As noted above, the final rule has been modified to eliminate many of the prescriptive disclosure elements from the proposal, and it instead provides a non-exclusive list of the types of disclosures that a registrant should include, as applicable, when describing management's role in assessing and managing the registrant's material climate-related risk. For example, if applicable, registrants should describe the processes by which certain positions or committees are informed about and monitor climate-related risks. A process-based description of management's governance of material climate-risks can offer investors a meaningful look at how registrants manage material climate-related risks. Registrants should also disclose, if applicable, whether management reports to the board or a subcommittee of the board on climate-related risks. Elimination of the proposed requirement to disclose how frequently the board meets to discuss climate-related matters, as discussed above, addresses commenters' concerns that this disclosure, if provided, could divert limited resources from the consideration of other material risks and encourage changes to business practices. Nonetheless, information on whether management reports to the board can provide needed clarity on the connection between board and management level governance of climate-related risks, and accordingly, we have retained it as an example of the type of disclosure that might be responsive to the rule. We have also added a reference to a subcommittee of the board because some registrants may establish a subcommittee to focus on climate-related issues.

Finally, as noted above,[712] we are not adopting the proposed rule that would have allowed, but did not require, registrants to describe management's role in assessing and managing climate-related opportunities. As with other voluntary disclosure, registrants may elect to include such disclosure. While we recognize that some commenters recommended that such disclosure be mandatory, we have determined to treat the disclosure regarding climate-related opportunities as optional, among other reasons, to allay any anti-competitive concerns that might arise from a requirement to disclose a particular business opportunity.[713]

These changes will also help address the concerns expressed by some commenters, including from smaller reporting companies and registrants in certain industries,[714] that the proposed rules would unduly pressure such registrants into a one-sized-fits-all governance approach given the line of business, size, and structure of their companies.[715] While we disagree with one commenter's suggestion that the proposal would "mandate that every company in the United States be required to expand management structures in order to accommodate concerns that are not material to a company," [716] shifting to a non-exclusive list of topics that a registrant should address, as applicable, will mitigate the concerns raised by some commenters that the prescriptiveness of the proposed disclosures could lead to such a result. In addition, the flexibility afforded to registrants under the final rule to determine which details about management's oversight of climate-related risks to include in their disclosure will help alleviate concerns that the proposal would elevate climate-related disclosures above other, equally important, disclosures. Furthermore, as stated above, the final rule does not impose any disclosure requirements on registrants that do not exercise management oversight of climate-related risks.

F. Risk Management Disclosure (Item 1503)

1. Proposed Rule

The Commission proposed to require a registrant to describe any processes the registrant has for identifying, assessing, and managing climate-related risks.[717] The Commission stated that

[710] Although we are not adopting specific requirements related to executive management remuneration linked to climate-based incentives, to the extent a climate-related target or goal or other measure is a material element of a registrant's compensation of named executive officers, such information is required to be disclosed under Item 402(b) of Regulation S–K.

[711] Further, we are adding Instruction 2 to Item 1501 to clarify that relevant expertise of management in Item 1501(b)(1) may include, for example: prior work experience in climate-related matters; any relevant degrees or certifications; any knowledge, skills, or other background in climate-related matters.

[712] *See* section II.C.1.c.

[713] *See* Proposing Release, section II.A.1.

[714] *See, e.g.,* letter from BIO.

[715] *See, e.g.,* letter from Chamber ("We believe the Proposed Rule, if adopted, would create a board oversight and risk management structure that not only makes little sense for certain companies but could harm investors in companies that have no need for such extensive oversight of climate risk. The Proposed Rule, if adopted, would present a costly distraction for companies with limited resources (particularly small-cap and many mid-cap companies) to attempt to align their behavior and disclosures with those of other companies that similarly felt pressured by the rule to adapt their behavior to what appears to be the SEC's preferred response to climate-related risks.").

[716] *See* letter from BIO.

[717] *See* Proposing Release, section II.E.1. As previously noted, *see supra* note 464, the Commission proposed to require transition plan disclosure in connection with a registrant's risk management discussion. *See* Proposing Release, section II.E.2. The final rule includes transition

more granular information regarding climate-related risk management could allow investors to better understand how a registrant identifies, evaluates, and addresses climate-related risks that may materially impact its business.[718] Such information could also permit investors to ascertain whether a registrant has integrated the assessment of climate-related risks into its regular risk management processes.[719]

The rule proposal would have required a registrant, when describing the processes for identifying and assessing climate-related risks, to disclose, as applicable, how the registrant:

- Determines the relative significance of climate-related risks compared to other risks;
- Considers existing or likely regulatory requirements of policies, such as GHG emissions limits, when identifying climate-related risks;
- Considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; and
- Determines the materiality of climate-related risks, including how it assesses the potential size and scope of any identified climate-related risk, such as the risks identified in response to proposed Item 1502.[720]

The rule proposal also required a registrant, when describing any processes for managing climate-related risks, to disclose, as applicable, how the registrant:

(a) Decides whether to mitigate, accept, or adapt to a particular risk;

(b) Prioritizes addressing climate-related risks; and

(c) Determines how to mitigate a high priority risk.[721]

The rule proposal further required a registrant to disclose whether and how climate-related risks are integrated into the registrant's overall risk management system or processes.[722] If a separate board or management committee is responsible for assessing and managing climate-related risks, the rule proposal required a registrant to disclose how that committee interacts with the registrant's board or management committee governing risks.[723] The Commission explained that these proposed disclosures would help investors assess whether the registrant has centralized the processes for managing climate-related risks, which may indicate to investors how the board and management may respond to such risks as they unfold.[724]

2. Comments

Many commenters supported the proposed rule requiring registrants to describe any processes in place for identifying, assessing, and managing climate-related risks.[725] Commenters stated that investors would use the risk management disclosures to evaluate an issuer's readiness for confronting climate-related risks.[726] Commenters also stated that the proposed risk management disclosure requirement would improve the quality of the disclosures that registrants currently provide on a voluntary basis.[727] Commenters further stated that the proposed risk management disclosure requirement is aligned with the TCFD's recommended disclosures regarding risk management, with which many registrants are already familiar.[728]

Other commenters generally opposed the proposed risk management disclosure requirement.[729] Commenters objected to the prescriptiveness of the proposal, which they stated would result in overly granular disclosure that may not be relevant to a registrant's particular business or industry and, therefore, may not be material for investors.[730] Commenters also stated that the prescriptive nature of the rule proposal may result in the disclosure of commercially sensitive and strategic information.[731] These commenters urged the Commission to adopt a more principles-based approach that would allow registrants to avoid the disclosure of commercially sensitive or proprietary information.[732]

Some commenters opposed the proposed risk management disclosure requirement because they believed that the Commission's existing rules already require the disclosure of material risks and how the registrant is managing them.[733] Other commenters stated that the Commission's proposed climate-related risk management disclosure provision deviated from the Commission's disclosure requirements for other risk categories and placed undue emphasis on climate-related matters.[734] Additionally, some commenters expressed general opposition to the proposed disclosure requirements, including risk management disclosures, because of concerns about the resulting compliance burden and costs.[735]

Several of the commenters that supported the risk management disclosure proposal also expressed support for the proposal's discrete disclosure items.[736] For example, one commenter supported requiring the disclosure of how a registrant determines the relative significance of climate-related risks compared to other risks, how it determines the materiality of climate-related risks, and how it considers various factors, such as existing or prospective regulatory requirements or policies, shifts in customer or counterparty preferences, technological changes, and changes in market prices, in assessing potential transition risks, and specifically mentioned that such disclosures are recommended by the TCFD.[737] Another commenter stated that requiring disclosure of how a company determines the importance of climate-related risks would be useful to investors, as this determination provides the foundation for all other climate-related considerations.[738]

plan disclosure as part of a registrant's disclosure about climate-related risks and their impact on the registrant's strategy. We discuss transition plan disclosure requirements above in section II.D.2.

Continued

Relatedly, one commenter stated that it needs transparent disclosure regarding how companies are determining the materiality of climate-related risks in order to evaluate issuer risks properly.[739] Another commenter stated that how a registrant determines the materiality of climate-related risks is important for investors to understand because it helps set the necessary context for all of the other climate-related disclosures.[740]

Commenters also supported the proposed requirement to describe how the registrant considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks.[741] One commenter stated that this would provide information about an important transition-related risk.[742] Another commenter stated that this type of information, among others, would help investors evaluate whether a company has implemented adequate processes for identifying, assessing, and managing climate-related risks.[743]

For similar reasons, some commenters supported the proposal requiring a registrant to disclose how it considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks.[744] Certain commenters, while supportive of the proposal, stated that the Commission should go further and also afford registrants the ability to provide additional disclosures, such as regarding how climate-related technological and customer shifts are being managed, minimized, tracked over time, and reported on regularly.[745]

Many commenters supported the proposal to require a registrant to disclose how it decides whether to mitigate, accept, or adapt to a particular climate-related risk.[746] One of these commenters stated that this information would help investors evaluate whether a company has implemented adequate processes for identifying, assessing, and managing climate-related risks.[747] Many commenters similarly supported the Commission's proposal to require disclosure of how registrants prioritize climate-related risks and how they determine to mitigate a high priority risk.[748] Commenters indicated that information concerning how the registrant prioritizes climate-related risks vis-à-vis other risks that the registrant is managing would be particularly useful.[749] One commenter stated that disclosure of a registrant's rationale for pursuing capital expenditures for managing certain climate-related risks would be beneficial for investors to better assess the company's capital allocation.[750] Other commenters emphasized that since investors must depend on issuers' assessment of their own significant or material climate-related risks, the proposed disclosure requirements would allow investors to understand how issuers reach these conclusions.[751]

Many commenters also supported the proposed disclosure requirement concerning whether and how climate-related risk management processes are integrated into a registrant's overall risk management system.[752] One commenter stated that information about how a registrant integrates its climate risk management processes into its overall risk management system is essential to understanding the effectiveness of those climate risk management processes.[753] Another commenter stated that disclosure regarding how a registrant's identified material climate-related risks are ''integrated into its company-wide enterprise risk management framework [would] allow for comparability of climate risks with other financial and non-financial risks.'' [754] Yet another commenter stated that information about whether a registrant has centralized its climate-related risk management into its regular risk management processes is decision-useful for investors because the disintegration of climate-related risks from other risks signals insufficient competence in managing the financial implications of climate-related matters.[755] One commenter expressed support for the proposed risk management disclosure provision but cautioned that registrants should not be required to speculate about future restructurings, write-downs, or impairments related to climate risks or disclose any trade secrets or confidential business information in their climate-related risk management disclosures.[756]

Several commenters opposed the proposed risk management disclosure requirement because of the detailed items that a registrant would be required to address when describing the processes used to identify, assess, and manage climate-related risks and how those processes are integrated into the registrant's overall risk management system.[757] One commenter stated that the proposed disclosure requirement could cause investors to overestimate climate-related risks and improperly contextualize the materiality of those risks.[758] Another commenter stated that the proposed disclosure requirement was redundant because such information already must be included in annual reports.[759] Other commenters expressed concern that the proposed disclosure requirement called for unnecessarily detailed, confidential, and proprietary information.[760] Some commenters also asserted that the proposed itemized risk management disclosure requirements go well beyond the TCFD framework, which one commenter stated would ''not provide a material benefit to investors and in fact may harm the public markets by creating undue costs on issuers to produce such information.'' [761] Other commenters criticized the proposed risk management disclosure provision for not including materiality qualifiers and not being more principles-based, and cautioned that the prescriptiveness of the rule proposal would lead to boilerplate language that would not provide decision-useful information to investors.[762]

3. Final Rule

After considering the comments received, we are adopting a requirement (Item 1503), modified from the proposal

---

to dictate how management and the board consider climate-related risks as part of governance, [and] whether management sets climate related targets or uses other tools such as scenario analysis'').

as discussed below, to describe any processes the registrant has for identifying, assessing, and managing material climate-related risks.[763] We agree with those commenters that stated investors need more comprehensive disclosure of registrants' climate-related risk management practices to inform their investment and voting decisions.[764] Because climate-related risks can have material impacts on a registrant's business, it is important for investors to have information available to them so that they can understand how a registrant identifies, assesses, and manages any such risks. At the same time, we are mindful of commenters' suggestions, both for this risk management disclosure in particular and climate-related disclosures more generally, that the Commission promulgate rules that allow registrants to tailor the disclosure of material climate-related risks and related management practices to their own particular facts and circumstances.[765] Accordingly, we are adopting a less prescriptive approach that focuses on a description of processes for identifying, assessing, and managing *material* climate-related risks. In doing so, we have sought to avoid imposing a ''one-size-fits-all'' disclosure model [766] that fails to account for differences in industries and businesses and that could result in disclosure of immaterial information while still eliciting decision-useful information for investors about registrants' risk management practices.

As a number of commenters indicated, consistent information about a registrant's management of climate-related risks is vital to informed investment and voting decisions.[767] Despite the importance of climate-related risk management information to investors, only a minority of registrants currently include such information in their voluntary climate reports or in their Exchange Act filings.[768] We considered comments that the proposed disclosure requirements are redundant because existing rules already require disclosure about material risks in annual reports, but we continue to believe that a specific disclosure item focused on managing material climate-related risks is warranted. While registrants may be required to disclose certain climate-related information in filings made with the Commission pursuant to existing disclosure requirements, as noted above [769] there is a need to improve the consistency, comparability, and reliability of disclosures about climate-related risk management for investors given that, as noted above, most registrants are not currently including the type of information called for by the final rules in voluntary climate reports or Exchange Act filings.[770] We also considered comments that the proposal placed undue emphasis on climate-related risks and, as discussed below, have made a number of changes in response to streamline the requirements and focus on material climate-related risks.

First, in a change from the proposal, we have added a materiality qualifier to the disclosure item.[771] The final rule will require registrants to disclose any existing processes for the identification, assessment, and management of material climate-related risks. Including a materiality qualifier addresses the specific concerns expressed by commenters that the proposal would require registrants to disclose this information in a level of detail that would impose undue costs. If a registrant has not identified a material climate-related risk, no disclosure is required. Given the concerns expressed by commenters that there is a wide range of risks that registrants manage as part of their operations, we are persuaded that it is appropriate to include a materiality qualifier for this aspect of the proposal to help ensure that the final rule elicits decision-useful information for investors without imposing an undue burden on registrants and placing undue emphasis on climate-related risks that are not material.

Similarly, to address the concerns of commenters that the proposed risk management disclosure provision would require registrants to address items that might not be relevant to their particular business or industry,[772] we have removed several prescriptive elements from the final rule. Those proposed provisions that we are not adopting would have required a registrant, when describing any processes for identifying and assessing climate-related risks, to disclose, as applicable, how the registrant:

- Determines the relative significance of climate-related risks compared to other risks;
- Considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks;
- Considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; and
- Determines the materiality of climate-related risks.

Instead, the final rule will allow a registrant, when describing its processes for identifying, assessing, and managing material climate-related risks, to determine which factors are most significant, and therefore should be addressed, based on its particular facts and circumstances, which may include information on the items listed above.

Commenters that supported the proposal stated that a meaningful description of the processes underlying climate risk management is necessary to enable investors to evaluate registrants' climate risk management practices as part of their investment decisions. The final rule will elicit disclosures that offer a more complete picture of the management of material climate-related risks while also mitigating concerns that the proposed rule could unnecessarily elevate climate-related risk above other important matters and give rise to competitive harm and increased litigation risk for registrants. The final rule will also promote more consistent and comparable disclosure of registrants' climate-related risk management practices than is currently available from voluntary reporting and, as these provisions of the final rules more closely align with the TCFD, they may limit costs for those registrants who are familiar with reporting under this framework.

The final rule provides that a registrant should address, as applicable, how it identifies whether it has incurred or is reasonably likely to incur a material physical or transition risk.[773] This provision is similar to the proposed rule that would have required a registrant to describe its processes for

[763] *See* 17 CFR 229.1503(a). As noted in section II.D.2.c above, we have moved the disclosure requirement concerning a registrant's transition plan to the 17 CFR 229.1502.

[766] *See, e.g.,* letters from API; Chamber; and SIFMA.

[767] *See supra* note 727 and accompanying text. *See also* Anthesis (stating that the SEC should require the registrant to disclose its process for identifying climate risks with the highest materiality and explain its adaptation/mitigation plan to build resiliency).

[768] *See* TCFD, *2022 Status Report* (Oct. 2022), available at *https://assets.bbhub.io/company/sites/60/2022/10/2022-TCFD-Status-Report.pdf* (indicating that only approximately one-third of over 1,400 public companies surveyed provided disclosure concerning climate risk management processes in their 2021 reports).

[769] *See supra* note 727 and accompanying text.

[770] *See* section IV.A.5.

[771] *See supra* note 730 and accompanying text.

[772] *See supra* note 730 and accompanying text.

[773] *See* 17 CFR 229.1503(a)(1).

identifying a climate-related risk.[774] The final rule substitutes the more specific terms ''physical risk or transition risk'' for ''climate-related risk'' to clarify and simplify the requirement since Item 1500 defines climate-related risk to encompass physical and transition risks. In addition, because the processes and factors that a registrant may use to identify the two types of risks may differ in certain respects, or in some cases a registrant may face one and not the other kind of risk, this change should elicit more relevant information for investors.[775]

Similar to the rule proposal, the final rule also provides that a registrant should address, as applicable, how it:

• Decides whether to mitigate, accept, or adapt to the particular risk;[776] and

• Prioritizes whether to address the climate-related risk.[777]

The final rules will help investors to understand the processes that a registrant has for identifying, assessing, and managing climate-related risks, consistent with the feedback of many commenters.[778] In this regard, commenters further indicated that information concerning how a registrant prioritizes climate-related risks vis-à-vis other risks that the registrant is managing would be particularly useful.[779] We are not, however, retaining the proposed requirement to disclose how a registrant determines how to mitigate any high priority risks. In response to the concerns expressed by several commenters,[780] we have removed this proposed disclosure item to reduce the prescriptiveness of the risk management disclosure requirement and streamline this requirement, as we have done with other areas of the final rules. Furthermore, in response to one commenter who supported the proposal but cautioned against an overly broad application,[781] we confirm that the final rules do not require registrants to speculate in their disclosures about future restructurings, write-downs, or impairments related to climate risk management. The flexibility afforded by the final rules also helps address the point made by the same commenter that the proposed disclosure item should not compel registrants to disclose trade secrets or confidential business information.

Also similar to the rule proposal, the final rule provides that, if a registrant is managing a material climate-related risk, it must disclose whether and how any of the processes it has described for identifying, assessing, and managing the material climate-related risk have been integrated into the registrant's overall risk management system or processes.[782] As some commenters noted, information about how a registrant integrates its climate risk management processes into its overall risk management system is important to help investors understand and assess the effectiveness of those climate risk management processes.[783] Mandating this disclosure, therefore, will allow investors to make better informed decisions about the overall risk profile of their investment in the registrant and provide a measure from which they can evaluate similarly situated companies.[784]

We are not adopting the proposed requirement for a registrant to disclose, if it has a separate board or management committee responsible for assessing and managing climate-related risks, how that committee interacts with the registrant's board or management committee governing risks. Several commenters stated that they do not have dedicated board or management committees for managing climate-related risks,[785] or asserted that including such prescriptive elements in the final rule could lead to boilerplate disclosure.[786] Having considered these comments, and in light of our overall aim to reduce the prescriptiveness of the proposed requirements, we are not including this disclosure item in the final rule. We believe the other disclosure items we are adopting will still provide investors with decision-useful information about how registrants manage their material climate-related risks.

Finally, as noted above,[787] we are not adopting the proposed rule that allowed but did not require registrants to describe any processes for identifying, assessing, and managing climate-related opportunities when responding to any of the provisions in the risk management section.[788] As with other voluntary disclosure, registrants may elect to include such disclosure. While we recognize the recommendation of some commenters that such disclosure be mandatory, consistent with the rule proposal, we have determined to treat disclosure regarding climate-related opportunities as optional, among other reasons, to allay any anti-competitive concerns that might arise from a requirement to disclose a particular business opportunity.[789]

G. Targets and Goals Disclosure (Item 1504)

1. Proposed Rule

The Commission proposed to require a registrant that has set any climate-related targets or goals to disclose certain information about those targets or goals.[790] The proposed rule provided examples of climate-related targets or goals, such as those related to the reduction of GHG emissions or regarding energy usage, water usage, conservation or ecosystem restoration, or revenues from low-carbon products in line with anticipated regulatory requirements, market constraints, or other goals established by a climate-related treaty, law, regulation, policy, or organization.[791]

The proposed rule would have required a registrant that has set climate-related targets or goals to disclose the targets or goals and include, as applicable, a description of:

• The scope of activities and emissions included in the target;

• The unit of measurement, including whether the target is absolute or intensity based;

• The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, policy, or organization;

• The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;

• Any interim targets set by the registrant; and

• How the registrant intends to meet its climate-related targets or goals.[792]

The proposed rule also would have required a registrant to disclose relevant data to indicate whether it is making progress toward achieving the target or goal and how such progress has been

[792] *See id.* The proposed rule further provided, as an example, that for a target or goal regarding net GHG emissions reduction, the discussion could include a strategy to increase energy efficiency, transition to lower carbon products, purchase carbon offsets or RECs, or engage in carbon removal and carbon storage.

achieved. The proposed rule would have required the registrant to update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.[793]

Finally, the Commission proposed to require a registrant that, as part of any net emissions reduction strategy, uses carbon offsets [794] or RECs [795] to disclose the role that carbon offsets or RECs play in the registrant's climate-related business strategy.[796] If the registrant used carbon offsets or RECs in its plan to achieve climate-related targets or goals,[797] the proposed rule would have required it to disclose the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECs, the source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs.[798]

[793] *See id.*

[794] The proposed rules defined carbon offsets as representing an emissions reduction or removal of greenhouse gases in a manner calculated and traced for the purpose of offsetting an entity's GHG emissions. *See* Proposing Release, section II.C.2.

[795] The proposed rules defined an REC, consistent with the EPA's commonly used definition, to mean a credit or certificate representing each purchased megawatt-hour (1 MWh or 1000 kilowatt-hours) of renewable electricity generated and delivered to a registrant's power grid. *See id.*

[796] *See id.* The Commission proposed the requirement to disclose information about the carbon offsets or RECs used by a registrant both in the proposed disclosure requirements for targets and goals and as part of the proposed disclosure requirements regarding the impacts of climate-related risks on a registrant's strategy. *See* Proposing Release, sections II.C.2 and II.I. To streamline and reduce redundancies in the subpart 1500 disclosure requirements, the final rules require disclosure of used carbon offsets or RECs only as part of the targets and goals disclosure requirements. Nevertheless, as discussed below, a registrant may elect to provide its disclosure about targets and goals as part of its strategy discussion, including its transition plan disclosure, as applicable. The final rules also require certain disclosures of offsets and RECs under the Regulation S–X amendments. *See* 17 CFR 210.14–02(e)(1) and *infra* section II.K.3.c.vi.

[797] While both carbon offsets and RECs represent commonly used GHG emissions mitigation options for companies, they are used for somewhat different purposes. A company may purchase carbon offsets to address its GHG emissions (Scopes 1, 2, and 3 emissions) by verifying global emissions reductions at additional, external projects. The reduction in GHG emissions from one place (''offset project'') can be used to ''offset'' the emissions taking place somewhere else (at the company's operations). *See, e.g.,* EPA, *Offsets and RECs: What's the Difference?* (Feb. 2018), available at *https://www.epa.gov/sites/default/files/2018-03/documents/gpp_guide_recs_offsets.pdf.* In contrast, a company may purchase an REC in renewable electricity markets solely to address its indirect GHG emissions associated with purchased electricity (*i.e.,* Scope 2 emissions) by verifying the use of zero- or low-emissions renewable sources of electricity.

[798] *See* Proposing Release, section II.I.

The proposed rule further stated that a registrant could provide the disclosures regarding its targets and goals when discussing climate-related impacts on its strategy, business model, and outlook or when discussing its transition plan.[799]

2. Comments

a. The Overall Proposed Disclosure Requirements

Many commenters supported the rule proposal requiring a registrant that has set climate-related targets or goals, including the reduction of GHG emissions, to disclose certain information about those targets or goals.[800] Commenters stated that information about a registrant's set targets and goals, how a registrant plans to achieve them, and progress made towards them is critical to understanding a registrant's transition risk management and its exposure to the likely financial impacts of identified transition risks.[801] Commenters also stated that the proposed targets and goals disclosure requirement would help investors assess a registrant's transition plan and whether it is aligned with global climate-related goals so that they may better understand the registrant's transition risk exposure.[802] Commenters also indicated that the proposed targets and goals disclosure requirement would provide needed data to help investors determine if a registrant's climate-related public commitments are real and would help discourage greenwashing.[803] Commenters further indicated that, despite the importance of information about a registrant's targets or goals to investors, such information currently is lacking.[804]

Several of the commenters that supported requiring disclosure of a GHG emissions reduction target or goal also supported the disclosure of other climate-related targets or goals, such as those pertaining to energy usage, water usage, conservation or ecosystem restoration, and revenues from low-carbon products.[805] Some commenters also recommended requiring the disclosure of any targets or goals that a registrant has set to mitigate climate-related impacts on local or indigenous communities or that involve human capital management goals related to employee retraining and retention in clean energy jobs.[806] One commenter, however, stated that the targets and goals disclosure requirement should only pertain to GHG emissions reduction.[807] According to this commenter, because standards for other climate-related targets and goals have not been broadly defined or accepted, voluntary reporting regarding such targets or goals is more appropriate.[808]

Several commenters that supported the proposed targets and goals disclosure requirement also supported requiring a registrant that has set a climate-related target or goal to describe, as proposed:

- The scope of activities and emissions included in the target;
- The unit of measurement, including whether the target is absolute or intensity based;
- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, policy, or organization;
- The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;
- Any interim targets set by the registrant; and
- How the registrant intends to meet its climate-related targets or goals.[809]

Continued

Commenters stated that the proposed detailed disclosure requirements would help investors understand the level of a registrant's commitment to achieving its climate-related targets and goals.[810] Some commenters recommended requiring additional disclosure requirements, such as whether the registrant has set science-based greenhouse gas emission reduction targets under the Science Based Targets Initiative,[811] or the extent to which it can achieve its targets or goals using existing technology.[812]

Several commenters supported the proposed rule provision requiring a registrant to disclose relevant data indicating whether it is making progress toward achieving a set target or goal and how such progress has been achieved.[813] One commenter stated that the proposed requirement would enhance management's accountability for its climate-related commitments.[814] This commenter further supported requiring a registrant to provide periodic updates to help investors evaluate its progress in achieving its targets or goals.[815] Another commenter stated that disclosure regarding a registrant's progress toward achieving its targets or goals should include information about the related capital expenditures it has made or intends to make.[816] One other commenter, in response to the proposed Regulation S–X amendments, recommended requiring the disclosure of a registrant's discrete and separable expenditures, both expensed and capitalized, related to transition activities for the registrant's publicly disclosed, climate-related targets and goals.[817]

Some commenters supported a targets and goals disclosure requirement but recommended conditions to such requirement. For example, some commenters stated that, in order to prevent the proposed disclosure requirement from acting as a disincentive to the adoption of climate-related targets or goals, the final rule should provide an opportunity for a registrant that has not set a target or goal to explain why it has not done so.[818] Some commenters indicated that a registrant should only be required to provide data about a publicly announced target or goal.[819] One commenter stated that the disclosure requirement should only be triggered by the board's or CEO's formal adoption of the target or goal to encourage the informal development of the target or goal.[820] One other commenter similarly stated that the Commission should require disclosure of targets or goals only when the board and senior management use the target or goal in their decision-making.[821]

Several commenters opposed the proposed targets and goals disclosure requirement.[822] Commenters expressed concern that the proposed disclosure requirement was overly prescriptive and would require detailed disclosure about a target or goal even if the target or goal was not material.[823] Commenters asserted that the disclosure requirements for targets and goals were overly prescriptive and would impose a costly compliance burden on registrants that, together with liability concerns, would discourage registrants from setting climate-related targets or goals.[824] One commenter stated that the proposed targets and goals disclosure requirement would have a chilling effect on registrants setting even aspirational targets or goals.[825] Another commenter stated that the proposed disclosure requirement would chill even preliminary discussions of climate-related initiatives at the board or management level.[826] A different commenter stated that the proposed targets and goals disclosure requirement would effectively punish early adopters of targets or goals by exclusively requiring them to disclose their targets and goals in extensive detail.[827]

Commenters also expressed concern that the proposed disclosure requirement would compel disclosure of internal, non-public targets that would reveal confidential proprietary information.[828] Because of these concerns, some of these commenters recommended that the Commission only require the disclosure of material targets and goals that have been publicly announced.[829]

b. The Proposed Disclosure Requirement Concerning the Use of Carbon Offsets or RECs

Many commenters supported the proposed rule provision requiring a registrant that uses carbon offsets or RECs in its plan to achieve climate-related targets or goals to disclose information about: the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECs; the source of the offsets or RECs; a description and location of the underlying projects; any registries or other authentication of the offsets or RECs; and the cost of the offsets or RECs.[830] Commenters stated that, because many registrants rely on the use of carbon offsets or RECs to achieve their GHG emissions reduction targets or goals, and because there are different types of carbon offsets and RECs with different attendant risks and benefits, investors need detailed information

because, if material, they will be included in the registrant's plans to meet the GHG reduction target).

about the carbon offsets or RECs used in order to evaluate the effectiveness of a registrant's transition risk strategy and management of climate-related impacts on its business.[831] Commenters further stated that, despite this need, such information is currently lacking, and that without detailed information about the type, underlying project, authentication, and cost of the offsets, investors cannot adequately assess a registrant's climate-related strategy and its exposure to climate-related risks, particularly transition risks.[832]

For example, some commenters expressed concern that registrants' carbon offset purchases vary considerably in terms of quality and effectiveness in meeting their own net-zero carbon targets or those required by jurisdictions in which they operate.[833] In this regard one commenter stated that investors need to know the type of carbon offset purchased in order to assess a registrant's climate risk management because, if the registrant has a net-zero target or goal, it must use a carbon removal offset rather than a carbon avoidance offset to achieve the net-zero target or goal.[834] Commenters relatedly recommended defining carbon offsets to include those that seek to avoid emissions (in addition to those that seek to reduce or remove them) and to require registrants that have used offsets to disclose the type of offset used (*e.g.,* avoidance, reduction, or removal).[835] Other commenters expressed support for increased disclosure about carbon offsets because of concerns about perceived problems in carbon offset markets regarding the quality and permanence of offsets.[836] Commenters further stated that a registrant's strategy that is heavily dependent on the use of carbon offsets or RECs runs the risk of market volatility, including spikes in the price of such instruments due to low supply and increased demand, and litigation and reputational risks from conducting an ineffective transition risk strategy or from claims of greenwashing.[837]

Some commenters recommended that the Commission require the disclosure of certain information about RECs in addition to the proposed disclosure items.[838] For example, commenters[839] recommended requiring the disclosure of whether a registrant's RECs are bundled or unbundled.[840] Commenters[841] also sought disclosure regarding whether a registrant purchased or obtained its RECs from a compliance market or voluntary market.[842]

Other commenters, however, opposed the proposed requirement to disclose detailed information regarding a registrant's use of carbon offsets or RECs.[843] One commenter stated that the proposed disclosure requirement was overly prescriptive and that, without a materiality qualifier, it was likely to result in disclosure that was not decision-useful for investors.[844] Another commenter similarly stated that the proposed requirement would result in the disclosure of immaterial information and also indicated that the proposed requirement, which the commenter characterized as seeking to regulate offsets and RECs, was outside the area of the Commission's expertise and beyond the Commission's statutory authority.[845] One other commenter stated that it did not believe it was necessary for companies to disclose the amount of energy represented by RECs, their nature, or the location of the underlying projects.[846]

3. Final Rule

a. The Overall Disclosure Requirement (Item 1504(a), (b), and (c))

The final rule (Item 1504(a)) will require a registrant to disclose any climate-related target or goal if such target or goal has materially affected or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition.[847] Investors need detailed information about a registrant's climate-related targets or goals in order to understand and assess the registrant's transition risk strategy and how the registrant is managing the material impacts of its identified climate-related risks. We recognize, however, as some commenters indicated, that an overly broad requirement to disclose any climate-related target or goal, even one that is meant for preliminary, internal planning purposes and that is not yet material, could impose a compliance burden on registrants that may outweigh its benefit to investors.[848] Conditioning the targets and goals disclosure requirement on the targets or goals being material will help to address this concern by focusing the requirement on the information that is most likely to be decision-useful for investors.

If a registrant sets an internal target or goal that materially affects or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition (*e.g.,* due to material expenditures or operational changes that are required to achieve the target or goal), then investors should have access to information about that target or goal to help them understand the financial impacts and assess the registrant's transition risk management. While some commenters recommended that the Commission require the disclosure only of targets or goals that are both material and publicly announced,[849] we decline to follow this suggestion. Such a condition would enable a registrant to keep non-public an internal target or goal that is material, which would fail

[831] *See, e.g.,* letters from AllianceBernstein; Carbon Direct; CarbonPlan; and Ceres.

[832] *See, e.g.,* letter from AllianceBernstein (stating that ''[t]he markets for carbon credits and offsets are nascent, fragmented and opaque, with significant variability in governance, quality, pricing and sourcing'' and that ''[i]ncreasing transparency on offsets is critical to an investor's assessment of how well a registrant is managing the risk of climate change to its business, particularly transition risk.''); *see also* letters from Calvert; CarbonDirect; CarbonPlan; Ceres; Engine No. 1; and Ethic.

[833] *See, e.g.,* letters from CarbonPlan; Ceres; and Morningstar.

[834] *See* letter from CarbonPlan.

[835] *See, e.g.,* letters from Amer. Fin. Reform, Sunrise Project *et al.*; Business Council for Sustainable Energy (June 17, 2022) (''BCSE''); Ceres; and WBCSD.

[836] *See, e.g.,* letter from ICCR.

[837] *See, e.g.,* letters from Amer. Fin. Reform, Sunrise Project *et al.*; CarbonDirect; and CarbonPlan.

[838] *See, e.g.,* letters from American Clean Power Association (June 17, 2022) (''Amer. Clean Power''); BCSE; CalPERS; and International Emissions Trading Association (June 17, 2022) (''IETA'').

[839] *See* letters from Amer. Clean Power; and IETA; *see also* letter from CalPERS (stating its belief that unbundled RECs should not be allowed to be counted, but if the final rule allows for unbundled RECs to be counted, then a registrant should be required to disclose both a total amount with, and a total amount without, the use of unbundled RECs for each scope of emissions).

[840] A bundled REC is one that is sold together with the generated electricity directly to the consumer or reseller whereas an unbundled REC is one that has been separated from and sold without delivery of the generated electricity. *See, e.g.,* U.S. EPA, *Retail RECs,* available at *https://www.epa.gov/green-power-markets/retail-recs* (last updated Nov. 1, 2023); *see also* Sustainable Development Strategy Group (''SDSG''), *Renewable Energy Credits* (Jan. 2020), available at *https://static1.squarespace.com/static/5bb24d3c9b8fe8421e87bbb6/t/5e212aa512182f60deb4849c/1579231912520/RECs+Policy+Primer.pdf.*

[841] *See, e.g.,* letters from Amer. Clean Power; and BCSE.

[842] Utilities may purchase RECs in a compliance market to comply with a state's renewable portfolio standard whereas a non-utility company may purchase RECs in a voluntary market to support the general deployment of renewable energy. RECs purchased in a compliance market must meet certain standards and must be certified by an approved certifying group. RECs purchased in a voluntary market may or may not be subject to certain standards and technically are not required to be certified. *See* SDSG, *supra* note 840.

[843] *See, e.g.,* letters from Beller *et al.*; CEMEX; and J. Weinstein.

[844] *See* letter from Beller *et al.*

[845] *See* letter from J. Weinstein.

[846] *See* letter from CEMEX.

[847] *See* 17 CFR 229.1504(a).

[848] *See supra* notes 823 and 828 and accompanying text.

[849] *See supra* note 829 and accompanying text.

to protect investors by potentially precluding their access to information that is important to make informed investment and voting decisions. We reemphasize, however, that a registrant is not required to disclose an internal target or goal that is not material.

In addition, we decline to follow the recommendation of some commenters that the targets and goals disclosure requirement should only be triggered by the board's or CEO's formal adoption of the target or goal.[850] Such a provision would deprive investors of material information for procedural reasons unrelated to the importance of the information to investors. Furthermore, as previously mentioned, the final rules are intended to elicit material climate-related disclosures for investors and not to influence governance practices regarding climate-related matters. Because registrants may have different processes for setting targets or goals, we believe that materiality is a better threshold for disclosure of targets or goals than basing the disclosure requirement on an internal process that may differ from company to company.

Similarly, although one commenter recommended that the Commission require the disclosure only of targets or goals related to a registrant's GHG emissions,[851] we decline to follow this recommendation. Investors need information about all of a registrant's material climate-related targets and goals in order to assess the impact of such targets and goals on a registrant's overall business, results of operations, financial condition, and prospects. Although the particular non-GHG emissions target or goal to be disclosed will depend on a registrant's particular facts and circumstances, to the extent such targets or goals are material, a registrant must disclose them. To simplify the targets and goals disclosure requirement and avoid implying any topical focus regarding the particular targets or goals that should be discussed, we have eliminated from the final rule the parenthetical ''*e.g.,* the reduction of GHG emissions or regarding energy usage, water usage, or revenues from low-carbon products.''

We also decline to follow the recommendations of some commenters to include provisions that specifically require the disclosure of targets or goals related to mitigation of impacts on local communities or that concern human capital management goals.[852] The final rule is intended to elicit disclosure of any climate-related target or goal that has materially affected or is reasonably likely to materially affect a registrant's business, results of operations, or financial condition. Accordingly, any target or goal meeting the conditions of the final rule (including that it is material) will need to be disclosed regardless of the particular issues it addresses, if that target or goal is considered climate-related in the registrant's particular circumstances and if achieving such target or goal would materially impact its business, results of operations, or financial condition. We note that a registrant may voluntarily disclose additional information that is not required to be disclosed under the final rule (and not part of a target or goal) but that is related to the mitigation of climate-related risks.

Similar to the proposed rule, with some modifications as discussed below, the final rule (Item 1504(b)) will require a registrant that is disclosing its targets and goals pursuant to Item 1504 to provide any additional information or explanation necessary to an understanding of the material impact or reasonably likely material impact of the target or goal, including, as applicable, a description of:

- The scope of activities included in the target;
- The unit of measurement;
- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is based on one or more goals established by a climate-related treaty, law, regulation, policy, or organization;
- If the registrant has established a baseline for the target or goal, the defined baseline time period and the means by which progress will be tracked; and
- A qualitative description of how the registrant intends to meet its climate-related targets or goals.[853]

These disclosures will allow investors to better understand a registrant's targets or goals and how it intends to achieve them, which will help investors better assess a registrant's transition risks and make more informed investment and voting decisions. In order to address the concern of some commenters that the proposed targets and goals disclosure provision was too prescriptive and would impose a costly compliance burden without necessarily resulting in material information,[854] the final rule has been revised so that the listed items are non-exclusive examples of additional information or explanation that a registrant must disclose only if necessary to an understanding of the material impact or reasonably likely material impact of the target or goal.[855]

To further streamline the targets and goals disclosure requirement, the final rules do not include ''emissions'' in the list of information that must be disclosed if necessary to an understanding of the material impact or reasonably likely material impact of a target or goal. If a registrant has set a material target or goal to reduce emissions, it will be required to disclose this when explaining the scope of activities included in the target. We also have eliminated the proposed disclosure item regarding whether a target is absolute or intensity-based because this information will likely be elicited by other required disclosure, such as the unit of measurement pertaining to the target or goal.[856]

Similar to the proposed rule, the final rule requires disclosure, as applicable, of how the registrant intends to meet its climate-related targets or goals.[857] However, in order to help address the concern of some commenters that the proposed rule could result in the disclosure of an excessive amount of detail, the final rule specifies that this discussion of prospective activities need only be qualitative. In addition, we are eliminating the proposed example that, for a target or goal regarding net GHG emissions reduction, the discussion could include a strategy to increase energy efficiency, transition to lower carbon products, purchase carbon offsets or RECs, or engage in carbon removal and carbon storage.[858] This will avoid any misperception that these are required items of disclosure. The final rule leaves it up to the registrant to determine what specific factors to highlight as part of the qualitative description of how it plans to meet its targets or goals.

We are also not adopting the proposed requirement to disclose any interim targets set by the registrant. We agree

[850] *See supra* note 820 and accompanying text.

[851] *See supra* note 807 and accompanying text.

[852] *See supra* note 806 and accompanying text.

[853] *See* 17 CFR 229.1504(b).

[854] *See supra* note 823 and accompanying text.

[855] *See* 17 CFR 229.1504(b).

[856] In addition, as discussed below in section II.H, elimination of this proposed disclosure requirement is consistent with our removal of the proposed requirement to disclose a registrant's GHG emissions metrics in intensity terms in addition to absolute terms.

[857] *See* 17 CFR 229.1504(b)(5).

[858] *See* Proposing Release, section II.I.

with commenters that stated that this disclosure item is not necessary because, if a registrant has set an interim target that is material, it will likely be included in the registrant's discussion of its plan to achieve its targets or goals.[859]

Similar to the proposed rule, the final rule (Item 1504(c)) will require a registrant to disclose any progress toward meeting the target or goal and how such progress has been achieved.[860] Also similar to the proposed rule, the final rule will require the registrant to update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.[861] We are adopting this updating requirement for substantially the same reasons we are adopting the updating requirement with respect to the transition plan disclosure required under Item 1502(e),[862] including because it will better enable investors to monitor impacts on the registrant as it attempts to meet its targets or goals.

Relatedly, the final rule will require a registrant to include in its targets and goals disclosure a discussion of any material impacts to the registrant's business, results of operations, or financial condition as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal.[863] This discussion must include quantitative and qualitative disclosure of any material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal,[864] consistent with the suggestion of some commenters.[865] We have added these latter provisions because, as commenters noted, a company's climate commitments, and progress in relation to its commitments, may materially impact its business, outlook, operating expenditures, capital expenditures, liquidity, and other capital resources, which is why investors seek and need information about such material expenditures and other material financial impacts related to its targets and goals.[866] As discussed in more detail below,[867] a number of commenters who supported the proposed expenditures disclosures in Regulation S–X indicated that such disclosure would help investors understand a registrant's ability to meet its climate-related targets and goals.[868]

We recognize commenters' concerns about registrants' abilities to identify, attribute, and quantify the impact of transition activities in the financial statements.[869] We believe that providing for this disclosure in the context of Item 1504 information on progress towards targets or goals appropriately balances investors' need for this information with commenters' concerns about implementation challenges. As discussed above,[870] with respect to concerns raised in the context of the proposed Regulation S–X amendments about registrants' abilities to disaggregate the portion of an expenditure that is directly related to transition activities, under the final rules, registrants will have flexibility to explain qualitatively the nature of any disclosed expenditure and how it is a direct result of progress under a disclosed target or goal. In addition, subjecting the disclosure requirement to materiality rather than a bright-line threshold, as was proposed for the Regulation S–X amendments, will help reduce the compliance burden of the final rules while providing material information for investors. Additionally, when considering which expenditures related to progress under a disclosed target or goal are material over the relevant period and therefore require disclosure, registrants should consider whether overall expenditures related to progress under a disclosed target or goal are material in the aggregate and, if so, provide appropriate disclosure. Finally, to the extent that disclosure of material impacts on financial estimates and assumptions as a direct result of the target or goal is disclosed in response to Rule 14–02(h) of Regulation S–X, a registrant would be able to cross-reference to such disclosure.[871]

Similar to the rule proposal, the final rule will permit a registrant to provide the required targets and goals disclosure as part of its discussion pursuant to Item 1502 regarding its transition plan or when otherwise discussing material impacts of climate-related risks on its business strategy or business model.[872] A registrant will also be permitted to provide the required targets and goals disclosure in its risk management discussion pursuant to Item 1503.[873] This provision will help to eliminate redundancies in the subpart 1500 disclosure.

Similar to Items 1502(d)(2) and 1502(e)(2), and for similar reasons, we are providing a phase in for compliance with the Item 1504(c)(2) disclosure requirement. A registrant will not be required to comply with the requirements of Item 1504(c)(2) until the fiscal year immediately following the fiscal year of its initial compliance date for the subpart 1500 rules based on its filer status.[874]

We decline to follow the recommendation of some commenters to require the disclosure of whether the registrant has set science-based GHG emission reduction targets under the Science Based Targets Initiative, or the extent to which it can achieve its targets or goals using existing technology.[875] As we similarly noted when declining to follow a recommendation to broaden transition risk disclosure, the targets and goals disclosure requirement we are adopting is consistent with the TCFD framework, which provides flexibility in terms of which tools or methods a registrant chooses to use, and therefore will limit the targets and goals compliance burden for those registrants that are already familiar with the TCFD framework.[876] A registrant may elect to provide disclosure regarding these additional items, but they are not required items of disclosure.

b. The Carbon Offsets and RECs Disclosure Requirement (Item 1504(d))

Similar to the proposed rule, the final rule includes a disclosure requirement about a registrant's use of carbon offsets or RECs (Item 1504(d)). Unlike the proposed rule, however, a registrant will be required to disclose certain

[870] *See supra* sections II.D.1.c. and II.D.2.c for discussion of similar material expenditures disclosure requirement, respectively, as part of a registrant's transition plan disclosure under Item 1502(e) and from activities to mitigate or adapt to climate-related risks disclosed pursuant to Item 1502(b)(4) under Item 1502(d) of Regulation S–K. To the extent that there is any overlapping disclosure of material expenditures in response to these Items, to avoid redundancy, a registrant should provide disclosure of material expenditures regarding the Item where, in its assessment, such disclosure is most appropriate, and then cross-reference to this disclosure when responding to the other Items.

information about the carbon offsets or RECs only if they have been used as a material component of a registrant's plan to achieve climate-related targets or goals.[877] We have added a materiality qualifier to the final rule to address the concern of commenters that the proposed disclosure requirement could result in detailed offsets or RECs information that is of little use to investors.[878] Under the final rule, registrants will need to make a determination, based upon their specific facts and circumstances, about the importance of such carbon offsets and credits to their overall transition plan and provide disclosure accordingly.

If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals, then, similar to the proposed rule, the registrant will be required to disclose: the amount of carbon avoidance, reduction or removal represented by the offsets or the amount of generated renewable energy represented by the RECs; the nature and source of the offsets or RECs; [879] a description and location of the underlying projects; any registries or other authentication of the offsets or RECs; and the cost of the offsets or RECs.[880]

Information about the source, value, underlying projects, and authentication of the carbon offsets or RECs will help investors evaluate the role of these instruments in a registrant's climate-related strategy and the impacts on its business. For example, understanding the role that carbon offsets or RECs play in a registrant's climate-related business strategy can help investors assess the potential risks and financial impacts of pursuing that strategy. Relatedly, a registrant that relies on carbon offsets or RECs as a material component of its plan to achieve its targets or goals might need to consider whether fluctuating supply or demand, and corresponding variability of price, related to carbon offsets or RECs, presents an additional material risk that is required to be disclosed when discussing its plan to achieve such target or goal pursuant the requirements of subpart 1500.

At the recommendation of commenters, in addition to carbon reduction, we have added the amount of carbon avoidance and carbon removal [881] represented by carbon offsets as disclosure items to clarify that disclosure is required about offsets representing carbon removal and those representing carbon avoidance or reduction if the registrant has used these types of offsets as a material part of its climate-related strategy.[882] This addition will help investors assess the risks associated with the different types of offsets used and how they may affect a registrant's transition risk management and the related impacts on the registrant's business and financial condition.

Also, at the recommendation of commenters, we have added the nature of the carbon offsets or RECs as a disclosure item in addition to the source of the offsets or RECs.[883] This addition will help investors understand whether a purchased offset represents carbon avoidance, reduction, or removal, and whether an REC is bundled or unbundled. Requiring the disclosure of the source of the offset or REC will help investors determine whether the offset has met certain criteria of an established standard-setting body,[884] and whether the REC originated from and met the standards of a compliance market or is instead derived from a more loosely regulated voluntary market.[885] These factors can affect the value and cost of the offsets and RECs and their attendant risks. For example, as one commenter noted, a market that develops increased demand for carbon removal offsets, either because of new regulation or stricter voluntary standards for net-zero targets, could result in a significant increase in offset prices, potential supply bottlenecks, and increased transition risk for registrants that assumed the continued availability and abundance of cheaper offsets.[886]

One commenter who objected to the proposed offsets and RECs disclosure requirement asserted that the Commission lacks statutory authority to regulate offsets and RECs.[887] We disagree with that commenter's characterization of the rule. In requiring the disclosure of certain information about a registrant's use of offsets or RECs when such use is a material component of the registrant's plan to achieve a target or goal that is required to be disclosed, we are not advocating for or against the use of offsets or RECs generally, or for or against the use of certain types of offsets or RECs. Nor are we substantively regulating their use. As previously mentioned, the final rules, including those pertaining to the use of offsets or RECs, are neutral regarding any strategy that a registrant may choose to manage a material climate-related risk. Instead, like the other climate-related disclosure rules we are adopting, the final rule regarding the disclosure of offsets or RECs is intended to provide investors with the decision-useful information they need to understand a registrant's strategy to mitigate or adapt to the realized or reasonably likely financial impacts of a material climate-related risk.

H. GHG Emissions Disclosure (Item 1505)

1. Proposed Rule

The proposed rules would have required a registrant to disclose its GHG emissions [888] for its most recently completed fiscal year and for the historical fiscal years included in its consolidated financial statements, to the extent such historical GHG emissions data is reasonably available.[889] The Commission based the proposed GHG emissions disclosure requirement on the

[877] *See* 17 CFR 229.1504(d).

[878] *See, e.g.,* letters from Beller *et al.*; and J. Weinstein.

[879] The nature of an offset refers to whether it represents carbon avoidance, reduction, or removal. The nature of an REC refers primarily to whether it is bundled or unbundled. The source of an offset or REC refers to the party that has issued the offset or REC. Commenters stated that investors need such detailed information about offsets or RECs in order to evaluate the effectiveness of a registrant's transition risk strategy and management of climate-related impacts on its business. *See supra* notes 831–834 and accompanying text.

[880] *See* 17 CFR 229.1504(d). At the recommendation of commenters, *see supra* note 835, to clarify that an offset can represent carbon avoidance, in addition to carbon reduction or removal, we have added ''avoidance'' to the definition of carbon offset. *See* 17 CFR 229.1500.

[881] A carbon avoidance occurs, *e.g.,* when a company protects a forest from deforestation. A carbon reduction occurs when emissions are reduced, *e.g.,* when a company switches from the use of fossil-fuel based energy to the use of wind or solar power. A carbon removal occurs when CO_2 is drawn out of the atmosphere and sequestered, *e.g.,* by carbon capture and storage technology. *See, e.g.,* letter from Ceres; and Ceres, *Evaluating the Use of Carbon Credits* (Mar. 1, 2022), available at *https://www.ceres.org/resources/reports/evaluating-use-carbon-credits.*

[885] *See, e.g.,* letter from Amer. Clean Power.

[886] *See* letter from CarbonPlan.

[887] *See* letter from J. Weinstein.

[888] We proposed to define ''greenhouse gases'' as carbon dioxide (''CO_2''); methane (''CH_4''); nitrous oxide (''N_2O''); nitrogen trifluoride (''NF_3''); hydrofluorocarbons (''HFCs''); perfluorocarbons (''PFCs''); and sulfur hexafluoride (''SF_6''). The greenhouse gases included in the proposed definition reflect the gases that are currently commonly referenced by international, scientific, and regulatory authorities as having significant climate impacts. This list of constituent greenhouse gases is consistent with the gases identified by widely used frameworks, such as the Kyoto Protocol, the UN Framework Convention on Climate Change, the U.S. Energy Information Administration, the EPA, and the GHG Protocol. *See* Proposing Release, section II.G.1.a.

[889] *See id.*

concept of scopes, which are themselves based on the concepts of direct and indirect emissions, developed by the GHG Protocol.[890] The Commission proposed to require a registrant to disclose its Scope 1 emissions, which, similar to the GHG Protocol, were defined to mean the direct GHG emissions from operations that are owned or controlled by a registrant.[891] The Commission also proposed to require a registrant to disclose its Scope 2 emissions, which, similar to the GHG Protocol, were defined to mean the indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant.[892] By sharing certain basic concepts and a common vocabulary with the GHG Protocol, the Commission intended to both elicit consistent, comparable, and reliable climate-related information for investors, and mitigate the compliance burden of the proposed rules for those registrants that are already disclosing or estimating their GHG emissions pursuant to the GHG Protocol.[893]

The Commission further proposed to require a registrant, other than an SRC, to disclose its Scope 3 emissions, which, similar to the GHG Protocol, were defined to mean all indirect GHG emissions not otherwise included in a registrant's Scope 2 emissions that occur in the upstream and downstream activities of a registrant's value chain.[894] Unlike the proposed disclosure requirement for Scopes 1 and 2 emissions, however, the Commission proposed to require the disclosure of a registrant's Scope 3 emissions only if those emissions are material, or if the registrant has set a GHG emissions reduction target or goal that includes its Scope 3 emissions.[895] The Commission proposed these limitations regarding Scope 3 disclosure in recognition of the fact that, unlike Scopes 1 and 2 emissions, Scope 3 emissions typically result from the activities of third parties in a registrant's value chain and, thus, collecting the appropriate data and calculating these emissions would potentially be more difficult than for Scopes 1 and 2 emissions. Although the Commission recognized that the disclosure of Scope 3 emissions may be important to provide investors with a complete picture of the climate-related risks that a registrant faces—particularly transition risks—it also believed it was necessary to balance the importance of Scope 3 emissions with the potential relative difficulty in data collection and measurement.[896]

For each of its Scopes 1, 2, and 3 emissions, the proposed rules would have required a registrant to disclose the emissions both disaggregated by each constituent greenhouse gas and in the aggregate, expressed in terms of CO_2e. The Commission proposed this requirement so that investors could gain decision-useful information regarding the relative risks to the registrant posed by each constituent GHG in addition to the risks posed by its total GHG emissions by scope.[897] The proposed rules would also have required a registrant to disclose the GHG emissions data in gross terms, excluding any use of purchased or generated offsets,[898] and in terms of GHG intensity.[899]

The proposed rules would have required a registrant to describe the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions metrics.[900] While the proposed GHG emissions disclosure rules shared many features with the GHG Protocol, they differed regarding the approach required to set a registrant's organizational boundaries. Those boundaries determine the business operations owned or controlled by a registrant to be included in the calculation of its GHG emissions. The proposed approach would have required a registrant to set the organizational boundaries for its GHG emissions disclosure using the same scope of entities, operations, assets, and other holdings within its business organization as those included in, and based upon the same set of accounting principles applicable to, its consolidated financial statements.[901] The Commission proposed this approach in order to provide investors a consistent view of the registrant's business across its financial and GHG emissions disclosures. The same organizational boundaries requirement would have applied to each disclosure of a registrant's Scope 1, Scope 2, and Scope 3 emissions.[902]

The rule proposal provided that a registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates. In proposing this provision, the Commission stated that while it encouraged registrants to provide as accurate a measurement of its GHG emissions as is reasonably possible, it recognized that, in many instances, direct measurement of GHG emissions at the source, which would provide the most accurate measurement, may not be possible.[903]

The Commission proposed to require the disclosure of a registrant's GHG emissions as of the end of its most recently completed fiscal year in its Exchange Act annual report for that year and in a Securities Act or Exchange Act registration statement filed subsequent to the compliance date for the climate-related disclosure rules.[904] The Commission also proposed to permit a registrant to use a reasonable estimate of its GHG emissions for its fourth fiscal quarter if no actual reported data is reasonably available, together with actual, determined GHG emissions data for its first three fiscal quarters when disclosing its GHG emissions for its most recently completed fiscal year, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter.[905] The Commission proposed this accommodation to address the concern of some commenters that a registrant may find it difficult to complete its GHG emissions calculations for its most recently completed fiscal year in time to meet its disclosure obligations for that year's Exchange Act annual report.[906]

[890] Direct emissions are GHG emissions from sources that are owned or controlled by a registrant, whereas indirect emissions are GHG emissions that result from the activities of the registrant but occur at sources not owned or controlled by the registrant. *See* World Business Council for Sustainable Development and World Resources Institute, GHG Protocol, *Corporate Accounting and Reporting Standard* (2004), available at *https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf*.

2. Comments

a. Overall GHG Emissions Disclosure Requirement

Several commenters supported the proposed requirement to disclose Scopes 1 and 2 emissions, as well as Scope 3 emissions if material or if included in a registrant's GHG emissions reduction target or goal.[907] The most common reason asserted for supporting the mandatory disclosure of GHG emissions is that such disclosure would provide investors with specific metrics to assess a registrant's exposure to transition risks.[908] Commenters also relatedly stated that mandatory disclosure of GHG emissions would enable investors to evaluate a registrant's progress towards achieving any publicly announced transition targets and goals,[909] and allow investors to compare registrants across sectors and industries to determine whether their transition strategies are aligned with investors' investment objectives.[910]

Some of these commenters also indicated that Scope 3 emissions disclosure was necessary to provide a complete picture of a registrant's transition risk exposure and therefore recommended that the Commission require the disclosure of Scope 3 emissions for all registrants.[911] Some commenters indicated that they are already using Scope 3 emissions data to make investment decisions.[912] Other commenters stated that, as registrants, they have disclosed Scope 3 emissions from certain activities and indicated their support for a Scope 3 emissions disclosure requirement with certain accommodations.[913] One commenter stated that capital markets are now assigning financial value to Scope 3 emissions metrics and, in supporting a Scope 3 emissions disclosure requirement, recommended that the Commission establish a quantitative threshold for determining the materiality and corresponding disclosure of Scope 3 emissions.[914] In addition, some commenters indicated that the disclosure of Scope 3 emissions may deter registrants from outsourcing to third-parties facilities that would otherwise count as sources of Scopes 1 and 2 emissions, thereby seeming to lower their transition risk exposure and facilitating greenwashing.[915] Some commenters indicated that while many registrants already measure and voluntarily disclose their Scopes 1 and 2 emissions, that is not the case for Scope 3 emissions.[916] Another commenter stated that publishing Scope 3 emissions information has not been cost prohibitive.[917]

While many commenters, including both issuers and investors, stated that they supported requiring Scope 1 and 2 disclosures, a significant number of commenters raised serious concerns about requiring Scope 3 emissions disclosures. Some asserted that the Commission lacks the authority to require disclosures of information that may come largely from non-public companies in registrants' value chain;[918] others questioned the value of Scope 3 emissions disclosures for investors, citing their concerns about the reliability of the metric;[919] others focused on their view of the costs and burdens of gathering, validating, and reporting the information.[920] A number of commenters representing entities not subject to the Commission's disclosure authority raised serious concerns about the costs and burdens they could face as a result of the requirement on registrants.[921] Among those costs, they highlighted not only the cost of collecting and reporting information but also the potential competitive disadvantage for smaller suppliers, if registrants select larger suppliers that may be in a better position to supply information to use in their Scope 3 emissions disclosures.[922] We discuss certain of these comments in more detail.

Some commenters supported the mandatory disclosure of Scopes 1 and 2 emissions but opposed the proposed disclosure of Scope 3 emissions.[923] Commenters stated that, because much of the data underlying Scope 3 emissions is in the control of third parties, registrants could face difficulty collecting such data, resulting in likely data gaps.[924] Commenters also asserted that the methodologies underlying the measurement and reporting of Scope 3 emissions are still too uncertain and expressed concerns about the reliability of Scope 3 emissions disclosure.[925] In light of these concerns, commenters stated that the compliance burden associated with Scope 3 emissions disclosure would be costly to registrants and that such costs were likely to exceed the benefit to investors.[926] Relatedly, one commenter raised concerns that Scope 3 emissions disclosure would not meet the materiality threshold for any registrant because of the challenges in calculating Scope 3 emissions in a reliable and consistent manner.[927]

[926] *See, e.g.,* letter from Harvard Mgmt.

[927] *See* letter from Fidelity. While not directly opposing the proposed Scope 3 emissions disclosure requirement, another commenter recommended that, due to perceived complexities in the calculation of Scope 3 emissions, the Commission reconsider this proposed requirement

One commenter supported the disclosure of Scope 3 emissions but only for activities, such as business travel, over which a registrant has influence or indirect control.[928] This commenter also recommended adopting a safe harbor for Scope 3 emissions modeled on the PSLRA safe harbors and treating Scope 3 emissions disclosure as furnished rather than filed because of the ''inherent uncertainty'' in the estimates and assumptions underlying Scope 3 emissions disclosure.[929]

Many commenters, however, generally opposed the proposed mandatory GHG emissions disclosure requirement, including the disclosure of Scopes 1 and 2 emissions.[930] Commenters stated that because the proposed disclosure of Scopes 1 and 2 emissions would require such disclosure even when a registrant has not determined climate-related risks to be material, the proposed GHG emissions disclosure requirement may not result in decision-useful information for investors.[931] Commenters also stated that because the registrants producing 85 to 90 percent of the emissions in the United States already report their emissions pursuant to the EPA's Greenhouse Gas Reporting Program, the Commission's proposed emissions disclosure requirements are unnecessary and the resulting emissions data potentially confusing for investors.[932]

Further, commenters opposed the GHG emissions disclosure requirement because of the expected high compliance costs, which they believed the Commission had underestimated.[933] One commenter further indicated that, although the Commission had stated that many companies were already disclosing their GHG emissions, according to a number of studies, most registrants have not yet measured and reported their Scopes 1 and 2 emissions, let alone their Scope 3 emissions.[934]

Commenters also expressed concerns, in connection with registrants' disclosure of Scope 3 emissions, regarding compliance costs involving private companies, which comprise a large percentage of many registrants' value chains or joint ventures, and which, through the influence of those registrants, would be compelled to measure and report their GHG emissions for the first time.[935] Some of these commenters asserted that registrants would likely incur costs to renegotiate contracts with these third parties to obtain the GHG emissions data required to comply with the proposed rules.[936] Another commenter stated that third parties that are unwilling or unable to provide their GHG emissions to registrants could eventually be excluded from consideration for contracts to provide goods or services to registrants, which could diminish opportunities for these third-parties, which may often be smaller businesses.[937]

In addition, commenters stated that, even if registrants are already voluntarily disclosing their Scopes 1 and 2 emissions pursuant to the GHG Protocol, those registrants will incur an increased compliance burden if the Commission was to adopt the proposed GHG emissions disclosure requirement, because of differences between the Commission's proposed requirement and the GHG Protocol and the TCFD.[938] These commenters also shared many of the concerns about the proposed Scope 3 emissions disclosure provision discussed above, including the difficulties of collecting emissions data from third parties in its value chain, the unreliability of reported data stemming from third parties' lack of sophisticated data collection technologies and the use of proxy data to fill data gaps, and the absence of a fully developed and uniformly accepted methodology to report Scope 3 emissions. According to commenters, these concerns would increase compliance costs and raise a registrant's liability exposure so that the total cost of the Scope 3 emissions disclosure would likely exceed its benefit.[939] Because of the difficulties and uncertainties involved in Scope 3 emissions disclosure, some commenters recommended that the reporting of Scope 3 emissions should remain voluntary.[940]

One commenter presented an alternative to the proposed GHG emissions requirement.[941] This commenter stated that, rather than adopting the proposed GHG emissions disclosure requirement, the Commission should ''mandate reporting, on a standardized form, of emissions data that registrants are required to disclose publicly pursuant to other federal, state, or foreign regulations.'' This commenter also stated that the alternative set of rules ''would, in effect, integrate the existing EPA reporting regime with the SEC's disclosure system in a manner that would be easier for investors and registrants to access and analyze.''[942] This commenter further stated that approximately 40 foreign countries already require various forms of emissions disclosures, and that California and other states are considering the adoption of their own mandatory emissions reporting regimes.[943] According to this commenter, the alternative set of rules ''would efficiently integrate, aggregate, and collate those disclosures on a single form available to all investors through

and, if it retains the requirement, then it should provide guidance around determining the materiality of Scope 3 emissions as well as more explicit standards to calculate Scope 3 emissions for key industries. *See* letter from SFERS.

[938] *See id.* Specifically, the commenter noted that the proposed rules would require a registrant's organizational boundaries to be consistent with the scope of entities included in its consolidated financial statements, whereas the GHG Protocol permits a company to choose between an equity share, operational control, or financial control method. The commenter also noted that the Commission's proposed rules would require a company to disclose its GHG emissions both on a disaggregated and aggregated basis whereas the TCFD requires a company to disclose its Scopes 1 and 2 emissions, without specifying whether the disclosure must be on a disaggregated basis. According to the commenter, these differences could result in an increased compliance burden for a registrant. We discuss additional commenter input on these differences below.

documents provided to the Commission.'' [944]

Some commenters supported the proposed exemption from Scope 3 emissions reporting for SRCs.[945] Some commenters also supported exempting SRCs from the requirement to disclose Scopes 1 and 2 emissions because, in their experience, SRCs have not historically tracked their GHG emissions and exempting SRCs from a GHG emissions reporting requirement would be consistent with a scaled disclosure regime for such issuers.[946]

Other commenters, however, opposed exempting all SRCs from the proposed Scope 3 emissions disclosure requirement.[947] Commenters stated that investors need climate-related disclosures from SRCs because SRCs are as exposed to climate-related risks as larger issuers, including risks stemming from their value chains.[948] Commenters also stated that because many large companies obtain climate-related data (*e.g.,* Scopes 1 and 2 emissions data) from small companies in their value chains, exempting SRCs from climate-related disclosures could hamper larger registrants from accurately assessing their Scope 3 emissions.[949] Instead of, or in addition to, an exemption from Scope 3 reporting, some commenters recommended providing a longer transition period for SRCs.[950]

Some commenters recommended that the Commission exempt EGCs from the proposed rules, including GHG emissions reporting requirements, or at least provide them with the same accommodations as SRCs.[951] Commenters stated that the large compliance costs of the proposed rules would likely deter many potential EGCs from going public.[952] Other commenters opposed exempting EGCs from the proposed rules because such companies, like SRCs, may be exposed to climate-related risks.[953]

b. Presentation of the GHG Emissions Metrics and Underlying Methodologies and Assumptions

Commenters expressed mixed views on the proposed requirement to disclose GHG emissions on both an aggregated and disaggregated basis. Some commenters supported the proposed requirement because each constituent gas may be subject to differing regulations and presents its own set of risks, which aggregated disclosure, by itself, would conceal.[954] Other commenters supported the proposed requirement because it would standardize the GHG emissions disclosure and help investors compare the GHG emissions data when making their risk assessments regarding a registrant.[955] Still other commenters supported the proposed requirement because it is consistent with the GHG Protocol and would generally enhance the transparency of GHG emissions disclosure, which they viewed as fundamental for investors because it helps investors understand the financial impacts that transition risk may have on a registrant's business and financial condition, including on its liquidity and capital resources.[956]

Other commenters, however, opposed the proposed requirement to disclose GHG emissions on a disaggregated basis because they believe it would impose additional costs without necessarily resulting in material disclosure.[957] Several of these commenters stated that a registrant should only be required to disclose disaggregated data for constituent gases that are material.[958] Other commenters opposed the proposed requirement because it would be difficult to obtain the necessary data for each constituent gas, particularly for Scopes 2 and 3 emissions.[959] One commenter stated that the proposed disaggregated disclosure requirement would not be compatible with certain industry standard life cycle assessment models.[960] Another commenter opposed a disaggregated disclosure requirement for GHG emissions unless a registrant's particular industry required such disclosure.[961]

Many commenters supported the proposed requirement to describe the methodology, significant inputs, and significant assumptions used to calculate a registrant's GHG emissions metrics.[962] Commenters stated that such disclosure is necessary to place the GHG emissions data in context and to help investors properly understand and interpret the reported emissions information and associated risks.[963] One commenter, however, opposed the proposed requirement, asserting that it would require extensive disclosure of information that is unlikely to be material to investors and will require significant additional effort by registrants.[964] Other commenters opposed a requirement to disclose the emission factors used when calculating GHG emissions because, in their view, such disclosure would be burdensome to produce and of limited use by investors.[965]

Many commenters stated that a registrant should be required to calculate its GHG emissions pursuant to the GHG Protocol because the GHG Protocol's methodologies have been widely accepted and requiring their adherence would promote comparability.[966] Several of these commenters further recommended that the Commission allow registrants to follow the GHG Protocol's methodology regarding setting organizational boundaries [967] instead of the proposed requirement to base a registrant's organizational boundaries on the

entities included in its consolidated financial statements. One of these commenters stated that because many registrants use the ''operational control'' approach permitted under the GHG Protocol, allowing such registrants to continue to follow the GHG Protocol in this regard would mitigate the compliance burden of GHG emissions disclosure because those registrants would not be required to implement a different approach, in particular, regarding equity method investees.[968] Some commenters, however, stated that a registrant should be permitted to follow other climate-related standards, such as certain International Organization for Standardization (ISO) standards, used by some companies when calculating their GHG emissions.[969]

Several commenters supported the proposed requirement to disclose gross emissions by excluding any purchased or generated carbon offsets.[970] Commenters stated that requiring the disclosure of gross emissions would enable investors to gain a full picture of a registrant's emissions profile and better assess its transition risk exposure.[971] Some commenters also pointed to perceived problems in carbon offset markets regarding the quality and permanence of offsets when supporting a gross emissions disclosure requirement.[972] Other commenters stated that a registrant should be required to disclose both a total amount with, and a total amount without, the use of offsets for each scope of emissions because such disclosure would increase transparency on offset use, which is critical to understanding how a registrant is managing transition risk to its business.[973]

Some commenters, however, opposed the proposed requirement to exclude carbon offsets when disclosing GHG emissions.[974] These commenters stated that the purchase of carbon offsets is a legitimate means for a registrant to reduce its carbon emissions and expressed the view that high-quality carbon offsets should play a significant role in a transition to a lower carbon economy.[975]

A number of commenters supported the proposed requirement to disclose GHG emissions in terms of GHG intensity.[976] These commenters stated that investors would find the disclosure of GHG intensity useful because it would help them assess a registrant's progress in achieving its emissions management and reduction goals, put in context its emissions in relation to its scale, and facilitate comparing the registrant's emissions efficiency with other registrants in the same industry.[977] Some commenters also noted that the TCFD recommends the disclosure of GHG emissions both in absolute terms and terms of intensity because each metric serves a different purpose.[978] For example, one commenter stated that the disclosure of emissions in absolute terms provides necessary baseline emissions data whereas normalizing the data using an intensity metric allows for a focus on emissions efficiency per unit of production relevant to the registrant's industry.[979] While some commenters supported the proposed requirement to disclose GHG intensity in terms of both metric tons of CO_2e per unit of total revenue and per unit of production relevant to the registrant's industry,[980] other commenters recommended making the final rules more flexible by expressly permitting registrants to use other GHG intensity metrics.[981]

Some commenters, however, opposed the proposed GHG intensity disclosure requirement.[982] These commenters stated that the proposed requirement to disclose a registrant's GHG emissions per unit of total revenue was unnecessary because investors can easily calculate this metric from a registrant's gross GHG emissions divided by its total revenues.[983] Some commenters further stated that the proposed requirement to disclose a registrant's GHG emissions per unit of production would be unworkable for many registrants with different product lines, even within the same industry, and would not result in comparable disclosure for investors.[984] Consequently, according to these commenters, GHG intensity disclosure should only be voluntary.[985]

Several commenters supported the proposed provision that would allow a registrant to use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates.[986] One commenter stated that the proposed provision would encourage the disclosure of GHG emissions.[987] Other commenters supported the proposed provision because the reporting of GHG emissions often relies on the use of estimates, such as emission factors and location-based data.[988] Another commenter stated that, while the use of estimates would primarily be needed for the disclosure of Scope 3 emissions, in certain instances registrants may need to estimate their Scope 1 and 2 emissions if they are not able to access the necessary information.[989] One other commenter stated that the use of

estimates should not be permitted when actual data is available.[990]

c. Timeline for Reporting GHG Emissions Metrics

Some commenters supported the proposed requirement to provide GHG emissions disclosure for the registrant's most recently completed fiscal year and for the appropriate, corresponding historical fiscal years included in the registrant's consolidated financial statements in the filing, to the extent such historical GHG emissions data is reasonably available.[991] Other commenters, however, stated that the GHG emissions disclosure requirement should be applied initially only to the most recently completed fiscal year following the date of compliance, with GHG emissions disclosure for historical periods required prospectively only.[992]

Several commenters supported the proposed requirement to disclose a registrant's GHG emissions as of fiscal year-end in its corresponding Exchange Act annual report.[993] Commenters stated that the proposed timeline for reporting a registrant's GHG emissions should be consistent with the timeline for its financial reporting to maximize the use of the GHG emissions data and to enhance the data's comparability.[994] One commenter further stated that the timing of a registrant's emissions data disclosure should be coincident with its financial statement data reporting because the objective of reporting climate-related data for investors is to understand the correlation with financial performance.[995]

Many other commenters [996] opposed the proposed requirement to disclose GHG emissions metrics in a registrant's Exchange Act annual report.[997] Commenters stated that, because of the difficulty required to calculate, verify, and disclose a registrant's GHG emissions, and because much of the necessary data for such disclosure does not become available along the same timeline as its other Exchange Act annual reporting requirements, the Commission should permit a registrant to provide its GHG emissions disclosure sometime after the Exchange Act annual report deadline.[998] Commenters recommended that the Commission permit registrants to include the GHG emissions disclosure either in a separate report that would be due later than the deadline for filing their annual report on Form 10–K or Form 20–F,[999] in a Form 10–Q or Form 6–K filed subsequent to the due date for the Exchange Act annual report,[1000] or in an amendment to the Exchange Act annual report.[1001] Commenters recommended varying deadlines for reporting GHG emissions, such as 120 days [1002] or 180 days following the end of its most recently completed fiscal year,[1003] or the due date for the Form 10–Q for the registrant's first [1004] or second fiscal quarter.[1005] Commenters further stated that providing a later deadline for GHG emissions disclosure would better align with the GHG emissions reporting required by other administrative agencies.[1006] In addition, commenters stated that providing a later deadline for GHG emissions disclosure would be preferable to the proposed use of a fourth quarter estimate, which would likely require an additional submission that would be burdensome for registrants and potentially confusing for investors.[1007]

3. Final Rule

a. Overview of the GHG Emissions Disclosure Requirement

As many commenters have indicated, investors view information about a registrant's GHG emissions, including its Scopes 1 and 2 emissions, as a central measure and indicator of the registrant's exposure to transition risk as well as a useful tool for assessing its management of transition risk and understanding its progress towards a registrant's own climate-related targets or goals.[1008] Because such information can be necessary to inform an investor's understanding of the overall impact of transition risk and related targets and goals on a registrant's business, results of operations, financial condition, and prospects, the final rules include a Scopes 1 and 2 emissions disclosure requirement (Item 1505), although modified from the rule proposal. We recognize commenters' concerns about the potentially high cost of compliance associated with the proposed GHG emissions disclosure requirement, including Scopes 1 and 2 emissions,[1009] as well as concerns about the current availability and reliability of the underlying data for Scope 3 emissions.[1010] To help address these concerns, instead of requiring, as proposed, the disclosure of Scopes 1 and 2 emissions by all registrants regardless of their materiality, the final rules will require the disclosure of Scope 1 emissions and/or Scope 2 emissions metrics [1011] by LAFs and AFs

Corp. Gov.; Walmart; and Williams Cos.

[997] Commenters also expressed timing concerns regarding the proposed requirement to include the GHG emissions disclosure in a Securities Act or Exchange Act registration statement. In particular, commenters raised concerns with applying the proposed climate disclosure rules to registrants in initial public offerings or to companies that are the target of a Form S–4 or F–4 transaction. We discuss these comments in section II.L below.

[1011] The concept of scopes was developed as part of the GHG Protocol. *See* World Business Council for Sustainable Development and World Resources Institute, GHG Protocol, *Corporate Accounting and Reporting Standard* (2004), available at *https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf.* We understand that some

that are not SRCs or EGCs, on a phased in basis,[1012] if such emissions are material.[1013]

As commenters have noted, some registrants already measure their GHG emissions, typically Scopes 1 and 2 emissions,[1014] and some use the data to manage their transition risk exposure or monitor their progress towards achieving climate-related targets and goals.[1015] Many other registrants, however, have determined that climate is not a material risk to their business, or are not currently measuring their GHG emissions.[1016]

In balancing these considerations, we are not mandating Scopes 1 and/or 2 emissions disclosures from all registrants. Rather, under the final rule, if either or both of those categories of GHG emissions are material, and the registrant is an LAF or an AF other than an SRC or EGC, it must disclose its Scopes 1 and/or 2 emissions metrics.[1017] As we stated when discussing a registrant's determination of material impacts of climate-related risks, we intend that a registrant apply traditional notions of materiality under the Federal securities laws when evaluating whether its Scopes 1 and/or 2 emissions are material.[1018] Thus, materiality is not determined merely by the amount of these emissions. Rather, as with other materiality determinations under the Federal securities laws and Regulation S–K, the guiding principle for this determination is whether a reasonable investor would consider the disclosure of an item of information, in this case the registrant's Scope 1 emissions and/or its Scope 2 emissions, important when making an investment or voting decision or such a reasonable investor would view omission of the disclosure as having significantly altered the total mix of information made available.

A registrant's Scopes 1 and/or 2 emissions may be material because their calculation and disclosure are necessary to allow investors to understand whether those emissions are significant enough to subject the registrant to a transition risk that will or is reasonably likely to materially impact its business, results of operations, or financial condition in the short- or long-term. For example, where a registrant faces a material transition risk that has manifested as a result of a requirement to report its GHG emissions metrics under foreign or state law [1019] because such emissions are currently or are reasonably likely to be subject to additional regulatory burdens through increased taxes or financial penalties, the registrant should consider whether such emissions metrics are material under the final rules. A registrant's GHG emissions may also be material if their calculation and disclosure are necessary to enable investors to understand whether the registrant has made progress toward achieving a target or goal or a transition plan that the registrant is required to disclose under the final rules.

Conversely, the fact that a registrant is exposed to a material transition risk does not necessarily result in its Scope 1 and Scope 2 emissions being de facto material to the registrant. For example, a registrant could reasonably determine that it is exposed to a material transition risk for reasons other than its GHG emissions, such as a new law or regulation that restricts the sale of its products based on the technology it uses, not directly based on its emissions.[1020] Such a risk may trigger disclosure under other provisions of subpart 1500 but may not necessarily trigger disclosure of Scope 1 and Scope 2 emissions information under Item 1505.[1021]

This revised approach to GHG emissions disclosure will provide investors with information they need to make informed investment and voting decisions while addressing concerns regarding the disclosure of GHG emissions data that may be immaterial. This approach will also limit the compliance costs of the final rules, as it will *not* require disclosure of GHG emissions data where such data is immaterial. Basing the GHG emissions disclosure requirement on traditional notions of materiality, which are fundamental to U.S. securities laws and the Commission's securities regulation, is more appropriate than a requirement that relies on GHG emissions disclosure laws or regulations required by other Federal agencies and foreign or state jurisdictions, as one commenter recommended.[1022] Those other laws or regulations may be adopted to serve other purposes and may be presented without the additional disclosures that supplement the ''total mix'' of information investors need for context and to understand why the GHG emissions information is material.

We acknowledge, however, that registrants could incur costs to assess and monitor the materiality of their emissions, even in situations in which they ultimately determine that they do not need to provide disclosure, and that for some registrants these costs could be significant, especially if firms are not already tracking this information for internal purposes.[1023] Mindful of these costs, we are further limiting the GHG emissions disclosure requirement to LAFs and AFs that are not SRCs or EGCs and on a phased in basis. These further limitations will help ensure that any registrants potentially subject to the final rule have sufficient resources and time to prepare for what we

registrants may measure their GHG emissions pursuant to other well-established standards, such as ISO 14064 and related ISO standards, which do not refer to scopes. For the purposes of the final rules, we have defined ''Scope 1 emissions'' and ''Scope 2 emissions,'' respectively, as a registrant's direct emissions and indirect emissions largely from the generation of purchased or acquired electricity consumed by the registrant's operations. We intend these definitions to include substantially similar emissions as those measured pursuant to the ISO standards. Accordingly, registrants have flexibility to leverage standards of their choice in calculating and disclosing GHG emissions metrics required by the final rules, including the GHG Protocol or relevant ISO standards, or other standards that may be established over time.

[1012] As discussed in section II.O below, LAFs will have a one-year transition period before they are required to comply with the final rule's GHG emissions disclosure requirements. AFs that are not SRCs or EGCs will be required to comply with the final rule's GHG emissions disclosure requirements two years following the GHG emissions compliance date for LAFs.

[1013] *See* 17 CFR 229.1505(a)(1). To the extent Scope 1 and/or 2 emissions disclosure are required under the final rules, 17 CFR 230.409 or 17 CFR 240.12b–21, which provide accommodations for information that is unknown and not reasonably available, would be available if its conditions are met.

[1014] *See supra* note 916 and accompanying text.

[1015] *See id.*

[1016] Although the TCFD has reported a significant increase in the number of companies that have publicly disclosed their GHG emissions across the globe in recent years, a minority of North American and U.S. companies have done so. The TCFD recently reported that only 30% of North American companies surveyed reported their Scopes 1, 2, and 3 emissions in 2021. *See* TCFD, *supra* note 768.

[1017] If a registrant is an LAF or an AF other than an SRC or EGC and its Scope 1 emissions are material but its Scope 2 emissions are not material, then, under the final rules, the registrant must disclose its Scope 1 emissions and is not required to disclose its Scope 2 emissions (and vice versa if its Scope 2 emissions are material but its Scope 1 emissions are not). If a registrant's Scope 1 and Scope 2 emissions both are material, then it must disclose both categories of emissions.

[1018] *See, e.g., supra* note 381 and accompanying text.

[1019] *See supra* section II.A.3 (discussing adoption of the ISSB climate disclosure standard and the foreign jurisdictions that intend to implement the standard and California's recently adopted laws requiring certain large corporations to disclose their GHG emissions metrics and their climate-related financial risks).

acknowledge could be a significant additional compliance obligation.[1024]

We recognize that many commenters supported the proposed requirement for disclosure of Scopes 1 and 2 emissions for all registrants. Nevertheless, mindful of the attendant costs, we believe that the final rules present an appropriate means to achieve the primary benefits of GHG emissions disclosure, namely: providing investors with material metrics that will aid in the assessment of transition risk for those registrants that have identified a material climate risk; and facilitating investors' evaluation of a registrant's progress towards achieving a material target or goal and the attendant effects on the registrant's business, results of operations, or financial condition. While the final GHG emissions disclosure provision will not apply to as many registrants or achieve the same level of comparability as may have been achieved under the proposed rules, on balance, we believe that, coupled with the other disclosures required under subpart 1500 and the structured data requirements of the final rules, investors will have sufficient information to assess the operational and financial impact of transition risks and strategies on registrants and compare such impacts across registrants.

b. Presentation of the GHG Emissions Metrics and Disclosure of the Underlying Methodologies and Assumptions

In a change from the rule proposal, which would have required the disclosure of a registrant's GHG emissions both disaggregated by each constituent GHG and in the aggregate, the final rule will require the disclosure of any described scope of emissions to be expressed in the aggregate in terms of CO_2e.[1025] This change is intended to address the concern of some commenters that the proposed approach would impose additional burdens and costs on registrants without necessarily resulting in material information for investors.[1026] In addition, if a registrant is required to disclose its Scope 1 and/or Scope 2 emissions, and any constituent gas of the disclosed emissions is individually material, it must also disclose such constituent gas disaggregated from the other gases.[1027] For example, if a registrant has included a particular constituent gas, such as methane, in a GHG emissions reduction target that is disclosed pursuant to Item 1504(a) because it is reasonably likely to materially affect the registrant's business, such constituent gas may be material and, therefore, required to be disclosed in disaggregated fashion. The required disaggregated disclosure of an individually material gas will help inform investors about the degree to which a registrant is exposed to transition risk as governments and markets may treat the individual GHG components differently.[1028] As explained in the Proposing Release, requiring a standard unit of measurement for GHG emissions with which many registrants are familiar should simplify the disclosure for investors and enhance its comparability across registrants with different types of GHG emissions.[1029]

Consistent with the rule proposal, under the final rule, a registrant that is required to disclose its Scope 1 and/or Scope 2 emissions must disclose those emissions in gross terms by excluding the impact of any purchased or generated offsets.[1030] As noted by some commenters, this requirement will enable investors to gain a more complete understanding of the full magnitude of a registrant's exposure to transition risk and to assess the extent to which a registrant relies upon purchased or generated offsets, if the registrant provides disclosure about the offsets pursuant to Item 1504, and better compare such exposure across registrants.[1031] Information about the degree to which a registrant's strategy relies on offsets is increasingly important for investors not only because their use exposes the registrant to offset market fluctuations but also because such use may indicate heightened transition risk exposure to the extent governments seek to regulate their use.[1032]

Also, similar to the rule proposal,[1033] the final rule will require a registrant to describe the methodology, significant inputs, and significant assumptions used to calculate the registrant's disclosed GHG emissions.[1034] We continue to believe that this information is important to investors because it will help them understand GHG emissions disclosures by providing important contextual information, such as the scope of the entities included in the GHG emissions results that may be subject to transition risk, and inform comparability across registrants while also providing registrants with flexibility to determine the appropriate methodologies and assumptions to use based on their own facts and circumstances. However, we have modified the proposed requirement to provide registrants with greater flexibility to present this information in a manner that best fits with their particular facts and circumstances, as several commenters recommended.[1035] For example, like the rule proposal, the final rule will require a registrant to disclose the organizational boundaries used when calculating its Scope 1 emissions and/or its Scope 2 emissions.[1036] Unlike the rule proposal, however, which would have required a registrant to use the same scope of entities and other assets included in its consolidated financial statements when determining the organizational boundaries for its GHG emissions calculation,[1037] the final rule provides that the registrant must disclose the method used to determine the organizational boundaries, and if the organizational boundaries materially differ from the scope of entities and operations included in the registrant's consolidated financial statements, the registrant must provide a brief

[1024] As discussed below, neither EGCs nor SRCs will be required to disclose their Scopes 1 and 2 emissions under the final rules. *See* 17 CFR 229.1505(a)(3)(i).

[1025] *See* 17 CFR 229.1505(a)(2)(i).

[1026] *See supra* note 957 and accompanying text.

[1027] *See* 17 CFR 229.1505(a)(2)(i).

[1028] For example, the EPA recently adopted a new regulation to curb methane emissions, which could be a source of transition risk for some registrants. *See* EPA, *EPA's Final Rule for Oil and Natural Gas Operations Will Sharply Reduce Methane and Other Harmful Pollution* (Dec. 2, 2023), available at *https://www.epa.gov/controlling-air-pollution-oil-and-natural-gas-operations/epas-final-rule-oil-and-natural-gas.*

[1029] *See* Proposing Release, section II.G.1.

[1030] *See* 17 CFR 229.1505(a)(2)(ii). While the rule specifies that gross emissions should be calculated without taking into account any purchased or generated offsets, the extent to which a registrant will exclude RECs from its gross emissions will depend on the methodology the registrant chooses to use. As described in the Proposing Release, section II.G.2., there are two common methods for calculating Scope 2 emissions: the market-based method and the location-based method. The market-based method may involve the use of RECs. *See* World Resources Institute, *GHG Protocol Scope 2 Guidance (2015),* Chapter 4, available at *https://ghgprotocol.org/sites/default/files/standards/Scope%202%20Guidance_Final_Sept26.pdf.* A registrant is required to describe its methodology, and in the case of Scope 2 emissions, it should include a description of whether and how RECs factor into its gross emissions calculation.

[1031] *See, e.g.,* letters from ICI; and Wellington Mgmt.

[1032] *See* California Legislative Information, Assembly Bill No. 1305, *Voluntary carbon market disclosures* (Oct. 7, 2023), available at *https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202320240AB1305.*

[1033] *See* Proposing Release, section II.G.2.

[1034] *See* 17 CFR 229.1505(b)(1).

[1035] *See, e.g.,* letters from ABA; Chamber; SIFMA; and Soc. Corp. Gov.

[1036] Like the rule proposal, the final rule defines ''organizational boundaries'' to mean the boundaries that determine the operations owned or controlled by a registrant for the purpose of calculating its GHG emissions. *See* 17 CFR 229.1500.

[1037] *See* Proposing Release, section II.G.2.a.

explanation of this difference in sufficient detail for a reasonable investor to understand. In addition, when describing its organizational boundaries, a registrant must describe the method used to determine those boundaries.[1038] Under this approach, a registrant will have flexibility to use, for example, one of the methods for determining control under the GHG Protocol, including the operational control approach, as recommended by some commenters,[1039] as long as it discloses the method used, and provides investors with information material to understanding the scope of entities and operations included in the GHG emissions calculation as compared to those included in its financial statements. We have made this change to address widely shared concerns about the compliance burden and associated costs of the more prescriptive aspects of the rule proposal.[1040] At the same time, requiring the registrant to provide a brief explanation of any material difference from the scope of entities and operations included in the consolidated financial statements will help avoid any potential confusion on the part of investors about the scope of entities included in the GHG emissions calculation and help them assess the extent of the registrant's transition risk-related financial impacts.

Similarly, we have also streamlined the methodology disclosure provision by, for example, specifying that a *brief* discussion, in sufficient detail for a reasonable investor to understand, is required of the operational boundaries used,[1041] including the approach to categorization of emissions and emissions sources.[1042] This provision is intended to provide investors with a general understanding of how the registrant determined which sources of emissions to include when calculating its direct emissions (Scope 1) and indirect emissions (Scope 2) to facilitate investors' understanding of the GHG emissions results and enhance their comparability across registrants while avoiding extensive disclosure that may be more burdensome for registrants to produce or investors to process.

Whereas the rule proposal would have required the disclosure of the calculation approach, including any emission factors used and the source of the emission factors,[1043] and any calculation tools used to calculate the GHG emissions, the final rule requires a *brief* description of, in sufficient detail for a reasonable investor to understand, the protocol or standard used to report the GHG emissions, including the calculation approach, the type and source of any emission factors used, and any calculation tools used to calculate the GHG emissions.[1044] Rather than potentially requiring a lengthy explanation of the calculation approach used, this provision will require a registrant to disclose whether it calculated its GHG emissions metrics using an approach pursuant to the GHG Protocol's Corporate Accounting and Reporting Standard, an EPA regulation, an applicable ISO standard,[1045] or another standard. Pursuant to this provision, we would expect a registrant to also disclose whether it calculated its Scope 2 emissions using a particular method (which may differ from the method used to calculate Scope 1 emissions, to the extent both Scope 1 and 2 emissions are required to be disclosed under the final rules), such as the location-based method, market-based method, or both.[1046] Similarly, a registrant should disclose the identity of any calculation tools used, such as those provided by the GHG Protocol or pursuant to GHG emissions calculation under the ISO standards. In addition, by modifying the proposed requirement to disclose any emission factors used, we are clarifying that the final rule will not require the disclosure of any quantitative emission factors used. Instead, the final rule will require a registrant to disclose the type and source of any emission factors used, such as the EPA's emission factors for stationary combustion and/or mobile combustion of various fuel types.[1047]

Requiring a brief description of the protocol or standard used to calculate a registrant's GHG emissions, together with the type and source of any emission factors used, will provide investors with information that is important to understanding the reported emissions data and associated risks[1048] without burdening registrants by requiring disclosure of detailed information that may not be material.[1049] Such disclosure should assist investors in understanding the emission disclosures and promote consistency and comparability over time. For example, with the required disclosures, an investor will be able to evaluate the registrant's selected emission factor(s) in the context of its operations and assess whether changes in reported emissions over time reflect changes in actual emissions in accordance with its strategy or simply a change in calculation methodology.

Unlike the rule proposal, which would have required a registrant to disclose its GHG emissions in both absolute terms and terms of intensity,[1050] under the final rule, registrants will not be required to disclose its GHG emissions in terms of intensity. As some commenters noted, the proposed intensity disclosure requirement is not necessary because investors should be able to calculate a registrant's GHG emissions per unit of total revenue by dividing a registrant's gross GHG emissions by its total revenues.[1051] Eliminating the GHG intensity disclosure requirement will also help lower the final rules' compliance burden. Although a registrant may choose to disclose its GHG emissions in terms of intensity, it is not required under the final rule.

Like the rule proposal, the final rule provides that a registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates.[1052] This explanation will

[1038] *See* 17 CFR 229.1505(b)(1)(i).

[1039] *See supra* note 967 and accompanying text.

[1040] *See supra* notes 956 and 968 and accompanying text.

[1041] Like the rule proposal, the final rule defines ''operational boundaries'' to mean the boundaries that determine the direct and indirect emissions associated with the business operations owned or controlled by a registrant. *See* 17 CFR 229.1500.

[1042] *See* 17 CFR 229.1505(b)(1)(ii).

[1043] Emission factors are ratios that typically relate GHG emissions to a proxy measure of activity at an emissions source. Examples of activity data reflected in emission factors include kilowatt-hours of electricity used, quantity of fuel used, output of a process, hours of operation of equipment, distance travelled, and floor area of a building. The EPA has published a series of commonly used emission factors. *See* EPA, *Emission Factors for Greenhouse Gas Inventories* (Apr. 2021), available at *https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors_apr2021.pdf. See also* 17 CFR 229.1500 (definition of ''emission factors'').

[1044] *See* 17 CFR 229.1505(b)(1)(iii).

[1045] *See supra* note 969.

[1046] The market-based method and the location-based method are two common methods for calculating Scope 2 emissions for purchased electricity. For a description of these methods, *see* World Resources Institute, *GHG Protocol Scope 2 Guidance,* Chapter 7, available at *https://files.wri.org/d8/s3fs-public/ghg-protocol-scope-2-guidance.pdf;* and EPA Center for Corporate Climate Leadership, *Scope 1 and Scope 2 Inventory Guidance,* available at *https://www.epa.gov/climateleadership/scope-1-and-scope-2-inventory-guidance.*

[1047] The EPA has published a set of emission factors based on the particular type of source (*e.g.,* stationary combustion, mobile combustion, refrigerants, and electrical grid, among others) and type of fuel consumed (*e.g.,* natural gas, coal or coke, crude oil, and kerosene, among many others. *See* EPA, Emission Factors for Greenhouse Gas Inventories (Apr. 2021), available at *https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors_apr2021.pdf.*

[1048] *See supra* note 963 and accompanying text.

[1049] *See supra* note 964 and accompanying text.

[1050] *See* Proposing Release, section II.G.1.

[1051] *See supra* note 983 and accompanying text.

[1052] *See* 17 CFR 229.1505(b)(2).

help investors understand and assess the GHG emissions disclosures and facilitate comparability across registrants. We recognize that, in many instances, direct measurement of GHG emissions at the source, which would provide the most accurate measurement, may not be possible. We also recognize that it is common practice under various GHG emissions reporting methodologies to use estimates, such as emission factors, when calculating a company's Scopes 1 and 2 emissions.[1053] A registrant may use reasonable estimates under the final rule as long as it describes the underlying assumptions and explains its reasons for using the estimates. Allowing for the use of reasonable estimates with an explanation will help lower the compliance burden for a registrant that must disclose its GHG emissions without, in our view, unduly undermining comparability and reliability of the GHG emissions metrics disclosure.

c. Exclusions From the GHG Emissions Disclosure Requirement

We are not adopting a provision that would require a registrant to disclose its Scope 3 emissions at this time. We are mindful of the potential burdens such a requirement could impose on registrants and other parties as well as questions about the current reliability and robustness of the data associated with Scope 3 emissions, as noted by commenters.[1054] However, we also recognize that, as some commenters indicated, disclosure of a registrant's Scope 3 emissions, including emissions from its suppliers (*i.e.,* upstream emissions) and its customers or consumers (*i.e.,* downstream emissions), or at least from those parties in its value chain that have significant emissions, may allow investors to develop a fuller picture of the registrant's transition risk exposure and evaluate and compare investment risks across registrants more thoroughly.[1055] Moreover, because many registrants will be required to disclose their Scope 3 emissions under foreign or state law or regulation,[1056] Scope 3 calculation methodologies may continue to evolve, mitigating many of the concerns noted by commenters about the disclosure of Scope 3 emissions. While such developments may encourage more registrants to disclose their Scope 3 emissions in Commission filings, at the present time, because of the potential costs and difficulties related to Scope 3 emissions reporting, the disclosure of Scope 3 emissions in Commission filings will remain voluntary.

Unlike the proposed rule, which would have exempted SRCs from the requirement to disclose Scope 3 emissions,[1057] the final rule will exempt SRCs and EGCs from any requirement to disclose its GHG emissions, including its Scopes 1 and 2 emissions.[1058] Such treatment is consistent with the scaled disclosure approach that is sometimes adopted for SRCs and EGCs.[1059] We understand from commenters that SRCs and EGCs will face the greatest burden and costs in attempting to comply with the GHG emissions disclosure requirement as compared to the other climate-related disclosure requirements.[1060] Accordingly, exempting SRCs and EGCs from this requirement but requiring them to comply with the final rules' other climate-related disclosure requirements should allow investors in SRCs and EGCs to gain a better understanding of the material climate risks such companies may be facing while limiting the overall costs to these registrants by alleviating the significant burdens associated with GHG emissions disclosure.

The final rules provide that a registrant is not required to include GHG emissions from a manure management system when disclosing its overall Scopes 1 and 2 emissions pursuant to 17 CFR 229.1505(a)(1).[1061] This exclusion from the GHG emissions disclosure requirement has been included in light of the 2023 Consolidated Appropriations Act, which provides that none of the funds made available under that Act or any other Act (including to the Commission) may be used to implement ''any provision in a rule, if that provision requires mandatory reporting of greenhouse gas emissions from manure management systems.'' [1062] Accordingly, an agricultural producer or other registrant that operates a manure management system will not be required to include GHG emissions from that system when disclosing its overall Scopes 1 and 2 emissions for so long as implementation of such a provision is subject to restrictions on appropriated funds or otherwise prohibited by Federal law.

d. Timeline for Reporting GHG Emissions Metrics

Under the final rules, if a registrant is required to disclose its Scope 1 and/or Scope 2 emissions, it must disclose those emissions for its most recently completed fiscal year and, to the extent previously disclosed in a Commission filing, for the historical fiscal year(s) included in the consolidated financial statements included in the filing.[1063] By contrast, a registrant that has not previously disclosed its Scopes 1 and 2 emissions in a Commission filing for a particular historical fiscal year will not be required to estimate and report those emissions for such period.[1064] Limiting the historical period disclosure requirement for GHG emissions in this fashion is largely consistent with the recommendation of commenters that any GHG emissions disclosure not be required for historical periods prior to the initial compliance date [1065] and should help mitigate the compliance costs for registrants that have not yet disclosed their Scopes 1 and 2 emissions in a Commission filing. This approach is also consistent with the approach taken for the disclosure of financial effects for historical periods under new Article 14 of Regulation S–X,[1066] as well as with approaches taken

[1053] *See, e.g.,* letter from PWC.

[1054] *See supra* notes 924–925 and accompanying text.

[1055] *See, e.g.,* letters from AllianceBernstein; CalPERS; Miller/Howard; Trillium; and Wellington Mgmt.

[1056] *See supra* section II.A.3.

[1057] *See* Proposing Release, section II.G.3.

[1058] *See* 17 CFR 229.1505(a)(3)(i). A registrant will be exempt from any requirement to disclose its GHG emissions for any fiscal year in which it qualified as an SRC. A registrant that previously qualified as an SRC also will be exempt from the GHG emissions disclosure requirements in the first fiscal year in which it no longer so qualifies because a registrant must reflect the determination of whether it came within the definition of smaller reporting company in its quarterly report on Form 10–Q for the first fiscal quarter of the next year, *see* 17 CFR 240.12b–2, which will be after the date of the annual report on Form 10–K in which the GHG emissions disclosure is required. This remains the case notwithstanding the permissibility under the final rules (as discussed *infra* Section II.H.3.d) of a registrant incorporating by reference its GHG emissions disclosures required in its Form 10–K from its Form 10–Q for the second quarter of that next fiscal year.

[1059] *See supra* notes 946 and accompanying text.

[1060] *See, e.g.,* letter from BIO (When recommending adoption of additional exemptions for small companies from the proposed rules, this commenter stated that ''67% of BIO members surveyed said that they currently do not report on carbon emissions, and a similar majority have significant concerns with the ability to collect and accurately report without significant liability.'').

[1061] *See* 17 CFR 229.1505(a)(3)(ii).

[1062] Public Law 117–328, div. G, tit. IV, § 437, 136 Stat. 4459, 4831 (2022).

[1063] *See* 17 CFR 229.1505(a)(1).

[1064] For example, if a registrant becomes an LAF during the fiscal year, it is required to present these disclosures for the most recently completed fiscal year in which it became an LAF; however, it is not required to provide those disclosures for the prior fiscal years included in its filing when it was not an LAF, to the extent that information was not previously required to be disclosed.

[1065] *See supra* note 992 and accompanying text.

[1066] *See infra* section II.K.

for other recently adopted changes to Regulation S–K.[1067]

We recognize that, as many commenters have stated, a registrant may have difficulty measuring and reporting its GHG emissions as of fiscal year-end by the same deadline for its Exchange Act annual report.[1068] To address this concern, the final rules provide that any GHG emissions metrics required to be disclosed pursuant to Item 1505 in an annual report filed with the Commission on Form 10–K may be incorporated by reference from the registrant's Form 10–Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates.[1069] Many commenters requesting additional time to disclose GHG emissions metrics indicated that most registrants currently report such metrics outside of Commission filings after completion of the second fiscal quarter. Accordingly, this change will help alleviate the challenges with disclosing such data in the annual report and be consistent with current market practices while still providing investors with timely GHG emissions information.

To provide comparable treatment for foreign private issuers, the final rules provide that the GHG emissions metrics required to be disclosed pursuant to Item 1505 may be disclosed in an amendment to their annual report on Form 20–F, which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions metrics disclosure relates. This corresponds approximately to the second quarter Form 10–Q filing deadline and should provide foreign private issuers with an appropriate and similar amount of time as domestic registrants to provide the required GHG emissions metrics disclosure.[1070] In order to treat the GHG emissions disclosure as filed and maintain the same level of liability as for corresponding disclosure by domestic registrants, a foreign private issuer must provide its GHG emissions disclosure in an amendment to its annual report on Form 20–F instead of on a Form 6–K.

Whether a registrant is a domestic registrant or foreign private issuer, the final rules provide that the registrant must include an express statement in its annual report indicating its intention to incorporate by reference or amend its filing for this information.[1071] This requirement will provide notice to investors regarding where to find the required GHG emissions metrics disclosure and is consistent with the general notice requirements for information that is being incorporated by reference under existing Securities Act and Exchange Act rules.[1072]

To provide similar treatment to GHG emissions metrics required to be disclosed under Item 1505 in a Securities Act or Exchange Act registration statement, the final rules state that the GHG emissions metrics must be provided as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement.[1073] For example, if a calendar year-end LAF files a Form S–1 registration statement in 2028, which goes effective on or after Monday, August 7, 2028, its GHG emissions metrics disclosure must be as of 2027 since the Form S–1's date of effectiveness is at least 225 days after the 2027 fiscal year-end. If, however, the Form S–1 registration statement goes effective on Friday, August 4, 2028, which is less than 225 days after its 2027 fiscal year-end, the registrant may provide its GHG emissions metrics disclosure as of its 2026 fiscal year-end.[1074]

I. Attestation Over GHG Emissions Disclosure (Item 1506)

1. Overview

a. Proposed Rules

The Commission proposed to require a registrant, including a foreign private issuer, that is an AF or an LAF to include in the relevant filing an attestation report covering the disclosure of its Scope 1 and Scope 2 emissions and to provide certain related disclosures about the service provider providing the attestation report.[1075] The proposed rules also included requirements related to the service provider and requirements for the engagement and the attestation report.[1076] The proposed rules would have required the attestation engagement to be performed by the service provider at a ''limited assurance'' level[1077] for fiscal years 2 and 3 after the Scopes 1 and 2 emissions disclosure compliance date and at a reasonable assurance level[1078] for fiscal year 4 and beyond.[1079] The Commission explained that during the transition period when limited assurance would be required, an AF or an LAF would be permitted to obtain ''reasonable assurance'' of its Scope 1 and 2 emissions disclosure at its option.[1080]

Also at its option, an AF or an LAF would have been permitted under the proposed rules to obtain any level of assurance over climate-related disclosures that are not subject to the

[1067] See, *e.g.,* Management's Discussion and Analysis, Selected Financial Data, and Supplementary Financial Information, Release No. 33–10890 (Nov. 19, 2020) [86 FR 2080 (Jan. 11, 2021)]; and Pay Versus Performance, Release No. 34–95607 (Aug. 25, 2022) [87 FR 55134 (Sept. 8, 2022)], which provided similar transition periods.

[1068] *See supra* note 998 and accompanying text.

[1069] *See* 17 CFR 229.1505(c)(1). A registrant may also include this in an amended Form 10–K filed no later than the due date for the registrant's second quarter Form 10–Q. This deadline would also apply to transition year registrants, *i.e.,* to registrants that have changed their fiscal year and the difference in reporting periods is so small that they are not required to file a Form 10–KT and can report the difference in a Form 10–Q.

[1070] *See* Form 10–Q, General Instruction A.1, which states that the Form 10–Q must be filed within 40 days after the end of the fiscal quarter if the registrant is an LAF or AF (and, if that 40 day period falls on a Saturday, the filing is not due until the following Monday, which is the 42nd day after the end of the quarter). The end of the second fiscal quarter corresponds to 181 days following the most recently completed fiscal year (and 182 days in a leap year). The 225-day deadline is intended to account for the upper limit combined periods (42 days + 182 days = 224 days).

[1071] *See* 17 CFR 229.1505(c)(1).

[1072] *See* 17 CFR 230.411(e) and 17 CFR 240.12b–23(e).

[1073] *See* 17 CFR 229.1505(c)(2).

[1074] Similarly, for a registration statement on Form S–3, because information is incorporated by reference from a registrant's Exchange Act filings, to address the scenario where a Form S–3 registration statement goes effective after a registrant files its Form 10–K annual report for its most recently completed fiscal year but before it has filed its second quarter Form 10–Q containing its GHG emissions metrics disclosure for its most recently completed fiscal year, we have added a provision to Form S–3 stating that the GHG emissions metrics disclosure must be as of its most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the Form S–3 registration statement. Accordingly, where a registrant has filed its annual report on Form 10–K for the most recently completed fiscal year but has not yet filed its Form 10–Q for the second fiscal quarter containing the disclosure required by 17 CFR 229.1505(a), it must incorporate its GHG emissions metrics disclosure for the fiscal year that is immediately prior to its most recently completed fiscal year. *See* Item 12(e) to Part I of Form S–3. For example, if a calendar year-end LAF has a Form S–3 registration statement go effective after it files its Form 10–K for 2028 but before it files its second quarter Form 10–Q (due no later than Aug. 9, 2029), it must incorporate its GHG emissions disclosure for the 2027 fiscal year previously filed on a Form 10–Q or a Form 10–K/A. We have added a similar provision to Form F–3. *See* Item 6(g) to Part I of Form F–3. For any registration statement, if the date of effectiveness is less than 225 days after its most recently completed fiscal year-end, a registrant will only be required to disclose its GHG emissions for the fiscal year that is immediately prior to its most recently completed fiscal year if the registrant was required to disclose its Scope 1 and/or Scope 2 emissions pursuant to Item 1505 for that year.

[1075] *See* Proposing Release, section II.H.1.

[1076] *See* Proposing Release, section II.H.2 and 3.

[1077] Limited assurance is equivalent to the level of assurance (commonly referred to as a ''review'') provided over a registrant's interim financial statements included in a Form 10–Q.

[1078] Reasonable assurance is equivalent to the level of assurance provided in an audit of a registrant's consolidated financial statements included in a Form 10–K.

[1079] *See* Proposing Release, section II.H.1.

[1080] *See id.*

proposed assurance requirements.[1081] To avoid potential confusion, however, the proposed rules would have required the voluntary assurance obtained by such registrant to follow the requirements of proposed Items 1505(b) through (d), including using the same attestation standard as the required assurance over Scope 1 and Scope 2 emissions. For filings made by AFs and LAFs after the compliance date for the GHG emissions disclosure requirements but before proposed Item 1505(a) would require limited assurance, the proposed rules only would have required the filer to provide the disclosure called for by proposed Item 1505(e) if it chose to voluntarily obtain attestation.[1082] The Commission stated that a registrant that is not an AF or LAF that obtains voluntary assurance would be required to comply only with proposed Item 1505(e).[1083]

In the Proposing Release, the Commission stated that requiring GHG emissions disclosure in Commission filings should enhance the consistency, comparability, and reliability of such disclosures due to the application of a registrant's DCP and the proposed inclusion of certain prescriptive elements that may help improve standardization of GHG emission calculations.[1084] The Commission also observed that the evolving and unique nature of GHG emissions involves and, in some cases, warrants varying methodologies, differing assumptions, and a substantial amount of estimation.[1085] Certain aspects of GHG emissions disclosure also involve reliance on third-party data. As such, the Commission concluded that requiring a third-party's attestation over these disclosures would provide investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures.[1086]

In the Proposing Release, the Commission explained that, although many registrants have voluntarily obtained some level of assurance for their climate-related disclosures,[1087] current voluntary climate-related assurance practices have been varied with respect to the levels of assurance provided (*e.g.,* limited versus reasonable), the assurance standards used, the types of service providers, and the scope of disclosures covered by the assurance.[1088] The Commission stated that this fragmentation has diminished the comparability of the assurance provided and may require investors to become familiar with many different assurance standards and the varying benefits of different levels of assurance.[1089] Accordingly, to improve accuracy, comparability, and consistency with respect to the proposed GHG emissions disclosure, the Commission proposed to require a minimum level of assurance services for AFs and LAFs including: (1) limited assurance[1090] for Scopes 1 and 2 emissions disclosure that scales up to reasonable assurance[1091] after a specified transition period; (2) minimum qualifications and independence requirements for the attestation service provider; and (3) minimum requirements for the accompanying attestation report.[1092]

The Commission stated that by specifying minimum standards for the attestation provided with respect to GHG emissions disclosure by AFs and LAFs, the proposed rules should improve accuracy and consistency in the reporting of this information, while also providing investors with an enhanced level of reliability against which to evaluate the disclosure.[1093] In addition to the proposed minimum standards for attestation services, the Commission explained that the proposed additional disclosure requirements for registrants should further assist investors in understanding the qualifications and suitability of the GHG emissions attestation provider selected by the registrant, particularly in light of the broad spectrum of attestation providers that currently provide and that would be permitted under the proposed rules to provide attestation services.[1094]

The Commission explained that the proposed rules did not aim to create or adopt a specific attestation standard for assuring GHG emissions because both the reporting and attestation landscapes are currently evolving and it would be premature to adopt one approach and potentially curtail future innovations in these two areas.[1095] The Commission acknowledged in the Proposing Release that the proposed minimum standards for attestation services and the proposed additional disclosure requirements would not eliminate fragmentation with respect to assurance or obviate the need for investors to assess and compare multiple attestation standards.[1096] Nevertheless, the Commission stated it believed some flexibility in its approach was warranted at this time given the unique and evolving nature of third-party assurance for climate-related disclosures.[1097]

In proposing mandatory assurance of GHG emissions disclosure, the

[1081] *See id.* For example, the Commission stated that an AF or LAF could voluntarily include an attestation report at the limited assurance level for its GHG intensity metrics or its Scope 3 emissions disclosure.

[1082] *See id.*

[1083] *See id.*

[1084] *See id.*

[1085] *See id.*

[1086] *See id.*

[1087] For example, the Commission stated that according to one study, 53% of the S&P 500 companies had some form of assurance or verification over climate-related metrics, along with other metrics. *See* CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021), available at *https://www.thecaq.org/sp-500-and-esg-reporting-2019-2020.* Another survey of sustainability reporting trends from 5,200 companies across 52 countries (including the United States) stated that, of the top 100 companies (by revenue), 80% have reporting on ESG (including climate), with up to 61% of those companies obtaining assurance. *See* KPMG, *The KPMG Survey of Sustainability Reporting 2020,* available at *https://home.kpmg/xx/en/home/insights/2020/11/the-time-has-come-survey-of-sustainability-reporting.html.* Proposing Release, section II.H.1.

[1088] *See* Proposing Release, section II.H.1.

[1089] *See id.* The Commission noted in the Proposing Release that the consequences of such fragmentation have also been highlighted by certain international organizations, including IOSCO, which stated that it ''identified a perceived lack of clarity and consistency around the purpose and scope of [voluntary] assurance . . . [which] can potentially lead to market confusion, including misleading investors and exacerbating the expectations gap.'' IOSCO, *Report on Sustainability-related Issuer Disclosures* (June 2021), available at *https://www.iosco.org/library/pubdocs/pdf/IOSCOPD678.pdf. See also, e.g.,* International Federation of Accountants, *The State of Play in Sustainability Assurance* (June 23, 2021), available at *https://www.ifac.org/knowledge-gateway/contributing-global-economy/publications/state-play-sustainability-assurance. See* Proposing Release, section II.H.1.

[1090] The Commission explained in the Proposing Release that the objective of a limited assurance engagement is for the service provider to express a conclusion about whether it is aware of any material modifications that should be made to the subject matter (*e.g.,* the Scopes 1 and 2 emissions disclosure) in order for it to be fairly stated or in accordance with the relevant criteria (*e.g.,* the methodology and other disclosure requirements specified in proposed Item 1504). *See* Proposing Release, section II.H.1 (citing, for example, AICPA's Statement on Standards for Attestation Engagements (SSAE) No. 22, AT–C section 210). In such engagements the conclusion is expressed in the form of negative assurance regarding whether any material misstatements have been identified. *See id.*

[1091] The Commission explained in the Proposing Release that the objective of a reasonable assurance engagement, which is the same level of assurance provided in an audit of a registrant's consolidated financial statements, is to express an opinion on whether the subject matter is in accordance with the relevant criteria, in all material respects. A reasonable assurance opinion provides positive assurance that the subject matter is free from material misstatement. *See* Proposing Release, section II.H.1 (citing, for example, AICPA SSAE No. 21, AT–C sections 205 and 206).

[1092] *See* Proposing Release, section II.H.1.

[1093] *See id.*

[1095] *See id.*

[1096] *See id.*

[1097] *See id.*

Commission weighed the challenges such requirements could present with the benefits that assurance would provide to investors and proposed only requiring AFs and LAFs to obtain an attestation report, subject to a phased in compliance period, to help mitigate concerns about cost and burden.[1098] In addition, the Commission stated that the proposed phase in periods would provide AFs and LAFs with significant time to develop processes to support their GHG emissions disclosure requirements and the relevant DCP, as well as to adjust to the incremental costs and efforts associated with escalating levels of assurance.[1099] During the proposed transition period, GHG emissions attestation providers would also have had time to prepare themselves for providing such services in connection with Commission filings.[1100]

In the Proposing Release, the Commission stated that the voluntary attestation obtained by some registrants has been at the reasonable assurance level; however, it acknowledged that a limited assurance engagement is less extensive and currently the level of assurance most commonly provided in the voluntary assurance market for climate-related disclosure.[1101] The Commission explained that, for this reason, prior to the transition to reasonable assurance, the additional compliance efforts required to comply with the proposed assurance requirement should be limited for the many registrants that are already obtaining limited assurance for their climate related disclosures.[1102] Although reasonable assurance provides a significantly higher level of assurance than limited assurance, the Commission expressed its belief that limited assurance would benefit investors during the initial transition period by enhancing the reliability of a registrant's Scopes 1 and 2 emissions disclosure, in light of the benefits that assurance provides.

Finally, the Commission stated in the Proposing Release that it did not propose to require assurance of Scope 3 emissions disclosure because the preparation of such disclosure presents unique challenges.[1103] The Commission explained that depending on the size and complexity of a company and its value chain, the task of calculating Scope 3 emissions could be relatively more burdensome and expensive than calculating Scope 1 and Scope 2 emissions, and in particular, it may be difficult to obtain activity data from suppliers, customers, and other third parties in a registrant's value chain, or to verify the accuracy of that information compared to disclosures of Scope 1 and Scope 2 emissions data, which are more readily available to a registrant.[1104]

b. Comments

Commenters expressed a variety of views on the proposal to require AFs and LAFs to provide an attestation report from a service provider over Scope 1 and Scope 2 emissions. A number of commenters supported the proposal to require some form of attestation.[1105] These commenters generally stated that subjecting Scope 1 and Scope 2 emissions to attestation would help increase the reliability and accuracy of the disclosures.[1106] Several commenters stated that the proposed mandatory assurance requirement would provide confidence to investors.[1107] For example, one commenter explained that ''[g]reenhouse gas emissions are the basic unit of input for all our individual company, industry, and market climate risk assessments'' and that ''[a]ssurance provides investors with greater confidence that this essential data is prepared faithfully and in line with globally accepted standards.'' [1108] Another commenter stated that ''[i]ndependent assurance on the accuracy, completeness and consistency of GHG emissions data would be beneficial to both internal decision-making and for investors and other external stakeholders.'' [1109] One commenter stated it supported the proposed mandatory assurance requirement because ''[r]eliable, standardized and assured data will strengthen our underwriting as it is critical to our understanding of the quality of a company's earnings in the face of climate change and the energy transition.'' [1110] Other commenters stated that the proposed attestation requirements would increase investor protection [1111] or help prevent greenwashing.[1112] One commenter that is a public company registrant explained that ''[w]hile obtaining assurances certainly requires additional resources, we do not feel it is overly burdensome and believe it has significantly improved our risk

[1098] *See id.* The Commission further stated that, for the many LAFs that are already voluntarily obtaining some form of assurance over GHG emissions, any cost increases associated with complying with the proposed rules would be mitigated and larger issuers generally bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance. *See id.*

[1099] *See id.*

[1100] *See id.*

[1101] *See id.* (citing CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021) (providing statistics on limited assurance versus reasonable assurance obtained voluntarily in the current market (*e.g.,* at least 26 of 31 companies that obtained assurance from public company auditors obtained limited assurance; at least 174 of 235 companies that obtained assurance or verification from other service providers (non-public company auditors) obtained limited assurance)) and CAQ, *S&P 100 and ESG Reporting* (Apr. 29, 2021), available at *https://www.thecaq.org/sp-100-and-esg-reporting/*). The Commission stated that based on an analysis by Commission staff on Mar. 3, 2022, a substantial number of the S&P 500 companies (460+) are LAFs. *See* Proposing Release, section II.H.1.

management and quality of our reporting.'' [1113] In addition, a number of commenters agreed with the Commission's statement in the Proposing Release that many registrants already obtain some form of assurance over GHG emissions data.[1114]

Conversely, a number of commenters did not support the proposed requirement for AFs and LAFs to provide an attestation report over Scope 1 and Scope 2 emissions.[1115] Many of these commenters stated that the proposed attestation requirements would be costly for registrants,[1116] with some commenters stating that the costs would outweigh any potential benefit to investors.[1117] For example, one commenter stated that obtaining attestation over GHG emissions disclosures would be ''far more costly than with financial data because the [attestation] market for emissions is not at all well developed.'' [1118] Other commenters stated that attestation is unnecessary because of the incentives for accuracy that already exist for information registrants provide to the Commission.[1119] Some commenters stated that there is currently a shortage in the supply of assurance providers to support the proposed rule's attestation requirements,[1120] while other commenters recommended eliminating the proposed requirement for attestation because assurance standards and methodologies are still evolving.[1121] Several commenters raised concerns about registrants' ability to obtain assurance over GHG emissions disclosures in light of the level of judgment, estimation, or uncertainty that would be involved in calculating GHG emissions data.[1122]

In addition, some commenters pointed out that neither the TCFD nor the GHG Protocol require attestation.[1123] Similarly, a number of commenters stated that the Environmental Protection Agency (EPA)'s GHG Reporting Program has its own verification process for greenhouse gas reports submitted to the EPA.[1124] One commenter stated the Commission's proposal to require mandatory attestation ''is inconsistent with the requirements of existing EPA regulation.'' [1125] Other commenters stated that the Commission should adopt the same verification process as the EPA, which does not require third-party assurance.[1126] Another commenter stated that adopting the same verification process as the EPA ''would reduce the costs and concerns with needing to verify emissions data under two separate and very different federal reporting regimes.'' [1127] Some commenters stated that, in their view, there is no reason why climate-related disclosures should be subject to attestation and treated any differently than other required disclosures outside of the financial statements in a Form 10–K.[1128] Relatedly, one commenter agreed with the Commission's statement in the Proposing Release that GHG emissions disclosure is different from existing quantitative disclosure required to be provided outside of the financial statements because such existing disclosure typically is derived, at least in part, from the same books and records that are used to generate a registrant's audited financial statements and that are subject to ICFR.[1129]

[1113] *See* letter from Etsy (stating it has received limited assurance for its reported Scope 1, 2, and 3 emissions since 2016).

[1121] *See, e.g.,* letters from ABA (''As the reporting and attestation standards develop further, a single standards-setting body emerges as the clear leader, and third parties begin to become qualified under these standards, the Commission can then assess whether an attestation standard is appropriate.''); Mid-Size Bank; Nasdaq (''To encourage disclosures while the attestation industry continues to mature, the Commission should eliminate the attestation requirement for Scope 1 and 2 emissions, and permit all issuers to disclose a voluntary attestation in accordance with proposed Item 1505(e)(1–3) of Regulation S–K.''); RILA; SIFMA; SIFMA AMG; Tata Consultancy Services (June 17, 2022); and Zions.

[1122] *See, e.g.,* letters from AFPM (stating that GHG emissions ''are subject to greater measurement challenges than most financial metrics and are subject to greater uncertainty''); Financial Services Forum (stating that ''Scope 1 and Scope 2 emissions may incorporate third-party data and rely in part on estimates and averages, which may be difficult or impossible for a registrant to verify with current capabilities''); Schneider; UPS; and USCIB.

[1123] *See, e.g.,* letters from AEPC; Corteva (noting that the TCFD does not require attestation over Scope 1 and Scope 2 emissions); Chamber; and Enerplus (noting that the TCFD does not require attestation over Scope 1 and Scope 2 emissions).

[1124] *See, e.g.,* letters from AFPM; API; NAA; SIA; Western Energy Alliance and the U.S. Oil & Gas Association (''WEA/USOGA''); and Williams Cos.

[1125] *See* letter from SIA (recommending that the Commission modify the proposed rules to permit registrants to ''self-certify emissions, consistent with existing EPA regulations'').

[1126] *See, e.g.,* letters from NAA; SIA; WEA/USOGA; and Williams Cos. *See also* EPA, Fact Sheet—Greenhouse Gases reporting Program Implementation (Nov. 2013) (''EPA Fact Sheet''), available at *https://www.epa.gov/sites/default/files/2014-09/documents/ghgfactsheet.pdf* (stating that the EPA verifies the data submitted and does not require third party verification, although prior to EPA verification, reporters are required to self-certify the data they submit to the EPA).

[1127] *See* letter from NAA.

[1128] *See, e.g.,* letters from APCIA; Capital Group; Capital Research (''In addition, no other numerical data in a company's regulatory filing, other than its financial statements, is required to be audited today. We are not persuaded that Scope 1 and Scope 2 GHG emissions data should be treated any differently. . . .''); and Soc. Corp. Gov. *See also* BCSE (''There is nothing particularly unique about the proposed disclosures as compared to numerous existing disclosures on other topics that would justify imposing an attestation requirement.'').

[1129] *See* letter from PwC.

However, other commenters disagreed with that statement.[1130]

Alternatively, some commenters stated that the Commission should wait before determining whether to adopt a mandatory assurance requirement for GHG emissions.[1131] A few commenters stated that instead of requiring mandatory assurance over GHG emissions disclosures, assurance should be voluntary.[1132] One of these commenters stated that permitting registrants to disclose whether they obtained voluntary attestation in accordance with proposed Items 1505(e)(1) through (3) would help investors understand whether the attestation or verification has enhanced the reliability of the GHG emissions disclosures.[1133]

A number of commenters offered their views on the types of registrants that should be subject to any attestation requirement. A few commenters stated that the attestation requirements should apply to AFs and LAFs as proposed.[1134] Several commenters stated that the proposed attestation requirements should apply to all registrants, not just AFs and LAFs.[1135] One of these commenters explained that it supported requiring all registrants to comply with the proposed attestation requirements because ''GHG emissions are a key metric for determining climate-related transition risks, and those risks are likely to impact small companies as well as large companies.'' [1136] Similarly, another commenter stated that extending the attestation requirement to additional registrants ''would be insightful for investors and allow comparability amongst disclosures of these attestation reports between several types of filers.'' [1137] Commenter feedback was mixed regarding whether SRCs should be subject to the proposed mandatory assurance requirements. Several commenters stated that SRCs should be excluded from the attestation requirement.[1138] On the other hand, one commenter stated that the Commission did not adequately justify an exclusion for SRCs and that excluding SRCs ''will undoubtedly undermine one of the key goals of the rule, here the reliability of climate disclosures.'' [1139] Alternatively, one commenter stated that the attestation requirement should be limited to ''seasoned issuers'' and ''those companies with more than [$1 billion] in revenue and more than [$2 billion] in public float.'' [1140]

Some commenters stated that they supported phasing in the assurance requirement from limited assurance to reasonable assurance over time as proposed.[1141] One of these commenters stated that the phased in approach would ''enable registrants to install the necessary DCP'' and ''enable assurance providers to upskill and establish the necessary capacity to provide limited and then reasonable assurance.'' [1142] Another commenter stated that phase in periods would balance investors' ''needs for data with the ability of issuers to provide that data.'' [1143] Some commenters stated that it was important for GHG emissions disclosures to ultimately be subject to reasonable assurance because reasonable assurance is necessary to ensure reliability.[1144] In fact, a number of commenters stated that the Commission should require reasonable assurance from the start without a phase in from limited assurance.[1145] One of these commenters stated that ''[i]nvestors may place disproportionate reliance on disclosures subject only to the review procedures of a limited assurance engagement, creating an expectations gap.'' [1146]

A few commenters stated that the level of assurance for Scope 1 and Scope 2 emissions should only be raised from limited to reasonable assurance after the Commission assesses the implementation of the assurance requirement.[1147] One of these commenters stated that, as a first step, ''limited assurance is all that is required to accomplish the SEC's objective to provide an external independent verification of climate disclosures—and reasonable assurance would be unduly burdensome and unnecessary at this stage, given data gaps.'' [1148] According to this commenter, ''[a]s data gaps are progressively addressed, reasonable assurance could be applied as in an audit of financial statements if it is determined that it is practical and the

[1148] *See* letter from BNP Paribas.

robustness of data warrants the enactment of a reasonable assurance standard.'' [1149] Another commenter recommended that the Commission take into consideration the EU's CSRD and ''contemplate raising the level of assurance within the same timeline subject to an assessment.'' [1150]

On the other hand, a number of commenters recommended that the Commission only require AFs and LAFs to obtain limited assurance over their Scope 1 and Scope 2 disclosures without a requirement to phase in reasonable assurance.[1151] This includes commenters that stated they did not support requiring mandatory attestation but, if the Commission adopts an assurance requirement, then the Commission should only require limited assurance.[1152] Some of these commenters stated that limited assurance should be sufficient to provide investors with comfort that GHG emissions disclosures are accurate.[1153] Other commenters stated that existing voluntary assurance over GHG emissions is most frequently performed at a limited assurance level.[1154] A few commenters stated that registrants had not received requests or feedback from investors asking for reasonable assurance.[1155] One commenter that has obtained limited assurance over its GHG emissions data stated that, based on its experience with limited assurance and discussions with its auditors, it anticipated a ''significant incremental investment in our processes, systems and personnel would be required to achieve reasonable assurance.'' [1156]

More generally, a number of commenters raised concerns about a requirement to obtain reasonable assurance.[1157] Several commenters expressed the view that reasonable assurance would be costly.[1158] For example, one commenter stated that ''moving from limited assurance to reasonable assurance could add far greater costs than anticipated, potentially without a commensurate increase in reliability of the information.'' [1159] One commenter stated that requiring reasonable assurance ''significantly increases regulatory risk'' and could result in penalties for companies.[1160] Another commenter stated that reasonable assurance would be impracticable for companies because ''unlike financial data, Scope 1 and 2 emissions calculations are never completely precise or completely 'knowable.' '' [1161] One commenter stated that reasonable assurance is ''difficult at this stage in the absence of sustainability assurance standards.'' [1162]

As an alternative, one commenter recommended that the Commission require registrants to initially obtain reasonable assurance, followed by two years of limited assurance, provided that the first year's attestation report included no modifications or qualifications.[1163] This commenter explained that this order would enable the attestation provider to understand and examine the design and implementation of controls to detect misstatements far more thoroughly than is possible during a limited assurance engagement.[1164]

Several commenters agreed with the proposed timing for phasing in the attestation requirement from limited to reasonable assurance.[1165] On the other hand, a number of commenters, including those that did not support requiring mandatory assurance, stated that the Commission should allow for a longer phase in period for the attestation requirements.[1166] One commenter stated

[1149] *See id.*

[1150] *See* letter from AFEP. *See also* letter from AFG (''We invite the SEC to consider the implications of a potential difference in scope, timing, and level of assurance between the SEC's proposed rule and the EU Regulation, also in light of preparers and auditors' level of readiness to comply with such requirements.'').

[1151] *See, e.g.,* letters from ACLI; Alphabet et al.; Cleary Gottlieb; Climate Risk Consortia; EMC; Energy Transfer; Hydro One; ICI; IIB; IIF; ITIC (stating that it is premature to require reasonable assurance and the ''SEC should assess registrants' implementation of the extensive new disclosure requirements, monitor evolving industry and auditor practices, and consider whether it would be appropriate to shift to reasonable assurance at a later date''); Mouvement Entreprises FR; Nareit; NAM (''NAM believes that a limited assurance requirement for Scope 1 and Scope 2 emissions could be workable.''); PIMCO; Reinsurance AA; R. Love; Salesforce; T. Rowe Price; and WSP.

[1156] *See* letter from Salesforce (stating that its costs would include, but would not be limited to, incremental headcount or consulting fees to enhance documentation over processes and controls, incremental investments in systems to track and monitor GHG emission data points, including headcount to implement and maintain such systems, and incremental costs to the third-party reviewer to complete a reasonable assurance review).

[1157] *See, e.g.,* letters from AFPM; Can. Bankers (stating that the proposed requirements would require registrants to gather substantial data from third parties and it is not clear that third parties will have in places processes and procedures to generate data that would meet a reasonable assurance standard); Climate Risk Consortia; EMC; Financial Services Forum; ICI; INGAA; Nareit; NAM; PIMCO; Reinsurance AA; and SIFMA.

[1158] *See, e.g.,* letters from Climate Risk Consortia (''Requiring reasonable assurance would impose immediate costs on registrants by requiring additional build-out of controls but provide little to no benefit for investors.''); Financial Services Forum; ICI; INGAA; NAM; Nareit; PIMCO; Reinsurance AA (stating that there would be significant initial and ongoing costs because reasonable assurance ''is a very high level of assurance'' that ''involves significantly more examination, including the evaluation and testing of ICFR''); and SIFMA.

[1159] *See* letter from Business Roundtable. *See also* letter from AFPM (stating that the Commission ''provided no evidence demonstrating that reasonable assurance would increase the reliability of disclosures above limited assurance, let alone that such benefits would outweigh additional costs, burdens, and risks.'').

[1160] *See* letter from AEM.

[1161] *See* letter from INGAA (stating that one member, for example, reports than more than 80% of its Scope 1 and 2 data are based on emissions factors or other forms of extrapolation, not actual measurements).

[1162] *See* letter from WFE. *See also* letter from Cleary Gottlieb (stating that because reporting and attestation practices are in the preliminary stages of development, it is premature to mandate that registrants obtain reasonable assurance).

[1163] *See* letter from Futurepast.

[1164] *See* letter from Futurepast.

[1165] *See, e.g.,* letters from B. Gillespie; BC IM Corp. (stating that the transition periods proposed are reasonable but ''[a]s investors, we will continue to engage with large emitters on obtaining reasonable assurance for their scope 1 and 2 emissions over an accelerated timeline to what is contemplated in the proposed rule''); Crowe; and Praxis.

[1166] *See, e.g.,* letters from AEM (recommending that registrants not be required to begin obtaining assurance for five years); AFPM; APCIA; API; Beller *et al.* (recommending phasing in attestation for public companies with a market capitalization of over $25 billion first with other smaller companies to follow); BHP (''[T]he Commission could consider extending the period in which the attestation requirement applied for limited assurance beyond two years, before requiring the more demanding requirement to provide reasonable assurance.''); BIO (''Attestation should be phased-in in-line with the spirit of the JOBS Act emerging growth company exemptions.''); BOA (recommending a two-year extension to the proposed phase in periods from limited assurance to reasonable assurance); CFA Institute (suggesting that the Commission consider a longer phase in period for reasonable assurance); Chevron; ConocoPhillips (stating that the Commission should extend the assurance implementation timeline to require assurance no earlier than three years following the initial implementation of the disclosure rules to permit capacity building and align internal record-keeping); Inclusive Cap.; INGAA; ITIC (recommending that the Commission extend the phase in period for assurance by at least a year to allow adequate time to establish the appropriate systems and controls and to ensure attestation providers are properly staffed and prepared); J. Josephs (recommending that the Commission provide a phase in period of five years before limited assurance is required); LTSE; Microsoft (recommending the deferral of the attestation requirements for at least one additional year); Mid-

that delaying the phase in periods would provide time for assurance standard setters to ''develop specialized assurance standards necessary for GHG emissions'' and would provide them time to obtain necessary staff and resources, which could help to reduce costs for registrants.[1167] A few commenters stated that the phase in period should be accelerated.[1168] For example, one of these commenters stated that an accelerated phrase in period was warranted given that various attestation providers are already offering limited, and in some cases, reasonable assurance of GHG emissions reporting.[1169]

Also related to timing, a number of commenters stated that the proposed timeline for attestation, which would require disclosure in annual reports, was impractical because it would not provide adequate time for registrants to prepare disclosures and for third-party providers to complete attestation procedures before the annual report is due.[1170] For example, one commenter stated that ''[c]ompiling, reviewing, and publishing'' GHG emissions data ''as well as obtaining assurance'' is a ''significant undertaking that can extend a number of months beyond a registrant's fiscal year end.'' [1171] Another commenter stated that ''[w]hile third party attestation is common'' it was ''concerned about the feasibility of obtaining assurance on the proposed timelines required to file on the Form 10–K.'' [1172]

One commenter supported requiring any voluntary assurance obtained by AFs and LAFs after limited assurance is required to follow the same attestation requirements of Items 1505(b) through (d) as proposed.[1173] Several commenters stated that the Commission should adopt an attestation requirement for Scope 3 GHG emissions disclosures [1174] with some commenters suggesting limited assurance would be sufficient [1175] while others recommended phasing in reasonable assurance.[1176] On the other hand, a number of commenters stated that they did not support requiring attestation over Scope 3 emissions disclosures, with several pointing to the potential cost.[1177]

In the Proposing Release, the Commission explained that it did not propose definitions for the terms ''limited assurance'' and ''reasonable assurance'' because under prevailing attestation standards these are defined terms that the Commission believed were generally understood in the marketplace, both by those seeking and those engaged to provide such assurance.[1178] The Commission included a request for comment asking if, instead, the Commission should define ''limited assurance'' and ''reasonable assurance,'' and if so, how it should define them.[1179] Several commenters recommended that the Commission include a definition of ''limited assurance'' and ''reasonable assurance'' in the final rules.[1180] One of these commenters explained that providing definitions would ''reduce any confusion in the market'' and ''ensure those familiar with greenhouse gas accounting principles and third-party validation/verification for greenhouse gas inventories can more easily translate to either limited or reasonable assurance.'' [1181] Other commenters recommended that the Commission provide guidance explaining the differences between limited assurance and reasonable assurance.[1182]

Some commenters stated that no definition is needed for these terms.[1183] For example, one commenter stated that it agreed that limited assurance and reasonable assurance are defined terms that are generally understood in the marketplace and therefore no definitions are needed.[1184] A few commenters stated that if the attestation standards are limited to those issued by the AICPA, IAASB, and the Public Company Accounting Oversight Board

Size Bank; NMA; NRA/RLC (stating that the phase in of limited assurance should be extended by three years and the transition to reasonable assurance should be extended by six years); NRF; Nikola (recommending an additional two years of limited assurance for Scopes 1 and 2 emissions); Petrol. OK; and PGIM (supporting the proposal, but recommending registrants be given an additional year to comply).

[1167] *See* letter from BOA.

[1180] *See, e.g.,* letters from Amer. for Fin. Reform, Sunrise Project *et al.* (stating that the Commission should provide a definition for limited assurance to ''establish a process more rigorous than currently used for assurance of quarterly SEC filings''); C2ES; ENGIE; ERM CVS; IECA (stating that the Commission should define these terms because it is ''not clear what those terms mean in this context, nor how they relate to the standard GHG terms of 'measured,' 'monitored,' and 'verified.'''); J. Weinstein; NASBA (stating that limited assurance and reasonable assurance should be defined in the proposal and noting that if ''non-CPAs are permitted to perform these attestation services, then regulations must be developed to build the intellectual infrastructure . . . outside of the professional standards governing the public accounting profession''); and SCS Global.

[1181] *See* letter from C2ES.

[1182] *See, e.g.,* letters from Ceres; ICCR (stating it would be helpful for the Commission to describe some minimum procedures that the auditor would be expected to utilize in performing a limited assurance engagement); and Morningstar.

[1183] *See, e.g.,* letters from ABA (stating that definitions are not needed but recommending additional guidance for limited and reasonable assurance engagements); CFA Institute; Eni SpA; and Futurepast (stating that these terms are generally understood).

[1184] *See* letter from CFA Institute (stating that it did not support providing additional or alternative definitions for these terms because it was concerned this would cause confusion regarding other attestation engagements not covered by the proposed rules).

(''PCAOB''), no definitions are needed; however, if the standards are not so limited, then the SEC should define the terms in the final rule.[1185] One commenter stated that it believed assurance terms should be defined by assurance standard setters and not by the Commission.[1186]

In the Proposing Release, the Commission asked if it should require AFs and LAFs to provide a separate management assessment and disclosure of the effectiveness of controls over GHG emissions disclosure (separate from the existing requirements with respect to the assessment and effectiveness of DCP).[1187] Some commenters stated that the Commission should require a registrant to provide a separate assessment and disclosure of the effectiveness of controls over GHG emissions disclosure by management.[1188] One commenter stated that such a requirement would ''further strengthen the validity of the data available.'' [1189] Conversely, some commenters stated that the Commission should not require registrants to provide a separate assessment and disclosure of the effectiveness of controls over GHG emissions disclosures.[1190] One commenter explained that current DCP requirements have proven to be effective and should suffice.[1191] Another commenter stated that the ''cost of such an undertaking may not support the incremental benefit to investors.'' [1192] Similarly, in the Proposing Release, the Commission asked whether, instead of, or in addition to, such management assessment, it should require the registrant to obtain an attestation report from a GHG emissions attestation provider that covers the effectiveness of such GHG emissions controls.[1193] Some commenters stated that the Commission should not require an attestation report from a GHG emissions provider that covers the effectiveness of such GHG emissions controls.[1194] One commenter questioned the value of a separate attestation report on controls at the moment because it does not believe there is a ''specific standard for . . . controls around non-financial data'' that ''takes into account the specific subject matter expertise needed in the internal control process.'' [1195]

c. Final Rules (Item 1506)

After considering comments, we are adopting final rules (Item 1506(a)(1)) that require a registrant, including a foreign private issuer, that is required to provide Scope 1 and/or Scope 2 emissions disclosure pursuant to Item 1505 to include an attestation report covering the disclosure of its Scope 1 and/or Scope 2 emissions in the relevant filing.[1196] However, as discussed in greater detail below, we made a number of modifications to the proposal to address certain concerns raised by commenters.

Under the final rules, the attestation engagement must, at a minimum, be at the following assurance level for the indicated fiscal year for the required GHG emissions disclosure: [1197]

Filer type	Scopes 1 and 2 emissions disclosure compliance date	Limited assurance compliance date	Reasonable assurance compliance date
LAFs	Fiscal year 2026	Fiscal year 2029	Fiscal year 2033.
AFs (other than SRCs and EGCs)	Fiscal year 2028	Fiscal year 2031	N/A.

AFs (excluding SRCs and EGCs) and LAFs are required to obtain an attestation report under the final rules,[1198] consistent with the scope of registrants that are required to comply with the GHG emissions disclosure requirements in Item 1505.[1199] As illustrated in the table above, the final rules (Item 1506(a)(1)(i), (ii)) require both AFs and LAFs to obtain limited assurance beginning the third fiscal year after the compliance date for Item 1505; however, under the final rules (Item 1506(a)(1)(iii)), only LAFs are required to obtain an attestation report at a reasonable assurance level beginning the seventh fiscal year after the compliance date for Item 1505.[1200] The final rules do not require an AF to obtain an attestation report at a reasonable assurance level. Consistent with the proposed rules, and with the lack of a requirement to disclose Scope 3 emissions under the final rules, no registrants will be required to obtain assurance over Scope 3 emissions under the final rules. Furthermore, as explained in greater detail below in section II.L.3, the final rules, including Item 1506, will not apply to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving a securities offering registered on Form S–4 or F–4.

As discussed above, a significant number of commenters supported the Commission's proposal to require certain registrants to obtain mandatory assurance over GHG emissions disclosure.[1201] Many of these commenters agreed with the Commission that mandatory assurance would improve the accuracy, comparability, and consistency of registrants' GHG emissions disclosure.[1202] As the Commission explained in the Proposing Release,

[1185] *See, e.g.,* letters from CAQ (stating that the Commission should define ''limited assurance'' and ''reasonable assurance'' by reference to the standards of the AICPA and IAASB rather than developing alternative definitions); and KPMG.

[1186] *See* letter from Mazars (stating that definitions of ''limited assurance'' and ''reasonable assurance'' currently exist within AICPA and IAASB standards).

[1187] *See* Proposing Release, section II.H.1.

[1188] *See, e.g.,* letters from B. Smith.; ERM CVS; and RSM US LLP.

[1189] *See* letter from B. Smith.

[1190] *See, e.g.,* letters from CEMEX; CFA Institute (stating that the issue could be revisited by the Commission in the future); Grant Thornton; J. Herron; and PwC.

[1191] *See* letter from CEMEX. *See also* letter from PwC (''We believe that the overall certifications regarding DC&P are sufficient and do not recommend modifying such language to specifically refer to GHG or other climate disclosures more broadly.'').

[1192] *See* letter from Grant Thornton.

[1193] *See* Proposing Release, section II.H.1.

[1194] *See, e.g.,* letters from CEMEX; CFA Institute (stating that the issue could be revisited by the Commission in the future); and Grant Thornton.

[1195] *See* letter from ERM CVS.

[1196] *See* 17 CFR 229.1506. Consistent with the Commission's statement in the Proposing Release, in order to attest to Scopes 1 and/or 2 emissions disclosure, a GHG emissions attestation provider will need to include in its evaluation relevant contextual information. *See* Proposing Release, section II.H.1. In particular, under the final rules, the attestation provider will be required to evaluate the registrant's compliance with (i) Item 1505(a), which includes presentation requirements (*e.g.,* disaggregation of any constituent gas if individually material), and (ii) the disclosure requirements in Item 1505(b) regarding methodology, organization boundary, and operational boundary. *See infra* section II.I.3.c for further discussion of the criteria against which the Scopes 1 and 2 emissions disclosure are measured or evaluated.

[1197] *See infra* section II.O.3 for a detailed discussion of compliance dates for the final rules.

[1198] *See* 17 CFR 229.1506(a).

[1199] *See* 17 CFR 229.1505. *See also supra* section II.H.3.

[1200] *See* 17 CFR 229.1506(a)(1).

[1201] *See supra* note 1105 and accompanying text.

[1202] *See supra* note 1106 and accompanying text.

obtaining assurance over GHG emissions disclosure provides investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures.[1203] The Commission has long recognized the important role played by an independent auditor in contributing to the reliability of financial reporting.[1204] Studies suggest that investors have greater confidence in information that has been assured, particularly when it is assured at the reasonable assurance level,[1205] and that high quality audits reduce the cost of capital,[1206] which may benefit both registrants and investors. Similarly, studies of ESG-related assurance, which is typically provided at a limited assurance level, have found benefits such as credibility enhancement, lower cost of equity capital, and lower analyst forecast errors and dispersion.[1207] The benefits that assurance will provide in terms of investor protection and increased confidence in GHG emissions disclosure warrants requiring attestation.[1208] That said, we recognize commenters' concerns about the potential cost of obtaining assurance, the potential shortage in the current supply of assurance providers, and the continually evolving state of assurance standards and methodologies.[1209] As discussed below, we have made modifications in the final rules to mitigate these concerns.

We considered the view expressed by some commenters that there is no reason to treat GHG emissions disclosures differently than other disclosures located outside of the financial statements, which do not require assurance.[1210] Although we recognize that registrants may provide quantitative disclosure outside of the financial statements that is not subject to any assurance requirement, as explained in the Proposing Release,[1211] and consistent with the feedback provided by commenters,[1212] GHG emissions disclosures are unique in that many companies currently voluntarily seek third-party assurance over their climate-related disclosures, and commenters, including investors, have expressed a particular need for assurance over GHG emissions disclosures. Current voluntary assurance practices have been varied and this fragmentation has diminished the comparability of assurance provided. Prescribing a minimum level of assurance required for AFs and LAFs over their Scope 1 and/or Scope 2 emissions in the final rules, along with minimum requirements for the GHG emissions attestation provider and the engagement, will enhance comparability and consistency with respect to assurance over GHG emissions disclosures.

A few commenters stated that it is unnecessary to mandate assurance because there are existing incentives for accuracy in connection with corporate disclosures, such as the Commission staff's filing review process or the possibility of Commission enforcement actions or private litigation.[1213] While it is true that there are existing incentives for companies to provide accurate information to investors, these incentives do not provide the same benefits that assurance will provide under the final rules. Although the desire to avoid an enforcement action or private litigation has a deterrent effect on registrants, such proceedings generally serve to adjudicate claims after investors have allegedly received inaccurate or misleading disclosures. In contrast, the assurance requirement in the final rules will require an independent third-party to provide a check on the accuracy and completeness of a registrant's GHG emissions disclosure before the information is provided to investors, which as explained above, will likely result in additional benefits such as lower cost of equity capital and lower analyst forecast errors.[1214] Furthermore, although the Commission staff's filing review process serves a valuable compliance function that contributes to investor protection, it is not designed to provide assurance, and certainly not for every filing. We note that, despite the existence and benefits of the filing review process, the Commission requires annual financial statements to be audited and has adopted other rules requiring an expert to review and provide conclusions on other specialized quantitative data that is provided outside of the financial statements to enhance its reliability.[1215]

Several commenters raised concerns about registrants' ability to obtain assurance over GHG emissions disclosure in light of the level of judgment, estimation, or uncertainty that would be involved in calculating GHG emissions data.[1216] While we acknowledge these concerns, we note that a number of registrants have voluntarily obtained either limited or reasonable assurance over their GHG emissions data, which shows that the practice is feasible.[1217] And although there are differences between a financial statement audit and an assurance engagement over GHG emissions, registered public accounting firms regularly must provide assurance over financial statement amounts that are

subject to significant judgment, estimates, or assumptions or that rely upon information received from a third party. We acknowledge that auditing standards for financial statement audits are more established after decades of development and required use than attestation standards and practices for GHG emissions. Nevertheless, as noted above, the practice of providing assurance over GHG emissions is far from nascent and is now expected by many market participants.[1218]

Several commenters urged the Commission to adopt the verification process for GHG reporting used by the EPA in lieu of the proposed assurance requirements.[1219] Although we considered the EPA's multi-step verification process, given the differences in the Commission's and EPA's reporting requirements, the different purposes of the Commission's and EPA's respective regulatory regimes, and the benefits of third-party assurance, we determined that independent, third-party assurance is a more appropriate model for the final rules.[1220]

Some commenters urged the Commission to wait before determining whether to adopt a mandatory attestation requirement for GHG emissions or to adopt final rules that permit registrants to disclose whether they voluntarily obtained attestation and related details instead of mandating assurance.[1221] We agree with commenters that requiring registrants to disclose whether they obtained voluntary assurance and related details would help those investors that invest in companies that decide to voluntarily obtain assurance understand whether the attestation obtained has enhanced the reliability of the GHG emissions disclosure, which is why we have included a requirement in the final rules for registrants that are not subject to Item 1505 to provide certain disclosure if they voluntarily obtain assurance over any voluntary GHG emissions disclosure included in Commission filings.[1222] However, requiring AFs and LAFs to obtain assurance over their Scope 1 and/or Scope 2 emissions disclosure in accordance with the final rules will result in more investors receiving the important benefits of assurance, including increased confidence in the reliability of, and an improved ability to make informed investment decisions based on, assured GHG emissions disclosures, which, as discussed above, provide investors with information for assessing a registrant's business, results of operations, and financial condition.[1223] As discussed in greater detail below, the assurance requirements in the final rules are narrowly tailored and limited to a subset of registrants, many of which already obtain assurance services with respect to their GHG emissions disclosures. In addition, we disagree with those commenters that suggested we wait before determining whether to adopt a mandatory attestation requirement for GHG emissions.[1224] The phase in periods included in the final rules should mitigate the concerns of commenters that stated the Commission should wait in order to give registrants and GHG emissions attestation providers more time to prepare for assurance, or to allow more time for attestation standards or guidance to develop.

Consistent with the proposal, the final rules will apply the attestation requirements to AFs and LAFs.[1225] However, in a shift from the proposal, the final rules will exempt SRCs and EGCs from the requirement to obtain an attestation report.[1226] Although some commenters urged the Commission to apply the final rules to all registrants,[1227] not just AFs and LAFs, our decision to exempt SRCs and EGCs from the assurance requirement is driven by our decision to exempt these companies from the requirement to disclose GHG emissions, which is discussed in greater detail above.[1228] Since SRCs and EGCs will not be required to disclose GHG emissions, they also will not be required to obtain assurance.

Under the final rules, AFs and LAFs will be required to obtain limited assurance over their GHG emissions disclosure beginning the third fiscal year after the compliance date for Item 1505 (the GHG emissions disclosure provision).[1229] LAFs will be required to obtain reasonable assurance over their GHG emissions disclosure beginning the seventh fiscal year after the compliance date for Item 1505.[1230] In a change from the proposal, AFs will *not* be required to scale up to reasonable assurance under the final rules. Although we agree with those commenters that stated that reasonable assurance would provide investors with increased confidence that a registrant's GHG emissions disclosure is reliable as compared to limited assurance,[1231] we have determined that it is appropriate to apply the reasonable assurance requirement to a more limited pool of registrants—LAFs—at this time because some LAFs are already collecting and disclosing climate-related information, including GHG emissions data,[1232] and larger issuers generally

[1218] As discussed above, a number of jurisdictions have undertaken efforts to obtain more consistent, comparable, and reliable climate-related information for investors, *see supra* section II.A.3, with certain jurisdictions requiring the disclosure of GHG emissions data along with assurance. *See* Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting (Text with EEA relevance), available at *https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L_.2022.322.01.0015.01.ENG* (requiring companies within its jurisdiction to obtain limited assurance over sustainability reporting and stating that the European Commission will perform an assessment to determine if moving from limited to reasonable assurance is feasible for both auditors and companies); SB–253, *Climate Corporate Data Accountability Act* (Oct. 7, 2023), available at *https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=202320240SB253* (requiring the California state board to develop and adopt regulations requiring the disclosure of GHG emissions and accompanying assurance engagements beginning with limited assurance and transitioning to reasonable assurance). In addition, the IAASB issued an exposure draft on Proposed International Standard on Sustainability Assurance 5000. *See* Proposed International Standard on Sustainability Assurance (ISSA) 5000, General Requirements for Sustainability Assurance Engagements (Exposure Draft) (Aug. 2, 2023), available at *https://www.iaasb.org/publications/proposed-international-standard-sustainability-assurance-5000-general-requirements-sustainability*(proposing assurance standards for both reasonable and limited assurance engagements).

[1232] According to one study, 99% of S&P 500 companies reported ESG information in 2021 and 65% of such companies reported obtaining assurance over some ESG information. *See* CAQ, *S&P 500 and ESG Reporting* (updated June 2023), available at *https://www.thecaq.org/sp-500-and-esg-reporting.* In addition, according to the study, over 63% of S&P 500 companies reported obtaining

bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance. This scaled approach will avoid increasing compliance burdens for AFs that may be smaller or less sophisticated issuers.

We considered whether to require LAFs to obtain an attestation report at a reasonable assurance level from the start as suggested by some commenters.[1233] However, most registrants that are voluntarily obtaining assurance today obtain limited assurance rather than reasonable assurance,[1234] and therefore a transition period is appropriate to give LAFs and GHG emissions attestation providers time to prepare for the higher level of assurance. In contrast to some commenters' suggestion that obtaining reasonable assurance would be impractical,[1235] we note that some registrants have voluntarily obtained reasonable assurance over their GHG emissions disclosure.[1236] In addition, one commenter stated that it agreed with the Commission's statement in the Proposing Release that limited assurance is not possible unless the assurance provider also believes reasonable assurance is possible on the subject matter.[1237]

We recognize that obtaining reasonable assurance over GHG emissions disclosure will be more costly than obtaining limited assurance because the scope of work in a limited assurance engagement is substantially less than the scope of work in a reasonable assurance engagement. The primary difference between the two levels of assurance relates to the nature, timing, and extent of procedures required to obtain sufficient, appropriate evidence to support the limited assurance conclusion or reasonable assurance opinion. For example, in a limited assurance engagement, the procedures performed by attestation providers are generally limited to analytical procedures and inquiries,[1238] but in a reasonable assurance engagement, they are also required to perform risk assessment and detail testing procedures to respond to the assessed risk.[1239] However, the outcome of a reasonable assurance engagement results in positive assurance (*e.g.,* the provider forms an opinion about whether the registrant's GHG emissions disclosures are in accordance with Item 1505 in all material respects) while the outcome of a limited assurance engagement results in negative assurance (*e.g.,* the provider forms a conclusion about whether it is aware of any material modifications that should be made to the disclosures for it to be in accordance with Item 1505). Therefore, we agree with those commenters that stated reasonable assurance will provide greater value to investors because at the reasonable assurance level, investors receive more reliable information about GHG emissions.[1240] Registrants may also benefit from providing disclosures subject to a reasonable assurance level because such assurance enhances investor confidence in the disclosures, and as a result, may lower the cost of capital for registrants.[1241]

As explained above, LAFs are best positioned to bear the increased costs of obtaining reasonable assurance. Such costs are justified for these registrants by the benefits that investors and registrants will receive in the form of positive assurance, which makes it more likely that material errors or omissions are detected and is consistent with the Commission's investor protection mission. In light of the significant phased in compliance period that LAFs will have before reasonable assurance is required, we expect that registrants will incur these costs over several years, which should make the burden easier to bear in any particular year. We also expect that during the significant phased in compliance period new assurance providers will enter the market and any resulting increase in competition will lead to relative reductions in the costs of providing those services over time.[1242]

We considered whether it would be appropriate to wait to make a determination about whether LAFs should be required to scale up to reasonable assurance, but decided against such an approach because the benefits of obtaining reasonable assurance are apparent now[1243] and we do not expect those to change in the future, while our decision to limit the reasonable assurance requirement to a narrower scope of registrants and to provide a significant transition period will help address the concerns raised by commenters. We also considered the suggestion by one commenter that the Commission initially require registrants to obtain reasonable assurance, followed by limited assurance engagements to the extent the first year's attestation report included no qualifications; however, for the reasons stated above, the scaled approach, starting with limited assurance and subsequently moving to reasonable assurance, will allow LAFs time for their processes and controls to mature before being subject to the higher level of assurance. It will also provide attestation service providers that do not currently provide assurance over GHG emissions disclosure with additional time to familiarize themselves with providing assurance over such disclosure, which, as noted above, should facilitate additional competition between assurance

assurance specifically over some portion of their GHG emissions disclosures. *See id.* Based on an analysis by Commission staff on Feb. 29, 2024, a substantial number of the S&P 500 companies (494) are LAFs.

[1233] *See supra* note 1145 and accompanying text.

[1234] *See* CAQ, *S&P 500 and ESG Reporting* (Updated June 2023), available at *https://www.thecaq.org/sp-500-and-esg-reporting* (stating that in 2021 most companies that obtained assurance from public company auditors and other providers opted for limited assurance).

[1235] *See, e.g.,* letter from INGAA.

[1236] *See supra* note 1217.

[1237] *See* letter from ERM CVS. As the Commission explained in the Proposing Release, under commonly used attestation standards, both a reasonable assurance engagement and a limited assurance engagement have the same requirement that the subject matter (*e.g.,* Scope 1 and Scope 2 emissions) of the engagement be appropriate as a precondition for providing assurance. Thus, if the subject matter is appropriate for a limited assurance engagement, it is also appropriate for a reasonable assurance engagement. *See* Proposing Release, section II.H.1 *See also, e.g.,* AICPA SSAE No. 18, Attestation Standards, available at *https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/ssae-no-18.pdf;* and IAASB ISAE 3000 (Revised), Assurance Engagements Other than Audits or Reviews of Historical Financial Information, available at *https://www.ifac.org/_flysystem/azure-private/publications/files/ISAE%203000%20Revised%20-%20for%20IAASB.pdf.*

[1238] *See, e.g.,* AICPA SSAE No. 18, AT–C § 105.A14.

[1239] *See, e.g.,* AICPA SSAE No. 18, AT–C § 205.18.

[1240] *See supra* note 1145 and accompanying text.

[1241] *See* letter from Anthesis Grp. *See also supra* note 1207.

[1242] *See* letter from Futurepast (expressing the view that the existence of a larger pool of potential GHG emissions attestation providers will enhance competition and likely result in lower costs to registrants). In addition, as discussed in greater detail below in Sections II.I.2.c and 3.c., we expect that registrants' ability to hire a non-accounting firm as a GHG emissions attestation provider and our decision to make certain modifications to the proposed requirements applicable to the GHG emissions attestation engagement should help address concerns about the supply of GHG emissions attestation providers.

[1243] *See supra* note 1193; Brandon Gipper, et al., *Carbon Accounting Quality: Measurement and the Role of Assurance* (Nov. 2023), available at *https://ssrn.com/abstract=4627783* (concluding that reasonable assurance improves carbon accounting quality more than limited assurance). *See also* letters from GRI (''Reasonable assurance should be adopted as this would be commensurate with the level of assurance provided through statutory audits of financial statements and will give information users increased confidence that the reported information is prepared in accordance with stated criteria.''); and PWYP (''Given the importance of GHG emissions data to enable investors to fully understand the climate-related risks of issuers, reasonable assurance is necessary to ensure that information is subjected to sufficient examination and verification such that it can be relied on by investors.'').

providers and further help decrease costs of compliance.

A number of commenters recommended that the Commission extend the phase in periods in the final rules because the proposed compliance schedule would have been too challenging for registrants to meet.[1244] We agree with commenters that extending the phase in periods would provide registrants and GHG emissions attestation providers with additional time to prepare for implementation of the rules and would allow assurance standards and practices applicable to GHG emissions to further evolve while balancing investors' need for the information. Therefore, as compared to the proposal, the final rules provide AFs and LAFs with additional time before they are required to comply with the GHG emissions assurance requirements in addition to the phased in GHG emissions compliance dates.[1245] Providing two phased in compliance dates—one before registrants are required to comply with the GHG emissions disclosure requirements and another before registrants are required to comply with the assurance requirements—will allow registrants and assurance providers to gain experience with the new rules before assurance is required.

Commenters expressed a variety of views about whether the Commission should define the terms ''limited assurance'' and ''reasonable assurance'' in the final rules. Some commenters stated that definitions or guidance could be helpful or reduce any potential confusion,[1246] while other commenters stated that no definition is needed.[1247] We have determined not to include definitions of ''limited assurance'' and ''reasonable assurance'' in the final rules because we agree with the commenters that stated that this terminology is generally well understood[1248] and should be defined by assurance standard setters and not by the Commission.[1249] As we explained in the Proposing Release, ''limited assurance'' and ''reasonable assurance'' are currently defined by the prevailing attestation standards.[1250] Furthermore, we expect the description of the work performed as a basis for the assurance provider's conclusion on the GHG emissions attestation engagement to be included in any assurance report issued pursuant to the final rules, which should facilitate investors' understanding of the nature of the limited or reasonable assurance engagement.[1251]

One commenter asked the Commission to clarify how the terms ''limited assurance'' and ''reasonable assurance'' relate to the ''standard GHG terms of 'measured,' 'monitored,' and 'verified.' ''[1252] It is our general understanding that ''measured,'' ''monitored,'' and ''verified'' are terms commonly used in the marketplace to describe the process for calculating and reporting GHG emissions data.[1253] Although such a process could share some similarities with the steps GHG emission attestation providers undertake during the course of an assurance engagement, such a process is distinct from the assurance required by the final rules, which must be performed in accordance with a standard that meets the requirements detailed below. Another commenter urged the Commission to provide a definition of limited assurance that establishes ''a process more rigorous than currently used for assurance of quarterly SEC filings.''[1254] However, doing so would potentially result in the Commission's definition of limited assurance being different from, or conflicting with, the definitions included in the prevailing attestation standards that we expect many GHG emissions attestation providers will use, which could cause confusion.

As discussed above, the final rules provide that any GHG emissions metrics required to be disclosed pursuant to Item 1505 in an annual report filed with the Commission on Form 10–K may be incorporated by reference from the registrant's Form 10–Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions disclosure relates, or may be included in an amended annual report on Form 10–K no later than the due date for such Form 10–Q.[1255] The extension of the deadline for the filing of GHG emissions metrics also applies to the deadline for the filing of an attestation report, which should accompany the GHG emissions disclosure to which the report applies.[1256] This additional time—an additional two fiscal quarters—should provide registrants subject to Item 1505 and their GHG emissions attestation providers with sufficient time to measure GHG emissions, provide assurance, and prepare the required attestation report. Consistent with the notice requirements included in Item 1505(c), the final rules (Item 1506(f)) provide that a registrant that elects to incorporate by reference its attestation report from its Form 10–Q for the second fiscal quarter or to provide its attestation report in an amended annual report must include an express statement in its annual report indicating its intention to either incorporate by reference the attestation report from a quarterly report on Form 10–Q or amend its annual report to provide the attestation report by the due date specified in Item 1505.[1257]

[1244] *See supra* note 1166 and accompanying text.

[1245] *See* 17 CFR 229.1506(a). *See also infra* section II.O.3 for further discussion of the compliance dates for the final rules.

[1246] *See supra* note 1180 and accompanying text.

[1247] *See supra* note 1183 and accompanying text.

[1248] *See* letter from CFA Institute.

[1249] *See* letter from Mazars.

[1251] *See, e.g.,* IAASB ISAE 3000 (Revised) § 69(k).

[1252] *See* letter from IECA.

[1253] For example, the draft interagency report entitled, ''Federal Strategy to Advance Greenhouse Gas Measurement and Monitoring for the Agriculture and Forest Sectors (Strategy),'' states that ''Measurement, Monitoring, Reporting, and Verification (MMRV) refers to activities undertaken to quantify GHG emissions and sinks (through direct measurement and/or modeling), monitor emission over time, verify estimates, and synthesize and report on findings.'' *See Federal Strategy to Advance Measurement and Monitoring Greenhouse Gas Measurement and Monitoring for the Agriculture and Forest Sectors,* 88 FR 44251 (July 12, 2023).

[1254] *See supra* note 1180.

[1255] *See* 17 CFR 220.1505(c)(1). If the registrant is a foreign private issuer, the final rules provide that its GHG emissions disclosure may be included in an amendment to its annual report on Form 20–F, which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions disclosure relates. *See id. See also supra* section II.H.3.

[1256] *See* 17 CFR 229.1506(f).

[1257] *See id.*

The proposed rules would have required the attestation report to be included in the separately captioned ''Climate-Related Disclosure'' section in the relevant filing.[1258] However, as discussed above, the final rules leave the placement of climate-related disclosures, other than the financial statement disclosures, largely up to each registrant.[1259] As such, a registrant will not be required to include the attestation report in a separately captioned ''Climate-Related Disclosure'' section, although it may elect to do so.[1260]

Consistent with the proposed rules, during the phased in compliance period when limited assurance is required for LAFs, the final rules (Item 1506(a)(1)(ii)) permit an LAF, at its option, to obtain reasonable assurance of its Scope 1 and/or 2 emissions disclosure.[1261] Similarly, the final rules (Item 1506(a)(1)(i)) permit an AF, at its option, to obtain reasonable assurance of its Scope 1 and/or 2 emissions disclosure. In addition, at its option, a registrant that is subject to the assurance requirements would be able to obtain any level of assurance over its GHG emissions disclosures that are not required to be assured pursuant to Item 1506(a).[1262] For filings made after the compliance date for the GHG emissions disclosure requirements but before Item 1506(a) requires limited assurance, a registrant would only be required to provide the disclosure called for by Item 1506(e).[1263] For filings made after the compliance date for assurance required by Item 1506(a), to avoid potential confusion, the additional, voluntary assurance obtained by such filer would be required to follow the requirements of Items 1506(b) through (d), including using the same attestation standard as the required assurance over Scope 1 and/or Scope 2 emissions, which was supported by one commenter.[1264] Although in the Proposing Release, the requirements outlined in this paragraph would have applied to any climate-related disclosures not subject to assurance under Item 1506(a),[1265] we have narrowed the scope of the final rule to apply only to GHG emissions disclosures that are not required to be assured under Item 1506(a) because, given the modifications in the final rule, we think it is unlikely that registrants will voluntarily obtain assurance over non-GHG emissions disclosure for which the disclosure required by 1506(e) would be useful to investors.[1266] Therefore, to reduce the complexity of the final rules, we are streamlining it in this way. In addition, as discussed below in section II.I.5, a registrant that is not subject to Item 1505 but that voluntarily discloses GHG emissions information and voluntarily obtains assurance will be required to comply only with Item 1506(e), if applicable.

For ease of reference, we have included a table reflecting the application of these requirements:

	After the compliance date for GHG emissions disclosure but before the compliance date for assurance	After the compliance date for assurance
LAFs and AFs subject to Items 1505 and 1506(a) through (d) (*e.g.,* registrants that are required to disclose GHG emissions and obtain assurance).	Any voluntary assurance over any GHG emissions disclosure must comply with the disclosure requirements in Item 1506(e).	Any voluntary assurance obtained over GHG emissions disclosures that are not required to be assured pursuant to Item 1506(a) (*e.g.,* voluntary Scope 3 disclosures) must follow the requirements of Item 1506(b) through (d), including using the same attestation standard as the registrant's required assurance over Scope 1 and/or Scope 2 disclosure.
Registrants not subject to Items 1505 or 1506(a) through (d) (*e.g.,* registrants that are not required to disclose GHG emissions).	Any voluntary assurance over any GHG emissions disclosure must comply with the disclosure requirements in Item 1506(e).	Any voluntary assurance over any GHG emissions disclosure must comply with the disclosure requirements in Item 1506(e).

2. GHG Emissions Attestation Provider Requirements

a. Proposed Rules

The proposed rules would have required the GHG emissions attestation report required by proposed Item 1505(a) for AFs and LAFs to be prepared and signed by a GHG emissions attestation provider.[1267] The proposed rules would have defined a GHG emissions attestation provider to mean a person or firm that has all the following characteristics:

- Is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. Significant experience means having sufficient competence and capabilities necessary to:
  - Perform engagements in accordance with professional standards and applicable legal and regulatory requirements; and
  - Enable the service provider to issue reports that are appropriate under the circumstances.
- Is independent with respect to the registrant, and any of its affiliates,[1268] for whom it is providing the attestation report, during the attestation and professional engagement period.[1269]

The Commission explained that the proposed expertise requirement was

[1258] *See* Proposing Release, section II.H.3.

[1259] *See supra* section II.A.3.

[1260] *See id.* for further discussion of presentation requirements for GHG emissions disclosure under the final rules.

[1261] *See* Proposing Release, section II.H.1.

[1262] Scope 1 and/or Scope 2 emissions disclosures are required to be assured pursuant to Item 1506(a). As noted above, no registrants are required to provide Scope 3 GHG emissions disclosures; however, a registrant may choose to provide such disclosure voluntarily.

[1263] *See* 17 CFR 229.1506(a)(3).

[1264] *See* letter from Amer. for Fin. Reform, Sunrise Project *et al.;* 17 CFR 229.1506(a)(3). For example, if an LAF was required to obtain reasonable assurance over its Scope 1 and/or Scope 2 emissions disclosure and the attestation provider chose to follow, for example, the AICPA attestation standards, the LAF could voluntarily obtain limited assurance over any voluntary Scope 3 GHG emissions disclosure, and the attestation provider would be required to follow the AICPA's attestation standard for providing limited assurance.

[1265] *See* Proposing Release, section II.H.1.

[1266] *See* 17 CFR 229.1506(a)(3).

[1267] *See* Proposing Release, section II.H.2.

[1268] *See id.* Proposed Item 1505(b)(2)(iii) stated that the term ''affiliates'' has the meaning provided in 17 CFR 210.2–01, except that references to ''audit'' are deemed to be references to the attestation services provided pursuant to this section.

[1269] *See* Proposing Release, section II.H.2. Proposed Item 1505(b)(2)(iv) stated that the term ''attestation and professional engagement period'' means the period covered by the attestation report and the period of the engagement to attest to the registrant's GHG emissions or to prepare a report filed with the Commission. The professional engagement period begins when the GHG attestation service provider either signs an initial engagement letter (or other agreement to attest a registrant's GHG emissions) or begins attest procedures, whichever is earlier.

intended to help ensure that the service provider preparing the attestation report has sufficient competence and capabilities necessary to execute the attestation requirement.[1270] If the service provider is a firm, the Commission stated it would expect that the firm has policies and procedures designed to provide it with reasonable assurance that the personnel selected to conduct the GHG emissions attestation engagement have sufficient experience with respect to both attestation engagements and GHG disclosure. This would mean that the service provider has the qualifications necessary for fulfillment of the responsibilities that it would be called on to assume, including the appropriate engagement of specialists, if needed.[1271] The Commission explained that the proposed expertise requirement would have applied to the person or the firm signing the GHG emissions attestation report.[1272]

The proposed requirement related to independence was modeled on the Commission's qualifications for accountants under 17 CFR 210.2–01 (''Rule 2–01 of Regulation S–X''), which are designed to ensure that auditors are independent of their audit clients.[1273] The Commission explained that similar to how assurance provided by independent public accountants improves the reliability of the financial statements and disclosures and is a critical component of our capital markets, assurance of GHG emissions disclosure by independent service providers should also improve the reliability of such disclosure.[1274] The Commission stated that academic studies demonstrate that assurance provided by an independent auditor reduces the risk that an entity provides materially inaccurate information to external parties, including investors, by facilitating the dissemination of transparent and reliable financial information.[1275] The Commission explained that it expected that GHG emissions disclosure would similarly benefit if assured by an independent service provider.[1276]

Similar to Rule 2–01 of Regulation S–X,[1277] the proposed rules provided that a GHG emissions attestation provider is not independent if, during the attestation and professional engagement period, such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement.[1278] The proposed rules further stated that, in determining whether a GHG emissions attestation provider is independent the Commission would consider:

- Whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant (or any of its affiliates), places the attestation provider in the position of attesting to such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant (or any of its affiliates), or places the attestation provider in a position of being an advocate for the registrant (or any of its affiliates); and
- All relevant circumstances, including all financial or other relationships between the attestation provider and the registrant (or any of its affiliates), and not just those relating to reports filed with the Commission.[1279]

These proposed provisions were modeled on the factors used by the Commission in determining whether an accountant is independent.[1280] The Commission explained that similar to Rule 2–01 of Regulation S–X, the proposed provisions should help protect investors by requiring the GHG emissions attestation provider to be independent both in fact and appearance from the registrant, including its affiliates.[1281]

The Commission also explained that because the GHG emissions attestation provider would be a person whose profession gives authority to the statements made in the attestation report and who is named as having provided an attestation report that is part of the registration statement, the registrant would be required to obtain and include the written consent of the GHG emissions attestation provider pursuant to Securities Act section 7,[1282] the corresponding rule requiring the written consents of such experts,[1283] and the Regulation S–K provision requiring the attachment of the written consent of an expert to a Securities Act registration statement or Exchange Act report that incorporates by reference a written expert report attached to a previously filed Securities Act registration statement.[1284] The GHG emissions attestation provider would also be subject to liability under the Federal securities laws for the attestation conclusion or, when applicable, opinion provided.[1285] The Commission explained that such liability should encourage the attestation service provider to exercise due diligence with respect to its obligations under a limited or reasonable assurance engagement.[1286]

b. Comments

A number of commenters supported the proposed rules' requirement for a registrant to obtain a GHG emissions attestation report that is provided by a GHG emissions attestation provider that meets specified requirements.[1287] A number of commenters stated that they agreed with the approach taken in the proposed rules not to limit eligible GHG emissions attestation providers to only accounting firms.[1288] Several commenters stated that non-accounting firms may have expertise that would be relevant to providing assurance over

[1270] *See* Proposing Release, Section II.H.2.

[1271] *See id.*

[1272] *See id.* The Commission noted that it has adopted similar expertise requirements in the past to determine eligibility to prepare a mining technical report, although the mining technical report requirements differ in that such an engagement is not an assurance engagement. *See id.* (citing *Modernization of Property Disclosures for Mining Registrants,* Release No. 33–10570 (Oct. 31, 2018) [83 FR 66344 (Dec. 26, 2018)]).

[1273] *See* Proposing Release, section II.H.2.

[1274] *See id.*

[1275] *See id.*

[1276] *See id.*

[1277] *See* 17 CFR 210.2–01(b).

[1285] As explained above, a limited assurance engagement results in a conclusion that no material modification is needed and a reasonable assurance engagement results in an opinion. *See supra* notes 1090 and 1091.

[1286] *See* Proposing Release, section II.H.2.

[1287] *See, e.g.,* letters from BOA; Bureau Veritas; CII; Crowe; ERM CVS; Ernst & Young LLP; Futurepast; ICAEW (''Third party assurance providers should comply with a professional framework encompassing competence, independence and a system of quality management.''); ICI; LRQA; MFA; Morningstar; and TotalEnergies.

[1288] *See* letter from ABA; Beller *et al.;* Bureau Veritas; Ceres; CFA Institute; Chevron; Climate Risk Consortia; ERM; Futurepast; J. Herron; J. McClellan (''Practically, many accounting firms will seek to hire subject matter experts to build their own internal expertise so it makes sense to expand the universe of assurance providers to include these specialist organizations.''); LRQA; MFA; NAM; SKY Harbor; and TCS.

GHG emissions disclosure.[1289] For example, one commenter stated that ''certain situations may require specialist expertise and that limiting attestation providers only to accounting firms would prevent registrants in such situations from availing themselves of the requisite special knowledge.'' [1290] Another commenter stated that ''[e]xpanding assurance beyond accounting firms has the added benefit of providing a much larger pool of assurance providers, which could potentially lower compliance costs.'' [1291] A few commenters stated that if non-accounting firms are eligible to provide assurance services, then the Commission would need to ensure that there are appropriate protections in place for investors.[1292] A few commenters stated that the proposed rules' references to accounting or audit-style requirements could favor accounting firms or make it difficult for non-accounting firms to meet the qualifications.[1293]

On the other hand, a few commenters stated that the Commission should require that the GHG emissions attestation provider be a public accounting firm registered with the PCAOB.[1294] One of these commenters stated that requiring a GHG emissions attestation provider to be a PCAOB-registered public accounting firm ''will enhance the reliability of the [GHG emissions] disclosures themselves, thus promoting confidence in the disclosures among investors.'' [1295] Another commenter explained that PCAOB-registered public accounting firms ''already have a framework to adhere to professional obligations related to objectivity and due process, and to the independence rules,'' which would negate ''the burden for registrants to research and provide various information related to attestation service providers'' required by the proposed rules.[1296]

Some commenters agreed with the proposal that significant experience means having sufficient competence and capabilities necessary to (a) perform engagements in accordance with professional standards and applicable legal and regulatory requirements and (b) enable the service provider to issue reports that are appropriate under the circumstances.[1297] One commenter recommended that the Commission require a minimum of three years of experience in GHG emissions attestation or assurance for the person or organization signing the assurance statement.[1298] Conversely, some commenters stated that the Commission should not prescribe a number of years of experience that would be required to qualify as a GHG emissions attestation provider.[1299]

Some commenters stated that the proposed rules were not clear about the qualifications required for a GHG emissions attestation provider [1300] or that the Commission should provide additional guidance.[1301] One commenter stated that registrants ''would face significant challenges and risks in connection with making determinations as to the qualification of attestation providers.'' [1302] Several commenters raised concerns about the supply and availability of experienced and qualified GHG emissions attestation providers to meet the deadlines included in the proposed rules.[1303]

In the Proposing Release, the Commission asked if it should specify that a GHG emissions attestation provider meets the expertise requirements if it is a member in good standing of a specified accreditation body that provides oversight to service providers that apply attestation standards, and if so, which accreditation body or bodies it should consider.[1304] A few commenters stated that the Commission should require the use of GHG emissions attestation providers

[1289] *See, e.g.,* letters from ABA (limiting qualified attestation providers to only accounting firms ''would unnecessarily constrict the supply providers and ignore the fact that other types of enterprises, such as engineering and consulting firms, have expertise in the measurement of GHG emissions and could conduct attestation engagements''); Bureau Veritas (''This creates an open, competitive market, and enables engineers, environmental scientists who have subject matter expertise in climate change and understand the specifics of GHG management to an expert level.''); ERM CVS; and J. McClellan.

[1290] *See* letter from J. Herron.

[1291] *See* letter from ANSI NAB. *See also* letter from Ceres (stating that non-accounting firms ''are likely to charge less for their services than major accounting firms, and we support having competition'').

[1292] *See* letter from Amer. for Fin. Reform, Sunrise Project *et al.* (''Eligible attestation providers should not be limited to only PCAOB-registered audit firms, but the SEC will need to conduct enhanced monitoring and enforcement of the assurance, as the attesting entities will be neither inspected by the PCAOB nor subject to PCAOB standards and enforcement.''); Center Amer. Progress (stating that non-accounting firms ''should be subject to the internal controls or other guardrails that exist for financial auditors); and NASBA (recommending that the Commission develop regulations ''to build the intellectual infrastructure, including independence requirements, quality management systems, and peer review inspections outside of the professional standards governing the public accounting profession''). *See also* letter from TCS (''The SEC should also permit attestation providers who are not registered public accounting firms to provide assurance of GHG emission disclosure, particularly for non-accelerated and smaller filers, so long as they can meet quality standards through certification or other means.'').

[1293] *See, e.g.,* letters from AFPM (stating that although the proposed rule ''ostensibly allow expert providers that are not auditors to provide assurance, imposing audit style assurance requirements will render the approach taken by many non-auditor consultants inadequate, leaving few firms that are qualified to provide this assurance''); and Airlines for America (''While the SEC appears to have intended to allow the use of, for example, qualified environmental engineering firms that have traditionally provided GHG emissions verification, the repeated references to accounting standards throughout the proposed rules seem to strongly favor accounting firms.'').

[1294] *See, e.g.,* letters from Better Markets (noting that the goals of the proposal would be served by requiring that providers be PCAOB-regulated entities because those firms are subject to oversight and inspection whereas other types of third-party verifiers are not); Mazars; and PRI. *See also* letter from NASBA (''We believe that permitting non-CPAs who are not subject to the standards that result from such due process procedures to provide attestation services is not the public interest.''); and RSM US LLP (''We believe assurance over climate-related reporting when performed by a public company auditor would offer increased investor protection compared with other forms of third-party assurance or verification.'').

[1295] *See* letter from Better Markets.

[1296] *See* letter from Mazars.

[1297] *See, e.g.,* letters from CFA Institute; Crowe; and GGMI (recommending that the Commission further clarify that by ''experience'' it means that ''experts have proper technical knowledge and competencies in STEM fields related to the sources and sinks of GHG emission and removals being quantified.'').

[1298] *See* letter from ERM CVS.

[1299] *See, e.g.,* letters from C2ES (''Prescribing a number of years of experience may limit new businesses who have employees with long term experience, therefore we do not recommend instead requiring a specified number of years of experience.''); CFA Institute; and Futurepast.

[1300] *See, e.g.,* letters from AEPC; APCIA; CEMEX (''We believe that in order to accurately comply with the proposed expertise requirements, additional guidance is needed. As done before with the recently implemented S–K 1300 where it specified the prescriptive requirements to be a 'qualified person' and provide insight to the registrant, something similar would suffice to ensure the experts that provide services to the registrant meet the necessary criteria and thus ensure a comparable and accurate GHG attestation amongst registrants.''); and INGAA.

[1301] *See, e.g.,* letters from Praxis, *et al.* (''In addition, the SEC should provide guidance on standards for third-party verifiers who are not accredited with the Public Company Accounting Oversight Board); S. Sills (same); and Veris Wealth (same).

[1302] *See* letter from Sullivan Cromwell.

[1303] *See, e.g.,* letters from Financial Services Forum; Jones Day (''It is also not clear that there will be a sufficient number of qualified firms to provide these services for companies to comply with the attestation requirements.''); SouthState (''Further, the number of experienced personnel to oversee, execute, or otherwise be considered an 'expert' in climate-related financial risk management is currently (and likely for the foreseeable future) very low.''); and Sullivan Cromwell (''Although an industry of qualified third-party providers likely would develop, the current lack of qualified attestation providers would prove challenging and costly for companies, especially smaller registrants, to adhere to the proposed attestation requirements, particularly given the short proposed implementation period.'').

[1304] *See* Proposing Release, section II.H.2.

that are accredited to ISO 14065 [1305] or require that the GHG emissions attestation provider be able to demonstrate expertise in ISO 14064–3.[1306] One commenter stated the Commission should include all firms that are accredited for independent certification and assurance work by one of the members of the International Accreditation Forum (IAF), as well as accounting firms that are members of the AICPA or other professional accounting organizations, and that either have significant experience in GHG emissions and their attestation or are able to supervise an appropriately qualified Auditor-Engaged Specialist.[1307] Another commenter stated that registrants should be required to ''engage a verifier accredited by a reputable organization, such as ANAB.'' [1308] One commenter recommended that the Commission establish a process for ''staff oversight'' of non-PCAOB-registered accounting firms,[1309] while another commenter suggested that the PCAOB be directed to develop ''a separate registration process for service providers specific to climate disclosures.'' [1310] Finally, one commenter stated that ''since there is no internationally recognized accreditation body to certify the qualifications of third-party attestation providers, issuers may not have sufficient clarity as to which third-party attestation providers have adequate qualifications under the proposed rule.'' [1311]

Some commenters recommended that the Commission specify additional qualifications for GHG emissions attestation providers.[1312] For example, a few commenters recommended that the Commission include a requirement for a GHG emission attestation provider to have prior experience in providing assurance.[1313] Another commenter stated that the Commission should require a GHG emissions attestation provider to ''have familiarity with the specific industry of the registrant for which the attestation report is being provided,'' which the commenter stated ''should enhance the attestation quality and provide greater transparency to investors and investment advisers without unduly burdening assurance providers.'' [1314] One commenter stated that GHG emissions attestation providers should be required to demonstrate that they have policies and procedures in place to carry out the objectives of the proposed rules in an impartial, fair, and expert manner.[1315] Finally, one commenter recommended that the Commission consider whether state licensure laws would preclude parties other than CPAs from performing attest services.[1316]

A number of commenters agreed with the proposed requirement for a GHG emissions attestation provider to be independent with respect to the registrant and any of its affiliates.[1317] One commenter stated that the proposed independence requirement ''should help ensure that the attestation provider can exercise informed, objective, and impartial judgment.'' [1318] Several commenters stated that the proposed independence requirement would enhance the reliability of the attestation report.[1319] Another commenter stated that ''[t]here is already a proliferation of potentially and actually conflicted operators in this space'' and that an independence requirement would ''protect against further conflicts of interest'' and provide investors with ''better assurances of accuracy.'' [1320]

A few commenters stated that Rule 2–01 of Regulation S–X is an appropriate model for determining the independence of GHG emissions attestation providers,[1321] while another commenter stated that it supported all the proposed criteria for determining the independence of the GHG emissions attestation provider.[1322] Alternatively, one commenter stated that the proposed rules do not explicitly require the GHG emissions attestation provider to ''meet the stringent independence standards applicable to the financial statement auditor'' and encouraged the Commission to require GHG emissions attestation providers to ''meet the full complement of SEC independence requirements.'' [1323] Other commenters stated that they supported the proposed definitions of ''affiliates'' and ''attestation and professional engagement period.'' [1324] One commenter stated that the definition of ''attestation and professional engagement period'' should be based on the definition of ''audit and professional engagement period'' in Rule 2–01.[1325] One commenter recommended that the Commission consider the relationship between the GHG emission attestation engagement and the financial audit if

[1325] *See* letter from RSM.

the same firm undertakes both engagements.[1326]

Conversely, a few commenters stated that they did not support the proposed independence requirement.[1327] A number of commenters raised concerns that the proposed independence requirement would limit the available pool of providers.[1328] For example, some commenters stated that GHG emissions consultants that are already familiar with the processes of a particular registrant may not meet the independence requirement.[1329] Another commenter stated that companies that have been obtaining third-party verification of GHG emissions data have not necessarily been obtaining verification from a provider that would meet the proposed independence requirement.[1330] One commenter stated that the ''shortage of qualified, independent third parties'' would ''further drive up the cost and impair the efficiency and quality of assurance services.'' [1331] Some commenters noted that other Commission rules pertaining to qualified persons did not contain an independence requirement.[1332] One commenter stated that the proposed independence requirement will place additional burdens on registrants given that they will need to perform procedures to assess the independence of attestation providers.[1333]

Some commenters recommended that the Commission consider alternatives to the proposed independence requirement. Instead of the proposed independence requirement, one commenter suggested that the Commission allow a non-independent attestation provider to disclose that the provider is not independent to address any concerns investors or others may have about the relationship.[1334] Another commenter stated that instead of requiring a GHG emissions attestation provider to be independent, the Commission should provide that ''if the firm retained by the company is providing other services to the company (in addition to attestation services) in excess of $1 million (for example) during the last completed fiscal year, then the company must provide disclosure of the aggregate fees for the attestation services and for such additional other services provided to the company for such year.'' [1335] One commenter stated that the proposed independence requirement was ''overbroad'' and recommended that the Commission permit qualified firms to provide services—at least to affiliates of the registrant—in addition to their attestation services.[1336] Another commenter stated that it would support a ''slimmed down'' version of Rule 2–01 for non-accountants and recommended particular criteria.[1337]

In the Proposing Release, the Commission explained that accountants are already required to comply with relevant quality control and management standards when providing audit and attest services under the PCAOB, AICPA, or IAASB standards, and those quality control and management standards would similarly apply to accountants providing GHG emissions attestation services pursuant to these standards.[1338] The Commission included a request for comment asking if it should require a GHG emissions attestation provider that does not (or cannot) use the PCAOB, AICPA, or IAASB attestation standards to comply with additional minimum quality control requirements.[1339] Some commenters recommended that the Commission require the GHG emissions attestation provider to be subject to additional minimum quality control requirements.[1340] One commenter stated that such requirements ''would foster more consistent quality in attestation reports under the proposed rules when the registrant selects a service provider that does not use PCAOB, AICPA, or IAASB attestation standards.'' [1341] One commenter stated that it believed the ISO standards create a sufficient basis for ensuring quality attestation engagements and therefore any attestation provider should be required to perform attestation engagements in accordance with these standards.[1342]

In the Proposing Release the Commission included a request for comment asking if it should amend 17 CFR 230.436 (''Rule 436'') to provide that a report on GHG emissions at the limited assurance level by a GHG emissions attestation provider that has reviewed such information is not considered a part of a registration statement prepared or certified by such person within the meaning of sections 7 and 11 of the Securities Act.[1343] Several commenters generally expressed support for such an amendment so that GHG emissions attestation providers would not be subject to liability under section 11.[1344] A few of these commenters stated that the potential for liability under section 11 would or could deter or reduce the number of

assurance providers available.[1345] On the other hand, a few commenters stated that the Commission should confirm that attestation reports are considered to be expertized material because firms acting as underwriters will be exposed to significant legal liability if Scope 1 and Scope 2 GHG emissions attestations are not considered to be expertized material for purposes of liability under section 11 of the Securities Act.[1346] One of these commenters further stated that ''[f]or any period for which assurance is not required for GHG emissions attestation reports, the SEC should clarify that the reports will still be considered to be expertized material, to avoid inadvertently subjecting underwriters to heightened due diligence requirements during an interim period of disclosure implementation.'' [1347]

c. Final Rules (Item 1506(b))

We are adopting the GHG emissions attestation provider requirements substantially as proposed.[1348] We continue to believe that the expertise requirements (Item 1506(b)(1)) are necessary to help ensure that the service provider preparing the attestation report has sufficient competence and capabilities necessary to execute the attestation engagement.[1349] Several commenters agreed with the proposal's expertise requirements and definition of significant experience.[1350] While some commenters urged the Commission to require a GHG emissions attestation provider to have a certain number of years of experience,[1351] other commenters stated that the Commission should not prescribe a minimum number of years.[1352] We do not think it is necessary to require a provider to have a certain number of years of experience because imposing such a requirement could result in a ''check the box'' mentality, and we believe that investors would be better served by registrants undertaking a more holistic consideration of a provider's qualifications in selecting a provider. Some commenters requested that the Commission provide additional guidance regarding the qualifications for a GHG emissions attestation provider; [1353] however, these commenters generally did not identify any particular aspects of the expertise requirement that required clarification. Adopting a principles-based approach inherently involves some uncertainty, but we believe registrants would be better served by such flexibility than an approach that, for example, identifies a static list of qualified providers. Such an approach will provide a registrant with more leeway to select a GHG emissions attestation provider that has the experience that best fits the registrant's facts and circumstances, which could improve the quality of assurance provided thereby enhancing the reliability of GHG emissions disclosures.

In response to a question included in the Proposing Release, some commenters stated that the Commission should specify that a GHG emissions attestation provider meets the expertise requirements if it is a member in good standing of a specified accreditation body and identified particular bodies or approaches the Commission should consider.[1354] We have decided not to impose such a requirement at this time given the evolving nature of GHG emissions assurance and the possibility that new or different accreditation bodies may exist at the time when registrants subject to Item 1505 and Item 1506 are required to begin obtaining attestation reports. Several commenters recommended that the Commission specify additional qualifications for GHG emissions attestation providers,[1355] and while we considered each of these suggestions, we believe that the requirements we have included in the final rules will help ensure that GHG emissions attestation providers have sufficient competence and capabilities necessary to execute the attestation engagement.

While a number of commenters urged the Commission to require that a GHG emissions attestation provider be a public accounting firm registered with the PCAOB,[1356] we determined to retain the principles-based approach in the final rules because it will provide registrants with the flexibility to hire a non-accounting firm that may have relevant or specialized experience with respect to assuring GHG emissions disclosure while at the same time ensuring that a GHG emissions attestation provider has the requisite expertise to perform the engagement in accordance with professional standards. Although we agree there would be investor protection benefits to be gained by requiring a registrant to use a PCAOB-regulated entity that is subject to oversight and inspections (even though the PCAOB's inspection jurisdiction would not include engagements for the assurance of GHG emissions disclosure within its scope),[1357] we have balanced this against other considerations, such as the availability of GHG emissions providers and compliance costs, which could potentially be lower if a larger pool of assurance providers is available. Nevertheless, we agree with those commenters who stated that if the final rules permit non-PCAOB-registered accounting firms to provide attestation services, the Commission would need to ensure that there are appropriate protections in place for investors.[1358] The expertise, independence, and other requirements applicable to the GHG emissions attestation engagement under the final rules, such as the requirement for a provider to use attestation standards that are established by a body or group that has followed due process procedures, are intended to serve precisely that function.

As with the proposed rules, the final rules apply the expertise requirement to the person or firm signing the GHG emissions attestation report.[1359] If the service provider is a firm, we would expect it to have policies and procedures designed to provide it with reasonable assurance that the personnel selected to conduct the GHG emissions attestation engagement have significant experience with respect to both attestation engagements and GHG emissions. As we explained in the

[1345] *See, e.g.,* letters from Apex; D. Hileman Consulting; ERM CVS; and WSP. *But see, e.g.,* letter from Futurepast (''Futurepast does not believe that the possibility of section 11 liability will deter qualified firms and persons from providing attestation services to registrants.'').

[1346] *See, e.g.,* letters from BPI; and Financial Services Forum.

[1347] *See* letter from BPI.

[1348] *See* 17 CFR 229.1506(b). To enhance clarity, we are making one minor change to the rule text. In the definition of ''significant experience'' in the final rules, we are substituting the proposed rule's reference to ''professional standards'' with a reference to ''attestation standards'' to make it clear that the standards being referenced in Item 1506(b)(1)(i) are the attestation standards that meet the requirements of Item 1506(a). *See* 17 CFR 229.1506(b)(1)(i).

[1349] *See* Proposing Release, section II.H.2.

[1350] *See supra* notes 1287 and 1297 and accompanying text.

[1351] *See supra* note 1298 and accompanying text.

[1352] *See supra* note 1299 and accompanying text.

[1353] *See supra* notes 1300 and 1301 and accompanying text.

[1354] *See supra* notes 1305, 1307, and 1308 and accompanying text.

[1355] *See supra* note 1312 and accompanying text.

[1356] *See supra* note 1294 and accompanying text.

[1357] The PCAOB's inspection jurisdiction is limited to audits of issuers, brokers, and dealers and would not include engagements for the assurance of GHG emissions disclosure within its scope. *See* 15 U.S.C. 7214 (setting forth the PCAOB's inspection jurisdiction). However, as discussed in greater detail below, oversight inspection programs can provide benefits, such as providing a check on a GHG emissions attestation provider's overall activities and driving improvements in the quality of services overall, even when an oversight inspection program does not include a GHG emissions attestation engagement within its scope.

[1358] *See supra* note 1292 and accompanying text.

[1359] *See* 17 CFR 229.1506(b).

Proposing Release, this would mean that the service provider has the qualifications necessary for fulfillment of the responsibilities that it would be called on to assume, including the appropriate engagement of specialists, if needed.[1360] A few commenters supported a requirement for GHG emissions attestation providers to establish policies and procedures along these lines.[1361] Although, as stated above, we expect firms to adopt policies and procedures related to the expertise of its personnel, we have determined not to include such a requirement in the final rules because we do not want to foreclose other possible means by which a firm may ensure that it and its relevant personnel meet the expertise requirements set forth in Item 1506(b).

As noted above, one commenter recommended that the Commission consider whether state licensure laws would preclude parties other than CPAs from performing attestation services.[1362] It is our understanding that states typically require someone who holds itself out as a public accountant or as performing public accounting services to be licensed as a CPA. In addition, non-CPAs are not able to use the AICPA or PCAOB attestation standards.[1363] However, these principles would not prevent a non-CPA from performing attestation services as long as it was neither holding itself out as a CPA nor using an attestation standard that, by its terms, is only available to CPAs. In this regard, we note that the IAASB and ISO standards, two of the four standards we are explicitly permitting assurance providers to use under the final rules (as discussed in more detail below), are not restricted to CPAs, and we are not aware that any state laws are currently impacting the ability of non-CPA service providers to provide assurance over GHG emissions.

With respect to independence, we are adopting each of the independence requirements (Item 1506(b)(2)) as proposed.[1364] These independence requirements are important because they help ensure that the attestation provider will perform the engagement in an objective and impartial manner. A number of commenters agreed with the proposed requirement for a GHG emissions attestation provider to be independent with respect to the registrant and any of its affiliates and agreed that the independence requirement would enhance the reliability of the attestation report.[1365] We continue to believe that, similar to how assurance provided by independent public accountants improves the reliability of financial statements and disclosures and is a critical component of our capital markets, assurance of GHG emissions disclosure by independent service providers should also improve the reliability of such disclosure.[1366] Several commenters agreed with the Commission's proposed approach of modeling the independence requirement and relevant definitions on the Commission's qualifications for accountants under Rule 2–01 of Regulation S–X,[1367] and we continue to believe the approach is appropriate given our experience in administering Rule 2–01 in the context of financial statement audits. One commenter appeared to suggest that, under the proposed rules, GHG emissions attestation providers would not be subject to the same level of independence as financial statement auditors.[1368] Although the final rules do not set forth a non-exclusive specification of circumstances inconsistent with independence like Rule 2–01(c) does for financial statement auditors, the foundational principles underlying the independence requirements in Rule 2–01 and the final rules are the same,[1369] and we view the independence requirements in the two contexts as providing similar, if not equivalent, protections to investors. However, for the avoidance of any doubt, we are clarifying that registrants and GHG emissions attestation providers are only required to comply with the independence requirements included in Item 1506 and are not required to separately comply with the independence requirements included in Rule 2–01 with respect to the GHG emissions attestation engagement.[1370] Along those lines, existing Commission guidance and staff interpretations regarding Rule 2–01 do not apply to the independence requirements in Item 1506; however, to the extent any such guidance or interpretation may apply to an issue that is similarly presented under Item 1506 (which is a possibility since Item 1506 is modeled on Rule 2–01), the guidance or interpretation would be a useful starting point for consideration, although not determinative.[1371]

We considered the concern raised by commenters that requiring a GHG emissions attestation provider to be independent would limit the available pool of providers and potentially increase costs.[1372] However, we think these concerns are mitigated by the modifications in the final rules that provide registrants subject to the requirements with a multi-year transition period before they are required to obtain an attestation report. The phased in compliance period will give registrants adequate time to find a provider that meets the independence requirements. It will also give non-accountant attestation providers time to familiarize themselves with the independence requirements and adapt their business practices accordingly, which may help mitigate any adverse effects that the independence requirements could have on the available pool of providers. For this reason, we do not think it is necessary, as suggested by some commenters, to

[1360] *See* Proposing Release, section II.H.2.

[1361] *See supra* note 1315 and accompanying text.

[1362] *See* letter from PwC. *See also* letter from NASBA (''Virtually all of the State Boards do not allow non-CPAs to perform attestation services or issue reports under the professional standards governing the public accounting profession.'').

[1363] By their terms, AICPA and PCAOB attestation standards are only applicable in the context of engagements performed by certified public accountants. *See, e.g.,* PCAOB AT section 101, Attest Engagements, available at *https://pcaobus.org/oversight/standards/attestation-standards/details/AT101* (stating that ''[t]his section applies to engagements . . . in which *a certified public accountant in the practice of public accounting* . . . is engaged to issue or does issue an examination, a review, or an agreed-upon procedures report on subject matter . . .'') (emphasis added); AICPA SSAE No. 18, AT–C § 105.01 (''This section applies to engagements in which a *CPA in the practice of public accounting* is engaged to issue, or does issue, a practitioner's examination, review, or agreed-upon procedures report on subject matter or an assertion about subject matter (hereinafter referred to as an assertion) that is the responsibility of another party.'') (emphasis added).

[1364] *See* 17 CFR 229.1506(b)(2).

[1365] *See supra* note 1317 and accompanying text.

[1366] *See* Proposing Release, section II.H.2.

[1367] *See supra* notes 1321 and 1324 and accompanying text.

[1368] *See* letter from PwC.

[1369] Namely, the final rules provide that a GHG emissions attestation provider is not independent if such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement, which is modeled on Rule 2–01(b). *Compare* 17 CFR 229.1506(b)(2)(i) and 17 CFR 210.2–01(b). Also, the final rules model the factors the Commission will consider in determining whether a GHG emissions attestation provider is independent on the introductory text to Rule 2–01. *Compare* 17 CFR 229.1506(b)(2)(ii) and Introductory Text to Rule 2–01.

[1370] The final rules do not alter or amend Rule 2–01 or its current applicability in any way, which means, for example, there is no change to the requirement that registrants and their financial statement auditor comply with Rule 2–01 with respect to the financial statement audit.

[1371] The staff of the Commission's Office of the Chief Accountant is available to consult with registrants or GHG emissions attestation providers regarding the independence requirements in the final rules.

[1372] *See supra* notes 1327, 1328, and 1331 and accompanying text.

adopt an alternative to the independence requirement to simply disclose the fees received.[1373] Although requiring the disclosure of any fees, including non-attestation fees, received by the GHG emissions attestation provider from the registrant would provide investors with important information for evaluating the objectivity of the attestation provider, such an alternative would not prohibit the GHG emissions attestation provider from performing the GHG emissions assurance services in circumstances where the provider was not independent from the registrant (as the final rules will do). A few commenters stated that the proposed rules' references to accounting or audit-style requirements could favor accounting firms,[1374] and we acknowledge that some of the requirements in the final rules, such as the independence requirements, may be more familiar to accounting firms versus non-accounting firms. However, we believe the principles-based approach in the final rules generally should be accessible for both accounting and non-accounting firms. Moreover, the phased in compliance period should give non-accountant attestation providers time to familiarize themselves with the independence requirements and provide existing service providers with time to unwind any existing conflicts to their independence.

Some commenters suggested that the proposed independence requirement was problematic because it would seem to prohibit an expert or other third-party that has assisted a registrant in calculating or preparing its GHG emissions data from serving as the registrant's GHG emissions attestation provider.[1375] We agree that it would be difficult for an expert that has assisted a registrant in calculating or preparing its GHG emissions data to meet the independence requirements because such an engagement would presumably place the attestation provider in the position of attesting to its own work and may create a mutual interest between the attestation provider and the registrant, two of the factors the final rules state the Commission will consider in determining whether the GHG emissions provider is independent.[1376] We think the conflict of interest presented by this circumstance is exactly the type of situation that the independence requirement is intended to prevent, and therefore we are not modifying the independence requirement in response to these commenters' concerns. As a result, this could mean that a registrant that determines it is necessary to hire a third-party service provider to help it calculate or prepare its GHG emissions disclosure may have to pay a fee to both the third-party service provider and to its GHG emissions attestation provider. However, the likelihood of this scenario is reduced by the multiyear phase in compliance period we are adopting, which provides registrants with sufficient time to develop the necessary processes and procedures to calculate their GHG emissions data before they are required to comply with the assurance requirements. In addition, the exemption from the GHG emissions reporting and assurance requirements for SRCs and EGCs provides most newly public companies with time to develop any in-house expertise that may be necessary in case they no longer qualify for SRC or EGC status in the future and become subject to the final rules.

In response to the commenters that pointed out that the Commission did not adopt a requirement to retain an independent third party to prepare, or conduct a reserves audit of, a registrant's reserves estimates in the context of its mining and oil and gas disclosure rules,[1377] we note that the Commission's determination in each of its rulemakings about whether to require a registrant to retain an independent third-party is context specific. For example, with respect to its mining disclosure rules, the Commission stated that it was not adopting a requirement for a qualified person to be independent from the registrant because, among other things, the final rules require a registrant to disclose the qualified person's affiliated status with the registrant or another entity having an ownership or similar interest in the subject property, which is consistent with the Committee for Mineral Reserves International Reporting Standards' mining guidelines, to which the Commission was amending its mining rules to more closely align.[1378] With respect to its oil and gas disclosure rules, the Commission pointed out that most commenters did not support a requirement to obtain an independent third-party assessment of reserves estimates because a company's internal staff is generally in a better position to prepare those estimates and there is a potential lack of qualified third party engineers and professionals available.[1379] However, the Commission did adopt a requirement for a registrant to provide a general discussion of the internal controls it uses to assure objectivity in the reserves estimation process and the disclosure of the qualifications of the technical person primarily responsible for preparing the reserves estimates.[1380] In keeping with this context specific approach, with respect to assurance over GHG emissions disclosure, we believe that the benefits to investors from requiring a GHG emissions attestation provider to be independent in accordance with Item 1506 justify the potential costs for the reasons stated above. Moreover, there is currently a growing practice among some registrants of obtaining third-party assurance over their GHG emissions data.[1381] Although generally the independence requirements in the assurance standards currently being used with respect to GHG emissions data are not as robust as the requirements in the final rules, many of these standards include requirements related to the objectivity and impartiality of the third-party assurance provider.[1382] Therefore, the final rules' independence requirement is not inconsistent with the general practice in this space of retaining an objective and impartial third-party to provide assurance.[1383]

[1373] *See supra* note 1335 and accompanying text.

[1374] *See supra* note 1293 and accompanying text.

[1375] *See supra* note 1329 and accompanying text.

[1376] *See* 17 CFR 229.1506(b)(2)(ii)(A). Conversely, we generally expect that a registrant would be able to use its financial statement auditor as its GHG emissions attestation provider consistent with the independence requirement in the final rules.

[1377] *See supra* note 1332 and accompanying text.

[1378] *See Modernization of Property Disclosures for Mining Registrants,* Release No. 33–10098 (June 16, 2016) [81 FR 41651, 41661 (June 27, 2016)]; *Modernization of Property Disclosures for Mining Registrants,* Release No. 33–10570 (Oct. 31, 2018) [83 FR 66344, 66363 (Dec. 26, 2018)].

[1379] *See Modernization of Oil and Gas Reporting,* Release No. 8995 (Dec. 31, 2008) [74 FR 2157, 2175 (Jan. 14, 2009)].

[1380] *See id.*

[1381] *See supra* note 1232.

[1382] *See, e.g.,* AICPA SSAE No. 18, AT–C § 105.26; IAASB ISAE 3000 (Revised) § 20; and ISO 14064–3: 2019 § 4.2. The independence requirements in the final rules are more rigorous and may differ in scope from the requirements included in these standards. It is possible that the application of the independence requirements in the final rules may result in a GHG emissions attestation provider no longer being able to provide certain non-assurance services to its assurance client that may be permissible to provide outside the context of the final rules.

[1383] The International Ethics Standards Board for Accountants (IESBA), which is an independent global ethics standard-setting board, has recently proposed ethics standards for sustainability assurance providers (*i.e.,* professional accountants and other professionals performing sustainability assurance engagements), including robust independence standards. IESBA stated that it ''holds to the premise that sustainability assurance engagements . . . must be underpinned by the same high standards of ethical behavior and independence that apply to audits of financial information.'' *See* IESBA, Explanatory Memorandum for Proposed International Ethics Standards for Sustainability Assurance (including International Independence Standards) (IESSA) and

In addition, we are adopting the definition of ''affiliate'' as proposed and consistent with the feedback provided by commenters that addressed this issue.[1384] Similarly, we are adopting the broad definition of ''attestation and professional engagement period'' as proposed, which is modeled on the definition of ''audit and professional engagement period'' in Rule 2–01.[1385]

As discussed in greater detail above, in response to a request for comment, some commenters recommended that the Commission require the GHG emissions attestation provider to be subject to additional minimum quality control requirements.[1386] We have determined not to impose such requirements at this time; however, we reiterate the statement the Commission made in the Proposing Release that accountants are already required to comply with relevant quality control and management standards when providing audit and attest services under PCAOB, AICPA, or IAASB standards, and those quality control and management standards would similarly apply to accountants providing GHG emissions attestation services pursuant to these standards.[1387] The IAASB standards impose similar quality control requirements on non-accountants.[1388] In addition, one commenter stated that, for example, all firms that are accredited by one of the members of the IAF must have a quality control and management system.[1389] As such, we believe that many of the more experienced non-accountant GHG emissions attestation providers are required to comply with quality control requirements. More generally, we expect that any attestation standards that meet the requirements of the final rules would likely provide guidance on quality control for assurance providers.[1390]

Although the final rules do not include a requirement that a registrant's audit committee pre-approve the GHG emissions attestation services, nor was such a requirement proposed, it would be permissible under the final rules for a registrant to use the auditor of its financial statements to perform the GHG emissions attestation engagement, assuming the final rules' requirements for assurance providers are met. To the extent that the registrant's auditor is engaged to provide an attestation report in connection with the registrant's GHG emissions, or with respect to any other climate-related disclosures, the auditor would be required to comply with applicable, existing pre-approval requirements.[1391] Even in circumstances where the GHG emissions attestation services are not subject to a pre-approval requirement, however, audit committees should consider what level of involvement would be appropriate for them to take with respect to the selection and retention of attestation providers for climate-related disclosures.

In addition, in response to commenters' feedback,[1392] we are amending Rule 436 to provide that a report by an attestation provider covering Scope 1 and/or Scope 2 emissions at a limited assurance level shall not be considered a part of the registration statement that is prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.[1393] We determined to include this amendment, in part, because we agree with commenters that the potential for section 11 liability could deter or reduce the number of attestation providers willing to accept these engagements.[1394] However, we are limiting the exception to those GHG emissions attestation engagements performed at a limited assurance level to encourage GHG emissions attestation providers to perform such engagements. We think there could be reluctance on the part of a GHG emissions attestation provider to perform attestation engagements at the limited assurance level because of their potential liability under section 11, and that, alternatively, if GHG emissions attestation providers perform significantly expanded procedures, much closer to reasonable assurance, in order to meet potential liability concerns under section 11, substantial increased costs to issuers could result.[1395] The same considerations do not apply to reasonable assurance engagements, and we are therefore not providing a similar exception for those engagements.

The amendment to Rule 436 also states that a report covering Scope 3 emissions at a limited assurance level shall not be considered a part of the registration statement that is prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.[1396] Although no registrants are required to disclose Scope 3 emissions or obtain an attestation report for Scope 3 emissions under the final rules, we have included Scope 3 emissions within the exception contained in Rule 436 in the event that a registrant voluntarily discloses its Scope 3 emissions. We believe it is appropriate to provide these accommodations to encourage registrants to obtain limited assurance over Scope 3 disclosure.

Although not subjecting providers of these reports to liability could affect their incentives, on balance we think that encouraging more providers to enter this market would result in more

[1388] *See* IAASB ISAE 3000.3(b) (Revised) (''The practitioner who is performing the engagement is a member of a firm that is subject to [International Standard on Quality Control (ISQC) 1], or other professional requirements, or requirements in law or regulation, regarding the firm's responsibility for its system of quality control, that are at least as demanding as ISQC 1.'').

[1389] *See* letter from ERM CVS. The International Accreditation Forum is a worldwide association of accreditation bodies and other bodies interested in conformity assessment in the fields of management systems, products, processes, services, personnel, validation and verification and other similar programs of conformity assessment. *See* International Accreditation Forum, About IAF, available at *https://iaf.nu/en/about/.* Its members include ANAB, the ANSI National Accreditation Board, which provides accreditation to greenhouse gas verification and validation providers that demonstrate competence to validate or verify statements in accordance with its accreditation requirements, including ISO 14065.

[1390] The ISO standards, which are used by many non-accountant GHG emissions attestation providers as described in greater detail below, include two standards that can be used as a basis for requirements for attestation providers related to impartiality, competency, and communication, which are areas typically covered by quality control requirements. *See* ISO 14065, General principles and requirements for bodies validating and verifying environmental information (2020); and ISO 14066, Environmental information—Competence requirements for teams validating and verifying environmental information (2023).

[1391] *See* 15 U.S.C. 78j–1(i). *See also supra* note 1280 (explaining that if the independent accountant who audits the registrant's consolidated financial statements is also engaged to perform the GHG emissions attestation for the same filing, the fees associated with the GHG emissions attestation engagement would be considered ''Audit-Related Fees'' for purposes of Item 9(e) of 17 CFR 240.14a–101, Item 14 of Form 10–K, Item 16C of Form 20–F, or any similar requirements).

[1392] *See supra* note 1344 and accompanying text.

[1393] *See* 17 CFR 230.436(i)(1).

[1394] *See supra* note 1345 and accompanying text.

[1395] The Commission relied upon a similar rationale when it amended Rule 436 to provide that a report prepared or certified by an accountant within the meaning of sections 7 and 11 of the Securities Act shall not include a report by an independent accountant on a review of unaudited interim financial statements. *See Accountant Liability for Reports on Unaudited Interim Financial Information Under Securities Act of 1933,* Release No. 33–6173 (Jan. 8, 1980) [45 FR 1601, 1604 (Jan. 8, 1980)].

[1396] *See* 17 CFR 230.436(i)(1).

competition, which would benefit investors.[1397] We acknowledge the potential downsides of not subjecting the providers of these reports to liability; however, as noted above,[1398] these accommodations are consistent with the treatment of an accountant's report on unaudited interim financial statements included in a registration statement, which is also provided at the limited assurance level. Therefore, in these particular circumstances, we believe it is appropriate to provide these accommodations.

One result of the amendments to Rule 436 is that a GHG emissions attestation provider that has performed an attestation engagement over GHG emissions at a limited assurance level is not required to submit a consent in connection with the registration statement under section 7 of the Securities Act.[1399] However, we think it is nonetheless important that a GHG emissions attestation provider have some awareness about whether its attestation report is included in a registration statement under the Securities Act.[1400] Therefore, we are also amending Item 601 of Regulation S–K, which details the exhibits required to be included in Securities Act and Exchange Act filings, to require registrants to file as an exhibit to certain registration statements under the Securities Act or reports on Form 10–K or 10–Q that are incorporated into these registration statements a letter from the attestation provider that acknowledges its awareness of the use in certain registration statements of any of its reports which are not subject to the consent requirement of section 7.[1401] We are amending the Instructions as to Exhibits section of Form 20–F to include the same requirement for Form 20–F filers to the extent the Form 20–F is incorporated into a registration statement under the Securities Act.[1402]

We note that certain commenters urged the Commission to confirm that any attestation reports are expertized material, stating that otherwise underwriters may face heightened due diligence requirements in light of potential section 11 liability over GHG emission disclosures included in a registration statement.[1403] We also note, as discussed above, that certain commenters stated that deeming the information expertized may have the effect of deterring or reducing available assurance providers.[1404] We believe the approach we have taken appropriately addresses these concerns by exempting the GHG emissions attestation providers that perform limited assurance engagements from section 11 liability and the consent requirements associated with expertized reports, and requiring consent with corresponding section 11 liability only when the heightened level of review associated with reasonable assurance makes it appropriate for the report to be expertized. This bifurcated approach to reasonable versus limited assurance engagements is consistent with the current treatment of audited financial statements and unaudited (reviewed) interim financial statements.[1405] While we recognize underwriters and other non-issuer defendants subject to potential liability under section 11 may face additional due diligence costs during the transition period or where limited assurance is required,[1406] we do not believe this is unduly burdensome compared to other climate-related information that will be required in a registration statement pursuant to the final rules that is not otherwise expertized. Moreover, absent a mandatory limited assurance requirement in the final rules, a registrant would nonetheless be required to disclose its GHG emissions and underwriters and other defendants subject to potential liability under section 11 would be faced with the same potential liability and due diligence costs with respect to those disclosures.[1407] Finally, the other defenses to liability included in Securities Act section 11(b) remain available in accordance with the terms of that provision.[1408]

3. GHG Emissions Attestation Engagement and Report Requirements (Item 1506(a)(2) and (c))

a. Proposed Rules

The proposed rules would have required the attestation report required by proposed Item 1505(a) for AFs and LAFs to be included in the separately-captioned ''Climate-Related Disclosure''

[1397] In situations where GHG emissions attestation providers are experts, the amendments to Rule 436 will eliminate the potential for section 11 liability for those providers with respect to attestation reports at the limited assurance level. This could reduce the incentives for GHG emissions attestation providers to perform a thorough analysis and ensure that their attestation report, which is required to be included in a registration statement with GHG emissions disclosures to which the assurance services relate, is true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading. We remind registrants and providers, however, that there are other remedies available to shareholders and/or the Commission, such as section 10(b) of the Exchange Act and Rule 10b–5 thereunder and section 17(a) of the Securities Act, which are not affected by the amendments to Rule 436.

[1398] *See supra* note 1395.

[1399] *See* 15 U.S.C. 77g. The amendments to Rule 436 provide that a report by a GHG emissions attestation provider covering Scope 1, Scope 2, and/or Scope 3 emissions at a limited assurance level shall not be considered part of the registration statement prepared or certified by an expert or person whose profession gives authority to the statements made, and therefore the requirement in section 7 of the Securities Act that written consent is required from ''any person whose profession gives authority to a statement made by him'' that is ''named as having prepared or certified a report . . . for use in connection with the registration statement'' does not apply.

[1400] The Commission relied on this same rationale when it adopted an amendment requiring issuers to file as an exhibit to a registration statement a letter from the independent accountants that acknowledges its awareness of the use in a registration statement of any of its reports which are not subject to the consent requirement of section 7. *See Accountant Liability for Reports on Unaudited Interim Financial Information Under Securities Act of 1933,* Release No. 33–6173 (Jan. 8, 1980) [45 FR 1601, 1604 (Jan. 8, 1980)]; *Amendments Regarding Exhibit Requirements,* Release No. 6230 (Sept. 5, 1980) [45 FR 58822, 58824 (Sept. 5, 1980)].

[1401] *See* 17 CFR 229.601(b)(27). This requirement is modeled on the requirement for an issuer to file as an exhibit to a registration statement a letter from the independent public accountant, which acknowledges their awareness that their report on unaudited interim financial information is being included in a registration statement. *See* 17 CFR 229.601(b)(15); *Accountant Liability for Reports on Unaudited Interim Financial Information Under Securities Act of 1933,* Release No. 33–6173 (Jan. 8, 1980) [45 FR 1601, 1604 (Jan. 8, 1980)]; *Amendments Regarding Exhibit Requirements,* Release No. 6230 (Sept. 5, 1980) [45 FR 58822, 58824 (Sept. 5, 1980)]. Although the Commission did not solicit comment specifically on the requirement to provide an acknowledgement letter, the requirement follows from similar contexts noted above. In addition, the associated burdens on issuers are less than the proposed consent requirement while retaining the benefit of providing notice to the assurance provider. Further, to help facilitate registrants' compliance with the requirement to file the letter from the GHG emissions attestation provider as an exhibit, we have included an instruction to Item 1506 that directs registrants obtaining assurance at a limited assurance level to Item 601(b)(27) (as well as to paragraph 18 of Form 20–F's Instructions as to Exhibits, as discussed *infra* note 1402 and accompanying text).

[1402] *See* Instructions as to Exhibits 18 of Form 20–F. Where Form 20–F is used a registration statement under the Exchange Act, this exhibit would not be required.

[1403] *See supra* note 1346 and accompanying text.

[1404] *See supra* note 1345 and accompanying text.

[1405] *See infra* section II.I.5.c discussing an additional amendment to Rule 436 in the context of a registrant's statements pertaining to voluntary assurance received over GHG emissions disclosure.

[1406] *Compare* 15 U.S.C. 77k(b)(3)(C) (providing underwriters and others with a defense for expertized material) *with* 15 U.S.C. 77k(b)(3)(A) (providing underwriters and others with a defense for non-expertized materials).

[1407] *See* 17 CFR 229.1505.

[1408] *See* 15 U.S.C. 77k(b)(3)(A) (providing that ''no person, other than the issuer, shall be liable as provided therein who shall sustain the burden of proof . . . as regards any part of the registrant statement not purporting to be made on the authority of an expert . . . he had, after reasonable investigation, reasonable ground to believe and did believe, at the time such part of the registration statement became effective, that the statements therein were true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading . . .'').

section in the relevant filing and provided pursuant to standards that are publicly available at no cost and are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.[1409] The Commission explained that the proposed requirement that the standards be established by a body or group that has followed due process procedures would be similar to the requirements for determining a suitable, recognized control framework for use in management's evaluation of an issuer's ICFR because in both cases a specific framework is not prescribed but minimum requirements for what constitutes a suitable framework are provided.[1410] The Commission stated that this approach would help to ensure that the standards upon which the attestation engagement and report are based are the result of a transparent, public and reasoned process.[1411]

In the Proposing Release, the Commission stated that, for example, in its view, the attestation standards of the PCAOB,[1412] AICPA,[1413] and IAASB [1414] would meet the proposed due-process requirement, and all of these standards are publicly available at no cost to investors who desire to review them.[1415] The Commission explained that by highlighting these standards, it did not mean to imply that other standards currently used in voluntary reporting would not be suitable for use under the proposed rules.[1416] The Commission further stated it intended the proposal to set minimum standards while acknowledging the current voluntary practices of registrants.[1417]

The proposed rules would have required a GHG emissions attestation provider to follow the specific requirements regarding form and content of the reports set forth by the attestation standard (or standards) used by such attestation provider.[1418] In addition, the proposed rules would have imposed minimum requirements for the GHG emissions attestation report to provide some standardization and comparability of GHG emissions attestation reports.[1419] The Commission explained that the proposed minimum report requirements would provide investors with consistent and comparable information about the GHG emissions attestation engagement and report obtained by the registrant when the engagement is conducted by a GHG emissions attestation provider using an attestation standard that may be less widely used or that has less robust report requirements than more prevalent standards.[1420]

The proposed minimum attestation engagement and report requirements were primarily derived from the AICPA's attestation standards (*e.g.,* SSAE No. 18), which are commonly used by accountants who currently provided GHG attestation engagement services as well as other non-GHG-related attestation engagement services and are largely similar to the report requirements under PCAOB AT–101 and IAASB ISAE 3410.[1421] The Commission explained that many of the proposed minimum attestation report requirements are also elements of an accountant's report when attesting to internal control over financial reporting, an accountant's report on audited financial statements (which is conducted at a reasonable assurance level), and a review report on interim financial statements (which is conducted at a limited assurance level).[1422]

b. Comments

Several commenters agreed with the proposal to require that the attestation engagement and related attestation report be provided pursuant to standards that are publicly available at no cost to investors and are established by a body or group that has followed due process procedures.[1423] One commenter stated that these proposed requirements would ''help to protect investors who may rely on the attestation report by limiting the standards to those that have been sufficiently developed.'' [1424] Another commenter stated that these proposed requirements would ''provide necessary transparency and opportunity for input from all stakeholders.'' [1425] One commenter stated that public availability of the standards ''would be especially important for smaller investors and registrants.'' [1426]

Conversely, a few commenters disagreed with the proposal to require that the attestation engagement and related attestation report be provided pursuant to standards that are publicly available at no cost to investors and are established by a body or group that has followed due process procedures.[1427] One of these commenters stated it ''strongly disagrees'' with the proposal to require the use of standards that are publicly available at no cost because, in its view, such requirements would preclude the use of ISO 14064–3, a standard widely used for GHG verification, and therefore, would not serve the interests of investors.[1428]

Several commenters stated that they appreciated that the proposed rules were flexible or not overly prescriptive about the required attestation standards.[1429] However, some commenters stated it would be helpful to provide further guidance about which standards would meet the proposed requirements,[1430] or suggested that, absent a list of acceptable attestation standards, the proposed rules could

[1427] *See* letter from Futurepast; and USTAG TC207. *See also* letter from CalPERS (stating that it is not clear why the proposed rules focus on providing the information at no cost and noting that ''[l]ike in other areas, chances are that a free public option would be made available and then a useable version would be made available at higher cost'').

[1428] *See* letter from Futurepast (stating that the National Technology Transfer Act of 1995 does not require the use of standards that are publicly available at no cost and explaining that the fees ISO charges for standards are designed to support the standards writing activity of the International Organization for Standardization).

[1429] *See, e.g.,* letters from BPI; Chevron (''We support flexibility on acceptable attestation standards . . .''); IIB; and NAM (''We also appreciate that the proposed rule does not prescribe a particular attestation standard, choosing instead to 'recognize[] that more than one suitable attestation standard exists and that others may develop in the future.''').

[1430] *See, e.g.,* letter from BPI (recommending that the Commission provide a non-exclusive list of acceptable verification standards).

hinder consistency and comparability.[1431]

A few commenters agreed with the Commission's statement in the Proposing Release that the attestation standards of the PCAOB, AICPA, and IAASB would meet the proposed due process requirements.[1432] In fact, some commenters recommended that the Commission consider requiring a GHG emissions attestation provider to use the standards established by the AICPA, IAASB, or PCAOB.[1433] One of these commenters stated that limiting the permissible standards in this way would ''promote the quality and comparability'' of the attestation provided.[1434] Alternatively, one commenter recommended that the Commission require the use of attestation standards promulgated by the PCAOB because in general ''investors would be best served if all verification was performed pursuant to the same standards.'' [1435] Another commenter stated that the PCAOB should ''begin preparing a separate standard based on the proposed rule.'' [1436] One commenter stated that the Commission should consider requiring non-accountant service providers to use the IAASB attestation standards, which in its view would ''potentially result in consistency across service providers, since accountants and non-accountants can both use those standards.'' [1437] Another commenter stated that if the Commission permits the use of attestation standards other than those of the PCAOB, AICPA, or IAASB, the Commission could establish ''a process to consider whether these standards are sufficient'' and ''provide transparency on the differences compared to the widely understood standards,'' which would protect the public interest.[1438]

Several commenters stated that the Commission should require [1439] or permit [1440] attestation over GHG emissions disclosure be performed in accordance with standards promulgated by the ISO.[1441] Several commenters stated that ISO 14064–3 is widely or commonly used by attestation providers.[1442] For example, one commenter stated that the ''International Civil Aviation Organization, a United Nations body, requires verification bodies to meet the requirements of ISO 14065 and perform verifications in accordance with ISO 14064–3'' and also recognizes ''ISO 14066 as the appropriate standard for assessing the competence of greenhouse gas validation teams and verification teams.'' [1443] Another commenter stated that ISO 14064–3 is either a ''required'' or ''acceptable'' method for ''verification by all of the major voluntary and regulatory reporting schemes (CDP, The Climate Registry and regional regulatory programs in California, Washington State, Oregon, and Canadian Provinces).'' [1444]

In addition, another commenter stated that ISO standards ''have been subjected to a rigorous development and approval process and have been accepted internationally as the basis for . . . [the] conduct of attestation engagements for nearly two decades.'' [1445] Relatedly, one commenter stated that it believed ISO 14064–3 would meet the proposed due process and public availability requirements.[1446] Further, another commenter stated that it believes ISO standards 14064–3, 14065, and 14066 ''address required expertise, independence, and quality control at least as well if not better than'' the IAASB's ISAE 3000, ISAE 3410, and ISRS 4400.[1447]

Another commenter that supported the proposed requirement related to the public availability of standards noted that ISO standards ''are not free'' and suggested that ''some agreement needs to be reached regarding access by investors to ISO 14064–3, if this standard is used by the attestation provider.'' [1448] On the other hand, one of the commenters that did not support

[1431] *See, e.g.,* letters from APCIA; and PLASTICS (stating that allowing the provider to ''pick the attestation standard'' could ''add variability to costs and reporting methodology, thereby undermining the Proposed Rule's claimed goal of promoting consistency'').

[1432] *See, e.g.,* letters from ERM CVS (agreeing with the Commission's statement but stating that the attestation standards of the PCAOB, AICPA, and IAASB are ''generic auditing/assurance/attestation standards and may not always address the complexities of non-financial or GHG emissions assurance/attestation''); and PwC. *But see* letter from RILA (stating that it appreciated the proposed rules' flexibility, but applying PCAOB, AICPA, and IAASB attestation standards ''prematurely will cause confusion and inconsistency, especially since it is still not clear what 'reasonable assurance' means under these standards with respect to GHG emissions disclosures'').

[1433] *See* letter from CAQ (stating that the PCAOB's attestation standards would need to be updated if required for use by the Commission); and Mazars. *See also, e.g.,* letters from Deloitte & Touche (stating that the AICPA, IAASB, and PCAOB standards are well-established and would provide needed transparency to investors, but that it sees a risk of investor confusion beyond those standards); and KPMG (stating that if the Commission were to limit the requirements to the PCAOB; AICPA; and IAASB standards the other elements of the proposed rules, such as the minimum criteria for a report, could be removed).

[1434] *See* letter from CAQ.

[1435] *See* letter from CFA Institute. Other commenters suggested that the PCAOB may need to update its attestation standards. *See, e.g.,* letters from Crowe (stating that the standard setters for the AICPA and IAASB attestation standards have issued standards or guidance on sustainability information, including GHG emissions information, while the PCAOB standards do not explicitly address these topics); and RSM US LLP (stating that if ''the Commission determines that attestation engagements related to GHG emissions should be conducted in accordance with PCAOB standards, we believe the PCAOB may deem it appropriate to update its attestation standards.'').

[1438] *See* letter from KPMG.

[1439] *See* letters from ANSI NAB (''ANAB believes that ISO standards, including ISO 14064–3, ISO 14065, and ISO 14066 form the basis for quality auditing of GHG emissions and environmental information, and that attestation bodies should be required to perform attestation engagements in accordance with these requirements.''); Futurepast (stating that attestation bodies that are not public accounting firms should be required to perform attestation engagements in accordance with ISO standards); and LRQA.

[1440] *See, e.g.,* letters from AIA; Anthesis Grp.; CCR (stating that ''precluding the use of ISO 14064–3 under the proposed rules would require a significant population of registrants to reevaluate and potentially change service providers, reducing efficiencies gained through prior attestation engagements and narrowing the field of service providers qualified to issue an acceptable attestation report under the proposed rules''); Chevron; Eni SpA; ERM CVS; First Environment; ISO; ISO Comm. GHG; NAM; SCS Global Services; S. Robinson (5–3–22) (stating that ''nearly two thirds of GHG reporting firms and approximately one third of all S&P 500 firms already report and receive external attestation using ISO'');.and USTAG TC207. *See also* letter from Bureau Veritas (recommending that ''validation and verification bodies'' be accredited to ''ISO 17029'').

[1441] The ISO is an independent, non-governmental international organization with a membership of 169 national standards bodies. *See* ISO, About us, available at *https://www.iso.org/about-us.html.*

[1442] *See, e.g.,* letters from Chevron (stating its view that ISO 14064–3 is the ''most predominantly used in the United States''); NAM; and US TAG TC207.

[1443] *See* letter from Futurepast (noting that Futurepast's president ''helped write'' the ISO standards ''as a U.S. Expert to ISO Technical Committee 207'').

[1444] *See* letter from SCS Global Services.

[1445] *See* letter from US TAG TC207 (stating that the ISO Technical Committee 207, which is responsible for the development, review, and revision of ISO environmental and climate change standards, includes 120 member countries, each represented by its national standards body, and includes liaisons with 32 organizations that monitor the committee's standards development activities and can provide input during standards development, including, among others, the European Commission, International Chamber of Commerce, and World Trade Organization).

[1446] *See* letter from NAM. *See also* letter from D. Hileman (stating that the Commission should require that attestation or verification reports be provided pursuant to standards publicly available and established by groups that have followed ''due process for broad stakeholder process'' and that ''[d]evelopment of ISO standards follows a similar trajectory'').

[1447] *See* letter from Futurepast. *See also* letter from ANSI NAB (stating that it supports the proposed requirement for attestation providers to be independent, which is supported by accreditation requirements such as those set forth in ISO 14065).

[1448] *See* letter from ERM CVS.

the proposed requirement for the attestation standards to be publicly available at no cost to investors explained that the fees ISO charges for standards are designed to support its standards writing activity and that it ''does not have any other agenda than the publication of high quality, consensus-based standards.'' [1449] Another commenter stated that ''[a]lthough ISO standards must be purchased for a fee, we believe that the nominal fee required to obtain ISO 14064–3 would not be a serious obstacle to investors who desire to review the standard.'' [1450]

A few commenters mentioned other potential attestation standards for the Commission's consideration. One commenter recommended that the Commission consider the CDP's criteria for third party verification standards [1451] and another commenter stated that the final rules should permit the use of ''the standards accepted by the CDP so as to avoid inadvertently excluding qualified providers.[1452] In response to a request for comment included in the Proposing Release, one commenter stated that it did not believe that AccountAbility's AA1000 Series of Standards would meet the proposed requirements because, among other reasons, it does not believe AccountAbility's process for developing and publishing standards would meet the proposed due process requirements.[1453] However, another commenter stated that the final rules should be inclusive of AccountAbility's AA1000 Series of Standards.[1454]

Several commenters agreed that the Commission should require the GHG emission attestation report to meet certain minimum requirements in addition to any form and content requirements set forth by the attestation standard or standards used, as proposed.[1455] One commenter stated that the proposed minimum attestation report requirements are ''similar to the requirements of an independent auditor's report, which is well-understood by the investment community.'' [1456] Another commenter stated that the proposed minimum requirements for the attestation report are particularly important if standards beyond those of the AICPA, IAASB, and PCAOB are permitted.[1457] One commenter stated that the Commission should also require a description of the role of internal audit in the underlying GHG emissions data and whether or how the GHG emissions attestation provider relied on internal audit's work in the minimum report requirements.[1458]

On the other hand, a few commenters recommended against requiring additional minimum requirements for attestation reports.[1459] One of these commenters stated that the report requirements from the attestation standard used should be sufficient.[1460] Another commenter recommended that the Commission clarify whether a report that states the GHG emissions attestation provider is disclaiming an opinion on the GHG emissions would satisfy the requirements of Regulation S–K.[1461]

Regarding the proposed provision requiring the identification of the criteria against which the subject matter was measured or evaluated, a few commenters agreed that reference to proposed Item 1504 would meet the ''suitable criteria'' requirement under the prevailing attestation standard.[1462] One commenter stated that, in addition to referencing proposed Item 1504, the attestation report should refer to ''the (publicly available) standard used by the registrant to determine the emissions.'' [1463]

In the Proposing Release, the Commission included a request for comment asking if it requires or permits a registrant to use the GHG Protocol as the methodology for determining GHG emissions, would the provisions of the GHG Protocol qualify as ''suitable criteria'' against which the Scope 1 and Scope 2 emissions disclosure should be evaluated.[1464] A number of commenters agreed that if the Commission required or permitted a registrant to use the GHG Protocol as the methodology for determining GHG emissions, the provisions of the GHG protocol would qualify as ''suitable criteria.'' [1465] On the other hand, one commenter stated that ''the reporting standards are not fully developed enough to establish criteria for reliability measuring GHG emissions.'' [1466]

c. Final Rules

We are adopting the GHG emissions attestation engagement and report requirements with some modifications from the proposal.[1467] Consistent with the proposed rules, the final rules (Item 1506(a)(2)) provide that the attestation report must be provided pursuant to standards that are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.[1468] Most commenters who discussed this aspect of the proposal supported the proposed requirement related to due process procedures,[1469] and we continue to believe that requiring the attestation report to be provided pursuant to standards that are established by a body or group that has followed due process procedures would help to ensure that the standards upon which the attestation engagement and report are based are the result of a transparent, public, and reasoned process.[1470] As the Commission stated in the Proposing Release, this requirement should also help to protect investors who may rely on the attestation report by limiting the standards to those that have been sufficiently developed.[1471]

The proposed rules also would have required the attestation standards to be publicly available at no cost. We

received feedback from some commenters indicating that including such a requirement in the final rules would preclude the use of certain standards that are currently widely used by GHG emissions attestation providers with respect to voluntary assurance over GHG emissions disclosures but that are not publicly available for free.[1472] After consideration of this feedback, the final rules will require that the attestation report be provided pursuant to standards that, in addition to being developed using due process, are either (i) publicly available at no cost, or (ii) widely used for GHG emissions assurance.[1473] In the Proposing Release, the Commission explained that open access is an important consideration when determining the suitability of attestation standards because it enables investors to evaluate the report against the requirements of the attestation standard.[1474] We continue to believe that open access is an important consideration for the reasons the Commission previously stated; however, we also recognize that the benefits provided by open access may also exist when a standard is widely used in the marketplace such that registrants, GHG emissions attestation providers, and investors have significant experience using, or evaluating disclosure assured pursuant to, that standard. In addition, it is important to recognize the value that investors have found in the voluntary assurance services currently being provided with respect to climate and GHG emissions disclosures. By making this modification to the final rules, we expect that many registrants and GHG emissions attestation providers will be able to continue to use assurance standards they are already using for their voluntary disclosures, assuming that those standards meet the due process requirement.[1475] This approach will not only reduce the costs of complying with the final rules[1476] but will likely benefit investors by leveraging the experience that GHG emissions attestation providers already have with particular standards, which could lead to assurance engagements being performed with a greater level of skill initially than if GHG emissions attestation providers were required to gain expertise with an unfamiliar standard.

Several commenters agreed with the Commission's statement in the Proposing Release that the attestation standards of the PCAOB, AICPA, and IAASB would meet the proposed attestation standard requirements.[1477] We continue to be of the view that the PCAOB, AICPA, and IAASB standards meet the due process requirements and are publicly available at no cost to investors. In addition, in light of our modifications to the final rules, we also believe that the ISO standards related to the attestation of GHG emissions disclosures would meet these requirements. We agree with those commenters that stated the process the ISO undertakes for the development of its standards is consistent with due process requirement included in the final rules.[1478]

The ISO TC 207/SC7 is the technical committee responsible for the development of ISO 14064–3—Greenhouse gases—Part 3: Specification with guidance for the verification and validation of greenhouse gas statements.[1479] The committee includes members from 120 countries, each represented by the country's national standards body, and the committee also liaises with 32 organizations who monitor standards development activities and can provide input during standards development.[1480] Members organize consultations among stakeholders in their country to develop a national position on ISO standards.[1481] The ISO member from the United States is ANSI and it publishes on its website a listing of draft ISO standards that are open to public comment.[1482] Moreover, ISO follows a consensus process for approval of its standards.[1483] This multi-stakeholder process, which includes an opportunity for public comment on proposed standards, is consistent with the reasoned and transparent process the Commission described in the Proposing Release as being the foundation for standards that are sufficiently developed. This leads us to the conclusion that ISO standards align with the due process requirement in the final rules.

As commenters have noted, ISO standards are not available for free. The ISO standards are, however, widely used for GHG emissions assurance. For example, a recent report determined that for S&P 500 companies that voluntarily obtained assurance over their climate-related disclosures, including in many cases GHG emissions disclosures, the most common standard referenced by non-accounting firm GHG emission attestation providers was ISO 14064–3.[1484] Specifically, the report found that ISO standards were used in connection with 196 out of a total 346 engagements.[1485] This frequency of use aligns with the ''widely used'' criteria in the final rules.

It is important to note that by highlighting these standards, we do not mean to imply that other standards, either those currently in existence, or those that may develop in the future, would not be suitable for use under the final rules. Commenters recommended a number of alternative approaches, such as providing a list of acceptable standards,[1486] or requiring the use of a

particular standard.[1487] Although we considered these alternatives, we ultimately agreed with those commenters who stated that the Commission should take a flexible approach to the acceptable standards in recognition that more than one suitable standard exists, and others could develop in the future.[1488]

The final rules (Item 1506(c)) require the form and content of the GHG emissions attestation report to follow the requirements set forth by the attestation standard or standards used, as proposed; however, in a shift from the proposal, the final rules do not prescribe minimum report requirements.[1489] The Commission explained in the Proposing Release that the proposed minimum components were all common elements of current assurance reports,[1490] a point that was affirmed in the feedback we received from commenters.[1491] We continue to expect that the attestation standards that meet the requirements of the final rules will generally include all of the elements that were proposed.[1492] Therefore, the benefit of including the proposed minimum requirements would be marginal, at best, and could be viewed as redundant and adding unnecessary complexity and associated burdens to the final rules. Instead, simply requiring the attestation report to follow the form and content requirements of the attestation standard or standards should provide investors with important information about the attestation engagement in a consistent and comparable manner. Nevertheless, in light of this shift to a more principles-based approach, to the extent that a particular attestation standard does not include elements sufficiently similar to those commonly included in an assurance report, the GHG emissions attestation provider should consider including such information in its attestation report to facilitate investors' understanding of the nature and scope of the engagement. Although some commenters suggested additional minimum requirements that could be included in the final rules,[1493] we decided against including any additional requirements for the same reason.

A few commenters asked the Commission to clarify the level of assurance that is required for historical periods in a registrant's filing.[1494] We are therefore clarifying that the final rules apply on a prospective basis only with disclosure for historical periods phasing in over time. Specifically, in the first year that an AF or LAF is required to provide an attestation report, such report is only required to cover the Scope 1 and/or Scope 2 emissions for its most recently completed fiscal year. To the extent the AF or LAF disclosed Scope 1 and/or Scope 2 emissions for a historical period, it would not be required to obtain an assurance report covering such historical period in the first year of the attestation rule's applicability. However, for each subsequent fiscal year's annual report, the registrant will be required to provide an attestation report for an additional fiscal year until an attestation report is provided for the entire period covered by the registrant's GHG emissions disclosures. In circumstances where more than one GHG emissions provider may have provided an attestation report for the different fiscal years included in the filing, a GHG emissions attestation provider should be clear about its involvement with any historical information, including disclaiming any such involvement where applicable.[1495]

In response to a request for comment, a few commenters agreed that a reference to proposed Item 1504 would meet the ''suitable criteria'' requirement under the prevailing attestation standard and that the provisions of the GHG Protocol would qualify as ''suitable criteria'' against which Scope 1 and Scope 2 emissions disclosure should be evaluated.[1496] Consistent with the Proposing Release, we reiterate that prevailing attestation standards require the criteria against which the subject matter is measured or evaluated to be ''suitable.'' [1497] Suitable criteria, when followed, will result in reasonably consistent measurement or evaluation of the registrant's disclosure that is within the scope of the engagement.[1498] Consistent with commenter feedback, Item 1505 of Regulation S–K will satisfy the suitable criteria requirements of the prevailing attestation standards because the proposed requirements set forth relevant, objective standards that call for measurable and complete disclosure of GHG emissions that would allow for a consistent evaluation of the registrant's disclosure.[1499] In addition, in response to a question from a commenter,[1500] we are clarifying that a report that states the GHG emissions attestation provider is disclaiming an opinion on the GHG emissions would not constitute compliance by the AF or LAF with the requirement to obtain an attestation report over its Scope 1 and/or Scope 2 emissions under the final rules.

Consistent with the proposed rules, the final rules do not require a registrant to obtain an attestation report specifically covering the effectiveness of internal control over GHG emissions disclosure.[1501] Such a report would not be required even when the GHG emissions attestation engagement is performed at a reasonable assurance level. As explained in the Proposing Release, given the current evolving state of GHG emissions reporting and assurance, existing DCP obligations and

[1487] *See supra* notes 1433, 1435, 1437, and 1439 and accompanying text.

[1488] *See supra* note 1428 and accompanying text. For example, in the Proposing Release, the Commission included a request for comment asking if AccountAbility's AA1000 Series of Standards would meet the proposed requirements for attestation standards. We received one comment that stated the final rule should be written in a way that is inclusive of all standards, including AA1000, among others, but the commenter did not provide any substantiative reasons why AA1000 would meet the proposed criteria. *See* letter from Climate Risk Consortia. Another commenter stated that the process for developing the AA1000 standard would not meet the proposed due process requirements. *See* letter from ERM CVS. Although the feedback we received from commenters was mixed, to the extent that the AA1000 standard meets the criteria in the final rule, registrants and GHG emissions attestation providers would not be precluded from using it in connection with complying with the final rules. The staff of the Commission's Office of the Chief Accountant is available to consult with registrants about whether a particular standard meets the requirements in the final rules.

[1489] *See* 17 CFR 229.1506(c).

[1490] The Commission explained in the Proposing Release that it primarily derived the proposed requirements from the AICPA's attestation standard (*e.g.,* SSAE No. 18), which are largely similar to the report requirements under PCAOB AT–101 and IAASB ISAE 3410. *See* Proposing Release, section II.H.3.

[1491] *See supra* note 279 and accompanying text.

[1492] *See supra* note 1490. *See also* ISO 14064–3, §§ 6.3.2 and 9.3.

[1493] *See supra* note 1458 and accompanying text.

[1494] *See, e.g.,* letters from Deloitte & Touche (requesting that the Commission clarify the level of assurance that is required for historical periods); and Grant Thornton (same).

[1495] This guidance parallels similar practices in the context of the financial statement audit. *See, e.g.,* PCAOB AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* paragraph 18h, available at *https://pcaobus.org/oversight/standards/auditing-standards/details/AS3101.*

[1496] *See supra* note 1462 and accompanying text.

[1497] *See* Proposing Release, section II.H.3.

[1498] Characteristics of suitable criteria include relevance, objectivity, measurability, and completeness. *See, e.g.,* AICPA SSAE No. 18, AT–C § 105.A16 and A42; AICPA SSAE No. 21, AT–C § 105.A16 and .A44. In addition to relevance and completeness, the characteristics of suitable criteria under IAASB ISAE 3000.A23 include reliability, neutrality and understandability. Therefore, despite the differences in the characteristics listed, the underlying concepts and objectives are consistent.

[1499] In addition, to the extent an AF or LAF chooses to disclose its Scope 1 and/or Scope 2 emissions pursuant to Item 1505 and leverages the GHG Protocol's methodologies, we agree with the commenters that stated the provisions of the GHG Protocol would qualify as ''suitable criteria'' against which the Scope 1 and/or Scope 2 emissions disclosure should be evaluated. *See supra* note 1366 and accompanying text.

[1500] *See* letter from Grant Thornton.

[1501] *See* Proposing Release, section II.H.3.

the requirement that AFs and LAFs (initially) obtain at least limited assurance of such disclosure are appropriate first steps toward enhancing the reliability of GHG emissions disclosure.[1502]

As explained above in section II.H.3, in a modification from the proposal, the final rules will not require that GHG emissions disclosure be provided in a separately captioned ''Climate-Related Disclosure'' section in the relevant filing. Therefore, the final rules do not require a registrant to include an attestation report in such a section, although a registrant may choose to do so.

One commenter asked the Commission to clarify whether, to the extent the Commission permits the use of standards other than those developed by the PCAOB, AICPA, and IAASB, the Commission should clarify ''whether all practitioners should be required to consider 'other information' in the same way as CPAs.'' [1503] The GHG emissions attestation provider must perform the engagement in accordance with the requirements included in the attestation standard being used. We are clarifying that, to the extent an attestation standard requires an attestation provider to consider 'other information,' then the provider would be required to comply with such a requirement to perform the engagement in accordance with the standard.

One commenter stated that, due to the proposed phase in for the assurance requirements, an LAF or AF may be required to obtain assurance over its GHG emissions disclosures, while its consolidated public subsidiaries are not (or not yet) subject to the same level of assurance.[1504] This commenter asked the Commission to consider clarifying whether the consolidated subsidiary is expected to obtain assurance based on the requirements of its parent entity or entities, and if not, how the assurance provider for the parent entity or entities would report the level of assurance provided over the individual components of the reporting entity.[1505] In response to the specific factual scenario raised by this commenter, we are clarifying that the consolidated information included in the parent company's Commission filing would need to comply with the final rules' requirements applicable to the parent company. This means that a subsidiary's information that is part of the consolidated reporting of its parent company will need to be assured as part of the assurance over the parent company's consolidated reporting even if the consolidated subsidiary itself is not subject to assurance. This is consistent with how the auditing standards over consolidated financial statements generally apply.

Along similar lines, another commenter stated that there might be instances where a subsidiary of a registrant has a separate attestation engagement performed over its GHG emissions data to meet local statutory or jurisdictional requirements and the subsidiary might choose an attestation provider at the local level that differs from the attestation provider retained to perform the assurance required under the Commission's rules.[1506] This commenter stated, for example, if a subsidiary's attestation engagement was performed by an accounting firm provider that used AICPA standards, then AICPA attestation standards would allow the provider performing the assurance required under the Commission's rules to use the work of another practitioner; however, AICPA standards do not address the ability of an accounting firm provider to use the work of a non-accountant practitioner, particularly when the non-accountant uses different attestation standards.[1507] Consistent with our response above, we are clarifying that the consolidated information included in the parent company's Commission filing would need to comply with the final rules' requirements applicable to the parent company. As is the case with other new disclosure requirements, the Commission staff is available to answer practice questions as registrants begin applying the final rules.

4. Additional Disclosure by the Registrant (Item 1506(d))

a. Proposed Rules

In addition to the proposed minimum attestation report requirements described above, the proposed rules would have required disclosure of certain additional matters related to the attestation of a registrant's GHG emissions.[1508] With respect to the Scope 1 and Scope 2 emissions attestation required pursuant to proposed Item 1505(a) for AFs and LAFs, the proposed rules would have required the registrant to disclose in the filing, based on relevant information obtained from any GHG emissions attestation provider:

- Whether the attestation provider has a license from any licensing or accreditation body to provide assurance, and if so, the identity of the licensing or accreditation body, and whether the attestation provider is a member in good standing of that licensing or accreditation body;
- Whether the GHG emission attestation engagement is subject to any oversight inspection program, and if so, which program (or programs); [1509] and
- Whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement and, if so, identify the record-keeping requirements and the duration of those requirements.[1510]

The Commission stated that these disclosures are not typically included in an attestation report and would not be included in the GHG emissions attestation report under the proposed rules.[1511] Instead, the registrant would be required to provide these disclosures in the separately captioned ''Climate-Related Disclosure'' section, where the GHG emissions disclosure would be provided pursuant to the proposed rules.[1512]

b. Comments

A few commenters generally agreed that the Commission should require the proposed items of disclosure to be provided by the registrant in the filing that includes the attestation report (where the GHG emissions and other climate-related disclosures are presented), based on relevant information obtained from the GHG emissions attestation provider as proposed.[1513] Alternatively, several commenters stated that they supported such disclosure requirements when the GHG emissions attestation provider is not registered with the PCAOB.[1514] One

[1502] *See id.* Under prevailing attestation standards for limited assurance engagements, the testing of and attestation over internal controls are not required. *See, e.g.,* AICPA SSAE No. 22, AT–C § 210.A16. With respect to reasonable assurance, while there are requirements under prevailing attestation standards to consider and obtain an understanding of internal controls, there is no required attestation of the effectiveness of internal controls such as that included in section 404(b) of the Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley Act). *See* 15 U.S.C. 7262(b) (requiring a registered public accounting firm that prepares or issues an audit report for certain issuers to attest to, and report on, the assessment made by the management of the issuer with respect to internal controls).

[1509] In the Proposing Release, the Commission stated that one example of an oversight program would be the AICPA peer review program, among others. *See id.*

[1510] *See id.*

[1511] *See id.*

[1512] *See id.*

[1513] *See* letters from Amer. for Fin. Reform, Sunrise Project *et al.;* and ICAEW.

[1514] *See, e.g.,* letters from CAQ; CFA Institute; Crowe (''If a registrant uses its financial statement

of these commenters explained that when a registrant uses a PCAOB-registered accounting firm as its GHG emissions attestation provider it should not be required to make the proposed additional disclosures ''[g]iven that a PCAOB-registered accounting firm is already complying with stringent requirements for things such as licensure, oversight, and record-keeping,'' which is ''well understood by investors.'' [1515] On the other hand, one commenter stated that registrants should not be required to provide these additional items of disclosure because, in its view, these are not ''appropriate determinations to be made by registrants and instead believe that this disclosure, if retained, should be included in the attestation provider's report itself.'' [1516]

Some commenters stated they agreed with the proposed requirement for a registrant to disclose whether the GHG emissions attestation provider has a license from an accreditation body.[1517] One of these commenters explained that this information ''would be helpful to investors as they could then rely on the licensing and accreditation bodies to vet the provider's expertise rather than needing to evaluate other related information.'' [1518] A few commenters stated that they disagreed with the proposed requirement for registrants to disclose whether the attestation provider has a license from any licensing or accreditation provider. One commenter explained that ''[i]n the absence of a universal certification or credential, registrants will seemingly bear the risk and burden of making a determination regarding the qualifications of an appropriate provider and disclosing these qualifications, and many registrants may lack the expertise to make such a determination or disclosure.'' [1519] Similarly, another commenter stated that the ''entity granting and monitoring professional practice for these credentials should bear the responsibility for making public disclosures'' on these topics with the GHG emissions attestation provider providing ''a citation to the granting entity's website.'' [1520] One commenter urged the Commission to ''defer action'' on this matter until after the rules have been implemented for a period of time.[1521]

The Proposing Release included a request for comment asking if, in lieu of only requiring disclosure about whether the GHG emissions attestation provider has a license from an accreditation body, the Commission instead should require a GHG emissions attestation provider to be licensed to provide assurance by specified licensing or accreditation bodies, and if so, which bodies the Commission should specify.[1522] One commenter stated that ''review by a licensed or accredited firm with minimum standards is essential for reliable GHG emissions reporting.'' [1523] Conversely, one commenter stated that the Commission should not require accreditation or require a GHG emissions attestation provider ''to be a member in good standing of a particular body'' because it could unintentionally disqualify an appropriate provider.[1524] Although the proposed rules would not have required a GHG emissions attestation provider to be licensed, one commenter asked the Commission to clarify ''which existing licensing or accrediting bodies meet SEC standards'' under the proposed rules.[1525]

Some commenters agreed that the Commission should require a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which program(s), as proposed.[1526] One commenter stated that this proposed requirement ''would provide decision-useful information to investors.'' [1527] On the other hand, one commenter disagreed with the proposed requirement and suggested instead the Commission require the attestation provider to publicly disclose on its website certain information such as the ''qualifications and experience of its principals'' and ''errors and omissions insurance information,'' among other things.[1528] Another commenter stated that such requirement is ''only relevant if the Commission also specifies the particular standards under which the attestation engagement should be performed.'' [1529] One commenter stated that such information ''should be communicated by the attestation provider as part of their reporting, rather than being reported by the issuer, who may or may not be able to confirm the information (notwithstanding its responsibility to do so in all SEC filings).'' [1530] In addition, one commenter stated that the Commission should work toward establishing oversight over GHG emissions attestation providers in the near future,[1531] and other commenters asked the Commission to ''clarify what regulatory environment applies to GHG attestation providers'' [1532] or stated that it was not clear what any oversight inspection program would include.[1533]

A few commenters stated that they supported the proposed requirement for registrants to disclose whether the GHG emissions attestation provider is subject to record-keeping requirements for the engagement.[1534] The Proposing Release included a request for comment asking if, in lieu of requiring disclosure about such matters, the Commission instead should specify that the record-keeping requirements of a GHG emissions attestation provider must be of a certain minimum duration.[1535] One commenter stated it believed ''the record-keeping requirement for the GHG attestation provider should extend to the duration of the securities law protections for investors.'' [1536]

One commenter recommended that the Commission include an additional element of disclosure and require registrants to disclose the terms that they negotiate with third-party verification firms to enable investors to evaluate the adequacy of third-party oversight.[1537]

auditor, who currently must meet the requirements in Article 2 of Reg. S–X, to also perform any required GHG emissions attestation, we recommend the SEC consider exempting those registrants from additional disclosures.''); and PwC (stating that given the importance of licensing, oversight, and record-keeping requirements they should be added to the qualifications necessary to be a GHG emissions attestation provider).

Continued

In the Proposing Release, the Commission included a request for comment asking if it should include disclosure requirements when there is a change in, or disagreement with, the registrant's GHG emissions attestation provider that are similar to the disclosure requirements in Item 4.01 of Form 8–K and 17 CFR 229.304 (''Item 304 of Regulation S–K'').[1538] A few commenters stated that they would support such a requirement.[1539] One commenter stated that the ''level of detail'' in Item 304 of Regulation S–K ''is excessive for non-accountants,'' but indicated it would support a ''slimmed down'' version of this requirement.[1540]

c. Final Rules

The Commission is adopting the requirement for registrants to disclose certain additional information related to the attestation of a registrant's GHG emissions with significant modifications from the proposal.[1541] To reduce the burdens on issuers that would have arisen under the proposed rules, and in response to certain commenter feedback described above, we are not adopting a requirement for registrants to disclose (1) whether the attestation provider has a license from any licensing or accreditation body to provide assurance; and (2) whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement. However, consistent with the proposal, the final rules (Item 1506(d)) require registrants to disclose whether the GHG emission attestation engagement is subject to any oversight inspection program, subject to certain modifications.[1542] In addition, in a modification from the proposal, the final rules require registrants to disclose certain information when there is a change in, and disagreement with, the registrant's GHG emissions attestation provider as discussed in greater detail below.[1543]

The decision not to adopt a requirement for a registrant to disclose whether its GHG emissions attestation provider has a license from any licensing or accreditation body will eliminate the potential for confusion about when disclosure is required, thus reducing the burden associated with the final rules. Although the existence of a license for a GHG emissions attestation provider that is a certified public accountant is straightforward to determine because certified public accountants and their firms must be registered with state boards of accountancy,[1544] it may be more difficult for a registrant to determine if a non-accountant GHG emissions attestation provider holds a license. Furthermore, although accreditation and certification organizations exist for GHG emissions attestation providers that are not accountants,[1545] it may be difficult for registrants and even GHG emissions attestation providers themselves to determine whether the credential conferred by such organization constitutes a ''license,'' or if it is some other type of accreditation or certification. Therefore, we agree with the commenter that pointed out the ''absence of a universal certification or credential'' likely would make it difficult for registrants to determine whether disclosure is required.[1546]

We decided not to require a registrant to disclose whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement to reduce burdens on registrants. Upon further consideration, this proposed requirement would seem to have marginal benefit to investors making investment or voting decisions while adding complexity to issuer disclosures. Instead, the final rules focus the disclosure requirements on the more significant disclosure of the existence of an oversight inspection program.[1547]

The proposed rules would have required a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which program (or programs).[1548] We are adopting this requirement as proposed.[1549] In response to commenters,[1550] we are clarifying, for purposes of the final rules, that we would consider a GHG emissions attestation engagement to be subject to an oversight inspection program if it is possible that the assurance services could be inspected pursuant to the oversight program, even if it is not certain that the services will be inspected in a particular inspection cycle. An example of such an oversight inspection program is the AICPA's peer review program, which includes within its scope attestation engagements performed by a certified public accountant in accordance with AICPA standards.[1551] Commenters did not offer any examples of oversight inspection programs that would include within their scope GHG emissions attestation engagements performed by *non-accountants.* Even if no such programs currently exist, it is possible that they could develop in the future given the evolving nature of GHG emissions assurance practices. Accordingly, we continue to believe that the existence of an oversight inspection program will help investors better understand the qualifications of the GHG emissions attestation provider, which in turn will help them determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure.

In addition to requiring a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program as proposed, the final rules also require a registrant to disclose whether the GHG emissions attestation provider is subject to any oversight inspection program, and if so, which program (or programs).[1552] To be clear, this requirement is not limited to oversight inspection programs that include within their scope, or require the inspection of, the GHG emissions attestation engagement. Rather, the final rules

requirement since the Commission did not propose to establish minimum standards for limited assurance engagements).

[1551] Under the AICPA Peer Review Program, firms that are members of the AICPA are required to have a peer review of their accounting and auditing practice once every three years in accordance with the AICPA Standards for Performing and Reporting on Peer Reviews. The peer review is conducted by an independent evaluator, known as a peer reviewer, who reviews a sample of the firm's work against the requirements of applicable professional standards in all material respects. *See* Summary of AICPA Peer Review Program, available at *https://us.aicpa.org/research/standards/peerreview/peer-review-summary.html.*

[1552] *See* 17 CFR 229.1506(d).

require the disclosure of ''any'' oversight inspection program that applies to the GHG emissions attestation provider.[1553] Therefore, a registrant must disclose any oversight inspection program the GHG emissions attestation provider is subject to for any type of engagement (*e.g.,* a financial statement audit or other review).[1554] This additional requirement will provide investors with a better understanding of the qualifications of the GHG emissions attestation provider because such oversight can provide a check on a provider's overall activities and drive improvements in the quality of their services.[1555]

We considered whether to only require disclosure about the existence of oversight inspections programs from registrants who engage GHG emission attestation providers that are not registered with the PCAOB, as suggested by some commenters.[1556] However, we are concerned that requiring this disclosure only with respect to certain GHG emission attestation providers could result in confusion and believe that requiring registrants to provide such disclosure with respect to all GHG emissions attestation providers will enhance the consistency and comparability of disclosures. Moreover, to the extent that a particular GHG emissions attestation provider is registered with the PCAOB, we would not expect it to be time consuming or difficult for a registrant to make this disclosure, which would presumably remain the same from year-to-year absent any changes to PCAOB rules.

We also considered whether to require such disclosure to be included in the attestation report as recommended by one commenter,[1557] instead of requiring the registrant to disclose this information in the filing that includes the attestation report as proposed. We understand that whether the attestation provider is subject to any oversight inspection program is in the first instance known by the attestation provider rather than the registrant, and therefore it may seem reasonable to require the attestation provider to make the disclosure rather than the registrant. However, we do not expect it would be difficult or burdensome for a registrant to obtain this information from the GHG emissions attestation provider, and in fact, we expect that most registrants would want to know about the existence of an oversight inspection program before retaining an attestation provider in most instances and therefore likely will already have such information in their possession. Moreover, we continue to believe that requiring such disclosure to be included in the attestation report may create confusion because this disclosure may not be required by existing attestation standards.

As stated above, the Commission included a request for comment in the Proposing Release asking if it should require disclosure when there is a change in, or disagreement with, the registrant's GHG emissions attestation provider that is similar to the disclosure requirements in Item 4.01 of Form 8–K and Item 304 of Regulation S–K.[1558] The commenters that responded to the request for comment generally agreed with including such a requirement in the final rules.[1559] Because we believe that requiring the disclosure of information regarding changes in, and disagreements with, a GHG emissions attestation provider would provide investors with important information about the provider and the conduct of the attestation engagement, which investors need to help them assess the reliability of the registrant's GHG emissions disclosures, we have included a provision in the final rules that will require AFs and LAFs subject to Item 1506(a) to disclose certain information when the registrant's GHG emissions attestation provider resigns (or indicates that it declines to stand for re-appointment after completion of the attestation engagement) or is dismissed.[1560]

We have generally modeled this aspect of the final rules on the disclosure requirements in Item 4.01 of Form 8–K and Item 304 of Regulation S–K, tailored to fit the context of a GHG emissions attestation engagement and to limit additional burdens.[1561] In particular, our decision to require the disclosure in the filing that contains the GHG emissions disclosures and attestation report (*e.g.,* a registration statement or an annual report that requires disclosure pursuant to Item 1506), instead of an alternative such as requiring a registrant to provide the disclosure in a Form 8–K, should serve to limit additional burdens associated with this provision. We believe that requiring similar disclosure for GHG emissions attestation providers to be included in the annual report or registration statement that contains the attestation report is appropriate because it will provide investors with the essential information they need to evaluate the assurance services provided while minimizing the need for additional filings by a registrant.

Specifically, the final rules (Item 1506(d)(2)) will require an AF or LAF subject to Item 1506(a) to disclose whether its former GHG emissions attestation provider resigned or was dismissed and the date thereof.[1562] If so, the registrant must state whether during the performance of the attestation engagement for the fiscal year covered by the attestation report there were any disagreements with the former GHG emissions attestation provider over any measurement or disclosure of GHG emission or attestation scope of procedures.[1563] The final rules will

[1553] *See id.*

[1554] Examples of such oversight inspection programs include the AICPA's peer review program or the PCAOB's inspection program. The AICPA's peer review program and PCAOB's inspection program are two examples of types of oversight inspection programs that a GHG emissions attestation provider may be subject to generally; however, only the AICPA's peer review program would include within its scope the GHG emissions attestation engagement. The PCAOB's inspection jurisdiction is limited to audits of issuers and registered brokers and dealers and does not include attestation engagements for GHG emissions disclosure within its scope. *See* 15 U.S.C. 7214 (setting forth the PCAOB's inspection jurisdiction). Consistent with our explanation above, commenters did not offer any examples of oversight inspection programs that apply to non-accountant GHG emissions attestation providers.

[1555] For example, in the context of inspections of PCAOB-registered public accounting firms, academic literature suggests that engagement-specific PCAOB inspections may have spillover effects on non-inspected engagements. *See, e.g.,* Daniel Aobdia, *The Impact of the PCAOB Individual Engagement Inspection Process—Preliminary Evidence,* 93Acct. Rev. 53, 53–80 (2018) (concluding that ''engagement-specific PCAOB inspections influence non-inspected engagements, with spillover effects detected at both partner and office levels'' and that ''the information communicated by the PCAOB to audit firms is applicable to non-inspected engagements''); Daniel Aobdia, *The Economic Consequences of Audit Firms' Quality Control System Deficiencies,* 66 Mgmt. Sci. (2020) (concluding that ''common issues identified in PCAOB inspections of individual engagements can be generalized to the entire firm, despite the PCAOB claiming its engagement selection process targets higher risk clients'' and that ''[PCAOB quality control] remediation also appears to positively influence audit quality'').

[1556] *See supra* note 400 and accompanying text.

[1557] *See supra* note 402 and accompanying text.

[1558] *See* Proposing Release, Section II.H.2.

[1559] *See supra* note 1539 and accompanying text.

[1560] *See* 17 CFR 229.1502(d)(2).

[1561] Although we have generally modeled these aspects of the final rules on existing requirements, in addition to the substantive differences discussed herein, we have also made several non-substantive changes and updates for readability. For the avoidance of doubt, neither the final rules nor this discussion should be construed as a modification or interpretation of the existing requirements on which they were modeled.

[1562] *See* 17 CFR 229.1506(d)(2)(i). Therefore, the registrant will be required to provide disclosure in circumstances where: (1) a GHG emissions attestation provider resigns or is dismissed during the fiscal year covered by the attestation report but it does not issue the attestation report; and (2) a GHG emissions attestation provider issues an opinion or conclusion on GHG emissions disclosure for the relevant fiscal year but is dismissed or resigns before the attestation report is filed.

[1563] *See* 17 CFR 229.1506(d)(2)(i)(B).

require the registrant to describe each such disagreement and state whether the registrant has authorized the former GHG emissions attestation provider to respond fully to the inquiries of the successor GHG emissions attestation provider concerning the subject matter of each such disagreement.[1564] Like the other elements of the disclosure requirement, this is modeled on the requirement to disclose disagreements between a registrant and its independent auditor in connection with the auditor's dismissal or resignation in Item 304 of Regulation S–K, and just as in that context, it is important that significant disagreements are brought to the attention of investors.[1565] The disclosure of the existence of a disagreement in the event of the resignation or dismissal of the GHG emissions attestation provider will enable investors to assess the possible effects of such disagreement and whether it could have impacted the reliability of the GHG emissions disclosure, which, as discussed above, provides investors with information about a registrant's business, results of operations, and financial condition. The final rules also include two instructions defining the term ''disagreements'' for purposes of the disclosure and explaining the circumstances in which it is sufficient to conclude that a disagreement has been communicated to the registrant.[1566] This definition and explanation is consistent with Item 304 of Regulation S–K and its Instructions, with minor modifications to take into account the circumstances of a GHG emissions attestation engagement.[1567]

We have determined to take an incremental approach to requiring disclosure about the resignation or dismissal of a GHG emissions attestation provider and therefore have not included a requirement for the registrant to request the former GHG emissions attestation provider to furnish the registrant with a letter addressed to the Commission stating whether it agrees with the statements made by the registrant with respect to the resignation or dismissal and disagreement (if applicable). The final rules, however, do not preclude a registrant from disclosing its explanation of the dismissal or resignation to its former GHG emissions attestation provider, and although not required, we encourage any GHG emissions attestation provider to convey concerns it has with the registrant's description of those events to the Commission's Office of the Chief Accountant.

The requirement to disclose certain information when a GHG emissions attestation provider resigns or is dismissed only applies to AFs and LAFs that are required to obtain an attestation report pursuant to Item 1506(a). It does not apply if an AF or LAF is not required to disclose its GHG emissions (and therefore is not required to obtain an attestation report) because the AF or LAF determines that its GHG emissions are not material for a particular fiscal year. In addition, for the avoidance of doubt, Item 1506(d)(2) does not apply to registrants that voluntarily obtain assurance over their GHG emissions disclosure and provide certain information about the engagement pursuant to Item 1506(e). We expect that the documentation regarding resignations and dismissals and any disagreements between the registrant and the GHG emissions attestation provider will be readily available to the registrant such that it would not be difficult or costly to comply with this requirement.

5. Disclosure of Voluntary Assurance (Item 1506(e))

a. Proposed Rules

The Commission proposed to require a registrant that was not required to include a GHG emissions attestation report under the proposed rules to disclose certain information if the registrant's GHG emissions disclosures were voluntarily subjected to third-party attestation or verification.[1568] Specifically, the Commission proposed new Item 1505(e) of Regulation S–K to require a registrant to disclose within the separately captioned ''Climate-Related Disclosure'' section in the filing the following information if the registrant's GHG emissions disclosures were subject to third-party attestation or verification:

(i) Identify the provider of such assurance or verification;

(ii) Describe the assurance or verification standard used;

(iii) Describe the level and scope of assurance or verification provided;

(iv) Briefly describe the results of the assurance or verification;

(v) Disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the registrant; and

(vi) Disclose any oversight inspection program to which the service provider is subject (*e.g.,* the AICPA's peer review program).[1569]

The Commission explained that, taken together, these proposed disclosure items should help investors understand the nature and reliability of the attestation or verification provided and help them assess whether the voluntary assurance or verification has enhanced the reliability of the GHG emissions disclosure.[1570]

b. Comments

Many of the commenters that specifically addressed the proposed requirement to provide disclosures regarding voluntary attestation or verification supported the proposal.[1571] One commenter stated, ''[i]f a registrant receives assurance for their GHG emissions, regardless of whether they are required to do so under the final [Commission] rule, they should be required to disclose this information . . . as proposed.'' [1572] Alternatively, one commenter stated that registrants that obtained voluntary assurance should follow the same proposed attestation requirements that would apply to mandatory assurance over Scope 1 and Scope 2 disclosures (*e.g.,* proposed Items 1505(a) through (d)) to protect investors from attestation reports provided under standards that did not meet a minimum set of criteria established by the Commission.[1573]

Several commenters supported the proposed requirements to: identify the provider of such assurance or verification; disclose the assurance or verification standard used; describe the level and scope of assurance or verification provided; and briefly describe the results of the assurance or verification.[1574] A few commenters supported the proposed requirement to disclose whether the third-party service provider had any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the

[1574] *See, e.g.,* letters from Amer. for Fin. Reform, Sunrise Project *et al.;* CEMEX; and C. Howard.

registrant.[1575] However, one commenter stated that it did not support such a disclosure requirement because it did ''not believe the third-party provider should be independent.'' [1576] A few commenters supported the requirement to disclose any oversight program to which the service provider is subject,[1577] while one commenter suggested aligning with the Science Based Targets Initiative.[1578] One commenter stated that it did not support requiring attestation providers to disclose any oversight inspection programs to which they are subject because investors could, in its view, wrongly assume that attestation providers that are subject to oversight are necessarily more qualified than those that are not.[1579] One commenter stated it is not clear what any oversight inspection program would include.[1580]

The Proposing Release included a request for comment asking whether registrants should be required to furnish a copy of, or provide a link to, the assurance or verification report.[1581] One commenter stated that registrants should be asked to provide a copy of the attestation or verification report when available.[1582] Another commenter stated that if summarizing the report in accordance with proposed Item 1505(e) effectively means that the report is filed, then furnishing the report would, in the commenter's view, be a more appropriate alternative.[1583] The Proposing Release also asked whether, instead of requiring a registrant to disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the registrant as proposed, the Commission should require the third-party service provider to be independent, according to the standard proposed under Item 1505(b) with respect to mandatory attestation over Scope 1 and Scope 2 emissions.[1584] In response, one commenter stated that it supported such a requirement,[1585] and one commenter stated that it did not support such a requirement, explaining that it would severely narrow the options registrants have to hire such providers.[1586] Finally, some commenters requested clarification on the use of the terminology ''assurance'' and ''verification,'' and the difference between the two.[1587]

c. Final Rules

We are adopting final rules (Item 1506(e)) that require any registrant that is not required to include a GHG emissions attestation report pursuant to Item 1506(a) to disclose certain information about the assurance engagement if the registrant's GHG emissions disclosure was voluntarily subject to assurance.[1588] Under the final rules, a registrant will be required to disclose the following information if the registrant's GHG emissions disclosure was subject to third-party assurance:

(i) Identification of the service provider of such assurance;

(ii) Description of the assurance standard used;

(iii) Description of the level and scope of assurance services provided;

(iv) Brief description of the results of the assurance services;

(v) Whether the service provider has any material business relationships with or has provided any material professional services to the registrant; and

(vi) Whether the service provider is subject to any oversight inspection program, and if so, which program (or programs) and whether the assurance services over GHG emissions are included within the scope of authority of such oversight inspection program.[1589]

The final rules require disclosure of this information whenever assurance services are voluntarily obtained by the registrant. Although we considered requiring a registrant to provide disclosure only when the registrant chooses to disclose the results of the assurance services, we decided not to adopt this alternative because it could incentivize a registrant not to disclose unfavorable results from voluntary assurance services when that information would be meaningful to an investor evaluating the reliability of a registrant's GHG emissions disclosure. If a registrant chooses to voluntarily obtain assurance over its GHG emissions disclosure, it is important that investors be made aware of the fact that assurance was obtained, the nature of the services provided, and the results of those assurance services so that they can evaluate how much reliance to place upon the disclosed GHG emissions data when making investment decisions.

Although the proposed rules would have required a registrant to disclose certain information if its GHG emissions disclosure was voluntarily subject to third-party ''attestation'' or ''verification,'' the final rules are narrower in scope in that they only require a registrant to disclose certain information about ''assurance'' services a registrant voluntarily obtains over its GHG emissions disclosure.[1590] For purposes of the final rules, assurance services are services performed in accordance with professional standards that are designed to provide assurance, which would include, for example, an examination providing reasonable assurance or a review providing limited assurance.[1591] Certain ''attestation'' engagements may be designed to provide limited or reasonable assurance over identified information and therefore such services would fall within the scope of the final rules, but in many cases ''verification'' services are not designed to provide assurance.

[1584] *See* Proposing Release, section II.H.5.

[1585] *See* letter from Futurepast.

[1586] *See* letter from CEMEX.

[1587] *See, e.g.,* letters from CEMEX; C. Howard; and IECA.

[1588] *See* 17 CFR 229.1506(e). Under the proposed rules, all registrants would have been subject to the requirement to disclose Scopes 1 and 2 emissions, but only AFs and LAFs would have been subject to the proposed requirement to obtain attestation. Therefore, under the proposed rules, there would have been a category of registrants that were required to disclose GHG emissions in their filings but were not required to obtain an attestation report. The situation is different under the final rules because only AFs and LAFs are required to disclose Scopes 1 and/or 2 emissions in certain circumstances, and these categories of registrants are also required to obtain an attestation report. Thus, under the final rules, there is no category of registrants that is required to disclose GHG emissions but not obtain an attestation report. As a result, Item 1506(e), which requires disclosure of voluntary assurance, only applies to (i) non-AF and non-LAF registrants that voluntarily disclose their GHG emissions in a Commission filing and voluntarily obtain assurance over such disclosure; and (ii) as explained above in section II.I.1, filings made by AFs and LAFs after the compliance date for the GHG emissions disclosure requirements but before Item 1506(a) requires limited assurance.

[1589] *See* 17 CFR 229.1506(e).

[1590] *See id.*

[1591] For examples of attestation engagements designed to provide assurance, *see, e.g.,* PCAOB AT section 101; AICPA SSAE No. 21 AT–C sections 205and 206 and AICPA SSAE No. 22 AT–C section 210; and IAASB ISAE 3000 (Revised) and ISAE 3410. *See also* Proposed ISSA 5000. The Proposing Release discussed the differences between limited and reasonable assurance. *See* Proposing Release, section II.H.1.

In contrast to assurance services, non-assurance services are services that are not designed to provide assurance, which would include, for example, agreed upon procedures engagements and, as indicated above, in many cases, verification engagements.[1592]

We have decided to focus the final rules on requiring disclosure of assurance services because investors are likely to place greater reliance on GHG emissions disclosure that has been subject to assurance than disclosure that has not been subject to assurance.[1593] Current voluntary ESG assurance practices have been varied with respect to the levels of assurance provided (*e.g.,* limited versus reasonable), the assurance standards used, the types of service providers, and the scope of disclosure covered by the assurance.[1594] Therefore, we believe it is appropriate to require registrants to provide investors with some basic information about the assurance services voluntarily obtained to help them understand the nature of the services provided and to help investors determine whether the assurance services have enhanced the reliability of the GHG emission disclosure. Similarly, requiring a brief description of the results of the voluntary assurance services will provide transparency about the reliability of any disclosed GHG emissions data, which in turn will help investors weigh how much importance to give that data when making investment decisions. Since non-assurance services are not designed to provide assurance, they do not connote the same degree of reliability as assurance services. Based on our experience, investors likely do not rely upon non-assurance services to the same degree as assurance services. Therefore, the final rules will not require a registrant to provide Item 1506(e) information about any voluntary non-assurance services (*e.g.,* agreed upon procedures) obtained over its GHG emissions disclosure to avoid the potential for confusion.[1595] Finally, we think these changes to the final rules respond to several commenters who requested that the Commission clarify the terminology ''assurance'' and ''verification'' and the differences between the two.[1596]

To the extent that registrants voluntarily provide more disclosure to investors than what is required under Item 1506(e), registrants should remain cognizant of their obligation to provide investors with truthful and accurate information and to avoid making any materially misleading statements or omissions.[1597] Importantly, this includes ensuring that any description or characterization of any assurance or any other type of services obtained with respect to GHG emissions disclosure is accurate.

Consistent with the general support expressed by commenters, registrants are required to disclose each of the proposed categories of information in the final rules with respect to voluntary assurance services with some minor modifications.[1598] The final rules require registrants to identify the provider of such assurance services.[1599] The identity of the assurance provider is a basic, but important, piece of information for investors, particularly considering the broad spectrum of providers that may provide assurance services (*e.g.,* public accounting firms registered with the PCAOB, unregistered public accounting firms, and potentially other types of service providers).

If voluntary assurance services are obtained, the final rules also require registrants to disclose the assurance standard used.[1600] As noted above, the assurance landscape is currently evolving and there is diversity in practice.[1601] Identification of the

[1592] For examples of engagements that are not designed to provide assurance, *see, e.g.,* PCAOB AT section 201, Agreed-Upon Procedures Engagements, available at *https://pcaobus.org/oversight/standards/attestation-standards/details/AT201;* AICPA SSAE No. 19 AT–C section 215, Agreed-Upon Procedures Engagements, available at *https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/at-c-00215.pdf;* and IAASB International Standard on Related Services 4400 (Revised) Agreed-Upon Procedures Engagements, available at *https://www.iaasb.org/_flysystem/azure-private/publications/files/ISRS-4400-Revised-Agreed-Upon-Procedures-final.pdf.* It is possible that a service identified or described as a ''verification'' could be designed to provide assurance (either limited or reasonable). *See, e.g.,* ISO 14064–3 (defining ''reasonable assurance'' as the ''level of assurance where the nature and extent of the *verification activities* have been designed to provide a high but not absolute level of assurance on historical data and information'' and ''limited assurance'' as the ''level of assurance where the nature and extent of the *verification activities* have been designed to provide a reduced level of assurance on historical data and information) (emphasis added). The key factor for purposes of determining whether disclosure is necessary under Item 1506(e) is whether the third-party services are *designed to provide assurance.*

[1593] A number of commenters on the proposed mandatory attestation requirements stated that they supported the proposal because it would help increase the reliability of the disclosure. *See supra* note 1106 and accompanying text. Relatedly, academic research suggests that investors prefer audited to non-audited information. *See* J. Cohen, *et al., Retail investors' perceptions of the decision-usefulness of economic performance, governance, and corporate social responsibility disclosures,* 23(1) Behavioral Research in Accounting 127 (2011) (''Auditing appears to be of use in lending credibility to the disclosure of nonfinancial information, in the view of most respondents.''); F.D. Hodge, Investors' perceptions of earnings quality, auditor independence, and the usefulness of audited financial statements, 17 Accounting Horizons-Supplement 42 (2003) (''Retail investors recognize the agency problems related to their investment and prefer audited financial information because of that.''). A financial statement audit is a type of ''reasonable assurance'' engagement. *See, e.g.,* PCAOB AS 1015, *Due Professional Care in the Performance of Work,* paragraph 10, available at *https://pcaobus.org/oversight/standards/auditing-standards/details/AS1015.*

[1594] *See* Proposing Release, section II.H.1. The Commission explained in the Proposing Release that this fragmentation has diminished the comparability of assurance provided and may require investors to become familiar with many different assurance standards and the varying benefits of different levels of assurance. *See id.* For example, investors may see that a service provider has produced an assurance report for a registrant's GHG emissions disclosure and have an expectation that such assurance will enhance the reliability of the disclosure, without always understanding, for example, what level of assurance (*e.g.,* limited versus reasonable) is being provided or what scope of assurance (*e.g.,* the disclosure covered by the assurance) is being provided with respect to the registrant's GHG emissions disclosure. *See id.* As noted above, the consequences of such fragmentation have also been highlighted by certain international organizations, including IOSCO. *See supra* note 1089 and accompanying text.

[1595] One commenter, which supported requiring mandatory attestation over Scope 1 and Scope 2 emissions for AFs and LAFs as proposed, expressed concerns that, among other things, ''inconsistencies in the nature and extent of procedures performed in voluntary attestation may detract from the benefits of the required attestations'' and also stated that ''[d]isclosing that the data was 'verified' would compound the confusion.'' *See* letter from PwC. This commenter's proposed solution was to subject any attestation—voluntary or required—to the proposed requirements that applied to the proposed mandatory attestation requirements. Although we are not adopting this commenter's recommendation, we think the approach we are taking in the final rules to require disclosure of certain information about assurance services voluntarily obtained by a registrant will reduce the potential for confusion while providing investors with information to help them evaluate whether the assurance services have enhanced the reliability of the GHG emissions disclosure.

[1596] *See supra* note 1587 and accompanying text.

[1597] *See, e.g.,* Securities Act section 17(a) [15 U.S.C. 77q(a)], Exchange Act section 10(b) [15 U.S.C. 78j(b)], and Exchange Act Rule 10b–5 [17 CFR 240.10b–5].

[1598] *See* 17 CFR 229.1506(e). In the Proposing Release, the Commission included a request for comment asking if registrants should be required to disclose the voluntary assurance or verification fees associated with the GHG emissions disclosure. One commenter responded to the request for comment and stated that it believed requiring the disclosure of such fees is unnecessary because the disclosure would not be useful for investors and would burden registrants. *See* letter from CEMEX. We have decided not to require the disclosure of voluntary assurance fees and instead focus on requiring the disclosure of the general categories of information specified in the final rules, which will be most useful to investors.

[1599] *See* 17 CFR 229.1506(e)(1).

[1600] *See* 17 CFR 229.1506(e)(2). *See also supra* note 1591 and accompanying text (citing examples of attestation engagements providing assurance and applicable standards).

[1601] *See, e.g.,* CAQ, *S&P 500 and ESG Reporting* (Updated June 2023) (pointing to the use of assurance methodologies such as AICPA AT–C 205, Assertion-Based Examination Engagements, AICPA AT–C 210, Review Engagements; and IAASB ISAE 3000 (Revised), and ISAE 3410, Assurance Engagements on Greenhouse Gas Statements).

assurance standard would enable investors to better understand the service that has been provided and to assess whether the standard is sufficiently developed, which may be particularly important given that some service providers may use standards that are developed by accreditation bodies with notice and public comment and other robust due processes for standard setting in the public interest, while other service providers may use standards that do not have these characteristics.

In addition, if voluntary assurance services are obtained, the final rules require registrants to describe the level and scope of assurance provided and to briefly describe the results of the assurance services.[1602] Registrants must clearly identify the level of assurance provided. Identifying the scope of the assurance provided will help investors understand whether the scope of the engagement aligns with the scope of the registrant's GHG emissions disclosure (*e.g.,* Scope 1 or 2). Providing investors with clear and transparent disclosure about the level and scope of assurance obtained is necessary to help investors weigh the level of reliance they should place on assurance services and determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure. In addition, as noted above, requiring disclosure of the results of the assurance will provide transparency about the reliability of any disclosed GHG emissions data so that investors can weigh how much importance to give that data when making investment decisions.

As explained above, with respect to voluntary assurance, the proposed rules would have required a registrant to disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the registrant.[1603] In a modification to the proposed rules, Item 1506(e)(5) requires a registrant to disclose whether the service provider has any material business relationships with or has provided any material professional services to the registrant.[1604] We have decided not to adopt the requirement for a registrant to determine whether any business relationships or other professional services ''may lead to an impairment of the service provider's *independence*'' (emphasis added) because of the variety of independence standards that could apply to the services. The assurance standard dictates the requirements for independence for engagements conducted in accordance with the standard. The final rules do not prescribe a particular assurance standard that third-party service providers must use with respect to the disclosure required under Item 1506(e).[1605] This could result in registrants and third-party providers applying different standards, which may not be apparent to investors and could reduce comparability. The modifications we have made in the final rules, however, will help avoid potential confusion and will enhance transparency related to the independence and objectivity of the third-party service provider by requiring registrants to disclose material business relationships and material professional services while also disclosing the assurance standard used by the service provider.[1606] Accordingly, the final rules serve much the same purpose as the proposed rules; namely, providing investors with information to evaluate the impartiality and objectivity of the service provider, which will in turn enable investors to determine whether the voluntary assurance services have enhanced the reliability of the GHG emissions disclosure. We continue to believe that assurance of GHG emissions disclosure by independent assurance providers improves the reliability of, and investor confidence in, such disclosure.[1607]

One commenter recommended that the Commission require a provider to be independent instead of simply requiring disclosure of the relevant facts;[1608] however, in keeping with the approach we are taking in the final rules with respect to voluntary assurance, which is focused on requiring the disclosure of information regarding the voluntary assurance services provided rather than imposing requirements addressing what the services must entail, the final rules require registrants to provide disclosure of material business relationships or other material professional services and the assurance standard used to enable investors to determine how much reliance to place on the assurance services.[1609]

Consistent with the proposed rules, the final rules require registrants to disclose any oversight inspection program to which the service provider is subject.[1610] This is the same requirement that applies to AFs and LAFs in Item 1506(d). As we explained in the discussion of Item 1506(d) in section II.I.4 above, the requirement to disclose any oversight inspection program to which the service provider is subject is not limited to oversight inspection programs that include within their scope, or require the inspection of, the assurance services provided for the GHG emissions disclosure. Rather, the final rules require the disclosure of ''any'' oversight inspection program, which includes any oversight program the service provider is subject to for any type of engagement (*e.g.,* a financial statement audit or other review).[1611] Examples of such oversight inspection programs include the AICPA's peer review program and the PCAOB's inspection program.[1612] As explained in section II.I.4 above, this information will help investors better understand the qualifications of an assurance provider, which in turn will help them determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure.[1613]

However, to provide investors with a more complete understanding of such oversight inspection program, in a modification to the proposed rules, the final rules also require a registrant to disclose whether such oversight inspection program includes within its scope the assurance services over GHG emissions disclosure obtained by the registrant.[1614] Again, this is the same requirement that applies to AFs and LAFs in Item 1506(d). As explained above, we would consider assurance

[1602] *See* 17 CFR 229.1506(e)(3), (4).

[1603] *See* Proposing Release, section II.H.5.

[1604] *See* 17 CFR 229.1506(e)(5). A GHG emissions assurance engagement, by itself, does not trigger the requirement to provide disclosure under Item 1506(e)(5).

[1605] For examples of independence standards, *see, e.g.,* PCAOB Ethics and Independence Rules and Standards; AICPA Code of Professional Conduct; and International Ethics Standards Board for Accountants (IESBA) International Code of Ethics for Professional Accountants (including International Independence Standards).

[1606] *See* 17 CFR 229.1506(e)(2), (5).

[1607] *See* Proposing Release, sections II.H.2 and II.H.5.

[1608] *See* letter from Futurepast.

[1609] *See* 17 CFR 229.1506(e)(2), (5).

[1610] *See* 17 CFR 229.1506(e)(6).

[1611] *See id.*

[1612] *See id.* The PCAOB's oversight inspection program is another non-exhaustive example of an oversight inspection program that would fall within the scope of the required disclosure, which, along with the additional explanation we are providing, will help clarify this requirement for commenters. *See supra* note 1580 and accompanying text.

[1613] As stated above in section II.I.4, this is true even in circumstances where the oversight inspection program does not include within its scope the assurance services for the GHG emissions disclosure because such oversight can provide a check on a provider's overall activities and drive improvements in the quality of their services overall. *See supra* note 1555 and accompanying text.

[1614] *See* 17 CFR 229.1506(e)(6).

services over GHG emissions disclosure to be within the scope of an oversight inspection program if it is possible for the assurance services to be inspected pursuant to the oversight program, even if it is not certain that the services will be inspected in a particular inspection cycle. Requiring registrants to disclose the existence of an oversight inspection program provides investors with valuable information about the qualifications of a GHG emissions attestation provider regardless of whether the oversight inspection program includes the inspection of assurance over GHG emissions disclosure within its scope. Similarly, requiring disclosure of whether the GHG emission assurance services would fall within the scope of such program would further facilitate investors' evaluation of the reliability of the assurance results and GHG emissions disclosure.[1615] One commenter stated that the Commission should not require the disclosure of oversight inspection programs because it could wrongly suggest that attestation providers that are subject to oversight are necessarily more qualified than those that are not.[1616] We agree with the commenter that it is not necessarily true that an assurance provider that is subject to oversight is more qualified than a provider that is not.[1617] But whether a provider is subject to oversight is one relevant factor for investors to consider when assessing the reliability of assurance results and GHG emissions disclosure and such oversight can provide a check on a provider's activities and drive improvements in quality as explained above.

The proposed rules would have required a registrant to include the proposed disclosure regarding voluntary attestation within the separately captioned ''Climate-Related Disclosure'' section in the Commission filing where the GHG emissions data is disclosed.[1618] Since the final rules leave the placement of climate-related disclosures, other than the financial statement disclosures, largely up to the registrant, a registrant will not be required to include the disclosure regarding voluntary assurance within a separately captioned ''Climate-Related Disclosure'' section in the Commission filing.[1619] Rather, registrants should provide the disclosure required by this section in the same Commission filing and alongside the GHG emissions disclosure to which the voluntary assurance services relate.

Under the final rules, a registrant is responsible for disclosing the required information about the voluntary assurance services in its Commission filings. In these circumstances, we do not view the assurance provider as having prepared or certified the filing or any information contained therein. In addition, Item 1506(e) will not require registrants to file or furnish any voluntary assurance reports to the Commission.

Although the final rules do not require a registrant that has obtained voluntary assurance over its GHG emissions disclosure to file or furnish an assurance report to the Commission, for the avoidance of doubt, and in response to commenters,[1620] we are amending Rule 436 to provide that any description of assurance services regarding a registrant's GHG emissions disclosure provided in accordance with Item 1506(e) of Regulation S–K will not be considered a part of the registration statement prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.[1621] Therefore, a registrant is not required to obtain and include the written consent of the GHG emissions attestation provider pursuant to Securities Act section 7 or Rule 436.[1622] Even though we believe that accountability for experts under section 11 is a central tenet of the Securities Act,[1623] this limited exception should encourage registrants to voluntarily obtain assurance over their GHG emission disclosure, which will benefit investors because assurance helps to enhance the reliability of a registrant's GHG emissions disclosure.

As discussed above in section II.I.2.c, we are also amending Rule 436 to provide that a report by a GHG emissions attestation provider covering Scope 1, Scope 2, and/or Scope 3 emissions at a limited assurance level shall not be considered a part of the registrant statement that is prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.[1624] To the extent that a registrant that voluntarily obtains assurance over its GHG emissions disclosures decides to voluntarily file or furnish an assurance report to the Commission at the limited assurance level, the GHG emissions attestation provider would be entitled to rely on this amendment to Rule 436 if its terms are met. In these circumstances, a registrant would be required to submit a letter from the GHG emissions attestation provider that acknowledges their awareness of the use in certain registration statements of any of their reports which are not subject to the consent requirement of section 7 pursuant to the amendments to Item 601 of Regulation S–K.[1625] However, if a registrant voluntarily chooses to file or furnish an assurance report to the Commission that does not meet the requirements of Rule 436(i)(1) (*e.g.,* the assurance report is provided at a reasonable assurance level), or if the registrant chooses to voluntarily disclose more information than is required under Item 1506(e) of Regulation S–K, then, by its terms, the exception in Rule 436 would not apply, and the assurance provider may be required to provide a consent in accordance with applicable statutory provisions and rules and would be subject to Section 11 liability.[1626]

[1615] The PCAOB's inspection jurisdiction is limited to audits of issuers and broker-dealers registered with the Commission and would not include engagements for the assurance of GHG emissions disclosures within its scope. *See supra* note 1357. However, as stated in the Proposing Release, an example of an oversight inspection program that includes within its scope assurance engagements is the AICPA peer review program. *See* Proposing Release, section II.H.4.

[1616] *See* letter from Futurepast.

[1617] *See supra* note 1579.

[1618] *See* Proposing Release, section II.H.5.

[1619] *See supra* section II.A.3.

[1620] *See supra* note 1345 and accompanying text.

[1621] *See* 17 CFR 230.436(i)(2).

[1622] *See* 15 U.S.C. 77g; 17 CFR 230.436. For the avoidance of doubt, a registrant would not have to obtain and include the written consent of the GHG emissions attestation provider pursuant to 17 CFR 229.601(b)(23), which is the Regulation S–K provision requiring a registrant to file the written consent of an expert as an exhibit to a Securities Act registration statement or Exchange Act report that incorporates by reference a written expert report attached to a previously filed Securities Act registration statement.

[1623] *See* 15 U.S.C. 77k(a)(4). *See also* 77 Cong. Rec. 2910, 2934 (1933) (Statement of Rep. Chapman) (''Under its provisions the issuer, the underwriter, and the technical expert (including the engineer, the lawyer, the appraiser, the accountant, in connection with the issuance of securities) are held responsible for making a full disclosure of every material fact in connection with an issue of corporate securities. The burden of proof is placed on them to show that after the exercise of the degree of diligence expected of reasonably prudent men they 'had reasonable ground to believe and did believe . . . that such statement was true or that there was no such omission.' '').

[1624] *See* 17 CFR 230.436(i)(1).

[1625] *See* 17 CFR 229.601(b)(27). *See also supra* section II.I.2.c. for further discussion of the amendments to Item 601 of Regulation S–K.

[1626] Although the amendments to Rule 436 will clarify that assurance providers will not be liable to shareholders in actions under section 11 of the Securities Act (to the extent the provider qualifies for the exception), we remind registrants and providers that there are other remedies available to shareholders and the Commission, such as section 10(b) of the Exchange Act and Rule 10b–5 thereunder, which are not affected by the amendments to Rule 436.

J. Safe Harbor for Certain Climate-Related Disclosures (Item 1507)

1. Proposed Rules

The Commission proposed a safe harbor for Scope 3 emissions data to mitigate potential liability concerns that registrants may have about providing emissions information derived largely from third parties in a registrant's value chain. The proposed safe harbor provided that disclosure of Scope 3 emissions by or on behalf of the registrant would be deemed not to be a fraudulent statement unless it is shown that such statement was made or reaffirmed without a reasonable basis or was disclosed other than in good faith.[1627] As proposed, the safe harbor would extend to any statement regarding Scope 3 emissions that is disclosed pursuant to proposed Items 1500 through 1506 of Regulation S–K and made in a document filed with the Commission. For purposes of the proposed safe harbor, the term ''fraudulent statement'' was defined to mean a statement that is an untrue statement of material fact, a statement false or misleading with respect to any material fact, an omission to state a material fact necessary to make a statement not misleading, or that constitutes the employment of a manipulative, deceptive, or fraudulent device, contrivance, scheme, transaction, act, practice, course of business, or an artifice to defraud as those terms are used in the Securities Act or the Exchange Act or the rules or regulations promulgated thereunder.[1628]

Although the proposed safe harbor only applied to Scope 3 emissions disclosures, the Commission solicited comment on whether the safe harbor should apply to other climate-related disclosures, such as Scopes 1 and 2 emissions disclosures, any targets and goals disclosures, or the proposed financial statement metrics disclosures.[1629] The Commission also solicited comment on whether to provide a safe harbor for disclosures related to a registrant's use of internal carbon pricing, scenario analysis,[1630] and a transition plan.[1631] The Commission further requested comment on whether it should adopt a provision similar to 17 CFR 229.305(d) that would apply the PSLRA safe harbors to forward-looking statements made in response to specified climate-related disclosure items, such as proposed Item 1502 pertaining to impacts of climate-related risks on strategy.[1632] Finally, the Commission solicited comment on whether the safe harbor should apply indefinitely or, instead, should sunset after the passage of a certain number of years or after certain conditions are satisfied.[1633]

2. Comments

Several commenters supported the adoption of a Scope 3 emissions safe harbor in the form proposed.[1634] These commenters stated that the proposed safe harbor for Scope 3 emissions disclosure was appropriate because of the uncertainties involved in the calculation of those emissions due to the need to rely on estimates[1635] and data from third parties.[1636] Some of these commenters also stated that the proposed safe harbor would encourage more robust disclosure of a registrant's Scope 3 emissions.[1637] A few commenters specifically supported basing the Scope 3 emissions safe harbor on the proposed standard that a registrant's Scope 3 emissions disclosure would not be deemed to be a fraudulent statement unless it is shown that such statement was made or reaffirmed without a reasonable basis or was disclosed other than in good faith.[1638]

Many other commenters recommended strengthening and/or broadening the scope of the proposed safe harbor to include other types of climate-related disclosures.[1639] In this regard several commenters stated that a more robust safe harbor for climate-related disclosures than what was proposed would encourage registrants to provide more robust and ''higher quality'' disclosures for investors while the proposed safe harbor would potentially chill climate reporting.[1640]

For example, some commenters stated that the proposed Scope 3 emissions safe harbor appeared to be based on a negligence liability standard, which would provide protection that was too weak to be of much use for many registrants.[1641] Some commenters recommended that the Commission remove the proposed ''reasonable basis'' requirement, condition the safe harbor only on a registrant acting in good faith when calculating and reporting its Scope 3 emissions, and, for loss of the safe harbor, require knowing or intentional fraud in the sense that the registrant must have actual knowledge that the third-party information it is utilizing is unreliable.[1642]

Some commenters, as well as the Commission's Small Business Capital Formation Advisory Committee,[1643] recommended adoption of a safe harbor that would cover any climate risk-related statement, historical or forward-looking, required by the final rules.[1644] Some commenters stated that the safe harbor should cover all forward-looking climate-related disclosures, including disclosure of forward-looking impacts.[1645] Other commenters stated that a safe harbor for Scope 3 emissions and other climate-related disclosures should provide protection at least as strong as that provided by the PSLRA safe harbors.[1646] In this regard some commenters stated that the safe harbor should be modeled on the market risk disclosure safe harbor under 17 CFR 229.305(d).[1647] Some commenters stated

Continued

that the Commission should adopt a forward-looking statement safe harbor for climate-related disclosures made in connection with initial public offerings (''IPOs'') [1648] or by partnerships, limited liability companies, and direct participation investment programs, which are excluded from the PSLRA safe harbors.[1649] Commenters stated that excluding climate-related disclosures made in connection with IPOs or by entities such as partnerships from safe harbor protections could potentially impede capital formation and discourage private companies from going public.[1650]

Several commenters recommended including specific disclosure items, in addition to Scope 3 emissions disclosures, within the scope of the safe harbor, such as Scopes 1 and 2 emissions disclosures,[1651] financial impact disclosures,[1652] and disclosures related to a registrant's use of internal carbon pricing,[1653] scenario analysis,[1654] and a transition plan,[1655] or the setting of targets and goals.[1656] Other commenters stated that the safe harbor should cover any climate-related disclosures based on third-party data or estimates.[1657] Commenters stated that because many of the required climate-related disclosures will involve complex assessments that are substantially based on estimates, assumptions, still-evolving science and analytical methods, and the use of third-party data, the safe harbor should cover all such climate-related disclosures.[1658] Still other commenters stated that the safe harbor should protect against not only private rights of action but Commission enforcement proceedings as well.[1659]

Some commenters opposed adoption of a safe harbor for Scope 3 emissions disclosure.[1660] A few commenters indicated that it would be inappropriate to adopt a safe harbor for Scope 3 emissions disclosure or any other climate-related disclosure that provided historical or current information.[1661] These commenters further stated that a separate forward-looking statement safe harbor for climate-related disclosures was not necessary because the PSLRA safe harbor is available to protect forward-looking climate-related disclosures.[1662] One other commenter stated that providing a safe harbor for Scope 3 emissions disclosure would disincentivize registrants from providing accurate disclosures.[1663]

Several commenters supported adoption of a Scope 3 emissions safe harbor but only if it was subject to a sunset provision.[1664] These commenters stated that the Scope 3 emissions safe harbor should eventually be phased out because of an expectation that Scope 3 reporting methodologies will be refined, Scope 3 tools and resources will improve, and the cost of Scope 3 emissions reporting will decline, which should reduce the uncertainties and difficulties in connection with Scope 3 emissions reporting.[1665] Commenters recommended various time horizons before sunsetting, such as one year,[1666] three years,[1667] five years,[1668] and five to seven years.[1669] By contrast, several other commenters stated that the Scope 3 emissions safe harbor should not be subject to a sunset.[1670] One commenter stated that the Scope 3 emissions safe harbor should be indefinite because the underlying data will always be under the control of third parties.[1671] Another commenter stated that there should be a meaningful safe harbor for the entirety of any final rule considering the ''unique'' challenges that registrants must overcome to meet the proposed climate-related disclosure obligations.[1672]

3. Final Rules

Because the final rules will not require the disclosure of Scope 3 emissions from any registrant,[1673] we are not adopting a safe harbor for such disclosures in the final rules. Instead, for the reasons discussed below and consistent with the feedback from commenters that asked the Commission to promulgate a safe harbor for certain climate-related disclosures (in addition to the Scope 3 emissions disclosure safe harbor that was proposed),[1674] we are adopting a provision (Item 1507) stating that disclosures (other than historic facts) provided pursuant to the following subpart 1500 provisions constitute ''forward-looking statements'' for purposes of the PSLRA safe harbors:

- 17 CFR 229.1502(e) (transition plans);
- 17 CFR 229.1502(f) (scenario analysis);
- 17 CFR 229.1502(g) (internal carbon pricing); and
- 17 CFR 229.1504 (targets and goals).[1675]

In addition, as discussed in more detail below, the final rules provide that the PSLRA safe harbors will apply to these forward-looking statements in connection with certain transactions and disclosures by certain issuers notwithstanding that these transactions and issuers are excluded from the PSLRA safe harbors in subparagraphs (a) and (b) of section 27A of the Securities Act and section 21E of the Exchange Act.

When proposing the climate disclosure rules, the Commission indicated that, because transition planning, scenario analysis, and internal carbon pricing involve assumptions, judgments, and predictions about future events, the PSLRA safe harbors would be applicable to forward-looking statements concerning transition plans, scenario analysis, and internal carbon

(stating that, in comparable circumstances, when the Commission adopted novel and complex disclosure requirements regarding market risk, ''the Commission recognized the challenges companies would face in preparing this novel information and specifically provided PSLRA safe-harbor protection for it,'' and recommending that the Commission adopt a similar safe harbor for GHG emissions disclosure).

pricing.[1676] Moreover, because the proposed targets and goals disclosure provision would require a registrant to disclose how it intends to achieve its climate-related targets or goals, the Commission similarly stated that the PSLRA safe harbors would apply to forward-looking statements made in the context of such targets and goals disclosure.[1677] Because estimates and assumptions based on future events are intrinsically involved in disclosures concerning a registrant's transition plan, use of scenario analysis or internal carbon pricing, and targets and goals, we continue to believe that such disclosures constitute ''forward-looking statements'' for purposes of the PSLRA safe harbors.

The PSLRA statutory provisions define ''forward-looking statement'' to include a number of different types of statements.[1678] Several of these definitional provisions are potentially applicable to statements made in the context of disclosures regarding transition plans, scenario analysis, and internal carbon pricing made pursuant to Item 1502 and regarding targets and goals made pursuant to Item 1504. To the extent that disclosures made in response to these Items or to any other subpart 1500 provision contain one or more of the following statements, they will fall within the PSLRA statutory definition of ''forward-looking statement'':

- A statement containing a projection of revenues, income (including income loss), earnings (including earnings loss) per share, capital expenditures, capital structure, or other financial items; [1679]
- A statement of the plans and objectives of management for future operations, including plans or objectives relating to the products or services of the issuer; [1680]
- A statement of future economic performance, including any such statement contained in a discussion and analysis of financial condition by the management, made pursuant to Commission rules; [1681]
- Any statement of the assumptions underlying or relating to the above statements; [1682] and
- A statement containing a projection or estimate of items specified by Commission rule or regulation.[1683]

If a forward-looking statement falls squarely within any of the above-described forward-looking statements, certain parties may rely on the existing PSLRA safe harbors for disclosures made pursuant to any of the subpart 1500 provisions, assuming the other requirements of the PSLRA provisions are met.[1684] We recognize, however, the concern of some commenters that the PSLRA safe harbors may not be applicable to disclosures related to transition plans, scenario analysis, internal carbon price, and targets and goals to the extent the disclosures consist of a complex mix of factual and forward-looking statements and because the PSLRA safe harbors do not apply to certain parties and certain transactions.[1685]

In addition to the forward-looking statement exemptions expressly provided under the PSLRA, the Commission has authority under the PSLRA to provide exemptions from liability for other statements based on projections or other forward-looking information if the Commission determines that such exemption is consistent with the public interest and the protection of investors.[1686] The Commission previously exercised this authority when it adopted a rule providing a forward-looking statement safe harbor for certain statements made concerning market risk.[1687]

After considering feedback from commenters, we have concluded that using the authority provided by the PSLRA to extend its protections to disclosures (other than historical facts) concerning transition plans, scenario analysis, internal carbon pricing, and targets and goals is consistent with the public interest and the protection of investors. We expect that the disclosures required by these items will include a complex mixture of both forward-looking and factual information related to climate-related risks and assumptions concerning those risks. Thus, we are providing a safe harbor for these disclosures to avoid having to disentangle the information to claim protection for forward-looking statements under the PSLRA safe harbors, which would increase the compliance burden under the final rules and potentially reduce the usefulness of those disclosures for investors. We also believe that a safe harbor for these disclosures will help incentivize more comprehensive disclosures on these matters to the benefit of investors.[1688]

Statements made by issuers and/or in connection with transactions [1689] currently excluded from the PSLRA statutory safe harbor for forward-looking statements that will be eligible for the final rules' safe harbor include forward-looking statements: made in connection with an offering of securities by a blank check company; [1690] made with respect to the business or operations of an issuer of penny stock; made in connection with a rollup transaction; or

[1676] *See* Proposing Release, sections II.C and E.

[1677] *See* Proposing Release, section II.I.

[1678] *See* 15 U.S.C. 77z–2(i)(1) and 15 U.S.C. 78u–5(i)(1).

[1679] *See* 15 U.S.C. 77z–2(i)(1)(A) and 15 U.S.C. 78u–5(i)(1)(A). For example, a statement of potential capital expenditures made in response to Item 1502(e) (transition plans) and Item 1502(d) (narrative discussion of material impacts of climate-related risks) would likely constitute a forward-looking statement.

[1680] *See* 15 U.S.C. 77z–2(i)(1)(B) and 15 U.S.C. 78u–5(i)(1)(B). For example, a statement of plans to transition to more efficient operations or a different mix of products or services made in response to Item 1502(d), Item 1502(e), or Item 1504 (targets and goals) would likely constitute a forward-looking statement.

[1681] *See* 15 U.S.C. 77z–2(i)(1)(C) and 15 U.S.C. 78u–5(i)(1)(C). For example, a statement of future economic performance made pursuant to Items 1502(d), Item 1504, or Item 303 of Regulation S–K would likely constitute a forward-looking statement.

[1682] *See* 15 U.S.C. 77z–2(i)(1)(D) and 15 U.S.C. 78u–5(i)(1)(D).

[1683] *See* 15 U.S.C. 77z–2(i)(1)(F) and 15 U.S.C. 78u–5(i)(1)(F). For example, a projection or estimate of a registrant's future GHG emissions made pursuant to Item 1504 would likely constitute a forward-looking statement.

[1684] Other safe harbors, such as Securities Act Rule 175 and Exchange Act Rule 3b–6 and the bespeaks caution doctrine may also continue to apply to disclosures made pursuant to any of the subpart 1500 provisions, depending on specific facts and circumstances.

[1685] *See, e.g.,* letters from BOA; and Chamber. For example, the PSLRA safe harbors do not apply to statements made in connection with an IPO, *see* 15 U.S.C. 77z–2(b)(2)(D) and 15 U.S.C. 78u–5(b)(2)(D), or made in connection with an offering by, or related to the operations of, a partnership, limited liability company, or a direct participation investment program, *see* 15 U.S.C. 77z–2(b)(2)(E) and 15 U.S.C. 78u–5(b)(2)(E).

[1686] 15 U.S.C. 77z–2(g) and 15 U.S.C. 78u–5(g). The PSLRA also provides that it does not limit, ''either expressly or by implication, the authority of the Commission to exercise similar authority or to adopt similar rules and regulations with respect to forward-looking statements under any other statute under which the Commission exercises rulemaking authority.'' 15 U.S.C. 77z–2(h) and 15 U.S.C. 78u–5(h).

[1687] 17 CFR 229.305; *see* Disclosure of Market Risk Sensitive Instruments Release.

[1688] *See supra* note 1640 and accompanying text.

[1689] In addition to issuers, consistent with the PSLRA safe harbors, the safe harbor will apply to: a person acting on behalf of the issuer; an outside reviewer retained by the issuer making a statement on behalf of the issuer; or an underwriter, with respect to information provided by the issuer or information derived from information provided by the issuer. *See* 15 U.S.C. 77z–2(a)(2)–(4) and 15 U.S.C. 78u–5(a)(2)–(4); *see also infra* note 1691.

[1690] The Commission recently amended Securities Act Rule 405 and Exchange Act Rule 12b–2 to define ''blank check company'' for purposes of Securities Act Section 27A and Exchange Act Section 21E to mean a company that has no specific business plan or purpose or has indicated that its business plan is to engage in a merger or acquisition with an unidentified company or companies, or other entity or person. *See Special Purpose Acquisition Companies, Shell Companies, and Projections,* Release No. 33–11265 (Jan. 24, 2024), [89 FR 14158 (Feb. 26, 2024)].

made in connection with an IPO,[1691] or in connection with an offering by, or relating to the operations of, a partnership, limited liability company, or a direct participation investment program.[1692]

We have determined that it is consistent with the public interest and the protection of investors to extend the safe harbor to these entities, such as partnerships and limited liability companies, and to transactions, such as IPOs, all of which are currently excluded from the PSLRA statutory safe harbor for forward-looking statements, because such entities may be subject to material climate-related risks that will require them to provide the disclosures pursuant to Items 1502(e), (f), or (g), or Item 1504. Extending the PSLRA safe harbor to these specified disclosures will encourage more comprehensive disclosures under these Items and help limit any negative effects to capital formation that may result from the perceived compliance costs associated with these provisions of the final rules.[1693]

Because the disclosure items pertaining to transition plans, scenario analysis, internal carbon pricing, and targets and goals are likely to involve a complex mixture of estimates and assumptions, some of which may be based on a combination of facts and projections, the safe harbor we are adopting provides that all information required by the subpart 1500 provisions concerning transition plans, scenario analysis, internal carbon pricing, and targets and goals is considered forward-looking statements for purposes of the statutory PSLRA safe harbors, except for historical facts.[1694] This provision should encourage more comprehensive disclosures regarding these subpart 1500 items, to the benefit of investors, despite their novelty and complexity.

Consistent with the operation of the PSLRA safe harbor, the final rules' forward-looking safe harbor will not be available for statements consisting solely of historical fact because such information does not involve the assumptions, judgments, and predictions about future events that necessitates additional protections.[1695] The safe harbor provision provides as non-exclusive examples of historical facts that are excluded from the safe harbor information related to carbon offsets or RECs described pursuant to a target or goal and a registrant's statements in response to Item 1502(e) (transition plan disclosure) or Item 1504 (targets and goals disclosure) about material expenditures actually incurred.[1696] Like the terms of a material contract, parties covered by the safe harbor should know with reasonable certainty information about a purchased carbon offset or REC, such as the amount of carbon avoidance, reduction, or removal represented by the offset or the amount of generated renewable energy represented by the REC, as well as the nature and source of the offset or REC, and should not need the protection of a forward-looking safe harbor if those items are required to be disclosed pursuant to Item 1504.[1697] Similarly, statements in response to Item 1502(e) (transition plan disclosure) and Item 1504 (targets and goals disclosure) about material expenditures actually incurred will not be eligible for the Item 1507 safe harbor because those statements consist of historical facts.

The PSLRA safe harbor does not apply to forward-looking statements included in financial statements prepared in accordance with generally accepted accounting principles (''GAAP'').[1698] Consistent with this, the final rules' safe harbor will not be available for forward-looking statements included in a registrant's consolidated financial statements. In addition, any such forward-looking statements that are incorporated by reference from the financial statements into a registrant's subpart 1500 disclosures will not be eligible for the Item 1507 safe harbor.

Notwithstanding deeming certain disclosures to be ''forward-looking statements'' and expanding the PSLRA protections to include certain issuers and transactions under Item 1507, the rest of the PSLRA requirements apply to the Item 1507 safe harbor. For example, in order for the safe harbor protections to apply, a forward-looking statement must be accompanied by a meaningful cautionary statement that identifies important factors that could cause actual results to differ materially from those in the forward-looking statement.[1699]

Although some commenters asked the Commission to include Scopes 1 and 2 emissions disclosures within the scope of any safe harbor, we decline to follow this recommendation.[1700] Because the methodologies underlying the calculation of those scopes are fairly well-established,[1701] we do not believe that it is necessary to provide a safe harbor from private litigation for such disclosures. We also decline to extend the safe harbor to Commission enforcement actions because existing Securities Act Rule 175 and Exchange Act Rule 3b–6 already provide a suitable safe harbor from liability for forward-looking statements in certain Commission enforcement actions.[1702]

Although some commenters recommended that we sunset any safe harbor,[1703] we decline to follow this recommendation at this time. The Commission may determine at a future date, after assessing how disclosure practices have evolved, whether it makes sense to amend or remove the safe harbor.

K. Financial Statement Effects (Article 14)

1. Introduction

The Commission proposed amendments to Regulation S–X that would require certain disclosures in registrants' financial statements. Specifically, the Commission proposed that if a registrant is required to file the disclosure required by proposed subpart 1500 in a filing that also requires audited financial statements, then the registrant would be required to disclose in a note to its financial statements certain disaggregated financial

[1691] The limitation in 15 U.S.C. 77z–2(a)(1) and 15 U.S.C. 78u–5(a)(1) is not applicable. *See* Item 1507(a)(3). Thus, notwithstanding 15.U.S.C. 77z(2)(a)(1) and 15 U.S.C. 78(u)(a)(1), the safe harbor will apply where an issuer that, at the time the statement is made, is not subject to the reporting requirements of section 13(a) or section 15(d) of the Exchange Act.

[1692] *See* 17 CFR 229.1507(a)(2).

[1693] *See* 15 U.S.C. 77z–2(b)(1)(B)–(D) and 77z–2(b)(2)(C)–(E); and 15 U.S.C. 78u–5(b)(1)(B)–(D) and 78u–5(b)(2)(C)}(E). We are not using our exemptive authority to extend the PSLRA safe harbors to: (i) issuers specified in Securities Act section 27A(b)(1)(A) and Exchange Act section 21E(b)(1)(A) (specified ''bad actors''); (ii) forward looking-statements contained ina registration statement of, or otherwise issued by, an investment company as specified in Securities Act section 27A(b)(2)(B) and Exchange Act section 21E(b)(2)(B); and (iii) forward-looking statements made by an issuer in a going-private transaction, *see* section 27A(b)(2)(E) and Exchange Act section 21E(b)(1)(E), in connection with a tender offer, *see* Securities Act section 27A(b)(2)(C) and Exchange Act section 21E(b)(2)(C), or in a beneificial ownership report required to be filed pursuant to section 13(d) of the Exchange Act, *see* Securities Act section 27A(b)(2)(F) and Exchange Act section 21E(b)(2)(F). *See also* the discussion below of forward-looking statements made in consolidated financial statements, which are excluded from both the PSLRA and Item 1507 safe harbors.

[1694] *See* 17 CFR 229.1507(b). The Commission adopted a similar provision in the market risk disclosure context. *See* 17 CFR 229.305(d)(2)(i).

[1695] *See* 15 U.S.C. 77z–2(a) and 15 U.S.C. 78u–5(a).

[1696] *See* 17 CFR 229.1507(b).

[1697] *See* 17 CFR 229.1504(d).

[1698] *See* 15 U.S.C. 77z–2(b)(2)(B) and 15 U.S.C. 78u–5(b)(2)(B).

[1699] *See* 15 U.S.C. 77z–2(c)(1)(A) and 15 U.S.C. 78u–5(c)(1)(A).

[1700] *See supra* note 1651 and accompanying text.

[1701] *See, e.g., supra* note 916 and accompanying text.

[1702] Securities Act Rule 175 and Exchange Act Rule 3b–6 also apply to private litigation.

[1703] *See supra* note 1664 and accompanying text.

statement metrics.[1704] The proposed rules would have required disclosure falling under three categories of information:

• Financial Impact Metrics; [1705]
• Expenditure Metrics; and
• Financial Estimates and Assumptions.[1706]

The proposed Financial Impact Metrics would have required disclosure of the impacts of severe weather events and other natural conditions and any efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks on the line items in a registrant's financial statements.[1707] Disclosure of the Financial Impact Metrics would have been required if the sum of the absolute value of all impacts on the line item was one percent or more of the total line item for the relevant fiscal year.[1708] The proposed Expenditure Metrics would have required registrants to disclose expenditures expensed and costs incurred to mitigate risks related to the same severe weather events and other natural conditions and transition activities.[1709] Under the Expenditure Metrics, disclosure would have been required if the aggregate amount of expenditures expensed or the aggregate amount of capitalized costs was one percent or more of the total expenditure expensed or total capitalized costs incurred, respectively, for the relevant fiscal year.[1710] In addition, the proposed rules would have required disclosure of Financial Estimates and Assumptions impacted by severe weather events and other natural conditions and transition activities and would have permitted a registrant to include the impact of any opportunities arising from these events and activities on any of the financial metrics disclosed.[1711]

Although commenters' views were mixed, a number of commenters supported adoption of the proposed financial statement disclosure requirements.[1712] Commenters stated that the proposed requirements would promote consistency across reporting and would satisfy investor demand for reliable information about the financial impacts of climate-related risks.[1713] One commenter stated that ''integrating climate risk information into financial statements goes to the very purpose of disclosures—helping investors understand how climate-related risks impact the profitability and resilience of a company and its financial position.'' [1714] Some commenters asserted that it was important to include the disclosures in the notes to the financial statements so that the information is subject to independent audit and registrants' internal control over financial reporting (''ICFR'').[1715] Another commenter stated that although existing regulations are clear that registrants must incorporate material climate considerations into the financial statements, this is not being done consistently, and therefore the proposed rules are important to help prevent companies from misrepresenting their financial positions.[1716] Some commenters supported including some climate-related disclosures in the audited financial statements subject to certain revisions as described below.[1717] One of these commenters stated that the linkage of the climate-related risks disclosed elsewhere in the filing to the financial statements is essential.[1718] This commenter explained that ''[a]nchoring the disclosures outside the financial statements to those within the financial statements will have a focusing effect and increase the reliability and consistency of both.'' [1719]

Conversely, many commenters expressed the view that the proposed rules would be difficult to implement and would require registrants to make costly and burdensome adjustments to their controls, procedures, and accounting records to provide the disclosures.[1720] Many commenters asserted that the proposed requirements would result in the disclosure of a potentially overwhelming volume of information that would be immaterial to investors.[1721] Some commenters stated

[1704] *See* Proposing Release, section II.F.1.

[1705] The Proposing Release and the proposed rules used the term ''metrics'' to describe the proposed Regulation S–X amendments, including the proposed Financial Impact Metrics and the proposed Expenditure Metrics. *See* Proposing Release, section II.F. The final rules do not use the term ''metrics'' to describe the Regulation S–X amendments because we think it is more accurate to characterize them as disclosures of financial statement effects. *See* 17 CFR 210.14–01, 14–02.

that the Commission's existing rules elicit sufficient disclosure for investors [1722] or would elicit sufficient disclosure when combined with the Commission's proposed amendments to Regulation S–K.[1723]

A number of commenters recommended alternatives to the proposed financial statement disclosures. For example, some commenters stated that in lieu of the proposed rules, the Commission should instead require registrants to discuss the impact of climate-related matters on the registrant's financial position in Item 303 of Regulation S–K (*i.e.,* MD&A).[1724] Other commenters stated that registrants are already required to disclose material climate-related impacts in MD&A.[1725] A number of commenters recommended that the Commission work with the FASB to determine whether accounting standards should be developed to address climate-related financial statement disclosures or that the Commission should simply refer the development of standards to the FASB.[1726] Other commenters stated that the Commission should instead update or issue new guidance addressing climate-related risk disclosure [1727] or consider requiring disclosure of the financial impacts in a separate report published outside of the financial statements.[1728] Finally, some commenters stated that the proposed financial statement metrics should only apply to registrants in certain sectors or industries, such as the energy sector.[1729]

After consideration of the feedback received from commenters, we are adopting rules that require certain financial statement effects to be disclosed in a note to the financial statements, but with modifications. We appreciate the significant concerns raised by commenters with respect to the potential burdens resulting from the proposed financial statement disclosures, including the adjustments that registrants stated they would need to make to their controls, processes, and accounting records in order to comply with the proposed requirements.[1730] Therefore, we are adopting rules that require registrants to provide decision-useful information to investors but that are significantly narrower in scope than the proposed rules, which should help to mitigate concerns about the potential burdens of the disclosure.

The Commission is not adopting the proposed Financial Impact Metrics and is modifying the scope of the proposed Expenditure Metrics and proposed Financial Estimates and Assumptions in the final rules, including by narrowing several aspects of the final rules as compared to the proposal. Declining to adopt the Financial Impact Metrics will reduce costs and ease many of the burdens that commenters stated would arise as a result of a requirement to disclose financial impacts on a line item basis.[1731] As discussed in greater detail below, the final rules are focused on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses [1732] incurred as a result of severe weather events and other natural conditions, and capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs, subject to disclosure thresholds.[1733] These capitalized costs, expenditures expensed, charges, and losses represent quantitative information that is derived from transactions and amounts recorded in a registrant's books and records underlying the financial statements. The final rules require registrants to disclose where on the balance sheet and income statement these capitalized costs, expenditures expensed, charges, and losses are presented.[1734] However, the balance sheet and income statement line items where these capitalized costs, expenditures expensed, charges, and losses are presented will be far fewer in number as compared to the number of line items that would have been impacted by the proposed Financial Impact Metrics, which, for example, would have required registrants to disclose changes in revenues due to disruptions of business operations.[1735] To narrow the scope further, the final rules do not require the disclosure of any impacts on the statement of cash flows, as would have been required under the proposed rules.[1736]

In addition, although we are retaining a one percent disclosure threshold in the final rules, registrants will not be required to apply it on a line item basis to determine whether disclosure is required since we are not adopting the proposed Financial Impact Metrics. Instead, as discussed in greater detail below, the final rules require the application of the one percent

[1731] *See supra* note 1730 and accompanying text.

[1732] While the final rules use the terms ''charges'' and ''losses'' in the disclosure requirements related to expenditures, these terms represent impacts that would have been disclosed under the proposed Financial Impact Metrics and, accordingly, we do not consider these to be an expansion of the proposed disclosure requirements. *See infra* note 1735 for an explanation of the overlap between the proposed Financial Impact Metrics and the proposed Expenditure Metrics.

[1733] *See* 17 CFR 210.14–02(c), (d), and (e).

[1734] *See id. See infra* section K.3.c.i for further discussion of the requirement to disclose where on the balance sheet and income statement the required capitalized costs, expenditures expensed, charges, and losses are presented.

[1735] *See* Proposing Release, section II.F.2. In response to a request for comment included in the Proposing Release, commenters stated that the Financial Impact Metrics and Expenditure Metrics, as proposed, potentially would result in some overlapping disclosures with respect to costs and expenditures (*i.e.,* certain costs included in the aggregate disclosures required by the proposed Expenditure Metrics would also have been captured by the proposed Financial Impact Metrics line item disclosures).

[1736] *See* Proposing Release, section II.F.2 (''A registrant would be required to determine the impacts of severe weather events, other natural conditions, transition activities, and identified climate-related risks described above on each consolidated financial statement line item.'').

disclosure threshold to only two categories of aggregate amounts: (1) expenditures expensed as incurred and losses; and (2) capitalized costs and charges, in both cases incurred as a result of severe weather events and other natural conditions. The final rules use different denominators for the disclosure thresholds as compared to the proposal and include de minimis thresholds to help respond to commenters' concerns about burdens.[1737] The requirement to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs is not subject to a one percent disclosure threshold. Rather, disclosure is only required if carbon offsets and RECs have been used as material component of a registrant's plans to achieve its disclosed climate-related targets or goals.[1738] As discussed in greater detail above, instead of requiring the disclosure of expenditures related to transition activities in the financial statements as proposed, the final rules will require registrants to disclose material expenditures related to (1) activities to mitigate or adapt to climate-related risk (in management's assessment), (2) disclosed transition plans, and (3) disclosed targets and goals, outside of the financial statements as part of the amendments to Regulation S–K.[1739] The final rules we are adopting seek to realize many of the benefits of the proposed rules in terms of enhanced financial statement disclosure while minimizing the likelihood that issuers will need to undertake costly updates to their internal systems and processes. Physical risks, such as severe weather events and other natural conditions, can significantly affect public companies' financial performance or position.[1740] Investors need disaggregated disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions to better understand the effect such events have on the financial statements.[1741] By expanding on the information provided in the financial statements, the final rules will help investors ''assess a registrant's exposure to physical risks,'' [1742] and ''better understand the overall vulnerability of assets . . . [and] loss experience.'' [1743] In addition, the requirement to provide disaggregated disclosure of capitalized costs, expenditures expensed, and losses incurred in connection with the purchase and use of carbon offsets and RECs will provide investors with needed transparency about the financial statement effects of a registrant's purchase and use of carbon offsets and RECs as part of its climate-related business strategy. As such, the disclosure required by the final rules will help investors make better informed investment or voting decisions by eliciting more complete disclosure of financial statement effects and improving the consistency, comparability, and reliability of such disclosures. In this way, the final rules appropriately balance the need for enhanced financial statement disclosures with the potential costs entailed to produce such disclosures given the current state of financial reporting practices.

Consistent with the proposed rules, the final rules require a registrant to include the financial statement disclosures in any filing that is required to include disclosure pursuant to subpart 1500 and that also requires the registrant to include its audited financial statements.[1744] For the avoidance of doubt, this means that a registrant is required to comply with the requirements in Article 14 even if it does not have information to disclose pursuant to subpart 1500, as long as the applicable Commission filing requires the registrant to comply with subpart 1500. Including disclosure of the financial statement effects in a note to the financial statements, as proposed, as opposed to including them outside of the financial statements, such as exclusively in the MD&A section of registrants' filings as recommended by some commenters,[1745] will subject these disclosures to the same financial statement audit and ICFR as similar financial disclosures, which will improve their consistency, quality, and reliability and thereby provide an important benefit to investors.

In addition, the disclosure requirements we are adopting will apply to public companies generally as opposed to only requiring companies in certain industries or sectors to comply with the final rules. The final rules are focused on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, which are occurrences that can happen to public companies in any sector or industry, and therefore it would not be appropriate to only require public companies in certain sectors or industries to comply with the rules. The decision not to limit the scope of Article 14 to only public companies in certain sectors or industries is consistent with the approach we are taking with respect to the amendments to Regulation S–K, which similarly are not limited to public companies in certain sectors or industries.

Furthermore, the financial statement disclosure requirements included in the final rules will apply to SRCs and EGCs. A few commenters raised concerns about the application of the proposed

---

[1737] *See infra* section II.K.3.c.ii for further discussion of the disclosure threshold requirement. In addition, in response to commenters' concerns, we are adopting a principle for attributing an expenditure to a severe weather event or other natural condition and for determining the amount to be disclosed. *See infra* section II.K.3.c.iii.

[1738] *See infra* section II.K.3.c.vi for further discussion of this requirement.

[1743] *See* letter from IAA.

[1744] *See* 17 CFR 210.14–01(a). For example, the note to the financial statements will not be required in a Form 10–Q filing. Similarly, the note to the financial statements will not be required for unaudited interim financial statements included in a registration statement. *See, e.g.,* 17 CFR 210.3–01, 3–02, 8–03, 10–01. *See also infra* note 2380 and section II.L.3, which discuss the applicability of the rules to foreign private issuers.

[1745] *See supra* note 1724 and accompanying text. Registrants are reminded that they may nonetheless have an obligation to discuss climate-related information in MD&A if the information meets the requirements for disclosure under Item 303 of Regulation S–K. *See* 17 CFR 229.303; 2010 Guidance.

financial statement disclosure requirements to smaller companies, including SRCs.[1746] We considered whether it would be appropriate to exempt SRCs and EGCs from the financial statement disclosure requirements. We recognize that SRCs generally may avail themselves of the scaled disclosure requirements in Article 8 of Regulation S–X. However, as the Commission expressed in the Proposing Release, we determined that it is appropriate to apply the financial statement disclosure requirements to SRCs and EGCs because severe weather events and other natural conditions can pose significant risks to the operations and financial conditions of all registrants. We expect that the narrower scope of the final rules we are adopting will significantly mitigate the costs and burdens for registrants of all sizes as compared to the proposed rules, including certain aspects of the final rules that may particularly benefit SRCs and EGCs, such as a de minimis disclosure threshold, which is discussed in further detail below. The final rules also provide SRCs and EGCs with a longer phased in compliance period than other registrants, which will give them more time to prepare to comply with the final rules.[1747] In addition, as explained in greater detail below in section II.L.3, the final rules, including the amendments to Regulation S–X, will not apply to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving a securities offering registered on Form S–4 or F–4.

We do not agree with those commenters who stated that the Commission should not adopt the amendments and instead refer the matter to the FASB.[1748] Although the Commission has recognized the FASB's financial accounting and reporting standards as ''generally accepted'' for purposes of the Federal securities laws, as explained above in section II.B, the Securities Act and the Exchange Act (as confirmed by the Sarbanes-Oxley Act of 2002) make it clear that the Commission has the ultimate responsibility and broad authority to set accounting standards, principles, and financial statement disclosure requirements for registrants.[1749] The Commission is exercising its authority to prescribe the financial statement disclosure requirements included in the final rules in response to the need expressed by investors for information related to the financial statement impacts of severe weather events as discussed elsewhere in this release.[1750] Significantly, the rules we are adopting amend both Regulation S–K, which prescribes the narrative disclosure requirements for registrants' periodic filings with the Commission, and Regulation S–X, which prescribes the requirements for the financial statements included in those filings. Therefore, adopting financial statement requirements as part of this rulemaking will provide for consistent disclosure of information across registrants' public filings and avoid potential inconsistencies that could arise through an approach that requires both Commission and independent FASB action.[1751] In addition, the final rules will apply regardless of whether the registrant applies U.S. GAAP, IFRS, or local GAAP, and therefore rulemaking by the Commission ensures that registrants are subject to the same requirements since the adoption of standards by the FASB would be limited to registrants that apply U.S. GAAP to their financial statements. Under each of these circumstances, it is appropriate for the Commission to adopt rules to ensure that investors are receiving the consistent, comparable, and reliable information they need to make timely investing and voting decisions.[1752]

2. Financial Impact Metrics

a. Proposed Rules

The Commission proposed to amend Regulation S–X to require a registrant to disclose Financial Impact Metrics. More specifically, the Financial Impact Metrics would have required a registrant to disclose the financial impacts from severe weather events and other natural conditions and transition activities on any relevant line item in the registrant's consolidated financial statements during the fiscal years presented.[1753] The Commission explained in the Proposing Release that this proposed requirement was intended to complement the proposed requirement in Item 1502(d) of Regulation S–K that called for a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks have affected or are reasonably likely to affect the registrant's consolidated financial statements.[1754] The Commission also explained in the Proposing Release that requiring disclosure of the impacts from severe weather events and other natural conditions and transition activities would capture a broad spectrum of physical and transition risks.[1755] To aid in the comparability of disclosures and to assist issuers, the proposed rules identified flooding, drought, wildfires, extreme temperatures, and sea level rise as non-exclusive examples of severe weather events and other natural conditions that may require

[1746] *See, e.g.,* letters from Abrasca; Cohn Rez.; Henry H. Huang (Apr. 16, 2022) (''H. Huang''); NAM; US SBA; and Volta.

[1747] *See infra* section II.O.3 for a discussion of the compliance dates for the final rules.

[1748] *See supra* note 1726 and accompanying text. Some commenters, however, stated that the Commission should not defer to the FASB. *See, e.g.,* letters from Ceres; and CFA Institute.

[1749] *See, e.g.,* 15 U.S.C. 77s(a) (Among other things, the *Commission* shall have authority, for the purposes of this subchapter, to prescribe the form or forms in which required information shall be set forth, the items or details to be shown in the balance sheet and earning statement, and the methods to be followed in the preparation of accounts, in the appraisal or valuation of assets and liabilities, in the determination of depreciation and depletion, in the differentiation of recurring and nonrecurring income, in the differentiation of investment and operating income, and in the preparation, where the *Commission* deems it necessary or desirable, of consolidated balance sheets or income accounts of any person directly or indirectly controlling or controlled by the *issuer,* or any person under direct or indirect common control with the *issuer.* The rules and regulations of the *Commission* shall be effective upon publication in the manner which the *Commission* shall prescribe); 15 U.S.C. 7218(c) (Nothing in this Act, including this section and the amendment made by this section, shall be construed to impair or limit the authority of the Commission to establish accounting principles or standards for purposes of enforcement of the securities laws.); and *Policy Statement: Reaffirming the Status of the FASB as a Designated Private-Sector Standard Setter,* Release No. 33–8221 (Apr. 25, 2003) [68 FR 23333, 23334 (May 1, 2003)] (While the Commission consistently has looked to the private sector in the past to set accounting standards, the securities laws, including the Sarbanes-Oxley Act, clearly provide the Commission with authority to set accounting standards for public companies and other entities that file financial statements with the Commission.). *See also* FASB Accounting Standards Codification (''FASB ASC'') Topic 105–10–10–1 (''Rules and interpretive releases of the Securities and Exchange Commission . . . are also sources of authoritative GAAP for SEC registrants.'').

[1750] *See supra* note 1741 and accompanying text.

[1751] The final rules establish presentation and disclosure requirements; they do not alter or establish recognition and measurement requirements. As discussed in greater detail above in section II.B, the Commission has previously adopted presentation and disclosure requirements regarding the form and content of the financial statements. For example, Rule 5–02 of Regulation S–X prescribes the various line items and certain additional disclosures that should appear on the face of the balance sheet or related notes. *See* 17 CFR 210.5–02.

[1752] *See General Revision of Regulation S–X,* Release No. 6233 (Sept. 25, 1980) [45 FR 63660, 63661 (Sept. 25, 1980)] (explaining, in connection with amendments to Regulation S–X, that the Commission does not believe ''any decision to require particular disclosures . . . through rulemaking in [Regulation] S–X, conflicts with the basic policy of relying on the FASB for leadership in establishing financial accounting and reporting standards'').

[1753] *See* Proposing Release, section II.F.2.

[1754] *See id.*

[1755] *See id.*

disclosure.[1756] The Commission further noted that there has been an increased recognition of the current and potential effects, both positive and negative, of these events and associated physical risks on a registrant's business as well as its financial performance and position.[1757] With respect to transition risks, the Commission proposed to require a registrant to disclose the financial impact of any identified transition risks and any efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks (collectively, ''transition activities'') on any relevant line items in the registrant's consolidated financial statements during the fiscal years presented.[1758]

The proposed rules prescribed a specific quantitative disclosure threshold for the Financial Impact Metrics. Specifically, a registrant would have been required to disclose the impacts of severe weather events, other natural conditions, and transition activities on the consolidated financial statements included in the relevant filing unless the aggregated impact of the severe weather events, other natural conditions, and transition activities was less than one percent of the total line item for the relevant fiscal year.[1759] The Commission stated that this quantitative threshold would provide a bright-line standard for registrants and should reduce the risk of underreporting such information.[1760] The Commission further stated that the proposed quantitative threshold could promote comparability and consistency among a registrant's filings over time and among different registrants compared to a more principles-based approach.[1761] The Commission also pointed out that it has used similar one-percent thresholds in other contexts (within the financial statements and without),[1762] and that, more generally, other rules such as 17 CFR 229.103 and 17 CFR 229.404 use quantitative disclosure thresholds to facilitate comparability, consistency, and clarity in determining when information must be disclosed.[1763]

Under the proposed rules, impacts would have, at a minimum, been required to be disclosed on an aggregated, line-by-line basis for all negative impacts and, separately, on an aggregated, line-by-line basis for all positive impacts.[1764] For purposes of determining whether the disclosure threshold has been met, a registrant would be required to aggregate the absolute value of the positive and negative impacts on a line-by-line basis, which the Commission explained would better reflect the significance of the impact of severe weather events, other natural conditions, and transition activities on a registrant's financial performance and position.[1765]

To provide additional clarity, the proposed rules included the following examples of disclosures that may be required to reflect the impact of the severe weather events and other natural conditions on each line item of the registrant's consolidated financial statements (*e.g.,* line items of the consolidated income statement, balance sheet, or cash flow statement):

- Changes to revenues or costs from disruptions to business operations or supply chains;
- Impairment charges and changes to the carrying amount of assets (such as inventory, intangibles, and property, plant, and equipment) due to the assets being exposed to severe weather, flooding, drought, wildfires, extreme temperatures, and sea level rise;
- Changes to loss contingencies or reserves (such as environmental reserves or loan loss allowances) due to impact from severe weather events; and
- Changes to total expected insured losses due to flooding or wildfire patterns.[1766]

With respect to the financial impacts of transition activities, the proposed rules included the following examples of potential impacts:

- Changes to revenue or cost due to new emissions pricing or regulations resulting in the loss of a sales contract;
- Changes to operating, investing, or financing cash flow from changes in upstream costs, such as transportation of raw materials;
- Changes to the carrying amount of assets (such as intangibles and property, plant, and equipment), for example, due to a reduction of the asset's useful life or a change in the asset's salvage value by being exposed to transition activities; and
- Changes to interest expense driven by financial instruments such as climate-linked bonds issued where the interest rate increases if certain climate-related targets are not met.[1767]

The Commission noted in the Proposing Release that an analogous approach to disaggregated, or separately stated, disclosure has been taken in other contexts within the financial statements and elsewhere, including in segment reporting,[1768] and that the importance of disaggregated disclosure in a registrant's financial statements is also supported by concepts set forth in FASB ASC Topic 606 *Revenue from Contracts with Customers* and IFRS 15 *Revenue from Contracts with Customers.*[1769] The Commission further noted that disaggregation of certain financial statement line items is also

[1756] *See id.* With the exception of wildfires, all of these examples were identified by the Commission more than a decade ago in its 2010 Guidance as events that could potentially affect a registrant's operations and results.

[1757] *See id.* (citing, among other sources, the FSOC's Report on Climate Related Financial Risk 2021, which discussed significant costs from the types of events identified in the proposed rule).

[1759] *See id.*

[1760] *See id.*

[1761] *See id.*

[1762] *See, e.g.,* 17 CFR 210.5–03.1(a) (stating that if the total of sales and revenues reported under this caption includes excise taxes in an amount equal to 1% or more of such total, the amount of such excise taxes shall be shown on the face of the statement parenthetically or otherwise) and 17 CFR 210.12–13 (requiring disclosure of open option contracts by management investment companies using a 1% of net asset value threshold, based on the notional amounts of the contracts).

[1763] *See* Proposing Release, section II.F.2 (citing 17 CFR 229.103(b)(2) (requiring disclosure of a legal proceeding primarily involving a claim for damages if the amount involved, exclusive of interest and costs, exceeds 10 percent of the current assets of the registrant and its subsidiaries on a consolidated basis), (c)(3)(iii) (requiring disclosure of a judicial proceeding that has been enacted or adopted regulating the discharge of materials into the environment or primarily for the purpose of protecting the environment, if a governmental authority is a party to such proceeding and such proceeding involves potential monetary sanctions, unless the registrant reasonably believes that such proceeding will result in no monetary sanctions or monetary sanctions, exclusive of interest and costs, of less than $300,000) and 17 CFR 229.404(a) (requiring disclosure of any transaction, since the beginning of the registrant's last fiscal year, or any currently proposed transaction, in which the registrant was or is to be a participant and the amount involved exceeds $120,000, and in which any related person had or will have a direct or indirect material interest).

[1764] *See id.*

[1765] *See id.*

[1766] *See id.*

[1767] *See id.*

[1768] For example, in segment reporting, a registrant must present within its consolidated financial statements a separate presentation of certain financial statement line items for each segment. *See* FASB ASC Topic 280 *Segment Reporting* and IFRS 8 *Operating Segments* (requiring segment reporting disclosures to be included in the audited financial statements). The Commission has noted the importance of disaggregated disclosure in the segment reporting context, stating that it ''has long been aware of the importance of meaningful segment information to reasoned investment decision-making.'' *See Industry and Homogenous Geographic Segment Reporting,* Release No. 33–6514 (Feb. 15, 1984) [49 FR 6737, 6738 (Feb. 23, 1984)]. For simplicity, we do not refer to the corresponding IFRS in each instance where we reference the FASB ASC. Accordingly, references in this release to the FASB ASC should be read to refer also to the corresponding IFRS for foreign private issuers applying those standards.

[1769] *See* Proposing Release, section II.F.2. FASB ASC Topic 606 and IFRS 15 require, among other things, disclosure of disaggregated revenue recognized from contracts with customers into categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors.

required by Article 5 of Regulation S–X, which calls for separate disclosure of specific balance sheet and income statement line items when practicable or when certain percentage thresholds are met, depending on the nature of the information.[1770]

Finally, the Commission proposed to require registrants to disclose the impacts of any climate-related risks identified pursuant to proposed Item 1502(a) of Regulation S–K—both physical risks and transition risks—on any of the financial statement metrics.[1771]

b. Comments

i. General Comments

Some commenters supported the proposal to require disclosure of Financial Impact Metrics.[1772] These commenters generally indicated that the proposed disclosures would be used by investors to make investment and voting decisions.[1773] Specifically, one commenter stated that the Financial Impact Metrics would be used by investors in voting, engaging, buying, and selling decisions and would help investors determine whether the company is ''properly oriented to manage for the long-term.'' [1774] Some commenters asserted that the proposed Financial Impact Metrics would provide investors with the information they need in a standardized or comparable way [1775] and that the level of detail required would be helpful for investors.[1776]

Commenters also asserted that the proposed Financial Impact Metrics are necessary to fill a void in the information currently provided to investors. For example, one commenter stated that requiring disclosure on a line item basis would ''overcome the longstanding problem of registrant climate risk disclosure that is too generic and boilerplate, or non-existent, despite repeated efforts by the [Commission] to encourage more detailed information in this broad area of risk.'' [1777] Some of these commenters suggested that the Commission provide additional guidance to facilitate the disclosure of the Financial Impact Metrics.[1778]

Some commenters generally supported requiring the disclosure of climate-related impacts in the financial statements, but they identified certain challenges and recommended certain revisions to the proposed Financial Impact Metrics.[1779] For example, as discussed in greater detail below, a number of these commenters recommended that the Commission replace the one percent disclosure threshold with a requirement to disclose the financial impacts if material.[1780] Several commenters recommended revising the line-by-line disclosures to take a less granular or less disaggregated approach.[1781]

Some commenters stated that the Commission should require disclosure of climate-related events and transition activities on a separate basis as proposed.[1782] One commenter stated that it supported the proposed requirement to separately report climate-related events and transition activities because it would be consistent with the TCFD framework and facilitate investors' understanding of the disclosures.[1783] One commenter stated that the Commission should instead require climate impacts to be considered in the aggregate, rather than distinguishing between those attributable to severe weather events versus transition activities since the distinction between the two may not always be clear.[1784] Other commenters recommended limiting the proposed disclosure to the impacts of severe weather events and other natural conditions and eliminating the proposed requirements related to identified climate-related risks and transition activities.[1785] One of these commenters explained that this would be consistent with an approach that only requires disclosure of impacts that would be recognized under GAAP.[1786] Another commenter stated that it would not support a rule that only required disclosures for severe weather events because this would result in other climate risks remaining ''hidden to investors.'' [1787]

Conversely, many of the commenters who provided feedback on the proposed Financial Impact Metrics did not support the proposed requirements.[1788]

[1770] *See* Proposing Release, section II.F.2. The analogies presented in this paragraph are not intended to imply that FASB ASC Topic 280, IFRS 8 or other concepts would have to be applied when accounting for and disclosing the financial statement effects required by the final rules. The analogies are also not intended to imply that the determination of when disclosure may be required and how that determination is made is the same across all these concepts.

Commenters generally asserted that it would not be feasible to provide the disclosures as proposed.[1789] Several commenters explained that companies currently do not track climate-related impacts by financial statement line item and companies do not have processes in place to do so under current accounting systems.[1790] A number of commenters stated that registrants would be required to create new accounting systems, processes, controls, and infrastructure to track, quantify, and disclose the proposed Financial Impact Metrics.[1791] Many commenters stated that the proposed Financial Impact Metrics would be burdensome and costly.[1792]

Some commenters questioned whether the proposed Financial Impact Metrics would benefit investors. For example, a number of commenters stated that the proposed Financial Impact Metrics would likely result in non-comparable or inconsistent data across registrants and therefore would not be useful or relevant to investors.[1793] In addition, one registrant stated that investors have not asked them to provide the level of detail that the Financial Impact Metrics would require.[1794] Some commenters pointed out that requiring registrants to disclose the Financial Impact Metrics on every line item could disincentivize companies from voluntarily disaggregating information in their financial statements, which would result in a loss of information for investors.[1795] One commenter asserted that the proposed Financial Impact Metrics are not included in the TCFD framework and it is unclear that these requirements would be adopted globally, which, in this commenter's view, would limit their usefulness for global investors and potentially undermine investment in U.S. registrants.[1796]

Other commenters expressed accounting-related concerns with respect to the Financial Impact Metrics. For example, some commenters asserted that certain of the disclosures that would be required by the proposal, such as disclosures regarding changes to revenue, would not be consistent with GAAP.[1797] Similarly, some commenters asserted that no accounting principles or guidance exist for certain of the proposed Financial Impact Metrics, which would make it difficult for auditors to opine on this information.[1798] In addition, a few commenters stated that the proposed Financial Impact Metrics would require public companies to seek information from the private companies they do business with and that private companies may not have the capabilities to respond to those inquiries.[1799]

Further, a number of commenters stated that it would be very difficult or impossible to accurately estimate the potential future or unrealized impacts of severe weather events and transition activities by financial statement line item.[1800] Some commenters also raised concerns about a registrant's ability to include indirect effects of climate-related events when disclosing financial impacts.[1801]

ii. Disclosure Threshold

Several commenters specifically expressed their support for the one percent disclosure threshold.[1802] Some of these commenters stated that a one percent disclosure threshold would reduce the risk of underreporting.[1803] For example, one commenter explained that setting the disclosure threshold too high could result in companies failing to undertake the necessary inquiry because they may conclude there is no way the threshold would be triggered.[1804] A few commenters explained that a percentage threshold is beneficial because it provides registrants and auditors with bright-line guidance.[1805] Other commenters asserted the Commission acted within its authority in prescribing a particular percentage disclosure threshold.[1806]

Conversely, many commenters stated that they did not support the proposed

disclosure threshold of one percent.[1807] A number of these commenters asserted that the threshold was too low [1808] and it would result in an excessive amount of detail, which would be immaterial and not useful to investors.[1809] Several commenters stated that it could confuse investors because investors could equate the level of detail that would be disclosed with a level of precision that is not consistent with the nature of the disclosures.[1810] Some commenters asserted that requiring disclosure at a one percent threshold would give disproportionate prominence to the proposed financial statement metrics relative to other risks addressed in the financial statements.[1811]

Other commenters were concerned that a one percent disclosure threshold would not result in consistent and comparable disclosure because the reported line items in the financial statements can vary significantly across registrants.[1812] A few commenters stated that applying the one percent disclosure threshold on a line item basis could result in only partial disclosure of expenditures related to a climate-related event since the total impact could be recorded in multiple financial statement line items, which would diminish the usefulness of the information to investors.[1813] In addition, some commenters asserted that registrants would not be able to calculate the monetary value for the one percent disclosure threshold until the end of the relevant period, which would require registrants to evaluate each transaction to determine if it counts towards the threshold.[1814]

Other commenters stated that one percent is significantly below the five percent ''rule of thumb'' for materiality used by many registrants and auditors,[1815] and that, in their view, a one percent disclosure threshold is not consistent with existing guidance from the Commission staff.[1816] Several commenters stated that the examples provided in the Proposing Release of other one percent disclosure thresholds were not comparable.[1817] For example, with respect to the one percent disclosure threshold applicable to excise taxes, one commenter asserted that, unlike excise taxes, registrants would not be able to precisely measure the impacts of severe weather events and transition activities, and therefore the two situations are distinguishable.[1818] A few commenters questioned the Commission's authority to establish a one percent disclosure threshold.[1819] Several commenters also stated that the proposed line item disclosure threshold is not aligned with the TCFD framework,[1820] and another commenter stated that the TCFD framework provides registrants with more flexibility to describe financial impacts.[1821]

Other commenters asserted that a one percent threshold would place an unreasonable burden on smaller companies.[1822] For example, one commenter asserted that it is more likely that smaller companies' impacts would exceed the one percent disclosure threshold.[1823] In addition, some commenters stated that the Commission did not adequately justify or explain its rationale for using a one percent disclosure threshold.[1824]

Other commenters raised concerns about the ability to audit the disclosures triggered by the one percent threshold or that the threshold could increase inefficiencies and costs associated with the audit.[1825] Specifically some of these commenters stated that the proposed one percent threshold may lead registrants to conclude that the one percent threshold is a de facto materiality threshold and should be applied to other financial statement disclosures that are triggered by materiality.[1826]

Due to these and other concerns, many commenters stated that if the proposed Financial Statement Metrics are retained in the final rules, then the Commission should require disclosure only if the impacts are material.[1827] One

commenter stated that a materiality standard would better align with how registrants track and view impacts internally,[1828] while another commenter stated that applying a materiality standard could mitigate operational challenges presented by the proposed rules.[1829] Another commenter stated that a materiality standard would strike a better balance between anticipated benefits to investors and the cost of and burden of the reporting on registrants.[1830] A few commenters noted that aligning with existing materiality concepts may elicit disclosure above or below the one percent disclosure threshold.[1831]

On the other hand, some of the commenters who supported the requirement to apply a one percent disclosure threshold also specifically disagreed with moving to a materiality standard.[1832] A few of these commenters stated that applying a materiality standard would result in underreporting[1833] or would not provide investors with as much decision-useful information.[1834] One commenter pointed out that Regulation S–X is composed of requirements to disclose specific financial information in a specific format and stated that the Commission did not need to establish the materiality of every one of those items for all registrants.[1835] Similarly, another commenter explained that registrants have experience disclosing information in their financial statements without applying materiality, such as information regarding executive compensation, related-party transactions, and share repurchases.[1836]

Several commenters suggested that the Commission should apply a different percentage threshold, such as five percent[1837] or ten percent.[1838] A few commenters asserted that the appropriateness of a particular percentage disclosure threshold may depend on the line item that is used as the denominator.[1839] For example, one of the commenters that recommended using a five percent threshold acknowledged that a percentage lower than five percent may be appropriate if the threshold is anchored to one of the larger line items in the financial statements, such as total operating expenses.[1840] Another commenter suggested using a percentage disclosure threshold based on total assets or income instead of individual line items.[1841] A couple of commenters stated that increasing the threshold to a higher percentage would not be an improvement because registrants still would not know the results of each line item until the end of the reporting period and therefore registrants would still have to track essentially all transactions.[1842] Another commenter emphasized the need for consistency over the desire for any particular percentage.[1843]

Some commenters offered their views on the appropriateness of using a dollar-based disclosure threshold. A few commenters stated that, to the extent the Commission does not adopt a principles-based approach, the Commission should consider adopting a combination of a higher percentage threshold along with a dollar threshold.[1844] Another commenter stated that if the Commission incorporates a dollar amount into the threshold it should be significantly higher than $1 million.[1845] One commenter suggested a materiality standard combined with a dollar-based disclosure threshold.[1846] A couple of commenters stated that they did not support applying a dollar threshold.[1847]

One commenter stated that the Commission should not apply a disclosure threshold and instead should require disclosure of any impacts.[1848] A couple of commenters asserted that the Commission should also require registrants to determine whether an impact that falls below the prescribed one percent threshold would nevertheless be material given its nature and, if so, to require disclosure of that impact.[1849] One commenter suggested setting a basic principle based on materiality and backstopping the materiality standard with a numerical disclosure threshold set at five percent in the short- and medium-term or ten percent in the long term.[1850] Alternatively, one commenter stated that relying on a one percent disclosure threshold alone could create a ''loophole'' for larger companies and therefore the Commission should clarify that disclosure would still be required for impacts that fall below one percent if they are material.[1851]

Commenters also provided feedback on the proposed requirement for registrants to aggregate the absolute value of the positive and negative impacts on a line-by-line basis before determining whether the disclosure threshold has been met. A number of commenters disagreed with the proposal to aggregate the absolute value of impacts.[1852] Some of these commenters

stated that it would be a significant departure from typical accounting practices,[1853] and others asserted it would be unworkable and would result in the disclosure of individually immaterial information.[1854] One commenter suggested that any aggregation requirements should allow a registrant to set a minimum materiality threshold for individual items.[1855] On the other hand, some commenters supported aggregating the absolute value of impacts, with one commenter stating it better reflects the significance of the impact on a registrant's financial performance and position.[1856]

A few commenters stated that the Commission should instead use a net value.[1857] For example, some commenters stated that the proposed rules fail to take into account mitigation efforts such as insurance, which would net against the gross value of any loss.[1858] Specifically, one commenter asserted that disclosure of losses, net of insurance proceeds, is appropriate if it is probable that the insurance recovery would be realized and if the provision for the loss and the insurance receivable are recognized in the same period in accordance with FASB ASC 450–20.[1859] In addition, one commenter asserted that using absolute values would not accurately reflect the economics of the (re)insurance industry, which manages its weather risks through reinsurance.[1860] On the other hand, some commenters opposed the netting of positive and negative impacts.[1861] One commenter asserted that netting would involve many assumptions and there is more value for investors in absolute numbers.[1862] Other commenters stated that netting could incentivize greenwashing.[1863] Finally, some commenters asserted that registrants should be required to determine if the disclosure threshold has been met or exceeded separately for physical events and transition activities.[1864]

iii. Terminology and Attribution

A number of commenters pointed out that ''severe weather events and other natural conditions'' is not defined in the proposal and they asserted that additional clarification or guidance is needed.[1865] Some commenters stated that the proposed amendments to Regulation S–X refer to ''severe weather events,'' while the proposed amendments to Regulation S–K refer to ''extreme weather events,'' and that the amendments provided overlapping, but different, examples.[1866] A few commenters suggested that the Commission should limit any required disclosures to a specified list of severe weather events and other natural conditions.[1867] For example, one commenter suggested that the Commission could establish a list of weather events and update it on a monthly or quarterly basis,[1868] but another commenter stated that maintaining a list of events would be impractical.[1869] A few commenters suggested that the Commission could borrow or refer to a list of severe weather events and other natural conditions prepared by a third party.[1870] Other commenters suggested specific additions to the list of non-exclusive examples included in the proposed rules.[1871] Many of these commenters stated that registrants will likely have different views on what constitutes a severe weather event, which will reduce comparability.[1872]

In addition, a number of commenters stated that it was unclear whether registrants would need to determine that a severe weather event or other natural condition was, in fact, caused by climate change before disclosure would be required, while other commenters assumed that such a determination was required.[1873] Some commenters stated that registrants would not have the ability to determine whether a weather event or natural condition was caused by climate change,[1874] and other commenters stated that the Commission failed to provide guidance on this issue.[1875]

Several commenters stated that it was unclear whether the proposed financial statement metrics are intended to capture all severe weather events or only those above a historical baseline.[1876] Specifically, one commenter asked the Commission to provide guidance on how registrants should distinguish ''events and conditions that are severe and relate to climate risks from those that are consistent with historical patterns.''[1877] Other commenters stated that it is not clear how the severity of a weather event should be assessed.[1878] For

example, one commenter questioned whether the severity of a hurricane should be assessed by looking to factors such as the wind speed categorization or the financial impact on the registrant itself.[1879] Another commenter suggested that the Commission should clarify that what is considered to be a severe weather event in one region may not be considered severe in a different region.[1880] One commenter asked for guidance on how to identify the beginning and ending dates of severe weather events because the impact from a weather event can continue even after the meteorological event has itself passed.[1881] Similarly, another commenter asked the Commission to provide additional examples of how to disclose a weather event like a hurricane or wildfire, both in the year that the event happened and for future years where the impacts may continue to manifest on the financial statements.[1882]

In addition, commenters asked the Commission to clarify what constitutes ''other natural conditions,'' [1883] and in particular, some commenters asserted that it would be difficult to identify chronic risks.[1884] For example, one commenter stated that the impact of sea level rise may be difficult to discern in a particular reporting period and might only be apparent over substantially longer periods.[1885] In addition, a few commenters raised concerns about the inclusion of ''wildfires'' in the list of severe weather events and natural conditions, pointing out, among other things, that wildfires have many different causes, including humans, or the cause of a wildfire may not be known for some time.[1886] One commenter asked the Commission to provide additional examples of ''other natural conditions.'' [1887]

On the other hand, some commenters stated that registrants should have flexibility to determine what constitutes a severe weather event or other natural condition.[1888] Several commenters asserted that the Commission should not limit climate risk disclosures to a specified set of severe weather events because companies will face different climate risks.[1889] Other commenters suggested that the Commission should require disclosure of ''unusual climate events'' instead of ''severe weather events'' and allow registrants to define what they consider to be unusual for the area in which they operate.[1890]

A number of commenters also raised concerns about the definition and scope of transition activities.[1891] Commenters expressed concerns that the scope of transition activities could broadly encompass ordinary business activities that are motivated by the intent to be more efficient.[1892] Other commenters were concerned that registrants would be required to disclose competitively sensitive information.[1893] In addition, a number of commenters stated that registrants are unlikely to interpret transition activities in a consistent manner and therefore the proposed disclosures would not result in decision-useful information for investors.[1894]

Some commenters requested that the Commission provide additional guidance related to transition activities.[1895] For example, one commenter urged the Commission to clarify when a transition activity ends, asserting that it was not clear if a registrant's disclosure obligation would cease once the registrant achieves its stated transition goal.[1896] Another commenter asked the Commission to clarify the scope of transition activities included in proposed Rule 14–02(d) because, in the commenter's view, the proposed provision could be read to mean that a registrant is only required to disclose the financial impact of activities or efforts of the registrant, and not the ''broad range of climate-related changes in technology, market forces and other occurrences instituted by entities not related to the registrant that may nonetheless impact the registrant's financials.'' [1897] This commenter pointed out that proposed Rule 14–02(f), which would require the disclosure of expenditures related to transition activities, already covers disclosure of the financial impact of activities or efforts of the registrant.[1898]

Other commenters suggested potential alternatives to the proposed requirements related to transition activities. A couple of commenters stated that the Commission should only require registrants to disclose the impact of certain specified transition activities, such as efforts taken exclusively to reduce GHG emissions.[1899] Another commenter suggested ''that the Commission instead require companies to track and report on transition activities that management has identified and reported on under the proposed [amendments to] Regulation S–K.'' [1900] One commenter suggested that the Commission could issue sector-specific guidance for industries where most registrants' balance sheets reflect expenditures related to clean energy, decarbonization, or resilience, to help companies determine what constitutes transition-related expenses.[1901]

Many commenters raised concerns about registrants' abilities to isolate or attribute the effects of severe weather events and other natural conditions and transition activities on the financial statements.[1902] Commenters pointed out that some events may have multiple contributing causes or that the cause

may not be clear.[1903] For example, several commenters stated that companies incur many expenses for core business purposes that may also be characterized as helping to mitigate climate-related risks.[1904] Another commenter pointed out that if a registrant's insurance costs increase, it will be difficult for a registrant to attribute this increase, or a portion of this increase, to climate-related risks.[1905] In addition, one commenter noted that there may be circumstances where financial impacts are attributable to both physical risks and transition risks, such as when a facility is destroyed in a storm and the registrant decides to rebuild it with storm-protection features and LEED-certification, and the commenter questioned how the impacts should be attributed in those circumstances.[1906] Many commenters also stated that it would be difficult to quantify climate-related events, conditions, and activities.[1907] For example, where an expenditure is made in part for a climate-related purpose, commenters questioned whether registrants should attribute the entire cost or only an incremental portion of the cost to climate-related events.[1908] A number of other commenters questioned how registrants would be expected to quantify indirect financial impacts such as those affecting a registrant's supply or value chain.[1909] Some commenters stated that there are currently no accounting principles or guidance to help registrants make these determinations [1910] and another commenter pointed out that it may require the expertise of a climate specialist.[1911] Commenters generally requested additional guidance to address these issues.[1912]

Commenters suggested various possibilities for addressing concerns about attribution and quantification. A few commenters stated that registrants should be permitted to make a reasonable estimate and disclose the assumptions that resulted in the estimate.[1913] Commenters suggested that disclosing the relevant assumptions would help investors interpret any estimations that may be required.[1914] One commenter recommended that any final rules should allow registrants to disclose either a single amount or a range, along with appropriate contextual information. This commenter noted that if the Commission proceeds with a single amount, registrants would require guidance on how the amount should be determined.[1915] Another commenter suggested that a registrant should be allowed to explain that it was unable to disclose the required information on a disaggregated basis due to impacts that were caused by a mixture of factors.[1916] Other commenters suggested that when disaggregation is not possible due to multiple contributing factors, registrants should provide qualitative information to explain the factors.[1917]

One commenter asserted that applying an entity-specific allocation methodology would not result in decision-useful information, and instead recommended attributing a financial statement impact or expenditure to climate risk only when the climate risk is a ''significant contributing factor,'' and otherwise requiring registrants to provide contextual information to explain the impact, which would help avoid accusations of greenwashing that might occur if registrants were required to attribute substantially all events, conditions, and activities to climate risk.[1918] Another commenter urged the Commission to clarify that disclosure is only required where the relevant impacts can be reasonably determined to be primarily or entirely driven by physical or transition risk activities, are material to the business, and are reasonably estimable.[1919]

On the other hand, a few commenters stated that the Commission does not need to prescribe a particular approach to attribution or allocation.[1920] One of these commenters pointed out that registrants already are required to allocate costs across multiple risks when preparing their financial statements.[1921]

iv. Alternatives

Commenters suggested a number of potential alternatives to the proposed financial statement metrics.[1922] Several commenters recommended that the Commission limit any requirement to disclose climate-related impacts to ''first order effects'' or direct impacts only.[1923] Specifically with respect to severe weather events, some commenters stated that it would be operationally possible to track specific, direct costs incurred due to severe weather events and natural conditions.[1924] For example, one commenter noted that certain property damage and related repair costs sustained as a result of severe weather could ''easily be segregated, analyzed, and quantified within our current processes.'' [1925] Another commenter stated that calculating direct costs incurred due to severe weather events might be straightforward because the costs are recorded in the registrant's financial records.[1926] One commenter recommended that the ''Commission consider limiting Article 14 of Regulation S–X requirements to

[1922] In many cases, the commenters discussed in this section expressed a stronger preference for other approaches discussed above, such as not adopting or reducing the proposed disclosure requirements but offered these alternatives to the proposed rules as well.

[1923] *See, e.g.,* letters from BOA; C2ES; Citigroup; and SIA.

[1924] *See, e.g.,* letters from Autodesk (noting that if a fire or storm destroys a registrant's facilities, the associated costs, impairments, and contingencies would be accounted for and, if material, disclosed under U.S. GAAP); Crowe; Dow; and Nutrien (noting that it would be operationally possible to track specific costs incurred to mitigate transition risks or costs incurred due to severe weather events and natural conditions).

[1925] *See* letter from Dow (explaining, however, that ''[q]uantifying the indirect impact of [severe weather events] on sales and cost of sales would be exceedingly difficult and require significant judgment, estimates and assumptions, thereby limiting the comparability of such information with other registrants and the usefulness of such information to investors'').

[1926] *See* letter from Crowe. *See also* letter from PwC (stating that the financial impact of some climate-related risks—for example, losses arising from asset impairments or operations and maintenance expenses associated with site restoration—may already be disclosed under existing GAAP, although the disclosures may not clearly link to the impact of climate).

physical impacts and related expenditures only.'' [1927] More generally, another commenter recommended streamlining the proposed rules to focus on ''what issuers can easily produce.'' [1928]

A few commenters recommended alternative approaches that focused on requiring the disclosure of discrete expenditures. For example, one commenter recommended that the Commission require a table in a note to the financial statements that presents discrete and separable expenditures, both expensed and capitalized, in three distinct categories: (i) climate-related events, (ii) transition activities for publicly-disclosed climate-related targets and goals, and (iii) all other transition activities.[1929] Similarly, another commenter recommended that the Commission should require disclosure of ''identifiable direct costs and capital expenditures incurred for the express purpose of addressing climate events and transition issues,'' which ''could be produced and audited with a level of certainty and comparability that is consistent with GAAP financial statements.'' [1930]

Other commenters recommended taking a more aggregated approach to disclosure. For example, one commenter suggested aggregating costs and benefits relating to climate-related events into categories (revenues, expenditures, and profits), and aggregating impacts on the balance sheet into the categories (assets, liabilities, and equity), which the commenter stated would ensure investors are able to identify the magnitude of the impacts affecting the company without unnecessary complication and cost for registrants.[1931] Another commenter recommended requiring disclosure at the event or activity level rather than disclosing impacts on financial statement line items, and focusing on discrete, material climate-related events and transition activities.[1932] Similarly, another commenter recommended analyzing potential impacts by broad accounting topics, such as impairments or useful life of assets, which would simultaneously cover several lines of the income statement, balance sheet, and cash flow statement.[1933] One commenter suggested that the Commission could enhance comparability by identifying a minimum set of line items for which disclosure is required while permitting registrants to present disclosure on additional line items in order to better reflect their business model and industry.[1934] On the other hand, one commenter recommended a more disaggregated approach to disclosure.[1935]

Additionally, one commenter recommended that the Commission adopt a ''top down approach'' by linking disclosure of short-term risks identified under the proposed amendments to Regulation S–K to financial statement impacts that would be required to be disclosed at a specified threshold, and supplemented by the disclosure of other material impacts.[1936] Another commenter suggested requiring the disclosure of climate-related cash-flow metrics, focused on providing gross cash flows of climate-related expenditures, with an indication of which cash flows have been capitalized, which the commenter stated would provide an understanding of real cash-flow impacts that could be more directly linked to the Regulation S–K disclosures and would be more useful for investors.[1937] One commenter stated that the Commission should consider amending its industry guides for the oil and gas industry, among others, to require better disclosure of the financial statement impacts of climate change.[1938]

c. Final Rules

After consideration of the comments, including those expressing significant concerns about the burdens associated with this aspect of the proposal, we are not adopting the proposed Financial Impact Metrics.[1939] While the proposed Financial Impact Metrics would have provided additional transparency for investors, we were persuaded by those commenters that stated the proposed Financial Impact Metrics would be burdensome and costly for registrants because of the updates that would be necessary to internal systems and processes. [1940] Therefore, at this time, we have chosen not to adopt these disclosures. These concerns led us to adopt a significantly narrower set of requirements that are focused on requiring the disclosure of a discrete set of actual expenses that registrants incur and can attribute to severe weather events and other natural conditions. In line with the views of certain commenters,[1941] we expect these requirements to be more feasible for registrants to disclose under current financial reporting processes. Moreover, given the overlapping nature of some of the disclosures that would have been required by the proposed Financial Impact Metrics and the capitalized costs, expenditures expensed, charges, and losses that are required to be disclosed under the final rules,[1942] the requirements we are adopting will provide many of the same benefits of transparency and insights that the proposed Financial Impact Metrics would have provided, albeit without as much detail, which should reduce the burden on registrants.

In addition, as discussed in greater detail below in section II.K.3.c.ii, we emphasize that registrants currently have an obligation under GAAP to consider material impacts on the financial statements, and the fact that the impact may be driven by climate-related matters does not alter registrants'

[1942] *See supra* notes 1732 and 1735.

financial reporting obligations.[1943] Therefore, a registrant should consider whether it currently has an obligation to disclose information that would have been covered by the proposed Financial Impact Metrics. Our decision not to adopt the proposed Financial Impact Metrics does not affect registrants' ongoing responsibility to consider material impacts, including those that may be climate-related, when preparing their financial statements and related disclosures.

Although we are not adopting the proposed Financial Impact Metrics at this time, certain aspects of the proposed rules discussed at length above also applied to, or were substantially similar to, the proposed Expenditure Metrics. For example, the proposed one percent disclosure threshold and terminology such as ''severe weather events and other natural conditions'' were included in the proposals for both proposed metrics.[1944] A number of commenters provided feedback on these issues generally, without indicating that their comments were limited to only the proposed Financial Impact Metrics or to only the proposed Expenditure Metrics.[1945] In addition, some of the alternatives discussed above are relevant to the proposed Expenditure Metrics.[1946] As such, we also considered these comments with respect to the proposed Expenditure Metrics. Below, our discussion focuses on additional issues that commenters raised with respect to the proposed Expenditure Metrics. As a result, our rationale for the final rules takes into consideration all of the commenter feedback we received on the proposed rules.

3. Expenditure Effects

a. Proposed Rules

The Commission proposed to amend Regulation S–X to require a registrant to disclose Expenditure Metrics. As proposed, the Expenditure Metrics referred to the positive and negative impacts associated with the same severe weather events, other natural conditions, transition activities, and identified climate-related risks as the proposed Financial Impact Metrics.[1947] Registrants would have been required to separately aggregate the amounts of (i) expenditures expensed and (ii) capitalized costs incurred during the fiscal years presented.[1948] For each of those categories, a registrant would have been required to disclose separately the amount incurred during the fiscal years presented (i) toward positive and negative impacts associated with the climate-related events and (ii) toward transition activities.[1949] The proposed rules provided that the registrant could also choose to disclose the impact of efforts to pursue climate-related opportunities.[1950] As discussed above, under the proposal, if a registrant elected to disclose the impact of an opportunity, it would have been required to do so consistently and would have been required to follow the same presentation and disclosure threshold requirements applicable to the required disclosures of the Expenditure Metrics.[1951] The Proposing Release explained that the amount of expenditure disclosed pursuant to the proposed Expenditure Metrics would be a portion, if not all, of the registrant's total recorded expenditure (expensed or capitalized), as calculated pursuant to the accounting principles applicable to the registrant's financial statements.[1952]

The proposed Expenditure Metrics were subject to the same disclosure threshold as the Financial Impact Metrics, which the Commission explained would promote comparability, consistency, and clarity in determining when information must be disclosed.[1953] The Commission explained in the Proposing Release that for purposes of calculating the disclosure thresholds for the Expenditure Metrics, a registrant could separately determine the amount of expenditure expensed and the amount of expenditure capitalized; however, a registrant would have been required to aggregate expenditure related to climate-related events and transition activities within the categories of expenditure (*i.e.,* amount capitalized and amount expensed).[1954] This approach was designed to better reflect the significance of climate-related expenditure compared to a calculation approach that allowed for a disclosure threshold to be measured at the individual event or activity level, which may result in more limited disclosures.

The Proposing Release provided examples of how a registrant would evaluate and disclose the proposed Expenditure Metrics, including examples of contextual information that could require disclosure, such as information about the specific climate-related events and transition activities that were aggregated for purposes of determining the impacts on the capitalized and expensed amounts.[1955] To provide additional clarity, the proposed rules clarified that a registrant may be required to disclose the amount of expenditure expensed or capitalized costs, as applicable, incurred for the climate-related events to increase the resilience of assets or operations, retire or shorten the estimated useful lives of impacted assets, relocate assets or operations at risk, or otherwise reduce the future impact of severe weather events and other natural conditions on business operations.[1956] The proposed rules also clarified that a registrant may be required to disclose the amount of expenditure expensed or capitalized costs, as applicable, incurred for climate-related transition activities related to research and development of new technologies, purchase of assets, infrastructure, or products that are intended to reduce GHG emissions, increase energy efficiency, offset emissions (purchase of energy credits), or improve other resource efficiency.[1957]

The Commission stated in the Proposing Release that separate disclosure of total expense and total capitalized costs incurred toward the climate-related events and transition activities should provide important information to help investors make better informed investment or voting decisions.[1958] The Commission pointed out that the financial impacts of expenditure typically appear in different places within the financial statements (*e.g.,* in an asset line item(s) on the balance sheet or in an expense line item(s) in the income statement), and therefore the proposed approach, which would require registrants to first identify the relevant climate-related

[1943] *See infra* notes 2068 and 2069 and accompanying text.

expenditures and then compile those impacts in one location, was intended to address this dispersed presentation.[1959]

b. Comments

As discussed above, some commenters generally stated that they supported the proposed amendments to Regulation S–X, including the financial statement disclosures.[1960] Other commenters specifically stated that they supported the proposed Expenditure Metrics.[1961] As previously noted, some of the commenters who supported the proposed amendments to Regulation S–X, including the Expenditure Metrics, recommended revising certain aspects of the proposal,[1962] such as the one percent disclosure threshold.[1963]

Many of the commenters that supported the proposed Expenditure Metrics stated that the disclosure requirement would provide useful information to investors.[1964] For example, one commenter stated that the proposed Expenditure Metrics would allow investors to gauge whether the qualitative discussions included in a registrant's periodic report match the substance of the registrant's expenditures.[1965] Another commenter stated that requiring the reporting of expenses associated with climate-related events would allow investors to ''better understand the overall vulnerability of assets, loss experience, and long term investment in asset resiliency or adaptation.'' [1966] Several commenters noted that the proposed Expenditure Metrics would help investors understand a registrant's ability to meet stated GHG emissions reduction targets or other climate-related targets and goals.[1967] One commenter stated that understanding the quantification of costs such as operating and capital expenditures enables it to improve its valuation models.[1968] Another commenter noted favorably that the proposed Expenditure Metrics were similar to one of the TCFD's seven cross-sector metrics, and that the ISSB's exposure draft similarly included language requiring ''the amount of capital expenditure, financing, or investment deployed towards climate-related risks and opportunities.'' [1969] A few commenters specifically stated that they supported applying the one percent disclosure threshold to the proposed Expenditure Metrics.[1970]

On the other hand, consistent with the feedback the Commission received on the proposed Financial Impact Metrics, and as discussed at length above, many of the commenters who provided feedback on the proposed Expenditure Metrics did not support the proposed requirements. Many commenters generally stated that they did not support the proposed amendments to Regulation S–X for the feasibility and other reasons described above.[1971] Other commenters specifically stated that they disagreed with the proposed Expenditure Metrics.[1972] For example, some commenters stated that the proposed Expenditure Metrics would be time intensive and costly for companies.[1973] One of these commenters stated that registrants ''do not measure capital expenditures by climate purpose'' and therefore the proposed disclosures would require ''the implementation of costly controls and procedures organization wide.'' [1974] Similarly, another commenter stated that many smaller issuers use accounting software packages that offer limited expenditure tracking functionality and therefore the proposed Expenditure Metrics would likely require significant upgrades to cash outflow tracking infrastructure.[1975] Some commenters stated that they opposed the use of a one percent disclosure threshold in the context of the Expenditure Metrics.[1976] Other commenters raised concerns about registrants' abilities to separately identify the cost of climate risk mitigation activities.[1977] A few commenters stated that the proposed Expenditure Metrics would not provide decision-useful information to investors because, among other things, the information is unlikely to be comparable among registrants.[1978]

Some commenters asserted that the proposed Financial Impact and Expenditure Metrics would require overlapping disclosure.[1979] These commenters generally stated that registrants should only be required to disclose the relevant information once.[1980] One of these commenters recommended that the proposed Expenditure Metrics focus on actions related to transition plans and the mitigation of physical risks.[1981] On the other hand, one commenter stated that

[1981] *See* letter from PGIM.

the Commission should require both the proposed Financial Impact and Expenditure Metrics in the final rules because they provide different perspectives and are both decision-useful for investors.[1982]

Some commenters agreed that it would be appropriate to require separate disclosure of capitalized costs and expenditures expensed.[1983] One of these commenters explained that capitalized costs and expenditures expensed have different effects on the value of assets and are recorded separately elsewhere in the financial statements.[1984] Another commenter stated that requiring the disclosures of expenditures expensed would be particularly helpful because otherwise they may not be subject to the same scrutiny or disclosure requirements as capitalized costs.[1985] Several commenters stated that additional examples or guidance would be useful.[1986]

Some commenters requested clarification regarding the proposed Expenditure Metrics. One commenter suggested that the Commission should provide an accounting definition of ''expenditures.'' [1987] Another commenter asked the Commission to clarify what it meant by a ''capitalized cost,'' for example, whether it only includes costs associated with purchases of Property, Plant and Equipment (PP&E) or if the definition is broader and also includes costs initially recognized as a debit on the balance sheet such as prepaid expenses.[1988] The commenter also noted that costs could be both capitalized and expensed in the same period, and therefore the rules should address how the costs should be presented in that circumstance.[1989] Similarly, one commenter asserted that whether something is identified as an expenditure or a capitalized cost would require registrants to make subjective judgments that are unlikely to be uniform across industries.[1990] Another commenter warned that a registrant could ''game'' the rules by classifying costs as expenditures, rather than capitalizing the costs, to avoid triggering the disclosure threshold.[1991] Some commenters generally asked the Commission to provide additional examples and guidance for calculating the proposed Expenditure Metrics.[1992]

c. Final Rules

i. Scope (Rules 14–02(c) and (d))

The proposed Expenditure Metrics would have required registrants to disclose expenditures expensed and capitalized costs to mitigate the risks of severe weather events and other natural conditions and related to transition activities.[1993] After consideration of the comments, we are adopting a requirement (Rules 14–02(c) and (d)) to disclose expenditures expensed and capitalized costs with a number of changes from the proposed rules based on commenter feedback.[1994] In response to the concerns identified by commenters above, we have modified the proposed requirements and are adopting final rules that require disclosures that significantly reduce the burdens for registrants while providing investors with decision-useful information.

The final rules focus on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, which is similar to certain of the alternatives suggested by commenters.[1995] Having considered the various alternatives presented by commenters, we concluded that focusing on the disclosure of discrete expenditures related to severe weather events and other natural conditions strikes an appropriate balance between providing investors with useful information and limiting the burdens on registrants.

Under the final rules, a registrant must disclose:

(1) The aggregate amount of expenditures expensed as incurred and losses, excluding recoveries, incurred during the fiscal year as a result of severe weather events and other natural conditions, and

(2) The aggregate amount of capitalized costs and charges, excluding recoveries, recognized during the fiscal year as a result of severe weather events and other natural conditions.[1996]

The proposed rules would have required registrants to disclose costs and expenditures incurred to ''mitigate the risks from severe weather events and other natural conditions.'' [1997] Some commenters indicated that it would be feasible, and significantly less burdensome, to instead segregate and quantify discrete costs incurred due to severe weather events.[1998] Requiring disclosure of expenditures related to mitigation activities would present challenges for registrants in terms of forecasting and determining their expectations about future severe weather events at the time they are making expenditure decisions. In addition, costs and expenditures related to mitigation activities may present similar issues to transition activities, which are discussed in further detail below, because the mitigation of the risks of severe weather events may be only one of several reasons why a company makes a business decision to incur a particular expenditure. Therefore, we have decided to require registrants to disclose capitalized costs, expenditures expensed, charges, and losses incurred ''as a result of'' severe weather events and other natural conditions.[1999] The capitalized costs,

McClellan (seeking clarification on expensed or capitalized costs partially incurred towards the climate-related events and transition activities); RSM US LLP; and Salesforce (seeking clarification around what constitutes ''expenditures incurred for climate-related transition activities related to research and development of new technologies, purchase of assets, infrastructure or products that are intended to reduce GHG emissions, increase energy efficiency, offset emissions (purchase of energy credits), or improve other resource efficiency'').

[1993] *See* Proposing Release, section II.F.3.

[1994] *See supra* note 1720 and accompanying text.

[1995] *See supra* section II.K.2.b.iv. *See also* letter from Dell (requesting that the ''Commission consider limiting Article 14 of Regulation S–X requirements to physical impacts and related expenditures only'').

[1996] *See* 17 CFR 210.14–02(c), (d). Under the final rules, disclosure must be provided for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s) included in the consolidated financial statements in the filing. *See* 17 CFR 210.14–01(d). In addition, foreign private issuers that file consolidated financial statements under home country GAAP and reconcile to U.S. GAAP, would be required to use U.S. GAAP (including the provisions of the final rules) as the basis for calculating and disclosing this information. Foreign private issuers that file consolidated financial statements under IFRS as issued by the IASB, would apply IFRS and the final rules as the basis for calculating and disclosing the financial statement effects. *See also infra* note 2380 which discusses proposed amendments to Form 20–F.

[1997] *See* Proposing Release, section II.F.3.

[1998] *See, e.g.,* letters from Dow (stating that direct costs related to property damage and related repair costs as a result of extreme weather events on the U.S. Gulf Coast ''can easily be segregated, analyzed, and quantified within our current processes''); and Nutrien (stating that if there is a fire at one of its locations that it can attribute to a severe weather event it could ''readily identify costs associated with demolition, clean-up and rebuilding of those physical assets for disclosure'').

[1999] *See* 17 CFR 210.14–02(c) and (d). Although the proposed Expenditure Metrics only required the disclosure of costs and expenditures related to the mitigation of risks from severe weather events and other natural conditions, the proposed Financial Impact Metrics would have required registrants to disclose costs and expenditures incurred as a result of severe weather events and other natural

expenditures expensed, charges, and losses that will be disclosed under the final rules are already captured in a registrant's income statement or balance sheet and measured and reported in accordance with U.S. GAAP or IFRS.[2000] Thus, this approach will be less costly and burdensome for registrants as compared to the proposed rules.

In response to commenter requests for additional clarity,[2001] we are prescribing an attribution principle that registrants must use to determine whether a capitalized cost, expenditure expensed, charge, or loss is ''as a result of'' a severe weather event or other natural condition.[2002] The attribution principle will also simplify the determination of the amount required to be disclosed by eliminating the need to allocate portions of costs and expenditures, which will reduce compliance costs for registrants.[2003]

Under the final rules, the requirement to disclose capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions remains subject to a one percent disclosure threshold; however, we are modifying the denominators used for the threshold and adopting de minimis thresholds that exempt disclosure of amounts that aggregate to less than $100,000 in the income statement or less than $500,000 in the balance sheet, as explained in greater detail below.[2004] In addition, under the final rules, registrants must separately disclose, as part of the required contextual information, any recoveries resulting from severe weather events and other natural conditions to reflect the net effect that severe weather events and other natural conditions have on a registrant's financial statements.[2005]

As proposed, the Expenditure Metrics would have required registrants to disclose separately the aggregate amount of expenditure expensed and the aggregate amount of capitalized costs.[2006] In a shift from the proposal, the final rules require registrants to separately disclose where on the income statement and balance sheet, as applicable, the capitalized costs, expenditures expensed, charges, and losses are presented.[2007] As explained above, significantly fewer line items are impacted by the final rules we are adopting than would have been impacted by a requirement to disclose the proposed Financial Impact Metrics. Only those line items that reflect capitalized costs, expenditures expensed, charges, and losses fall within the scope of the disclosures, as is further illustrated below in section II.K.3.c.vii. For example, we do not expect that gross revenues would be impacted under the final rules. In addition, we do not believe that requiring registrants to disclose in which line item each of the required capitalized costs, expenditures expensed, charges, and losses are presented will increase the burden as compared to the proposed Expenditure Metrics because the disclosures required under the final rules are simply a disaggregation of financial statement line items. Requiring registrants to separately disclose in which line item the capitalized costs, expenditures expensed, charges, and losses are presented will enhance the usefulness of the disclosures for investors by allowing them to understand the effects of severe weather events and other natural conditions on a registrant's financial position and performance. This information will facilitate their analyses and cash flow projections year-on-year and across registrants.

The proposed rules would have required registrants to disclose expenditures expensed and capitalized costs incurred to reduce GHG emissions or otherwise mitigate exposure to transition risks.[2008] With respect to transition activities, many commenters pointed out that registrants make business decisions, such as incurring an expenditure to purchase a piece of machinery that is more energy efficient, for multiple reasons, and as a result, a registrant's transition activities may be inextricably intertwined with its ordinary business activities.[2009] Consequently, commenters raised concerns about registrants' abilities to identify, attribute, and quantify the impact of transition activities on the financial statements.[2010] In addition, requiring disclosure for transition activities would present challenges for registrants in terms of forecasting and determining their expectations about transition activities at the time they are making expenditure decisions. Taking these comments into consideration, we have determined not to require registrants to disclose costs and expenditures related to general transition activities in the financial statements at this time.

Although we are not adopting the broader requirement for disclosure of transition activities in the financial statements, registrants will be required to disclose capitalized costs, expenditures expensed, and losses related to the purchase and use of carbon offsets and RECs in the financial statements.[2011] The proposed rules identified the amount of expensed or capitalized cost, as applicable, related to ''offset emissions (purchase of energy credits)'' as one example of the disclosures that may be required[2012] and the purchase and use of carbon offsets and RECs is a type of transition activity that does not present the definitional or scoping concerns presented by transition activities more generally. In addition, carbon offsets and RECs that are expensed or capitalized are discrete transactions that are currently captured in a registrant's income statement or balance sheet.[2013] Moreover, requiring the disclosure of capitalized costs, expenditures expensed, and losses related to the acquisition and use of carbon offsets and RECs will complement the disclosures regarding carbon offsets and RECs required by the amendments to Regulation S–K that we are adopting in this release.[2014]

Furthermore, although the final rules under Article 14 do not require registrants to disclose costs and expenditures incurred to reduce GHG emissions or otherwise mitigate exposure to transition risks in the financial statements, the final rules under subpart 1500 of Regulation S–K will require registrants to provide quantitative and qualitative disclosure of material expenditures in certain circumstances as described in greater

conditions because those costs would have constituted line-item impacts to a registrant's financial statements. Therefore, the requirement to disclose costs and expenditures incurred as a result of severe weather events and other natural conditions is a subset of the information that was included in the proposal.

detail above,[2015] which should result in the disclosure of some of the information for expenditures related to transition activities that we would have expected to be disclosed under the proposed rules, albeit outside of the financial statements. Requiring the disclosure of these expenditures outside of the financial statements and subject to materiality rather than a bright-line threshold, among other things, should mitigate the compliance burden and related concerns raised by commenters with respect to the proposed requirement to disclose transition expenditures in the financial statements.[2016] While we are adopting the requirements to disclose expenditures related to transition activities outside the financial statements, we remind registrants that current accounting standards may require the disclosure of material expenditures within the financial statements,[2017] which may include material expenditures incurred in furtherance of a registrant's transition activities, depending upon the application of these current accounting standards. Current accounting standards specify minimum presentation and disclosure requirements. Importantly, however, the FASB's Conceptual Framework provides additional guidance for evaluating whether financial information is representationally faithful. In particular, the Conceptual Framework states ''[t]o be a perfectly faithful representation,'' a depiction ''would be complete, neutral and free from error.'' The Conceptual Framework further states, ''[a] complete depiction includes *all* information necessary for a user to understand the phenomenon being depicted, including *all* necessary descriptions and explanations'' [2018] (emphasis added). Accordingly, additional disaggregation and disclosure of material expenditures, whether on the face of the primary financial statements or in the notes to the financial statements, may be needed to meet the objective of the financial reporting as explained by the Conceptual Framework.[2019] For example, a registrant may consider whether disaggregating material cash outflows to acquire property, plant, and equipment [2020] purchased to meet the registrant's transition plans, targets, or goals on the statement of cash flows or in a related note is appropriate to provide complete information about the entity's cash flows for the period.

Under the final rules, registrants are required to disclose the aggregate amounts of (1) carbon offsets and RECs expensed, (2) carbon offsets and RECs capitalized, and (3) losses incurred on the capitalized carbon offsets and RECs during the fiscal year.[2021] This disclosure requirement is not subject to the one percent disclosure threshold that applies to the disclosure of severe weather events and other natural conditions. Instead, disclosure is required if carbon offsets or RECs have been used as a material component of a registrant's plan to achieve disclosed climate-related targets or goals,[2022] which is consistent with the requirement to disclose information about carbon offsets and RECs included in the amendments to Regulation S–K that we are adopting in this release and therefore will help limit the burden for registrants and avoid confusion for investors.[2023] In addition, registrants are required to disclose the beginning and ending balances of capitalized carbon offsets and RECs on the balance sheet for the fiscal year.[2024] The beginning and ending balances are currently existing information in a registrant's balance sheet that will provide investors with information to help them understand the registrant's activity related to the purchase and use of carbon offsets and RECs, further illustrating how a registrant is using carbon offsets and RECs as a material component of its plan to achieve a target or goal. Registrants are also required to disclose where on the income statement or balance sheet the capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs are presented under the final rules.[2025]

One commenter stated that the proposed rules would likely require many smaller issuers to make significant upgrades to their cash outflow tracking infrastructure.[2026] The commenter identified upgrades that would be needed to cash outflow tracking infrastructure to capture the costs and investments for each separate risk, transition activity, and weather event.[2027] However, as discussed above, the final rules will not require disclosure of the proposed Financial Impact Metrics or costs and expenditures related to transition activities in the financial statements. Rather, the amendments to Regulation S–X have been narrowed to focus on severe weather events and other natural conditions and carbon offsets and RECs, which will be less burdensome for registrants. Furthermore, the final rules do not require any disclosure of the impacts to the statement of cash flows.

We did not include in the final rules the proposed requirement for a registrant to disclose the impact of any climate-related risks identified by the registrant pursuant to proposed Item 1502(a) on any of the financial metrics included in the proposed rules, including the proposed Expenditure Metrics.[2028] A few commenters sought clarification about the scope of this proposed requirement or questioned what disclosure objective it was intended to achieve.[2029] Because the final rules we are adopting are more narrowly focused on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, we do not think it would be in keeping with this approach to also require a registrant to disclose the impacts from any climate-related risks identified by the registrant pursuant to Item 1502(a).

[2029] *See, e.g.,* letters from ABA; Amer. for Fin. Reform, Sunrise Project *et al.;* and Deloitte & Touche. *See also* letter from Travelers (Mar. 10, 2023) (objecting to the proposed requirement for a registrant to disclose the impact of any climate-related risks identified by the registrant pursuant to proposed Item 1502(a) on any of the financial metrics included in the proposed rule).

We recognize that a number of commenters expressed support for the Expenditure Metrics as proposed, including some who stated that the proposed requirements would provide investors with important information about ''long term investments in asset resiliency'' or would help investors understand a registrant's ability to meet its climate-related targets and goals.[2030] Although the final rule is more narrow in scope than the proposal, the information elicited by the final rules will provide investors with comparable, reliable, and decision-useful information about registrants' capitalized costs, expenditures expensed, charges, and losses related to severe weather events and other natural conditions, which will serve to protect investors, while minimizing costs and burdens on registrants.

ii. Disclosure Threshold (Rule 14–02(b))

In the final rules, we are retaining a quantitative disclosure threshold for capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions.[2031] Providing a bright-line standard for registrants will simplify compliance compared to a more principles-based standard, reduce the risk of underreporting such information, and promote comparability and consistency among a registrant's filings over time and among different registrants.[2032] Accordingly, the final rules require disclosure of:

(1) Expenditures expensed as incurred and losses if the aggregate amount of such expenditures expensed as incurred and losses equals or exceeds one percent of the absolute value of income or loss before income tax expense or benefit for the relevant fiscal year; and

(2) Capitalized costs and charges recognized if the aggregate amount of the absolute value of capitalized costs and charges recognized equals or exceeds one percent of the absolute value of stockholders' equity or deficit, at the end of the relevant fiscal year.[2033]

Such disclosure is not required, however, if the aggregate amount of expenditures expensed and losses as incurred in the income statement is less than $100,000 for the relevant fiscal year.[2034] With respect to the balance sheet, registrants are not required to provide disclosure if the aggregate amount of capitalized costs and charges is less than $500,000 for the relevant fiscal year.[2035]

In a shift from the proposal, we are using different denominators for the disclosure thresholds. Specifically, the denominators we are adopting are: (1) income or loss before income tax expense or benefit, and (2) stockholders' equity or deficit.[2036] Income or loss before income tax expense or benefit is a frequently disclosed line item on the income statement that provides an accounting-based measure of financial performance. Stockholders' equity or deficit is a disclosed line item in the balance sheet that reflects stockholders' ownership interest in the book value of the registrant and represents the net difference between the assets and liabilities of the registrant.

Although we did not receive commenter feedback specifically objecting to the denominators for the proposed Expenditure Metrics (*i.e.,* ''total expenditure expensed'' or ''total capitalized costs''), we have decided to use these alternative denominators because income or loss before income tax expense or benefit and stockholders' equity or deficit are well known and understood by registrants and investors and are easily calculable based on line items in the financial statements that are defined under U.S. GAAP and IFRS.[2037] These alternative denominators are broadly responsive to commenters who raised concerns that the proposed rules would be inconsistent with existing GAAP[2038] or would not result in comparable disclosure,[2039] although neither of these concerns was specifically directed at the proposed denominators for the disclosure threshold. Since the line items we have chosen for the denominators in the final rules are well known and represent aggregated financial activity, we expect at least some companies will have insight into the expected amount or magnitude of these denominators in advance of the end of the fiscal year, which could help facilitate the establishment of internal accounting controls related to the required disclosure and support the establishment of ICFR and accurate and timely disclosure.[2040] In addition, as mentioned above, income or loss before income tax expense or benefit is a measure of profitability, and requiring a registrant to disclose expenditures expensed and losses incurred as a result of severe weather events and other natural conditions will help investors understand the impact these events and conditions had on the registrant's profitability. Likewise, stockholders' equity or deficit represents shareholders' interest in the book value of an entity, and requiring a registrant to disclose the capitalized costs and charges incurred as a result of severe weather events and other natural conditions will help investors understand the impact these events and conditions have on assets attributable to shareholders.

The final rules provide that the disclosure thresholds should be calculated using the absolute values of the relevant denominator.[2041] We think it is appropriate to use the absolute values because the balances for these line items may represent debit or credit balances (which are not inherently either positive or negative) in the books and records, and thus using an absolute value will avoid any confusion that could arise from using a negative number resulting from an accounting convention for the disclosure threshold.[2042]

In addition, the final rules require registrants to use the absolute value of capitalized costs and charges recognized for the numerator to determine whether the applicable disclosure threshold is triggered for the balance sheet disclosures since capitalized costs and charges can offset one another.[2043] Expenditures expensed as incurred and losses in the income statement do not offset one another and therefore the use of absolute values is unnecessary to

[2030] *See supra* notes 1966 and 1967 and accompanying text.

[2031] *See* 17 CFR 210.14–02(b).

[2032] *See* Proposing Release, section II.F.2.

[2033] *See* 17 CFR 210.14–02(b).

[2034] *See* 17 CFR 210.14–02(b)(1).

[2035] *See* 17 CFR 210.14–02(b)(2).

[2036] *See* 17 CFR 210.14–02(b).

[2037] For example, while some registrants are not explicitly required to present income or loss before income tax expense or benefit in accordance with 17 CFR 210.5–03.10 in their financial statements, U.S. GAAP includes presentation and disclosure requirements that result in information sufficient to calculate income or loss before income tax expense or benefit, and registrants often do present this amount. In addition, while IFRS does not explicitly require income or loss before income tax expense or benefit, the standards do require disclosure of profit or loss and income tax expense.

[2038] *See supra* note 1797 and accompanying text.

[2039] *See supra* note 1793 and accompanying text.

[2040] Some commenters raised concerns that registrants would not be able to calculate the monetary value for the 1% disclosure threshold until the end of the relevant period, which would require registrants to evaluate every transaction to determine if it counts towards the threshold. *See supra* note 1814 and accompanying text. Our decision to use income or loss before income tax expense or benefit and shareholders' equity or deficit as the denominators in the final rules should mitigate this concern to some extent for registrants because we expect that many registrants will have insight into the magnitude of these denominators prior to the end of the fiscal year.

[2041] *See* 17 CFR 210.14–02(b).

[2042] Other rules in Regulation S–X use absolute values in determining whether a threshold has been exceeded. *See* 17 CFR 210.1–02(w) (setting forth the income test for determining whether a subsidiary is a significant subsidiary).

[2043] *See* 17 CFR 210.14–02(b)(2).

determine whether the applicable disclosure threshold is triggered. Although the proposed Expenditure Metrics did not use absolute values in the numerator to determine whether the applicable disclosure threshold was triggered,[2044] the proposed Financial Impact Metrics did, and commenter feedback on the use of absolute values in that context was varied. A few commenters supported using the absolute value, and one investor stated that the absolute value would better reflect the significance of the impact on a registrant's financial performance and position.[2045] On the other hand, a few commenters objected to using the absolute value and stated it could result in the disclosure of individually immaterial information.[2046] We agree with the commenter that stated using the absolute value to determine whether the disclosure threshold is triggered will better reflect the significance of the impact on a registrant's financial position because the absolute value takes into account each of the relevant capitalized costs or charges (*i.e.,* the full magnitude of the costs or charges), whereas a net amount would not necessarily reflect the total effect on the registrant.

In a further shift from the proposal, we have included de minimis thresholds in the final rules.[2047] As discussed above, some commenters expressed the view that the proposed one percent disclosure threshold would place an unreasonable burden on smaller companies because it is more likely that the impacts on smaller companies would exceed the one percent disclosure threshold.[2048] In addition, a few commenters mentioned a de minimis exception in their letters.[2049] We recognize the possibility that a one percent disclosure threshold could be disproportionately burdensome for smaller companies or companies in the early stages of developing a product or business line for which one percent of income or loss before income tax expense or benefit or stockholders' equity or deficit could be a very small amount. In addition to smaller companies, we think de minimis thresholds will also be helpful for companies that have income or loss before income tax expense or benefit near breakeven in a particular year, perhaps due to anomalous circumstances. Therefore, we have included in the final rules de minimis thresholds of: (1) $100,000 for expenditures expensed as incurred and losses in the income statement, and (2) $500,000 for capitalized costs and charges recognized on the balance sheet.[2050] As a practical matter, this means that, under the final rules, registrants for which one percent of the absolute value of income or loss before income tax expense or benefit is less than $100,000 will not have to provide disclosure until the aggregate amount of expenditures expensed and losses incurred as a result of severe weather events and other natural conditions equals or exceeds $100,000.[2051] Similarly, under the final rules, registrants for which one percent of the absolute value of stockholders' equity or deficit is less than $500,000 will not have to provide disclosure until the absolute value of the aggregate amount of capitalized costs and charges incurred as a result of severe weather events and other natural conditions equals or exceeds $500,000.[2052] We have decided to use a higher de minimis threshold for capitalized costs and charges recognized on the balance sheet because generally the disclosure threshold applicable to the balance sheet—one percent of the absolute value of stockholders' equity or deficit—will result in larger numbers than the disclosure threshold applicable to the income statement, and therefore a larger de minimis threshold is appropriate and proportionate. Moreover, as noted below in section IV, in 2022 the $100,000 de minimis value for the income statement would have exceeded one percent of income or loss before income tax expense or benefit for approximately 17% of registrants, and the $500,000 de minimis value for the balance sheet would have exceeded one percent of stockholders' equity or deficit for approximately 24% of registrants. Thus, approximately the same number of companies will benefit from the de minimis thresholds by using these values.

While a number of commenters asserted that requiring disclosure at a one percent threshold would result in an excessive amount of immaterial detail for investors, the changes we have made from the proposal address this concern.[2053] Specifically, the final rules require disclosure of specific categories of discrete capitalized costs, expenditures expensed, charges, and losses, which in our view is unlikely to result in immaterial disclosure. As discussed in greater detail below, the final rules also include an attribution principle that limits the required disclosure to circumstances where the severe weather event or other natural condition was a significant contributing factor in incurring the capitalized cost, expenditure expensed, charge, or loss.[2054] The final rules include de minimis thresholds, and the denominators used in the final rules—stockholders' equity or deficit and income or loss before income tax expense or benefit—are aggregated amounts and therefore we expect that in many instances they will result in a larger denominator than what was included in the proposal. Given the narrower scope of the final rules, the one percent threshold should not result in an excessive amount of detail or immaterial disclosure. Some commenters also raised concerns that the one percent disclosure threshold could confuse investors by giving too much prominence to the climate-related disclosures relative to the impacts of other risks disclosed in the financial statements or could suggest a level of precision that does not exist.[2055] However, the final rules require disclosure of capitalized costs, expenditures expensed, charges, and

[2044] As explained above, the proposed Expenditure Metrics did not require the disclosure of charges, and therefore there was no potential for offsetting, although charges would have been required disclosures under the proposed Financial Impact Metrics. *See supra* note 1732.

[2045] *See supra* note 1856 and accompanying text.

[2046] *See supra* note 1854 and accompanying text.

[2047] *See* 17 CFR 210.14–02(b).

[2048] *See supra* note 1823 and accompanying text.

[2049] *See* letter from NAM (''The extreme burden of building new processes and systems to track quantitative climate impacts, with no materiality threshold or even a de minimis exception for minor events or immaterial impacts, would impose colossal costs and strain resources at all public companies.''). *See also* letter from Cleveland Cliffs (stating a similar view).

[2050] *See* 17 CFR 210.14–02(b). There is precedent in Regulation S–X for using $100,000 as a de minimis threshold. *See* 17 CFR 210.3–11 (permitting a registrant to submit unaudited financial statements if gross receipts and expenditures are not in excess of $100,000).

[2051] *See* 17 CFR 210.14–02(b)(1). For example, if a registrant had $5 million in income or loss before income tax expense or benefit for the relevant fiscal year, the registrant's disclosure threshold for the income statement would be $50,000 ($5,000,000 × .01 = $50,000). Since $50,000 falls below the $100,000 de minimis threshold, the registrant would not be required to provide the disclosure required by Rule 14–02(b)(1) and (c) until the aggregate amount of expenditures expensed as incurred and losses equals or exceeds $100,000 (*i.e.,* the de minimis threshold).

[2052] *See* 17 CFR 210.14–02(b)(2). For example, if a registrant had $25 million in stockholders' equity or deficit for the relevant fiscal year, the registrant's disclosure threshold for the balance sheet would be $250,000 ($25,000,000 × .01 = $250,000). Since $250,000 falls below the $500,000 de minimis threshold, the registrant would not be required to provide the disclosure required by Rule 14–02(b)(2) and (d) until the aggregate amount of capitalized costs and charges equals or exceeds $500,000 (*i.e.,* the de minimis threshold).

[2053] *See supra* note 1809 and accompanying text.

[2054] *See* 17 CFR 210.14–02(g) and *infra* Section II.K.3.c.iii.

[2055] *See supra* notes 1810 and 1811 and accompanying text.

losses that are currently recorded in a registrant's financial statements in accordance with GAAP, and therefore the disclosures should have the same degree of precision as the other information provided in the financial statements. Moreover, the required disclosures will be in a note to the financial statements along with other disaggregated disclosures addressing a variety of topics, and therefore its placement will be on equal footing with other information included in such notes.

Other commenters stated that applying the one percent disclosure threshold on a line-item basis could result in only partial disclosure of expenditures related to a climate-related event since the impact could be recorded in multiple financial statement line items—for which the disclosure threshold may not be triggered—which would diminish the usefulness of the information to investors.[2056] Our decision not to adopt the proposed Financial Impact Metrics should alleviate this concern to a great extent. However, it remains true that, under the final rules, the application of the disclosure threshold separately to (i) capitalized costs and charges in the balance sheet, and (ii) expenditures expensed and losses in the income statement could result in a situation where the threshold for only one of the financial statements is triggered and certain costs related to a particular severe weather event or other natural condition may not be required to be disclosed. We acknowledge that in some circumstances this may result in investors only receiving a partial picture of the financial statement effects of a particular event or condition; however, applying the disclosure threshold separately to the income statement and the balance sheet will be more straightforward for registrants to implement and therefore will help to limit the overall burden of the final rules. Moreover, registrants are not prohibited from disclosing how the severe weather event or other natural condition affected both the income statement and balance sheet, even if the disclosure threshold for one of the financial statements is not triggered. One commenter suggested that a registrant could "game" the rules by classifying costs as expenditures, rather than capitalizing costs, to avoid triggering the disclosure threshold.[2057] We think the likelihood of this occurring is low because registrants are required to follow GAAP in determining whether to expense a cost or capitalize it and these amounts will be subject to audit.

Certain commenters argued that the Commission should apply a different percentage threshold, such as five or ten percent.[2058] Although we considered those options, in light of the other changes we are making to the disclosure threshold, such as using an aggregated denominator and including a de minimis threshold, we think one percent will generally not result in immaterial disclosure nor result in undue burdens on registrants. In this regard, we agree with those commenters who stated that the appropriate percentage threshold depends upon what is used as the denominator.[2059] For the same reason, we considered, but are not adopting, the other alternative disclosure thresholds that commenters suggested, such as only using a dollar threshold or requiring the disclosure of all relevant expenditures.[2060]

Certain commenters stated that the examples provided in the Proposing Release of other one percent disclosure thresholds were not analogous.[2061] Generally, these commenters suggested that the examples were not analogous, at least in part, because they involved amounts that are knowable under current accounting practice and have discrete impacts on a smaller number of larger line items (as opposed to every line item).[2062] Although the alignment with other disclosure thresholds is not dispositive of whether a threshold elicits appropriate disclosure for investors, the final rules' focus on requiring the disclosure of amounts that are currently recorded in a registrant's financial statements in accordance with GAAP and that pertain to a significantly smaller number of line items (as well as the revisions made to the denominators for the disclosure thresholds) should align the final rules more closely with other instances where the Commission has used a one percent or other numerical disclosure threshold.[2063]

We have considered the feedback we received from commenters urging the Commission to forgo the one percent disclosure threshold and instead require disclosure only if material.[2064] We agree that the concept of materiality plays an important role in the Federal securities laws. As such, as discussed above, we have significantly modified the scope of the proposed disclosures and the proposed disclosure threshold and have included de minimis exceptions to focus the final requirements on eliciting material information for investors. We are not, however, eliminating the threshold entirely and moving to a more principles-based disclosure standard because, as discussed in the Proposing Release,[2065] the proposed quantitative disclosure threshold provides registrants with greater clarity in implementing the rules, reduces the risk of underreporting, and increases consistency and comparability. This approach is consistent with the feedback we received from some commenters that expressed concerns about the risks of underreporting in the context of the financial statements, as evidenced by the limited climate-related disclosure under current accounting standards despite increasing demand by investors for such disclosure.[2066]

We agree with, and further emphasize, the point made by those commenters who asserted that registrants are already required to disclose the financial statement effect of material climate risks under existing rules.[2067] Registrants currently have an

Continued

obligation to consider material impacts on the financial statements, and the fact that a material impact may be driven by climate-related matters does not alter a registrant's obligation.[2068] The Commission and accounting standard-setting bodies and their staff have all reminded registrants, through the issuance of guidance, of existing accounting and disclosure requirements that may apply to climate-related matters when there is a material impact on the financial statements.[2069] Although the final rules require registrants to disclose certain expenditures if they exceed the one percent disclosure threshold, that requirement does not affect registrants' ongoing responsibility to consider material impacts, whether climate-related or not, when preparing their financial statements and related disclosures.[2070] This may include determining whether costs and expenditures that do not trigger the disclosure threshold may be material to the registrant, taking into consideration all relevant quantitative and qualitative factors.[2071]

iii. Attribution Principle (Rule 14–02(g))

A number of commenters raised concerns about the ability of registrants to isolate, attribute, and quantify expenditures related to severe weather events and other natural conditions.[2072] In response to these concerns, we are adopting a principle for attributing a cost, expenditure, charge, loss, or recovery to a severe weather event or other natural condition and for determining the amount to be disclosed. The final rules (Rule 14–02(g)) require a registrant to attribute a cost, expenditure, charge, loss, or recovery to a severe weather event or other natural condition and disclose the entire amount of the expenditure or recovery when the event or condition is a significant contributing factor in incurring the cost, expenditure, charge, loss, or recovery.[2073]

Some commenters suggested that registrants should be permitted to make a reasonable estimate and disclose the assumptions that resulted in the estimate, or suggested that the Commission did not need to prescribe a particular approach to attribution or quantification because registrants already have experience allocating costs across risks when preparing financial statements.[2074] Although we considered those possibilities, we are adopting ''significant contributing factor'' as the attribution principle for the final rules, which was recommended by a commenter.[2075] We think it is appropriate to do so for a number of reasons. First, it is important to establish an attribution principle because allowing a registrant to apply an entity-specific methodology may not result in consistent or comparable information from one registrant to another which would limit the usefulness of the disclosures to investors. Second, the ''significant contributing factor'' principle will strike an appropriate balance by requiring disclosure when a severe weather event or other natural condition was a significant factor resulting in the registrant incurring the expenditure or receiving the recovery, while not requiring disclosure where a severe weather event or other natural condition was only a minor factor, thereby reducing the cost burden on registrants. Moreover, many areas of U.S. GAAP currently require a registrant to apply the concept of significance (even though U.S. GAAP does not define the term ''significant''),[2076] which should help facilitate registrants' use of this attribution principle. Although the application of this attribution principle may require the exercise of judgment, financial statement preparers are accustomed to applying judgment in many circumstances under U.S. GAAP, and, as stated above, preparers have experience applying the concept of significance.[2077] Finally, in addition to enhancing consistency and comparability of how the disclosures are developed, specifying an attribution and quantification principle in the final rules will reduce the burden associated with attributing (since there is no allocation involved) and quantifying costs and expenditures.

iv. Recoveries (Rule 14–02(f))

In addition, the final rules (Rule 14–02(f)) provide that, if a registrant is required to disclose capitalized costs, expenditures expensed, charges, or losses incurred as a result of severe weather events and other natural conditions, then it must separately disclose the aggregate amount of any recoveries recognized during the fiscal year as a result of the severe weather events and other natural conditions for which capitalized costs, expenditures expensed, charges, or losses have been disclosed.[2078] Registrants would have been required to disclose the financial impacts of severe weather events and

Proposal—require consideration of climate-related risks in the measurement of various financial statement estimates.'').

[2068] For example, although U.S. GAAP and IFRS Accounting Standards do not refer explicitly to climate-related matters, registrants have an obligation to consider material impacts when applying, for example, FASB ASC Topic 330 *Inventory* (IAS 2 *Inventories*) and FASB ASC Topic 360 *Property, Plant, and Equipment* (IAS 36 *Impairment of Assets*). *See also supra* note 2069.

[2069] *See, e.g.,* 2010 Guidance (stating that ''registrants must also consider any financial statement implications of climate change issues in accordance with applicable accounting standards, including [FASB ASC] Topic 450, Contingencies, and [FASB ASC] Topic 275, Risks and Uncertainties.''); FASB Staff Educational Paper, Intersection of Environmental, Social, and Governance Matters with Financial Accounting Standards (Mar. 2021), available at *https://www.fasb.org/Page/ShowPdf?path=FASB_Staff_ESG_Educational_Paper_FINAL.pdf* (''When applying the financial accounting standards, an entity must consider the effects of certain material ESG matters, similar to how an entity considers other changes in business and operating environment that have a material direct or indirect effect on the financial statements and notes thereto.''); IFRS, Effects of climate-related matters on financial statements (Nov. 2020 and July 2023), available at *https://www.ifrs.org/content/dam/ifrs/supporting-implementation/documents/effects-of-climate-related-matters-on-financial-statements.pdf* (stating that the IFRS has re-published ''this educational material to remind stakeholders of the long-standing requirements in IFRS Accounting Standards to report on the effects of climate-related matters in the financial statements when those effects are material.'').

[2070] *See id.* Notwithstanding the final rules' 1% disclosure threshold, registrants have a fundamental obligation not to make materially misleading statements or omissions in their disclosures and may need to provide such additional information as is necessary to keep their disclosures from being misleading. *See* 17 CFR 230.408 and 17 CFR 240.12b–20.

[2071] *See* Concept Release (discussing materiality in the context of, among other matters, restating financial statements). *See also* Staff Accounting Bulletin No. 99 (Aug. 12, 1999), available at *https://www.sec.gov/interps/account/sab99.htm* (emphasizing that a registrant or an auditor may not substitute a percentage threshold for a materiality determination that is required by applicable accounting principles).

[2072] *See supra* notes 1902 and 1907 and accompanying text.

[2073] *See* 17 CFR 210.14–02(g).

[2074] *See supra* notes 1913 and 1921 and accompanying text.

[2075] *See supra* note 1918 and accompanying text.

[2076] See, *e.g.,* FASB ASC Topic 280 Segment Reporting, FASB ASC 323 Equity Method and Joint Ventures, FASB ASC 810 Consolidations, and FASB ASC 820 Fair Value Measurement.

[2077] To illustrate the application of the attribution principle, if a tornado damages the roof of a registrant's factory and the registrant incurs costs to repair the damage, the tornado would be a significant contributing factor in incurring the costs to repair the roof and the registrant would be required to disclose the entire cost incurred (if the applicable disclosure threshold is triggered), notwithstanding the fact that if the roof had been in place for some period of time there could be other factors that contributed to the roof's condition after the tornado.

[2078] *See* 17 CFR 210.14–02(f). We expect most recoveries to consist of insurance proceeds; however, we appreciate that other transactions or agreements may result in recovery of amounts as a result of severe weather events and other natural conditions, such as guarantees or indemnifications, and therefore have not limited the disclosure to only insurance proceeds.

other natural conditions, including the receipt of insurance proceeds, as part of the Financial Impact Metrics included in the proposed rules. Although we are not adopting the proposed Financial Impact Metrics, along the lines of the proposal, the final rules provide that any recoveries should be disclosed as part of the contextual information required by the rules.[2079] Several commenters raised concerns about the treatment of mitigation efforts, such as insurance, under the proposed rules.[2080] Relatedly, other commenters asserted that registrants should not be permitted to use ''net'' amounts to determine whether disclosure is required under the rules.[2081] Having considered those comments, we are persuaded that permitting a registrant to use a net amount to determine whether capitalized costs, expenditures expensed, charges, and losses have exceeded the disclosure threshold would be inconsistent with the intent of the rules because the net amount could obscure the magnitude of the financial effects of severe weather events and other natural conditions experienced by the registrant. For example, obtaining insurance is a risk mitigation activity that may ultimately result in payment to the registrant for costs and expenditures incurred, but it does not mean that the financial effects did not occur in the first place. The existence of recoveries, such as insurance proceeds, is important information for investors because without it, investors could be under the misperception that severe weather events and other natural conditions have a greater effect on a registrant's operations than is the case. Therefore, requiring registrants to disclose whether they have recognized any recoveries, such as insurance proceeds, as a result of the severe weather events and natural conditions for which capitalized costs, expenditures expensed, charges, or losses have been disclosed, will provide investors with information that is important to understand the financial statement effects of the capitalized costs, expenditures expensed, charges, and losses.[2082] In addition, such disclosure will complement other contextual information that may be disclosed by a registrant such as a discussion of the composition of the capitalized costs, expenditures expensed, charges, or losses.[2083] Similar to the final rules' other disclosure requirements, a registrant will be required to identify where the recoveries are presented in the income statement and the balance sheet.[2084]

v. Severe Weather Events and Other Natural Conditions (Rules 14–02(c) and (d))

A number of commenters requested that the Commission provide additional guidance to help registrants apply the meaning and scope of ''severe weather events and other natural conditions.'' [2085] Some commenters pointed out that the proposed amendments to Regulation S–K used the phrase ''extreme weather events,'' and that the examples of extreme weather events provided in the Proposing Release were different, but overlapping, with the examples of severe weather events included in the proposed amendments to Regulation S–X.[2086] In response to these comments and to provide greater clarity, the final amendments to Regulation S–K and Regulation S–X both use the phrase ''severe weather events.'' [2087] In addition, both include the same examples; specifically, in a change from the proposal, the examples of severe weather events included in the final amendments to Regulation S–X include hurricanes and tornadoes.[2088] These revisions are consistent with our expectation that there will be significant overlap between the severe weather events and other natural conditions a registrant identifies for purposes of disclosure under Rule 14–02 and the types of physical risks (*i.e.,* acute risks (including severe weather events) and chronic risks) a registrant identifies for purposes of disclosure under the amendments to Regulation S–K.

However, in response to questions raised by commenters,[2089] we are clarifying that a registrant is not required to make a determination that a severe weather event or other natural condition was, in fact, caused by climate change in order to trigger the disclosure required by Rule 14–02 related to such event or condition. Requiring such a determination for severe weather events or other natural conditions was not the intent of the proposed amendments to Regulation S–X, and it is not required by Rule 14–02.[2090] In this way, although there is

[2079] *See id. See infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

[2080] *See supra* note 1858 and accompanying text.

[2081] *See supra* note 1861 and accompanying text.

[2082] One commenter appeared to suggest that it would be contrary to accounting principles to require registrants to disclose costs and expenditures that are not net of insurance proceeds. *See* letter from Prologis. However, the final rules do not prescribe how a registrant must account for insurance proceeds in its financial statements, and registrants should prepare their financial statements in accordance with GAAP. Rather, the final rules require a registrant to disaggregate certain costs and expenditures in the notes to the financial statements and require a registrant to disclose separately whether it has recognized any recoveries, such as insurance proceeds, as part of the contextual information that must be provided to help investors understand the financial statement effect.

[2083] *See* 17 CFR 210.14–02(a).

[2084] *See* 17 CFR 210.14–02(f). Under the final rules it is possible that the disclosure threshold could be triggered for a registrant's balance sheet, but not its income statement, and vice versa, resulting in only partial disclosure of capitalized costs, expenditures expensed, charges, and losses related to severe weather events and other natural conditions incurred during the fiscal year. *See supra* section II.K.3.c.ii. The final rules require a registrant to disclose the aggregate amount of any recoveries recognized during the fiscal year as a result of the severe weather events and other natural conditions for which capitalized costs, expenditures expensed, charges, or losses have been disclosed. *See* 17 CFR 210.14–02(f). We acknowledge that in some circumstances this may result in a registrant only disclosing a portion of its expenditures corresponding to the event or condition that resulted in the recovery, which could create the impression that a registrant's recoveries for a particular fiscal year exceed its expenditures related to severe weather events and other natural conditions. However, as explained above, to the extent this is a concern for an issuer, there is nothing in the final rules that would prevent a registrant from disclosing how the severe weather event or other natural condition affected both the income statement and balance sheet, even if the disclosure threshold for one of the financial statements is not triggered. *See supra* section II.K.3.c.ii.

[2085] *See supra* note 1865 and accompanying text.

[2086] *See supra* note 1866 and accompanying text.

[2087] *See* 17 CFR 229.1500 (defining ''physical risks'' to include ''acute risks'' (including severe weather events) and ''chronic risks''); and 17 CFR 210.14–02 (c), (d), and (h). Although we do not believe there was any confusion about this issue, for the avoidance of doubt, we are confirming that ''severe'' modifies both the weather events and other natural conditions. *See* 17 CFR 210.14–02(c), (d), and (h).

[2088] *See* 17 CFR 229.1500; and 17 CFR 210.14–02 (c), (d), and (h). The proposed amendments to Regulation S–K included hurricanes, floods, tornadoes, and wildfires as examples of ''acute risks'' and included sustained higher temperatures, sea level rise, and drought as examples of ''chronic risks.'' These remain unchanged in the final amendments to Regulation S–K. *See* 17 CFR 229.1500. As noted above, the final amendments to Regulation S–X include hurricanes and tornadoes as examples of severe weather events and other natural conditions, in addition to the following examples that were included in the proposed amendments to Regulation S–X and remain unchanged in the final rules: flooding, drought, wildfires, extreme temperatures, and sea level rise. We have retained the ''extreme temperatures'' terminology in the final amendments to Regulation S–X instead of using the ''sustained higher temperatures'' terminology included in the final amendments to Regulation S–K because we want to emphasize that disclosure under Rule 14–02 is only required if the weather event or other natural condition is ''severe.''

[2089] *See supra* note 1873 and accompanying text.

[2090] Similarly, a few commenters raised concerns about determining the cause of a wildfire, *see supra* note 1886 and accompanying text, but as we have stated, registrants will not be required to determine the cause of the severe weather event or natural condition for purposes of providing disclosure under Rule 14–02. The cause of a severe weather event or natural condition is irrelevant in

Continued

significant overlap between the disclosure of climate-related physical risks pursuant to Regulation S–K and the severe weather events and other natural conditions that a registrant identifies pursuant to Rule 14–02, the events covered by Rule 14–02 would also cover severe weather events and other natural conditions that are not necessarily related to climate.[2091]

Since Rule 14–02 requires event-based disclosure, the decision not to require a registrant to determine whether a severe weather event or other natural condition was caused by climate change should simplify the analysis that a registrant has to undertake to determine whether disclosure is required. We expect that the final rules will elicit disclosure appropriately aligned with the corresponding risk-based Regulation S–K disclosure without presenting the financial-statement specific challenges associated with making a determination about whether particular events relate to climate or climate change.

The list of examples of severe weather events and other natural conditions included in Rule 14–02 is not intended to be exclusive or exhaustive, nor are the examples intended to create a presumption about whether disclosure is required for those events in every circumstance.[2092] Rather, under the final rules, registrants will have the flexibility to determine what constitutes a severe weather event or other natural condition based on the particular risks faced by the registrant, taking into consideration the registrant's geographic location, historical experience,[2093] and the financial impact of the event on the registrant, among other factors. We do not agree with those commenters who suggested that we should provide a comprehensive list of severe weather events, or refer to a list from another source, because doing so would be inconsistent with the dynamic nature of these events.[2094] Furthermore, a particular weather event may be ''severe'' in one region but not in another region.

We considered whether the non-exclusive list of examples should be expanded to include other types of severe weather events or other natural conditions identified by commenters in their comment letters;[2095] however, we designed the list as non-exhaustive and non-exclusive because we think it is more appropriate to take a flexible approach to enable registrants to exercise judgment in identifying severe weather events or other natural conditions based on the impacts those events have on their financial condition.

Some commenters asserted that allowing registrants to exercise judgment about which severe weather events or natural conditions to analyze would reduce comparability.[2096] Although more prescriptive requirements can increase comparability, our view is that greater flexibility for registrants to determine which severe weather events and other natural conditions affect them in light of their particular facts and circumstances will yield better disclosures for investors compared to a static list of potential events that may or may not be relevant to every registrant now and in future years. Additionally, requiring registrants to use a prescribed list of events could lead to significant gaps in disclosure over time. We expect that the final rules will give registrants the flexibility to adopt reasonable approaches to identifying severe weather events and other natural conditions and adapt to changing circumstances. As a result, the final rules provide a level of flexibility that even a regularly updated, prescribed list of events would be unable to match—resulting in what we believe is appropriate, decision-useful information to investors.

Some commenters raised questions about how to identify the beginning and ending dates of severe weather events and how to disclose weather events where the impact from the weather event may continue into the future.[2097] We have streamlined the final rules to focus on requiring the disclosure of expenditures for specific transactions that are recorded in a registrant's books and records during the fiscal year, and that are attributable to severe weather events or other natural conditions. This more straightforward approach will make it clearer when disclosure is required and avoid many of the questions raised by commenters in this regard.

vi. Carbon Offsets and Renewable Energy Credits (Rule 14–02(e))

If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve its disclosed climate-related targets or goals, the final rules (Rule 14–02(e)) require registrants to disclose (1) the aggregate amount of carbon offsets and RECs expensed, (2) the aggregate amount of capitalized carbon offsets and RECs recognized, and (3) the aggregate amount of losses[2098] incurred on the capitalized carbon offsets and RECs, during the fiscal year.[2099] As explained above, although the final rules do not include a requirement for registrants to disclose costs and expenditures related to transition activities in the financial statements as proposed,[2100] we think it is appropriate to require registrants to disclose costs, expenditures, and losses related to one type of transition activity—the acquisition[2101] and use of carbon offsets and RECs—because the acquisition and use of carbon offsets and RECs do not present the definitional or scoping concerns raised by commenters with respect to transition activities generally.[2102] Significantly, requiring disclosure of capitalized costs, expenditures expensed, and losses recognized in the notes to the financial statements when carbon offsets or RECs have been used as a material component of a registrant's plan to achieve its disclosed climate-related targets or goals will complement the disclosures required by the amendments to Regulation S–K[2103] and will anchor the

determining whether disclosure is required under Rules 14–01 and 14–02.

[2091] For example, the ''natural conditions'' referenced in Rule 14–02 need not be climate-related, and therefore may include types of non-climate-related occurrences, such as earthquakes, if severe and depending on the registrant's particular facts and circumstances. *See* letter from Chamber. In addition to simplifying the analysis for registrants, as discussed below, disclosure of these non-climate-related severe weather events and other natural conditions is consistent with the other event-based disclosure reflected in the final amendments to Regulation S–X and will elicit material information for investors.

[2092] We believe providing examples of severe weather events and other natural conditions will aid in the comparability of the resulting disclosure while assisting issuers in making the disclosures. *See* Proposing Release, section II.F.2.

[2093] For example, in determining whether high temperatures constitute a severe natural condition, a relevant factor may include average seasonal temperatures.

[2094] *See supra* notes 1867 and 1870 and accompanying text.

[2095] *See, e.g.,* letters from Anthesis (cyclones, water stress, severe participation, and severe wind); Chamber (earthquakes); Climate Advisers (deforestation); and WSP (water stress).

[2096] *See supra* note 1872 and accompanying text.

[2097] *See supra* notes 1881 and 1882 and accompanying text.

[2098] For example, an impairment could result in the recognition of a loss on a capitalized carbon offset.

[2099] *See* 17 CFR 210.14–02(e)(1). The final rules do not prevent registrants from disclosing additional information about other transactions involving their carbon offsets and RECs.

[2100] *See* Proposing Release, section II.F.3. Proposed Rule 14–02(f), which would have required the disclosure of expenditures related to transition activities, provided that a registrant may be required to disclose the amount of expense or capitalized cost, as applicable related to ''offset emissions (purchase of energy credits),'' among other things. *See supra* note 2012.

[2101] Carbon offsets and RECs may be acquired in various ways. For example, they may be purchased or granted.

[2102] *See supra* note 1891 and accompanying text.

[2103] *See* 17 CFR 229.1504(d).

disclosures required outside the financial statements to those required within the financial statements, making a connection which one commenter generally described as having ''a focusing effect'' and increasing ''the reliability and consistency of both.'' [2104] Although we considered applying the one percent disclosure thresholds applicable to severe weather events and other natural conditions to carbon offsets and RECs, using the same trigger for disclosure in the amendments to Regulation S–K and the amendments to Regulation S–X will provide investors with a comprehensive understanding of the registrant's use of carbon offsets and RECs, which will help investors evaluate the role of these instruments in a registrant's climate-related strategy and help them assess the likely financial effects of a disclosed material transition risk.[2105]

In addition, the final rules require registrants to disclose the beginning and ending balances of capitalized carbon offsets and RECs on the balance sheet for the fiscal year.[2106] The beginning and ending balances of carbon offsets and RECs are an important data point for investors to understand as they assess a registrant's transition risks. Specifically, while the disclosure of expenditures related to the acquisition and use of carbon offsets and RECs will provide information about the registrant's activity throughout the fiscal period, it does not provide information about the carbon offsets still available to the registrant for use in future periods, which some commenters indicated is important information.[2107] The requirement to provide the beginning and ending balances will help provide a more complete picture of the financial impact of a registrant's use of carbon offsets and RECs as a material component of its plan to achieve a disclosed target or goal. While this particular data point was not part of the proposal, which would have required disclosure of costs and expenditures related to transition activities more generally, the beginning and ending balances are currently existing information in a registrant's balance sheet and therefore we expect the cost and burdens of disclosing this information to be minimal. The final rules also require a registrant to disclose where on the balance sheet and income statement these capitalized costs, expenditures expensed, and losses are presented.[2108] If a registrant is required to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs, the final rules provide that a registrant must also state, as part of the contextual information required, the registrant's accounting policy for carbon offsets and RECs.[2109] We understand there is currently a diversity in practice in how registrants account for carbon offsets and RECs, and therefore an explanation of the registrant's accounting policy will help enhance the usefulness and comparability of this disclosure for investors.[2110]

vii. Presentation of Disclosure (Rules 14–02(c) and (d))

As discussed above, the final rules (Rule 14–02(c) and (d)) require disclosure of the amount of (1) capitalized costs and charges on the balance sheet, and (2) expenditures expensed as incurred and losses in the income statement, during the fiscal year, as a result of severe weather events and other natural conditions.[2111] Under the final rules, registrants must separately aggregate the (1) capitalized costs and charges on the balance sheet, and (2) expenditures expensed as incurred and losses in the income statement to determine whether the applicable disclosure threshold is triggered and for purposes of disclosure.[2112] The capitalized costs, expenditures expensed, charges, and losses must be segregated between the balance sheet and the income statement depending on which financial statement they are recorded within upon recognition in accordance with applicable GAAP. For each of the balance sheet and income statement disclosures, if the applicable disclosure threshold is met, a registrant is required to disclose the aggregate amount of expenditures expensed and losses and the aggregate amount of capitalized costs and charges incurred during the fiscal year and separately identify where on the income statement and balance sheet these amounts are presented as illustrated in greater detail below.[2113]

With respect to capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs, registrants must disclose these amounts if carbon offsets or RECs have been used as a material component of a registrant's plan to achieve its disclosed climate-related targets or goals.[2114] Unlike the disclosures related to severe weather events and other natural conditions, a registrant is not required to separately determine whether the disclosure threshold is triggered for costs, expenditures, and losses that are recorded on the balance sheet versus the income statement for disclosures related to carbon offsets and RECs.[2115] If disclosure is required because carbon offsets or RECs have been used as a material component of a registrant's plan to achieve its disclosed climate-related targets or goals, then a registrant must separately disclose the following: (1) the aggregate amount of each of the capitalized costs, expenditures expensed, and losses related to carbon

[2104] *See supra* note 1718 and accompanying text. This commenter was referring generally to the Commission's proposal to amend both Regulation S–K and Regulation S–X when it stated its support for anchoring disclosures required outside the financial statements to disclosures required inside the financial statements and was not directly addressing the requirement to disclose expenditure related to carbon offsets or RECs. *See id.* However, this commenter's general assertion is equally applicable to the requirements in the final rules to disclose certain information about carbon offsets and RECs inside and outside the financial statements.

[2105] *See* letter from J. McClellan (stating that a registrant's intent to meet its climate-related targets or goals through any purchase of offsets or RECs ''is directly connected to climate related financial metrics'' and ''[t]here is consensus that significant capital expenditures will be required to meet the most ambitious targets, and investors will want to understand how a registrant is deploying capital against its target.'').

[2106] *See* 17 CFR 210.14–02(e)(1).

[2107] *See, e.g.,* letters from Rockefeller Asset Mgmt. (''It would be helpful to understand a company's intended utilization of carbon offsets and the corresponding quantification of carbon credits that may need to be purchased.''); and Carbon Direct (''Accurate and separate disclosure of . . . the procurement and retirement of carbon offset credits to attempt to compensate for these emissions, are critical for informed investment decisions.'').

[2108] *See* 17 CFR 210.14–02(e)(1).

[2109] *See* 17 CFR 210.14–02(e)(2). *See infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

[2110] On Dec. 15, 2021, the FASB Chair added a research project to explore accounting for regulatory credits (such as carbon offsets and RECs among others). Respondents provided feedback on this project indicating that the lack of guidance in GAAP for accounting for regulatory credits results in a significant diversity in practice. In May 2022, the FASB added a project to its technical agenda on regulatory credits (such as carbon offsets and RECs among others). *See* 2021 FASB Agenda Consultation Report, available at *https://fasb.org/Page/ShowPdf?path=2021%20FASB%20Agenda%20Consultation%20Report.pdf.* In addition, in July 2022, the IASB added a pollutant pricing mechanisms project to their reserve list as a result of its Third Agenda Consultation. The project aims to develop specific requirements for pollutant pricing mechanisms. *See* Third Agenda Consultation Feedback Statement, available at *https://www.ifrs.org/content/dam/ifrs/project/third-agenda-consultation/thirdagenda-feedbackstatement-july2022.pdf.*

[2111] *See* 17 CFR 210.14–02(c) and (d).

[2112] *See* 17 CFR 210.14–02(b), (c), and (d). Similarly, the proposed Expenditure Metrics would have required a registrant to separately aggregate the amount of expenditures expensed and the amount of capitalized costs to determine whether the applicable disclosure threshold was triggered. *See* Proposing Release, section II.F.3.

[2113] *See* 17 CFR 210.14–02(c) and (d).

[2114] *See* 17 CFR 210.14–02(e)(1).

[2115] *See id.*

offsets and RECs during the fiscal year; (2) the beginning and ending balances of capitalized carbon offsets and RECs on the balance sheet for the fiscal year; and (3) where on the balance sheet and the income statement the capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs are presented, as illustrated in greater detail below.[2116]

We are providing the following example to help illustrate the operation of the final rules. Assume a registrant (1) capitalized $1,200,000 of expenditures related to Severe Weather Event A; (2) incurred an impairment charge of $750,000 in the income statement to write-off $750,000 of inventory from the balance sheet related to Natural Condition B; (3) capitalized $1,000,000 of expenditures to replace the inventory written off related to Natural Condition B; (4) expensed $2,000,000 of expenditures related to Severe Weather Event C; and (5) received $400,000 in insurance recoveries related to Severe Weather Event A. The registrant determined that Severe Weather Events A and C and Natural Condition B were significant contributing factors in incurring the capitalized costs, expenditures expensed, charges, losses, and recovery described above. In addition, the registrant used carbon offsets and RECs as a material component of its plan to achieve a disclosed climate-related target or goal, and it capitalized $1,000,000 and expensed $3,000,000 of carbon offsets or RECs during the period. The registrant had a beginning balance of capitalized carbon offsets or RECs of $2,500,000 and ended the year with $500,000 in capitalized carbon offsets or RECs remaining on its balance sheet. The registrant would determine whether the financial statement effects as a result of severe weather events and other natural conditions would trigger the disclosure requirements based on the thresholds, as illustrated below:

Expenditure category	Current fiscal year balances (stockholders' equity from balance sheet, income or loss before income tax expense or benefit from income statement)	Severe weather event A	Natural condition B	Severe weather event C	Percentage impact
Balance Sheet (capitalized costs and charges)	$150,000,000	$1,200,000	$1,750,000		1.97
Income Statement (expenditures expensed as incurred and losses)	75,000,000		750,000	$2,000,000	3.67

In the above example, the expenditures incurred toward Severe Weather Event A was $1,200,000 (capitalized on balance sheet), the capitalized cost, charge, and loss incurred as a result of Natural Condition B was $1,750,000 (charge on balance sheet and loss in income statement of $750,00 and capitalized cost of $1,000,000 on the balance sheet), and the expenditures incurred toward Severe Weather Event C was $2,000,000 (expense in the income statement). The aggregate amount of the absolute value of capitalized costs and charges on the balance sheet ($2,950,000) exceeded the one percent threshold of stockholders' equity, and therefore disclosure would be required for these costs and charges. The aggregate amount of expenditures expensed as incurred and losses in the income statement ($2,750,000) exceeded the one percent threshold of income or loss before income tax expense or benefit, and therefore disclosure would be required for the expenses and loss. In addition, the registrant used carbon offsets and RECs as a material component of its plan to achieve a disclosed climate-related target or goal, and therefore disclosure would be required for the carbon offsets and RECs. The registrant's resulting disclosure of such costs and expenditures may be provided, for example, as illustrated in the following table (excluding disclosure of contextual information):

Note X. Financial statement effects related to severe weather events and other natural conditions and carbon offsets and renewable energy credits:

Category	Balance sheet		Income statement		
	Year ended Dec. 31,		Year ended Dec. 31,		
	20X2	20X3	20X1	20X2	20X3
Severe Weather Events and Other Natural Conditions.					
Capitalized Costs and Charges:					
Inventory	$–	[a] $250,000			
PP&E	$–	1,200,000			
Expenditures Expensed as Incurred and Losses:					
General & Administrative			$–	$–	$(2,000,000)
Other Income/(Loss)			$–	$–	(750,000)

[a] $1,000,000 + ($750,000) = $250,000.

In this example, the required contextual information may include disclosure such as the specific severe weather events, natural conditions, and transactions that were aggregated for purposes of determining the effects on the balance sheet and income statement amounts and, if applicable, policy decisions made by a registrant, such as any significant judgments made to determine the amount of capitalized costs, expenditures expensed, charges,

[2116] *See id.*

and losses.[2117] Also, as part of the contextual information, a registrant would be required to disclose the $400,000 in insurance recoveries recognized in the consolidated financial statements as a result of Severe Weather Event A, including identification of where it is presented in the income statement or balance sheet.

CARBON OFFSETS AND RECs

Carbon Offsets and RECs at Jan. 1, 20X3	$2,500,000
Capitalized Carbon Offsets and RECs	1,000,000
Expensed Carbon Offsets and RECs	(3,000,000)
Carbon Offsets and RECs at Dec. 31, 20X3	$500,000

Carbon offsets and RECs are presented in the Intangible Assets line item on the balance sheet and expensed in the General and Administrative line item on the income statement.[a]

[a] As noted above, there is diversity in practice in accounting for carbon offsets and RECs. *See supra* note 2110 and accompanying text. In this example, the entity capitalizes all of its costs of carbon offsets and RECs and presents these amounts within the intangible assets line item. We are providing this example for illustrative purposes only and this is not meant to indicate a preferred method of accounting or presentation. Registrants should consider their specific facts and circumstances when determining the appropriate accounting treatment and disclose their accounting policy in accordance with 17 CFR 210.14–02(e)(2).

In this example, the required contextual information would include the registrant's accounting policy for the carbon offsets and RECs.[2118]

Currently, expenditures, costs, charges, losses, and recoveries may appear in different places within the financial statements (*e.g.,* in one or more asset line items or expense line items on the balance sheet or income statement, respectively). The final rules address this dispersed presentation by requiring registrants to first identify the relevant expenditures, costs, charges, losses, and recoveries and then separately disclose where on the balance sheet and income statement these costs and expenditures are presented.[2119] Such an approach should provide insight into, and context for understanding, the nature of a registrant's business, and provide consistency and comparability for users of the financial statements.

Similar to the examples of disclosure that were included in the proposed rules, the final rules state that a registrant may be required to disclose the aggregate amount of expenditures expensed and losses as incurred as a result of severe weather events and other natural conditions, for example, to restore operations, relocate assets or operations affected by the event or condition, retire affected assets, repair affected assets, recognize impairment loss of affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations.[2120] The final rules also state that a registrant may be required to disclose the aggregate amount of capitalized costs and charges incurred as a result of severe weather events and other natural conditions, for example, to restore operations, retire affected assets, replace or repair affected assets, recognize an impairment charge for affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations.[2121]

4. Financial Estimates and Assumptions (Rule 14–02(h))

a. Proposed Rules

The Commission proposed to require registrants to disclose whether the estimates and assumptions used to produce their consolidated financial statements were impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions or any climate-related risks identified by the registrant pursuant to Item 1502(a) of Regulation S–K.[2122] For such impacts, registrants would have been required to provide a qualitative description of how these events impacted the development of the estimates and assumptions used in the preparation of their financial statements.[2123]

Like the other proposed financial statement metrics, the proposed rules also included a provision that would have required separate disclosure focused on transition activities, including identified transition risks.[2124] If the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, a potential transition to a lower carbon economy or any climate-related targets it disclosed, the registrant would have been required to provide a qualitative description of how the development of the estimates and assumptions were impacted by such a potential transition or the registrant's disclosed climate-related targets.[2125] If a registrant elected to disclose the impact of an opportunity on its financial estimate and assumptions, then it would have been required to do so consistently and would have been required to follow the same applicable presentation and disclosure requirements.[2126]

The Commission explained in the Proposing Release that estimates and assumptions are currently required for accounting and financial reporting purposes (*e.g.,* projected financial information used in impairment calculations, estimated loss contingencies, estimated credit risks, commodity price assumptions) and expressed its belief that the proposed disclosures could provide decision-useful information and transparency to investors about the impact of climate-related events and transition activities, including disclosed targets and goals, on

[2117] *See* 17 CFR 210.14–02(a). *See infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

[2118] *See* 17 CFR 210.14–02(a) and (e)(2).

[2119] *See* 17 CFR 210.14–02(c), (d), (e)(1), and (f).

[2120] *See* 17 CFR 210.14–02(c). In response to a question raised by a commenter, with respect to the capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, we are clarifying that the final rules do not require a registrant to disclose both the capitalization of expenditures and subsequent expense of expenditures in the same period. *See supra* note 1989. Rather, the final rules require the disclosure of expenditures expensed and losses ''as incurred.'' See 17 CFR 210.14–02(c). For example, a registrant that purchased new machinery to replace machinery that was damaged due to a severe weather event would be required to disclose the cost to purchase the new machinery (assuming the relevant disclosure threshold is met), but the registrant would not be required to disclose (or include in the numerator for purposes of calculating the disclosure threshold) the subsequent depreciation associated with the machinery.

[2121] *See* 17 CFR 210.14–02(d).

[2122] *See* Proposing Release, section II.F.4.

[2123] *See id.*

[2124] *See id.*

[2125] *See id.*

[2126] *See id.*

such estimates and assumptions.[2127] In addition, the Commission stated that such disclosure could allow investors to evaluate the reasonableness of the registrant's estimates and assumptions, which are used to prepare the registrant's financial statements.[2128] The Proposing Release noted that current accounting standards require registrants to consider how climate-related matters may intersect with and affect the financial statements, including their impact on estimates and assumptions. However, the Proposing Release explained that the nature of climate-related events and transition activities discussed in the proposed rules may manifest over a longer time horizon, and therefore targeted disclosure requirements may be necessary to elicit decision-useful information for investors in a consistent manner.[2129]

In addition, the Commission noted in the Proposing Release that some registrants have already provided disclosure along the lines of the proposed requirements, which the Commission said provided support for the feasibility of making such disclosures.[2130] The Proposing Release provided examples of financial statement estimates and assumptions that may require disclosure pursuant to the proposed rules, such as those related to the estimated salvage value of certain assets, estimated useful life of certain assets, projected financial information used in impairment calculations, estimated loss contingencies, estimated reserves (such as environmental reserves or loan loss allowances), estimated credit risks, fair value measurement of certain assets, and commodity price assumptions.[2131]

b. Comments

A number of commenters stated that they supported the proposal to require the disclosure of whether and how the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions and a potential transition to a lower carbon economy, or any climate-related targets disclosed by the registrant.[2132] Several commenters stated that the proposed rules would provide useful information for investors.[2133] For example, one commenter asserted that disclosures of registrants' estimates and assumptions are ''[e]qually if not more important'' than the line item disclosures themselves.[2134] Another commenter stated that requiring the disclosure of impacts on estimates and assumptions is necessary because for financial risk to be assessed and quantified using financial metrics, investors need to understand the degree of uncertainty of projections and be able to use that information to alter investment choices.[2135] One commenter stated that it would use disclosures about impacts on estimates and assumptions to uncover emerging trends affecting the registrant or other companies similarly situated with respect to the climate related event.[2136]

The Commission included a request for comment in the Proposing Release asking if it should require disclosure of only significant or material estimates and assumptions that were impacted by climate-related events and transition activities, or whether it should require disclosure of only estimates and assumptions that were materially impacted by climate-related events and transition activities.[2137] A number of commenters recommended that the Commission only require the disclosure of estimates and assumptions that were materially impacted by climate-related events.[2138] On the other hand, a few commenters recommended that the Commission only require the disclosure of material estimates and assumptions impacted by climate-related events.[2139] A few commenters recommended that the Commission require disclosure of material estimates and assumptions that were materially impacted by climate-related events.[2140] At least two commenters more generally stated that the proposed estimates and assumptions disclosure should be qualified by materiality.[2141] Some of these commenters asserted that if not qualified by materiality, the proposed rules would result in a large volume of immaterial information.[2142] On the other hand, one commenter stated that the requirement should not be limited to only significant or material estimates and assumptions because it would create a risk that registrants would fail to produce decision-useful information for investors.[2143]

A few commenters stated that they did not support the proposed disclosures of estimates and assumptions.[2144] For example, some commenters pointed out that existing accounting standards already require the disclosure of material financial estimates and related assumptions, which would include those impacted by climate-related risks.[2145] Another commenter stated that amending Regulation S–X to require these disclosures when, in its view, existing standards already require this disclosure could lead registrants to include a statement in their reports that climate-related events were not considered (if they were not a key assumption in calculating estimates), which could imply a negative connotation that, in fact, they should have been considered.[2146]

Some commenters stated that it would be challenging to provide the disclosures,[2147] or stated that additional guidance was needed.[2148] For example, one commenter stated that without additional guidance it would be

[2148] *See, e.g.,* letters from Ernst & Young LLP; and PwC.

challenging for registrants to develop estimates to isolate the relevant exposures.[2149] Another commenter stated that it would be helpful to provide additional guidance about when the disclosures would be triggered when there may be more than one contributing factor.[2150] This commenter suggested focusing on changes to estimates and assumptions primarily or solely due to climate rather than instances when changes ''are inextricably linked to other contributing factors.'' [2151] Another commenter suggested that the Commission should clarify that registrants have an existing obligation to disclose climate-related financial estimates and assumptions and the proposed rule is providing guidance on the form and location of the already required disclosure.[2152]

Some commenters stated that the scope of the proposed disclosures should be limited to critical accounting estimates.[2153] In particular, one commenter suggested it would be more meaningful if the proposed requirements were included in a registrant's MD&A section of its periodic reports along with the other critical accounting estimates.[2154] One commenter stated that the Commission should not limit disclosure to whether and how climate-related events and transition activities affected critical accounting estimates.[2155] This same commenter also stated that the Commission should not limit the disclosures of impacts to financial estimates and assumptions to only a subset of risks.[2156]

The Commission included a request for comment in the Proposing Release asking if, for the proposed financial statement metrics, it should require a registrant to disclose material changes in estimates, assumptions, or methodology among fiscal years and the reasons for those changes, and if so, whether the Commission should require the material changes disclosure to occur on a quarterly, or some other, basis.[2157] Some commenters stated that registrants should be required to disclose material changes in estimates and assumptions for the proposed financial statement metrics.[2158] A few of these commenters noted that current regulations already require disclosure of material changes in estimates and assumptions.[2159] However, some commenters asserted that current regulations may not be effectively eliciting this disclosure.[2160] One commenter suggested that the Commission should require material changes in estimates and assumptions to be provided on a quantitative basis by financial statement caption because the information would be useful in showing the variability of key estimates and assumptions going forward and their future impact on cash flows.[2161] With respect to timing, one commenter suggested that disclosures regarding material changes in estimates and assumptions could be made on an annual basis with prior year changes and adjustments noted.[2162] Conversely, one commenter stated that registrants should not be required to disclose material changes in estimates and assumptions.[2163] In addition, one commenter asked the Commission to clarify that nothing in the proposed rules would create an affirmative obligation for a foreign private issuer to provide interim updates for any material changes beyond what they would already be required to disclose on Form 6–K.[2164]

c. Final Rules

We are adopting the proposed requirements (Rule 14–02(h)) for registrants to disclose impacts on financial estimates and assumptions with some modifications.[2165] First, the Commission proposed to require a registrant to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, a potential transition to a lower carbon economy or any climate related targets disclosed by the registrant.[2166] The final rules, instead of requiring disclosures related to ''a potential transition to a lower carbon economy,'' require registrants to disclose financial estimates and assumptions related to a narrower category of transition activities, specifically, ''any . . . transition plans disclosed by the registrant.'' [2167] As noted above, commenters, including registrants, raised concerns about the scope of transition activities and potential difficulties with identifying and quantifying their impacts when they overlapped with a registrant's ordinary business decisions.[2168] To reduce the potential burden on registrants, we have decided to narrow the scope of transition activities covered by this aspect of the final rule to only those transition plans disclosed by the registrant.[2169] Consistent with the proposed rules, the final rules also require a registrant to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, any climate-related targets disclosed by the registrant.[2170]

Second, consistent with commenters' suggestion,[2171] we are modifying the proposed requirements by adding a materiality qualifier in the final rules. The final rules require registrants to disclose whether the estimates and assumptions used to prepare the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as hurricanes, tornadoes,[2172] flooding, drought, wildfires, extreme temperatures, and sea level rise, or any climate-related targets or transition

[2172] We have added hurricanes and tornadoes to the list of severe weather events and other natural conditions included in Rule 14–02(h) to be consistent with the addition of these two types of severe weather events or natural conditions in Rule 14–02(c) and (d). *See supra* section II.K.3.c.v.

plans disclosed by the registrant.[2173] If so, then consistent with the proposed rules, the final rules require registrants to provide a qualitative description of how the development of such estimates and assumptions were impacted by the events, conditions, and disclosed targets or transition plans identified above.[2174]

As described above, a number of commenters indicated that if we adopted a requirement to disclose impacts on estimates and assumptions, then it would be appropriate to include a materiality qualifier in the final rules, and those commenters recommended various permutations related to the materiality qualifier.[2175] After considering this feedback, we have modified the final rules to focus on estimates and assumptions that have been materially impacted because a registrant may use numerous inputs and assumptions, including qualitative considerations, when developing accounting estimates. Focusing on estimates and assumptions that were materially impacted by the events, conditions, and disclosed targets and plans will help to reduce operational challenges and burdens that could arise if registrants were required to assess all impacts when determining the disclosures that would be required. We considered whether it would be appropriate to instead include two materiality qualifiers and require the disclosure of material estimates and assumptions that were materially impacted. However, we think that adding a second materiality qualifier is unnecessary because the disclosures that would result from the two different alternatives would likely be the same. Namely, we think it is unlikely that there could be ''material'' impact to an estimate or assumption if the estimate or assumption itself was not material to the financial statements.[2176] We also considered whether to require disclosure of any impacts to material estimates and assumptions or to not include any materiality qualifiers in the final rules, but we think the approach we are taking appropriately balances investors' need for decision-useful information with a desire to reduce operational challenges for registrants.

We continue to believe that disclosure of whether and how climate-related events impacted the development of financial estimates and assumptions will provide important information to investors. As the Commission stated in the Proposing Release, such disclosure will provide insight into the impacts described above on the registrant's financial statements and will allow investors to assess the reasonableness of the registrant's estimates and assumptions.[2177] Among other things, these disclosures will allow investors to evaluate material impacts on future cash flows, which will help investors make more informed investing decisions. We also agree with those commenters that stated disclosure of impacts on financial estimates and assumptions would enable investors to evaluate a registrant's ''physical risk resilience,'' [2178] or would inform investors ''of the scope, likelihood, and magnitude of potential risks as perceived by the company'' and enable ''comparative analysis against peers.'' [2179]

Some commenters stated that they did not support the proposed requirement to disclose financial estimates and assumptions because existing accounting standards already require the disclosure of this information and therefore this additional requirement would be unnecessary or could be confusing for investors.[2180] Although we agree with commenters that U.S. GAAP and IFRS require the disclosure of material estimates and assumptions in many circumstances,[2181] including significant inputs associated with material estimates and assumptions, the final rules will enhance transparency and consistency by requiring registrants to disclose how estimates and assumptions are materially impacted by severe weather events, natural conditions, and disclosed targets and transition plans, which may require more specific disclosures in certain situations than is currently required under applicable accounting standards.

In addition, although we agree with commenters that the proposed requirements share similarities with critical accounting estimates,[2182] we do not think those disclosures obviate the need for this requirement because the final rules go further by requiring specific disclosure about how estimates and assumptions are materially impacted by risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions and any climate-related targets or transition plans disclosed by the registrant. While critical accounting estimates are often presented outside of the financial statements, the disclosure regarding material impacts to estimates and assumptions will be located in a single note to the financial statements along with the other financial statement disclosures we are adopting, which will enhance the usefulness of the disclosure to investors. Furthermore, we do not think the required disclosure will be confusing to investors. To the contrary, it will provide investors with more decision-useful information about the estimates and assumptions used to prepare the financial statements than is required under applicable accounting standards. Registrants are presumably making business decisions and taking actions to achieve their disclosed transition plans and targets and these decisions may have material impacts on their estimates and assumptions. Providing investors with an understanding of these impacts will help them better evaluate a registrant's financial position, performance, and future cash flows. Other commenters raised concerns about registrants' abilities to isolate the relevant impacts when there may be more than one contributing factor.[2183] We expect these concerns to be mitigated to some extent by the final rules, which include a materiality qualifier and thereby focus management on a narrower category of impacts for which management should have greater insight. In addition, the final rules require registrants to provide a qualitative description of the impacts, which generally is less burdensome to produce than if management had to identify a specific amount.

In addition, we are reiterating a few examples that were included in the Proposing Release where severe weather events, natural conditions, or a registrant's disclosed targets or transition plans could affect a

[2173] *See* 17 CFR 210.14–02(h). As previously discussed, the final rules include similar requirements under subpart 1500 of Regulation S–K to disclose material impacts on financial estimates and assumptions as a direct result of disclosed actions under a transition plan or as a direct result of a disclosed target or goal or actions taken to make progress toward meeting the target or goal. *See* 17 CFR 229.1502(e), discussed *supra* section II.D.2, and 17 CFR 229.1504(c)(2), discussed *supra* section II.G.3. When responding to these Regulation S–K provisions, a registrant may cross-reference from the disclosure provided under 17 CFR 210.14–02(h) to the extent such disclosure is responsive to these subpart 1500 provisions.

[2174] *See* 17 CFR 210.14–02(h). For the avoidance of doubt, if the registrant's estimates and assumptions were not materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, or any climate-related targets or transition plans disclosed by the registrant, then no disclosure is required under Rule 14–02(h).

[2175] *See supra* notes 2138–2141 and accompanying text.

[2176] *See supra* note 381 and accompanying text.

[2177] *See* Proposing Release, section II.F.4.

[2183] *See supra* note 2150 and accompanying text.

registrant's financial estimates and assumptions.[2184] For example, a registrant's climate-related targets and related commitments, such as a disclosed commitment to achieve net-zero emissions by 2040, may impact certain accounting estimates and assumptions. Also, for example, if a registrant disclosed a commitment that would require decommissioning an asset by a target year, then the registrant's useful life and salvage value estimates used to compute depreciation expense as well as its measurement of asset retirement obligation should reflect alignment with that commitment. Financial statement estimates and assumptions that may require disclosure pursuant to the final rules may include those related to the estimated salvage value of certain assets, estimated useful life of certain assets, projected financial information used in impairment calculations, estimated loss contingencies, estimated reserves (such as environmental reserves, asset retirement obligations, or loan loss allowances), estimated credit risks, fair value measurement of certain assets, and commodity price assumptions.

Finally, although we considered whether it would be appropriate to require disclosure of material changes in estimates, assumptions, or methodology among fiscal years and the reasons for those changes,[2185] at this time we are not including such a requirement in the final rules. The narrower scope of the final rules, which is focused on discrete transactions that are currently recognized in a registrant's financial statements in accordance with GAAP, reduces the need for explicit requirements regarding material changes in estimates and assumptions underlying the financial disclosures. Current requirements under GAAP would continue to apply to material changes in estimates and assumptions.[2186] In addition, in response to the commenter that asked for clarification about whether foreign private issuers would have to provide interim updates,[2187] we are clarifying that the final rules will not affect existing filing obligations under Form 6–K.

5. Opportunities

a. Proposed Rules

The proposed rules would have permitted a registrant, at its option, to disclose the impact of any opportunities arising from severe weather events and other natural conditions, any impact of efforts to pursue climate-related opportunities associated with transition activities, and the impact of any other climate-related opportunities, including those identified by the registrant pursuant to proposed Item 1502(a) of Regulation S–K, on any of the financial statement metrics.[2188] The Proposing Release explained that if a registrant makes a policy decision to disclose the impact of a climate-related opportunity on the proposed financial statement metrics, it must do so consistently (*e.g.,* for each fiscal year presented in the consolidated financial statements, for each financial statement line item, for all relevant opportunities identified by the registrant) and must follow the same presentation and disclosure threshold requirements applicable to the required disclosures related to the financial impact metrics and expenditure metrics.[2189]

b. Comments

A number of commenters stated that they supported the proposal to make the disclosure of climate-related opportunities optional.[2190] Commenters stated that investors would benefit from this information about positive impacts,[2191] including because it is key for investors to understand how a company is reducing its climate-related financial risks.[2192] However, a few of these commenters explained that concerns about requiring the sharing of sensitive or competitive business information weighed in favor of making the proposed disclosure optional.[2193] In addition, some commenters stated that they supported the proposal to require the disclosure of opportunities to be made consistently.[2194]

One commenter asserted that the disclosure of opportunities in the financial statements should be limited to amounts that can be objectively verified and reliably quantified.[2195] Similarly, another commenter stated it should be limited to ''virtually certain opportunities'' to avoid misleading investors.[2196] A few commenters expressed concerns about potential greenwashing related to the disclosure of opportunities.[2197] However, one commenter explained that, although there is a risk that the disclosure of opportunities could lead to greenwashing, by including the information in a filing with the Commission, registrants would be subject to liability and would be required to disclose their assumptions and methodologies.[2198]

Other commenters stated that the disclosure of opportunities should not be permitted in the audited financial statements.[2199] For example, one commenter explained that opportunities should not be disclosed in the financial statements because opportunities appear to be forward-looking and speculative and may be subject to management bias.[2200] Some commenters stated that it may be difficult to develop internal controls for the disclosure of opportunities [2201] or that opportunities may be complex to audit.[2202] A few commenters suggested that registrants could address opportunities in the MD&A section of their periodic reports.[2203]

Some commenters stated that they would support the Commission mandating the disclosure of opportunities.[2204] One of these commenters stated that mandated disclosure of opportunities would facilitate an understanding of the strategic or competitive advantages a company may have in terms of furthering physical risk resilience.[2205] Another commenter expressed support for mandatory disclosure of climate-related opportunities except when such opportunities are unrelated to the registrant's core or existing lines of

business.[2206] Relatedly, one commenter requested that the Commission clarify that the disclosure of opportunities is optional because the interaction between proposed rules 14–02(b) and (j) could give the impression that disclosure of opportunities is required if the impact is greater than one percent.[2207]

A few commenters recommended revisions or clarifications to the definition of opportunities. For example, one commenter pointed out that financial statements typically include backward-looking financial results and therefore the use of the term opportunities in the financial statements should be clarified.[2208] Another commenter asserted that the definition of ''climate-related opportunities'' provided in proposed Item 1500(b) is confusing when applied to the disclosure of opportunities in the financial statements, which would be made on a line item basis, because the definition refers to the actual or potential positive impacts of climate-related conditions and events on a registrant's consolidated financial statements ''as a whole.'' [2209] Other commenters suggested that the definition of climate-related opportunities should be revised to include activities in the forestry and forest products sector [2210] and the positive impacts of a company's competitive positioning, brand strength, and reputation.[2211] One commenter asserted that the disclosure of opportunities should not impact the reporting relevant for the disclosure thresholds because it could potentially discourage companies from disclosing impacts from opportunities and triggering the threshold.[2212] One commenter requested that the Commission provide additional guidance around the definition of climate-related opportunities.[2213]

c. Final Rules

In light of the changes to other aspects of the final rules, we have decided not to adopt the proposed rules related to the disclosure of opportunities. First, as discussed above, we have decided not to adopt: (1) the proposed Financial Impact Metrics,[2214] (2) the proposed requirement to disclose costs and expenditures related to general transition activities in the financial statements (*e.g.,* a portion of the proposed Expenditure Metrics), and (3) the proposed requirement to disclose the impacts of any climate-related risks identified pursuant to proposed Item 1502(a) of Regulation S–K. The proposed rules would have permitted a registrant to disclose the impact of any opportunities with respect to each of these disclosure items.[2215] Because these disclosure items will not be included in the final rules, there is no reason to adopt final requirements regarding the disclosure of opportunities with respect to these items.

Second, as discussed above in section K.3.c, in a modification from the proposed rules, the final rules require the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events.[2216] Unlike the proposed rules, the final rules do not make a distinction between ''risks'' and ''opportunities'' in the financial statement disclosure requirements. Therefore, we do not think it is necessary to retain a provision related to the disclosure of opportunities. To the extent that a registrant incurs costs and expenditures as a result of a severe weather event (applying the final rules' attribution principle), the registrant would be required to disclose these costs and expenditures under the final rules regardless of the reason for the expenditure (assuming the disclosure threshold is met). However, we do not expect that registrants will commonly incur costs, expenditures, charges, and losses as a result of severe weather events or other natural conditions in furtherance of an opportunity. In this regard, our expectation is consistent with the Proposing Release, which did not provide any examples of opportunities associated with severe weather events and other natural conditions in the discussion of the proposed Expenditure Metrics.[2217] To the extent that a registrant identifies a cost or expenditure incurred as a result of severe weather events or other natural conditions that it believes was incurred in furtherance of an opportunity, disclosure of the cost or expenditure would be required (assuming the other requirements of the final rules are satisfied) as explained above. However, the registrant would not be required to identify any costs or expenditures disclosed under Article 14 as related to an ''opportunity'' as explained in greater detail below.[2218]

The same analysis applies to opportunities related to carbon offsets and RECs. The requirement in the final rules to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs was not included in the proposed rules because the proposed rules required the disclosure of costs and expenditures related to transition risks more generally, and therefore the proposed rules did not separately address opportunities related to carbon offsets and RECs. Under the final rules, a registrant is required to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs regardless of the reason for the expenditure (assuming the disclosure threshold is met) for the same reasons as discussed in the previous paragraph with respect to severe weather events. We expect that registrants will most commonly incur costs, expenditures, and losses in connection with the acquisition and use of carbon offsets and RECs as part of a strategy to mitigate transition *risk* as opposed to in furtherance of an *opportunity*. However, to the extent that a registrant incurs such costs, expenditures, and losses in furtherance of an opportunity, the registrant would not be required to identify any amounts disclosed under the final rules as related to an ''opportunity'' as explained in greater detail below.

Third, as discussed above in section K.4, we are adopting Rule 14–02(h),

[2206] *See* letter from We Mean Business.

[2207] *See* letter from Deloitte & Touche.

[2208] *See* letter from CFA Institute.

[2209] *See* letter from Chamber.

[2210] *See* letter from NAFO.

[2211] *See* letter from Moody's.

[2212] *See* letter from Morningstar.

[2213] *See* letter from PwC.

[2214] *See supra* note 1735 for an explanation regarding the overlap between the proposed Financial Impact Metrics and the proposed Expenditure Metrics.

[2215] *See* Proposing Release, sections II.F.2, 3, and 4.

[2216] *See* 17 CFR 210.14–02(c) and (d). The proposed rules would have required the disclosure of costs and expenditures to ''mitigate the risks from severe weather events and other natural conditions.'' *See* Proposing Release, section II.F.3.

[2217] *See* Proposing Release, section II.F.3 (stating, in the discussion of the proposed Expenditure Metrics, that a registrant may choose to disclose the impact of efforts to pursue climate-related opportunities associated with transition activities but remaining silent with respect to opportunities for costs and expenditures related to severe weather events and other natural conditions).

[2218] The same analysis applies to opportunities related to carbon offsets and RECs. The requirement in the final rules to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs was not included in the proposed rules because the proposed rules required the disclosure of costs and expenditures related to transition risks more generally, and therefore the proposed rules did not separately address opportunities related to carbon offsets and RECs. Under the final rules, a registrant is required to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs regardless of the reason for the expenditure (assuming the disclosure threshold is met) for the same reasons as discussed in this paragraph with respect to severe weather events. *See* 17 CFR 210.14–02(e).

which we have modified from the proposal, to require registrants to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions or any climate-related targets or transition plans disclosed by the registrant.[2219] After further consideration, we believe that including a provision regarding the disclosure of the impact of opportunities on the financial estimates and assumptions is also unnecessary. That is because Rule 14–02(h) requires a registrant to disclose the ''known impacts'' on its financial estimates and assumptions and ''impacts'' is not limited to negative impacts.[2220] Nor does ''known impacts'' draw a distinction between the impacts resulting from ''risks'' or ''opportunities.'' In other words, to the extent that a registrant's financial estimates and assumptions are materially impacted by severe weather events or other natural conditions or disclosed targets or transition plans, the registrant would be required to disclose this material impact under the final rules regardless of the reason for the impact.[2221] Therefore, we are not adopting the proposed rules related to the voluntary disclosure in the financial statements of the impact of any opportunities related to financial estimates and assumptions.

The approach we are taking in the final rules will mitigate many of the concerns that commenters raised about the disclosure of opportunities, while still providing investors with decision-useful information about a registrant's capitalized costs, expenditures expensed, charges, losses, and material impacts to estimates and assumptions. As discussed above, the final rules do not distinguish between ''risks'' and ''opportunities'' in requiring the disclosure of capitalized costs, expenditures expensed, charges, losses, and material impacts to estimates and assumptions, and registrants will not be required to identify any amounts disclosed under the final rules as related to a ''risk'' or ''opportunity.'' Furthermore, any capitalized costs, expenditures expensed, charges, losses, and material impacts to financial estimates and assumptions required to be disclosed under the final rules are limited to those that a registrant has actually incurred and recorded in its books and records. These aspects of the final rules should alleviate commenters' concerns about the potential for greenwashing,[2222] issues regarding auditability,[2223] and concerns that registrants could be required to disclose sensitive or competitive business information related to opportunities.[2224] Similarly, commenters' concerns about the definition of ''opportunities'' as applied to the financial statement disclosures[2225] are rendered moot because, as explained above, the final rules will not require registrants to identify particular capitalized costs, expenditures expensed, charges, losses, or material impacts to estimates and assumptions as derived from an opportunity, and furthermore the final rules no longer include a definition of opportunities.[2226]

6. Financial Statement Disclosure Requirements

a. Contextual Information (Rule 14–02(a)) and Basis of Calculation (Rule 14–01(c))

i. Proposed Rules

In the Proposing Release, the Commission explained that because the proposed financial statement metrics would involve estimation uncertainties driven by the application of judgments and assumptions, similar to other financial statement disclosures, registrants would be required to disclose contextual information to enable a reader to understand how it derived the financial statement metrics, including a description of significant inputs and assumptions used, and if applicable, policy decisions made by the registrant to calculate the metrics.[2227]

To avoid potential confusion, maintain consistency with the rest of the financial statements, and to aid comparability, the Commission proposed that registrants would be required to calculate the financial statement metrics using financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements included in the filing.[2228] Therefore, registrants would have to include in any such calculation financial information from subsidiaries.[2229]

The Commission also proposed basis of calculation requirements providing that a registrant would be required to apply the same set of accounting principles that it is required to apply in preparation of the rest of its consolidated financial statements included in the filing, whenever applicable.[2230]

ii. Comments

Many of the commenters that specifically addressed the proposed requirement to provide contextual information supported it.[2231] Commenters who supported the proposal generally stated that contextual information would provide important information to investors and would help them understand the financial statement disclosures.[2232] One commenter stated that the requirement to provide contextual information would make comparisons easier across registrants.[2233] Another commenter confirmed that it would use contextual information in evaluating a registrant's securities.[2234]

A few commenters specifically disagreed with the proposal to require contextual information.[2235] One commenter expressed concern that a registrant would be required to make many assumptions and policy decisions in order to disclose contextual information and asserted that the proposed requirement could result in inconsistent and incomparable information that is not useful for

[2235] *See, e.g.,* letters Corteva; and Energy Transfer.

investors.[2236] Another commenter stated that the Proposing Release does not provide any guidance on the necessary level of detail required for contextual information and that contextual information will not help registrants distinguish between climate and non-climate related activities or help registrants determine how to allocate impacts to particular line items.[2237] One commenter stated that while it supported the need for transparency in definitions and methodologies used, it believed it would be possible to simplify the requirement to provide contextual information, in particular, by making the information required in the audited financial statements less prescriptive.[2238] Finally, in the Proposing Release, the Commission requested comment on whether providing additional examples or guidance would assist registrants in disclosing contextual information. Commenters had different views on whether additional examples or guidance would be helpful, but generally did not provide the Commission with any specific recommendations.[2239]

Commenters who addressed the issue generally agreed with the proposal to require registrants to calculate the financial statement metrics using financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements and to use the same accounting principles that the registrant is required to apply in preparing the rest of its consolidated financial statements including in the filing.[2240] One commenter stated that applying the same set of accounting principles consistently throughout a registrant's consolidated financial statements is important and would aid comparability.[2241] Another commenter asked the Commission to clarify the phrase ''whenever applicable'' as used in proposed Rule 14–01(c)(2), which directs a registrant to, ''whenever applicable, apply the same accounting principles that it is required to apply in the preparation of the rest of its consolidated financial statements . . . .'' [2242] This commenter stated that the phrase ''whenever applicable'' is confusing because it is presumed that GAAP applies to the proposed financial statement metrics and therefore the Commission should clarify any circumstances it is aware of where the accounting principles would conflict with, or be inconsistent with, GAAP.[2243] With respect to the proposed requirement to use financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements, one commenter stated that the proposed rule ''makes no allowance for wholly-owned subsidiaries, which may lead to duplication and double counting.'' [2244]

In addition, most commenters supported requiring the application of existing GAAP to the proposed financial statement metrics.[2245] However, a number of commenters raised concerns that certain of the proposed financial statement metrics would not necessarily comport with GAAP, including amounts for lost revenues, cost savings, or cost reductions.[2246] In addition, in response to a question in the Proposing Release, certain commenters stated that the proposed financial statement metrics should be calculated at a reportable segment level when a registrant has more than one reportable segment, as defined by FASB ASC Topic 280 *Segment Reporting,* or presented by geographic areas that are consistent with the registrant's reporting pursuant to FASB ASC Topic 280–10–50–41.[2247] On the other hand, some commenters stated that they did not support calculating and presenting the disclosures at a segment or geographic level because it would be too complex or would result in the disclosure of irrelevant information.[2248]

iii. Final Rules

After consideration of the comments, we are adopting the requirement (Rule 14–02(a)) to provide contextual information with certain clarifying modifications. We have decided to include in the text of the final rules two additional types of contextual information a registrant is required to disclose.[2249] In addition to the types of contextual information included in the proposed rules, registrants will also be required to disclose significant judgments made and other information that is important to an investor's understanding of the financial statement effect.[2250] Therefore, under the final rules, a registrant must ''[p]rovide contextual information, describing how each specified financial statement effect . . . was derived, including a description of significant inputs and assumptions used, significant judgments made, [and] other information that is important to understand the financial statement effect and, if applicable, policy decisions made by the registrant to calculate the specified disclosures.'' [2251] Similar to the Proposing Release, in the discussion of the financial statement disclosures above, we provided certain non-exclusive examples of the types of contextual information that registrants may be required to disclose depending on the particular facts and circumstances. We agree with the commenters who stated that contextual information will help investors understand the required financial statement effects.[2252] The financial statement disclosures we are adopting may involve estimation uncertainties that are driven by the application of judgments and assumptions, like certain other financial statement disclosures,[2253] and therefore disclosure of contextual information will facilitate investors' understanding of the financial statement effects and will be an integral part of the financial statements.

In response to certain commenters' requests for clarification or additional guidance,[2254] as noted above, we decided to include in the final rules two additional types of contextual information that will enhance investors' understanding of the financial statement disclosures. We have decided to include ''significant judgments'' as an additional type of contextual information in the final rules because registrants will need to exercise judgment when preparing their disclosures, and disclosing contextual information about those judgments will help investors understand and evaluate the reasonableness of the disclosures.[2255]

[2253] For example, the application of FASB ASC Topic 606 *Revenue from Contracts with Customers* and ASC Topic 326 *Financial Instruments—Credit Losses* require the application of judgment when applying GAAP to the financial statements. FASB ASC 275–10–50–6 through 50–15A require the disclosure of information about certain significant estimates. In addition, FASB ASC 235–10–05–3, 05–4, and 50–1 require the disclosure of information about accounting policies.

[2254] *See supra* note 2239 and accompanying text.

[2255] *See* 17 CFR 210.14–02(a). Registrants are regularly required to exercise judgment when

Given the narrower scope of the disclosure requirements that we are adopting, we expect that the final rules require fewer inputs and assumptions than would have been required under the proposal; however, we are retaining the references to inputs and assumptions in the final rules because it is possible, though less likely, that preparation of the financial statement disclosures could involve estimation uncertainty and require the registrant to exercise judgment in the selection of inputs and assumptions.[2256] In addition, to enhance understanding of the financial statement disclosures, the final rules explicitly require disclosure of other information that is important to understand the financial statement effects.[2257] In section II.K.3.c.iv above, we have specified one instance where the final rules require registrants to disclose this type of contextual information because we think the information is important to understand the financial statement effects of the disclosed capitalized costs, expenditures expensed, charges, or losses.[2258] By requiring the disclosure of information that is important to understand the financial statement effects, the requirement to provide contextual information will also help registrants avoid having incomplete and potentially misleading disclosures.

We disagree with the commenters who stated that requiring disclosure of contextual information would result in inconsistent and incomparable information that is not useful for investors.[2259] On the contrary, the requirement to provide contextual information will improve the comparability of disclosures by enabling investors to understand how registrants have exercised judgment and made assumptions in determining the financial statement effect. This will enable investors to compare judgments and assumptions made by registrants, including across industries, which will provide investors with useful information for purposes of their investment and voting decisions. Furthermore, although we are clarifying aspects of the contextual information requirement, we disagree with the commenters who stated that the requirement to provide contextual information should be simplified and that more guidance is needed with respect to the level of detail required.[2260] The final rules intentionally provide flexibility to registrants to allow them to include contextual information that is tailored to their particular circumstances thereby improving the usefulness for investors of the disclosures. One commenter stated that a registrant would be required to make many assumptions and policy decisions to disclose contextual information.[2261] As noted above, the final rules focus on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, which require fewer assumptions and policy decisions by the registrant than would have been required under the proposed rules. As a result, we expect the extent of contextual information provided under the final rules will be reduced as compared to the proposal.

We are also adopting the requirements (Rule 14–01(c)) for registrants to calculate the financial statement effects using financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements and to apply the same set of accounting principles that a registrant is required to apply in preparation of the rest of its consolidated financial statements, consistent with the proposal.[2262] As the Commission explained in the Proposing Release, requiring registrants to calculate the financial statement disclosures using financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements will avoid potential confusion, maintain consistency, and aid comparability.[2263] In addition, we agree with the commenter who stated that applying the same set of accounting principles to the financial statement disclosures will aid comparability.[2264] We are not aware of any circumstances where the final rules will require a registrant to deviate from GAAP, and therefore we are striking the words ''[w]henever applicable'' from the final rules, in response to the commenter who stated that this phrase was confusing because it could imply that the Commission is aware of circumstances where the applicable accounting principles would be inconsistent with GAAP.[2265] In addition, it is important for investors to be provided with information that is consistent across financial statements.

As discussed above, the Commission also received feedback about whether registrants should be required to calculate the proposed financial statement metrics at a reportable segment level or to present the metrics by geographic areas.[2266] The Commission did not propose such requirements and—although we do not necessarily agree with those commenters that stated requiring disclosure at a segment or geographic level would be too complex or result in the disclosure of irrelevant information [2267]—we think the approach to disclosure we are adopting strikes an appropriate balance between providing consistent, comparable, and decision-useful information to investors and the associated burdens to registrants.

Finally, several areas of commenter question or concern related to the requirements discussed above are addressed by our decision to not adopt the proposed Financial Impact Metrics and to focus on the disaggregation and disclosure of discrete transactions that are recorded in the financial statements. For example, concerns about the interaction between GAAP and the proposed Financial Impact Metrics will not apply to the final rules.[2268] For the sake of clarity, however, we reiterate that the rules the Commission is adopting require registrants to apply existing GAAP recognition and

---

applying GAAP to prepare their financial statements and therefore the fact that the final rules will require registrants to exercise judgment is not unusual. For example, FASB ASC Topic 606 *Revenue from Contracts with Customers* requires an entity to disclose significant judgments in the application of the guidance (ASC 606–10–50–17), FASB ASC Topic 820 *Fair Value Measurement* requires an entity to disclose judgments and assumptions about assets and liabilities measured at fair value in the financial statements, and FASB ASC Topic 842 *Leases* requires a lessees to disclose information about significant assumptions and judgments made in applying the requirements of Topic 842.

[2256] *See* 17 CFR 210.14–02(a).

[2257] *See id.*

measurement requirements to the financial statement disclosures.

b. Historical Periods (Rule 14–01(d))

i. Proposed Rules

The Commission proposed to require a registrant to provide disclosure for the registrant's most recently completed fiscal year and for the historical fiscal year(s) included in the registrant's consolidated financial statements in the applicable filing.[2269] The Proposing Release stated that a registrant would not need to provide a corresponding historical metric for a fiscal year preceding its current reporting fiscal year if it is eligible to take advantage of the accommodation in 17 CFR 230.409 (''Rule 409'') or 17 CFR 240.12b–21 (''Rule 12b–21'').[2270] The Commission explained that requiring disclosure of current and, when known or reasonably available to the registrant without unreasonable effort or expense, historical periods, should allow investors to analyze trends in relevant impacts on the consolidated financial statements and to better evaluate the narrative trend disclosure provided pursuant to proposed subpart 1500 of Regulation S–K.[2271]

ii. Comments

A few commenters supported the requirement as proposed.[2272] One commenter indicated that the accommodation in Rule 409 or Rule 12b–21 would be sufficient for issuers to rely upon when historical information subject to disclosure is unknown or not reasonably available.[2273] On the other hand, some commenters stated that it was not clear when a registrant could take advantage of the accommodations provided by these rules or that the requirements applicable to these rules made it difficult for registrants to rely upon them.[2274]

Most commenters that provided feedback on the proposed financial statement metrics did not support requiring registrants to provide disclosure for historical period(s) that occurred prior to the compliance date of the rule and instead recommended requiring disclosure on a prospective basis and phasing in disclosure for historical periods over time.[2275] These commenters generally observed that it would be challenging and burdensome for registrants to provide disclosure for historical periods that occurred prior to the compliance date because many registrants do not currently collect or report the information that would have been required under the proposal.[2276] One commenter stated that issuers would have to ''retroactively estimate their historical data,'' which would be ''burdensome and unlikely to produce reliable and consistent disclosures for investors.'' [2277] Other commenters pointed out that even if historical information is available, issuers may not be able to conclude that they had adequate controls in place prior to the compliance date for the rule.[2278] As an alternative, some commenters recommended that the Commission delay the effective date of the proposed rule to help facilitate the disclosure of information for historical periods.[2279]

Several commenters stated that disclosure of historical information on a prospective basis would be useful information for investors.[2280] These commenters generally observed that the disclosure of historical information would be valuable for illuminating material changes to estimates and assumptions and historical trends.[2281]

The Commission included a request for comment in the Proposing Release asking if information for all periods in the consolidated financial statements should be required for registrants that are filing an initial registration statement.[2282] A few commenters supported requiring a registrant to provide disclosure for all periods in the consolidated financial statements for registrants filing an initial registration statement.[2283] On the other hand, one commenter recommended that, for newly public companies on an ongoing basis, the Commission require disclosure only for the most recent fiscal year for which audited financial statements are included in the initial registration statement to ''reduce the barriers to market.'' [2284] In addition, one commenter asked whether the proposed financial statement metrics would need to be restated or adjusted for historical periods if climate-related impacts (both physical and transition events) are not identifiable and do not occur until after the metrics are first reported.[2285]

iii. Final Rules

After consideration of comments, we have decided to require a registrant to provide disclosure for historical fiscal year(s) included in a registrant's consolidated financial statements on a prospective basis only.[2286] Under the final rules (Rule 14–01(d)), disclosure must be provided for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s), for which audited consolidated financial statements are included in the filing.[2287] Subject to the compliance date discussed below,[2288] registrants will be required to provide disclosure for the registrant's most recently completed fiscal year for which audited financial statements are included in the filing in any filings to which the final rules apply; however, registrants are not required to provide disclosure for historical fiscal year(s) included in that filing. For example, subject to the compliance date, a registrant that files its annual report will only be required to provide the applicable disclosure for the registrant's most recently completed fiscal year for which audited financial statements are included in the filing. For each subsequent fiscal year's annual report, the registrant will be required to provide the applicable disclosure for an additional fiscal year until the required disclosure is provided for the entire period covered by the registrant's financial statements.[2289] Initial

[2287] *See id.*

[2288] *See infra* section II.O for a discussion of the compliance date for the rules.

[2289] As discussed in more detail above in section II.K.3.c.ii, the final rules call for disclosure triggered off both the balance sheet and the income statement. A registrant that is required to include balance sheets as of the end of its two most recent fiscal years and income statements as of the end of its three most recent fiscal years would be required to disclose two years of the financial statement effects that correspond to the balance sheet and

registration statements are subject to the final rules to the same extent as the other Commission filings to which the rules apply.[2290] Specifically, a registrant engaged in an IPO that has a fiscal year that is subject to the final rules is required to provide disclosure for the registrant's most recently completed fiscal year for which audited financial statements are included in the filing. However, such registrant will not be required to provide disclosure for any preceding fiscal years included in the initial registration statement because as new entrants to the public markets such registrants would not have previously disclosed or been required to disclose the information required by the final rules.[2291]

We agree with those commenters who stated that the disclosure of historical information would be useful for investors because it would illuminate changes to the financial statement disclosures and trends.[2292] However, we recognize that it may be difficult for registrants to compile and produce the required disclosures for periods that occurred prior to the compliance date of the rules. Therefore, we are modifying the proposed rules to require registrants to provide disclosure for historical fiscal year(s) only on a prospective basis, which will further limit the burdens on reporting companies or companies considering an IPO without unduly compromising the intended benefit to investors. This modification, when combined with the phased in compliance dates for the final rules, will provide registrants with sufficient time to prepare their disclosures.

Finally, in response to a question raised by a commenter about whether the proposed financial statement disclosures would need to be restated or adjusted for historical periods if climate-related impacts are not identifiable until after the metrics are first reported,[2293] we are clarifying that registrants should apply the principles in FASB ASC Topic 250 *Accounting Changes and Error Corrections* or IFRS International Accounting Standard (''IAS'') 8 *Accounting Policies, Changes in Accounting Estimates and Errors,* as appropriate, in these circumstances.

7. Inclusion of Disclosures in the Financial Statements (Rule 14–01(a))

a. Proposed Rules

The Commission proposed to require registrants to include the proposed financial statement metrics in the financial statements, which would result in the metrics being (i) included in the scope of any required audit of the financial statements in the relevant disclosure filing, (ii) subject to audit by an independent registered public accounting firm, and (iii) within the scope of the registrant's ICFR.[2294] The proposed disclosures shared many characteristics with other financial statement disclosures, and the proposed financial statement metrics would reflect financial data that is derived from the registrant's consolidated balance sheets, income statements, and statements of cash flows, and would be presented in a similar way to existing financial statement disclosures.[2295] The Commission explained in the Proposing Release that requiring the proposed financial statement metrics to be included in a note to the financial statements, and therefore subject to audit and within the scope of ICFR, should enhance the reliability of the proposed financial statement metrics.[2296]

b. Comments

As discussed above, a number of commenters stated that the proposed financial statement metrics should be included in the financial statements and subject to audit.[2297] One commenter explained that subjecting the disclosures to audit would be important because ''[a]s investors, we look to auditors to provide robustly independent challenge to ensure the assumptions and estimates underpinning the financial statements are sound, and the statements themselves provide a fair representation of the entity's economic health.'' [2298] Another commenter stated that requiring the disclosures to be audited ''will result in more decision useful information because investors can presume it to be accurate, truthful, and complete.'' [2299] In response to a request for comment included in the Proposing Release, a few commenters stated that the proposed financial metrics should not be included in a separate or supplemental document instead of the financial statements.[2300] One of these commenters said that doing so ''could send a perverse message that climate impacts are not financial or material for corporate earnings and financial condition, which would, in our view, be misleading.'' [2301] One commenter suggested that the Commission apply the ICFR requirements set forth in Item 308 of Regulation S–K to the proposed financial statement metrics, if finalized.[2302]

Conversely, a number of commenters were opposed to including the financial impact of climate-related risks in the financial statements.[2303] As discussed above, many commenters asserted the disclosures should instead be included in the MD&A section of a registrant's periodic reports.[2304] Other commenters stated that the proposed disclosures should be included alongside the

three years of the financial statement effects that correspond to the income statement. *See* 17 CFR 210.3–01(a), 210.3–02(a). An EGC may, in a Securities Act registration statement for the IPO of its equity securities, ''provide audited statements of comprehensive income and cash flows for each of the two fiscal years preceding the date of the most recent audited balance sheet (or such shorter period as the registrant has been in existence).'' *See* 17 CFR 210.3–02(a). A smaller reporting company is required to ''file an audited balance sheet as of the end of each of the most recent two fiscal years, or as of a date within 135 days if the issuer has existed for a period of less than one fiscal year, and audited statements of comprehensive income, cash flows and changes in stockholders' equity for each of the two fiscal years preceding the date of the most recent audited balance sheet (or such shorter period as the registrant has been in business).'' *See* 17 CFR 210.8–02.

[2290] *See* 17 CFR 210.14–01(d). *See infra* section II.L.3 for further discussion of the decision not to provide an exemption or transitional relief for registrants engaged in an IPO.

[2291] *See* 17 CFR 210.14–01(d). *See, e.g.,* letter from KPMG (''[F]or initial public offerings of securities, we recommend that the Commission permit newly public companies on an ongoing basis to provide the proposed information only for the most recent fiscal year for which audited financial statements are included in the initial registration statement.'').

[2304] *See supra* note 1724 and accompanying text.

proposed amendments to Regulation S–K in the new climate-related discussion section.[2305] A few commenters stated that if the Commission adopts the proposed financial statement metrics, then they should be provided in supplemental information or a schedule outside of the financial statements,[2306] although some of these commenters had different views about whether disclosure in a supplemental schedule should be subject to audit and ICFR requirements.[2307] Some commenters stated that the Commission should consider including the proposed disclosures outside of Form 10–K in an alternative report.[2308]

Other commenters generally stated that if the Commission adopts the proposed financial statements metrics they should be exempted from the audit requirement.[2309] One of these commenters noted that ''[d]ata processes and controls over climate-related information are not as mature as financial reporting processes and controls'' and ''[t]o mature these processes and controls to a level of audit readiness will take significant time.'' [2310] A few commenters stated that the proposed disclosure requirements did not have to be included in an audited note to the financial statements to be ''valid and reliable.'' [2311] Similarly, one commenter stated that disclosures included in a Commission filing but outside of the audited financial statements would be subject to ''the existing level of oversight, regulation, and liability associated with [Commission] filings.'' [2312] One commenter stated that the Commission should exclude the proposed rules from ICFR requirements until the Commission has established appropriate guidelines for audit and assurance.[2313]

Other commenters suggested that the Commission defer making a determination about audit and ICFR requirements for the proposed financial statement disclosures. For example, one commenter suggested that the Commission defer making a determination until after issuers have had an opportunity to familiarize themselves with any new requirements.[2314] In addition, one commenter stated that the Commission should not impose any financial statement disclosure requirements or require certifications pursuant to the Sarbanes-Oxley Act until generally accepted accounting rules have been established by the FASB.[2315] A few commenters suggested including the proposed financial statement metrics outside of the financial statements initially with a transition to the financial statements.[2316]

A few commenters stated that PCAOB auditing standards would be applicable or should be applied to the proposed financial statement metrics.[2317] A number of commenters asserted that it would be necessary to develop additional guidance regarding the application of PCAOB auditing standards to the proposed financial statement metrics.[2318] One commenter stated that guidance would be helpful to registrants because it would ''better enable them to effectively obtain or prepare necessary data, information and analysis, and for auditors to obtain sufficient appropriate audit evidence related to these metrics.'' [2319] Some commenters suggested particular standards for which additional specific guidance would be needed for the proposed financial statement metrics.[2320] For example, one commenter asserted additional guidance was needed regarding PCAOB Auditing Standard (AS) 2105, *Consideration of Materiality in Planning and Performing an Audit,* because ''if the proposed one percent disclosure threshold for disclosure of climate-related impacts on the financial statement line items is not considered material, current PCAOB auditing standards may not require the auditor to perform audit procedures for those disclosures.'' [2321]

Some commenters agreed that additional guidance and auditing standards may be needed, but did not identify particular standards for which guidance is needed.[2322] More generally, one commenter stated that the PCAOB should provide guidance to auditors regarding what is expected and then should undertake reviews to ensure proper implementation.[2323] Another commenter suggested that the PCAOB should issue guidance confirming existing audit requirements regarding the consideration of material climate risk and should increase its focus on this issue during the auditor inspection process.[2324] Conversely, one commenter asserted that the proposed financial impact disclosures would leave auditors open to ''second guessing'' during the PCAOB inspection process.[2325]

Another commenter suggested that the audits of any expenditures and costs related to severe weather events and other natural conditions should be a separate assurance engagement outside of the scope of the current financial statement and internal controls audits and that these separate engagements should be governed by clearly defined weather-related cost accounting standards and an appropriately tailored PCAOB assurance standard that provides implementation examples.[2326] One commenter suggested that the Commission consider allowing

sustainability consultants or experts outside of the traditional accounting sector to audit the proposed financial statement metrics.[2327] Another commenter stated that it may be necessary for an auditor to tailor its audit opinion to explain that the note to the financial statements was not prepared in accordance with IFRS disclosure requirements, but in accordance with Commission disclosure requirements and based upon financial statement information prepared in accordance with IFRS.[2328]

Alternatively, some commenters asserted that there are no clearly established auditing standards for registrants with respect to the proposed financial statement metrics.[2329] One commenter argued that ''[g]iven the subjectivity inherent in assigning the required quantitative financial impacts, it is unclear how auditors will evaluate and subsequently provide assurance with respect to these decisions and the associated disclosures.'' [2330] Another commenter suggested that it would be preferable to include the proposed financial statement metrics outside of the financial statements to avoid ''distracting'' the PCAOB from its ''core mission.'' [2331]

With respect to timing, one commenter stated that any changes to PCAOB standards would need to be implemented and effective before the proposed disclosures are required to be included in the audited financial statements.[2332] Another commenter stated that the Commission will have to instruct the PCAOB to prioritize the development and adoption of standards for auditing the proposed financial statement metrics.[2333] Another commenter asserted that the proposed timeline for adoption of final rules would not provide issuers with enough time to integrate a robust ICFR framework for the proposed financial impact metrics that would be auditable.[2334]

In the Proposing Release, the Commission solicited comment on whether it would be clear that the proposed climate-related financial statement metrics would be included in the scope of the audit when the registrant files financial statements prepared in accordance with IFRS as issued by the IASB, and whether it would be clear that the proposed rules would not alter the basis of presentation of financial statements as referred to in an auditor's report.[2335] The Commission also solicited comment on whether it should amend Form 20–F, or other forms, to clarify the scope of the audit or the basis of presentation.[2336] In response, one commenter asserted that disclosure of the basis of presentation is important for understanding and comparability, and noted that since the basis of presentation of climate-related financial metrics may be different from the basis of presentation of the financial statements due to boundary differences, there should be disclosure when these differ.[2337] One commenter stated that the Commission should amend Form 20–F and other forms to make it clear that the scope of the audit must include the proposed financial statement footnote.[2338] On the other hand, one commenter stated that the scope of the audit is clear, and therefore it did not believe it was necessary to amend Form 20–F.[2339] One commenter asserted that the proposed climate-related financial statement metrics and related audit requirements for foreign filers should align with those for domestic filers.[2340] Another commenter stated that foreign private issuers should be allowed to disclose the proposed financial statement metrics as unaudited supplemental financial information.[2341]

Some commenters stated that the audit and ICFR assessment required for the proposed financial statement metrics would result in significant costs for registrants [2342] or would result in an increase in audit fees for registrants.[2343] A few commenters stated that they expected the audit costs would be higher than the estimated amount included in the proposal.[2344] For example, a registrant stated that its auditors estimated the cost of the audit to be within the range of $70,000 to $225,000 per year.[2345] One commenter stated that registrants' audit fees would increase ''due to the significant level of assurance required based on the low thresholds applied.'' [2346] Another commenter stated that the costs of the audit will depend on the granularity and complexity of the information required.[2347] One commenter stated if specialists are needed this would increase the cost of the audit for companies.[2348] Another commenter stated that the costs would be out of proportion to the value of the information to investors.[2349] Other commenters stated that it is likely that the costs of auditing the proposed financial statement footnotes would decrease [2350] or stabilize [2351] over time like other areas of audit work.

Finally, some commenters observed that the safe harbor established by the Private Securities Litigation Reform Act (PSLRA) does not apply to forecasting information in the financial statements and urged the Commission to include a safe harbor for any forward-looking financial disclosures included in the financial statements and footnotes.[2352] Other commenters generally recommended including a safe harbor for the proposed financial statement metrics and did not appear to limit their recommendation to only forward-looking statements.[2353] Commenters generally claimed that a safe harbor was necessary to protect registrants from liability in light of the estimates, judgments, and assumptions that would be required to disclose the proposed financial statement metrics.[2354]

c. Final Rules

As explained above, we believe it is appropriate to require that the financial statement effects disclosure we are adopting be presented in a note to the financial statements (Rule 14–01(a)).[2355] Identifying a specific location for the disclosures—a note to the financial statements—will make the information more accessible for investors.[2356] In

Continued

addition, we agree with the commenter that stated that including the disclosure of the financial statement effects in the financial statements will facilitate investor decision-making.[2357] As is true of any disclosures included in the financial statements, subjecting the required disclosures to a financial statement audit and registrants' ICFR will enhance the reliability of that information. The scope of the final rules is significantly narrower than the proposal and requires the disclosure of costs and expenditures for transactions that are currently recorded in registrants' books and records and materially impacted financial estimates and assumptions. These modifications will ease many of the burdens that registrants identified with respect to requiring the disclosures to be subject to audit and ICFR.

We considered the various alternatives suggested by commenters, including whether to require the disclosure of financial statement effects to be provided in supplemental information or a schedule outside of the financial statements.[2358] The financial statement disclosures we are adopting, however, present financial information that is derived from registrants' books and records and is already included in registrants' financial statements. Therefore, presenting this information in a note to the financial statements, consistent with other financial statement disclosures, will enhance its accessibility and usefulness for investors. We do not think it would be appropriate to exempt these financial statement disclosures from audit or ICFR requirements. Providing an exemption from audit or ICFR for the financial statement disclosure requirements in the final rules could confuse investors about which parts of the financial statements are covered by audit and ICFR. Nevertheless, the phase in periods provided for in the final rules should give registrants and their auditors time to familiarize themselves with the new requirements before the compliance date and should help to mitigate the concerns raised by commenters.

With respect to auditing standards, PCAOB standards can and will apply to the financial statement disclosures included in a note to the financial statements. We understand that a number of commenters raised concerns about applying PCAOB standards and stated that additional guidance would be needed.[2359] The modifications made to the final rules to narrow their scope to capitalized costs, expenditures expensed, charges, and losses derived from transactions and amounts recorded in registrant's books and records underlying the financial statements and materially impacted estimates and assumptions, along with the Commission's adoption of an attribution principle, will help to mitigate commenters' concerns about the auditability of the disclosures. In light of these modifications, we expect that including the financial statement note as part of the audited financial statements will allow the disclosures to be readily incorporated into the scope of the financial statement and ICFR audits that registrants currently obtain and that existing PCAOB auditing standards will readily apply.

Several commenters raised concerns about how auditors would address the one percent disclosure threshold when considering materiality in planning and performing an audit.[2360] Auditors should apply the concepts of materiality in PCAOB AS 2105, *Consideration of Materiality in Planning and Performing an Audit,* to the rules we are adopting. In applying the concept of materiality, auditors should remain alert for misstatements that could be material due to quantitative or qualitative factors and lesser amounts of misstatement could influence the judgment of a reasonable investor because of qualitative factors.[2361] Under PCAOB Auditing Standards, auditors should also evaluate whether, in light of particular circumstances, there are certain accounts or disclosures for which there is a substantial likelihood that misstatements of lesser amounts than the materiality level established for the financial statements as a whole would influence the judgment of a reasonable investor. If so, the Auditing Standards provide that the auditor should establish separate materiality levels for those accounts or disclosures to plan the nature, timing, and extent of audit procedures for those accounts or disclosures.[2362] Additionally, there are numerous rules in Regulation S–X as well as other disclosure requirements within GAAP that include a percentage disclosure threshold.[2363] Based on staff experience, we understand that auditors have developed procedures for auditing such disclosures and have not claimed an inability to audit that information. We expect auditors similarly will be able to apply the concepts of materiality and to audit the financial statement disclosures included in the final rules, particularly given the final rules' narrower scope. Therefore, there is no need to delay the requirement to obtain an audit or exclude the financial statement disclosures from the scope of the audit or the registrants' ICFR. The rules we are adopting will provide the suitable criteria necessary for the disclosures to be subject to audit. Nevertheless, the Commission will work with the PCAOB to address any issues that come to light regarding the auditing of this information and will consider issuing additional guidance to the extent needed and helpful.

Finally, we do not agree with the commenter who suggested that consultants or experts outside of the traditional accounting sector should be allowed to audit the proposed financial statement disclosures.[2364] The auditor's unqualified opinion contains an expression of opinion on the financial statements, taken as a whole, which refers to a complete set of financial statements, including the related financial statements notes and any related schedules.[2365] As stated above, we expect that the audit procedures applied to the financial statement note will be incorporated into the scope of registrants' current financial statement and internal controls audit and therefore PCAOB-registered public accounting firms will be able to apply sufficient,

consistent dissemination of this important information'').

[2361] *See* PCAOB AS 2105, paragraph .03.

[2362] *See id.,* paragraph .07.

[2363] *See, e.g., supra* note 2063 and accompanying text; FASB ASC 280–10–50–12 (requiring the reporting of separate information about an operating segment that meets certain quantitative thresholds), 280–10–50–14 (stating that if total of external revenue reported by operating segments constitutes less than 75% of total consolidated revenue, additional operating segments shall be identified as reportable segments (even if they do not meet the criteria in paragraph 280–10–50–12) until at least 75% of total consolidated revenue is included in reportable segments), 280–10–50–42 (stating, among other things, that if revenues from transactions with a single external customer amount to 10% or more of a public entity's revenues, the public entity shall disclose that fact, the total amount of revenues from each such customer, and the identity of the segment or segments reporting the revenues), and 323–10–50–3 (requiring, among other things, disclosure of the names of any significant investee entities in which the investor holds 20% or more of the voting stock, but the common stock is not accounted for on the equity method, together with the reasons why the equity method is not considered appropriate, and the names of any significant investee corporations in which the investor holds less than 20% of the voting stock and the common stock is accounted for on the equity method, together with the reasons why the equity method is considered appropriate).

[2364] *See supra* note 2327 and accompanying text.

[2365] See PCAOB AS 3101, paragraph .08, The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion.

appropriate audit procedures to these disclosures as required by law.[2366] Moreover, PCAOB-registered accounting firms are subject to periodic inspection by the PCAOB and are required to comply with PCAOB rules, including a requirement to establish a system of quality control that is implemented throughout the accounting firm, which will enhance investors' confidence in the accuracy of registrants' disclosures.

However, this does not mean that the auditor cannot use the work of an auditor specialist while performing its work if the auditor determines doing so would be appropriate in accordance with applicable auditing standards. PCAOB AS 2101, paragraph .16, *Audit Planning,* states that auditors should determine whether specialized skill or knowledge, such as an auditor specialist, is needed to perform the appropriate risk assessments, plan or perform audit procedures, or evaluate audit results. Auditors may use the work of auditors' specialists to assist in their evaluation of significant accounts and disclosures, including accounting estimates. In doing so, auditors consider the requirements within PCAOB AS 1201, *Supervision of the Audit Engagement,* when using the work of auditor-employed specialists, and AS 1210, *Using the Work of an Auditor-Engaged Specialists,* when using the work of an auditor engaged specialist, as appropriate.

The Commission received mixed feedback about whether it would be clear that: (i) the financial statement disclosure requirements would be included in the scope of the audit when a registrant files financial statements prepared in accordance with IFRS as issued by the IASB, and (ii) the proposed rules would not alter the basis of presentation of financial statements as referred to in an auditor's report.[2367] Therefore, we are clarifying that the financial statement disclosure requirements we are adopting in this release must be included in the scope of the audit when a registrant files financial statements in accordance with IFRS as issued by the IASB. We believe that these disclosures are important and should be required regardless of the GAAP followed. Furthermore, registrants that file financial statements prepared using IFRS as issued by the IASB are subject to the existing requirement to comply with Regulation S–X,[2368] and we are not aware of any policies that would prevent registrants from including the financial statement disclosures in a note in the financial statements prepared in accordance with IFRS as issued by the IASB. Further, the final rules will not alter the basis of presentation of financial statements referred to in an auditor's report. The instructions to Form 20–F make it clear that the issuer's financial statements must be audited in accordance with PCAOB standards.[2369] PCAOB AS 3101.08 states that the first section of the auditor's report must include a ''statement identifying each financial statement and any related schedule(s) that has been audited'' and a ''statement indicating that the financial statements, including the related notes and any related schedule(s), identified and collectively referred to in the report as the financial statements, were audited.''[2370] As the disclosure requirements we are adopting will be included in a note to the foreign private issuer's financial statements and based on information that is recognized and measured in the foreign private issuer's financial statements in accordance with IFRS as issued by the IASB, they will be within the scope of the statement by the registrant's auditor that the financial statements ''including any related notes'' were audited.

A number of commenters provided feedback on the cost of the audit for the proposed financial statement metrics and some of these commenters suggested that the estimate included in the proposal was too low[2371] or that the proposed financial statement metrics would result in significant fees or an increase the cost of the audit.[2372] Given the narrower scope of the final rules and their focus on costs and expenditures for transactions that are currently recorded in registrants' books and records and material impacts to financial estimates and assumptions rather than the proposed Financial Impact Metrics, we expect any increases to the cost of the audit due to the financial statement disclosures will be relatively modest for most companies.[2373] In addition, we agree with those commenters that stated the costs of auditing the proposed note to the financial statements would likely decrease or stabilize over time like other areas of audit work.[2374] The financial statement disclosures we are adopting share many similarities with other disclosures in the financial statements, in particular because they are based in transactions currently recorded in registrants' books and records, and therefore the cost trajectory for auditing should be similar over time.

Finally, a number of commenters argued that the Commission should adopt a safe harbor for the financial statement metrics.[2375] Some of these commenters limited their request to forward-looking financial disclosures included in the financial statements, while other commenters did not appear to limit their request for a safe harbor to forward-looking financial disclosures. By narrowing the scope of financial statement disclosures and focusing on costs and expenditures for transactions that are currently recorded in registrants' books and records and material financial estimates and assumptions, the final rules avoid many of the complexities associated with the proposed rules and therefore we do not think it would be necessary or appropriate to adopt a safe harbor for the financial statement disclosures.

L. Registrants Subject to the Climate-Related Disclosure Rules and Affected Forms

1. Proposed Rules

The Commission proposed to apply the proposed climate-related disclosure rules to a registrant with Exchange Act reporting obligations pursuant to Exchange Act section 13(a)[2376] or section 15(d)[2377] and companies filing a Securities Act or Exchange Act registration statement.[2378] The Commission proposed to require such registrants to include climate-related disclosures, including the proposed financial statement metrics,[2379] in

Continued

Securities Act or Exchange Act registration statements (Securities Act Forms S–1, F–1, S–3, F–3, S–4, F–4, and S–11, and Exchange Act Forms 10 and 20–F) [2380] and Exchange Act annual reports (Forms 10–K and 20–F). Similar to the treatment of other important business and financial information, the proposed rules also required registrants to disclose any material change to the climate-related disclosures provided in a registration statement or annual report in their Form 10–Q (or, in certain circumstances, Form 6–K for a registrant that is a foreign private issuer that does not report on domestic forms).[2381]

The Commission proposed to amend Form 20–F and the Securities Act forms that a foreign private issuer may use to register the offer and sale of securities under the Securities Act to require the same climate-related disclosures as proposed for a domestic registrant.[2382] The Commission explained that, because climate-related risks potentially impact both domestic and foreign private issuers regardless of the registrant's jurisdiction of origin or organization, requiring that foreign private issuers provide this disclosure is important to achieving the Commission's goal of more consistent, reliable, and comparable information across registrants.[2383] The Proposing Release further noted that Form 20–F imposes substantially similar disclosure requirements as those required for Form 10–K filers on matters that are similar and relevant to the proposed climate-related disclosures, such as risk factors and MD&A.[2384]

The Commission proposed to exempt SRCs from the proposed Scope 3 emissions disclosure requirement. SRCs would otherwise be subject to all of the proposed rules. The Commission did not propose to exempt EGCs from the proposed rules noting that, due to their broad impact across industries and jurisdictions, climate-related risks may pose a significant risk to the operations and financial condition of registrants, both large and small.[2385] The Commission did, however, solicit comment on whether the proposed rules should apply to EGCs or to other issuers, such as business development companies (''BDCs'').[2386]

The proposed climate-related disclosure rules would not have applied to asset-backed issuers. The proposed rules also would not have required the proposed disclosures on the following forms, although the Commission solicited comment regarding such application:

- Form 40–F, the Exchange Act form used by a Canadian issuer eligible to report under the Multijurisdictional Disclosure System (''MJDS'') to register securities or to file its annual report under the Exchange Act;
- Form S–8, the Securities Act form used to register securities pursuant to an employee benefit plan; and
- Form 11–K, the Exchange Act form used for annual reports with respect to employee stock purchase, savings, and similar plans.[2387]

The Commission also requested comment on whether the Commission should exclude Securities Act registration statements filed in connection with a registrant's IPO from the scope of the proposed climate-related disclosure rules instead of including them, as proposed.[2388] The Commission further solicited comment on whether to require climate-related disclosure on Forms S–4 and F–4, as proposed. Specifically, the Commission requested comment on whether it should provide transitional relief for recently acquired companies such that registrants would not be required to provide the climate-related disclosures for a company that is the target of a proposed acquisition under Form S–4 or F–4 until the fiscal year following the year of the acquisition if the target company is not an Exchange Act reporting company and is not the subject of foreign or alternative climate-related disclosure requirements that are substantially similar to the Commission's proposed requirements.

2. Comments

Many commenters supported the proposal to include the climate-related disclosures in Securities Act and Exchange Act registration statements and Exchange Act annual reports.[2389] One commenter stated that it supported the placement of the climate-related disclosures in a company's annual report or registration statement instead of in a separate report because of its belief in integrated reporting, which facilitates a better understanding of a business.[2390] Another commenter stated that inclusion of the proposed climate-related disclosures in registrants' annual reports and registration statements will dramatically improve the transparency of climate-related issues that affect registrants to the securities markets and drive consistency with which such data is prepared, presented, and audited.[2391]

Many other commenters opposed requiring the climate-related disclosures to be included in existing forms and recommended that some or all of the

Although Item 17 and 18 of Form 20–F, and the forms that refer to Form 20–F (including Forms F–1 and F–3) permit a foreign private issuer to file financial statements prepared in accordance with IFRS as issued by the IASB, proposed Article 14 disclosure was nevertheless required (similar to disclosure required by Article 12 of Regulation S–X). *See Acceptance from Foreign Private Issuers of Financial Statements Prepared in Accordance with International Financial Reporting Standards Without Reconciliation to U.S. GAAP,* Rel. No. 33–8879 (Dec. 21, 2007) [73 FR 986 (Jan. 4, 2008)], 999, note 136 (stating that ''Regulation S–X will continue to apply to the filings of all foreign private issuers, including those who file financial statements prepared using IFRS as issued by the IASB,'' but providing that such issuers ''will comply with IASB requirements for form and content within the financial statements, rather than with the specific presentation and disclosure provisions in Articles 4, 5, 6, 7, 9, and 10 of Regulation S–X'').

[2380] Form 20–F is the Exchange Act form used by a foreign private issuer for its annual report or to register a class of securities under section 12 of the Exchange Act. We proposed to amend Part I of Form 20–F to require a foreign private issuer to provide the climate-related disclosures pursuant to the proposed rules either when registering a class of securities under the Exchange Act or when filing its Exchange Act annual report. The proposed rules further required a foreign private issuer to comply with the proposed rules when filing a Securities Act registration statement on Form F–1. Because Form F–1 requires a registrant to include the disclosures required by Part I of Form 20–F, the proposed amendment to Form 20–F rendered unnecessary a formal proposed amendment to Form F–1. We similarly did not propose to formally amend Forms S–3 and F–3 because the climate-related disclosure would be included in a registrant's Form 10–K or 20–F annual report that is incorporated by reference into those Securities Act registration statements.

[2381] Form 6–K is the form furnished by a foreign private issuer with an Exchange Act reporting obligation if the issuer: (i) makes or is required to make the information public pursuant to the law of the jurisdiction of its domicile or in which it is incorporated or organized, or (ii) files or is required to file the information with a stock exchange on which its securities are traded and which was made public by that exchange, or (iii) distributes or is required to distribute the information to its security holders. *See* General Instruction B to Form 6–K. That instruction currently lists certain types of information that are required to be furnished pursuant to subparagraphs (i), (ii), and (iii), above. While we proposed to amend Form 6–K to add climate-related disclosure to the list of the types of information to be provided on Form 6–K, we explained that a foreign private issuer would not be required to provide the climate-related disclosure if such disclosure is not required to be furnished pursuant to subparagraphs (i), (ii), or (iii) of General Instruction B.

[2391] *See* letter from Xpansiv.

climate-related disclosures be included in a new and separately furnished form.[2392] Some commenters stated that GHG emissions disclosures should be furnished on a separate form, which would be due after the deadline for a registrant's Exchange Act annual report, among other reasons, to better align this disclosure with GHG emissions reporting pursuant to the EPA's Greenhouse Gas Reporting Program (''GHGRP'').[2393] Other commenters asserted that climate information that was ''beyond that traditionally required for other risk factors'' should be furnished supplementally on a new form.[2394] Still other commenters, pointing to what they characterized as the rules' novelty and complexity, stated that most of the required climate disclosures should be furnished on one or more separate forms.[2395]

One commenter opposed requiring climate-related disclosures in Securities Act registration statements unless the disclosures are incorporated by reference from another filing (*e.g.,* from Form 10–K or 20–F).[2396] This commenter stated that excluding climate disclosures from these registration statements would prevent the climate disclosure rules from acting as a barrier to entry to the capital markets or unnecessarily delaying a pending merger and/or acquisition (''M&A'') transaction.[2397]

Commenters offered varied input on the application of the proposed rules to SRCs. Some commenters supported exempting SRCs from all of the proposed climate-related disclosure requirements [2398] on the grounds that the compliance burden would be disproportionately greater for SRCs, as a proportion of overall revenue.[2399] One commenter suggested that SRCs should be allowed to opt-out of climate disclosures for a period of ten years following an evaluation of certain factors, including the proportion of public investors and other metrics related to the registrant's climate impact.[2400] Many commenters [2401] supported the proposed exemption for Scope 3 emissions included in the proposed rules, asserting that SRCs will face significant data collection and reporting costs [2402] and that SRCs need time to implement new technologies that will aid data collection and reporting.[2403] Other commenters further stated that the Commission was underestimating these compliance costs and the resultant burdens it would impose on SRCs.[2404] A number of commenters supported the proposed exemption for SRCs given the risk that the reporting burden would be passed to smaller downstream companies and urged the Commission to consider the impact of its climate disclosure requirements on those entities when considering exemptions for SRCs.[2405]

Some commenters stated that the proposed rules would discourage private companies from joining the public markets due to the high cost of complying with climate disclosures.[2406] Other commenters urged the Commission to ameliorate the compliance costs for newly public companies by implementing exemptions for EGCs [2407] and recommended that the Commission offer a phase in for newly public companies until the end of the first full fiscal year after going public.[2408] Others recommended scaling and delaying the compliance requirements for both EGCs and SRCs.[2409]

A number of commenters opposed providing exemptions for SRCs, in particular for some or all of the proposed GHG requirements.[2410] Some of these commenters instead favored longer compliance deadlines to ease the compliance burden for registrants, including SRCs,[2411] while other commenters asserted that it was important not to exempt SRCs indefinitely from the requirement to disclose GHG emissions, particularly because this class of registrants is a significant portion of public companies.[2412] Another commenter stated that SRCs have disproportionately higher exposure to climate-related risk, and indicated that while it may be appropriate to mitigate their compliance burden, disclosure would provide necessary transparency into the operations and financial condition of these registrants.[2413] A different commenter stated that the ability of large filers to disclose Scope 3 emissions depended in part on smaller registrants disclosing Scope 1 and 2 emissions.[2414] In addition, as discussed below,[2415] commenters weighed in on the phase in periods that should apply to SRCs.[2416]

Some commenters recommended that the Commission exempt EGCs from the proposed rules or at least provide them with the same accommodations as SRCs.[2417] Commenters stated that the large compliance costs of the proposed rules may deter many potential EGCs

Herron; Nasdaq (recommending phase ins for EGCs similar to those proposed for SRCs); Shearman Sterling (recommending that EGCs be exempt from proposed attestation requirement for Scopes 1 and 2 emissions); and SBCFAC Recommendation (recommending scaled and delayed disclosure for SRCs and EGCs).

from going public.[2418] Other commenters opposed exempting EGCs from the proposed rules because such companies, like SRCs, may be exposed to climate-related risks.[2419] Some commenters recommended providing EGCs with a longer phase in period rather than exempting them from the proposed rules.[2420]

Several commenters recommended that the Commission exempt BDCs from the proposed rules.[2421] Commenters stated that subjecting BDCs to the proposed rules would be inappropriate because they are pooled investment vehicles that are more like registered investment companies than operating companies, which would also make the disclosure of GHG emissions difficult.[2422] Commenters further stated that BDCs would be subject to the Commission's proposed rules regarding ESG disclosures for certain investment advisers and investment companies,[2423] if adopted, which the commenters asserted is a more suitable regulation for BDCs than proposed subpart 1500.[2424] Some commenters similarly recommended the exemption of other registered collective investment vehicles, such as real estate investment trusts (''REITs''),[2425] and exchange-traded products (*i.e.,* pooled investment vehicles listed on securities exchanges that are not investment companies registered under the Investment Company Act),[2426] and issuers of non-variable insurance contracts[2427] because of their differences with registered operating companies.

Several commenters supported requiring foreign private issuers to provide the same climate disclosures as domestic registrants, as proposed.[2428] Commenters stated that because foreign private issuers are exposed to climate-related risks in much the same way as domestic registrants, they should be subject to the same disclosure requirements.[2429] Commenters also stated that applying the same climate-related disclosure requirements to domestic and foreign registrants would enhance the comparability of such disclosure.[2430]

Other commenters stated that the Commission should permit foreign private issuers to follow the climate disclosure requirements of their home jurisdiction or of an alternative reporting regime to which they are subject.[2431] Commenters stated that such treatment would alleviate the burden of having to comply with more than one set of climate disclosure requirements and would help prevent the Commission's climate disclosure rules from deterring foreign private issuers from becoming or remaining U.S. registrants.[2432] One commenter recommended that the Commission exempt foreign private issuers from the proposed climate disclosure rules in order to discourage foreign private issuers from delisting from U.S. securities exchanges.[2433]

Some commenters supported the rule proposal to require a registrant to disclose any material changes to the climate disclosures provided in its Exchange Act annual report in a subsequently filed Form 10–Q or furnished Form 6–K.[2434] In this regard, one commenter stated that because climate-related risks are financial risks, they should be subject to the same disclosure requirements as other financial risks.[2435] Another commenter stated that the proposed requirement should apply to any material change in a registrant's disclosure related to governance, strategy, risk management, and targets and goals, and not just to changes in previously reported quantitative information.[2436]

Other commenters, however, opposed the disclosure of climate-related information on a quarterly basis.[2437] One commenter stated that an interim updating requirement to report a material change in climate-related disclosures is not necessary because Form 10–Q already requires an update to risk factor disclosure provided by registrants other than SRCs and related material financial impacts disclosure would be required in an interim MD&A.[2438] This commenter further stated that intra-year updates on climate-related disclosures would create meaningful incremental costs for registrants but offer little additional value to investors.[2439] Another commenter that opposed quarterly updating stated that ''many, if not most, climate metrics, risks, opportunities, and strategies are long-term in nature and cannot meaningfully be assessed on a quarter-to-quarter basis.'' [2440] Other commenters asserted that requiring the disclosure of climate-related information in Form 10–Q, in addition to Form 10–K, would overwhelm investors with information of limited usefulness and, due to its novelty, should not be required to be disclosed in Commission periodic reports.[2441]

Many commenters supported not subjecting MJDS filers to the proposed climate disclosure rules, as proposed.[2442] Commenters stated that excluding MJDS filers from the Commission's climate disclosure rules would be consistent with the purpose of the MJDS, which is to enhance the efficiency of cross-border capital raising between the United States and Canada by in part permitting Canadian registrants to follow their home jurisdiction laws and rules when registering securities in the United States and satisfying their reporting obligations under the Exchange Act.[2443] Commenters also noted that in October 2021, the Canadian Securities Administrators proposed a specific climate-related disclosure framework

(''CSA Proposed Instrument'') [2444] that is primarily modeled on the TCFD framework.[2445] According to commenters, once the CSA Proposed Instrument is adopted, MJDS filers will provide climate-related disclosures pursuant to the CSA Instrument that is similar to the disclosures required pursuant to the Commission's proposed rules.[2446] One commenter, however, opposed excluding MJDS filers from the Commission's disclosure rules at least until the CSA Proposed Instrument is finalized and the Commission has determined that the CSA final Instrument is substantially similar to the Commission's climate-related rules.[2447]

Many commenters supported excluding asset-backed issuers from the proposed rules, as proposed.[2448] One commenter stated that application of the proposed rules to asset-backed issuers would be inappropriate because of the unique market structure of asset-backed securities, regarding which the relevant disclosures for most investors relate to matters tied to credit quality and payment performance of the securitized pools, and not to commitments of the sponsoring company relating to climate.[2449] Another commenter stated that any climate-related disclosure requirements would need to be based on a framework that is particularly suited for asset-backed issuers, such as the ABS Climate Disclosure Framework that is being developed by the Structured Finance Association.[2450] Other commenters stated that, because asset-backed securitizations are essential for making home mortgages and car loans available to Americans, including those in low-income communities, and because application of the proposed rules to asset-backed issuers would motivate them to exclude such loans from their financed emissions, such application would result in disproportionate and negative impacts on low-income communities.[2451]

One commenter expressly opposed excluding asset-backed issuers from the proposed rules.[2452] This commenter stated that asset-backed issuers are subject to many of the same climate risks as other issuers and require similar disclosure. As an example of the need for such disclosure, this commenter stated that there are growing concerns that asset-backed issuers are not fully disclosing that properties within the asset pools that they securitize are located in areas particularly vulnerable to increased risk of sea-level rise and extreme flooding.[2453] Another commenter supported excluding asset-backed issuers from the Commission's climate disclosure rules at this time, but encouraged the Commission to consider, in due time, separate rules requiring climate-related disclosures from such issuers.[2454] This commenter stated that, while it believed that all financial and nonfinancial corporations should be expected to provide consistent climate-related disclosures with respect to their equity or debt (or debtlike) issuances, a more tailored, risk-based approach may be more appropriate for climate-related disclosures with respect to securitizations.[2455]

One commenter opposed applying the Commission's climate disclosure rules to Form S–8 filings without stating the reasons why.[2456] No commenter addressed whether the proposed rules should apply to Form 11–K filings.

Several commenters raised concerns about the application of the proposed disclosure requirements to newly public companies.[2457] For example, commenters stated that application of the proposed rules to IPOs could deter many companies from going public due to the increased compliance costs and litigation risks associated with providing the climate-related disclosures, which would run counter to the Commission's mission of facilitating capital formation.[2458] One commenter further stated that because private companies already face complex, lengthy, and costly processes to prepare for an IPO, the additional compliance burden imposed by the proposed climate disclosure rules would have a chilling effect on the use of the public securities markets to raise capital and on the broader U.S. economy.[2459]

Commenters raised similar concerns about the proposed rules in the context of M&A transactions. For example, one commenter stated that, given the scale of the disclosure and work necessary to comply with the proposed climate disclosure rules, having to prepare this disclosure for a private target on a stand-alone basis before the acquiring registrant can file its Form S–4 or F–4 to register the securities being issued in connection with the business combination would materially delay those filings and significantly extend the overall transaction timeline.[2460] According to this commenter, public companies could be placed at a competitive disadvantage when bidding to acquire a private target company under the proposal because it would be necessary to screen prospective acquisitions for the ability to produce climate-related disclosures.[2461] Another commenter stated that a private target may not have collected climate-related data prior to its acquisition, and it could be ''incredibly burdensome'' for the private company to go back in time and measure the impact of climate-related events during a period when it was not collecting such data.[2462] Commenters noted that integrating a recently acquired company takes considerable time and resources, and the Commission should allow for delayed reporting so that an acquiring company need not alter its acquisition schedule to account for the difficulties in assuming responsibility for climate-related disclosures.[2463] Because of the above concerns, commenters urged the Commission not to adopt compliance deadlines for the proposed climate disclosure requirements that would substantially influence the probability or timing of M&A transactions and IPOs.[2464]

Some commenters opposed excluding IPO registrants from the scope of the proposed climate disclosure rules.[2465] After stating that companies that are going public should be held to the same reporting and disclosure requirements of all other public companies, one commenter noted that the rule proposal already contains a number of accommodations for filers, which should not be expanded.[2466] Another commenter opposed exempting IPO registrants from the proposed rules because that would lower investor

protections in the public markets, which is contrary to the Commission's mission and purpose.[2467] One other commenter stated that because investors need information about a registrant's climate-related risks at every stage of capital formation, it supported requiring a registrant to provide climate-related disclosures about a target company in its Form S–4 or F–4.[2468]

3. Final Rules

The final rules will apply to Exchange Act periodic reports[2469] and Securities Act and Exchange Act registration statements largely as proposed, with some modifications as described below. As we stated above when discussing our reasons for amending Regulations S–K and S–X,[2470] we are requiring climate-related disclosures in most Securities Act or Exchange Act registration statements and Exchange Act periodic reports. We believe disclosures about climate-related risks and their financial impacts should be treated like other business and financial information because they are necessary to understand a company's operating results and prospects and financial condition.[2471]

We are taking this approach instead of adopting a new form for climate-related disclosures as suggested by commenters because it is more consistent with the Commission's integrated disclosure system for business and financial reporting and will improve the transparency and comparability of climate-related disclosures for investors as they will be included and incorporated into forms with which registrants and investors alike are familiar, and alongside information regarding a registrant's business, results of operations, and financial condition, which will facilitate an understanding of the impacts of climate-related risks.[2472] While we understand the concern of commenters that recommended the creation of a new form for climate-related disclosures,[2473] revisions to the proposed rules[2474] and strengthened accommodations regarding certain types of disclosures[2475] and for certain issuers[2476] will address many of these concerns.

The final rules require registrants that file their Exchange Act annual reports on Forms 10–K, as well as their Exchange Act and Securities Act registration statements on Form 10 and Form S–1, S–4 (except as provided below), or S–11, as applicable, to include the climate-related disclosures required by the final rules in these forms.[2477] The final rules will also require foreign private issuers that file their Exchange Act annual reports or registration statements on Form 20–F and their Securities Act registration statements on Form F–1 or Form F–4 (except as provided below) to provide the same climate-related disclosures as domestic registrants.[2478] As commenters noted, because foreign private issuers are exposed to climate-related risks in the same way as domestic registrants, they should be subject to the same disclosure requirements.[2479] Applying the same climate-related disclosure requirements to domestic and foreign registrants will also help achieve the Commission's goal of providing more consistent, reliable, and comparable information across registrants for investors. While we acknowledge commenters who suggested that foreign private issuers be permitted to substitute compliance with the final rules through disclosures made in response to requirements of other jurisdictions, we are not adopting substituted compliance at this time. We believe it makes sense to observe how reporting under international climate-related reporting requirements and practices develop before making a determination whether such an approach would result in consistent, reliable, and comparable information for investors. The Commission may consider such accommodations in the future depending on developments in the international climate reporting practices and our experience with disclosures under the final rules.[2480]

In a change from the proposed rules, the final rules will not apply to private companies that are parties to business combination transactions, as defined by Securities Act Rule 165(f),[2481] involving a securities offering registered on Forms S–4 and F–4.[2482] We acknowledge the concerns of commenters about the difficulties and costs associated with private target companies complying with the proposed disclosure requirements in the business combination context in addition to complying with certain other disclosure requirements under Regulation S–K and Regulation S–X,[2483] as well as concerns that the application of those

[2467] *See* letter from AGs of Cal. *et al.*

[2468] *See* letter from Amer. for Fin. Reform, Sunrise Project *et al.*

[2469] Although we generally refer to the final rules applying to Exchange Act periodic reports, the only time a registrant will disclose climate-related information responsive to the final rules in a Form 10–Q is when it elects to disclose its Scopes 1 and/or 2 emissions pursuant to Item 1505 of Regulation S–K. A foreign private issuer that is subject to the GHG emissions reporting requirement, however, is required to provide the GHG emissions disclosure in its annual report on Form 20–F, although it may provide such emissions disclosure on a delayed basis in an amendment to that filing. *See supra* section II.H. The other portions of the final rules are not applicable to Exchange Act periodic reports other than annual reports.

[2470] *See supra* section II.A.3.

[2471] *See id.*

[2472] *See, e.g., supra* notes 2390 and 2391 and accompanying text.

[2473] *See supra* notes 2392–2395 and accompanying text.

[2474] *See, e.g.,* the adoption of less prescriptive requirements and a materiality qualifier for several of the final rule provisions.

[2475] *See, e.g., supra* section II.J (discussing the adoption of an expanded safe harbor provision).

[2476] *See, e.g., supra* section II.H (discussing the exemption from Scopes 1 and 2 emissions reporting for both SRCs and EGCs); and *infra* section II.O (discussing the adoption of different compliance dates for different types of filers).

[2477] Registrants may incorporate by reference the climate-related disclosures required by the final rules to the extent they are permitted to do so under Forms S–1, S–4, and S–11. *See, e.g.,* Form S–1, General Instruction VII (setting forth the requirements a registrant must meet in order to incorporate by reference certain information required by Form S–1). If a registrant is eligible and elects to incorporate by reference certain information required by Forms S–1, S–4, and S–11, those forms also require the registrant to incorporate by reference its latest Form 10–K and all other Exchange Act reports filed since the end of the fiscal year covered by that Form 10–K. *See* Form S–1, Item 12; Form S–4, Items 11 and 13; Form S–11, Item 29. In addition to those filings that a registrant is required to incorporate by reference, a registrant may also incorporate by reference its required emissions disclosure, if applicable, from the prior filing that contained such disclosure to satisfy its Item 1505 disclosure obligations under Form S–1, S–4, or S–11 if (1) such Form S–1, S–4, or S–11 becomes effective after filing its Form 10–K for its latest fiscal year but before filing a Form 10–K/A or its Form 10–Q for the second quarter of its current fiscal year containing the prior year's emissions disclosure and (2) the registrant, pursuant to Item 1505(c)(1), discloses the information required by Item 1505 in either a Form 10–K/A or its second quarter Form 10–Q rather than in its Form 10–K (in both the prior and current fiscal year). *See also* 17 CFR 230.411 and 17 CFR 240.12b–23.

[2478] Forms S–3 and F–3 are not being amended to reference subpart 1500 because the required climate-related disclosures would be included in a registrant's Form 10–K or 20–F annual report that is incorporated by reference into those Securities Act registration statements. *See* Proposing Release, section J, note 690. However, as discussed in section II.H.3 above, we are amending these forms to clarify the date as of which disclosure required by Item 1505(a) must be incorporated.

[2479] *See supra* note 2429 and accompanying text.

[2480] *See also* discussion *infra* section IV.A.4 and IV.C.3.

[2481] *See* 17 CFR 230.165.

[2482] While Form S–1 may be used for business combination transactions, climate-related disclosure will also be required for reporting companies that are parties to the transaction.

[2483] *See, e.g.,* Form S–4, Part I.C, Item 17(b) (requiring, with respect to a company being acquired that is not subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, a brief description of its business, disclosure pursuant to Item 2–01 of Regulation S–K (market price of and dividends on the company's equity), disclosure pursuant to Item 303 of Regulation S–K (MD&A), disclosure pursuant to Item 304 of Regulation S–K (changes in and disagreements with accountants), and, in certain circumstances, financial information).

requirements to private target companies could impact the timing of or discourage business combination activity in U.S. public markets.[2484] Disclosure pursuant to subpart 1500 of Regulation S–K and Article 14 of Regulation S–X will only be required for a registrant or company being acquired that is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act.[2485]

In another change from the proposed rules, the final rules will not require registrants to disclose any material change to the climate-related disclosures provided in a registration statement or annual report in its Form 10–Q or, in certain circumstances, Form 6–K for a registrant that is a foreign private issuer that does not report on domestic forms. This is consistent with the annual reporting requirement adopted by the Commission in other contexts.[2486] We are mindful of the concern expressed by many commenters about the potential compliance costs of the proposed rules, including the proposed interim updating requirement.[2487] This change will help to mitigate the compliance burden.[2488]

Also as proposed, the final rules will not apply to Canadian registrants that use the MJDS and file their Exchange Act registration statements and annual reports on Form 40–F. As many commenters stated, excluding MJDS filers from the Commission's climate disclosure rules is consistent with the purpose of the MJDS and will continue to allow MJDS registrants to follow their home jurisdiction laws and rules when registering securities in the United States and satisfying their reporting obligations under the Exchange Act.[2489]

The proposed rules would have required SRCs to comply with all of the proposed climate-related disclosure requirements, except for disclosure pertaining to Scope 3 emissions, from which they were proposed to be exempted.[2490] Similarly, most of the final rules will apply to SRCs, except for the disclosures requiring Scopes 1 and 2 emissions, from which SRCs will be exempted.[2491] Although some commenters asked the Commission to exclude SRCs from all of the Commission's climate disclosure rules,[2492] we do not believe that such a blanket exemption would be appropriate in light of the fact that, as some commenters noted, SRCs are exposed to climate-related risks to the same extent as other registrants.[2493] For similar reasons, the final rules will apply to EGCs, as proposed, except for the exemption regarding Scopes 1 and 2 emissions disclosure. However, we acknowledge that some aspects of the final rules could impose significant burdens on smaller and early growth stage registrants, particularly if the costs of compliance do not scale with the size of the firm and divert resources that are needed to expand the registrant's business. Because we expect the compliance burden and costs for the GHG emissions disclosure requirement to be proportionally greater for such registrants, not requiring SRCs and EGCs to disclose their Scopes 1 and/or 2 emissions will help address these concerns. For these reasons, we find that it is necessary and appropriate in the public interest and consistent with the protection of investors to not include SRCs and EGCs within the scope of the GHG emissions disclosure requirement,[2494] but to include them within the scope of the other aspects of the final rules.[2495] Moreover, the streamlined requirements and disclosure accommodations we are adopting, which will help limit the compliance burden of the final rules for all registrants, should further alleviate commenters' concerns about the impact of the proposed rules on SRCs and EGCs. In particular, adding materiality qualifiers and making several of the disclosure provisions less prescriptive should enable registrants, including SRCs and EGCs, to provide disclosure that better fit their particular facts and circumstances, which should lessen the need for scaled disclosure for SRCs and EGCs. Additionally, as discussed below, we are providing extended phase ins based on filer status, which will provide SRCs and EGCs with additional time to prepare for the final rules.

Similarly, we are not providing an exemption or transitional relief for registrants engaged in an IPO, as recommended by some commenters, because of these streamlined requirements and other accommodations.[2496] In addition, we note that exempting EGCs from the GHG emissions disclosure requirement will significantly reduce the compliance burden of the final rules for most new registrants, as historically EGCs have accounted for almost 90% of IPO companies.[2497] Moreover, providing a longer transition period before SRCs and EGCs must first comply with the final rules should help those entities that go public to develop the appropriate

[2484] *See, e.g.,* letters from Shearman Sterling (stating that private targets are ''unlikely to have the extensive climate change disclosure prepared in advance of entering into a business combination with a public company.''); and Sullivan Cromwell (stating that, ''in addition to having the resources necessary to collect emissions data from the target company, acquirors would need to expend significant resources to ensure that (1) it has appropriate controls and procedures in place to assess the quality of the information and (2) such information is being collected and measured on a basis consistent with the emissions calculations throughout its organization.'').

[2485] The discussion throughout this release regarding the application of the subpart 1500 disclosure requirements to business combination transactions involving a securities offering registered on Forms S–4 and F–4 also applies to certain business combination transactions for which a proxy statement on Schedule 14A or an information statement on Schedule 14C is required to be filed. *See* 17 CFR 240.14a-101, Item 14(c)(1) (requiring, for certain business combination transactions, disclosure of ''the information required by Part B (Registrant Information) of Form S–4 . . . or Form F–4 . . . , as applicable, for the acquiring company'') and Item 14 (c)(2) (requiring, for certain business combination transactions, disclosure of ''the information required by Part C (Information with Respect to the Company Being Acquired) of Form S–4 . . . or Form F–4 . . . , as applicable''); and 17 CFR 240.14c–101, Item 1 (''Furnish the information called for by all of the items of Schedule 14A . . . which would be applicable to any matter to be acted upon at the meeting if proxies were to be solicited in connection with the meeting.''). The information required by Parts B and C of Forms S–4 and F–4 includes the information required by General Instructions B.3 and C.3 to those forms. *See* Form S–4, General Instruction B.3 (''If the registrant is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then . . . the information required by subpart 1500 of Regulation S–K . . . must be provided with respect to the registrant . . . ''); Form F–4, General Instruction B.3 (same); Form S–4, General Instruction C.3 (''If the company being acquired is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then . . . the information required by subpart 1500 of Regulation S–K . . . must be provided with respect to the company being acquired . . . ''); Form F–4, General Instruction C.3 (same).

[2496] *See supra* note 2457 and accompanying text.

[2497] Wilmer Hale, *2023 IPO Report, 2* (Mar. 31, 2023), available at *https://www.wilmerhale.com/insights/publications/2023-ipo-report* (''IPOs by emerging growth companies (EGCs) accounted for 87% of the year's IPOs, a share modestly lower than the 93% in 2021 and the 89% average that has prevailed since enactment of the JOBS Act in 2012.'').

controls and procedures for providing the required climate-related disclosures. We further note that initial filings from registrants that are not SRCs or EGCs and that determine that they have material Scope 1 and/or Scope 2 emissions will only be required to provide emissions data for one year because they will not have previously provided such disclosure in a Commission filing.[2498]

The final rules also will not apply to asset-backed securities issuers, as proposed. Although we recognize that, as one commenter noted, climate-related risks may be relevant for some of the pooled assets that comprise certain asset-backed securities,[2499] we believe that adoption of climate-related disclosure requirements for certain types of securities, such as asset-backed securities, should consider the unique structure and characteristics of those securities, consistent with other Commission disclosure requirements applicable to asset-backed securities issuers.[2500] Accordingly, while the Commission may consider climate-related disclosure requirements for asset-backed securities issuers in a future rulemaking, we decline to adopt such requirements as part of this rulemaking.

We are not exempting other registrants, such as BDCs, REITs, or issuers of registered non-variable insurance contracts from the final rules. As with operating companies, these entities may face material climate-related risks that would impact an investment or voting decision and will have only limited disclosure obligations to the extent climate-related risks are not material in a given case. We acknowledge commenters that noted that certain registered collective investment vehicles have differences from operating companies, but, in our view, those differences are not significant enough in this context to warrant the differential treatment we are applying to asset-backed securities issuers. Further, because the final rules have been modified and streamlined from proposed, as described above, to the extent a climate-related risk is not material to such registrants the information required to be disclosed would be limited. Likewise, we are not exempting BDCs as suggested by other commenters. While we acknowledge that, if the Commission's proposed rules regarding ESG disclosures for certain investment advisers and investment companies were adopted, there may be some overlap in the required disclosures, we nonetheless believe that the climate-related information required to be disclosed by the final rules in a registrant's Securities Act registration statements and Exchange Act reports will be important to investors and should apply to BDCs and REITs. Finally, with respect to issuers of registered non-variable insurance contracts, if the final rules would otherwise apply solely as a result of a registrant's offerings of registered index-linked annuities, the final rules may not apply prior to required compliance.[2501] To the extent such a registrant is subject to the final rules in connection with offerings of other types of registered non-variable insurance contracts, as noted above, to the extent a climate-related risk is not material to such registrants the information required to be disclosed would be limited.

Finally, as proposed, the final rules will not apply to Forms S–8 and 11–K.

M. Structured Data Requirement (Item 1508)

1. Proposed Rules

The proposed rules would have required a registrant to tag the proposed climate-related disclosures in a structured, machine-readable data language. Specifically, the proposed rules would have required a registrant to tag climate-related disclosures in Inline eXtensible Business Reporting Language (''Inline XBRL'') in accordance with 17 CFR 232.405 (Rule 405 of Regulation S–T) and the EDGAR Filer Manual. The proposed requirements would include block text tagging and detail tagging of narrative and quantitative disclosures provided pursuant to subpart 1500 of Regulation S–K and Article 14 of Regulation S–X.

2. Comments

Commenters that addressed this aspect of the proposal largely supported requiring registrants to tag climate-related disclosures, including block text tagging and detail tagging of narrative and quantitative disclosures in Inline XBRL, as proposed.[2502] Commenters indicated that Inline XBRL is a functional tool familiar to most investors and that it would be a useful tool for climate-related disclosures.[2503] Some commenters questioned the utility of climate-related disclosures without digital tagging and asserted that the benefit to end users of this information far outweighed the costs to issuers, particularly given that issuers should already have established the necessary software, skills, and processes to comply with the proposed requirements.[2504]

One commenter questioned how many investors use this functionality and suggested that tagging should instead be voluntary.[2505] Another commenter stated that tagging of climate-related disclosures under subpart 1500 of Regulation S–K should not be required because currently registrants only tag their financial statements including any footnotes and schedules set forth in Article 12 of Regulation S–X.[2506] This commenter also asserted that, if the Commission

[2499] *See supra* notes 2452 and 2453 and accompanying text.

[2500] *See supra* note2450 and accompanying text. *See also* 17 CFR 229.1100 through 229.1125 (Regulation AB).

[2501] *See* Division AA, Title I of the Consolidated Appropriations Act, 2023, Public Law 117–328; 136 Stat. 4459 (Dec. 29, 2022) and Registration for Index-Linked Annuities; Amendments to Form N–4 for Index-Linked and Variable Annuities (''RILA Act''), Release No. 33–11250 (Sept. 29, 2023) [17 FR 71088 (Oct. 13, 2023)]. If the Commission adopts this proposal substantially as proposed, or insurers are able to register offerings of registered index-linked annuities on Form N–4 pursuant to a provision in the RILA Act, the registration statement for a registered-index linked annuity would not be required to include the information required by the final rules adopted in this release. We also anticipate that in these circumstances insurance companies generally will rely on Exchange Act Rule 12h–7 if they would otherwise be subject to Exchange Act reporting obligations solely by reason of their offerings of registered index-linked annuities.

Hadick; R. Palacios. *But see* Alliance Resource (''Requiring XBRL tagging of information would increase costs and impose time constraints on registrants. Requiring the use of XBRL would be a departure from other areas of Securities and Exchange Act filings outside the financial statements and given the differences in the estimates and assumptions used to calculate Scope 1, 2, and 3 emissions, we believe the use of XBRL for these disclosures would not be meaningful to investors.'').

[2503] *See, e.g.,* letters from ISS ESG; Ceres.

[2504] *See, e.g.,* letters from XBRL International; Ceres.

[2505] *See, e.g.,* letters from Sky Harbor.

[2506] *See, e.g.,* letter from American Fuel & Petrochemical Manufacturers.

were to adopt an Inline XBRL tagging requirement as proposed, it should approve and update a taxonomy prior to compliance, otherwise registrants would create custom tags which would reduce the comparability and utility of the required disclosures. One supportive commenter stated that the Commission should consider developing guidance to help standardize climate-related custom tags ''to foster comparability and faster access across corporate disclosures.'' [2507] Yet another supportive commenter recommended that ''the Commission avoid custom tags within the Inline XBRL schema because they erode the comparability of the climate-related disclosures.'' [2508]

Commenters largely supported the proposal to require tagging of both quantitative climate-related metrics and qualitative climate-related disclosures, stating that tagging will maximize efficiency and make the information easier to consume.[2509] One of these commenters stated that detail and block text tagging ''of all disclosure, as opposed to only quantitative metrics, expedites aggregation, filtering, and synthesis of corporate reporting in addition to making the reporting more accessible and usable in the first place.'' [2510] Another commenter stated that tagging of both narrative and quantitative information is necessary to increase efficiencies in the capital markets as a new volume of information becomes available.[2511]

The Commission also solicited comment on whether there are any third-party taxonomies the Commission should consider in connection with the proposed tagging requirements.[2512] While one commenter [2513] suggested the registrant should have the ability to select the structured data language it wanted to use, most commenters stated that the Commission should require tagging in Inline XBRL, as proposed.[2514] One commenter noted the importance of interoperability with international regulators and organizations when considering alternatives.[2515] Another commenter emphasized that machine-readable data that are interoperable with international standards was necessary to ensure effective usage in the current international regulatory environment.[2516] A different commenter similarly stated that the ISSB has been refining the XBRL climate risk disclosure taxonomy since its inception and recommended that the Commission build its taxonomy based on this work, which would further facilitate global alignment of disclosure standards.[2517] Other commenters stated that the existing XBRL taxonomy is both familiar and available to issuers and consumers of financial data.[2518]

3. Final Rules

After considering comments, we are adopting the structured data requirements as proposed.[2519] For registrants that are LAFs, compliance with the structured data requirements for disclosures under subpart 1500 of Regulation S–K will be required for all disclosures beginning one year after initial compliance with the disclosure requirements.[2520] Other categories of filers will be required to comply with the tagging requirements upon their initial compliance with subpart 1500. Likewise, with respect to any specific provisions that have an extended compliance date that begins on or after the initial tagging compliance date for LAFs, filers will be required to tag such information at initial compliance.[2521] Because non-LAF registrants will have a later date than LAF registrants to comply overall with the final rules, we are not adopting a separate later compliance date regarding the structured data requirements for non-LAF registrants.

Since all issuers that will be subject to the final rules must currently tag disclosures in Inline XBRL,[2522] the requirement will not unduly add to companies' burden, and we believe any incremental costs are appropriate given the significant benefits to investors, as detailed by commenters, including improving the usefulness and comparability of disclosures, as well as making such disclosures easier to locate and review. With respect to the commenter that stated that registrants should not be required to tag climate-related disclosures because they currently only tag financial statement disclosures, we note that all issuers, including smaller reporting companies, must tag in Inline XBRL cover page disclosures and financial statement disclosures, which includes both detail and block text tagging. In addition, we note that the limited incremental additional cost associated with tagging additional disclosures results in a significant benefit to investors in terms of the ability to readily find and analyze disclosures. As the Commission stated in the Proposing Release and as confirmed by commenters, Inline XBRL tagging will enable automated extraction and analysis of the information required by the final rules, allowing investors and other market participants to more efficiently identify responsive disclosure, as well as perform large-scale aggregation, comparison, filtering, and other analysis of this information across registrants, as compared to requiring a non-machine readable data language such at HTML.[2523] The Inline XBRL requirement will also enable automatic comparison of tagged disclosures against prior periods. If we were not to adopt the Inline XBRL requirement as suggested by some commenters, some of these benefits would be diminished, in particular the enhanced comparability of the disclosures required under the final rules. We are not allowing for voluntary tagging, as suggested by one commenter, because to do so would likely negatively impact the completeness of the data, thereby diminishing the usefulness of the information.

With respect to the commenter that suggested registrants should have the ability to select a structured data language, we have concluded that leaving the particular structured data language unspecified could lead to

[2518] *See, e.g.,* letter from ISS ESG.

[2519] Item 1508 of Regulation S–K and Rule 405(b)(4)(vii) of Regulation S–T (requiring disclosures filed pursuant to subpart 1500 of Regulation S–K to be submitted as an Interactive Data File). Because financial statements are already structured in Inline XBRL, no new regulatory text is necessary to structure the disclosures filed pursuant to Article 14 of Regulation S–X. See Rule 405(b)(1)(i) of Regulation S–T.

[2520] *See infra* at section II.O.3 for a more detailed discussion of compliance dates.

[2521] This includes Item 1502(d)(2), Item 1502(e)(2), Item 1504(c)(2), Item 1505, and Item 1506.

[2522] *See* Rules 405, 406, and 408 of Regulation S–T.

[2523] These considerations are generally consistent with objectives of the recently enacted Financial Data Transparency Act of 2022, which directs the establishment by the Commission and other financial regulators of data standards for collections of information, including with respect to periodic and current reports required to be filed or furnished under Exchange Act sections 13 and 15(d). Such data standards must meet specified criteria relating to openness and machine-readability and promote interoperability of financial regulatory data across members of the Financial Stability Oversight Council. *See* James M. Inhofe National Defense Authorization Act for Fiscal Year 2023, Public Law 117–263, tit. LVIII, 136 Stat. 2395, 3421–39 (2022).

different issuers using different data languages for the same disclosure, thus hindering the interoperability and usability of the data. We agree with commenters that stated that the existing Inline XBRL data language is familiar to registrants and investors, and therefore continued use of this structured data language will ease registrants' cost of compliance and burdens on investors.

We acknowledge commenters that noted the importance of interoperability with international standards. The staff will keep this consideration in mind as it develops a draft taxonomy for the final rules and will seek to incorporate elements from third-party taxonomies whenever appropriate to do so. With respect to the commenter who called for the Commission to approve a taxonomy prior to compliance, consistent with the Commission's common practice, a draft taxonomy will be made available for public comment, and the Commission will incorporate a final taxonomy into an updated version of EDGAR before the tagging requirements take effect. We acknowledge commenters who expressed concerns about the potential for extensive custom tagging, and the possible resulting effect on data quality and usefulness. In order to address these concerns and provide sufficient time for the adoption of a final taxonomy that will take into consideration initial disclosures that will be provided in response to the final rules, we are delaying compliance with the structured data requirements for one year beyond initial compliance with the disclosure requirements for LAF registrants, which have the earliest compliance date regarding the final rules.[2524] This approach should both help lessen any compliance burden and improve data by reducing the need for extensive custom tagging.

N. Treatment for Purposes of the Securities Act and the Exchange Act

1. Proposed Rules

The Commission proposed to treat the proposed required climate-related disclosures as ''filed'' and therefore subject to potential liability under Exchange Act section 18,[2525] except for disclosures furnished on Form 6–K.[2526] The proposed filed climate-related disclosures would also be subject to potential section 11 liability [2527] if included in, or incorporated by reference into, a Securities Act registration statement. This treatment would apply both to the disclosures in response to proposed subpart 1500 of Regulation S–K and to proposed Article 14 of Regulation S–X.

The Commission proposed that Form 6–K disclosures would not be treated as ''filed'' because the form, by its own terms, states that ''information and documents furnished in this report shall not be deemed to be 'filed' for the purposes of section 18 of the Act or otherwise subject to the liabilities of that section.'' [2528] As the Commission explained when proposing the climate-related disclosure rules,[2529] the treatment of disclosures on Form 6–K as furnished is a long-standing part of the foreign private issuer disclosure system.[2530]

2. Comments

Commenters expressed differing views on whether we should treat Commission-mandated climate-related disclosures as filed or furnished. Several commenters supported the proposed treatment of disclosures required by both proposed subpart 1500 of Regulation S–K and proposed Article 14 of Regulation S–X as filed.[2531] One commenter stated that because climate-related disclosures will provide information that is important for investors in securities analysis and the management of investment risk, these disclosures should be treated the same as other critical information filed under Regulations S–X and S–K that is material and necessary for investors' assessment of registrants' financial performance and future prospects.[2532] Other commenters stated that the treatment of climate-related disclosures as filed, which would allow liability under section 18 to attach to false or misleading statements, will communicate to registrants the importance of these disclosures and deter them from greenwashing or otherwise making misleading statements.[2533] Still other commenters stated that the proposed treatment of climate-related disclosures as filed would help ensure that the disclosures are accurate and consistent.[2534] One such commenter stated that the treatment of climate-related disclosures as filed could substitute for the proposed requirement to provide assurance for certain GHG emissions disclosures, which the commenter opposed.[2535]

Several other commenters opposed the proposed treatment of climate-related disclosures as filed.[2536] Some of these commenters stated that the Commission should treat climate-related disclosures as furnished rather than filed because of the complexities and uncertainties involved in such disclosures, particularly regarding those pertaining to GHG emissions disclosures.[2537] In this regard one commenter stated that the ''evolving and uncertain nature of Scope 3 measurement and tracking capabilities (and, for some smaller companies, the novelty of Scope 1 and Scope 2 reporting) could make it difficult for [registrants] to reach the degree of certainty necessary to assume the liability burden associated with reports filed with the [Commission].'' [2538] Other commenters stated that the proposed treatment would deter registrants from providing expansive climate-related disclosures because of the potential liability under Exchange Act section 18 and Securities Act section 11.[2539]

Several commenters supported the proposed treatment of climate-related disclosures on a Form 6–K as furnished.[2540] One commenter stated that it saw no reason to disrupt the well-established treatment of information provided on a Form 6–K.[2541] Other commenters supported the proposed Form 6–K treatment because they believed that all climate-related disclosures should be treated as furnished.[2542]

3. Final Rules

As proposed, the climate-related disclosures provided pursuant to the

[2541] *See* letter from BHP.

[2542] *See, e.g.,* letters from CEMEX; and J. Herron; *see also* letter from Nasdaq (stating that the Commission should treat all climate-related disclosures as furnished while also stating that the Commission has ''not explained why it has discriminated between foreign and domestic companies in this regard'').

final rules will be treated as filed. Climate-related disclosures will therefore be subject to potential liability pursuant to Exchange Act section 18 and, if included or otherwise incorporated by reference into a Securities Act registration statement, Securities Act section 11 as well. Treating climate-related disclosures as filed will help promote the accuracy and consistency of such disclosures. In this regard, we believe climate-related disclosures should be subject to the same liability as other important business or financial information that the registrant includes in its registration statements and periodic reports. While we acknowledge commenters' concerns regarding the complexities and evolving nature of climate data methodologies, particularly with regard to GHG emissions metrics,[2543] the modifications we have made to the proposed rules should help to mitigate this concern. These modifications include: limiting the scope of the GHG emissions disclosure requirement; [2544] revising several provisions regarding the impacts of climate-related risks on strategy, targets and goals, and climate-related metrics so that registrants will only be required to provide the disclosures in certain circumstances, such as when material to the registrant; [2545] and providing an additional PSLRA safe harbor for several types of climate-related disclosures.[2546] We also are providing registrants with a transition period based on filer status and the content of the required information to afford registrants additional time to prepare to provide the climate-related disclosures.[2547] For these reasons, we are requiring the climate-related disclosures to be filed rather than furnished.

O. Compliance Date

1. Proposed Rules

The Commission proposed phase in dates for complying with the proposed rules that differed based on a registrant's filing status or status as an SRC.[2548] In proposing the different compliance dates, the Commission recognized that many registrants may require time to establish the necessary systems, controls, and procedures to comply with the proposed climate-related disclosure requirements. The Commission also indicated that it was appropriate to apply the rules first to LAFs because many LAFs are already collecting and disclosing climate-related information, have already devoted resources to these efforts, and have some levels of controls and processes in place for such disclosure.[2549] In addition, by providing AFs and NAFs with additional time, and SRCs with the greatest amount of time, to prepare for complying with the proposed rules, the Commission sought to provide registrants, especially smaller registrants, with additional time to prepare for the proposed climate-related disclosures.[2550]

The Commission summarized the proposed phase ins for compliance in the following table, which was included in the Proposing Release. The table assumed, for illustrative purposes, that the proposed rules would be adopted with an effective date in December 2022, and that the registrant has a December 31 fiscal year-end. The proposed compliance dates in the table applied to both annual reports and registration statements.

COMPLIANCE DATES UNDER PROPOSED RULES

Registrant type	Disclosure compliance date		Financial statement metrics audit compliance date
	All proposed disclosures, including GHG emissions metrics: Scope 1, Scope 2, and associated intensity metric, but excluding Scope 3	GHG emissions metrics: Scope 3 and associated intensity metric	
LAFs	Fiscal year 2023 (filed in 2024)	Fiscal year 2024 (filed in 2025)	Same as disclosure compliance date.
AFs and NAFs	Fiscal year 2024 (filed in 2025)	Fiscal year 2025 (filed in 2026).	
SRCs	Fiscal year 2025 (filed in 2026)	Exempted.	

2. Comments

Many responsive commenters supported different compliance dates based on a registrant's status as an LAF, AF, NAF, or SRC.[2551] Some commenters supported the phase in schedule, as proposed.[2552] One commenter stated that the proposed phase in periods would give sufficient lead time for registrants to prepare while also not unduly delaying the disclosures for investors.[2553]

Several commenters stated that the proposed phase in schedule would be challenging even for LAFs to meet and that additional time would be needed for registrants to develop the reporting controls and procedures necessary to prepare disclosures that are high quality and reliable for investors.[2554] Commenters recommended that the proposed compliance dates be extended by various periods, such as by: one year; [2555] two years; [2556] three years; [2557]

[2556] *See, e.g.,* letters from Alphabet *et al.;* AXPC; KPMG (recommending extending the phase in periods by two-three years); NRF; RILA; SIFMA (recommending two-year extension of the compliance date for Scope 3 emissions disclosure); and US TAG TC207.

[2557] *See, e.g.,* letters from CEMEX (recommending extending the compliance date for Scope 3 emissions disclosure by LAFs by three-five years); SIFMA (recommending three-four year extension for compliance with financial metrics disclosure); and Williams Cos. (recommending three-five year extension for all registrants, including LAFs).

or five years.[2558] Some commenters opposed the proposed compliance dates without specifying what dates would be appropriate.[2559] Other commenters recommended that the Commission shorten the proposed phase in periods.[2560]

3. Final Rules

Similar to the proposed rules, we are adopting delayed and staggered compliance dates for the final rules that vary according to the filing status of the registrant.[2561] We continue to believe that initially applying the disclosure requirements to LAFs is appropriate because many LAFs are already collecting and disclosing climate-related information,[2562] and therefore will have devoted resources to these efforts and have some levels of controls and processes in place for such disclosure. In comparison, registrants that are not LAFs may need more time to develop the systems, controls, and processes necessary to comply with the climate disclosure rules and may face proportionately higher costs. Accordingly, we are providing such registrants additional time to comply, with SRCs, EGCs, and NAFs receiving the longest phase in period. Although we recognize that some SRCs and EGCs may technically be classified as AFs, such registrants may face the same difficulties as other SRCs and EGCs in complying with the final rules, and accordingly, the extended compliance date applies to them based on their status as SRCs or EGCs.

To address the concerns of many commenters that the proposed compliance schedule was too challenging even for LAFs to meet, we are providing an extended and phased in compliance period for each type of registrant and for certain types of disclosures. For example, we are providing a further phased in compliance date for registrants that may be required to disclose their Scopes 1 and 2 emissions that differs from the proposed compliance schedule, which would have required registrants to provide those emissions disclosures by the same deadline as for the other climate disclosures. This will help address the concern of commenters that additional time is required for registrants, including many LAFs, to enhance or implement new policies, processes, controls, and system solutions in order to provide the GHG emissions disclosures if required. We are also providing a further phased-in compliance date for the requirements to provide quantitative and qualitative disclosures about material expenditures and material impacts to financial estimates and assumptions required by Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2) until the fiscal year immediately following the fiscal year of the registrant's initial compliance date for subpart 1500 disclosures based on its filer status, for the reasons discussed above.[2563]

The following table summarizes the phased in compliance dates of the final rules, both for subpart 1500 of Regulation S–K and Article 14 of Regulation S–X. The compliance dates in the table apply to both annual reports and registration statements; in the case of registration statements, compliance would be required beginning in any registration statement that is required to include financial information for the full fiscal year indicated in the table.

COMPLIANCE DATES UNDER THE FINAL RULES [1]

Registrant type	Disclosure and financial statement effects audit		GHG emissions/assurance			Electronic tagging
	All Reg. S–K and S–X disclosures, other than as noted in this table	*Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2)*	*Item 1505 (Scopes 1 and 2 GHG emissions)*	*Item 1506—Limited assurance*	*Item 1506—Reasonable assurance*	*Item 1508—Inline XBRL tagging for subpart 1500* [2]
LAFs	FYB 2025	FYB 2026	FYB 2026	FYB 2029	FYB 2033	FYB 2026.
AFs (other than SRCs and EGCs)	FYB 2026	FYB 2027	FYB 2028	FYB 2031	N/A	FYB 2026.
SRCs, EGCs, and NAFs	FYB 2027	FYB 2028	N/A	N/A	N/A	FYB 2027.

[1] As used in this chart, "FYB" refers to any fiscal year beginning in the calendar year listed.
[2] Financial statement disclosures under Article 14 will be required to be tagged in accordance with existing rules pertaining to the tagging of financial statements. *See* Rule 405(b)(1)(i) of Regulation S–T.

For example, an LAF with a January 1 fiscal-year start and a December 31 fiscal year-end date will not be required to comply with the climate disclosure rules (other than those pertaining to GHG emissions and those related to Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2), if applicable) until its Form 10–K for fiscal year ended December 31, 2025, due in March 2026. If required to disclose its Scopes 1 and/or 2 emissions, such a filer will not be required to disclose those emissions until its Form 10–K for fiscal year ended December 31, 2026, due in March 2027, or in a registration statement that is required to include financial information for fiscal year 2026. Such emissions disclosures would not be subject to the requirement to obtain limited assurance until its Form 10–K for fiscal year ended December 31, 2029, due in March 2030, or in a registration statement that is required to include financial information for fiscal year 2029. The registrant would be required to obtain reasonable assurance over such emissions disclosure beginning with its Form 10–K for fiscal year ended December 31, 2033, due in March 2034, or in a registration statement that is required to include financial information for fiscal year 2033. If required to make disclosures pursuant to Item 1502(d)(2), Item 1502(e)(2), or Item 1504(c)(2), such a filer will not be required to make such disclosures until its Form 10–K for fiscal year ended December 31, 2026, due in March 2027,

[2558] *See, e.g.,* letters from API; and ConocoPhillips (recommending extending the compliance date for Scopes 1 and 2 emissions disclosures to at least five years from date of adoption).

[2559] *See, e.g.,* letters from AGCA; Crowe LLP (June 16, 2022) ("Crowe") (recommending extending the phase in periods for GHG emissions and financial metrics disclosures); Eni SpA (recommending a phase in for financial metrics disclosure); IADC; and Nasdaq.

[2560] *See, e.g.,* letters from AGs of Cal. *et al.* (recommending shortening the phase in period for all registrants other than LAFs by one year); CalSTRS (recommending setting the phase in periods to the earliest possible dates); and Ceres (recommending moving up disclosure proposed to be required for fiscal year 2025 by one year).

[2561] For the avoidance of doubt, notwithstanding the fact that we generally use the term "registrant" in this section, the compliance dates discussed herein also apply to the information required to be provided pursuant to new General Instruction C.3 of Forms S–4 and F–4 with respect to a company being acquired.

[2562] *See infra* section IV.A.5. *See also, e.g.,* letters from Amazon; Dell; and Microsoft.

[2563] *See supra* sections II.D.1.c, II.D.2.c, and II.G.3.a.

or in a registration statement that is required to include financial information for fiscal year 2026.

As another example, an AF that is not an SRC or EGC with a January 1 fiscal-year start and December 31 fiscal year-end date will not be required to comply with the climate disclosure rules (other than those pertaining to GHG emissions and those related to Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2), if applicable) until its Form 10–K for the fiscal-year ending December 31, 2026, due in March 2027. If required to disclose its Scopes 1 and 2 emissions, such a filer will not be required to disclose those emissions until its Form 10–K for fiscal year ending December 31, 2028, due in March 2029, or in a registration statement that is required to include financial information for fiscal year 2028, and it would not be required to obtain limited assurance over such disclosure until its Form 10–K for fiscal year ending December 31, 2031, due in March 2032, or in a registration statement that is required to include financial information for fiscal year 2031. If required to make disclosures pursuant to Item 1502(d)(2), Item 1502(e)(2), or Item 1504(c)(2), such a filer will not be required to make such disclosures until its Form 10–K for fiscal year ended December 31, 2027, due in March 2028, or in a registration statement that is required to include financial information for fiscal year 2027.

We are adopting a separate compliance date for the structured data (electronic tagging) requirements of the final rules that is one year following the earliest compliance date (which applies to LAFs) under the final rules.[2564] We are adopting a later compliance date for the structured data requirements to improve the quality of the structured data, as discussed above.[2565] Accordingly, LAFs will not be required to comply with the structured data requirements when first complying with the climate disclosure rules in subpart 1500 required in 2025 but will be required to do so when complying with the climate disclosure rules in subpart 1500 for fiscal year 2026; tagging of disclosures provided in response to Item 1502(d)(2), Item 1502(e)(2), Item 1504(c)(2), Item 1505, and Item 1506 will be required at the time of initial compliance with these provisions. AFs (other than SRCS and EGCs) will be required to comply with the structured data requirements when first complying with the relevant provisions of subpart 1500 for the fiscal year that begins in 2026. Similarly, SRCs, EGCs, and NAFs will be required to comply with the structured data requirements when first complying with the climate disclosure rules for the fiscal year that begins in 2027. For these non-LAF registrants, we are not adopting a later compliance date for the structured data requirements because we are adopting later compliance dates regarding the final rules overall for these registrants, which will provide them with additional time to meet the final rules' structured data requirements.

III. Other Matters

The Commission considers the provisions of the final rules to be severable to the fullest extent permitted by law. ''If parts of a regulation are invalid and other parts are not,'' courts ''set aside only the invalid parts unless the remaining ones cannot operate by themselves or unless the agency manifests an intent for the entire package to rise or fall together.'' *Bd. of Cnty. Commissioners of Weld Cnty.* v. *EPA,* 72 F.4th 284, 296 (D.C. Cir. 2023); *see K Mart Corp.* v. *Cartier, Inc.,* 486 U.S. 281, 294 (1988). ''In such an inquiry, the presumption is always in favor of severability.'' *Cmty. for Creative Non-Violence* v. *Turner,* 893 F.2d 1387, 1394 (D.C. Cir. 1990). Consistent with these principles, while the Commission believes that all provisions of the final rules are fully consistent with governing law, if any of the provisions of these rules, or the application thereof to any person or circumstance, is held to be invalid, the Commission intends that such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application. For instance, but without limitation, each of the following portions of the final rules serves distinct but related purposes and is capable of operating independently: (1) climate-related risk disclosures, (2) targets and goals disclosures, (3) GHG emissions disclosures and assurance, and (4) Article 14 financial statement disclosures. Moreover, many of the required disclosure items in the final rules operate independently in that not all registrants are required to provide each of the required disclosures, and some disclosures will only be provided to the extent applicable. For example, disclosures related to a registrant's use of transition plans, scenario analysis, or internal carbon prices would depend upon a registrant's activities, if any, to mitigate or adapt to material climate-related risks. Similarly, governance disclosures would only be required to the extent that a registrant has information responsive to the disclosure requirements. In addition, the GHG emissions disclosure requirements will apply only with respect to LAFs and AFs (other than SRCs and EGCs). Thus, while the final rules are each intended to improve the overall consistency, comparability, and reliability of climate-related disclosures as discussed throughout this release, the invalidity of any particular disclosure requirement would not undermine the operability or usefulness of other aspects of the final rules.

Pursuant to the Congressional Review Act,[2566] the Office of Information and Regulatory Affairs has designated these rules a ''major rule,'' as defined by 5 U.S.C. 804(2).

IV. Economic Analysis

We are mindful of the economic effects that may result from the final rules, including the benefits, costs, and the effects on efficiency, competition, and capital formation.[2567] This section analyzes the expected economic effects of the final rules relative to the current baseline, which consists of the regulatory framework of disclosure requirements in existence today, the current disclosure practices of registrants, and the use of such disclosures by investors and other market participants. Where possible, we have attempted to quantify these economic effects. In many cases, however, we are unable to reliably quantify the potential benefits and costs of the final rules because we lack information necessary to provide a reasonable estimate. For example, existing empirical evidence does not allow us to reliably quantify how enhancements in climate-related disclosure may improve information processing by investors, or company

[2564] We note that the final rules do not alter the requirements for registrants to tag their financial statement disclosures in Inline XBRL. Accordingly, financial statement disclosures provided pursuant to new Article 14 of Regulation S–X will be required to be tagged in accordance with those requirements at the time they are first required. *See* Rule 405(b)(1)(i) of Regulation S–T.

[2565] *See* discussion *supra* at section II.M.3.

[2566] 5 U.S.C. 801 *et seq.*

[2567] Section 2(b) of the Securities Act, 15 U.S.C. 77b(b), and section 3(f) of the Exchange Act, 17 U.S.C. 78c(f), require the Commission, when engaging in rulemaking where it is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. Further, section 23(a)(2) of the Exchange Act, 17 U.S.C. 78w(a)(2), requires the Commission, when making rules under the Exchange Act, to consider the impact that the rules would have on competition, and prohibits the Commission from adopting any rules that would impose a burden on competition not necessary or appropriate in furtherance of the Exchange Act.

monitoring of climate-related risks. Where quantification of the economic effects of the final rules is not practical or possible, we provide a qualitative assessment of the effects.

The final rules will provide investors with more consistent, comparable, and reliable disclosures with respect to registrants' climate-related risks that have materially impacted, or are reasonably likely to have a material impact on, the registrant's business strategy, results of operations, or financial condition, the governance and management of such risks, and the financial statement effects of severe weather events and other natural conditions, which will enable investors to make more informed investment and voting decisions.[2568] Many investors have expressed concern that the current landscape of primarily voluntary climate-related disclosures is inadequate.[2569] By requiring registrants to provide climate-related information in a more standardized format in Commission filings, the final rules will mitigate the challenges that investors currently confront in obtaining consistent, comparable, and reliable information, assessing the nature and extent of the climate-related risks faced by registrants and their impact on registrants' business operations and financial condition, and making comparisons across registrants. Further, a mandatory disclosure regime will generally provide investors with access to climate-related disclosures on a more timely and regular basis than a voluntary disclosure regime.[2570] As a result, the final rules will reduce information asymmetry between investors and registrants, which can reduce investors' uncertainty about estimated future cash flows. This effect contributes to a lowering of the risk premium that investors demand and therefore registrants' cost of capital. The final rules will also reduce information asymmetry among investors by narrowing the informational gap between informed and uninformed traders, which can reduce adverse selection problems and improve stock liquidity.[2571] Further, by enabling climate-related information to be more fully incorporated into securities prices, the final rules will allow climate-related investment risks to be borne by those investors who are most willing and able to bear them. Taken together, the final rules are expected to promote investor protection, the efficient allocation of capital, and, for some registrants, capital formation.[2572]

We recognize that the final rules will impose additional costs on registrants, investors, and other parties. Registrants will face increased compliance burdens, with the extent of these burdens varying based on a registrant's filer status, existing climate-related disclosure practices (if any), and other characteristics. For example, additional compliance burdens could be significant for registrants that are not already collecting climate-related information and providing climate-related disclosures. In other cases, the compliance burden could be more modest, such as for registrants that are already collecting climate-related information and providing information similar to what is required by the rules we are adopting. Additionally, the requirements will pose a comparatively smaller compliance burden for those registrants that do not have material climate-related risks. Other potential costs for registrants include increased litigation risk and the potential disclosure of proprietary information about a registrant's operations, business, and/or production processes.[2573] Beyond registrants, certain third parties, such as market participants, customers, and suppliers, could face reduced demand for their services or higher prices for their inputs as a result of the final rules' required disclosures.

A. Baseline and Affected Parties

The baseline against which the costs, benefits, and the effects on efficiency, competition, and capital formation of the final rules are measured consists of current requirements for climate-related disclosures and current market practice as it relates to such disclosures. The economic analysis considers existing regulatory requirements, including recently adopted rules, as part of its economic baseline against which the benefits and costs of the final rules are measured.[2574]

One commenter stated that our analysis should account for the ''[s]taggering aggregate costs and unprecedented operational challenges'' of recently proposed rules in three categories, including ''[c]orporate governance.'' [2575] Another commenter identified two specific rules with which these final amendments could ''interact in obvious or non-obvious ways that raise costs for businesses.'' [2576] Implementation of one of these, adopted in the Cybersecurity Disclosures Adopting Release,[2577] could involve the

2568 *See infra* section IV.C.1.

2569 *See infra* section IV.B.

2570 As industry observers have noted, many companies do not disclose their climate and other sustainability data until more than 12 months after the end of their fiscal year. *See, e.g.,* Corporate Knights, *Measuring Sustainability Disclosure* (2019), available at *https://www.corporateknights.com/wp-content/uploads/2021/08/CK_StockExchangeRanking_2020.pdf*. *See* letter from Morningstar (stating that ''Currently, a lack of clear disclosure standards for the timing of 'sustainability reports,' which is the primary source for emissions data, greatly hinders investor knowledge. For example, some registrants released 2021 reports—detailing 2020 data—as late as November 2021.''); *see also* letters from Miller/Howard (stating that requiring disclosure in filings with the Commission will provide users with confidence that they are receiving the ''most recent'' climate-related information); and Calvert (stating that ''57% of 2,207 companies disclosed their Scope 1 and 2 emissions with a one or two year delay.''). Furthermore, a voluntary regime may allow registrants to provide disclosures at irregular or multi-year intervals. In contrast, the final rules will generally require disclosures on an annual basis, which will allow investors to make better comparisons across time.

2571 *See* Corporate Knights, *supra* note 2570.

2572 *See infra* section IV.D.

2573 *See infra* section IV.C.2.

2574 *See, e.g., Nasdaq* v. *SEC,* 34 F.4th 1105, 1111–15 (D.C. Cir. 2022). This approach also follows Commission staff guidance on economic analysis for rulemaking. *See* SEC Staff, *Current Guidance on Economic Analysis in SEC Rulemaking* (Mar. 16, 2012), available at *https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf* (''SEC Guidance on Economic Analysis (2012)'') (''The economic consequences of proposed rules (potential costs and benefits including effects on efficiency, competition, and capital formation) should be measured against a baseline, which is the best assessment of how the world would look in the absence of the proposed action.''); *see id.* (''The baseline includes both the economic attributes of the relevant market and the existing regulatory structure.''). The best assessment of how the world would look in the absence of the proposed or final action typically does not include recently proposed actions, because that would improperly assume the adoption of those proposed actions.

2575 *See* letter from Member of the U.S. House of Representatives Patrick McHenry and 28 other House Members (Sept. 26, 2023). Although the commenter did not identify specific rules that should be considered as part of this analysis, we considered the ''corporate governance'' category noted by the commenter (because the final rules include disclosure provisions related to governance of climate-related risks) and identified *Cybersecurity Risk Management, Strategy, Governance, and Incident Disclosure, supra* note 2486 (''Cybersecurity Disclosures Adopting Release'') as a rule with potentially overlapping implementation costs (discussed *infra* note 2577 and accompanying text).

2576 *See* Overdahl exhibit to letter from Chamber (citing Mandel and Carew (2013)). In addition to the Cybersecurity Disclosures Adopting Release, discussed *infra,* this commenter identified *Share Repurchase Disclosure Modernization,* Release Nos. 34–97424, IC–34906 (May 3, 2023) [88 FR 36002 (June 1, 2023)]. That rule was vacated by the U.S. Court of Appeals for the Fifth Circuit in December 2023. *See* Chamber of Com. of the U.S. v. SEC, 88 F.4th 1115 (Dec. 19, 2023).

2577 *See* Cybersecurity Disclosures Adopting Release. The Cybersecurity Disclosures Adopting Release requires current disclosure about material cybersecurity incidents, and periodic disclosures about a registrant's processes to assess, identify, and manage material cybersecurity risks, management's role in assessing and managing material cybersecurity risks, and the board of directors' oversight of cybersecurity risks. For a full discussion of compliance dates for these amendments, *see id.* at section II.I.

same staff and resources as implementation of the final climate disclosure rules. However, we expect minimal overlap in the implementation periods of the two rules because the only remaining compliance dates for the rules adopted in the Cybersecurity Disclosures Adopting Release are for cybersecurity incident disclosure by smaller reporting companies by June 15, 2024, structured data requirements for Form 8–K and Form 6–K disclosures by December 18, 2024, and structured data requirements for Item 106 of Regulation S–K and Item 16K of Form 20–F disclosures beginning with annual reports for fiscal years ending on or after December 15, 2024. By contrast, the earliest compliance date for these final rules covers activities occurring in fiscal year 2025.

This section describes the current regulatory and economic landscape with respect to climate-related disclosures. It discusses the parties likely to be affected by the final rules, current trends in registrants' voluntary reporting on climate risks, related assurance practices, and existing mandatory disclosure rules under state and other Federal laws as well as from other jurisdictions in which registrants may operate.

1. Affected Parties

The disclosure requirements being adopted in this release will apply to Securities Act and Exchange Act registration statements as well as Exchange Act annual and quarterly reports. Thus, the parties that are likely to be affected by the final rules include: registrants subject to the disclosure requirements imposed by these forms, as detailed below; consumers of the climate-related risk information, such as investors, analysts, and other market participants; and third-party service providers who may collect and process this information, including assurance providers and ratings providers.

The final rules will affect both domestic registrants and foreign private issuers, but will not apply to Canadian registrants that use the MJDS and file their Exchange Act registration statements and annual reports on Form 40–F.[2578] We estimate that during calendar year 2022, excluding registered investment companies, there were approximately 6,870 registrants that filed on domestic forms,[2579] and approximately 920 foreign private issuers that filed on Form 20–F. Among domestic registrants, approximately 34 percent were LAFs, 10 percent were AFs, and 56 percent were NAFs. In addition, we estimate that approximately 57 percent of domestic registrants and 37 percent of foreign private issuers were either SRCs, EGCs, or both.

The final rules will require disclosures in registered offerings, except with respect to business combination transactions involving a company not subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act. In many cases, registrants will be able to meet these requirements by incorporating by reference from their periodic reports. Registrants that have not previously filed periodic reports, such as companies conducting IPOs, will not have previously filed such reports to incorporate by reference. In 2022, there were approximately 390 such companies that conducted registered offerings on Form S–1 or F–1.[2580]

2. Current Commission Disclosure Requirements

As discussed above and in the Proposing Release, existing disclosure requirements may, depending on circumstance, require the disclosure of climate-related risk.[2581] The 2010 Guidance describes how the Commission's existing disclosure requirements can encompass climate-related risk.[2582] The 2010 Guidance emphasized that certain existing disclosure requirements in Regulation S–K and Regulation S–X may require disclosure related to climate change. With respect to the most pertinent non-financial statement disclosure rules, the Commission noted that: Item 101 (Description of Business) expressly requires disclosure regarding certain costs of compliance with environmental laws; [2583] Item 103 (Legal Proceedings) requires disclosure regarding any material pending legal proceeding to which a registrant or any of its subsidiaries is a party; Item 105 (Risk Factors) requires disclosure regarding the most significant factors that would make an investment in the registrant speculative; [2584] and Item 303 (MD&A) of Regulation S–K requires material historical and prospective narrative disclosure enabling investors to assess the financial condition and results of

[2578] The number of domestic registrants and foreign private issuers affected by the final rules is estimated as the number of companies, identified by Central Index Key (''CIK''), that filed a unique Form 10–K or Form 20–F during calendar year 2022, excluding asset-backed securities issuers. For the purposes of this economic analysis, these estimates do not include registrants that did not file a unique annual report. This approach avoids including entities whose reporting obligation would be satisfied by a parent or other company, such as co-issuers of debt securities or guarantors, or who otherwise have a suspended reporting obligation. The estimates for the percentages of SRCs, EGCs, AFs, LAFs, and NAFs are based on data obtained by Commission staff using a computer program that analyzes SEC filings, with supplemental data from Ives Group Audit Analytics and manual review of filings by Commission staff. Because this manual review takes a substantial amount of time, the Commission staff performs this process at the end of each calendar year rather than at the end of each quarter. Data for the 2023 filings is not yet available and fully reviewed, so the release includes 2022 numbers. Additionally, there are no 2023 updates for several sections of the baseline (such as those that rely on data or reports from third parties that have not completed their reviews of 2023), so the release includes 2022 data to provide for comparability across the release.

[2579] This number includes approximately 50 foreign private issuers that filed on domestic forms in 2022, approximately 120 BDCs, and 300 REITs.

[2580] This estimate was calculated by searching EDGAR for all registrants who filed a Form S–1 or F–1 in the year 2022. If multiple registration statements were filed in 2022 by the same registrant, the earliest was used. This list of registrants was then compared to a list of periodic reports (Forms 10–K, 10–Q, 20–F, 8–K) in EDGAR dating back to 2015. Approximately 390 registrants filed registration statements in 2022 that had not previously filed a Form 10–K, 10–Q, 20–F, or 8–K. Of those, approximately 180 did not subsequently file a Form 10–K, 10–Q, 20–F, or 8–K in 2022 or 2023, for example by operation of 17 CFR 240.12h–5 or 12hndash;7, indicating that they may incur lower or no cost of ongoing compliance because they are exempt from ongoing Exchange Act reporting obligations.

[2581] *See* discussion *supra* section I.A; Proposing Release sections I.A, IV.A.2; *see also supra* section II.B. for discussion of the historical evolution of Commission rules requiring registrant disclosure. The Commission considers the current disclosure of climate risk-related information as part of the baseline against which the benefits and costs of the final rules are measured. We disagree with the commenter who said that the baseline discussion in the Proposing Release was ''in effect suggesting that anything climate-related should be presumed to be material.'' (Overdahl exhibit to letter from Chamber). The baseline includes both the required disclosure of material information under Commission regulation, as well as requirements under other laws that may apply to registrants, and current market practices which may include voluntary disclosures. *See also* section IV.F.1. discussing the benefits and costs of a principles-based approach.

[2582] For an overview of how climate change issues may be required to be disclosed under existing rules, primarily Regulation S–K and Regulation S–X, *see* 2010 Guidance, section III.

[2583] Item 101 of Regulation S–K was amended in 2019. *See* Release No. 33–10618. When the 2010 Guidance was issued, Item 101(c)(1)(xii) required disclosure ''as to the material effects that compliance with Federal, state and local provisions which have been enacted or adopted regulating the discharge of materials into the environment, or otherwise relating to the protection of the environment, may have upon the capital expenditures, earnings and competitive position of the registrant and its subsidiaries. The registrant shall disclose any material estimated capital expenditures for environmental control facilities for the remainder of its current fiscal year and its succeeding fiscal year and for such further periods as the registrant may deem material.''

[2584] Risk Factors disclosure was required by Item 503(c) of Regulation S–K at the time of the 2010 Guidance. It was moved to Item 105 of Regulation S–K in 2019. *See* Release No. 33–10618.

operations of a registrant.[2585] While these provisions elicit some decision-useful climate-related disclosure,[2586] they have not resulted in consistent and comparable information about the actual and potential material impacts of climate-related risks on a registrant's business or financial condition, which many investors have increasingly stated that they need in order to make informed investment and voting decisions.[2587]

3. Existing State and Other Federal Laws

Existing state and other Federal laws require certain climate-related disclosures or reporting. For instance, within the insurance industry there are requirements for mandatory climate risk disclosure for any domestic insurers that write more than $100 million in annual net written premium.[2588] As of 2022, 14 states[2589] and the District of Columbia require these domestic insurers to disclose their climate-related risk assessment and strategy via the NAIC Climate Risk Disclosure Survey, which the NAIC revised in 2022 to align with the TCFD framework.[2590] Survey question topics include climate risk governance, climate risk management, and modeling. For reporting year 2021, 62 registrants provided climate risk disclosures in response to the NAIC survey.[2591] For reporting year 2022, insurers were allowed to submit a completed TCFD report or a survey response: 96 registrants provided either a TCFD report or a survey response.[2592]

Federal and state reporting requirements related to GHG emissions also exist. At the Federal level, the GHGRP requires that each facility that directly emits more than 25,000 metric tons of CO_2e per year report these direct emissions to the EPA.[2593] Additionally, facilities that supply certain products that would result in over 25,000 metric tons of CO_2e per year if those products were released, combusted, or oxidized must similarly report these ''supplied'' emissions to the EPA.[2594] The resulting emissions data are then made public through the EPA's website. The EPA estimates that the reporting required under the GHGRP covers 85 to 90 percent of all GHG emissions from over 8,000 facilities in the United States,[2595] and we estimate that approximately 365 registrants had an ownership stake in facilities that reported to the GHGRP in 2022.[2596] Gases that must be reported under the GHGRP include all those referenced by the GHG Protocol, which are also included within these final rules' definition of ''greenhouse gases.''[2597]

In light of the existence of the GHGRP, some commenters questioned the need for the proposed rules.[2598] One commenter stated ''[t]he natural question is why the SEC feels compelled to require its own GHG emissions disclosures when the EPA already has a public reporting program that covers 85 to 90 percent of all GHG emissions from over 8,000 facilities in the United States.''[2599] While we acknowledge that the GHGRP and the final rules both address reporting of GHGs, there are distinct and significant differences between both the goals and requirements of the GHGRP and the final rules. As the EPA noted in its comment letter: ''[T]he GHGRP . . . informs the development of greenhouse gas policies and programs under the Clean Air Act, and serves as an important tool for the Agency and the public to understand greenhouse gas emissions from facilities covered by the GHGRP nationwide. This is distinct from the purposes of the SEC's Proposed

[2585] The 2010 Guidance also discusses corollary provisions applicable to foreign private issuers not filing on domestic forms and states that, in addition to the Regulation S–K items discussed therein, registrants must also consider any financial statement implications of climate-related matters in accordance with applicable accounting standards, including FASB ASC Topic 450, Contingencies, and FASB ASC Topic 275, Risks and Uncertainties. Finally, the 2010 Guidance noted the applicability of Securities Act Rule 408 and Exchange Act Rule 12b-20, which require a registrant to disclose, in addition to the information expressly required by Commission regulation, ''such further material information, if any, as may be necessary to make the required statements, in light of the circumstances under which they are made, not misleading.''

[2586] *See, e.g.,* Jeong-Bon Kim, Chong Wang & Feng Wu, *The Real Effects of Risk Disclosures: Evidence from Climate Change Reporting in 10-Ks,* 28 Rev. Acct. Stud. 2271 (2023) (finding that the 2010 Guidance resulted in a large increase in the number of firms providing climate-related disclosures).

[2587] *See supra* section I.A.

[2588] ''Net written premium'' is defined as the premiums written by an insurance company, minus premiums paid to reinsurance companies, plus any reinsurance assumed.

[2589] The 14 states are California, Connecticut, Delaware, Maine, Maryland, Massachusetts, Minnesota, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington. Colorado enacted legislation requiring insurers to participate beginning in 2024. Co. Rev. Stat. 10–3–244 (enacted May 11, 2023).

[2590] NAIC News Release, *U.S. Insurance Commissioners Endorse Internationally Recognized Climate Risk Disclosure Standard for Insurance Companies* (Apr. 8, 2022), available at *https://content.naic.org/article/us-insurance-commissioners-endorse-internationally-recognized-climate-risk-disclosure-standard*; NAIC, *Redesigned State Climate Risk Disclosure Survey* (adopted Apr. 6, 2022), available at *https://www.insurance.ca.gov/0250-insurers/0300-insurers/0100-applications/ClimateSurvey/upload/2022RevisedStateClimateRiskSurvey.pdf.*

[2591] This estimate is based on 20–F and 10–K filings in calendar year 2021 and 2021 NAIC survey results available at *https://interactive.web.insurance.ca.gov/apex_extprd/f?p=201:1* (last visited Jan. 16, 2024). *See supra* note 2578 for more information on how the Commission staff estimated the number of registrants.

[2592] This estimate is based on 20–F and 10–K filings in calendar year 2022, and 2022 NAIC survey results, available at *https://interactive.web.insurance.ca.gov/apex_extprd/f?p=201:1* (last visited Jan. 16, 2024).

[2593] *See* 40 CFR part 98 (2022); *see also* EPA Fact Sheet. The EPA's emissions data does not include emissions from agriculture, land use, or direct emissions from sources that have annual emissions of less than 25,000 metric tons of CO2e per year. *See also* letter from EPA (describing differences between the GHGRP and the SEC's proposed rule and noting the ''Clean Air Act authority for reporting and the purpose of the GHGRP are distinct from those of the SEC's proposed rule.'').

[2594] *See* EPA Fact Sheet; *see also* EPA, *Learn About the Greenhouse Gas Reporting Program (GHGRP),* available at *https://www.epa.gov/ghgreporting/learn-about-greenhouse-gas-reporting-program-ghgrp* (Updated June 20, 2023). According to the EPA, ''direct emitters'' are facilities that combust fuels or otherwise put GHGs into the atmosphere directly from their facility. *See* EPA, *Greenhouse Gas Search User Guide,* available at *https://www.epa.gov/enviro/greenhouse-gas-search-user-guide* (Updated Jan. 17, 2024). An example of a direct emitter is a power plant that burns coal or natural gas and emits CO_2 directly into the atmosphere. *Id.* ''Suppliers'' are those entities that supply products into the economy which if combusted, released, or oxidized emit GHGs into the atmosphere. *Id.* An example of a supplier is a gasoline importer or distributer, which sells gasoline in the U.S. that is burned in cars throughout the country. *Id.* While the GHGRP does not represent the total GHG emissions in the U.S., it is the only dataset containing facility-level data for large sources of direct emissions, thus including the majority of U.S. GHG emissions. *See* EPA, *2022 GHGRP Overview Report,* available at *https://www.epa.gov/system/files/documents/2023–10/ghgrp-2022-overview-profile.pdf.* The EPA estimates that the GHGRP data reported by direct emitters covers about half of all U.S. emissions. *Id.* When including the greenhouse gas information reported by suppliers to the GHGRP, emissions coverage reaches approximately 85–90% of U.S. GHG emissions. *Id.*

[2595] *See* EPA Fact Sheet.

[2596] This estimate is based on parent company data provided by the EPA (*GHGRP Reported Data* (2022), *supra* note 2594), as well as registrant data gathered by Commission staff from Commission filings. Parent companies from the GHGRP reporting data were matched to registrants based on company name using Levenshtein Distance, as well as the reported city and state of the parent company. Matches were then manually reviewed by Commission staff.

[2597] The EPA also requires reporting on some gases (*e.g.,* fluorinated ethers, perfluoropolyether) that are considered optional under the GHG Protocol and that are not included within this final rules' definition of ''greenhouse gases.''

[2598] *See* letter from Andrew N. Vollmer (May 9, 2022)*; see also* letters from D. Burton; Heritage Fdn. (''The very limited increase in actual information that will be achieved by the proposed rule will make virtually no difference. And, if it is thought that it will, by far the most efficient and effective means of increasing the information available would be to amend the EPA rules''); and ConocoPhillips (''We believe GHG disclosure regimes established by the EPA and regulators in other jurisdictions with broad existing GHG emissions coverage should form the basis of GHG emissions disclosure and do not believe additional and duplicative Scope 1 and 2 emissions disclosures will be useful or material to investors in many instances.'').

[2599] *See* letter from Andrew N. Vollmer (May 9, 2022).

Rules, which are intended to enhance and standardize climate-related disclosures to address investor needs and help issuers more efficiently and effectively disclose climate-related risks, benefitting both investors and issuers.'' [2600] In addition to the difference in goals, there are several significant differences in the requirements between the GHGRP and the final rules. First, the entities required to report under the EPA regime may differ from the entities required to report under the final rules.[2601] Second, the EPA requires emissions reporting only for U.S. facilities, while the final rules are not limited to U.S. facilities. Third, the EPA emissions data do not allow a precise disaggregation across the different scopes of emissions for a given registrant. In particular, the EPA requires reporting of facility-level direct emissions, which may be a subset of the relevant registrant's Scope 1 emissions. Finally, the EPA does not require reporting of Scope 2 emissions.[2602]

Many state laws also impose specific GHG emissions reporting requirements.[2603] States' rules vary with respect to reporting thresholds and emissions calculation methodologies, but most tend to focus on direct emissions, with certain exceptions. For example, in New York, any owner or operator of a facility that is a ''major source'' must report its annual actual emissions of certain air contaminants to the New York State Department of Environmental Conservation.[2604] Colorado requires GHG-emitting entities to report their emissions to the state in support of Colorado's GHG inventory and reduction efforts.[2605] California and Washington require annual reporting of GHG emissions by industrial sources that emit more than 10,000 metric tons of CO_2e, transportation and natural gas fuel suppliers, and electricity importers.[2606]

California also recently enacted two laws requiring additional climate-related disclosures and reporting for certain companies doing business in the state.[2607] The Climate Corporate Data Accountability Act (Senate Bill 253), which will require companies making over $1 billion in gross annual revenue to disclose their GHG emissions to the state on an annual basis and to obtain independent third-party assurance over such disclosures,[2608] is expected to apply to an estimated 5,300 companies doing business in the state.[2609] The Climate-Related Financial Risk Act (Senate Bill 261),[2610] which will require companies with total annual revenue above $500 million to publish a biennial report on the company's website disclosing such company's climate-related financial risk in accordance with the TCFD framework or a comparable disclosure regime,[2611] and describing what measures have been adopted to reduce and adapt to such risk, is expected to apply to an estimated 10,000 companies doing business in the state.[2612] Companies subject to the Climate Corporate Data Accountability Act will be required to disclose their Scope 1 and Scope 2 emissions beginning in 2026 and their Scope 3 emissions beginning in 2027.[2613] Companies subject to the Climate-Related Financial Risk Act will be required to begin reporting their climate-related financial risks and measures in 2026.[2614] We estimate that approximately 1,980 Commission registrants meet the $1 billion revenue threshold for Climate Corporate Data Accountability Act and approximately 2,520 Commission registrants meet the $500 million revenue threshold for the Climate-Related Financial Risk Act.[2615]

As a result of these Federal- and state-level climate-related disclosure and reporting requirements, some registrants subject to the final rules may already have in place, or may be developing, certain processes and systems to track and disclose aspects of their climate-related risks.

4. International Disclosure Requirements

Issuers that are listed or operate in jurisdictions outside the United States may also be subject to those jurisdictions' disclosure and reporting requirements. As discussed in section I.B. above, many jurisdictions' current or proposed requirements for climate-risk disclosure are aligned with the TCFD's framework for climate-related financial reporting.[2616] Several

[2600] *See* letter from EPA.

[2601] The EPA requirements apply to facility owners and operators, and suppliers, while these final rules apply to registrants.

[2602] ''The GHGRP does not include emissions from . . . reporting of data on electricity purchases or indirect emissions from energy consumption, which falls under Scope 2 emissions.'' (footnote omitted). EPA, *Greenhouse Gas Reporting Program (GHGRP)* (Updated June 20, 2023), available at *https://www.epa.gov/ghgreporting/learn-about-greenhouse-gas-reporting-program-ghgrp*.

Bd., Mandatory Greenhouse Gas Reporting 2020 Emissions Year Frequently Asked Questions (2021), available at *https://www.arb.ca.gov/cc/reporting/ghg-rep/reported-data/2020mrrfaqs.pdf; see also Was. Dept. of Ecology, Mandatory Greenhouse Gas Reports*, available at *https://ecology.wa.gov/Air-Climate/Reducing-Greenhouse-Gas-Emissions/Tracking-greenhouse-gases/Mandatory-greenhouse-gas-reports*.

[2607] The California Air Resources Board (''CARB'') will need to develop and adopt regulations by January 1, 2025 for the disclosure requirements under the Climate Corporate Data Accountability Act to become effective. *See supra* note 156. These regulations are expected to provide further details regarding the law's compliance requirements, including the content of the disclosure, the methodology for calculating emissions that are required to be disclosed and what qualifies as ''doing business'' in California. The requirements of the Climate-Related Financial Risk Act are self-effectuating, such that additional regulations are not required to implement the law's reporting requirements; however, the law requires the CARB to adopt regulations that authorize it to seek administrative penalties from covered entities for failing to make the required reports publicly available or publishing inadequate or insufficient information in the report. *See* SB–253, *supra* note 156.

[2608] *See* SB–253, *supra* note 156.

[2609] *See* Brent W. Thompson, California's Climate Disclosure Requirements: An Overview of Senate Bills 253 and 261, Ca. Lawyers Assoc. (Nov. 2023), available at *https://calawyers.org/business-law/californias-climate-disclosure-requirements-an-overview-of-senate-bills-253-and-261/*.

[2610] *See* SB–261, *supra note 155.*

[2611] A company will satisfy the requirements of the Climate-Related Financial Risk Act if it prepares a publicly accessible biennial report that includes climate-related financial risk disclosure information by any of the following methods: (1) pursuant to a law, regulation or listing requirement by any regulated exchange or government entity, incorporating the disclosure requirements that are consistent with the requirements of the- Climate-Related Financial Risk Act or (2) voluntarily using a framework that meets the requirements of the Climate-Related Financial Risk Act or is in compliance with ISSB standards. *See* SB–261, *supra note 155.*

[2612] *See* Thompson, *supra* note 2609; *see also* letter from Chamber (Dec. 6, 2023) (describing the California laws and highlighting differences in purpose, scope, and timing between the California laws and the proposed rules) (''letter from Chamber II''); *see also infra* note 3112 and accompanying text discussing this comment and the inclusion of California state law in the baseline.

[2613] *See* Thompson, *supra* note 2609.

[2614] *See id.*

[2615] Estimates are based on Compustat data for 2022 registrants. We do not have readily accessible data that could be used to reliably estimate the subset of these registrants doing business in California. One commenter estimated that 73% of Fortune 1000 companies would need to comply with both California laws. *See* letter from Amer. for Fin. Reform, Public Citizen and Sierra Club (Oct. 26, 2023) (using a list of companies registered with the California Secretary of State for their estimate, but describing in their methodology discussion why that does not directly correspond to ''doing business'' in the state).

[2616] *See* note 46 and accompanying text; *see also* TCFD, Task Force on Climate-Related Financial

Continued

jurisdictions also have announced plans or support for adopting climate disclosure requirements that are consistent with the TCFD recommendations, and some jurisdictions already require climate-related disclosures aligned with the TCFD recommendations.[2617] The UK, for example, has TCFD-aligned disclosure requirements for certain issuers.[2618] Insofar as Commission registrants are listed or have operations in these other jurisdictions, they may already be subject to these other jurisdictions' disclosure requirements, policies, and guidance on reporting certain information about climate-related financial risk.

Additionally, the ISSB released its climate-related disclosure standards in June 2023.[2619] These standards incorporate the TCFD recommendations, such that companies that apply the ISSB standards will satisfy the TCFD recommendations, although the ISSB standards include some additional disclosure requirements.[2620] The ISSB provisions relating to GHG emissions also align with the GHG Protocol.[2621] Several jurisdictions have announced plans or support for implementing the ISSB standards, or local standards based on ISSB standards.[2622]

In the EU, the CSRD will apply to approximately 50,000 companies when implemented.[2623] Companies required to report under the CSRD beginning on January 1, 2024, will report according to ESRS, adopted in July 2023,[2624] that are closely aligned with the TCFD framework [2625] and ISSB standards, although the CSRD includes some additional disclosure requirements.[2626] This first stage of CSRD implementation will primarily affect companies that have more than 500 employees and are listed on an EU-regulated market. Subsequent stages will encompass other large EU-based companies,[2627] and later, certain small to medium-sized companies and certain non-EU companies operating in the EU.[2628] Finally, in the last stage of CSRD implementation, certain non-EU companies operating in the EU would report sustainability impacts to the EU,[2629] but because the ESRS for that stage are not yet developed, we cannot assess the extent to which disclosures made under this last stage would overlap with either the TCFD framework or these final rules.

Disclosure: 2023 Status Report, Table D1 (Oct. 2023), available at *https://assets.bbhub.io/company/sites/60/2023/09/2023-Status-Report.pdf* (''*TCFD 2023 Status Report*''*).* For more detail on the TCFD recommendations, *see* Proposing Release, section I.D; *see also* TCFD, *Overview* (Mar. 2021), available at *https://assets.bbhub.io/company/sites/60/2020/10/TCFD_Booklet_FNL_Digital_March-2020.pdf*. Concurrent with the release of its 2023 status report, the TCFD fulfilled its remit and transferred to the ISSB its responsibility for tracking company activities on climate-related disclosure. Fin. Stability Bd., *supra* note 151. As discussed *infra*, the TCFD recommendations are incorporated into the ISSB standards. Although the TCFD has disbanded, in this release we continue to refer to ''TCFD recommendations'' as distinct from ISSB standards, both for clarity and because not all jurisdictions that implemented TCFD-aligned disclosure requirements have implemented the broader and more recent ISSB standards.

[2617] *See* Proposing Release, section IV.A.4 (discussing disclosure requirements implemented, for example in the United Kingdom, Japan, and New Zealand). Commission staff determined that in 2022, approximately 1,961 Commission registrants traded in the U.K., 52 in Japan, and 2 in New Zealand; however, individual requirements in each country determine whether these registrants are subject to the climate-related disclosure laws of that country. *See also* TCFD 2023 Status Report, *supra* note 2616, at Part D.

[2627] For purposes of the CSRD, a ''large'' company is one that meets at least two of the following criteria: balance sheet total greater than €25 million; net turnover greater than €50 million; or more than 250 employees. *See* Directive (EU) 2023/2775 amending Directive 2013/34/EU as regards the adjustments of the size criteria for micro, small, medium-sized and large undertakings or groups (Dec. 21, 2023), available at *https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=CELEX:32023L2775.*

[2628] *See* CSRD Q&A, *supra* note 2626.

[2629] *See id.*

We estimate that there are approximately 3,700 Commission registrants that are traded on a European exchange; however, we understand that most of these companies do not trade on an EU-regulated market, in which case they may not be impacted by the initial stage of CSRD implementation.[2630] We estimate that approximately 70 Commission registrants (fewer than 10 of which are U.S.-based) are listed on EU-regulated markets and could therefore be subject to reporting under the initial set of ESRS in fiscal year 2024.[2631] Additional registrants may have EU subsidiaries or operations that fall within the scope of the CSRD, including in later compliance years. Although the number of Commission registrants subject to CSRD reporting in 2024 may be relatively low, we expect that once the CSRD is fully implemented, it could apply to many of the 3,700 Commission registrants that trade on a European exchange, as well as other non-EU companies, provided that they meet the required turnover and presence thresholds.[2632] This assessment aligns with another estimate, which found that U.S. companies could make up 31 percent of an estimated 10,000 U.S., Canadian, and British companies required to begin complying with the CSRD between 2025 and 2029.[2633] However, the number of registrants affected cannot be determined with specificity because the CSRD implementing standards are not fully developed yet, and because the number will depend on factors such as, for example, how many Commission registrants trade on an exchange defined as an EU-regulated market.

Despite uncertainty as to the parameters of other jurisdictions' requirements, the information described above indicates that a meaningful number of Commission registrants may be subject to the climate-related disclosure and reporting requirements of one or more additional jurisdictions. As a result, some registrants subject to the final rules may already have in place, or may be developing, processes and systems to track and disclose aspects of their climate-related risks.

5. Current Market Practices

This section describes current market practices with regard to climate-related disclosure, including disclosures made in Commission filings and in other contexts. This section then describes the use of third-party frameworks in current disclosures; the disclosure of climate-related targets, goals, and transition plans; and the use of third-party assurance.

We recognize that some aspects of the final rules may overlap with existing disclosure requirements and practices. The incremental costs of the final rules to a specific registrant will depend on the extent to which its disclosures resulting from the final rules overlap with disclosures that would have occurred in the absence of the final rules, as discussed in further detail below.[2634]

a. Climate-Related Disclosures in SEC Filings

The Commission staff reviewed 52,778 annual reports (Forms 10–K and 20–F) submitted from January 1, 2016, until December 31, 2022, to determine how many contain any of the following keywords: ''climate change,'' ''climate risk,'' or ''global warming,'' collectively referred to as ''climate-related keywords'' throughout this section.[2635] The presence of any of the climate-related keywords in any part of the annual report is indicative of some form of climate-related disclosure.[2636] Table 1 shows the portion of climate-related keywords used in Form 10–Ks and 20–Fs from 2021 through 2022.

TABLE 1—FILINGS WITH CLIMATE-RELATED KEYWORDS BY FORM TYPE

Form	Has keyword	All filings	Percent
10–K	4,521	12,846	35
20–F	662	1,721	38
Total	5,183	14,567	36

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. For each form type, the table indicates how many contain any of the climate-related keywords.

Figure 1 shows that the percentage of Form 10–K and Form 20–F filings with climate-related keywords[2637] has increased between 2016 and 2022. As reflected in Table 1, in more recent filings (*i.e.,* those submitted in calendar

[2630] ''European exchange'' refers to an exchange located in the EU. The first stage of CSRD implementation is specific to companies trading on an ''EU-regulated market,'' where ''regulated market'' is a defined term under EU securities law, distinct from an organized trading facility or multilateral trading facility. *See* Directive 2014/65/EU of the European Parliament and of the Council (May 15, 2014), available at *https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32014L0065* (updated Mar. 23, 2023).

[2631] This analysis is based on listing status data from Refinitiv. We note that this figure may not reflect all registrants that would be subject to the CSRD rules, as listing status is just one of the conditions for required disclosure under the EU rules. Fiscal year 2024 reporting is required of companies already subject to another EU reporting directive known as the Non-Financial Reporting Directive, including large U.S. companies with more than 500 employees and listed on an EU-regulated market. Among the approximately 70 registrants listed on EU-regulated markets, we are unable to determine how many are ''large'' as defined in the CSRD, as many registrants do not provide geographic breakdowns of turnover or assets needed to identify turnover or assets attributable to the EU, so it is possible that the lower bound is fewer than 70 registrants. Even if not subject to CSRD reporting in fiscal year 2024, however, we anticipate that all or nearly all registrants listed on an EU-regulated exchange, and many not listed on such an exchange, will be required to report in subsequent compliance years as the CSRD phases in. We are not aware of any official analysis from European authorities regarding the number of Commission-registered issuers which will be subject to CSRD reporting.

[2632] *See generally* CSRD Q&A, *supra* note 2626; Thibault Meynier, *et al., EU Finalizes ESG Reporting Rules with International Impacts,* Harvard L. Sch. Forum on Corp. Gov. (Jan. 30, 2023), available at *https://corpgov.law.harvard.edu/2023/01/30/eu-finalizes-esg-reporting-rules-with-international-impacts/.*

[2633] Dieter Holger, *At Least 10,000 Foreign Companies to be Hit by EU Sustainability Rules,* Wall St. J. (Apr. 5, 2023), available at *https://www.wsj.com/articles/at-least-10–000-foreign-companies-to-be-hit-by-eu-sustainability-rules-307a1406* (retrieved from Factiva database).

[2634] *See* section IV.C.3.c, ''Factors that Influence Direct Costs.'' The same point applies similarly to the more general costs imposed by the final rules: those registrants that currently provide (or plan to provide) climate-related disclosures irrespective of the final rules will incur lower incremental costs to the extent that these disclosures overlap with the final rules' requirements.

[2635] We follow the approach used in the Proposing Release except we have excluded 40–F filers because they are not subject to the final rules.

[2636] One limitation of using this climate-related keyword search is that it is unable to discern the extent or decision-usefulness of climate-related disclosures, nor can it determine specific sub-topics within climate-related disclosures. For these reasons, the analysis was supplemented by natural language processing (''NLP'') analysis, as described later in this section.

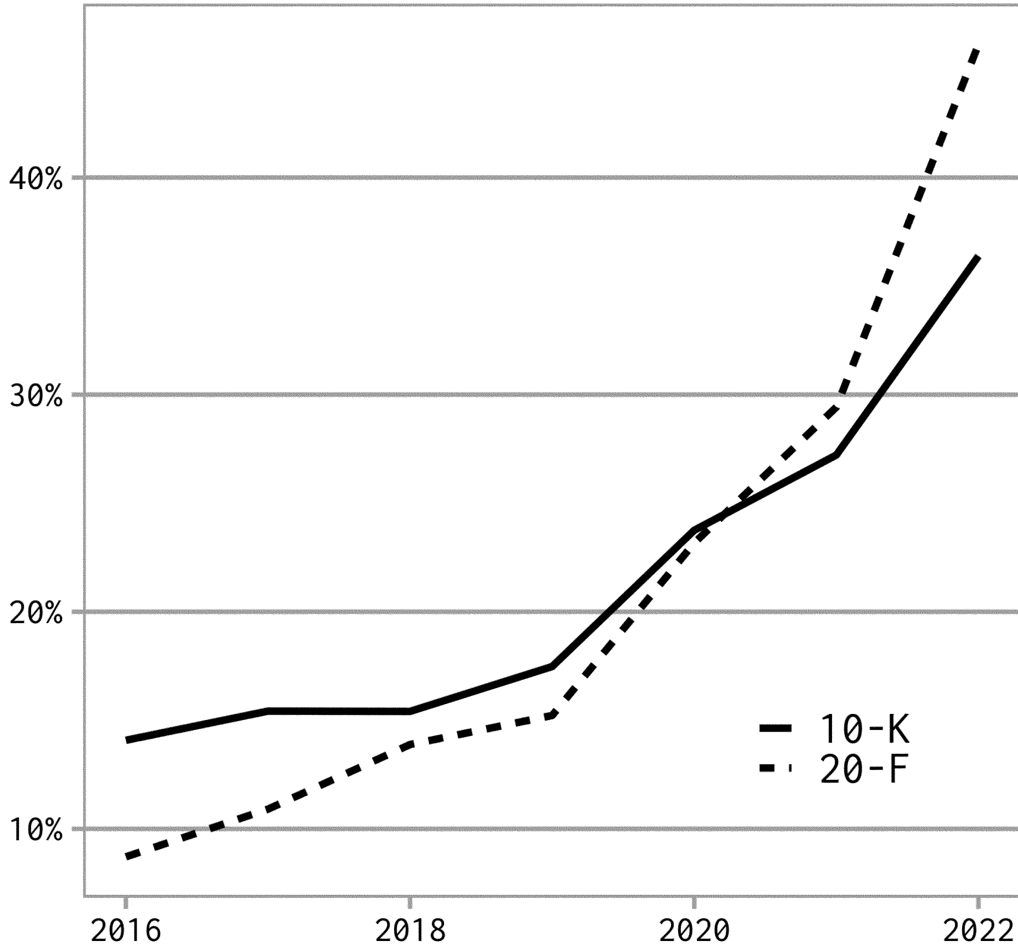
[2637] *See supra* note 2636.

years 2021 and 2022) 36 percent of all annual reports contain some climate-related keywords, with a slightly greater proportion (38 percent) among foreign private issuers filing on Form 20–F.[2638] These figures are consistent with data from Bloomberg, which focuses on registrants listed on NYSE and NASDAQ, on ESG reporting. Specifically, using this data, we find that 39 percent of registrants include a discussion of climate related risks in their MD&A section.[2639]

Figure 1 shows that the percentage of Form 10–K and 20–F filings with climate-related keywords [2640] has been increasing between 2016 and 2022. We note that Table 1 reflects the averages of the last two years of the time-series shown in Figure 1.

BILLING CODE 8011–01–P

Figure 1. Percentage of Filings with Climate-related Keywords by Form Type



This figure presents the analysis of annual filings on Form 10-K and Form 20-F submitted to the Commission between Jan. 1, 2016, and Dec. 31, 2022. For each form type, the figure plots the percentage of filings containing climate-related keywords.

BILLING CODE 8011–01–C

Table 2 provides a breakdown of more recent filings by accelerated filer status. Among LAFs, 68 percent provided climate-related keywords in 2022, while only 50 percent did so in 2021. Discussions by AFs and NAFs also saw increases over the same period (from 40 to 49 percent and from 16 to 23 percent, respectively).

[2638] Some foreign private issuers may elect to file their annual report on Form 10–K and would thus be classified as ''domestic filers'' in the following analysis.

[2639] Bloomberg reports ''[w]hether the Management Discussion and Analysis (MD&A) or its equivalent risk section of registrant's annual report discusses business risks related to climate change.'' As with other summary statistics presented in this release, these figures may not be representative of all Commission registrants. For example, registrants that are not listed on NYSE or NASDAQ may be less likely to include discussions of climate related risks in their MD&A section.

[2640] *See supra* note 2636.

TABLE 2—FILINGS WITH CLIMATE-RELATED KEYWORDS BY ACCELERATED FILER STATUS

Year	Filer status	Has keyword	All filings	Percent
2021	LAF	1,063	2,126	50
	AF	373	936	40
	NAF	635	3,883	16
	All	2,071	6,945	30
2022	LAF	1,726	2,520	68
	AF	425	863	49
	NAF	961	4,241	23
	All	3,112	7,622	41

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. For each filer status, the table indicates how many contain any of the climate-related keywords.

Similarly, Table 3 indicates that the inclusion of climate-related keywords by SRCs and EGCs also increased from 2021 to 2022, but that climate change discussions remain less common among these registrants than among registrants that are not SRCs or EGCs.

TABLE 3—FILINGS WITH CLIMATE-RELATED KEYWORDS BY SRC/EGC STATUS

Year	Filer status	Has keyword	All filings	Percent
2021	SRC & EGC	184	2,400	8
	SRC	744	4,142	18
	EGC	198	984	20
	Neither	3,016	6,364	47
2022	SRC & EGC	440	3,180	14
	SRC	912	3,724	24
	EGC	424	1,226	35
	Neither	4,448	7,114	63

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. Filer status SRC, EGC, small emerging growth companies (“SRC & EGC”), and large non-EGC and non-SRC companies (“Neither”). For each filer status, the table indicates how many contain any of the climate-related keywords.

Table 4 (presented as a graph in Figure 2) provides a breakdown of the recent filings by industry and shows that the industries with the highest percentage of annual reports containing climate-related disclosure include electric services, maritime transportation, steel manufacturing, paper and forest products, and oil and gas, among others.

TABLE 4—FILINGS WITH CLIMATE-RELATED KEYWORDS BY INDUSTRY

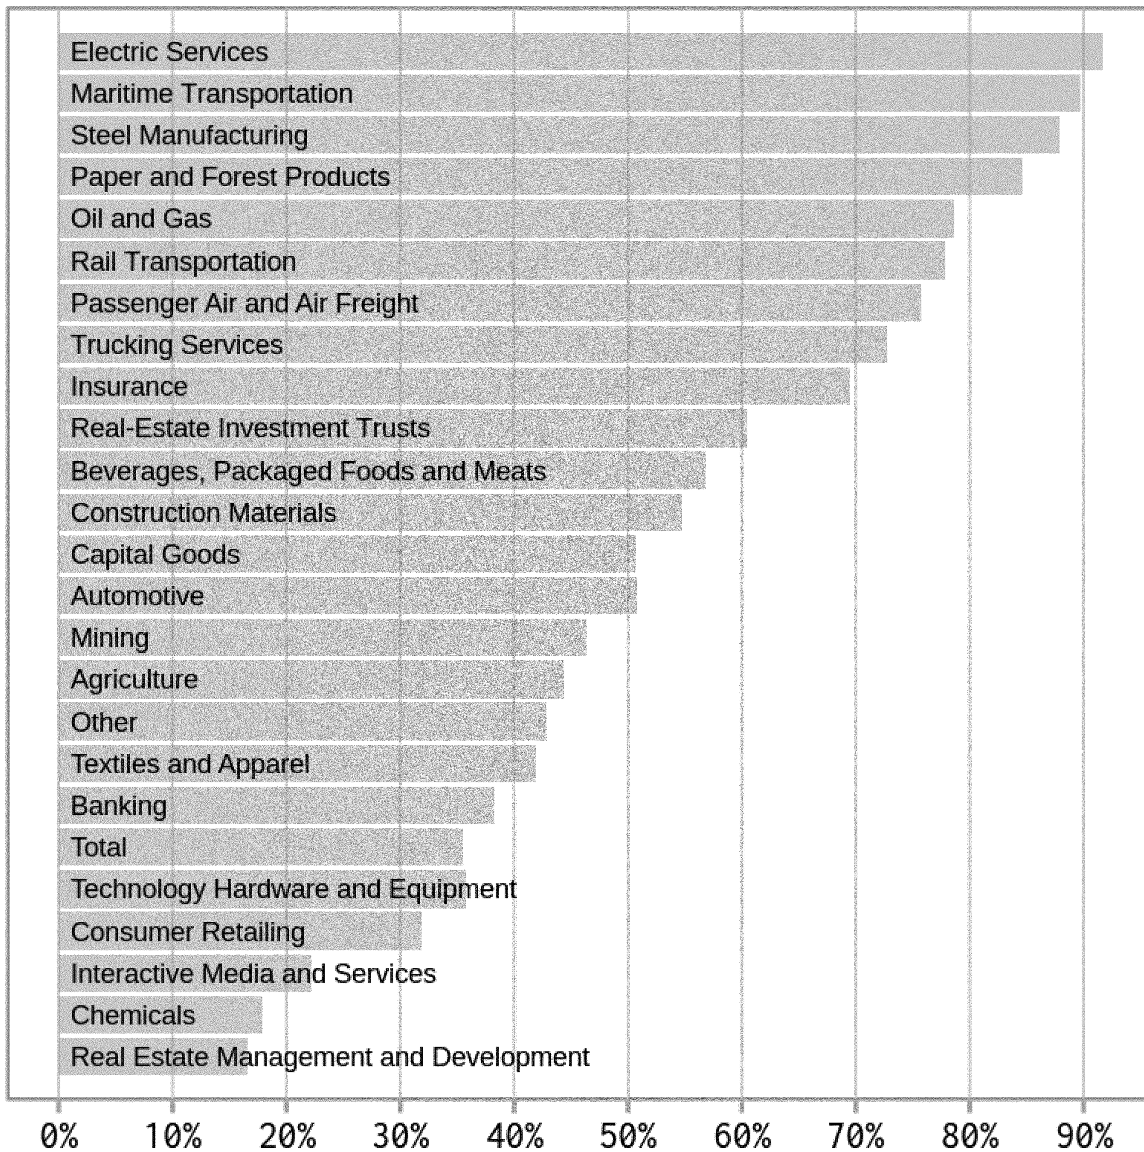
Industry	Has keyword	All filings	Percent
Electric Services	144	157	92
Maritime Transportation	114	127	90
Steel Manufacturing	29	33	88
Paper and Forest Products	44	52	85
Oil and Gas	350	445	79
Rail Transportation	14	18	78
Passenger Air and Air Freight	50	66	76
Trucking Services	32	44	73
Insurance	189	272	69
Real-Estate Investment Trusts	292	483	60
Beverages, Packaged Foods and Meats	138	243	57
Construction Materials	128	234	55
Automotive	34	67	51
Capital Goods	123	243	51
Mining	154	332	46
Agriculture	32	72	44
Other	622	1,454	43
Textiles and Apparel	31	74	42
Banking	558	1,460	38
Technology Hardware and Equipment	618	1,725	36
Consumer Retailing	392	1,229	32
Total	5,188	14,593	36

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. For each industry, the table indicates how many contain any of the climate-related keywords.

Figure 2 provides a breakdown by industry of use of climate-related keywords.

BILLING CODE 8011–01–P

Figure 2. Percentage of Filings with Climate-related Keywords by Industry



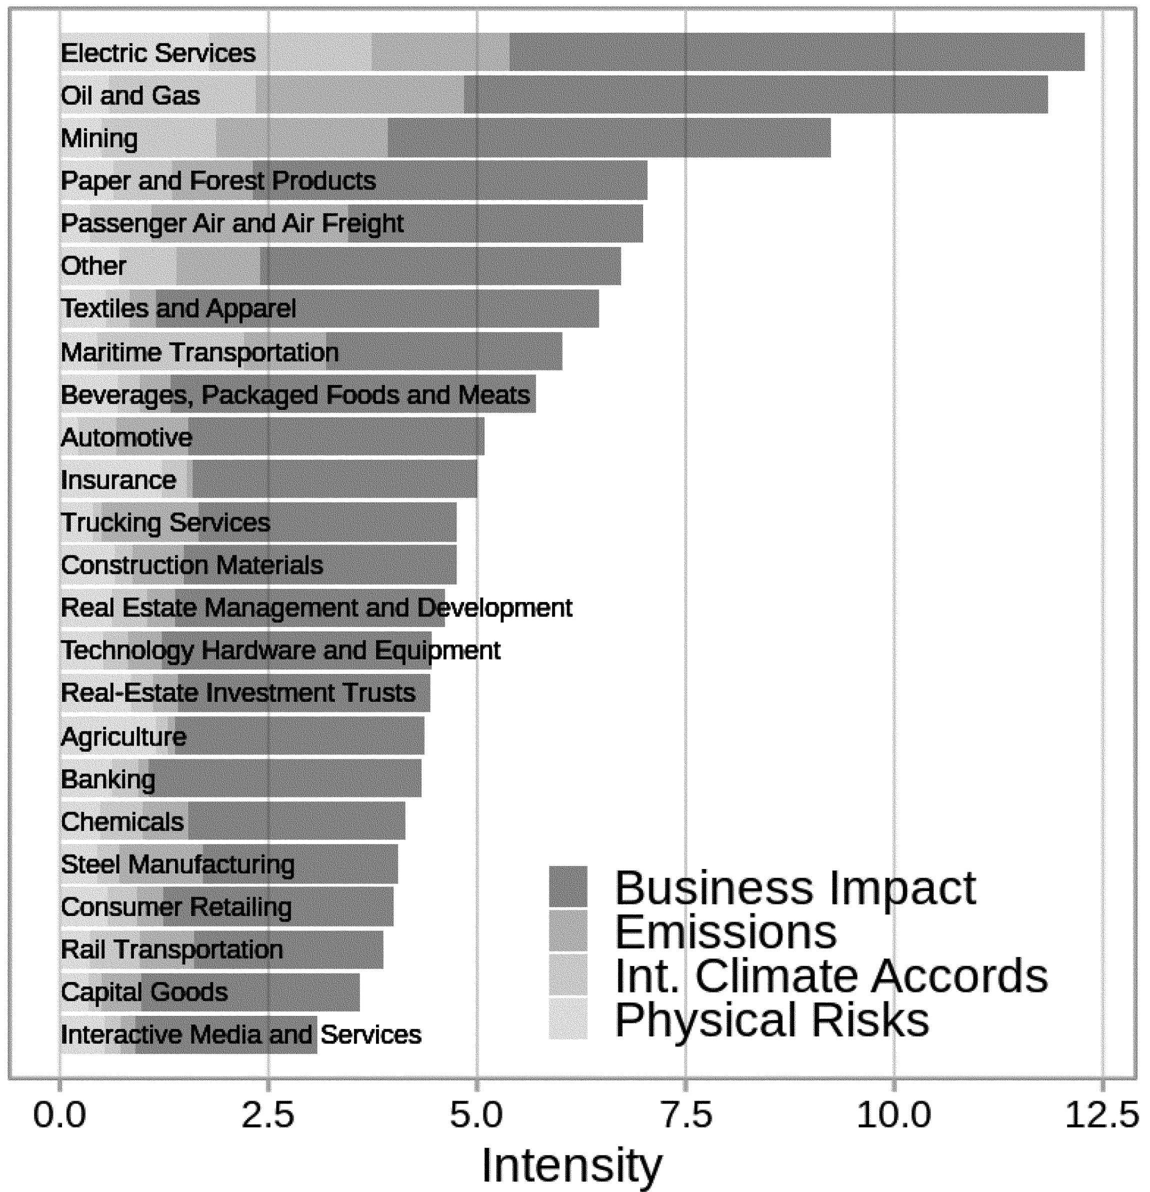
Using the same sample of recent annual reports, Commission staff conducted additional analysis using NLP, which can provide insight on the semantic meaning of individual sentences within registrants' climate-related disclosures and classify them into topics (*i.e.,* clusters).[2641] The NLP analysis suggests that climate-related disclosures can be broadly organized into four topics: business impact, emissions, international climate accords, and physical risks. The analysis finds significant variation, both within the quantity and content, of climate-related disclosures across industries, as shown in Figures 3 and 4.

Figure 3 presents the intensity of disclosure for domestic annual report filings (Form 10–K). The intensity refers to sentences per registrant, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of registrants within the industry (including those that do not include any climate-related keywords). Thus, the intensity represents a more comparable estimate across industries. Figure 3 shows that registrants in the following industries have the highest intensity of

[2641] The specific NLP method used in this analysis is word embedding, which utilizes Google's publicly available, pre-trained word vectors that are then applied to the text of climate-related disclosures within regulatory filings. While this NLP analysis can be used to identify the general topic and the extent of disclosures, it is limited in its ability to discern the decision-usefulness of disclosures from investors' perspective.

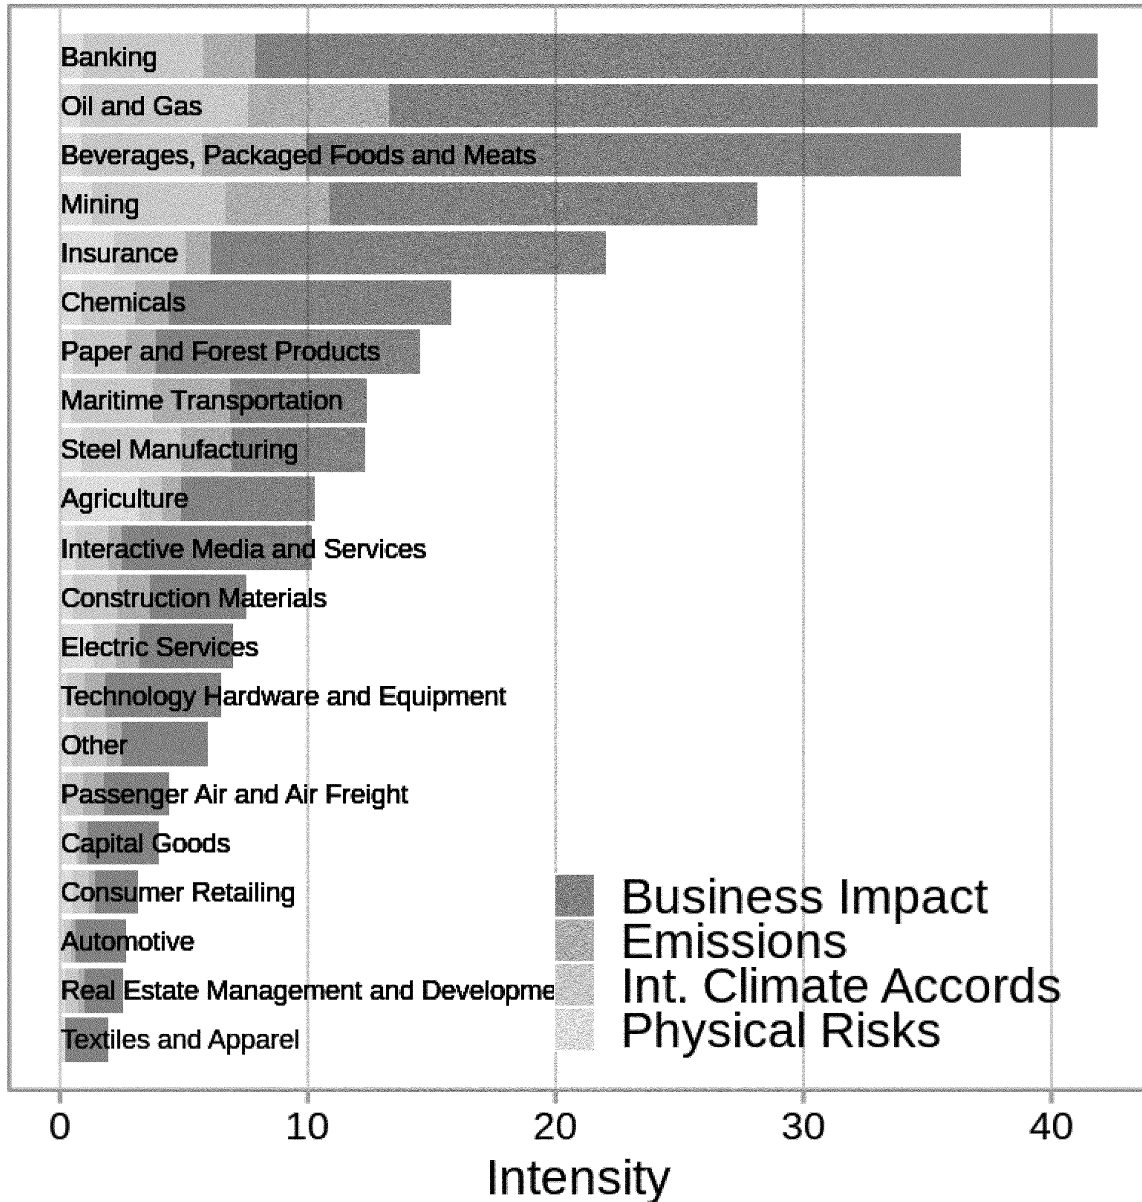
disclosures: oil and gas, electric services, and mining. The majority of these disclosures addressed business impact, followed by emissions, international climate accords, and physical risks. Figure 4 presents the corresponding information for foreign annual report filings (Form 20–F). The foreign filings contain considerably higher intensity of climate-related keywords. For example, Form 10–K filers in the oil and gas industry have approximately 12 sentences per filing containing climate-related keywords while foreign filers in the same industry devote approximately 75 sentences per filing containing climate-related keywords. Overall, the analysis indicates that the majority of the disclosure for both domestic and foreign filings is focused on transition risks, with comparatively fewer mentions of physical risk.

Figure 3. Clustered Intensity by Industry for Domestic Filings (Form 10-K)



This figure presents the analysis of Form 10-K annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. NLP was used to analyze sentences contained within the annual filings and classify them into four broad topics (i.e., clusters): business impact, emissions, international climate accords, and physical risks. Intensity refers to the average number of sentences per registrant, which is calculated by taking the aggregate number of relevant sentences in an industry and dividing it by the total number of registrants within the industry.

Figure 4. Clustered Intensity by Industry for Foreign Filings (Form 20-F)



This figure presents the analysis of Form 20-F annual reports submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. We exclude any Form 20-Fs that were not annual reports. NLP was used to analyze sentences contained within the annual filings and classify them into four broad topics (i.e., clusters): business impact, emissions, international climate accords, and physical risks. Intensity refers to the average number of relevant sentences per registrant, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of registrants within the industry.

BILLING CODE 8011–01–C

The Commission staff's findings are consistent with one academic study that looked at the extent of climate-related disclosures by Commission registrants.[2642] In this study, a review of Form 10–K filings from Russell 3000 companies over the last 12 years found that the majority of climate-related disclosure is focused on transition risks,[2643] consistent with the above Commission staff analysis that finds that annual filings contain more discussion on emissions and international climate accords relative to physical risks. This study further found that while 35 percent of Russell 3000 Index companies provided climate-related information in 2009, this figure grew to

[2642] *See* Parker Bolstad, Sadie Frank, Erick Gesick & David Victor, *Flying Blind: What Do Investors Really Know About Climate Change Risks in the U.S. Equity and Municipal Debt Markets* (Hutchins Center Working Paper 67, 2020) (''Hutchins Center Working Paper'').

[2643] *See id.*

60 percent in 2020.[2644] The study also found that the extent of disclosure for a given report has increased.[2645] In 2009, companies mentioned climate risks 8.4 times on average in their Form 10–K.[2646] This figure grew to 19.1 times in 2020.[2647]

The Proposing Release included a similar analysis of climate-related disclosures in Commission filings using data from earlier years.[2648] That analysis also found that filings by registrants in the electric services and oil and gas industries have the most robust climate-related discussions.[2649] In response to this finding, one commenter suggested that the current ''principles-based approach is working successfully, as these are industries where climate-related factors are more likely to have a material impact on the present value of future cash flows.'' [2650] We disagree. The Commission staff's analysis focuses on the incidence of climate-related discussion in annual reports (Forms 10–K and 20–F).[2651] The fact that the incidence of disclosures may be correlated with the likelihood that climate-related risks are material to a particular company does not demonstrate that registrants are fully disclosing their material climate-related risks to investors. For instance, registrants may strategically omit information that could be perceived as negative or adverse,[2652] and some studies point to the potential for substantial underreporting of material climate-related information within the current principles-based reporting regime.[2653]

In addition, one commenter suggested the Commission examine analyst reports and interactions involving analysts to assess ''the significance of ESG factors relative to other factors for determining the value of securities.'' [2654] There is academic research that considers analyst reports; this literature has found that, while very few analyst reports traditionally discuss topics related to climate, climate-related disclosures can offer useful predictive signals about future financial performance for firms whose industries are most exposed to climate-related risk and can influence analysts to revise their target prices for these firms.[2655] Other research has found that Form 10–K disclosures on material climate risks are associated with increased precision and lower dispersion in analysts' earnings forecasts.[2656] Similarly, in the context of earnings conference calls involving analysts, discussions concerning exposure to climate-related risks have been shown to contain important information that is priced in stocks and options.[2657] Relatedly, the same commenter suggested that the Commission conduct an event study to study price or volume responses to climate-related disclosures.[2658] We decline to follow the suggestion in light of the support in peer reviewed literature for the importance of climate-related disclosures to investors.[2659] Existing research finds an increase in stock price volatility around the day when GHG or carbon emissions are disclosed in a Form 8–K filing.[2660] This suggests that investors find such disclosures to be informative.

b. Additional Trends in Climate-Related Disclosures

As discussed below, a number of industry and advocacy groups have examined the scope of voluntary climate-related disclosures, and their findings are relevant to assess the economic impact of the final rules.

i. Prevalence and Scope of Climate-Related Disclosures

As discussed in the Proposing Release,[2661] one organization, in collaboration with several other organizations, conducted a survey of a sample of 436 U.S. public companies across 17 industries that range from small to large in terms of market capitalization.[2662] According to the survey, over half of the companies (52 percent) published a CSR, sustainability, or a similar report, the contents of which commonly include information regarding climate-related risks. The most frequently discussed topics in such reports were energy (74 percent), emissions (70 percent), environmental policy (69 percent), water (59 percent), climate mitigation strategy (57 percent), and supplier environmental policies (35 percent). Among the registrants that reported climate-related information to the public, the majority disclosed such information via external reports or company websites rather than through regulatory filings. Similar to the Commission staff's review, the survey found that about a third (34 percent) of the respondents disclosed information regarding ''risks related to climate change, greenhouse gas emissions, or energy sourcing'' in their Commission filings.[2663] Among these companies, 82

[2644] *See id.* The methodology uses a series of keywords to determine whether a company provides climate-related disclosures. Some keywords may occur in non-climate contexts, which the authors note may introduce some bias into the statistics.

[2663] *See id.*

percent disclosed such information in Risk Factors, 26 percent in MD&A, 19 percent in the Description of Business, and 4 percent in Legal Proceedings.[2664]

One institute issues annual analyses of sustainability reports by the companies belonging to the Russell 1000 Index.[2665] The institute found that in calendar year 2022, a record high of 90 percent of these companies published sustainability reports, which commonly include climate-related information—up from 60 percent in 2018.[2666] In particular, sustainability reporting reached an all-time high of 98 percent for companies in the top half of the Russell 1000 Index (which roughly comprises the S&P 500 Index). However, the most significant change was among companies in the bottom half of the Russell 1000 Index, where sustainability reporting percentage increased to 82 percent, up from 34 percent in 2018. The percentage of companies from each Global Industry Classification Standard (''GICS'') sector [2667] that published a sustainability report in 2021 were: Communications (56 percent), Consumer Discretionary (81 percent), Consumer Staples (91 percent), Energy (94 percent), Financials (85 percent), Health Care (69 percent), Industrials (89 percent), Information Technology (71 percent), Materials (95 percent), Real Estate (90 percent), and Utilities (100 percent).

Notwithstanding these investor-led initiatives, disclosures currently vary considerably in terms of coverage, location, and presentation across companies,[2668] making it difficult for investors to navigate through different information sources and filings to identify, compare, and analyze climate-related information.[2669] For example, one commenter submitted a survey reporting that institutional investors spend an average of $257,000 and $357,000 on ''collecting climate data related to assets'' and ''internal climate-related investment analysis,'' respectively.[2670] An academic study similarly finds that ''there exists considerable heterogeneity in what and how firms report about their CSR activities . . . The heterogeneity in reported CSR topics makes it difficult for users to compare disclosures and to benchmark firms' underlying CSR performance.'' [2671] Some studies and commenters have asserted that current disclosures are often vague and boilerplate, creating challenges for investors.[2672] Industry observers and some commenters also report that many registrants that currently provide voluntary climate-related disclosures through sustainability reports often take longer than 12 months after their fiscal year end to disclose decision-relevant data, raising concerns about the timeliness of these reports for investors.[2673] As noted in section II.A.2, many commenters stated that the Commission's current reporting requirements do not yield adequate or sufficient information regarding climate-related risks.[2674]

ii. GHG Emissions Reporting

Commission staff also analyzed the number of registrants that recently reported Scope 1 and 2 emissions data. In this analysis, Commission staff utilized a database that compiles emissions data (among other ESG-related information) from companies' annual filings, sustainability reports, or other public disclosures.[2675] The number of registrants that are covered in this database is 5,535, which comprises the matched sample. From this matched sample, about 20 percent of registrants (1,125 out of 5,535) reported their Scope 1 and Scope 2 emissions in fiscal year 2021, with the highest disclosure rate found among LAFs (50 percent).[2676] In fiscal year 2022, about 18% of registrants (870 out of 5,535) reported their Scope 1 and 2 emissions, with the disclosure rate among LAFs at 42 percent. These and other statistics are presented in Table 5.

Often vendor information is estimated when a company has not disclosed information on its climate-related risks. Sometimes the estimates are made across industries, based on what other more proactive peers have disclosed. We are concerned about the lack of accuracy fostered by estimation methodologies, and also the trend for these methodologies to under-estimate actual emissions.''); Boston Trust Walden (''our analysts examine quantitative and qualitative climate-related corporate disclosure to enhance our understanding of the existing and potential financial outcomes associated, ranging from risks (*e.g.,* losing the license to operate) to opportunities (*e.g.,* generating new sources of revenue). In the absence of mandated disclosure requirements, we rely on the data of third-party research providers, which includes a mix of issuer provided data and estimates. Our analysts then seek to fill data gaps through additional research and analysis, outreach via written requests, meetings, and shareholder resolutions seeking the expanded disclosure we require. These processes for gathering necessary climate-related disclosures are inefficient and resource intensive.''); NY Office of the State Comptroller; and State of Vermont Pension Investment Commission.

[2670] *See* ERM survey attached to letter from ERM (June 16, 2022) (''ERM survey'').

[2671] *See* Hans B. Christensen, Luzi Hail & Christian Leuz, *Mandatory CSR and Sustainability Reporting: Economic Analysis and Literature Review,* 26 Rev. of Acct. Stud. 1176 (2021) (''Christensen *et al.* (2021)'') at 1194.

[2672] *See* SASB, The State of Disclosure: An Analysis of the Effectiveness of Sustainability Disclosure in SEC Filings (2017), available at *https://www.sasb.org/wp-content/uploads/2019/08/StateofDisclosure-Report-web112717.pdf* (reporting that about 50% of Commission registrants provide generic or boilerplate sustainability information in their regulatory filings); *see also* letter from The Institute for Policy Integrity at New York University School of Law, Environmental Defense Fund, and Professor Madison Condon (''Inst. Policy Integrity *et al.*'') (''Existing disclosure regulations and guidance have proved insufficient to address this asymmetry. In a 2020 study of climate risk disclosures in 10–K filings, the Brookings Institution concluded that though '[d]isclosure has risen sharply,' '[m]ore firms are disclosing more general information that is essentially of no utility to the marketplace.' '').

[2673] *See supra* note 2570; *see also* letter from Calvert (''Last year, when evaluating disclosure rates of companies in our equities portfolios, we found 57% of 2,207 companies disclosed their Scope 1 and 2 emissions with a one to two year delay . . . [B]y the time this data is gathered, there may be a long lag time to the point of disclosure—it is not uncommon that GHG emissions disclosure is already 12–18 months out of date once it is actually published.'').

[2674] *See supra* section II.A.2.

[2675] Commission staff used the Refinitiv ESG database, which covers over 88% of global market capitalization, across more than 700 different ESG metrics. The U.S. coverage broadly includes listed companies belonging to the Russell 3000 Index. The emissions data used in this analysis was extracted from Refinitiv on Feb 11, 2024. *See* Refinitiv, *Environmental, Social And Governance Scores From Refinitiv* (May 2022), available at *https://www.lseg.com/content/dam/marketing/en_us/documents/methodology/refinitiv-esg-scores-methodology.pdf.*

[2676] These percentages may be understated to the extent that Refinitiv may not be able to fully track all emissions disclosures made by Commission registrants. Conversely, compared to the full sample of Commission registrants, these figures may be overstated given that smaller firms outside of Refinitiv's coverage universe (*i.e.,* those outside of the Russell 3000) are less likely to report emissions.

TABLE 5—NUMBER OF REGISTRANTS THAT DISCLOSE SCOPE 1 AND 2 EMISSIONS USING THIRD-PARTY DATA [1]

Filer status	SEC registrants [2]	Registrants covered in third-party database[3]	Coverage rate [4] (%)	Scope 1 and 2 emissions disclosures			
				FY 2021		FY 2022 [6]	
				Disclosed	Disclosure rate[5] (%)	Disclosed	Disclosure rate [7] (%)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
LAF	2,528	2,059	81	1,026	50	870	42
AF	444	334	75	57	17	50	15
NAF	507	154	30	8	5	15	10
SRC/EGC	4,265	2,988	70	34	1	50	2
Total	7,744	5,535	71	1,125	20	985	18

[1] Commission staff used the Refinitiv ESG database. *See supra* note 2675.
[2] These statistics are based on SEC registrants filing annual reports in calendar year 2022. *See supra* note 2578. For LAF, AF, and NAF registrant counts, only those that are not SRCs or EGCs are included. We note that several non-SRC/EGC registrants did not disclose their filer status, thus the total registrant count in Table 5 is not the same as what is indicated in section IV.A.1.
[3] The matched sample consists of the number of registrants that are covered in the Refinitiv ESG database.
[4] Column (4) = (Column (3))/(Column (2)).
[5] Column (6) = (Column (5))/(Column (3)).
[6] Data collection of GHG emissions disclosure can lag by 18 months or longer. As a result, the number of disclosers for FY 2022 may not be complete and thus understated.
[7] Column (8) = (Column (7))/(Column (3)).

We note that the number of registrants providing disclosure in fiscal year 2022 may be understated given that data collection of GHG emissions can lag by up to 18 months.[2677] To estimate how this number could potentially increase upon the completion of data collection, we consider the following assumption: for those registrants that disclosed only in fiscal year 2021 (but not in fiscal year 2022), we assume that their fiscal year 2022 disclosures are forthcoming.[2678] Within the matched sample, there are 263 LAFs that disclosed in fiscal year 2021 but not in fiscal year 2022. The corresponding number for AFs is 17. If we assume that these registrants subsequently provide their fiscal year 2022 disclosures, the fiscal year 2022 disclosure rate for LAFs would increase from 42% to 55% [2679] and that of AFs would increase from 15% to 20%.[2680] We recognize, however, that the above assumption may not hold true for all of these registrants.

Commission staff also analyzed U.S. companies that voluntarily responded to CDP's questionnaire and publicly disclosed their responses.[2681] In 2022, 1,311 domestic companies provided responses to CDP's questionnaire. Approximately 610 of these were Commission registrants,[2682] suggesting that 10 percent of the approximately 5,860 domestic registrants that will be subject to the final rules provided responses to CDP's questionnaire in 2022. The response rate was higher among companies with higher market capitalizations. For example, CDP lists 351 respondents as included in its S&P 500 sample, suggesting that approximately 70 percent of S&P 500 companies provided responses. Of these 351 respondents, 95 percent provided Scope 1 and Scope 2 emissions data. In addition, a 2022 report examines Russell 1000 companies and finds that 57% disclose Scope 1 and 2 emissions.[2683]

c. Use of Third-Party Frameworks

Multiple third-party reporting frameworks and data providers have emerged over the years to facilitate and encourage the reporting of climate-related information by companies.[2684] Due to the voluntary nature of third-party frameworks, however, companies often disclose some but not all components of those frameworks, and the components that are disclosed may not be the same across companies,[2685] resulting in reporting fragmentation.

Some companies follow existing third-party reporting frameworks when developing climate-related disclosures

[2677] The Commission understands that data collection of GHG emissions for FY 2022 is ongoing. In addition, some industry observers have noted that "many companies still take more than 12 months after their fiscal year to disclose their sustainability data," *see, e.g.,* Corporate Knights, *supra* note 2570; letter from Morningstar ("Currently, a lack of clear disclosure standards for the timing of 'sustainability reports,' which is the primary source for emissions data, greatly hinders investor knowledge. For example, some registrants released 2021 reports—detailing 2020 data—as late as November 2021.")

[2678] These registrants have demonstrated that they have Scope 1 and 2 emissions measurement and disclosure processes in place. It is therefore plausible that they have forthcoming disclosures for FY 2022 that is not yet in the dataset.

[2679] (870 + 263)/2059 = 55%.

[2680] (50+17)/334 = 20%.

[2681] This analysis is based on data provided to the Commission from CDP, available at *https://www.sec.gov/comments/s7-10-22/s71022-206599-416182.xlsx*. CDP operates a global disclosure system that enables companies, cities, states and regions to measure and manage their environmental risks, opportunities and impacts. Despite not being a framework like GRI, SASB and TCFD, CDP's questionnaires gather both qualitative and quantitative information from across governance, strategy, risk, impact and performance. To aid comparability and ensure comprehensiveness, CDP includes sector-specific questions and data points. In 2018, CDP aligned its climate change questionnaire with the TCFD. Companies' participation in the CDP questionnaire is voluntary. If a company decides to respond to the questionnaire and disclose its information to the CDP, it then has the option to mark its response as either "Public" or "Private." Importantly, responses marked as "Private" are available only to the signatory investors of the CDP (non-signatory investors and the general public cannot access this information). Responses marked as "Public" can be accessed by the general public at no cost. *See* CDP, available at *https://www.cdp.net/en/info/about-us*. In a meeting with CDP officials, the Commission staff was informed that the number of public companies that respond to the CDP questionnaire but do not publicly disclose their responses is negligible. *See* SEC Meeting Memorandum dated June 15, 2023, available at *https://www.sec.gov/comments/s7-10-22/s71022-206619-416182.pdf*.

[2682] This estimate is based on matching CDP survey respondents to registrants on ticker, company name, and industry. Five-hundred seventy matches were made on ticker. Approximately 40 more matches were made on company name using Levenshtein Distance. The matches were then manually reviewed by Commission staff to ensure the industry description provided by CDP aligned with the SIC code assigned to the matched registrant.

[2683] *See* Just Capital, The Current State of Environment Disclosure in Corporate America: Assessing What Data Russell 1000 Companies Publicly Share, available at *https://justcapital.com/wp-content/uploads/2022/04/JUST-Capital_Environment-State-of-Disclosure-Report_2022.pdf*.

[2684] The TCFD, the SASB, the GRI, the Principles for Responsible Investment, the PCAF, and the CDP (among others), have all developed standards and systems that aim to help firms and investors identify, measure, and communicate climate-related information and incorporate that information into their business practices. Multiple frameworks have emerged, in part, because each seeks to provide different information or fulfill different functions when it comes to disclosing information related to climate-related risks or other ESG factors that may be important to investors.

[2685] *See* Reiners *et al., supra* note 2653.

for Commission filings or to be included in CSR, sustainability, ESG, or similar reports. As described in the Proposing Release, for instance, one survey found that 59 percent of respondents follow one or more such frameworks.[2686] Among these respondents, 44 percent used SASB, 31 percent used the Global Reporting Initiative GRI, 29 percent used the TCFD, and 24 percent used the CDP.[2687] Broadly similar statistics on the usage of different reporting frameworks are also provided by other studies. For example, another report [2688] found that 78 percent of sustainability reports from Russell 1000 companies aligned with SASB reporting standards,[2689] 54 percent utilized GRI reporting standards,[2690] 50 percent aligned with the TCFD recommendations,[2691] and 53 percent responded to the CDP Climate Change questionnaire.[2692] A review of website sustainability disclosures by 80 small- and mid-cap companies across five different industries found comparable numbers.[2693]

While these various frameworks are distinct, they overlap in their alignment with the TCFD recommendations. According to one report,[2694] the GRI standards exhibit ''Reasonable'' alignment with the TCFD, while the SASB standards generally exhibit ''Moderate'' or ''Reasonable'' alignment with the majority of the TCFD disclosure items. Additionally, the CDP Climate Change questionnaire fully incorporates the TCFD framework and thus exhibits full alignment.[2695] Thus, companies that report following the GRI, SASB, or CDP frameworks are, to varying degrees, producing disclosures that are in line with the TCFD. However, because each framework takes different approaches (*e.g.,* different intended audience and/or reporting channel) and because certain differences exist in the scope and definitions of certain elements, investors may find it difficult to compare disclosures under each framework. One organization analyzed the rate of disclosure for each TCFD disclosure element for a sample of 659 U.S. companies in 2020 and 2021, presented in Table 6.[2696]

TABLE 6—THIRD-PARTY ANALYSIS OF TCFD DISCLOSURE RATES FROM A SAMPLE OF U.S. COMPANIES [1]

TCFD disclosure element	Rate of disclosure (%)
Governance:	
(a) Describe the board's oversight of climate-related risks and opportunities	17
(b) Describe management's role in assessing and managing climate-related risks and opportunities	10
Strategy:	
(a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term	45
(b) Describe the impact of climate-related risks and opportunities on the organization's businesses, strategy, and financial planning	34
(c) Describe the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2 °C or lower scenario	5
Risk Management:	
(a) Describe the organization's processes for identifying and assessing climate-related risks	15
(b) Describe the organization's processes for managing climate-related risks	17
(c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization's overall risk management	16
Metrics and Targets:	
(a) Describe the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process	21
(b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 GHG emissions, and the related risks	19
(c) Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets	25

[2692] *See id.* Thirty-two percent of companies in the smaller half of the Russell 1000 index (by market capitalization) responded to the CDP Climate Change questionnaire. The corresponding statistic for companies in the larger half is 74%.

[2693] *See* White & Case and the Soc. Corp. Gov., *A Survey and In-Depth Review of Sustainability Disclosures by Small- and Mid-Cap Companies* (Feb. 18, 2021), available at *https://www.whitecase.com/publications/article/survey-and-depth-review-sustainability-disclosures-small-and-mid-cap-companies* (Among the companies reviewed, 41 companies (51%) provided some form of voluntary sustainability disclosure on their websites. Further, nine of those 41 companies indicated the reporting standards with which they aligned their reporting, with the majority of the nine companies not following any one set of standards completely. Additionally, six companies followed the GRI standards, while three companies stated that they follow both the TCFD recommendations and SASB standards).

[2694] The Corporate Reporting Dialogue is a platform, convened by the Value Reporting Foundation, to promote greater coherence, consistency, and comparability between corporate reporting frameworks, standards, and related requirements. *See Driving Alignment in Climate-related Reporting, Corporate Reporting Dialogue* (2019), available at *https://www.integratedreporting.org/wp-content/uploads/2019/09/CRD_BAP_Report_2019.pdf* (providing a detailed assessment of the various frameworks' degrees of alignment with each TCFD disclosure item, ranging from maximum to minimum alignment as follows: Full, Reasonable, Moderate, Very Limited, and None).

[2695] *See* CDP, *supra* note 52.

[2696] *See* Moody's Analytics, TCFD-Aligned Reporting by Major U.S. and European Corporations (Feb. 2022), available at *https://www.moodysanalytics.com/articles/pa/2022/tcfd_aligned_reporting_by_major_us_and_european_corporations.* The sample for analysis was provided to Moody's Analytics by the TCFD and includes 659 companies domiciled in the United States. To arrive at these statistics, Moody's conducted an artificial intelligence (''AI'') based review of all public filings, including financial filings, annual reports, integrated reports, sustainability reports, and other publicly available reports that were associated with companies' annual reporting on sustainability. Non-public disclosures, such as responses to the CDP questionnaire, were not included in the analysis.

The variety of disclosure frameworks in use, and their varying rates of overlap with the TCFD disclosure elements, demonstrates the low rate of consistency and comparability among existing climate disclosures.

d. Climate-Related Targets, Goals, and Transition Plan Disclosures

Carbon reduction targets or goals have become an increasing focus for both companies and countries.[2697] For example, 195 parties, including the United States, the EU, and the UK, have signed the Paris Climate Agreement as of December 2023.[2698] The agreement aims to strengthen the global response to climate change by keeping a rise in global temperatures to well below 2° Celsius above pre-industrial levels this century, as well as pursue efforts to limit the temperature increase even further to 1.5° Celsius.[2699] A 2022 report, which examined approximately 5,300 companies across the globe, found that over one-third of these companies announced plans to curb their Scope 1 or Scope 2 emissions.[2700] Of these 5,300 companies that also responded to the CDP climate survey, the same report found that about one-fourth of these companies had established a target to achieve net-zero carbon emissions.[2701] In addition, a growing number of companies and organizations have signed on to The Climate Pledge, indicating a commitment to achieve net-zero emissions by 2040.[2702] According to data from another source, as of August 2023, 5,728 companies had established climate targets.[2703] Of these companies, 710 were located in the United States, about half of which were Commission registrants.[2704] The trend in companies disclosing other climate-related targets has also been increasing over time.[2705]

An increasing number of companies are adopting transition plans, according to a 2023 report.[2706] This report finds that 4,100 organizations [2707] across the globe reported having transition plans aligned with reaching a temperature change of no more than 1.5° Celsius above pre-industrial levels.[2708] Approximately 43 percent of these transition plans are publicly available.[2709]

Commission staff compared these figures to data related to targets and goals on the Bloomberg ESG database, which is focused on registrants listed on NYSE and NASDAQ. The results are reported in Table 7 below. These results are generally consistent with data from the sources discussed above.

TABLE 7—REGISTRANTS WITH TARGETS OR GOALS ACCORDING TO BLOOMBERG ESG DATA

	Climate change policy [1] (%)	Emission reduction initiatives [2] (%)	Science-based targets [3] (%)	Net zero plans [4] (%)
All issuers	37	45	11	17
NAFs	10	11	1	2
AFs	23	29	2	7
LAFs	55	67	19	27
EGCs	8	9	0	1
Non EGCs	47	58	15	22
SRCs	13	12	0	3
Non SRCs	40	49	12	18

Sources: Bloomberg, SEC filings.

[1] Bloomberg defines this field as indicating: ''Whether the registrant has disclosed its intention to help reduce global GHG emissions through its ongoing operations and/or the use of its products and services in its annual report or CSR report. Examples might include efforts to reduce GHG emissions, efforts to improve energy efficiency, efforts to derive energy from cleaner fuel sources, investment in product development to reduce emissions generated or energy consumed in the use of the company's products etc.''

[2] Bloomberg defines this field as indicating: ''Whether the registrant has disclosed the implementation of any initiative to reduce its emissions, such as GHGs, SO_X, NO_X, or other air pollutants in its annual report or CSR report.''

[3] Bloomberg defines this field as indicating: ''Whether the registrant has disclosed its ambition and engagement related to setting science-based GHG emissions reduction targets. Emissions targets are considered science-based if they align with the goals of the Paris Climate Agreement to limit warming to well below 2 degrees Celsius above pre-industrial levels. That is, whether the company has explicitly disclosed that they have either committed to setting or have set science-based targets. This information is sourced from a company's CSR report.''

[4] Bloomberg defines this field as indicating: ''Whether the registrant has disclosed its ambition and engagement related to achieving Net Zero GHG emissions. Net Zero refers to a state in which GHG emissions released into the atmosphere are balanced by removal of emissions from the atmosphere. This information is sourced from a company's CSR report.''

[2697] *See, e.g.,* UNFCC COP28 Agreement, *supra* note 34; Press Release, United Nations Framework Convention on Climate Change, Commitments to Net Zero Double in Less Than a Year, (Sept. 21, 2020), available at *https://unfccc.int/news/commitments-to-net-zero-double-in-less-than-a-year.*

XXVII, 7.d Paris Agreement (treaty status updated Feb. 2024), available at *https://treaties.un.org/Pages/ViewDetails.aspx?src=TREATY&mtdsg_no=XXVII-7-d&chapter=27&clang=_en* treaty collection; *see also* EU Press Release, *Corporate Sustainability Due Diligence: Council and Parliament Strike a Deal to Protect Environment and Human Rights* (Dec. 14, 2023), available at *https://www.consilium.europa.eu/en/press/press-releases/2023/12/14/corporate-sustainability-due-diligence-council-and-parliament-strike-deal-to-protect-environment-and-human-rights/* (announcing a provisional agreement to adopt the Corporate Sustainability Due Diligence Directive, which includes a requirement that companies ensure their business strategies are compatible with limiting global warming to 1.5° Celsius).

[2699] *See* section I.

[2700] *The Sustainability Yearbook 2022,* S&P Global (Feb. 2022), available at *https://www.spglobal.com/esg/csa/yearbook/2022/downloads/spglobal_sustainability_yearbook_2022.pdf.*

[2701] *Id.*

[2702] As of February 20, 2024, The Climate Pledge had acquired 468 signatories, 146 of which are from the United States. *See The Climate Pledge,* available at *https://www.theclimatepledge.com/us/en/Signatories* (last visited Feb. 20, 2024).

[2703] *See Target Dashboard,* available at *https://sciencebasedtargets.org/ (as visited Aug. 16, 2023).*

[2704] *See id.*

[2705] For example, the percentage of both global and U.S. companies with water reduction targets grew by 4% in 2019 on a year-over-year basis. This represented 28% of major global companies (*i.e.,* those listed on the S&P Global 1200 index) and 27% of major (*i.e.,* those listed in the S&P 500 index) U.S. companies publicly disclosing these targets. *See State of Green Business 2021,* S&P Global (Feb. 4, 2021), available at *https://www.spglobal.com/marketintelligence/en/news-insights/research/state-of-green-business-2021.*

[2706] CDP, Are Companies Developing Credible Climate Transition Plans? (Feb. 2023), available at *https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/785/original/Climate_transition_plan_report_2022_%2810%29.pdf.*

[2707] *See id.* According to the CDP's Transition Plan report, ''Nearly 20,000 organizations around the world disclosed data through CDP in 2022, including more than 18,700 companies worth 50% of global market capitalization, and over 1,100 cities, states and regions.''

[2708] *See id.*

[2709] *See id.*

The results suggest that smaller registrants (NAFs, EGCs, and SRCs) are much less likely to have developed climate-related targets and goals. For example, the portion of companies that have ''Net Zero Plans'' is approximately 1 percent for EGCs and approximately 22 percent for non-EGCs.

e. Third-Party Assurance of Climate-Related Disclosures

Among the companies that provide climate-related disclosures, a considerable portion include some form of third-party assurance of the accuracy of these disclosures. One report finds that 40 percent of Russell 1000 Index companies, nearly all of which are LAFs, obtained third-party assurance for their sustainability reports in 2022, up from 24 percent in 2019.[2710] Among the companies that obtained assurance, however, only three percent obtained assurance for the entire report, with 58 percent obtaining assurance only with respect to GHG emissions. Regarding the level of assurance, the overwhelming majority (92 percent) obtained limited assurance while only 5 percent obtained reasonable assurance. Regarding service providers, 17 percent of companies received assurance from an accounting firm, 15 percent from small consultancy/boutique firms, and 68 percent from engineering firms.[2711] Because these statistics are limited to Russell 1000 Index companies, corresponding figures for the full sample of U.S. registrants may differ depending on the extent to which the practice of obtaining third-party assurance is concentrated in large companies.[2712] Indeed, based on Commission staff's analysis of Bloomberg ESG data, which focuses on registrants listed on NYSE and NASDAQ, approximately 15 percent obtained some type of third-party assurance or verification[2713] on their environmental policies and data, nearly all of which are non-SRCs and non-EGCs.[2714] Based on analysis of S&P 500 companies from 2010 through 2020, a 2023 study finds that the most common form of assurance standard used for GHG emissions is the ISO 14064,[2715] which is the assurance standard typically applied by assurance providers who are not accountants.[2716] Specifically, across Scopes 1, 2, and 3 GHG emissions, approximately 40 percent of the assurance performed utilizes ISO 14064–3. Application of other assurance standards are reported to be also consistent across Scopes 1, 2, and 3 GHG emissions: around 10 percent for AICPA, around 10 percent for AccountAbility's AA1000, around 16 percent for IAASB ISAE, and around 30 percent for miscellaneous in-house assurance standards and protocols.[2717] An analysis of S&P 500 firms in 2021 reveals a similar finding with ISO 14064–3 being the most common assurance standard referenced in ESG reporting followed by the IAASB ISAE, which experienced an increase of 41 more references compared to the previous year (*i.e.,* 54 percent increase).[2718]

B. Broad Economic Considerations

1. Investor Demand for Additional Climate Information

Comments received in response to the Proposing Release, previously discussed in section II.A.2, indicate that there is broad support from investors for more reliable, consistent, and comparable information on how climate-related risks can impact companies' operations and financial conditions.[2719] The results of multiple recent surveys[2720] and evidence in academic studies[2721] also indicate strong demand from investors

[2710] *See supra* note 2666.

[2711] One study finds that assurance service providers that are not financial auditors are reported to be not applying the AICPA assurance standards. *See* Brandon Gipper, Samantha Ross & Shawn Shi, *ESG Assurance in the United States* (Aug. 14, 2023), Stanford Univ. Grad. Sch. of Bus. Rsch Paper No. 4263085, UC San Francisco Rsch. Paper No. Forthcoming, available at *https://ssrn.com/abstract=4263085* (retrieved from SSRN Elsevier database) (''Gipper *et al.* (2023)''); *see also supra* note 1363 (explaining that non-CPAs are unable to use AICPA or PCAOB attestation standards).

[2712] Other studies also report evidence of third-party assurance among smaller samples of companies analyzed. For example, according to a recent study by the International Federation of Accountants (''IFAC''), in 2019, 99 out of the 100 largest U.S. companies by market capitalization provided some form of sustainability disclosure, which may contain climate-related information among other sustainability-related topics. Seventy of those companies obtained some level of third-party assurance, with the vast majority being ''limited assurance'' according to the study. Of the 70 companies that obtained assurance, the study reports that 54 obtained ''limited assurance,'' eight obtained ''reasonable assurance,'' five obtained ''moderate assurance,'' and three did not disclose any assurance. Of the 81 unique assurance reports examined in the study, nine were found to be issued by an auditing firm, while 72 were issued by another service provider. *See* IFAC, *supra* note 1089. Among the sample of 436 companies included in the CCMC Survey, 28% disclosed that they engaged a third party to provide some form of auditing or assurance regarding their climate-related or ESG disclosure.

[2713] As discussed in section II.I.5.c, assurance services are services performed in accordance with professional standards that are designed to provide assurance, while in many cases verification services are not designed to provide assurance.

[2714] Consistent with rates of voluntary GHG emissions disclosures, the percentages become much smaller when the sample analyzed is expanded to include smaller registrants. The breakdown for LAF, AFs, and NAFs is as follows: 25%, 4%, and 1%, respectively.

[2715] *See* Gipper *et al.* (2023).

[2716] *See* Center for Audit Quality, *S&P 500 ESG Reporting and Assurance Analysis* (2023), available at *https://www.thecaq.org/sp-500-and-esg-reporting* (stating, in the context of the study, that the most common standard used by non-accountant providers was ISO 14064–3).

[2717] Percentages do not add up to 100% because assurance statements can sometimes reference multiple assurance standards.

[2718] Center for Audit Quality, *supra* note 2716.

[2719] This includes support for climate-related disclosure in the form of numerous letters from individuals as well as letters from investment managers and investment advisers. *See supra* section II.A.

[2720] *See, e.g.,* Morrow Sodali, *Institutional Investor Survey* (2021), available at *https://morrowsodali.com/uploads/INSTITUTIONAL-INVESTOR-SURVEY-2021.pdf* (''Morrow Sodali (2021)''). This survey solicited the views of 42 global institutional investors managing over $29 trillion in assets (more than a quarter of global assets under management). Results show that 85% of surveyed investors cited climate change as the leading issue driving their engagements with companies, and 61% indicated that they would benefit from disclosures that more clearly link climate-related risks to financial risks and opportunities. *See also, e,g.,* E. Ilhan, *et al., Climate Risk Disclosure and Institutional Investors,* 36 Rev. Fin. Stud. 2617 (2023) (''Ilhan *et al.* (2023)'') (''Through a survey and analyses of observational data, we provide systematic evidence that institutional investors value and demand climate risk disclosures''). The sample consists of 439 institutional investor respondents. Results show that 68% of respondents either agreed or strongly agreed that management discussions on climate risk are not sufficiently precise. Also, 74% either agreed or strongly agreed that investors should demand that portfolio companies disclose their exposure to climate risk, while 59% engaged (or planned to engage) portfolio companies to provide disclosures in line with the TCFD. Lastly, 73% of institutional investors surveyed either agreed or strongly agreed that standardized and mandatory reporting on climate risk is necessary. The authors state that ''respondents are likely biased toward investors with a high ESG awareness.''

for multiple types for disclosures of climate-related risks faced by companies.[2722] Commenters identified various channels by which climate risks can impact financial performance[2723] and why this information is important for their investment decisions. These commenters agreed with the Commission's assessment in the Proposing Release that the current set of voluntary disclosures are inadequate to meet investor needs. Accordingly, these commenters expressed support for new rules to enhance the consistency, comparability, and reliability of climate-related disclosures.

Other commenters questioned both the Commission's rationale for the proposed rules and the views of supportive commenters. Some of these commenters characterized the demand for climate-related information as being concentrated among a small set of institutional investors, who did not represent investors more broadly.[2724] Other commenters expressed the view that institutional investors are influenced by motives other than the desire to obtain the best financial return for their clients.[2725] Relatedly, one commenter expressed the view that climate-related information would not better inform investor decision-making beyond what is found in current financial disclosures, while also stating that the risks that it highlighted were too far in the future to matter for current valuation.[2726]

We disagree with the commenters who stated that the demand for climate-related information is concentrated among a small group of institutional investors. We received numerous comment letters from investors, both institutional and individual, expressing a need for more reliable, consistent, and comparable climate-related information.[2727] Furthermore, institutional managers' demand for climate-related disclosures likely reflects what they believe to be in the best interests of their investors and clients, including individuals.[2728] Institutional investors have strong incentives to earn financial returns on behalf of their clients.

Moreover, climate risk information can be informative about financial performance in a way that goes beyond current accounting numbers. As stock prices reflect profits potentially years in the future, even long-term climate-related risks can affect profitability, though not all climate risks are necessarily long-term. In any case, risks to cash flows, even those that are far in the future, can still be important for investors today.[2729]

2. Current Impediments to Climate Disclosures

In the Proposing Release, the Commission stated that, in practice, investors' demand for climate-related information is often met by inconsistent and incomplete disclosures due to the considerable variation in the coverage, specificity, location, and reliability of information related to climate risk.[2730] Furthermore, the Commission noted that multiple third-party reporting frameworks and data providers have emerged over the years but these resources lack mechanisms to ensure compliance and have contributed to reporting fragmentation.[2731] Many commenters supported these observations.[2732]

The Commission also described a set of conditions that could contribute to the market failing to achieve an optimal level of climate disclosure from the point of view of investors.[2733] Briefly put, these market failures stemmed from the existence of information externalities (implying that registrants may fully internalize the costs of disclosure but not the benefits, which may lead them to under-disclose relative to what is optimal from investors' perspective), from agency problems in that managers may not be motivated to disclose information due to agency concerns, and the fact that disclosures may not elicit uniform responses from investors. In articulating these market failures, the Commission drew on a long-standing literature in economics regarding insufficient private incentives for disclosure.[2734] Academic literature that focuses on climate disclosures acknowledges these to be applicable market failures, though there

[2722] *See* discussion *supra* sections I and II.A.; *see also* Christensen *et al.* (2021) (stating ''it is clear that capital-market participants have a demand for CSR information, not least because of the potential performance, risk or valuation implications''); Investor Agenda, 2021 Global Investor Statement to Governments on the Climate Crisis, available at *https://theinvestoragenda.org/wp-content/uploads/2021/09/2021-Global-Investor-Statement-to-Governments-on-the-Climate-Crisis.pdf* (statement signed in 2021 by 733 investors collectively managing over $52 trillion in assets).

[2723] *See infra* notes 2738–2745 and accompanying text.

[2724] *See, e.g.,* letter from Business Roundtable; Nasdaq, *The SEC's proposal on Climate Change Disclosure: a Survey of U.S. Companies* (2022) (letter and accompanying survey report), available at *https://nd.nasdaq.com/rs/303-QKM-463/images/1497-Q22_SEC-Climate-Change-Survey-Findings-Report-Listings-CP-v3.pdf*; and Overdahl exhibit to letter from Chamber (citing BCG Investor Perspectives Series Pulse Check #19 Mar. 18–22, 2022, available at *https://web-assets.bcg.com/7e/19/4b86c63541b78f1c9ffa82e42804/bcg-investor-pulse-check-series-19.pdf*). From that BCG study, the commenter cites a footnote (slide 17): ''However, most of the investors BCG recently surveyed indicated that ESG is not currently a primary consideration in day-to-day investment decisions and recommendations.'' Simply because a matter is not a *day-to-day* consideration does not imply that disclosure relating to it is unimportant to an investor.

[2725] *See, e.g.,* letters from Cunningham *et al.;* David R. Burton; Domestic Energy Producers' Alliance; National Fuel Corporation; Western Energy Alliance and U.S. Oil & Gas Association; and Competitive Enterprise Institute. *See also* letter from Boyden Gray (June 2022), citing Paul G. Mahoney & Julia D. Mahoney, *The New Separation of Ownership and Control: Institutional Investors and ESG,* 2 Colum. Bus. L. Rev. 840, 851 (2021), which discusses cases in which some institutional investors may act for purposes that are contrary to those of their investors but noting that such concerns may not apply to all institutional investors.

[2730] Proposing Release, section IV.B.2.a.

[2731] *Id.*

[2732] *See supra* section II.A.

[2733] *See* Proposing Release, section IV.B.2.a.

[2734] *See id; see also* S.J. Grossman, The Informational Role of Warranties and Private Disclosure About Product Quality, 24 J. L. & Econ. 461 (1981); P. Milgrom, Good News and Bad News: Representation Theorems and Applications, 17 Bell J. Econ. 18 (1981); S.A. Ross, Disclosure Regulation in Financial Markets: Implications of Modern Finance Theory and Signaling Theory, Issues in Financial Regulation (McGraw Hill, F.K. Edwards Ed., 1979); Anne Beyer, *et al.,* The Financial Reporting Environment: Review of the Recent Literature, 50 J. Acct. & Econ. 296 (2010).

is a debate over whether these failures justify official sector action.[2735]

One commenter argued that the Commission must empirically establish the existence of a market failure and that the Proposing Release ''failed to demonstrate that a market failure exists with respect to the current principles-based approach.'' [2736] As discussed in section IV.B.1, however, investors have expressed a need for the information provided by these disclosures and have stated there is a lack of consistency in current disclosures. In addition, there are several conditions that inhibit an optimal level of climate-related disclosure in the current market, as described above. It is widely accepted that such conditions demonstrate barriers to voluntary disclosure, namely, a market failure in this context. These together establish the basis for Commission action.

C. Benefits and Costs

We begin with a general discussion of the final rules' benefits and costs (section IV.C.1). We then turn to the benefits and costs that are specific to particular provisions of the final rules (section IV.C.2). Finally, we discuss estimates of quantifiable direct costs of compliance with the final rules (section IV.C.3).

1. General Discussion of Benefits and Costs

a. Benefits

The final rules will require comprehensive and standardized climate-related disclosures, including disclosure on governance, business strategy, targets and goals, GHG emissions, risk management, and financial statement metrics. This information will enable investors to better assess material risks in climate-related reporting and facilitate comparisons across firms and over time.

Academic literature shows a well-established link between climate-related risks and firm fundamentals.[2737] In an international study of over 17,000 firms from 1995 to 2019, researchers found that increased exposure to higher temperatures, a form of physical climate risk, reduces firm revenues and operating income.[2738] Another study found that drought risk, another form of physical climate risk, predicts poor profit growth.[2739] A third study found that exposure to physical climate risk leads firms to choose capital structures with less debt due to higher expected distress costs and greater operating costs.[2740] Researchers have found that banks with financial exposure in their lending portfolios to extreme climate-related hazards (*e.g.,* hurricanes) experience higher loan losses and lower long-run profitability.[2741] Other studies document effects of climate-related transition risks on innovation, employment and investment policies.[2742]

Relatedly, research shows that publicly available climate-related information is reflected in asset prices, which is an indication that such information affects the prices at which investors are willing to buy or sell assets (*i.e.,* their investment decisions).[2743] For example, some studies document a carbon emissions premium: investors demand compensation (higher expected returns) for bearing exposure to firms with higher carbon emissions.[2744]

[2735] *See* Christensen *et al.* (2021); Richard M. Frankel, S.P. Kothari & Aneesh Raghunandan, *The Economics of ESG Disclosure Regulation* (Nov. 29, 2023), available at *https://ssrn.com/abstract=4647550* (retrieved from SSRN Elsevier database). *See also* Overdahl exhibit to letter from Chamber (critiquing a rules-based approach).

[2736] *See* Overdahl exhibit to letter from Chamber. This commenter also pointed to a statement from a set of economists that considered how the Commission should approach disclosures of environmental and social issues. The commenter cites to the groups' recommendation that, ''that the SEC should not mandate disclosure of the firm's impacts on environmental and social (E&S) outcomes.'' *See* Jonathan M. Karpoff, Robert Litan, Catherine Schrand & Roman L. Weil, *What ESG-Related Disclosures Should the SEC Mandate?,* 78 Fin. Analysts J. 8 (2022); Fin. Economists Roundtable, Statement on SEC Regulation of ESG Issues: SEC Should Mandate ESG Disclosure Limited to Matters that Directly Affect the Firm's Cash Flows, (2021) (''FER Statement''), available at *https://static1.squarespace.com/static/61a4492358cbd07dda5dd80f/t/61e8d6dd8c22c04330637bc9/1642649310539/2021.pdf.* Although the final rules require some disclosure of GHG emissions, contrary to the FER Statement's concerns, those disclosures are not intended to promote an ''understanding [of] how the firm's activities affect society.'' *Id.* Instead, consistent with the FER Statement's suggestion, the GHG emissions disclosure requirements are intended to help investors understand the risks to which registrants are subject so that they can make better-informed investment and voting decisions. Moreover, the commenter neglected to reference the group's recommendation that ''[t]he SEC should mandate disclosure of E&S-related cash flow effects, including investments that alter E&S outcomes.'' Overall, therefore, we believe our approach is broadly consistent with the FER Statement's recommendation to focus on ''understanding the impact of E&S activities on the firm's value through their effects on a firm's cash flows.''

[2737] One commenter said that the Commission did not explain ''why climate-related information would often be material to investors when other information, such as cash flows, profitability and industry, are likely to be much more relevant to an investment decision.'' *See* Overdahl exhibit to letter from Chamber (citing BCG Investor Perspectives Series Pulse Check #19, *supra* note 2724). We disagree with the premise underlying this comment. Indeed, as other commenters have expressed, understanding the impact of climate-related risks is important, for investors to assess current financial information such as cash flows and profitability and thus to make informed investment decisions. *See supra* section IV.B.1. Moreover, disclosure regarding the potentially likely material impacts of a registrant's climate-related risks may be more informative about future cash flows than disclosure regarding its current cash flows. This commenter cites as evidence an academic study, A. Moss, J.P. Naughton & C. Wang, *The Irrelevance of Environmental, Social, and Governance Disclosure to Retail Investors,* Mgmt. Sci. (2023) (also submitted to the comment file by the authors, *see* letter from James P. Naughton). This study suggests that the portfolios of retail investors on one trading platform are not different on days of ESG press releases. We received numerous comments speaking to difficulties in analyzing current climate disclosures, and this paper's findings are consistent with this feedback. We acknowledge, however, that this study is subject to certain limitations, such as the fact that its findings center around disclosures on social issues more generally (rather than specifically focusing on climate-related risks). Also, voluntary disclosures are analytically subject to a dual selection problem. *See* Christensen *et al.* (2021), at 1208. The dual selection problem refers to two concurrent issues that pose challenges in determining causality. The first stems from the fact that observable ESG disclosures are from companies that voluntarily choose to disclose, reflecting a selection bias. The second is the challenge of disentangling the effects of disclosure by itself from the effects of the underlying CSR activities.

[2738] *See* Nora Pankratz, Rob Bauer & Jeroen Derwall, *Climate Change, Firm Performance, and Investor Surprises,* 69 Mgmt Sci. 7352 (2023).

Identifying Supply Effects* (June 30, 2022), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3724940* (retrieved from SSRN Elsevier database) (describing decline in labor and sales due to extreme temperatures in manufacturing and other heat-sensitive industries).

[2740] *See* Edith Ginglinger & Quentin Moreau, *Climate Risk and Capital Structure,* 69 Mgmt Sci. 7492 (2023). Similar evidence also appears in the context of transition risk where researchers find that firms with higher carbon emissions exhibit lower leverage when their banks through commitments to decarbonize are found to supply less credit to these firms. *See* Marcin T. Kacperczyk & José-Luis Peydró, *Carbon Emissions and the Bank-lending Channel* (Aug. 2022), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3915486* (retrieved from SSRN Elsevier database).

[2741] *See* Yao Lu & Valeri V. Nikolaev, *The Impact of Climate Hazards on Banks' Long-Run Performance* (Sept. 2023), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4569935* (retrieved from SSRN Elsevier database).

[2742] *See* Sautner, *et al.* (2023); Li, *supra* note 2657.

[2743] Although the literature shows that financial motivations play a central role in driving investor interest in information regarding climate- and sustainability-related issues, we acknowledge that there coexist investors who exhibit nonpecuniary preferences involving this type of information. *See* S.M. Hartzmark & A.B. Sussman, *Do Investors Value Sustainability? A Natural Experiment Examining Ranking and Fund Flows,* 74 J. of Fin. 2789 (Aug. 2019); A. Riedl & P. Smeets, *Why Do Investors Hold Socially Responsible Mutual Funds?* 72 J. of Fin. 2505 (Aug. 2017); L̆. Pástor, R.F. Stambaugh, & L.A. Taylor, *Sustainable Investing in Equilibrium,* 142 J. of Fin. Econ 550 (Nov. 2021).

[2744] *See* Patrick Bolton & Marcin T. Kacperczyk, *Do Investors Care about Carbon Risk?* 142 J. of Fin. Econ. 517 (2021). Similar evidence on the pricing of information regarding climate-related risks more generally, *see* Sautner, *et al.* (2023); Griffin, *et al.,*

Similar evidence is found in debt and financial derivatives markets where climate-related risks are found to be priced in corporate bonds, options, credit default swaps, and futures contracts.[2745] Recent academic research also concludes that climate disclosures can be used in constructing efficient ''climate-hedging'' portfolios, by allowing investors to better identify firms with positive or negative climate exposure and adjust their portfolios in response to that information.[2746] Collectively, this research indicates that disclosures about climate-related risks, when they are made, become priced into the value of a firm, thereby demonstrating that the disclosure provides relevant information to investors as they make investment decisions.

Given the usefulness of climate disclosures to investors in accurately valuing a company and assessing its risks, the use of a standardized disclosure framework will mitigate agency problems arising from registrants being able to selectively disclose (*i.e.,* ''cherry pick'') information, which reduces transparency and impairs investors' ability to effectively assess the potential financial impacts of a registrant's climate-related risks. Providing better information to investors will, in turn, reduce information asymmetries between managers and investors as well as amongst investors[2747] (*i.e.,* reduce any informational advantages), which will improve liquidity and reduce transaction costs for investors (*i.e.,* reduce adverse selection), and may lower firms' cost of capital.[2748]

The final rules will also integrate climate-related risk disclosures into the existing Regulation S–K and S–X disclosure frameworks. Investors will therefore find information about all the material risks that companies face—not just climate-related risks—within a centralized source (*i.e.,* Commission filings, as opposed to sustainability reports, brochures, or company websites), thereby reducing search costs, and will receive this information in a more timely manner and on a regular schedule.[2749] These benefits should be especially pronounced for financial institutions with significant exposure to climate-related risks through their portfolio companies since any enhancements in the portfolio companies' disclosures will better position the institutions to assess their portfolio-level risks.[2750]

Furthermore, by treating the climate-related disclosures as ''filed,'' these disclosures will be subject to potential liability under the Exchange Act and the Securities Act, which will incentivize registrants to take additional care to ensure the accuracy of the disclosures, thereby resulting in more reliable disclosures.[2751] Several commenters expressed support for treating climate-related disclosures as filed, noting that it would help improve investor confidence in the accuracy and completeness of such disclosures.[2752]

For disclosures other than financial statement disclosures, the final rules will provide registrants with the flexibility to determine the appropriate placement within their filing of climate-related disclosures. While this could affect investors' ability to easily locate and compare those disclosures, we believe that this concern is largely

supra note 2660; E.M. Matsumura, R. Prakash & S.C. Vera-Munoz, *Firm-value Effects of Carbon Emissions and Carbon Disclosures,* 89 Acct. Rev. 695 (March 2014); E.M. Matsumura, R. Prakash & S.C. Vera-Munoz, *Climate Risk Materiality and Firm Risk,* Rev. Acct. Stud. (Feb. 5, 2022) available at *https://ssrn.com/abstract=2983977* (retrieved from SSRN Elsevier database).

[2745] For evidence within the market for corporate bonds, *see, e.g.,* Thanh D. Huynh & Ying Xia, *Climate Change News Risk and Corporate Bond Returns,* 56 J. of Fin. & Quant. Analysis 1985 (Sept. 2021) (''Huynh & Xia (2021)''). For evidence within the market for options, *see, e.g.,* E. Ilhan, Z. Sautner, & G. Vilkov, *Carbon Tail Risk, supra* note 2729; Sautner *et al.* (2023). For evidence within the market for credit default swaps, *see* Kölbel *et al., supra* note 2721. For evidence within the market for futures contracts, *see* Wolfram Schlenker & Charles A. Taylor, *Market Expectations of a Warming Climate,* 142 J. of Fin. Econ. 627 (Nov. 2021). *But see* Hong, *supra* note 2739 (finding asset prices may not fully price in climate related risks); and evidence finding a lack of relation between climate-related risks and asset prices, J. Aswani, A. Raghunandan & S. Rajgopal, *Are Carbon Emissions Associated with Stock Returns?* 28 Rev. of Fin. 75 (Jan. 2024); R. Faccini, R. Matin & G. Skiadopoulos, *Dissecting Climate Risks: Are They Reflected in Stock Prices?* 155 J. of Banking & Fin., Article 106948 (Oct. 2023); J. Murfin & M. Spiegel, *Is the Risk of Sea Level Rise Capitalized in Residential Real Estate?,* 33 Rev. of Fin. Stud. 1217 (March 2020). For a discussion of seemingly contradictory empirical results found in studies involving stock returns and carbon emissions, *see* Patrick Bolton, Zachery Halem & Marcin T. Kacperczyk, *The Financial Cost of Carbon,* 34 J. of Applied Corp. Fin. 17 (June 2022). For further evidence in real estate and municipal bonds, *see* D.D. Nguyen, S. Ongena, S. Qi & V. Sila, *Climate Change Risk and the Cost of Mortgage Credit,* 26 Rev. of Fin. 1509 (2022); P. Goldsmith-Pinkham, M.T. Gustafson, R.C. Lewis & M. Schwert, *Sea-level Rise Exposure and Municipal Bond Yields,* 36 The Rev. of Fin. Studs. 4588 (2023); M. Painter, *An Inconvenient Cost: The Effects of Climate Change on Municipal Bonds,* 135 J. of Fin. Econ. 468 (2020).

[2746] *See, e.g.,* Robert F Engle, *et al., Hedging Climate Change News,* 33 Rev. Fin. Stud. 1184 (2020).

[2747] This information asymmetry can result from the fact that it currently requires considerable resources to infer a registrant's exposure to or management of climate-related risks using the existing publicly available information provided through voluntary disclosures. *See, e.g.,* letters from Vermont Pension Investment Commission; CalSTERS; and Wellington (describing how these commenters currently glean such information, incurring costs related to development of proprietary models, devoting considerable resources to reviews of public information, and subscribing to services from other data providers).

[2748] *See* section IV.E. for more information on capital market benefits; *see also* Christensen *et al.* (2021), at 1202, 1208; Yakov Amihud & Haim Mendelson, *Liquidity and Stock Returns,* 42 Fin. Analysts J. 43 (May-June 1986); Lawrence R. Glosten & Paul R. Milgrom, *Bid, Ask and Transaction Prices in a Specialist Market with Heterogeneously Informed Traders,* 14 J. of Fin. Econ. 71 (March 1985); R.E. Verrecchia, *Essays on Disclosure,* 32 J. of Acct. & Econ. 97 (Dec. 2001). More recently, researchers used international evidence to find that mandatory ESG disclosures improves stock liquidity, *see* P. Krueger, Z. Sautner, D.Y. Tang & R. Zhong, *The Effects of Mandatory ESG Disclosure Around the World,* Euro. Corp. Gov. Inst.—Finance Working Paper No. 754/2021 (Jan. 12, 2024). Asymmetric information occurs when one party to an economic transaction possesses greater material knowledge than the other party. Adverse selection occurs when the more knowledgeable party only chooses to transact in settings that, based on their private information, is advantageous for them. Less informed parties, aware of their informational disadvantage, might be less inclined to transact at all for fear of being taken advantage of. *See* George Akerlof, *The Market for Lemons, Quality Uncertainty and the Market Mechanism,* 84 Q. J. of Econ. 488 (Aug. 1970). One commenter claimed that the final rules could result in adverse selection if companies with the most exposure to climate risks choose to de-register or opt out of registration (*see* letter from Chamber). We disagree with this claim. We believe the benefits of being a public registered company are sufficiently strong such that it is unlikely many companies will choose to avoid becoming or continuing as a public registered company as a result of the final rules. *See* section IV.E.3 for more information.

[2749] *See supra* note 2570.

[2750] *See Report on Climate-Related Financial Risk 2021,* FSOC, available at *https://home.treasury.gov/system/files/261/FSOC-Climate-Report.pdf* (''Demand for information about climate-related risks and opportunities has grown significantly, driven by investors and financial institutions that are interested in managing their exposure to climate risks . . . Further, it is important to note that to assess and quantify their own climate-related financial risks, particularly transition risks, financial institutions need access to climate-related risk information from the companies they are financing and investing in.''); CDP, CDP Non-Disclosure Campaign: 2021 Results (2021), available at *https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/069/original/CDP_2021_Non-Disclosure_Campaign_Report_10_01_22_%281%29.pdf; see also* letter from BNP Paribas (''Given the increasing awareness of corporates and the financial community about the need to accelerate the transition to a low carbon economy, establishing robust and comparable climate related disclosure standards is critical to providing investors decision-useful information. In particular, this information is essential for banks and asset managers to assess climate-related risks for lending purposes and making investment decisions, to define portfolio alignment strategies in the context of a registrant's net zero commitments . . .'').

[2751] However, we note that these benefits will be mitigated for certain forward-looking statements, including those related to transition plan disclosures, scenario analysis, internal carbon pricing, and climate-related targets and goals, as these statements will have the benefit of safe harbor protections if the safe harbor requirements are satisfied.

[2752] *See, e.g.,* letters from Amer. For Fin. Reform, Sunrise Project *et al.;* Ags of Cal. *et al.;* CalPERS; Ceres; CFA; Engine No. 1; Franklin Templeton; PwC; SKY Harbor; and TotalEnergies.

mitigated by the final rules' structured data requirement. The structured disclosure requirements we are adopting, including the requirement to tag such disclosures using XBRL, will enable search and retrieval of the disclosures on an automated and large-scale basis, allowing investors, and the market, to process information much more effectively and efficiently as compared to manual searches through unstructured formats. This will improve investors' assessment of companies' estimated future cash flows, leading to more accurate company valuations and lowering companies' cost of capital.[2753]

Additionally, having access to more reliable information could result in cost savings for those investors who collect or organize information about climate-related risks. Several commenters emphasized the scale of the resources required to render the currently available information on climate-related disclosures useful to their decisions.[2754]

Similarly, investors also may benefit from the final rules if the required disclosures change the nature and degree to which investors rely on third parties that provide ESG ratings or scores. To the extent there is overlap between the disclosures required by the final rules and the types of information considered by ESG ratings providers, the final rules may reduce reliance on these third parties, thereby reducing costs incurred by investors to obtain decision-useful information. ESG ratings are not necessarily standardized or transparent with respect to their underlying methodologies, and several studies have found that different ESG ratings providers often assign inconsistent ratings for the same registrant.[2755] To the extent the final rules reduce reliance on these ratings, registrants and investors could benefit by saving money that would otherwise be spent on obtaining third-party ESG ratings.[2756] Alternatively, the disclosures elicited by the final rules may increase the value of these third-party services to the extent that the third-party services are able to leverage the enhanced disclosures to provide investors with greater market insights. The disclosures may also allow registrants to better monitor ESG ratings, which could reduce the risk of greenwashing.

b. Costs

The final rules will impose direct costs of compliance on registrants. We use the term ''direct costs'' or ''compliance costs'' to include (1) any costs related to developing or maintaining systems for collecting information to comply with the final rules, (2) costs of preparing and presenting the resulting disclosures for Commission filings, which we refer to as ''reporting costs,'' [2757] (3) costs associated with assuring the accuracy of the disclosures, such as audit and attestation costs, and (4) any legal or disclosure review costs incurred to support management's assertion that the disclosures comply with the final rules. These costs could be incurred internally (*e.g.,* through employee hours or hiring additional staff) or externally (*e.g.,* via third-party service providers, such as auditors or consultants). Numerous commenters expressed concerns over the direct costs of compliance on registrants of the proposed rules.[2758] As discussed in section II.A, the final rules include certain modifications relative to the proposed rules that reduce overall costs and help address commenters' concerns about the time and resources required to comply with the final rules' requirements.[2759] This concern could further be mitigated for certain registrants to the extent that the final rules generally align with the disclosure frameworks that they are already using for their voluntary disclosures or disclosures that are, or will be, required by state, Federal, or other laws.[2760] Many commenters submitted cost estimates for the proposed rules that varied considerably depending on a given company's size, industry, complexity of operations, and other characteristics. We review these comments and discuss cost estimates in detail in sections IV.C.2 and IV.C.3. The remainder of this section focuses on other costs that may result from the final rules.

The final rules may result in additional litigation risk for registrants.[2761] However, the final rules include several changes from the proposal to mitigate these concerns. For example, certain forward-looking statements, including those related to transition plan disclosures, scenario analysis, internal carbon pricing, and climate-related targets and goals, will have the benefit of certain liability protections if the adopted safe harbor requirements are satisfied. Another example is the inclusion of phase in periods after the effective date to provide registrants with additional time to become familiar with and meet the final rules' disclosure requirements. In addition, Scope 3 emissions disclosure is no longer required and the amendments to Regulation S–X have been modified to lessen the compliance requirements, among other examples.

[2753] *See* Christensen *et al.* (2021), at 1187; R. Lambert, C. Leuz & R.E. Verrecchia, *Accounting Information, Disclosure, and the Cost of Capital,* 45 J. of Acct. Rsch. 385 (May 2007); D. Easley & M. O'Hara, *Information and the Cost of Capital,* 59 J. of Fin 1553 (Aug. 2004); R. Lambert, C. Leuz & R.E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital,* 16 Rev. of Fin. 1 (Jan. 2012).

[2754] *See, e.g.,* letter from CalSTRS (stating, ''The current reporting requirements are insufficient for investors to assess corporate climate risk and the related financial impacts to execute investment decisions. CalSTRS spends approximately $2,200,000 per year to access climate research, analyze available data, and develop methods to estimate climate risks and opportunities for assets in our portfolio. In addition to two full-time investment staff members, CalSTRS consults external advisors to learn how other global asset owners determine climate risk exposures to their portfolios given the lack of reliable, consistent, and comprehensive data. A conservative estimate of the variable cost of these combined human resources is $550,000 annually.'').

[2755] Florian Berg, Julian Kölbel & Roberto Rigobon, *Aggregate Confusion: The Divergence of ESG Ratings,* 26 Rev. Fin. 1315 (Nov. 2022). The authors found that the correlations between six different ESG ratings are on average 0.54, and range from 0.38 to 0.71, while the correlations between credit ratings were 0.99. *See also* Scott Robinson *et al., supra* note 2721; Dane Christensen, George Serafeim & Anywhere Sikochi, *Why is Corporate Virtue in the Eye of the Beholder? The Case of ESG Ratings,* Acct. Rev. (Feb. 26, 2021), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3793804* (retrieved from SSRN Elsevier database).

[2756] Because ESG ratings encompass information beyond climate-related matters, registrants and investors may still obtain ESG ratings for reasons unrelated to climate-related information.

[2757] Specifically, ''reporting costs'' refer to the costs of preparing information to be presented in Commission filings, separate from any prior costs or resources expended in obtaining or developing such information. For example, the final rules will require some registrants to disclose their Scope 1 and 2 emissions. For registrants that already disclose them, the incremental cost will only be the reporting cost, distinct from any costs they have previously voluntarily incurred related to developing emissions measurement/estimation systems and processes in order to quantify their emissions.

[2758] *See, e.g.,* letters from Chamber; Nutrien; Williams Companies; Energy Transfer LP; Hess; PPL; NRF; RILA; ConocoPhillips; NASDAQ; API; and SCG.

[2759] *See, e.g.,* letter from Chamber.

[2760] *See* section IV.A.3 for discussion of existing state and Federal laws.

[2761] *See* letter from NAM (expressing concern about treating climate-related disclosures as ''filed,'' noting the ''evolving and uncertain nature'' of GHG emissions disclosures could make it difficult for registrants to reach the degree of certainty necessary to assume the liability burden associated with reports filed with the Commission); *see also* letter from Chamber (noting that the complexity of the proposed rules could increase the likelihood of nuisance lawsuits that are intended to extract a settlement thereby increasing the cost of compliance with the rules). This commenter also pointed out that audit costs could increase if auditors were also subject to increased litigation risk. *See also* letter from Cunningham *et al.* (noting that ''The SEC recognizes that a major cost of the Proposal concerns litigation risk.''); Overdahl exhibit to letter from Chamber (noting the increase in litigation risk can also result in higher insurance costs for registrants and auditors).

Some commenters expressed concerns that the proposed disclosures would over-emphasize climate risks relative to other types of risks that investors might find important.[2762] A related concern that commenters raised is that potentially voluminous disclosures could obscure the information that investors deem most relevant to their investment or voting decisions.[2763] To mitigate such concerns (in addition to concerns related to the compliance costs) the final rules are less prescriptive in certain places relative to the proposed rules. The final rules also have additional materiality qualifiers such that registrants that determine climate risks to be immaterial will have fewer disclosure obligations relative to the proposal. These costs also are expected to be mitigated by the structured data requirements of the final rules, which will make it easier for investors to find and analyze relevant information in filings. These changes also address other commenters' concerns that mandatory climate disclosure requirements that are too prescriptive or granular may lead to inefficient changes in business strategies and limit or halt innovation in the market for voluntary climate disclosures.[2764]

We also acknowledge the concerns expressed by several commenters that the proposed rules would have required the disclosure of confidential or proprietary information,[2765] which can put affected registrants at a competitive disadvantage. This consequence could alter registrants' incentives to develop strategies to manage climate-related risks where it would otherwise be beneficial to do so.[2766] The final rules have been narrowed relative to the proposed rules to provide additional flexibility to limit costs associated with the disclosure of competitively sensitive information, while retaining disclosures that will help investors understand registrants' climate-related risks. In particular, we have eliminated certain prescriptive requirements from the proposal that commenters identified as potentially revealing competitively sensitive information and for which the benefits to investors were less apparent.[2767] For example, by providing registrants with flexibility to determine how best to describe their strategy towards managing climate-related risks, the final rules may enable them to avoid disclosure of competitively sensitive information.[2768] Furthermore, while we have eliminated the requirement to disclose ZIP code level information, the final rules continue to require location disclosures sufficient to understand a registrants' exposure to physical risks. We also have eliminated the requirement to disclose interim targets or goals. At the same time, we acknowledge that, in some instances, a more flexible approach may also result in less comparable disclosures. While this has the possibility of reducing the value of the disclosures to investors, we believe this approach appropriately balances investor protection with concerns raised by commenters.

Relatedly, the final rules may have indirect cost implications for third-party service providers, such as ESG ratings providers. For example, the increased disclosures may reduce institutional investors' reliance on ESG ratings providers, which could negatively impact these providers.[2769] Conversely, more comprehensive disclosures could reduce the cost of producing ESG ratings or may improve the informational content of the ratings, thereby increasing demand. This could benefit not only the ratings providers, but also investors that rely on ESG ratings.

Many commenters raised concerns about costs to third parties from the proposed rules,[2770] with one commenter stating that ''measuring and reporting of GHG emissions would be a prerequisite for doing business with registrants and most retailers under this proposal.''[2771] Compared to the proposed rules, the final rules do not impose such costs because they do not include Scope 3 disclosure requirements. Other disclosure items under the final rules may continue to result in registrants seeking input from third parties, such as those disclosure items requiring disclosure of material impacts from climate-related risks on purchasers, suppliers, or other counterparties to material contracts with registrants. However, the final rules limit the compliance burden of this requirement by limiting information that should be disclosed to that which is ''known or reasonably available,'' thereby eliminating any potential need for registrants to undertake unreasonable searches or requests for information from such third parties. Given the more flexible and tailored approach in the final rules, such consultations will pertain only to parties whose relationship with the registrant is most likely to materially impact the registrant's strategy, business model and outlook, as well as parties from whom the registrant may be best positioned to request information, thus lowering these costs.

Some commenters asserted that a registrant's compliance costs could be passed on to other parties such as consumers (via higher prices), workers (through reduced wages or benefits), or shareholders (in the form of lower earnings).[2772] Other commenters stated that compliance costs could vary across industries.[2773] We acknowledge that third parties could bear some of the increased costs of compliance arising from the final rules and that this effect may be more pronounced in certain industries than in others. The final rules include significant changes from the proposal that lower the burdens on registrants. To the extent that these changes result in lower compliance costs, they also will help mitigate any adverse effects on other parties.

There is some existing academic literature on costs related to mandatory climate-related disclosures in other

[2762] *See, e.g.,* Overdahl exhibit to letter from Chamber, stating, ''because climate-related information is just one factor among many other (potentially more relevant) factors, climate-related information is often not material;'' *see also* letters from API; Western Energy Alliance and the U.S. Oil & Gas Association; Matthew Winden; American Council of Engineering Companies; Chamber; and Wisconsin Manufacturers & Commerce.

jurisdictions.[2774] Some studies report lower profitability and costly operational adjustments for firms affected by mandatory CSR disclosure and GHG emissions reporting in China and the United Kingdom, respectively.[2775] However, other studies do not find an impact on financial operating performance from mandating climate-related disclosures.[2776] Another study showed aggregate stock price movement associated with mandatory climate-related disclosure; while the study found, on average, a negative market reaction, the negative stock returns were concentrated in firms with weak ESG performance and disclosure, while firms with above-median ESG performance and disclosure exhibited a positive abnormal return.[2777] We note that differences between the final rules and these other mandates (*e.g.,* materiality qualifiers) suggest that similar costs associated with the final rules may be lower.

As discussed in sections IV.C.2.f and IV.C.3.c, the final rules may have implications for assurance providers or, more generally, for third parties with climate-related expertise. In the short run, the rules may increase demand (and accordingly, the cost) for climate-related expertise and/or assurance of emissions disclosures. Over time, we expect the supply of third parties with climate-related expertise will adjust to correspond with the increased demand, leading to reduced costs.

Finally, the modifications made in the final rules to reduce overall costs will help address, to an extent, some commenters' concerns that costs associated with the proposed rules could factor into a company's decision to become or remain a public reporting company.[2778] In response to other commenters' concerns,[2779] the final rules also provide EGCs and SRCs with a longer phase in period for climate-related disclosures (including financial statement disclosures under Regulation S–X) and exempt EGCs and SRCs from GHG emissions disclosure requirements. And, while climate-related disclosures will be required in registration statements for firms conducting IPOs, we are not applying the subpart 1500 and Article 14 disclosure requirements to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving a securities offering registered on Form S–4 or F–4.[2780]

2. Analysis of Specific Provisions

The costs incurred by any particular registrant may vary significantly depending upon which, if any, of the disclosures required under the final rules are applicable to that registrant's operations and circumstances. We discuss the costs of specific components of the rules below.

a. Disclosure of Climate-Related Risks

The final rules require registrants to identify any climate-related risks that have materially impacted or are reasonably likely to have a material impact on the registrant, including on its strategy, results of operations, or financial condition.[2781] For any risks identified, registrants are required to provide information necessary to an understanding of the nature of the risk presented and whether the risk is a physical or transition risk. Registrants are also required to classify whether these risks are reasonably likely to manifest in the short-term and in the long-term. For both physical and transition risks, registrants are required, as applicable, to provide detailed information on these risks (*e.g.,* the particular type of transition risk as well as the geographic location and nature of the properties, processes, or operations subject to the physical risk).

This aspect of the final rules will improve investors' understanding of what a registrant considers to be the relevant short-term and long-term climate-related risks that have materially impacted or are reasonably likely to have a material impact on its business. As a number of commenters have noted, climate-related risks often translate into material financial risks with implications for firm growth and profitability, and therefore investors would benefit from a disclosure regime that requires registrants to provide information on climate-related risks that is accurate and more comparable to each other.[2782]

Academic research has found that retail investors as well as institutional investors value and utilize information on climate-related risks in decision-making.[2783] As numerous commenters stated,[2784] climate-related risks and

[2774] Commenters stated that there is limited evidence on the overall economic impact of mandatory climate-related disclosure regimes in other jurisdictions. *See* letter from Committee on Capital Markets Regulation (June 16, 2022) (''CCMR''); and Overdahl exhibit to letter from Chamber; *see also* Christensen *et al.* (2021).

[2775] *See* Y. Chen, M. Hung & Y. Wang, *The Effect of Mandatory CSR Disclosure on Firm Profitability and Social Externalities: Evidence from China,* 65 J. of Acct. & Econ. 169 (2018); *see also* letter from CCMR (citing, as evidence of negative effects to firm financial performance from mandatory climate-related disclosures, Jouvenot & P. Krueger, *Mandatory Corporate Carbon Disclosure: Evidence from a Natural Experiment* (Aug. 8, 2019), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3434490* (retrieved from SSRN Elsevier database)).

[2776] *See* B. Downar, J. Ernstberger, S. Reichelstein, S. Schwenen & A. Zaklan, *The Impact of Carbon Disclosure Mandates on Emissions and Financial Operating Performance,* 26 Rev. of Acct. Stud. 1137 (2021).

[2777] *See* letter from CCMR. *See also* Proposing Release, section IV.C.1., at n. 848, citing Jody Grewal, Edward J. Riedl & George Serafeim, *Market Reaction to Mandatory Nonfinancial Disclosure,* 65 Mgmt Sci. 3061 (2019). We note that the study's findings are based on the assumption that the only news disproportionately affecting the treated companies was the policy at issue, as opposed to some other event(s) impacting the treated companies.

[2778] *See, e.g.,* letter from Chamber and section II.L.2. For example, private companies might decide to defer a public offering, and existing public companies might decide to deregister from U.S. securities markets or not pursue mergers that would subject the merged company to reporting requirements. Other provisions that will reduce costs for conducting an IPO include (i) registrants will only have to provide Article 14 disclosure for historical fiscal years on a prospective basis, and (ii) the PSLRA statutory safe harbor for forward-looking statements (with respect to transition plans, scenario analysis, targets and goals) will apply to registration statements in IPOs.

[2779] *See* sections II.H.2 and II.O.2 for a discussion of commenters' concerns on GHG emissions disclosures and phase in periods, respectively.

[2780] *See supra* section II.L.3. While this approach avoids imposing additional costs on companies engaged in business combination transactions involving a private company, we note that investors will not have the benefit of the disclosures required by the final rules with respect to such private company.

[2781] *See* 17 CFR 229.1502(a).

[2782] *See, e.g.,* letters from PIMCO (''[W]e believe climate risks often pose a material financial risk, and therefore, investors need disclosure of climate risks that is complete, reliable, and consistent in order to analyze how climate-related risks may affect a company's business or overall financial performance.''); Wellington (''Accurate and comparable information about climate risk is critical to Wellington Management's ability to make informed investment decisions on behalf of our clients. Because climate change will continue to profoundly impact society, economies and markets, investors need more information to better price these risks and fully assess the value of an issuer's securities.''); and AllianceBernstein (''[M]aterial risks and opportunities associated with climate change as fundamental financial factors that impact company cash flows and the valuation investors attribute to those cash flows. Regulatory changes, physical risks, and changing consumer decision criteria and preferences are all factors that asset managers need to understand and integrate into their investment processes to make optimal investment decisions on behalf of their clients.'')

[2783] *See supra* section IV.B.1. One commenter suggested that institutional investors and retail investors may have different preferences for climate-related information, especially when the former consider investment portfolios and the latter consider individual companies. *See* letter from Society for Corp. Gov. The commenter further argued that retail investors are unlikely to care about climate-related information given their investment horizon. Because of the documented impact of climate-related risks, including distant ones, on asset prices, we disagree with these assertions.

[2784] *See* section IV.B; *see also, e.g.,* letters from BlackRock (''Compared to the existing voluntary framework, the Commission's detailed analytical and disclosure roadmap . . . is more likely to increase the comparability and consistency of

their impacts on businesses are often not reported in a way that is useful to investors. Commenters noted that with the limitations to the currently available climate-related disclosures, extensive costs in the form of data gathering, research and analysis are needed to process them and to fill data gaps where possible in forming investment decisions.[2785] We expect the final rules to reduce these information processing costs for investors.[2786]

We expect the final rules will help investors gain a more accurate and complete understanding of the climate-related risks that a registrant determines have materially impacted or are reasonably likely to materially impact its strategy, results of operations, or financial condition. By distinguishing between climate-related risks that manifest in the short-term and long-term, the final rules will help inform investors about which risks are salient to their investment decision-making and which are not, depending on the time horizon investors are focused on. For instance, longer term risks may be less certain and are less likely to have impacts on cash flows in the short-term. As such, some investors may choose to focus more on short-term risks. Conversely, an investor with a long investment horizon may choose to focus on the risks that match its investment horizon.[2787] This temporal standard is consistent with an existing MD&A disclosure requirement and therefore should provide a degree of familiarity to registrants and investors as they prepare and analyze these disclosures.[2788] This aspect of the final rules will impose additional costs on registrants (*e.g.,* direct compliance costs and indirect costs resulting from, for example, increased litigation risk). These costs are discussed in greater detail in sections IV.C.1 and IV.C.3.

b. Disclosure Regarding Impacts of Climate-Related Risks on Strategy, Business Model, and Outlook

The final rules require registrants to describe the actual and potential material impacts of any climate-related risks identified in response to Item 1502(a) on the registrant's strategy, business model, and outlook.[2789] With respect to their strategy, business model, and outlook, the final rules specify that registrants are required to assess, as applicable, any material impacts on a non-exclusive list of items: business operations; products or services; suppliers, purchasers, or counterparties to material contracts (to the extent known or reasonably available); activities to mitigate or adapt to climate-related risks; and expenditure for research and development. Registrants are also required to discuss whether and how the registrant considers these impacts as part of its strategy, financial planning, and capital allocation.

We expect the resulting disclosures to provide investors with a better understanding of how climate-related risks have materially impacted or are reasonably likely to have a material impact on the registrant. Such disclosures will directly benefit investors who use this information to evaluate the financial prospects of the firms in which they are looking to invest.[2790] Discussions of material impacts on strategy, business model, or outlook will help investors determine whether and how registrants are addressing identified material climate-related risks. This type of disclosure could be particularly useful when comparing the approaches taken by similarly situated registrants. For example, one registrant may disclose that it is actively shifting assets away from exposure to flood zones, while another might disclose that it is investing in such assets as they are considered currently undervalued. These disclosures will allow an investor to choose to invest in the company with climate-related risk strategies that best align with the investor's investment objectives.

Under the final rules, if a registrant has adopted a transition plan to manage a material transition risk, it must describe the plan. The registrant must also provide an annual update about any actions taken during the year under the plan, including how these expenditures have impacted the registrant's financial condition, or results of operations, along with quantitative and qualitative disclosure of material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the transition plan. We expect these disclosures to provide investors with more complete and reliable information about how registrants plan to address material transition risks. A number of commenters indicated that these disclosures would help investors assess the registrant's approach to managing climate-related risks and achieving its climate-related targets and goals.[2791] This benefit could be reduced if these disclosures provide opportunities for greenwashing. However, we expect this risk to be reduced given that these disclosures will include quantitative and qualitative information on expenditures that are filed with the Commission and are subject to the

issuers' climate-related disclosures.''); Calvert (''Currently, climate change disclosures are largely voluntary, unverified, and idiosyncratic.''); CFA (''The current voluntary climate-related disclosure regime has resulted in inadequate and inconsistent information which falls short of investor demands and prevents market participants from reasonably assessing the risks of climate change.''); and Wellington (''Currently, our evaluation of the positive and negative impacts of climate change on issuers is limited by inadequate information and the absence of a standardized framework for disclosure.'' and that ''For a significant number of issuers, information is not sufficient to support equivalent analysis.'').

[2785] *See* letter from Wellington (''We were able to make these and other determinations based on available information (including internal and external estimates), and only after extensive research and analysis. For a significant number of issuers, information is not sufficient to support equivalent analysis.''); Boston Trust Walden (''Evaluation of climate risk across investment portfolios represents a cost to investors and results in the gathering of data that is often incomplete and not comparable. At Boston Trust Walden, our analysts examine quantitative and qualitative climate-related corporate disclosure to enhance our understanding of the existing and potential financial outcomes associated, ranging from risks (*e.g.,* losing the license to operate) to opportunities (*e.g.,* generating new sources of revenue). In the absence of mandated disclosure requirements, we rely on the data of third-party research providers, which includes a mix of issuer provided data and estimates. Our analysts then seek to fill data gaps through additional research and analysis, outreach via written requests, meetings, and shareholder resolutions seeking the expanded disclosure we require. These processes for gathering necessary climate-related disclosures are inefficient and resource intensive.'').

[2786] The final rules may also lead to a lower cost of capital for some registrants, as we discuss below.

[2787] *See* letter from Vanguard (''climate risks to be material and fundamental risks for investors and the management of those risks is important for price discovery and long-term shareholder returns.'').

[2788] *See, e.g.,* letter from ABA (''We believe that climate-related matters should be addressed within the same time short- and long-term time frames used in MD&A.''); 17 CFR 229.303(b)(1) (''Analyze the registrant's ability to generate and obtain adequate amounts of cash to meet its requirements and its plans for cash in the short-term (*i.e.,* the next 12 months from the most recent fiscal period end required to be presented) and separately in the long-term (*i.e.,* beyond the next 12 months).''); *see also* section II.C.2.

[2789] *See* 17 CFR 1502(b)–(g).

[2790] *See* P. Krueger, Z. Sautner & L.T. Starks, *The Importance of Climate Risks for Institutional Investors,* 33 Rev. of Fin. Stud. 1067 (March 2020); Ilhan *et al.* (2023).

[2791] *See, e.g.,* letters from CalPERS; Morningstar; Change Finance; *see also* letter from ICI (''We support [transition plan] disclosure as it would inform investors of the nature of the risks and the company's actions or plans to mitigate or adapt to them.''); and the CFA Institute (''We support the Proposed Rule's requirement that a registrant disclose, if it has adopted a transition plan (*i.e.,* a strategy and implementation plan to reduce climate-related risks) as part of its climate-related risk management strategy. We agree with the view that it will facilitate investor understanding of whether the company has a plan and whether it may be effective in the short, medium, and long term in achieving such a transition. Presently, many companies have made net-zero commitments by 2050 but have made little if any disclosures regarding how they plan to get there. This requirement would necessitate that they do so.'')

applicable liability provisions under the Securities Act and Exchange Act. The requirement to provide annual updates should further mitigate these concerns. The updating requirement will be particularly beneficial to investors as it will allow them to analyze the impacts of transition plans on a registrant's operations and financial condition over time.

The requirement to describe quantitatively and qualitatively the material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the transition plan will help investors better understand a registrant's approach to managing climate-related risks so they have information necessary to assess how those actions have impacted the registrant. Including a quantitative description of material expenditures incurred will discourage boilerplate disclosures and, to some extent, facilitate comparisons across registrants. However, we acknowledge commenters who raised concerns about the difficulties of attributing expenditures to these types of activities.[2792] We recognize that similarly situated registrants may take different approaches in their determination of which expenditures to include and whether to quantitatively or qualitatively identify portions of expenditures specifically tied to these activities. To the extent that registrants take different approaches to identifying such expenditures, the comparability benefits of the disclosure will be diminished. Nevertheless, the qualitative discussion accompanying the disclosures should provide the context necessary for investors to understand the registrant's approach to these activities and provide an assessment of the impact of these activities on the registrant's financial condition.

If a registrant uses scenario analysis to assess the impact of climate-related risks on its business, results of operations, or financial condition, and if, based on the results of such scenario analysis, the registrant determines that a climate-related risk is reasonably likely to have a material impact on its business, results of operations, or financial condition, the registrant must describe each such scenario. This description must include a brief description of the parameters, assumptions, and analytical choices used, as well as the expected material impacts on the registrant under each such scenario. Disclosures about the use of scenario analysis to stress test businesses across a range of possible future climate and climate policy scenarios can vary significantly.[2793] As such, the final rules will inform investors about whether a registrant is using scenario analysis to manage a material climate risk, and for those investors who view scenario analysis as an important tool for climate risk management, allow them to factor this information into their investment decisions.[2794] The required disclosures around parameters, assumptions, and analytical choices used by a registrant when conducting scenario analysis will allow investors to better understand the methodology underlying the scenario analysis and thereby improve investors' assessment of the appropriateness of a registrant's strategy and business model in light of foreseeable climate-related risks.[2795]

If a registrant's use of an internal carbon price is material to how it evaluates and manages climate-related risks disclosed in response to Item 1502(a), then the registrant must disclose in units of the registrant's reporting currency information about the price per metric ton of CO_2e, and the total price, including how the total price is estimated to change over the short-term and long-term, as applicable. For registrants that use more than one internal carbon price to evaluate and manage a material climate-related risk, these disclosures apply to each internal carbon price and the registrant must disclose reasons for using different prices. If the scope of entities and operations involved in the use of an internal carbon price described is materially different from the organizational boundaries used for the purpose of calculating GHG emissions pursuant to Item 1505, the final rules require registrants to describe the difference. We expect this disclosure will provide investors with more standardized and decision-useful information regarding whether a registrant's use of an internal carbon price is material and, if so, how it impacts its strategy, results of operations, and financial condition. This is important to address issues with increased voluntary corporate disclosures of internal carbon pricing.[2796] By mandating that registrants disclose any material differences in their boundaries used for internal carbon pricing and GHG emissions measurement, the final rules will help clarify for investors the scope of entities and operations included in a registrant's application of internal carbon pricing and improve the transparency about the methodology underlying the use of internal carbon pricing so that investors may better compare such use across registrants.

In addition to the general cost considerations discussed in section IV.C.1.b, these provisions may have certain unintended effects on registrants and investors. In particular, as some commenters noted, it is possible that requiring registrants to disclose specific facts about their use of transition plans, scenario analysis, and internal carbon prices to address climate-related risks could deter registrants from utilizing these methods or cause them to abandon them, for example because of perceived litigation risk or because of the direct costs of preparing such disclosure.[2797] This could have negative consequences for investors if the use of these methods would have helped registrants better manage climate-related risks and therefore make value-maximizing decisions in light of those risks. However, if registrants' use of these methods becomes a common practice,[2798] due to investor demand or otherwise, this deterrence effect is likely to be limited.

There are potential costs that could result from scenario analysis disclosures under the final rules. First, commenters expressed concern that the disclosure of the scenario analysis results could confuse investors to the extent they inadvertently suggest that the chance of a loss occurring due to a rare event is more likely.[2799] The commenters' concern could materialize if, for

[2792] *See supra* notes 1891 and 1892, and accompanying text.

[2794] *See, e.g.,* Council of Institutional Investors; Boston Common Asset Management; Boston Walden Trust; Domini; University Network for Investor Engagement; AllianceBernstein.

[2795] *See, e.g.,* letter from Bloomberg (stating "scenario analysis is a useful tool to describe the resilience of a company's strategy to the risks and opportunities of climate change and to develop a more informed view of implications for enterprise value and value chains"); *see also supra* notes 540–542 and accompanying text; *see also* letter from Wellington ("[i]nformation concerning scenario analysis would also help investors evaluate the resilience of the registrant's business strategy in the face of various climate scenarios that could impose potentially different climate-related risks.").

[2796] *See* CDP, *supra* note 608.

[2797] *See, e.g.,* letters from OMERS; Cemex; and NAM.

[2798] *See, e.g.,* Climate Action 100+, *Progress Update 2022* (2022), available at *https://www.climateaction100.org/wp-content/uploads/2023/01/CA-100-Progress-Update-2022-FINAL-2.pdf* (stating that "91% of focus companies have now aligned with TCFD recommendations, either by supporting the TCFD principles or by employing climate scenario planning").

[2799] *See, e.g.,* letter from the BPI.

instance, a scenario analysis suggests a heightened risk of a once-in-a-hundred-year flood over the next 30 years, and disclosure of this causes certain investors, particularly those not familiar with such analysis, not to invest in the registrant despite the fact that the registrant actually has the same risk profile as other companies that have not made this disclosure. However, we expect any potential investor confusion in such a case will be mitigated because, under the final rules, the registrant would not be required to disclose this information if it determines that this scenario, like other very remote scenarios, are not likely to have a material impact on its business or financial condition. In addition, when disclosure is required, information accompanying the scenario analysis results—such as the assumptions and parameters underlying the analysis—should help provide investors the necessary context for understanding the import of the disclosed analysis.[2800] Second, in disclosing scenario analysis assumptions and inputs as well as information about internal carbon prices, a registrant may face competitive harm to the extent that the disclosures reveal competitively sensitive information, such as asset allocation decisions. However, we expect that the degree of flexibility offered by the disclosure requirements in the final rules will help avoid the exposure of confidential or proprietary information, though they may make the disclosures less comparable.

Overall, by focusing on climate-related risks that are material to the registrant's business, the final rules seek to avoid imposing costs associated with disclosing large amounts of detailed information that may be less relevant to investors. Finally, some of the required disclosures (*e.g.,* forward-looking statements concerning transition plans, scenario analysis, and internal carbon pricing) will be subject to PSLRA safe harbors, which may reduce litigation costs where the safe harbors are applicable.[2801]

c. Governance Disclosure

The final rules require a registrant to disclose information concerning the board's oversight of climate-related risks as well as management's role in assessing and managing the registrant's material climate-related risks.[2802] The final rules require a registrant to identify, if applicable, any board committee or subcommittee responsible for the oversight of climate-related risks and to describe the processes by which the board or such committee or subcommittee is informed about such risks. Additionally, if there is a disclosed climate-related target or goal or transition plan, the registrant must describe whether and how the board oversees progress against the target or goal or transition plan. In describing management's role in assessing and managing the registrant's material climate-related risks, the registrant should address, as applicable, the following non-exclusive list of disclosure items: (1) whether and which management positions or committees are responsible for assessing and managing climate-related risks and the relevant expertise of the position holders or committee members; (2) the processes by which such positions or committees assess and manage climate-related risks; and (3) whether such positions or committees report information about such climate-related risks to the board of directors or a committee or subcommittee of the board of directors. Like other parts of the final rules, these provisions provide some flexibility for registrants to tailor their disclosures to suit their particular facts and circumstances while helping to ensure that investors receive information regarding the board's and management's role in addressing and managing climate-related risks.[2803]

The disclosures required by the final rules will enable investors to better understand how the company's leadership (*i.e.,* its board of directors and management) is informed about climate-related risks and how the company's leadership considers such factors as part of its business strategy, risk management, and financial oversight. Managers and directors typically play a key role in identifying and addressing these risks.[2804] Commenters stated that governance-focused information on how such risks are being overseen by the board is "fundamental" for investors, and supported "full disclosure with respect to how and to whom within the company's organization accountability for climate-related risks is assigned" so that investors may assess a registrant's risk management systems in this context.[2805] The disclosures required by the final rules will inform investors about whether the organization has assigned climate-related responsibilities to management-level positions and/or to the board and, if so, whether those responsibilities include assessing and/or managing climate-related risks. As a result, investors will be better able to understand and evaluate the processes, if any, by which the registrant assesses and manages material climate-related risks.

Information regarding whether and how the board oversees progress on material climate-related targets or goals or transition plans will provide useful context for the final rules' other targets or goals or transition plan disclosure requirements. Researchers have found that oversight systems at the board level can provide an important signal about how directors of the registrants recognize and address relevant climate-related risks.[2806]

The final rules require disclosure of board-level governance, if any, of climate-related risks irrespective of the materiality of those risks. This disclosure will allow investors to understand whether climate-risks are among those that are significant enough to be considered at the board level and how management and the board collectively oversee such risks. Regardless of the potential impact of such risks to the company, the decision to oversee climate-related risks at the board level as opposed to delegating

[2800] We note that other disclosure requirements, such as those relating to market risk disclosures, convey to investors complex information about uncertain future risks that registrants face.

[2801] *See supra* section II.J.3 for a discussion of the disclosures required under the final rules that will be subject to PSLRA safe harbors. *See also* 17 CFR 229.1507.

[2802] *See* 17 CFR 229.1501.

[2803] *See, e.g.,* letters from Wellington ("The proposed enhancements to disclosure on governance would help investors assess whether the issuer is appropriately considering risks and provide investors with valuable information about how the issuer plans to address these risks. This disclosure, in turn, gives investors insight into potential future capital allocation, expansion plans, and potential vulnerabilities associated with the issuer's business model (*e.g.,* significant exposure to the impact of a carbon price)."); and Institute of Internal Auditors ("The board is accountable for the success of the organization and needs assurance from an independent source to fulfill its duties. . . . Effective governance inspires stakeholders' confidence and trust that a company's decisions, actions, and outcomes can address priorities and achieve the organization's desired purpose.").

[2805] *See, e.g.,* letter from Canadian Coalition for Good Governance (noting that "If a company cannot articulate how material climate-related risks are identified and clearly integrated into its governance philosophy and approach, this is a significant red flag for investors."); *see also* GHGSAT who state that "A challenge to the implementation of the TCFD framework has been a lack of education on the topic at the board level and a shortage of time for boards to consider the issues."

[2806] V. Ramani & B. Ward, How Board Oversight Can Drive Climate and Sustainability Performance, 31 J. of Applied Corp. Fin. 80 (2019).

entirely to management can provide useful information for understanding the company's overall approach to risk management and how climate-related risks factor into such processes.

Commenters asserted that the proposed rules may disproportionally burden small registrants that may not have the internal management organizations and processes in place to assess and manage climate-related risks.[2807] This provision of the final rules does not require registrants to disclose any information when such internal management organizations and processes are absent. In these cases, registrants will not incur any direct costs associated with producing these disclosures. As with any other disclosure requirement, smaller registrants that are required to disclose governance information under the final rules may be disproportionally affected in terms of costs relative to larger registrants because of the direct fixed costs associated with producing disclosure.

Finally, we recognize that the disclosure requirements may either prompt or deter companies from overseeing climate-related risks at the board or management level. To the extent that the final rules lead companies to alter their governance structures in ways that are less efficient (*e.g.,* by diverting board or management attention from other pressing corporate matters or devoting internal resources and expertise to climate-related risks at the expense of other concerns), investors could incur costs in the form of diminished shareholder value. One commenter noted that the adverse effects could be particularly pronounced for smaller registrants that may be less likely to have internal management organizations and processes in place to assess and manage climate-related risks.[2808] We acknowledge these potential costs but also note that several changes from the proposal help to mitigate such effects. For example, by adopting less prescriptive disclosure requirements compared to the those in the proposal and only requiring disclosure of management's role in overseeing material climate related risks, the final rules are less likely to have such unintended effects on the registrant's governance structure and processes. Finally, we reiterate that the final rules are focused on disclosure and do not require registrants to change their governance or other business practices.

Other commenters expressed concern that the proposed requirement to disclose board members' climate expertise would impose costs by placing pressure on registrants to fill limited numbers of board seats with individuals with a narrow skillset, rather than those with wide ranging expertise or skillsets that may be better suited to the company's needs.[2809] Some commenters also noted the limited number of climate-risk experts compared to the demand for such individuals for board seats, which could increase costs for registrants that feel pressured to appoint climate-risk experts to the board as a result of the final rules.[2810] Similar concerns were raised with respect to the proposed requirement to disclose management's relevant expertise.[2811] In light of the comments, the Commission is not requiring the disclosure of board expertise. We are, however, adopting the requirement to disclose the relevant expertise of management to provide investors with useful information about the expertise of those responsible for identifying material climate risks and communicating those risks to the board.[2812] We acknowledge the incremental cost of making this disclosure and the potential for indirect costs if registrants decide to hire climate experts in response to the disclosure requirement. While acknowledging these costs, we reiterate that the Commission remains agnostic about whether and/or how registrants govern climate-related risks. Registrants remain free to establish or retain the procedures and practices that they determine best fit their business. Overall, we agree with commenters that stated that investors will benefit from this disclosure given the direct role that management plays in overseeing any material climate-related risks.[2813]

d. Targets and Goals Disclosure

The final rules will require a registrant to disclose any climate-related target or goal if such target or goal has materially affected or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition.[2814] Under the final rules, a registrant must provide any additional information or explanation necessary to an understanding of the material impact or reasonably likely material impact of the target or goal, including, as applicable, a description of: (1) the scope of activities included in the target; (2) the unit of measurement; (3) the defined time horizon by which the target is intended to be achieved and whether the time horizon is based on goals established by a climate-related treaty, law, regulation, policy, or organization; (4) if the registrant has established a baseline for the target or goal, the defined baseline time period and the means by which progress will be tracked; and (5) a qualitative description of how the registrant intends to meet these climate-related targets or goals. Registrants are also required to provide certain information if carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals. Furthermore, registrants must disclose any progress made toward meeting the target or goal, how any such progress has been achieved, any material impacts to the registrant's business, results of operations, or financial condition as a direct result of the target or goal (or actions taken to make progress toward meeting the target or goal), and include quantitative and qualitative disclosure of any material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal (or actions taken to make progress toward meeting the target or goal). This disclosure must be updated each fiscal year by describing the actions taken during the year to achieve its targets or goals.[2815]

The final rules will help investors to understand how a registrant's target or goal impacts its business and financial condition. Such disclosure will enable investors to better understand the costs associated with pursuing these objectives as well as the benefits associated with achieving them. While some registrants may currently provide disclosure about their climate-related targets or goals, those voluntary disclosures generally do not provide investors with an understanding of whether and how the climate-related targets or goals materially impact or are reasonably likely to materially impact the registrant's business, results of operations, or financial condition. In addition, without a requirement to disclose material targets or goals, investors have no way of knowing if there are nonpublic targets or goals that could be relevant to their investment decisions, or if the registrant has simply not set any such targets or goals. Furthermore, voluntary disclosures

[2808] *See* letter from Chamber.

[2810] *See, e.g., supra* note 650.

[2811] *See, e.g., supra* note 695 and accompanying text.

[2812] *See supra* section II.E.2.c.

[2813] *See* section II.E.2.ii.

[2814] *See* 17 CFR 229.1504.

[2815] As with forward-looking statements concerning transition plans, scenario analysis, and internal carbon pricing, forward-looking statements related to targets and goals will be covered by the PSLRA safe harbor, which may reduce litigation costs.

about climate-related targets or goals are often missing key pieces of information that investors need to understand them, such as the plan for achieving them.[2816] The final rules will address these knowledge gaps by supplementing the existing publicly available information.

The final rules will allow for greater comparability across registrants. However, we recognize that the requirement to disclose targets and goals may prompt registrants to forgo establishing targets or goals that may be or may become material in order to avoid the disclosure requirements. This effect may be mitigated to the extent that registrants also consider other factors (*e.g.,* investor demand) for having or not having climate-related targets and goals when making such decisions.

The greater transparency from the required disclosure of specific details related to these targets and goals in Commission filings may help alleviate concerns regarding the issue of greenwashing in existing voluntary disclosures, as noted by commenters.[2817] Academic studies have found that existing information about climate-related targets and goals can suffer from considerable imprecision and inaccuracy despite efforts by certain organizations to create more accountability and transparency.[2818] As a result, under the current voluntary framework, investors may not be able to distinguish between targets and goals that are material and those that are more akin to puffery and are unlikely to be material to a registrant. For example, disclosures that explicitly link a target to a material impact on a registrant's financial condition will both inform investors about the potential costs and benefits of the target, while also lending credibility towards the registrant's efforts to achieve the target. Thus, by requiring disclosures about material targets and goals in Commission filings, the final rules should enhance the reliability and utility of such information for investors.[2819] In addition, since any greenwashing under the current voluntary disclosure regime could lead investors to over- or under-estimate the potential impact of targets or goals on a registrant's business strategy, results of operations, or financial conditions, the disclosures required by the final rules will further enable investors to draw more informed conclusions about how targets and goals may impact the business.

We are not adopting the proposed requirement to disclose metrics quantifying a registrant's progress towards its target or goal. By not requiring registrants to provide quantification of its targets and goals metrics, we avoid some of the cost concerns raised by comments associated with such disclosure, including Scope 3 emissions disclosures and other potentially difficult-to-calculate metrics.[2820] Nevertheless, we expect the final rules to result in some costs associated with developing systems for measuring progress made on targets or goals because registrants may still have to track their progress for purposes of providing the required disclosures, if they do not already have those processes in place. Further, the final rules' more flexible approach may limit the usefulness of targets and goals disclosures relative to the proposed rules. In particular, if a registrant provides boilerplate qualitative disclosures, then it would be harder for investors to assess the disclosures' credibility. However, the final rules requirement to provide quantitative and qualitative disclosures of material expenditures and material impacts on financial estimates and assumptions related to targets and goals will mitigate this concern to some extent. This disclosure will also inform investors about the financial implications of pursuing these targets and goals. For instance, investment in achieving targets could be value-enhancing in the long run but reduce cash flow in the short run. By facilitating a better understanding of these impacts, investors will be better positioned to value companies and make investment and voting decisions.

Quantitative disclosures of expenditures and impacts may facilitate comparisons across registrants; although, as noted in section IV.C.2.b above, the comparability benefits of this quantitative disclosure depend on the degree of variation in management determinations of which portion of their expenditures can be directly attributable to targets and goals. In addition, as discussed above, these disclosures may lead some registrants to report figures that overstate the impact of targets and goals (if, for example, the registrant determines not to deduct the portion of expenditures that are unrelated to pursuit of the target or goal). However, we expect that accompanying qualitative discussion should provide investors the context necessary to draw informed conclusions.

In a change from the proposal, the final rules do not require disclosure of interim targets set by the registrant. Rather, registrants have flexibility to determine whether to disclose their interim targets, if any, in describing their plans to achieve their targets and goals or in the context of describing their progress towards such targets or goals.

If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals, the final rules require registrants to separately disclose the amount of carbon avoidance, reduction, or removal represented by the offsets or the amount of generated renewable energy represented by the RECs, the nature and source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the costs of the offsets or RECs. Describing the features of RECs will help investors understand how registrants are managing their climate-related risks.[2821] For example, one commenter said that ''not all offsets or RECs are equal'' and that information on RECs would ''allow investors to better assess the use of capital, the integrity and validity of such offsets or RECs, and the degree that the registrants emissions profile and offsets or RECs could be at risk due to policy or regulation changes.'' [2822] These disclosures also will provide context for any required disclosures of Scope 1 or Scope 2 GHG emissions (*i.e.,* if such emissions are material for an LAF or an AF). In addition, more complete disclosures about carbon offsets and RECs may help deter potential greenwashing that results from a lack of reliable basic information. Because these disclosures comprise basic facts associated with the registrant's purchased carbon offsets and RECs, we do not expect that collecting and reporting this information will constitute a significant burden.

e. GHG Emissions Metrics

The final rules will require LAFs and AFs (that are not SRCs or EGCs) to disclose Scope 1 and/or Scope 2 emissions, if such emissions are material, for their most recently completed fiscal year and, to the extent previously disclosed in a Commission filing, for the historical fiscal year(s) included in the consolidated financial statements in the filing.[2823] By specifying that these registrants must provide information on material GHG emissions, the final rules will give investors access to a more comprehensive set of emissions data than under the baseline. Investors can use this data to assess exposures to certain types of climate-related risks and provide quantitative contextual data to supplement a registrant's description of the material climate-related risks it faces, as well as progress on the management of those risks, as a part of assessing the registrant's overall business and financial condition. Because the value of a company's equity is derived from expected future cash flows, disclosure of GHG emissions can help investors understand whether those emissions are likely to subject the registrant to a transition risk that will materially impact its business, results of operations, or financial condition in the short- or long-term and incorporate risks associated with such future cash flows into asset values today. Indeed, academic literature shows that risks both in the near term and far into the future are priced into current asset valuations.[2824] Thus, for many registrants, GHG emissions can be helpful to assess the registrants' exposure to climate-related risks, particularly to material transition risks.[2825]

As noted in section IV.A, many registrants currently do not provide quantitative disclosures on their Scope 1 and 2 emissions. This lack of information on emissions makes it more difficult for investors to assess the degree of risk in individual companies, to compare those risks across companies, and to value securities. By requiring disclosure of GHG emissions for specified registrants for the same historical periods as those included in the financial statements in the relevant filing, the final rules will help investors develop a more accurate assessment of those registrants' exposure and approach to climate-related risks over time. For example, Scope 1 and Scope 2 emissions disclosure may be relevant to investors' assessment of a registrant's progress made on targets or goals or towards its transition plan.[2826]

The final rules will provide informational benefits beyond those associated with the voluntary disclosure of emissions that may be found in sustainability reports or other places, such as company websites. In particular, the overall mix of information disclosed to the market can be distorted when only a certain subset of companies (*e.g.,* those with lower emissions or those that face lower costs of emissions measurement) have stronger incentives to make voluntary disclosures. The final rules may offset this distortion because disclosure is only required if a registrant determines that its Scope 1 and Scope 2 emissions are material. The materiality qualifier will allow registrants that determine that their emissions are immaterial to avoid the full costs of emissions measurement and disclosure. It will also mitigate the risk that investors could be burdened with large amounts of information that is less relevant for their investment and voting decisions. In addition, mandatory disclosure of Scope 1 and Scope 2 emissions data in Commission filings may deter potential greenwashing that could occur with voluntary disclosures.[2827]

Some commenters questioned the value of GHG disclosures in light of existing requirements for some registrants to report emissions pursuant to the GHGRP.[2828] As previously discussed,[2829] the data available from the GHGRP is generally not suited to help investors understand how a registrant's exposure and approach to managing climate-related risks may impact its future cash flows and profitability for several reasons. First, the GHGRP requires that emissions are reported at the facility-level rather than the registrant-level. Second, suppliers of certain products must report their ''supplied emissions,'' conditional on these emissions exceeding a specified threshold.[2830] Third, GHGRP reporting is limited to U.S. facilities. Some commenters asserted that the GHGRP could not be substituted for the proposed rules given the different disclosure requirements and the different objectives of the two reporting regimes.[2831]

While there are differences between the EPA's GHGRP and the Scope 1 and 2 emissions disclosures in the final rules, we expect that registrants subject to both reporting regimes would face reduced costs of compliance with the final rules to the extent there is overlap between the reporting requirements of the GHGRP and the final rules. As discussed in section IV.A, the GHGRP covers 85 to 90 percent of all GHG emissions in the U.S. and includes those emissions referenced by the GHG Protocol and included in the final rules' definition of ''greenhouse gasses.'' [2832] As such, we expect that entities subject to the GHGRP disclosure and reporting requirements may consequently have lower incremental information gathering costs under the final rules for those emissions already required to be calculated and reported by a registrant pursuant to the GHGRP. For example, because both the GHGRP and the final rules require companies to collect information to report and disclose their Scope 1 emissions, to the extent that the information and reporting activities overlap, registrants subject to both the

Intermediation, Article 100994 (Oct. 2022); Soh Young In & Kim Schumacher, *Carbonwashing: A New Type of Carbon Data-related ESG Greenwashing* (2021), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3901278* (retrieved from SSRN Elsevier database); V. Kalesnik, M. Wilkens & J. Zink, *Do Corporate Carbon Emissions Data Enable Investors to Mitigate Climate Change?,* 48 J. of Portfolio Mgmt. 119 (2022) (''Kalesnik *et al.*'').

[2828] *See supra* section IV.A.3 and letters from Chamber; Elaine Henry; BOK Financial; David R. Burton; Permian Basin; and Petroleum Association.

[2829] *See supra* section IV.A.3.

[2830] In addition, as previously discussed, the EPA emissions data only reflects a portion of emissions. *See supra* section IV.A.3. The EPA's emissions data therefore presents challenges for investors to use, especially as the data are made public by facility and not by company. While each facility is matched to its parent company, this company may not be the entity registered with the SEC and thus the reported information may be less relevant to investors. *See also* letter from EPA (containing a tabular comparison of the EPA disclosures to the proposed disclosures).

[2831] *See, e.g.,* letters from EPA; and Marathon Oil.

[2832] *See supra* section IV.A.3.

final rules and the GHGRP may face lower incremental information gathering costs. However, as one commenter noted, ''[t]he Commission-proposed regulation is not completely in alignment with the US EPA regulation. Thus, an assessment, plan of action, and implementation of changes will be needed for many companies to be compliant with the requirements of both agencies.'' [2833] In addition as noted above, this lower incremental cost would only apply to direct emissions from U.S.-based facilities, not registrants' international facilities or operations.

Limiting the disclosure requirement to larger companies (*i.e.,* those with greater resources that tend to be already calculating emissions, as noted in section IV.A) will help to balance the concerns of commenters who stated that the evolving nature of current emissions measurement technologies could impose significant compliance costs on registrants, especially those not currently familiar with reporting this information.[2834]

Although the final rules limit disclosures to circumstances in which emissions are material for registrants, we expect most, if not all, LAFs and AFs that are not EGCs or SRCs will need to assess or estimate their Scope 1 and 2 emissions to reach a materiality determination. As a result, we expect these registrants will, to some extent, need to adopt controls and procedures to assess the materiality of their Scope 1 and 2 emissions and determine whether disclosure is required if they do not already have them in place. Registrants that determine that their Scope 1 and 2 emissions are material may likewise need to adopt further controls and procedures, including measurement technologies and other tools to track and report the information to the extent they do not already do so. The final rules may also affect registrants that currently track and/or report this information.[2835] For example, some registrants may only be measuring some Scope 1 or Scope 2 emissions.[2836] Any investments in systems or technologies to better measure Scope 1 and Scope 2 emissions will improve the quality of available data [2837] on emissions but will also contribute to the direct costs of compliance.[2838]

The benefits of this component of the final rules depend on the extent to which Scope 1 and 2 emissions disclosures are accurate and thus provide reliable reflections of registrants' exposure to material climate-related risks, their management of that risk, and their progress on transition plans and/or targets and goals (to the extent they have them). Several commenters noted that many registrants have had more experience measuring and disclosing Scope 1 and 2 emissions than Scope 3 emissions, and that those methodologies, from their experiences, are well-established and are considered fairly robust.[2839] Nevertheless, according to studies as well as commenter feedback, there may be issues with errors and inconsistencies in voluntary Scope 1 and 2 emissions disclosures.[2840] The final rules will benefit investors by improving the accuracy and reliability of this information—first through requiring registrants to subject GHG emissions disclosures, to the extent they are required to make them, to disclosure controls and procedures; and second, by requiring assurance. The final rules also permit the disclosure of reasonable estimates for Scope 1 and 2 emissions provided that such estimates are accompanied by disclosure of underlying assumptions and reasons for using estimates, which will help investors better understand the metrics that registrants are disclosing.

Scope 1 and 2 emissions may not fully reflect a registrant's exposure to transition risks because some of those risks would only be captured through other metrics such as Scope 3 emissions.[2841] For example, registrants facing similar exposure to emissions-related climate risks may report different Scope 2 emissions levels depending on, for example, whether they pay directly for their utilities (counted as Scope 2) or their leases provide for utilities expenses (counted as Scope 3), or, as another example, whether they have employees who work from home and therefore who do not contribute directly to utilities expenses. Recognizing these limitations, the final rules also require disclosures on methodology, significant inputs, significant assumptions, organizational boundaries, operational boundaries, and reporting standard used with respect to Scope 1 and 2 emissions. These disclosures will provide additional context to help investors understand the disclosures and will enable investors to draw more reliable comparisons across registrants. For example, disclosure of operational boundaries will help distinguish registrants that rely on utilities provided by third parties from those that pay directly for their utilities, which will assist investors in accounting for this difference when comparing reported emissions and thus climate-related risk across registrants.

In a change from the proposal, we are exempting SRCs and EGCs from the GHG emissions disclosure requirements in order to limit the costs of this disclosure requirement for such registrants. This exemption should also mitigate the risk of deterring prospective EGCs or SRCs from conducting IPOs or inducing EGCs or SRCs to deregister under the Exchange Act as a result of the costs associated with compliance with the requirements to disclose material Scopes 1 and 2 emissions. Registrants that already measure their GHG emissions tend to be larger companies (with greater exposure to various climate-related transition risks by virtue of their size and economic footprint) as observed in our own baseline analysis (see Table 5) and in the assessments of commenters, many of whom supported exemptions for SRCs and EGCs as they would be disproportionately impacted by the requirement.[2842] While these

[2833] Letter from Marathon Oil.

[2834] *See* letters from Blackrock; Business Roundtable; and Chevron. *See also* Kalesnik, *et al., supra* note 2827.

[2835] As we discuss below, the costs for existing registrants who track and disclose emissions will be limited because the final rules enable registrants to continue to use the operational and organizational boundaries they already use to track emissions.

[2836] *See* Kalesnik, *et al., supra* note 2827 (noting that many registrants do not fully measure their Scope 1 emissions).

[2837] A number of studies have raised concerns about the quality of existing emissions data. For example, one study found that third-party estimates of emissions, which represent a significant fraction of the emissions data available in several existing databases, are materially less accurate than self-reported emissions data by issuers. *See* Kalesnik *et al., supra* note 2827. Another study examined emissions data reported to CDP between 2010 and 2019 and found that 38.9% of the reports exhibited disparities between the reported total emissions and sum of reported emissions by various sub-categories. *See* S. Garcia-Vega, A.G. Hoepner, J. Rogelj & F. Schiemann, *Abominable Greenhouse Gas Bookkeeping Casts Serious Doubts On Climate Intentions of Oil and Gas Companies* (working paper, Mar. 2023), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4451926 (retrieved from SSRN Elsevier database).*

exemptions may limit the benefit of achieving greater consistency and comparability across registrants, exempting SRCs and EGCs from this disclosure requirement at this time is appropriate given the relatively larger burden GHG emissions reporting requirements could have on these firms [2843] and the differences in the existing levels of climate-related disclosure between larger companies and smaller companies.

Commenters raised concerns about the costs of providing GHG emissions on a disaggregated basis.[2844] However, many commenters also explained that disaggregated disclosures could be decision useful, as emissions from specific constituent gases could have differential effects on a company's cash flows or business operations.[2845] For example, a registrant may be subject to methane fees by the EPA, in which case information about the registrant's methane emissions could factor into investors' decision making. To balance these views, some commenters suggested that the final rules should require constituent gases to be disclosed on a disaggregated basis only when individually material.[2846] We agree with those commenters and believe that this approach will provide investors with decision-useful information about GHG emissions without imposing undue compliance costs on registrants to produce disaggregated data in circumstances in which the disaggregation may not be particularly useful for investors.[2847]

The final rules also permit registrants to calculate and disclose GHG emissions according to the methodology that best matches their particular facts and circumstances. The benefit of this flexible approach is that registrants will have the opportunity to provide investors with information about their GHG emissions using the latest and most suitable methodology as measurement technologies and standards continue to develop. For example, while many companies calculate their GHG emissions pursuant to the GHG Protocol, others utilize different approaches, such as certain ISO standards.[2848] This flexibility, which may include registrants' ability to round as appropriate, will serve to limit costs.[2849] Conversely, it could also make comparisons less straightforward, which may attenuate some of the expected benefits of the final rules. However, there are several reasons to believe that this reduction in comparability will not significantly undermine the utility of the required disclosures. First, the required disclosures will expand upon and enhance the quality of the existing set of GHG emissions disclosures that investors already find useful despite the variation in methodologies that produce existing emission disclosures.[2850] Second, the contextual disclosures (*e.g.,* operational boundaries) will enable investors to better understand the quantitative disclosures and make adjustments to facilitate comparisons with other registrants that are otherwise not possible under the baseline. Third, to the extent that industry-specific approaches to disclosing emissions continue to develop and evolve, the final rules will permit registrants within those industries to adopt those approaches, which will help investors to compare peer companies within an industry. Finally, as we discuss in the next subsection, obtaining assurance over GHG emissions disclosure provides investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures.

These disclosures complement the other required disclosures about the organizational boundaries (used to calculate emissions versus those used in their financial statements) as well as carbon offsets and RECs, which offer important context for facilitating comparisons between companies as discussed above. In fact, by not requiring organizational boundaries to necessarily conform to those used in the company's consolidated financial statements, the final rules permit the development of a standardized framework (*e.g.,* control approach) for measuring emissions across registrants. Commenters supported this approach as it would allow registrants to continue to measure emissions using their current approach and procedures.[2851] That is, by not imposing a prescriptive methodology for GHG emissions disclosures, the final rules provide space for the continued development of a shared reporting framework for issuers to disclose information that ultimately may enhance the degree of comparability of registrant-level GHG emissions data, to the benefit of investors, registrants and the market (relative to the baseline).[2852]

Finally, as discussed in section II.I above, we are following the suggestions of many commenters and allowing registrants more time to report emissions given the inherent challenges with reporting sooner that commenters highlighted.[2853] By delaying the requirement to disclose GHG emissions until later in the year, the final rules will provide additional time to prepare the information for filing (more consistent with current voluntary reporting practices),[2854] which should improve its accuracy and reduce costs for registrants but may result in delayed disclosure in some instances. The delay in annual reporting may also allow registrants to leverage disclosures they may have already prepared for other reporting regimes. Nonetheless, even with the extended filing deadline for

technological, financial, and staff resources to comply with the proposed rules. Representatives from the biotechnology, plastics, and equipment manufacturing industries have reported to Advocacy that small businesses in their industries have not traditionally tracked GHG emissions or other climate-related metrics. These businesses would either need to develop modeling software to track climate metrics in-house or hire third-party consultants to do so . . . Small private companies have also voiced that the costs of collecting and analyzing GHG emissions data could be prohibitive.''); Soros Fund (suggesting that EGCs and SRCs should be allowed additional time to adjust to climate disclosure requirements, be afforded an additional safe harbor and be exempt from financial statement metrics disclosure); and SBCFAC Recommendation (recommending ''scaling and delaying the compliance requirement for emerging growth companies, along with smaller reporting companies.'').

[2843] Even for SRCs and EGCs that are currently calculating GHG emissions, there could be certain fixed costs associated with preparing this information for disclosure in Commission filings that would not scale with the size of the registrant and would therefore be more burdensome to these entities. We expect benefits to scale with the size of the firm.

registrants, investors will still benefit from receiving this information in a more timely and predictable manner than they currently do.[2855]

f. Attestation Over GHG Emissions Disclosure

The proposed rules would have required LAFs and AFs to provide an attestation report covering the disclosure of its Scope 1 and Scope 2 emissions at the limited assurance level for the second and third fiscal years after the Scopes 1 and 2 emissions disclosure compliance date, and at the reasonable assurance level beginning in fiscal year four. In a change from the proposal, the final rules require LAFs and AFs to provide an attestation report at the limited assurance level for Scope 1 and/or Scope 2 emissions disclosures beginning the third fiscal year after the compliance date for GHG emissions reporting and require an LAF to provide an attestation report at the reasonable assurance level for Scope 1 and/or Scope 2 emissions disclosures beginning the seventh fiscal year after the compliance date for GHG emissions reporting.[2856]

Many commenters stated that the proposed assurance requirements would be too costly.[2857] In response to these commenters' concerns, and in a shift from the proposal, the final rules will exempt SRCs and EGCs from the requirement to obtain assurance, since SRCs and EGCs will not be required to disclose GHG emissions. In addition, the final rules do not require AFs to provide attestation reports at the reasonable assurance level. We have determined that it is appropriate to apply the reasonable assurance requirement to a more limited pool of registrants—LAFs—at this time because a number of LAFs are already collecting and disclosing climate-related information, including GHG emissions data and larger issuers generally bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance.

For both LAFs and AFs, the extended phased in compliance dates will further address concerns about the immediate costs of compliance under the final rules.[2858] Specifically, the final rules provide registrants with two phased in compliance periods—one phased in compliance period before GHG emissions disclosures are required, and another, later phased in compliance period before assurance over GHG emissions disclosures is required. These phased in compliance periods will give registrants time to develop and implement processes and controls to produce high quality GHG emissions data and disclosures. In addition, the phased in compliance periods will provide existing GHG emissions assurance providers with time to train additional staff and undertake other preparations for these engagements as necessary, as well as facilitate the entry of new GHG emissions attestation providers into the market to meet demand.[2859] As the availability of assurance providers increases and the quality of registrants' reporting improves, we expect the costs of assurance will decrease.

Many commenters also pointed out the benefits of attestation reports covering the disclosure of registrants' Scope 1 and Scope 2 emissions, including increased investor protection[2860] and mitigation against the risk of potential greenwashing.[2861] Academic research shows that voluntary assurance improves the quality of GHG emissions disclosures and CSR disclosures more generally,[2862] and that investors perceive CSR disclosures to be more credible when they are accompanied by the assurance reports, regardless of the assurance level.[2863] Broadly, academic research also suggests that the market values voluntary audits[2864] and due to this demand firms voluntarily submit to audits.[2865] Furthermore, practitioner evidence suggests that the demand for voluntary ESG assurance is increasing.[2866] And while some registrants may meet this demand by obtaining voluntary assurance; others may not. Indeed, research shows that many firms do not obtain voluntary assurance,[2867] and that assurance provided on a voluntary basis may vary widely in form and content.[2868] Hence, we expect there to be benefits from requiring LAFs and AFs to provide the attestation reports covering their Scope 1 and/or Scope 2 emission

2855 *See, e.g.,* letter from Morningstar (''Currently, a lack of clear disclosure standards for the timing of 'sustainability reports,' which is the primary source for emissions data, greatly hinders investor knowledge. For example, some registrants released 2021 reports—detailing 2020 data—as late as November 2021.'').

2856 *See* 17 CFR 229.1506.

2857 *See, e.g.,* letters from AFPM; AHLA; Amer. Chem.; Bipartisan Policy (''While emissions data is no doubt important for companies to evaluate, especially those that are large emitters, attesting or certifying this data as accurate is far more costly than with financial data because the market for emissions is not at all well-developed.''); Eversource; Business Roundtable; Chamber; ConocoPhillips (''the availability of assurance providers is currently insufficient to meet demand and will likely trigger a surge in costs''); McCormick (''While unknown at this time, due to the fact that these types of disclosures have never been required by the SEC in the past and in this form, these added costs must be well understood and measured against the benefit.''); NOIA; PPL; SBCFAC Recommendation; SIFMA; Soc. Corp. Gov.; Sullivan Cromwell; and Travelers.

2858 *See* letter from BOA (stating that a delay in the compliance date ''would give additional time to attestation providers to obtain the necessary staff and resources to meet future demand and could help to reduce costs for registrants''); *see also* letter from Corteva (stating that a minimum one-year extension to the implementation deadlines set forth in the proposal ''would reduce the risk of reporting delays, give registrants further opportunities to improve data quality and internal control processes, and work with assurance providers to ensure a more productive assurance process'').

2859 There can be barriers to entry due to consolidation around a few major assurance providers. *See* Gipper *et al.* (2023); *see also* discussion of similar concerns raised in the context of recent California laws, discussed *infra* note 3118 and accompanying text.

2866 *See* Center for Audit Quality, *supra* note 2716.

2867 As of 2020, the voluntary assurance rate of ESG reports in the U.S. was 46%. Gipper *et al.* (2023).

2868 For example, there was significant heterogeneity in the content of voluntary assurance reports over financial statements provided in the U.S. prior to the adoption of the mandatory audit requirements of the Exchange Act. *See* Bourveau, *et al., supra* note 2865; Gipper *et al.* (2023) also document that there is a heterogeneity of the types of metrics being voluntarily assured, depending on the type of the assuror. For example, financial auditors tend to assure slightly more metrics (93%) than non-financial assurers (89%). *See* Gipper *et al.* (2023), at Table IA–2.

disclosures.[2869] The assurance requirement in the final rules will require an independent third-party to provide a check on the accuracy and completeness of a registrant's GHG emissions disclosures before the information is provided to investors, which as explained above, will likely contribute to lowering the cost of capital and analyst forecast errors.[2870] While the academic accounting literature, as one commenter has noted, has traditionally found that ''auditing assurance for corporate social responsibility in the US has not led to positive market effects,'' [2871] more recent evidence on specifically carbon emissions assurance has revealed a positive link between external assurance of carbon emissions and market value.[2872]

Other commenters stated that there is a lack of expertise to meet the demand for required attestation services.[2873] These commenters raised concerns that this lack of expertise, coupled with the proposed rules' requirements for assurance providers, would increase costs of obtaining assurance. Other commenters stated that they were opposed to the proposed assurance requirements because the requirements would preclude assurance providers from applying the ISO 14064–3 standards, which is the most common standard used by non-accountant assurance providers.[2874] As discussed in the baseline, most companies that currently obtain some type of third-party verification or assurance do not obtain these services from accounting firms.[2875] The proposed requirements would not have limited the scope of providers to accounting firms. However, the proposed requirements regarding the attestation standards would have prevented providers from using certain attestation standards widely used by non-accounting firm providers, such as ISO 14064–3, which could have resulted in providers needing to become familiar with different standards or registrants needing to change assurance providers, which would have increased the costs of obtaining assurance. The final rules address these concerns by modifying the requirements for the attestation standards such that an attestation report pursuant to the ISO 14064–3 standards will satisfy the requirements in the final rule.

Commenters also asserted that assurance standards and methodologies are still evolving.[2876] Consistent with these commenters' assertions, prior research shows that the field of sustainability assurance—which presumably encompasses the assurance over emissions disclosures—is fairly new and thus may not provide the same benefits as decades of financial audit practice.[2877] While we acknowledge that the field of GHG emission assurance is still maturing, as discussed elsewhere, a number of registrants currently obtain voluntary assurance over their GHG emissions disclosures, which presumably they would not do if existing assurance standards were unworkable or did not meaningfully enhance the reliability of those disclosures. The final rules permit registrants to follow any attestation standards that are publicly available at no cost or that are widely used for GHG emissions assurance and that are established by a body or group that has followed due process procedures including the broad distribution of the framework for public comment. These conditions will help ensure that any standards used for GHG assurance services under the final rules are sufficiently developed to provide meaningful investor protection benefits, while still providing a degree of flexibility to registrants given the emerging nature of GHG assurance services. In addition, the final rules include a longer phase in period before LAFs and AFs are required to comply with the assurance requirements, which also provides additional time for standards and methodologies to further develop.

The final amendments also require the GHG emissions attestation report be prepared and signed by a GHG emissions attestation provider who is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. This provider must be independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report, during the attestation and professional engagement period.

The final rule's expertise requirement for attestation providers should enhance the overall benefits of obtaining GHG emissions assurance, consistent with academic research showing that industry specialist auditors deliver higher quality financial statement audits than non-specialist auditors [2878] and that audit clients are willing to pay more for audit services of more experienced audit partners.[2879]

[2879] D. Aobdia, S. Siddiqui & A. Vinelli, Heterogeneity in Expertise in a Credence Goods Setting: Evidence from Audit Partners, 26 Rev. of Acct. Stud. 693 (2021).

Similarly, the final rules' independence requirement for attestation providers is consistent with the similar requirement that has long existed for financial statement auditors and will enhance the perceived credibility of the GHG emissions assurance.[2880] Attestation providers that are not accountants may incur additional costs to familiarize themselves with these requirements.

The final rules also require LAFs and AFs to disclose, after requesting relevant information from any GHG emissions attestation provider as necessary, whether the GHG emissions attestation provider is subject to any oversight inspection program, and if so, which program (or programs) and whether the GHG emissions attestation engagement is included within the scope of authority of such oversight inspection program. While the final rules do not require that the GHG emissions attestation provider be subjected to mandatory oversight and inspection processes, disclosure of whether this is the case will provide investors with a better understanding of the qualifications of the GHG emissions attestation provider, which in turn will help them determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure. For example, academic research shows that oversight inspections of financial statement audits by the PCAOB have significantly increased the credibility of the financial statement audits.[2881] Similarly, in the context of inspections of PCAOB-registered public accounting firms, academic literature suggests that engagement-specific PCAOB inspections may have spillover effects on non-inspected engagements.[2882]

Furthermore, the final rules require AFs and LAFs subject to Item 1506(a) to disclose whether any GHG emissions attestation provider that was previously engaged to provide attestation over the registrant's GHG emissions disclosure for the fiscal year covered by the attestation report resigned (or indicated that it declined to stand for re-appointment after the completion of the attestation engagement) or was dismissed. If so, the registrant is required to disclose certain information about whether there were any disagreements with the former GHG emissions attestation provider and to describe the disagreement. The registrant also must disclose whether it has authorized the former GHG emissions attestation provider to respond fully to the inquiries of the successor GHG emissions attestation provider concerning the subject matter of the disagreement. Due to the readily available nature of this information for registrants, we do not expect that it would be costly for registrants to include these disclosures in the filing that contains the GHG emissions disclosures and attestation report, when applicable. The disclosure of the existence of a disagreement in the event of the resignation or dismissal of the GHG emissions attestation provider will enable investors to assess the possible effects of such disagreement and whether it could have impacted the reliability of the GHG emissions disclosure, which, as discussed in Section II.H above, provides investors with information about a registrant's business, results of operations, and financial condition. This disclosure requirement also may limit a registrant's incentive to dismiss attestation providers that it views as unfavorable.[2883]

In addition, the final rules require any registrant that is not required to include a GHG emissions attestation report pursuant to Item 1506(a) to disclose certain information if the registrant's GHG emissions disclosure were voluntarily subjected to third-party assurance, which is consistent with the proposed rules and with the feedback provided by several commenters.[2884] There is some academic evidence suggesting that the assurance approaches of accountants and non-accountants differ (thus potentially reducing comparability across what is being assured),[2885] that firms choose accountants vs. non-accountants as their GHG emissions assurance providers depending on their internal objectives,[2886] and that market participants draw inferences from the attributes of the assurance providers.[2887] We expect that greater disclosures about the nature of voluntarily obtained Scope 1 and Scope 2 emissions attestation reports will help investors determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure.[2888] However, the liability and accompanying litigation risk associated with including these disclosures in Commission filings could disincentivize some registrants from voluntarily obtaining assurance, particularly if they have lower confidence in the quality of the services performed. These concerns are mitigated to some extent with respect to liability under section 11 of the Securities Act by the final rules' amendment to Rule 436, which provides that any description of assurance regarding a registrant's GHG emissions disclosures provided in accordance with Item 1506(e) (*i.e.,* assurance voluntarily obtained over GHG emissions disclosures) shall not be considered part of the registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Securities Act.[2889]

[2880] *See, e.g.,* M. DeFond & J. Zhang, *A Review of Archival Auditing Research,* 38 J. of Acct. & Econ. 275 (2014); W.R. Knechel *et al., supra* note 1206.

g. Risk Management Disclosure

The final rules require a registrant to describe any processes it has for identifying, assessing, and managing material climate-related risks.[2890] A registrant with such a process should address, as applicable, the following non-exclusive list of disclosure items: (1) how it identifies whether it has incurred or is reasonably likely to incur a material physical or transition risk; (2) how it decides whether to mitigate, accept, or adapt to the particular risk; and (3) how it prioritizes whether to address the climate-related risk. Furthermore, the final rules specify that registrants who manage a material climate-related risk must disclose whether and how their processes for identifying, assessing, and managing climate-related risks have been integrated into their overall risk management system or processes.

These disclosures will allow investors to better assess the risk management processes registrants use to evaluate and address material climate-related risks that may have or are reasonably likely to have an impact on companies' operations and financial conditions. Climate-related risks could impact companies' financial performance in a number of ways. For example, physical risks could result in asset impairments and business interruptions. Regulatory changes could render certain business plans less or unprofitable. Shifts in consumer preferences could increase or decrease demand for certain types of products. While some of these risks may be relatively straightforward to evaluate, others may require expertise and detailed knowledge about a company's business partners and operations. The risk management disclosures in the final rules will provide investors with a more detailed understanding of how a registrants' risk management systems identify, evaluate, and address climate-related risks, which could contribute to better-informed investment and voting decisions.[2891]

As one example of how investors could use risk management disclosure, one commenter explained:''[we] identified a semi-conductor manufacturer as a more attractive investment when we learned it was diversifying its manufacturing locations to diversify its water sourcing.'' [2892] However, a commenter also noted that ''[f]or a significant number of issuers, information is not sufficient to support equivalent analysis.'' [2893] In this respect, requiring a registrant to describe its process for identifying, assessing, and managing material climate-related risks, such as water sourcing risks, will allow investors to more fully evaluate the drivers and outcomes of the registrant's risk management decisions. These disclosures will also benefit investors by providing context for the other disclosures required by the final rules. For example, investors can use these disclosures to better understand the steps a registrant took to identify material climate-related risks in the context of the registrant's disclosures about the types of material climate-related risks it faces.

The requirement to disclose the extent to which a registrant's processes for identifying, assessing, and managing climate-related risks have been integrated into its overall risk management system or processes provision will help investors understand and assess the effectiveness of those climate risk management processes.

There are many climate risk management approaches available to firm managers, ranging from divestment from certain suppliers to engagement with their business partners to hedging to incorporating climate risk into their financial planning.[2894] To the extent that there is variation in risk management practices across registrants or such practices change over time, the final rules will allow investors to compare those risk management practices when making investment decisions.

As discussed in section IV.C.3, we expect registrants to incur some additional compliance costs as a result of these disclosures; however, to limit the costs associated with these disclosures, we are not requiring several of the prescriptive elements found in the proposed rules, including a separate disclosure item on how a registrant determines how to mitigate any high priority risks.[2895] While these disclosures may have been low cost to produce for some registrants that already create TCFD-compliant sustainability reports, we opted for a more flexible approach for the reasons discussed above. In providing that registrants only need to describe the process for identifying, assessing, and managing material climate-related risks, the final rules further limit the compliance costs for registrants. Nonetheless, registrants may still choose to include the details set forth in the proposed rules if they are relevant to their risk management practices.

Under the approach taken in the final rules, investors will benefit from a discussion tailored to the registrant's facts and circumstances. For example, registrants will be able to exclude information that they deem to be less relevant or useful to understanding the registrant's approach to managing material climate-related risks. However, this flexibility could potentially result in disclosures that are not fully comparable across registrants, which could reduce the benefits of this provision. The more flexible approach we are adopting could also reduce the risk that a registrant would have to disclose confidential information, a concern raised by some commenters.[2896]

The benefits of the final rules will be lessened to the extent that this existing voluntary reporting overlaps in content with the required disclosures.[2897] However, even in these cases, investors will benefit from having this

and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading'').

[2890] *See* 17 CFR 229.1503.

[2891] *See* letters from the Investment Company Institute (''We also support companies being required to disclose whether and how climate-related risks are integrated into the company's overall risk management system or processes. This disclosure should help investors assess how the company handles climate-related risk as compared to other risks.''); Vanguard (''We consider climate risks to be material and fundamental risks for investors and the management of those risks is important for price discovery and long-term shareholder returns.''); and Calvert (''We support the SEC's mandated approach for registrants to describe processes for identifying, assessing and managing climate-related risks, including both physical and transition risks. In order for us to evaluate issuer risks properly, we need transparent disclosure that allows us to assess how companies are determining the materiality of climate-related risks, including how they measure the potential scope and impact of an identified climate-related risk and how the risks identified in the disclosures relate back to that issuer's strategy, business model and outlook.'').

[2892] *See* letter from Wellington.

[2893] *Id.*

[2894] *See, e.g.,* Keely Bosn, Amelia Brinkerhoff, Katherine Cunningham & Shirui Li, *Climate Risk Management: Strategies for Building Resilience to Climate Change in the Private Sector* (2020), available at *https://deepblue.lib.umich.edu/bitstream/handle/2027.42/154987/370%20Climate%20Risk%20Management_%20Zurich.pdf* (documenting various divestment and planning strategies in managing climate-related risk among companies in the insurance and financial services industries).

[2895] For instance a registrant will not be required to disclose, as applicable, how it: (1) determines the relative significance of climate-related risks compared to other risks; (2) considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks; (3) considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; or (4) determines the materiality of climate-related risks.

[2896] *See, e.g.,* letters from Cemex; Chief Execs. (noting that registrants may simply start making generic disclosures); AFPA; American AALA *et al.;* IADC; and Sullivan Cromwell.

[2897] *See supra* section IV.A., particularly IV.A.5., for a discussion of existing trends in voluntary disclosure.

information set forth in a Commission filing, which will improve its reliability of this information and reduce search costs for investors. We also expect the final rules to address concerns expressed by commenters that existing voluntary disclosures are often deficient in terms of understandability, transparency, and detail.[2898] Therefore, we expect the final rules will result in more consistent, comparable, and reliable information about registrants' risk management processes as compared to the baseline.

h. Financial Statement Disclosures

i. Expenditure Disclosures

The final rules require an issuer to disclose the following categories of expenditures: (1) expenditures expensed as incurred and losses resulting from severe weather events and other natural conditions; (2), capitalized costs and charges resulting from severe weather events and other natural conditions; and (3) if carbon offsets or RECs or certificates have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals, the aggregate amount of carbon offsets and RECs expensed, the aggregate amount of capitalized carbon offsets and RECs recognized, and the aggregate amount of losses incurred on the capitalized carbon offsets and RECs.[2899] Under the final rules, a capitalized cost, expenditure expensed, charge, loss, or recovery results from a severe weather event or other natural condition when the event or condition is a ''significant contributing factor'' in incurring the capitalized costs, expenditure expensed, charge, loss, or recovery.[2900]

The final rules require financial statement disclosures only if the capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions exceed certain thresholds.[2901] Specifically, a registrant will be required to disclose capitalized costs and charges incurred as a result of severe weather events or other natural conditions if the aggregate amount of the absolute value of capitalized costs and charges incurred is one percent or more of the absolute value of shareholders' equity or deficit, but no disclosure will be required if such amount is less than $500,000 for the relevant fiscal year.[2902] Similarly, a registrant will be required to disclose expenditures expensed and losses incurred as a result of severe weather events and other natural conditions if the aggregate amount of such expenditures expensed and losses is one percent or more of the absolute value of income or loss before income tax expense (''pretax income''), but no disclosure will be required if such amount is less than $100,000 for the relevant fiscal year.[2903] If the disclosure threshold is triggered, registrants will be required to disclose the aggregate amount of the capitalized costs, expenditures expensed, charges, and losses and identify where the amounts are presented in the income statement and the balance sheet.

We expect that disclosure of capitalized costs, expenditures expensed, charges, and losses incurred resulting from severe weather events and other natural conditions will enable investors to better assess the effects of these events and conditions (*i.e.,* types of physical risks) on a registrant's financial position and financial performance. Better disclosures of physical risks can provide decision-useful information to investors.[2904] For example, one study found that a one standard deviation increase in exposure to heat stress is associated with a 40 basis point increase in yields on corporate bonds.[2905] Another study found that stock price reactions to climate-related risk disclosures in earnings calls are more negative for companies that have experienced a severe weather event in the quarter.[2906]

We anticipate that these financial statement disclosures will result in increased consistency and comparability relative to registrants' current disclosure practices. In particular, our decision to use a bright-line threshold will ensure that investors have access to decision-useful information for all registrants that have been meaningfully impacted by severe weather-related events and other natural conditions. Comparisons across registrants may enable investors to assess how different registrants manage and respond to severe weather events and other natural conditions, while comparisons over time will enable investors to evaluate how registrants are adapting to these types of events and conditions.

A better understanding of registrants' exposure to severe weather events and other natural conditions will help individual investors manage their portfolio-level exposure to climate-related physical risks. Whereas some climate-related risks may be company-specific, others may be correlated across different registrants and across time.[2907] The financial statement disclosures required by the final rules will provide investors with information to help assess which types of climate-related physical risks are company-specific, and therefore diversifiable, and which are not. This will better equip investors to limit their portfolio-level exposure to non-diversifiable climate-related physical risks by selecting companies less sensitive to any non-diversifiable risks related to severe weather events and other natural conditions.

The value of this financial statement information to assessing risk exposure depends in part on the extent to which past exposure to severe weather events or other natural conditions predicts future exposure to those events or conditions.[2908] For example, commenters questioned the benefits of disclosures related to physical risks given their view that there is inherent uncertainty of trends in exposure.[2909] However, other commenters indicated that a better understanding of the impact of past severe weather events would help them assess a registrant's exposure to physical risks going forward, and some commenters highlighted the value of having quantitative estimates of impacts.[2910]

Academy Actuaries (''Identification of material risks without sufficient quantitative disclosure of financial impact would

Continued

We agree that discussion of past impacts could be informative. The required expenditure disclosures will help investors identify the relative magnitude of different risk trends in various types of risk over time. Moreover, historical data may help investors assess a company's response to severe weather events or other natural conditions. This will help investors assess a registrant's risk management and risk mitigation. This information will allow investors to better tailor their decisions to their own risk-tolerance.

In the context of the proposal, commenters expressed concern that these benefits will be lessened if reporting companies choose to apply the final rules in different ways.[2911] For example, investors may mistakenly conclude that a registrant has a very high level of exposure to climate-related physical risks simply because the registrant takes a very inclusive approach to identifying ''severe weather events or other natural conditions.'' Different interpretations of which ''capitalized costs,'' ''expenditures expensed,'' ''charges,'' or ''losses'' are required to be disclosed by the final rules could similarly reduce the comparability benefits.[2912] The final rules address this concern by narrowing the scope of the disclosures (as discussed below). Any differences in application may be relatively benign or they may be used strategically to highlight or downplay certain aspects of the effects on the registrant's financial statements. We expect the inclusion of these disclosures in the financial statements to mitigate these types of concerns, as the disclosures will be subject to ICFR and an audit by an independent registered public accounting firm. Moreover, we believe the final rules' requirement to disclose contextual information, such as a description of significant inputs and assumptions used, significant judgments made, and if applicable, policy decisions made by the registrant to calculate the specified disclosures, alongside the expenditures disclosures should help to mitigate the concerns discussed above by providing additional transparency and facilitating comparability,[2913] although we note that some commenters were skeptical about the added value of contextual information in this respect.[2914]

Several commenters highlighted comparability concerns resulting from ambiguities and uncertainty related to the definition of transition activities and the proposal's approach to attribution. For example, one commenter asked whether replacing a light bulb with an LED bulb would constitute a transition expense.[2915] Another commenter asked how a registrant should identify the portion of a cost that could be attributable to drought.[2916] These hypotheticals, and many others raised by commenters, are addressed by limiting the financial statement disclosures to the capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions and the capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs (instead of requiring the disclosure of expenditures related to transition activities generally in the financial statements)[2917] and by the revised approach to attribution. However, we recognize that some issuers will apply the final rules differently than others. For example, several commenters pointed out that some registrants might consider a hurricane to be a severe weather event regardless of whether hurricanes are common to the area while others might base this assessment on whether a weather event is uncharacteristic or more severe than usual.[2918] Although a more prescriptive requirement could increase comparability, it may do so at the expense of disclosure that is more decision-useful for investors for the reasons stated above.[2919] We also expect comparability of the disclosures to improve over time as registrants gain more experience applying the disclosure thresholds and attribution standards and consensus emerges among registrants regarding best practices for compliance with the final rules.

In addition to reducing information asymmetry about the impact of severe weather events and other natural conditions, these disclosures will improve consistency and comparability relative to registrants' current disclosure practices. We are unable to quantify these benefits, and we are cognizant that registrants will exercise discretion in making their disclosures. Nevertheless, we expect comparability of the disclosures to improve over time as consensus emerges among registrants on best practices for compliance with the final rules.

The benefits of the disclosures will also be reduced if the final rules result in disclosures that are not decision-useful to investors, for example if they represent a small portion of capitalized costs, expenditures expensed, charges, and/or losses. We believe that the final rules mitigate this risk by not requiring disclosure if the aggregate amount of the absolute value of the effects of severe weather events or other natural conditions is less than one percent of pretax income for income statement effects or of shareholders' equity for balance sheet effects.[2920] However, we recognize the possibility that these thresholds may nonetheless result in some disclosure of information that is not decision-useful for investors, depending upon the facts and circumstances of the particular company, especially for companies with limited pretax income or shareholders' equity. Some commenters took issue with the use of absolute values for determining whether the disclosure threshold is triggered, explaining that if the net effect of an event is not material, it is not clear why the positive and negative components would be material.[2921] Others had a contrary view and thought it was important to delineate the positive and negative effects to help protect against greenwashing.[2922] Many commenters viewed a one percent threshold in the context of the financial statement disclosure to be too low.[2923] The de minimis thresholds partially address this concern. For example, we estimate that in 2022, the de minimis value of $100,000 exceeded one percent of the absolute value of pretax income for approximately 17 percent of companies

not benefit investors, so investors want to understand the relative magnitude of various climate risks, track the size of various climate risks over time, and compare the climate risk of different registrants.'').

[2919] *See id.*

[2920] The choice of a 1% threshold is consistent with what the Commission currently uses in other contexts for disclosure of certain items within the financial statements (*e.g.,* §§ 210.5–03.1(a) and 210.12–13).

[2921] *See, e.g.,* letter from Cemex.

[2922] *See, e.g.,* letter from ClientEarth.

[2923] *See, e.g.,* letter from Moody's.

and the de minimis value of $500,000 exceeded one percent of the absolute value of shareholders' equity for approximately 24 percent of companies.[2924] Conversely, it is also possible that some disclosures that would have been decision-useful to investors may not meet the disclosure thresholds and therefore will not be required to be included in the note to the financial statements under the final rules.

The disclosure thresholds may also result in partial disclosures of the financial effects of severe weather events and other natural conditions. For example, if a registrant exceeds the income statement threshold, but not the balance sheet threshold, it is only required to disclose expenditures expensed as incurred and losses on the income statement and it need not disclose the effects on the balance sheet, if any. Some registrants may find it simplest to disclose how the severe weather event or natural condition affected both the income statement and balance sheet while others might limit their disclosure to the rules' requirements. If so, the disclosures could lead to confusion about, for example, how and whether the severe weather event affected the financial statements for which disclosure is not required. We acknowledge that in some circumstances this may result in investors only receiving a partial picture of the financial statement effects of a particular event or condition; however, we think that applying the disclosure threshold separately to the income statement and the balance sheet will be more straightforward for registrants to implement and therefore will help to limit the overall burden of the final rules. To the extent this is a concern for an issuer, there is nothing in the final rules that would prevent a registrant from disclosing how the severe weather event or other natural condition affected both the income statement and balance sheet, even if the disclosure threshold for one of the financial statements is not triggered.

Some commenters raised the possibility that the financial statement disclosures could confuse or distract investors from other factors that contribute meaningfully to the financial statements.[2925] We believe our decision to limit the scope of disclosure to expenditures resulting from severe weather events and other natural conditions should mitigate these concerns.[2926] Furthermore, the fact that the information is tagged in Inline XBRL will facilitate an investor's ability to extract and sort the information that the investor deems more useful.[2927]

Many commenters raised concerns about registrants' ability to isolate or attribute particular costs or expenses to severe weather events and other natural conditions or to transition activities, explaining it would be complicated and costly.[2928] We believe that this cost is largely mitigated by the attribution principle included in the final rules, which requires registrants to disclose the entire capitalized cost, expenditure expensed, charge, or loss, provided that a severe weather event or other natural condition was a ''significant contributing factor'' to incurring the expense.

The requirement in the final rules to disclose where in the income statement or the balance sheet the disclosed expenditures expensed, capitalized costs, charges, and losses are presented could result in some incremental compliance costs. However, the expenditures expensed, capitalized costs, charges, and losses subject to disclosure are all captured in the books and records of the registrant and are measured and recognized in accordance with GAAP, such that concerns commenters raised about needing to develop and test new systems to track line-item impacts of climate-related expenses should be substantially mitigated under the final rules, relative to the proposed rules.[2929]

Many commenters expressed concerns with the proposed one percent disclosure thresholds as discussed in detail in section II.K.2.b.ii. Some of these commenters specifically highlighted that registrants would have challenges estimating or determining one percent of the individual line items before period end, which would require the tracking of all financial impacts and expenditures throughout the reporting period.[2930] In response to these commenters' feedback,[2931] the final rules do not require the disclosure of the proposed Financial Impact Metrics, which would have required the disclosure of financial impacts (and the determination of whether the disclosure threshold was met) on a line-by-line basis. Instead, the final rules focus on the disclosure of discrete expenditures and require the disclosure threshold to be calculated once for impacts to the income statement and once for impacts to the balance sheet using as the denominator income or loss before income tax expense or benefit and shareholders' equity or deficit, respectively. In addition to reducing the number of calculations that are necessary to determine whether disclosure is required as compared to the proposal, as discussed above in section II.K.3.c.ii, we believe that simplifying the threshold in this manner will give registrants the ability to estimate the amount or magnitude of these denominators earlier in the fiscal year, as compared to the proposed rules. As a result, the burdens on registrants associated with the final rules will be much less than they would have been under the proposed disclosure thresholds. That said, we recognize that registrants may need to track their expenditures expensed, capitalized costs, charges, and losses incurred as a result of severe weather events throughout the year to comply with the final rules.

Any differences in application of the rules that are not fully addressed by subjecting the disclosures to third-party audits could also introduce some incremental legal and compliance costs. For example, registrants may face some litigation risk stemming from their classification of expenditures. As above, we expect some of these costs to decrease over time as registrants gain experience applying the final rules and best practices emerge for application of the final rules.

The final rules also require that a registrant disclose, as part of the required contextual information, recoveries resulting from severe weather events and natural conditions, if they are required to disclose capitalized costs, expenditures expensed, charges, or losses incurred resulting from the same severe weather events or natural conditions. This provision will allow investors to better understand the net impact of severe weather events.

[2924] Estimates are based on 2022 registrants (*supra* note 2578) and data from Compustat.

[2925] *See, e.g.,* letter from API stating (''The flood of information and the presumed importance that would attach to it by virtue of the SEC's mandate could easily distract investors from equally important or more topically relevant material information that a registrant discloses.'').

[2926] The final rules are not the only place where disaggregated disclosure is required. We note that U.S. GAAP and IFRS require the disaggregation of certain information on the face of the financial statements or in the notes to the financial statements. For example, FASB ASC Topic 220 *Income Statement—Reporting Comprehensive Income* requires the nature and financial effects of each event or transaction that is unusual in nature or occurs infrequently to be presented separately in the income statement or in the notes to the financial statements. *See* ASC 220–20–50–1.

[2927] *See infra* section IV.C.2.ix.

[2928] *See, e.g.,* letter from BOA.

[2929] *See, e.g.,* letter from Amer. Bankers.

[2930] *See, e.g.,* letter from ABA, Securities Law Comm.

[2931] *See* section II.K.c.2.

Finally, the rules also require disclosure of expenditures expensed, capitalized costs, and losses resulting from the purchase and use of carbon offsets and RECs if carbon offsets or RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals. As discussed in more detail in section IV.C.2.d, providing investors with disclosure regarding expenditures resulting from a registrant's purchase and use of carbon offsets and RECs will allow investors to better understand the registrant's approach to meeting its targets or goals and any applicable requirements set by other regulators.[2932] These disclosures could introduce some incremental compliance and audit costs, but we expect these costs to be relatively small as these expenditures expensed, capitalized costs, and losses are discrete and easily identifiable.

ii. Contextual Information, Historical Periods, and Other Requirements

The final rules require registrants to provide contextual information, to accompany the financial statement disclosures of expenditures expensed as incurred losses and resulting from severe weather events and other natural conditions, capitalized costs and charges resulting from severe weather events and other natural conditions, and, if carbon offsets or renewable energy credits or certificates have been used as a material component of a registrant's plants to achieve its disclosed targets or goals, the aggregate among of carbon offsets and renewable energy credits or certificates expensed, the aggregate amount of capitalized carbon offsets and renewable energy credits or certificates recognized, and the aggregate amount of losses incurred on the capitalized carbon offsets and renewable energy certificates or credits.[2933] This information will explain the basis for the financial statement disclosures, including a description of any significant inputs and assumptions used, significant judgments made to calculate the disclosures, and other information that is important to an investor's understanding of the financial statement effects. The rules further require that a registrant use financial information that is consistent with the scope of its consolidated financial statements and apply the same accounting principles that it is required to apply in the preparation of its consolidated financial statements.

Collectively, the inclusion of contextual information and the presentation of financial statement disclosures that are consistent with the rest of the financial statements should improve investors' ability to understand and compare registrants' financial statement effects. Several commenters agreed with this rationale for providing contextual information.[2934]

It is possible that some disclosures of contextual information may be of limited usefulness to investors in understanding the financial statement effects. Likewise, some registrants may provide disclosures with a level of detail that investors deem immaterial. Ultimately, the level of detail important to understand a particular registrant's disclosure of the financial statement effects and thus necessary for compliance with the final rules will depend on the specific facts and circumstances faced by that registrant. We therefore believe that the flexibility provided in the final rules achieves the benefits of eliciting disclosures that are both comparable and most likely to be relevant to investors' understanding of the registrant's financial statement disclosures, without imposing significant additional costs on registrants and the investors who use the disclosures. This conclusion is supported by commenters' reactions to the proposal, which were generally supportive of the requirement to provide contextual information.[2935]

In a change from the proposal, the final rules require the presentation of the financial statement disclosures on a prospective basis only. That is, the final rules require registrants to provide disclosure for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s) included in the consolidated financial statements in the filing. This approach will lower the initial compliance costs of the rule, although investors will not immediately benefit from the ability to make year-over-year comparisons of the financial statement effects.

iii. Financial Estimates and Assumptions

The final rules require registrants to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise, or any climate-related targets or transition plans disclosed by the registrant.[2936]

These disclosures will provide investors with information as to the sensitivity of the financial information to climate-related risks, as explained by some commenters.[2937] Consider, for example, a registrant that recently disclosed a net-zero emissions target. Investors could benefit from understanding how that target impacted the assumptions and estimates that went into the preparation of the registrant's financial statements. This benefit, as well as any costs of the provision, will be lessened if registrants would have disclosed the impact of these events, conditions, targets, or plans on their financial estimates and assumptions regardless of the adoption of the final rules.[2938]

iv. Inclusion of Climate-Related Disclosures in the Financial Statements

The required disclosures must be included in a note to the financial statements and thus audited by an independent registered public accounting firm in accordance with existing Commission rules and PCAOB auditing standards.[2939] Subjecting these financial statement disclosures to reasonable assurance pursuant to an audit will subject these disclosures to the same financial statement audit and ICFR as similar financial disclosures, which will alleviate possible concerns about the consistency, quality, and reliability of the financial statement disclosures and thereby provide an important benefit to investors.[2940] Assurance can increase the relevance and reliability of disclosures.[2941] In addition, by including the required disclosures in the financial statements,

they will be subject to a registrant's ICFR and the requirement for management to establish and maintain an adequate control structure and provide an annual assessment of the effectiveness of ICFR.[2942] Furthermore, for AFs and LAFs, the registrant's independent auditor must attest to, and report on, management's assessment of the effectiveness of the registrant's ICFR.[2943] Effective ICFR can reduce the risk of material misstatements to the financial statements and thereby enhance the reliability and improve investor confidence in the disclosure.

Inclusion of these disclosures in the financial statements will increase the compliance costs of the final rules as audit firms will need to apply sufficient appropriate audit procedures to the application of the rules to each registrant's circumstances. However, we believe these increased costs will be limited because the final rules will require disclosure of capitalized costs, expenditures expensed, charges, and losses that are already required to be recorded in a registrant's financial statements. The incremental compliance costs will be due to the requirement to separately disaggregate and disclose these costs, expenditures, charges, and losses in the notes to the financial statements.[2944] Over time, we expect audits of these disclosures will become more streamlined and therefore the costs associated with these disclosures should also decrease. We discuss these costs in detail in section IV.C.3.

i. Structured Data Requirement

Under the final rules, the new climate-related disclosures will be required to be tagged in the Inline XBRL structured data language on a phased in basis.[2945] The provision requiring Inline XBRL tagging of climate-related disclosures will benefit investors by making those disclosures more readily available for aggregation, comparison, filtering, and other enhanced analytical methods.[2946] These benefits are expected to reduce search costs and substantially improve investors' information-processing efficiency.[2947] Structured data requirements for public company financial statement disclosures have been observed to reduce information-processing costs, thereby decreasing information asymmetry and increasing transparency by incorporating more company-specific information into the financial markets.[2948] In addition, the Inline XBRL requirement for the climate-related disclosures will further limit agency problems, as requirements for financial statement tagging have been observed to facilitate external monitoring of registrants through the aforementioned reduction of information processing costs.[2949]

Investors with access to XBRL analysis software may directly benefit from the availability of the climate-related disclosures in Inline XBRL, whereas other investors may indirectly benefit from the processing of Inline XBRL disclosures by asset managers and by information intermediaries such as financial analysts.[2950] In that regard, XBRL requirements for public company financial statement disclosures have been observed to increase the number of companies followed by analysts, decrease analyst forecast dispersion, and, in some cases, improve analyst forecast accuracy.[2951] Should similar impacts on the analysts' informational environment arise from climate-related disclosure tagging requirements, this will likely benefit retail investors, who have generally been observed to rely on analysts' interpretation of financial disclosures rather than directly

[2942] *See* 17 CFR 210.13a–15, 210.15d–15.

[2943] *See* 15 U.S.C. 7262.

[2944] The incremental costs include the disclosure of financial statement estimates and assumptions materially impacted by severe weather events and other conditions or disclosed targets or transition plans; however, we believe these incremental costs will be minimal.

[2945] *See* 17 CFR 229.1508; 17 CFR 232.405. LAFs must begin complying with the disclosure requirements in filings covering fiscal year 2025 and must comply with the tagging requirements in filings covering fiscal year 2026. Other categories of filers must comply with the tagging requirements upon their initial compliance with the climate disclosure rules. For example, AFs must comply with tagging requirements when they first provide climate disclosures in filings covering fiscal year 2026. *See* section II.N.

[2946] *See* Darren Bernard, Elizabeth Blankespoor, Ties de Kok & Sara Toynbee, *Confused Readers: A Modular Measure of Business Complexity* (June 15, 2023), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4480309* (retrieved from SSRN Elsevier database) (developing an algorithm mimicking a sophisticated general user of financial statements by training it on a random sample of sentences with inline XBRL tags to understand a large corpus of numerical concepts based on surrounding text).

[2947] The findings on XBRL cited in the following paragraphs are not necessarily focused on climate-related disclosures and metrics, but we expect the findings to be generally applicable and to result in similar benefits for investors.

[2948] *See, e.g.,* Y. Cong, J. Hao & L. Zou, *The Impact of XBRL Reporting on Market Efficiency,* 28 J. Info. Sys. 181 (2014) (finding support for the hypothesis that ''XBRL reporting facilitates the generation and infusion of idiosyncratic information into the market and thus improves market efficiency''); Y. Huang, J.T. Parwada, Y.G. Shan & J. Liu, T. Wang & L.J. Yao, XBRL's Impact on Analyst Forecast Behavior: An Empirical Study, 33 J. Acct. Pub. Pol. 69 (2014) (finding ''mandatory XBRL adoption has led to a significant improvement in both the quantity and quality of information, as measured by analyst following and forecast accuracy''). But see S.L. Lambert, K. Krieger & N. Mauck, Analysts' Forecasts Timeliness and Accuracy Post-XBRL, 27 Int'l. J. Acct. Info. Mgmt. 151 (2019) (finding significant increases in frequency and speed of analyst forecast announcements, but no significant increase in analyst forecast accuracy post-XBRL).

analyzing those disclosures themselves.[2952]

With respect to the Inline XBRL tagging requirements, various preparation solutions have been developed and used by operating companies to fulfill their structuring requirements, and some evidence suggests that, for smaller companies, XBRL compliance costs have decreased over time.[2953] One commenter, in opposing the proposed Inline XBRL requirements, stated that the requirements would increase costs for registrants.[2954] While we acknowledge that costs for registrants will increase as a result of the tagging requirements, this increase should be mitigated by the fact that filers subject to the final rules are already subject to Inline XBRL requirements for other disclosures in Commission filings, including financial statement disclosures and disclosures outside the financial statements.[2955] As such, the final rules do not impose Inline XBRL compliance requirements on filers that would otherwise not be subject to such requirements, and filers may be able to leverage existing Inline XBRL preparation processes and/or expertise in complying with the climate-related disclosure tagging requirements.

Many commenters agreed that the proposed structuring requirement would enable more efficient data processing and more informed investment decisions.[2956] One commenter noted that tagging the new disclosures in Inline XBRL would, by allowing the disclosed information to be more readily incorporated into investors' analyses, promote the efficiency of the U.S. capital markets.[2957] Another commenter stated that tagging the new disclosures would offer significant benefits to both institutional and retail investors.[2958] A different commenter indicated that the tagging requirement should enable investors to compare the adequacy of risk analysis and mitigation planning among registrants in the same economic sector.[2959]

One commenter questioned the benefits of requiring the new disclosures to be structured by asserting that investors and market participants who need to extract and analyze the disclosures required under subpart 1500 of Regulation S–K can perform the same search manually by using the appropriate Item reference as is done for current searches.[2960] However, the availability of such disclosures in a machine-readable form will allow for search and retrieval of disclosures on an automated, large-scale basis, greatly increasing the efficiency of information acquisition as compared to manual searches through unstructured formats.[2961]

Other commenters expressed concern that the potential for excessive use of extensions (*i.e.,* custom tags) would detract from the aforementioned benefits of structured data.[2962] We agree that the inappropriate use of custom tags hinders the benefits of tagging. However, we do not believe the final rules will result in an excessive use of custom tags, because filers will be prohibited from using custom tags unless there is no suitable standard tag for their disclosure in the related climate taxonomy, which the Commission will publish before the tagging compliance date.[2963] The climate taxonomy will contain standard tags that cover each new disclosure provision, so we do not expect custom tagging for climate disclosures will be excessive. Also, as discussed above, the one-year transition period for tagging requirements will enable the climate taxonomy development process to leverage samples of climate disclosures in Commission filings to further build out the list of standard tags and adapt to common disclosure practices. This should further reduce the likelihood of excessive custom tags and thus improve data quality.[2964] Such improvement in data quality will come at the cost of data users having one less year of tagged climate disclosures, making the climate disclosures filed during that year more difficult to analyze efficiently.

3. Quantifiable Direct Costs on Registrants

In this section, we attempt to quantify the direct costs of compliance for registrants that will be impacted by the final rules.[2965] These costs could be incurred internally (*e.g.,* through employee hours or hiring additional staff) or externally (*e.g.,* via third-party service providers, such as auditors or consultants).

Our estimates are informed, in part, by feedback we received from public comment letters. As discussed below, however, commenters offered a wide range of cost estimates, suggesting that there is significant heterogeneity when it comes to expected compliance costs among registrants, and such estimates may not provide a representative view of the costs of compliance for all affected registrants.

The cost estimates submitted by commenters varied considerably depending on a given company's size,

[2965] *See supra* section IV.C.1.b.

industry, complexity of operations, and other characteristics. This variability adds to the challenges in estimating compliance costs. Additionally, many commenters provided aggregate cost estimates that did not include certain elements required by the final rules, or included other elements that are not required in the final rules,[2966] without providing a breakdown of the component costs. Without a breakdown of component costs, it is difficult to use these cost estimates to quantify the direct cost of the final rules. Furthermore, changes from the proposal, often in response to commenter concerns about costs, will result in corresponding differences in the anticipated cost of the final rules as compared to the proposal.[2967] Nonetheless, we have endeavored below to factor these comments into our analysis to determine registrants' approximate cost of compliance with the final rules.

a. Comments and Data on Direct Cost Estimates of the Proposed Rules

In the Proposing Release, the Commission requested comment on all aspects of its economic analysis, including the potential costs and benefits of the proposed rules and alternatives, and whether the proposed rules, if adopted, will promote efficiency, competition, and capital formation or have an impact on investor protection.[2968] The Commission specifically requested empirical data, estimation methodologies, and other factual support for commenters' views, in particular, on costs and benefits estimates.[2969]

We received many comments asserting that the direct costs imposed by the proposed rules would be much greater than the Commission estimated.[2970] Many letters from individual companies and industry groups provided quantitative estimates of the cost to comply with the proposed rules that were considerably higher than the estimates included in the Proposing Release.[2971] One commenter conducted a survey of 263 public companies between April and June 2022.[2972] Seventy-nine percent of non-SRC respondents in this survey asserted that the Commission under-estimated the costs of compliance with the proposed rules. Seventy-three percent of survey participants responded that their compliance costs under the proposed rules would exceed the Commission's estimates in the Proposing Release, with 41 percent of respondents stating that the compliance costs would exceed $1 million on an ongoing basis.[2973] Another commenter, a biotechnology trade association, surveyed its members and found that 56 percent of respondents expected that the proposed rules would be more expensive than the Commission's estimates, with 40 percent indicating it would cost between $0.5 and $1.0 million.[2974] Additionally, a survey of corporate executives indicated that 61 percent of respondents expect that the proposed rules would impose $750,000 or more in first year compliance costs.[2975] Some commenters specifically identified the GHG emissions reporting and Regulation S–X provisions of the proposed rules as likely to impose large cost burdens on both registrants and potentially on non-registrants.[2976]

To help assess the direct costs of the final rules, we conducted a detailed review of compliance cost estimates from commenters and other public sources. The nature of the cost information ranged from survey results, estimates directly from identifiable companies, estimates of anonymous companies, and general estimates, either based on industry experience, fees for related services, or derived as part of similar rulemaking processes in other jurisdictions. We describe below the cost estimates provided in these letters and other sources.

One commenter provided cost information from seven large-cap companies in various industries on their current voluntary climate-reporting practices, which vary in their degrees of alignment with the proposed or final rules.[2977] The responses varied considerably regarding the reporting activities, disclosure elements, and costs. The number of staff required to produce the voluntary disclosures ranged from two to 20 full-time equivalents (''FTEs''). Reported employee hours for climate reporting (including TCFD reporting) ranged from 7,500 to 10,000 hours annually. One company reported spending 9 months to prepare its TCFD report and 4 months responding to the CDP questionnaire. Commonly cited external advisory services include environmental engineering consultants; emissions, climate science, and modeling consultants; outside counsel; and sustainability or sustainability reporting consultants, with costs ranging from $50,000 to $1.35 million annually. Third-party assurance costs ranged from $10,000 to $600,000. One company reported that it incurred initial costs of approximately $1.3 million to establish a baseline for SASB and TCFD reporting, while another company estimated that new or enhanced systems, controls, audit, and other costs associated with any additional disclosure requirements would be over $1 million.

The same commenter submitted another letter presenting detailed annual cost estimates from 13 companies (11 large-cap, 1 mid-cap, and 1 small-cap).[2978] Similar to their first comment, the responses displayed considerable variation with respect to

[2966] Commenters' estimates that include the cost of voluntarily undertaking a specific activity (*e.g.,* the costs of setting targets or goals, formulating transition plans, or conducting scenario analysis) may not be indicative of the compliance costs of the final rules since the final rules do not necessarily require the undertaking of such activities, but rather require only the attendant disclosures in certain cases.

[2967] For example, as compared to the proposed rules, the final rules include a number of changes intended to reduce the burden of the Regulation S–X disclosure requirements and do not require Scope 3 emissions reporting.

[2972] *See* letter from Nasdaq.

[2973] *Id.* Twelve percent of the participants in the survey were SRCs.

[2974] *See* letter from Biotechnology Innovation Organization.

[2975] PwC, *Change in the Climate: How US business leaders are preparing for the SEC's climate disclosure rule* (2023), available at *https://www.pwc.com/us/en/services/esg/library/sec-climate-disclosure-survey.html* (discussing survey, conducted between Dec. 2022 and Jan. 2023, that solicits the views of 300 executives at U.S.-based public companies with at least $500 million in annual revenue with respect to the proposed rules).

[2976] *See, e.g.,* letter from Chamber. Concerns about burdens for non-registrants were mostly focused on the proposed rules' Scope 3 GHG emissions disclosure requirements. The final rules do not require disclosures of Scope 3 emissions.

[2977] *See* letter from Soc. Corp. Gov (June 11, 2022), referencing a comment it submitted in response to Acting Chair Allison Herren Lee's request for public input on climate disclosures. *See* Acting Chair Allison Herren Lee Public Statement, *Public Input Welcomed on Climate Change Disclosures,* available at *https://www.sec.gov/news/public-statement/lee-climate-change-disclosures.* Comment letters in response to this request are available at *https://www.sec.gov/comments/climate-disclosure/cll12.htm.*

[2978] *See* letter from Soc. Corp. Gov (June 17, 2022). The commenter acknowledges that these companies are ''not the norm. They represent a discrete subset of predominantly larger companies that have undertaken these reporting efforts voluntarily and generally reflect a much greater level of maturity in climate-related reporting than the average company.''

current disclosure scope, granularity, and reported costs. Specific estimates of initial costs to comply with the proposed rules included $5 to $10 million,[2979] $6 million (with $4 to $5 million in ongoing costs),[2980] $10 million (with ''much of it recurring''),[2981] and $650,000 to $1.5 million (with $650,000 in ongoing costs).[2982] In many cases, the reported costs in this comment letter aggregated several different disclosure items and related activities without providing a cost breakdown. In other cases, costs were much more specific. For example, some companies reported their costs of measuring emissions. One small-cap company estimated $300,000 annually in internal staff time for its Scope 1 emissions data collection and reporting. This letter also included the aggregate ongoing costs of measuring Scope 1, Scope 2, and some Scope 3 emissions[2983] from three different companies. These companies' respective estimates are $200,000,[2984] $75,000,[2985] and 188 internal hours.[2986] Other specific cost estimates included assurance (ranging from $10,000 to $550,000, depending on the scope and level of assurance), external consultants (ranging from $55,000 to $990,000), and other activities related to sustainability reporting.

A public report presents detailed climate-related reporting cost estimates from three anonymous companies.[2987] One company, a large-cap financial institution, reported that the cost of issuing their first TCFD report was less than $100,000 and that annual ongoing costs for responding to the CDP questionnaire is likewise less than $100,000. Another company, a mid-cap waste management company, stated that the cost of producing their first TCFD and SASB report were both less than $10,000. This company reported that its total annual employee costs associated with climate disclosure are approximately $12,600. It also reported incurring annual third-party costs between $60,000 to $160,000 to ''develop [its] corporate sustainability report and microsite, both of which contain GHG climate-related information.'' This company estimates the cost of producing voluntary climate-related disclosures to be less than 5 percent of its total SEC compliance-related costs. The remaining company, a large-cap industrial manufacturing company, reported that the combined cost of producing its first TCFD, SASB, and GRI disclosures amounted to between $250,000 and $350,000 (without providing a breakdown of component costs), while the cost of responding to its first CDP questionnaire was less than $50,000. This company reported that it also spent $400,000 annually for third-party auditors and consultants that provide support in the company's climate disclosure efforts.

Another commenter provided the results of a survey, conducted from February to March 2022, of corporate issuers and institutional investors (''ERM survey'').[2988] The results reflect the responses of 39 issuers, of which 29 were LAFs.[2989] The ERM survey presents issuers' average annual costs in seven categories: GHG analysis and/or disclosures ($237,000);[2990] climate scenario analysis and/or disclosures ($154,000);[2991] additional climate-related analysis and/or disclosures ($130,000);[2992] internal climate risk management controls ($148,000);[2993] proxy responses to climate related proposals ($80,000); assurance/audits related to climate ($82,000); and other climate-related disclosure costs not covered by the previous six categories ($76,000).

We also reviewed annual cost estimates associated with existing climate-related disclosure policies in the U.K. In 2021, the U.K. Financial Conduct Authority (''FCA'') adopted a comply-or-explain disclosure rule (''FCA rule''), which originally applied only to commercial companies with a U.K. premium listing[2994] but, effective 2022, was subsequently expanded to include issuers of standard listed shares.[2995] The U.K. Department for Business, Energy, and Industrial Strategy (''BEIS'') adopted a similar—albeit mandatory—disclosure rule (''BEIS rule''), also effective 2022,[2996]

[2979] *Id. See* Company 1 (large-cap company).

[2980] *Id. See* Company 2 (large-cap company). Throughout this release, ''ongoing costs'' refer to recurring costs on an annual basis.

[2981] *Id. See* Company 3 (large-cap company).

[2982] *Id. See* Company 4 (small-cap company).

[2983] Disclosing ''some Scope 3 emissions'' generally means that the commenter discloses some—but not all—categories of Scope 3 emissions. For example, one company ''discloses Scope 1 and Scope 2 and some Scope 3 (fuel and energy-related activities, business travel, and use of sold products) GHG emissions . . .'' *See* letter from Soc. Corp. Gov (June 17, 2022).

Torrent, *The Cost of Climate Disclosure: Three Case Studies on the Cost of Voluntary Climate-Related Disclosure,* Climate Risk Disclosure Lab (2021), available at *https://econ.duke.edu/sites/econ.duke.edu/files/documents/The%20Cost%20of%20Climate%20Disclosure.pdf. This source was also reviewed as part of the proposed rules. See* Proposing Release, section IV.C.2.a.

[2988] *See* ERM survey, *supra* note 2670. The 39 issuers included the following industries: healthcare and pharmaceuticals; financials, insurance, and professional services; consumer discretionary products; communication services; transportation, construction, and industrials; consumer staples; oil, gas, and energy; utilities; real estate; metals, plastics, and other raw material; and information technology.

[2989] *See id.* Respondent market capitalizations ranged from less than $300 million to more than $200 billion, with the highest proportion of respondents (34%) having a market capitalization between $10 billion and $50 billion.

[2990] This survey category includes all costs relating to the development of GHG inventories with analysis and disclosure of Scope 1, Scope 2, and/or Scope 3 emissions.

[2991] This survey category includes all costs to issuers related to conducting assessments of the impact of climate risks in the short-, medium-, or long-term using scenario analysis as well as TCFD/CDP disclosure of risks and opportunities. Respondents were asked to exclude from this category any costs that they included in their costs of GHG emissions analysis and disclosures.

[2992] This survey category includes additional voluntary climate-related analyses and disclosures for processes largely disconnected from current and proposed climate-related disclosures such as outreach, engagement, and management.

[2993] This survey category includes costs for internal climate risk management controls, namely the costs related to integrating climate risk into enterprise risk management, oversight at the board level, strategic planning, internal audit, and other fundamental business processes. In addition, this category includes issuer costs related to climate-related data collection and aggregation, including IT costs and staff time; internal review of climate-related data collection by management, board committees, and the board; in-house counsel drafting; and review by outside counsel.

[2994] *See* FCA, Policy Statement PS20/17, *Proposals to Enhance Climate-related Disclosures by Listed Issuers and Clarification of Existing Disclosure Obligations* (Dec. 2020), available at *https://www.fca.org.uk/publication/policy/ps20-17.pdf.* This document states that the rule would apply to 480 companies that have a premium listing. A premium listed company is a company listed on the London Stock Exchange that is subject to more stringent compliance and disclosure requirements in addition to the minimum standards outlined in the UK provisions that implemented the EU Consolidated Admissions and Reporting Directive (CARD) and the EU Transparency Directive.

[2995] *See* FCA, Consultation Paper CP21/18, *Enhancing Climate-related Disclosures by Standard Listed Companies and Seeking Views on ESG Topics in Capital Markets* (June 2021), available at *https://www.fca.org.uk/publication/consultation/cp21-18.pdf.* Cost estimates of the FCA rule are sourced from this document. *See also* FCA, Policy Statement PS21/23, *Enhancing Climate-related Disclosures by Standard Listed Companies* (Dec. 2021). This rule applies to 244 issuers: 148 issuers of standard listed equity shares as well as 96 additional issuers (*i.e.,* standard listed issuers of Global Depository Receipts and standard listed issuers of shares other than equity shares, excluding standard listed investment entities and shell companies). A standard listed company is a company listed on the London Stock Exchange that is subject to the minimum standards outlined in the UK provisions that implemented the EU Consolidated Admissions and Reporting Directive (CARD) and the EU Transparency Directive.

[2996] U.K. Final Stage Impact Assessment, Mandating Climate-related Financial Disclosures By Publicly Quoted Companies, Large Private Companies and Limited Liability Partnerships (LLPs) (2021), available at *https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1055931/tcfd-final-*

that was previously used to inform the Commission's cost estimates of the proposed rules.[2997] The BEIS rule generally applies to companies that have over 500 employees and/or a turnover of more than £500 million.[2998] Both rules exhibit significant overlap as they are both largely based on the TCFD framework's major components, including disclosure on governance, strategy, and risk management, all of which have similar counterparts in the final rules. Both UK rules also include scenario analysis and metrics and targets; however, because undertaking these activities is not required under the final rules (only their disclosure in specific circumstances), we focus on the cost estimates of the other components that are more relevant to the final rules.[2999]

One-time implementation costs—which consist of ''familiarization costs'' and ''legal review''—are estimated to be $19,543 [3000] by the BEIS and $15,147 by the FCA. The BEIS rule presents first-year cost estimates of complying with climate-related disclosures associated with Governance ($11,256),[3001] Strategy ($16,080),[3002] and Risk Management ($13,359),[3003] for a combined total of $40,694, which is assumed to remain the same in subsequent years. This contrasts with the FCA's corresponding first-year costs of $183,028 and ongoing costs of $86,270 for larger issuers.[3004] The FCA rule also estimates costs for small and medium-sized issuers, with corresponding costs of $137,271 in the first year and $64,702 in subsequent years.

These estimates from the FCA and BEIS rules help to inform our assessment of the compliance costs of similar provisions of the final rules amending Regulation S–K, as our approach for these provisions is based, in part, on the TCFD recommendations. However, it is important to note that these estimates are intended to reflect compliance costs of the typical company within the designated sample of affected entities and are conditional upon several assumptions regarding the number of required staff, the rank or title of the staff, the required labor hours, and local wage data. Actual costs can vary significantly depending on company characteristics, such as company size, industry, business model, the complexity of the company's corporate structure, existing climate-related disclosure practices, and internal expertise, etc.

Another commenter provided cost estimates reported by an anonymous company, referred to as a ''Well-known seasoned issuer.'' [3005] This company, which has made TCFD-aligned disclosures public on its website (including Scope 1, Scope 2, and Scope 3 emissions disclosures) estimated that, combined with the amounts the company currently spends on voluntary climate disclosure, the company would need to spend a total of approximately $35 million over five years to implement climate-related reporting in order to comply with the proposed rules, if adopted as proposed. Within this amount, the company estimates one-time expenses of $19 million and recurring expenses averaging $3.1 million per year. The primary categories of expenses are audit fees, professional services, subscriptions, labor, licenses, and training. The company estimates that compliance with the provisions amending Regulation S–X, as proposed, would have initial costs of $1.5 million to $2.0 million and subsequent ongoing costs of $1.0 million to $2.0 million annually. The company also estimated compliance costs for the proposed Scope 3 emissions disclosure to be $15.6 million over five years, with a significant part of this cost attributable to attestation requirements and with ''filing'' Scope 3 information.[3006]

Several letters from professional trade or industry organization also provided cost estimates. One commenter stated that the ''cost of registrants trying to report in alignment with just certain aspects of TCFD for their first time on a voluntarily basis can be around $500,000. . . . The actual cost for complete alignment to TCFD could be up to $1,000,000 per registrant over several years,'' which does not include the annual cost associated with preparing for and conducting attestation.[3007] Another commenter said that based on member feedback, the ''true initial set up and ongoing compliance costs for a typical retailer will be more than 35 times the amount that the SEC has estimated . . . . Members estimate that the initial costs of implementing the proposed rules would be somewhere in the $5 million to $15 million range.'' [3008] Other commenters estimated the initial cost of complying with the proposed amendments to Regulation S–X would exceed $100 million.[3009] One commenter estimated that the combined costs of ''complying with the reporting requirements under S–X and S–K would

stage-ia.pdf (''BEIS Final Stage Impact Assessment''). Cost estimates of the BEIS rule (with the exception of familiarization costs) are sourced from this document.

[2997] *See* Proposing Release, section IV.C.2.a, which also reviews the BEIS rule (referred to as the ''UK Impact Assessment'' in the Proposing Release). The estimated costs of the BEIS rule, as outlined in the following paragraphs, are the same as those presented in the proposed rules, with the exception of applying an updated exchange rate to convert the costs from GBP to USD.

[2998] Specifically, the BEIS rule applies to relevant Public Interest Entities (''PIEs''), including UK Premium and Standard listed companies with over 500 employees, UK registered companies with securities admitted to the Alternative Investment Market with more than 500 employees, limited liability partnerships with over 500 employees and a turnover of over £500 million, and UK registered companies that are not included in the categories above and that have over 500 employees and a turnover of over £500 million.

[2999] The following cost estimates from the BEIS and FCA reflect internal labor costs with the assumption that affected entities have no pre-existing climate-related disclosure practices that fulfill the stated requirements. The costs are converted from GBP to USD using the 2022 average exchange rate of $1.2369 USD/GBP.

[3000] The familiarization cost component is sourced from the BEIS Consultation Stage Impact Assessment (as opposed to Final Stage), which assumes that scenario analysis requirements are not part of the familiarization process, and thus may be a relatively better representation of the corresponding cost with respect to the final rules. The familiarization cost is estimated to be £12,600. *See* BEIS Final Stage Impact Assessment2996. The other initial cost related to legal review (£3,200), as outlined in the BEIS Final Stage Impact Assessment, is added to obtain £15,800 ($19,543). *See supra* note 2996.

[3001] Governance costs include the ongoing cost to those in scope to implement, document and disclose governance of their climate related risks and opportunities and to coordinate across internal business functions.

[3002] Strategy costs include the ongoing reporting costs to those entities in scope of internally coordinating, documenting and disclosing climate-related risks and opportunities the company has identified, as well as reporting the impact of these risks on the company's business, strategy, and financial planning. This estimate does not include scenario analysis, which is discussed separately in a later paragraph.

[3003] Risk management costs are the ongoing annual costs to those entities in scope to disclose the company's management of climate-related risks, including the coordination across functions internally, identification and assessment of risks and their integration into the company's overarching risk-management strategy. This also includes the time taken to identify and analyze major risk exposures in the context of the company's business strategy.

[3004] The FCA presents aggregated costs for governance, strategy, and risk management disclosure instead of individual costs for each of the aforementioned disclosure categories. The cost discrepancy relative to the BEIS rule is primarily driven by significantly different assumptions of internal labor requirements, such as the number of employees, salaries, and required hours.

[3005] *See* letter from Chamber.

[3006] *See* letter by API. We note that the proposed rules would not have imposed any attestation requirements with respect to Scope 3 emissions disclosure.

[3007] *See* letter from AEPC.

[3008] *See* letter from RILA.

[3009] *See* letters from Western Energy Alliance (suggesting initial compliance costs to be ''over $100 million for large companies when considering not just the new systems but the staff training required'') and API (without specifying whether the $100 million figure reflects implementation costs or ongoing annual costs).

cost companies $3 to $7 million annually.'' [3010]

One commenter included cost estimates provided by members of its trade association with respect to their on-going efforts, prior to the proposed rules, in measuring GHG emissions.[3011] One member reported that an average automated GHG measuring system would cost $250,000 to purchase and set up, with ongoing annual costs of approximately $100,000. Another member reported that ''completing questionnaires and conducting emissions measurements through an automated GHG measuring program with applicable audits costs the company about $15,000 per year to maintain.'' Another member company's mature Scope 1 and 2 emissions reporting programs resulted in 100 to 200 resource hours per year.

Several individual registrants also provided cost estimates of either their own current climate-reporting practices or expected practices if the proposed rules were adopted as proposed. One multinational registrant that engages in hydrocarbon exploration and production estimated that initial compliance costs with respect to the proposed rules would range from $100 to $500 million.[3012] This registrant expressed concerns about the burden of complying with the proposed rules, particularly with the proposed amendments to Regulation S–X. This registrant estimated ongoing costs to be $10 to $25 million annually. One energy company noted that it expected compliance costs to be at least four to five times the estimates provided in the Proposing Release, primarily due to the necessary increases in staff and the added costs in auditing and attestation fees.[3013] Other energy companies estimated that compliance with the proposed amendments to Regulation S–X and reporting Scope 3 emissions would likely exceed $100 million [3014] and $1 million,[3015] respectively.

Another commenter, a multinational energy company, estimated its internal burden hours for Scope 3 emissions reporting to be 650 hours in the first year and 100 hours annually in subsequent years.[3016] A different commenter reported that it allocates one full-time consultant and 20 employees working part time each year from November to March as part of its process to measure Scope 1, Scope 2, and some Scope 3 emissions, collect and validate data, estimate and review emissions, and obtain third-party limited assurance for GHG-related data in its sustainability report.[3017] Another commenter that already tracks some Scope 1 emissions estimated that it may incur an additional cost of $10,556,800 or more to track and report Scope 1 emissions from additional facilities as a result of the proposed rules.[3018] A multinational fertilizer company estimated that the direct and indirect costs of compliance with the proposed rules would be between $35 million and $55 million, with assurance costs related to financial statement metrics estimated to be $70,000 to $225,000 annually.[3019]

We also reviewed memoranda of staff meetings with external parties that further inform our assessment of the final rules' compliance costs.[3020] One organization presented pricing information for the following relevant services provided: TCFD reporting, excluding measuring emissions and establishing targets ($100,000 average); assessing Scopes 1, 2, and 3 emissions ($75,000 to $125,000); and target setting ($20,000 to $30,000).[3021] A different organization indicated fees would range from $11,000 to $105,000 for services related to GHG accounting (Scopes 1, 2, and 3 emissions).[3022] Another organization estimated that costs for assessing Scopes 1 and 2 emissions would range between $25,000 and $45,000 and assessing Scopes 1, 2, and 3 emissions would cost between $50,000 and $125,000, depending on whether a given company already has emissions-measuring systems and processes in place.[3023]

The cost information in the above sources indicates the variance and the scale of compliance costs the proposed rules would have imposed on registrants. We note, however, that many of the estimates combine the costs of multiple components without providing a breakdown of component costs, which makes it difficult to isolate only the components that are applicable to the proposed or final rules. Furthermore, these voluntary cost estimates may reflect some selection bias such that they may be skewed toward a certain demographic (*e.g.,* large-cap companies) and thus may not be representative of the broad sample of affected registrants. Finally, to the extent that the cost estimates are specific to the proposed rules, they do not account for the changes made to the final rules. For example, the final rules' requirements with respect to financial statements have been narrowed relative to the proposed rules.[3024] In addition, the final rules do not require the disclosure of Scope 3 emissions. Nevertheless, we use this cost information to the extent possible to inform our assessment of the expected compliance costs of the final rules, as outlined in the following subsection.

b. Direct Cost Estimates for the Final Rules

The final rules will impose a number of new disclosure requirements on registrants. These requirements will result in additional compliance costs for registrants, and, depending on the nature of the registrant's operations and its existing disclosure practices, these additional compliance costs could be significant. Using comment letters and other sources, we take a conservative approach (*i.e.,* erring on the side of overstating costs rather than understating them) to estimate approximate compliance costs for the final rules, which are discussed in

subsequent sections and summarized immediately below.

With respect to the Regulation S–K amendments pertaining to governance disclosure (Item 1501); disclosure regarding the impacts of climate-related risks on strategy, business model, and outlook (Items 1502(a) through (e) and (g)); and risk management disclosure (Item 1503), we estimate that compliance costs will be $327,000 in the first year of compliance and $183,000 annually in subsequent years.[3025] For those registrants that conduct scenario analysis and are required to provide attendant disclosures (Item 1502(f)), we estimate the reporting costs will be $12,000 in the first year and $6,000 in subsequent years.[3026] Some registrants will be required to disclose Scope 1 and 2 GHG emissions (Item 1505) after a specified phase in period. We estimate that the compliance costs for these disclosures will be $151,000 in the first year of compliance and $67,000 annually in subsequent years.[3027] After an additional phase in period, applicable registrants will be required to obtain assurance for their emissions disclosures (Item 1506). Limited assurance for emissions disclosures is estimated to cost $50,000 while reasonable assurance is estimated to cost $150,000.[3028] For registrants that voluntarily establish targets or goals and are required to provide attendant disclosures (Item 1504), we estimate the reporting costs will be $10,000 in the first year of establishing the target and $5,000 in subsequent years.[3029] With respect to amendments to Regulation S–X, we estimate an upper bound of $500,000 in the first year of compliance, while the annual cost in subsequent years is estimated to have an upper bound of $375,000.[3030] Incremental audit fees are estimated to have an upper bound of $23,000 for all years.[3031]

We emphasize that there could be a considerable range in actual compliance costs given that not all costs listed above will apply to all registrants or during all measurement periods. Depending on the registrant, annual compliance costs (averaged over the first ten years of compliance) could range from less than $197,000 to over $739,000.[3032] A registrant's compliance costs may be at the lower end of the cost range if, for example, it does not conduct scenario analysis, does not have material Scope 1 and 2 emissions, has no climate-related target or goal, and has no applicable expenditures or financial statement impacts that require disclosure, thereby avoiding the corresponding costs of the aforementioned disclosure items. However, this registrant may have exposures to material climate risks that necessitate governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure. In this case, the cost of these required disclosures—estimated to be $327,000 in the first year of compliance and $183,000 annually in subsequent years [3033]—would comprise the full compliance cost of the final rules. This corresponds with an average annual compliance cost of $197,000 (rounded to the nearest $1,000) over the first ten years of compliance.[3034] Incremental compliance costs would be even lower for registrants that already provide these disclosures (either voluntarily or as required by other laws or jurisdictions).[3035]

At the upper end of the cost range, for example, there may be other registrants for which all estimated compliance costs apply. In this example, these registrants could incur an estimated $872,000 [3036] in the first year of compliance and lower annual costs in subsequent years. After the respective phase in periods, these registrants would incur additional costs for GHG emissions disclosure, limited assurance, and subsequently reasonable assurance (assuming the registrant is an LAF). This registrant would incur an average annual compliance cost of $739,000 (rounded to the nearest $1,000) over the first ten years of compliance.[3037] These examples highlight the potential range in compliance costs depending on a given registrant's circumstances, including (but not limited to) industry, size, existing climate-related disclosure practices, and whether the registrant's climate-risk exposure exceeds applicable materiality thresholds for disclosure.

Regarding assessing materiality to determine whether disclosure is required under the final rules, we acknowledge that some registrants may need to expend resources to first determine whether particular disclosure items are material, even in cases where registrants ultimately determine they do not need to make disclosure. While commenters provided estimates of the overall costs of measuring and assessing GHG emissions and making disclosure under TCFD disclosure frameworks, they did not provide a level of detail that would enable us to reliably disaggregate the materiality determination from the costs of disclosure more broadly. We also note that the cost of such a determination could vary depending on the registrant's facts and circumstances and may in some cases be de minimis. While we have not provided a standalone cost estimate of making such materiality determinations, our estimates of the costs of governance disclosure, disclosure regarding the impacts of climate-related risks on strategy, business model, and outlook, and risk management disclosure begin with TCFD disclosure as a starting point.[3038] Thus, to the extent that a materiality or similar assessment is included in TCFD disclosure, this cost is reflected in the Commission's compliance cost estimates with respect to the above disclosure items.

Moreover, the above estimates are conditional upon several factors. First, they depend on the sample of sources and commenters that voluntarily provided relevant cost information.[3039] To the extent that this sample is not representative of the broad set of affected registrants, the resulting estimates may similarly be less representative. In addition to company size and industry, another relevant factor may be the decision to engage third-party advisory services. Some registrants may determine that engaging such advisory services will better position them to comply with the final rules, while others may decide to use in-

[3031] *Id.*

[3032] Registrants will incur compliance costs for different disclosure items at different times due to applicable phase in periods. For ease of comprehension and comparability, these estimates are presented as the average annual compliance cost over the first ten years of compliance. *See infra* notes 3034 and 3036 for additional details.

[3033] *See* section IV.C.3.b.i.

[3034] ($327,000 + $183,000*(9 years))/10 = $197,400.

[3035] *See supra* section IV.A for a discussion on existing laws (domestic and foreign) that elicit similar disclosures and current market practices with respect to climate-related disclosures. *See also infra* section IV.C.3.c.

[3036] $327,000 (governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure) + $12,000 (reporting cost of scenario analysis) + $10,000 (reporting cost of target or goal) + $500,000 (disclosures related to amendments to Regulation S–X, upper bound) + $23,000 (audit fees, upper bound) = $872,000.

[3037] Total compliance costs are calculated each year for the first ten years of compliance, taking into account the various disclosure items and their respective phase in periods. The average of these annual costs is $738,700.

[3038] See section IV.C.3.b.i.

[3039] *See supra* section IV.C.3.a.

house resources.[3040] The above estimates incorporate information on both internal costs (*e.g.,* employee hours) and external costs (*e.g.,* hiring third parties or consultants), as provided by comment letters and other sources.[3041] Second, several analytical assumptions were incorporated in the estimation process. While we endeavored to apply them consistently and in a conservative manner throughout the analysis, actual compliance costs may differ to the extent that these assumptions do not reflect a given registrant's specific circumstances.

The above compliance cost estimates exhibit certain features that may make them conservative. First, the cost estimates from comment letters and other sources, which serve as inputs in our cost estimation process, are almost all from large-cap companies. To the extent that compliance costs increase with company size, smaller registrants can expect lower costs.[3042] Furthermore, there are numerous instances in which analytical assumptions were required due to insufficient information from the source material. Wherever possible, assumptions that tend to overstate actual costs were chosen over those that would tend to understate them. Certain registrants may nonetheless incur costs that exceed our estimates. However, we believe that due to the nature of our cost estimation process, the majority of registrants will incur costs that do not exceed our estimates. Furthermore, our estimates assume registrants have no pre-existing climate-related disclosure practices. As a result, those that already provide disclosures that meet some of the final rules' requirements will face lower incremental costs.[3043]

We recognize that some comment letters in response to the proposed rules contained compliance cost estimates that significantly exceed the Commission's estimates of the final rules.[3044] We reiterate that this discrepancy is likely attributable to a number of changes from the proposed rules that reduce compliance costs. For example, the final rules do not require Scope 3 emissions reporting and have less burdensome requirements with respect to the amendments to Regulation S–X, thereby resulting in reduced compliance costs.

Our compliance cost estimation process consists of five elements. First, we estimate the aggregate costs of complying with three specific provisions that have similar counterparts within the TCFD framework: governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure. Second, we estimate the cost of assessing and disclosing Scope 1 and 2 emissions. Third, we estimate the cost of obtaining third-party assurance for GHG emissions disclosures. Fourth, we estimate the reporting costs of scenario analysis and targets and goals. Fifth, we estimate the costs associated with complying with the amendments to Regulation S–X and incremental audit costs. We proceed with a review of each element that describes how we arrived at the above compliance cost estimates.

i. Cost Estimates of Governance Disclosure; Disclosure Regarding Impacts of Climate-Related Risks on Strategy, Business Model, and Outlook; and Risk Management Disclosure

We begin by reviewing estimates from commenters and other sources with respect to the costs of TCFD disclosure with the objective of informing our assessment on the costs of similar provisions of the final rules. Specifically, these provisions of interest include governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure. We begin by focusing on these specific provisions separate from other components (*e.g.,* GHG emissions measurement or targets and goals) because these other components are not necessarily required in all circumstances or by all registrants.

In many cases, however, commenters provided one aggregate cost for their TCFD disclosure that also included the costs of GHG emissions measurement or target and goals-related activities. Without a breakdown of component costs, we face challenges in isolating the costs of the relevant provisions. Moreover, some commenters provided only a single aggregate cost that, in addition to their TCFD disclosure, includes several other components not required by the final rules,[3045] which poses similar challenges in separately estimating the component costs.

To account for these challenges, we used an approach that takes these aggregate cost estimates and applies adjustments derived from specific estimates from other sources, allowing us to obtain a more targeted ''adjusted cost.'' For example, some commenters provided their cost estimates specifically for measuring emissions, from which we can determine the median reported emissions-measurement cost. Thus, if a given commenter provided an aggregate cost of TCFD disclosure that includes the measuring of emissions, we applied an adjustment (*i.e.,* subtracted the median reported emissions-measurement cost), which results in an adjusted cost estimate for the remaining portion of TCFD disclosures (*i.e.,* the provisions of interest). We applied similar adjustments throughout the analysis, as described in detail below.

While this approach can help us arrive at more granular cost estimates, we also recognize its limitations. Primarily, the median reported cost of a given component may be different from the actual cost incurred by a specific registrant (due to differences in company size, industry, climate reporting practices, or other factors) such that applying the adjustment may not yield a true representation of that registrant's cost breakdown. However, we believe this issue is mitigated to some extent because almost all estimates used in this analysis are from large cap companies and thus of relatively comparable size. Furthermore, while a given cost adjustment may be overstated for some registrants and understated for others, these discrepancies should partially offset each other when we subsequently take

[3040] For example, registrants that are required to disclose emissions may be more likely to rely on external services. Registrants facing climate-related risks that are complex or a myriad may also be more likely to engage third party services. We emphasize that the final rules impose no requirement with respect to the use of third-party services and that registrants are free to decide how best to meet compliance based on their specific circumstances.

[3041] Some commenters provided TCFD disclosure costs and separate costs for sustainability consultants. *See, e.g.,* letters from Soc. Corp Gov (June 11, 2021, and June 17, 2022). However, the latter were often not explicitly tied to TCFD, but rather associated with sustainability reports or other disclosures and activities not necessarily required by the final rules. In these cases, we only used the TCFD disclosure costs due to their direct relevance while omitting the cost of sustainability consultants as we could not reliably determine what portion were directly attributable to the TCFD and the provisions of interest. For GHG emissions, some companies' estimates included both internal and external costs, some mentioned the use of external costs but did not provide dollar estimates, while others did not engage external services at all. We have incorporated all available information to the extent possible in our estimation process.

[3042] Nevertheless, we recognize that in some cases, certain components of compliance costs may not vary with size and may be higher in proportional terms for smaller registrants.

[3043] *See* section IV.C.3.c.

[3044] *See* section IV.C.3.c.

[3045] For example, an anonymous large-cap company ''noted that combined costs for producing its first TCFD, SASB, and GRI disclosures were between $200,00 and $350,000.'' *See supra* note 2987.

the median [3046] of the resulting adjusted costs.

Table 8 presents an overview of the cost estimation methodology with respect to the provisions of interest. Column (1) specifies the commenter or other public source that contains cost estimates specific to TCFD disclosures. Some sources contained costs for multiple, anonymous companies. Where applicable, these company descriptions are provided in Column (2). Column (3) shows the ongoing costs of TCFD disclosures before cost adjustments are applied. Some costs are taken directly from the source, whereas in other cases, specific assumptions and calculations are applied to obtain an estimate (see table footnotes for details). For example, if a source provided estimates in the form of FTEs or burden hours, we converted them to dollars according to hourly cost estimates consistent with the PRA.[3047] Some sources only provided an initial cost (*i.e.,* first-year startup cost) without providing ongoing, annual costs. In these cases, we estimate the ongoing cost by applying a percentage reduction derived from other sources. Furthermore, because the CDP questionnaire exhibits full alignment with the TCFD recommendations,[3048] we also included estimates for responding to the CDP questionnaire, from which we estimated the equivalent cost for TCFD disclosures by applying a conversion factor.[3049]

We determined that some of the costs in Column (3) include the costs of setting targets and goals or measuring GHG emissions, as indicated in Columns (4) and (5), respectively. Where applicable, these costs are subtracted from Column (3) to obtain the adjusted cost in Column (6), which represents the aggregate, annual ongoing cost estimate for provisions of interest: governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure.

TABLE 8—COST ESTIMATES OF GOVERNANCE DISCLOSURE; DISCLOSURE REGARDING CLIMATE-RELATED RISKS THAT HAVE MATERIAL IMPACTS ON STRATEGY, BUSINESS MODEL, AND OUTLOOK; AND RISK MANAGEMENT DISCLOSURE

Commenter or source (1)	Type of company (if specified) (2)	Ongoing cost of TCFD disclosures (pre-adjustment) (3)	Adjustment: setting targets and goals ($54,015) [1] (4)	Adjustment: Scope 1, Scope 2, and some Scope 3 emissions ($79,236) [2] (5)	Adjusted cost [3] (6)
Society for Corporate Governance (June 11, 2021).	Financial Services company	[4] $1,918,080	Included	Included	$1,784,829
	Energy company	[5] 8,524,800		Included	8,445,564
	Comm. Services company	[6] 865,385	Included	Included	506,862
Society for Corporate Governance (June 17, 2022).	Company 5	[7] 360,000		Included	280,764
	Company 6	[8] 2,237,760	Included.	Included	2,104,509
FCA rule		[9] 86,270			86,270
BEIS rule		[10] 40,694			40,694
The Climate Risk Disclosure Lab	Large-cap financial institution.	[11] 56,000			56,000
	Mid-cap company	[12] 5,600			$5,600
	Large-cap company	[13] 63,000			63,000
American Exploration and Production Council.		[14] 280,000			280,000
S&P Global		[15] 56,000			56,000
Median					[16] 183,135

[1] The adjustment factor for setting targets and goals is $54,015, which is determined by relevant cost estimates presented in Table 9.

[2] The adjustment factor for assessing Scope 1, Scope 2, and some Scope 3 emissions is $79,236, which is determined by relevant cost estimates presented in Table 10.

[3] The adjusted cost is calculated as Column (3) minus adjustment factors where applicable, as indicated by Columns (4) and (5). If Column (4) indicates ''Included,'' then $54,015 is subtracted from Column (3). Similarly, if Column (5) indicates ''Included,'' then $79,236 is subtracted from Column (3). The net result is the ''adjusted cost,'' presented in Column (6).

[4] *See* letter from Soc. Corp. Gov (June 11, 2021). This company reported that three FTEs ''plus others'' spend nine months for TCFD reporting. (3 FTEs)*(40 hrs/wk)*(36 wks)*($444/hr) = $1,918,080. The source does not specify how many hours are contributed by the ''others,'' thus the estimated cost may be understated.

[5] *See id.* This company reported TCFD-aligned reporting process involved 40 people from the company and took six months of nearly full-time participation by 20 core team members. (20 FTEs)*(40 hrs/wk)*(24 wks)*($444/hr) = $8,524,800. The source does not specify how many hours are contributed by those outside of the 20 core members, thus the estimated cost may be understated.

[6] *See id.* This company reported spending $1.25 million on both CDP and TCFD disclosures, in addition to several other components. We first estimate the TCFD component by applying the 4-to-9 ratio. ($1.25 million)*(9/13) = $865,385.

[7] *See* letter from Soc. Corp. Gov (June 17, 2022). This company reported spending ''$160,000 for CDP and other climate-related surveys, including supply chain surveys.'' To be conservative, we assume that the $160,000 is the cost for CDP only, then apply the 4-to-9 ratio. $160,000*(9/4) = $360,000.

[8] *See id.* This company reported that ''two employees focus on climate change, including disclosure, and 1.5 employees focus on sustainability reporting overall,'' spending nine months on its TCFD report. (3.5 FTEs)*(40 hrs/wk)*(36 wks)*($444/hr) = $2,237,760.

[9] *See supra* note 2995. This is the ongoing cost of ''coordination of disclosure inputs across functions'' (£69,747 for larger issuers), which is in line with the TCFD disclosure categories of Governance, Strategy, and Risk Management. This cost is converted to USD based on the 2022 average exchange rate. (£69,747)*(1.2369 USD/GBP) = $86,270. This reflects a 56% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[3046] Throughout the cost estimation process, we use medians instead of means since the former is less sensitive to outliers.

[3047] The PRA assumes that internal burden hours cost $444/hour, while external burden hours cost $600/hour. *See* section V.

[3048] For information on how the CDP questionnaire is fully aligned with the TCFD, *see* CDP, How CDP is aligned to the TCFD, *supra* note 52.

[3049] Two companies referenced in comment letters noted that it takes a designated number of staff four months to complete the CDP questionnaire and nine months to complete TCFD disclosures. Based on these estimates, we incorporate the assumption that the CDP-to-TCFD cost ratio is 4 to 9 (''4-to-9 ratio''). *See* letters from Soc. Corp. Gov. (June 11, 2021 and June 17, 2022).

[10] *See supra* note 2996. This figure adds the ongoing costs of disclosure associated with Governance (£9,100), Strategy (£13,000), and Risk Management (£10,800). The total (£32,900) is converted to USD based on the 2022 average exchange rate. (£32,900)*(1.2369 USD/GBP) = $40,694. This reflects a 32% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[11] *See supra* note 2987. This company reported that the cost of issuing its first TCFD report was less than $100,000. To be conservative, we assume $100,000 is the initial cost. To estimate ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%. ($100,000)*(1 − 0.44) = $56,000.

[12] *See id.* This company reported that the cost of producing its first TCFD report was less than $10,000. To be conservative, we assume $10,000 is the initial cost. In estimating ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%. $10,000*(1 − 0.44) = $5,600.

[13] *See id.* This company reported that the combined cost for producing their first TCFD, SASB, and GRI disclosures was between $200,000 and $350,000 but did not provide the cost for TCFD only. However, it noted that the cost of preparing its first CDP questionnaire did not exceed $50,000. To be conservative, we assume the initial CDP-related cost is $50,000. We apply the 4-to-9 ratio to convert this to the initial costs of TCFD disclosure and then apply a 44% reduction to estimate the ongoing cost. $50,000*(9/4)*(1 − 0.44) = $63,000.

[14] *See* letter from AEPC. This commenter stated that initial costs to report in alignment with certain aspects of the TCFD can be around $500,000. To estimate ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%. $500,000*(1 − 0.44) = $280,000.

[15] *See supra* note 3021. This source, which provided indicative fees for TCFD reporting services, noted that the average cost would be around $100,000. To estimate ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%. $100,000*(1 − 0.44) = $56,000.

[16] When there is an even number of data points, there is no single middle value. In such cases, the median is computed as the arithmetic mean of the two middle data points. Accordingly, the median of Column (6) is calculated as follows: ($86,270 + $280,000)/2 = $183,135.

We next discuss our estimation process and methodology involved in producing the numbers in Table 8, including which cost estimates were included versus excluded, what assumptions were incorporated, and how the adjustment factors for targets and goals and GHG emissions measurement were calculated and applied. Many commenters did not explicitly state whether the costs of measuring emissions or setting targets and goals were included in their TCFD costs. As a result, we assumed that such costs were included only if such activities were contained in their qualitative description of climate-related disclosure activities. Of the twelve cost estimates presented in Table 8, we assume that three included the cost of target-related activities, as indicated in Column (4).[3050] We also assume that five estimates included the costs of measuring Scope 1, Scope 2, and some Scope 3 emissions, as indicated in Column (5).[3051]

We next review cost estimates specific to setting targets and goals and assessing GHG emissions (Scope 1, Scope 2, and some Scope 3) from other sources in order to obtain their adjustment factors ($54,015 and $79,236, respectively). We recognize that the final rules do not necessarily require registrants to incur costs associated with setting targets and goals or measuring all three scopes of GHG emissions. We review such cost estimates because we determined that some of the sources in Table 8 included them with their overall TCFD-related costs; however, they should not necessarily be interpreted as direct compliance costs resulting from the final rules. Instead, we use these cost estimates to obtain appropriate adjustment factors that are subsequently subtracted from the applicable estimates in Column (3).

The adjustment factor for setting targets and goals is $54,015, as indicated in Column (4). To obtain this number, we begin by reviewing four sources that provided more specific cost estimates related to targets and goals,[3052] which are presented in Table 9. The BEIS rule estimated that Metrics and Targets (including the cost of data gathering and cost of reporting, unrelated to GHG emissions) would have an ongoing cost of $72,359, while the FCA rule estimated the ongoing cost to be $53,507.

The remaining two sources only provided initial costs. Thus, to estimate the ongoing cost, we referred to the percent reduction from initial to ongoing costs reflected by the BEIS rule (23 percent reduction) and FCA rule (67 percent reduction), which yields a median percent reduction of 45 percent. One source estimated that setting targets would come with an initial cost ranging from $20,000 to $30,000.[3053] We apply the 45 percent reduction to arrive at an ongoing cost estimate of $13,750. Another company reported that it spent $1 million as an initial cost for target baseline and projections.[3054] We similarly apply the 45 percent reduction to arrive at an ongoing cost estimate of $550,000. The median of the ongoing costs of setting targets in Table 9 is $54,015, which is used as the adjustment factor for setting targets and goals (as indicated in Column (4) of Table 9).

[3050] The Financial Services company stated that it ''reports on its progress towards its low-carbon financing and carbon-neutrality goals; the percentage of renewable energy sourced to support its operations and the percentage of energy reductions year over year.'' The Communication Services company reports that it gathers metrics/data related to carbon abatement, renewable energy, water conservation, and incurs expenses for monitoring and data quality. (*See* letter from Soc. Corp. Gov (June 11, 2021)). Company 6 stated that it ''gathers data and reports on progress towards the company's low-carbon financing goal, progress toward the company's carbon-neutrality goal, the percentage of renewable energy sourced to support the company's operations, the percentage of energy reduction year-over-year.'' (*See* letter from Soc. Corp. Gov (June 17, 2022)). Based on the description of these activities, we assume that these three companies included the costs of setting targets and goals in their reported costs. The Large-cap financial institution stated that it ''is committed to achieving net-zero emissions by 2050 and is in the process of implementing the Paris Agreement Capital Transition Assessment (PACTA) methodology to align its loan portfolio with the goals of the Paris Agreement.'' *See supra* note 2987. However, given their relatively low reported costs, we assume that the cost of setting targets and goals is not included in order to remain conservative in our estimation.

[3051] The Financial Services company, Communications Services company, Company 5, and Company 6 all explicitly state that they measure and report Scopes 1, 2, and some Scope 3 emissions. The Energy company does not explicitly state that it measures emissions, however it states that it requires ''consultants in emissions, climate science, and modeling,'' ''multiple engineering disciplines,'' and ''GHG emissions reporting expertise'' as part of its disclosures. *See* letters from Soc. Corp. Gov (June 11, 2021 and June 17, 2022). Thus, we assume that these five companies included the costs of measuring Scope 1, 2, and some Scope 3 emissions within their reported costs. The Large-cap financial institution and Mid-cap company also report measuring the three scopes of emissions, however given their relatively low reported costs, we assume that the cost of measuring emissions is not included in order to remain conservative in our estimation.

[3052] These sources generally do not provide sufficient detail on precisely what the targets and goals disclosure would consist of; therefore, it is difficult to determine to what extent the corresponding cost estimates are applicable to the final rules' requirements on targets and goals. We can nevertheless use these sources to help us arrive at better informed compliance cost estimates. Similar reasoning can be applied to the cost estimates of scenario analysis, discussed in section IV.C.3.b.iv.

[3053] *See supra* note 3021.

[3054] *See* letter from Soc. Corp. Gov. (June 17, 2022).

TABLE 9—ONGOING COSTS OF SETTING TARGETS AND GOALS

Commenter or source	Ongoing costs of setting targets and goals
BEIS rule	[1] $72,359
FCA rule	[2] 35,671
Society for Corporate Governance (June 17, 2022)	[3] 550,000
S&P Global	[4] 13,750

[1] *See supra* note 2996. The BEIS rule estimated that the ongoing cost metrics and targets disclosure is £58,500 (£52,000 for annual data gathering and £6,500 for the cost of reporting). We apply the 2022 average exchange rate. (£58,500)*(1.2369 USD/GBP) = $72,359. This reflects a 23% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[2] *See supra* note 2995. The FCA rule estimated that ongoing costs for metrics and targets disclosure is £43,259; however, this figure includes assessing Scopes 1 and 2 emissions. The corresponding initial cost disaggregates the cost, with two-thirds allocated to metrics and targets unrelated to Scopes 1 and 2 emissions. We assume the ongoing cost reflects the same proportional allocation and then we apply the 2022 average exchange rate. (£43,259)*(2/3)*(1.2369 USD/GBP) = $35,671. This reflects a 67% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[3] *See* letter from Soc. Corp. Gov (June 17, 2022). "Company 7" in this comment letter reported that it spent $1 million on "building a database for target baseline and projections," but did not provide the ongoing cost. To estimate the ongoing cost, we refer to the percentage reduction from initial to ongoing costs as reflected by the BEIS rule (23%) and the FCA rule (67%), of which the median is 45%. ($1,000,000)*(1 − 0.45) = $550,000.

[4] *See supra* note 3021. The S&P Global meeting memorandum provides estimates on the initial cost of setting target ($20,000–$30,000) but does not provide estimates with respect to the ongoing cost. To estimate the ongoing cost, we refer to the percentage reduction from initial to ongoing costs as reflected by the BEIS rule (23%) and the FCA rule (67%), of which the median is 45%. We apply this median percentage reduction to the midpoint of the initial cost: ($25,000)*(1 − 0.45) = $13,750.

Next, we focus on the adjustment factor for assessing Scope 1, Scope 2, and some Scope 3 emissions (as indicated in Column (5) of Table 8). To obtain this number, we review eight relevant estimates, which are presented in Table 10. Where necessary, modifications or assumptions are applied to the estimates (see table footnotes for details). Lastly, we take the median of these eight data points to obtain the adjustment factor for measuring Scope 1, Scope 2, and some Scope 3 emissions: $79,236. We reiterate that the final rules do not require the disclosure of Scope 1 and 2 emissions in all cases or from all registrants, and Scope 3 disclosures are not required. We reviewed these emissions cost in this section because we subtract them from applicable estimates in Column (3) of Table 8, which we have deemed to include emissions costs.

TABLE 10—ONGOING COSTS OF MEASURING SCOPE 1, SCOPE 2, AND SOME SCOPE 3 EMISSIONS

Commenter or source	Company (if specified)	Ongoing costs of measuring Scope 1, Scope 2, and some Scope 3 emissions
Society for Corporate Governance (June 17, 2022)	Company 9	[1] $200,000
	Company 10	[2] 83,472
	Company	[3] 75,000
ERM Survey		[4] 182,985
Air Products and Chemicals, Inc		[5] 4,032,000
Persefoni		[6] 50,000
S&P Global		[7] 40,000
South Pole		[8] 23,184

[1] *See* letter from Soc. Corp. Gov. (June 17, 2022). Company 9 discloses Scope 1 and Scope 2 and some Scope 3 GHG emissions but does not specify which categories of Scope 3 emissions are reported. The company "conducts the emissions inventory/data gathering in-house at an estimated cost of at least $200,000 annually." Thus, we assume that $200,000 is the ongoing cost of measuring Scope 1, Scope 2, and some Scope 3 emissions. This estimate may be understated as it is presented as a minimum cost.

[2] *See id.* Company 10 discloses Scope 1 and Scope 2 and some Scope 3 (fuel and energy-related activities, business travel, and use of sold products) GHG emissions. Approximately five to seven staff members are involved with the emissions calculations and reporting to various agencies and for verification. The company estimates 188 hours for emissions gathering/annual operating reporting across the company's utility and gas infrastructure business unit and preparing its final verification support. Thus, we assume the 188 burden hours is the ongoing costs of measuring the specified scopes of emissions. (188 hours)*($444/hr) = $83,472.

[3] *See id.* Company 11 discloses Scope 1, Scope 2, and some Scope 3 (business travel, commuting, waste, downstream leased assets) GHG emissions. The company estimated its internal time and external resources associated with emissions inventory/data gathering to be about $75,000 annually.

[4] *See* ERM survey. The ERM survey indicated that the average spend for GHG analysis and/or disclosures is $237,000 annually. This survey category included all costs related to developing GHG inventories, including analysis and disclosure of Scope 1, Scope 2, and/or Scope 3 emissions. This category also included preparation of GHG data for inclusion in public reporting, any analysis related to setting science-based targets, and other similar efforts to understand GHG emissions. Because this estimate includes targets, we subtract the median ongoing cost of targets ($54,015), as reported in Table 9. $237,000 − $54,015 = $182,985.

[5] *See* letter from Air Products and Chemicals, Inc. This company reports Scope 1, Scope 2, and Scope 3 emissions, but does not specify which categories of Scope 3. The company's emissions reporting process requires one full-time consultant and 20 employees working part-time each year from Nov. to Mar. (1 full-time consultant)*(40 hrs/wk)*(20 weeks)*($600/hr) + (20 employees)*(20 hrs/wk)*(20 wks)*($444/hr) = $4,032,000. However, this estimate may be overstated because it includes the cost of third-party limited assurance for GHG emissions.

[6] *See supra* note 3023. Persefoni estimates that the cost of assessing Scope 1, Scope 2, and Scope 3 emissions for companies of "high maturity" (*i.e.*, those that are already measuring/tracking Scope 1, Scope 2, and Scope 3 emissions, among other activities) is $50,000, which we assume to reflect ongoing costs. The commenter further estimates that the corresponding cost for companies that do not already measure/track such emissions would be $125,000. If this figure is assumed to represent initial costs, then the estimates reflect a 60% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[7] *See supra* note 3021. S&P Global estimated that the cost of assessing Scope 1, Scope 2, and Scope 3 emissions for the first time is between $75,000 and $125,000. We take the midpoint of this range ($100,000) and apply the same percent reduction (60%) reflected in the Persefoni meeting memorandum to estimate ongoing costs. $100,000*(1 − 0.6) = $40,000.

[8] *See* South Pole Memo. South Pole indicated that conducting a bottom-up assessment of Scope 1, Scope 2, and Scope 3 emissions for the first time can cost between €10,000 and €100,000. We take the midpoint (€55,000), apply the 2022 average exchange rate ($1.0538 USD/€), and apply the same percent reduction (60% reduction) reflected in the Persefoni meeting memorandum to estimate ongoing costs. (€55,000)*(1.0538 USD/€)*(1 − 0.6) = $23,184.

There were other commenters and sources that contained individual cost estimates specific to only Scope 1,[3055] Scopes 1 and 2 combined,[3056] or only Scope 3 emissions measurement,[3057] as opposed to an aggregate cost that combines all three scopes. However, because we determined that all estimates indicated by Column (5) of Table 8 include the aggregate cost of all three scopes of emissions and to remain conservative in our estimation, we opted not to use estimates of individual scopes of emissions for comparability.[3058]

We have so far obtained the adjustment factors for setting targets and goals ($54,015) and measuring Scope 1, Scope 2, and some Scope 3 emissions ($79,236). We next subtract these amounts, where applicable, from Column (3), from which the result is presented as the adjusted cost in Column (6). The median of the adjusted costs is $183,135. We next extrapolate the initial cost using the assumption of a 44 percent cost reduction [3059] from the first year to subsequent years of these corresponding disclosures. Thus, we estimate that the aggregate compliance costs for governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure are $327,000 for the first year and $183,000 for subsequent years (rounded to the nearest $1,000).[3060]

There were additional estimates associated with TCFD disclosure costs that were ultimately not included in this analysis, mainly due to the lack of details needed to obtain a quantitative estimate.[3061] For example, one commenter stated that their ''Head of Corporate ESG Strategy and Reporting leads a team of employees that required seven months to gather data and draft disclosures for our 2021 TCFD Report in coordination with numerous subject matter experts across our entire organization.'' [3062] However, the commenter did not specify how many staff or FTEs are involved, which precludes us from reliably calculating burden hours and associated costs. Another commenter asserted that the ''actual cost for complete alignment to TCFD could be up to $1,000,000 per registrant over several years.'' Because the commenter did not provide the number of years, however, we are unable to obtain the annual costs.[3063] Other sources provided costs that had general descriptions (*e.g.,* ''implementation costs'' or ''two FTEs . . . dedicated to climate reporting'') that did not explicitly mention ''TCFD'' disclosures.[3064] We similarly did not include such estimates given that we cannot reliably infer whether these costs are reflective of TCFD disclosures and the specific provisions of interest.

ii. Cost Estimates of Scope 1 and 2 Emissions Disclosures

The final rules require the disclosure of Scope 1 and 2 emissions, if material, by LAFs and AFs, while SRCs and EGCs are exempt.[3065] To inform our assessment of the associated cost, we review comment letters and other sources that contain relevant estimates, presented in Table 11. We note that three of the estimates are specific to the cost of assessing Scope 1 emissions only.[3066] Nevertheless, we include them in Table 11 because (a) these Scope 1 emissions cost estimates are generally higher than other estimates that include both Scope 1 and 2 emissions, and (b) the costs can only increase if the Scope 1 emissions estimates are adjusted to also account for Scope 2 emissions (*i.e.,* they are understated with respect to the cost of both Scope 1 and 2 emissions). Thus, we include the Scope 1 emissions cost estimates to remain conservative in our estimation.

TABLE 11—COSTS OF ASSESSING SCOPE 1 AND 2 EMISSIONS

Commenter or Source	Company (if specified)	Ongoing cost
Persefoni		[1] $25,000
FCA rule		[2] 17,836
S&P Global		[3] 40,000
International Dairy Foods Association		[4] 66,600
International Dairy Foods Association		[5] 100,000
Energy Transfer LP		[6] 10,162,035
Society for Corporate Governance (June 17, 2022)	Company 4	[7] 300,000

[3055] *See* letters from Soc. Corp. Gov. (June 17, 2022); and IDFA.

[3056] *See supra* notes 3021, 3023, and 2995; *see also* letter from IDFA.

[3057] *See* letters from Williams, Inc.; and Ørsted.

[3058] In some cases, commenters' estimates of assessing Scope 1 emissions are greater than other commenters' combined estimates of assessing Scope 1, Scope 2, and some Scope 3 emissions. However, because the resulting adjustment factor will be *subtracted* from Column (3) of Table 8 to obtain compliance costs, we do not include the greater Scope 1 cost estimates in order to remain conservative and to avoid understating final compliance costs. In the following subsection, however, we include these cost estimates when estimating the combined costs of Scopes 1 and 2 emissions in a similar bid to remain conservative.

[3059] As noted earlier in this subsection, the FCA rule and BEIS rule reflect a 56% and 32% reduction in cost, respectively, from initial year to subsequent years regarding the provisions of interest (*i.e.,* governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure). The median, 44%, is used to estimate the initial cost.

[3060] No commenters or sources offered estimates specific to the cost of the disclosure of material expenditures directly related to climate-related activities as part of a registrant's strategy, transition plan and/or targets and goals. Nevertheless, the Commission's estimates (*i.e.,* $327,000 for the first year and $183,000 annually in subsequent years) should reflect this cost based on our application of conservative assumptions and because of the small expected incremental cost given that registrants will likely be tracking the material expenditures under the financial statement disclosure requirements.

[3061] *See, e.g.,* letters from Soc. Corp. Gov. (June 11, 2021); Nasdaq; Chamber; and AEPC.

[3062] *See* letter from Nasdaq.

[3063] *See* letter from AEPC.

[3064] *See, e.g.,* letters from RILA; Nutrien; and Soc. Corp. Gov. (June 11, 2021).

[3065] *See* 17 CFR 229.1505(a)(1).

[3066] The cost estimates that are specific to Scope 1 only are those from the Society for Corporate Governance (Company 4), Energy Transfer LP, and IDFA ($100,000).

TABLE 11—COSTS OF ASSESSING SCOPE 1 AND 2 EMISSIONS—Continued

Commenter or Source	Company (if specified)	Ongoing cost
Median		$66,600

[1] *See supra* note 3023. Persefoni estimated that the ongoing cost is $25,000. This reflects a 44% cost reduction from its initial cost estimate, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[2] *See supra* note 2995. The FCA estimates initial costs to be £43,259, which is converted to dollars based on the 2022 average exchange rate. (£43,259)*(1.2369 USD/GBP) = $53,507. The ongoing costs, however, are not explicitly provided, but instead are grouped with another disclosure component. Because the initial costs make up one third of the total initial cost when combined with this other component, we assume that the same proportion holds with respect to ongoing costs. $53,507/3 = $17,836. This reflects a 67% cost reduction from its initial cost estimate, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[3] *See supra* note 3021.

[4] *See* letter from IDFA. One unnamed company reported that it spends between 100 and 200 hours to maintain automated GHG aggregation and reporting software system for Scope 1 and Scope 2 emissions. We take the midpoint of the burden hours and convert to dollars based on $444/hr. (150 hours)*($444/hr) = $66,600.

[5] *See id.* Another unnamed company reported that it spends about $100,000 to maintain its GHG measuring system, with the context suggesting that this is specific to Scope 1 emissions. Although this estimate does not include the cost of assessing Scope 2, it is nevertheless included to remain conservative in our estimation.

[6] *See* letter from Energy Transfer LP. This company stated that although it already tracks Scope 1 emissions to some degree, the incremental costs to comply with the proposed rules would be approximately $7 million in 2006 dollars, which is equivalent to $10,162,035 in 2022 dollars. However, because this is only the incremental cost, it is presumably understated with respect to the full cost (i.e., incremental costs are a subset of the full cost of disclosure). It is further understated since the estimate is specific to Scope 1 emissions only, whereas we seek to estimate the costs of assessing Scope 1 and 2 emissions. Nevertheless, because this estimate is greater than the other estimates in Table 11, it is included to remain conservative in our estimation.

The median ongoing cost of assessing Scope 1 and 2 emissions in Table 11 is $66,600. To estimate the initial cost, we refer to two sources that reported both initial and ongoing costs to inform our assessment of the percentage reduction between the two costs. One organization's estimated costs reflect a reduction of 44 percent [3067] while another's reflect a reduction of 67 percent.[3068] We use the median (56 percent) to extrapolate the initial cost. As a result, we estimate that the cost of assessing Scope 1 and 2 emissions is $151,000 [3069] for the first year and $67,000 for subsequent years (rounded to the nearest $1,000).

iii. Cost Estimates of Assurance for Scope 1 and 2 Emissions Disclosures

With respect to Scope 1 and 2 emissions disclosures, the final rules require assurance at different levels (limited or reasonable) with different phase in periods depending on whether the registrant is an LAF or AF, while SRCs and EGCs are exempt.[3070] To assess the costs of assurance, we reviewed comment letters that provided relevant, quantitative cost estimates, as presented in Table 12.

The estimates displayed varying degrees of assurance "coverage" (*i.e.,* which specific disclosures were being assured). Some commenters reported assurance costs but did not explicitly define what climate-related disclosure items were being assured.[3071] In such cases, we applied the conservative assumption that the reported assurance costs were specific to their GHG emissions disclosures only. Other estimates were specifically attributed to Scope 1 and 2 emissions,[3072] consistent with the final rules' requirements, where applicable. The majority of estimates, however, pertained to the combined assurance costs for all three scopes of emissions,[3073] which presumably overstate the assurance costs for Scope 1 and 2 emissions only. Nevertheless, we include these estimates for two reasons: first, we included them because we cannot reliably isolate the assurance costs for Scope 1 and 2 emissions only (*i.e.,* by excluding Scope 3 emissions); and second, by including costs that are overstated relative to what the final rules require, we remain conservative in our estimation.

Other commenters, however, stated that their assurance cost estimates covered both their GHG emissions and the proposed financial statement disclosures.[3074] It is likely that a significant portion of these costs is attributable to the proposed financial statement disclosures, which several commenters stated would come with high costs.[3075] We therefore did not include these estimates as they are less likely to be representative of assurance costs for Scope 1 and 2 only compared to other aggregate estimates.

The estimates also varied in the level of assurance, with most estimates equally split between either limited assurance or not specifying the level assurance. To be conservative, any estimates that did not specify the level of assurance were assumed to be limited assurance. One commenter estimated only the incremental cost of switching from limited to reasonable assurance.[3076] While we cannot infer the actual costs of either limited or reasonable assurance in this case, we nevertheless include the incremental cost because it is relatively high, allowing us to remain conservative in our estimation.

[3067] *See supra* note 3023; *see also* footnote 1 in Table 11.

[3068] *See supra* note 2995; *see also* footnote 2 in Table 11.

[3069] ($66,600)/(1 − 0.56) = $151,364.

TABLE 12—COSTS OF LIMITED ASSURANCE FOR GHG EMISSIONS DISCLOSURES

Commenter	Company (if specified)	Limited assurance cost
Society for Corporate Governance (June 11, 2021)	Basic Materials	[1] $30,000
	Comm. Services	[2] 600,000
	Health Care	[3] 22,000
Society for Corporate Governance (June 17, 2022)	Company 1	[4] 400,000
	Company 3	[5] 13,000
	Company 5	[6] 45,000
	Company 6	[7] 15,000
	Company 7	[8] 50,000
	Company 8	[9] 12,500
	Company 9	[10] 72,000
	Company 10	[11] 15,000
	Company 11	[12] 15,000
	Company 12	[13] 75,000
	Company 13	[14] 550,000
Persefoni		[15] 82,000
International Dairy Foods Association		[16] 62,500
Salesforce		[17] 800,000
Median		50,000

[1] *See* letter from Soc. Corp. Gov (June 11, 2021). The Basic Materials company reported spending $30,000 for assurance over its Scope 1, 2, and 3 emissions without specifying the level of assurance.

[2] *See id.* The Communication Services (''Comm. Services'') company, which discloses Scope 1, 2, and 3 emissions (among other climate-related disclosures), reported that assurance costs are approximately $600,000 annually without specifying the coverage or level of assurance.

[3] *See id.* The Health Care company, which discloses Scope 1, Scope 2, and Scope 3 (among other climate-related disclosures), reported that assurance costs are $22,000 without specifying the coverage or level of assurance.

[4] *See* letter from Soc. Corp. Gov (June 17, 2022). Company 1 reported spending over $400,000 for ''limited assurance from a public company accounting firm over select environmental metrics disclosed in its sustainability report, including its Scope 1, 2 (location-based and market-based), and Scope 3 (including a comparison against the base year) GHG emissions; total energy consumed; percentage grid electricity; percentage renewable energy; and water usage.''

[5] *See id.* Company 3 currently pays $13,000 annually for limited assurance over its Scope 1, Scope 2, and one category of Scope 3 emissions. The cost estimated may be understated given that this company believes that its current assurance may not be in compliance with the proposed rules and that costs may increase if the rule is adopted as proposed.

[6] *See id.* Company 5 reported spending over $45,000 annually for ''limited assurance from a professional audit firm for disclosure in its sustainability report of its Scope 1 and 2 GHG emissions and defined categories of its Scope 3 GHG emissions (exclusive of processing and use of, and end-of-life treatment for, sold products, and certain other downstream activities).''

[7] *See id.* Company 6 reported spending $15,000 annually for assurance over its Scope 1 and 2 emissions and certain Scope 3 operational emissions (such as emissions associated with business travel and downstream leased assets) without specifying the level of assurance.

[8] *See id.* Company 7 reported spending $50,000 annually for assurance over its Scope 1, Scope 2, and some categories of Scope 3 emissions without specifying the level of assurance.

[9] *See id.* Company 8 reported spending between $10,000 and $15,000 annually for assurance over its Scope 1 and 2 emissions. We include the midpoint of this range in the table ($12,500).

[10] *See id.* Company 9 reported spending $10,000 for reasonable assurance over its Scope 1, Scope 2, and some Scope 3 emissions. It also noted that another firm offered to do the same work for $180,000. To be conservative, we use this higher estimate instead. Next, we extrapolate the cost of limited assurance based on a comment letter, which states that the cost of reasonable assurance could be 2–3 times higher than limited assurance. *See* letter from Center for Climate and Energy Solutions. By taking the midpoint (2.5), we estimate the cost of limited assurance: $180,000/2.5 = $72,000.

[11] *See id.* Company 10 reported spending $15,000 annually for limited assurance over its Scope 1, Scope 2, and partial Scope 3 (fuel and energy-related activities and business travel) emissions.

[12] *See id.* Company 11 reported spending $15,000 annually for limited assurance over its Scope 1, Scope 2, and some Scope 3 (business travel, commuting, waste, downstream leased assets) emissions.

[13] *See id.* Company 12 reported spending $30,000 for limited assurance over its Scope 1, 2, and 3 emissions. It also noted that another firm offered to do the same work for $75,000. To be conservative, we use this higher estimate instead.

[14] *See id.* Company 13 reported spending $550,000 for limited assurance over its Scope 1, 2, and 3 emissions.

[15] *See* ERM survey. The ERM survey indicates that 28 respondents spend an average of $82,000 for assurance/audits related to climate. According to the commenter, this ''survey did not ask issuer respondents to include details of the specific level of assurance or the scope of business practices covered, whether assurance covered all locations or all business units, or whether it consisted of limited or reasonable assurance. The costs reported by issuer respondents may include third-party assurance of Scope 1 and/or 2 GHG emissions metrics, financial metrics, or both.'' Although the level and coverage of assurance are unspecified, we apply the conservative assumption that the reported cost pertains to limited assurance of Scope 1 and 2 emissions.

[16] *See* letter from IDFA. An unnamed, privately held company reported that it discloses Scope 1 and 2 emissions. It further states that it spends between ''$50,000–$75,000 or more that is necessary to periodically hire a 3rd party consultant to review and re-validate the company's internal systems.'' The level of assurance is unspecified. We include the midpoint of this range in the table ($62,500).

[17] *See* letter from Salesforce. This commenter did not provide actual costs of limited or reasonable assurance, but it estimated that its *incremental* cost of switching from limited to reasonable assurance over its Scope 1, 2, and 3 emissions could range from $1 to 3 million. We include this incremental cost since it serves as a lower bound for its reasonable assurance costs. We take the midpoint of this range ($2 million) and convert to limited assurance (see footnote 10 of this table): ($2 million)/2.5 = $800,000. This estimate is understated considering that it is derived from the incremental cost as opposed to actual cost.

Table 12 presents the cost estimates of limited assurance from commenters, with any adjustments or assumptions explained in the table footnotes. The median of these estimates ($50,000) is subsequently used to extrapolate the cost of reasonable assurance. One commenter stated that reasonable assurance may cost two to three times more than limited assurance, based on input from stakeholders with expertise in developing GHG inventories for companies.[3077] We use the upper end of

[3077] *See* letter from Center for Climate and Energy Solutions.

this range and assume that reasonable assurance is three times the cost of limited assurance. As a result, we estimate that the cost of limited assurance for Scope 1 and Scope 2 emissions disclosures is $50,000, while the cost for reasonable assurance is $150,000.

Costs may vary, however, depending on the type of assurance provider. Specifically, assurance provided by a registered public accounting firm may cost more than if it were provided by a different type of service provider. However, the final rules do not require assurance to be obtained from a registered public accounting firm.[3078] Conversely, costs may be lower if a registrant uses its auditor to also provide assurance over its GHG emissions disclosures rather than contracting with a different third-party. We also note that some of the companies listed in Table 12 indicated that they were unsure as to whether their current assurance practices would meet the proposed rules' requirements.[3079] We are likewise unable to make this determination without additional details on these companies' assurance practices. If these companies were to incur additional costs to meet the final rules' assurance requirements, the Commissions' compliance cost estimates may be understated in this regard. However, we believe that our conservative approach in other aspects (*e.g.,* incorporating assurance costs that cover all three scopes of emissions instead of just Scopes 1 and 2 emissions) mitigate this concern.

iv. Estimates of Reporting Costs for Scenario Analysis and Targets/Goals

While the final rules do not require any registrants to undertake activities related to scenario analysis or setting targets and goals, they may require the attendant disclosures under specific circumstances,[3080] which will result in affected registrants incurring associated reporting costs. To estimate this reporting cost, we first review comment letters and other sources that inform our assessment on the costs of undertaking scenario analysis and targets or goals, then apply the assumption that 10 percent of this cost comprise the reporting cost.[3081]

Table 13 presents the relevant sources of the costs of scenario analysis.[3082] The FCA rule estimates the ongoing cost to be $40,688 for larger issuers. The BEIS rule contains ongoing cost estimates for two different types of scenario analysis: qualitative ($32,190) and quantitative ($79,706). Because the final rules allow for registrants to provide disclosures of either type, where applicable, we include the estimates of both. Finally, a survey indicates that the respondents' average annual expenditures is $154,000. The median of these ongoing costs is $60,197. We next extrapolate the initial cost. Some of the sources provide both the initial and ongoing cost of scenario analysis (see Table 13 footnotes), from which we determine the median percentage cost reduction (50 percent). This implies an initial cost of $120,394. Assuming that 10 percent of these costs comprise the reporting costs, we estimate that the reporting costs of scenario analysis is $12,000 in the initial year and $6,000 annually in subsequent years (rounded to the nearest $1,000).

TABLE 13—COSTS OF SCENARIO ANALYSIS

Commenter or source	Ongoing cost
FCA rule	[1] 40,688
BEIS rule: qualitative scenario analysis	[2] 32,190
BEIS rule: quantitative scenario analysis	[3] 79,706
ERM survey	[4] 154,000

[1] *See supra* note 2995. The FCA rule estimates ongoing costs to be £32,896 for larger issuers, which is converted to dollars based on the 2022 average exchange rate. (£32,896)*(1.2369 USD/GBP) = $40,688. This reflects a 50% reduction from the initial cost estimate ($81,377), which we consider in determining the appropriate percentage reduction in subsequent calculations.

[2] *See supra* note 2996. The BEIS rule estimates ongoing costs of *qualitative* scenario analysis to be £26,025, which is converted to dollars based on the 2022 average exchange rate. (£26,025)*(1.2369 USD/GBP) = $32,190. This reflects a 25% reduction from the initial cost estimate ($42,920), which we consider in determining the appropriate percentage reduction in subsequent calculations.

[3] *See id.* The BEIS rule estimates ongoing costs of *quantitative* scenario analysis to be £64,440 (£52,040 for writing or quantifying scenarios and £12,400 additional cost for quality assurance and internal verification). This is converted to dollars based on the 2022 average exchange rate. (£64,440)*(1.2369 USD/GBP) = $79,706. The initial cost estimate is $240,194 (£112,400 for developing a model for conducting scenario analysis, £69,390 for writing and quantifying scenarios, and £12,400 additional cost for quality assurance and internal verification, converted to dollars based on the 2022 average exchange rate). This reflects a 67% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

[4] *See* ERM survey. The ERM survey indicates that $154,000 is the average of respondents' expenditures with respect to scenario analysis, which "includes all costs to a company related to conducting assessments of the impact of climate in the short, medium, or long term using scenario analysis as well as TCFD/CDP disclosure of risks and opportunities." The survey does not include data on initial costs.

With respect to the reporting costs of targets and goals disclosure, we refer to Table 9, which presents the ongoing costs of undertaking targets and goals. The median ongoing cost of targets is $54,015. Using the median percent cost reduction from the initial year (45 percent), we extrapolate the initial cost to be $98,209. We assume 10 percent comprise the reporting costs.[3083] Thus, we estimate that the reporting costs of targets and goals are $10,000 in the initial year of disclosure and $5,000 annually in subsequent years (rounded to the nearest $1,000).

v. Cost Estimates of Amendments to Regulation S–X and Incremental Audit Fees

We reviewed comment letters that provided cost estimates pertaining to the amendments to Regulation S–X, which were often in the millions of dollars.[3084] We considered these

[3078] One commenter suggested that most registrants will nevertheless seek assurance from registered public accounting firms to comply with the proposed rules. *See* letter from Soc. Corp. Gov. (June 17, 2022). To the extent that this is also true of the final rules, registrants may incur higher assurance costs.

[3079] *See* letter from Soc. Corp. Gov (June 17, 2022).

[3080] *See* sections II.G and II.D.3.

[3081] The BEIS rule estimates that in the first year of compliance, the reporting cost of metrics and targets disclosure is approximately 9.4% of the cost of the "annual data gathering" activity associated with metrics and targets (*see supra* note 2996). We similarly assume that reporting costs are 10% of the cost of undertaking the associated activity.

[3082] *See supra* note 3052.

[3083] *See supra* note 3081.

[3084] *See, e.g.,* letters from API; Chamber; NRF; WEA/USOGA; and Williams Cos.

estimates, presented in Table 14, when developing our cost estimates but made adjustments to reflect the changes made to the final rules,[3085] which we expect will substantially reduce the compliance burden compared to the proposal.

TABLE 14—ESTIMATED COSTS OF AMENDMENTS TO REGULATION S–X

Commenter	Cost
Chamber of Commerce[1]	$1.5–2.5 million (initial); $1–2 million (ongoing).
Williams Companies, Inc	"Millions of dollars"[2] (initial).
Western Energy Alliance and U.S. Oil and Gas Association	> $100 million[3] (initial).

1. The Chamber of Commerce stated that this estimate was provided by one Well-Known Seasoned Issuer it consulted regarding the proposed amendments.
2. Williams Cos. estimated the costs of implementing the proposed amendments to Regulation S–X would be in the "millions of dollars" without providing a more specific estimate.
3. Western Energy Alliance and U.S. Oil and Gas Association stated that this estimate was based on discussions with public companies that estimated costs of over $100 million for large companies when considering the need for new systems and staff training.

We consider the ''millions of dollars'' estimate provided by Williams Companies, Inc. as the median[3086] cost estimate. Assuming the range ''millions of dollars'' refers to a number less than $10 million but more than $1 million,[3087] we take the midpoint of $5 million as the starting point for our estimate of the costs of the proposed Regulation S–X amendments.

We believe the $5 million, however, should be adjusted downward as the costs associated with the final rules should be significantly less than the proposed rules. Many of the concerns that commenters expressed about the proposed rules were primarily focused on the expected challenges and costs related to implementing the proposed Financial Impact Metrics, which would have constituted most of the costs associated with the proposed amendments to Regulation S–X. Specifically, these commenters expressed concerns about implementing new accounting processes, policies, controls, and IT systems to identify and distinguish activities related to climate-related risks and transition activities from normal routine business activities and then to calculate the disclosure threshold and track those impacts on a line-by-line basis.[3088] These commenters also highlighted challenges posed by the significant number of estimates and assumptions that, in their view, would be required to prepare the proposed disclosures.[3089]

As discussed in greater detail above, the final rules have been significantly revised compared to the proposal to reduce burdens on registrants. The final rules do not include the proposed Financial Impact Metrics, which should result in a substantial reduction in compliance costs and burdens.[3090] For example, registrants will not be required to disclose any impacts to the Statement of Cash Flows. Moreover, registrants will not be required to disclose any impacts to revenues, costs savings, or cost reductions, which some commenters stated would be particularly difficult to disclose because such amounts are not currently captured in a registrant's books and records.[3091] In addition, registrants will not be required to apply the 1% disclosure threshold on a line-by-line basis.

Instead, the final rules focus the financial statement disclosures on expenditures related to a narrower category of activities as compared to the proposal: severe weather events and other natural conditions and the purchase and use of carbon offsets and RECs (one type of transition activity).[3092] Commenters stated that discrete expenditures of this type are captured in the books and records and would be feasible to disclose.[3093] Under the final rules, registrants will be required to apply the 1% disclosure threshold to severe weather events and other natural conditions. In addition, instead of applying the 1% disclosure threshold on a line-by-line basis throughout the financial statements as would have been required under the proposed rules, the 1% disclosure threshold will be applied only to two amounts under the final rules to determine if disclosure is required.[3094] Specifically, disclosure is required only if (1) the aggregate amount of expenditures expensed as incurred and losses equals or exceeds one percent of the absolute value of income or loss before income tax expense or benefit; and/or (2) the aggregate amount of the absolute value of capitalized costs and charges equals or exceeds one percent of the absolute value of stockholders' equity or deficit, subject to de minimis thresholds.[3095] In addition, the final rules prescribe an attribution principle—significant contributing factor—in response to commenters' concerns about their ability to isolate and attribute expenditures to severe

[3085] *See* section II.K.

[3086] *See supra* note 3046.

[3087] We recognize the possibility that the commenter's language of ''millions of dollars'' may be referring to a number greater than $10 million. However, if the commenter was referring to ''tens of millions'' or ''hundreds of millions'' of dollars, we assume that the commenter would have stated it as such. Without additional information, we believe it is reasonable to read this comment as meaning less than $10 million.

[3088] *See, e.g.,* letter from NRF (''Existing accounting systems are not designed for tracking and reporting such cost impacts, particularly with no meaningful cost threshold, across all line items, because registrants do not have systems in place to collect, calculate, and report these line items, especially at such a granular level.'').

[3089] *See, e.g.,* letter from Chamber (''[T]he Proposed Rules require untold estimates, assumptions and judgments against the backdrop of significant data limitations and speculative impacts.'').

[3090] *See* letter from Williams Cos. (''Accounting for climate impacts would require companies to write entirely new and significant accounting policies, design and implement new controls, and develop and potentially pay for new software.'').

[3091] *See, e.g.,* letters from Chamber (stating that ''GAAP financial statement line-items do not include amounts for lost revenues, cost savings, or cost reductions''); and Williams Cos. (stating that ''lost revenue'' does not exist under GAAP).

[3092] *See* 17 CFR 210.14–02(c), (d), and (e).

[3093] *See* letters from Autodesk (noting that if a fire or storm destroys a registrant's facilities, the associated costs, impairments, and contingencies would be accounted for and, if material, disclosed under U.S. GAAP); Crowe; Dow; and Nutrien (noting that it would be operationally possible to track specific costs incurred to mitigate transition risks or costs incurred due to severe weather events and natural conditions).

[3094] *See* 17 CFR 210.14–02(b).

[3095] *See id.*

weather events and other natural conditions.[3096]

The final rules require registrants to disclose costs, expenditures, and losses incurred in connection with the purchase and use of carbon offsets and RECs only if carbon offsets or RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals.[3097] As explained above, this requirement is narrower than the proposed rules, which would have required registrants to disclose expenditures incurred to reduce GHG emissions or otherwise mitigate exposure to transition risks in the financial statements. Although registrants will not be required to disclose expenditures generally related to transition activities in the financial statements, under the final rules, registrants are required to disclose material expenditures incurred that directly result from: (1) disclosed activities to mitigate or adapt to climate-related risk (in management's assessment); (2) disclosed transition plans; and (3) disclosed targets and goals, as part of the final amendments to Regulation S–K. Since these disclosure requirements are no longer part of the amendments to Regulation S–X, the disclosures will fall outside the scope of the financial statement audit and a company's ICFR, which, along with the materiality qualifier, should further reduce costs and burdens as compared to the proposed rules.[3098]

In addition, the final rules limit the scope of the requirement to disclose estimates and assumptions in the financial statements to only those estimates and assumptions materially impacted by severe weather events and natural conditions and any climate-related targets or transition plans disclosed by the registrant, whereas under the proposed rules, registrants would have been required to disclose estimates and assumptions impacted by transition activities more generally.[3099]

Finally, the final rules require the disclosure for historical fiscal year(s) only to the extent the required information was previously disclosed or required to be disclosed (*i.e.,* on a prospective basis).[3100] Commenters stated that the proposed requirement to provide disclosure for the historical fiscal year(s) included in the consolidated financial statements would be burdensome and costly because, among other things, it would require issuers to ''retroactively estimate their historical data.'' [3101] However, under the final rules, no registrants will be required to provide disclosure for fiscal periods in which they were not required to collect or report the data.

After taking into account the fact that the final rules eliminate many of the primary drivers of the costs identified by commenters, and based on staff knowledge of accounting practices, we are using $500,000 as an estimated initial direct cost of compliance. While this represents a significant reduction from the median cost estimate provided by commenters, we view it as an upper bound estimate given the numerous changes from the proposal and the fact that discrete expenditures of this type are already captured in the books and records and therefore should be less costly to disclose.[3102] Thus, we expect that in many cases, based on staff knowledge of accounting practices, costs will be significantly lower.

Although we anticipate that the amendments to Regulation S–X we are adopting will be significantly less costly to apply than the proposed rules, registrants will incur some implementation costs related to adjustments in processes and systems, including systems of internal control. We expect these adjustments will be far fewer than would have been required under the proposed rules.

With respect to the final amendments to Regulation S–X, registrants may need to adjust their internal processes and systems to (1) identify, track, and disclose the costs, expenditures, charges, and losses incurred as a result of severe weather events and other natural conditions and related to the purchase and use of carbon offsets and RECs; (2) calculate the disclosure thresholds; (3) identify and disclose the amount of relevant recoveries; (4) evaluate and disclose financial estimates and assumptions materially impacted by severe weather events and other natural conditions or disclosed targets; and (5) to provide contextual information.

To calculate the upper bound of the range for ongoing costs, we used the estimates for the initial and ongoing costs related to the proposed amendments to Regulation S–X provided by the Chamber of Commerce to determine that the expected the ongoing costs would be approximately 75% of the initial cost.[3103] Applying that reduction to the upper bound of the Commission's initial cost estimate of $500,000 results in an estimated upper bound of $375,000 for compliance with the amendments to Regulation S–X on an ongoing, annual basis.[3104] As noted above, given the feedback from commenters that our cost estimates in the proposed rules were too low, we have considered the upper bound of the estimated range in evaluating the economic impact of the final rules. However, we acknowledge the precise amount of both the implementation costs and ongoing costs will vary depending on a number of factors including the size and complexity of the registrant (and its financial reporting systems), and the frequency in which the registrant is exposed to severe weather events and other natural conditions, among other factors.

We also consider incremental audit fees resulting from the final rules. To be clear, these incremental audit fees are separate from the fees associated with mandatory assurance over GHG emissions disclosure. In the Proposing Release, we estimated this incremental cost to be $15,000 with respect to the proposed rules.[3105] Several commenters asserted that actual costs would be much higher.[3106] One commenter estimated incremental audit fees of $70,000 to $225,000 per year.[3107] Based on the final rules' significant reductions in the burden of complying with the amendments to Regulation S–X, we expect a corresponding reduction in the cost of the audit. As a result, we are using an upper bound cost estimate of $23,000 in incremental audit fees per year (rounded to the nearest $1,000).

c. Factors that Influence Direct Costs

Incremental compliance costs may be relatively lower for registrants that

[3096] *See* 17 CFR 210.14–02(g). *See also* letter from NAM (''Companies would be required to count every single financial impact that could plausibly be attributable to climate risks, weather events, or transition activities, somehow determine the degree of climate causation associated with each, and then aggregate these impacts to determine if they meet the proposed 1% threshold—for each line item in the consolidated financial statements.'').

[3097] *See* 17 CFR 210.14–02(e).

[3098] *See* 17 CFR 229.1502(d)(2), (e)(2) and 17 CFR 229.1504(c)(2).

[3099] *See* 17 CFR 210.14–02(h).

[3100] *See* 17 CFR 210.14–01(d).

[3101] *See* letter from BlackRock; *see also* letter from Autodesk (stating that ''it may be prohibitively costly'' for registrants to accurately compile the necessary data, particularly for historical periods).

[3102] *See supra* note 3093.

[3103] The initial range provided by the Chamber of Commerce was $1.5–$2.5 million while the ongoing estimate was $1 million–$2 million. To arrive at 75%, we take the midpoint of the two ranges ($1.5 million ongoing cost to $2 million initial cost).

[3104] This figure is based on the $500,000 estimate for initial implementation costs multiplied by 75%. *See id.*

[3105] *See* Proposing Release, section IV.C.2.a.

[3106] *See, e.g.,* letters from Nutrien; Soc. Corp. Gov (June 17, 2022); National Association of Manufacturers; Edison Electric Institute; ConocoPhillips; Business Roundtable; Association of American Railroads; Ernst & Young LLP; and ABA.

[3107] *See* letter from Nutrien.

already disclose any of the information required by the final rules. For instance, covered registrants that already disclose Scope 1 and 2 emissions will face lower incremental costs relative to those that have never previously disclosed such information, all else equal. As discussed in section A.5.a, the Commission staff found that 41 percent of annual reports on Form 10–K and Form 20–F filed in 2022 contained some degree of climate-related disclosures. To the extent that these disclosures meet some of the final rules' requirements, these registrants would face lower incremental costs.

Some industry reports also document how a sizeable portion of U.S. companies report climate-related information under one or more third-party frameworks that are either fully or partially aligned with the TCFD disclosure elements. Registrants with operations in foreign jurisdictions [3108] that have disclosure requirements based on the TCFD's framework for climate-related financial reporting may also face lower incremental costs.[3109] To the extent that the final rules overlap with the TCFD framework, we expect lower incremental compliance costs for registrants that already provide most or all disclosures according to the TCFD or related frameworks, including the CDP, which has fully integrated the TCFD disclosure elements into its disclosure questionnaire, and other frameworks and/or standards partly aligned with the TCFD framework.

Similarly, while registrants in the insurance industry may face higher compliance costs due to their complex exposure to climate-related risks, they have existing disclosure obligations that may effectively lower their incremental costs due to the final rules. As discussed in section IV.A.3, a large subset of insurance companies must, by state law, disclose their climate-related risk assessment and strategy via the NAIC Climate Risk Disclosure Survey. For example, a comment letter by a state insurance commissioner stated that because this survey overlaps extensively with the TCFD recommendations, these companies should be able to easily switch from their current reporting to reporting via the TCFD framework,[3110] and accordingly, similar portions of the final rules.

We reiterate that not all quantifiable cost estimates will be applicable to all registrants. For instance, the final rules will not require SRCs and EGCs to incur costs of assessing their GHG emissions or obtaining the associated assurance. Other registrants may not have to provide certain disclosures due to materiality qualifiers. Risk management disclosure, for example, will only be required with respect to climate risks that are material. Other disclosures that may not apply to all registrants include scenario analysis and targets and goals. The final rules do not require any registrants to undertake such activities, but if registrants voluntarily do so, the related disclosures (and costs) would only be required following a materiality determination. As a result, while certain registrants may incur some costs in order to make the prerequisite materiality determination, those that subsequently deem a disclosure component to be non-material would accordingly avoid the remaining portions of the estimated compliance costs associated with the disclosure (*e.g.,* drafting, vetting and review, other reporting costs, and assurance in cases where Scope 1 and 2 emissions are not material).

With regard to California state laws on climate-related disclosure, registrants that will be required to comply with the Climate Corporate Data Accountability Act and the Climate-Related Financial Risk Act may experience reduced costs of compliance with the final rules to the extent the California laws impose similar requirements for those registrants that are subject to them. Several commenters asserted that the recently enacted California laws, which reach some of the same entities and require some of the same types of disclosure as these final rules, could affect the benefits and costs of the final rules.[3111] Another commenter stated that the Commission could not rely on the California laws to reduce cost estimates because, based on the compliance dates in the Proposing Release, the final rules would precede the California laws in implementation.[3112] We disagree with that comment, in that enacted laws—even if not fully implemented—imply future costs and benefits, and so we appropriately consider existing enacted laws as part of the baseline against which we consider the economic effects of the final rules.[3113] However, our estimates of the final rules' direct compliance costs do not reflect any adjustments with respect to the California laws because, as discussed below, the details of their implementation are uncertain.

We expect that entities subject to the California laws could have lower incremental information gathering costs with respect to the final rules to the extent that there is overlap in the information that is required to be collected and reported under the final rules and the California laws. For example, because both the Climate Corporate Data Accountability Act and the final rules require companies to collect information to disclose their Scope 1 and Scope 2 emissions and "obtain an assurance engagement of the disclosure," to the extent that the information and reporting activities overlap, registrants subject to the final rules and the Climate Corporate Data Accountability Act may face lower incremental information gathering compliance costs.[3114] However, the extent and overall impact of overlapping disclosure obligations are unclear.[3115] The scope and requirements of the California laws differ from the final rules, such that compliance with the final rules could require information collection and reporting activities in addition to those performed to satisfy the California requirements.[3116]

[3108] Morningstar reports that over 35% of S&P 500 revenues came from foreign markets, while this percentage is around 20% for the revenues coming from companies belonging to the Russell 2000 index. *See* Gabrielle Dibenedetto, *Your U.S. Equity Fund is More Global Than You Think,* Morningstar (Mar. 14, 2019), available at *https://www.morningstar.com/articles/918437/your-us-equity-fund-is-more-global-than-you-think*.

[3111] *See, e.g.,* letters from Amer. for Fin. Reform, Public Citizen and Sierra Club (Oct. 26, 2023); Institute for Policy Integrity et. al; and Rep. Maxine Waters.

[3112] Letter from Chamber II.

[3113] *See* SEC Guidance on Economic Analysis (2012), *supra* note 2574 (describing the baseline as "the best assessment of how the world would look in the absence of the proposed action").

[3114] One commenter agreed that compliance with the California laws could reduce the cost of compliance with the final rules, stating that ". . . the costs of compliance with other provisions of the proposed rule will be reduced substantially due to overlap with California's new laws." Letter from Amer. for Fin. Reform. Public Citizen and Sierra Club (Oct. 26, 2023).

[3115] For example, the Climate Corporate Data Accountability Act directs a state agency to adopt implementing regulations by January 1, 2025 for reporting to begin in 2026. The details of those regulations are not yet available.

[3116] One commenter identified two differences in scope between the California laws and the proposed rules: (1) the Climate Corporate Data Accountability Act requires GHG emission disclosures "based on different organizational boundaries" than the proposed rules; and (2) Climate Related Financial Risk Act requires biennial reporting, instead of annual reporting. *See* letter from Chamber II. This commenter also stated there could be additional administrative costs related to coordinating compliance with different reporting regimes. *Id.* We agree that differences such as these reduce the potential for cost mitigation through overlapping requirements (although we note that, in a change from the proposal, the final rules allow the organizational boundaries to differ from those used

Additionally, one of the California laws allows the covered entity to satisfy certain California disclosure requirements with a disclosure prepared pursuant to another law or regulation.[3117] Therefore, while the California requirements may mitigate the costs of the final rules for some registrants, the degree of mitigation will depend on the regulations ultimately adopted and on the ways in which entities organize their compliance activities to satisfy reporting obligations in different jurisdictions.

One commenter suggested that the California laws could increase compliance costs by increasing demand, and thus the cost, for external consultants and services.[3118] We acknowledge this could occur in the short term; however, over the long-term, we expect that increased demand would cause new providers to enter the market, resulting in a corresponding increase in supply. An increase in the supply of providers would lead to greater competition among the external consultants, resulting in lower fees charged by consultants. To that end, the phased implementation of the final rules should mitigate most costs stemming from any shortage of consultants.

Registrants that have more exposure to material climate-related risks may face higher compliance costs to the extent that they must provide more extensive disclosures. However, we note that industries in which climate-risks are most likely to be material are also those that are already providing some degree of voluntary or mandatory disclosures.[3119]

The incremental costs of the financial statement disclosures may be somewhat higher for companies with exposure to severe weather events or other natural conditions that are difficult to assess, track, and disclose in the financial statements. For example, companies (*e.g.,* banks) with complicated asset structures or with operations in many jurisdictions may incur more costs to identify the expenditures for which a severe weather event or other natural condition was a ''significant contributing factor.''

Incremental costs, either proportionally or in dollar terms, may be higher for smaller registrants, such as SRCs and EGCs, considering that they are less likely to have climate-related disclosure systems and processes already in place.[3120] If smaller firms were to face higher proportional fixed costs in meeting the disclosure requirements, they may potentially be placed at a competitive disadvantage relative to larger firms.[3121] Conversely, incremental costs may be lower for smaller firms to the extent that their assets and operations are less complex, which may allow them to prepare responsive disclosures at lower cost. We recognize that a portion of the final rules' compliance costs is ''fixed'' in the sense that the costs do not scale with registrant size or its level of resources. We therefore expect that smaller registrants will have more difficulty allocating resources to comply with the final rules as compared to larger firms.[3122] To mitigate these compliance burdens, the final rules provide SRCs and EGCs certain accommodations, including being exempt from the GHG emissions disclosure requirement and the accompanying assurance requirement, as well as an extended phased in compliance period, which will allow such issuers both more time to prepare for initial compliance, as well as the benefit of observing market practices prior to preparing their initial disclosures required in response to the final rules.

We expect compliance costs to decrease over time. For example, a registrant disclosing climate-related information for the first time is likely to incur initial fixed costs to develop and implement the necessary processes and controls.[3123] Once the company invests in the institutional knowledge and systems to prepare the disclosures, the procedural efficiency of these processes and controls should subsequently improve, leading to lower costs in subsequent years.

Mandated climate disclosures may heighten demand for third-party services related to preparing the required disclosures, especially if registrants' current service providers cannot provide the specific services that registrants may seek to comply with the final rules.[3124] In the short term, there could be a potential increase in the prices of such services, leading to higher compliance costs. In the long term, however, this heightened demand is expected to spur competition, innovation, and economies of scale that could over time lower associated costs for such services and improve their availability.[3125] Moreover, the aggregate accumulation of institutional knowledge may lead to a broad convergence of disclosure-related best practices, which could further reduce the costs of the required disclosures.

Overall, the market effects deriving from competition and innovation could enhance the efficiency and availability of relevant services, thereby lowering compliance costs. These positive externalities from standard reporting practices can provide additional market-wide cost savings to the extent that they reduce duplicative effort in the production and acquisition of information.[3126]

D. Other Economic Effects

The analysis of benefits and costs in section IV.C is generally based on the assumption that the final rules will not cause registrants to change how they manage climate-related risks, but rather how they produce the associated disclosures. In this section, we consider the possibility that the rules may influence how some companies approach climate-related risks. For example, if agency conflicts currently prompt some managers to ignore long-run climate-related risks, in an effort to increase short-term cash flows, the additional transparency provided by the final rules may lead managers to focus more on long-run considerations if that is what their shareholders demand. Conversely, if some managers currently are over-prioritizing climate-related risks as compared to what investors view as optimal, the final rules may lead those managers to scale back their level of investment in managing climate-related risks. Generally, we expect that any resulting changes in behavior will

in the financial statements; *see supra* note 1034 and accompanying text).

primarily stem from investors' improved ability to assess managerial decisions. That is, to the extent the final rules prompt managers to alter their approach to climate-related risks, it may be because they expect that failing to do so might prompt a negative stock price reaction to the disclosures.[3127]

Registrants may change their behavior in response to the proposed disclosure requirements by managing exposures to certain physical or transition risks. For example, empirical evidence shows that mandatory reporting of GHG emissions results in reduced aggregate reported emissions among affected firms.[3128] The final rules will require the disclosure of the location of company properties or operations subject to material physical risks (Item 1502(a)(1)), which could allow investors to better assess companies' exposures to such risks. It is possible that, in response to or anticipation of investor reactions, companies may relocate properties or operations to geographical areas less exposed to physical risks or give preference to such areas for future business activity. Any such changes to registrant behavior resulting from the final rules may come with the potential cost of lower productivity, profitability, or market share.[3129] In the case of relocation, for example, the alternate location may be more costly to operate. Similarly, we also recognize that some of the costs associated with the final rules may prompt some registrants to abandon or forgo adoption of material targets or goals relating to GHG emissions. To avoid direct costs of compliance or to simply report a lower emissions amount in their required disclosures, some registrants may take steps to reorganize their business in order to shift certain parts of their Scope 1 and Scope 2 emissions into the Scope 3 emissions category.[3130] This potential response from registrants obscures the registrants' true risk exposure and therefore could diminish the benefits of the disclosure related to investors' ability to assess exposure to climate-related transition risks.

Some commenters asserted that the compliance costs of the rules might cause some registrants to reduce their voluntary oversight of climate-related risks. For example, according to one commenter, devoting ''resources to meeting the requirements of any final rules the Commission adopts . . . will detract from other climate-related reporting efforts.'' [3131] This commenter also asserted that the proposed requirement to ''disclose internal information, such as internal carbon pricing, scenario planning, and related information if a company has an emission reduction target, could discourage companies from setting such targets.'' [3132] We recognize that some companies may pursue such avoidance strategies in response to the final rules. Other companies, however, may find the existence of disclosure requirements around climate-related targets and goals to be beneficial for signaling credible value-enhancing commitments to investors and hence may be motivated to engage in setting targets.[3133] More reliable and standardized disclosures about climate-related targets and goals will facilitate investors' understanding of the impact of those targets and goals, and hence could affect registrants' incentives for making such commitments, but the magnitude and direction of any such effects would depend upon registrants' decisions and investors' assessments about the value of those commitments rather than stemming directly from the final rules.

E. Effects on Efficiency, Competition, and Capital Formation

1. Efficiency

The final rules should have positive effects on market efficiency. As discussed above, the final rules should improve the informativeness and reliability of climate-related risks and financial disclosures. As a result of the disclosures required by the final rules, investors and other market participants should better understand the climate-related risks that registrants are facing, their potential impact (*e.g.,* on future cash flows), and registrants' ability to respond to and manage such risks. Investors and other market participants should thereby better evaluate registrants and make more informed investment and voting decisions. As a result, the required disclosures should reduce information asymmetry and mispricing in the market, improving market efficiency. More efficient prices should improve capital formation by increasing overall public trust in markets, leading to greater investor participation and market liquidity.[3134]

Currently, investors may seek information on registrant's climate-related risks from various sources, including those outside of Commission filings. For example, the necessary information may only be available from company websites or from third-party service providers that collect information and offer their analysis for a fee. Once investors locate relevant disclosures, they may need to spend time organizing and compiling information in ways that facilitate comparisons across companies. Because the final rules will make the required disclosures available from a consistent source (*i.e.,* Commission filings) and because the disclosures will be standardized and tagged, we expect the final rules to improve efficiency by reducing the costs associated with compiling and organizing information on climate-related risks and oversight.[3135]

We expect the climate-related disclosures mandated by the final rules

[3127] *See* M. Kahn, J. Matsusaka & C. Shu, *Divestment and Engagement: The Effect of Green Investors on Corporate Carbon Emissions* (Oct. 3, 2023), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4592023* (retrieved from SSRN Elsevier database).

[3128] *See* Jeong-Bon Kim, *et al., supra* note 2586; B. Downar, *et al., supra* note 2776; S. Tomar, *Greenhouse Gas Disclosure and Emissions Benchmarking,* SMU Cox Sch. of Bus. Rsch. Paper No. 19–17 (2021), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3448904* (retrieved from SSRN Elsevier database); V. Jouvenot & P. Krueger, supra note 2775.

[3129] At the same time, we recognize that a registrant may optimize for both climate risks and productivity, as these factors are not necessarily mutually exclusive.

[3130] *See* Lucas Mahieux, Haresh Sapra & Gaoqing Zhang, *Climate-Related Disclosures: What Are the Economic Trade-Offs?* (Dec. 1, 2023), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4507526* (retrieved from SSRN Elsevier database).

[3131] *See* letter from API.

[3132] *Id.*

[3133] Disclosures filed with the Commission are subject to greater liability and thus may be viewed as more credible than similar disclosures provided via other avenues (*e.g.,* company sustainability reports). In addition, the final rules will require disclosure of details or specifics that some registrants may otherwise not provide in the absence of the final rules.

[3134] *See* Grewal, *et al.,* supra note 2653; M.E. Barth, *et al., Textual Dimensions of Non-Financial Information, Stock Price Informativeness, and Proprietary Costs: Evidence from Integrated Reports,* (July 27, 2023), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3857927*; see also D.S. Dhaliwal *et al., Voluntary Nonfinancial Disclosure and the Cost of Equity Capital: The Initiation of Corporate Social Responsibility Reporting,* 86 Acct. Rev. 59 (2011); S. Kleimeier & M. Viehs, *Carbon Disclosure, Emission Levels, and the Cost of Debt,* (Jan. 7, 2018), available at *https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2719665* (retrieved from SSRN Elsevier database); E.M. Matsumura, *et al., Climate Risk Materiality and Firm Risk,* supra note 2744. *But see* I. Goldstein & L. Yang, *Good Disclosure, Bad Disclosure,* 131 J. of Fin. Econ. 118 (2019).

[3135] One commenter stated that ''[t]he Commission offers no support for the view that a rule aimed at consistency should be a stand-alone goal that will promote competition, efficiency, and capital formation.'' *See* Overdahl exhibit to letter from Chamber. To the extent that the commenter is asserting that the consistency achieved by the final rules does not promote or is somehow at odds with competition, efficiency, and capital formation, we disagree for the reasons outlined in this paragraph. Moreover, the Commission considers benefits and costs of the final rules in addition to the economic effects associated with efficiency, competition, and capital formation. *See* SEC Guidance on Economic Analysis (2012), *supra* note 2574.

will cause differential asset price and financing cost responses across companies and settings, as investors are more easily able to factor this information into their valuation decisions. These expected improvements in market efficiency are broadly consistent with empirical research. For example, one academic study finds evidence that, among companies that voluntarily report emissions via the CDP questionnaire, those with higher emissions (relative to their size and industry peers) pay higher loan spreads.[3136] Another study examined more than 16,000 companies from 2016 through 2020 and found that investors were actively and directly pricing some transition risk into valuations, an action that resulted in a negative correlation between companies' CO_2 emissions and their price-to-earnings ratio.[3137]

Empirical research has also documented evidence of current market inefficiencies with respect to climate-related risks. For example, one study found that stock prices of food processing and agricultural companies may exhibit mispricing with respect to drought exposure.[3138] The study documented that drought-exposed companies report reduced future profitability, indicating that drought exposure is a financial risk.[3139] In an efficient market, this risk should result in trading activity that decreases the current stock price and increases the expected return (to compensate investors for bearing this risk). The study, however, found that drought-exposed companies deliver *lower* future returns relative to companies with less exposure, suggesting that the market initially under-reacts to drought exposure.[3140] In other words, the market fails to sufficiently incorporate the risk of drought exposure into the current stock price, resulting in investors holding mispriced assets and bearing risk for which they are not appropriately compensated. Consistent with this finding, survey responses from institutional investors indicated that such investors believed that equity valuations do not fully reflect climate-related risks.[3141] The final rules may help address these market inefficiencies by eliciting more consistent and reliable information about climate-related risks so that those risks can be better incorporated into asset prices.

We also expect the final rules to increase efficiency by improving comparability of climate-related disclosures and requiring them to be filed in a machine-readable data language (*i.e.,* Inline XBRL).[3142] As discussed in section IV.C.2.i, efficiency gains from standardized reporting practices can provide market-wide cost savings to registrants in the long-term, to the extent that they reduce duplicative effort in registrants' production and acquisition of information (*e.g.,* certain data or third-party services related to preparing the required disclosures, including the reporting of emissions data, may become cheaper in the long run as heightened demand spurs competition, innovation, and economies of scale). Finally, more standardized reporting should also reduce investors' costs of acquiring and processing climate-related information by facilitating investors' analysis of a registrant's disclosure and assessing its management of climate-related risks against those of its competitors.

The inclusion of climate-related information in Commission filings using a machine-readable data language (*i.e.,* Inline XBRL), rather than external reports or company websites, should also make it easier for investors to find and compare this information. In that regard, XBRL requirements have been observed to reduce the informational advantages of informed traders and lead to lower cost of capital and higher stock liquidity for filers that provide tagged disclosures.[3143]

We acknowledge commenters who stated that proposed amendments could decrease efficiency by reducing the incentives for reporting companies to develop business strategies, transition plans, or goals, because the amendments would require disclosure of these strategies, plans or goals.[3144] According to these commenters, the benefits of developing these elements could be outweighed by the direct and indirect costs of disclosing them. While this may occur in some circumstances, the efficiency loss is expected to be relatively low as the required disclosures are not highly granular. Thus, in many cases, we believe the benefits of developing business strategies, transition plans or goals will exceed the costs of such disclosure. But we recognize that, more generally, the final rules may divert some resources away from what their best use would otherwise be. As explained above, by removing some of the more prescriptive elements of the proposed rules that could require disclosure of a registrant's competitively sensitive information, the final rules mitigate this concern.

Some commenters raised the more general concern that final rules could divert managers' attention from other types of risks that may be more urgent or important to investors.[3145] However, we expect this channel will be somewhat limited. First, the final rules will elicit more disclosures from those registrants for which climate-related risks have materially impacted or are reasonably likely to have material impacts on the registrants' financials or business strategy. Therefore, the final rules are unlikely to demand significant managerial attention in settings in which such attention is not warranted. Second, managers and directors have strong incentives to maximize the market value of the company (as reflected in the stock price). As a result, there is limited upside to selecting policies that prioritize climate over other concerns that investors view as more important determinants of company value.

[3136] *See* S. Kleimeier & M. Viehs, *supra* note 3134.

[3137] *See* Lazard Climate Center, *Inaugural Research Findings of the Lazard Climate Center* (Dec. 2021), available at *https://www.lazard.com/research-insights/inaugural-research-findings-of-the-lazard-climate-center/*; *see also https://lazard.com/media/ge5oromo/lazard-climate-center-presentation-december-2021.pdf* (presentation). The Lazard presentation notes, however, that the effects vary significantly across different types of GHG emissions, market capitalization, and sectors. Large capitalization companies (>$50 billion) experience greater valuation discounts, while larger emitters, such as energy companies, showed the most consistently negative correlation. On average, a 10% decrease in a large U.S. energy company's emissions corresponded with a 3.9% increase in its price-to-earnings ratio.

[3138] *See* H. Hong, *et al., supra* note 2739.

[3139] *See id.*

[3140] *See id.*

2. Competition

Overall, we expect that by standardizing reporting practices, the final rules would level the playing field among firms, making it easier for investors to assess the climate-related risks of a registrant against those of its competitors. The effects of peer benchmarking can contribute to increased competition for companies in search for capital both across and within industries, whereby registrants can be more easily assessed and compared by investors against alternative options.

Some commenters raised concerns that the proposed rules would have increased competition among registrants for hiring individuals with climate-related expertise and/or GHG emissions attestation providers.[3146] These commenters asserted that the proposed rules could increase the costs of hiring key personnel with relevant experience, which could restrain a registrant's ability to produce climate disclosures and institute climate-related strategies.[3147] While the final rules do not completely eliminate concerns about the costs of hiring or engaging those with climate-related expertise, we have made several changes to mitigate these costs. With respect to GHG emissions assurance, for example, the final rules will permit assurance providers to use the ISO 14064–3 attestation standard, which should limit the circumstances in which registrants need to seek out different attestation engagements. In addition, the extended phase in periods for compliance with the GHG emissions disclosure and assurance requirements will provide additional time for registrants to seek out, and the markets to respond to increased demand for, climate-related professional services.

Some commenters stated that the proposed amendments would harm the competitive position of Commission registrants relative to their peers who do not face such disclosure requirements.[3148] In particular, these commenters stated that Commission registrants would face direct costs of compliance, and indirect costs such as the risk of disclosure of proprietary business information, while other companies would not face these costs.[3149] Relative to the proposed rules, the final rules take a number of steps to reduce the costs of complying with the final rules.[3150] For example, we have eliminated the requirement to disclose Scope 3 emissions, we have significantly narrowed the Regulation S–X requirements, and the final rules for subpart 1500 of Regulation S–K include additional materiality qualifiers and less prescriptive disclosure requirements. Moreover, as discussed above, a number of these changes from the proposal will serve to limit the circumstances in which disclosure of potentially competitive business information will be required.

Similarly, one commenter noted that public companies could be placed at a competitive disadvantage when bidding to acquire a private target company because they would need to screen prospective targets for their ability to produce the disclosures required by the proposed rules.[3151] Any such competitive disadvantage will be mitigated under the final rules, as compared to the proposed rules, because we no longer are applying disclosure requirements to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving securities offerings registered on Form S–4 or F–4.

Commenters also raised concerns about disproportionate effects for smaller companies, as discussed above in section IV.C.3.c. Any costs that disproportionately impact smaller companies—such as those that do not scale with the size of the registrant—may limit the ability of smaller registrants to compete with larger registrants. As discussed above, the final rules do not require SRCs and EGCs to provide GHG emissions disclosures and provide SRCs and EGCs with longer phase in periods to delay implementation costs. This delay may effectively lower implementation costs for SRCs and EGCs to the extent that, by the time they are required to report, SRCs and EGCs can look to the disclosure practices developed by other registrants to assist them in preparing their own disclosures.

3. Capital Formation

More consistent, comparable, and reliable disclosures could lead to capital market benefits in the form of improved liquidity and lower costs of capital.[3152] These benefits would stem from reductions in information asymmetries brought about by the required disclosure of climate-related information.[3153] The reduction in information asymmetry between managers and investors could allow investors to better estimate future cash flows, which could reduce investors' uncertainty, thus lowering the costs of capital.[3154] In addition, less information asymmetry *among* investors could mitigate adverse selection problems by reducing the informational advantage of investors that have sufficient resources to become more informed about a registrant's exposure to and management of climate-related risks.[3155] This is likely to improve stock liquidity (*i.e.,* narrower bid-ask spreads), which could attract more investors and reduce the cost of capital overall.[3156]

[3149] *Id.*

[3150] *See* section IV.C.2.

[3151] Letter from Shearman Sterling. *See also supra* 2461 and accompanying text.

[3152] *See* D.W. Diamond & R.E. Verrecchia, *Disclosure, Liquidity, and the Cost of Capital,* 46 J. Fin. 1325 (1991) (finding that revealing public information to reduce information asymmetry can reduce a company's cost of capital through increased liquidity); *see also* C. Leuz & R.E. Verrecchia, *The Economic Consequences of Increased Disclosure,* 38 J. Acct. Res. 91 (2000). Several studies provide both theoretical and empirical evidence of the link between information asymmetry and cost of capital. *See, e.g.,* T.E. Copeland & D. Galai, *Information Effects on the Bid-Ask Spread,* 38 J. Fin. 1457 (1983) (proposing a theory of information effects on the bid-ask spread); Easley *et al., supra* note 2753 (showing that differences in the composition of information between public and private information affect the cost of capital, with investors demanding a higher return to hold stocks with greater private information.).

[3153] *See, e.g.,* Christensen *et al.* (2021), at 1147 (noting ''[A] primary benefit of corporate disclosure is to mitigate information asymmetries between the firm and its investors as well as among investors . . . [T]he general takeaway from this large literature is that more and better disclosure can lead to tangible capital-market benefits in the form of improved liquidity, lower cost of capital, higher asset prices (or firm value), and potentially better corporate decisions . . . To the extent that mandatory CSR reporting and CSR standards improve the information available to investors, the same theories and many of the prior findings should apply when considering the economic effects of the mandate or standard.'').

[3154] *See* Diamond *et al., supra* note 3152; Lambert, *et al.,* Accounting Information, *supra* note 2753; Christopher Armstrong, John Core, Daniel Taylor & Robert Verrecchia, *When Does Information Asymmetry Affect the Cost of Capital?,* 49 J. of Acct. Rsch. 1 (2011). We note that these articles also detail limited theoretical circumstances under which more reliable disclosures could lead to a higher cost of capital, such as in the case where improved disclosure is sufficient to reduce incentives for market making.

[3155] *See* Verrecchia, *et al., supra* note 2748.

[3156] One commenter asserted that this first channel does not apply to corporate disclosures, as it pertains only to bid-ask spreads set by market makers concerned with trading against parties with more information about order flow. *See* Overdahl exhibit to letter from Chamber. We disagree. Market makers concerned about trading against more informed parties will set larger bid-ask spreads regardless of the reason for the asymmetric information. In this setting, corporate disclosures of material climate-related information would reduce information asymmetries between market makers and other traders who have, for example, learned about a company's climate related risks through proprietary research. *See* letters from Calvert

There are two additional channels through which the disclosures could impact cost of capital. The first arises because some investors may have preferences to invest with companies that are more or less exposed to climate-related risks about which the final rules will elicit disclosure. To the extent the disclosures provide more complete and reliable information about a registrant's material climate-risks and how such risks are being managed, shifts in investor demand for the registrant's securities could increase or decrease (depending on investor preferences and how they factor this information into their investment decision-making).[3157] The second results from the fact that some aspects of climate risk may not be diversifiable and therefore could command a risk premium. Academic research suggests that investors demand a higher return to hold assets that are more exposed to non-diversifiable climate-related risk (including both transition and physical risks).[3158] If the disclosures cause investors to update their expectations of a registrant's exposure to this type of risk, the cost of capital could adjust accordingly.

More generally, if compliance costs with the final rules are sufficiently high, this could influence the marginal company's decision to exit public markets or refrain from going public in the first place to avoid having to comply with the disclosure requirements. This concern was echoed by a number of commenters.[3159] Companies may choose this strategy if they believe the potential compliance costs from the final rules outweigh the benefits of being a registered public company including, for example, a more liquid market for the company's securities and the associated reduction in cost of capital. Uptake of this avoidance strategy may widen the transparency gap between public and private companies, negatively affecting capital markets' information efficiency, and potentially reducing the size of the public markets.[3160] However, we note that this avoidance strategy will come with significant disadvantages. For example, any companies deterred from registration because of the final rules would face more limited access to the capital markets, implying higher financing costs and debt-ratios.[3161] On balance, we believe the benefits of being a public registered company are sufficiently strong such that it is unlikely many companies will choose to avoid becoming or continuing as a public registered company as a result of the final rules. In this regard, we note that the final rules include a number of changes from the proposal intended to mitigate the compliance burden on registrants and lessen disproportionate impacts on smaller and emerging growth firms.

F. Reasonable Alternatives

1. Adopt a More (or Less) Principles-Based Approach to Regulation S–K Disclosures

Many commenters recommended a more principles-based approach (either overall or with respect to specific provisions) that would permit registrants to determine the type of climate-related information to disclose based on what they deem to be appropriate.[3162] Such an approach might reduce reporting costs because registrants would be required to report only information that they determine to be appropriate given their unique circumstances. To the extent that the more prescriptive elements of the final rules result in disclosure that is less useful for investors, a principles-based approach could benefit investors by reducing the incidence of less material or even boilerplate disclosure.[3163] A principles-based approach would also reduce the risk that the disclosure requirements could lead registrants to change their risk management strategies in ways that are less than optimal for the sake of achieving what they perceive to be more favorable climate-related disclosure.

On the other hand, a more principles-based approach would not fully achieve many of the intended benefits of the rules, which are focused on enhancing the consistency and comparability of existing voluntary disclosure arrangements. In addition, a principles-based approach could increase shareholder confusion because the choice of climate metrics and other details (*e.g.,* time horizon) may vary significantly across registrants. Also, a principles-based approach may allow registrants to selectively choose the measures or time horizon that result in the most favorable disclosures. In the final rules, we elected to include prescriptive disclosure requirements (with certain modifications to address commenter concerns) to avoid such cherry-picking of information and to ensure that investors are provided with more consistent and comparable information about climate-related risks.

We similarly considered whether the final rules should be more prescriptive. This would generally improve investors' ability to compare disclosures across registrants since disclosures would be less tailored to each registrant's specific

(''Calvert purchases third party vendor data to support our ability to assess companies on their ESG factors and that provide specific data related to climate change, where available. Often vendor information is estimated when a company has not disclosed information on its climate-related risks. Sometimes the estimates are made across industries, based on what other more proactive peers have disclosed.''); Boston Trust Walden (reporting: ''our analysts examine quantitative and qualitative climate-related corporate disclosure to enhance our understanding of the existing and potential financial outcomes associated, ranging from risks (*e.g.,* losing the license to operate) to opportunities (*e.g.,* generating new sources of revenue)''). We also note that corporate disclosures of material climate-related information reduce information asymmetries between affiliated investors and other investors. *See also* Glosten *et al., supra* note 2748, for evidence that informed traders may take advantage of ''private information or superior analysis'' when making investment decisions). This commenter also asserted that the Commission must consider the potential efficiency losses that may result from investors no longer having the same incentives to invest in this type of proprietary research. We disagree with the commenter that there would be an efficiency loss. The primary benefit of proprietary research is more accurate prices. If disclosures obviate the need for proprietary research by achieving price discovery in the absence of that research, there is not an efficiency loss from the lack of research. This commenter also argues that voluntary disclosure regimes should enable corporate issuers to lower their cost of capital by reducing information asymmetry. *See supra* note 3154. We discuss shortcomings related to a voluntary disclosure regime in this context in section IV.B.2, and we cite to academic evidence in *supra* notes 2748 and 3153 that mandatory reporting that improves the information available to investors can lead to tangible capital market benefits.

[3157] *See* Yang, *supra* note 2827; Avramov, Cheng, Lioui & Tarelli, *Sustainable Investing with ESG Rating Uncertainty,* 145 J. of Fin. Econ. (Oct. 2022); L. Pastor, R. Stambaugh & L. Taylor, *Sustainable Investing in Equilibrium,* 142 J. Fin. Econ. 550 (2021); P. Bolton & M. Kacperczyk, *supra* note 2744; Li *et al., supra* note 2657.

[3158] *See, e.g.,* Bolton *et al., supra* note 3157 (finding that investors demand compensation for exposure to carbon emissions risk); Acharya *et al., supra* note 2905 (finding higher expected returns for exposure to physical risks); Huynh & Xia (2021).

[3159] *See* letters from Elaine Henry; API; Cunningham *et al.;* Matthew Winden; Southside Bancshares Inc.; David Burton; AEPC; CCMR; Chamber; Petrol. OK; and AGs of Cal. *et al.*

[3160] *See* Overdahl exhibit to letter from Chamber.

[3161] *See* Omer Brav, *Access to Capital, Capital Structure, and the Funding of the Firm,* 64 J. of Fin. 263 (2009); Anthony Saunders & Sascha Steffen, *The Costs of Being Private: Evidence from the Loan Market,* 24 Rev. of Fin. Stud. 4091 (2011); E.P. Gilj & J.P Taillard, *Do Private Firms Invest Differently than Public Firms? Taking Cues from the Natural Gas Industry,* 71 J. of Fin. 1733 (2016).

[3162] *See, e.g.,* letters from Beller, *et al.* and Microsoft; Sullivan Cromwell; Airlines for America; BOA; Business Roundtable; Soc. Corp. Gov; and Overdahl exhibit to letter from Chamber.

[3163] Similarly, one commenter described ''(1) the ability of a principles-based approach to evolve in order to keep pace with emerging issues; and (2) the flexibility of a principles-based approach to correct deficiencies or excesses in disclosure without the need for the Commission to continuously add to or update the underlying disclosure rules as new issues arise.'' Overdahl exhibit to letter from Chamber. We acknowledge that a principles-based approach can present these benefits and that prescriptive rules may need updates.

circumstances. A more prescriptive approach would also reduce the risk of boilerplate disclosures. However, we decided against this approach in light of commenters' concerns about the costs of compliance with the proposed rules, as well as the importance of allowing registrants the flexibility to provide investors with the most useful and relevant disclosures. Accordingly, in response to commenters, the final rules include additional materiality qualifiers and take a less prescriptive approach in a number of areas, which should help to mitigate some of the concerns expressed with respect to the proposed rules while continuing to elicit more decision-useful information for investors about climate-related risks.

2. Different Approaches to Assurance Over GHG Emissions Disclosures

We considered several alternative approaches to assurance over GHG emissions disclosure. For example, the Commission could not require that any GHG emissions disclosure be subject to assurance. Alternatively, the Commission could require reasonable assurance of all GHG emissions disclosures rather than only for LAFs. The Commission could also prescribe more restrictive requirements for attestation standards and assurance providers. Inherent in these choices is a tradeoff between compliance costs and the reliability of the disclosures. For example, while requiring reasonable assurance for all GHG emissions would have likely resulted in more reliable disclosures, it would have imposed considerable costs on registrants, based on feedback from commenters about the costs of obtaining reasonable assurance.[3164]

We also considered taking a less prescriptive approach to the independence requirements for assurance providers in the final rules. For example, we considered not adopting a requirement for the GHG emissions assurance provider to be independent with respect to the registrant and any of its affiliates and/or instead requiring disclosure about any potentially independence-impairing relationship.[3165] This approach would help to mitigate concerns commenters raised about a potential shortage of qualified GHG emissions assurance providers increasing the costs for registrants[3166] and potential burdens on registrants related to the need to assess the independence of assurance providers.[3167] However, not imposing an independence requirement or only requiring disclosure about potential conflicts would not provide the same confidence to investors that the attestation provider will perform the engagement in an objective and impartial manner. This in turn would diminish one of the key benefits of requiring assurance over GHG emissions disclosures, which is to improve the reliability of such disclosures.

We acknowledge that the independence requirement in the final rules may result in some registrants that are already obtaining assurance voluntarily needing to retain a new GHG emissions assurance provider that meets the independence requirement or may make it more difficult for a registrant that has not obtained GHG assurance before to find an available provider. These costs are mitigated by the modifications in the final rules that provide registrants subject to the assurance requirement with a multi-year phase in period before they are required to obtain an attestation report. The phase in period will give registrants time to find a provider that meets the independence requirement or provide existing service providers time to unwind any existing conflicts in order to meet the independence requirement. It will also give non-accountant attestation providers time to familiarize themselves with the independence requirement and adapt their business practices accordingly.

3. Different Thresholds for Financial Statement Disclosures

We considered alternative criteria for disclosure under the amendments to Regulation S–X, such as using a more principles-based materiality approach. In general, materiality thresholds can help ensure that the disclosure elicited is most likely to factor into an investor's decision or voting decisions. While materiality is used as the threshold for disclosures in certain contexts, we believe that registrants will benefit from the certainty associated with a set of bright line quantitative thresholds. In doing so, investors will have disclosures that are more consistent across registrants due to the predictable application of quantitative thresholds. As discussed above, we have significantly modified the scope of the proposed disclosures and threshold and have included de minimis exceptions to focus the requirements on providing material disclosure to investors. However, we decided not to eliminate the bright-line thresholds entirely and move to a more principles-based disclosure standard because the quantitative disclosure threshold provides registrants with greater clarity in implementing the rules, reduces the risk of underreporting, and increases consistency and comparability. This approach is consistent with the feedback we received from some commenters that expressed concerns about the risks of underreporting in the context of the financial statements, as evidenced by the limited climate-related disclosure under current accounting standards despite increasing demand by investors for such disclosure.

We considered not including de minimis disclosure thresholds. A de minimis threshold is more likely to be triggered for smaller registrants; so, not including a de minimis threshold would have resulted in similar rates of disclosure from both large and small companies. However, this approach would have been more likely to elicit disclosures that are not decision-useful to investors. In particular, for some registrants, shareholders' equity and income or losses before taxes may not scale meaningfully with the magnitude of the registrant's operations, for example, if the registrant is highly leveraged or was not very profitable (or very unprofitable) during the period. Including de minimis thresholds will avoid triggering overly granular disclosure in such anomalous situations.

Following feedback from commenters, we also considered limiting the new Regulation S–X disclosures to registrants in certain sectors. While restricting disclosure to specific sectors would limit the costs of disclosure, it would result in a lack of information about other sectors, which can be affected by severe weather events or other natural conditions. By specifying disclosures for certain sectors, the Commission would also risk making a determination about which sectors to include and exclude that may become obsolete in the future if conditions change. For sectors that are not generally affected by severe weather events or other natural conditions, the costs associated with these disclosures are likely to be moot.

4. Permit Disclosures To Be Furnished Rather Than Filed

We considered the possibility of permitting some or all of the required disclosures to be furnished rather than

[3164] *See, e.g.,* letter from Salesforce (estimating that obtaining reasonable assurance rather than limited assurance over their emissions disclosures would increase their expected costs by $1–$3 million).

[3165] *See* 17 CFR 229.1506(b)(2).

[3166] *See, e.g.,* letters from AEPC; Climate Risk Consortia; and Soc. Corp. Gov.

[3167] *See, e.g.,* letter from Soc. Corp. Gov.

filed. Although some commenters expressed a desire for furnished disclosures, stating that it would lower the legal liability for registrants who are required to provide climate-related disclosures under the final rules,[3168] furnished disclosures may also limit the benefit for investors who rely on complete and accurate information from registrants about their climate-related risks and their efforts to address these risks.[3169] By contrast, requiring registrants to file, rather than furnish, the climate-related disclosures provided pursuant to the final rules will give investors the ability to bring suit if registrants fail to comply with the new disclosure requirements, for instance under Exchange Act section 18.[3170] This will improve the avenues of redress available to investors in the case of false or misleading statements with respect to material facts and, in turn, provide benefits to investors to the extent they rely on the disclosures required under the final rules to make investment or voting decisions. Further, treating these disclosures as filed will help promote their accuracy and consistency to the extent registrants seek to avoid liability (under, for example, section 18) by taking additional care to ensure that disclosures are accurate. We believe, therefore, that information about climate-related risks should be subject to the same liability as other important business or financial information that the registrant includes in its registration statements and periodic reports.

We acknowledge that requiring these disclosures to be filed may increase registrants' litigation risks (and, therefore, their costs of complying with the final rules) relative to an alternative approach that would allow registrants to furnish the disclosures. The modifications we have made to the proposed rules, however, should help to mitigate those concerns. These modifications include: limiting the scope of the GHG emissions disclosure requirement; [3171] revising several provisions regarding the impacts of climate-related risks on strategy, targets and goals, and financial statement effects so that registrants will be required to provide the disclosures only in certain circumstances, such as when material to the registrant; [3172] and adopting a provision stating that disclosures (other than historic facts) provided pursuant to certain of the new subpart 1500 provisions of Regulation S–K constitute ''forward-looking statements'' for the purposes of the PSLRA safe harbors.[3173] We also are providing registrants with a phase in period based on filer status to give them additional time to prepare to provide the climate-related disclosures, which will constrain registrants resources less over the short run, which could effectively lower implementation costs.[3174]

Finally, regardless of whether the information is filed or furnished, registrants may be subject to potential liability under Securities Act section 17(a), Exchange Act section 10(b), and/or Rule 10b–5, as applicable, for false or misleading material statements in the information disclosed pursuant to the final rules.

5. Exempt SRCs/EGCs

We considered completely exempting SRCs and EGCs from the final rules. While such a broad exemption would avoid burdening newly public and/or smaller registrants with the costs of the final rules, which include some fixed costs that would disproportionately affect smaller registrants, such an alternative would leave significant gaps in the information set on climate-related risks faced by registrants, thereby significantly detracting from comparability and other informational benefits of the final rules. We have, however, made a number of changes from the proposal, such as generally reducing the prescriptiveness of the proposed rules, which should help to mitigate the compliance burden for all registrants, including SRCs and EGCs. We are also providing phase in periods based on filer status, which will provide registrants that are SRCs or EGCs with additional time to prepare to make disclosure under the final rules.

For emissions-related disclosures, there exists a similar trade-off between costs and benefits of exempting SRCs and EGCs. However, based in part on the analysis performed by Commission staff, which indicated extremely low rates of disclosure for SRCs and EGCs, we have exempted SRCs and EGCs from the requirement to disclose GHG emissions data given the significant compliance burden that such disclosure could impose on smaller registrants.[3175]

6. Permit Registrants To Rely on Home-Country Disclosure Frameworks/Substituted Compliance

In light of the fact that several other jurisdictions have adopted or are currently pursuing climate-related disclosure frameworks, some commenters suggested that that the Commission consider allowing registrants to comply with the proposed rules by using disclosures provided in these other jurisdictions.[3176] While this substituted compliance approach has the potential to reduce costs to the extent that there are overlapping disclosure requirements, we have determined, at this time, that it is premature to allow for substituted compliance with the final rules, given the current status of such requirements in other jurisdictions. Accordingly, the Commission intends to observe how reporting under international climate-related reporting requirements and practices develop before making any determination whether such an approach would result in consistent, reliable, and comparable information for investors. As noted above,[3177] the Commission may consider such accommodations in the future depending on developments in the international climate reporting practices and our experience with disclosures under the final rules.[3178]

Similarly, some commenters suggested that, in lieu of the proposed GHG emissions disclosure requirements, we should require registrants to submit GHG emissions data that they publicly report under other regulatory regimes, such as the GHGRP.[3179] Under such an approach, registrants would not need to track and report GHG emissions data that they are not already collecting for other regulatory purposes, and thus registrants would not incur certain direct compliance costs associated with disclosing this information under the final rules (although they would assume new securities law liability for including the information in Commission filings). However, as discussed in detail in section IV.C.2.e, reporting under other regulatory regimes, such as the GHGRP, serves different purposes than disclosure under the Federal securities laws, and the information reported is not always presented in ways that are decision-

[3168] *See, e.g.,* letter from CCMR; *see also* section II.K.2.

[3169] *See* discussion in II.K.3.

[3170] Climate-related disclosures provided pursuant to the final rules also will be subject to section 11 liability if included in, or incorporated by reference into, a Securities Act registration statement.

[3171] *See supra* section II.H.3.

[3172] *See supra* sections II.D.3, II.G.3, and II.H.3.

[3176] *See* letters from AllianceBernstein; Davis Polk; Linklaters L; PGIM; PwC; and SAP SE.

[3177] *See supra* section II.L.3.

[3178] *See, e.g.,* section IV.A. discussing the domestic and international disclosure requirements that are still being developed and finalized at this time.

[3179] *See* letter from Grundfest; Memorandum of Meeting with Grundfest and Wilson (June 28, 2023).

useful for investors. Accordingly, we have decided not to adopt such an alternative.

7. Alternative Tagging Requirements

With respect to Inline XBRL tagging, we considered changing the scope of disclosures required to be tagged, for example by removing the tagging requirements for climate-related disclosures for all or a subset of registrants (such as SRCs). As another example, we considered requiring only a subset of proposed climate-related disclosures, such as the quantitative climate-related disclosures, to be tagged in Inline XBRL. Narrowing the scope of climate-related disclosures to be tagged could have provided some incremental cost savings for registrants compared to the final rules, because incrementally less time would have been required to select and review the particular tags to apply to the climate-related disclosures.

However, we believe any such incremental cost savings would have been low because all affected registrants are required to tag certain of their disclosures (including both quantitative and qualitative disclosures) in Inline XBRL.[3180] Moreover, narrowing the scope of tagging requirements would have diminished the extent of informational benefits that would accrue to investors by reducing the volume of climate-related information that would become less costly to process and easier to compare across time and registrants. For example, an alternative whereby only quantitative climate-related disclosures would be tagged would have inhibited investors from efficiently extracting or searching climate-related disclosures about registrants' governance; strategy, business model, and outlook; risk management; and targets and goals, thus creating the need to manually run searches for these disclosures through entire documents. Such an alternative would also have inhibited the automatic comparison and redlining of these disclosures against prior periods, and the performance of targeted machine learning assessments (tonality, sentiment, risk words, etc.) of specific narrative climate-related disclosures outside the financial statements rather than the entire unstructured document.

V. Paperwork Reduction Act

A. Summary of the Collections of Information

Certain provisions of our rules and forms that will be affected by the final rules contain ''collection of information'' requirements within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[3181] The Commission published a notice requesting comment on changes to these collections of information in the Proposing Release and submitted these requirements to the Office of Management and Budget (''OMB'') for review in accordance with the PRA.[3182] The hours and costs associated with preparing and filing the forms and reports constitute reporting and cost burdens imposed by each collection of information.[3183] An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information requirement unless it displays a currently valid OMB control number. Compliance with the information collections is mandatory. Responses to the information collections are not kept confidential and there is no mandatory retention period for the information disclosed. The titles for the affected collections of information are:

- Form S–1 (OMB Control No. 3235–0065);
- Form F–1 (OMB Control No. 3235–0258);
- Form S–4 (OMB Control No. 3235–0324);
- Form F–4 (OMB Control No. 3235–0325);
- Form S–11 (OMB Control No. 3235–0067);
- Form 10 (OMB Control No. 3235–0064);
- Form 20–F (OMB Control No. 3235–0288); and
- Form 10–K (OMB Control No. 3235–0063).

The final rules will require registrants filing Securities Act registration statements on Forms S–1, F–1, S–4, F–4, and S–11 to include the climate-related disclosures required under subpart 1500 of Regulation S–K and Article 14 of Regulation S–X. The final rules will further require registrants filing Exchange Act annual reports on Forms 10–K and 20–F and Exchange Act registration statements on Forms 10 and 20–F to include the climate-related disclosures required under subpart 1500 of Regulation S–K and Article 14 of Regulation S–X. Registrants may include the climate-related disclosures required under subpart 1500 in a part of the registration statement or annual report that is separately captioned as Climate-Related Disclosure or in another appropriate section, such as Risk Factors, MD&A, or Description of Business. Registrants will be required to include the climate-related disclosures required under Article 14 in a note to the financial statements.

In addition, if a registrant is an LAF or AF that is not an SRC or EGC, the final rules may require the registrant to disclose its Scope 1 and/or Scope 2 emissions. Such registrant will also be required to file an attestation report in connection with its Scope 1 and/or Scope 2 emissions disclosure. For purposes of Exchange Act reporting on domestic forms, although a U.S. registrant may incorporate by reference such disclosure from its Form 10–Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates, we have attributed the paperwork burden associated with the GHG emissions disclosure requirement and the related attestation report to the Form 10–K annual report. This is because the GHG emissions disclosure and related attestation report are requirements of, and relate to the same fiscal year-end as, the Form 10–K.

A description of the final rules including the need for the climate-related information and its intended use, as well as a description of the likely respondents, can be found in section II above, and a discussion of the economic effects of the final rules can be found in section IV above.

B. Current Inventory Update To Reflect $600 per Hour Rather Than $400 per Hour Outside Professional Costs Rate

At the outset, we note that the current OMB inventory for the above-referenced collections of information reflect an average hourly rate of $400 per burden hour borne by outside professionals. Similarly, in the Proposing Release, the Commission used an estimated cost of $400 per hour, recognizing that the costs of retaining outside professionals may vary depending on the nature of the professional services.[3184] The Commission recently determined to increase the estimated costs of such hourly rate to $600 per hour[3185] to adjust the estimate for inflation from Aug. 2006.[3186] In order to more accurately present the burden changes

[3180] *See supra* section IV.c.2.ix.

[3181] 44 U.S.C. 3501 *et seq.*

[3182] 44 U.S.C. 3507(d) and 5 CFR 1320.11.

[3183] The paperwork burdens for Regulation S–X, Regulation S–K, Regulation C, and Regulation S–T are imposed through the forms, schedules, and reports that are subject to the requirements in these regulations and are reflected in the analysis of those documents.

[3184] *See* Proposing Release, section V.C.

[3185] We recognize that the costs of retaining outside professionals may vary depending on the nature of the professional services, but for purposes of this PRA analysis, we estimate that such costs would be an average of $600 per hour.

[3186] *See* Listing Standards for Recovery of Erroneously Awarded Compensation, Rel. No. 33–11126 (Oct. 26, 2022) [87 FR 73076 (Nov. 28, 2022)].

as a result of the final rules in the context of the current burden inventory, we are presenting updated numbers for the current inventory for professional cost burden for each of the affected collections of information to reflect the updated $600 per hour rate where it has not yet been reflected in the current burden inventory last approved by OMB. This update is solely derived from the change in the hourly rate; it is not a new burden imposed by the final rules. The updated cost estimates using the $600 per hour rate are set out in the following PRA Table 1: [3187]

PRA TABLE 1—CHANGE IN PRA BURDEN DUE TO UPDATED OUTSIDE PROFESSIONAL COST ESTIMATE

Collection of information	Current inventory professional cost burden (@$400/hr.) (A)	Updated professional cost burden (@600/hr.) (B)	Increased burden due to update (C) = (B) − (A)
Form S–1	$174,015,643	$261,023,465	$87,007,822
Form F–1	32,130,375	48,195,563	16,065,188
Form S–4	675,605,379	1,013,408,069	337,802,690
Form F–4	17,013,425	25,520,138	8,506,713
Form S–11	14,790,168	22,185,252	7,395,084
Form 10	12,851,488	19,277,232	6,425,744
Form 20–F	576,533,425	864,800,138	288,266,713
Form 10–K	1,835,594,519	2,753,391,779	917,797,260

C. Summary of Comment Letters

In the Proposing Release, the Commission requested comment on the PRA burden hour and cost estimates and the analysis used to derive the estimates.[3188] While a number of parties commented on the potential costs of the proposed rules, only a few commenters mentioned the PRA analysis.[3189] One commenter stated that it opposed the rule proposal in part because, in its view, it would ''more than doubl[e] the total paper-work compliance costs to public corporations.'' [3190] Two commenters stated that the Commission had underestimated the compliance burden and costs of the proposed rules.[3191] One of the commenters stated that ''besides failing to monetize the internal compliance burden hours, the PRA Table ignores: 1. litigation costs; 2. cost not easily and directly allocable to filling out the forms listed in [the PRA Table]; 3. costs imposed on non-issuers; and 4. [t]he cost to investors, issuers and workers caused by adverse economic effects of the rule.'' [3192]

While we acknowledge the commenters' concerns about costs of the proposal, for the reasons discussed in section II and elsewhere throughout this release, we believe the information required by the final rules is necessary and appropriate in the public interest and for the protection of investors. Further, a discussion of the economic effects of the final rules, including consideration of comments that expressed concern about the expected costs associated with the proposed rules, can be found in section IV above. With regard to the calculation of paperwork burdens, we note that both the Proposing Release's PRA analysis and our PRA analysis of the final rules estimate the incremental burden of each new or revised disclosure requirement individually and fully comport with the requirements of the PRA. We further note that the costs that one commenter stated we had not included are not costs that are required to be considered or typically included in a PRA analysis.[3193] Further, our estimates reflect the modifications to the proposed rules that we are adopting in response to commenter concerns, including streamlining some of the proposed rule's elements to address concerns regarding the level of detail required and the anticipated costs of compliance.

D. Sources of Cost Estimates

We based the paperwork burden of the proposed rules in part on the BEIS impact assessment for the UK climate disclosure rules as well as the input from commenters to a request for public input.[3194] Our estimates of the paperwork burden associated with the final rules are based on the direct cost estimates discussed in the Economic Analysis.[3195] As discussed above in more detail in section IV.C.3.b, those direct cost estimates are based primarily on two cost estimates for similar UK climate disclosure rules (*i.e.,* the 2021 BEIS impact assessment and the 2021 FCA cost-benefit analysis) [3196] and on cost estimates provided by several commenters.[3197] While we believe that the direct cost estimates provide a reasonable means of determining the estimated collection of information burden associated with the final rules, they likely represent an upper bound of the paperwork burden of the final rules as they reflect a conservative approach (*i.e.,* erring on the side of overstating costs rather than understating them) to estimate approximate compliance costs for the final rules.

E. Incremental and Aggregate Burden and Cost Estimates of the Final Rules

Below we estimate the incremental and aggregate increase in paperwork burden resulting from the final rules. These estimates represent an average multi-year burden for all issuers, both large and small. While we typically calculate a three-year average for PRA purposes, because one of the amendment's requirements will not be phased in until the ninth year of initially providing the disclosures required by the amendments,[3198] we have estimated a nine-year average PRA

[3187] The table uses the percentage estimates we typically use for the burden allocation for each response. *See infra* PRA Table 2.

burden. In deriving our estimates, we recognize that the burdens will likely vary among individual registrants based on a number of factors, including the nature of their business, the size and complexity of their operations, and whether they are subject to similar climate-related disclosure requirements in other jurisdictions or already preparing similar disclosures on a voluntary basis. For purposes of the PRA, the burden is to be allocated between internal burden hours and outside professional costs.

PRA Table 2 below sets forth the percentage estimates we typically use for the burden allocation for each affected collection of information.

PRA TABLE 2—STANDARD ESTIMATED BURDEN ALLOCATION FOR SPECIFIED COLLECTIONS OF INFORMATION

Collection of information	Internal (%)	Outside professionals (%)
Forms S–1, F–1, S–4, F–4, S–11, 10, and 20–F	25	75
Form 10–K	75	25

1. Calculation of the Paperwork Burden Estimates of the Final Rules

When estimating the paperwork burden of the proposed rules, we considered the effects of three sets of climate-related information that would be required to be filed on the Commission's forms under those rules: climate-related disclosures regarding governance, strategy, and risk management; GHG emissions metrics and targets; and financial statement metrics. When estimating the paperwork burden of the final rules, we have modified the sets of information considered to reflect changes made from the proposed rules. First, we have separated disclosures related to targets from disclosures related to metrics. Second, we have replaced ''financial statement metrics'' with ''financial statement disclosures.'' This modification reflects the fact that the final rules do not use the term ''metrics'' to describe the amendments to Regulation S–X because it is more accurate to characterize the disclosures as financial statement effects.[3199]

The estimated burden hours and costs of the final rules are generally lower than the estimated burden hours and costs of the proposed rules. This is due to changes from the proposed rules that we are adopting in the final rules. For example, the final rules include materiality qualifiers and other revisions in the disclosure categories regarding governance, risk management, and strategy, including transition plans, scenario analysis, targets and goals, and GHG emissions metrics. In addition, we have revised the average salary rate from that used for the proposed PRA estimates to convert some of commenters' cost estimates into burden hours, consistent with existing OMB guidance.[3200]

The following PRA Table 3 shows the estimated number of total burden hours resulting from the final rules based on the initial and ongoing cost estimates for the above-described sets of information as discussed in section IV above. To derive the estimated total number of burden hours, we first applied the appropriate percentage estimate from PRA Table 2 to allocate the portion of the cost estimate for each set of information pertaining to the internal burden and the portion pertaining to external professional costs. We then converted the costs to internal burden hours using a conversion rate of $441/hr. for governance, strategy, and risk management, scenario analysis, Scopes 1 and 2 emissions, targets and goals, and financial statement disclosures.[3201] We similarly converted external professional costs into burden hours using a conversion rate of $600/hr. We then added internal and external burden hours to obtain the total number of estimated burden hours for each set of information. All numbers have been rounded to the nearest whole number.

BILLING CODE 8011–01–P

[3199] *See supra* note 1705.

[3200] The PRA estimates for the proposed rules used an hourly rate that was based on an average annual salary of a climate specialist, according to Glassdoor, but which did not reflect additional labor costs. *See* Proposing Release, section V.B. We have based the PRA estimates for the Regulation S–K subpart 1500 disclosure requirements on average salary rates according to SIFMA Management and Professional Salaries Data, which the staff has updated to account for inflation through September 2023 and which includes overall costs and overhead associated with the reported professional and management positions. The SIFMA data provides a more realistic cost basis for determining the PRA burdens associated with the final rules because of this additional information, and is consistent with OMB guidance that, when determining burden hours, ''all wages need to be fully-loaded, meaning they reflect the full cost of labor.'' OMB, *A Guide to the Paperwork Reduction Act,* available at *https://pra.digital.gov/burden/*. In addition, unlike the PRA estimates for the proposed rules, which were based solely on the average annual salary of a climate specialist, we have based the PRA burden hour estimates of the subpart 1500 rules on the median salary rates of in-house legal counsel and systems analyst/database administrators, whom we believe in conjunction with each other will most likely perform the work underlying the disclosures of governance, strategy, risk management, targets and goals, and Scope 1 and 2 GHG emissions metrics. We therefore have taken the average of the median salary rates for SIFMA-listed attorney positions (Attorney and Assistant General Counsel, which average $525/hr.) and SIFMA-listed system analyst/database administrator positions (Systems Analyst, Sr. Systems Analyst, and Sr. Database Administrator, which average $356/hr.) calculated as follows: $525/hr. + $356/hr. = $881/hr. $881/2 = $441/hr.

Notes:
[1] Column B values for this PRA Table 3 are calculated as follows: ((Column A value) x (Relevant percentage for Internal from PRA Table 2)) / ($441/hr.).
[2] Column C values for this PRA Table 3 are calculated as follows: (Column A value) x (Relevant percentage for Outside Professionals from PRA Table 2).
[3] Column D values for this PRA Table 3 are calculated as follows: (Column C value) / ($600/hr.).
[4] Column G values for this PRA Table 3 are calculated as follows: ((Column F value) x (Relevant percentage for Internal from PRA Table 2)) / ($441/hr.).
[5] Column H values for this PRA Table 3 are calculated as follows: (Column F value) x (Relevant percentage for Outside Professionals from PRA Table 2).
[6] Column I values for this PRA Table 3 are calculated as follows: (Column H value) / ($600/hr.).

The next three tables summarize the paperwork burden effects for three groups of registrants: (1) LAFs; (2) AFs that are not SRCs or EGCs (“non-exempt AFs”) and (3) SRCs, EGCs, and NAFs. The first two tables summarize,

respectively, the estimated internal burden hour (PRA Table 4A) and external professional cost effects (PRA Table 4B) of the final rules. Both tables show the phase in for the Scopes 1 and 2 emissions disclosure requirements. Both LAFs and non-exempt AFs are subject to the requirement to disclose their Scopes 1 and 2 emissions if material. LAFs must comply with the GHG emissions disclosure requirement beginning with their second fiscal year of compliance with the final rules, while non-exempt AFs must comply beginning with their third fiscal year of compliance.[3202]

The tables span the first nine years of compliance in order to cover the first year of the paperwork burden associated with the requirement to obtain a reasonable assurance attestation report, which LAFs must comply with in their ninth year of compliance. For comparability purposes, we have also estimated the paperwork burden effects for non-exempt AFs and SRCs, EGCs, and NAFs over a nine-year span, and have taken a nine-year average for each of the three groups of registrants.[3203]

After a three-year phased in compliance period of reporting their GHG emissions, both LAFs and non-exempt AFs will be required to obtain an attestation report to verify their GHG emissions disclosure. While LAFs will initially be required to obtain an attestation report at the limited assurance level, after a four-year transition period, they will be required to obtain an attestation report at the reasonable assurance level. We estimate that a reasonable assurance attestation report will be more costly than a limited assurance report. PRA Table 4C summarizes the paperwork burden effects estimated to result from the attestation report requirement for these two groups of registrants over a nine-year span.[3204]

[3202] The final rules provide a phase in for another set of information—the material expenditures disclosure requirement, which will be provided pursuant to either Item 1502, as part of a registrant's strategy disclosure, or Item 1504 of Regulation S–K, as part of a registrant's targets and goals disclosure. All three groups of registrants must comply with the material expenditures disclosure requirement in the fiscal year immediately following the fiscal year of their initial compliance date for the final rules based on their filer status. As explained in section IV.C.3, we have assumed that costs for the material expenditures disclosure have been included in the cost estimates considered for strategy or targets and goals disclosures. *See supra* note 3060 and accompanying text. Because the material expenditures disclosure will comprise only part of a registrant's strategy or targets and goals disclosure and because most of the disclosure requirements pursuant to Item 1502 and Item 1504 are not subject to a phase in, the tables below do not account for the material expenditures phase in.

[3203] In each table, all numbers have been rounded to the nearest whole number.

[3204] *See supra* section IV.C.3.b.iii for further discussion of these attestation report estimates.

[3] 9-Year Average values for this column are calculated as follows: ((Year 1 value for All Registrants) + ((Years 2-9 value for SRCs, EGCs, and NAFs) x 8)) / 9.

PRA Table 4C. Estimated Paperwork Burden Effects of the Attestation Requirement Over the First Nine Years of Compliance

Collection of Information: Forms S-1, F-1, S-4, F-4, S-11, 10, 20-F, and 10-K						
Assurance Costs for LAFs				Assurance Costs for Non-Exempt AFs		
Years 1-4	Years 5-8	Year 9	9-Year Average[1]	Years 1-5	Years 6-9	9-Year Average[2]
$0	$50,000	$150,000	**$38,889**	$0	$50,000	**$22,222**

Notes:

[1] 9-Year Average values for this column are calculated as follows: (((Years 1-4 value for LAFs) x 4) + ((Years 5-8 value for LAFs) x 4) + (Year 9 value for LAFs)) / 9.

[2] 9-Year Average values for this column are calculated as follows: (((Years 1-5 value for non-exempt AFs) x 5) + ((Years 6-9 value for non-exempt AFs) x 4)) / 9.

2. Estimated Number of Affected Respondents

We estimate that the final rules will change the paperwork burden per response for each affected collection of information. However, we do not believe that the above-described paperwork burdens will affect all the filers for each collection of information. Because the final rules include materiality qualifiers and otherwise will not require disclosure in all instances from all registrants, but rather depend on the registrant's particular facts and circumstances, we estimate that only a certain percentage of filers of each form will be required to provide the climate-related disclosures. We have based the estimated percentages on third-party surveys of current climate-related disclosure practices, commenters' estimates of companies likely to disclose climate-related risks and metrics, and staff estimates of current climate-related disclosure practices.[3205]

The following PRA Table 5 provides the percentage of filers for each collection of information that we estimate will be affected by the final rules.

[3205] In particular, we have considered the percentages of surveyed companies, both issuers with larger market capitalization and all other registrants, providing climate-related disclosures as reported by the TCFD in TCFD, 2022 Status Report (Oct. 2022). That report included climate-related data from companies with a market capitalization ranging from greater than $12.2 billion to less than $3.4 billion. In addition, we have considered aspects of the third-party surveys discussed in section IV, such as the 2021 S&P Global Corporate Sustainability Assessment and estimates of climate-related risk and metrics reporting provided by commenters, such as Amer. for Fin. Reform and Public Citizen (Oct. 26, 2023). That commenter included climate-related data pertaining to Fortune 1000 companies with individual annual revenues over $2 billion. However, none of the estimates considered included companies that directly matched the registrants that will be affected by the final rules. Therefore, the estimated percentages of LAFs, AFs, and all other registrants affected by the final rules, as provided in the table below, may underestimate or overestimate the actual number of affected respondents.

PRA Table 5. Estimated Percentage of Filers for Each Collection of Information That Will Be Affected By the Final Rules

Form	No. of Respondents[1]				Disclosure Item	Percentage of Respondents Affected[2]			No. of Affected Respondents		
	Total	LAFs	Non-Exempt AFs	SRCs, EGC, and NAFs		LAFs	Non-Exempt AFs	SRCs, EGCs, and NAFs	LAFs	Non-Exempt AFs	SRCs, EGCs, and NAFs

					Average No. of Affected Respondents:				**1,395**	**141**	**1,131**

Notes:

[1] The number of respondents for each group of registrants is based on the approximate percentage of respondents in 2022 that were LAFs, non-exempt AFs, and all other registrants (SRCs, EGCs, and NAFs). As discussed in Section IV, the number of domestic registrants and foreign private issuers affected by the final rules is estimated as the number of companies that filed a unique Form 10-K or Form 20-F during calendar year 2022, excluding asset-backed securities issuers. Of domestic respondents, approximately 33% were LAFs, 5% were non-exempt AFs, and 62% were all other registrants (SRCs, EGCs, and NAFs). Of foreign respondents, approximately 33% were LAFs, 11% were non-exempt AFs, and 56% were all other registrants (SRCs, EGCs, and NAFs).

[2] All percentages for LAFs, non-exempt AFs, and all other registrants (SRCs, EGCs, and NAFs) rounded to nearest 5%.

[3] For example, according to the TCFD 2022 Status Report, an average of 48% of the largest companies provided disclosures related to governance, strategy, and risk management (excluding scenario analysis), 68% of LAFs provided some climate-related disclosures in Commission filings in 2022 as discussed in Section IV above, and 73% of Fortune 1000 companies will likely be required to disclose their climate risks and strategies pursuant to recent California law, according to one commenter. *See* letter from Amer. for Fin. Reform, Public Citizen, and Sierra Club (Oct. 26, 2023). 48 + 68 + 73 = 189; 189/3 = 63, which we have rounded up to 65%.

3. Summary of the Estimated Burden Hour and Cost Increases Resulting From the Final Rules

The following two tables provide:

- The calculation of the incremental and aggregate change in burden hour and professional cost estimates of current responses resulting from the final rules (PRA Table 6); and
- The program change and total requested change in paperwork burden for the final rules (PRA Table 7).

PRA Table 6. Calculation of the Incremental and Aggregate Change in Burden Hour and Cost Estimates of Current Responses Resulting from the Final Rules[1]

BILLING CODE8011–01–C

VI. Final Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (''RFA'') requires the Commission, in promulgating rules under section 553 of the Administrative Procedure Act,[3206] to consider the impact of those rules on small entities. We have prepared this Final Regulatory Flexibility Analysis (''FRFA'') in accordance with section 604 of the RFA.[3207] An Initial Regulatory Flexibility Analysis ('' IRFA'') was prepared in accordance with the RFA and was included in the Proposing Release.[3208]

A. Need for, and Objectives of, the Final Amendments

The final amendments add a new subpart 1500 to Regulation S–K and a new Article 14 to Regulation S–X, which will require registrants to provide certain climate-related disclosures in their Securities Act and Exchange Act registration statements and Exchange Act reports. These requirements will elicit more complete and useful information about the impacts of climate-related risks on registrants to improve the consistency, comparability, and reliability of climate-related information for investors. As required by the RFA, this FRFA describes the impact of the final amendments on small entities. The need for, and objectives of, the final rules are described in sections I and II above. We discuss the economic impact and potential alternatives to the amendments in section IV, and the estimated compliance costs and burdens of the amendments for purposes of the PRA in section V.

B. Significant Issues Raised by Public Comments

In the Proposing Release, the Commission requested comment on any aspect of the IRFA, and particularly on the number of small entities that would be affected by the proposed amendments, the existence or nature of the potential impact of the proposed amendments on small entities discussed in the analysis, how the proposed amendments could further lower the burden on small entities, and how to quantify the impact of the proposed amendments.

We received one comment letter on the IRFA from the U.S. Small Business Administration's Office of Advocacy (''Advocacy'').[3209] Advocacy's letter expressed concern that ''the IRFA does not adequately describe the regulated small entities and potential impacts on those entities.'' [3210] In the Proposing Release, the Commission estimated that the proposed amendments would apply to 1,004 registrants that may be considered small entities.[3211] Advocacy's comment letter stated that this estimate did ''not provide additional information, such as the North American Industry Classification System (''NAICS'') classifications of the affected entities'' and did not ''break down the affected entities into smaller size groups (*e.g.,* based on total assets).'' [3212]

The comment letter from Advocacy also addressed the discussion of alternatives within the IRFA and the Commission's explanation of why it did not ultimately propose such alternatives. Advocacy also stated that ''[t]he RFA requires that an IRFA provide significant, feasible alternatives that accomplish an agency's objectives,'' and stated that the IRFA did not satisfy this requirement because it listed ''broad categories of potential alternatives to the proposed rules but [did] not analyze specific alternatives that w[ere] considered by the SEC'' and because it did not ''contain a description of any additional regulatory alternatives which accomplish the SEC's stated objectives and which would further minimize the significant economic impact of the proposal on small entities.'' [3213] Finally, Advocacy stated that the Commission had not ''considered the impacts of the proposal to indirectly regulated small entities'' as a result of the proposed requirement for Scope 3 emissions data from certain registrants.[3214] Advocacy stated that ''[m]any of these upstream and downstream parties will be small, privately-owned companies that do not have public reporting requirements,'' and as result such ''small businesses are unsure what information they would be expected to provide to public companies, how to collect the necessary information, and whether their businesses would be able to absorb the associated costs.'' [3215]

1. Estimate of Affected Small Entities and Impact to Those Entities

With respect to the adequacy of the Proposing Release's estimate of affected small entities, the RFA requires ''a description of and, where feasible, an estimate of the number of small entities to which the proposed rule will apply.'' [3216] Advocacy's published guidance recommends agencies use NAICS classifications to help in ''identifying the industry, governmental and nonprofit sectors they intend to regulate.'' [3217] Here, given that the rulemaking applies to and impacts all public company registrants, regardless of industry or sector, we do not believe that further breakout of such registrants by industry classification is necessary or would otherwise be helpful to such entities in understanding the impact of the proposed or final rules. In this case, small entities in certain industries and sectors are not necessarily more affected than others, as climate-related risks may exist across all industries and sectors, and may or may not exist for a particular registrant irrespective of the industry classification.[3218] For the same reasons, we are not breaking down the affected entities into smaller size groups (*e.g.,* based on total assets), as recommended by Advocacy. Given the nature of the final rules, we believe that our estimate below of the number of small entities to which the final rules will apply adequately describes and estimates the small entities that will be affected.[3219]

We disagree with the statement in Advocacy's comment letter that ''SEC expects that the costs associated with the proposed amendments to be similar for large and small entities.'' The Commission explained in the IRFA that the proposed amendments would apply to small entities to the same extent as other entities, irrespective of size, and that therefore, the Commission expected that ''the *nature* of any benefits and costs associated with the proposed amendments to be similar for large and

[3218] A breakout would be relevant where, for example, the Commission finds that small entities generally would not be affected by a rule but small entities in a particular industry would be affected.

[3219] *See infra* section VI.C.

small entities'' (emphasis added).[3220] The analysis with respect to the *nature* of the costs (and benefits) of the proposed rules detailed in the Economic Analysis of the Proposing Release was referenced in the IRFA to help small entities understand such impacts, not to imply that small entities face the same proportional costs as large entities. Indeed, the Commission went on to state in both the IRFA and the Economic Analysis of the Proposing Release that costs ''can vary significantly depending on firm characteristics, such as firm size, industry, business model, the complexity of the firm's corporate structure, starting level of internal expertise, etc.'' [3221]

The Commission solicited comments on the proposal's potential effect on small entities, and specifically acknowledged that their varied characteristics, including ''the nature and conduct of their businesses make[s] it difficult to project the economic impact on small entities with precision.'' [3222] We note that the proposal, while not exempting small entities from the full scope of the proposed amendments, did exempt SRCs, which would generally include all estimated small entities that would be subject to the proposed rules, from the proposed Scope 3 emissions disclosure requirements and from the proposed GHG attestation requirements. Under the proposal, SRCs also were afforded a longer transition period to comply with the proposed rules than other registrants.

We nonetheless recognize the concerns raised by Advocacy and others regarding the costs to small entities subject to the proposed rules, as well as the concerns about the indirect impact to small entities not subject to the proposed rules. We discuss the economic effects, including costs, of the final rules across all entities in section IV above. We recognize that, to the extent the costs of the final rules are generally fixed across entities, they would be proportionally more costly for smaller companies. However, as discussed both above and below, to help mitigate that relatively greater burden to smaller companies and to respond to commenter concerns, we have made a number of changes in the final rules to ease these burdens, including providing SRCs, EGCs and NAFs with the longest phase in periods for compliance as well as excluding them entirely from some of the requirements, such as the GHG emissions disclosure and related assurance requirements. Additionally, certain changes from the proposal, including streamlining the requirements, making them less prescriptive and adding materiality qualifiers, will reduce the overall burden of the final rules for all registrants, including small entities. Accordingly, we believe that both this FRFA and our prior IRFA adequately describe and analyze the relative impact of costs to small entities.

2. Consideration of Alternatives

The IRFA's discussion of significant alternatives, and our discussion of alternatives below, satisfy the RFA. The relevant RFA requirement provides that an IRFA ''shall also contain a description of any significant alternatives to the proposed rule *which accomplish* the stated objectives of applicable statutes and which minimize any significant economic impact of the proposed rule on small entities.'' [3223] In the Proposing Release, the Commission discussed each of the types of significant alternatives noted in section 603 of the RFA and concluded that none of these alternatives would accomplish the stated objectives of the rulemaking while minimizing any significant impact on small entities. In addition, section IV.F of the Proposing Release discussed reasonable alternatives to the proposed rules and their economic impacts. Similarly, in addition to the discussion in section VI.E below, in section IV.F of this release we also discuss reasonable alternatives of the final rules and their economic impacts.

While not commenting on the alternatives raised in the IRFA specifically, several commenters asked the Commission to provide further exemptions not only for SRCs as proposed, but also for other small businesses without reporting obligations that may have faced upstream or downstream reporting obligations under the proposed rules.[3224] One of these commenters stated that while ''appreciat[ive] that the Commission proposes to exempt small companies from a portion of the reporting requirements (Scope 3)'' small companies in the biotechnology industry ''will be disproportionately affected by the proposed rule while providing limited benefit to investors.'' [3225] This commenter also asserted that the proposed exemptions would not provide relief to smaller companies that ''have no product revenues but often fall outside of the scope of smaller reporting companies due to existing public float threshold.'' [3226] Failure to consider these companies, it argued, could lead to ''diminishing incentives'' to go public and potentially duplicative regulation.[3227] Another commenter reiterated this concern, stating that Scope 3 emission requirements extend beyond registrants to privately owned entities, specifically those without the resources to comply with the proposed disclosures.[3228]

Advocacy stated it was concerned about the potential upstream and downstream effects of Scope 3 emissions disclosure requirements on non-regulated small businesses.[3229] Several commenters raised similar concerns.[3230] While small businesses without reporting requirements were not obligated under the proposed rules to provide this information, several commenters expressed concerns that companies with reporting obligations would compel the collection of this information as a condition of doing business with these businesses.[3231]

The Commission also received comments that explicitly opposed a wholesale exemption for smaller companies, pointing to the need for greater transparency about climate-related risks irrespective of a registrant's size.[3232] Some of these commenters

[3230] *See* letter from AFPA (''The SEC should carefully consider that the potential burdens of the proposal are not limited to public companies subject to SEC regulation, as private companies, including innumerable small businesses, also are expected to face inquiries from many SEC-regulated customers as a result of the rules.'').

[3231] *See* letter from Venture Dairy Cooperative (''Although this proposed rule is likely well intended as a step to both measure and monitor climate related information on publicly traded companies on Wall Street, this extension of reporting on Scope 3 emissions will inevitably filter down the supply chain to our nation's family farms who grow and raise the food we eat.''). *See also* letters from IDFA and PDMPA.

[3232] *See* letters from Anthesis Bailard; CalSTRS CBD; Change Finance; ClientEarth; Defenders Wildlife; Essex Invest. Mgmt.; IASJ IEN; FFAC; Grant Eisenhofer; NCF; OMERA PWHC LLP; Prentiss; S. Lloyd; Sweep; Terra Alpha; UNCA; and WAP.

explained their opposition to a wholesale exemption by stating that smaller companies may face disproportionately greater climate-related risks, and asserted that the additional proposed phase in period was adequate to ensure smaller companies had time to comply with the proposed rules.[3233]

Another commenter stated that, with respect to the proposal to require disclosure about the climate expertise of board members, small companies' ''operations and limited resources do not naturally lend themselves to requiring discrete board expertise for every risk, including climate-related risk.'' [3234] This commenter also stated that requiring the disclosure of board expertise for a smaller company could lead to the selection of board members without other requisite skills.

The Commission considered the comments on the Proposing Release, including those addressing the impact of the proposed reporting obligations on small entities. The final rules address several concerns raised by Advocacy and other commenters and modify the proposal in ways that will significantly reduce costs to smaller reporting companies, including small entities that meet the definition of SRCs, EGCs, and NAFs. For example, SRCs, EGCs and NAFs are not subject to the requirement to disclose Scope 1 and 2 emissions, as discussed above. Additionally, the Commission is not adopting the proposal to require disclosure of Scope 3 emissions for any entities. This will address any concerns about the possible impacts of the proposed Scope 3 requirements on small entities, including private companies, in a reporting company's value chain. Additionally, as a result of eliminating the reference to negative climate-related impacts on a registrant's value chain from the proposed definition of climate-related risks, the final rules further limit the burdens of climate risk assessment on parties in a registrant's value chain that might have occurred under the rule proposal.

We agree with commenters that stated that smaller companies should not be fully exempted from the final rules because they could face material climate risks about which investors need information to make informed voting and investment decisions.[3235] As with other sized entities, many of the changes we have made to streamline the rules and provide additional flexibility to registrants to tailor their disclosures based on their particular facts and circumstances will similarly benefit smaller companies. For example, the changes made to the governance and risk management sections are less prescriptive and more principles-based, which will allow smaller companies to avoid disclosure requirements that are not compatible with their business. Additionally, as discussed in section II.O, we are providing SRCs, EGCs, and NAFs with significant additional time to comply with the final rules, with the earliest disclosures being required no sooner than the filings that are required to include financial information for fiscal year 2027.

C. Small Entities Subject to the Final Amendments

The final rules apply to registrants that are small entities. The RFA defines ''small entity'' to mean ''small business,'' ''small organization,'' or ''small governmental jurisdiction.'' [3236] For purposes of the RFA, under our rules, a registrant, other than an investment company, is a ''small business'' or ''small organization'' if it had total assets of $5 million or less on the last day of its most recent fiscal year and is engaged or proposing to engage in an offering of securities that does not exceed $5 million.[3237] An investment company, including a business development company,[3238] is considered to be a ''small business'' if it, together with other investment companies in the same group of related investment companies, has net assets of $50 million or less as of the end of its most recent fiscal year.[3239] We estimate that, as of December 31, 2022, there were approximately 800 issuers and 10 business development companies that may be considered small entities that would be subject to the final amendments.

D. Projected Reporting, Recordkeeping, and Other Compliance Requirements

As noted above, requirements to disclose material GHG emissions information and obtain assurance over that information will not apply to SRCs, EGCs, or NAFs in response to concerns raised by commenters. For the remainder of the requirements, we continue to expect that the nature of any benefits and costs associated with the amendments to be similar for large and small entities, and so we refer to the discussion of the amendments' economic effects on all affected parties, including small entities, in section IV above. Also consistent with the discussion in sections II and IV above, we acknowledge that, to the extent that a smaller entity would be required to provide disclosure under the final rules, it may face costs that are proportionally greater as it may be less able to bear such costs relative to larger entities.[3240] The costs of preparing the disclosure would be a primary contributing factor given that compliance with certain provisions of the final amendments may require the use of professional skills, including legal, accounting, and technical skills. We also anticipate that the economic benefits and costs likely could vary widely among small entities based on a number of factors, such as the nature and conduct of their businesses, including whether and how they managed any material climate-related risks, which makes it difficult to project the economic impact on small entities with precision. To the extent that the disclosure requirements have a greater effect on smaller registrants relative to large registrants, they could result in adverse effects on competition.

E. Agency Action To Minimize Effect on Small Entities

The RFA directs us to consider alternatives that would accomplish our stated objectives, while minimizing any significant adverse impact on small entities. Accordingly, we considered the following alternatives:

1. Exempting small entities from all or part of the requirements;
2. Establishing different compliance or reporting requirements that consider the resources available to small entities;
3. Using performance rather than design standards; and
4. Clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities.

[3233] *See* letter from ICI (''In addition, we support the Commission not proposing generally to exempt SRCs or EGCs from the entire scope of the proposed climate-related disclosure rules because climate-related risks may pose a significant risk to the operations and financial condition of smaller companies. At the same time, providing them with more time than other companies to comply with any new requirements could mitigate the Proposal's compliance burden for smaller companies by giving them additional time to allocate the resources necessary to compile and prepare climate-related disclosures.'').

[3234] *See* letter from NRP.

[3235] *See, e.g., supra* notes 2410–2413.

[3236] 5 U.S.C. 601(6).

[3237] *See* 17 CFR 240.0–10(a).

[3238] Business development companies are a category of closed-end investment company that are not registered under the Investment Company Act [15 U.S.C. 80a–2(a)(48) and 80a–53 through 64].

[3239] 17 CFR 270.0–10(a).

[3240] We note that some commenters stated that SRCs may have proportionately lower expenses. *See* letter from Amer. for Fin. Reform, Sunrise Project *et al.*

The rules are intended to allow investors to make more informed investment and voting decisions about the impact of climate-related risks on registrants' business and financial condition. As explained in section I.A. above, current requirements are not yielding consistent and comparable disclosure sufficient to meet investors' needs. The disclosure that does exist is scattered in various parts of registrants' filings and public disclosures and provided at different intervals, making it difficult for investors to locate, analyze, and compare across registrants.

Given the current disclosure landscape, exempting small entities entirely from the rules or otherwise clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities would frustrate the rulemaking's goal of providing investors with more consistent, comparable and timely disclosure about climate-related risks across all registrants. However, as discussed in section II above, we have consolidated and simplified the disclosure requirements for all entities, which should ease small entities' compliance as well. Further, as some commenters noted, smaller companies may face equal or greater climate-related risk than larger companies, making the disclosures important for investors in these companies.[3241] However, we have determined to require the disclosure of Scope 1 and Scope 2 GHG emissions only in certain circumstances from the largest filers, thereby excluding smaller companies from these provisions. We believe that this strikes an appropriate balance between the needs of investors in smaller companies, including small entities, to understand the likely impacts of material climate-related risks and the costs associated with compliance.

We also believe the rulemaking's stated objectives can be achieved by providing smaller companies with additional time to comply. Therefore, smaller companies, including small entities that are SRCs, EGCs and NAFs, will be provided with more than two years from the effective date of the final rules before compliance is required; specifically, these entities must begin to comply in filings that are required to include financial information for fiscal year 2027. These changes will benefit small entities and other small companies, both by giving them an extended compliance period to establish disclosure controls and procedures and by allowing them to observe and learn from best practices as they develop among larger registrants.

Similarly, the final rules incorporate a combination of performance and design standards with respect to all affected registrants, including small entities, in order to balance the objectives and compliance burdens of the final rules. While the final rules use design standards to promote uniform compliance requirements for all registrants and to address the disclosure concerns underlying the amendments, which apply to entities of all sizes, they also incorporate elements of performance standards to give registrants sufficient flexibility to craft meaningful disclosure that is tailored to their particular facts and circumstances. For example, the final rules require a registrant to describe the actual and potential material impacts of any material climate-related risk on the registrant's strategy, business model, and outlook. The rules also provide a non-exhaustive list of examples of disclosure items that a registrant should include, if applicable, in providing responsive disclosure rather than specifying more prescriptive set of disclosures, as in the proposal.

Statutory Authority

The amendments contained in this release are being adopted under the authority set forth in sections 7, 10, 19(a), and 28 of the Securities Act, as amended, and sections 3(b), 12, 13, 15, 23(a), and 36 of the Exchange Act, as amended.

List of Subjects in 17 CFR Parts 210, 229, 230, 232, 239, and 249

Accountants; Accounting; Administrative practice and procedure, Reporting and recordkeeping requirements, Securities.

Text of Amendments

For the reasons set out in the preamble, the Commission is adopting amendments to title 17, chapter II of the Code of Federal Regulations as follows:

PART 210—FORM AND CONTENT OF AND REQUIREMENTS FOR FINANCIAL STATEMENTS, SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934, INVESTMENT COMPANY ACT OF 1940, INVESTMENT ADVISERS ACT OF 1940, AND ENERGY POLICY AND CONSERVATION ACT OF 1975

■ 1. The authority citation for part 210 continues to read as follows:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77aa(25), 77aa(26), 77nn(25), 77nn(26), 78c, 78j–1, 78*l,* 78m, 78n, 78*o*(d), 78q, 78u–5, 78w, 78*ll,* 78mm, 80a–8, 80a20, 80a–29, 80a–30, 80a–31, 80a–37(a), 80b–3, 80b–11, 7202 and 7262, and sec. 102(c), Pub. L. 112–106, 126 Stat. 310 (2012), unless otherwise noted.

■ 2. Amend § 210.8–01 by revising paragraph (b) to read as follows:

§ 210.8–01 General requirements for Article 8.

* * * * *

(b) Smaller reporting companies electing to prepare their financial statements with the form and content required in Article 8 need not apply the other form and content requirements in 17 CFR part 210 (Regulation S–X) with the exception of the following:

(1) The report and qualifications of the independent accountant shall comply with the requirements of §§ 210.2–01 through 210.2–07 (Article 2); and

(2) The description of accounting policies shall comply with § 210.4–08(n); and

(3) Smaller reporting companies engaged in oil and gas producing activities shall follow the financial accounting and reporting standards specified in § 210.4–10 with respect to such activities; and

(4) Sections 210.14–01 and 210.14–02 (Article 14).

* * * * *

■ 3. Add an undesignated center heading and §§ 210.14–01 and 210.14–02 to read as follows:

Article 14 Disclosure of Severe Weather Events and Other Information

§ 210.14–01 Instructions related to disclosure of severe weather events and other information.

(a) *General.* A registrant must include disclosure pursuant to § 210.14–02 in any filing that is required to include disclosure pursuant to subpart 229.1500 of this chapter and that also requires the registrant to include its audited financial statements. The disclosure pursuant to § 210.14–02 must be included in a note to the financial statements included in such filing.

(b) *Definitions.* The definitions in § 229.1500 of this chapter (Item 1500 of Regulation S–K) apply to §§ 210.14–01 and 210.14–02 (Article 14) except where otherwise indicated.

(c) *Basis of calculation.* When calculating the financial statement effects in this Article 14, except where otherwise indicated, a registrant must:

(1) Use financial information that is consistent with the scope of its consolidated financial statements included in the filing; and

(2) Apply the same accounting principles that it is required to apply in

[3241] *See supra* note 3233.

the preparation of its consolidated financial statements included in the filing.

(d) *Periods to be disclosed.* Disclosure must be provided for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s), for which audited consolidated financial statements are included in the filing.

§ 210.14–02 Disclosures related to severe weather events and other information.

(a) *Contextual information.* Provide contextual information, describing how each specified financial statement effect disclosed under § 210.14–02(b) through (h) was derived, including a description of significant inputs and assumptions used, significant judgments made, other information that is important to understand the financial statement effect and, if applicable, policy decisions made by the registrant to calculate the specified disclosures.

(b) *Disclosure thresholds.* (1) Disclosure of the aggregate amount of expenditures expensed as incurred and losses pursuant to paragraph (c) of this section is required if the aggregate amount of expenditures expensed as incurred and losses equals or exceeds one percent of the absolute value of income or loss before income tax expense or benefit for the relevant fiscal year. Such disclosure is not required, however, if the aggregate amount of expenditures expensed as incurred and losses is less than $100,000 for the relevant fiscal year.

(2) Disclosure of the aggregate amount of capitalized costs and charges incurred pursuant to paragraph (d) of this section is required if the aggregate amount of the absolute value of capitalized costs and charges equals or exceeds one percent of the absolute value of stockholders' equity or deficit at the end of the relevant fiscal year. Such disclosure is not required, however, if the aggregate amount of the absolute value of capitalized costs and charges is less than $500,000 for the relevant fiscal year.

(c) *Expenditures expensed as incurred and losses resulting from severe weather events and other natural conditions.* Disclose the aggregate amount of expenditures expensed as incurred and losses, excluding recoveries, incurred during the fiscal year as a result of severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise. For example, a registrant may be required to disclose the amount of expense or loss, as applicable, to restore operations, relocate assets or operations affected by the event or other natural condition, retire affected assets, repair affected assets, recognize impairment loss on affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations. Disclosure pursuant to this paragraph must separately identify where the expenditures expensed as incurred and losses are presented in the income statement.

(d) *Capitalized costs and charges resulting from severe weather events and other natural conditions.* Disclose the aggregate amount of capitalized costs and charges, excluding recoveries, incurred during the fiscal year as a result of severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise. For example, a registrant may be required to disclose the amount of capitalized costs or charges, as applicable, to restore operations, retire affected assets, replace or repair affected assets, recognize an impairment charge for affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations. Disclosure pursuant to this paragraph must separately identify where the capitalized costs and charges are presented in the balance sheet.

(e) *Carbon offsets and RECs.* (1) If carbon offsets or RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals, disclose the aggregate amount of carbon offsets and RECs expensed, the aggregate amount of capitalized carbon offsets and RECs recognized, and the aggregate amount of losses incurred on the capitalized carbon offsets and RECs, during the fiscal year. In addition, disclose the beginning and ending balances of the capitalized carbon offsets and RECs for the fiscal year. Disclosure pursuant to this paragraph must separately identify where the expenditures expensed, capitalized costs, and losses are presented in the income statement and the balance sheet.

(2) If a registrant is required to provide disclosure pursuant to paragraph (e)(1) of this section, then a registrant must state its accounting policy for carbon offsets and RECs as part of the contextual information required by paragraph (a) of this section.

(f) *Recoveries.* If a registrant is required to provide disclosure pursuant to paragraphs (c) or (d) of this section, then as part of the contextual information required by paragraph (a) of this section, a registrant must state separately the aggregate amount of any recoveries recognized during the fiscal year as a result of severe weather events and other natural conditions for which capitalized costs, expenditures expensed, charges, or losses are disclosed pursuant to paragraphs (c) or (d) of this section. Disclosure pursuant to this paragraph must separately identify where the recoveries are presented in the income statement and the balance sheet.

(g) *Attribution.* For purposes of providing disclosure pursuant to paragraphs (c), (d), and (f) of this section, a capitalized cost, expenditure expensed, charge, loss, or recovery results from a severe weather event or other natural condition when the event or condition is a significant contributing factor in incurring the capitalized cost, expenditure expensed, charge, loss, or recovery. If an event or condition is a significant contributing factor in incurring a cost, expenditure, charge, loss, or recovery, then the entire amount of such cost, expenditure, charge, loss, or recovery must be included in the disclosure pursuant to paragraphs (c), (d), and (f) of this section.

(h) *Financial estimates and assumptions materially impacted by severe weather events and other natural conditions or disclosed targets or transition plans.* Disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise, or any climate-related targets or transition plans disclosed by the registrant. If yes, provide a qualitative description of how the development of such estimates and assumptions were impacted by such events, conditions, targets, or transition plans.

PART 229—STANDARD INSTRUCTIONS FOR FILING FORMS UNDER SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934 AND ENERGY POLICY AND CONSERVATION ACT OF 1975—REGULATION S–K

■ 4. The authority citation for part 229 continues to read as follows:

Authority: 15 U.S.C. 77e, 77f, 77g, 77h, 77j, 77k, 77s, 77z–2, 77z–3, 77aa(25), 77aa(26), 77ddd, 77eee, 77ggg, 77hhh, 77iii, 77jjj, 77nnn, 77sss, 78c, 78i, 78j, 78j–3, 78l, 78m, 78n, 78n–1, 78o, 78u–5, 78w, 78ll, 78

mm, 80a–8, 80a–9, 80a–20, 80a–29, 80a–30, 80a–31(c), 80a37, 80a–38(a), 80a–39, 80b–11 and 7201 *et seq.;* 18 U.S.C. 1350; sec. 953(b), Pub. L. 111–203, 124 Stat. 1904 (2010); and sec. 102(c), Pub. L. 112–106, 126 Stat. 310 (2012).

■ 5. Amend § 229.601 by:

■ a. In the exhibit table in paragraph (a), revising entry 27; and

■ b. Adding paragraph (b)(27).

The revision and addition read as follows:

§ 229.601 (Item 601) Exhibits.

(a) * * *

EXHIBIT TABLE

	Securities Act forms										Exchange Act forms					
	S–1	S–3	SF–1	SF–3	S–4[1]	S–8	S–11	F–1	F–3	F–4[1]	10	8–K[2]	10–D	10–Q	10–K	ABS–EE
*	*			*			*		*			*		*		
(27) Letter re GHG emissions attestation provider	X	X	....	....	X	....	X	X	X	X	......	....	....	X	X	....
*	*			*			*		*			*		*		

[1] An exhibit need not be provided about a company if: (1) With respect to such company an election has been made under Form S–4 or F–4 to provide information about such company at a level prescribed by Form S–3 or F–3; and (2) the form, the level of which has been elected under Form S–4 or F–4, would not require such company to provide such exhibit if it were registering a primary offering.

[2] A Form 8–K exhibit is required only if relevant to the subject matter reported on the Form 8–K report. For example, if the Form 8–K pertains to the departure of a director, only the exhibit described in paragraph (b)(17) of this section need be filed. A required exhibit may be incorporated by reference from a previous filing.

* * * * *

(b) * * *

(27) *Letter re GHG emissions attestation report.* A letter, where applicable, from the attestation provider that acknowledges awareness of the use in a registration statement of a GHG emissions attestation report that pursuant to 17 CFR 230.436(i)(1) (Rule 436(i)(1)) under the Securities Act is not considered a part of a registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Securities Act. Such letter may be filed with the registration statement, an amendment thereto, or a report on Form 10–K (§ 249.310), Form 10–Q (§ 249.308a), or Form 20–F (§ 249.220f), which is incorporated by reference into the registration statement.

* * * * *

■ 6. Add subpart 229.1500, consisting of §§ 229.1500 through 229.1508, to read as follows:

Subpart 229.1500—Climate-Related Disclosure

Sec.

229.1500 (Item 1500) Definitions.
229.1501 (Item 1501) Governance.
229.1502 (Item 1502) Strategy.
229.1503 (Item 1503) Risk management.
229.1504 (Item 1504) Targets and goals.
229.1505 (Item 1505) GHG emissions metrics.
229.1506 (Item 1506) Attestation of Scope 1 and Scope 2 emissions disclosure.
229.1507 (Item 1507) Safe harbor for certain climate-related disclosures.
229.1508 (Item 1508) Interactive data requirement.

Subpart 229.1500—Climate-Related Disclosure

§ 229.1500 (Item 1500) Definitions.

As used in this subpart, these terms have the following meanings:

Carbon offsets represents an emissions reduction, removal, or avoidance of greenhouse gases (''GHG'') in a manner calculated and traced for the purpose of offsetting an entity's GHG emissions.

Climate-related risks means the actual or potential negative impacts of climate-related conditions and events on a registrant's business, results of operations, or financial condition. Climate-related risks include the following:

(1) *Physical risks* include both acute risks and chronic risks to the registrant's business operations.

(2) *Acute risks* are event-driven and may relate to shorter term severe weather events, such as hurricanes, floods, tornadoes, and wildfires, among other events.

(3) *Chronic risks* relate to longer term weather patterns, such as sustained higher temperatures, sea level rise, and drought, as well as related effects such as decreased arability of farmland, decreased habitability of land, and decreased availability of fresh water.

(4) *Transition risks* are the actual or potential negative impacts on a registrant's business, results of operations, or financial condition attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks, including such non-exclusive examples as increased costs attributable to changes in law or policy, reduced market demand for carbon-intensive products leading to decreased prices or profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, and reputational impacts (including those stemming from a registrant's customers or business counterparties) that might trigger changes to market behavior, consumer preferences or behavior, and registrant behavior.

Carbon dioxide equivalent or *CO2e* means the common unit of measurement to indicate the global warming potential (''GWP'') of each greenhouse gas, expressed in terms of the GWP of one unit of carbon dioxide.

Emission factor means a multiplication factor allowing actual GHG emissions to be calculated from available activity data or, if no activity data are available, economic data, to derive absolute GHG emissions. Examples of activity data include kilowatt-hours of electricity used, quantity of fuel used, output of a process, hours of operation of equipment, distance travelled, and floor area of a building.

GHG or *Greenhouse gases* means carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), nitrogen trifluoride (NF_3), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

GHG emissions means direct and indirect emissions of greenhouse gases expressed in metric tons of carbon dioxide equivalent (CO_2e), of which:

(1) Direct emissions are GHG emissions from sources that are owned or controlled by a registrant.

(2) Indirect emissions are GHG emissions that result from the activities of the registrant but occur at sources not owned or controlled by the registrant.

Internal carbon price means an estimated cost of carbon emissions used internally within an organization.

Operational boundaries means the boundaries that determine the direct and indirect emissions associated with

the business operations owned or controlled by a registrant.

Organizational boundaries means the boundaries that determine the operations owned or controlled by a registrant for the purpose of calculating its GHG emissions.

Renewable energy credit or *certificate* or *REC* means a credit or certificate representing each megawatt-hour (1 MWh or 1,000 kilowatt-hours) of renewable electricity generated and delivered to a power grid.

Scenario analysis means a process for identifying and assessing a potential range of outcomes of various possible future climate scenarios, and how climate-related risks may impact a registrant's business strategy, results of operations, or financial condition over time.

Scope 1 emissions are direct GHG emissions from operations that are owned or controlled by a registrant.

Scope 2 emissions are indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant.

Transition plan means a registrant's strategy and implementation plan to reduce climate-related risks, which may include a plan to reduce its GHG emissions in line with its own commitments or commitments of jurisdictions within which it has significant operations.

§ 229.1501 (Item 1501) Governance.

(a) Describe the board of directors' oversight of climate-related risks. If applicable, identify any board committee or subcommittee responsible for the oversight of climate-related risks and describe the processes by which the board or such committee or subcommittee is informed about such risks. If there is a climate-related target or goal disclosed pursuant to § 229.1504 or transition plan disclosed pursuant to § 229.1502(e)(1), describe whether and how the board of directors oversees progress against the target or goal or transition plan.

(b) Describe management's role in assessing and managing the registrant's material climate-related risks. In providing such disclosure, a registrant should address, as applicable, the following non-exclusive list of disclosure items:

(1) Whether and which management positions or committees are responsible for assessing and managing climate-related risks and the relevant expertise of such position holders or committee members in such detail as necessary to fully describe the nature of the expertise;

(2) The processes by which such positions or committees assess and manage climate-related risks; and

(3) Whether such positions or committees report information about such risks to the board of directors or a committee or subcommittee of the board of directors.

Instruction 1 to Item 1501: In the case of a foreign private issuer with a two-tier board of directors, for purposes of paragraph (a) of this section, the term ''board of directors'' means the supervisory or non-management board. In the case of a foreign private issuer meeting the requirements of § 240.10A–3(c)(3) of this chapter, for purposes of paragraph (a) of this section, the term ''board of directors'' means the issuer's board of auditors (or similar body) or statutory auditors, as applicable.

Instruction 2 to Item 1501: Relevant expertise of management in paragraph (b)(1) of this section may include, for example: Prior work experience in climate-related matters; any relevant degrees or certifications; any knowledge, skills, or other background in climate-related matters.

§ 229.1502 (Item 1502) Strategy.

(a) Describe any climate-related risks that have materially impacted or are reasonably likely to have a material impact on the registrant, including on its strategy, results of operations, or financial condition. In describing these material risks, a registrant must describe whether such risks are reasonably likely to manifest in the short-term (*i.e.,* the next 12 months) and separately in the long-term (*i.e.,* beyond the next 12 months). A registrant must disclose whether the risk is a physical or transition risk, providing information necessary to an understanding of the nature of the risk presented and the extent of the registrant's exposure to the risk, including the following non-exclusive list of disclosures, as applicable:

(1) If a physical risk, whether it may be categorized as an acute or chronic risk, and the geographic location and nature of the properties, processes, or operations subject to the physical risk.

(2) If a transition risk, whether it relates to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), or other transition-related factors, and how those factors impact the registrant. A registrant that has significant operations in a jurisdiction that has made a GHG emissions reduction commitment should consider whether it may be exposed to a material transition risk related to the implementation of the commitment.

(b) Describe the actual and potential material impacts of any climate-related risk identified in response to paragraph (a) of this section on the registrant's strategy, business model, and outlook, including, as applicable, any material impacts on the following non-exclusive list of items:

(1) Business operations, including the types and locations of its operations;

(2) Products or services;

(3) Suppliers, purchasers, or counterparties to material contracts, to the extent known or reasonably available;

(4) Activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes; and

(5) Expenditure for research and development.

(c) Discuss whether and how the registrant considers any impacts described in response to paragraph (b) of this section as part of its strategy, financial planning, and capital allocation, including, as applicable:

(1) Whether the impacts of the climate-related risks described in response to paragraph (b) have been integrated into the registrant's business model or strategy, including whether and how resources are being used to mitigate climate-related risks; and

(2) How any of the targets referenced in § 229.1504 or transition plans referenced in paragraph (e) of this section relate to the registrant's business model or strategy.

(d)(1) Discuss how any climate-related risks described in response to paragraph (a) of this section have materially impacted or are reasonably likely to materially impact the registrant's business, results of operations, or financial condition.

(2) Describe quantitatively and qualitatively the material expenditures incurred and material impacts on financial estimates and assumptions that, in management's assessment, directly result from activities disclosed under paragraph (b)(4) of this section.

(e)(1) If a registrant has adopted a transition plan to manage a material transition risk, describe the plan. To allow for an understanding of the registrant's progress under the plan over time, a registrant must update its annual report disclosure about the transition plan each fiscal year by describing any actions taken during the year under the plan, including how such actions have impacted the registrant's business, results of operations, or financial condition.

(2) Include quantitative and qualitative disclosure of material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the transition plan disclosed under paragraph (e)(1) of this section.

(f) If a registrant uses scenario analysis to assess the impact of climate-related risks on its business, results of operations, or financial condition, and if, based on the results of such scenario analysis, the registrant determines that a climate-related risk is reasonably likely to have a material impact on its business, results of operations, or financial condition, the registrant must describe each such scenario including a brief description of the parameters, assumptions, and analytical choices used, as well as the expected material impacts, including financial impacts, on the registrant under each such scenario.

(g)(1) If a registrant's use of an internal carbon price is material to how it evaluates and manages a climate-related risk identified in response to paragraph (a) of this section, disclose in units of the registrant's reporting currency:

(i) The price per metric ton of CO_2e; and

(ii) The total price, including how the total price is estimated to change over the time periods referenced in paragraph (a) of this section, as applicable.

(2) If a registrant uses more than one internal carbon price to evaluate and manage a material climate-related risk, it must provide the disclosures required by this section for each internal carbon price and disclose its reasons for using different prices.

(3) If the scope of entities and operations involved in the use of an internal carbon price described pursuant to this section is materially different from the organizational boundaries used for the purpose of calculating a registrant's GHG emissions pursuant to § 229.1505, briefly describe this difference.

§ 229.1503 (Item 1503) Risk management.

(a) Describe any processes the registrant has for identifying, assessing, and managing material climate-related risks. In providing such disclosure, registrants should address, as applicable, the following non-exclusive list of disclosure items regarding how the registrant:

(1) Identifies whether it has incurred or is reasonably likely to incur a material physical or transition risk;

(2) Decides whether to mitigate, accept, or adapt to the particular risk; and

(3) Prioritizes whether to address the climate-related risk.

(b) If managing a material climate-related risk, the registrant must disclose whether and how any processes described in response to paragraph (a) of this section have been integrated into the registrant's overall risk management system or processes.

§ 229.1504 (Item 1504) Targets and goals.

(a) A registrant must disclose any climate-related target or goal if such target or goal has materially affected or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition. A registrant may provide the disclosure required by this section as part of its disclosure in response to §§ 229.1502 or 229.1503.

(b) In providing disclosure required by paragraph (a) of this section, a registrant must provide any additional information or explanation necessary to an understanding of the material impact or reasonably likely material impact of the target or goal, including, as applicable, but not limited to, a description of:

(1) The scope of activities included in the target;

(2) The unit of measurement;

(3) The defined time horizon by which the target is intended to be achieved, and whether the time horizon is based on one or more goals established by a climate-related treaty, law, regulation, policy, or organization;

(4) If the registrant has established a baseline for the target or goal, the defined baseline time period and the means by which progress will be tracked; and

(5) A qualitative description of how the registrant intends to meet its climate-related targets or goals.

(c) Disclose any progress made toward meeting the target or goal and how any such progress has been achieved. A registrant must update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.

(1) Include a discussion of any material impacts to the registrant's business, results of operations, or financial condition as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal.

(2) Include quantitative and qualitative disclosure of any material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal.

(d) If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals, separately disclose the amount of carbon avoidance, reduction or removal represented by the offsets or the amount of generated renewable energy represented by the RECs, the nature and source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs.

§ 229.1505 (Item 1505) GHG emissions metrics.

(a)(1) A registrant that is a large accelerated filer or an accelerated filer, each as defined in § 240.12b–2 of this chapter, must disclose its Scope 1 emissions and/or its Scope 2 emissions, if such emissions are material, for its most recently completed fiscal year and, to the extent previously disclosed in a Commission filing, for the historical fiscal year(s) included in the consolidated financial statements in the filing.

(2) For any GHG emissions required to be disclosed pursuant to paragraph (a)(1) of this section:

(i) Disclose the registrant's Scope 1 emissions and/or Scope 2 emissions separately, each expressed in the aggregate, in terms of CO_2e. In addition, if any constituent gas of the disclosed emissions is individually material, disclose such constituent gas disaggregated from the other gases.

(ii) Disclose the registrant's Scope 1 emissions and/or Scope 2 emissions in gross terms by excluding the impact of any purchased or generated offsets.

(3)(i) A smaller reporting company, as defined by §§ 229.10(f)(1), 230.405, and 240.12b–2 of this chapter, and an emerging growth company, as defined by §§ 230.405 and 240.12b–2 of this chapter, are exempt from, and need not comply with, the disclosure requirements of this section.

(ii) A registrant is not required to include GHG emissions from a manure management system when disclosing its overall Scopes 1 and 2 emissions pursuant to paragraph (a)(1) of this section so long as implementation of such a provision is subject to restrictions on appropriated funds or otherwise prohibited under federal law.

(b)(1) Describe the methodology, significant inputs, and significant assumptions used to calculate the registrant's GHG emissions disclosed pursuant to this section. This description must include:

(i) The organizational boundaries used when calculating the registrant's disclosed GHG emissions, including the method used to determine those boundaries. If the organizational boundaries materially differ from the scope of entities and operations included in the registrant's consolidated financial statements, provide a brief explanation of this difference in sufficient detail for a reasonable investor to understand;

(ii) A brief discussion of, in sufficient detail for a reasonable investor to understand, the operational boundaries used, including the approach to categorization of emissions and emissions sources; and

(iii) A brief description of, in sufficient detail for a reasonable investor to understand, the protocol or standard used to report the GHG emissions, including the calculation approach, the type and source of any emission factors used, and any calculation tools used to calculate the GHG emissions.

(2) A registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the underlying assumptions, and its reasons for using, the estimates.

(c)(1) Any GHG emissions metrics required to be disclosed pursuant to this section in a registrant's annual report on Form 10–K filed with the Commission may be incorporated by reference from the registrant's Form 10–Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates, or may be included in an amended annual report on Form 10–K no later than the due date for such Form 10–Q. If the registrant is a foreign private issuer, as defined in §§ 230.405 and 240.3b–4(c) of this chapter, such information may be disclosed in an amendment to its annual report on Form 20–F (§ 249.220f of this chapter), which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions metrics disclosure relates. In either case, the registrant must include an express statement in its annual report indicating its intention to incorporate by reference this information from either a quarterly report on Form 10–Q or amend its annual report on Form 10–K or Form 20–F to provide this information by the due date specified by this section.

(2) In the case of a registration statement filed under the Securities Act of 1933 [15 U.S.C. 77a *et seq.*] or filed on Form 10 (§ 249.210 of this chapter) or Form 20–F (§ 249.220f of this chapter) under the Securities Exchange Act of 1934 [15 U.S.C. 78a *et seq.*], any GHG emissions metrics required to be disclosed pursuant to paragraph (a) of this section must be provided as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement.

§ 229.1506 (Item 1506) Attestation of Scope 1 and Scope 2 emissions disclosure.

(a) *Attestation.* (1) A registrant that is required to provide Scope 1 and/or Scope 2 emissions disclosure pursuant to § 229.1505 must include an attestation report covering such disclosure in the relevant filing, subject to the following provisions:

(i) For filings made by an accelerated filer beginning the third fiscal year after the compliance date for § 229.1505 and thereafter, the attestation engagement must, at a minimum, be at a limited assurance level and cover the registrant's Scope 1 and/or Scope 2 emissions disclosure;

(ii) For filings made by a large accelerated filer beginning the third fiscal year after the compliance date for § 229.1505, the attestation engagement must, at a minimum, be at a limited assurance level and cover the registrant's Scope 1 and/or Scope 2 emissions disclosure; and

(iii) For filings made by a large accelerated filer beginning the seventh fiscal year after the compliance date for § 229.1505 and thereafter, the attestation engagement must be at a reasonable assurance level and cover the registrant's Scope 1 and/or Scope 2 emissions disclosure.

(2) Any attestation report required under this section must be provided pursuant to standards that are:

(i) Publicly available at no cost or that are widely used for GHG emissions assurance; and

(ii) Established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.

(3) A registrant that is required to provide Scope 1 and/or Scope 2 emissions disclosure pursuant to § 229.1505 that obtains voluntary assurance over its GHG emissions disclosure prior to the first required fiscal year for assurance must comply with paragraph (e) of this section. Voluntary assurance obtained by such registrant after the first required fiscal year that is in addition to any required assurance must follow the requirements of paragraphs (b) through (d) of this section and must use the same attestation standard as the required assurance over Scope 1 and/or Scope 2 emissions disclosure.

(b) *GHG emissions attestation provider.* The GHG emissions attestation report required by paragraph (a) of this section must be prepared and signed by a GHG emissions attestation provider. A GHG emissions attestation provider means a person or a firm that has all of the following characteristics:

(1) Is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. Significant experience means having sufficient competence and capabilities necessary to:

(i) Perform engagements in accordance with attestation standards and applicable legal and regulatory requirements; and

(ii) Enable the service provider to issue reports that are appropriate under the circumstances.

(2) Is independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report, during the attestation and professional engagement period.

(i) A GHG emissions attestation provider is not independent if such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement.

(ii) In determining whether a GHG emissions attestation provider is independent, the Commission will consider:

(A) Whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant (or any of its affiliates), places the attestation provider in the position of attesting to such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant (or any of its affiliates), or places the attestation provider in a position of being an advocate for the registrant (or any of its affiliates); and

(B) All relevant circumstances, including all financial or other relationships between the attestation provider and the registrant (or any of its affiliates), and not just those relating to reports filed with the Commission.

(iii) The term ''affiliate'' as used in this section has the meaning provided in § 210.2–01 of this chapter, except that references to ''audit'' are deemed to be references to the attestation services provided pursuant to this section.

(iv) The term ''attestation and professional engagement period'' as used in this section means both:

(A) The period covered by the attestation report; and

(B) The period of the engagement to attest to the registrant's GHG emissions or to prepare a report filed with the Commission (''the professional engagement period''). The professional engagement period begins when the GHG attestation service provider either signs an initial engagement letter (or other agreement to attest to a registrant's GHG emissions) or begins attest procedures, whichever is earlier.

(c) *Attestation report requirements.* The form and content of the attestation report must follow the requirements set forth by the attestation standard (or standards) used by the GHG emissions attestation provider.

(d) *Additional disclosure by the registrant.* In addition to including the GHG emissions attestation report required by paragraph (a) of this section, a large accelerated filer and an accelerated filer must disclose, alongside the GHG emissions disclosure to which the attestation report relates, after requesting relevant information from any GHG emissions attestation provider as necessary:

(1) Whether the GHG emissions attestation provider is subject to any oversight inspection program, and if so, which program (or programs), and whether the GHG emissions attestation engagement is included within the scope of authority of such oversight inspection program.

(2)(i) Whether any GHG emissions attestation provider that was previously engaged to provide attestation over the registrant's GHG emissions disclosure pursuant to paragraph (a) of this section for the fiscal year period covered by the attestation report resigned (or indicated that it declined to stand for re-appointment after the completion of the attestation engagement) or was dismissed. If so,

(A) State whether the former GHG emissions attestation provider resigned, declined to stand for re-appointment, or was dismissed and the date thereof; and

(B) State whether during the performance of the attestation engagement for the fiscal year period covered by the attestation report there were any disagreements with the former GHG emissions attestation provider on any matter of measurement or disclosure of GHG emissions or attestation scope of procedures. Also,

(*1*) Describe each such disagreement; and

(*2*) State whether the registrant has authorized the former GHG emissions attestation provider to respond fully to the inquiries of the successor GHG emissions attestation provider concerning the subject matter of each such disagreement.

(ii) The term ''disagreements'' as used in this section shall be interpreted broadly, to include any difference of opinion concerning any matter of measurement or disclosure of GHG emissions or attestation scope or procedures that (if not resolved to the satisfaction of the former GHG emissions attestation provider) would have caused it to make reference to the subject matter of the disagreement in connection with its report. It is not necessary for there to have been an argument to have had a disagreement, merely a difference of opinion. For purposes of this section, however, the term disagreements does not include initial differences of opinion based on incomplete facts or preliminary information that were later resolved to the former GHG emissions attestation provider's satisfaction by, and providing the registrant and the GHG emissions attestation provider do not continue to have a difference of opinion upon, obtaining additional relevant facts or information. The disagreements required to be reported in response to this section include both those resolved to the former GHG emissions attestation provider's satisfaction and those not resolved to the former provider's satisfaction. Disagreements contemplated by this section are those that occur at the decision-making level, *i.e.,* between personnel of the registrant responsible for presentation of its GHG emissions disclosure and personnel of the GHG emissions attestation provider responsible for rendering its report.

(iii) In determining whether any disagreement has occurred, an oral communication from the engagement partner or another person responsible for rendering the GHG emissions attestation provider's opinion or conclusion (or their designee) will generally suffice as a statement of a disagreement at the ''decision-making level'' within the GHG emissions attestation provider and require disclosure under this section.

(e) *Disclosure of voluntary assurance.* A registrant that is not required to include a GHG emissions attestation report pursuant to paragraph (a) of this section must disclose in the filing the following information if the registrant's GHG emissions disclosure in the filing were subject to third-party assurance:

(1) Identification of the service provider of such assurance;

(2) Description of the assurance standard used;

(3) Description of the level and scope of assurance services provided;

(4) Brief description of the results of the assurance services;

(5) Whether the service provider has any material business relationships with or has provided any material professional services to the registrant; and

(6) Whether the service provider is subject to any oversight inspection program, and if so, which program (or programs) and whether the assurance services over GHG emissions are included within the scope of authority of such oversight inspection program.

(f) *Location of disclosure.* A registrant must include the attestation report and disclosure required by this section in the filing that contains the GHG emissions disclosure to which the report and disclosure relate. If, in accordance with the requirements in § 229.1505, a registrant elects to incorporate by reference its GHG emissions disclosure from its Form 10–Q (§ 249.308a of this chapter) for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions disclosure relates or to provide this information in an amended annual report on Form 10–K (§ 249.310 of this chapter) or 20–F (§ 249.220f of this chapter), then the registrant must include an express statement in its annual report indicating its intention to incorporate by reference the attestation report from either a quarterly report on Form 10–Q or amend its annual report on Form 10–K or Form 20–F to provide the attestation report by the due date specified in § 229.1505.

Instruction 1 to Item 1506: A registrant that obtains assurance from an attestation provider at the limited assurance level should refer to § 229.601(b)(27) and paragraph 18 of Form 20–F's Instructions as to Exhibits.

§ 229.1507 (Item 1507) Safe harbor for certain climate-related disclosures.

(a)(1) The safe harbors for forward-looking statements in section 27A of the Securities Act of 1933 (15 U.S.C. 77z–2) and section 21E of the Securities Exchange Act of 1934 (15 U.S.C. 78u–5) (''statutory safe harbors'') apply as provided in this section to information provided pursuant to §§ 229.1502(e), 229.1502(f), 229.1502(g), and 229.1504.

(2) The safe harbor provided by this section applies to a forward-looking statement specified in the statutory safe harbors:

(i) Made in connection with an offering of securities by a blank check company, as specified in 15 U.S.C. 77z–2(b)(1)(B) and 15 U.S.C. 78u–5(b)(1)(B);

(ii) Made with respect to the business or operations of an issuer of penny stock, as specified in 15 U.S.C. 77z–2(b)(1)(C) and 15 U.S.C. 78u–5(b)(1)(C);

(iii) Made in connection with a rollup transaction, as specified in 15 U.S.C. 77z–2(b)(1)(D) and 15 U.S.C. 78u–5(b)(1)(D);

(iv) Made in connection with an initial public offering, as specified in 15 U.S.C. 77z–2(b)(2)(D) and 15 U.S.C. 78u–5(b)(2)(D); and

(v) Made in connection with an offering by, or relating to the operations of, a partnership, limited liability company, or a direct participation investment program, as specified in 15 U.S.C. 77z–2(b)(2)(E) and 15 U.S.C. 78u–5(b)(2)(E).

(3) Notwithstanding 15 U.S.C. 77z–2(a)(1) and 15 U.S.C. 78–u(a)(1), the safe harbor provided by this section will apply where an issuer that, at the time that the statement is made, is not subject to the reporting requirements of section 13(a) or section 15(d) of the Securities Exchange Act of 1934.

(b) For purposes of paragraph (a) of this section, all information required by §§ 229.1502(e), 229.1502(f), 229.1502(g), and 229.1504 is considered a *forward-looking statement* for purposes of the statutory safe harbors, except for historical facts, including, as non-exclusive examples, terms related to carbon offsets or RECs described pursuant to § 229.1504 and statements in response to §§ 229.1502(e) or 229.1504 about material expenditures actually incurred.

§ 229.1508 (Item 1508) Interactive data requirement.

Provide the disclosure required by this subpart 1500 in an Interactive Data File as required by § 232.405 of this chapter (Rule 405 of Regulation S–T) in accordance with the EDGAR Filer Manual (see § 232.301 of this chapter).

PART 230—GENERAL RULES AND REGULATIONS, SECURITIES ACT OF 1933

■ 7. The authority citation for part 230 continues to read, in part, as follows:

Authority: 15 U.S.C. 77b, 77b note, 77c, 77d, 77f, 77g, 77h, 77j, 77r, 77s, 77z–3, 77sss, 78c, 78d, 78j, 78*l*, 78m, 78n, 78*o*, 78*o*–7 note, 78t, 78w, 78*ll*(d), 78mm, 80a–8, 80a–24, 80a–28, 80a–29, 80a–30, and 80a–37, and Pub. L. 112–106, sec. 201(a), sec. 401, 126 Stat. 313 (2012), unless otherwise noted.

* * * * *

Sections 230.400 to 230.499 issued under secs. 6, 8, 10, 19, 48 Stat. 78, 79, 81, and 85, as amended (15 U.S.C. 77f, 77h, 77j, 77s).

* * * * *

■ 8. Amend § 230.436 by adding paragraph (i) to read as follows:

§ 230.436 Consents required in special cases.

* * * * *

(i) Notwithstanding the provisions of paragraphs (a) and (b) of this section, the following shall not be considered part of the registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Act:

(1) A report by an attestation provider covering Scope 1, Scope 2, and/or Scope 3 GHG emissions at a limited assurance level; and

(2) Any description of assurance regarding a registrant's GHG emissions disclosure provided in accordance with § 229.1506(e) of this chapter.

PART 232—REGULATION S–T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS

■ 9. The general authority citation for part 232 continues to read as follows:

Authority: 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s(a), 77z–3, 77sss(a), 78c(b), 78*l*, 78m, 78n, 78*o*(d), 78w(a), 78*ll*, 80a–6(c), 80a–8, 80a–29, 80a–30, 80a–37, 80b–4, 80b–6a, 80b–10, 80b–11, 7201 *et seq.;* and 18 U.S.C. 1350, unless otherwise noted.

* * * * *

■ 10. Amend § 232.405 by adding paragraphs (b)(4)(vi) and (vii) to read as follows:

§ 232.405 Interactive Data File submissions.

* * * * *

(b) * * *

(4) * * *

(vi) [Reserved]

(vii) The climate-related information required by §§ 229.1500 through 229.1507 of this chapter (subpart 1500 of Regulation S–K).

* * * * *

PART 239—FORMS PRESCRIBED UNDER THE SECURITIES ACT OF 1933

■ 11. The general authority citation for part 239 continues to read as follows:

Authority: 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77sss, 78c, 78*l*, 78m, 78n, 78*o*(d), 78*o*–7 note, 78u–5, 78w(a), 78*ll*, 78mm, 80a–2(a), 80a–3, 80a–8, 80a–9, 80a–10, 80a–13, 80a–24, 80a–26, 80a–29, 80a–30, 80a–37, and sec. 71003 and sec. 84001, Pub. L. 114–94, 129 Stat. 1321, unless otherwise noted.

* * * * *

■ 12. Amend Form S–1 (referenced in § 239.11) by adding Item 11(o) to Part I.

Note: Form S–1 is attached as Appendix A to this document. Form S–1 will not appear in the Code of Federal Regulations.

■ 13. Amend Form S–3 (referenced in § 239.13) by adding Item 12(e) to Part I.

Note: Form S–3 is attached as Appendix B to this document. Form S–3 will not appear in the Code of Federal Regulations.

■ 14. Amend Form S–11 (referenced in § 239.18) by replacing Item 9 to Part I.

Note: Form S–11 is attached as Appendix C to this document. Form S–11 will not appear in the Code of Federal Regulations.

■ 15. Amend Form S–4 (referenced in § 239.25) by adding General Instructions B.3 and C.3.

Note: Form S–4 is attached as Appendix D to this document. Form S–4 will not appear in the Code of Federal Regulations.

■ 16. Amend Form F–3 (referenced in § 239.33) by adding paragraph (g) to Item 6 to Part I.

Note: Form F–3 is attached as Appendix E to this document. Form F–3 will not appear in the Code of Federal Regulations.

■ 17. Amend Form F–4 (referenced in § 239.34) by adding General Instructions B.3 and C.3.

Note: Form F–4 is attached as Appendix F to this document. Form F–4 will not appear in the Code of Federal Regulations.

PART 249—FORMS, SECURITIES EXCHANGE ACT OF 1934

■ 18. The authority citation for part 249 continues to read, in part, as follows:

Authority: 15 U.S.C. 78a *et seq.* and 7201 *et seq.;* 12 U.S.C. 5461 *et seq.;* 18 U.S.C. 1350; Sec. 953(b) Pub. L. 111–203, 124 Stat. 1904; Sec. 102(a)(3) Pub. L. 112–106, 126 Stat. 309 (2012), Sec. 107 Pub. L. 112–106, 126 Stat. 313 (2012), Sec. 72001 Pub. L. 114–94, 129 Stat. 1312 (2015), and secs. 2 and 3 Pub. L. 116–222, 134 Stat. 1063 (2020), unless otherwise noted.

* * * * *

Section 249.220f is also issued under secs. 3(a), 202, 208, 302, 306(a), 401(a), 401(b), 406 and 407, Pub. L. 107–204, 116 Stat. 745, and secs. 2 and 3, Pub. L. 116–222, 134 Stat. 1063.

* * * * *

Section 249.308a is also issued under secs. 3(a) and 302, Pub. L. 107–204, 116 Stat. 745.

* * * * *

Section 249.310 is also issued under secs. 3(a), 202, 208, 302, 406 and 407, Pub. L. 107–204, 116 Stat. 745.

* * * * *

■ 19. Amend Form 10 (referenced in § 249.210) by adding Item 3.A (''Climate-Related Disclosure'').

Note: Form 10 is attached as Appendix G to this document. Form 10 will not appear in the Code of Federal Regulations.

■ 20. Amend Form 20–F (referenced in § 249.220f) by:

■ a. Adding Item 3.E (''Climate-related disclosure''); and

■ b. Revising the Instructions as to Exhibits.

Note: Form 20–F is attached as Appendix H to this document. Form 20–F will not appear in the Code of Federal Regulations.

■ 21. Amend Form 10–Q (referenced in § 249.308a) by adding Item 1.B (''Climate-Related disclosure'') to Part II (''Other Information'').

Note: Form 10–Q is attached as Appendix I to this document. Form 10–Q will not appear in the Code of Federal Regulations.

■ 22. Amend Form 10–K (referenced in § 249.310) by:
■ a. Revising paragraph (1)(g) of General Instruction J (''Use of this Form by Asset-backed Issuers''); and
■ b. Adding Item 6 (''Climate-Related Disclosure'') to Part II.

Note: Form 10–K is attached as Appendix J to this document. Form 10–K will not appear in the Code of Federal Regulations.

By the Commission.

Dated: March 6, 2024.

Vanessa A. Countryman,

Secretary.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendix A—Form S–1

FORM S–1

* * * * *

Part I—Information Required in Prospectus

* * * * *

Item 11. Information with Respect to the Registrant.

* * * * *

(o) Information required by subpart 1500 of Regulation S–K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure*. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S–K in other parts of the registration statement (*e.g.,* Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

* * * * *

Appendix B—Form S–3

FORM S–3

* * * * *

Part I—Information Required in Prospectus

* * * * *

Item 12. Incorporation of Certain Information by Reference.

* * * * *

(e) If a registrant is required to disclose its Scope 1 emissions and/or its Scope 2 emissions pursuant to 17 CFR 229.1505(a), the GHG emissions metrics disclosure that would be incorporated by reference must be as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement. Accordingly, if a registrant has filed its annual report on Form 10–K for the most recently completed fiscal year and, in reliance on 17 CFR 229.1505(c)(1) has not yet filed its Form 10–Q for the second fiscal quarter containing the disclosure required by 17 CFR 229.1505(a), it must incorporate by reference its GHG emissions metrics disclosure for the fiscal year that is immediately prior to its most recently completed fiscal year.

* * * * *

Appendix C—Form S–11

FORM S–11

* * * * *

Part I—Information Required in Prospectus

* * * * *

Item 9. Climate-related disclosure. Provide the information required by subpart 1500 of Regulation S–K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as *Climate-Related Disclosure*. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S–K in other parts of the registration statement (*e.g.,* Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

General Instructions

* * * * *

B. Information With Respect to the Registrant

* * * * *

3. If the registrant is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then, in addition to the information otherwise required to be provided by this Form, the information required by subpart 1500 of Regulation S–K (17 CFR 229.1500 through 229.1507) must be provided with respect to the registrant, in a part of the registration statement that is separately captioned as *Climate-Related Disclosure.* A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S–K in other parts of the registration statement (*e.g.,* Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors. A registrant may incorporate by reference the information required by Items 1500 through 1507 of Regulation S–K to the extent it is permitted to incorporate by reference the other information required by this Form and by the same means provided by this Form.

* * * * *

C. Information With Respect to the Company Being Acquired

* * * * *

3. If the company being acquired is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then, in addition to the information otherwise required to be provided by this Form, the information required by subpart 1500 of Regulation S–K (17 CFR 229.1500 through 229.1507) must be provided with respect to the company being acquired, in a part of the registration statement that is separately captioned as *Climate-Related Disclosure.* Disclosure with respect to the company being acquired that is responsive to the topics specified in Items 1500 through 1507 of Regulation S–K may be included in other parts of the registration statement (*e.g.,* Risk Factors, Business, or Management's Discussion and Analysis), in which case it should be considered whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors. The information required by Items 1500 through 1507 of Regulation S–K may be incorporated by reference to the extent the other information required by this Form with respect to the company being required is permitted to be incorporated by reference and by the same means provided by this Form.

Clean Water Act Hazardous Substance Facility Response Plans; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 118 and 300

[EPA–HQ–OLEM–2021–0585; FRL–7881–01–OLEM]

RIN 2050–AH17

Clean Water Act Hazardous Substance Facility Response Plans

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA or Agency) is finalizing facility response plan requirements for worst case discharges of Clean Water Act (CWA) hazardous substances for onshore non-transportation-related facilities that could reasonably be expected to cause substantial harm to the environment by discharging a CWA hazardous substance into or on the navigable waters, adjoining shorelines, or exclusive economic zone.

DATES: This final rule is effective on May 28, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OLEM–2021–0585. All documents in the docket are listed on the *http://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *http://www.regulations.gov.*

622	Hospitals.
624	Social Assistance.
712	Museums, Historical Sites, and Similar Institutions.
713	Amusement, Gambling, and Recreation Industries.
811	Repair and Maintenance.
812	Personal and Laundry Services.
921	Executive, Legislative, and Other General Government Support.
924	Administration of Environmental Quality Programs.
926	Administration of Economic Programs.
928	National Security and International Affairs.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding affected entities likely to be regulated by this action. This table includes the types of entities that EPA is aware could potentially be regulated by this action. Other types of entities not included in the table could also be regulated. To determine whether your entity is regulated by this action, you should carefully examine the applicability criteria found in § 118.3. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

B. What action is the Agency taking?

EPA is finalizing new requirements for Facility Response Plans (FRPs) for worst case discharges of CWA hazardous substances from onshore non-transportation related facilities (hereafter, covered facilities or facility) that, because of their location, could reasonably be expected to cause substantial harm to the environment by discharging into or on the navigable waters, adjoining shorelines, or exclusive economic zone.

C. What is the Agency's authority for taking this action?

This final rule is authorized by section 311(j)(5) and 501(a) of the CWA, (33 U.S.C. 1321(j)(5), 1361(a)).

D. What are the incremental costs and benefits of this action?

EPA estimated the total incremental costs of the final action by combining the per-covered facility estimates of compliance costs with the estimate of the affected covered facility universe. EPA estimated the annualized cost of the final rule over a 20-year analysis period, using three percent and seven percent discount rates, as presented in Table 2.

TABLE 2—TOTAL INCREMENTAL COMPLIANCE COST OF THE FINAL ACTION, ANNUALIZED

[2022$]

	Present value, 7%	Annualized cost, 7%	Present value, 3%	Annualized cost, 3%
Facility Cost	$1,120,290,646	$105,747,512	$1,641,867,861	$110,359,310
Agency Cost	70,880,205	6,690,590	101,561,496	6,826,528
Total Cost	1,191,170,851	112,438,102	1,743,429,357	117,185,838

The final action is expected to have a mitigating effect on CWA hazardous substance worst case discharges because the rule provisions address the categories of damages and adverse impacts expected from this type of discharge. The planning activities associated with developing FRPs are likely to mitigate several damage categories through pre-discharge planning and identification of potential receptors and applicable endpoints; the emergency response information provision; descriptions of discharge detection systems, hazard evaluation, and training programs; and drills and exercises. Quantifying the costs and benefits of this action is challenging due to a lack of data around the likelihood of a worst case discharge in the baseline, the universe of potentially regulated facilities, costs of program elements, historical discharges, baseline compliance behavior, and the degree to which the final action will mitigate the probability and severity of worst case discharges. Despite the numerous uncertainties associated with estimating the benefits of the final action quantitatively, information on previous worst case discharges of a similar nature suggests that the benefits of mitigating these discharges could be large relative to the final rule's estimated cost. Chapters 5 and 6 of the final rule Regulatory Impact Analysis (RIA) developed for this action provide additional details on costs and benefits, respectively. This analysis, ''Regulatory Impact Analysis: Clean Water Act Hazardous Substance Facility Response Plans,'' is available in the docket.

II. Background

A. Statutory Authority and Delegation of Authority

1. Statutory Requirements

The CWA, as amended by the Oil Pollution Act of 1990 (33 U.S.C. 2701 et seq; hereafter, ''OPA 90''), states, ''The President shall issue regulations which require an owner or operator of a tank vessel or facility . . . to prepare and submit to the President a plan for responding, to the maximum extent practicable, to a worst case discharge, and to a substantial threat of such a discharge, of oil or a hazardous substance'' (33 U.S.C. 1321(j)(5)(A)(i)). The statute defines a covered facility as ''. . . [an] onshore facility that, because of its location, could reasonably be expected to cause substantial harm to the environment by discharging into or on the navigable waters, adjoining shorelines, or the exclusive economic zone'' (33 U.S.C. 1321(j)(5)(C)(iv)). As described below, the Administrator has been delegated this authority under Executive Order (E.O.) 12777 (56 FR 54757, October 18, 1991). The Administrator also has authority under CWA section 501 to prescribe such regulations as are necessary to carry out provisions of the Act.

In 33 U.S.C. 1321(j)(5)(D), the CWA states that these response plans must:

(1) Be consistent with the National Contingency Plan (NCP) and Area Contingency Plans (ACP);

(2) Identify the qualified individual (QI) having full authority to implement removal actions, and require immediate communications between that individual and the appropriate Federal official and the persons providing personnel and equipment;

(3) Identify, and ensure by contract or other means approved by the President the availability of private personnel and equipment necessary to remove to the maximum extent practicable a worst case discharge (including a discharge resulting from fire or explosion), and to mitigate or prevent a substantial threat of such a discharge;

(4) Describe the training, equipment testing, periodic unannounced drills, and response actions of persons on the vessel or at the facility, to be carried out under the plan to ensure the safety of the facility and to mitigate or prevent the discharge, or the substantial threat of a discharge;

(5) Be updated periodically; and

(6) Be resubmitted for approval of each significant change.

EPA's responsibilities pursuant to the CWA (33 U.S.C. 1321(j)(5)(E)) for this action for facilities that could

reasonably be expected to cause significant and substantial harm to the environment by discharging into or on the navigable waters are to:

(1) Promptly review plans;

(2) Require amendments when plans do not meet the statutory requirements;

(3) Approve plans; and

(4) Review each plan periodically.

Additionally, EPA may require inspection of containment booms, skimmers, vessels, and other major equipment used to remove discharges (33 U.S.C. 1321(j)(6)(A)). EPA also has the authority to conduct unannounced drills of removal capability in areas for which ACPs are required and under relevant FRPs (33 U.S.C. 1321(j)(7)).

EPA intends that the provisions of the rule be severable. In the event that any individual provision or part of the rule is invalidated, EPA intends that this would not render the entire rule invalid, and that any individual provisions that can continue to operate will be left in place. The rule contains many discrete provisions that operate independent of each other. For example, the screening criteria are designed to provide an initial, relatively bright line for identifying covered facilities that do not need to engage in any further applicability determination. That is independent of the criteria that actually determine whether a covered facility could cause substantial harm to the environment from a worst case discharge into or on the navigable waters or a conveyance to navigable waters. Thus, the rule would still satisfy the statutory requirements if the one-half mile distance screening criterion were struck down. Similarly, the four substantial harm criteria are independent of one another, and covered facility owners and operators could still conduct a substantial harm analysis to determine whether an FRP is required absent any one substantial harm criterion. Likewise, if the provisions regarding Regional Administrator (RA) determinations were struck down, the rule would still meet statutory requirements and fulfill its purpose. Furthermore, while there are many different components of an FRP, they serve different functions and are independent requirements.

2. Delegation of Authority

Under E.O. 12777 (56 FR 54757, October 18, 1991), EPA was delegated the authority to regulate non-transportation-related onshore facilities and non-transportation-related offshore facilities landward of the coastline. The U.S. Department of Transportation (USDOT) was the delegated authority for transportation-related facilities and the U.S. Coast Guard (USCG) was delegated the authority for tank vessels and marine transportation-related (MTR) facilities. Section 2(i) of E.O. 12777 allows for further delegation between the agencies as later occurred in a February 3, 1994 memorandum of understanding (MOU) between EPA, the U.S. Department of the Interior (DOI), and USDOT (59 FR 9494, February 28, 1994). DOI redelegated 33 U.S.C. 1321(j)(5) authority to regulate non-transportation-related offshore facilities landward of the coastline to EPA. This MOU applies to both oil and CWA hazardous substance facilities.

EPA has delegated authority over offshore facilities landward of the coastline as per 40 CFR part 112 Appendix B. However, this final action is limited to non-transportation-related onshore facilities as defined in the consent decree described below.

B. Litigation

On March 21, 2019, the Natural Resources Defense Council, on behalf of Clean Water Action, and the Environmental Justice Health Alliance for Chemical Policy Reform filed suit in the United States District Court for the Southern District of New York alleging violations of the CWA section 311(j)(5)(A)(i) and the Administrative Procedures Act (APA).[1] The first claim alleged that EPA failed to issue ''regulations mandated by the [CWA] requiring non-transportation-related substantial-harm facilities to plan, prevent, mitigate and respond to worst case spills of hazardous substances . . . [which] constitutes a failure to perform a non-discretionary duty or act in violation of the [CWA].'' The second claim alleged, ''EPA's failure to issue these regulations constitute[d] Agency action unlawfully withheld contrary to and in violation of the [APA] and the [CWA].'' The plaintiffs requested an order from the Court to compel EPA to promulgate CWA Hazardous Substance Worst Case Discharge Planning Regulations. Following EPA's Answer, filed on June 4, 2019, Plaintiffs and EPA entered discussions regarding a potential resolution of the lawsuit.

The plaintiffs and EPA entered into a consent decree on March 12, 2020, which resolved the claims of the suit.[2] The consent decree requires that within two years (24 months) of entry into the consent decree, *i.e.,* by March 12, 2022, EPA sign a notice of proposed rulemaking pertaining to the issuance of the CWA Hazardous Substance Worst Case Discharge Planning Regulations for non-transportation-related onshore facilities. The consent decree further requires EPA to sign a notice taking final action within an additional two and half years, or 30 months after publication of the proposal. On March 28, 2022 (87 FR 17890), EPA proposed to require planning for worst case discharges of CWA hazardous substances for onshore non-transportation-related facilities. This final action satisfies EPA's second obligation under the consent decree.

C. Proposed Rule

On March 28, 2022, EPA proposed to require planning for worst case discharges of CWA hazardous substances for onshore non-transportation-related facilities that could reasonably be expected to cause substantial harm to the environment by discharging CWA hazardous substances into or on the navigable waters, adjoining shorelines, or exclusive economic zone, with a 60-day comment period, which was later extended to 120 days. EPA proposed that FRPs must (1) be consistent with the NCP and ACPs; (2) identify the QI having full authority to implement response actions and require immediate communications between that individual and the appropriate Federal official and the persons providing personnel and equipment, with a description of duties; (3) identify, and ensure by contract or other approved means, the availability of private personnel and equipment necessary to respond to the maximum extent practicable to a worst case discharge of CWA hazardous substances (including a discharge resulting from fire or explosion), and to mitigate or prevent a substantial threat of such a discharge; (4) describe the training, equipment testing, periodic unannounced drills, and response actions of persons at the covered facility; (5) be reviewed and updated periodically and resubmitted to the RA for approval of each significant change.

In developing CWA hazardous substance worst case discharge plan components, EPA considered existing requirements for the Oil Pollution Prevention FRP regulation under 40 CFR 112.20 given that these requirements have been in place since 1994 and were promulgated under the same statutory authority as the proposal. Notwithstanding the differences between CWA hazardous substances and oil, EPA understands that, where possible, there is value to having a high

[1] Complaint for Declaratory and Injunctive Relief, Environmental Justice Health Alliance for Chemical Policy Reform v. EPA, No. 1–19–cv–02516 (S.D.N.Y., filed March 21, 2019).

level of consistency between similar regulatory programs. Even if this rule applies to a different set of regulated entities, there will be synergy among local responders, States, and others, such as spill response organizations (SROs) and consultants, that have experience with worst case discharge planning. Invariably, the experience of implementing and complying with the Oil Pollution Prevention FRP regulation will make this rule easier to comply with, understand, and implement. Additionally, EPA examined elements under the Risk Management Plan (RMP) regulation under 40 CFR part 68, which implements section 112(r)(7) of the Clean Air Act (CAA) and requires facilities that use regulated substances to develop an RMP. Specific CWA hazardous substance FRP components in the proposed rule included: facility information, owner or operator information, hazard evaluation, reportable discharge history, response personnel and equipment, evidence of contracts or other approved means to ensure the availability of personnel and equipment, notification lists, discharge information, personnel roles and responsibilities, response equipment information, evacuation plans, discharge detection systems, response actions, disposal plans, containment measures, training and exercise procedures, self-inspection, and coordination activities.

Eight commenters requested a 60-day extension to submit comments. In response, EPA extended the original comment period an additional 60 days, to July 26, 2022. EPA received a total of 220 unique comments: 59 organization comments from 53 unique organizations, 158 private citizens, and 3 mass mailer campaigns representing a total of 29,860 signatories.

III. This Action

After issuing its proposal, EPA received comments on numerous issues relating to:

1. General comments;
2. Costs and benefits of various regulatory provisions;
3. Background analyses; and
4. Proposed provisions.

EPA has structured this document to address these issues and discuss each proposal element, related significant comments, and how any changes EPA considered are reflected in the final rule.

A. General Comments

As discussed above in Section II.A.1 of this preamble, Congress directed EPA to issue regulations to address worst case discharges for both oil and CWA hazardous substances, providing clear and unambiguous authority for this action. While some commenters asserted that the Agency has the authority to decide not to proceed with the rulemaking and questioned the data analysis supporting this action, including the breadth of the potentially regulated community, EPA has judged the underlying data as sufficient to warrant a regulatory program as detailed in the RIA, available in the docket. While worst case discharges historically may be rare, that in and of itself is not a rationale for not planning for a worst case discharge. This is especially true given trends in natural disasters in the US, with more than $1 trillion in damage from 2016–2022,[3] illustrating that planning for severe weather events is critical as they become more common and intense and reflecting the long term challenges posed by climate change.[4] Additionally, the requirements follow the statutory directives set forth in 33 U.S.C. 1321(j)(5)(D). Indeed, OPA 90 is clear in directing the President to promulgate regulations for worst case discharges of CWA hazardous substances, regardless of the number of facilities that may be ultimately regulated. EPA is following the same approach as the Oil Pollution Prevention FRP regulation, which was promulgated under the same statutory authority, and as such disagrees with commenters who argued that the proposal represents administrative overreach. Worst case discharge planning provisions will appropriately place response planning responsibilities on covered facility owners and operators, as is clearly the Congressional intent, as per the OPA 90 Conference Report, while enumerating EPA's role in oversight and enforcement.

EPA notes that in March 2000, USCG published a notice of proposed rulemaking (NPRM) in the **Federal Register** entitled ''Marine Transportation-Related Facility Response Plans for Hazardous Substances'' (65 FR 17416, March 31, 2000) under the same CWA authority as this final rule. USCG then withdrew that rulemaking in February 2019 (84 FR 2799). Given that nearly 20 years elapsed between the proposal and withdrawal, it is unsurprising that USCG found the proposed rule was no longer appropriate to the current state of spill response in the chemical industry. USCG also noted that their NPRM may overlap with existing local and State regulatory schemes as well as current industry practice. EPA has reviewed USCG's actions, reports, and findings. EPA did not find sufficient overlap for onshore non-transportation-related facilities to justify not promulgating this regulation as per Chapter 2 of the Technical Background Document (TBD), available in the docket. Finally, to commenters who pointed to the no action final rule under CWA 311(j)(1)(C) (84 FR 46100, October 3, 2019), that rulemaking is outside the scope of this final rule and the Agency conclusion there has no bearing here.

EPA disagrees with commenters who asserted they were not adequately notified as per the APA. The proposal was clear and the comment period was ample. Indeed, the Agency extended the comment period to 120 days from 60 days to accommodate commenters who requested additional time (87 FR 29728, May 16, 2022).

Several commenters noted that the rule does not fully define ''waters of the United States'' (WOTUS) and that this causes the term ''navigable waters'' to be ''very ambiguous.'' The commenters highlighted a related and, at the time, pending Supreme Court decision and EPA rulemaking that would ultimately clarify these concerns. These commenters stressed the importance of holding off from any final rulemaking until the court decision is issued or navigable waters is more clearly defined while additional commenters recommended EPA release a supplementary proposed rule once 'WOTUS' and 'navigable waters' are clearly defined.

EPA disagrees with the comment. Following the Supreme Court's May 25, 2023, decision in *Sackett* v. *Environmental Protection Agency,* 143 S. Ct. 1322 (2023), the EPA and Department of the Army developed a rule to amend the final ''Revised Definition of 'Waters of the United States''' rule consistent with *Sackett* (88 FR 61964, Sept. 8, 2023).

EPA has determined that the rule should cite to the definition in 40 CFR 120.2 to determine whether a particular water is a water of the United States, as opposed to establishing a separate definition. The revised definition provides clarity and citing to this definition will ensure consistency with the Supreme Court's decision in *Sackett,* as well as ensuring greater understanding and consistency

[3] National Oceanic and Atmospheric Administration (NOAA) National Centers for Environmental Information (NCEI). (2023). U.S. Billion-Dollar Weather and Climate Disasters. *https://www.ncei.noaa.gov/access/billions/,* DOI: 10.25921/stkw–7w73.

[4] U.S. Global Change Research Program (USGCRP). (2017). Climate Science Special Report: Fourth National Climate Assessment, Volume I, Chapter 7: Precipitation Change in the United States. *https://science2017.globalchange.gov/chapter/7/.*

nationwide. Because this definition is also used by other regulatory programs, it provides the greatest amount of information and experience regarding its applicability. The Agency disagrees with commenters who asserted that this definition is prohibitively technical or costly; and notes that the September 2023 definition, issued following *Sackett,* covers fewer waters than the rule that was in place at the time comments were received. In sum, it is the Agency's position that the regulated community has sufficient information to determine whether they are more than one-half mile from navigable waters or a conveyance to navigable waters such that they are not subject to the rule. Doing so, as some commenters suggest, could inadvertently inject unintended ambiguities or questions about applicability, causing more uncertainty, not less.

Finally, EPA acknowledges concerns raised about the impact of litigation and court rulings on post-2015 definitions of ''waters of the United States,'' and a resulting patchwork of definitions across the country. Needless to say, this is a different rule and while EPA recognizes that due to ongoing litigation there is variation among jurisdictions as to which definition of ''waters of the United States'' governs, *e.g.,* using the pre-2015 definition in the SPCC context, presumably at some point the litigation will be resolved resulting in national consistency and, in any event, introducing another variation would do nothing to advance national consistency. To the contrary, codifying yet another definition would introduce more complexity within every jurisdiction by requiring regulated entities that need to comply with different CWA regulations to navigate two different definitions within that jurisdiction. Thus, even if currently there is variation with respect to which definition (pre- or post-2015) applies in different jurisdictions, there is merit to having the definition be consistent for regulated parties within their jurisdiction for purposes of the CWA (see Operative Definition of Waters of the United States chart at: *https://www.epa.gov/wotus/definition-waters-united-states-rule-status-and-litigation-update*).

B. Costs and Benefits of Various Regulatory Provisions

EPA estimated the total costs of the final action by combining the per-covered facility estimates with the estimate of the affected facility universe. To provide information about the scale of costs that covered facilities will incur, EPA compiled estimates of unit compliance costs for each of the program elements in the final action. EPA developed unit burden estimates for individual elements of the response plan on a first- and subsequent-year basis. EPA also estimated the extent of baseline compliance for facilities subject to the rule due to the overlap in facilities and program elements in the existing Oil Pollution Prevention FRP, RMP, and Resource Conservation and Recovery Act (RCRA) regulatory requirements, as these three regulations have the most significant crossover. EPA estimated an average compliance cost per covered facility after accounting for baseline compliance with existing regulations by multiplying labor rates and unit burdens.

EPA has prepared and posted in the docket an RIA of the potential costs and benefits associated with this action. As presented in Chapter 5 of that analysis, EPA estimated the final rule will result in total annualized costs of 112.4 to 117.2 million per year, at 7 percent and 3 percent discount rates, respectively. This cost includes 92.0–93.5 million for existing covered facilities to comply, 13.7–16.9 million for projected new covered facilities to comply in the future, and 6.7–6.8 million for the Agency to administer the regulations. Table 3 and Table 4 present the estimated costs of the final rule by FRP program component for covered facilities and the Agency, respectively. See Chapter 6 of the final rule RIA for additional details regarding benefits of the final action.

TABLE 3—TOTAL COST OF THE FINAL ACTION, FACILITIES, ANNUALIZED (2022)

Response plan requirements	Present value, 7%	Annualized cost, 7%	Present value, 3%	Annualized cost, 3%
Facilities completing the substantial harm certification only				
Rule Familiarization	$2,840,473	$268,121	$2,950,783	$198,339
Substantial Harm Certification Form	51,660,843	4,876,418	57,916,345	3,892,888
Subtotal, Substantial Harm Certification Form only facilities	54,501,316	5,144,539	60,867,128	4,091,227
Facilities developing FRPs				
Rule Familiarization	2,120,519	200,162	2,202,869	148,067
Substantial Harm Determination	38,419,664	3,626,544	43,071,820	2,895,103

Subtotal, Projected New Facilities	145,231,155	13,708,794	250,717,866	16,852,179

TABLE 3—TOTAL COST OF THE FINAL ACTION, FACILITIES, ANNUALIZED (2022)—Continued

Response plan requirements	Present value, 7%	Annualized cost, 7%	Present value, 3%	Annualized cost, 3%
Grand Total, Facilities	1,120,290,646	105,747,512	1,641,867,861	110,359,310

TABLE 4—TOTAL COST OF THE FINAL ACTION, THE AGENCY, ANNUALIZED (2022)

Agency cost	Annualized cost, 7%	Annualized cost, 3%
Review Existing Facility Plans	$1,359,732	$1,126,250
Review New Facility Plans	345,366	389,990
Government-Initiated Unannounced Exercises (GIUEs) and Inspections	3,846,625	4,141,097
FRP Amendments	289,529	311,693
IT/Data Management and Integration	849,339	857,498
Total	6,690,590	6,826,528

The benefits of the final action are assessed qualitatively and include a wide diversity of potential benefit mechanisms, such as reductions in impacts to public water systems (PWS) and waterways used for recreational and commercial purposes; impacts to the ecosystem and environment; impacts to human health; and other socioeconomic impacts driven by business disruption, evacuations, and other elements of emergency response. These benefits include prevention of economic loss in value of homes near discharges [5] and the economic losses to communities affected by a discharge. See Chapter 6 of the final rule RIA for additional details regarding benefits of the final action.

The Agency disagrees with commenters who assert that EPA has underestimated costs. EPA recognizes commenters' concern that covered facility owners or operators will need to spend some resources to determine whether they meet the initial screening criteria, and for those that do, potentially significantly more resources and time determining whether they meet any of the substantial harm criteria, preparing an FRP including in-depth hazard evaluations, and potentially revising the FRP. The Agency has accounted for these costs, as well as all other aspects of the regulatory program in Chapter 5 of the final RIA.

The Agency proposed that if the maximum capacity onsite exceeds 10,000x the reportable quantity (RQ), a covered facility meets the threshold quantity screening criterion. While EPA proposed a 10,000x RQ multiplier, the Agency has determined that a 1,000x RQ multiplier will more appropriately screen for covered facilities that could cause substantial harm to the environment from a worst case discharge of a CWA hazardous substance, to fully address the range of potential releases that merit worst case discharge planning and response. This results in substantially more covered facilities having to determine whether they are subject to the planning requirements of the rule, *i.e.,* meet the initial screening criteria in the first instance, and analyzing the substantial harm criteria. The Agency also revised the economic analysis for the final rule, estimating annualized costs for regulated facilities of approximately 117 million per year, as documented in section 5.5 the final RIA.

EPA estimated the total costs of the final action by combining per-facility estimates with the estimate of the affected facility universe. To provide information about the scale of costs that covered facilities would incur, EPA compiled estimates of unit compliance costs for each of the program elements in the final action. EPA developed unit burden estimates for individual elements of the response plan on a first- and subsequent-year basis. EPA calculated the annualized total cost to regulated facilities of the final action over a 20-year analysis period, using the three percent and seven percent discount rates.

The Agency also notes that the majority of labor burden for regulated facility staff are estimated using labor rates of $93.50 and $70.84, based on U.S. Bureau of Labor Statistics (BLS) wage data. The Agency also recognizes the role of consultants in facility planning efforts. This cost is accounted for as an annually recurring cost of $18,471 per facility for contractor support.

C. Background Analyses

1. CWA Hazardous Substance Discharge History And Impacts Analysis

EPA maintains that it has sufficient data to support the need for this final rule. As detailed in the final rule RIA, EPA analyzed National Response Center (NRC) data on CWA hazardous substances discharges to water. 40 CFR 117.21 requires immediate notification to the NRC once the person in charge of a vessel or an offshore or onshore facility has knowledge of a discharge of a CWA hazardous substance from the facility in quantities equal to or exceeding its assigned RQ in any 24-hour period. NRC data are generated by notifications received immediately following a discharge and often lack complete information on chemicals and quantities discharged, incident and response details, impacts, and locations. While EPA's analysis of NRC data shows a decline in the average number of CWA hazardous substance discharges from 2010 to 2019, past discharge history is not a guarantee of future outcomes, nor does the number of discharges definitively indicate the level of impact of those discharges. Thus, it's possible that a smaller number of higher consequence discharges could cause more adverse impacts due to the circumstances of the incident. Moreover, NRC data are a starting point for further analysis to inform CWA hazardous substance worst case discharge occurrences. Based on past experiences of oil and chemical spills, EPA has observed data gaps with NRC reports, but continues to improve oil and CWA hazardous substance spill data as incidents progress through regional and EPA Emergency Operation Center reporting. Furthermore, NRC

[5] Burton, K., Maas, A., and Lee, K. (2022). A Case Study in Contamination: Persistent Home Value Losses Associated with the Elk River Spill. *https://jareonline.org/articles/a-case-study-in-contamination-persistent-home-value-losses-associated-with-the-elk-river-spill/*).

data is the most complete dataset available, and it does show that CWA hazardous substance discharges to water continue to occur. Accordingly, EPA has determined that worst case discharge planning regulations for CWA hazardous substances are critical to protect the environment, keep our waterways safe and clean, and protect human health.

While 10 CWA hazardous substances account for most of the CWA hazardous substance discharges reported to the NRC, as detailed in section 3.1 of the RIA, these data often lack the names and quantities of chemicals discharged, and do not reflect future probabilities of release. Also, the frequency of reported releases does not reflect the impacts that could occur with a worst case discharge. While some commenters suggested narrowing the number of CWA hazardous substances covered by the rule, changing the list of CWA hazardous substances in 40 CFR part 116 is outside the scope of this action.

Moreover, EPA has no reliable information to support the commenter claim that the industry is already devoting the necessary resources and capabilities to prevent and respond to discharges that may reach navigable waters or a conveyance to navigable waters. And even if there is any merit to the commenter's assertion, that would generally serve to change the baseline, mitigating the impact of this rule, and not a reason to have no rule or even the playing field between those that are responsibly planning for such events and those that are not. In any case, EPA intends to work collaboratively with industry to ensure robust response plans for CWA hazardous substance worst case discharges into or on navigable waters or a conveyance to navigable waters that could cause substantial harm to the environment. Additionally, while this final regulation does not address the causes of worst case discharges, it does require comprehensive response planning regardless of how a CWA hazardous substance discharge occurs. By focusing on covered facilities within one half mile to navigable waters or a conveyance to navigable waters and above the threshold quantity that also meet one or more proposed substantial harm criteria, the final regulation will appropriately ensure robust planning for covered facilities that pose the highest risk of causing substantial harm to the environment.

2. Analysis of Existing Programs/ Technical Background Document

In sum, EPA's analysis found few Federal programs that comprehensively cover all the CWA section 311(j)(5)(D) requirements for all CWA hazardous substances. While CWA hazardous substance covered facilities subject to the Oil Pollution Prevention Program FRP requirements or RMP regulations, among others, have some overlap for the required program elements, those programs do not cover all requirements in CWA section 311(j)(5)(D) for CWA hazardous substances. EPA also recognizes commenter feedback that industry guidance and voluntary programs are valuable resources for ensuring safe, protective practices. However, those practices are not enforceable nor required and do not fulfill the statutory requirements of this action. In addition, EPA acknowledges State programs may be comprehensive for CWA hazardous substance worst case discharge planning. The Agency agrees with commenters who stated that duplicative requirements should be avoided and refers the commenters to Chapter 2 of the TBD for more information and analysis. As such, a regulated facility owner or operator may augment an existing plan with the requirements of this rule or use an Integrated Contingency Plan (ICP) approach, such as One Plan, which will reduce the administrative burden. However, an owner or operator may not assume they are compliant with this regulation due to their compliance under other programs (*e.g.,* the Oil Pollution Prevention FRP regulation, RMP regulation). See the Response to Comments document for specific responses to each program, in the docket for this action. Please see section III.D.7 of this Preamble for a discussion of exemptions.

D. Rule Provisions

1. Definitions

Some commenters requested that EPA revise its definitions of key terms. EPA has considered these comments carefully as is committed to providing clarity throughout this action.

i. Adverse Weather

EPA considered comments advocating that the definition of ''adverse weather'' should be revised. To the extent that commenters are concerned with ''ambiguity,'' it seems largely because they are interested in narrowing the definition to a limited number of clearly delineated events. However, the definition is intentionally broad and meant to capture the wide range of potential weather changes and conditions due to the nation's varying regional weather patterns. Prescribing specific types of events or adverse weather conditions is unrealistic and does not represent the myriad challenges facing our nation due to climate change. EPA also disagrees with commenters who asserted that the breadth of this definition will cause uneven implementation of the final rule; rather, it will allow covered facility owners or operators and local emergency planners to consider the full range of potential adverse weather events, taking into consideration varying local and regional weather patterns (current and future), that could impact the covered facility and affect worst case discharge response planning as well as changing conditions and emerging threats such as the widening impact of extreme heat. For example, while specific events, such as ''20-year storm conditions'' may be useful as one type of climatological condition to consider in one region, EPA agrees that it is equally important to consider effects of, for example, increased drought or lack of rain activity in other regions and the effects on a potential worst case discharges of CWA hazardous substances. As such, EPA has added language describing some types of climate change impacts that may need to be considered when accounting for adverse weather conditions during a worst case discharge of CWA hazardous substances into or on the navigable waters or a conveyance to navigable water, such as the increased frequency and intensity of adverse weather, temperature fluctuations, rising seas, storm surges, inland and coastal flooding, drought, wildfires, and permafrost melt in northern areas.

EPA chose to define ''adverse weather'' in this final rule differently from the Oil Pollution Prevention regulation definition of adverse weather found in 40 CFR 112.2 due to the variance in physicochemical properties among oil and the 296 CWA hazardous substances as well as how different types of adverse weather may impact the analysis of appropriate response actions for those myriad CWA hazardous substances. This is another reason why a broad definition of ''adverse weather'' is appropriate for this rule.

EPA recognizes that, given the increased probability of extreme weather events, historic incidents are becoming less of a predictor of future effects. Compliance assistance will be available to aid owners or operators in determining the appropriate types and severity of weather events, sea level rise, drought, flooding, heat, wildfire, and subsidence risk, etc., to consider for their worst case discharge in adverse

weather, as well as references and data sources.

ii. Container

While several commenters noted that the definition of ''container'' is not consistent with the Oil Pollution Prevention regulation in 40 CFR 112.2 and that there is no corresponding definition in this action for ''bulk storage container.'' The primary reason for this is because the two regulations do not cover the same substances. Additionally, while the Oil Pollution Prevention regulation has determined that a 55-gallon *de minimis* container size is appropriate, as noted by commenters, this is not the case for CWA hazardous substances. To the contrary, certain CWA hazardous substances have been determined that they ''may be harmful'' at quantities as low as one pound. Accordingly, a 55-gallon container size would be an inappropriate *de minimis* amount for all substances because smaller containers may contain hazardous levels of substances that could cause substantial harm in the event of a worst case discharge, especially when aggregated. Additionally, CWA hazardous substances are stored in a wide variety of containers, and CWA hazardous substances are typically measured and regulated[6] by mass (*e.g.,* pounds), not volume (gallons), underscoring why a 55-gallon *de minimis* container standard would be unsuitable. Because of the variation of the chemical properties, including toxicity, of CWA hazardous substances, EPA has no basis for setting a *de minimis* container size at 55-gallons or any other level, including the RQ level, as suggested by some commenters. Furthermore, the OPA Conference Report states that ''. . . the selection criteria should not necessarily omit those smaller facilities that are near major water supplies or that are near environmentally sensitive areas.'' (H.R. Rep. No. 101–653, 10lst Cong., 2d Sess., p.151.). Threshold determinations must consider all CWA hazardous substance present at the covered facility in the aggregate, but without consideration to container size or capacity because the maximum quantity onsite may contribute to the potential harm posed by a covered facility. Finally, two commenters asked for additional examples of containers. Accordingly, EPA notes that containers may consist of a rail car or other mobile storage not under active shipping papers, process vessel, canister, drum, bulk storage tank, dumpster, tote, or bulk cargo container positioned on land, among other things. For the reasons enumerated above, EPA is finalizing the definition of container as proposed.

[6] EPCRA Reporting Rule (40 CFR part 370), RMP regulation (40 CFR part 68), DHS CFATS (6 CFR part 27), OSHA's PSM (29 CFR 1910.119).

iii. Conveyance to Navigable Waters

EPA considered whether to include a rule-specific definition for ''conveyance to a navigable waterway.'' EPA is aware that the CWA definition of ''point source'' at 33 U.S. Code § 1362(14) uses the term conveyance and includes some examples. However, EPA determined that cross-referencing that description of conveyance, with its specific exclusions, would not be appropriate for this rule. In this rule, conveyances are a critical consideration in a facility's worst case discharge scenarios because a straight-line analysis may overlook an opportunity to travel via pipe or open channel that could more easily enter navigable waters. Indeed, the concern is not particular types of structures or pathways (and categorizing them) but that a conveyance to navigable waters can result in a more immediate discharge to navigable waters. Moreover, while there are some broad categorical generalizations that can be made about what constitutes a conveyance to navigable waters, there are factual elements that necessarily make the determination a case-by-case determination (even if most of the time it will be straightforward, if not obvious), *i.e.,* where identifying particular types of conveyances will not suffice or capture the variations that exist in the real world.

In any case, in terms of a definition, conveyance is meant to have its normal English language definition and usage. That said, consistent with having the elements of the initial screen be relatively straightforward, EPA is clarifying that it considers a conveyance to navigable waters in the context of this rule to be a means of transport that provides a direct pathway to navigable waters. In the majority of cases, a means of transport will be discernible, confined, and discrete, and thus will present a straightforward factual scenario. Some examples are a storm drain, pipe, or channel that discharge directly into navigable waters.

A few commenters had categorical questions about types of structures or features such as a dry gulch, a wellhead, subsurface water or even groundwater. While EPA could make some generalization that it does or does not expect that any of these examples would serve as a means of transport, the reality is there will inevitably be situations where it will depend on the specific facts to determine whether a given structure or feature (no matter what it is called) serves as a means of transport to navigable waters. Finally, given the purpose of the rule, EPA disagrees that the inclusion of a means of transport that could result in a more immediate discharge to navigable waters in the initial screen (and in some cases may require some analysis), makes the reach or scope of the rule ''unbounded.''

iv. Distance to Endpoint

EPA is adjusting the definition of distance to endpoint for clarity and to reflect that the distance represents the greatest distance a CWA hazardous substance can travel in a worst case discharge to navigable waters or a conveyance into or on the navigable waters while still being able to cause injury to fish, wildlife, or sensitive environments (FWSE) or public receptors, or adversely impact a PWS.

v. Endpoint

Accordingly with the definition of distance to endpoint above, EPA is adjusting the definition of endpoint to clarify that it represents the concentration at which a worst case discharge of a CWA hazardous substance into or on the navigable waters has the ability to cause injury to FWSE or public receptors, or adversely impact a PWS.

vi. Facility

Some commenters asserted that the definition of ''facility'' is unclear while others were concerned about the possibility of gamesmanship in drawing facility boundaries. EPA is adjusting the definition to reflect the Preamble to the proposed rule, that stated that an owner or operator may not make determinations as to what constitutes a covered facility indiscriminately and in such a manner as to simply avoid applicability of the final rule (for example, the division of one facility into separate facilities with one CWA hazardous substance container located at each facility where all containers are located side-by-side or in close proximity to each other and are used for the same purpose). EPA maintains that the flexibility afforded to owners or operators in determining what constitutes a covered facility allows those most knowledgeable about its operations to decide whether it should be aggregated or divided, which may vary widely due to the range of CWA hazardous substance operations and types of facilities. Furthermore, EPA notes that it is adopted from the Oil Pollution Prevention regulation at 40 CFR 112.2, is appropriately broad, and captures the types of facilities intended

to be regulated by EPA under CWA hazardous substance worst case discharge regulations. Please see the Response to Comments document in the docket for further discussion.

EPA has adjusted the definition to separate out non-transportation-related onshore facilities for clarity and ease of navigation in the document.

vii. Injury

Because of the need to maintain consistency with the NCP, the Agency has determined it is appropriate to use the definition of ''injury'' established by the Natural Resource Trustees for this rule. Federal officials authorized by the President and the authorized representatives of Indian Tribes and State and foreign governments act as public trustees to recover damages to natural resources under their trusteeship. Under the NCP, each trustee has responsibilities for protection of resources; mitigation and assessment of damage; and restoration, rehabilitation, replacement, or acquisition of resources equivalent to those affected (40 CFR 300.615). EPA maintains that the definition of ''injury'' is appropriate to assess substantial harm based on the extensive experience of the Natural Resource Trustees in conducting evaluations of CWA hazardous substance impacts on natural resources. The definition of ''injury'' in 40 CFR 112.2 of the Oil Pollution Prevention regulation was adapted from the definition of ''injury'' in the DOI Natural Resources Damage Assessments (NRDA) final rule at 43 CFR part 11 and includes only the part of the definition that addresses oil discharges, which EPA is now adapting for this regulation to provide regulatory consistency.

In response to the commenters who stated that the definition of ''injury'' could apply to ''insubstantial effects'' rather than ''substantial harm,'' EPA notes that the definition of ''injury'' is intended to assist in the identification of covered facilities that could cause substantial harm. The potential for a spill to cause an injury to FWSE or public receptors is coupled with the screening criteria to determine if a covered facility could cause substantial harm to the environment. In that context, causing injury indicates the potential for a worst case discharge to cause substantial harm to the environment. EPA concludes that the injury relies on changes that have been demonstrated to adversely impact the resources in question, or services provided by those resources.

While ''injury'' to a public receptor as a concept may be new to the regulatory community, EPA holds that it is an important consideration due to the variability of CWA hazardous substances, how they act in water, their effects on human health and the environment, and their impact on the potentially exposed public. EPA agrees with the commenter who asserted that just being a measurable effect does not mean that the effect is ''substantial;'' however, the endpoints in Appendix B are not limited to just measurable effects. Indeed, the endpoints are both measurable and indicate a covered facility could cause substantial harm to the environment due a worst case discharge into or on the navigable waters or a conveyance to navigable waters.

viii. Maximum Quantity Onsite

EPA has revised the definition of ''maximum capacity onsite'' to ''maximum quantity onsite.'' This is based on the decision to use a threshold quantity based on quantity, not capacity, discussed below in section III.D.2.ii. Please note, a covered facility owner or operator must plan proactively for future anticipated product onsite and FRP threshold quantities are based on the maximum quantity onsite at any time for each CWA hazardous substance. For example, a covered facility with both chlorine and benzene onsite must consider when those CWA hazardous substances will be at their maximum quantity onsite both as to whether they meet the threshold quantity and for planning purposes. If the owner or operator is developing a plan in January and does not want to amend their plan in the coming months, the maximum quantity onsite for chlorine may occur in March and the maximum quantity onsite of benzene may occur in September. For the FRP to be valid without amendments, it must plan for the maximum quantities onsite for each CWA hazardous substance at any time, so both maximum quantities onsite, regardless as to whether the times overlap.

ix. Permanently Closed

EPA is removing the definition of ''permanently closed'' because a CWA hazardous substance maximum quantity onsite, threshold quantity, and worst case discharge scenario quantities in the final rule are based on using quantity, not capacity, discussed below in section III.D.2.ii.

x. Publicly Owned Treatment Works

EPA is adding a definition for publicly owned treatment works (POTW), referring to the existing definition in 40 CFR 403.3, but including federally owned treatment works for the purposes of this final rule.

xi. Public Receptor

Some commenters suggested that the definition of ''public receptor'' is too broad. However, EPA's definition of ''public receptor'' is intentionally so in order to cover a wide variety of areas through which the public has access to navigable waters and could be affected by a worst case discharge. EPA did not include first responders in the definition of public receptor, as one commenter suggested, because first responders are covered in a facility and community's health and safety plan and emergency planning.

While this definition is not part of the Oil Pollution Prevention regulation in 40 CFR part 112, CWA hazardous substances differ from oil in important and varied ways and require different considerations. For instance, certain CWA hazardous substances may have no realistic means of recovery once the substance enters a waterbody, meaning that receptors must be prepared for and swiftly notified of the diluted substance as it travels downstream. As with other aspects of this rule, EPA intends to provide compliance assistance to covered facility owners or operators on types of areas they should consider when determining their ability to cause injury to public receptors.

xii. Public Vessel

EPA did not receive any comments on the definition of public vessel and has adjusted the definition to refer to the definition in section 311(a)(4) of the CWA. This will provide regulatory consistency with other CWA programs and reflect the statutory authority of this action rather than creating a new definition just for use in this regulation.

xiii. Vessel

EPA did not receive any comments on the definition of vessel has adjusted the definition to refer to the sections 311(a)(4) of the CWA and 101(28) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA). This will provide regulatory consistency with other CWA and CERCLA programs and reflect the statutory authority of this action, rather than creating a new definition just for use in this regulation.

xiv. Water Distribution System

EPA has revised the definition for accuracy and to align with its use in other EPA programs in order to more

accurately reflect drinking water system characteristics.[7]

xv. Wellhead Protection Area

EPA is adding a definition for wellhead protection area for consistency with the Oil Pollution Prevention FRP regulation and to aid responders in identifying risks in the event of a worst case discharge to protect drinking water sources.

xvi. Worst Case Discharge

Some commenters suggested EPA change its definition of worst case discharge; however, EPA concludes that the current definition is designed to capture the worst case discharge and consistent with the statutory authority of this action. It is worth noting, however, that discharges in compliance with NPDES (40 CFR part 122) are not covered by this regulation. To commenters concerned with impacts due to climate change, a largest foreseeable discharge must already be evaluated in adverse weather conditions, including those due to climate change, which may include challenging climatic conditions such the increased frequency and intensity of extreme weather events, temperature fluctuations, rising seas, storm surges, inland and coastal flooding, drought, wildfires, and permafrost melt in northern areas. In addition, EPA refers commenters to 40 CFR 118.10 and section III.D.9 of this preamble for more specific language and discussion on worst case discharge calculations.

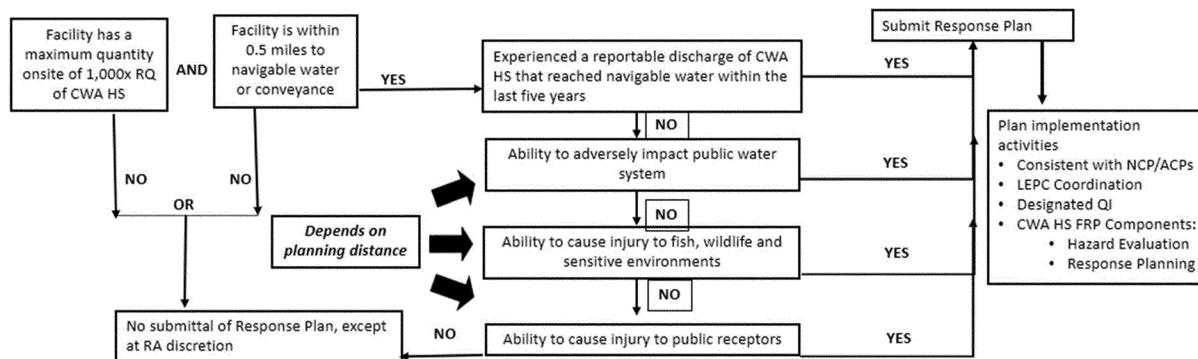
xvii. Other Definitions

EPA did not receive major substantive comments on the remaining definitions in § 118.2 and is finalizing them as proposed, with some separated out for clarity.

2. Applicability

In 40 CFR 118.3, EPA set forth a two-step applicability process, whereby a covered facility owner or operator assesses two screening criteria, and, if both criteria are met, the owner or operator then, and only then, assesses the ability to cause substantial harm to the environment through four substantial harm criteria (all described in detail below). To ensure that EPA tied the proposed applicability provisions to the statutory requirements, the Agency proposed four substantial harm criteria to target covered facilities that could cause substantial harm to the environment by discharging into or on navigable waters or a conveyance to navigable waters. Additionally, EPA proposed location-based criteria (using both distance from navigable waters or conveyance and planning distance calculations) to ensure covered facilities are regulated based on their location, as required by statute. In combination with the screening criteria, EPA determined that the substantial harm criteria reflect real world scenarios whereby a worst case discharge could cause substantial harm to the environment. Some commenters raised concerns about the level of responsibility on owners or operators to determine if they are subject to the rule. While EPA staff will be available to work with facilities and provide compliance assistance, consistent with Congressional intent, the responsibility for safeguarding their materials and for planning for a worst case discharge of CWA hazardous substances into or on the navigable waters or a conveyance to navigable waters rests first and foremost with the covered facility owner or operator (H.R. Rep. No. 101–653, 101st Cong., 2d Sess. 1990).

Figure 1—Final Applicability Criteria for CWA Hazardous Substance FRP-Subject Facilities



i. Example of the Applicability Determination Process

Below is a detailed discussion of the applicability determination process in 40 CFR 118.3. The first step is to complete the screening criteria, which are to be assessed concurrently; there is no implied order of which screening criterion to assess initially, and a covered facility owner or operator may choose to examine either their distance to navigable waters or a conveyance to navigable waters or threshold quantity first, whichever is preferable to their circumstances. In this example, the owner or operator chooses to determine if their maximum quantity/quantities onsite of CWA hazardous substance(s) meets or exceeds the threshold quantity first. The aggregate maximum quantity onsite at any time of benzene (a listed hazardous substance as found in 40 CFR 116.4) is 15,000 pounds. Since benzene has an RQ of 10 and the RQ multiplier is 1,000, the threshold quantity for benzene is 10,000 pounds. Because the covered facility's maximum quantity onsite exceeds the threshold quantity for benzene, it meets this screening criterion. If there are mixtures containing CWA hazardous substances onsite, the owner or operator must follow the requirements regarding mixtures, as detailed in section III.D.8 of this preamble. The covered facility owner or operator then determines whether it has a maximum quantity onsite at any time that meets or exceeds the threshold quantity for each other CWA hazardous substance onsite and in mixtures following the same procedure. Alternatively, if a covered facility does not have any CWA hazardous substances that meet the CWA hazardous substance screening threshold (1,000x RQ), it need not

[7] *https://www.epa.gov/dwreginfo/drinking-water-distribution-system-tools-and-resources.*

proceed further with the applicability determination.

Again, if the covered facility meets the CWA hazardous substance threshold quantity screening criterion, the owner or operator next determines its distance to navigable waters or a conveyance to navigable waters. In this instance, the covered facility boundary or nearest opportunity for discharge nearest to a navigable water or a conveyance to navigable water as assessed using an online mapping tool is 0.3 miles. Thus, the covered facility is within one-half mile of navigable waters or a conveyance to navigable waters. Since the covered facility meets both prongs of the screening criteria, the owner or operator then determines whether it meets any of the substantial harm criteria. If a covered facility is not within one-half mile of a navigable waters or a conveyance to navigable waters, the owner or operator need not proceed further.

Similar to the screening criteria, there is no implied order of operations in determining whether a covered facility meets any of the substantial harm criteria, and an owner or operator may proceed through the criteria as preferred. However, unlike the screening criteria (where both prongs need to be met), if an owner operator determines that the covered facility meets one of the substantial harm criteria, the owner or operator must submit an FRP to EPA. In addition, the owner or operator must still assess the other substantial harm criteria, as it is important to have a guide to all the potential areas of impact in the case of a worst case discharge as well as past vulnerabilities as shown through previous reportable discharges. Therefore, the assessments for all four criteria must be included in the FRP or Appendix A: Substantial Harm Certification Form.

Proceeding through each of the substantial harm criteria, for the substantial harm criteria based on calculating distances to endpoints (FWSEs and public receptors and the ability to adversely impact a PWS), EPA expects that covered facility owners or operators will need to gather information related to the CWA hazardous substances onsite above the threshold quantity and information relevant to their fate and transport following a worst case discharge. This may include modeling a worst case discharge scenario under various flow conditions to obtain the arrival time, duration, and concentration of the discharge as it reaches a FWSE, public receptor, or water intake. Typically, low flow conditions will result in larger peak concentrations of the discharged substance, and thus could be more likely to cause substantial harm.

Next, a covered facility owner or operator determines whether a worst case discharge of each CWA hazardous substance with a maximum quantity onsite above the threshold quantity could cause injury to FWSE. To calculate the quantity of a worst case discharge for each CWA hazardous substance onsite above the threshold quantity, the owner or operator identifies the maximum CWA hazardous substance container, interconnected containers, pipe, or piping system quantity onsite. Then, a covered facility owner or operator consults the relevant ACP (available by contacting their EPA regional office) to identify FWSE that could potentially be reached by a worst case discharge. To calculate planning distance, the owner or operator must consider the factors for overland and in water transport detailed in § 118.10(b)(3)(i) and (ii), as well as adverse weather conditions in § 118.10(b)(3)(iii) and properties of the CWA hazardous substance in 40 CFR 118.10(b)(3)(iv) or associated aqueous products. Once an owner or operator completes the planning distance calculations, they compare the concentration-based (*i.e.,* mg/L) results to the chart in Appendix B to determine whether a worse case discharge could cause injury to FWSE.

To determine whether a covered facility could cause injury to a public receptor, the owner or operator follows the same steps as for FWSE, but uses the appropriate concentration-based (*i.e.,* mg/kg) endpoint values found in Appendix B. To identify public receptors, an owner or operator may consult local maps, local authorities, their Local Emergency Planning Committee (LEPC) or Tribal Emergency Planning Committee (TEPC), or any other available information about parks, recreational areas, docks, or other public spaces inhabited, occupied, or used by the public at any time where members of the public could be injured as a result of a worst case discharge into or on the navigable waters or a conveyance to navigable waters.

To evaluate whether a worst case discharge from a covered facility could adversely impact a PWS, the owner or operator determines whether a worst case discharge would result in certain outcomes as detailed below by working with potentially affected PWSs. Using information including properties of CWA hazardous substances onsite and information relevant to their fate and transport arrival time, duration, and concentration of the discharge as it reaches a water intake, the owner or operator coordinates with downstream PWSs to determine impacts to the system and documents that coordination. If the owner or operator has made and documented good faith efforts but is nonetheless unable to work with the PWS, the covered facility will use the estimated concentration of the CWA hazardous substance from a worst case discharge at the water intake to assess the potential to adversely impact a PWS. Specifically, an owner or operator must assess each of the following impacts:

—Violation of a National Primary Drinking Water Standard or State Drinking Water Regulation: To assess whether a worst case discharge violates any National Primary Drinking Water Regulations (NPDWR) or State Drinking Water Regulations (SDWR), a covered facility owner or operator determines whether the released CWA hazardous substance, aqueous products, or a chemical product that forms when the CWA hazardous substance reacts with drinking water treatment chemicals, is subject to a NPDWR or SDWR, and is predicted to exceed the maximum contaminant level (MCL) at the point of compliance with the NPDWR or SDWR. For example, benzene is a CWA hazardous substance and is subject to a NPDWR with an MCL of 0.005 mg/L measured at the entry point to the water distribution system. An example of a chemical product that could form through a reaction is the CWA hazardous substance ammonium thiocyanate, which reacts with free chlorine to form cyanogen chloride and/or free cyanide, both of which are acutely toxic above a threshold and are regulated under SDWA.

—Interference with the ability of PWSs to comply with any NPDWR or SDWR: To assess whether a worst case discharge compromises the ability of the PWS to produce water that complies with any NPDWR or SDWR, a covered facility owner or operator determines whether the released CWA hazardous substance alters water quality or interferes with treatment processes in a manner that impacts a PWS's ability to produce water that complies with an NPDWR or SDWR. For example, a release of a strong acid, such as sulfuric acid in sufficient quantity may reduce water alkalinity to a degree where the PWS can no longer maintain adequate corrosion control, putting it at risk of a violation under the Lead and

Copper Rule (40 CFR part 141 subpart I).

—Threat to public health: To assess whether a worst case discharge results in adverse health impacts in people exposed to the maximum concentration that could enter a drinking water distribution system, a covered facility owner or operator determines whether the released CWA hazardous substance, aqueous products, or a chemical product that forms when the CWA hazardous substance reacts with drinking water treatment chemicals, is predicted to exceed scientifically accepted reference concentrations below which adverse human health impacts are not expected. An example of such reference concentrations are EPA's established Drinking Water Health Advisories, which are intended to protect public health during an emergency, such as a chemical release. As an example, benzene has a one-day Drinking Water health advisory of 0.2 mg/L.

—Contamination of PWS infrastructure: To assess whether a worst case discharge will contaminate PWS infrastructure, including but not limited to intake structures, treatment facilities, and drinking water distribution systems, or premise plumbing systems[8] to a degree that requires remediation to restore system components to acceptable performance, a covered facility owner or operator determines whether the released CWA hazardous substance, aqueous products, or a chemical product that forms when the CWA hazardous substance reacts with drinking water treatment chemicals, is likely to corrode, foul, adhere to, adsorb into, permeate into, or otherwise damage components and materials used at any point in the PWS, from the intake through premise plumbing systems. For example, CWA hazardous substances that are oil-like can foul water treatment filtration media, making it ineffective.

—Impact to aesthetic characteristics of drinking water: To assess whether a worst case discharge impairs the taste, odor, or other aesthetic characteristic of the water entering a drinking water distribution system to a degree that could make the water unacceptable to consumers and that could prompt the PWS to issue use restrictions, a covered facility owner or operator determines whether the released CWA hazardous substance, aqueous products, or a chemical product that forms when the CWA hazardous substance reacts with drinking water treatment chemicals, is predicted to exceed scientifically accepted reference concentrations, below which aesthetic impacts from the CWA hazardous substance are not expected. For example, a CWA hazardous substance at a concentration above established taste and odor thresholds could prompt a water system to issue use restrictions, such as a "do not drink" order. When available, secondary MCLs established under SDWA should be used as a reference concentration for aesthetic impacts. For example, chloride has a secondary MCL of 250 mg/L—above this concentration, the taste of the water may be unacceptable to customers. Several CWA hazardous substances, such as hydrochloric acid, would increase the chloride concentration in water.

When assessing each criterion for substantial harm to PWSs, the covered facility owner or operator should attempt to work collaboratively with the downstream PWS(s) to determine precisely how the worst case discharge would impact the system. Given the complexity of fate and transport of a CWA hazardous substance in aqueous environments as well as the impact of drinking water treatment processes on the CWA hazardous substance, system specific information from the PWS will facilitate the most accurate assessment for the potential of the CWA hazardous substance to cause substantial harm to the PWS. However, if the covered facility owner or operator has made and documented good faith efforts but is nonetheless unable to work with the PWS in this assessment, the owner or operator must use the predicted concentration of the CWA hazardous substance at the drinking water intake resulting from a worst case discharge, along with scientifically accepted information about the impact of common water treatment processes (*e.g.,* chlorination) on the CWA hazardous substance to make the substantial harm determination.

The covered facility owner or operator must consider each of the five potentially adverse outcomes to PWSs described above and determine the concentration at which the adverse outcome could occur. The lowest concentration at which any of the five adverse outcomes could occur must be used in the substantial harm determination, and if the concentration at the reference point (*e.g.,* at the intake, at the entry point to the distribution system) is equal to or greater than the concentration at which the adverse outcome could occur, then the covered facility meets this substantial harm criterion.

Finally, a covered facility owner or operator assesses whether they have had a reportable discharge of a CWA hazardous substance (a discharge over the RQ) to navigable waters in the last five years. This could be accomplished by reviewing discharge records and those submitted to the NRC in the event of a reportable discharge.

If the covered facility CWA hazardous substance maximum quantity onsite meets or exceeds the threshold quantity and it is located within one-half mile of navigable waters or a conveyance to navigable waters, but does not meet any of substantial harm criteria, the owner or operator must still submit a Substantial Harm Certification Form (Appendix A) to EPA, including supporting calculations and modeling. If the covered facility meets at least one of the substantial harm criteria, the owner or operator must complete and submit an FRP to EPA that includes information on each CWA hazardous substance onsite above the threshold quantity, along with their Substantial Harm Certification Form.

Below is a detailed discussion of the significant comments and EPA's responses, as well as adjustments made to the regulatory text.

ii. Threshold Quantity

In 40 CFR 118.3, EPA proposed that if the maximum capacity onsite exceeds 10,000x the RQ, a covered facility meets the threshold quantity screening criterion. While EPA proposed using 10,000x RQ multiplier for threshold quantities, the Agency has determined that a 1,000x RQ multiplier will more appropriately screen for covered facilities that could cause substantial harm to the environment from a worst case discharge. For example, some commenters criticized the 10,000x multiplier citing a lack of evidence that those facilities under that threshold quantity would not be reasonably be expected to cause substantial harm to the environment from a worst case discharge. Therefore, the commenters urged EPA to take a more precautionary approach and not exclude these facilities from determining their ability to cause substantial harm to the environment. Since threshold quantity is a screening tool, *i.e.,* a covered facility with less than that amount is not covered by the rule and need not consider whether it may reasonably cause a worst case discharge in the first instance, setting a lower initial screening level at this stage has merit,

[8] *https://www.epa.gov/emergency-response-research/premise-plumbing-decontamination.*

since even with less than a 10,000x RQ amount, it is reasonably foreseeable that a covered facility could cause substantial harm from a worst case discharge. Said another way, setting the threshold quantity too high may mean that higher risk covered facilities are not required to determine their ability to cause substantial harm at all, which could leave the environment more vulnerable to worst case discharges.

Several commenters supported the initial proposed 10,000x RQ multiplier, but EPA agrees with other commenters who suggested lowering the RQ multiplier to 1,000x. See Chapter 2 of the RIA for this final rule for a detailed analysis of covered facilities with CWA hazardous substances onsite at the 1,000x and 10,000x RQ multiplier levels. This analysis shows that at the 1,000x RQ multiplier, a number of additional covered facilities with CWA hazardous substances onsite that present a significant threat to downstream PWSs, FWSEs, and public receptors will need to determine if they meet the substantial harm criteria. For example, for covered facilities with 1,000x RQ onsite of arsenic trioxide (arsenic, a known toxin regulated under the Safe Drinking Water Act (SDWA)), 66% would now meet the quantity threshold, versus 50% at 10,000x RQ. Similarly, for covered facilities with benzene onsite, a known carcinogen also regulated under the SDWA, 75% would now meet the threshold quantity versus 32% at 10,000x RQ. A few other examples include lead sulfate (lead, regulated under SDWA), 66% of covered facilities at 1,000x RQ versus 17% at 10,000x RQ; sodium arsenate (arsenic, a known toxin regulated under SDWA), 100% of covered facilities at 1,000x RQ versus 11% at 10,000x RQ; and hydrogen cyanide (cyanide, regulated under SDWA), 57% at 1,000x RQ versus 29% at 10,000x RQ. These additional covered facilities evaluating their substantial harm criteria will significantly add to protection of the environment.

EPA disagrees with commenters who argued that this lower multiplier value will bring in too many covered facilities under the rule without a concomitant increase in environmental protection. First, meeting the threshold quantity does not automatically make a covered facility subject to the rule. Second, a lower threshold quantity is appropriate for an initial screening criterion, ensuring that only covered facilities that are unlikely to meet the substantial harm criteria are excluded from the scope of the rule. Accordingly, EPA has judged that the screening criteria in conjunction with the substantial harm criteria appropriately targets those covered facilities that could cause substantial harm to the environment from a worst case discharge of CWA hazardous substances into or on the navigable waters.

To the commenters who asked for more information on the basis of the threshold quantity, the RQ multiplier reflects relative toxicity parameters used to establish the original RQs. See section IV.A.1.a.i of the proposed rule preamble, Docket ID EPA–HQ–OLEM–2021–0585–0001, for a discussion on RQs and how they were derived. The RQs provide a means to use an existing regulatory structure that already considers risk on a scale and that has been successfully used for release notification for decades. EPA also balanced the variability among the 296 CWA hazardous substances and tailoring threshold amount against a uniform, easily applied, mass-based RQ multiplier, as advocated for by many commenters, deciding on balance in favor of using a single RQ multiplier. In addition, while the proposal focused on capturing larger capacity covered facilities that could pose a greater risk, with additional consideration, in EPA's judgment, a 1,000x multiplier for determining the threshold quantity as a screening criterion more effectively represents the potential risks associated with a worst case discharge.

In this final rule, EPA has adjusted its approach to use maximum quantity onsite (inventory) rather than maximum container capacity onsite as the basis for assessing risk to the environment. EPA based this decision largely on the fact that risk determinations using maximum quantity onsite will more accurately reflect the hazard posed and has been used successfully in other EPA chemical regulations, such that this is standard business practice. Additionally, since containers are typically measured by volume and CWA hazardous substances may vary dramatically in weight due to their physical properties, there is not a clear association between container size and quantity of CWA hazardous substances onsite, which many commenters raised as an unnecessary complication. Thus, a covered facility owner, operator, or inspector would have to convert the volume of each CWA hazardous substance container onsite to a chemical-specific weight in order to compare reported values and determine if the covered facility meets the threshold quantity, exacerbating conversion difficulties discussed in the proposed rule including at 87 FR 17900 and raised by several commenters.

While the Oil Pollution Prevention FRP regulations use container capacity for applicability threshold determination, this is consistent with how oil is measured and regulated, using volume (gallons). On the chemical side, CWA hazardous substances (and all chemicals that EPA and other Federal agencies regulate) are measured and regulated by weight, typically in pounds. CWA RQs are also weight-based (1, 10, 100, 1,000, and 5,000 pounds). The OPA Conference Report (H.R. Rep. No. 101–653, 101st Cong., 2d Sess. 1990) specifically directed EPA to account for oil storage capacity, but it has no corresponding language for CWA hazardous substances. As oil and the 296 CWA hazardous substances differ in important and myriad ways, it is reasonable to pursue a different approach in terms of determining the appropriate amount that should be used for determining threshold quantities and as a planning factor.

In so doing, EPA is responding to commenter concerns about covered facilities that may have capacity for but will never actually have CWA hazardous substances onsite in quantities sufficient to meet the threshold quantity but (if capacity were the metric) could be subject to the rule, especially considering some CWA hazardous substances will never be stored at the full capacity of a container due to their physical properties. For example, several commenters noted that for one of the highest volume and occurrence CWA hazardous substances, anhydrous ammonia, containers are prohibited to be filled beyond 85% liquid volume to allow expansion and contraction.

For mixtures, using capacity gets even more complicated, an issue raised by many commenters, since a covered facility owner or operator, or EPA inspector would have to convert varying volumes of CWA hazardous substances into weights, then extrapolate based on their proportions to the full capacity of the container. This seems needlessly complex and potentially introduces calculation errors into threshold applicability determinations and worst case discharge scenario quantities. To add to the complexity, CWA hazardous substance and mixtures can be present onsite in myriad types of containers and configurations.

EPA understands the concern regarding fluctuating quantities and numbers of containers, particularly at certain batch processors and in some industries and also the use of mobile storage containers and notes that the maximum quantity onsite must reflect the aggregated quantity at the covered

facility across all containers, including but not limited to rail cars or other mobile storage not under active shipping papers, process vessels, canisters, drums, bulk storage tanks, dumpsters, totes, or bulk cargo containers positioned on land. However, EPA disagrees with commenters who asserted that the only way to adequately plan for response to worst case discharges is to account for the full storage capacity for CWA hazardous substances. Indeed, EPA and other Federal regulators routinely use actual chemical inventory quantities for a variety of regulatory and planning purposes. EPA intends that an FRP for CWA hazardous substances be forward-looking and account for the maximum quantity onsite at any time. On balance, EPA believes that choosing quantity over capacity is appropriate in terms of implementability and the risks presented. Moreover, covered facilities have many incentives to accurately track their inventories over time.

iii. Proximity to Navigable Waters or a Conveyance to Navigable Waters

EPA is retaining the proposed location-based screening criterion that covered facilities must determine whether they are located within one-half mile of navigable waters or a conveyance to navigable waters, while clarifying that this should be measured from the facility boundary or nearest opportunity for discharge. This distance is based on research related to the Oil Pollution Prevention FRP regulation. On balance, while the Agency agrees that there are significant differences between oil and CWA hazardous substances, one-half mile is an appropriate distance to infer that a covered facility has a reasonable expectation to discharge to navigable waters or a conveyance to navigable waters in the event of a worst case discharge.

Some commenters argued that the distance should be extended farther for more complete protection of the nation's waters and in the context of CWA hazardous substances. However, in EPA's analysis, 80% of covered facilities with CWA hazardous substances onsite were within one-half mile to navigable waters (see Chapter 2 of the RIA in the rulemaking docket). To extend the distance would make the criterion effectively meaningless because nearly every covered facility that meets or exceeds the threshold quantity would meet this screening criterion. While commenters were concerned about differences in topography complicating determinations of whether a covered facility is within one-half mile of navigable waters or a conveyance to navigable waters, this distance should be measured from the nearest opportunity for discharge and industry will be able to comply using widely available electronic mapping tools. EPA has determined that the one-half mile distance is protective and simple to calculate, and covered facility owners or operators will have the opportunity to model a worst case discharge in evaluating the substantial harm criteria that depend on planning distance. Additionally, an owner or operator may appeal to the RA if they believe there is no reasonable expectation to discharge into or on navigable waters or a conveyance to navigable waters from their covered facility.

EPA agrees with commenters who stated that one-half mile to navigable waters or conveyance to navigable waters applicability requirement is important to minimize harms to the environment. The Agency again notes that this is an initial screening criterion; it does not mean that a facility is subject by the rule. Rather, it means that if a covered facility does not meet either of these initial screening thresholds, it is not subject to the rule and need not do any further analysis. Only covered facilities within one-half mile to navigable water or a conveyance that also meets or exceeds a threshold quantity must then determine whether they satisfy any of the substantial harm criteria.

EPA recognizes commenter concerns regarding CWA hazardous substances that have physical properties (*e.g.,* viscosity, vapor pressure, etc.) that preclude the substance from reaching navigable waters or a conveyance to navigable waters. However, a covered facility owner or operator will consider these properties, and their implications for the ability of the substance to impact water, when they evaluate the substantial harm criteria, not in the initial screening criteria. A covered facility will need to determine its distance to navigable waters or a conveyance to navigable waters regardless of the route or method of travel of a CWA hazardous substance in a worst case discharge.

iv. Substantial Harm Criteria

In § 118.3(c), EPA proposed four substantial harm criteria. EPA is retaining these criteria in the final rule, with minor modifications. Below is a summary of changes and responses to major comments.

Several commenters asserted that the extensive efforts to assess whether they meet the substantial harm criteria were essentially requiring compliance with the rule. EPA disagrees with this premise; indeed, the reason for the initial screening criteria is to mitigate the impact on covered facilities that would not meet the substantial harm criteria. However, given the variability of the CWA hazardous substances at issue (including variations in transport, fate, and other chemical characteristics), it is inevitable that some covered facilities that meet the screening criteria will nonetheless not meet any of the substantial harm criteria. Because of the myriad of variables involved, the analysis is necessarily case-by-case. And while simplicity can reduce costs, it also often faces the dilemma of being either over or under inclusive. So, while EPA determined that simple to apply, bright line screening criteria were appropriate to satisfy the requirements of the statute in terms of adequately protecting human health and the environment, a more nuanced analysis of the substantial harm criteria to determine which covered facilities must incur the added cost of preparing an FRP is warranted. Nevertheless, in principle, EPA agrees that making it as easy as possible to conduct these assessments is an important goal and will facilitate the successful implementation of this rule. EPA intends to continue to identity and provide tools to the regulated community and the public to support these determinations.

To commenters who suggested a standalone substantial harm criterion based on the potential impacts of worst case discharges to navigable waters or a conveyance to navigable waters on communities with environmental justice concerns, EPA recognizes the unique risks faced by these communities. In § 118.5(b), an RA may determine that a covered facility could cause substantial harm to the environment due to its potential impacts on communities with environmental justice concerns. Another issue for communities with environmental justice concerns is the potential cumulative impact of multiple covered facilities in one area where any one covered facility may not have a maximum quantity onsite that meets or exceeds the threshold quantity of CWA hazardous substances, but it seems likely that if one covered facility experienced a worst case discharge due to extreme weather conditions, others could be similarly impacted and the collective effects could cause substantial harm to the environment. Upon consideration and in response to commenter concerns, an RA may now consider concerns regarding co-located covered facilities when determining whether a covered facility has the

potential to cause substantial harm to the environment.

a. Ability To Cause Injury to FWSE

In § 118.3(c)(1), EPA proposed and is retaining in the final rule a substantial harm criterion to consider the covered facility's ability to cause injury to FWSE. Relatedly, the Agency proposed in Appendix B, and is retaining in the final rule, 10 percent of Lethal Concentrations 50% (LC50) as the toxic endpoints a covered facility owner or operator must use to perform planning distance calculations. FWSEs are identified in ACPs. This regulation does not alter how FWSEs are identified or what constitutes FWSE. EPA has added language that facility owners and operators must also consider aqueous products that form when the CWA hazardous substance enters water to ensure the full range of risk is represented in this assessment.

EPA disagrees with the commenter who requested that the regulated community should identify endpoints for individual CWA hazardous substances (as opposed to categories of CWA hazardous substances) and incorporate these facility-defined endpoint concentrations given EPA approval. Determining these on a site-by-site and CWA hazardous substance-by-substance basis would be prohibitively difficult to assess. On a case-by-case basis, a covered facility owner or operator may appeal a substantial harm determination to the RA if they disagree with the planning distance calculations. EPA maintains that the LC50-based endpoints appropriately model for effects on wildlife, regardless of the type of hazardous substance discharge or type of waterbody.

One commenter requested that EPA acknowledge that ''not all navigable waters identify fish, wildlife, and sensitive environments and public receptors in their Area Contingency Plans,'' and asked for flexibility in these determinations because of these situations, specifically referencing the Oil Pollution Prevention FRP regulation's vulnerability analysis, § 112.20(h)(4) and section 1.4.1 of Appendix F. EPA is aware that ACPs currently may not reflect impacts of worst discharge of CWA hazardous substances to navigable waters. Working with Federal response partners, the Agency intends to provide compliance assistance to covered facilities to ensure these areas are properly identified and impacts are assessed. In addition, the owner or operator is responsible for identifying public receptors, not just ACPs.

b. Ability to Adversely Impact a Public Water System

EPA proposed in § 118.3(c)(2) and is retaining in the final rule the substantial harm criterion for covered facilities located at a distance such that a worst case discharge has the ability to adversely impact a PWS. Covered facilities are required to coordinate with the PWS to determine whether predicted concentrations from a worst case CWA hazardous substance discharge would result in substantial harm to the PWS. EPA has added language that facility owners and operators must also consider aqueous products that form when the CWA hazardous substance enters water to ensure the full range of risk is represented in this assessment.

However, several commenters expressed concern with EPA's approach. Some commenters requested that EPA provide detailed, transparent, and clear guidance about the applicable drinking water standards to prevent inconsistencies in implementation and confusion for covered facilities. An owner or operator must assess the possibility of a worst case discharge to cause any of the impacts enumerated in § 118.3(c)(2)(ii) through (v). Information that supports this assessment includes NPDWR, SDWR, human health impact thresholds, taste and odor thresholds, and physicochemical properties of the CWA hazardous substance. Furthermore, EPA intends to provide compliance assistance to covered facility owners or operators in making these assessments, including resources that crosswalk CWA hazardous substances against existing NPDWR.

Additionally, several commenters suggested that EPA allow covered facility owners or operators to show a good-faith effort of coordination with PWSs through documented attempts, especially in certain circumstances where coordination is difficult or not possible. EPA agrees and is revising the requirement to more clearly state that owner or operators may show a good-faith effort of coordination with PWSs through documented attempts where coordination is difficult or not possible.

(i) Alternative Approaches

—*Source Water Protection Areas (SWPAs):* As part of the proposal, EPA considered requiring covered facilities within SWPAs to prepare an FRP. Although several commenters supported this approach, largely for the reasons enumerated in the proposal preamble at IV.A.2.b.ii EPA has decided not to finalize this requirement. On the one hand, SWPAs would be a useful tool that could eliminate the need for distance planning if they were universally available and uniformly applied. However, they are not. Moreover, EPA is concerned with the burden that would be placed on State drinking water programs to respond to requests for SWPAs from covered facilities if this were a requirement of the rule. Commenters provided no data or information to support the assertion that responding to requests for SWPAs from covered facilities would likely not place a significant burden on State drinking water programs. One purpose of this final regulation is to implement congressional intent by shifting the responsibility for planning from public resources to private covered facilities that pose a substantial risk to the environment in the event of a worst case discharge into or on the navigable waters or a conveyance to navigable waters, not create new burdens for State drinking water programs or PWSs. Furthermore, requiring additional updating of SWPAs or uniformity in their application so that they could be used as a substantial harm criterion is outside the scope of this rulemaking.

—*Groundwater:* Including potential discharges to groundwater is outside of the scope of this final rule, which is specific to onshore non-transportation-related facilities that, because of their location, could reasonably be expected to cause substantial harm to the environment by a worst case discharge into or on navigable waters or a conveyance to navigable waters. Nonetheless, several commenters requested that EPA include a provision to protect groundwater under the final rule. One commenter recognized that groundwater is not jurisdictional water of the United States under the CWA but argued that the rule affects the quality of groundwater drawn by groundwater-supplied PWSs regulated under the SDWA as well as nearby groundwater users and other downstream surface water users if the groundwater discharges to surface water. Again, navigable waters does not, by definition, include groundwater.

—*Zones Of Concern (ZOCs):* EPA disagrees with commenters who posited that the source water zones of concern (ZOCs) described in the report ''Occurrence of Releases with the Potential to Impact Sources of Drinking Water'' (EPA 817–R–21–001) are appropriate for this regulation. The ZOCs used in the study described in the referenced report were

intended to provide a uniform definition for identifying whether releases captured by the NRC would be included in the analysis or not. The methodology was not designed to identify worst case discharges. As noted in Section 2.6 of the referenced report: Limitations of the Methodology, ''It is possible that releases significantly impacting a source of drinking water occurred outside a zone of concern. Conversely, it is also possible that releases within a zone of concern did not significantly impact the source water.'' The criteria in the final rule, which are based on whether a worst case discharge from a covered facility could cause substantial harm to a PWS are outcome based and therefore will more appropriately target covered facilities for regulation compared to the ZOCs in the referenced report.

c. Ability To Cause Injury to Public Receptors

In § 118.3(c)(3), EPA proposed a substantial harm criterion for covered facilities that could cause injury to public receptors through a worst case discharge into or on navigable waters or a conveyance to navigable waters, using the same parameter and toxic endpoint approach proposed for FWSE. EPA is retaining this provision in this final action. Several commenters expressed concern with EPA's proposal to have a separate substantial harm criterion for covered facilities that could cause injury to public receptors through a worst case discharge into or on the navigable waters or a conveyance to navigable waters and asserted that this is out of scope of the CWA. EPA disagrees that this substantial harm criterion does not fall under the scope of the CWA or the stated purpose of this final rule. The scope of the rule is onshore non-transportation-related facilities that, because of their location, could reasonably be expected to cause substantial harm to the environment by a worst case discharge into or on navigable waters or a conveyance to navigable waters. Public receptors are defined as areas through which the public has access to navigable waters, thus tying this criterion to the statutory authority.

Covered facility owner or operators should include impacts to public receptors in their hazard evaluations in § 118.11(b)(3), based on the physicochemical properties of the CWA hazardous substances onsite and their potential effects as well as the potential economic effects to businesses.

d. Reportable Discharge History

In § 118.3(c)(4), EPA proposed, and is retaining in the final action, that a reportable discharge history is a substantial harm criterion, meaning the covered facility has had a discharge of a CWA hazardous substance at or exceeding the RQ, as listed in 40 CFR 117.3, that violates CWA section 311(b)(3), *i.e.,* that reaches navigable waters or adjoining shorelines. If a covered facility that meets the screening criteria has had a reportable discharge within the last five years that reached navigable waters, it will be considered to have the potential to cause substantial harm in the event of a worst case discharge. Reportable discharge history will be limited to the preceding five years, so if a covered facility has had a reportable discharge outside of that date range, it does not meet that substantial harm criterion. EPA clarifies here that discharges permitted under National Pollutant Discharge Elimination System (NPDES) are not subject to this regulation (40 CFR part 122).

EPA notes that the fact that a reportable discharge in this context means that the discharge entered into or on navigable waters in quantities that may be harmful. Furthermore, these discharges are required to be reported to the NRC, so evaluating whether a covered facility has had one in the last five years should add no burden. Additionally, discharge history may indicate deficiencies at a covered facility and so warrant further care and additional planning, as shown in the related study of oil spills discussed in the preamble to the Oil Pollution Prevention FRP regulation (58 FR 8832, February 17, 1993).

EPA maintains that five years is a reasonable look back window and ample time for a covered facility to improve spill resilience as demonstrated through the lack of reportable discharges into or on navigable waters. EPA agrees with commenters that limiting the reportable discharge releases into or on navigable waters is reasonable and has added clarifying text to the final rule. The Agency is not expanding the discharge history criterion to cover other reportable discharges (*e.g.,* to land) given that the authority for this action is specific to impacts into or on navigable waters, adjoining shorelines, or exclusive economic zone.

e. Passive Mitigation, Administrative Controls, and Secondary Containment

EPA did not propose and is not including provisions regarding passive mitigation, administrative controls, or secondary containment in this rule. This is a planning regulation, as per its statutory authority under the CWA 311(j)(5). As such, the Agency is not incorporating mitigation techniques into the screening criteria, determinations of substantial harm, nor in the FRP hazard evaluation.

As per the CWA, as amended by the OPA, a worst case discharge is defined as ''the largest foreseeable discharge in adverse weather conditions.'' The OPA Conference Report goes on to state that the largest foreseeable spill from a given type of facility is intended to describe a case that is worse than either the largest spill to date or the maximum most probable spill for that type of facility. Further, Congress' intent was that the worst case discharge reflects the partial failure of various preventive systems, and that the private sector be encouraged to increase its spill response capability (H.R. Rep. No. 101–653, 101st Cong., 2d Sess. 1990). Relatedly, in extreme weather events, mitigation systems may fail. In addition, written administrative controls may be overridden or overlooked, making it foreseeable that a worst case discharge could occur notwithstanding such controls.

Furthermore, although EPA encourages covered facilities to implement additional release prevention, detection, and mitigation measures such as those cited by commenters, the Agency believes that the effects of these measures on the size and impact of a potential spill are not readily quantifiable, nor easily supported with historical spill evidence. CWA hazardous substances vary widely in physicochemical properties and prevention and response strategies correspondingly differ based on the substance. EPA maintains that incorporating factors into the worst case discharge calculation that consider the risks associated with a variety of site-specific conditions regarding passive mitigation or administrative controls will, in general, be too complex for this rulemaking, and will require a very detailed verification and inspection processes. Requirements to prevent CWA hazardous substance discharges are based on many different regulatory regimes and industry standards and thus may be difficult for an inspector to assess and requiring installation or operation of such systems is outside the scope of this final action. As a result, EPA does not believe that it is feasible or warranted to include a calculation of mitigation measures tied to a reduction in the worst case discharge volume. Nonetheless, if an owner or operator

believes that the circumstances of the covered facility are such that it could not cause substantial harm to the environment from a worst case discharge to navigable waters or a conveyance to navigable waters, they may appeal the substantial harm determination to their RA.

For these reasons, EPA maintains that it is inappropriate to include secondary containment, administrative controls, and passive mitigation in this final rule.

f. Transfers Over Water

EPA did not propose an additional or different substantial harm criteria for covered facilities that transfer CWA hazardous substances over water. The Agency received comments both supporting and opposing such a provision. EPA has decided against including one in this final action. First and foremost, the USCG has primary responsibility for MTR facilities and would be the implementing Agency for any CWA hazardous substance FRP regulations for that type of facility. Should the USCG initiate a rulemaking for facilities over which it and the Agency share jurisdiction, the two agencies will collaborate to ensure consistency. Moreover, EPA did not receive data or information to support adding this as a substantial harm criterion. EPA notes that should a covered facility within EPA's jurisdiction have a reportable discharge during transfers over water, this would meet the § 118.3(c)(4) substantial harm criterion (*i.e.,* reportable discharge of a CWA hazardous substances under § 117.21 within last five years).

3. General Requirements

In § 118.4, EPA proposed and is finalizing, with some adjustments, general requirements and compliance dates for CWA hazardous substance FRPs. In § 118.4(a), to aid in informing the regulated community of their responsibilities under this regulation, the Agency has added ''implement'' to the list of items a covered facility must do regarding their FRP. This will reduce uncertainty and make clear that plans must be in place and followed.

In § 118.4(a), EPA has changed the language for plan submission to emphasize that there is an initial 36-month implementation period. This will allow covered facilities ample time to familiarize themselves with the rule requirements, gauge seasonal and commodity flow-related inventory fluctuations to determine the maximum quantity onsite at any time, perform planning distance calculations, and prepare their plans. Plan preparation, submission, and implementation timelines are as follows:

—*Initially regulated covered facilities (covered facilities in operation on November 30, 2026, and that meet the criteria in § 118.3 or are notified by an RA as in § 118.5): by June 1, 2027.*
—*Newly regulated covered facilities (covered facilities that meet the criteria in § 118.3 or are notified by an RA as in § 118.5 after November 30, 2026:* Within 6 months.
—*Newly constructed covered facilities (covered facilities starting operations after June 1, 2027:* Prior to the start of operations and including a 60-day start up period adjustment phase.
—*Covered facilities regulated as a result of a planned event or change:* Prior to the start of operations and including a 60-day start up period adjustment phase, but no sooner than June 1, 2027. An example of a facility characteristic change could be processing expansion whereby nearest opportunity to discharge moves within one-half mile to navigable waters or a conveyance to navigable waters, such as adding a rail spur.
—*Covered facilities regulated as a result of an unplanned event or change:* Prior to the start of operations and including a 60-day start up period adjustment phase, but no sooner than November 30, 2026.

Newly constructed covered facility owners or operators should use projected CWA hazardous substance maximum quantities onsite to develop the FRP, which can then be adjusted during the 60-day operational start up period.

For covered facilities meeting the criteria in § 118.3(a) and (b), Appendix A: Substantial Harm Certification Forms must be submitted to EPA by June 1, 2027, while covered facilities meeting that criteria at a later date have 60 days to submit their forms to EPA, but no sooner than June 1, 2027. The Agency has adjusted this timeline from one month to recognize that the required calculations may require additional time and resources.

EPA recognizes that some commenters believe that the timelines provided are too short or insufficient for FRP development and submission. In response, all covered facilities now have 36 months following the effective date to comply with the requirements in 40 CFR part 118. On the other hand, some commenters would prefer a swifter implementation period. However, due to resource constraints and the complexity of implementing a new regulatory program, EPA had judged a 36-month implementation period to be warranted. Moreover, as this is a new program, albeit modeled on an existing program, EPA is prepared to provide necessary compliance assistance as facilities develop plans for the first time.

Although EPA understands that current practices at some covered facilities may present challenges with meeting the 60-day window for changes to FRPs, documenting and adjusting material changes must be done swiftly to ensure that plans adequately prepare for worst case discharges of CWA hazardous substances. Longer timelines could render the FRP unusable as a response plan. Larger and more complex batch processors, laboratories, and facilities require proactive planning for the anticipated maximum quantities onsite. In addition, as detailed in the proposal, these timelines are roughly based on OPA 90 transition provisions, which directed EPA to issue regulations for oil worst case discharge response plans (oil FRPs) under section 311(j)(5) of the CWA within 24 months. Facilities could submit the oil FRPs beginning 30 months from enactment and were required to be submitted by 36 months of enactment. For existing and new facilities, oil FRPs were to be submitted within six months from the time of discovery or notification that a facility could cause ''substantial harm.'' This timeline is similar to that of the oil FRP program, where an oil FRP must be resubmitted within 60 days of each material change in facility or plan that could affect the adequacy of a facility's response capabilities, such as the ability to respond to a worst case discharge.

EPA has added § 118.4(a)(6), whereby a covered facility owner or operator must review and recertify their plan Agency every five years. This will ensure that FRPs stay updated and that owners or operators remain cognizant of their responsibilities under this regulation. A five-year review period is common in EPA programs and the Agency judges this to be a necessary component of an effective program.

EPA has added § 118.4(a)(7), whereby a covered facility owner or operator must evaluate their operations if EPA adds or removes a CWA hazardous substance from the list at 40 CFR 116.4 or adjusts relevant RQs as found in 40 CFR 117.3. Such additions, deletions, or adjustments are done through a formal notice and comment rulemaking procedure, so the regulated community will be on notice and have ample opportunity to review such proceedings before they become final. If a covered facility becomes newly subject to this regulation at that time, the owner or operator has six months to submit a new or updated FRP to EPA.

4. Regional Administrator Determination of Substantial Harm and Significant and Substantial Harm

In proposed § 118.5, EPA detailed a process by which an RA may require a covered facility to prepare a CWA hazardous substance FRP after consideration of site-specific factors. EPA has added a provision in § 118.5(a) whereby the RA may require amendments to FRPs submitted under their authority in § 118.5. Additionally, the Agency proposed factors for the RA to consider in § 118.5(b), as well as the factors in § 118.3. Some commenters urged EPA to remove the provision regarding the process for RAs to determine that a covered facility could cause substantial harm to the environment and must prepare, implement, and submit an FRP.

For the following reasons, EPA has decided to retain the language largely as proposed in the final action. On the one hand, EPA understands that § 118.5 creates some uncertainty for owners and operators. With respect to determining whether covered facilities could cause substantial harm to the environment in the first instance, EPA decided to implement a rule with two components (*i.e.,* regulatory criteria, including an initial screen followed by an analysis of substantial harm criteria). The regulatory criteria are designed to capture the bulk of those covered facilities that could reasonably be expected to cause substantial harm to the environment. However, because of the size and diversity of the types of covered facilities within the regulated community, EPA believes that there are covered facilities that will not meet the criteria in § 118.3, but may, due to facility-specific or location-specific circumstances, pose sufficient risk to the environment to be designated as being able to cause substantial harm to the environment. Accordingly, EPA has included the ability of the RA to make a case-by-case determination. Although EPA has made every effort to avoid being overly broad in terms of covered facilities that must submit an FRP, EPA understands that there may be circumstances where the regulatory criteria are overinclusive. In such cases, an owner or operator may seek a determination by the RA that the covered facility does not have the potential to cause substantial harm to the environment despite meeting the regulatory criteria. The Agency recognizes that RAs possess unique knowledge of Region-specific considerations and EPA has authority under E.O. 12777 to designate covered facilities on a case-by-case basis that could reasonably be expected to cause substantial harm to the environment. That said, EPA expects to exercise this authority judiciously and in manner that is reserved to ensure adequate protection of the environment. This type of process is not without precedent; indeed, the Oil Pollution Prevention FRP regulation has a similar provision in 40 CFR 112.20.

Moreover, EPA agrees with commenters who stressed that communities with environmental justice concerns may have unique circumstances that are not captured in the published applicability criteria. To be sensitive to these specific issues, of which RAs are uniquely positioned to have knowledge, EPA maintains that considering these concerns and circumstances is necessary to protect these communities. Similarly, the impacts of climate change may be difficult to anticipate and vary widely; thus, the Regional ability to assess facilities on a case-by-case basis and, if appropriate, to require a facility to develop a response plan is warranted in order to protect the environment.

EPA has decided to augment § 118.5(b)(2) to specifically reference CWA hazardous substance characteristics, such as ignitability and reactivity. Thus, RAs may take such considerations into account when determining if a covered facility could cause substantial harm to the environment in the event of a worst case discharge to navigable waters. This addition is important in certain instances to account for the wide variety of CWA hazardous substances and their physicochemical properties, including CWA hazardous substances present in waste, especially in combination with the other substantial harm factors in § 118.5(b), of which the RA is uniquely situated to be knowledgeable. In addition, and with further consideration of public comments, EPA has decided to add § 118.5(b)(10), whereby an RA may consider facility density and potential cumulative impacts of co-located facilities in requiring a covered facility to prepare and submit an FRP. EPA agrees with commenters concerned about cascading effects of a worst case discharge and submits that the RA is best positioned to evaluate this potential in the regulated community.

Some commenters also urged EPA to remove the provision regarding the process by which RAs determine that a covered facility could cause significant and substantial harm through a worst case discharge into or on navigable waters or a conveyance to navigable waters. However, the CWA directs the President to develop criteria to identify a subset of substantial harm facilities that could reasonably be expected to cause both significant and substantial harm to the environment. As such, EPA proposed factors for the RA to consider when determining that a covered facility could cause significant and substantial harm to the environment in § 118.5(d), along with the substantial harm criteria found in §§ 118.3(c) and 118.5(b). Also, in § 118.5(d)(3), EPA has expanded the factors an RA may consider when designating a covered facility as a significant and substantial harm facility to include the condition of containers or equipment onsite, as deteriorating or poor quality containers or equipment could more readily fail. In addition, EPA removed a duplicative provision referring to plan reviews. Finally, an owner or operator may appeal an RA's determination that their covered facility could cause significant and substantial harm to the environment through a worst case discharge using the process in § 118.6.

To assist RAs in achieving nationwide consistency, EPA intends to outline specific screening procedures for use by RAs and to foster consistency in how the substantial harm and significant and substantial harm factors are applied. RAs should consider the relationship of the substantial harm and significant and substantial harm factors and not consider one factor in isolation except under unique circumstances. Although the RA may consider that one factor is sufficient to require that a response plan be submitted, this would be done only under limited circumstances where site-specific conditions warrant. EPA believes that this will help to ensure a greater degree of uniformity in Regional determinations of substantial harm and significant and substantial harm.

RAs will provide a written basis for the determination of substantial harm or significant and substantial harm, which will be made available to the covered facility owner or operator. An owner or operator may use the appeals provision in § 118.6 to request reconsideration and ultimately appeal to the Administrator that their covered facility could cause substantial harm or significant and substantial harm to the environment from a worst case discharge into or on navigable waters or a conveyance to navigable waters.

5. Appeals

EPA proposed and is retaining in § 118.6 a two-step appeals process to allow covered facility owners or operators seek reconsideration of the RA's determination of substantial harm or significant and substantial harm or the disapproval of a CWA hazardous

substance FRP, and then, if warranted, to appeal that decision to the EPA Administrator. The two-step appeals process is similar to one that has been available in the Oil Pollution Prevention FRP regulation for close to 30 years and is intended to provide owners or operators with an avenue to present their data and information to EPA through a formal process.

In the first stage, the owner or operator submits a request for reconsideration, including supporting data and information, to the RA. Then, the RA will evaluate the submitted information and data and decide whether to approve the covered facility's appeal or adjust its evaluation of the ability to cause substantial harm to the environment. The RA will issue a written decision, including the basis for the determination, as soon as practicable. Depending on the outcome, the owner or operator either must submit a plan or amendments to a plan following the timelines in § 118.4 or is not required to submit a plan or amendments. After the RA issues a determination, the owner or operator may appeal the decision to the EPA Administrator within 60 days. If the EPA Administrator requires a plan or amendments to be submitted to EPA, the owner or operator shall follow the timelines in § 118.4.

As per the OPA 90 amendments to the CWA, the intent of this regulation is to shift the burden of planning and response to covered facilities rather than public resources; thus, putting the onus on the owner or operator to disprove the need for a plan is appropriate.

6. Petitions

EPA proposed and is retaining in this final rule a petition provision in § 118.7 whereby the public and other government agencies may petition EPA to determine whether a CWA hazardous substance covered facility should be required to submit an FRP to EPA. Petitions are submitted to the RA, who in turn reviews the submissions as soon as practicable. Petitions must include a reasonable basis for asserting that the covered facility may pose a risk of substantial harm to the environment. Specifically, a petition must include a discussion of how the factors in § 118.3 apply to the covered facility. Although including quantitative or other data as to the substantial harm criteria would be ideal, petitioners are not required to submit such data. EPA will make the petition available to the owner or operator that is the subject of the petition and provide an opportunity to respond. RAs may render a decision based solely on the information in the petition and in the response provided by the owner or operator that is the subject of the petition, but may also gather additional information before rendering a decision.

In terms of public availability, EPA does not believe that making all petitions public would serve to protect human health and the environment. Some materials may contain sensitive information or be inaccurate; once a covered facility is subject to FRP requirements, EPA will make public those parts of the FRP that can be shared as determined in conjunction with Federal partners like the U.S. Department of Homeland Security (DHS) and the Federal Bureau of Investigation (FBI). EPA is also not adding a deadline for acting on petitions, since they and covered facilities may be complex, and it is important to allow ample time for review and to work with both petitioners and owners or operators to address any concerns.

EPA disagrees with commenters who assert that petitions will lead to the regulation being unevenly applied. It is not unusual for Executive Agencies to have a process that develops and establishes applicability norms over time. A few commenters suggested that the rule should require petitioners to provide supporting evidence and allow covered facility owners or operators an opportunity to respond before an RA decides how the Agency will proceed in response to such a petition. Other commenters expressed concern that the rule does not provide procedures for covered facilities that are the subject of a petition to test the claims made in the petition, to submit data or information, or rebut the petition in other ways. In response to these concerns, EPA has revised § 118.7 to specify EPA will make the petition available to the owner or operator of the covered facility in question and provide an opportunity to respond. In addition, the RA will work with the owner or operator to substantiate the petition, as appropriate. The appeals and petitions provisions are complementary: one the one hand, the petition provision allows for stakeholder participation in whether EPA determines if a covered facility poses a risk of substantial harm to the environment through a worst case discharge into or on navigable waters or a conveyance to navigable waters and must prepare an FRP. On the other hand, the appeals provision allows covered facilities that may meet the criteria but could not reasonably be expected to cause substantial harm to the environment from a worst case discharge into or on navigable waters or a conveyance to navigable waters to appeal to the RA that the owner or operator is not required to submit an FRP, or otherwise engage with EPA on determinations.

While commenters expressed concern that the petition process is based on subjective opinion and lacks evidence-based standards for determining covered facility applicability, EPA will still determine covered facility status based on the regulatory criteria in §§ 118.3 and 118.5. EPA clarifies here that it is not necessary for petitioners to provide detailed analyses and calculation as to whether the covered facility meets one of the specific criteria in § 118.3 but rather must provide a reasonable basis for asserting that the covered facility may pose a risk of substantial harm to the environment. For example, if a covered facility is located near a wildlife sanctuary and appears to store significant quantities of a CWA hazardous substance, then the petition need only include such observations. That said, a petition that fails to provide a basis for why a covered facility should be determined to reasonably be expected to cause substantial harm to the environment from a worst case discharge into or on navigable waters or a conveyance to navigable waters (*e.g.,* the covered facility is near a drinking water supply or a priority sensitive environment listed in an ACP, or has a history of frequent discharges to water or poor maintenance, etc.) may not receive immediate action by the RA or may be summarily denied. The purpose of the requirement to provide some basic information based on knowledge of EPA's criteria is to help screen out frivolous, unfounded petitions. The RA will use his or her discretion in following up on petitions that do not include a reasonable basis to believe a covered facility could cause substantial harm to the environment from a worst case discharge into or on navigable waters or a conveyance to navigable waters.

To commenters concerned that communities at risk of a CWA hazardous substance discharge would be dependent on petitions in order to protect themselves, EPA maintains that the applicability criteria in § 118.3 appropriately target the bulk of covered facilities that could cause substantial harm to the environment from a worst case discharge into or on navigable waters or a conveyance to navigable waters. Rather, for the subset of covered facilities that may not be captured using that mechanism, the public may submit a petition asking EPA to pursue the matter. The RA then follows the processes in §§ 118.3 and 118.5 to

determine whether a covered facility could cause substantial harm to the environment.

One commenter requested that EPA authorize State Emergency Response Commissions (SERCs) to make covered facility designations—due to their greater local capacity to address environmental justice, responder and public safety—unless the RA disagrees. EPA disagrees that SERCs should be authorized to make covered facility designations, as this is EPA's authority. The SERC may use the petition process to work with the RA in determining whether a covered facility could cause substantial harm to the environment through a worst case discharge into or on navigable waters or a conveyance to navigable waters.

Finally, EPA disagrees that the petitions process is unprecedented and expansive; the petitions process is similar to one that has been available in the Oil Pollution Prevention FRP regulation for close to 30 years and is intended to provide stakeholders and the public with an avenue to participate in the FRP determination process with EPA through a formal process.

7. Exceptions and Exemptions

EPA proposed and is retaining in § 118.8 certain exceptions and exemptions to this regulation, but with some adjustments and clarifications. Several commenters expressed concern about areas where they thought the rule overlapped with other regulations or programs. Below is a brief summary of the regulations commenters most commonly cited as overlapping:

—The RMP regulation under the CAA's authority is for air releases; for that reason alone, it is insufficient to rely upon to determine whether a covered facility could cause substantial harm to the environment by discharging into or on navigable waters (40 CFR part 68).
—The Oil Pollution Prevention Program FRP regulation is comprehensive for oils but does not regulate CWA hazardous substances (40 CFR 112.20 and 112.21, Appendices C–F). Similarly, the Oil Pollution Prevention Spill Prevention, Control, and Countermeasure (SPCC) program regulates oils, specifically the prevention of oil spills (40 CFR part 112).
—Occupational Safety and Health Administration's (OSHA) Process Safety Management (PSM) standard sets requirements for preventing or minimizing the consequences of catastrophic releases of toxic, reactive, flammable, or explosive chemicals in order to protect workers. The provisions of the PSM standard were written to assure safe and healthful working conditions for employees, not to protect the environment from discharges of CWA hazardous substances. (29 CFR 1910.119).
—The CWA NPDES Permit Program, authorized by the CWA, controls water pollution by regulating point sources that discharge pollutants into waters of the United States. An NPDES permit establishes limits on what can be discharged, monitoring and reporting requirements, and other provisions to protect water quality. In essence, the permit translates general requirements of the CWA into specific provisions tailored to the operations of the facility discharging pollutants. A NPDES general permit may be written to establish requirements that apply to eligible facilities with similar operations and types of discharges that obtain authorization to discharge under the general permit. It does not require response planning and permitted discharges are not regulated under this final rule (40 CFR part 122).
—Bureau of Alcohol, Tobacco, Firearms and Explosives ammonium nitrate-fuel oil (ANFO) requirements apply to ANFO, which is not a CWA hazardous substance (27 CFR part 555).
—USDOT regulations for product and waste shipping apply to items in transportation, while this proposal applies explicitly to onshore non-transportation-related facilities (49 CFR parts 171–185).
—DHS regulations do not require planning for worst case discharges of CWA hazardous substance into or on the navigable waters or a conveyance to navigable waters; rather, they identify and regulate high-risk facilities to ensure security measures are in place to reduce the risk that certain dangerous chemicals are weaponized by terrorists (6 CFR part 27).
—The Emergency Planning and Community Right-to-Know Act (EPCRA) Reporting Rule is a reporting rule and does not require worst case discharge planning (40 CFR part 370).

EPA refers commenters to the TBD, available in the docket, for more information on how the program elements in existing Federal programs do or do not align with the requirements in CWA Sec. 311(j)(5).

After examining the RCRA regulations and commenter concerns, EPA is adding an exemption at § 118.8(b)(2)(viii) for the storage and accumulation of hazardous waste subject to the Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities (TSDF), 40 CFR part 264 and 40 CFR part 265 and Standards Applicable to Generators of Hazardous Waste, 40 CFR part 262, subpart M. For covered facilities subject to the TSDF requirements under 40 CFR parts 264 and 265, these regulations comprehensively address the program elements required under CWA section 311(j)(5)(D). For hazardous waste generators covered under 40 CFR part 262, EPA is exempting those generators subject to subpart M (*i.e.,* large quantity generators) for the same reason; the contingency plan and emergency procedures requirements therein comprehensively address the program elements required under CWA section 311(j)(5)(D). While small quantity generators have preparedness and prevention requirements, these do not cover all required program elements under CWA section 311(j)(5)(D), and very small quantity generators are not subject to prevention and preparedness requirements nor required to develop a contingency plan and emergency procedures. Since hazardous waste at these generators may contain CWA hazardous substances and are not subject to all RCRA hazardous waste requirements, EPA has decided that hazardous waste generators not subject to RCRA part 262, subpart M requirements must follow the applicability criteria at § 118.3 to determine if they could cause substantial harm to the environment through a worst case discharge into or on navigable waters or a conveyance to navigable waters. Solid, non-hazardous waste is also subject to this final rule.

Additionally, EPA excepts tanks already regulated under the underground storage tank (UST) program at 40 CFR part 280 at 40 CFR 118.8(a)(4). EPA is not regulating substances present as oil and that may be part of an oil mixture, such as gasoline, at covered facilities in this action since those are regulated under 40 CFR 112.20.

In terms of adjustments and clarifications, the Agency clarifies that permitted discharges are not included in the § 118.3 applicability determinations, nor the § 118.11 FRP requirements. Also, EPA is adding an exemption under § 118.8(b)(2)(v) for wastewater whereby a POTW does not need include CWA hazardous substances present in wastewater entering their collection system prior to treatment under a NPDES permit in their threshold quantity determinations. The Agency, however, notes the pretreatment program oversight requirements in 40

CFR 403.8(f) for any industrial users that may be subject to this rule, and recommends control authorities evaluate whether program elements such as slug control plans or local limits expressed as best management practices should be issued or revised in coordination with the requirements of this rule.

Additionally, EPA clarifies here that the exemption under § 118.8(b)(2)(iv) for use of process water or cooling water is specific to amounts of a CWA hazardous substance present in water drawn into a covered facility from the environment or municipal sources. For example, chlorine present in water taken from municipal sources does not have to be considered for threshold determination. This is consistent with the approach taken by other chemical regulations, including Toxics Release Inventory (TRI) and RMP, and DHS's Chemical Facility Anti-Terrorism Standards (CFATS) program and reflects the low level of risk of such waters.

Finally, this regulation applies to only the non-transportation-related portion of MTR facilities that are subject to both EPA and USCG jurisdiction, as per § 118.8. As such, the non-transportation-related portion of the facility is generally defined as the valve manifold adjacent to the tank nearest the connection to the transportation-related portion of the facility (*i.e.,* the structure used or intended to be used to transfer CWA hazardous substances to or from a vessel or pipeline). The interface may be defined differently at a specific facility if agreed to by the RA and the appropriate Federal official.

8. Mixtures

In § 118.9, EPA proposed and is retaining in this final action a mixture provision for determining the CWA hazardous substance maximum quantity onsite at the covered facility of CWA hazardous substance(s), under § 118.3(a) and mixture worst case discharge quantities under § 118.10. This provision is based on CERCLA Notification Requirements, found in CERCLA section 103(a) (40 CFR 302.6). EPA agrees with a commenter that noted the chosen approach mirrors existing regulations on how to treat mixtures of CWA hazardous substances under the CWA and CERCLA. Regulated facilities are familiar with the mixture rule and how to apply it.

EPA disagrees with commenters who argued that requiring the use of the lowest RQ when the exact mixture composition is unknown is overly conservative, unrealistic, and does not reflect the actual risk of harm. If there are known and unknown substance constituent quantities, the covered facility owner or operator must only apply the lowest RQ to the unknown portion of the mixture, not the entire quantity. This approach is properly conservative and reflective of risk. If a covered facility owner or operator can provide evidence that the mixture composition does not meet the lowest RQ, they may use the appeals provision in § 118.6 to adjust their maximum quantity onsite or worst case discharge scenario quantity, or for reconsideration of their status.

A few examples illustrate how the mixture rule is applied when evaluating whether the quantity of CWA hazardous substances onsite is greater than or equal to their respective RQs. The first example provides a case where a covered facility has a mixture where all components are known. The covered facility has 5,000 pounds of a cleaning solution containing 45–55% water, 1–10% chromic acid, 1–10% sodium sulfate, and 25–35% sulfuric acid onsite. Chromic acid (CAS 7738–94–5) and sulfuric acid (CAS 7664–93–9) are CWA hazardous substances with RQs of 10 and 1,000 pounds, respectively. The owner or operator assumes the highest percentage of each CWA hazardous substance in the range, performing mixture calculations based on 10% chromic acid and 35% sulfuric acid. Based on the total quantity of the cleaning solution at the covered facility, there are 500 pounds of chromic acid and 1,750 pounds of sulfuric acid onsite. The threshold quantity for chromic acid is 10,000 pounds, while the threshold quantity for sulfuric acid is 100,000 pounds. The quantities of chromic acid and sulfuric acid onsite are below the threshold quantity.

A second example demonstrates threshold calculations when the composition of a mixture is not known. A large manufacturing covered facility produces chromated copper arsenate as a wood preservative for specialized timber applications. The covered facility regularly generates production waste, which is stored in a container. The container has 1,000 pounds of a waste of unknown composition, but which has been determined to be non-hazardous under RCRA and contains water, copper oxide, arsenic pentoxide, and chromic acid. Arsenic pentoxide (CAS 1303–28–2) and chromic acid (CAS 7738–94–5) are CWA hazardous substances with RQs of 1 and 10 pounds, respectively. The covered facility has 50 pounds of arsenic pentoxide and 75 pounds of chromic acid onsite as reactants. Because the composition of the waste is unknown, the owner or operator must assume that the entire mixture is composed of the lowest RQ substance, in this case arsenic pentoxide. Based on the total mass of the waste, the owner or operator calculates that they have 1,000 pounds of arsenic pentoxide from the waste mixture, and 50 pounds of arsenic pentoxide as a reactant (but which is not a commercial chemical product), with a total mass of 1,050 pounds of arsenic pentoxide. The threshold quantity for arsenic pentoxide is 1,000 pounds. The quantity of arsenic pentoxide onsite is above the threshold quantity.

A final example demonstrates a case when part of a waste mixture containing CWA hazardous substances is known and part is unknown. A small, covered facility uses hydrochloric acid and nitric acid as part of its manufacturing process. The spent acid is collected in a large vessel containing 100,000 pounds of a mixture with a pH of 3 composed of 25% water by weight and an unknown percentage of hydrochloric acid, nitric acid, and several other unknown chemical substances. Hydrochloric acid (CAS 7647–01–0) and nitric acid (CAS 7697–37–2) are CWA hazardous substances with RQs of 5,000 and 1,000, respectively. The covered facility has 1,000 pounds of hydrochloric acid and 5,000 pounds of nitric acid onsite. Because 25% of the waste mixture is of known composition, the owner or operator only needs to assume the remaining 75% of the mixture is the CWA hazardous substance with the lowest RQ. Because nitric acid has the lowest RQ, the owner operator calculates that they have 75,000 pounds of nitric acid in the waste mixture, with 80,000 total pounds of nitric acid onsite. The threshold quantity for nitric acid is 1,000,000 pounds. The quantity of nitric acid onsite is below the threshold quantity.

Note that CWA hazardous substance maximum quantities onsite are calculated by CWA hazardous substance. They should not be aggregated, even if they have the same RQ.

9. Worst Case Discharge Calculations

As discussed earlier, EPA is adjusting the worst case discharge calculations in § 118.10. The CWA, as amended by the OPA, defines the worst case discharge for a facility as ''the largest foreseeable discharge in adverse weather conditions.'' As detailed above, adverse weather conditions include those due to climate change, which may consist of challenging climatic conditions such as those that would maximize the peak concentration of the discharged substance in the receiving waterbody. The OPA Conference Report goes on to

state that the largest foreseeable spill from a given type of facility is intended to describe a case that is worse than either the largest spill to date or the maximum most probable spill for that type of facility (see H.R. Rep. No. 101–653, l0lst Cong., 2d Sess. 1990 at pp. 149–150.), which is unlikely to be the entire capacity or quantity stored at a facility in a single event.

Again, EPA has adjusted its approach to worst case discharge scenario quantity to use the maximum quantity of a single container for substances stored in separate containers or the maximum quantity of a group of interconnected containers, rather than capacity. Facility circumstances and methods of storage vary widely, and owners or operators should know their inventories and largest containers. Additionally, this simplifies procedures for facilities accounting for mixtures. EPA has further adjusted its approach to require worst case discharge scenarios for all CWA hazardous substances onsite above the threshold quantity once a covered facility is subject to this regulation. This will satisfy the statutory requirement to plan for CWA hazardous substance worst case discharges and address the concerns of commenters around which substance to use in worst case discharge scenarios. The Agency has also revised language to clarify that covered facility owners or operators must compare the distance to the endpoints provided in Appendix B against their calculated CWA hazardous substance planning distance to determine if the covered facility could cause substantial harm to FWSE or public receptors from a worst case discharge into or on navigable waters or a conveyance to navigable waters and also in their hazard evaluation once a covered facility is subject to the regulation. EPA has further adjusted the properties of the CWA hazardous substance to be evaluated to reflect those properties as they relate to a discharge to navigable waters. Additionally, an owner or operator must provide evidence in their Appendix A: Substantial Harm Certification Form that containers with common piping or piping systems are not operated as one unit. Finally, EPA has added pH and alkalinity under the conditions of the receiving water to better characterize a worst case discharge in § 118.10(b)(ii)(E).

While a few commenters were concerned about piping and measuring the contents of piping systems, EPA maintains that, in general, if a covered facility owner or operator has two or more containers that contain a CWA hazardous substance and are connected through piping or hoses to transfer the CWA hazardous substance, the owner or operator must consider the total quantity of the CWA hazardous substance in all the connected containers and piping when determining the maximum worst case discharge scenario quantity. If the containers are connected for transfer of the CWA hazardous substance using hoses that are sometimes disconnected, the owner or operator still must consider the contents of the containers as one process, because if one container were to rupture while a hose was attached or a hose were to break during the transfer, both containers could be affected. Again, the statute directs EPA to address the worst case discharge scenarios—even in situations where the conditions are not static, *i.e.,* sometimes containers are connected but not always. Therefore, the owner or operator must count the quantities in both containers and in any connecting piping or hoses. Similarly, the presence of automatic shutoff valves or other devices that can limit flow do not change the analysis because these are assumed to fail for the purpose of determining the worst case discharge scenario quantity. This is consistent with and required under other regulations, such as onshore oil pipelines regulated by the USDOT Pipeline and Hazardous Materials Safety Administration.

EPA agrees with commenters who noted that there are chemicals in the CWA hazardous substance list at 40 CFR 116.4 that may be in either a solid or gaseous form upon release and may be physically unable to reach navigable waters or a conveyance to navigable waters. Specifically, facility circumstances and methods of storage vary widely, so the covered facility owner or operator must use their best professional judgment based on the physicochemical properties and characteristics of the substance at issue and best available information and practice in determining if a worst case discharge or a CWA hazardous substance that releases as a gas or solid could, in adverse weather conditions, reach navigable waters or a conveyance to navigable waters, cause injury to a public receptor or FWSE, or adversely impact a PWS. This may mean that for a substance released as a gas in adverse weather conditions and without consideration of passive mitigation, secondary containment, or administrative controls, the distance to endpoints cannot be calculated. Solid CWA hazardous substances may be miscible in water and, as such, a planning distance may be calculated. Thus, if a solid stored as a powder or in pellets has the ability to release in a flood scenario and reach navigable waters or a conveyance to navigable waters, the covered facility owner or operator must make a substantial harm determination, and if determined to be able to cause substantial harm to the environment from a worst case discharge of a CWA hazardous substance into or on navigable waters or a conveyance to navigable waters, submit an FRP to EPA. However, EPA stresses that adverse weather conditions, including extreme events due to climate change, must be considered. As such, if a solid stored as a powder or in pellets could release in a high-intensity rainfall event or flood scenario and navigable waters or a conveyance to navigable waters, the covered facility must make a substantial harm determination. Similarly, should a worst case discharge consist of a CWA hazardous substance releasing as a gas that could mix with rainwater and then reach navigable waters or a conveyance to navigable waters, the covered facility owner or operator would need to examine that outcome in their worst case discharge scenario(s). Relatedly, EPA is not choosing to set a temperature range or define the form of the substance as it releases; instead, the covered facility owner or operator should make a similar determination as described above. The Agency recognizes commenter concern over covered facilities with a variable inventory of CWA hazardous substances. Owners or operators of these covered facilities will need to plan for the maximum quantity in a single container or interconnected containers of a CWA hazardous substance onsite at any one time and forecast when such occasions may occur. Due to the potentially catastrophic effects of a worst case discharge, the Agency does not see these requirements as overly burdensome. EPA notes that plans can and should be updated if, for example, there is an unexpected increase in demand such that the worst case discharge scenario quantity is outside of anticipated fluctuations and necessitates different or more response resources, requiring an amendment to the FRP as in § 118.4(b).

While some commenters asked for clarification on the timing of a discharge, EPA maintains that a worst case discharge may occur instantaneously or over time, and a covered facility owner or operator is best situated to determine the appropriate timing scenario based onsite-specific considerations and the

physicochemical properties of the CWA hazardous substances in question. The timing used for the worst case discharge scenario should reflect reasonable conditions that have the greatest potential to cause substantial harm. One commenter suggested that calculations should be based on the dollar amount of potential damage. EPA is not following this approach as such calculations would be very difficult to assess and could fluctuate over time dependent on inflation and the costs of equipment, materials, labor, etc.

The Agency is aware that CWA hazardous substance planning distance modeling is a critical component of successful implementation of this regulation and is engaged with its research arm to identify additional data and resources to aid the regulated community in compliance. That said, EPA disagrees with commenter concerns that having covered facilities exercise their professional judgment and applying best modeling practices creates opportunities for inconsistency, as it provides flexibility and allows for those most familiar with the substance, facility, and site conditions to examine the event of a worst case discharge and its potential effects.

For commenters concerned with public availability of the models used, § 118.10 as proposed and finalized in this action requires covered facility owners or operators to provide EPA access to models, submit documentation substantiating the methodology, and describe the features to local emergency planners. EPA will work with other Federal partners to determine the feasibility and safety of providing such information to the public.

For the commenter who suggested requiring use of the Chezy Manning equation as in the Oil Pollution Prevention FRP regulation (40 CFR part 112, Appendix C), this approach may be applicable to some oil-like CWA hazardous substances. However, it is not generally applicable to the myriad characteristics and effects of the 296 hazardous substances listed in 40 CFR 116.4. So, while they may be useful tools, dictating or limiting the analysis to those methods alone would not be adequate for calculating planning distances for all CWA hazardous substances, though they may be used for oil-like CWA hazardous substances as appropriate.

10. Facility Response Plan Requirements

EPA proposed and is finalizing with adjustments the FRP requirements in § 118.11. One major objective of the OPA 90 amendments to section 311(j)(5) of the CWA was to shift the burden of response from public to private resources. While a worst case discharge of hazardous substances will likely require the use of both public and private resources, section 311(j)(5)(D)(iii) of the CWA states specifically that facility owners or operators must identify and ensure by contract or other means the availability of private personnel and equipment necessary to respond to the maximum extent practicable to a worst case discharge. The Agency clarifies here that covered facility owner or operators who meet the screening and one or more of the substantial harm criteria must prepare and submit an FRP to EPA that plans for all CWA hazardous substances onsite above the threshold quantity but not CWA hazardous substances onsite below the threshold quantity.

The requirements in § 118.11 are designed to address concerns specific to CWA hazardous substances; as such they do not mirror exactly the requirements under the Oil Pollution Prevention FRP regulation. A written plan that complies with other Federal contingency plan regulations or is consistent with the approach in the National Response Team's ICP Guidance (''One Plan'') and that includes the elements required will satisfy the requirements of this final rule. Facilities may augment an existing response plan with requirements that are specific to this action.

The Agency is aware that planning for any number of the 296 possible CWA hazardous substances with disparate characteristics and impacts may be involved. That is one reason EPA has implemented an initial screen with relatively bright line criteria to that will identify covered facilities that do not need to engage in further analysis.

In this final action, once a covered facility determines it meets one of the substantial harm criteria, the owner or operator must plan for all CWA hazardous substance onsite above the threshold quantity. EPA has adjusted its approach from the proposed rule, where one CWA hazardous substance worst case discharge scenario provided the basis for the FRP. This change is consistent with EPA's statutory authority under this action to require plans for covered facilities that, because of their location, could cause substantial harm to the environment from a worst case discharge into or on the navigable waters. It also recognizes that response and/or recovery actions may vary widely depending on the physicochemical properties of the substance, so one CWA hazardous substance at facilities with multiple CWA hazardous substances that meet or exceed the threshold quantity cannot adequately inform that facility's FRP.

i. Consistency With National Contingency Plan and Area Contingency Plans

Despite supporting the overall proposed rule, one commenter requested EPA add a provision to § 118.11(a)(1) to provide a way to evaluate facility owner or operator compliance with the requirement to ensure consistency with the NCP and ACPs. This seems like a commonsense suggestion that should not impose any additional burden on facilities and will allow the Agency and other reviewers to confirm compliance and cross check relevant plans. Accordingly, EPA has added § 118.11(a)(1)(ii), requiring a signed affirmation of review of relevant plans and § 118.11(a)(1)(iii), requiring a list of area and sub-area plans reviewed.

Additionally, EPA has augmented this provision to require consistency with Regional Contingency Plans (RCPs) as per 40 CFR 300.210. This is appropriate and consistent with the requirements of the CWA since RCPs form a fundamental component of the NCP.

ii. Qualified Individual

Several commenters stated that the requirements for a QI are extremely difficult to meet and impractical, while placing all these responsibilities on one individual is inconsistent with most facilities' operational structures. On the one hand, EPA understands that this is a new program and these requirements may be foreign compared to how owners or operators currently do business. On the other hand, such requirements have been in operation for close to 30 years in the Oil Pollution Prevention FRP regulation, so there is precedent and a successful model for this approach. Accordingly, EPA is keeping in place the requirements for a QI. However, in response to the concerns raised in the comments, EPA is clarifying that a documented management system that can perform the stated functions may take the place of a single individual. For example, as in the Oil Pollution Prevention FRP regulation, duties may be spread across corporate departments and consist of a regional QI structure, corporate call center, and corporate media relations department.

As stated in the OPA conference report (H.R. Rep. No. 101–653, 101st Cong., 2d Sess. 1990), a main objective of this statutory mandate is to shift the burden of response from public to private resources. A sufficiently trained QI can be a valuable member of the incident response team who has

intimate knowledge of the facility and its operations, allowing the QI to make better and informed decisions for the facility if the plan needs to be put into action as well as how the facility response fits into the larger community response. Assuming public responders will take on this role is inappropriate to this action.

In § 118.11(a)(2)(xii), EPA is requiring QIs to acquire and maintain incident commander training requirements consistent with 29 CFR 1910.120(q)(6)(v). Commenters asserted that this is inappropriate because OSHA's Hazardous Waste Operations and Emergency Response (HAZWOPER) standard at 29 CFR 1910.120 is for uncontrolled releases, which could be mitigated by passive mitigation and thus be controlled. EPA maintains that a worst case discharge into or on navigable waters or a conveyance to navigable waters that causes substantial harm to the environment is, by definition, an uncontrolled release and is not allowing for consideration of passive mitigation in this final action. EPA maintains that proper facility personnel training is critical to an effective response program.

iii. Emergency Response Information

EPA has endeavored to provide a framework in § 118.11(b) that is consistent with the Oil Pollution Prevention FRP regulation in 40 CFR 112.20 while maintaining the flexibility needed to address the specific planning needs for 296 disparate CWA hazardous substances.

Facility Information

EPA agrees with a commenter suggestion to add EPA identification numbers to make it easier for EPA, response officials, and stakeholders to cross-reference other relevant information about the facility related to discharge response and preparedness. As such, the Agency has added ''EPA identification numbers'' as a data element to report so facility owner or operators can report various EPA ID numbers they may use, such as TRI IDs, Facility Registry Service (FRS) numbers, etc. This will aid in cross referencing submissions across programs.

Additionally, to provide consistency with the Oil Pollution Prevention FRP regulation, EPA is adding that a facility owner or operator must indicate whether their facility is located in or drains into a wellhead protection area as defined by the SDWA. This information will aid responders in determining whether further assessment of impacts to those areas is warranted.

Owner or Operator Information

The Agency maintains that information on the facility owner or operator is sufficient; both are not needed. EPA is not requiring notification of related facilities nearby and disagrees with a commenter who suggested that listing all facilities within a three-mile radius that are under common ownership would enhance response planning efforts. Related information should be included in the hazard evaluation, where a facility owner or operator would identify nearby businesses that could be affected by a worst case discharge.

Hazard Evaluation

The Agency is aware of the complexity and cost of modelling endpoints for all CWA hazardous substances above the threshold, examining communities with environmental justice concerns, and considering climate change impacts in hazard evaluations. EPA intends to provide tools and compliance assistance to help the regulated community comply with these requirements and maintains that their inclusion is critical to protect the environment in the event of a worst case discharge. The hazard evaluation will additionally serve to inform equipment selection (*i.e.,* based on physicochemical characteristics of the CWA hazardous substance as floater, sinker, or soluble in water) and response actions to be taken, since those will all depend on what risks are identified and characterized, the necessary control methods, and communications required. Additionally, EPA has added a requirement that, when identifying risks, facility owners or operators must assess the age of CWA hazardous substance containers, since older containers may be more susceptible to failure. Facility owners or operators must also identify taste or odor thresholds in water in their assessment of the ability to adversely impact a PWS in order to more fully inform the relevant PWS of the risks.

For the commenters concerned about assessing cascading failures, EPA does not have access to facility-specific risk information and is not taking on that responsibility for this evaluation, nor is it requiring facilities to assess these impacts across facilities. However, the risks associated with facility density is a factor the RA may consider in § 118.5(b)(10) when determining if a facility could cause substantial harm to the environment through a worst case discharge into or on navigable waters or a conveyance to navigable waters. That said, it is incumbent upon the facility owner or operator to identify nearby schools, businesses, places of worship, or other areas that could be impacted by a worst case discharge.

In addition, the hazard evaluation must examine the effects of CWA hazardous substance worst case discharges on communities with environmental justice concerns as well as the effects of climate change, including those that result in low flow conditions in receiving water bodies, on the likelihood, duration, and impacts of a CWA hazardous substance worst case discharge into or on navigable waters or a conveyance to navigable waters. EPA is not specifying specific climatological data or scenarios in regulation in order to be flexible and in recognition that climate change impacts are occurring in unexpected ways. Indeed, climate change considerations may include the increased frequency and intensity of extreme weather events, temperature fluctuations, rising seas, storm surges, inland and coastal flooding, drought, wildfires, and permafrost melt in northern areas. Instead, the Agency will continue to provide compliance assistance for assessing both climate change impacts and effects on communities with environmental concerns.

Reportable Discharge History

EPA maintains that reportable discharge history is not only relevant but also an appropriate substantial harm criterion; this information is critical to scenario development, including lessons learned from past CWA hazardous substance discharges and response efforts. In terms of a timeline for reporting, EPA is following the lead of the Oil Pollution Prevention FRP regulation and requiring this information to be retained for the life of the facility. EPA notes that permitted discharges under NPDES and reportable discharges under 40 CFR part 112 are covered under those regulations. EPA is not requiring information on non-CWA hazardous substance discharges, since it is unclear at best how relevant they are or would be to worst case discharges of CWA hazardous substances. Similarly, EPA is only including reportable discharges that reach navigable waters, since other discharges are outside the scope of this action.

Another commenter suggested that that any discharge above a RQ is already required to be reported under the CWA or the ancillary State program, so it should be sufficient for the CWA hazardous substance FRP to simply reference the notification submitted to EPA or the State. EPA disagrees that this

is an adequate substitute for purposes of using the information as a planning tool.

Response Personnel and Equipment

Pursuant to § 118.11(b)(5), facility owners or operators must provide the identity and a description of response personnel and equipment and response action implementation necessary to respond to a discharge of a CWA hazardous substance. The Agency clarifies that a management system that clearly outlines the spill response roles will be sufficient for this requirement, as long as it is properly documented.

Contracts

EPA has revised the contracts requirement to explicitly require response resources with firefighting capability. Adding this clarification will aid facility owners or operators in their preparations for a worst case discharge due to fire or explosion, as per the statutory requirement. This is also consistent with the Oil Pollution Prevention FRP regulation at 40 CFR part 112, Appendix E, section 7.4. If a facility does not have adequate resources onsite and it is unable to rely on locally available resources with firefighting capabilities, the facility owner or operator must identify such resources and ensure they are available by contract or other approved means as per § 118.2. The plan must also identify an individual, who could be the QI, at the facility to work with the local fire department during a response and verify that sufficient well-trained resources are available within a reasonable response time to respond to a worst case discharge.

EPA recognizes that, in many cases, contracting resources will need to be identified to fill the role of SROs. Most large Oil Spill Removal Organizations already have the capability to respond to hazardous material incidents, particularly if they have been contracted by truck and rail carriers. EPA expects that the potential increase in demand for SROs caused by the rule will result in greater competition and increased market entry by new contractors. Additionally, in § 118.4, EPA is providing a 36-month implementation period before facility owner or operators must submit plans. Finally, EPA will work with USCG to identify SROs that can fulfill this role.

Notification Lists

EPA received a variety of suggestions of possible interested parties who could potentially be contacted in the event of a discharge. EPA is not expanding the scope of the notification list, since Federal, Tribal, State, and local responders, as well as the non-specific listing of potential receptors or interested parties is inclusive of all of these suggestions. The Agency did, however, remove the requirement to notify the Federal On-Scene Coordinator (OSC) and/or Regional Response Center, since this notification will be handled by the NRC. Federal, State, and local responders will be best positioned to determine whether additional types of notifications are necessary and will be most knowledgeable about the language needs of their local community. Additionally, local responders will be aware of special populations, *e.g.,* hospitals, long-term care homes, assisted living facilities, etc., that may have specific concerned and needs in an emergency situation.

EPA can expect facilities to ensure that a community notification system is available because FEMA has established the Integrated Public Alert & Warning System (IPAWS) for community notification. This system provides authenticated emergency and life-saving information to the public through mobile phones using wireless emergency alerts. It also provides alerts to radio and television via the Emergency Alert System and on NOAA's Weather Radio. The Emergency Alert System devices found at radio, TV and cable stations can support multiple languages and wireless Emergency Alerts can support both English and Spanish. EPA has judged that the presence of State and/or local IPAWS alerting authorities—with the designated authority to alert and warn the public when there is an impending natural or human-made disaster, threat, or dangerous or missing person—in all 50 States provides the necessary infrastructure for facilities to ensure that a community notification system is operational in the event of a worst case discharge of a CWA hazardous substance with the potential to impact the public. The most applicable alerts through this system would be the imminent threat and public safety alerts. Imminent threat alerts include natural or human-made disasters, extreme weather, active shooters, and other threatening emergencies that are current or emerging. Public safety alerts contain information about a threat that may not be imminent, or about an imminent threat that has occurred.

EPA disagrees with commenters who argued that ''preferred communication'' should be removed, since telephone call is not the only method of notification. The reason telephone communication has been historically preferred is because the ''sender'' knows that they have gotten through, or just as importantly, that they have *not* gotten through and need to continue trying. That said, as long as receipt of the communication is confirmed, notification can take any number of electronic forms, including text or email.

Discharge Information

EPA clarifies that there is an expectation that a facility will provide response officials with material updates to discharge information as the facility learns more about the scope and nature of the discharge as it becomes available to aid response efforts.

Personnel Roles and Responsibilities

In response to the concerns raised in the comments, the Agency is clarifying that a documented management system that can perform the stated functions may take the place of a specific individual.

Response Equipment Information

In order to avoid unnecessary confusion or redundancy, EPA notes that CWA hazardous substance FRPs may reference lists in other plans as long as they meet the requirements of § 118.11. For example, oil FRP plan holders could reference their existing response equipment and update the narrative to meet the CWA hazardous substance FRP requirements in an ICP.

EPA disagrees with a commenter who asserted that monitoring and sampling equipment should be specified as ''can be made available.'' Since time will always be of the essence in responding to a worst case discharge, these items are an important component of CWA hazardous substance response and should be actually available rather than possibly available. Additionally, plan holders should refer to their ACP, which contains equipment and response resource requirements in some areas. Finally, determining the type, quantity, etc. of response resources may vary widely given the range of facilities and chemicals at issue, which is one reason EPA has decided that facility owners and operators should have the latitude to make these types of determinations.

Evacuation Plans

One commenter suggested that the final rule explicitly require FRPs to identify the community evacuation plan(s) with which they coordinated and how that coordination with the surrounding community was conducted. EPA agrees with the commenter that this is an important aspect of response planning for a worst case discharge and has adjusted its approach to require FRPs to identify and list the community

evacuation plans consulted in § 118.11(b)(11).

The Agency recognizes that evacuation routes may vary, which is why § 118.11(b)(11) includes ''limitations on evacuation routes'' as a plan element. A facility may include more than one diagram to reflect different scenarios as necessary. Facility owner or operators may include evacuation plans prepared in accordance with 29 CFR 1910.38, but they must reflect the requirements of this section.

To the commenter who suggested cross referencing to evacuation plans prepared under other statutes, while EPA understands there is some redundancy in submitting a plan and in some cases cross referencing is appropriate, the Agency maintains submitting the evacuation plan here allows OSCs to have the plans readily available in the event of a worst case discharge and to inform coordinated response. However, a facility owner or operator may combine their plans in a single ICP to reduce the administrative burden.

Discharge Detection Systems

The Agency maintains that in the event of a worst case discharge, discharge detection systems are critical to inform response timelines. If a facility demonstrably has the ability to cause substantial harm to the environment, it must also have the ability to detect when such a discharge is occurring. EPA notes, however, that the facility owner or operator may include personnel procedures (visual examination, etc.) designed to detect discharges. EPA recognizes that this may increase costs but maintains that the effects of worst case discharges can be catastrophic and costly (see chapter 3 of RIA in the docket).

EPA disagrees with a commenter who argued that discharge detection systems for the 296 CWA hazardous substances should follow the same requirements as for oils. The context of this regulation is for worst case discharges of CWA hazardous substances, as such, discharge detection systems should be sufficient for those events. Additionally, the Agency notes that these systems should not be limited to response actions, as they may alert a facility owner operator of a discharge in the first place.

Response Actions

EPA has adjusted the language in this section to clarify that air monitoring and water sample collection, including analytical methods and laboratory support, must be described in this section. Monitoring and sampling are critical components of CWA hazardous substance release responses, since many CWA hazardous substances cannot be recovered, in contrast to oil discharges, where recovery is more likely feasible. Therefore, it is imperative that they be planned for accordingly. Additionally, and in the same vein, EPA has added a requirement to identify types of environmental monitoring to be collected, including method collection techniques, parameter of interest measurement, a description of how the data will be used in a response, and personal protection and safety considerations.

A facility owner or operator; PWS; or responding Federal, State, or local agency can determine whether it is necessary to obtain a third-party to assess and monitor the community health effects following a hazardous discharge to a PWS and make this information publicly available. This will be part of the response actions to a discharge.

One commenter recommended that EPA require facilities to develop a safety plan prior to conducting sampling that considers variable factors like weather conditions, chemical hazards, and situational awareness. EPA notes provisions for worker health and safety are found at § 300.150 of the NCP. The Agency emphasizes that the NCP requires compliance with applicable worker health and safety regulations, including OSHA, under § 300.150(b) during a response action taken by the responsible party, the responsible party must assure that an occupational safety and health program consistent with 29 CFR 1910.120 is made available for protection of workers at the response site.

Finally, EPA has added requirements for response actions to be taken within one- and two-hours of discharge detection. Within one hour of discharge detection, actions include making notifications, mobilizing facility personnel, identifying the extent of the incident, coordinating with the SRO, consulting the hazard evaluation to determine potential effects of the discharge, ensuring containment and neutralization systems are working, evacuation assessment, and coordination with PWSs and local responders. Within two hours, resources and monitoring must be deployed. Explicitly stating EPA's expectations within these critical response time frames will ensure resources are ready and available, and guide exercise and training programs as well as GIUEs, further enabling readiness.

Disposal Plans

EPA has adjusted its approach to include disposal plans for firefighting foam and runoff. As seen in responses such as the Menominee Michigan Warehouse Fire, where several million gallons of fire suppression water have been collected to minimize runoff of fire-related contaminants into to the Menominee and Marinette water treatment plant and adjacent Menominee River,[9] these types of plans are important to ensure chemicals are properly disposed of and to minimize runoff of fire-related contaminants.

Containment Measures

One commenter recommended that EPA define the term ''adequate containment'' to prevent industry confusion and differences in interpretations by the regions. Adequate containment will vary based on the worst case discharge scenario and associated response actions and consist of sufficient resources to contain the items described in § 118.11(b)(15). As per the statutory authority of this action under CWA sec. 311(j)(5), this is a response planning regulation. Inherently safer technologies and designs related to CWA hazardous substance storage are outside the scope of this rule. Nonetheless, EPA notes that § 118.11(b)(15) includes requirements for measures to provide adequate containment and drainage of discharged CWA hazardous substances in a response scenario, as this is a response function.

Training Procedures

See section III.D.vi of this preamble for a discussion of training procedures.

Exercise Procedures

See section III.D.vi of this preamble for a discussion of training procedures.

Self-Inspection

EPA is finalizing § 118.11(b)(18) as proposed.

iv. Emergency Response Action Plan

In § 118.11(c), EPA has added a provision requiring an Emergency Response Action Plan (ERAP), similar to the provision under the Oil Pollution Prevention FRP regulation at 40 CFR 112.20(h)(1). As detailed in the proposed rule, the ERAP's purpose is to provide a summary of steps for discharge source stabilization, including immediate actions by the facility incident management team, such as internal and external notifications and

[9] *https://response.epa.gov/site/site_profile.aspx?site_id=15823.*

initiation of CWA hazardous substance discharge preparedness and evacuation procedures, to be kept in the front of the CWA hazardous substance FRP or in a separate binder to accompany the full CWA hazardous substance FRP. This requirement will provide important site-specific information for facility personnel and responders. EPA has found ERAPs to be important to plan holders responding to oil spills and expects that a CWA FRP ERAP will be similarly critical for responders to a CWA hazardous substance worst case discharge into or on navigable waters or a conveyance to navigable waters.

v. Coordination Activities

As State and local emergency response officials are vital participants in community and facility response planning, EPA disagrees with the commenters who requested that EPA remove § 118.12(c) as well as the requirement to coordinate drills and exercises with local public emergency response officials and invite them to participate in § 118.13(c)(1). The Agency maintains that such coordination is critical for planning for worst case discharges since public entities are often involved in response efforts and, as such, EPA has added language to include local emergency planning and response organizations outside of SERCs, TERCs, LEPCs, and TEPCs in coordination activities. Additionally, the rule does not contain language that State and local emergency response officials should set drill and exercise schedules; rather, it states that facility owner or operators shall include consulting with the appropriate officials to establish schedules and plans.

EPA recognizes that, in some cases, it may be difficult to coordinate with LEPCs, TEPCs, or other local emergency planning and response organizations due to competing priorities or limited resources. In response, the Agency has added § 118.12(d)(3), which allows a facility owner or operator to demonstrate through documentation that he or she has made a good faith effort to coordinate on the schedule required under § 118.12(a). The Agency is retaining the requirement to maintain signed agreements as a compliance tool and to encourage in-depth, practicable coordination. Correspondence such as email may be used for purposes of documenting good faith efforts, as long as it is preserved. In terms of retention, facility owners or operators are expected to maintain coordination documentation for the life of the facility. Due to the ease of storing electronic records, the Agency does not expect this to be burdensome, and past agreements and discussions may be valuable tools in response planning, revision, and augmentation.

EPA recognizes that historically, planning and response has been a public function. However, as stated in the OPA Conference Report (H.R. Rep. No. 101–653, 101st Cong., 2d Sess.), a major purpose of this action is to shift the burden of worst case discharge planning from public resources to private resources and ensure that facility owners and operators are properly planning for worst case discharges of CWA hazardous substances into or on navigable waters or a conveyance to navigable waters. EPA agrees that facility and community plans should work in concert to plan for these events. However, this regulation does not put requirements on local emergency responders because that is beyond the scope and authority for this action. Nonetheless, EPA notes that ASTM E3241–20 Standard Guide for Coordination and Cooperation between Facilities, Local Emergency Planning Committees, and Emergency Responders is a valuable guide and resource and encourages LEPCs or TEPCs and emergency responders to familiarize themselves with the standard. The Agency is aware that many communities prepare all hazards plans and reiterates that this regulation does not require additional planning by emergency planners. Instead, facilities must reach out to these planners and coordinate FRPs. Community planners then have access to this information and any other types of information they may need to strengthen their community plans.

vi. Facility Response Training, Drills, and Exercises

EPA proposed and is finalizing with minor adjustments training requirements in § 118.13(b). EPA is retaining a reference to OSHA's 29 CFR 1910.120 training specific to hazardous substances, while also ensuring that training is conducted for facility personnel, private personnel, casual laborers, and volunteer responders. However, in response to commenter concerns and consistent with the Oil Pollution Prevention FRP program, training may be specific to job tasks and personnel roles. This additional training will ensure the full population of those who could respond to a worst case discharge are prepared. The Agency notes that OSHA's 29 CFR 1910.120 already applies to emergency response operations for releases of, or substantial threats of release of, hazardous substances without regard to the location of the hazard (29 CFR 1910.120(a)(1)(v)) and facility owners or operators should already be complying with these requirements. EPA has added language to § 118.13(b) to clarify that facility personnel are also subject to these requirements.

While some commenters suggested that the provision that requires facilities to work with and train volunteers and casual laborers who may respond to a discharge should be removed from the FRP requirements and instead a public entity such as the LEPC or TEPC should coordinate volunteer and casual laborer response activities, EPA disagrees, as this shifts the burden of properly training response personnel to the public, which is counter to the intent of OPA 90. Additionally, there may be LEPCs or TEPCs that are inactive or do not have time, personnel, resources, or capabilities to provide this type of training.

To account for modern business practices and the easy of electronic record storage, EPA has adjusted the documentation provision in § 118.13(b)(4) to allow records to be maintained under usual and customary business practices and either as an annex or included in the FRP.

Under § 118.13(c), EPA is finalizing the drills and exercises requirements with minor adjustments. In § 118.13(b)(1), a facility owner or operator must coordinate with local public emergency response officials when appropriate and invite them to participate. EPA has added language in § 118.13(c)(1) which allows a facility owner or operator to demonstrate through documentation that he or she has made a good faith effort to coordinate. Finally. EPA notes that the Preparedness for Response Exercise Program (PREP) guidelines will be updated to reflect the requirements under 40 CFR part 118, CWA Hazardous Substance FRPs.

11. Substantial Harm Certification Form

EPA has made several adjustments to Appendix A: Substantial Harm Certification Form to reduce confusion and duplicative entries as well as to aid in compliance. EPA has adjusted the initial submission date from one month to within 60 days of meeting the criteria in § 118.3(a) and § 118.3(b), for covered facilities that do not satisfy the substantial harm criteria in § 118.3(c). Because substantial harm calculations and modeling may be involved, the Agency recognizes that additional time may be necessary. Those submitting an FRP will still need to submit a Substantial Harm Certification Form, which should add minimal burden, since this information will be included in their FRP. However, facilities submitting their FRPs may submit their

Appendix A Substantial Harm Certification Form at the same time. EPA has added a requirement to list the ACP(s) consulted in question 3, as well as list the FWSEs and list and describe the public receptors potentially affected by a worst case discharge. This will allow reviewers to cross check entries against the ACP. EPA is not requiring submission of forms to local emergency response organizations, though covered facility owners or operators must make the forms available to local emergency response organizations upon request. Covered facility owner or operators must also recertify their Forms every five years.

EPA understands why covered facilities are interested in keeping the form as simple as possible and has taken efforts to that effect. However, there are countervailing reasons for including more robust information. Completing and submitting Appendix A ensures that the covered facility reviews their potential to cause substantial harm to the environment and that EPA has access to updated information in a timely manner. This approach is based on the Oil Pollution Prevention FRP regulation, in which facility personnel must complete, and maintain at the facility, a certification form which identifies substantial harm information for the facility (see 40 CFR part 112 Appendix C, Attachment C–II). The form is required of all SPCC-regulated facilities and requires signature by the certifier for the facility. The inclusion of information that demonstrates the reliability and analytical soundness of the substantial harm evaluation as well as a review of potential receptors that could be impacted as a result of a CWA hazardous substance discharge will assist EPA in making compliance determinations as well as provide sufficient information to identify those covered facilities that could reasonably be expected to cause significant and substantial harm to the environment. Again, while EPA recognizes that the form will require time and resources to complete, the agency maintains that this information is critical for protecting the environment and can help covered facility owner or operators identify risks at their facilities.

EPA disagrees that these forms will cause confusion for the public. Appendix A will be used as a public information, enforcement, and compliance tool for this regulation; thus, the relevant information on CWA hazardous substance present onsite must be readily available. EPA has revised Appendix A in the final rule to aid in clarity. For example, EPA has adjusted the language in Question 5 to clarify that the reportable discharge must have been to navigable waters. For discharges after the effective date of this rule, EPA expects that covered facility owners or operators will collect this information routinely in order to improve their business practices and minimize accidental discharges. The adverse impact reported are limited to what is listed in Appendix A. In addition, conforming changes regarding the requirement to analyze all CWA hazardous substances above the threshold level onsite have been made. Finally, EPA has adjusted the certification statement for clarity as to its expectations of the certifier.

12. Confidential Business Information (CBI)

EPA agrees with commenters concerned about security and the sensitivity of certain types of information and will work with its Federal partners such as DHS and DOJ and other appropriate agency security and cybersecurity experts to determine which parts of the FRP may not be made publicly available. Additionally, the Agency takes personal privacy seriously and will ensure the safety of individual information and data.

E. Additional Considerations

1. Climate Change

EPA appreciates the concerns raised by the commenters and understands that the unpredictability of breadth of the impacts of climate change make it challenging to assess. Because the impacts of climate change continue to expand, EPA expects to provide ongoing compliance assistance and guidance to assist covered facilities in compliance with the climate change considerations in the final rule. That said, EPA disagrees that climate change impacts are occurring on a longer-term scale than can be considered within the FRP's five-year cycle. For example, the increase in severity and frequency of severe weather, including conditions resulting in flooding or drought, is a clear impact of climate change that should be considered by a covered facility owner or operator when evaluating their worst case discharge scenarios. The agency agrees that owners or operators should use the best available climate data when evaluating climate risks because the climate is changing rapidly compared to historical conditions. As part of ongoing compliance assistance, EPA expects to make existing and evolving data sources and tools available. The Agency recognizes that these evaluations are not without costs, however, due to the known risks of increasing and more frequent severe weather and other climate change impacts, their inclusion in this action is vital to ensure protection of human health and the environment.

One commenter stated that, because climate change could impact factors like the distance to navigable waters or a conveyance to navigable waters, EPA could plan to reassess CWA worst case scenario discharge risks at a regular interval to see if the actions' requirements remain effective. The Agency notes that FRPs must be recertified every five years as per § 118.4(a)(6), which will give owners or operators the opportunity to reassess their worst case discharge scenarios. Finally, EPA appreciates the suggested data and information sources suggested by commenters and will evaluate them for purposes of ongoing compliance assistance.

2. Communities With Environmental Justice Concerns

As discussed in the Preamble to the proposed rule, there is clear evidence of co-location of hazardous substance facilities in or near communities with environmental justice concerns. Specifically, the co-location assessment confirms that industrial facilities and aboveground storage tanks are disproportionately located in these communities and worst case discharges or threats of worst case discharges of CWA hazardous substances are examples of environmental justice concerns that can affect local communities. Currently, once a facility meets the applicability criteria in § 118.3, their hazard evaluation (§ 118.11(b)(3)) must examine impacts on nearby communities that could be affected by a discharge. Although, the final rule does not require consultation with communities with environmental justice concerns, there are other avenues of participation for the public in the response planning process, including involvement in the ACP development process or participation in the LEPC or TEPC. EPCRA section 303 tasks LEPCs and TEPCs to develop community emergency response plans and to share chemical information to citizens in the community and is the current avenue for public participation in these types of plans, in consideration of communities with environmental justice concerns. Existing stewardship programs through partnerships or company initiatives may fulfill the requirements in § 118.11(b)(3) or be augmented to do so. In addition, one factor RAs may consider in determining whether to require CWA hazardous substance FRPs for covered

facilities is the potential for a worst case discharge to adversely impact communities with environmental justice concerns.

3. Facility Density

EPA recognizes the increased risk of worst case discharges in areas with a high density of CWA hazardous substance facilities that could be involved in an incident impacting multiple sites. In § 118.5(b)(10), EPA has included density of facilities in the immediate area with CWA hazardous substances onsite as a factor that an RA may consider in determining whether to require that a covered facility owner or operator to submit an FRP. EPA notes, however, that the hazard evaluation (§ 118.11(b)(3)) must already consider local businesses that could be affected by a worst case discharge. EPA also recognizes that there are many factors, including greenbelts, facility design, spacing requirements, facility size, and manufacturing processes, that complicate considerations for facility density. Accordingly, the RA must take all these site-specific circumstances into account when making a determination.

F. Consistency With the NCP

Section 311(j)(5)(D) of the CWA states that facility response plans must be consistent with the NCP and ACPs. As such, in §§ 300.185, 300.211, and 300.411, EPA is finalizing as proposed minor changes to 40 CFR part 300 to ensure uniformity. EPA did not receive any comments on these changes which include adding references to 40 CFR part 118 in §§ 300.185 and 300.211, adding § 300.411 to detail requirements for responses to CWA hazardous substance worst case discharges, and mirroring the requirements for oil worst case discharges in § 300.324, including OSC responsibilities to notify the NSFCC, requiring the FRP be initiated, implementing ACP worst case discharge plans, taking response actions, and coordinating private and public equipment for response.

IV. Statutory and Executive Orders Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a ''significant regulatory action'' as defined in Executive Order 12866, as amended by Executive Order 14094. Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to the Executive Order 12866 review is available in the docket. The EPA prepared an economic analysis of the potential impacts associated with this action. This *Regulatory Impact Analysis, Clean Water Act Hazardous Substance Facility Response Plans,* is available in the docket for this action.

B. Paperwork Reduction Act (PRA)

The information collection activities in this final action have been submitted for approval to OMB under the PRA, 44 U.S.C. 3501 *et seq.* The Information Collection Request (ICR) document prepared by EPA has been assigned EPA ICR No. 2710.02. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

The CWA hazardous substance provisions of the final rule include requirements for onshore non-transportation-related facilities that could reasonably be expected to cause substantial harm to the environment, based on their location, to prepare FRPs for worst case discharges and submit them to EPA. Specific CWA hazardous substance FRP components include: facility information, owner or operator information, hazard evaluation, reportable discharge history, response personnel and equipment, evidence of contracts or other approved means to ensure the availability of personnel and equipment, notification lists, discharge information, personnel roles and responsibilities, response equipment information, evacuation plans, discharge detection systems, response actions, disposal plans, containment measures, training and exercise procedures, self-inspection, a coordination activities.

EPA has estimated an average annual total burden for respondents of 984,891 hours per year in the first three years, average annual labor cost of $69.7 million and operations and maintenance (O&M) costs of $18.0 million ($87.7 million total cost per year). EPA has carefully considered the burden imposed upon the regulated community by the regulations. EPA believes that the activities required are necessary and, to the extent possible, has attempted to minimize the burden imposed. The requirements specified in the final rule are intended to have a mitigating effect on CWA hazardous substance worst case discharges because the rule provisions address the categories of damages and adverse impacts expected from this type of discharge.

Respondents/affected entities: 12,618, including 7,264 estimated for rule familiarization and the Substantial Harm Certification Form; and 5,354 facilities further developing and maintaining FRPs under the final rule.

Respondent's obligation to respond: Mandatory.

Estimated number of respondents: 12,618 responses by 12,618 respondents during the three-year ICR period. The overall average number of responses during the ICR period is 4,206.

Frequency of response: One-time, then if required to amend an FRP.

Total estimated burden: Average hours per year: 984,891. Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: Average cost per year: $87,705,322 per year.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. The small entities subject to the requirements of this action are 1,509 potentially small businesses classified under a broad range of 148 different North American Industry Classification System (NAICS) industries, at the five-digit level. For facilities owned by regulated small entities, the cost per facility ranges from $11,753 to $20,064, depending on the industry. The Agency has determined that 47 small entities may experience a cost-to-revenue impact of 1% to 3% of revenues (or, about three percent of all small entities). These entities are in four industries:

- Animal Food Manufacturing (33 small entities).
- Sawmills and Wood Preservation (4 small entities).
- Resin and Synthetic Rubber Manufacturing (9 small entities).
- Marine Cargo Handling (1 small entity).

The Agency also estimated 21 entities (around 1.4 percent of all regulated small entities), may experience an

impact greater than 3% of revenue. These entities include:

- Electric Power Generation (19 small entities).
- Support Activities for Mining (2 small entities).

As documented in section 8.3 of the RIA for the final rule, and in accordance with RFA requirements and SBA guidance, EPA has prepared a screening analysis to assess small entity impacts. This conclusion was reached by identifying the subset of small entities regulated by the final action based on SBA criteria for each NAICS industry. Then, EPA assessed the potential impact of the rule on those small entities using the cost-to-revenue threshold test. The Agency compared the annualized cost per small entity to annual revenues and identified entities where costs exceed one or three percent of annual revenues.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This final rule imposes no new enforceable duty on any State, local, or Tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has Tribal implications. However, it will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law. EPA has concluded that this action may have Tribal implications because it requires covered facility owner or operators to notify their local TEPC if a worst case discharge should occur and coordinate with their TEPC on developing the Facility Response Plan and any associated community emergency response planning.

EPA mapped the location of the available sample of 661 in-scope facilities present in EPA's Tier II data against EPA's geographic boundaries for Tribal lands and did not identify any covered facilities located on Tribal lands. EPA notes that these data capture only a portion of potentially regulated facilities, and do not include some States with relatively higher proportions of Tribal lands, such as Oklahoma. In addition, EPA lacks information on the location of water intakes associated with facilities, which is a further uncertain potential source of Tribal impacts. EPA consulted with Tribal officials under EPA Policy on Consultation and Coordination with Indian Tribes early in the process of developing this regulation to enable them to have meaningful and timely input into its development. EPA held a national Tribal consultation on the Clean Water Act Hazardous Substance Worst Case Discharge Planning Regulation Proposal in FY2022. On March 21, 2022, EPA sent a notification letter via email to Tribal leaders of all 574 federally recognized Tribes in lieu of a hardcopy because of the COVID–19 pandemic. In addition, EPA hosted one national Tribal informational webinar on April 6, 2022, to explain the action, answer questions, and record Tribal input. Five Tribal participants attended the webinar. No Tribes requested government to government consultation with EPA on the Clean Water Act Hazardous Substance Worst Case Discharge Planning Regulation Proposal. A few Tribes provided comments during the webinar. No federally recognized Tribes submitted comments to the docket during the public comment process.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 directs Federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in Federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is not subject to Executive Order 13045 because the EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children. The Agency has concluded that the effect of the requirements codified in this final rule will mitigate the adverse effects of environmental and socio-economic damage that could otherwise result from worst case discharges. This final action will therefore not have a disproportionate adverse effect on children. However, EPA's *Policy on Children's Health* applies to this action. Information on how the Policy was applied is available under ''Children's Environmental Health'' in the Supplementary Information section of this preamble.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The requirements specified in the final rule are intended to result in greater overall environmental protection. The final rule will not cause reductions in the supply or production of oil, fuel, coal, or electricity; nor will it result in increased energy prices, increased cost of energy distribution, or an increased dependence on foreign supplies of energy.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that the human health or environmental conditions that exist prior to this action result in or have the potential to result in disproportionate and adverse human health or environmental effects on communities with environmental justice concerns. Under Executive Order 14096, ''Revitalizing Our Nation's Commitment to Environmental Justice for All'' (which builds upon Executive Order 12898 [10]) agencies must, as appropriate and consistent with applicable law, identify, analyze, and address the disproportionate and adverse human health and environmental effects (including risks) and hazards of rulemaking actions and other Federal activities on communities with environmental justice concerns.[11] Worst case discharges of hazardous substances from facilities regulated by this action would likely pose disproportionate risks to such communities located near these sites *e.g.,* including communities that have been historically marginalized by underinvestment and overburdened by pollution. EPA has concluded that the regulatory requirements will advance fair treatment of those communities by

[10] Exec. Order No. 12898 of Feb. 11, 1994 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations), 59 FR 7629 (Feb. 16, 1994).

[11] For further information, including the definition of environmental justice, see Exec. Order No. 14096 of Apr. 21, 2023 (Revitalizing Our Nation's Commitment to Environmental Justice for All), 88 FR. 25,251 (Apr. 26, 2023).

reducing the disproportionate damages that worst case discharges might otherwise inflict on those areas.

The EPA believes that this action is likely to reduce existing disproportionate and adverse effects on communities with environmental justice concerns. EPA has concluded that the regulatory requirements will advance fair treatment of those communities by reducing the disproportionate damages that worst case discharges might otherwise inflict on those areas. EPA has concluded that the requirements codified in this final rule will mitigate the adverse effects of environmental and health damage that could otherwise result from worst case discharges and are likely to reduce existing disproportionate and adverse effects on communities with environmental justice concerns. EPA has concluded that the regulatory requirements will advance fair treatment of those communities by reducing the disproportionate damages that worst case discharges might otherwise inflict on those areas.

The focus of this action is to finalize new requirements for FRPs for worst case discharges of CWA hazardous substances for onshore non-transportation related facilities that, because of their location, could reasonably be expected to cause substantial harm to the environment by discharging into or on the navigable waters or a conveyance to navigable waters. The EPA additionally identified and addressed environmental justice concerns associated with the final rule and qualitatively assessed whether the requirements codified in this final rule will mitigate the adverse effects of environmental and health damage that could otherwise result from worst case discharges. EPA has concluded that, while the changes in this rule were independent of environmental justice considerations, the regulatory requirements will advance fair treatment of communities with environmental justice concerns by reducing the disproportionate damages that discharges might otherwise inflict on them. Specifically, EPA has concluded that:

- Communities with environmental justice concerns (including communities historically marginalized by underinvestment and overburdened by pollution) are more likely to be in proximity to those covered facilities (and thus at greater risk) than other communities. To the extent that communities living closer to covered facilities are more likely to be exposed if a discharge occurs, potential CWA FRP facilities pose a greater risk to these groups. Therefore, the final action will reduce risk for these communities.
- The final requirements for FRPs will improve preparedness planning and public awareness of planning and response activities. EPA expects the final rule requirements will also enhance EPA's ability to address area- and regional-specific concerns.

The information supporting this review is contained in the RIA, section 8.7, which includes an environmental justice analysis and is available in the docket for this action.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action does not meet the criteria set forth in 5 U.S.C. 804(2).

List of Subjects in 40 CFR Parts 118 and 300

Environmental protection, Hazardous substances, Reporting and recordkeeping requirements, Water pollution control.

Michael S. Regan,

Administrator.

For the reasons stated in the preamble, Title 40, chapter I, of the Code of Federal Regulations is amended as follows:

■ 1. Add part 118 to subchapter D to read as follows:

Subchapter D Water Programs

PART 118—CLEAN WATER ACT HAZARDOUS SUBSTANCES FACILITY RESPONSE PLANS

Sec.

118.1 Purpose.
118.2 Definitions.
118.3 Applicability.
118.4 General requirements.
118.5 Regional Administrator determination of substantial harm and significant and substantial harm.
118.6 Appeals process.
118.7 Petitions.
118.8 Exceptions and exemptions.
118.9 Mixtures.
118.10 Worst case discharges.
118.11 Facility response plan requirements.
118.12 Coordination activities.
118.13 Facility response training and drills/exercises.
Appendix A to Part 118: Certification form
Appendix B to Part 118: Toxicity endpoints for calculating planning distance for fish, wildlife and sensitive environments and public receptors.

Authority: 33 U.S.C. 1251 *et seq.,* and Executive Order 11735, superseded by Executive Order 12777, 56 FR 54757.

§ 118.1 Purpose.

This part establishes Clean Water Act (CWA) hazardous substance facility response plan requirements for the owner or operator of any non-transportation-related onshore facility that, because of its location, could reasonably be expected to cause substantial harm to the environment by discharging CWA hazardous substances into or on the navigable waters, adjoining shorelines, or the exclusive economic zone.

§ 118.2 Definitions.

For the purposes of this part:

Adverse weather means weather conditions that make it difficult for response equipment and personnel to clean up or respond to discharged CWA hazardous substances, accounting for impacts due to climate change, such as the increased frequency and intensity of extreme weather events, temperature fluctuations, rising seas, storm surges, inland and coastal flooding, drought, wildfires, and permafrost melt in northern areas and that must be considered when identifying response systems and equipment in a response plan for the applicable operating environment.

Article means a manufactured item that is formed to a specific shape or design during manufacture, has end use functions dependent in whole or in part upon the shape or design during end use, and does not release or otherwise result in exposure to a CWA hazardous substance under normal conditions of processing and use.

Container means any device or portable device in which a CWA hazardous substance is processed, stored, used, transported, treated, disposed of, or otherwise handled.

Contract or other approved means is defined as:

(1) A written contractual agreement with a spill response organization that identifies and ensures the availability of the necessary personnel and equipment within appropriate response times;

(2) A written certification by the owner or operator that the necessary personnel and equipment resources, owned or operated by the facility owner or operator, are available to respond to a discharge within appropriate response times;

(3) Active membership in a local or regional spill response organization that has identified and ensures adequate access through such membership to necessary personnel and equipment to respond to a discharge within appropriate response times in the specified geographic area; or

(4) Any other specific arrangement approved by the Regional Administrator upon request of the owner or operator.

CWA Hazardous Substance means any hazardous substance designated in 40 CFR part 116.

Discharge includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping of a CWA hazardous substance, but excludes: discharges in compliance with a permit under section 402 of the CWA; discharges resulting from circumstances identified, reviewed, and made a part of the public record with respect to a permit issued or modified under section 402 of the CWA, and subject to a condition in such permit; and continuous or anticipated intermittent discharges from a point source, identified in a permit or permit application under section 402 of the CWA, that are caused by events occurring within the scope of relevant operating or treatment systems.

Distance to the endpoint means the greatest distance a CWA hazardous substance in a worst case discharge into or on the navigable waters or a conveyance to navigable waters can travel while still having the ability to cause injury to public receptors or fish, wildlife, and sensitive environments, as determined under § 118.3(c)(1) and (c)(3) using endpoint concentrations enumerated in Appendix B or adversely impact a public water system as in § 118.3(c)(2).

Endpoint means the concentration at which a worst case discharge of a CWA hazardous substance has the ability to cause injury to public receptors or fish, wildlife, and sensitive environments as in Appendix B or adversely impact a public water system as in § 118.3(c)(2).

Exclusive economic zone means the zone contiguous to the territorial sea of the United States extending to a distance up to 200 nautical miles from the baseline from which the breadth of the territorial sea is measured.

Facility means any mobile or fixed building, property, parcel, lease, structure, installation, equipment, pipe, or in-plant pipeline (other than a vessel or a public vessel), used in CWA hazardous substance handling, production, manufacturing, storage, processing, refining, transfer, distribution, treatment, or in which any CWA hazardous substance is used. The boundaries of a facility depend on several site-specific factors, including but not limited to, the ownership or operation of buildings, structures, and equipment on the same site and types of activity at the site. Therefore, contiguous or non-contiguous buildings, properties, parcels, leases, structures, installations, pipes, or pipelines under the ownership or operation of the same person may, for legitimate operational and response planning reasons, be considered separate facilities.

Fish, wildlife, and sensitive environments mean areas that may be identified by their legal designation or by evaluations of Area Committees (for planning) or members of the Federal On-Scene Coordinator's spill response structure (during responses). These areas may include wetlands, national and State parks, critical habitats for endangered or threatened species, wilderness and natural resource areas, marine sanctuaries and estuarine reserves, conservation areas, preserves, wildlife areas, wildlife refuges, wild and scenic rivers, recreational areas, national forests, Federal and State lands that are research national areas, heritage program areas, land trust areas, and historical and archaeological sites and parks. These areas may also include unique habitats such as aquaculture sites and agricultural surface water intakes, bird nesting areas, critical biological resource areas, designated migratory routes, and designated seasonal habitats.

Injury means a measurable adverse change, either long- or short-term, in the chemical or physical quality or the viability of a natural resource or public receptor (including to human health) resulting either directly or indirectly from exposure to a discharge, or exposure to a product of reactions (*e.g.,* more hazardous degradation products, ignition, or reaction) resulting from a discharge.

Interconnected containers mean containers that are connected via pipes, hoses, or other conveyance (either permanent or temporary) to allow movement of a CWA hazardous substance between containers.

Maximum extent practicable means within the limitations used to determine CWA hazardous substance release planning resources for recovery, shoreline protection, and cleanup for worst case discharges from onshore non-transportation-related facilities in adverse weather. It includes the planned capability to respond to a worst case discharge, including a discharge resulting from fire or explosion, as contained in a facility response plan that meets the requirements in § 118.11 or in a specific plan approved by the Regional Administrator.

Maximum quantity onsite means the maximum total aggregate quantity for each CWA hazardous substance present at all locations within the entire non-transportation-related onshore facility at any time.

Mitigation or mitigation system(s) means specific activities, technologies, or equipment designed or deployed to capture or control substances upon loss of containment to minimize exposure of the public or the environment. Passive mitigation means equipment, devices, or technologies that function without human, mechanical, or other energy input.

Navigable waters mean waters of the United States as defined in 40 CFR 120.2, adjoining shorelines, and the exclusive economic zone.

Non-transportation-related onshore facility means any facility of any kind located in, on, or under any land within the United States and excludes movement of CWA hazardous substances in interstate or intrastate commerce under active shipping papers by rail, pipeline, highway vehicle, or vessel pursuant to 49 CFR parts 171–180.

Offshore facility means any facility of any kind (other than a vessel or public vessel) located in, on, or under any of the navigable waters of the United States, and any facility of any kind that is subject to the jurisdiction of the United States and is located in, on, or under any other waters.

Offsite means areas beyond the property boundary of a facility, and areas within the property boundary to which the public has routine and unrestricted access during or outside business hours.

Onshore facility means any facility of any kind located in, on, or under any land within the United States other than submerged land. Furthermore, this extends to in, on, or under any submerged land as delegated to the Environmental Protection Agency (EPA) pursuant to 40 CFR part 112 Appendix B.

Owner or operator means any person owning or operating an onshore facility or an offshore facility, and in the case of any abandoned offshore facility, the person who owned or operated or maintained the facility immediately prior to such abandonment.

Person means an individual, firm, corporation, association, or partnership.

Planning distance means the distance to an endpoint such that a worst case discharge of CWA hazardous substances into or on the navigable waters or a conveyance to navigable waters from a non-transportation-related onshore facility could adversely impact a public water system or cause injury to fish, wildlife, and sensitive environments or public receptors, as described in § 118.10.

Publicly Owned Treatment Works is defined in 40 CFR 403.3 and includes Federally Owned Treatment Works.

Public receptors mean parks, recreational areas, docks, or other public spaces inhabited, occupied, or used by the public at any time where members of the public could be injured as a result of a worst case discharge into or on the navigable waters or a conveyance to navigable waters.

Public vessel as defined by section 311(a)(4) of the CWA means a vessel owned or bareboat-chartered and operated by the United States, or a State or political subdivision thereof, or by a foreign nation, except when such vessel is engaged in commerce.

Public water system is a system as defined in 40 CFR 141.2. A public water system is either a ''community water system'' or a ''non-community water system.''

Qualified individual (QI) means the individual having full authority to implement response actions and required to initiate immediate communications with the appropriate Federal official and the persons providing personnel and equipment to respond, to the maximum extent practicable, to a worst case discharge and to mitigate or prevent a substantial threat of such a discharge.

Regional Administrator means the Regional Administrator of the EPA, in and for the Region in which the non-transportation-related onshore facility is located.

Reportable quantities mean quantities that may be harmful as set forth in § 117.3, the discharge into the environment during a 24-hour period, which is a violation of Clean Water Act section 311(b)(3) and requires notice as set forth in § 117.21.

Respond or response means containment, removal, remediation, neutralization, source control, mechanical recovery, bioremediation, or other release countermeasures, in accordance with the applicable Regional Contingency Plan and Area Contingency Plan, of the CWA hazardous substances from the water and adjoining shorelines or the taking of such other actions that may be necessary to prevent, minimize, or mitigate damage to the environment, public health, or welfare, including, but not limited to, persons, fish, shellfish, wildlife, public water systems, and public and private property, shorelines, and beaches.

Response equipment means equipment (including firefighting equipment), or other mitigating substances and devices, available to an owner or operator and Federal, State, and local or Tribal agencies, designed or used to ensure an effective and immediate response to a discharge, and to ensure mitigation or prevention of a substantial threat of a discharge.

Response resources means the personnel, equipment, supplies, and other capability necessary to perform the response activities identified in the facility response plan required under this part.

Source water protection area means the area delineated by the State for a public water system or including numerous public water systems, whether the source is ground water or surface water or both, as part of the State Source Water Assessment Program approved by EPA under section 1453 of the Safe Drinking Water Act (42 U.S.C. 300j–13).

Spill response organization (SRO) means an entity that provides spill response resources to mitigate or remove CWA hazardous substances from the environment and mitigate associated impacts.

Transportation or transport means the movement of property and loading, unloading, or storage incidental to movement pursuant to 49 CFR part 171–199.

Transportation-related onshore facility means any facility of any kind, in, on, or under any land within the United States which provides movement or conveyances of CWA hazardous substances in interstate or intrastate commerce by rail, pipeline, highway vehicle, or vessel pursuant to 49 CFR parts 171–199.

United States means the States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, Guam, American Samoa, the U.S. Virgin Islands, and the Pacific Island Governments.

Vessel as defined by section 101(28) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), means every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water; and, as defined by section 311(a)(3) of the CWA, means every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water other than a public vessel.

Water distribution system means a system to connect water treatment plants or water sources (in the absence of treatment) to customers via a network of pipes, storage facilities, valves, and pumps.

Wellhead protection area means the surface and subsurface area surrounding a water well or wellfield, supplying a public water system, through which contaminants are reasonably likely to move toward and reach such water well or wellfield.

Worst case discharge means the largest foreseeable discharge in adverse weather conditions including a discharge resulting from fire or explosion.

§ 118.3 Applicability.

This part applies to the owner or operator of any non-transportation-related onshore facility that, because of its location, could reasonably be expected to cause substantial harm to the environment by discharging CWA hazardous substances into or on the navigable waters or a conveyance to navigable waters by meeting the following criteria:

(a) *Threshold quantity.* The maximum quantity onsite for any CWA hazardous substance listed at 40 CFR 116.4 at any time, meets or exceeds 1,000 times the Reportable Quantity in pounds (kilograms) found at 40 CFR 117.3. Do not include any exceptions or exemptions identified in § 118.8. To calculate the threshold quantities of CWA hazardous substances in mixtures, follow the procedures in § 118.9; and

(b) *Proximity to navigable waters.* The non-transportation-related onshore facility boundary or nearest opportunity for discharge is located within one-half mile of navigable waters or a conveyance to navigable waters; and

(c) *Substantial harm criteria.* The non-transportation-related onshore facility meets one or more of the following substantial harm criteria:

(1) *Ability to cause injury to fish, wildlife, and sensitive environments.* The non-transportation-related onshore facility is located at a distance to an endpoint as calculated using a planning distance in § 118.10(b) such that a worst case discharge of a CWA hazardous substance or the aqueous products that form when the CWA hazardous substance enters water from the non-transportation-related onshore facility could cause injury to fish, wildlife, and sensitive environments. For identification of fish, wildlife, and sensitive environments, owners or operators shall use the applicable Area Contingency Plan prepared pursuant to section 311(j)(4) of the CWA, in addition to identifying other areas pursuant to the definition in § 118.2;

(2) *Ability to adversely impact a public water system.* The non-transportation-related onshore facility is located at a distance to an endpoint such that a worst case discharge could adversely impact a public water system, as described by the five criteria listed

under paragraphs (c)(2)(i) through (v) of this section. This assessment should be conducted in collaboration with the downstream public water system(s). If the owner or operator is unable to work with the public water system after good faith efforts to do so, the owner or operator should use the estimated peak concentration of the CWA hazardous substance from a worst case discharge at the water intake to assess the potential to adversely impact a public water system. Ability to adversely impact a public water system includes a concentration of a CWA hazardous substance, or the aqueous products that form when the CWA hazardous substance enters water, reaching a public water system which:

(i) Violates any National Primary Drinking Water Standard or State Drinking Water Regulation, such as an exceedance of a Maximum Contaminant Level;

(ii) Compromises the ability of the public water system to produce water that complies with any National Primary Drinking Water Standard or State Drinking Water Regulation;

(iii) Results in adverse health impacts in people exposed to the maximum concentration that could enter a drinking water distribution system;

(iv) Contaminates public water system infrastructure, including but not limited to intake structures, treatment facilities, and drinking water distribution systems, or premise plumbing systems to a degree that requires remediation to restore system components to acceptable performance; or

(v) Impairs the taste, odor, or other aesthetic characteristic of the water entering a drinking water distribution system to a degree that could make the water unacceptable to consumers and that could prompt the public water system to issue use restrictions;

(3) *Ability to cause injury to public receptors.* The non-transportation-related onshore facility is located at a distance to an endpoint as calculated using a planning distance in § 118.10(b) such that a worst case discharge into or on the navigable waters or a conveyance to navigable waters could cause injury to a public receptor as defined in § 118.2; or

(4) *Reportable discharge history.* The non-transportation-related onshore facility has had a reportable CWA hazardous substance discharge under § 117.21 within the last five years that reached navigable waters.

§ 118.4 General requirements.

(a) *Preparation, submission, and implementation of facility response plans.* The owner or operator of any non-transportation-related onshore facility meeting the applicability requirements of § 118.3 shall prepare, submit, and implement a facility response plan according to the following provisions:

(1) *Initially regulated facilities.* The owner or operator of a non-transportation-related onshore facility in operation on November 30, 2026 that satisfies the criteria in § 118.3 shall prepare and submit a facility response plan that satisfies the requirements of this section and Appendix A: Substantial Harm Certification Form to the Regional Administrator by June 1, 2027.

(2) *Newly regulated facilities.* The owner or operator of a non-transportation-related onshore facility that did not satisfy the criteria in § 118.3 on November 30, 2026, but satisfies the criteria in § 118.3 after November 30, 2026 or that is notified by the Regional Administrator pursuant to § 118.5 shall prepare and submit a facility response plan that satisfies the requirements of this section and Appendix A: Substantial Harm Certification Form to the Regional Administrator within six months of meeting the criteria or notification.

(3) *Newly constructed facilities.* For a newly constructed non-transportation-related onshore facility that commences operation after June 1, 2027, and is required to prepare and submit a facility response plan based on the criteria in § 118.3, the owner or operator shall submit the facility response plan and Appendix A: Substantial Harm Certification Form to the Regional Administrator prior to the start of operations. Adjustments to the facility response plan to reflect changes that occur during the start-up phase of operations must be submitted to the Regional Administrator after an operational trial period of 60 days.

(4) *Facilities regulated as a result of a planned event or change.* For a non-transportation-related onshore facility required to prepare and submit a facility response plan after June 1, 2027, as a result of a planned change in design, construction, operation, or maintenance so that the non-transportation-related onshore facility now meets the criteria in § 118.3 of this part, the owner or operator shall submit the facility response plan and Appendix A: Substantial Harm Certification Form to the Regional Administrator before the portion of the non-transportation-related onshore facility undergoing the planned change commences operations. Adjustments to the facility response plan to reflect changes that occur during the start-up phase of operations must be submitted to the Regional Administrator after an operational trial period of 60 days.

(5) *Facilities regulated as a result of an unplanned event or change.* For a non-transportation-related onshore facility required to prepare and submit a facility response plan after June 1, 2027, as a result of an unplanned event or change in facility characteristics that renders the non-transportation-related onshore facility subject to the criteria in § 118.3, the owner or operator shall submit the facility response plan and Appendix A: Substantial Harm Certification Form to the Regional Administrator within six months of the unplanned event or change.

(6) *Recertification.* Owners or operators must review and recertify their facility response plans and Appendix A: Substantial Harm Certification Forms every five years.

(7) *Updated CWA hazardous substance information in 40 CFR 116.4 or 40 CFR 117.3.* If a CWA hazardous substance is added or removed from the list maintained at 40 CFR 116.4 or a reportable quantity adjusted as listed at 40 CFR 117.3, an owner operator shall update their facility response plan accordingly within six months.

(b) *Facility response plan amendments.* (1) The owner or operator of a non-transportation-related onshore facility for which a facility response plan is required under this part shall revise and resubmit revised portions of the facility response plan within 60 days of each change that materially may affect the response to or potential for a worst case discharge, including:

(i) A change in the non-transportation-related onshore facility's configuration that materially alters the information included in the facility response plan;

(ii) A change in the CWA hazardous substance maximum quantity onsite (*i.e.,* increase or decrease in the maximum quantity stored onsite) that materially alters the required response resources;

(iii) A material change in capabilities of the spill response organization(s) that provide equipment and personnel to respond to discharges of CWA hazardous substances described in § 118.11(a)(3);

(iv) A material change in the non-transportation-related onshore facility's discharge mitigation and response equipment or emergency response procedures; and

(v) Any other changes that materially affect the implementation of the facility response plan.

(2) Except as provided in paragraph (b) of this section, amendments to

information in the facility response plan (such as personnel, contact information, or changes in the spill response organization(s)) that do not result in a material change in response capabilities do not require review and approval by the Regional Administrator. Owners or operators shall provide a copy of such changes to the Regional Administrator as the revisions occur.

(3) The owner or operator of a non-transportation-related onshore facility that submits changes to a facility response plan as provided in the preceding paragraphs of this section shall provide an EPA-issued facility identification number (where one has been assigned, such as Facility Registry Service number) with the changes.

(4) The Regional Administrator shall review and approve or disapprove changes to a facility response plan submitted pursuant to the requirements in paragraph (b)(1) of this section for a non-transportation-related onshore facility that he or she has determined pursuant to § 118.5(c) to have the potential to cause significant and substantial harm to human health or the environment.

(c) *Substantial harm certification form submission.* If the non-transportation-related onshore facility meets the criteria in § 118.3(a) and (b) but not (c):

(1) If the non-transportation-related onshore facility is in operation on March 30, 2027, complete and submit to the EPA Regional Administrator the Substantial Harm Certification Form in Appendix A to this part by June 1, 2027, or, for facilities meeting the criteria in § 118.3(a) and (b) after March 30, 2027, within 60 days. Owner or operators must retain their completed Appendix A and supporting documentation for the duration that the CWA hazardous substance maximum quantity onsite meets or exceeds the threshold quantity and for an additional 10 years.

(2) Attach to the form documentation, calculations, and any other information necessary to demonstrate the reliability and analytical soundness of the substantial harm determination as well as a review of potential receptors that could be impacted as a result of a CWA hazardous substance discharge.

(3) Submit to the EPA Regional Administrator a recertification of the Substantial Harm Certification Form every five years, or within 60 days of a change at or outside the non-transportation-related onshore facility that impacts the potential to cause substantial harm to the environment in accordance with the criteria in § 118.3.

(4) Provide the Substantial Harm Certification Form in Appendix A to this part to local emergency response organizations upon request.

(d) *Assertion of claims of confidential business information.* (1) Except as provided in paragraph (2) of this section, an owner or operator of a non-transportation-related onshore facility required to submit a facility response plan or otherwise provide information under this part may make a claim of confidential business information for any such information that meets the criteria set forth in § 2.302 of this chapter.

(2) Notwithstanding the provisions of 40 CFR part 2, an owner or operator of a facility subject to this part may not claim as confidential business information the following information:

(i) Data required by § 118.11 (b); and

(ii) Data required in Appendix A of this part, excluding the supporting documentation.

(iii) Notwithstanding the procedures specified in 40 CFR part 2, an owner or operator asserting a claim of confidential business information with respect to information contained in its facility response plan as per § 118.11, shall submit to EPA at the time it submits the facility response plan the following:

(A) The information claimed confidential, provided in a format to be specified by EPA;

(B) A sanitized (redacted) copy of the facility response plan, with the notation ''CBI'' substituted for the information claimed confidential, except that a generic category or class name shall be substituted for any chemical name or identity claimed confidential; and

(C) The document or documents substantiating each claim of confidential business information, as described in paragraph (e) of this section.

(e) *Substantiating claims of confidential business information.* (1) An owner or operator claiming that information is confidential business information must substantiate that claim by providing documentation that demonstrates that the claim meets the substantive criteria set forth in § 2.302 of this chapter.

(2) Information that is submitted as part of the substantiation may be claimed confidential by marking it as confidential business information. Information not so marked will be treated as public and may be disclosed without notice to the submitter. If information that is submitted as part of the substantiation is claimed confidential, the owner or operator must provide sanitized and unsanitized versions of the substantiation.

(3) The owner, operator, or senior official with management responsibility at the non-transportation-related onshore facility shall sign a certification that the signer has personally examined the information submitted and that based on inquiry of the persons who compiled the information, the information is true, accurate, and complete, and that those portions of the substantiation claimed as confidential business information would, if disclosed, reveal trade secrets or other confidential business information.

§ 118.5 Regional Administrator determination of substantial harm and significant and substantial harm.

(a) *Regional Administrator authority to require facility response plans and amendments.* After considering the factors in paragraph (b) of this section, the Regional Administrator may at any time require the owner or operator of any non-transportation-related onshore facility to prepare and submit a facility response plan under this section. If such a determination is made, the Regional Administrator shall notify the owner or operator in writing and shall provide a basis for the determination and the owner or operator shall submit the facility response plan to the Regional Administrator as per the preparation, submission, and implementation guidelines in § 118.4. The Regional Administrator may require amendments to any facility response plan that does not meet the requirements § 118.11.

(b) *Regional Administrator substantial harm determination.* To determine whether a non-transportation-related onshore facility could, because of its location, reasonably be expected to cause substantial harm to the environment by a discharge, or substantial threat of a discharge, of CWA hazardous substances into or on the navigable waters or a conveyance to navigable waters, the Regional Administrator may consider the following:

(1) Type of transfer operation(s);

(2) CWA hazardous substance quantity and category as determined in 40 CFR 117.3 and characteristics (*e.g.,* ignitability or reactivity) stored onsite;

(3) Proximity to fish, wildlife, and sensitive environments and other areas determined by the Regional Administrator to possess ecological value;

(4) Ability to adversely impact public water systems as described in § 118.3(c)(ii);

(5) Location in a source water protection area;

(6) Ability to cause injury to public receptors;

(7) Lack of passive mitigation measures or systems, including those

that enhance resilience to climate change;

(8) Potential to adversely impact communities with environmental justice concerns;

(9) Potential vulnerability to adverse weather conditions resulting from climate change;

(10) Density of facilities with CWA hazardous substances onsite in the immediate area;

(11) Reportable discharge history; or

(12) Other site-specific characteristics and environmental factors that the Regional Administrator determines to be relevant to recovery, shoreline protection, and cleanup.

(c) *Regional Administrator responsibilities for significant and substantial harm facilities.* The Regional Administrator shall review facility response plans submitted by facilities meeting the applicability requirements of § 118.3 to determine whether the non-transportation-related onshore facility could, because of its location, reasonably be expected to cause significant and substantial harm to the environment by a discharge, or a substantial threat of discharge, of CWA hazardous substances into or on the navigable waters or a conveyance to navigable waters based on the factors identified in paragraph (d) of this section. If such a determination is made, the Regional Administrator shall notify the owner or operator in writing and:

(1) Approve any facility response plan that meets the requirements of § 118.11; and

(2) Review each facility response plan periodically thereafter on a schedule established by the Regional Administrator.

(d) *Regional Administrator significant and substantial harm determination.* To determine whether a non-transportation-related onshore facility could, because of its location, reasonably be expected to cause significant and substantial harm to the environment by discharging a CWA hazardous substance into or on the navigable waters or a conveyance to navigable waters, the Regional Administrator shall consider the factors in paragraph (b) of this section and § 118.3(c), as well as the following:

(1) Frequency of past reportable discharges;

(2) Proximity to navigable waters or a conveyance to navigable waters;

(3) Age or condition of containers and equipment;

(4) Potential for hazards such as flooding, hurricanes, earthquakes, or other disasters that could result in a worst case discharge; and

(5) Other facility- and Region-specific information, including local impacts on public health.

§ 118.6 Appeals process.

(a) *Owner or operator request to reconsider requirement to prepare a facility response plan.* In the event the owner or operator of a non-transportation-related onshore facility does not agree that the facility meets the applicability criteria under § 118.3 or with the Regional Administrator's determination under § 118.5 that the facility could, because of its location, reasonably be expected to cause substantial harm or significant and substantial harm to the environment by discharging CWA hazardous substances into or on the navigable waters or a conveyance to navigable waters, or that amendments to the facility response plan are necessary, such as changes to the worst case discharge planning quantity, the owner or operator may submit a request for reconsideration to the Regional Administrator and provide additional information and data in writing to support the request. The request and accompanying information must be submitted to the Regional Administrator within 60 days of receipt of notice of the Regional Administrator's original decision. The Regional Administrator shall consider the request and render a written decision with the basis for the determination as soon as practicable. The owner or operator shall then follow the preparation, submission, and implementation guidelines in § 118.4.

(b) *Owner or operator request to reconsider classification status.* In the event the owner or operator of a non-transportation-related onshore facility believes a change in classification status is warranted because of an unplanned event or change in the facility's characteristics (*i.e.,* substantial harm or significant and substantial harm), the owner or operator may submit a request for reconsideration to the Regional Administrator and provide additional information and data in writing to support the request. The Regional Administrator shall consider the request and render a written decision with the basis for the determination and notify the owner or operator as soon as practicable.

(c) *Appeals process following Regional Administrator decision.* After a request for reconsideration under paragraph (a) or (b) of this section has been denied by the Regional Administrator, an owner or operator may appeal a determination made by the Regional Administrator. The appeal shall be made to the EPA Administrator and shall be made in writing within 60 days of receipt of the decision from the Regional Administrator that the request for reconsideration was denied. A complete copy of the appeal must be sent to the Regional Administrator at the time the appeal is made. The appeal shall contain a clear and concise statement of the issues and points of fact in the case. It also may contain additional information from the owner or operator, or from any other person. The EPA Administrator may request additional information from the owner or operator, or from any other person. The EPA Administrator shall render a written decision with the basis for the determination and notify the owner or operator as soon as practicable. If the EPA Administrator determines a non-transportation-related onshore facility is subject to this regulation, the owner or operator must submit a facility response plan to the Regional Administrator following the preparation, implementation, and submission guidelines in § 118.4.

§ 118.7 Petitions.

Any person, including a member of the public or any representative from a Federal, State, or local agency who has a reasonable basis to believe that a non-transportation-related onshore facility subject to this section could, because of its location, reasonably be expected to cause substantial harm to the environment by a discharge, or substantial threat of a discharge, of CWA hazardous substance into or on the navigable waters or a conveyance to navigable waters may petition the Regional Administrator to determine whether the facility meets the criteria in § 118.3. Such a petition shall include a discussion of how the factors in § 118.3 apply to the non-transportation-related onshore facility and EPA shall make the petition available to the owner or operator in question and provide an opportunity to respond. The Regional Administrator shall consider such petitions and respond as soon as practicable in writing including the basis for the determination. The Regional Administrator may render a decision based solely on the information in the petition but may also gather additional information before rendering a decision.

§ 118.8 Exceptions and exemptions.

(a) *Exceptions.* This part does not apply to the owner or operator of any facility, equipment, or operation that is not subject to the jurisdiction of the EPA under section 33 U.S.C. 1321(j)(5)(C), as follows:

(1) Any non-transportation-related onshore facility, that due to its location, could not reasonably be expected to have a discharge, or substantial threat of a discharge, as described in § 118.3. This determination must be based solely upon consideration of the geographical and location aspects of the non-transportation-related onshore facility (such as proximity to navigable waters, land contour, drainage, etc.) and must exclude consideration of manmade features such as dikes, equipment, depressions, or other structures, which may serve to restrain, hinder, contain, or otherwise prevent a discharge.

(2) Any equipment, or operation of a vessel or transportation-related onshore facility which is subject to the authority and control of the U.S. Department of Transportation, and which provides movement or conveyances of CWA hazardous substances in interstate or intrastate commerce by rail, pipeline, highway vehicle, or vessel. For modes other than pipeline, this exception is limited to movement under active shipping papers prior to arrival at a final destination pursuant to 49 CFR parts 171–180.

(3) Any equipment, or operation of a vessel or onshore or offshore facility which is subject to the authority and control of the U.S. Coast Guard or the U.S. Department of the Interior, as defined in the Memorandum of Understanding between the Secretary of Transportation, the Secretary of the Interior, and the Administrator of EPA (40 CFR part 112, Appendix B).

(4) Any underground storage tank and connected underground piping, underground ancillary equipment, and containment systems, at any facility, that is subject to all the technical requirements of part 280 of this chapter or a State program approved under part 281 of this chapter.

(b) *Exemptions.* For the purposes of determining whether the maximum quantity onsite meets or exceeds the threshold quantity of a CWA hazardous substance or substances, under § 118.3(a), at the non-transportation-related onshore facility, the following exemptions apply:

(1) *Articles.* CWA hazardous substances contained in articles need not be considered when determining whether the maximum quantity onsite meets or exceeds the threshold quantity.

(2) *Uses.* CWA hazardous substances, when in use for the following purposes, need not be included in determining whether the maximum quantity onsite meets or exceeds the threshold quantity:

(i) *Structural components.* Use as a structural component of the non-transportation-related onshore facility;

(ii) *Janitorial.* Use of products for routine janitorial maintenance;

(iii) *Foods, drugs, cosmetics.* Use by employees of foods, drugs, cosmetics, or other personal items containing the CWA hazardous substance;

(iv) *Process water or cooling water.* Use of CWA hazardous substances present in process water or non-contact cooling water as drawn from the environment or municipal sources;

(v) *Wastewater treated by Publicly Owned Treatment Works.* Use of municipal wastewater entering a publicly owned treatment works prior to treatment under a National Pollution Discharge Elimination System permit;

(vi) *Compressed air.* Use of CWA hazardous substances present in air used either as compressed air or as part of combustion;

(vii) *Retail and personal uses.* Use for personal, family, or household purposes, or present in the same form and concentration as a product packaged for distribution and use by the general public. Present in the same form and concentration as a product packaged for distribution and use by the general public means a CWA hazardous substance packaged in a similar manner and present in the same concentration as the substance when packaged for use by the general public, whether or not it is intended for distribution to the general public or used for the same purpose as when it is packaged for use by the general public; and

(viii) *RCRA hazardous waste.* Storage or accumulation of hazardous waste regulated under the Resource Conservation and Recovery Act Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities, 40 CFR parts 264 and 265, and Resource Conservation Recovery Act Standards Applicable to Generators of Hazardous Waste, 40 CFR part 262 subpart M.

§ 118.9 Mixtures.

For the purposes of determining the CWA hazardous substance maximum quantity onsite at the non-transportation-related onshore facility of CWA hazardous substance(s), under § 118.3(a), the following provisions apply to CWA hazardous substances mixtures:

(a) If the quantity of all of the CWA hazardous substance constituent(s) of the mixture or solution is known, the mixture meets the threshold quantity when the maximum quantity onsite, as defined in § 118.2, meets or exceeds the threshold quantity of any CWA hazardous substance in the mixture.

(b) If the quantity of one or more of the CWA hazardous substance constituent(s) of the mixture or solution is unknown, the mixture meets the threshold when the maximum quantity onsite of the mixture or solution meets or exceeds the quantity for the CWA hazardous substance established in § 118.3(a) with the lowest threshold quantity.

§ 118.10 Worst case discharge.

Non-transportation-related onshore facility owners or operators are required to model a worst case discharge scenario, determine appropriate endpoints using Appendix B as per § 118.3(c)(1) and (3) from a discharge into or on the navigable waters or a conveyance to navigable waters, calculate the distances to endpoints and CWA hazardous substance planning distances, and compare the distances to endpoints against the CWA hazardous substance planning distances from the non-transportation-related onshore facility. If the CWA hazardous substance planning distances determined are shorter than the distances to endpoints as per Appendix B, the worst case discharge can cause substantial harm. Owners or operators shall also use their worst case discharge scenario(s) to determine if the non-transportation-related onshore facility has the ability to adversely impact public water systems per § 118.3(c)(2) from a discharge into or on the navigable waters or a conveyance to navigable waters. The worst case discharge scenarios must represent each CWA hazardous substance onsite that meets or exceeds the threshold quantity set in § 118.3(a). Each scenario must use the largest quantity following the below parameters:

(a) *Determination of worst case discharge quantity.* The worst case discharge quantity shall be the greater of the following:

(1) For CWA hazardous substances in separate containers, the maximum quantity of a single container, such as a bulk storage tank, process vessel, rail car, or mobile or portable container;

(2) For CWA hazardous substances in interconnected containers, the maximum quantity of a group of interconnected containers; or

(3) For substances in pipes, the maximum quantity of a pipe or interconnected pipes, and the owner or operator must provide evidence in Appendix A that containers with common piping or piping systems are not operated as one unit.

(4) For mixtures of CWA hazardous substances, follow the procedures in § 118.9.

(b) *Planning distance determinations.* To determine the distance to endpoints for fish, wildlife, and sensitive

environments, public water systems, and public receptors as referenced in § 118.3(c), an owner or operator shall use a methodology, model, or other technique that accounts for facility-specific conditions and accounts for the stated requirements in this paragraph. An owner or operator may use proprietary models, provided that the owner or operator allows EPA access to the model, submits documentation that demonstrates the reliability and analytical soundness of the methodology used, and describes the model's features to local emergency planners, upon request. Any models used for planning distance determinations shall be used in exercises conducted per § 118.13.

(1) Endpoints for fish, wildlife, and sensitive environments are provided in Appendix B of this part.

(2) Endpoints for public receptors are provided in Appendix B of this part.

(3) In determining CWA hazardous substance planning distance endpoints, owners or operators shall consider the following parameters:

(i) Factors affecting overland transport including:

(A) Nearest opportunity for discharge into or on the navigable waters;

(B) Ground conditions which may include topography of the surrounding area, drainage patterns, land use coverage, impervious cover, soil distribution or porosity, and soil absorption rate or soil saturation during adverse weather conditions; and

(C) Properties of the CWA hazardous substance, which may include evaporation rate based on wind speed; atmospheric stability, ambient temperature, pressure, and humidity; reactivity with rainwater and/or other substances along the overland flow path into or on the navigable water; and ignitability and explosive potential;

(ii) Factors affecting in-water transport including:

(A) Point of entry to navigable waters;

(B) Flow rate and duration of the discharge;

(C) Direction of the discharge at the point of entry;

(D) Surface versus underwater entry; and

(E) Conditions of the receiving water including the velocity of the navigable waters which may be affected by: Slope of the river; hydraulic radius; turbulence and potential for cross-channel mixing; Manning's Roughness coefficient; differentiation of still, tidal or moving waters; currents; wave height; tidal influence; and water temperature, pH, alkalinity, and salinity.

(iii) Adverse weather conditions, which shall be calculated based on adverse winds, currents, and/or river stages, over a range of seasons, weather conditions, and river stages.

(iv) Properties of the CWA hazardous substance such as solubility in water, speciation in water, density (relative to water), polarity, vapor pressure, reactivity with water and common solutes in natural waterbodies, human toxicity, mammalian toxicity, aquatic toxicity, and flammability.

§ 118.11 Facility response plan requirements.

(a) *General requirements.* A written plan that complies with other Federal contingency plan regulations or is consistent with the approach in the National Response Team's Integrated Contingency Plan Guidance (''One Plan'') and that includes the elements provided in this section shall satisfy the requirements. The owner or operator may augment an existing plan with these required elements. All facility response plans must include the following:

(1) *Consistency With National Contingency Plan, Area Contingency Plans, and Regional Contingency Plans.* Plans must be consistent with the requirements of the National Oil and Hazardous Substance Pollution Contingency Plan (40 CFR part 300) and applicable Area Contingency Plans prepared pursuant to section 311(j)(4) of the Clean Water Act and Regional Contingency Plans as per 40 CFR 300.210.

(i) The owner or operator shall review relevant portions of the National Oil and Hazardous Substances Pollution Contingency Plan and applicable Area Contingency Plan annually and, if necessary, revise the facility response plan to ensure consistency with these plans;

(ii) Include a signed affirmation that the owner or operator has reviewed relevant plans during facility response plan development and resubmission and;

(iii) Include a list of area plans and sub-area plans reviewed.

(2) *Qualified individual.* Identify the qualified individual or documented management system having full authority to implement response actions and require immediate communications between that individual and the appropriate Federal official and the persons providing personnel and equipment, with a description of duties including:

(i) Activate internal alarms and hazard communication systems to notify all facility personnel;

(ii) Notify all response personnel, as needed;

(iii) Identify the character, exact source, amount, and extent of the discharge, as well as the other items needed for notification;

(iv) Notify and provide necessary information to the appropriate Federal, State, and local authorities with designated response roles, including the National Response Center, State Emergency Response Commission or Tribal Emergency Response Commission, and Local Emergency Planning Committee or Tribal Emergency Planning Committee;

(v) Notify and provide necessary information to public water systems that may be impacted by a discharge;

(vi) Assess the interaction of the discharged CWA hazardous substance with water, solutes in water, water treatment chemicals, and/or other substances stored at the facility and notify response personnel at the scene of that assessment;

(vii) Assess the possible hazards to human health and the environment due to the worst case discharge. This assessment must consider both the direct and indirect effects of the discharge (*i.e.,* the effects of any toxic, irritating, or asphyxiating gases that may be generated, or the effects of any hazardous surface water runoffs from water or chemical agents used to control fire and heat-induced explosion) and initiate appropriate monitoring;

(viii) Implement prompt response actions to contain and respond, to the maximum extent practicable, the CWA hazardous substance discharged;

(ix) Coordinate rescue and response actions as previously arranged with response personnel;

(x) Use authority to immediately access company funding to initiate cleanup activities;

(xi) Direct cleanup activities until properly relieved of this responsibility; and

(xii) Acquire and maintain incident commander training requirements consistent with 29 CFR 1910.120(q)(6)(v).

(3) *Response resources.* Identify, and ensure by contract or other approved means, the availability of private personnel and equipment necessary to respond to the maximum extent practicable to a worst case discharge of CWA hazardous substances (including a discharge resulting from fire or explosion), and to mitigate or prevent a substantial threat of such a discharge;

(4) *Training, testing, and drills.* Describe the training, equipment testing, periodic unannounced drills, and response actions of persons at the facility to be carried out under the plan to ensure facility safety and to mitigate

or prevent the discharge, or the substantial threat of a discharge; and,

(5) *Plan updates.* Review and update facility response plan periodically and resubmit to the Regional Administrator for approval of each significant change as required by 118.4(a)(6) and (b)(1).

(b) *Emergency response information.* The facility response plan shall include:

(1) *Facility information.* Facility details including the facility name; latitude and longitude; street address, with city, State, and zip code; telephone number; facility location information described in a manner that would aid a reviewer and a responder in locating the facility, EPA identification numbers, and indication if the facility is located in or drains into a wellhead protection area as defined by the Safe Drinking Water Act of 1986;

(2) *Owner or operator information.* Contact information to include name and preferred contact method;

(3) *Hazard evaluation.* Hazard evaluation for worst case discharge into or on the navigable waters or a conveyance to navigable waters and risk-based decision support system shall include:

(i) Chemical-specific information, including the response considerations, health hazards, fire hazards, chemical reactivity, hazard classifications, and physical and chemical properties; potential effects of a CWA hazardous substance worst case discharge as per 118.10; impacts to communities with environmental justice concerns; and impacts of climate change, including but not limited to the increased frequency and intensity of extreme weather events, temperature fluctuations, rising seas, storm surges, inland and coastal flooding, drought, wildfires, and permafrost melt in northern areas. Illustrative diagrams of the hazard evaluation should be included.

(ii) This section of the plan must outline processes that will help responders make decisions relating to the identification, evaluation, and control of risks to human health and the environment following a CWA hazardous substance discharge. The processes outlined below do not need to be scenario-specific but can be generic in nature. At a minimum, the processes must include all the following:

(A) *Risk identification*—describe the process that will be used to determine the extent and route of CWA hazardous substance exposure to humans and the environment including location and age of containers and their contents;

(B) *Risk characterization*—describe the process that will be used to establish relative degrees of risk and prioritizing risks;

(C) *Risk control*—describe the process that will be used to determine feasible response methods to mitigate CWA hazardous substance discharge impacts on human health and the environment; and

(D) *Risk communication*—describe the process that will be used to communicate information resulting from paragraphs (A), (B), and (C) of this section to parties internal and external to response activities.

(4) *Reportable discharge history.* Discharges reported under 40 CFR part 117.21 that reached navigable waters with additional data including date, time, and discharge duration; CWA hazardous substance(s) discharged; estimated quantity discharged in pounds; quantity discharged that reached navigable waters in pounds; the type of discharge event and its source; weather conditions; on-site impacts; offsite impacts; initiating event; description of how the discharge was detected; clean-up actions taken, steps taken to reduce the possibility of recurrence; and contributing factors with all data to be retained for the life of the facility;

(5) *Response personnel and equipment.* The identity and a description of response personnel, equipment, and response action implementation necessary to respond to the maximum extent practicable to a worst case discharge of a CWA hazardous substance described in § 118.10, and to mitigate or prevent a substantial threat of a worst case discharge;

(6) *Contracts.* Evidence of contracts or other approved means as per the definition in § 118.2 to ensure the availability of proper response personnel and equipment, including response resources with firefighting capability and the availability of resources if facility or mutual aid resources are not capable of handling a worst case discharge incident resulting from a fire or explosion. The owner or operator of a facility that does not have adequate firefighting resources located at the facility or that cannot rely on sufficient local firefighting resources through mutual aid agreements must identify adequate firefighting resources, including contracted resources. The response plan must also identify an individual located at the facility to work with the fire department in a response. This individual shall also verify that sufficient well-trained firefighting resources are available within a reasonable response time to a worst case scenario. The individual may be the qualified individual identified in the response plan or another appropriate individual located at the facility;

(7) *Notifications.* A list of the identities, contact information, and preferred communication method(s) of individuals or organizations to be notified in the event of a discharge so that immediate communications and liaising between the qualified individual identified in paragraph (a)(2) of this section and the appropriate Federal officials; State, local, or Tribal response organizations; and persons providing response personnel and equipment can be ensured, and a description of communication methods. Notification shall include but not be limited to the: National Response Center, qualified individual, facility response team, local response team (fire department or cooperatives), fire marshal, State Emergency Response Commission or Tribal Emergency Response Commission, State police, Local Emergency Planning Committee or Tribal Emergency Planning Committee, downstream public water systems, local media for evacuation notification, local hospitals, and any other potential receptor or interested party who could be impacted by a discharge;

(8) *Discharge information.* A description of information to pass to response personnel in the event of a reportable discharge, including specifics about the event, CWA hazardous substance name and quantity discharged, possible areas and receptors affected, potential routes of transport, distance(s) to nearby waterways and conveyances, any data on the characteristics of the CWA hazardous substance and other hazardous substances in proximity, ignition sources, explosion potential, and any other information that may be helpful to responders and the public, including updates on the scope and nature of the discharge as available;

(9) *Personnel roles and responsibilities.* A description of response personnel capabilities, including the duties of persons at the facility during a response action and their response times, training, and qualifications or a description of documented management system that can perform the stated functions, as appropriate;

(10) *Response equipment information.* A description of the facility's response equipment, including roles in response actions, location of the equipment, last inspection or response equipment test date, inspection frequency, last deployment drill date, deployment

frequency, response times, and equipment testing;

(11) *Evacuation plans.* Facility-wide plans for evacuation including a diagram. Include identification and documentation of coordination with community evaluation plans, as appropriate, and consider locations of CWA hazardous substances and their risks when discharged; anticipated flow direction; water conditions; emergency response personnel and equipment arrival routes; limitations on evacuation routes; transportation of injured personnel to nearest emergency medical facility; location of alarm/notification systems; check-in areas for evacuation validation; command center location; and location of shelter at the facility as an alternative to evacuation;

(12) *Discharge detection systems.* Procedures and equipment used to detect discharges, as well as detect and monitor any hazardous air releases resulting from discharges into or on the navigable water or a conveyance to navigable waters as appropriate, including personnel (*i.e.,* routine walk-around visual inspection) or automatic discharge detection for regular and afterhours operations by CWA hazardous substance, reliability checks, and inspection frequency;

(13) *Response actions.* This section should describe the response actions to be carried out by facility personnel or contracted personnel under the facility response plan to ensure the safety of the facility and to mitigate or prevent worst case discharges described in § 118.10 or the substantial threat of such discharges, including immediate response actions for personnel safety, personal protective equipment use, facility personnel responsibilities by job title, facility personnel actions, facility personnel information gathering assignments for response personnel, and facility responsibilities to mitigate a CWA hazardous substance worst case discharge. Identify the types of environmental monitoring data to be collected, collection methods, techniques for measuring the environmental parameters of interest (including established analytical methods when applicable), a description of the data's utility during a response (including procedures for sharing data with response personnel and the public), and required personal protection requirements and safety procedures during data collection and analysis. Include a description of actions to be taken within:

(i) One hour of discharge detection: Complete notifications; mobilize facility response personnel for immediate response actions; identify the scale of the incident and coordinate with SRO on appropriate response actions; complete cross-check of worst case discharge scenarios and resulting potential effects to begin tactical planning based on the scale of the incident; ensure containment and neutralization systems are operational; coordinate evacuation of facility, if necessary; coordinate with drinking water authorities; mobilize response equipment, as appropriate; and coordinate with local police and fire officials. Initiate community evacuation plan, if necessary, and evaluate if downstream (or upstream, if tidally influenced waterbody) public receptors that could be impacted and may require evacuation.

(ii) Two hours of discharge detection: As appropriate, deploy response resources identified in the response plan, including containment and recovery devices (such as containment dams, culvert plugs, underflow dams, containment booms, skimmer equipment or acid/base neutralization resources); and initiate any water, soil, and air monitoring as outlined in the response plan.

(14) *Disposal plans.* Plans to dispose of contaminated cleanup materials, if appropriate to the material, including how and where the facility intends to recover, reuse, decontaminate, treat, and dispose of materials after a discharge has taken place and plans for temporary storage of recovered materials as well as the appropriate permits required to manage recovered materials according to local, State, and Federal requirements. The disposal plan must account for recovered product; contaminated soil and water; contaminated equipment and materials including drums, tank parts, valves, and shovels; personal protective equipment; decontamination solutions; adsorbents; and spent chemicals including firefighting runoff management;

(15) *Containment measures.* Measures to provide adequate containment and drainage of discharged CWA hazardous substances including containment volumes, draining routes from storage and transfer areas, materials used to construct drainage troughs, number and types of valves and separators used in the drainage system, sump pump capacities, containment capacity of weirs and booms and their locations, and other cleanup materials;

(16) *Training procedures.* Training procedures as per § 118.13;

(17) *Exercise procedure.* Exercise procedures as per § 118.13 and the schedule set under § 118.12(c); and

(18) *Self-inspection.* Written procedures and records of inspections including an inspection checklist and method to record the inspection date and findings, to be retained for five years.

(c) *Emergency response action plan.* The response plan shall include an emergency response action plan that is maintained in the front of the response plan, or as a separate document accompanying the response plan, addresses the first two hours of the incident response followed by an outline of continued operations appropriate for Incident Command, and that includes the following information:

(i) The identity and telephone number of a qualified individual having full authority, including contracting authority, to implement removal actions;

(ii) The identity of individuals or organizations to be contacted in the event of a discharge so that immediate communications between the qualified individual identified in paragraph (a)(2) of this section and the appropriate Federal officials and the persons providing response personnel and equipment can be ensured;

(iii) A description of information to provide to response personnel in the event of a worst case discharge;

(iv) A description of the facility's response equipment and its location;

(v) A description of response personnel capabilities, including the duties of persons at the facility during a response action and their response times and qualifications;

(vi) Plans for evacuation of the facility and a reference to community evacuation plans, as appropriate;

(vii) A description of immediate measures to secure the source of the discharge, including the response actions to be taken in the first two hours of an incident as per paragraph (b)(13) of this section, and to provide adequate containment and drainage of discharged CWA hazardous substances;

(viii) A description of the potential discharge pathways of the CWA hazardous substances to public water systems, public receptors, and fish, wildlife, and sensitive environments, and estimated time of travel; and

(ix) A diagram of the facility including evacuation routes.

§ 118.12 Coordination Activities.

The facility response plan shall be coordinated with the local emergency response plan developed by the Local Emergency Planning Committee or Tribal Emergency Planning Committee under section 303 of title III of the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 11001 *et seq.*). Upon request, the owner

or operator shall provide a copy of the facility response plan to the Local Emergency Planning Committee, Tribal Emergency Planning Committee, State Emergency Response Commission, Tribal Emergency Response Commission or other local emergency planning and response organizations. The owner or operator shall coordinate response needs with local emergency planning and response organizations to determine how the facility is addressed in the community emergency response plan and to ensure that local response organizations are aware of the CWA hazardous substances at the facility, their quantities, the risks presented, and the resources and capabilities provided by the facility to respond to a worst case discharge of a CWA hazardous substance into or on the navigable waters or a conveyance to navigable waters.

(a) Coordination shall occur at least annually, and more frequently, if necessary, to address changes at the facility, in the facility response plan, and/or in the community emergency response plan.

(b) Coordination shall include providing to the appropriate State, local, or Tribal emergency planning and response organizations the facility response plan, updated emergency contact information, and other information necessary for developing and implementing the local emergency response plan.

(c) Coordination shall include consulting with appropriate State, local, or Tribal emergency response officials to establish appropriate schedules and plans for drills and exercises required under § 118.13. The owner or operator shall request an opportunity to meet with the Local Emergency Planning Committee or Tribal Emergency Planning Committee (or equivalent) and/or local fire department as appropriate to review and discuss those materials.

(d) The owner or operator shall document coordination with appropriate State, local, or Tribal authorities and retain that documentation for the life of the facility, including:

(1) The names of individuals involved and their contact information (phone number, email address, and organizational affiliations), dates of coordination activities, and nature of coordination activities; and

(2) Signed agreements on activities and resources, identified by the facility, in the facility response plan to be performed by the appropriate State, local, or Tribal emergency response organizations.

(3) If a facility owner or operator is unable to coordinate with their State Emergency Response Commission or Tribal Emergency Response Commission, Local Emergency Planning Committee or Tribal Emergency Planning Committee, and/or local fire department, documentation must show a good faith effort to contact, coordinate, and consult with those bodies in the frequency described in this section.

§ 118.13 Facility response training, drills, and exercises.

(a) The owner or operator of any facility required to prepare a facility response plan under § 118.3 shall develop and implement a facility response training program and a drills and exercise program that satisfy the requirements of this section. The owner or operator shall describe the programs in the facility response plan as provided in § 118.11.

(b) The facility owner or operator shall develop a facility response training program to train facility and non-facility personnel involved in CWA hazardous substance response activities. Training shall be functional in nature according to job tasks for both supervisory and non-supervisory operational personnel.

(1) A facility owner or operator must identify the method to be used for training any volunteers or casual laborers used during a response to comply with the requirements of 29 CFR 1910.120.

(2) The facility owner or operator is responsible for ensuring that all private response personnel are trained to meet the Occupational Safety and Health Administration standards for emergency response operations in 29 CFR 1910.120.

(3) The facility response plan shall include a description of the training program as required in § 118.11.

(4) The facility response plan shall include records, including logs, of CWA hazardous substance facility response plan meetings and describe the type of response training and dates, review of personnel responsibilities during a response action, and drills and exercises. These records may be included in the facility response plan or kept as an annex to the facility response plan. Completed records will be kept for five years following each activity. Records required under this part kept under usual and customary business practices will suffice for purposes of this paragraph.

(c) The facility owner or operator shall develop a program of facility response drills and exercises, including evaluation procedures. A program that follows the National Preparedness for Response Exercise Program (PREP) will be deemed as compliant with the drill and exercise requirements of this section. An alternative program or deviations from the PREP exercise requirements may also be developed by the owner or operator and are subject to approval by the Regional Administrator.

(1) Drills and exercises shall, when appropriate, be coordinated with local public emergency response officials and these officials shall be invited to participate. If a facility owner or operator is unable to coordinate with local public emergency response officials, documentation must show a good faith effort to contact and coordinate with those bodies.

Appendix A to Part 118: Substantial Harm Certification Form

Facility Name:
Facility Address:
EPA Facility ID:
Facility Latitude/Longitude:
Facility Qualified Individual (Last name, First name):
Facility Contact (phone):
Facility Contact (email):
Parent Company:
Facility industry NAICS code: 1. Does the facility have a maximum quantity onsite of a CWA hazardous substance greater than or equal to the CWA Reportable Quantity (RQ)x 1,000?

Yes____ No____

If Yes, list names, CAS no., and maximum quantities (lbs) onsite for each CWA hazardous substance:

If No, you do not need to proceed. 2. Is the facility within one-half mile of navigable waters or a conveyance to navigable waters?

Yes____ No____

If Yes, list navigable waters and a description of conveyance(s).

If No, you do not need to proceed.

If the answers to both 1 and 2 are Yes, answer questions 3–6.3. Is the facility located at a distance such that a worst case discharge from the facility could cause injury to fish, wildlife, and sensitive environments? For further description of fish, wildlife, and sensitive environments (FWSE), see the applicable Area Contingency Plan (ACP). Attach documentation of the formulas, assumptions, ACP(s) consulted, and distances calculated.

Yes ____ No ____

4. Is the facility located at a distance such that a worst case discharge from the facility could cause injury to public receptors? Attach documentation of the formulas and distances calculated.

Yes ____ No ____

5. Would a worst case discharge from the facility cause substantial harm to a public water system by causing any one, or any combination of more than one, of the adverse impacts listed below?

(i) Violates any National Primary Drinking Water Standard or State Drinking Water Regulation, such as exceedance of a Maximum Contaminant Level;

(ii) Compromises the ability of the public water system to produce water that complies with any National Primary Drinking Water Standard or State Drinking Water Regulation;

(iii) Results in adverse health impacts in people exposed to the maximum concentration that could enter a drinking water distribution system;

(iv) Contaminates public water system infrastructure, including but not limited to intake structures, treatment facilities, and distribution systems, or premise plumbing systems to a degree that requires remediation to restore system components to acceptable performance; or

(v) Impairs the taste, odor, or other aesthetic characteristic of the water entering a drinking water distribution system to a degree that could make the water unacceptable to consumers and that could prompt the public water system to issue use restrictions.

Yes ____ No ____

Attach documentation of the methodology and assumptions used to evaluate the potential of a worst case discharge to cause each of the adverse impacts (i–v).

For each worst case discharge scenario list:

—CWA hazardous substance name, CAS no. and worst case discharge quantity (lbs)
—Worst case discharge scenario type (single container or interconnected containers)
—Name(s) of each FWSE receptor(s) and planning distance(s) to FWSE (feet or miles)
—Type(s) and description(s) of public receptor(s) and planning distance(s) to public receptor(s) (feet or miles)
—Adverse impacts (i–v) to a public water system

Attach documentation attesting to the required consultation with the applicable downstream public water system, including name of public water system, point of contact, and date of consultation for each potentially impacted public water system. If efforts to coordinate with the applicable downstream public water systems were unsuccessful, provide documentation to demonstrate the efforts to coordinate and provide the distance to the first downstream public water system intake.

6. Has the facility experienced a reportable CWA hazardous substance discharge to navigable waters within the last five years?

Yes ____ No ____

Attach relevant documentation of past reportable discharges.

For each reportable discharge identify:

Name of CWA hazardous substance, CAS no.

Date of discharge:
Duration of discharge (minutes):
Quantity discharged (lbs):
Navigable water(s) reached:
Injury caused to FWSE:
Injury caused to public receptors:
Adverse impacts to public water systems:
NRC report number:

Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I have no personal knowledge that the information submitted is other than true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

PART 300—NATIONAL OIL AND HAZARDOUS SUBSTANCES POLLUTION CONTINGENCY PLAN

■ 2. The authority citation for part 300 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.;* 42 U.S.C. 9601–9657; E.O. 13626, 77 FR 56749, 3 CFR, 2013 Comp., p. 306; E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; E.O. 12580, 52 FR 2923, 3 CFR, 1987 Comp., p. 193.

■ 3. Amend § 300.185 by revising paragraph (a) to read as follows:

§ 300.185 Nongovernmental participation.

(a) Industry groups, academic organizations, and others are encouraged to commit resources for response operations. Specific commitments should be listed in the RCP and ACP. Those entities required to develop tank vessel and facility response plans under CWA section 311(j) must be able to respond to a worst case discharge to the maximum extent practicable, and shall commit sufficient resources to implement other aspects of those plans in accordance with the requirements of 30 CFR part 254, 33 CFR parts 150, 154, and 155; 40 CFR parts 112 and 118; and 49 CFR parts 171 and 194.

* * * * *

■ 4. Amend § 300.211 by revising paragraph (c) to read as follows:

§ 300.211 OPA facility and vessel response plans.

* * * * *

(c) For non-transportation-related onshore facilities, these regulations are codified in 40 CFR 112.20 and 40 CFR part 118;

* * * * *

■ 5. Add § 300.411 to read as follows:

§ 300.411 Response to CWA hazardous substance worst case discharges.

(a) If the investigation by the OSC shows that a discharge is a worst case discharge as defined in the ACP, or there is a substantial threat of such a discharge, the OSC shall:

(1) Notify the NSFCC;

(2) Require, where applicable, implementation of the worst case portion of an approved facility response plan required by CWA section 311(j)(5);

(3) Implement the worst case portion of the ACP required by CWA section 311(j)(4); and

(4) Take whatever additional response actions are deemed appropriate.

(b) Under the direction of the OSC, the NSFCC shall coordinate use of private and public personnel and equipment, including strike teams, to respond to a worst case discharge and mitigate or prevent a substantial threat of such a discharge.

RIN 2070–AK86

Asbestos Part 1; Chrysotile Asbestos; Regulation of Certain Conditions of Use Under the Toxic Substances Control Act (TSCA)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA or the Agency) is issuing this final rule under the Toxic Substances Control Act (TSCA) to address to the extent necessary the unreasonable risk of injury to health presented by chrysotile asbestos based on the risks posed by certain conditions of use. The injuries to human health include mesothelioma and lung, ovarian, and laryngeal cancers resulting from chronic inhalation exposure to chrysotile asbestos.

DATES: This final rule is effective on May 28, 2024.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2021–0057, is available online at *https://www.regulations.gov.* Additional instructions for visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/.*

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

You may be potentially affected by this final action if you manufacture (including import), process, distribute in commerce, use, or dispose of chrysotile asbestos. TSCA section 3(9) defines the term ''manufacture'' to mean to import into the customs territory of the United States (as defined in general note 2 of the Harmonized Tariff Schedule of the United States), produce, or manufacture. Therefore, unless expressly stated otherwise, importers of chrysotile asbestos are subject to any provisions regulating manufacture of chrysotile asbestos. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Oil and Gas Extraction (NAICS code 211).
- Nuclear Electric Power Generation (NAICS code 221113).
- Chemical Manufacturing (NAICS code 325).
- Fabricated Metal Product Manufacturing (NAICS code 332).
- Transportation Equipment Manufacturing (NAICS code 336).
- Gasket, Packing, and Sealing Device Manufacturing (NAICS code 339991).
- Motor Vehicle and Motor Vehicle Parts and Supplies Merchant Wholesalers (NAICS code 4231).
- Motor Vehicle and Parts Dealers (NAICS code 441).
- Automotive Repair and Maintenance (NAICS code 8111).

This action may also affect certain entities through pre-existing import, including import certification, and export notification rules under TSCA. Persons who import any chemical substance in bulk form, as part of a mixture, or as part of an article (if required by rule) are also subject to TSCA section 13 import certification requirements and the corresponding regulations at 19 CFR 12.118 through 12.127; see also 19 CFR 127.28. Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B. In addition, any persons who export or intend to export a chemical substance that is the subject of this final rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)), and must comply with the export notification requirements in 40 CFR part 707, subpart D. Asbestos (including chrysotile asbestos) is already subject to TSCA section 6(a) (40 CFR part 763, subparts G and I) rules and a significant new use rule under TSCA section 5(a)(2) (40 CFR part 721.11095) that trigger the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b); see also 40 CFR 721.20). Any person who exports or intends to export asbestos (including chrysotile asbestos) must comply with the export notification requirements in 40 CFR part 707, subpart D.

If you have any questions regarding the applicability of this final action to a particular entity, consult the technical information contact listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is the Agency's authority for taking this action?

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if the EPA determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the risk evaluation, under the conditions of use, EPA must by rule apply one or more requirements to the extent necessary so that the chemical substance or mixture no longer presents such risk.

C. What action is the Agency taking?

Pursuant to TSCA section 6(b), EPA determined that chrysotile asbestos presents an unreasonable risk of injury to health, without consideration of costs or other non-risk factors, including an unreasonable risk to potentially exposed or susceptible subpopulations identified as relevant to the 2020 Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos by EPA, under the following conditions of use (Ref. 1):

- Processing and Industrial use of Chrysotile Asbestos Diaphragms in the Chlor-alkali Industry;
- Processing and Industrial Use of Chrysotile Asbestos-Containing Sheet Gaskets in Chemical Production;
- Industrial Use and Disposal of Chrysotile Asbestos-Containing Brake Blocks in the Oil Industry;
- Commercial Use and Disposal of Aftermarket Automotive Chrysotile Asbestos-Containing Brakes/Linings;
- Commercial Use and Disposal of Other Chrysotile Asbestos-Containing Vehicle Friction Products;
- Commercial Use and Disposal of Other Chrysotile Asbestos-Containing Gaskets;
- Consumer Use and Disposal of Aftermarket Automotive Chrysotile Asbestos-Containing Brakes/Linings; and
- Consumer Use and Disposal of Other Chrysotile Asbestos-Containing Gaskets.

A detailed description of the conditions of use that contribute to

EPA's determination that chrysotile asbestos presents an unreasonable risk is included in Unit II.C.2. Accordingly, to address the unreasonable risk, EPA is issuing this final rule under TSCA section 6(a) to:

(i) Prohibit the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, in the chlor-alkali industry and require interim workplace controls;

(ii) Prohibit the manufacture (including import), processing, use, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for sheet gaskets in chemical production and require interim workplace controls for certain commercial uses;

(iii) Prohibit the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for oilfield brake blocks, aftermarket automotive brakes and linings, other vehicle friction products and other gaskets;

(iv) Prohibit the manufacture (including import), processing, and distribution in commerce of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for consumer use of aftermarket automotive brakes and linings and other gaskets; and

(v) Establish disposal and recordkeeping requirements.

D. Why is the Agency taking this action?

Under TSCA section 6(a), ''[i]f the Administrator determines in accordance with subsection (b)(4)(A) that the manufacture, processing, distribution in commerce, use or disposal of a chemical substance or mixture, or that any combination of such activities, presents an unreasonable risk of injury to health or the environment, the Administrator shall by rule . . . apply one or more of the [section 6(a)] requirements to such substance or mixture to the extent necessary so that the chemical substance no longer presents such risk.'' Chrysotile asbestos was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in December 2020 (Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos) (Ref. 1). On April 12, 2022, EPA issued a proposed rule (87 FR 21706) (FRL–8332–02–OCSPP) under TSCA section 6(a) to regulate those conditions of use evaluated in the 2020 Risk Evaluation for which EPA determined unreasonable risk, so that chrysotile asbestos does not present unreasonable risk as determined in the 2020 Risk Evaluation, and the Agency received public comment on the proposal. After the close of the public comment period for the proposed rule, EPA received comments and held meetings with stakeholders. EPA issued a Notice of Data Availability on March 17, 2023 (88 FR 16389) (FRL–8332–04–OCSPP), to request additional public comment on any information received during and after the proposed rule public comment period and how EPA should consider such information in the development of this final rule. With this action, EPA is finalizing with modifications the rule proposed on April 12, 2022 (87 FR 21706), so that conditions of use of chrysotile asbestos do not present unreasonable risk, as determined in the 2020 Risk Evaluation. The unreasonable risk is described in Unit II.C.1. and the conditions of use that are the subject of this final action are described in Unit II.C.2.

E. What are the estimated incremental impacts of this action?

EPA has prepared an Economic Analysis of the potential incremental impacts associated with this rulemaking. (Ref. 2).

1. Background

Asbestos use in the nation has been declining for decades and current domestic consumption of raw asbestos is less than 0.1% of peak consumption in the early 1970s. Chlor-alkali producers are the only industry in the U.S. known to fabricate products from raw chrysotile asbestos. In addition, EPA has concluded that imports of a few asbestos-containing products are intended, known, or reasonably foreseen to occur; while the total quantity of asbestos in those products is uncertain, it is believed to be relatively small (see Appendix C of the Risk Evaluation).

2. Costs

Three firms own a total of eight chlor-alkali facilities in the U.S. that still use asbestos diaphragms to produce chlorine and sodium hydroxide (also known as caustic soda). The eight facilities range in age from 42 to 83 years old, although some have had new capacity added as recently as 18 years ago, and others may have had recent refurbishments. The share of total chlorine and caustic soda production using asbestos diaphragm cells has been declining over time. The diaphragm cells in these facilities currently represent about one-third of U.S. chlor-alkali production capacity. EPA anticipates that firms will respond to the rule by converting their asbestos diaphragm cells to non-asbestos diaphragms or membrane cells, which do not use asbestos. A more detailed discussion of the expected impacts of conversion from asbestos-containing diaphragm cells to non-asbestos diaphragms or membrane cells is located in Unit VII.B.5.

Converting the facilities using asbestos diaphragm cells to non-asbestos technologies is predicted to require an investment of approximately $2.8 billion to $3.4 billion across all eight facilities. For a number of these facilities, the non-asbestos technologies, particularly membrane cells, are more energy efficient than asbestos diaphragm cells, so those conversions are expected to result in savings for the companies that would accrue over the lifetimes of the facilities. The dollar value of the expected change in energy usage (which is a net energy savings across all the facilities) is included in the estimated net annualized costs. Membrane cells also produce a higher grade of caustic soda that has historically commanded a higher price than the product from asbestos diaphragm cells, and which may continue to do so in the future. EPA anticipates that the conversions to non-asbestos diaphragms and membranes would occur in the coming decades even without this final rule, following existing trends in the chlor-alkali industry to transition away from asbestos. Compared to this baseline trend, the incremental net effect of the rule on the chlor-alkali industry over a 35-year period using a 3 percent discount rate is estimated to range from an annualized cost of $7 million per year to an annualized savings of $1 million per year, depending on whether the higher grade of caustic soda produced by membrane cells continues to command a premium price. Using a 7 percent discount rate, the incremental annualized net effect is a cost ranging from $34 million to $43 million per year, again depending on whether there are revenue gains from the caustic soda production.

EPA also estimates that approximately 1,800 sets of automotive brakes or brake linings containing asbestos may be imported into the U.S. each year, representing 0.002% of the total U.S. market for aftermarket brakes. The cost of a prohibition would be minimal due to the ready availability of alternative products that are only slightly more expensive (an average cost increase of about $5 per brake). The rule is estimated to result in total annualized costs for aftermarket automotive brakes

of approximately $300,000 per year using a 3% discount rate and $200,000 per year using a 7% discount rate.

EPA did not have information to estimate the costs of prohibiting asbestos for the remaining uses subject to the rule (sheet gaskets used in chemical production, including titanium dioxide production and nuclear material processing; brake blocks in the oil industry; other vehicle friction products; or other gaskets), so there are additional unquantified costs. EPA believes that the use of these asbestos-containing products has declined over time, and that, depending on which products, they are now either used in very small segments of the industries, or possibly not at all.

More information on the estimated costs is available in EPA's Economic Analysis for the rule (Ref. 2).

3. Benefits

EPA's Economic Analysis for the rule (Ref. 2), quantified the benefits from avoided cases of lung cancer, mesothelioma, ovarian cancer, and laryngeal cancer due to reduced asbestos exposures to workers, occupational non-users (ONUs), and do-it-yourselfers (DIYers) related to the rule's requirements for chlor-alkali diaphragms, aftermarket automotive brakes, and sheet gaskets used for titanium dioxide production. The combined national quantified benefits of avoided cancer cases associated with these products are approximately $6,000 per year using a 3% discount rate and $3,000 per year using a 7% discount rate, based on the cancer risk estimates from the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos. EPA did not estimate the aggregate avoided cancer benefits of the requirements for sheet gaskets used for other forms of chemical production, oilfield brake blocks, other vehicle friction products or other gaskets because the Agency did not have sufficient information on the number of individuals likely to be affected by the rule. To the extent that such products are still manufactured, processed, distributed in commerce, used, or disposed of, there would be additional benefits from reducing exposures from these use categories.

There are also unquantified benefits due to other avoided adverse health effects associated with asbestos exposure including respiratory effects (*e.g.,* asbestosis, non-malignant respiratory disease, deficits in pulmonary function, diffuse pleural thickening and pleural plaques). The rule will also generate unquantified benefits from other exposure pathways and life cycle stages for which exposures were not estimated. To the extent that the number of individuals exposed or exposure levels in the baseline were underestimated, EPA's analysis underestimates the benefits of the regulatory requirements.

In addition to the benefits of avoided adverse health effects associated with chrysotile asbestos exposure, the rule is expected to generate significant benefits from reduced air pollution associated with electricity generation. Chlor-alkali production is one of the most energy-intensive industrial operations in the United States. To the extent that alternative technologies are more energy efficient, converting asbestos diaphragm cells to non-asbestos technologies reduces overall electricity consumption and thus the total level of pollutants associated with electric power generation, including carbon dioxide, particulate matter, sulfur dioxide, and nitrogen oxides. Converting asbestos diaphragm cells to non-asbestos technologies could yield millions of dollars per year in environmental and health benefits from reduced emissions of these pollutants. EPA's Economic Analysis, which can be found in the rulemaking docket (Ref. 2), contains more information on the potential magnitude of these monetized benefits from reduced criteria air pollutants and carbon dioxide emissions.

4. Small Entity Impacts

As described in more detail in Unit X.C. and in section 6.2 of the Economic Analysis (Ref. 2), EPA estimates that 14 to 1,372 small entities would be subject to the rule.

Chlor-alkali facilities account for nearly all of the quantified costs of the rule, and none of the firms operating chlor-alkali facilities are small businesses.

Eleven to 1,369 of the affected small businesses perform brake replacements using aftermarket automotive brake linings and pads containing asbestos. The estimate of 11 affected small entities assumes that each affected business performs between 40 and 700 brake replacements per year using asbestos brake linings or pads. The estimate of 1,369 affected small entities assumes that each affected business installs a single set of asbestos brake linings or pads per year. Affected firms are expected to incur a cost of approximately $18 per brake replacement job for the additional expense of a set of four non-asbestos brake linings or pads, and about $1 for recordkeeping about their asbestos waste disposal activities. This results in annual costs between $20 and $14,000 per firm (depending on the number of brake replacements they perform). At the low-end estimate of 11 affected brake replacement firms, approximately 85% of firms would have cost impacts of less than 1% of their annual revenues, about 10% would have cost impacts between 1% and 3%, and around 6% would have cost impacts of greater than 3%. At the high-end estimate of 1,369 affected brake replacement firms, 100% of firms would have a cost impact of less than 1% of their annual revenues.

Two small businesses are assumed to manufacture sheet gaskets containing asbestos for titanium dioxide production. EPA does not have data on the cost to these businesses resulting from the prohibition on sheet gaskets containing asbestos. Therefore, EPA was unable to estimate the magnitude of the impacts for these small entities. Asbestos-free products in this application reportedly require more frequent replacement than items containing asbestos. As a result, the rule could increase revenues for the affected small business suppliers if they sell a larger volume of non-asbestos products to the end users as replacements.

One small business is known to import and distribute oilfield brake blocks containing asbestos. EPA does not have data on the cost for this use category resulting from the prohibition on products containing asbestos. Therefore, EPA was unable to estimate the magnitude of the impacts for this small entity. Asbestos-free products in this application reportedly require more frequent replacement than items containing asbestos. As a result, the rule could increase revenues for the affected small business supplier if it sells a larger volume of non-asbestos products to the end users as replacements.

No small businesses have been identified as using sheet gaskets for chemical production or brake blocks in the oil industry.

EPA has not identified specific firms (of any size) manufacturing, processing, distributing or using products containing asbestos for the aftermarket automotive brakes, other gaskets, and other vehicle friction products use categories. To the extent that there are any small businesses engaged in these activities, there are likely only a few firms facing a small cost increase for asbestos-free products.

5. Environmental Justice

This rule is expected to increase the level of environmental protection for all affected populations without having disproportionate and adverse health or environmental effects on any population, including any communities

with environmental justice concerns (Ref. 2). Most of the affected chlor-alkali facilities and one other chemical manufacturer affected by this rule are located in or near communities with high levels of polluting industrial activities, elevated disease risk, and a high proportion of people of color. For example, communities that contain affected chlor-alkali facilities have a cumulative baseline cancer risk from air toxics that is nearly twice the national average, and the share of Black/African American persons in these communities is almost three times the national average. This rule is not expected to increase these pre-existing environmental justice concerns. Units III.B. and X.J. discuss outreach conducted to advocates for communities with environmental justice concerns that might be subject to disproportionate exposure to chrysotile asbestos.

6. Children's Environmental Health

Consistent with Executive Order 13045 (62 FR 19885, April 23, 1997), EPA evaluated the health and safety effects of this action on children. This action is also subject to EPA's Policy on Children's Health (*https://www.epa.gov//childrens-health-policy-and-plan*) because the environmental health risk addressed by this action has a disproportionate effect on children.

Chrysotile asbestos has a disproportionate effect on children. The health effect of concern relates to exposures to chrysotile asbestos are mesothelioma, lung and other cancers, all of which have a long latency period following exposure. The risk evaluation (Ref. 1) demonstrated in sensitivity analyses that age at first exposure affected risk estimates, with earlier exposures in life resulting in greater risk. For children, exposures can be anticipated (1) as bystanders for consumer uses such as aftermarket brakes and (2) in consumer uses and occupational uses given that the risk evaluation presented information indicating that children as young as 16 years of age may engage in these activities. Furthermore, EPA recognizes it is possible that workers exposed to chrysotile asbestos at work may cause unintentional exposure to individuals in their residence, including children, due to take-home exposure from contaminated clothing or other items, although this additional pathway was not specifically evaluated in the risk evaluation. This rule protects children from these disproportionate environmental health risks.

The results of EPA's evaluation are contained in the risk evaluation (Ref. 1) and the Economic Analysis (Ref. 2).

7. Effects on State, Local, and Tribal Governments

As discussed in Unit X.E., this action has federalism implications because regulation under TSCA section 6(a) may preempt state law. It does not impose costs on small governments or have tribal implications.

II. Background

A. Overview of Chrysotile Asbestos

Asbestos is defined in section 202 of TSCA Title II as: ''Asbestiform varieties of six fiber types—chrysotile (serpentine), crocidolite (riebeckite), amosite (cummingtonite-grunerite), anthophyllite, tremolite or actinolite.'' EPA used this definition of asbestos at the onset of the asbestos risk evaluation in 2016. However, EPA determined that chrysotile asbestos is the only type of asbestos where import, processing, and distribution in commerce for use is known, intended, or reasonably foreseen in the U.S. As such, EPA assessed these non-legacy conditions of use of chrysotile asbestos in the December 2020 Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 1). Following a decision by the Ninth Circuit Court of Appeals (*Safer Chemicals Healthy Families* v. *EPA,* 943 F.3d 397 (9th Cir. 2019)) concerning legacy use and associated disposal of asbestos (conditions of use that were not included in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos), EPA began developing a supplemental risk evaluation to address legacy and associated disposal conditions of use. The Risk Evaluation for Asbestos, Part 2: Supplemental Evaluation Including Legacy Uses and Associated Disposals of Asbestos will include evaluation of those conditions of use of chrysotile asbestos, the five amphibole fiber types identified in the TSCA Title II definition (crocidolite (riebeckite), amosite (cummingtonite-grunerite), anthophyllite, tremolite and actinolite) and Libby Amphibole Asbestos (mainly consisting of tremolite, winchite, and richterite). Additionally, some talc deposits and articles containing talc have been shown to contain asbestos. Thus, EPA recognizes that certain uses of talc may present the potential for asbestos exposure. Where EPA identifies reasonably available information demonstrating the presence of asbestos in talc, and where such talc applications fall under TSCA authority, those asbestos-containing talc conditions of use will be evaluated in Part 2 of the risk evaluation for asbestos. Once the Risk Evaluation for Asbestos, Part 2: Supplementary Evaluation Including Legacy Uses and Associated Disposals is complete, EPA intends to revisit the unreasonable risk determination issued in the 2020 Risk Evaluation for Asbestos Part 1, and, as appropriate, make an unreasonable risk determination for asbestos as a whole chemical substance.

In addition, on April 25, 2019, EPA finalized a significant new use rule for asbestos under TSCA section 5(a)(2) (40 CFR 721.11095) for manufacturing (including importing) or processing of asbestos for discontinued uses. This rule requires that persons notify EPA at least 90 days before commencing any manufacturing (including importing) or processing of asbestos (including as part of an article) for uses other than the uses evaluated under the Risk Evaluation for Asbestos, Part I: Chrysotile Asbestos and uses that are already prohibited under TSCA. The required notification would initiate EPA's evaluation of the risks associated with the intended significant new use. Manufacturing (including importing) and processing (including as part of an article) for the significant new use may not commence until EPA has conducted a review of the notice, made an appropriate determination on the notice, and taken such actions as are required in association with that determination. Also, on July 12, 1989, EPA issued a rule under TSCA section 6 entitled: Asbestos: Manufacture, Importation, Processing, and Distribution in Commerce Prohibitions (54 FR 29460, July 12, 1989) (FRL–3476–2), that prohibited the manufacture (including import), processing and distribution of commerce of almost all asbestos-containing products. On October 18, 1991, in *Corrosion Proof Fittings* v. *EPA,* 947 F.2d 1201, the United States Court of Appeals for the Fifth Circuit vacated and remanded most of the 1989 rule. However, as a result of the Court's decision, certain asbestos-containing products remain banned including the manufacture, importation, processing, and distribution in commerce of corrugated paper, rollboard, commercial paper, specialty paper and flooring felt. Also, any ''new use'' remains banned—defined by that rule as uses of asbestos for which the manufacture, importation, or processing would be initiated for the first time after August 25, 1989.

This final rule applies only to chrysotile asbestos (Chemical Abstract Services Registry Number (CASRN) 132207–32–0). Chrysotile asbestos is a hydrated magnesium silicate mineral, with relatively long and flexible crystalline fibers that are capable of being woven. Chrysotile asbestos fibers used in most commercial applications consist of aggregates and usually contain a broad distribution of fiber

lengths. Chrysotile asbestos fiber bundle lengths usually range from a fraction of a millimeter to several centimeters, and diameters range from 0.1 to 100 micrometers. More information on the physical and chemical properties of chrysotile asbestos is in Section 1.1 of the Risk Evaluation (Ref. 1).

EPA evaluated the conditions of use associated with six ongoing use categories of chrysotile asbestos (chlor-alkali diaphragms, sheet gaskets used in chemical production, oilfield brake blocks, aftermarket automotive brakes/linings, other vehicle friction products, and other gaskets). There is no longer any domestic mining of asbestos. All imported raw asbestos is chrysotile asbestos, and it is used in the manufacture of chlor-alkali diaphragms. According to the United States Geological Survey (USGS), 152 metric tons of raw chrysotile asbestos were imported in 2022 (Ref. 3) from Brazil; however, as discussed in this preamble, public comments to the proposed rule indicate the importation of raw chrysotile asbestos for chlor-alkali use has ceased for now, while imports for the other use categories may be ongoing. EPA is also aware that Brazil's Federal Supreme Court banned asbestos mining, processing and export in 2022.

B. Regulatory Actions Pertaining to Chrysotile Asbestos

Because of its adverse health effects, chrysotile asbestos is subject to numerous State, Federal, and international regulations restricting and regulating its use. A summary of EPA regulations pertaining to chrysotile asbestos, as well other Federal, State, and international regulations, is in the docket (Ref. 1; Ref. 4).

C. Summary of EPA's Risk Evaluation Activities on Chrysotile Asbestos

In July 2017, EPA published a scope of the chrysotile asbestos risk evaluation (82 FR 31592, July 7, 2017) (FRL–9963–57), and after receiving public comment, published a problem formulation in June 2018 (83 FR 26998, June 11, 2018) (FRL–9978–40). In March 2020, EPA released a draft risk evaluation for asbestos (EPA–HQ–OPPT–2019–0501–0002), and in December 2020, following public comment and peer review by the Science Advisory Committee on Chemicals (SACC), EPA finalized the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 1).

In the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, EPA evaluated risks associated with the conditions of use involving six non-legacy use categories of chrysotile asbestos including: Chlor-alkali diaphragms, sheet gaskets in chemical production, other gaskets, oilfield brake blocks, aftermarket automotive brake/linings, and other vehicle friction products. EPA evaluated the conditions of use within these categories, including manufacture (including import), processing, distribution, commercial use, consumer use, and disposal (Ref. 1). Descriptions of these conditions of use are included in Unit II.C.2.

The risk evaluation identified potential adverse health effects associated with exposure to chrysotile asbestos, including the risk of mesothelioma, lung cancer, and other cancers from chronic inhalation. A further discussion of the chrysotile asbestos hazards is included in Unit II.C.1. The chrysotile asbestos conditions of use that EPA determined contribute to the chemical substance's unreasonable risk to health include processing and industrial use of diaphragms in the chlor-alkali industry; processing and industrial use of sheet gaskets used in chemical production; industrial use and disposal of brake blocks in the oil industry; commercial use and disposal of aftermarket automotive brakes/linings; commercial use and disposal of other vehicle friction products; commercial use and disposal of other gaskets; consumer use and disposal of aftermarket automotive brakes/linings; and consumer use and disposal of other gaskets. This determination includes unreasonable risk of injury to health to both workers and occupational non-users (ONUs) during occupational exposures, and to consumers and bystanders during exposures to consumer uses.

EPA determined that ongoing uses of chrysotile asbestos do not present unreasonable risk to the environment (Ref. 1).

As previously discussed, following the November 2019 decision of the Ninth Circuit Court of Appeals in *Safer Chemicals Healthy Families* v. *EPA,* 943 F.3d 397, the agency is also conducting a Part 2 of the Asbestos Risk Evaluation: Supplemental Evaluation Including Legacy Uses and Associated Disposals of Asbestos, which is occurring in parallel with its effort to pursue risk management to address unreasonable risk identified in the Risk Evaluation for Asbestos, Part 1. Legacy uses and associated disposals for asbestos are conditions of use for which manufacture (including import), processing, and distribution in commerce for a use no longer occur, but where use (*e.g.,* in situ building material) and disposal are still known, intended, or reasonably foreseen to occur.

The October 13, 2021, consent decree in the case *Asbestos Disease Awareness Organization et al* v. *Regan et al,* 4:21–cv–03716–PJH (N.D. Cal.) requires the agency to publish a final Part 2 asbestos risk evaluation on or before December 1, 2024. EPA published a draft scope for the Part 2 asbestos risk evaluation on December 29, 2021 (86 FR 74088) (FRL–9347–01–OCSPP), and a final scope for the Part 2 asbestos risk evaluation on June 29, 2022 (87 FR 38746) (FRL–9347–02–OCSPP).

As part of the problem formulation for the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, EPA found that exposures to the general population may occur from the conditions of use considered. (Ref. 5). EPA determined, in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, that exposure to the general population via surface water, drinking water, ambient air, and disposal pathways falls under the jurisdiction of other environmental statutes administered by EPA. The Agency, therefore, at that time explained that it was tailoring the scope of the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos using authorities in TSCA sections 6(b) and 9(b)(1). As such, EPA did not evaluate hazards or exposures to the general population, and the unreasonable risk determinations made in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos do not account for exposures to the general population. However, EPA expects that any potential exposures to the general population would be adequately addressed through the prohibition on the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos to address the unreasonable risk posed to workers, ONUs, consumers and bystanders. EPA does plan to evaluate exposures to the general population in the Risk Evaluation for Asbestos, Part 2: Supplemental Evaluation Including Legacy Uses and Associated Disposals of Asbestos.

EPA also concluded that, based on the reasonably available information in the published literature provided by industries using asbestos and reporting to EPA databases, there are minimal or no releases of asbestos to surface water associated with the conditions of use that EPA evaluated in Part 1. Therefore, EPA concluded that there is low or no risk to aquatic and sediment-dwelling organisms from exposure to chrysotile asbestos. Terrestrial pathways, including biosolids from wastewater treatment plants, were excluded from the analysis at the problem formulation stage (Ref. 1; Ref. 5). However, EPA

expects that any potential exposures to terrestrial species, as with the general population, would be adequately addressed through the prohibition on the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos.

1. Description of Unreasonable Risk

The health endpoint driving EPA's determination of unreasonable risk for chrysotile asbestos under the conditions of use is cancer from inhalation exposure (Ref. 1). This unreasonable risk includes the risk of mesothelioma and lung, ovarian, and laryngeal cancers from chronic inhalation exposure. Inhalation unit risk (IUR) is typically defined as a plausible upper bound on the estimate of cancer risk per micrograms per cubic meter (μg/m^3) air breathed for 70 years. For asbestos, the IUR is expressed as cancer risk per fibers per cubic centimeter (f/cc) (in units of the fibers as measured by Phase Contrast Microscopy (PCM)). The IUR represents the total cancer incidence risk from chronic inhalation exposure of chrysotile asbestos and was based on epidemiological studies on mesothelioma and lung cancer in cohorts of workers using chrysotile asbestos in commerce. The inhalation unit risk for mesothelioma and lung cancer were directly estimated from the selected epidemiologic studies reporting exposure-response relationships between exposure to chrysotile asbestos and those cancers. Since there was no exposure-response data for ovarian and laryngeal cancer effects in the epidemiological literature, a direct estimate of risk from ovarian and laryngeal cancer could not be made for the inhalation unit risk calculation. An adjustment factor for ovarian and laryngeal cancer effects was applied to risk value estimates to correct for the underestimated total cancer risk derived from only lung cancer and mesothelioma that yielded an IUR for total cancer risk encompassing all four cancers known to be caused by exposure to chrysotile asbestos. And, as discussed in Section 4.2.1 of the Risk Evaluation (Ref. 1), for workers and ONUs exposed in a workplace, EPA used as a benchmark extra risk of 1 cancer per 10,000 people, that is, a risk level of $1{\times}10^{-4}$ (or 1E–4). In addition, because non-cancer effects of asbestosis and pleural thickening may also contribute to overall health risk resulting from workplace exposures to chrysotile asbestos, the quantified health risks of chrysotile asbestos are underestimates because they are based on cancer risk alone.

For processing and industrial use of chrysotile asbestos diaphragms in the chlor-alkali industry, EPA found unreasonable risk to workers and ONUs from chronic inhalation exposure to chrysotile asbestos, based on industry data including personal air monitoring (*i.e.,* worker breathing zone results) and area air monitoring (*i.e.,* fixed location air monitoring results) that led to the high-end risk estimates exceeding the $1{\times}10^{-4}$ risk benchmark (Section 5.2.1 of the Risk Evaluation).

For both the processing (*i.e.,* gasket cutting) and industrial use activities of chrysotile asbestos-containing sheet gaskets for chemical production, EPA found unreasonable risk to workers and ONUs from chronic inhalation exposure to chrysotile asbestos based on monitoring data provided by industry and data in the published literature (Section 5.2.1 of the Risk Evaluation).

For the industrial use and disposal of chrysotile asbestos-containing oilfield brake blocks, EPA found unreasonable risk to workers and ONUs from chronic inhalation exposure to chrysotile asbestos based on a published literature (Section 5.2.1 of the Risk Evaluation).

For the commercial use and disposal of aftermarket automotive chrysotile asbestos-containing brakes/linings and other vehicle friction products (except for the NASA Super Guppy Turbine aircraft use), EPA found unreasonable risk to workers from chronic inhalation exposure to chrysotile asbestos based on published literature and OSHA data (Section 2.3.1.8.1 of the Risk Evaluation). EPA determined, based on exposure data provided by NASA to EPA (Section 2.3.1.8.2 of the Risk Evaluation), that the use and disposal of chrysotile asbestos-containing brakes for NASA's Super Guppy Turbine aircraft did not present an unreasonable risk of injury to health or the environment.

For the commercial use and disposal of other chrysotile asbestos-containing gaskets, EPA found unreasonable risk to workers and ONUs from chronic inhalation exposure to chrysotile asbestos based on exposure scenarios from occupational monitoring data for asbestos-containing gasket replacement activities in vehicles.

For consumer use and disposal of aftermarket automotive chrysotile asbestos-containing brakes/linings and other chrysotile asbestos-containing gaskets, EPA found unreasonable risk to consumers and bystanders from chronic inhalation exposure to chrysotile asbestos, using as a benchmark cancer risk level of $1{\times}10^{-6}$ (1E–6) for consumers and bystanders.

EPA also noted in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos that it is possible for industrial workers or consumers working with aftermarket automotive products or other types of asbestos-containing gaskets to cause unintentional exposure to individuals in their residence due to take-home exposure from contaminated clothing or other items.

The provisions of the final rule are described in Unit VI. and the health effects of chrysotile asbestos and the magnitude of the exposures to chrysotile asbestos are described in Unit VII.B.1.

2. Description of Conditions of Use

This unit describes the conditions of use subject to this final action. Although EPA identified both industrial and commercial uses in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos for purposes of distinguishing scenarios, the Agency clarified then and clarifies now that EPA interprets the authority over "any manner or method of commercial use" under TSCA section 6(a)(5) to apply to both industrial and commercial uses identified in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos.

The conditions of use for this final action do not include any legacy uses or associated disposal for chrysotile asbestos or other asbestos fiber types. EPA will consider legacy uses and associated disposals in Part 2 of the risk evaluation for asbestos (Ref. 1).

a. *Processing and industrial use of chrysotile asbestos diaphragms in the chlor-alkali industry.*

Chrysotile asbestos historically has been imported and used by the chlor-alkali industry for the fabrication of semi-permeable diaphragms. The chrysotile asbestos diaphragms are used in an industrial process for the production of chlorine and sodium hydroxide (caustic soda). Asbestos is chemically inert and able to effectively separate chlorine and sodium hydroxide in electrolytic cells. The chlor-alkali chemical production process involves the separation of the sodium and chloride atoms of salt in saltwater (brine) via electricity to produce sodium hydroxide (caustic soda), hydrogen, and chlorine. The electrolytic cell contains two compartments separated by a semi-permeable diaphragm, which is made mostly of chrysotile asbestos. The diaphragm prevents the reaction of the caustic soda with the chlorine and allows for the separation of both materials for further processing. Diaphragms are typically used for 1–3 years before they must be replaced (Ref. 1).

b. *Processing and industrial use of chrysotile asbestos-containing sheet gaskets in chemical production.*

Sheet gaskets are used to form a leakproof seal between fixed components. Chrysotile asbestos-containing gaskets are used primarily in industrial applications with extreme operating conditions, such as high temperatures, high pressures, and the presence of chlorine or other corrosive substances. Such extreme operating conditions are found in many chemical manufacturing and processing operations, including: the manufacture of titanium dioxide and chlorinated hydrocarbons; polymerization reactions involving chlorinated monomers; and steam cracking at petrochemical facilities. Chrysotile asbestos-containing gaskets used for titanium dioxide production are fabricated from sheets composed of 80% (minimum) chrysotile asbestos fully encapsulated in styrene butadiene rubber. The chrysotile asbestos-containing sheets are articles which are imported into the U.S. in large rolls where they are cut to shape by a fabricator and subsequently used at titanium dioxide manufacturing facilities. Installed gaskets typically remain in use anywhere from a few weeks to three years (Ref. 1). In addition to the industrial uses specifically identified in the risk evaluation, the use of sheet gaskets in the processing of nuclear material is also covered by this condition of use because it involves processing chemicals under extreme operating conditions, in this case operations involving radioactive materials.

c. *Industrial use and disposal of chrysotile asbestos-containing brake blocks in oil industry.*

The rotary drilling rig of an oil well uses a drawworks hoisting machine to raise and lower the traveling blocks during drilling. The drawworks is a permanently installed component of a mobile drilling rig. The drawworks consists of a large-diameter steel spool, a motor, a main brake, a reduction gear, and an auxiliary brake. The brake of the drawworks hoisting machine is an essential component that is engaged when no motion of the traveling block is desired. Chrysotile asbestos-containing brake blocks are imported articles for use in some drawworks, reportedly most often on larger drilling rigs. Spent brake blocks must periodically be replaced by workers in the oilfield industry who maintain the rig (Ref. 1).

d. *Commercial use and disposal of aftermarket automotive chrysotile asbestos-containing brakes/linings.*

The two primary types of automobile brakes are drum brakes and disc brakes, and chrysotile asbestos has been found in both, in linings for drum brake assemblies and pads in disc brake assemblies. Disc brakes are much more common today than drum brakes, but many passenger vehicles have a combination of disc brakes for the front wheels and drum brakes for the rear wheels. Chrysotile asbestos fibers offer many properties that are desired for brake linings and brake pads, and up through the 1990s many new automobiles manufactured in the United States had brake assemblies with asbestos-containing components. By 2000, asbestos was no longer used in the brakes of virtually any original equipment manufacturer (OEM) automobiles sold domestically; however, asbestos-containing brake products continue to be imported and sold in the United States. The quantity of asbestos-containing brake part articles imported is unknown. Therefore, asbestos could be found in the United States: (1) In vehicles on the road that have asbestos-containing brakes, whether from older and vintage vehicles or aftermarket parts; and (2) In vehicles that have new replacement asbestos-containing brakes installed by establishments or individuals that use certain imported products. Brakes must be repaired and replaced periodically, which involves activities that create dust and potential occupational exposure to asbestos (Ref. 1).

e. *Commercial use and disposal of other chrysotile asbestos-containing vehicle friction products.*

While EPA has verified that U.S. automotive manufacturers are not installing asbestos-containing brakes on new cars for domestic distribution, EPA identified a company that claimed to import asbestos-containing brakes and then install them on cars in the United States for export only. Following completion of the risk evaluation, and during the risk management phase following publication of the final risk evaluation, this company disavowed this practice (Ref. 6).

In addition, there is a limited use of asbestos-containing brakes for a special, large transport plane, the ''Super-Guppy'' Turbine (SGT) aircraft, owned and operated by the National Aeronautics and Space Administration (NASA). The SGT aircraft is a specialty cargo plane that transports oversized equipment, and it is considered a mission-critical vehicle. Only one SGT aircraft is in operation today, and NASA acquired it in 1997. The SGT aircraft averages approximately 100 flights per year. When not in use, it is hangered and maintained at a NASA facility in El Paso, Texas. The SGT aircraft has eight landing gear systems, and each system has 32 brake blocks, which contain chrysotile asbestos. Potential worker exposures are associated with servicing the brakes. As explained in the risk evaluation, the following two conditions of use do not present unreasonable risk, and therefore do not require mitigation by this final rule: Use of chrysotile asbestos-containing brakes for a specialized, large NASA transport plane; and the disposal of chrysotile asbestos-containing brakes for a specialized, large NASA transport plane (Ref. 1).

f. *Commercial use and disposal of other asbestos-containing gaskets.*

EPA also identified the use of chrysotile asbestos-containing gaskets in the exhaust system of a specific type of utility vehicle manufactured and available for purchase in the United States. The utility vehicle manufacturer purported at the time to receive the pre-cut gaskets which are then installed during manufacture of the vehicle. The gaskets may be removed during servicing of the exhaust system at utility vehicle dealerships and other repair and maintenance shops. Exhaust gasket installation and repair activities create asbestos exposure. (Ref. 1).

g. *Consumer use and disposal of aftermarket automotive chrysotile asbestos-containing brakes/linings.*

Asbestos could be found in the United States: (1) In vehicles on the road that have asbestos-containing brakes, whether from original manufacturers (primarily for older and vintage vehicles) or aftermarket parts; and (2) In vehicles that have new replacement asbestos-containing brakes installed by establishments or individuals that use certain imported products. Brakes must be repaired and replaced periodically, activities which create dust and exposure to asbestos for consumers and bystanders who perform their own do-it-yourself automobile maintenance and repairs on asbestos-containing components (Ref. 1).

h. *Consumer use and disposal of other asbestos-containing gaskets.*

EPA also identified the use of chrysotile asbestos-containing gaskets in the exhaust system of a specific type of utility vehicle manufactured and available for purchase in the United States. The gaskets may be removed during servicing of the exhaust system. EPA determined that do-it-yourself consumers who may repair these vehicles and bystanders are exposed to asbestos (Ref. 1).

III. EPA's Proposed Rule Under TSCA Section 6(a) for Chrysotile Asbestos

A. Description of TSCA Section 6(a) Requirements

Under TSCA section 6(a), if the Administrator determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the Agency's risk evaluation, under the conditions of use, EPA must by rule apply one or more requirements to the extent necessary so that the chemical substance no longer presents such risk.

The TSCA section 6(a) requirements can include one or more of the following actions alone or in combination:

- Prohibit or otherwise restrict the manufacturing (including import), processing, or distribution in commerce of the substance or mixture, or limit the amount of such substance or mixture which may be manufactured, processed, or distributed in commerce (TSCA section 6(a)(1)).
- Prohibit or otherwise restrict the manufacturing, processing, or distribution in commerce of the substance or mixture for a particular use or above a specific concentration for a particular use (TSCA section 6(a)(2)).
- Limit the amount of the substance or mixture which may be manufactured, processed, or distributed in commerce for a particular use or above a specific concentration for a particular use specified (TSCA section 6(a)(2)).
- Require clear and adequate minimum warning and instructions with respect to the substance or mixture's use, distribution in commerce, or disposal, or any combination of those activities, to be marked on or accompanying the substance or mixture (TSCA section 6(a)(3)).
- Require manufacturers and processors of the substance or mixture to make and retain certain records or conduct certain monitoring or testing (TSCA section 6(a)(4)).
- Prohibit or otherwise regulate any manner or method of commercial use of the substance or mixture (TSCA section 6(a)(5)).
- Prohibit or otherwise regulate any manner or method of disposal of the substance or mixture, or any article containing such substance or mixture, by its manufacturer or processor or by any person who uses or disposes of it for commercial purposes (TSCA section 6(a)(6)).
- Direct manufacturers or processors of the substance or mixture to give notice of the unreasonable risk determination to distributors, certain other persons, and the public, and to replace or repurchase the substance or mixture (TSCA section 6(a)(7)).

EPA analyzed how the TSCA section 6(a) requirements could be applied so that the unreasonable risk described in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos is no longer present. TSCA section 6(c)(2)(A) requires EPA, in proposing and promulgating TSCA section 6(a) rules, to include a statement of effects addressing certain issues, including the effects of the chemical substance on health and the environment; the magnitude of exposure of the chemical substance to humans and the environment; the benefits of the chemical substance for various uses; and the reasonably ascertainable economic consequences of the rule, including consideration of the likely effects of the rule on the national economy, small business, technological innovation, the environment and public health; and the costs and benefits and the cost effectiveness of the regulatory action and of the one or more primary alternative regulatory actions considered by the Administrator. As a result, EPA is finalizing a regulatory action and describing two primary alternative regulatory actions considered, which are discussed in Unit VI. and Unit VII.A., respectively.

Related to TSCA section 6(a) actions, TSCA section 6(c)(2)(C) requires that, in deciding whether to prohibit or restrict the chemical substance in a manner that substantially prevents a specific condition of use and in setting an appropriate transition period for such action, EPA consider, to the extent practicable, whether technically and economically feasible alternatives that benefit health or the environment will be reasonably available as a substitute when the prohibition or restriction takes effect. Unit VII.B.5. includes more information regarding EPA's consideration of alternatives.

Also as part of TSCA section 6(a) actions or separately, under the authority of TSCA section 6(g), EPA may consider granting by rule a time-limited exemption for a specific condition of use for which EPA finds: That the specific condition of use is a critical or essential use for which no technically and economically feasible safer alternative is available, taking into consideration hazard and exposure; that compliance with the proposed requirement would significantly disrupt the national economy, national security, or critical infrastructure; or that the specific condition of use of the chemical substance, as compared to reasonably available alternatives, provides a substantial benefit to health, the environment, or public safety. EPA did not propose to grant and is not finalizing an exemption from the rule requirements under TSCA section 6(g).

B. Consultations and Other Stakeholder Outreach

EPA conducted consultations and outreach in preparing for the proposed regulatory action. The Agency held a federalism consultation on May 13, 2021, as part of this rulemaking process and pursuant to Executive Order 13132 (Ref. 7). On May 24, 2021, and June 3, 2021, EPA held tribal consultations for the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 8). EPA also conducted outreach to advocates of communities that might be subject to disproportionate exposure to chrysotile asbestos, such as communities with environmental justice concerns. EPA's environmental justice (EJ) consultation occurred from June 1 through August 13, 2021. On June 1 and 9, 2021, EPA held public meetings as part of this consultation. These meetings were held pursuant to Executive Orders 12898 and 14008 (Ref. 9). Units X.E., X.F., X.J. provide more information regarding the consultations.

In addition to the consultations described in Units X.E., X.F., and X.J. on February 3, 2021, EPA held a public webinar (Ref. 10) and also attended a Small Business Administration roundtable on February 5, 2021 (Ref. 11). Furthermore, EPA engaged in discussions with industry, non-governmental organizations, other national governments, asbestos experts and users of chrysotile asbestos. Summaries of external meetings held during the development of this rulemaking are in the docket.

C. Proposed Regulatory Action

On April 12, 2022, EPA issued a proposed rule under TSCA section 6(a) to regulate certain conditions of use, so that chrysotile asbestos does not present the unreasonable risk of injury to health as determined in the 2020 Risk Evaluation (87 FR 21706). EPA proposed pursuant to TSCA section 6(a) to prohibit manufacture (including import), processing, distribution in commerce, and commercial use of chrysotile asbestos in bulk form or as part of chrysotile asbestos diaphragms used in the chlor-alkali industry and chrysotile asbestos-containing sheet gaskets used in chemical production. EPA proposed that these prohibitions would take effect two years after the

effective date of the final rule. EPA also proposed pursuant to TSCA section 6(a) to prohibit manufacture (including import), processing, distribution in commerce, and commercial use of: chrysotile asbestos-containing brake blocks used in the oil industry, aftermarket automotive chrysotile asbestos-containing brakes/linings, other chrysotile asbestos-containing vehicle friction products and other chrysotile asbestos-containing gaskets. EPA proposed that these prohibitions would take effect 180 days after the effective date of the final rule. EPA further proposed pursuant to TSCA section 6(a) to prohibit manufacture (including import), processing, and distribution in commerce of: aftermarket automotive chrysotile asbestos-containing brakes/linings for consumer use, and other chrysotile asbestos-containing gaskets for consumer use. EPA proposed that these prohibitions would take effect 180 days after the effective date of the final rule. EPA also proposed disposal and recordkeeping requirements under which regulated parties would document compliance with the proposed disposal requirements. Disposal and recordkeeping requirements would take effect 180 days after the effective date of the final rule. EPA additionally proposed definitions of certain terms used in the proposed regulatory text.

D. Primary Alternative Regulatory Action Described in the Proposed Rule

As indicated by TSCA section 6(c)(2)(A), EPA must consider the cost and benefits and the cost effectiveness of the proposed regulatory action and one or more primary alternative regulatory actions. In the April 12, 2022, proposed rule (87 FR 21706), EPA's primary alternative regulatory action described in the proposed rule was to: prohibit manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos in bulk form or as part of: chrysotile asbestos diaphragms in the chlor-alkali industry and for chrysotile asbestos-containing sheet gaskets in chemical production, with prohibitions taking effect five years after the effective date of the final rule, and require, prior to the prohibition taking effect, compliance with an existing chemical exposure limit (ECEL) to reduce inhalation exposures for the processing and commercial use of chrysotile asbestos for these uses. The primary alternative regulatory action described in the proposed rule additionally included a prohibition on the manufacture (including import), processing, distribution in commerce, and commercial use of chrysotile asbestos-containing brake blocks in the oil industry; aftermarket automotive chrysotile asbestos-containing brakes/linings; and other vehicle friction products (with prohibitions taking effect two years after the effective date of the final rule and with additional requirements for disposal). The primary alternative regulatory action described in the proposed rule also included prohibitions on manufacture (including import), processing, and distribution in commerce of aftermarket automotive chrysotile asbestos-containing brakes/linings for consumer use and other chrysotile asbestos-containing gaskets for consumer use (with prohibitions taking effect two years after the effective date of the final rule). The primary alternative regulatory action described in the proposed rule also included a requirement to dispose of chrysotile asbestos-containing materials in a manner identical to the proposed regulatory action, with additional provisions for downstream notification and signage and labeling.

IV. Summary of Public Comments

A. Public Comments Regarding the Proposed Rule

EPA received a total of 10,847 public comments on the April 12, 2022, Proposed Rule titled "*Asbestos Part 1: Chrysotile Asbestos; Regulation of Certain Conditions of Use Under Section 6(a) of the Toxic Substances Control Act (TSCA).*" The comment period for the proposed rule was originally scheduled to end on June 13, 2022, but was extended until July 13, 2022, in response to public requests (87 FR 31814, FRL–8332–03–OCSPP). EPA received 158 unique comments from trade organizations, industry stakeholders, environmental groups, and non-governmental health advocacy organizations, among others. A separate document that summarizes all comments submitted and EPA's responses to those comments is available in the docket for this rulemaking (Ref. 12).

B. Notice of Data Availability and Request for Comment

After the close of the public comment period for the proposed rule, EPA received comments and held meetings with stakeholders, including affected industry and interested groups, related to the use of chrysotile asbestos diaphragms in the chlor-alkali industry and chrysotile asbestos-containing sheet gaskets used in chemical production. Topics of these comments and meetings included media reports regarding asbestos workplace practices in the chlor-alkali industry, the timing of any prohibition on the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos diaphragms and chrysotile asbestos-containing sheet gaskets, and the requirement, included in the primary regulatory alternative described in the preamble to the proposed rule, for processors and users of chrysotile asbestos diaphragms and chrysotile asbestos-containing sheet gaskets to comply with an ECEL as an interim inhalation exposure control measure prior to the effective date of a prohibition. Meetings were held with: ADAO (July 6 and October 13, 2022); Chlorine Institute (July 6, 2022); Dow Chemicals (October 28, 2022); Axial/Westlake (November 3, 2022); Olin Corporation (Olin) (November 14, 2022); OxyChem (November 16, 2022, December 7, 2022, and February 9, 2023), and Chemours (January 18, 2023). EPA received data as part of and following those stakeholder meetings and made the information available to the public in the rulemaking docket (EPA–HQ–OPPT–2021–0057) through a Notice of Data Availability (NODA) and Request for Comment (88 FR 16389, March 17, 2023) (FRL–8332–04–OCSPP).

In addition, EPA posted to the docket other information made available after the close of the public comment period, including several public comments submitted to EPA, including from state and local government officials, regarding the potential impacts of the proposed rule's compliance date for the prohibition on the commercial use of chrysotile asbestos diaphragms in the chlor-alkali industry on the supply of chlorine used for drinking water disinfection, wastewater treatment and potential impacts on state and local water supply systems; the timing of the prohibition on the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos-containing sheet gaskets in chemical production; and discussion of workplace monitoring strategies to comply with an asbestos ECEL during the interim period prior to a prohibition on the commercial use of chrysotile asbestos diaphragms.

EPA requested public comment on any data in the docket that was received during and after the proposed rule public comment period, and how EPA should consider it during the development of the final rule. EPA received 47 unique comments that were responsive to the Agency's request for

comments. Commenters included trade organizations, industry stakeholders, unions, and non-governmental health advocacy organizations. A separate document that summarizes all comments submitted regarding the NODA, and EPA's responses to those comments is available in the docket for this rulemaking (Ref. 13).

V. Changes From the Proposed Rule

This unit summarizes the main changes from the proposed rule to the final rule, based on the consideration of the public comments.

A. Chrysotile Asbestos Diaphragms for Use in the Chlor-Alkali Industry

TSCA section 6(d) requires EPA to specify mandatory compliance dates for all requirements of a TSCA section 6(a) rule. The mandatory compliance dates must be ''as soon as practicable'' and ''provide for a reasonable transition period.'' Except when EPA is imposing a ban or phase-out of a chemical substance, the mandatory compliance date for a requirement in a TSCA section 6(a) rule must be no later than five years after the date of promulgation of the final rule. If EPA is requiring a ban or phase-out of a chemical substance, EPA must specify a mandatory compliance date for the start of the ban or phase-out that is no later than five years after the date of promulgation of the final rule, and must specify mandatory compliance dates for full implementation of the ban or phase-out which are as soon as practicable. Pursuant to TSCA section 6(d)(2), EPA may establish different mandatory compliance dates for different persons.

EPA proposed to prohibit manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos for chrysotile asbestos diaphragms for use in the chlor-alkali industry, effective two years after the effective date of the final rule. In the proposed rule, EPA sought public comment ''to support or refute its assumption that [chlor-alkali] facilities using asbestos diaphragms will convert to non-asbestos technologies, and the timeframes required for such conversions,'' and as well as on a prohibition compliance date that would be both ''as soon as practicable'' and ''provide for a reasonable transition period'' (87 FR 21721, 21726). In the notice of data availability, EPA described comments and other information that the Agency had received regarding these issues and requested additional public comment on how EPA should consider this information in developing the final rule. 88 FR 16389, 16391. Based on public comments received in response to the proposed rule and notice of data availability, EPA concludes that the proposed mandatory compliance date for the prohibition on the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos for chrysotile asbestos diaphragms would not be ''as soon as practicable,'' and would not provide for a reasonable transition period, as required under TSCA section 6(d)(1). 15 U.S.C. 2605(d)(1). EPA is therefore finalizing mandatory compliance dates that differ from those in the proposed rule.

Specifically, EPA concludes that it is practicable to prohibit the manufacture (including import) of chrysotile asbestos for diaphragms in the chlor-alkali industry as of the effective date of the final rule. All chlor-alkali companies that currently use chrysotile asbestos already have a sufficient supply of chrysotile asbestos for foreseeable future operations prior to the prohibition compliance dates for processing, distribution in commerce and commercial use. The three chlor-alkali companies that use asbestos diaphragms provided comment to EPA that they all ceased importing raw asbestos and do not need or intend to resume importing raw asbestos. Therefore, EPA is prohibiting the manufacture (including import) of chrysotile asbestos for diaphragms for use in the chlor-alkali industry as of the effective date of the final rule.

With respect to the prohibition on the processing, distribution in commerce, and commercial use of chrysotile asbestos for chrysotile asbestos diaphragms, EPA concludes that five years after the effective date of this final rule is as soon as practicable for this prohibition to start. Additionally, EPA concludes that the date by which the full implementation of this prohibition is practicable varies for different persons affected by this prohibition. Therefore, as described in further detail below, EPA is finalizing multiple compliance dates for full implementation of this prohibition to provide a reasonable transition time.

EPA received significant comment on the timing of the proposed prohibition on use of chrysotile asbestos diaphragms in the chlor-alkali industry during the public comment period for the proposed rule, as well as in response to the notice of data availability. While EPA received comments supporting the proposed two-year prohibition timeline, many commenters argued the two-year timeline would not provide the chlor-alkali industry a reasonable transition period. Comments included information regarding the types of activities involved in the transition to non-asbestos diaphragms, the limited number of suppliers that are able to provide the necessary materials for the transition, the technical expertise needed and its scarcity, capital cost investments needed, projected chlorine production impacts from the expected transition, and time it generally takes to obtain permits, including environmental permits, required for the transition. Commenters requested that EPA provide additional time to allow the chlor-alkali industry to transition away from asbestos-containing diaphragms, and to allow for this transition to occur without causing economic disruptions or public health impacts resulting from potential disruption of drinking water disinfection and wastewater treatment supplies due to fluctuations in the production of chlorine and other chlor-alkali products. Other commenters also raised concerns of impacts to other chemical industries that use chlorine as their main feedstock for their processes. Some commenters also expressed concerns about the proposed alternative five-year timeline for similar reasons.

Regarding the timing of the prohibition on processing, distribution in commerce and commercial use of chrysotile asbestos for chrysotile asbestos-containing diaphragms, EPA concludes based on public comments that five years after the effective date of this final rule is as soon as practicable for this prohibition to begin, and that the practicable compliance dates for the full implementation of this prohibition vary for different affected persons and depend on the number of facilities a person is converting to membrane technology. Three companies own a total of eight chlor-alkali facilities in the United States that use chrysotile asbestos diaphragms; the number of facilities owned by each company varies from one to five, and the size of the asbestos diaphragm chlorine capacity at the eight facilities varies from 171 thousand metric tons to 981 thousand metric tons. Several factors affect the time needed for each individual chlor-alkali company to transition away from chrysotile asbestos diaphragm technology, including the number and size of facilities owned by the chlor-alkali company, the company's approach to transition away from asbestos (*e.g.,* a decision to either convert facilities to non-asbestos diaphragms or to membrane technologies), and technical differences in specific facility conversions. Comments received described the

different approaches to move away from chrysotile asbestos use given the different designs of chrysotile asbestos diaphragm technology, the type of intended conversion to a non-asbestos diaphragm technology or membrane technology, the limited availability of suppliers and technical expertise required for the conversion process, as well as differences regarding permits needed for the conversion of facilities and permitting timelines based on their location. In particular, comments explained that due to such issues, one company's conversion of multiple facilities to membrane technology cannot be performed simultaneously and can only be accomplished in a sequential conversion process. In the final rule, EPA is adopting an approach that can accommodate differences among facilities to provide a reasonable transition period for each remaining chlor-alkali facility still using chrysotile asbestos diaphragms, while ensuring the associated unreasonable risk is addressed as soon as practicable without anticipated disruption to the available supply of chlor-alkali chemicals needed to treat drinking water and wastewater.

The mandatory compliance dates for the prohibition on processing, distribution in commerce and commercial use of chrysotile asbestos for chrysotile asbestos diaphragms for use in the chlor-alkali industry included in this final rule are longer than the proposed regulatory action; however, the prohibition phase-in dates begin five years after the effective date of the final rule, which was the compliance date in the primary alternative regulatory option described in the proposed rule for this condition of use. The primary alternative regulatory option described in the proposed rule included a prohibition effective five years after the effective date of the final rule, as well as a requirement to comply with an existing chemical exposure limit (ECEL) before this prohibition would take effect and related monitoring and recordkeeping requirements. The final rule also includes a requirement to comply with interim controls before the prohibition takes effect. Unit V.B. describes the changes to these interim controls.

There are two main technologies that can be used to replace asbestos diaphragms in chlor-alkali production, non-asbestos diaphragm cells and membrane cells. Development of non-asbestos diaphragm cells began in the mid-1980s. Non-asbestos diaphragms operate in a similar manner to asbestos diaphragms. In a diaphragm cell, a diaphragm is placed between the anode and cathode of an electrolysis cell to separate the chlorine, hydrogen, and caustic soda products. The diaphragm ensures that the chlorine and hydrogen do not spontaneously ignite, and the chlorine and caustic soda do not form undesirable reactant products. Non-asbestos diaphragms generally last longer in service than asbestos diaphragms and can reduce energy consumption due to lower cell voltages. The process to convert a chlor-alkali facility from asbestos diaphragms to non-asbestos diaphragms is not as complex as the process to convert to membrane technology; it requires fewer design changes, less construction, and may be performed over several years without significant disruption of facility operations or product output. Significantly, the conversion to non-asbestos diaphragms can proceed concurrently at several facilities, subject to the availability of supplies of non-asbestos diaphragm cell components. Membrane cell technology was developed in the early 1970's; the membrane cell process is different from the diaphragm process in a number of significant ways and operates through the selective permeability of the membranes, which allow only specific components to pass through. Membrane technology conversions are more complicated than diaphragm technology conversions. Membrane technology conversions require new cells, as well as multiple other plant infrastructure changes, including changes to: brine processing, caustic soda handling, piping, storage tanks, and power supply. However, as compared to diaphragm technology, membrane technology uses less energy and produces a higher-quality product (containing less salt) for which there is greater market demand, and is therefore generally considered the current best available technology in the chlor-alkali industry.

Based on public comments and meetings with companies, EPA understands that at least four of eight chlor-alkali facilities, two operated by OxyChem and two operated by Olin, will be converted to non-asbestos diaphragm cell technology. A fifth facility, operated by Westlake, is being converted to an unspecified non-asbestos technology. As described in Unit IV.B., EPA issued a Notice of Data Availability (NODA) and Request for Comment (88 FR 16389, March 17, 2023), that, among other topics, provided additional information on and sought comment on the timing of any prohibition on the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos diaphragms. Based on this information, including public comment received in response to this notice, EPA concludes these five conversions to non-asbestos diaphragms (or alternative non-asbestos process) can be achieved in five years.

On April 4, 2023, during the public comment period for the March 2023 Notice of Data Availability, one chlor-alkali company, Olin, met with EPA and submitted a letter to EPA stating its support for "an EPA action to ban the installation of any new or replacement asbestos-based diaphragms in two years, in combination with an additional five years to operate any existing asbestos-based diaphragm production cells." The comment suggested that this seven-year ban should apply to the entire chlor-alkali industry. The company also noted that during the proposed additional five-year window it "would use an in-situ process to maintain the diaphragms which does not involve workers removing asbestos diaphragms from the closed process for repairs or constructing new asbestos diaphragms." (Ref. 14) No further written information was provided to support this comment during the public comment period, which ended April 17, 2023. In August 2023, Olin requested to meet again with EPA and provided a one-page slide with bullet-points on its plans to convert its two facilities using asbestos diaphragms to non-asbestos diaphragms within the seven-year timeline it had proposed in April. The company stated it has several thousand asbestos diaphragm cells and after an initial two-year period during which it would continue to install new asbestos diaphragms; it would require five additional years to replace all its asbestos diaphragms. (Ref. 15)

In the preamble to the proposed rule, EPA sought public comment on a compliance date for a prohibition on the use of chrysotile asbestos-containing diaphragms in chlor-alkali production, including "specific and detailed timelines to build asbestos-free facilities or to convert existing asbestos-using facilities to asbestos-free technology" and "specific information regarding potential barriers to achieving the proposed prohibition date while considering the supply of chlor-alkali chemicals" (87 FR 21726). Olin's comments do not provide EPA with adequate information to establish that seven years is as soon as practicable for the company to convert its two facilities to non-asbestos diaphragms or otherwise end the use of asbestos, or that this rule's five-year prohibition for non-membrane conversions does not provide the company with a reasonable transition period. For example, it is

unclear why two years are required for the company to continue installing new asbestos diaphragms before the company can begin converting cells, since the company did not provide supporting data to explain why waiting two years to start the conversion, is as soon as practicable for cell conversions. The company did not provide information indicating any difficulties with its expected ability to obtain replacement parts, including any information from or on suppliers; and no supporting information was provided to EPA to show that a higher conversion rate or beginning the conversion immediately rather than in two years could disrupt the company's ability to produce sufficient chlor-alkali chemicals for its customers. Additional information that would have been needed for EPA to assess whether the proposed seven-year compliance date is as soon as practicable includes: information regarding the types of activities involved in the transition to non-asbestos diaphragms, what suppliers provide the necessary materials, what type of technical expertise is needed and its availability, capital cost investments needed, projected chlorine production and impacts from the expected transition. In establishing the chrysotile asbestos diaphragm phase-out timeframes in the rule, EPA based its compliance timeframe on reasonably available information, including information provided in public comments, as well as in meetings with interested stakeholders. EPA took into consideration the technical differences in specific facility conversions and how those affect the time needed for each individual chlor-alkali company to transition away from chrysotile asbestos diaphragm technology, such as the different designs of chrysotile asbestos diaphragm technology, the type of intended conversion to a non-asbestos diaphragm technology or membrane technology, the limited availability of suppliers and technical expertise required for the conversion process, as well as differences regarding permits needed for the conversion of facilities and permitting timelines based on facility location.

Also, beyond a general description, Olin provided no additional information on its proposed chrysotile asbestos-containing slurry cell maintenance process, how it may or may not differ from previously described practices by the company, or to what extent this process would reduce exposure. Furthermore, EPA has no information on other companies' ability to implement such an asbestos-containing slurry process within two years, or its effect on national chlor-alkali production in the period after two years and before final phase-out.

While seven years was presented as being as soon as practicable to transition one company's operations to non-asbestos diaphragm technology, seven years was also presented to EPA as a chrysotile asbestos use ban date for the entire chlor-alkali industry. The proposal does not consider other companies' comments on their abilities to phase-out asbestos use as soon as practicable, or what is a reasonable transition time for those firms. Other companies have told EPA or provided information to EPA that leads EPA to conclude that they can complete all of their planned conversions to non-asbestos diaphragms within five years (Ref. 16; Ref. 17). Allowing all of the chlor-alkali companies seven years—an additional two years—to convert to non-asbestos diaphragms therefore would not be as soon as practicable given the information received from other companies.

Furthermore, EPA believes that Olin's suggested approach for conversion from asbestos diaphragms to non-asbestos diaphragms is not practical for other companies who are converting from diaphragm to membrane technology, and EPA believes that there would be adverse impacts on the availability of chlorine for drinking water should this approach be uniformly adopted. Regarding the plans of another company, OxyChem, to sequentially convert three facilities to membrane technology, EPA has received detailed information on the sequential conversion schedule. The company's first facility can be converted within five years; allowing seven years for its conversion would not be as soon as practicable. The second facility conversion is not scheduled to be complete for eight years. EPA has no basis to conclude this schedule could be shortened to seven years while still providing a reasonable transition period, given the limited global supply of essential metals, the limited capacity to produce electrode elements, the limited number of specialized electrochemical and technical experts for chlor-alkali facilities and the inability to concurrently schedule and procure for multiple, unique membrane facility conversions, as documented in extensive and detailed information provided to EPA by OxyChem. Finally, the third facility's membrane conversion will not be completed for 12 years; EPA has no basis to conclude seven years provides a reasonable transition period for this conversion; in fact, the conversion process is not scheduled to begin before eight years due to the need to complete the conversion of the second facility in advance of this third facility. A ban that is implemented in seven years would force the closure of this third facility for five years before chlor-alkali production could resume. EPA expects this forced closure would have deleterious impacts on the supply of chlor-alkali chemicals for water treatment as well as the chemicals industry, and also would have significant financial impacts for the company.

The issuance of this final rule does not preclude Olin from presenting additional information to EPA on its conversion plans in the future. For example, EPA has discretion under TSCA section 6(g) to grant an exemption from a requirement of a TSCA section 6(a) rule for a specific condition of use of a chemical substance, if EPA finds that, among other reasons, compliance with the requirement would significantly disrupt the national economy, national security, or critical infrastructure, or the condition of use provides a substantial benefit to health or public safety. EPA believes the provision of chlor-alkali chemicals for water treatment has potential implications for all these considerations. Information that would help EPA to evaluate an alternate transition time would include: Conversion plans and schedules; progress made; impediments to ending asbestos use in five years; impacts of the five-year end date on production output; impact on the company's customers; and the impact on the supply of chlor-alkali chemicals for water treatment. However, EPA currently has no basis to conclude that requiring compliance with the five-year period would significantly disrupt the national economy, national security, or critical infrastructure, or that a longer transition period for the conversion of asbestos diaphragms to non-asbestos diaphragms would provide a substantial benefit to public safety, such that a section 6(g) exemption may be appropriate. Similarly, EPA currently has no basis to conclude that the five-year period provided in this final rule is not as soon as practicable and does not provide a reasonable transition time for chlor-alkali companies to convert to non-asbestos diaphragms.

In regard to the remaining three chlor-alkali facilities, EPA has been provided detailed information on OxyChem's plans to sequentially convert all three facilities to membrane technology. Conversion work on one facility has

begun and is expected to be completed within five years; the other two facilities are planned to be converted in sequence to membrane technology after the first conversion project is finished. The final rule prohibits the processing, distribution in commerce, and commercial use of chrysotile asbestos for chrysotile asbestos diaphragms effective five years after the effective date of the final rule, but allows longer staggered phase-out periods of 8- and 12-years in order to provide companies with a reasonable transition period for the sequential conversion to membrane technology of up to three of their chlor-alkali facilities still using chrysotile asbestos diaphragms, provided certain conditions are met and progress toward initiating phase-out has been demonstrated. The 5-8-12 years staggered phase-out period allows for the required construction and required planning, permits and capital investment needed for the transition from chrysotile asbestos diaphragms to membrane technology. The final rule allows a company to continue to process, distribute in commerce and commercially use chrysotile asbestos for diaphragms in the chlor-alkali industry at no more than two of its facilities until eight years after the effective date of the final rule, to provide a reasonable period for sequential conversions of facilities from chrysotile asbestos diaphragm technology to membrane technology. In order to be eligible for this extended phase-out period under the final rule, a company must: own or operate more than one facility that uses chrysotile asbestos in chlor-alkali production as of the effective date of the final rule; be converting more than one of those facilities to membrane technology; have, by the date five years after the effective date of the final rule, ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at one (or more) facilities that are undergoing or have undergone such conversion; and certify to EPA compliance with these provisions. A company that does this may then also continue to process, distribute in commerce and commercially use chrysotile asbestos for diaphragms in the chlor-alkali industry at not more than one facility until 12 years after the effective date of the final rule, so that it may continue to produce chlor-alkali chemicals during conversion to membrane technology, subject to similar conditions and the submission of a second certification to EPA by eight years after the effective date of the final rule. This means that by eight years after the effective date of the rule, a company must certify: that they own or operate more than two facilities that uses chrysotile asbestos in chlor-alkali production as of the effective date of the final rule; be converting more than two of those facilities to membrane technology; and have, by the date eight years after the effective date of the final rule, ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at all facilities but one. In no situation may any facility continue to process, distribute in commerce or commercially use chrysotile asbestos for diaphragms in the chlor-alkali industry after 12 years after the effective date of the final rule.

B. Interim Controls

EPA's primary alternative regulatory action described in the proposed rule was to prohibit the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos in bulk form or as part of chrysotile asbestos diaphragms in the chlor-alkali industry and for chrysotile asbestos-containing sheet gaskets in chemical production (with prohibitions taking effect five years after the effective date of the final rule), which also included a requirement, prior to the prohibition taking effect, to comply with an ECEL for the processing and commercial use of chrysotile asbestos for these uses. The final rule includes interim control requirements developed from the ECEL provisions described in the preamble to the proposed rule with some modifications to address public comments regarding monitoring limitations which could impact the ability to implement an action level. The final rule does not include the ECEL action level of 0.0025 f/cc as an 8-hour time weighted average (TWA) described in the preamble to the proposed rule, in response to concerns raised in comments about the feasibility of accurately measuring to this level. Under the primary alternative regulatory action described in the proposed rule, the ECEL action level would have been used to determine how frequently periodic exposure monitoring would be required if initial exposure monitoring revealed concentrations of chrysotile asbestos below the ECEL: if exposure monitoring revealed concentrations of chrysotile asbestos below the ECEL action level, the owner or operator would be required to conduct periodic exposure monitoring every five years; however, if exposure monitoring revealed concentrations of chrysotile asbestos at or above the ECEL action level but below the ECEL, the owner or operator would be required to conduct periodic exposure monitoring every six months. Since an ECEL action level is not being included as part of the final rule due to concerns with accurately measuring down to the ECEL action level, EPA is requiring all persons subject to the interim control requirements to conduct exposure monitoring every six months if the most recent exposure monitoring shows exposure at or below the ECEL. This testing frequency is the same as the periodic exposure monitoring frequency under the primary alternative regulatory action described in the proposed rule where concentrations are at or above the ECEL action level but at or below the ECEL.

Some commenters proposed that an ECEL would be sufficient to eliminate the unreasonable risk, without a need for a ban on chrysotile asbestos. EPA considered all risk management approaches and the adverse health effects from chrysotile asbestos, including the risk of mesothelioma, lung cancer, and other cancers from chronic inhalation as well as who is exposed and how they are exposed to chrysotile asbestos and concluded that a prohibition is the only requirement that would ensure that chrysotile asbestos no longer presents an unreasonable risk. An ECEL is a requirement that can be used to minimize the exposure to the potentially exposed persons at the chlor-alkali facilities during the interim period before the prohibition takes effect, provided that a robust monitoring program and effective exposure controls, such as engineering controls, are in place. However, as explained in the proposed rule, and supported by public comment, monitoring to and below the ECEL, while achievable, may at times be problematic due to analytical and field sampling challenges, resulting in the modifications to the interim controls described earlier in this Unit. Therefore, owners or operators may be unable to reliably ensure with sufficient confidence that potentially exposed persons are not exposed to air concentrations above the ECEL. The feasibility of instituting additional engineering controls at chlor-alkali facilities is unlikely due to the nature of the tasks that require workers handling chrysotile asbestos. As such, compliance with the ECEL for workers is unlikely to be achieved without long-term reliance on the use of respirators. Respirators are the least effective means of ensuring worker protection in the hierarchy of controls, particularly in the case of protecting workers and ONUs against exposure to asbestos fiber

inhalation. As discussed in section 2.3.2.1 of the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, based on studies investigating the performance of respirators, some workers and ONUs may have protection below the nominal applied protection factor for respirator use and would not be protected so that chrysotile asbestos does not present unreasonable risk. For these reasons, EPA believes that an ECEL cannot ensure that chrysotile asbestos does not present unreasonable risk to workers and, therefore, it is not a substitute for a ban as a long-term risk management solution.

C. Chrysotile Asbestos-Containing Sheet Gaskets in Chemical Production

EPA proposed to prohibit manufacture (including import), processing, distribution in commerce, and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for sheet gaskets in chemical production, with these prohibitions taking effect two years after the effective date of the final rule. EPA is finalizing these prohibitions with several modifications based on public comment received in response to the proposed rule and notice of data availability.

First, commenters noted the proposed ban would prohibit the ongoing use of previously installed chrysotile asbestos-containing sheet gaskets in chemical production, which presented several concerns. They noted that the number of sheet gaskets remaining in use in chemical plants and refineries could be in the hundreds of thousands and potentially millions. This is a much larger universe than the asbestos-containing gasket use that EPA characterized in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos. Comments noted it would be impossible for facilities to be certain which older gaskets contain asbestos, and therefore to ensure compliance with the prohibition as proposed, the facilities would have to remove all older gaskets on the assumption that they may contain chrysotile asbestos. Such a replacement program would be expensive, it would disrupt production, including prolonged plant shutdowns, and would be difficult to accomplish even in two years. Commenters also noted that the ongoing use of installed gaskets does not present unreasonable risk: rather the risk is present during asbestos gasket removal and recommended that the most effective and safest strategy would be to replace asbestos gaskets when they reach the end of their service life. These comments are consistent with EPA's evaluation of exposure to in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos. The worker activities most relevant to chrysotile asbestos exposure include receiving new gaskets, removing old gaskets, bagging old gaskets for disposal, and inserting replacement gaskets into flanges and other process equipment. Outside of these activities, EPA did not find the ongoing use of installed gaskets presented unreasonable risk. In response to these comments, EPA is specifying in the final rule that any chrysotile asbestos-containing sheet gaskets for chemical production which are already installed and in use prior to the compliance date for the prohibitions are not subject to the distribution in commerce and commercial use prohibitions. Allowing distribution in commerce of installed chrysotile asbestos-containing sheet gaskets will permit the sale of equipment and facilities that may contain such gaskets.

Second, EPA is finalizing a prohibition on the commercial use of chrysotile asbestos sheet gaskets for titanium dioxide production with a modified mandatory compliance date of five years after the effective date of the final rule. This provision responds to information provided by a titanium dioxide producer that it requires additional time to replace asbestos gaskets that are used in specialized equipment for titanium dioxide production. The company provided information that it is actively working on a transition to non-asbestos gaskets at its two large titanium dioxide production facilities in the United States; however, the replacement of asbestos gaskets in the oxidation reaction area of the process, which are subject to high temperature, pressure, and corrosive chemicals, is a complicated engineering project that will require the redesign and replacement of specialized reactor vessel flanges. (Ref. 18; Ref. 19) Due to the specialized nature of the project, the need to continue titanium dioxide production, and safety concerns, EPA has concluded that five years is as soon as practicable and provides a reasonable transition period for the implementation of a ban on the commercial use of asbestos gaskets for titanium dioxide production. Consistent with the proposed primary regulatory alternative, to address worker exposure to asbestos during this five-year period, interim workplace controls of chrysotile asbestos exposures will be required for the commercial use of sheet gaskets for titanium dioxide production. The titanium dioxide producer did not request additional time to import or process asbestos for this use, and the manufacture (including import), processing, and distribution in commerce of chrysotile asbestos sheet gaskets for titanium dioxide production has an unmodified mandatory compliance date of two years after the effective date of the final rule while use can continue until five years after the effective date of the final rule.

Finally, after publication of the proposed rule, EPA received a comment from a Department of Energy contractor, Savannah River Nuclear Solutions, stating that there is an ongoing use of chrysotile asbestos sheet gaskets in the processing of nuclear material at the Savannah River Site, which EPA has determined falls within the sheet gaskets in chemical production category of use, based on the information provided by the commenter (Ref. 20). The commenter states they have been unable to identify non-asbestos substitute materials that are as durable in the radioactive environment associated with the use. EPA met with the commenter and gathered additional information on the use, which also includes some use of chrysotile asbestos sheet gaskets for steam systems in low or no radiation areas at the nuclear facility.

The comment stated that the use of less durable, non-asbestos, gasket material would require more frequent gasket replacements, which in turn increases the frequency of radiation exposure for the workers who perform this task in radioactive areas. In addition, the comment indicated that the protective clothing, gloves, and respiratory equipment required to minimize exposure to the radiological hazards associated with the nuclear material also protects workers in radioactive areas from exposures to chrysotile asbestos. At this facility, there is also some use of asbestos gaskets in low or no radiation areas, but removal and replacement of asbestos gaskets is performed in compliance with OSHA 29 CFR 1926.1101 (Class III work) at a minimum. In addition, minimum respiratory protection used by workers for this task is a full-face air purifying respirator with a P–100 (HEPA) cartridge which has an APF of 50. In high radiation areas, respirators with APF of 1,000 or 10,000 are used, depending on the protective suit required.

In response to this comment, EPA reached out to the Department of Energy for additional information regarding any ongoing use of chrysotile asbestos sheet gaskets at its nuclear facilities and confirmed that additional DOE nuclear

facilities do still use such gaskets. EPA received additional information on use of chrysotile asbestos sheet gaskets in the processing of nuclear material from the Department of Energy during OMB interagency review, regarding DOE operations at its Savannah River Site. DOE explained that chrysotile asbestos sheet gaskets are used at SRS in the H-Canyon, F and H Tank Farms, Defense Waste Processing Facility, and at the Savannah River National Laboratory. DOE stated that the greatest impacts of this rule would be on the operations of H-Canyon; this facility is the sole nuclear separations facility in the nation and is integral to DOE's mission to safely dispose of nuclear materials from across the DOE complex. H-Canyon is used to help process certain materials for disposition, such as spent nuclear fuel—used fuel from nuclear reactors—some of which contains highly enriched uranium. DOE also explained that asbestos gaskets provide the most robust protection against potential leaks or radiological contamination events, they are the longest lasting material for these environments, and they continue to be the only usable gasket for some specialized infrastructure. Further, SRS was added to the National Priorities List (NPL) on December 21, 1989, and the site is subject to the SRS Federal Facility Agreement (FFA) signed by DOE, EPA, South Carolina Department of Health and Environmental Control (SCDHEC) in 1993 pursuant to Section 120 of CERCLA Section 120 and Sections 3008(h) and 6001 of RCRA (Ref. 21). Under the FFA, DOE, EPA Region 4 and the SCDHEC have entered into a *2022 High Level Waste Milestone Agreement* that specifies completion of the liquid waste program at SRS by the end of 2037 (Ref. 22). Even if a suitable replacement could be identified for this use of asbestos gaskets, DOE explained, the time required to replace the asbestos gaskets, incur an outage of waste processing, and restart facilities would result in a significant delay in the completion of the liquid waste program. Thus, EPA has determined that compliance with a two or five year prohibition on the use of chrysotile asbestos sheet gaskets at SRS is not practicable, and does not provide for a reasonable transition period, as required under TSCA section 6(d). Rather, in order to provide SRS with a reasonable transition period to move away from asbestos gaskets without disruption of its existing commitments to complete the liquid waste program, EPA has determined that 2037 is as soon as practicable for the full implementation of the ban on the use of chrysotile asbestos sheet gaskets in chemical processing at SRS.

EPA also contacted the Nuclear Energy Institute (NEI), which reported that some commercial nuclear facilities continue to use chrysotile asbestos sheet gaskets, while many do not. NEI also stated that its largest supplier of specialty gaskets for nuclear applications does not provide asbestos gaskets. EPA spoke to the commenter's supplier of asbestos gaskets, who informed EPA that, while there is ongoing difficulty finding suitable substitutes for asbestos in specific nuclear applications, they have been unable to find sources of asbestos cloth to produce new asbestos gaskets and are phasing out of this market.

Although the current workplace controls described by the commenter, Savannah River Nuclear Solutions, potentially reduce the risk posed to some workers, because the use of chrysotile asbestos sheet gaskets in the processing of nuclear material was first identified to EPA by public comment received after publication of the proposed rule, which followed publication of the Risk Evaluation, EPA was unable to evaluate this industry's specific work practices in the Risk Evaluation. Therefore, in the Risk Evaluation, EPA does not present information specific to risk to workers and ONUs for the use of chrysotile asbestos sheet gaskets in the processing of nuclear material; however, information received after the Risk Evaluation describes the current workplace controls for processing of nuclear material and the related challenges to transition to a substitute material. EPA does not have sufficient information to determine that unreasonable risk can be eliminated with PPE and current workplace controls alone; therefore, a prohibition is necessary to address the unreasonable risk. In consideration of the information received, EPA is providing additional time for the use of chrysotile asbestos-containing sheet gaskets for processing nuclear material. Under the final rule, persons may continue to manufacture (including import), process and distribute in commerce chrysotile asbestos-containing sheets gaskets for two years after the effective date of the final rule and commercially use chrysotile asbestos-containing sheet gaskets for processing nuclear material for five years after the effective date of the final rule, and until the end of 2037 for the Savanah River Site.

Similar to the primary alternative regulatory action described in the proposed rule, to address worker exposure to asbestos during this five-year period of commercial use, interim workplace controls of chrysotile asbestos exposures will be required for the commercial use of sheet gaskets. In the case of the chrysotile asbestos-containing sheet gaskets used in the processing of nuclear material, EPA is incorporating the current worker protection practices identified by the commenter as part of the interim controls for that use to reduce chrysotile asbestos exposures until the prohibition compliance date. This includes ongoing compliance with the OSHA Asbestos Safety and Health Regulations for Construction (29 CFR 1926.1101) and minimum respiratory protection of a full-face air purifying respirator with a P–100 (HEPA) cartridge with an APF of 50 for potentially exposed persons. A respirator with an APF 50 is a higher level of PPE than would be needed to reduce worker exposure to below the cancer benchmark for general sheet gasket use (replacing gaskets) in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 1). However, as discussed in section 2.3.2.1 of the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, based on studies investigating the performance of respirators, some workers and ONUs may have protection below the nominal applied protection factor for respirator use and would not be protected; EPA would need additional information to determine if the unreasonable risk can be eliminated without a prohibition for the use of asbestos gaskets in the processing of nuclear material. The commenter also requested an exemption from the final rule since the asbestos gaskets are integral to the safe operation of the process. TSCA section 6(g)(2) requires EPA to analyze the need for the exemption, and to make public the analysis and statement on how the analysis was considered when proposing an exemption under TSCA section 6(g). EPA is considering a separate action to provide a future time-limited exemption under TSCA section 6(g) for the processing of nuclear material.

D. Other Conditions of Uses

EPA proposed to prohibit all persons from the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for commercial use of: (1) Oilfield brake blocks; (2) Aftermarket automotive brakes and linings; (3) Other vehicle friction products; and (4) Other gaskets, beginning 180 days after the effective date of the final rule. Public comments noted the difficulty in

identifying asbestos components previously installed in vehicles; that it is not possible to tell by visual inspection whether previously installed aftermarket brake pads or shoes contain asbestos, and that very few aftermarket brake pads and shoes contain asbestos. Without existing records, it may not be possible to establish that a vehicle's brakes do not contain asbestos unless they are replaced. This is also the situation for other vehicle friction products and gaskets in vehicles. Based on this information, EPA is finalizing the proposed prohibition, with modifications to specify that any aftermarket automotive brakes and linings, and other gaskets which are already installed and in use before the prohibition is effective are not subject to the distribution in commerce and commercial use prohibitions. Allowing the continued use of these installed products for their useful life will not increase repair and replacement worker activity or related exposure or risk for these uses.

EPA received similar comments regarding the proposed prohibition on the manufacturing (including importing), processing, and distribution in commerce of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for consumer use of aftermarket automotive brakes and linings and other gaskets; namely that it would be difficult to determine if previously installed components of a vehicle contain asbestos, as it is not possible to tell by visual inspection whether previously installed aftermarket brake pads or shoes contain asbestos or not. Therefore, EPA is finalizing the proposed prohibition, with modifications to specify that any aftermarket automotive brakes and linings, and other gaskets which are already installed and in consumer use by 180 days after the effective date of the final rule are not subject to this distribution in commerce prohibition. This will permit the resale of vehicles that contain already-installed asbestos brakes and linings, or other gaskets. This prohibition does not apply to the consumer use of any aftermarket automotive brakes and linings, and other gaskets, so it is not necessary to modify the proposal to permit the continued consumer use of these asbestos-containing components, including consumer use in vehicles that may contain these components. This modification will not increase repair and replacement workers' exposure or risk for these uses.

E. Recordkeeping

EPA is also finalizing modified recordkeeping provisions. The recordkeeping provisions included in the proposed rule addressed retention of disposal records. The final rule includes additional recordkeeping requirements to reflect additional provisions of the final rule. Specifically, EPA's final recordkeeping provisions include additional requirements to maintain records regarding interim workplace controls of chrysotile asbestos exposures, as well as records of certifications of compliance for the chlor-alkali industry. Full description of the recordkeeping requirements is in Unit VI.F.

F. Definitions

In the final rule, EPA is adding definitions in § 751.503 for ''Authorized person,'' ''Membrane technology,'' ''Nuclear material,'' ''Regulated area,'' and ''Savannah River Site.'' These new definitions are being added to address provisions that were not in the proposed regulatory text, such as the interim controls and phased-in compliance dates for the chlor-alkali industry prohibitions.

VI. Provisions of the Final Rule

This final rule sets certain restrictions on the manufacture (including import), processing, distribution in commerce, and commercial use and disposal of chrysotile asbestos to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a), 15 U.S.C. 2605(a). Pursuant to TSCA section 12(a)(2), this rule applies to chrysotile asbestos even if being manufactured, processed, or distributed in commerce solely for export from the United States because EPA has determined that chrysotile asbestos presents an unreasonable risk to health within the United States or to the environment of the United States.

A. Manufacturing, Processing, Distribution in Commerce and Commercial Use of Chrysotile Asbestos Diaphragms in the Chlor-Alkali Industry

Provisions regulating the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos diaphragms in the chlor-alkali industry are specified in §§ 751.505 and 751.507. As of the effective date of the final rule, all persons are prohibited from the manufacture (including import) of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for diaphragms in the chlor-alkali industry. Additionally, beginning five years after the effective date of the final rule, all persons are prohibited from processing, distribution in commerce and commercial use of chrysotile asbestos for diaphragms in the chlor-alkali industry, except as provided in §§ 751.505(c) and (d).

Section 751.505(c) permits a person to process, distribute in commerce and commercially use chrysotile asbestos for diaphragms in the chlor-alkali industry at no more than two facilities until eight years after the effective date of the final rule, provided that: (1) On the effective date, the person owns or operates more than one facility that uses chrysotile asbestos in chlor-alkali production; (2) The person is converting more than one facility that the person owns or operates that, as of the effective date, uses chrysotile asbestos in chlor-alkali production from the use of chrysotile asbestos diaphragms to non-chrysotile asbestos membrane technology; (3) By the date five years after the effective date of the final rule, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at one (or more) facility that is undergoing or has undergone such conversion; and (4) The person certifies to EPA compliance with the provisions of the paragraph, in accordance with certification provisions in § 751.507.

Section 751.505(d) permits a person who meets all of the criteria of that paragraph to process, distribute in commerce and commercially use chrysotile asbestos for diaphragms in the chlor-alkali industry at not more than one facility until 12 years after the effective date of the final rule, provided that: (1) On the effective date of the final rule, the person owns or operates more than two facilities that use chrysotile asbestos in chlor-alkali production; (2) The person is converting more than two facilities that the person owns or operates that, as of the effective date of the final rule, use chrysotile asbestos in chlor-alkali production, from the use of chrysotile asbestos diaphragms to non-chrysotile asbestos membrane technology; (3) By five years after the effective date of the final rule, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at one (or more) facility that is undergoing or has undergone such conversion, and by eight years after the effective date of the final rule, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at two (or more) facilities that are undergoing or have undergone such conversion; and (4) The person certifies to EPA compliance with the provisions

of the paragraph, in accordance with the certification provisions of § 751.507.

B. Certification of Compliance for Chlor-Alkali Industry

Requirements for certifications of compliance for the chlor-alkali industry are specified in § 751.507. A person who processes, distributes in commerce or commercially uses chrysotile asbestos for diaphragms in the chlor-alkali industry between five years and eight years after the effective date of the final rule must certify to EPA their compliance with all requirements of § 751.505(c) and provide the following information to EPA: (1) Identification of the facility (or facilities) at which, by five years after the effective date of the final rule, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos, including the facility name, location, and mailing address; the name of facility manager or other contact, with title, phone number and email address; and the date the person ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at the facility; and (2) The identification of the one or two facilities (no more than two facilities) at which the person will after five years after the effective date of the final rule, continue to process, distribute in commerce and commercially use chrysotile asbestos diaphragms while the facility or facilities are being converted to non-chrysotile asbestos membrane technology, including for each facility, the facility name, location, and mailing address; and (3) The name of facility manager or other contact, with title, phone number and email address.

A person who processes, distributes in commerce or commercially uses chrysotile asbestos for diaphragms in the chlor-alkali industry between 8 and 12 years after the effective date of the final rule must certify to EPA their compliance with all requirements of § 751.505(d) and provide the following information to EPA: (1) Identification of the facility at which the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos after five years after the effective date of the final rule but no later than eight years after the effective date of the final rule, including the facility name, location, and mailing address; the name of facility manager or other contact, with title, phone number and email address; and the date the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at the facility; (2) The identification of the facility at which the person will between eight years after the effective date of the final rule and no later than 12 years after the effective date of the final rule, continue to process, distribute in commerce and commercially use chrysotile asbestos diaphragms while the facility is being converted to non-chrysotile asbestos membrane technology pursuant to § 751.505(d), including the facility name, location, and mailing address; and (3) The name of facility manager or other contact, with title, phone number and email address.

Such certification must be signed and dated by a responsible corporate officer, which means: a president, secretary, treasurer, or vice-president of the corporation in charge of chlor-alkali operations, or any other person who performs similar policy or decision-making functions for the corporation. The certification must include the statement:

> ''I certify under penalty of law that this document was prepared under my direction or supervision, and the information is, to the best of my knowledge and belief, true, accurate, and complete. I am aware it is unlawful to knowingly submit incomplete, false and/or misleading information and there are criminal penalties for such conduct.''

Certifications must be submitted to the Director of the Office of Pollution Prevention and Toxics in Washington, DC, no later than 10 business days after the date five years after the effective date of the final rule, or 10 business days after the date 8 years after the effective date of the final rule, as appropriate.

C. Other Prohibitions of, and Restrictions on the Manufacturing, Processing, Distribution in Commerce and Commercial Use of Chrysotile Asbestos

1. Prohibition on manufacture (including import), processing, distribution in commerce, and commercial use of chrysotile asbestos for chrysotile asbestos-containing sheet gaskets in chemical production.

Provisions regulating the manufacturing, processing, distribution in commerce and commercial use of chrysotile asbestos-containing sheet gaskets in chemical production are specified in § 751.509, specifically paragraphs (a) through (c), of this rule. Beginning two years after the effective date of the final rule, all persons are prohibited from manufacturing (including importing), processing, distributing in commerce, and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for use in sheet gaskets for chemical production, except as provided in § 751.509(b) and (c). However, any sheet gaskets for chemical production which are already installed and in use as of the applicable compliance date, are not subject to this distribution in commerce and commercial use prohibition.

Section 751.509(b) allows the commercial use of chrysotile asbestos sheet gaskets for titanium dioxide production past the general two-year prohibition; any person may use chrysotile asbestos sheet gaskets for titanium dioxide production until five years after the effective date of the final rule. This provision only applies to commercial use; manufacturing (including import), processing and distribution in commerce must cease after two years, pursuant to § 751.509(a).

Section 751.509(c) allows the commercial use of chrysotile asbestos sheet gaskets for processing of nuclear material past the general two-year prohibition: any person who meets the applicable criteria in the paragraph may commercially use chrysotile asbestos sheet gaskets for processing nuclear material until five years after the effective date of this final rule; at the Department of Energy's Savannah River Site, use may continue until the end of 2037. This provision only applies to commercial use; manufacturing (including import), processing and distribution in commerce must cease after two years, pursuant to § 751.509(a). Section 751.509(c) requires that, beginning 180 days after the effective date of the final rule, all persons commercially using chrysotile asbestos sheet gaskets for processing nuclear material must have in place exposure controls (*i.e.,* engineering controls, work practices, or a combination of both) expected to reduce exposure of potentially exposed persons to asbestos, and provide potentially exposed persons in the regulated area where chrysotile asbestos sheet gasket replacement is being performed with a full-face air purifying respirator with a P–100 (HEPA) cartridge (providing an assigned protection factor of 50), or other respirators that provide a similar or higher level of protection to the wearer.

EPA did not consider workplace practices in the nuclear industry during the development of the primary alternative interim workplace controls in the proposed rule, and EPA has concerns about unintended consequences were those controls to be imposed for this specific use. In the case of the processing of nuclear material, EPA is not adopting an ECEL to avoid imposing requirements that could

increase asbestos air monitoring beyond what is currently required under the OSHA Asbestos Safety and Health Regulations for Construction—(29 CFR 1926.1101). This is to ensure that this final rule does not have the unintended consequence of increasing persons exposure to radiation from nuclear material and the risk of any associated health effects. Aside from additional worker exposure to radiation that may result from additional sample collection activities (such as would be required under interim workplace controls with an ECEL under § 751.511), air sampling in radioactive environments presents special technical challenges: first, the equipment used to collect samples may become contaminated and unfit for further use, and second, the collected samples may be too radioactive for laboratories to accept for analysis.

EPA expects that during the interim period before the full-ban compliance date, existing measures under the OSHA asbestos standards, as well as radiological control protocols under Department of Energy regulations at 10 CFR part 835, will adequately mitigate asbestos risk in relation to the cancer benchmark. EPA notes that the OSHA requirements clearly delineate a regulated area in which the gasket replacement work is occuring that has strict access controls, while access is further restricted to radioactive areas, such that no one is permitted in the workspace without full PPE, which includes respirators of APF 50 or higher, in accordance with industry practices. Respirators with APF 50 is a higher level of PPE than would be needed to reduce exposure to workers below the cancer benchmark as identified in the TSCA risk evaluation for general sheet gasket use (replacing gaskets). (Table 4–19 in section 4.2.2.3. of the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos). However, as explained before, EPA also recognizes that respirators are the least effective means of ensuring worker protection in the hierarchy of controls, particularly in the case of protecting workers against exposure to asbestos fiber inhalation. As discussed in section 2.3.2.1 of the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, some workers may have protection below the nominal applied protection factor for respirator use and would not be protected. Therefore, while respirators with APF of 50 reduce exposures to workers, only a prohibition on use ensures no unreasonable risk. By requiring facilities to continue using the current respiratory protection with an assigned protection factor of 50 or higher, EPA is reducing the risk to potentially exposed persons from the unreasonable risk presented by chrysotile asbestos while ensuring a reasonable transition period until the relevant prohibition goes into effect. During the development of any future TSCA section 6(g) exemption for this specific use of chrysotile asbestos sheet gaskets, should one be proposed, EPA could give more consideration to the need for a chrysotile asbestos monitoring program beyond asbestos monitoring that is already required by OSHA under the Asbestos Safety and Health Regulations for Construction at 29 CFR 1926.1101.

2. Prohibition on manufacture (including import), processing, distribution in commerce, and commercial use of: chrysotile asbestos-containing brake blocks in the oil industry; aftermarket automotive chrysotile asbestos-containing brakes/linings; asbestos-containing vehicle friction products; and other asbestos-containing gaskets.

Provisions regulating the manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos-containing brake blocks in the oil industry; aftermarket automotive chrysotile asbestos-containing brakes/linings; other asbestos-containing vehicle friction products; and other asbestos-containing gaskets are specified in § 751.509(d). Beginning 180 days after the effective date of the final rule, all persons are prohibited from manufacturing (including importing), processing, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for commercial use of: (1) Oilfield brake blocks; (2) Aftermarket automotive brakes and linings; (3) Other vehicle friction products; and (4) Other gaskets. However, any aftermarket automotive brakes and linings, other vehicle friction products and other gaskets which are already installed and in use as of 180 days after the effective date of the final rule, are not subject to this distribution in commerce and commercial use prohibition.

3. Prohibition on manufacture (including import), processing, and distribution in commerce for aftermarket automotive chrysotile asbestos-containing brakes/linings and other asbestos-containing gaskets for consumer use.

Provisions regulating the manufacture (including import), processing, and distribution in commerce for aftermarket automotive chrysotile asbestos-containing brakes/linings and other asbestos-containing gaskets for consumer use are specified in § 751.509(e). Beginning 180 days after the effective date of the final rule, all persons are prohibited from the manufacturing (including importing), processing, and distribution in commerce of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for consumer use of: aftermarket automotive brakes and linings; and other gaskets. However, any aftermarket automotive brakes and linings, and other gaskets which are already installed and in consumer use as of 180 days after the effective date of the final rule are not subject to this distribution in commerce prohibition.

This prohibition does not apply to the consumer use of any chrysotile asbestos-containing aftermarket automotive brakes and linings, and other gaskets. EPA's authority to regulate commercial use under TSCA section 6(a)(5) does not extend to consumer use of chemical substances or mixtures. The prohibition on the upstream manufacturing, processing and distribution of chrysotile asbestos aftermarket automotive brakes and linings, and other gaskets for consumer use will remove these products from the consumer market and over time eliminate their use as these products wear out and are replaced, or the vehicles in which they are components are retired from use.

D. Interim Workplace Controls of Chrysotile Asbestos Exposures

1. Overview

For most of the conditions of use where, pursuant to this final rule, the prohibition on processing and industrial use will take effect in five or more years after the effective date of this final rule, EPA is requiring that owners or operators comply with an eight-hour existing chemical exposure limit (ECEL), beginning six months after the effective date of the final rule. Specifically, this requirement applies to the following conditions of use: (1) Processing and industrial use of chrysotile asbestos in bulk form or as part of chrysotile asbestos diaphragms used in the chlor-alkali industry; and (2) Industrial use of chrysotile asbestos sheet gaskets for titanium dioxide production. Once a facility has completed the phase-out of chrysotile asbestos and no longer uses chrysotile asbestos in their operations, the interim requirements no longer apply.

EPA uses the term ''potentially exposed person'' in this Unit and in the regulatory text to include workers, occupational non-users, employees, independent contractors, employers,

and all other persons in the work area where chrysotile asbestos is present and who may be exposed to chrysotile asbestos under the conditions of use for which these interim workplace controls apply. EPA's intention is to require interim workplace controls that address the unreasonable risk from chrysotile asbestos to workers directly handling the chemical or in the area where the chemical is being used until the relevant prohibitions go into effect. The 2020 Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos did not distinguish between employers, contractors, or other legal entities or businesses that manufacture, process, distribute in commerce, use, or dispose of chrysotile asbestos. For this reason, EPA uses the term ''owner or operator'' to describe the entity responsible for implementing the interim workplace controls in any workplace where an applicable condition of use described in Units III.B.2.a. and III.B.2.b. and subject to the interim workplace controls is occurring. The term includes any person who owns, leases, operates, controls, or supervises such a workplace. EPA has proposed to amend 40 CFR 751.5 to add a definition of ''owner or operator'' consistent with this description as part of its proposed TSCA section 6(a) rules to regulate methylene chloride (88 FR 28284) and perchloroethylene (88 FR 39652). In this final rule, EPA is using the same definition of ''owner or operator'' to apply to where it appears in the regulatory text for chrysotile asbestos.

As mentioned in the proposed rule (87 FR 21706), TSCA risk management requirements could incorporate and reinforce requirements in OSHA standards. For chrysotile asbestos, EPA's approach for interim controls seeks to align, to the extent possible, with certain elements of the existing OSHA standard for regulating asbestos under 29 CFR 1910.1001 and 29 CFR 1926.1101. The OSHA PEL and ancillary requirements have established a long-standing precedent for exposure limit threshold requirements within the regulated community. However, EPA is applying a lower, more protective exposure limit or ECEL derived from the TSCA 2020 Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos. However, in this final rule, EPA is not establishing medical surveillance requirements based on the ECEL to align with those under 29 CFR 1910.1001. Companies must continue to follow the medical surveillance requirements established by OSHA at 0.1 fiber per cubic centimeter of air as an eight (8)-hour time-weighted average (TWA) level.

This unit includes a summary of the interim controls, including a description of the ECEL; and the implementation requirements such as monitoring and notification requirements; regulated area; exposure control plan; respiratory protection; and additional requirements for workplace information and training. The recordkeeping associated with the interim controls is included under the recordkeeping requirements (Unit VI.F). This Unit also describes compliance timeframes for these requirements.

2. Existing Chemical Exposure Limit (ECEL)

EPA calculated the ECEL to be 0.005 fibers (f)/cubic centimeter (cc), for inhalation exposure to chrysotile asbestos as an eight-hour time-weighted average (TWA) for use in workplace settings based on incidence of lung cancer, mesothelioma and other cancers. (Ref. 23).

As part of the primary regulatory alternative included in the proposed rule (87 FR 21706), EPA considered an ECEL-action level of 0.0025 f/cc as an eight-hour TWA, which would initiate certain required activities such as more frequent periodic monitoring of exposures to chrysotile asbestos. However, as discussed above in Unit V.B., after public comments regarding the difficulties of measuring asbestos at such low concentrations, EPA has decided not to finalize an ECEL-action level in this final rule. Instead, EPA is finalizing more frequent periodic monitoring requirements when exposure monitoring shows levels below the ECEL than those that were described in the primary regulatory alternative in the proposed rule. In the proposed rule, periodic exposure monitoring results below the ECEL but above the ECEL action-level would trigger an increase in periodic exposure monitoring to every six months. Due to the difficulties expressed in public comments of effectively measuring asbestos to the ECEL action level and to be health protective in the absence of reliable test results to the ECEL action level, the final rule will require periodic monitoring every six months when measurements are at or below the ECEL and periodic monitoring every three months when the ECEL is exceeded.

Commenters also expressed concerns with being able to effectively measure asbestos to the ECEL, citing complicating factors such analytical limitations, sample equipment, contributions from background sources, and typical worker task exposure scenarios. While EPA in this final rule will not include an ECEL action level due to the analytical concerns raised in public comment, EPA believes that current analytical methods and modern air sampling equipment allow for air monitoring with a detection limit that allows for comparison with the ECEL level, and the feasibility of the ECEL level is further demonstrated through the personal air monitoring data submitted to EPA by the chlor-alkali industry. However, for scenarios in which a sufficient limit of detection cannot be achieved for comparison to the ECEL, owners and operators may elect to use increased respiratory protection with an appropriate Assigned Protection Factor (APF) to demonstrate compliance with the ECEL as an interim workplace control, discussed more in Unit VI.D.6.

In addition, in the proposed rule, EPA indicated that implementation of an ECEL would require time and resources and therefore did not propose to include it for the two-year period prior to the proposed prohibition date. However, since this final rule's prohibition dates for the processing and industrial use of chrysotile asbestos in bulk form or as part of chrysotile asbestos diaphragms used in the chlor-alkali industry and processing and industrial use of chrysotile asbestos-containing sheet gaskets for titanium dioxide production are at least five years, or potentially longer for certain entities meeting EPA's requirements, EPA finds it necessary to issue interim controls to reduce worker exposures for the period prior to the prohibition taking effect. As part of an interim control measure, requirements to implement the ECEL start six months after the effective date of the rule. Specifically, owners or operators are required to ensure that no person in the workplace is exposed to an airborne concentration of chrysotile asbestos in excess of 0.005 f/cc as an eight-hour TWA beginning six months after the effective date of the final rule. EPA is also requiring owners or operators to comply with additional requirements that are needed to ensure successful implementation of the ECEL.

3. Monitoring

Monitoring requirements are a key component of implementing EPA's interim workplace controls. Initial monitoring for chrysotile asbestos is critical for establishing a baseline of exposure for potentially exposed persons; similarly, periodic exposure monitoring assures continued compliance over time so that potentially exposed persons are not exposed to levels above the ECEL. In some cases, a change in workplace conditions with

the potential to impact exposure levels would warrant additional monitoring, which is also described.

EPA is requiring that owners or operators determine the 8-hour TWA exposure of each potentially exposed person's exposure by taking one or more personal breathing zone air samples that are representative of the full-shift exposures for each potentially exposed person in each job classification in each work area. These requirements are a modification of the requirements described in the proposed regulation, which allowed for sampling only some of the potentially exposed persons. The requirements in this final rule align with the approach taken for characterization of employee exposure in the OSHA standard for asbestos (see 29 CFR 1910.1001(d)(1)(i) and (ii)) and allow for multiple samples to fully represent the exposures during a full shift, based on the job classification in each work area of the potentially exposed person.

Exposure samples must be analyzed using analytical methods described in Appendix A to 29 CFR 1910.1001, or as referenced in Appendix A to 29 CFR 1910.1001 (Appendix B to 29 CFR 1910.1001, OSHA method ID–160, or the NIOSH 7400 method). In the proposed rule, the primary regulatory alternative would have required use of a laboratory that complies with the Good Laboratory Practice Standards in 40 CFR part 792; however, in this final rule, and based on public comment, EPA is aligning the laboratory quality standards with the OSHA general asbestos standard. The OSHA method ID–160 and NIOSH 7400 analytical methods are the required methods in the OSHA general asbestos standard at 29 CFR 1910.1001 and the OSHA asbestos construction standard at 29 CFR 1926.1101. In addition, 29 CFR 1910.1001 Appendix A includes the quality control procedures that must be implemented by laboratories performing the analysis. Owners and operators subject to this final rule are already familiar with the use of these methods since they are used to comply with the OSHA asbestos standards. By incorporating the use of these standards in this final rule, EPA is aligning with existing analytical practice.

In the event that the owner or operator needs to use an equivalent method to the OSHA reference method, EPA also is allowing use of such equivalent method if the owner or operator ensures the equivalency of the method by ensuring that replicate exposure data used to establish equivalency are collected in side-by-side field and laboratory comparisons, and the comparison indicates that 90% of the samples collected in the range 0.5 to 2 times the ECEL have an accuracy range of plus or minus 25% of the OSHA reference method at 95% confidence level as demonstrated by a statistically valid protocol. These requirements align with the approach taken in the OSHA standard for asbestos (see 29 CFR 1910.1001(d)(6)(ii) and (iii)).

In addition, and as supported by commentors, the NIOSH 7402 analytical method may be applied to adjust the analytical result to include only chrysotile asbestos. PCM analysis does not differentiate between asbestos and other fibers. The NIOSH 7402 analytical method uses a TEM microscope to determine the fraction of fibers that are asbestos from a filter prepared and analyzed following NIOSH 7400. To ensure consistency across both methods, airborne fibers analyzed using TEM under the NIOSH 7402 analytical method align with those specified in the NIOSH 7400 PCM method. The NIOSH 7402 method is not designed for the quantification of the air concentration of asbestos fibers and therefore should be used in conjunction with NIOSH 7400 under this final rule for asbestos fiber identification.

a. *Initial exposure monitoring.*

In this final rule, each owner or operator of a facility engaged in one or more of the conditions of use listed earlier in Unit VI.D.1. is required to perform initial exposure monitoring no later than 180 days after the effective date of the final rule to determine the extent of exposure of potentially exposed persons to chrysotile asbestos. Initial monitoring will notify owners and operators of the magnitude of possible exposures to potentially exposed persons with respect to their work conditions and environments. Based on the magnitude of possible exposures in the initial exposure monitoring, the owner or operator may need to increase the frequency of future periodic monitoring, and/or adopt new exposure controls (such as engineering controls, administrative controls, and/or a respiratory protection program).

In the primary regulatory alternative included as part of the proposed regulation, EPA stated that if the regulated entity had existing monitoring data less than five years old that followed the initial exposure monitoring criteria described in the preamble to the proposed rule, and where a process change was not implicated, the owner or operator could choose to use this existing data as the initial exposure monitoring instead of conducting initial exposure monitoring. However, given the lower exposure limit set by the ECEL compared to the current monitoring practices, and given the expected changes at the chlor-alkali and chemical production facilities transitioning to non-asbestos technologies, EPA has decided to require all owners or operators to conduct new initial monitoring. Owners and operators may not use data collected before the publication of this final rule to comply with the initial monitoring requirement.

b. *Periodic exposure monitoring.*

EPA's final rule is aligned with elements of the existing OSHA asbestos standard (29 CFR 1910.1001(d)(3) through (5)) to the extent possible. Based on the results from the initial exposure monitoring, or the most recent monitoring, EPA is requiring the following periodic monitoring for owners or operators:

- If one or more samples representing full-shift exposures from the most recent exposure monitoring exceeds the ECEL (>0.005 f/cc 8-hour TWA), periodic exposure monitoring will be required within three months of the most recent exposure monitoring.
- Otherwise, periodic exposure monitoring will be required within six months of the most recent exposure monitoring.

In the primary alternative regulatory action described in the proposed rule, EPA based the exposure monitoring frequency on both the ECEL-action level and the ECEL. However, since EPA is not finalizing an ECEL action level due to the comments received regarding effectively measuring asbestos to the ECEL action level, the exposure monitoring frequency under the final rule is based only on the comparison of the monitoring results with the ECEL. Because EPA is not finalizing an ECEL action level, the final rule requires owners and operators to conduct periodic exposure monitoring every six months if the most recent exposure monitoring indicates airborne exposure is at or below the ECEL. This exposure monitoring frequency is consistent with the exposure monitoring described in the primary alternative regulatory action in the proposed rule associated with exposure monitoring results revealing a concentration of chrysotile asbestos above the ECEL action level but at or below the ECEL. Further, since EPA is not finalizing an ECEL action level, EPA could not finalize an option to terminate exposure monitoring if all samples taken during initial exposure monitoring were at or below the ECEL action level, as was described in the primary regulatory alternative action described in the proposed rule.

In addition, under the primary regulatory alternative described in the proposed regulation, if an owner or operator did not use chrysotile asbestos during an exposure monitoring period, the owner or operator would not need to conduct exposure monitoring until the next exposure monitoring period. Further, the proposed primary regulatory alternative provided that an owner or operator had to conduct exposure monitoring at minimum every five years. However, EPA expects continued use of chrysotile asbestos in the limited number of conditions of use subject to the interim workplace control requirements and, as discussed above, is requiring all persons engaged in these conditions of use to conduct exposure monitoring at least every six months. EPA has therefore concluded there is no need to include provisions in the final rule to suspend monitoring or conduct monitoring only every five years.

c. *Additional exposure monitoring.*

In addition to initial and periodic monitoring, EPA is requiring that the owner or operator complying with the interim workplace controls carry out additional exposure monitoring (analogous to those requirements outlined in 29 CFR 1910.1001(d)(5)) after any changes in production, process, control equipment, personnel, or work practices that may reasonably be anticipated to result in new or additional exposures above the ECEL, or when the owner or operator has any reason to suspect that the change may result in new or additional exposures above the ECEL. This additional exposure monitoring event may result in an increased frequency of periodic monitoring. The required additional exposure monitoring should be conducted within a reasonable timeframe after there has been a change to ensure that it is representative of the new procedures. In cases of malfunctions and other incidents, the monitoring should not delay implementation of any necessary corrective actions to restore malfunctioning processes, necessary emergency response, cleanup or other remedial action to reduce the exposures to potentially exposed persons.

d. *Notification of exposure monitoring results.*

In this final rule, EPA is requiring that the owner or operator must, within 15 working days after receipt of the results of any exposure monitoring, notify each potentially exposed person in writing, either individually to each potentially exposed person or by posting the information in an appropriate and accessible location, such as public spaces or common areas, consistent with 29 CFR 1910.1001(d)(7).

The notification is required to include a description of any action taken by the owner or operator to reduce inhalation exposures to or below the ECEL or refer to a document available to the potentially exposed persons which identifies the actions to be taken to reduce exposures. For example, the owner or operator may notify a worker (or other potentially exposed person) of the results as follows: ''Based on the monitoring conducted on [date], the exposure to chrysotile asbestos by workers installing gaskets was [0.03 f/cc]. This concentration is above the limit set by EPA of 0.005 f/cc as an 8-hour time weighted average to protect workers, and therefore the company is requiring use of half-mask supplied-air respirator (SAR), or airline respirator operated in a demand mode to ensure exposure prevention. Workers can access the exposure control plans, exposure monitoring records, and respiratory program implementation and documentation at the office during regular business hours.''

4. Regulated Areas

Analogous to the OSHA Standard (29 CFR 1910.1001(e)), EPA is requiring that 6 months after the effective date of the rule, the owner or operator demarcate any area where airborne concentrations of chrysotile asbestos are reasonably expected to exceed the ECEL. This regulated area must be demarcated in a manner that minimizes the number of persons who will be exposed to chrysotile asbestos, *e.g.,* establishing boundaries for the area, using highly visible signifiers, in multiple languages as appropriate, placed in conspicuous areas to clearly mark the boundary of such regulated area. The owner or operator is required to restrict access to the regulated area only to those authorized to enter.

EPA is also requiring that the owner or operator must supply a respirator that complies with the requirements described in Unit VI.D.6.5. and ensure that all persons within the regulated area are using the provided respirators whenever chrysotile asbestos exposures may exceed the ECEL. Finally, the owner or operator must ensure that, within a regulated area, persons do not engage in non-work activities which may increase chrysotile asbestos exposure, such as eating, drinking, smoking, chewing tobacco or gum, or applying cosmetics.

5. Exposure Control Plan

EPA recommends and encourages the use of pollution prevention as a means of controlling exposures whenever practicable. Pollution prevention, also known as source reduction, is any practice that reduces, eliminates, or prevents pollution at its source (*e.g.,* elimination and substitution), as described in the hierarchy of controls. In the proposed rule (87 FR 21706), EPA's primary alternative regulatory action included a requirement to document efforts to implement the hierarchy of controls, specifically, the use of elimination and substitution, followed by the use of engineering controls, administrative controls, or work practices prior to requiring the use of respirators as a means of controlling inhalation exposures to chrysotile asbestos below EPA's ECEL. In this final rule, EPA recognizes that the owners and operators subject to the requirements are already taking steps to eliminate the use of chrysotile asbestos, and therefore the requirement in this final rule is to institute and maintain engineering controls and work practices that reduce chrysotile asbestos to or below the ECEL. When the engineering controls and work practices (such as clean-up of accumulated asbestos) cannot reduce chrysotile asbestos exposures to or below the ECEL, owners and operators are required to reduce chrysotile asbestos exposures to the lowest level achievable by these controls and supplement them using respiratory protection. The respirators must be supplied in accordance with the requirements outlined in Unit VI.D.6.

The final requirements state that, as of one year after the effective date of the final rule, an owner or operator subject to the interim workplace control requirements has to demonstrate the consideration of engineering controls and/or work practices to reduce the airborne chrysotile asbestos concentrations to the lowest levels achievable. If the resulting chrysotile asbestos concentrations are not at or below the ECEL, adequate respiratory protection must be given to potentially exposed persons, in accordance with Unit VI.D.6. Owners or operators must not implement a schedule of personnel rotation as a means of compliance with the ECEL. Finally, owners and operators must document their exposure control strategy in an exposure control plan. The exposure control plan must be reviewed and updated as necessary, but at least annually, to reflect any significant changes in the approach taken to reduce the chrysotile asbestos airborne concentrations.

Similar to the primary regulatory alternative described in the proposed rule, in this final rule EPA is requiring

that owners or operators document their efforts in an exposure control plan. Such plan could be part of any existing documentation of the facility's safety and health program developed as part of meeting OSHA requirements or other safety and health standards. EPA is requiring that the owner or operator document in the exposure control plan the following:

- Identification of all engineering and work practices or administrative controls that were considered.
- For each engineering and administrative control identified, a rationale for why the control was selected or not selected, based on feasibility, effectiveness, and other relevant considerations;
- Any actions the owner or operator must take to implement the engineering and administrative controls selected, including proper installation, maintenance, training or other steps taken. In addition, the owner or operator must indicate the estimated timeline for implementing the controls selected.
- Descriptions of the activities conducted by the owner or operator during the review and annual update of the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are implementing the exposure controls correctly. These activities could consist of regular inspections or other type of evaluations of the exposure controls; and
- Description of procedures for responding to any change that may reasonably be expected to introduce additional exposures of chrysotile asbestos or result in increased exposures to chrysotile asbestos. The plan should also describe the corrective actions taken to mitigate the exposures to chrysotile asbestos.

6. Respiratory Protection

a. *In general.*

Six months after the effective date of this rule, EPA is requiring owners or operators to supply a respirator selected in accordance with the requirements of this Unit and ensure that all potentially exposed persons are using the provided respirators whenever chrysotile asbestos exposures exceed or can reasonably be expected to exceed the ECEL. EPA's requirements are compatible with OSHA's Respiratory Protection standard at 29 CFR 1910.134, and the respiratory protection provision of the OSHA Asbestos standard for general industry at 29 CFR 1910.1001(g).

In this final rule, EPA is requiring that owners or operators must provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition) respirators that are of safe design and construction for the work to be performed. These requirements are consistent with the requirements of 29 CFR 1910.134(g) through (j), 1910.134 App. B–1 to B–2. Owners and operators must select respirators that properly fit each affected person and communicate respirator selections to each affected person. These requirements are consistent with the requirements of 29 CFR 1910.134(f), 1910.134 App. A.

EPA is also requiring that owners and operators provide training in accordance with 29 CFR 1910.134(k) to all persons required to use respirators prior to or at the time of initial assignment to a job involving potential exposure to chrysotile asbestos. Such training must be repeatedly at least annually or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use the respirator, or when changes in the workplace or in the required respirator render the previous training obsolete.

b. *Respirator selection.*

EPA is requiring that owners and operators select and provide all potentially exposed persons with respirators, based on the most recent monitoring results. The following represents the minimum respiratory protection that must be provided based on the most recent monitoring results, such that any respirator affording the same or higher degree of protection than the following requirements may be used.

- If the most recent exposure monitoring indicates that the exposure concentration is at or below 0.005 f/cc (the ECEL): no respiratory protection is required.
- If the most recent exposure monitoring indicates that the exposure concentration is above 0.005 f/cc (the ECEL) and less than or equal to 0.05 f/cc (10 times the ECEL): (i) a half-mask supplied-air respirator (SAR) or airline respirator operated in demand mode; or (ii) a half-mask self-contained breathing apparatus (SCBA) respirator operated in demand mode (APF 10).
- If the most recent exposure monitoring indicates that the exposure concentration is above 0.05 f/cc (10 times the ECEL) and less than or equal to 0.125 f/cc (25 times the ECEL): a loose fitting facepiece supplied-air respirator (SAR) or airline respirator operated in continuous flow mode (APF 25).
- If the most recent exposure monitoring indicates that the exposure concentration is above 0.125 f/cc (25 times the ECEL) and less than or equal to 0.25 f/cc (50 times the ECEL): (i) a full facepiece supplied-air respirator (SAR) or airline respirator operated in demand mode; or (ii) a half-mask supplied-air respirator (SAR) or airline respirator operated in continuous flow mode; or (iii) a half-mask supplied-air respirator (SAR) or airline respirator operated in pressure-demand or other positive-pressure mode; or (iv) a full facepiece self-contained breathing apparatus (SCBA) respirator operated in demand mode; or (v) a helmet/hood self-contained breathing apparatus (SCBA) respirator operated in demand mode (APF 50).
- If the most recent exposure monitoring indicates that the exposure concentration is above 0.25 f/cc (50 times the ECEL) and less than or equal to 5 f/cc (1,000 times the ECEL): a full-facepiece supplied-air respirator (SAR) or airline respirator operated in pressure-demand or other positive-pressure mode (APF 1,000).
- If the most recent exposure monitoring indicates that the exposure concentration is above 5 f/cc (1,000 times the ECEL) and less than or equal to 50 f/cc (10,000 times the ECEL): (i) a full-facepiece self-contained breathing apparatus (SCBA) respirator operated in pressure-demand or other positive-pressure mode; or (ii) a helmet/hood self-contained breathing apparatus (SCBA) respirator operated in pressure-demand or other positive-pressure mode (APF 10,000).

The respirator requirements have been updated from the primary regulatory alternative described in the proposed regulation to make them compatible with the OSHA's Asbestos standard for general industry at 29 CFR 1910.1001(g)(2)(i). The respiratory protection requirements in this final rule represent the minimum respiratory protection requirements; therefore, owners or operators may provide respirators affording a higher degree of protection than the required respirator. However, in situations where a sufficient limit of detection cannot be reached for comparison to the ECEL, owners and operators may elect to use the lowest measurable concentration possible as their basis for the selection of the respirators, and use an increased respiratory protection with an appropriate APF to demonstrate compliance with the ECEL as an interim control measure. For example, if the lowest measurable concentration possible is 0.1 f/cc, then, the owner or operator should assume that the measured exposure concentration is above 0.05 f/cc and less than or equal to 0.125 f/cc or 25 times the ECEL, and

provide a loose fitting facepiece supplied-air respirator (SAR) or airline respirator in continuous flow mode.

7. Workplace Information and Training

In the proposed rule primary regulatory alternative (87 FR 21706), EPA described requirements to ensure worker participation. In this final rule, EPA is requiring specific information to be provided to potentially exposed persons and associated training to ensure that potentially exposed persons are taking the necessary steps to reduce exposure to chrysotile asbestos.

Six months after the effective date of the final rule EPA is requiring that owners or operators provide information and training for each person prior to or at the time of potential exposure to chrysotile asbestos and repeat the training annually. The information and training must be presented in a manner that is understandable to each person required to be trained.

In this final rule, EPA is requiring that the information and training that must be provided to all persons potentially exposed to chrysotile asbestos is based on the most recent public information available from EPA, OSHA, NIOSH, and/or CDC, and include:

- The health effects associated with exposure to chrysotile asbestos;
- The quantity, location, manner of use, release, and storage of chrysotile asbestos and the specific operations in the workplace that could result in exposure to chrysotile asbestos, particularly noting where each regulated area is located;
- The specific procedures implemented by the owner or operator to protect persons potentially exposed to chrysotile asbestos, such as engineering controls, work practices and personal protective equipment to be used; and
- The requirements associated with the interim controls, as described in Unit VI.D., as well as how to access or obtain a copy of these regulations in the workplace.

The training must be conducted as necessary to ensure that each person maintains understanding of the principles of safe use and handling of chrysotile asbestos in the workplace, but at minimum, the training must be given annually. The owner or operator will need to develop a training program that is conducted in a manner that allows each person potentially exposed to understand the information, in an understandable manner (*i.e.,* plain language) and in multiple languages as appropriate (*e.g.,* based on languages spoken by potentially exposed persons). The owner or operator would consider factors such as the skills required to perform the work activity, the existing skill level of the staff performing the work. Finally, whenever there are changes in the workplace, such as modification of tasks or procedures, or institution of new tasks or procedures, or when airborne concentrations of chrysotile asbestos increase, or when the exposure control plan has been updated according to Unit VI.D.5, the owner or operator must update the training to reflect any additional steps that are needed to maintain the procedures implemented to reduce exposures to chrysotile asbestos in the workplace, and re-train each potentially exposed person.

E. Disposal

EPA is finalizing the disposal provisions in the proposed rule without significant changes. These disposal provisions at § 751.513 cross reference existing EPA and OSHA regulations that address asbestos-containing waste disposal. By following these existing regulations, worker and ONU exposure to chrysotile asbestos during disposal can be prevented. For this rule, EPA is requiring that for the chrysotile asbestos diaphragm condition of use, as well as oilfield brake blocks, other vehicle friction products, and any commercial use of other gaskets and aftermarket automotive brakes and linings conditions of use, regulated entities must adhere to waste disposal requirements described in OSHA's Asbestos General Industry Standard in 29 CFR 1910.1001, including 1910.1001(k)(6), which requires waste, scrap, debris, bags, containers, equipment, and clothing contaminated with asbestos that are consigned for disposal to be disposed of in sealed impermeable bags or other closed, impermeable containers. For the chrysotile asbestos sheet gaskets in chemical production condition of use, regulated entities must adhere to waste disposal requirements described in OSHA's Asbestos Safety and Health Regulations for Construction in 29 CFR 1926.1101.

Additionally, for the chrysotile asbestos diaphragm condition of use, as well as oilfield brake blocks, other vehicle friction products, and any commercial use of other gaskets and aftermarket automotive brakes and linings, EPA is cross-referencing the disposal requirements of Asbestos National Emission Standards for Hazardous Air Pollutants (NESHAP) (40 CFR part 61, subpart M) at 40 CFR 61.150. The asbestos NESHAP reduces exposure to airborne asbestos by generally requiring sealing of asbestos-containing waste material from regulated activities in a leak-tight container and disposing of it in a landfill permitted to receive asbestos waste. EPA is not cross-referencing this same NESHAP waste disposal provision for the disposal of chrysotile asbestos-containing waste from sheet gasket processing and use because EPA did not find unreasonable risk for the disposal of sheet gaskets.

EPA is also requiring that each manufacturer (including importer), processor, and distributor of chrysotile asbestos, including as part of products and articles, for consumer uses subject to this proposed regulation, dispose of regulated products and articles in accordance with specified disposal provisions. These consumer uses are aftermarket automotive brakes and linings, and other gaskets. These consumer use supply chain disposal requirements are consistent with those for disposers of aftermarket automotive brakes and linings, and other gaskets, intended for commercial use. EPA does not generally have TSCA section 6(a) authority to directly regulate consumer use and disposal, but under TSCA section 6(a) EPA may nonetheless regulate the disposal activity of suppliers of these products, including importers, wholesalers and retailers of asbestos-containing aftermarket automotive brakes and linings, and other gaskets.

The disposal requirements at § 751.513 will take effect 180 days after the effective date of the final rule, as was proposed.

F. Recordkeeping

This final rule establishes recordkeeping provisions. A general records provision at § 751.515(a) of the final rule, requires that, beginning 180 days after the effective date of the final rule, all persons who manufacture (including import), process, or distribute in commerce or engage in industrial or commercial use of chrysotile asbestos must maintain ordinary business records, such as invoices and bills-of-lading related to compliance with the prohibitions, restrictions, and other provisions of this rulemaking and must make them available to EPA for inspection.

Section 751.515(b) of the final rule addresses recordkeeping for certifications of compliance for the chlor-alkali industry required under § 751.507 of the rule: persons must retain records for five years to substantiate certifications required under that provision and must make them available to EPA for inspection.

Section 751.515(c) of the final rule requires retention of records for interim workplace controls of chrysotile asbestos exposures. For each monitoring event, owners or operators subject to the exposure monitoring provisions of § 751.511(c) must document and retain records of:

(1) The dates, duration, and results of each sample taken;

(2) The quantity, location(s) and manner of chrysotile asbestos use at the time of each monitoring event;

(3) All measurements that may be necessary to determine the sampling conditions that may have affected the monitoring results, such as humidity or ventilation rates, based on the expertise of the person conducting the sampling;

(4) The name, address, work shift, job classification, work area, and type of respiratory protection (if any) of each person monitored;

(5) Sampling and analytical methods used and compliance with the Good Laboratory Practice Standards or laboratory quality standards required under the OSHA general asbestos standard described in § 751.511(c)(5)(i); and

(6) Notification of monitoring results as required by § 751.511(c)(6).

Additionally, § 751.515(c) of the final rule requires that owners or operators subject to the interim workplace controls described in § 751.511 must retain records of:

(1) The exposure control plan and its implementation as required by § 751.511(e), which must be available to persons exposed to chrysotile asbestos;

(2) Respiratory protection used and program implementation as described in § 751.511(f); and

(3) Information and training provided by the owner or operator as required by § 751.511(g).

Section 751.515(d) of the final rule requires the retention of disposal records. It specifies that each person, except a consumer, who disposes of any chrysotile asbestos and any chrysotile asbestos-containing products or articles subject to § 751.513, beginning 180 days after the effective date of the final rule, must retain in one location at the headquarters of the company, or at the facility for which the records were generated: any records related to any disposal of chrysotile asbestos and any chrysotile asbestos-containing products or articles generated pursuant to, or otherwise documenting compliance with, regulations specified in § 751.513. All records under this rule must be retained for five years from the date of generation.

VII. Other TSCA Considerations

A. Primary Alternative Regulatory Actions Considered

Pursuant to TSCA section 6(c)(2)(A), EPA considered the cost and benefits and the cost effectiveness of the final regulatory action and one or more primary alternative regulatory actions. EPA considered two primary alternative regulatory actions for chrysotile asbestos diaphragms in the chlor-alkali industry. One is to prohibit manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos in bulk form or as part of: chrysotile asbestos diaphragms in the chlor-alkali industry, with prohibitions taking effect five years after the effective date of the final rule, without exception, and require, prior to the prohibition taking effect, compliance with an existing chemical exposure limit (ECEL) for the processing and commercial use of chrysotile asbestos for this use. The other was to prohibit manufacture (including import), processing, distribution in commerce and commercial use of chrysotile asbestos in bulk form or as part of: chrysotile asbestos diaphragms in the chlor-alkali industry, with prohibitions taking effect twelve years after the effective date of the final rule, without exception, and require, prior to the prohibition taking effect, compliance with an ECEL for the processing and commercial use of chrysotile asbestos for this use.

The primary alternative regulatory action for sheet gaskets used in chemical production is to prohibit manufacture (including import), processing, distribution in commerce and commercial use, with prohibitions taking effect five years after the effective date of the final rule, and require, prior to the prohibition taking effect, compliance with an ECEL for the processing and commercial use of chrysotile asbestos for this use.

The primary alternative regulatory action additionally includes a prohibition on the manufacture (including import), processing, distribution in commerce, and commercial use of chrysotile asbestos-containing brake blocks in the oil industry; aftermarket automotive chrysotile asbestos-containing brakes/ linings; and other vehicle friction products, with prohibitions taking effect two years after the effective date of the final rule. The primary alternative regulatory action also included prohibitions on manufacture (including import), processing, and distribution in commerce of aftermarket automotive chrysotile asbestos-containing brakes/ linings for consumer use and other chrysotile asbestos-containing gaskets for consumer use, with prohibitions taking effect two years after the effective date of the final rule.

The primary alternative regulatory actions also include recordkeeping and disposal requirements identical to those in the final action.

B. TSCA Section (c)(2) Considerations

The following is EPA's statement of effects, as required by TSCA section 6(c)(2)(A), with respect to this final rule.

1. Effects of chrysotile asbestos on health and the magnitude of the exposure of human beings to chrysotile asbestos under TSCA section 6(c)(2)(A)(i).

EPA's analysis of the health effects of and magnitude of exposure to chrysotile asbestos is in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 1). A summary is presented here. Many authorities have established causal associations between asbestos exposures and lung cancer and mesothelioma in humans based on epidemiologic studies. EPA identified in the literature a causal association between exposure to asbestos and cancer of the larynx and cancer of the ovary and suggestive evidence of a positive association between asbestos and cancer of the pharynx, stomach, and colorectum. EPA also identified increases in lung cancer and mesothelioma mortality in both workers and residents exposed to various asbestos fiber types, including chrysotile asbestos, as well as fiber mixtures. Mesothelioma tumors arise from the thin membranes that line the chest and abdominal cavities and surround internal organs.

Asbestos exposure is known to cause various non-cancer health outcomes as well, including asbestosis, non-malignant respiratory disease, deficits in pulmonary function, diffuse pleural thickening, and pleural plaques. Various immunological and lymphoreticular effects are suggested but not well-established.

For the conditions of use that contribute to unreasonable risk, populations exposed to chrysotile asbestos (including potentially exposed or susceptible subpopulations) include workers, ONUs, consumer users, and bystanders to consumers using products containing chrysotile asbestos. For these conditions of use EPA estimates that, annually, at least 256 workers and 222 ONUs are exposed to chrysotile asbestos at over 49 operations either processing or using products containing chrysotile asbestos. Additional workers and ONUs are exposed to oilfield brake blocks and

may potentially be exposed to other vehicle friction products and other gaskets. Each year, approximately 400 consumers are potentially exposed to asbestos through the use of products containing chrysotile asbestos subject to this rule. The number of exposed bystanders is unknown to EPA. The breakdown by category of use is as follows:

- Diaphragms—80 workers and 80 ONUs at 8 sites;
- Sheet gasket stamping—at least 4 workers and 8 ONUs at 4 sites;
- Sheet gasket use (non-nuclear)—at least 18 workers and 119 ONUs at 4 sites;

Sheet gasket use (nuclear)—up to 139 workers at 1 site; number of workers and ONUs at approximately 20 additional sites is unknown;

- Oilfield brake blocks—Unknown;
- Aftermarket automotive brakes—15 to 1,400 workers and 15 to 1,400 ONUs at 12 to 1,400 sites;
- Other vehicle friction products—Unknown;
- Other gaskets—Unknown; and
- DIY mechanics—400 consumers and unknown bystanders.

More information on the derivation of these estimates is provided in the Economic Analysis for this rulemaking that can be found in the rulemaking docket (Ref. 2).

As discussed in Unit II.C., EPA did not evaluate hazards or exposures to the general population in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos.

2. Effects of the chrysotile asbestos on the environment and the magnitude of the exposure of the environment under TSCA section 6(c)(2)(A)(ii).

EPA's analysis of the environmental effects of and the magnitude of exposure of the environment to chrysotile asbestos are in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 1). A summary is presented here.

Chrysotile asbestos may be released to the environment through industrial or commercial activities, such as processing raw chrysotile asbestos, fabricating/processing asbestos-containing products, or the dispersing of friable chrysotile asbestos during use, disturbance and disposal of asbestos-containing products.

Although this action is focused on chrysotile asbestos fiber type, some of the information in this unit pertains to asbestos fibers in general. Asbestos is a persistent mineral fiber that can be found in soil, sediments, in the air and windblown dust, surface water, ground water and biota. Asbestos fibers are largely chemically inert in the environment. They may undergo minor physical changes, such as changes in fiber length or leaching of surface minerals, but do not react or dissolve in most environmental conditions.

In water, chrysotile asbestos will eventually settle into sediments (or possible biosolids) and can enter wastewater treatment plants. EPA's review of aquatic vertebrate and invertebrate studies indicated that chronic exposure to waterborne chrysotile asbestos at a concentration range of 10^4–10^8 fibers/L, which is equivalent to 0.01 to 100 million fibers per liter (MFL), may result in reproductive, growth and/or sublethal effects to fish and clams. In addition, acute exposure of clams to waterborne chrysotile asbestos at a concentration range of 10^2–10^8 fibers/L demonstrated reduced siphoning activity.

EPA has determined that there are minimal or no releases of asbestos to surface water associated with the conditions of use that EPA evaluated in the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos and that are the subject of this action.

3. Benefits of chrysotile asbestos for various uses under TSCA section 6(c)(2)(A)(iii).

The only form of asbestos manufactured (including imported), processed, or distributed for use in the United States today is chrysotile asbestos. The United States Geological Survey (USGS) estimated that 152 metric tons of raw chrysotile asbestos were imported into the United States in 2022 (Ref. 3). This raw asbestos is used exclusively by the chlor-alkali industry, and imported amounts between 2018 and 2022 ranged from 41 to 681 metric tons during a given year (Ref. 3).

In addition to the use of raw imported chrysotile asbestos by the chlor-alkali industry, EPA is also aware of imported asbestos-containing products; however, the imported volumes of those products are not fully known. The asbestos-containing products that EPA has identified as potentially being imported and used are sheet gaskets (which are imported in large sheets and cut to size domestically by a fabricator), oilfield brake blocks, aftermarket automotive brakes/linings, other vehicle friction products, and other gaskets. Chrysotile asbestos is chemically inert, durable, and able to effectively separate the anode and cathode chemicals in the electrolytic cells used in the chlor-alkali process. Asbestos-containing gaskets have been used in chemical production because they are resistant to cyclical high temperatures and immense pressure. During the manufacture of titanium dioxide, temperatures can exceed 1850 degrees Fahrenheit and pressures can be greater than 50 pounds per square inch. For processing of nuclear material, asbestos-containing sheet gaskets are preferred for their durability in radioactive environments. The physical properties of chrysotile asbestos including heat resistance make asbestos a useful material for uses where friction is produced and extreme heat is generated, including its application in brakes, gaskets and other vehicle friction product uses considered in this rule.

4. Reasonably ascertainable economic consequences of the rule under TSCA section 6(c)(2)(A)(iv).

The reasonably ascertainable economic consequences of this rule include several components, all of which are described in the economic analysis for this rule and summarized here (Ref. 2).

a. *The likely effect of this Part 1: Chrysotile Asbestos rule on the national economy, small business, technological innovation, the environment, and public health (TSCA section 6(c)(2)(A)(iv)(I)).*

With respect to the anticipated effects of this rule on the national economy, the economic impact of a regulation on the national economy generally only becomes measurable if the economic impact of the regulation reaches 0.25 percent to 0.5 percent of Gross Domestic Product (GDP) (Ref. 24). Given the current GDP of $27.62 trillion, this is equivalent to a cost of $69 billion to $138 billion which is considerably higher than the estimated cost of this rule. EPA considered the number of businesses and workers that would be affected and the costs and benefits to those businesses and workers and society at large and did not find that there would be a measurable effect on the national economy. In addition, EPA considered the employment impacts of this rule. While EPA assumes that chlor-alkali facilities currently using asbestos diaphragms will convert to non-asbestos technologies, some facilities may not do so before the effective prohibition date in the rule. As a result, even with the extended compliance dates in the final action, it is possible that the rule may result in facility closures and job losses, at least temporarily, at some chlor-alkali facilities as well as at facilities that use chlorine, caustic soda, or their derivatives as intermediates, and may result in shortages or price increases for chlorine, caustic, and their derivatives. There may be similar employment effects at chemical facilities using asbestos gaskets. However, the extended compliance dates in the final rule reduce the likelihood and potential magnitude of such impacts compared to the proposed rule. There may also be

increased temporary employment associated with new construction as firms convert their facilities to replace asbestos diaphragms and asbestos gaskets with substitute technologies. There may also be increases in employment at facilities that currently use asbestos-free technologies (Ref. 2).

EPA has determined that the rule will not have a significant impact on a substantial number of small entities; EPA estimates that the rule will affect 11 to 1,369 small businesses supplying aftermarket brakes, incurring costs between $20 and $14,000 per firm (depending on the number of brake replacements they perform). At the low-end estimate of the number of affected brake replacement firms, approximately 85% of firms would have cost impacts of less than 1% of their annual revenues, about 10% would have cost impacts between 1% and 3%, and around 6% would have cost impacts of greater than 3%. At the high-end estimate of the number of affected brake replacement firms, 100% of firms would have a cost impact of less than 1% of the annual revenue. An additional three small entities that do not supply aftermarket brakes are estimated to be affected by the rule; two are assumed to manufacture sheet gaskets for titanium dioxide production, and one imports oilfield brake blocks. EPA did not have the information necessary to estimate the cost impacts on these other four small entities (Ref. 2).). EPA found no literature that described the costs of converting to asbestos-free products for either sheet gaskets used in titanium dioxide production or oilfield brake blocks. Moreover, there were no public comments in response to the proposed rule or the subsequent notice of data availability that provided information on the costs for these use categories.

The uses of asbestos subject to the rule are all in mature industries and the amount of asbestos consumed in them has been declining for some time. There is no evidence of innovative applications of asbestos in these uses in recent years, nor is there any expectation that such innovations would occur in the future in the absence of a prohibition on these uses of asbestos.

The effects of this rule on public health are estimated to be positive, due to the avoided incidence of adverse health effects attributable to asbestos exposure, including lung cancer, mesothelioma, and cancers of the larynx and ovary (Ref. 2). Despite the uncertainties about possible greater use and release of PFAS discussed in Unit VII.B.5., EPA believes the benefits of removing chrysotile asbestos, a known human carcinogen that causes cancer (mesothelioma, lung, ovarian, and laryngeal cancers), from continued use in the United States, are significant enough to outweigh the potential additional exposure to PFAS that might result from this action.

Converting chlor-alkali diaphragm cells to non-asbestos technology is expected to reduce total electricity consumption by the chlor-alkali industry and thus the level of air pollution associated with electric power generation. This reduction in air pollution would provide environmental benefits as well as health benefits (Ref. 2).

b. *Costs and benefits of the regulatory action and of the primary alternative regulatory actions considered by the Administrator.*

i. *Regulatory action.*

EPA was able to quantify the costs of the rule for the chlor-alkali industry and the aftermarket automotive brake industry, as well as a portion of the costs for firms using sheet gaskets. Nearly all of the quantified costs are due to the requirements for the chlor-alkali industry. The rule is predicted to require an investment of $2.8 billion to $3.4 billion to convert chlor-alkali facilities using asbestos diaphragm cells to cells using non-asbestos diaphragms or membranes. The rule accelerates existing trends in the industry to transition away from asbestos diaphragms, and EPA expects that these conversions would eventually occur in the baseline even without the rule, although more slowly than with the prohibition deadlines in the rule. For a number of these facilities the non-asbestos technologies are more energy efficient than asbestos diaphragm cells, resulting in cost savings that would accrue over the lifetimes of the facilities. Membrane cells also produce a higher grade of caustic soda that has historically commanded a higher price than the product from asbestos diaphragm cells; that price differential may or may not continue in the future. If some facilities are unable to complete their conversions to non-asbestos technology by the mandatory compliance dates in the rule, the unconverted portions of those facilities would need to close until the conversions are completed. Such temporary closures would result in lost producer surplus (as well as lost consumer surplus, which EPA was unable to quantify) until the conversions are completed. The incremental net annualized costs of the rule to the chlor-alkali industry are calculated by combining conversion costs, changes in energy usage, potential revenue gains from increased production of membrane-grade caustic soda, and the lost producer surplus from possible temporary facility closures (all compared to the baseline), and annualizing the results over the 35-year expected lifetime of new chlor-alkali facility equipment.

Compared to this baseline trend, the net cost of the rule to the chlor-alkali industry over a 35-year period using a 3 percent discount rate is estimated to range from an annualized cost of $7 million per year (if the additional membrane grade caustic soda that is produced sells for the same price as diaphragm grade caustic soda) to an annualized savings of $1 million per year (if the higher grade of caustic soda produced by membrane cells continues to command a premium price, as it has in the past). Using a 7 percent discount rate, the incremental net cost of the rule to the chlor-alkali industry ranges from a cost of $34 million per year (if there is a premium for membrane-grade caustic soda) to $43 million per year (if there is no premium for membrane-grade caustic soda).

EPA also estimates that approximately 1,800 sets of automotive brakes or brake linings containing asbestos may be imported into the U.S. each year, representing 0.002% of the total U.S. market for aftermarket brakes. The cost of a prohibition would be minimal due to the ready availability of alternative products that are only slightly more expensive (an average cost increase of about $5 per brake). The rule is estimated to result in total annualized costs for aftermarket automotive brakes of approximately $300,000 per year using a 3% discount rate and $200,000 per year using a 7% discount rate.

EPA estimated a lower bound of the cost of the ECEL and disposal requirements for titanium dioxide producers using sheet gaskets containing asbestos. These annualized costs are estimated at approximately $44,000 per year using a 3% discount rate or $65,000 per year using a 7% rate. However, EPA was unable to estimate the potential cost to sheet gasket users of substituting non-asbestos products.

EPA also did not have information to estimate all of the costs of prohibiting asbestos in brake blocks in the oil industry, and any other vehicle friction products or other gaskets. (EPA believes that the use of these asbestos-containing products has declined over time, and that they are now used in at most small segments of the relevant industries.) Since EPA could not quantify all of the costs of the rule for all of the use categories, the quantified estimates of the total costs of the rule are an upper

bound estimate of total cost savings and a lower bound estimate of total costs. Thus, the total net incremental costs of the rule are estimated to range from an annualized cost of greater than $7 million per year to an annualized savings of less than $1 million per year using a 3 percent discount rate. Using a 7 percent discount rate, these costs range from greater than $34 million per year to more than $43 million per year.

EPA quantified the benefits from avoided cases of cancer due to reduced asbestos exposures attributable to the rule's requirements for chlor-alkali diaphragms and aftermarket brakes, and sheet gaskets used for titanium dioxide production. The combined total national quantified benefits of avoided cancer cases associated with these use categories are approximately $6,000 per year using a 3% discount rate and $3,000 per year using a 7% discount rate. EPA did not estimate the avoided cancer benefits of the requirements for sheet gaskets used for other forms of chemical production, oilfield brake blocks, other vehicle friction products or other gaskets, in part because the Agency did not have sufficient information to accurately characterize the number of individuals whose exposures are likely to be affected by the rule. To the extent that products in these use categories are still manufactured, processed, distributed in commerce, used, or disposed of, the rule will generate additional benefits from reducing the exposures associated with these uses.

There are also unquantified benefits due to other avoided adverse non-cancer health effects associated with asbestos exposure, such as respiratory effects (*e.g.,* asbestosis, non-malignant respiratory disease, deficits in pulmonary function, diffuse pleural thickening and pleural plaques). The rule will also generate unquantified benefits from other exposure pathways and life cycle stages for which exposures were not estimated in the risk evaluation.

In addition to the benefits of avoided adverse health effects associated with chrysotile asbestos exposure, the rule is expected to generate benefits from reduced air pollution associated with electricity generation. Chlor-alkali production is one of the most energy-intensive industrial operations. Converting asbestos diaphragm cells to non-asbestos technologies will reduce overall electricity consumption and thus the total level of pollutants resulting from electric power generation, including carbon dioxide, particulate matter, sulfur dioxide, and nitrogen oxides. Converting asbestos diaphragm cells to non-asbestos technology could yield millions of dollars per year in environmental and health benefits from reduced emissions of criteria air pollutants and greenhouse gases (Ref. 2). The decreased air pollution resulting from the rule was not the driver for the decision making under TSCA section 6(a).

EPA's Economic Analysis, which can be found in the rulemaking docket (Ref. 2), contains more information on the estimated costs and benefits of the regulatory action.

ii. *Primary alternative regulatory actions.*

EPA considered two primary regulatory alternatives to the requirements that are being finalized in this action for chrysotile asbestos diaphragms in the chlor-alkali industry. Under one alternative, the prohibitions on the processing, distribution in commerce and commercial use of asbestos diaphragms at chlor-alkali facilities would take effect at all facilities after five years; the prohibitions on sheet gaskets for chemical production would take effect after two years for sheet gaskets used to produce titanium dioxide or to process nuclear materials, and two years for all other sheet gaskets used for chemical production; and after 180 days for the remaining use categories subject to the rule. Under the other alternative, these prohibitions would take effect at all chlor-alkali facilities after 12 years; after 5 years for all sheet gaskets used in chemical production; and after 2 years for the remaining use categories.

Under the alternative regulatory action with a 5-year prohibition on asbestos diaphragms for all chlor-alkali facilities, the total cost of the rule using a 3 percent discount rate is estimated to range from an annualized costs of more than $14 million per year (if the additional membrane-grade caustic soda that is produced sells for the same price as diaphragm grade caustic soda) to an annualized cost of more than $5 million per year (if the higher grade of caustic soda produced by membrane cells continues to command a premium price, as it has in the past). Using a 7 percent discount rate, the estimates range from a cost of more than $42 million per year (if there is a premium for membrane-grade caustic soda) to a cost of more than $51 million per year (if there is no premium for membrane-grade caustic soda).

Under the alternative regulatory action with a 12-year prohibition on asbestos diaphragms for all chlor-alkali facilities, the total cost of the rule using a 3 percent discount rate ranges from a savings of less than $1 million per year (if the higher grade of caustic soda produced by membrane cells continues to command a premium price) to a cost of greater than $7 million per year (if the additional membrane grade caustic soda that is produced receives the same price as diaphragm grade caustic soda). Using a 7 percent discount rate, the cost ranges from more than $31 million per year (if there is a premium for membrane-grade caustic soda) to more than $38 million per year (if there is no premium for membrane-grade caustic soda).

The alternative option with a 12-year prohibition deadline for all chlor-alkali facilities has estimated annualized incremental costs that are similar to those for the final rule, and are slightly lower than the final rule when using a 7% discount rate. These differences are due to how the timing of expenditures affects the annualized cost estimates. The vast majority of the quantified costs of the rule are associated with the chlor-alkali industry. Converting all eight plants using asbestos diaphragm cells to non-asbestos technologies is predicted to require an investment of approximately $2.8 billion to $3.4 billion, and these costs are assumed to be the same regardless of how quickly the conversions occur. Where the incremental cost of a 12-year prohibition deadline is less than the incremental cost of the final rule, part of the reason is that the rate of conversion to non-asbestos technologies under the alternative option is closer to the baseline conversion rate. (The incremental cost estimate compares the costs and savings associated with conversions under each option to the costs and savings that would be incurred each year in the absence of the rule). This means that the chlor-alkali companies are incurring the same actual costs under both options (since the conversions have the same costs and savings per ton of chlorine and caustic soda produced under all of the options), but under the 12-year option some of those costs are not attributed to the rule. In addition, some of the compliance costs are incurred at later points in time under the 12-year option than under the final rule, and expenditures that occur at later dates result in smaller annualized costs than those that occur sooner. These factors can make the alternative option with a 12-year prohibition deadline for all chlor-alkali facilities appear slightly less costly than the final rule, despite the fact that same facility conversions eventually occur under all the regulatory alternatives.

c. *Cost effectiveness of the regulatory action and primary alternative regulatory actions considered by the Administrator.*

The regulatory action reflected in the final rule and the alternative regulatory actions all reduce risks to the extent necessary such that unreasonable risk would no longer be present after such actions were implemented. The estimated costs of achieving this result differ across the possible regulatory actions and can be compared in terms of their cost-effectiveness. The measure of cost-effectiveness considered is the annualized net incremental cost of each regulatory option per micro-risk reduction in cancer cases estimated to occur as a result of the option, where a micro-risk refers to a one in one million reduction in the risk of a cancer case. The estimated cost-effectiveness of the final rule ranges from a cost of $185 to a savings of $35 per micro-risk reduction at a 3% discount rate, and a cost of $860 to $1,075 per micro-risk reduction at a 7% discount rate (where a micro-risk represents a one in a million chance of the adverse health outcome, which in this case is cancer). The estimated cost-effectiveness of the alternative regulatory action with a 5-year prohibition on asbestos diaphragms for all chlor-alkali facilities ranges from a cost of $128 to $348 per micro-risk reduction at a 3% discount rate, and a cost of $1,044 to $1,259 per micro-risk reduction at a 7% discount rate. The estimated cost-effectiveness of the alternative regulatory action with a 12-year prohibition on asbestos diaphragms for all chlor-alkali facilities ranges from a cost of $172 to a savings of $13 per micro-risk reduction at a 3% discount rate, and a cost of $779 to $953 per micro-risk reduction at a 7% discount rate.

The alternative option with a 12-year prohibition deadline for all chlor-alkali facilities appears to be somewhat more cost effective than the final rule when using a 7 percent discount rate. But as noted previously, these differences are due to how the timing of expenditures affects the annualized cost estimates.

5. Consideration of alternatives under TSCA section 6(c)(2)(C).

Under TSCA section 6(c)(2)(C), and based on the information published under TSCA section 6(c)(2)(A), in deciding whether to prohibit or restrict in a manner that substantially prevents a specific condition of use of a chemical substance or mixture, and in setting an appropriate transition period for such action, EPA must also consider, to the extent practicable, whether technically and economically feasible alternatives that benefit health or the environment will be reasonably available as a substitute when the prohibition or other restriction takes effect.

a. *Health and environmental effects of the chemical alternatives or substitute methods.*

In considering the potential chemical alternatives or substitute methods for chrysotile asbestos for the conditions of use evaluated in the risk evaluation, EPA notes that chrysotile asbestos is not currently the primary substance most commonly used in these conditions of use, nor has it been for the last decade. Chlor-alkali asbestos diaphragms, sheet gaskets for chemical production, aftermarket automotive breaks, oilfield brake blocks, other gaskets and other friction products containing chrysotile asbestos are relatively uncommon in the market space, as described in the risk evaluation. There are a number of alternatives to asbestos in these conditions of use that make up the majority of the market share and have been preferentially used for some time, in part as a result of the known severe and adverse health effects related to asbestos exposure. Based on the information published under TSCA section 6(c)(2)(A), EPA does not expect any adverse impacts to human health and the environment to result from the further reduction of asbestos in these conditions of use when compared to the continued use of asbestos.

EPA acknowledges that substitute technologies for asbestos-containing diaphragms in chlor-alkali production use an increased concentration of per- and polyfluoroalkyl substances (PFAS) relative to the amount of PFAS compounds contained in asbestos-containing diaphragms. As discussed in the Economic Analysis, the three types of chlor-alkali production technologies commonly used in the United States vary in their use of PFAS. Non-asbestos diaphragms have a higher concentration of polytetrafluoroethylene (PTFE, a polymeric perfluorinated substance) than asbestos-containing diaphragms, and non-asbestos membranes are made of PTFE, perfluorinated carboxylic acids and perfluorosulfonic acids. However, the impact of the transition away from asbestos-containing diaphragms on the quantities of PFAS compounds used and released is uncertain. Although they contain a higher concentration of PFAS compounds than diaphragms made with asbestos, non-asbestos diaphragms and membranes have a typical lifespan that can be several times longer than that for asbestos diaphragms. Therefore, it is unclear how increased use of non-asbestos technologies will affect the total production, usage, or releases of PFAS compounds, or exposures to such compounds. Despite these uncertainties about the use and release of PFAS, EPA believes the benefits of removing chrysotile asbestos from continued use in the United States are significant even though there are uncertainties regarding the potential changes in exposure to PFAS that might result from this action. Still, when possible, EPA recommends a transition to safer alternatives. Additional information on PFAS, including Agency guidance, is available at *https://www.epa.gov/*.

To the extent that alternative technologies are more energy efficient, converting asbestos diaphragm cells to non-asbestos technologies reduces overall electricity consumption and thus the total level of pollutants associated with electric power generation, including carbon dioxide, particulate matter, sulfur dioxide, and nitrogen oxides.

b. *Technically and economically feasible and reasonably available chemical alternatives or substitute methods.*

As mentioned, there are a number of alternatives to asbestos in these conditions of use that make up the majority of the market share and have been preferentially used for some time. EPA received input from stakeholders regarding their concerns about alternatives to chrysotile asbestos. EPA expects non-asbestos diaphragms and membrane cells will be the likely substitutes to asbestos diaphragms. Prior to the proposed rule, the chlor-alkali industry expressed concerns to EPA about the economic feasibility of transitioning to asbestos free technology in general (Ref. 25; Ref. 26; Ref. 27; Ref. 28; Ref. 29) and indicated that it would take a significant amount of time. Subsequent public comments and information from the chlor-alkali industry obtained after the proposed rule was published indicates that conversion to asbestos-free technology is commercially viable, but that the conversion can take a significant amount of time, depending on the technology adopted and the number of facilities to be converted (Ref. 12; Ref. 13).

Several stakeholders provided feedback on alternatives to chrysotile asbestos for the sheet gasket use in chemical production. Generally, these stakeholders described how the transition from asbestos use for titanium dioxide production would require modifications to the facilities that would be time consuming. One stakeholder noted in 2021 that they had a titanium dioxide production facility located in Taiwan that uses asbestos-free gaskets. The stakeholder, however, stated at that time that the technology used in the Taiwan facility would not suit certain domestic titanium dioxide

facilities because the large diameter flanges in the domestic facilities result in performance issues with the asbestos-free gaskets (Ref. 25). The same stakeholder subsequently informed EPA in 2023 that they could transition to the use of non-asbestos gaskets in their domestic facilities by re-engineering the flanges, although that process will require several years to complete (Ref. 18). Non-asbestos technologies already dominate the market for other gaskets, oilfield brake blocks, brakes and other friction products. Although, stakeholders indicated the advantages of using asbestos (*e.g.,* asbestos in automotive drum brakes advantages include thermal stability, flexibility, resistance to wear, and low cost), and limitations of the non-asbestos replacements (*e.g.,* non-asbestos replacements in brake blocks have a useful life half that of products containing asbestos, are more expensive than asbestos-containing products, and are subject to sudden failure) (Ref. 2). Non-asbestos aftermarket automotive brakes are estimated to cost an average of $4 more than brakes containing asbestos. EPA was unable to identify any companies currently supplying or using other gaskets or other friction products containing asbestos, so the Agency does not have information on the cost differentials between products that contain asbestos and those that are asbestos-free. Additional information is available in the risk evaluation (Ref. 1) and economic analysis (Ref. 2).

6. Replacement parts under TSCA section 6(c)(2)(D).

TSCA section 6(c)(2)(D) states that EPA shall exempt from TSCA section 6(a) rules replacement parts for complex durable goods and complex consumer goods that are designed prior to the publication of a final risk management rule, unless such replacement parts contribute significantly to the risk, identified in a risk evaluation conducted under TSCA section 6(b)(4)(A), to the general population or to an identified potentially exposed or susceptible subpopulation. TSCA section 6(c)(2)(D) defines complex consumer goods as electronic or mechanical devices composed of multiple manufactured components, with an intended useful life of three or more years, where the product is typically not consumed, destroyed, or discarded after a single use, and the components of which would be impracticable to redesign or replace. The term ''complex durable goods'' means manufactured goods composed of 100 or more manufactured components, with an intended useful life of five or more years, where the product is typically not consumed, destroyed or discarded after a single use. Several of the conditions of use addressed by this final rule impact these replacement part categories. Aftermarket automotive brakes/linings are replacement parts for automobiles and other vehicles. Other asbestos-containing gaskets may be available as both new and replacement parts on utility and other vehicles. Oilfield brake blocks are replacement parts for the drilling rigs used in the oil industry. These vehicles and drilling rigs are composed of numerous components, manufactured separately and assembled together into a machine designed for a useful life of at least three years if properly maintained. By their nature, EPA believes these meet the TSCA definition of complex durable goods. In the Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos, however, EPA found unreasonable risk from use and disposal of chrysotile asbestos-containing brake blocks in the oil industry; aftermarket automotive chrysotile asbestos-containing brakes/linings; and other asbestos-containing gaskets. EPA's risk evaluation evaluated scenarios involving these replacement parts, and EPA finds that the replacement parts contribute significantly to the identified unreasonable risk for these conditions of use to the potentially exposed or susceptible subpopulations identified in the risk evaluation. Accordingly, EPA is not exempting replacement parts from regulation in this final rule.

7. Article considerations under TSCA section 6(c)(2)(E).

Under this final rule, EPA is regulating the manufacture, processing, and distribution in commerce of articles containing chrysotile asbestos. TSCA section 6(c)(2)(E) states: ''In selecting among prohibitions and other restrictions, the Administrator shall apply such prohibitions or other restrictions to an article or category of articles containing the chemical substance or mixture only to the extent necessary to address the identified risks from exposure to the chemical substance or mixture from the article or category of articles so that the substance or mixture does not present an unreasonable risk of injury to health or the environment identified in the risk evaluation conducted in accordance with section 6(b)(4)(A).'' TSCA does not define ''article,'' but EPA proposed to define ''article'' and is now finalizing that definition. Based on this definition, the conditions of use subject to this regulation include articles, *e.g.,* sheet gaskets, brake blocks, brake/linings, other gaskets and other vehicle friction products.

Except for bulk chrysotile asbestos imported for use in asbestos diaphragms, all of the other conditions of use that are the subject of this regulation involve the use and/or disposal of products or articles containing chrysotile asbestos. For each condition of use, the article is subject to circumstances during use that change or alter the article as a direct result of the use. Releases of chrysotile asbestos, and the associated unreasonable risk from exposure to chrysotile asbestos identified in the risk evaluation, result from use of the articles. The articles themselves include sheet gaskets, other gaskets, brake blocks, brakes and linings, which wear down during use and release asbestos fibers. The risk evaluation determined that exposure to workers, ONUs, consumers and bystanders can occur when these items are replaced or repaired, resulting in harmful exposures. These identified risks from articles containing asbestos could result from exposure of any kind and, as a result, EPA had no feasible option to prevent these risks other than a complete prohibition. In particular, without effective respiratory protection to reduce asbestos exposure, no other restriction EPA researched could sufficiently prevent unreasonable risk to ONUs, consumers, and bystanders who were not expected to wear respiratory protection. For example, EPA does not assume consumers who replace their own automobile brakes will consistently use appropriate respiratory protection, nor can EPA in this rule require respirator use for consumers. Accordingly, EPA's final regulatory action sets requirements for articles only to the extent necessary to address the identified risks from exposure to chrysotile asbestos from the article so that chrysotile asbestos does not present an unreasonable risk to health.

C. TSCA Section 9 Analysis

1. TSCA section 9(a) analysis.

Section 9(a) of TSCA provides that, if the Administrator determines in the Administrator's discretion that an unreasonable risk may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA, the Administrator must submit a report to the agency administering that other law that describes the risk and the activities that present such risk. TSCA section 9(a) describes additional procedures and requirements to be followed by EPA and the other federal agency after submission of the report. As discussed in this Unit, the Administrator does not determine that unreasonable risk from the conditions of use of chrysotile

asbestos may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

TSCA section 9(d) instructs the Administrator to consult and coordinate TSCA activities with other Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burden of duplicative requirements. For this rule, EPA has consulted with other appropriate Federal executive departments and agencies including OSHA and NIOSH.

OSHA requires that employers provide safe and healthful working conditions by setting and enforcing standards and by providing training, outreach, education and assistance. OSHA has three separate health standards for asbestos covering employers in General Industry (29 CFR 1910.1001); Shipyards (29 CFR 1915.1001); and Construction (29 CFR 1926.1101). These standards include a permissible exposure limit (PEL) for asbestos of 0.1 fibers per cubic centimeter (cc) of air as an eight-hour time weighted average (TWA), and an excursion limit of 1.0 asbestos fibers per cubic centimeter over a 30-minute period. The standards apply to all occupational exposures to asbestos and require exposure monitoring to determine employee exposure. Exposure monitoring includes both initial monitoring of employees who are, or may reasonably be expected to be, exposed to airborne concentrations at or above the TWA PEL or excursion limit, as well as additional monitoring. Monitoring frequency depends on work classification exposure while additional monitoring may be required based on changes in the workplace environment that may result in new or additional exposures above the TWA PEL or excursion limit.

This rule addresses risk from exposure to chrysotile asbestos in both workplace and consumer settings (*e.g.,* do-it-yourself automobile maintenance). With the exception of TSCA, there is no Federal law that provides authority to prevent or sufficiently reduce these cross-cutting exposures. No other Federal regulatory agency can evaluate and address the totality of the risk that EPA is addressing in this rule. For example, OSHA may set exposure limits for workers, but its authority is limited to the workplace and does not extend to consumer uses of hazardous chemicals (while EPA does not regulate consumer use directly under TSCA 6(a)(5), it has authority to regulate the upstream supply of chemicals for consumer uses). Further, OSHA does not have direct authority over state and local employees, and it has no authority at all over the working conditions of state and local employees in states that have no OSHA-approved State Plan under 29 U.S.C. 667. Other individuals that may not be covered by OSHA requirements include university students, volunteers, and self-employed persons. CPSC is charged with protecting the public from unreasonable risks of injury or death associated with the use of the thousands of types of consumer products under the agency's jurisdiction, CPSC has the authority to regulate chrysotile asbestos in such consumer products, but not in automobiles, trucks and motorcycles, which are not under its jurisdiction.

Moreover, the 2016 amendments to TSCA, Public Law 114–182, alter both the manner of identifying unreasonable risk under TSCA and EPA's authority to address unreasonable risk under TSCA, such that risk management under TSCA is increasingly distinct from analogous provisions of the Consumer Product Safety Act (CPSA), the Federal Hazardous Substances Act (FHSA), or the OSH Act. These changes to TSCA reduce the likelihood that an action under the CPSA, FHSA, or the OSH Act would sufficiently prevent or reduce the unreasonable risk of chrysotile asbestos. In a TSCA section 6 rule, following an unreasonable risk determination, EPA must apply risk management requirements to the extent necessary so that the chemical no longer presents unreasonable risk and only consider costs to the extent practicable, 15 U.S.C. 2605(a) and (c)(2), subject to time-limited conditional exemptions, 15 U.S.C. 2605(g). By contrast, a consumer product safety rule under the CPSA must include a finding that ''the benefits expected from the rule bear a reasonable relationship to its costs.'' 15 U.S.C. 2058(f)(3)(E). Additionally, the 2016 amendments to TSCA reflect Congressional intent to ''delete the paralyzing 'least burdensome' requirement,'' 162 Cong. Rec. S3517 (June 7, 2016), a reference to TSCA section 6(a) as originally enacted, which required EPA to use ''the least burdensome requirements'' that protect ''adequately'' against unreasonable risk, 15 U.S.C. 2605(a) (1976). However, a consumer product safety rule under the CPSA must impose ''the least burdensome requirement which prevents or adequately reduces the risk of injury for which the rule is being promulgated.'' 15 U.S.C. 2058(f)(3)(F). Analogous requirements, also at variance with recent revisions to TSCA, affect the availability of action CPSC may take under the FHSA relative to action EPA may take under TSCA. 15 U.S.C. 1262. Gaps also exist between OSHA's authority to set workplace standards under the OSH Act and EPA's obligations to sufficiently address chemical risks under TSCA. To set PELs for chemical exposure, OSHA must first establish that the new standards are economically feasible and technologically feasible (79 FR 61387, October 10, 2014). But under TSCA, EPA's substantive burden under TSCA section 6(a) is to demonstrate that, as regulated, the chemical substance no longer presents an unreasonable risk, with unreasonable risk being determined under TSCA section 6(b)(4).

EPA therefore concludes that: TSCA is the only regulatory authority able to prevent or reduce risks of chrysotile asbestos to a sufficient extent across the range of conditions of use, exposures and populations of concern; these risks can be addressed in a more coordinated, efficient and effective manner under TSCA than under different laws implemented by different agencies, and there are key differences between the finding requirements of TSCA and those of the OSH Act. For these reasons, in the Administrator's discretion, the Administrator does not determine that unreasonable risk from the conditions of use of chrysotile asbestos may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

More than 10 comments were received regarding issues generally related to TSCA section 9. Some commenters supported EPA's decision to not make a determination and submit a report to another agency under TSCA section 9(a). Other commenters contended that the OSHA regulation that relates to reducing worker exposure sufficiently mitigates the unreasonable risk and that EPA lacks authority to regulate worker exposures because OSHA is better positioned to enforce both safety measures and occupational exposures. EPA's response to these comments is available in the docket for this rulemaking (Ref. 12).

2. TSCA section 9(b) analysis.

If EPA determines that actions under other Federal laws administered in whole or in part by EPA could eliminate or sufficiently reduce a risk to health or the environment, TSCA section 9(b) instructs EPA to use these other authorities unless the Administrator determines in the Administrator's discretion that it is in the public interest to protect against such risk under TSCA. In making such a public interest finding, TSCA section 9(b)(2) states: ''the Administrator shall consider, based on information reasonably available to the

Administrator, all relevant aspects of the risk . . . and a comparison of the estimated costs and efficiencies of the action to be taken under this title and an action to be taken under such other law to protect against such risk.''

Although several EPA statutes have been used to limit chrysotile asbestos exposure (Ref. 4), regulations under those EPA statutes have limitations because they largely regulate releases to the environment, rather than direct human exposure. The Clean Air Act generally focuses on releases of asbestos to the ambient air. Under the Resource Conservation and Recovery Act (RCRA) Subtitle D, the disposal of chrysotile asbestos is regulated as a non-hazardous solid waste; RCRA does not address exposures during manufacturing, processing, distribution and use of products containing chrysotile asbestos. Only TSCA provides EPA the authority to regulate the manufacture (including import), processing, distribution in commerce, commercial use and commercial disposal of chemicals substances to be able to address chrysotile asbestos direct exposure to humans.

For these reasons, the Administrator does not determine that unreasonable risk from the conditions of use of chrysotile asbestos could be eliminated or reduced to a sufficient extent by actions taken under other Federal laws administered in whole or in part by EPA.

D. TSCA Section 26(h) Considerations

In accordance with TSCA section 26(h), EPA has used scientific information, technical procedures, measures, methods, protocols, methodologies, and models consistent with the best available science. The unreasonable risk determination was based on a risk evaluation, which was subject to peer review and public comment, was developed in a manner consistent with the best available science and based on the weight of the scientific evidence. The extent to which the various information, procedures, measures, methods, protocols, methodologies or models, as applicable, used in EPA's decision have been subject to independent verification or peer review is adequate to justify their use, collectively, in the record for this rule. In particular, the ECEL value incorporated into the interim workplace controls is derived from the analysis in the 2020 Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos; it likewise represents decisions based on the best available science and the weight of the scientific evidence (Ref. 23). The ECEL value of 0.005 f/cc as an 8-hour TWA is based incidence of lung cancer, mesothelioma and other cancers. Additional information on the peer review and public comment process, such as the peer review plan, the peer review report, and the Agency's response to comments, can be found at EPA's risk evaluation docket at EPA–HQ–OPPT–2019–0501 (Ref. 30).

E. TSCA Section 14 Requirements

EPA is also providing notice to manufacturers, processors, and other interested parties about potential impacts to confidential business information that may occur with this final rule. Under TSCA section 14(b)(4), if EPA promulgates a rule pursuant to TSCA section 6(a) that establishes a ban or phase-out of a chemical substance, the protection from disclosure of any confidential business information regarding that chemical substance and submitted pursuant to TSCA will be ''presumed to no longer apply,'' subject to the limitations identified in TSCA section 14(b)(4)(B)(i) through (iii). Pursuant to TSCA section 14(b)(4)(B)(iii), the presumption against protection from disclosure would apply only to information about the specific conditions of use that this rule would prohibit. Manufacturers or processors seeking to protect such information would be able to submit a request for nondisclosure as provided by TSCA sections 14(b)(4)(C) and 14(g)(1)(E). Any request for nondisclosure would need to be submitted within 30 days after receipt of notice from EPA under TSCA section 14(g)(2)(A). EPA anticipates providing such notice via the Central Data Exchange (CDX).

F. TSCA Section 18(c)(3) Federal Preemption

TSCA section 18(c)(3) defines the scope of federal preemption with respect to any final rule EPA issues under TSCA section 6(a). That provision provides that federal preemption of ''statutes, criminal penalties, and administrative actions'' applies to ''the hazards, exposures, risks, and uses or conditions of use of such chemical substances included in any final action the Administrator takes pursuant to [TSCA section 6(a)].'' With respect to this final TSCA section 6(a) rule for chrysotile asbestos, federal preemption applies to the COUs evaluated in the TSCA Risk Evaluation for Asbestos, Part 1. Federal preemption as a result of this section 6(a) rule does not apply to COUs that are being evaluated in EPA's Risk Evaluation for Asbestos, Part 2, including legacy uses and associated disposals, other types of asbestos fibers in addition to chrysotile, and conditions of use of asbestos-containing talc.

VIII. Severability

EPA intends that each provision of this rulemaking be severable. In the event of litigation staying, remanding, or invalidating all or a portion of EPA's risk management approach for one or more conditions of use (COUs) in this rule, EPA intends to preserve the risk management approach in the rule for all other portions of the risk management approach for a COU and all other COUs to the fullest extent possible. The Agency evaluated the risk management options in TSCA section 6(a)(1) through (7) for each COU and generally EPA's regulation of a COU to address the unreasonable risk from chrysotile asbestos functions independently from EPA's regulation of other COUs, which may have different characteristics leading to EPA's risk management decisions. Further, the Agency crafted this rule so that different risk management approaches are reflected in different provisions or elements of the rule that are capable of operating independently. Accordingly, the Agency has organized the rule so that if any provision or element of this rule is determined by judicial review or operation of law to be invalid, that partial invalidation will not render the remainder of this rule invalid.

There are many permutations of the above. Accordingly, rather than walking through each one, EPA is providing the following two representative examples for illustrative purposes. The first example of how the regulation of one COU is independent of another COU is based on the following COU examples of: the commercial use of chrysotile asbestos for use in sheet gaskets for chemical production, which EPA prohibited in § 751.509(a), and the commercial use of chrysotile asbestos for oilfield brake blocks, which EPA prohibited in § 751.509(d)(1). To the extent that a court were to find EPA lacked substantial evidence to support its prohibition of the commercial use of chrysotile asbestos for use in sheet gaskets for chemical production or otherwise found flaw with EPA's approach to that COU, it would have no bearing on other COUs, such as the commercial use of chrysotile asbestos for oilfield brake blocks, unless the specific flaw also applies to the particular facts associated with the commercial use of chrysotile asbestos for oilfield brake blocks. This is reflected in the structure of the rule, which does not intertwine the prohibitions for commercial use of chrysotile asbestos for use in sheet

gaskets for chemical production and the commercial use of chrysotile asbestos for oilfield brake blocks, but rather separately prohibits each of these COUs.

Another example of how different risk management approaches are reflected in different provisions or elements of the rule that are capable of operating independently is the regulatory provisions for the commercial use of chrysotile asbestos sheet gaskets for titanium dioxide production. EPA's risk management approach includes two elements: (1) a prohibition on the commercial use of chrysotile asbestos sheet gaskets for titanium dioxide production under § 751.509(b) and (2) interim workplace controls to reduce risk to workers until the prohibition takes effect under § 751.511. To the extent that a court were to find that EPA lacked substantial evidence to support the interim workplace controls for the commercial use of sheet gaskets for titanium dioxide production, or otherwise found flaw with EPA's approach with respect to this aspect of the risk management for this COU, it would have no bearing on EPA's decision to prohibit the commercial use of sheet gaskets for titanium dioxide production. This is reflected in the structure of the rule, which does not make the prohibition of the commercial use of sheet gaskets for titanium dioxide production contingent on the application of interim workplace controls.

X. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/regulations/and-executive-orders.*

A. Executive Orders 12866: Regulatory Planning and Review and 14094: Modernizing Regulatory Review

This action is a ''significant regulatory action'' as defined under section 3(f)(1) of Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023). Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to Executive Order 12866 review is available in the docket.

As summarized in Unit I.E., EPA prepared an analysis of the potential costs and benefits associated with this action (Ref. 2), a copy of which is available in the docket and discussed in Unit VII.B.

B. Paperwork Reduction Act (PRA)

The information collection requirements in this final rule have been submitted to OMB for approval under the PRA, 44 U.S.C. 3501 *et seq.* The Information Collection Request (ICR) document prepared by EPA has been assigned EPA ICR No. 2707.02 and OMB Control No. 2070–0220. You can find a copy of the ICR in the docket for this rule (Ref. 31), and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

The information collection activities required under this rule include reporting and recordkeeping requirements. As explained in Unit VI.F. and specified at § 751.511, companies that manufacture (including import), process, distribute in commerce and use chrysotile asbestos would be required to retain certain information at the company headquarters for five years from the date of generation. These information collection activities are necessary to provide EPA with information upon inspection. EPA believes that these information collection activities would not significantly impact the regulated entities. As further explained in the ICR document:

• Four (4) titanium dioxide manufacturing facilities that use sheet gaskets and 8 chlor-alkali facilities are estimated to incur costs associated with the ECEL (specifically, developing the exposure control plan, conducting exposure monitoring, and the associated notifications and recordkeeping). Each firm is predicted to an incur an average burden of 182.98 hours per year.

• Five (5) chemical manufacturing facilities that use sheet gaskets and 12 to 1,400 companies installing aftermarket automotive brakes are estimated to incur additional recordkeeping costs associated with their disposal activities. Firms are predicted to incur a burden of ranging from 0.03 hours to 4.42 hours per year.

• For the remaining industry sectors and recordkeeping activities required by the rule, records that comply with the requirements are assumed to already be maintained as part of ordinary business records. Therefore, EPA estimates that such respondents would incur no additional incremental paperwork burdens due to the rule.

Respondents/affected entities: Chrysotile asbestos manufacturers (including importers), processors, distributors, and users.

Respondent's obligation to respond: Mandatory. TSCA section 6(a) and the final rule.

Estimated number of respondents: 721.

Frequency of response: On occasion.

Total estimated burden: 2,269 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $370,973 (per year), includes $233,425 annualized capital or operation & maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA, 5 U.S.C. 601 *et seq.* The small entities subject to the requirements of this action manufacture (including import), process, distribute in commerce and use chrysotile asbestos in the conditions of use covered by this rule. As described in more detail in section 6.2 of the Economic Analysis (Ref. 2), EPA has determined that 14 to 1,372 small entities would be subject to the rule. The available information about the magnitude of the small entity impacts for each use category are summarized below:

Chlor-alkali facilities: None of the three affected firms are small businesses.

Sheet gasket manufacturing for chemical production: EPA does not have the information to calculate the costs of the rule to small businesses in this sector, so small business impacts have not been estimated. EPA is aware of the identity of a small business that manufactures sheet gaskets containing asbestos for chemical production (including titanium dioxide production), and the Agency assumes that there may be a second small business providing sheet gaskets containing asbestos for similar uses. While EPA lacks the information to estimate the compliance cost and the resulting impact on firms in this sector, the one firm EPA is aware of supplying this sector sells a diverse line of products (including non-asbestos gaskets and many products other than gaskets) serving several different industries, and it operates several sites that do not manufacture gaskets containing asbestos. This suggests that asbestos-containing gaskets are not a primary source of revenue for the firm. EPA assumes that if there is another manufacturer of asbestos gaskets for similar uses, that it also sells non-asbestos gaskets. Since asbestos gaskets are such a niche portion of the gasket industry, EPA believes this is a reasonable assumption. If the customers using gaskets containing asbestos are able to convert entirely to asbestos-free gaskets, the affected gasket manufacturers could likely provide the

substitute products. These customers consist of chemical manufacturers that are all large businesses as far as EPA is aware. To the extent that asbestos-free gaskets do not last as long as those containing asbestos, the rule could potentially increase revenues for the affected gasket manufacturers. Asbestos-free products in these applications reportedly require more frequent replacement than items containing asbestos. As a result, the rule could increase revenues for the affected small business suppliers if they sell a larger volume of non-asbestos products to the end users as replacements.

Sheet gasket end users (chemical production): None of the 4 firms known to be affected are small businesses. It is possible there may be other unknown small businesses that may be affected.

Oilfield brake block importer: EPA does not have the information to calculate the costs of the rule to small businesses in this sector, so small business impacts have not been estimated. There is one firm known to import and distribute oilfield brake blocks containing asbestos and it is a small business. While EPA was not able to estimate the compliance cost and its impact on this firm, if the customers (which may include other small businesses) with older drilling rigs currently using brake blocks containing asbestos continue to use those rigs, the importer could likely provide the asbestos-free brake blocks used as substitutes. To the extent that asbestos-free brake blocks are more expensive and do not last as long as those containing asbestos, the rule could potentially increase revenues for the affected brake block importer. A less durable product might be less profitable for the customers, but selling a product that has to be replaced more often could increase revenues for the importer if it sells a larger volume of non-asbestos products to the end users as replacements.

Oilfield brake block—end users: EPA has not identified any small businesses using oilfield brake blocks containing asbestos. If there are such small businesses, EPA does not have the information needed to calculate the costs of the rule to them. Industry sources have indicated that the use of asbestos-containing brake blocks has declined over time because the type of drilling rigs that use them have been replaced by equipment that does not require the use of brake blocks containing asbestos, or that do not use brake blocks at all. Since there is only one known importer and it is small, there are likely few companies still using asbestos-containing brake blocks.

Aftermarket automotive brakes: 11 to 1,369 small businesses are estimated to be affected by the rule. The estimate of 11 affected small entities assumes that each affected business performs between 40 and 700 brake replacements per year using asbestos brake linings or pads. The estimate of 1,369 affected small entities assumes that each affected business installs a single set of asbestos brake linings or pads per year. Affected firms are expected to incur a cost of approximately $18 per brake replacement job for the additional expense of a set of four non-asbestos brake linings or pads, and about $1 for recordkeeping for their waste disposal activities. This results in annual costs between $20 and $14,000 per firm (depending on the number of brake replacements they perform). At the low-end of 11 affected brake replacement firms, approximately 85% would have cost impacts of less than 1% of their annual revenues, about 10% would have cost impacts between 1% and 3%, and roughly 6% would have cost impacts over 3%. At the high-end estimate of 1,369 affected brake replacement firms affected, 100% of firms would have a cost impact of less than 1% of their annual revenue. As described in the Economic Analysis (Ref. 2), aftermarket automobile brakes containing asbestos are estimated to have a very small share (0.002%) of the total market. EPA did not estimate any costs for these businesses associated with finding suppliers of non-asbestos brakes because EPA assumes that these businesses already sell non-asbestos brakes as well as brakes containing asbestos.

Other gaskets: EPA is not aware of any firms that would be affected for this use category, since the one firm that previously indicated that it used these products subsequently stated that it does not do so. Therefore, no impacts are predicted on this use category as a result of the rule.

Other vehicle friction products: EPA is not aware of any firms impacted for this use category because the one firm that previously indicated to EPA that it used products in this use category subsequently stated that it does not do so. Therefore, no impacts are predicted on this use category as a result of the rule. To the extent there are ongoing uses, it is likely that the effects of the rule would be similar to those for aftermarket auto brakes (a few firms facing a small cost increase for asbestos-free products that probably can be passed on to consumers).

Details of this analysis are presented in the Economic Analysis (Ref. 2).

D. Unfunded Mandates Reform Act (UMRA)

This action contains a federal mandate under UMRA, 2 U.S.C. 1531–1538, that may result in expenditures of more than the inflation-adjusted UMRA threshold of $100 million or more for state, local and tribal governments, in the aggregate, or the private sector in any one year. Accordingly, the EPA has prepared a written statement required under UMRA section 202. The statement is included in the docket for this action and briefly summarized here. (Ref. 32)

Total annual net compliance costs per year over the first 12 years of this rule are estimated to range from a cost of $342 million to a savings of $126 million, depending on the year. (This does not include costs for sheet gaskets used in chemical production, brake blocks in the oil industry, other vehicle friction products, or other gaskets, which were not quantified). Thus, the cost of the rule in any one year can exceed $177 million, the inflation-adjusted UMRA threshold. When longer term savings in the chlor-alkali industry are accounted for over a 35-year period (the estimated useful lifespan of facilities in the chlor-alkali industry), the quantified incremental costs of the rule using a 3% discount rate range from savings of less than $1 million per year to costs of more than $7 million per year. Using a 7% discount rate, the incremental costs range from more than $34 million per year to greater than $43 million per year.

The economic impact of a regulation on the national economy is generally considered to be measurable only if the economic impact of the regulation reaches 0.25 percent to 0.5 percent of Gross Domestic Product (GDP) (Ref. 24). Given the current GDP of $27.62 trillion, this is equivalent to a cost of $69 billion to $138 billion. Therefore, EPA has concluded that this rule is highly unlikely to have any measurable effect on the national economy.

The quantified benefits of avoided cancer incidence due to the requirements for chlor-alkali facilities, sheet gaskets in chemical production, and aftermarket automobile brakes total approximately $6,000 per year using a 3% discount rate and $3,000 per year using a 7% discount rate. There are also benefits due to the reduction in pollutants generated by electric utilities that supply power to the chlor-alkali facilities, as well as various unquantified benefits.

UMRA section 205 requires that before promulgating any rule for which a written statement is required under

UMRA section 202, the agency shall identify and consider a reasonable number of regulatory alternatives and from those alternatives select the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule, unless the head of the affected agency publishes with the final rule an explanation of why the least costly, most cost-effective or least burdensome method of achieving the objectives of the rule was not adopted; or the provisions are inconsistent with law.

EPA considered two primary regulatory alternatives to the requirements that are being finalized in this action for chrysotile asbestos diaphragms in the chlor-alkali industry. Under one alternative the prohibitions on the processing, distribution in commerce and commercial use of asbestos diaphragms at chlor-alkali facilities would take effect at all facilities five years after the effective date of the final rule. Under the other alternative these prohibitions would take effect at all facilities after 12 years. The 12-year option has slightly lower estimated annualized costs than the final rule in EPA's Economic Analysis (Ref. 2) when using a 7 percent discount rate. However, as described in Unit VII.B.4.b.ii., this is an artifact of how the time at which costs are incurred affects the incremental annualized cost estimates of the rule. Moreover, neither alternative option is consistent with the statute or the objectives of the rule.

EPA has concluded that the regulatory alternatives it considered are not consistent with the statute or the objectives of the rule. TSCA requires that EPA specify mandatory compliance dates for all requirements of a TSCA section 6(a) rule, and that the dates be ''as soon as practicable'' and ''provide for a reasonable transition period.'' As described in Unit V., given the differences among chlor-alkali facilities, EPA has concluded that a compliance deadline of five years for the processing, distribution in commerce and commercial use at all facilities would not provide a reasonable transition period without anticipated disruption to the available chlorine supply for water treatment. But allowing the processing, distribution in commerce and commercial use of asbestos diaphragms to continue for 12 years at all facilities would not be as soon as practicable, since some facilities will be able to complete their conversion to non-asbestos technology in less than 12 years. Therefore, neither of the alternative options considered would be consistent with the statute or the objectives of the rule. Instead, EPA is finalizing requirements that provide longer staggered phase-out periods to provide a reasonable period for companies to sequentially convert some facilities from chrysotile asbestos diaphragm technology to membrane technology that is still as quickly as is practicable.

Additional information on EPA's estimates of the benefits and costs of this action are provided in Units I.E. and VII.B.4. and in the Economic Analysis (Ref. 2). Information on the authorizing legislation is provided in Unit I.B. Information on prior consultations with affected State, local, and Tribal governments is provided in Units X.E and X.F.

This action is not subject to the requirements of UMRA section 203 because it contains no regulatory requirements that might significantly or uniquely affect small governments.

E. Executive Order 13132: Federalism

As discussed in Unit I.E.7., EPA has concluded that this action has federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999) because regulation under TSCA section 6(a) may preempt state law. EPA provides the following federalism summary impact statement. The Agency consulted with state and local officials early in the process of developing the proposed action to facilitate their meaningful and timely input into its development. EPA invited the following national organizations representing state and local elected officials to a meeting on May 13, 2021, in Washington, DC: National Governors Association, National Conference of State Legislatures, Council of State Governments, National League of Cities, U.S. Conference of Mayors, National Association of Counties, International City/County Management Association, National Association of Towns and Townships, County Executives of America, and Environmental Council of States. A summary of the meeting with these organizations, including the views that they expressed, is available in the docket (Ref. 7). EPA provided an opportunity for these organizations to provide follow-up comments in writing but did not receive any such comments.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000). This rulemaking would not have substantial direct effects on tribal government because chrysotile asbestos is not manufactured, processed, or distributed in commerce by tribes and would not impose substantial direct compliance costs on tribal governments. Thus, Executive Order 13175 does not apply to this action. EPA nevertheless consulted with tribal officials during the development of this action, consistent with the EPA Policy on Consultation and Coordination with Indian Tribes.

EPA met with tribal officials via teleconferences on May 24, 2021, and June 3, 2021, concerning the prospective regulation of chrysotile asbestos under TSCA section 6 (Ref. 8). Tribal officials were given the opportunity to meaningfully interact with EPA risk managers concerning the current status of risk management. EPA received questions during both meetings held during the consultation period concerning potential risks to workers, consumers, and general population. Participants in the consultations expressed interest in the conditions of use where EPA found unreasonable risk and how EPA would address that unreasonable risk. EPA responded by providing the suite of options provided the agency under TSCA section 6 to address the unreasonable risk (Ref. 8).

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997) directs federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is subject to Executive Order 13045 because it is a significant regulatory action under section 3(f)(1) of Executive Order 12866, and, as discussed in Unit I.E.6., EPA believes that the environmental health or safety risk addressed by this action has a disproportionate effect on children. The health effects of concern related to exposures to chrysotile asbestos are mesothelioma, lung and other cancers, all of which have long latency periods following exposure. Accordingly, we have evaluated the environmental health or safety effects of asbestos on children.

The Risk Evaluation for Asbestos, Part 1: Chrysotile Asbestos (Ref. 1) demonstrated in sensitivity analyses that age at first exposure affected risk estimates, with earlier exposures in life resulting in greater risk. For children, exposures can be anticipated (1) as bystanders for consumer uses such as aftermarket brakes and (2) in consumer uses and occupational uses given that

the risk evaluation presented information indicating that children 16 years of age may engage in these activities.

The results of EPA's evaluation are contained in the risk evaluation (Ref. 1) and the Economic Analysis (Ref. 2). Copies of these documents have been placed in the public docket for this action.

This action is preferred over other regulatory options analyzed because this action prohibits the manufacture (including import), processing, commercial use, and distribution in commerce of chrysotile asbestos for the regulated conditions of use as soon as practicable while providing for a reasonable transition period.

Furthermore, as discussed in Unit I.E.6., EPA's Policy on Children's Health also applies to this action. Information on how the Policy was applied is available under ''Children's Environmental Health'' in the **SUPPLEMENTARY INFORMATION** unit of this preamble.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution in Commerce, or Use

This action is not a ''significant energy action'' under Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not likely to have a significant adverse effect on the supply, distribution or use of energy. The action is predicted to reduce energy use and is not expected to reduce energy supply or increase energy prices.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards under NTTAA, 15 U.S.C. 272.

J. Executive Orders 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and 14096: Revitalizing our Nation's Commitment to Environmental Justice for All

In accordance with Executive Orders 12898 (59 FR 7629, February 16, 1994) and 14096 (88 FR 25251, April 26, 2023), EPA considered the environmental justice (EJ) conditions that exist prior to this action, and the likely effects of this action. EPA believes that the human health or environmental conditions that exist prior to this action result in or have the potential to result in disproportionate and adverse human health or environmental effects on communities with EJ concerns. As summarized in Unit I.E.5. and described more fully in the Economic Analysis (Ref. 2), the firms that will be subject to regulation, particularly for the chlor-alkali and sheet gasket use categories, are often located in areas with a high concentration of industrial activities that pose a variety of environmental hazards to surrounding populations. It is not possible to separate potential EJ concerns currently posed by the use categories being regulated from other risks in the community that are unrelated to chrysotile asbestos. Although data are not available on the worker demographics at specific companies, chemical workers in communities with chlor-alkali facilities are more likely to be Hispanic, less likely to be a race other than White or Black, and have higher incomes on average than chemical workers nationally. Workers in communities with other affected chemical producers are more likely to be Black and less likely to be Hispanic or a race other than White or Black than chemical workers nationally.

EPA believes that this action is likely to reduce existing disproportionate and adverse effects on communities with EJ concerns. Any disproportionate impacts related to the conditions of use that are subject to this rule will be reduced, and ultimately eliminated once all of the prohibitions in the rule take effect. Thus, EJ concerns will be mitigated compared to the baseline.

EPA conducted outreach to advocates of communities with EJ concerns that might be subject to disproportionate exposure to chrysotile asbestos. EPA's EJ consultation occurred from June 1 through August 13, 2021. On June 1 and 9, 2021, EPA held public meetings as part of this consultation (Ref. 9). See also Unit III.A.1. These meetings were held pursuant to and in compliance with Executive Order 12898 and Executive Order 14008, *Tackling the Climate Crisis at Home and Abroad* (86 FR 7619, February 1, 2021). EPA received several comments following the EJ meetings. Commenters expressed concerns that consumers who live near chlor-alkali facilities and Do-It-Yourself (DIY) auto workers could be exposed unless chrysotile asbestos is banned (Ref. 33). EPA also acknowledges that there are pre-existing EJ concerns in communities surrounding some of the affected chlor-alkali facilities and one other chemical manufacturer in Louisiana and Texas due to high levels of polluting industrial activities and high proportions of residents who are people of color (described in more detail in the Economic Analysis (Ref. 2)). This rule is not expected to affect all of these pre-existing EJ concerns, since some of the EJ concerns in these communities result from pollutants other than chrysotile asbestos from facilities that are not affected by this rule.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.,* and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action meets the criteria set forth in 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 751

Environmental protection, Chemicals, Export certification, Hazardous substances, Import certification, Recordkeeping.

Michael S. Regan,

Administrator.

Therefore, for the reasons set forth in the preamble, 40 CFR chapter I is amended as follows:

PART 751—REGULATION OF CERTAIN CHEMICAL SUBSTANCES AND MIXTURES UNDER SECTION 6 OF THE TOXIC SUBSTANCES CONTROL ACT

■ 1. The authority citation for part 751 continues to read as follows:

Authority: 15 U.S.C. 2605, 15 U.S.C. 2625(l)(4).

■ 2. Add a subpart F, consisting of §§ 751.501 through 751.515, to read as follows:

Subpart F—Chrysotile Asbestos

Sec.

751.501 General.
751.503 Definitions.
751.505 Manufacturing, processing and commercial use of chrysotile asbestos diaphragms in the chlor-alkali industry.
751.507 Certification of compliance for the chlor-alkali industry.
751.509 Other prohibitions and restrictions of the manufacturing, processing and commercial use of chrysotile asbestos.
751.511 Interim workplace controls of asbestos exposures.
751.513 Disposal.
751.515 Recordkeeping.

§ 751.501 General.

This subpart sets certain restrictions on the manufacture (including import), processing, distribution in commerce, and commercial use and disposal of chrysotile asbestos (CASRN 132207–32–0) to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a), 15 U.S.C. 2605(a).

§ 751.503 Definitions.

The definitions in subpart A of this part apply to this subpart unless otherwise specified in this section. In

addition, the following definitions apply to this subpart:

Aftermarket automotive brakes and linings means any automotive friction brake articles sold in the secondary market as replacement parts (*e.g.,* brake pads, linings and shoes) used in disc and drum brake systems on automobiles and trucks.

Article means a manufactured item:

(1) Which is formed to a specific shape or design during manufacture;

(2) Which has end use function(s) dependent in whole or in part upon its shape or design during end use; and

(3) Which has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the article, and that result from a chemical reaction that occurs upon end use of other chemical substances, mixtures, or articles; except that fluids and particles are not considered articles regardless of shape or design.

Authorized person means any person specifically authorized by the owner or operator to enter, and whose duties require the person to enter, a regulated area.

Chrysotile asbestos is the asbestiform variety of a hydrated magnesium silicate mineral, with relatively long and flexible crystalline fibers that are capable of being woven.

Disposal means to discard, throw away, or otherwise complete or terminate the useful life of chrysotile asbestos, including any chrysotile asbestos-containing products or articles.

Distribution in commerce has the same meaning as in section 3 of the Act, but the term does not include distribution of chrysotile asbestos waste solely for purposes of disposal in accordance with this Subpart.

Diaphragms means semipermeable diaphragms, which separate the anode from the cathode chemicals in the production of chlorine and sodium hydroxide (caustic soda).

Gasket means an article used to form a leakproof seal between fixed components.

Membrane technology means a chlor-alkali production technology that uses chlorine production cells in which the anode and the cathode are separated by an ion-exchange membrane that is designed to allow only sodium ions and some water to pass through it.

Nuclear material means any source material, special nuclear material, or byproduct material (as such terms are defined in the Atomic Energy Act of 1954, as amended, and regulations issued under such Act).

Oilfield brake blocks means the friction brake blocks component in drawworks used in the hoisting mechanism for oil well drilling rigs.

Other gaskets means gaskets other than *sheet gaskets in chemical production,* to include gaskets used in the exhaust systems of utility vehicles.

Other vehicle friction products means friction articles such as brakes and clutches, other than *aftermarket automotive brakes and linings,* installed on any vehicle, including on off-road vehicles, trains, planes, etc. *Other vehicle friction products* does not include articles used in the NASA Super Guppy Turbine aircraft, a specialty cargo plane used for the transportation of oversized equipment that is owned and operated by the National Aeronautics and Space Administration (NASA).

Owner or operator means any person who owns, leases, operates, controls, or supervises a workplace covered by this subpart.

Potentially exposed person means any person who may be occupationally exposed to a chemical substance or mixture in a workplace as a result of a condition of use of that chemical substance or mixture.

Processing has the same meaning as in section 3 of the Act, but the term does not include processing of chrysotile asbestos waste solely for purposes of disposal in accordance with this subpart.

Regulated area means an area established by the regulated entity to demarcate where airborne concentrations of a specific chemical substance exceed, or there is a reasonable possibility they may exceed, the ECEL.

Savannah River Site means the Department of Energy's nuclear waste management and related national defense operations at its Savannah River Site in Aiken, Barnwell and Allendale counties in South Carolina, including operations at H-Canyon, F and H Tank Farms, Defense Waste Processing Facility, Savannah River National Laboratory and any on-site facility managed by Savannah River Nuclear Solutions.

Sheet gaskets in chemical production means gaskets cut from sheeting, including asbestos-containing rubberized sheeting, that are used in facilities for extreme condition applications such as titanium dioxide manufacturing, or processing nuclear material.

§ 751.505 Manufacturing, processing, distribution in commerce and commercial use of chrysotile asbestos diaphragms in the chlor-alkali industry.

(a) After May 28, 2024, all persons are prohibited from manufacture (including import) of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for diaphragms in the chlor-alkali industry.

(b) After May 28, 2029, all persons are prohibited from processing, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for diaphragms in the chlor-alkali industry, except as provided in paragraphs (c) through (d) of this section.

(c) Any person who meets all of the criteria of this paragraph (c) may process, distribute in commerce and commercially use chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for diaphragms in the chlor-alkali industry at no more than two facilities until May 25, 2032:

(1) On May 28, 2024, the person owns or operates more than one facility that uses chrysotile asbestos in chlor-alkali production;

(2) The person is converting more than one facility that the person owns or operates that as of May 28, 2024 uses chrysotile asbestos in chlor-alkali production from the use of chrysotile asbestos diaphragms to non-chrysotile asbestos membrane technology, and by May 28, 2029, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at one (or more) facility undergoing or that has undergone conversion to non-chrysotile asbestos membrane technology; and

(3) The person certifies to EPA compliance with the provisions of this paragraph, in accordance with § 751.507.

(d) Any person who meets all of the criteria of this paragraph (d) may process, distribute in commerce and commercially use chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for diaphragms in the chlor-alkali industry at not more than one facility until May 26, 2036:

(1) On May 28, 2024, the person owns or operates more than two facilities that use chrysotile asbestos in chlor-alkali production; and

(2) The person is converting more than two facilities that the person owns or operates that as of May 28, 2024 use chrysotile asbestos in chlor-alkali production from the use of chrysotile

asbestos diaphragms to non-chrysotile asbestos membrane technology:

(i) By May 28, 2029, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at one (or more) facility undergoing or that has undergone such conversion; and

(ii) By May 25, 2032 the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at two (or more) facilities undergoing or that have undergone conversion to non-chrysotile asbestos membrane technology; and

(3) The person certifies to EPA compliance with the provisions of this paragraph, in accordance with § 751.507.

§ 751.507 Certification of compliance for the chlor-alkali industry.

(a) In addition to meeting the requirements of §§ 751.505(c), any person who processes, distributes in commerce or commercially uses chrysotile asbestos for diaphragms in the chlor-alkali industry between May 28, 2029 and May 25, 2032 must:

(1) Certify to EPA their compliance with all requirements of § 751.505(c); and

(2) Provide the following information to EPA to support their compliance with the requirements of § 751.505(c):

(i) Identification of the facility for which, by May 28, 2029, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos, pursuant to § 751.505(c)(2), including:

(A) facility name, location, and mailing address;

(B) name of facility manager or other contact, title, phone number and email address; and

(C) date the person ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at the facility.

(ii) Identification of the facility or facilities (no more than two facilities) for which the person will after May 28, 2029, continue to process, distribute in commerce and commercially use chrysotile asbestos diaphragms while the facility or facilities are being converted to non-chrysotile asbestos membrane technology, pursuant to § 751.505(c), including for each facility:

(A) facility name, location, and mailing address; and

(B) name of facility manager or other contact, title, phone number and email address.

(b) In addition to meeting the requirements of paragraph (a) of this section and §§ 751.505(d), any person who processes, distributes in commerce or commercially uses chrysotile asbestos for diaphragms in the chlor-alkali industry between May 25, 2032 and May 26, 2036 must:

(1) Certify to EPA their compliance with all requirements of § 751.505(d); and

(2) Provide the following information to EPA to support their compliance with the requirements of § 751.505(d):

(i) Identification of the facility identified in § 751.505(d)(2)(ii) at which as of May 25, 2032, the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos, including:

(A) facility name, location, and mailing address;

(B) name of facility manager or other contact, title, phone number and email address; and

(C) date the person has ceased all processing, distribution in commerce and commercial use of chrysotile asbestos at the facility.

(ii) Identification of the facility at which the person will between May 25, 2032 and no later than May 26, 2036, continue to process, distribute in commerce and commercially use chrysotile asbestos diaphragms while the facility is being converted to non-chrysotile asbestos membrane technology pursuant to § 751.505(d), including:

(A) facility name, location, and mailing address; and

(B) name of facility manager or other contact, title, phone number and email address.

(c) The certification required by paragraphs (a) and (b) of this section must be signed and dated by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: a president, secretary, treasurer, or vice-president of the corporation in charge of chlor-alkali operations, or any other person who performs similar policy or decision-making functions for the corporation.

(d) Any person signing a document under paragraph (c) of this section shall also make the following certification:

"I certify under penalty of law that this document was prepared under my direction or supervision, and the information is, to the best of my knowledge and belief, true, accurate, and complete. I am aware it is unlawful to knowingly submit incomplete, false and/or misleading information and there are criminal penalties for such conduct."

(e) This certification must be submitted to the Director, Office of Pollution Prevention and Toxics (OPPT), using the address specified at 40 CFR 700.17(a).

(1) The certification under paragraph (a) of this section must be submitted no later than 10 business days after May 28, 2029; and

(2) The certification under paragraph (b) of this section must be submitted no later than 10 business days after May 25, 2032.

§ 751.509 Other prohibitions and restrictions on the manufacturing, processing, distribution in commerce and commercial use of chrysotile asbestos.

(a) After May 27, 2026, all persons are prohibited from manufacturing (including importing), processing, distributing in commerce, and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for use in sheet gaskets for chemical production, except as provided in paragraphs (b) and (c) of this section. Any sheet gaskets for chemical production which are already installed for use on May 27, 2026 are not subject to the distribution in commerce and commercial use prohibitions.

(b) Any person may commercially use chrysotile asbestos sheet gaskets for titanium dioxide production until May 28, 2029.

(c)(1)(i) Any person may commercially use chrysotile asbestos sheet gaskets for processing nuclear material until May 28, 2029.

(ii) Any person may commercially use chrysotile asbestos sheet gaskets for processing nuclear material at the Savannah River Site until December 31, 2037.

(2) After November 25, 2024, any person commercially using chrysotile asbestos sheet gaskets for processing nuclear material pursuant to (c)(1)(i) and (ii) must have in place exposure controls expected to reduce exposure of potentially exposed persons to asbestos, and provide potentially exposed persons in the regulated area where chrysotile asbestos sheet gasket replacement is being performed a full-face air purifying respirator with a P–100 (HEPA) cartridge (providing an assigned protection factor of 50), or other respirator that provides a similar or higher level of protection to the wearer.

(3)(i) Any sheet gaskets for processing nuclear material which are already installed for use on May 28, 2029 are not subject to the distribution in commerce and commercial use prohibitions in paragraphs (a) of this section.

(ii) Any sheet gaskets for processing nuclear material at the Savannah River Site which are already installed for use on December 31, 2037, are not subject

to the distribution in commerce and commercial use prohibitions in paragraphs (a) of this section.

(d) After November 25, 2024, all persons are prohibited from manufacturing (including importing), processing, distribution in commerce and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for commercial use of:

(1) Oilfield brake blocks;

(2) Aftermarket automotive brakes and linings;

(3) Other vehicle friction products; and

(4) Other gaskets.

(e) After November 25, 2024, all persons are prohibited from the manufacturing (including importing), processing, and distribution in commerce of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for consumer use of:

(1) Aftermarket automotive brakes and linings; and

(2) Other gaskets.

(f) On November 25, 2024:

(1) Any aftermarket automotive brakes and linings, other vehicle friction products, and other gaskets which are already installed for commercial use are not subject to the prohibitions on distribution in commerce and commercial use under paragraph (d) of this section.

(2) Any aftermarket automotive brakes and linings, and other gaskets which are already installed for consumer use are not subject to the distribution in commerce prohibition under paragraph (e) of this section.

§ 751.511 Interim workplace controls of chrysotile asbestos exposures.

(a) *Applicability.* This section applies to processing and commercial use of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for chrysotile asbestos diaphragms in the chlor-alkali industry; and to the commercial use of chrysotile asbestos sheet gaskets for titanium dioxide production.

(b) *Interim Existing Chemical Exposure Limit (ECEL).* Beginning November 25, 2024, the owner or operator must ensure that no person is exposed to an airborne concentration of chrysotile asbestos in excess of the interim ECEL for chrysotile asbestos of 0.005 fibers (f)/cubic centimeter (cc) as an eight (8)-hour time-weighted average (TWA). Where an owner or operator cannot demonstrate exposure at or below the ECEL, including through the use of all technically feasible engineering controls or work practices as described in paragraph (e)(1) of this section, and has not demonstrated that it has appropriately supplemented with respiratory protection that complies with the requirements of paragraph (f) of this section, this will constitute a failure to comply with the ECEL.

(c) *Exposure monitoring*—(1) *In general.* (i) Owners or operators must determine each potentially exposed person's exposure from personal breathing zone air samples that are representative of the 8-hour TWA exposure of each potentially exposed person.

(ii) Representative 8-hour TWA of a potentially exposed person's exposure must be determined on the basis of one or more samples representing full-shift exposures for each shift for each potentially exposed person in each job classification in each work area.

(2) *Initial exposure monitoring.* No later than November 25, 2024 each owner or operator covered by paragraph (a) of this section as of May 28, 2024, must perform initial exposure monitoring of all potentially exposed persons.

(3) *Periodic exposure monitoring.* The owner or operator must establish an exposure monitoring program for periodic monitoring of exposure to chrysotile asbestos. If one or more samples representing full-shift exposures from the most recent exposure monitoring exceeds the ECEL (>0.005 f/cc 8-hour TWA), periodic exposure monitoring is required within three months of the most recent exposure monitoring. Otherwise, periodic exposure monitoring is required within six months of the most recent exposure monitoring.

(4) *Additional exposure monitoring.* The owner or operator must conduct additional exposure monitoring within a reasonable timeframe after there has been a change in the production, process, control equipment, personnel or work practices that may result in new or additional exposures above the ECEL or the owner or operator has any reason to suspect that a change may result in new or additional exposures above the ECEL.

(5) *Method of monitoring.* (i) Exposure monitoring samples must be personal breathing zone samples collected and analyzed using methods and quality control procedures described in Appendix A to 29 CFR 1910.1001, or as referenced in Appendix A to 29 CFR 1910.1001 (Appendix B to 29 CFR 1910.1001, OSHA method ID–160, or the NIOSH 7400 method).

(ii) Owners or operators must use exposure monitoring methods that conform with the OSHA Reference Method specified in Appendix A of 29 CFR 1910.1001 or an equivalent method. If an equivalent method is used, the owner or operator must ensure that the method meets the following criteria:

(A) Replicate exposure data used to establish equivalency are collected in side-by-side field and laboratory comparisons; and

(B) The comparison indicates that 90% of the samples collected in the range 0.5 to 2.0 times the ECEL or the lowest concentration possible have an accuracy range of plus or minus 25 percent of the OSHA Reference Method specified in Appendix A of 29 CFR 1910.1001 at a 95 percent confidence level as demonstrated by a statistically valid protocol. The NIOSH 7402 analytical method may be applied to adjust the analytical result to include only chrysotile asbestos.

(6) *Notification of exposure monitoring results.* (i) The owner or operator must, within 15 business days of receipt of monitoring results, notify each potentially exposed person of these results either individually in writing or by posting the results in an appropriate location that is accessible to all potentially exposed persons. The notice must be in plain language and understandable to all potentially exposed persons.

(ii) The written notification required by paragraph (c)(6)(i) of this section must include the corrective action being taken by the owner or operator to reduce exposure to or below the ECEL, wherever monitoring results indicated that the ECEL had been exceeded.

(d) *Regulated areas*—(1) *Establishment.* Beginning November 25, 2024 the owner or operator must establish regulated areas wherever airborne concentrations of chrysotile asbestos exceed, or there is a reasonable possibility that they may exceed, the ECEL.

(2) *Demarcation.* The owner or operator must demarcate regulated areas from the rest of the workplace in a manner that minimizes the number of persons who will be exposed to chrysotile asbestos.

(3) *Access.* The owner or operator must limit access to regulated areas to authorized persons or other persons required by work duties to be present in regulated areas.

(4) *Provision of respirators.* The owner or operator must supply a respirator selected in accordance with paragraph (f) of this section to each person entering a regulated area and must require the use of such respirator.

(5) *Prohibited activities.* The owner or operator must ensure that persons do

not eat, drink, smoke, chew tobacco or gum, or apply cosmetics in the regulated area.

(e) *Exposure Control Procedures and Plan*—(1) *Exposure Controls.* (A) The owner or operator must institute engineering controls and work practices to reduce and maintain airborne chrysotile asbestos concentrations to or below the ECEL, except to the extent that the owner or operator can demonstrate that such controls are not feasible.

(B) Wherever the feasible engineering controls and work practices that can be instituted are not sufficient to reduce airborne chrysotile asbestos concentrations to or below the ECEL, the owner or operator must use them to reduce exposures to the lowest levels achievable by these controls. If the feasible engineering controls and work practices cannot reduce exposures to or below the ECEL, the owner or operator must supplement the controls by providing and requiring the use of respiratory protection that complies with the requirements of paragraph (f) of this section.

(2) *Exposure Control Plan Requirements.* (i) Beginning March 28, 2025, when the airborne chrysotile asbestos concentrations exceed the ECEL, or are reasonably expected to exceed the ECEL, owners and operators must establish and implement an exposure control plan to reduce exposures to all potentially exposed persons to or below the ECEL by means of engineering controls and work practices, and by the use of respiratory protection where required under paragraph (e)(1)(B) of this section. The exposure control plan must be available to persons exposed to chrysotile asbestos.

(ii) The exposure control plan must be reviewed and updated as necessary, but at least annually, to reflect any significant changes in the status of the owner or operator's compliance with the requirements of this section.

(iii) The owner or operator must not implement a schedule of personnel rotation as a means of compliance with the ECEL.

(iv) The exposure control plan must include:

(A) An explanation of the exposure controls considered, a rationale for why exposure controls were selected or not selected, based on feasibility, effectiveness, and other relevant considerations;

(B) Descriptions of actions the owner or operator must take to implement the exposure controls selected, including proper installation, maintenance, training, or other actions, and the estimated timeline for implementing such controls;

(C) Description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls; and

(D) An explanation of the procedures for responding to any change that may reasonably be expected to introduce additional sources of exposure to chrysotile asbestos, or otherwise result in increased exposure to chrysotile asbestos, including procedures for implementing corrective actions to mitigate exposure to chrysotile asbestos.

(f) *Respiratory protection*—(1) *Method of Compliance.* Beginning November 25, 2024, if an owner or operator is required to provide respiratory protection pursuant to paragraphs (d)(4) or (e)(1)(B) of this section, the owner or operator must provide each potentially exposed person with a respirator according to the requirements of this section.

(2) *Respirator program.* For purposes of this paragraph (f)(2), the cross-referenced provisions in 29 CFR 1910.134 applying to an ''employee'' also apply equally to potentially exposed persons, and provisions applying to an ''employer'' also apply equally to owners or operators.

(i) Owners and operators must select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person consistent with the requirements of 29 CFR 1910.134(f) and 1910.134 App. A.

(ii) Owners and operators must provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition) respiratory protection that is of safe design and construction for the applicable condition of use consistent with the requirements of 29 CFR 1910.134(g) through (j) and 1910.134 App. B–1 to B–2.

(iii) Prior to or at the time of initial assignment to a job involving potential exposure to chrysotile asbestos, owners and operators must provide training and retraining to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k).

(3) *Respirator selection.* Owners or operators must select and provide appropriate respirators based on the most recent exposure monitoring. The minimum respiratory protection that must be provided is as follows:

(i) If the most recent exposure monitoring indicates that the exposure concentration is at or below the 0.005 f/cc (ECEL): no respiratory protection is required.

(ii) If the most recent exposure monitoring indicates that the exposure concentration is above 0.005 f/cc (ECEL) and less than or equal to 0.05 f/cc (10 times the ECEL):

(A) A half-mask supplied-air respirator (SAR) or airline respirator operated in demand mode; or

(B) A half-mask self-contained breathing apparatus (SCBA) respirator operated in demand mode (Assigned Protection Factor 10).

(iii) If the most recent exposure monitoring indicates that the exposure concentration is above 0.05 f/cc (10 times the ECEL) and less than or equal to 0.125 f/cc (25 times the ECEL): A loose fitting facepiece supplied-air respirator (SAR) or airline respirator operated in continuous flow mode (Assigned Protection Factor 25).

(iv) If the most recent exposure monitoring indicates that the exposure concentration is above 0.125 f/cc (25 times the ECEL) and less than or equal to 0.25 f/cc (50 times the ECEL):

(A) A full facepiece supplied-air respirator (SAR) or airline respirator operated in demand mode; or

(B) A half-mask supplied-air respirator (SAR) or airline respirator operated in continuous flow mode; or

(C) A half-mask supplied-air respirator (SAR) or airline respirator operated in pressure-demand or other positive-pressure mode; or

(D) A full facepiece self-contained breathing apparatus (SCBA) respirator operated in demand mode; or

(E) A helmet/hood self-contained breathing apparatus (SCBA) respirator operated in demand mode (Assigned Protection Factor 50).

(v) If the most recent exposure monitoring indicates that the exposure concentration is above 0.25 f/cc (50 times the ECEL) and less than or equal to 5 f/cc (1,000 times the ECEL): A full-facepiece supplied-air respirator (SAR) or airline respirator operated in pressure-demand or other positive-pressure mode (Assigned Protection Factor 1,000).

(vi) If the most recent exposure monitoring indicates that the exposure concentration is above 5 f/cc (1,000 times the ECEL) and less than or equal to 50 f/cc (10,000 times the ECEL):

(A) A full-facepiece self-contained breathing apparatus (SCBA) respirator operated in pressure-demand or other positive-pressure mode; or

(B) A helmet/hood self-contained breathing apparatus (SCBA) respirator operated in pressure-demand or other positive-pressure mode (Assigned Protection Factor 10,000).

(vii) The respiratory protection requirements in paragraph (f)(3) of this section represent the minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the required respirator may be used.

(g) *Workplace information and training.* (1) By November 25, 2024, the owner or operator must institute a training program and ensure that persons potentially exposed to chrysotile asbestos participate in the program according to the requirements of this paragraph (g).

(2) The owner or operator must train each potentially exposed person prior or at the time of a potential exposure to chrysotile asbestos and at least annually thereafter.

(3) The owner or operator must ensure that information and training is presented in a manner that is understandable to each person required to be trained.

(4) The following information and training must be provided to all persons potentially exposed to chrysotile asbestos:

(i) The health effects associated with exposure to chrysotile asbestos, based on the most recent publication by EPA, OSHA, NIOSH, and/or CDC;

(ii) The quantity, location, manner of use, release, and storage of chrysotile asbestos and the specific operations in the workplace that could result in exposure to chrysotile asbestos, noting where each regulated area is located;

(iii) The specific procedures implemented to control exposures and manage occupational risks to persons potentially exposed to chrysotile asbestos, such as engineering controls, work practices and personal protective equipment to be used; and

(iv) The requirements of this section, as well as how to access or obtain a copy of these regulations.

(5) Whenever there are workplace changes, such as modifications of tasks or procedures or the institution of new tasks or procedures, or when the airborne concentration of chrysotile asbestos increases, or when the exposure control plan is updated according to paragraph (e)(2)(ii) of this section, the owner or operator must update the training and re-train each potentially exposed person.

§ 751.513 Disposal.

(a) After November 25, 2024, all persons disposing of chrysotile asbestos and any chrysotile asbestos-containing products or articles subject to § 751.505, must dispose of chrysotile asbestos and any chrysotile asbestos-containing products or articles, as applicable:

(1) In accordance with the Asbestos General Industry Standard—(29 CFR 1910.1001(k)).

(2) In conformance with the asbestos waste disposal requirements at 40 CFR 61.150.

(b) After November 25, 2024, all persons disposing of chrysotile asbestos and any chrysotile asbestos-containing products or articles subject to paragraphs (a) through (c) of § 751.509 must dispose of chrysotile asbestos and any chrysotile asbestos-containing products or articles, as applicable:

(1) In accordance with the Asbestos Safety and Health Regulations for Construction—(29 CFR 1926.1101)

(2) [Reserved]

(c) After November 25, 2024, all persons disposing of chrysotile asbestos and any chrysotile asbestos-containing products or articles subject to § 751.509(d) must dispose of chrysotile asbestos and any chrysotile asbestos-containing products or articles, as applicable:

(1) In accordance with the Asbestos General Industry Standard—(29 CFR 1910.1001).

(2) In conformance with the asbestos waste disposal requirements at 40 CFR 61.150.

(d) After November 25, 2024, each manufacturer (including importer), processor, and distributor of chrysotile asbestos, including any chrysotile asbestos-containing products or articles, for consumer use, disposing of chrysotile asbestos and any chrysotile asbestos-containing products or articles subject to § 751.509(e), must dispose of chrysotile asbestos and any chrysotile asbestos-containing products or articles, as applicable:

(1) In accordance with the Asbestos General Industry Standard at 29 CFR 1910.1001(k).

(2) In conformance with the asbestos waste disposal requirements at 40 CFR 61.150.

§ 751.515 Recordkeeping.

(a) *General records.* After November 25, 2024, all persons who manufacture (including import), process, or distribute in commerce or engage in commercial use of chrysotile asbestos must maintain ordinary business records, such as invoices and bills-of-lading related to compliance with the prohibitions, restrictions, and other provisions of this subpart.

(b) *Certification of compliance for chlor-alkali industry records.* Persons required pursuant to § 751.507 to certify compliance with § 751.505 must:

(1) Retain records of certifications prepared to comply with § 751.507 and records to substantiate such certifications; and

(2) Make the records retained pursuant to paragraph (b)(1) of this section available to EPA for inspection.

(c) *Interim workplace controls of chrysotile asbestos exposures records*—(1) *Exposure monitoring.* For each monitoring event, owners or operators subject to the exposure monitoring required by § 751.511(c) must document, retain records of the following and make them available to EPA for inspection:

(i) Dates, duration, and results of each sample taken;

(ii) The quantity, location(s) and manner of chrysotile asbestos use at the time of each monitoring event;

(iii) All measurements that may be necessary to determine sampling conditions that may have affected the monitoring results;

(iv) Name, address, work shift, job classification, work area, and type of respiratory protection (if any) of each monitored person;

(vi) Sampling and analytical methods used and documentation of compliance with the quality control procedures described in § 751.511(c)(5)(i) and (ii); and

(vii) Notification of exposure monitoring results in accordance with § 751.511(c)(6).

(2) *Other requirements.* Owners or operators subject to the interim workplace controls described in § 751.511 must retain records and make them available to EPA for inspection of:

(i) The exposure control plan and its implementation as required by § 751.511(e).

(ii) Respiratory protection used and program implementation as described in § 751.511(f); and

(iii) Information and training provided by the owner or operator as required by § 751.511(g).

(d) *Disposal records.* Each person, except a consumer, who disposes of any chrysotile asbestos and any chrysotile asbestos-containing products or articles subject to § 751.513, after November 25, 2024 must retain in one location at the headquarters of the company, or at the facility for which the records were generated, documentation showing any records related to any disposal of chrysotile asbestos and any chrysotile asbestos-containing products or articles generated pursuant to, or otherwise documenting compliance with, regulations specified in § 751.513.

(e) *Retention.* The documentation in this section must be retained for 5 years from the date of generation.

BILLING CODE 6560–50–P

FEDERAL REGISTER

Vol. 89 Thursday,
No. 61 March 28, 2024

Part V

International Trade Commission

19 CFR Parts 201, 206, 207, et al.
Practice and Procedure: Rules of General Application, Safeguards, Antidumping and Countervailing Duty Investigations, and Section 337 Adjudication and Enforcement; Proposed Rule

INTERNATIONAL TRADE COMMISSION

19 CFR Parts 201, 206, 207, and 210

Practice and Procedure: Rules of General Application, Safeguards, Antidumping and Countervailing Duty Investigations, and Section 337 Adjudication and Enforcement

AGENCY: International Trade Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The United States International Trade Commission (''Commission'') proposes to amend its Rules of Practice and Procedure concerning rules of general application, safeguards, antidumping and countervailing duty investigations, and section 337 adjudication and enforcement. The amendments are necessary to make certain technical corrections, to clarify certain provisions, to harmonize different parts of the Commission's rules, and to address concerns that have arisen in Commission practice. The intended effect of the proposed amendments is to facilitate compliance with the Commission's Rules and improve the administration of agency proceedings.

DATES: To be assured of consideration, written comments must be received by 5:15 p.m. on May 20, 2024.

ADDRESSES: You may submit comments, identified by docket number MISC–049, by any of the following methods:

—*Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.

—*Agency website: https://www.usitc.gov.* Follow the instructions for submitting comments on the website at *https://www.usitc.gov/secretary/edis.htm.*

—*Email: cathy.chen@usitc.gov.* Include docket number MISC–049 in the subject line of the message.

—*Mail:* For paper submission. U.S. International Trade Commission, 500 E Street SW, Room 112, Washington, DC 20436.

—*Hand Delivery/Courier:* U.S. International Trade Commission, 500 E Street SW, Room 112, Washington, DC 20436, from the hours of 8:45 a.m. to 5:15 p.m.

Instructions: All submissions received must include the agency name and docket number (MISC–049), along with a cover letter stating the nature of the commenter's interest in the proposed rulemaking. All comments received will be posted without change to *https://www.usitc.gov,* including any personal information provided. For paper copies, a signed original and fourteen (14) copies of each set of comments should be submitted to Lisa R. Barton, Secretary, U.S. International Trade Commission, 500 E Street SW, Room 112, Washington, DC 20436.

Docket: For access to the docket to read background documents or comments received, go to *https://www.usitc.gov* and/or the U.S. International Trade Commission, 500 E Street SW, Room 112, Washington, DC 20436.

FOR FURTHER INFORMATION CONTACT: Cathy Chen, telephone 202–205–2392, Office of the General Counsel, United States International Trade Commission. Hearing-impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal at 202–205–1810. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.*

SUPPLEMENTARY INFORMATION: The preamble below is designed to assist readers in understanding these proposed amendments to the Commission Rules. This preamble provides background information, a regulatory analysis of the proposed amendments, a section-by-section explanation of the proposed amendments to parts 201, 206, 207, and 210, and a description of the proposed amendments to the rules. The Commission encourages members of the public to comment on whether the language of the proposed amendments is sufficiently clear for users to understand, in addition to any other comments they wish to make on the proposed amendments.

If the Commission decides to proceed with this rulemaking after reviewing the comments filed in response to this notice, the proposed rule revisions will be promulgated in accordance with the applicable requirements of the Administrative Procedure Act (''APA'') (5 U.S.C. 553) and will be codified in 19 CFR parts 201, 206, 207, and 210.

Background

Section 335 of the Tariff Act of 1930 (19 U.S.C. 1335) authorizes the Commission to adopt such reasonable procedures, rules, and regulations as it deems necessary to carry out its functions and duties. This rulemaking seeks to improve provisions of the Commission's existing Rules of Practice and Procedure, including increasing the efficiency of its proceedings and reducing the burdens and costs on the parties and the agency. The Commission proposes amendments to its rules governing proceedings conducted under section 337 of the Tariff Act of 1930 (19 U.S.C. 1337), as well as Title VII of the Tariff Act of 1930, which comprises 19 U.S.C. 1671–1677n, sections 201–202, 204, and 406 of the Trade Act of 1974 (19 U.S.C. 2251–2252, 2254, and 2436), and sections 301–302 of the United States-Mexico-Canada Implementation Act (19 U.S.C. 4551–4552).

This rulemaking was undertaken to make certain technical corrections, to clarify certain provisions, to harmonize different parts of the Commission's rules, and to address concerns that have arisen in Commission practice. The intended effect of the proposed amendments is to facilitate compliance with the Commission's Rules and improve the administration of agency proceedings. The Commission is concurrently considering additional amendments to its rules to be reflected in future Notices of Proposed Rulemaking.

The current notice of proposed rulemaking is consistent with the Commission's plan to ensure that the Commission's rules are effective, as detailed in the Commission's Plan for Retrospective Analysis of Existing Rules, published February 14, 2012, and found at 77 FR 8114. This plan was issued in response to Executive Order 13579 of July 11, 2011, and established a process under which the Commission will periodically review its significant regulations to determine whether any such regulations should be modified, streamlined, expanded, or repealed so as to make the agency's regulatory program more effective or less burdensome in achieving regulatory objectives. This process includes a general review of existing regulations in 19 CFR parts 201, 206, 207, and 210.

The Commission invites the public to comment on all of these proposed rule amendments. In any comments, please consider addressing whether the language of the proposed amendments is sufficiently clear for users to understand. Please also consider addressing how the proposed rules amendments could be improved and offering specific constructive alternatives where appropriate. Because some of the provisions in the proposed amendments are similar to certain provisions in the Federal Rules of Civil Procedure, the Commission is interested in comments concerning the relevance of any variances between the proposals and similar provisions in the Federal Rules of Civil Procedure.

Consistent with its ordinary practice, the Commission is issuing these proposed amendments in accordance with the applicable requirements of

section 553 of the APA. This procedure entails the following steps: (1) publication of a notice of proposed rulemaking; (2) solicitation of public comments on the proposed amendments; (3) Commission review of public comments on the proposed amendments; and (4) publication of final amendments at least thirty days prior to their effective date.

Regulatory Analysis of Proposed Amendments to the Commission's Rules

The Commission has determined that the proposed rules do not meet the criteria described in section 3(f) of Executive Order 12866 (58 FR 51735, Oct. 4, 1993) and thus do not constitute a significant regulatory action for purposes of the Executive Order.

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) is inapplicable to this rulemaking because it is not one for which a notice of final rulemaking is required under 5 U.S.C. 553(b) or any other statute. Although the Commission has chosen to publish a notice of proposed rulemaking, these proposed regulations are ''agency rules of procedure and practice,'' and thus are exempt from the notice requirement imposed by 5 U.S.C. 553(b).

These proposed rules do not contain federalism implications warranting the preparation of a federalism summary impact statement pursuant to Executive Order 13132 (64 FR 43255, Aug. 4, 1999).

No actions are necessary under the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 *et seq.*) because the proposed rules will not result in expenditure in the aggregate by State, local, and tribal governments, or by the private sector, of $100,000,000 or more in any one year, and will not significantly or uniquely affect small governments, as defined in 5 U.S.C. 601(5).

The proposed rules are not major rules as defined by section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*). Moreover, they are exempt from the reporting requirements of the Contract With America Advancement Act of 1996 (Pub. L. 104–121) because they concern rules of agency organization, procedure, or practice that do not substantially affect the rights or obligations of non-agency parties.

The amendments are not subject to section 3504(h) of the Paperwork Reduction Act (44 U.S.C. 3504(h)).

Part 201—Rules of General Application

Subpart A—Miscellaneous

Section 201.3a

Section 201.3a provides for the inclusion of missing children information in Commission mailings pursuant to 39 U.S.C. 3220. There are several sentences throughout part 201 of the Commission's Rules of Practice and Procedure that contain gender-specific language, including in paragraph 201.3a(c). Because this is inconsistent with the Commission's ongoing commitment to inclusiveness, the Commission proposes to replace this language with gender-neutral terminology. No substantive change is intended. Thus, in paragraph 201.3a(c) the Commission intends to revise ''The Director of Administration shall make such changes in the procedure as he deems appropriate'' to read ''The Chief Administrative Officer shall make such changes in the procedure as the Officer deems appropriate.'' The Commission also proposes to correct a typographical error, changing ''childern'' to ''children.''

Subpart B—Initiation and Conduct of Investigations

Section 201.8

Section 201.8 provides for the filing of documents with the Commission. Due to the global COVID–19 pandemic, the Commission previously published temporary changes to its filing procedures. *See* 85 FR 15798 (Mar. 19, 2020). The temporary changes waived and amended certain of the Commission's rules that require the filing of paper copies, CD–ROMs, and other physical media in section 337 investigations. In particular, the Commission eliminated the requirement for paper-based filings, including paper copies, and allowed for electronic filing and service of confidential and public documents via the Commission's Electronic Document Information System (EDIS) in section 337 investigations, safeguard investigations, and antidumping and countervailing duty investigations and reviews.

Both the International Trade Commission Trial Lawyers Association (ITCTLA) and the Customs and International Trade Bar Association (CITBA) request that the Commission permanently adopt the temporary e-filing rules. The CITBA states that by adopting the existing temporary e-filing rules as final rules, the Commission can modernize its existing filing procedures, eliminate paper-based filings and paper copies in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), and save taxpayer money. EDIS Doc. ID No. 722134. The ITCTLA states that permanently adopting the existing temporary waivers of the paper-based filings and paper copy requirements and permitting electronic filing and service of confidential and public documents is in the public interest, promotes administrative efficiencies, and saves taxpayer money. EDIS Doc. ID No. 723747.

The Commission proposes to permanently adopt certain of the temporary changes to its filing procedures. In particular, the Commission proposes to add a requirement that all documents be filed electronically in paragraph (d)(1). The Commission also proposes to eliminate the requirement for submission of paper copies in most cases. For proceedings under section 337, as discussed below with respect to section 210.4, the Commission proposes to eliminate the requirement for submission of paper copies except for complaints and supplements and amendments thereto. For proceedings under other Commission authorities, the Commission proposes to revise section 201.8 (applicable to proceedings other than under section 337) to eliminate the requirement for submission of paper copies in paragraph (d)(1), except as required by the Secretary pursuant to existing paragraph (d)(6), renumbered herein as paragraph (d)(3).

The Commission also proposes to amend paragraphs (a), (c), (f), and (g) to reflect the requirement for electronic filing, while recognizing that there might be situations where paper filings are necessary. Paragraphs (d)(2), (d)(3), and (d)(5) have been removed and paragraphs (d)(4), (d)(6), and (d)(7) have been renumbered as paragraphs (d)(2), (d)(3), and (d)(4), respectively.

The Commission also proposes to replace ''agent'' in paragraph (e) of section 201.8 with ''corporate representative.'' The proposed change discourages misrepresentations that a person is an attorney or acting as counsel without appropriate qualifications as set forth in paragraph 201.15(a). The rule continues to permit inventors and small businesses to appear *pro se* but requires corporations to be represented by counsel or a corporate representative, similar to the practice in federal district court.

For the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language in section 201.8 from ''his address'' to ''a current address,'' ''he had'' to ''the person has,'' and ''his'' to ''that person's.'' No substantive change is intended.

Section 201.12

Section 201.12 provides authorization for any party to a nonadjudicative investigation to request the Commission to take particular action with respect to that investigation. For the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language in section 201.12 from ''shall be placed by him in the record'' to ''shall be placed by the Secretary in the record.'' No substantive change is intended. The Commission also proposes to eliminate the requirement for submission of paper copies of the request consistent with the proposed amendments to section 201.8. The removal of the requirement for electronic filing from this rule is in light of the requirement in 201.8 that all documents be filed electronically.

Section 201.13

Section 201.13 provides the general provisions for the conduct of nonadjudicative hearings. This includes hearings in antidumping and countervailing duty investigations and reviews under Title VII. For the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language in paragraph 201.13(d) from ''a list of the witnesses he intends to call'' to ''a list of the witnesses that person intends to call.'' No substantive change is intended. The Commission proposes to amend paragraph 201.13(f) to require that the supplementary materials be filed no later than the day of the hearing. The Commission also proposes to clarify that supplementary materials do not include witness testimony, which are addressed in sections 207.15 and 207.24.

Section 201.14

Section 201.14 provides for the computation of time, additional hearings, postponements, continuances, and extensions of time. The Commission proposes to eliminate the requirement for submission of paper copies of the request in paragraph (b)(3) consistent with the proposed amendments to section 201.8. The removal of the requirement for electronic filing from this rule is in light of the requirement in 201.8 that all documents be filed electronically.

Section 201.15

Section 201.15 provides general provisions for attorneys and others practicing and appearing before the Commission. The proposed rule would revise paragraph (a) to indicate that no separate application for admission to practice before the Commission is required. It would also revise the paragraph to provide that attorneys practicing or desiring to practice before the Commission must maintain a bar membership in good standing in any State of the United States or the District of Columbia and must report any change in status including, but not limited to, disbarment or suspension by any bar association, court, or agency. The Commission welcomes comments on whether these requirements should be mandatory or permissive. If it is mandatory, please explain how the Commission should use this information. Non-attorneys desiring to appear before the Commission may be required to show that they are acceptable in the capacity in which they seek to appear.

The proposed rule would also revise paragraph (b) to clarify that the restrictions on a former officer or employee of the Commission from practicing or appearing before the Commission in connection with a matter which was pending in any manner or form in the Commission during that person's employment applies to both former attorney and non-attorney employees of the Commission.

Additionally, for the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language in paragraphs (a) and (b) of section 201.15 to remove several references to ''he,'' ''him,'' and ''his.'' No substantive changes are intended.

Section 201.16

Section 201.16 provides the general provisions for service of process and other documents. The proposed rule would amend paragraphs (d) and (e) of section 201.16 by clarifying that the calculation of additional time after service by mail or express delivery in Commission proceedings conducted under section 337 is governed by the provisions of section 210.6. The Commission also proposes removing the parenthetical authority citation at the end of the section and incorporating it into the Authority statement at the beginning of part 201.

Subpart C—Availability of Information to the Public Pursuant to 5 U.S.C. 552

Section 201.20

Section 201.20 provides the general provisions for payment of fees to the Commission. For the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language in paragraphs 201.20(d)(2)(iii), 201.20(e), and 201.20(g)(2) to remove several references to ''he,'' ''him,'' and ''his.'' No substantive change is intended. The Commission also proposes to change ''30 days'' to ''thirty (30) days'' in paragraph (g)(2) for clarity.

Subpart D—Safeguarding Individual Privacy Pursuant to 5 U.S.C. 552a

Section 201.32

Section 201.32 contains provisions regarding records that are exempted from paragraphs (c)(3), (d), (e)(1), (e)(4)(G) through (I) and (f) of the Privacy Act of 1974, 5 U.S.C. 552a. For the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language in paragraph 201.32(b) from ''to which he is otherwise entitled'' to ''to which that individual is otherwise entitled.'' No substantive change is intended.

Part 206—Investigations Relating to Global and Bilateral Safeguard Actions, Market Disruption, Trade Diversion, and Review of Relief Actions

Subpart A—General

Section 206.2

Section 206.2 provides for investigations to commence on the basis of a petition, request, resolution, or motion as provided for in the statutory provisions listed in sections 206.1 and 206.31. The Commission proposes to amend this section to direct parties to section 201.8, which includes the general requirement for electronic filing, and to remove the paper-filing requirement.

Section 206.8

Section 206.8 provides for the service, filing, and certification of documents in certain proceedings including bilateral and global safeguard investigations. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies of briefs in paragraph (d).

Part 207—Investigations of Whether Injury to Domestic Industries Results From Imports Sold at Less Than Fair Value or From Subsidized Exports to the United States

Subpart B—Preliminary Determinations

Section 207.10

Section 207.10 provides filing requirements for petitions before the Commission. The Commission proposes removing paper filing requirements for petitions from paragraph (a) and deeming the filing date as the date when the petition is filed electronically. The Commission also proposes to remove

the requirement for facsimile notifications from paragraph (b)(1)(i).

Section 207.15

Section 207.15 provides for written briefs and a conference in preliminary phase antidumping and countervailing duty investigations. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies of briefs. The Commission proposes to only require submission of paper copies of written witness testimony when it is provided on the day of the conference, but not when it is filed electronically prior to the date of the conference. For the reasons noted above under paragraph 201.3a(c), the Commission proposes to change certain gender-specific language to remove a reference to ''he.'' No substantive change is intended. The Commission also proposes to remove language related to electronic filing since that requirement is in section 201.8 and to replace the term ''Director'' with ''presiding official'' for consistency.

Subpart C—Final Determinations, Short Life Cycle Products

Section 207.23 and Section 207.25

Sections 207.23 and 207.25 provide for prehearing briefs and posthearing briefs, respectively, in final phase antidumping and countervailing duty investigations. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies of prehearing briefs and posthearing briefs. The Commission proposes to remove language related to electronic filing since that requirement is in section 201.8.

Section 207.24

Section 207.24 provides procedures for hearings. The Commission proposes to only require submission of paper copies of written witness testimony when it is provided on the day of the hearing, but not when it is filed electronically prior to the date of the hearing. The Commission proposes to delete the reference to paragraph 201.13(f), consistent with the clarifications proposed for that section.

Section 207.28

Section 207.28 provides for statements filed by persons regarding anticircumvention matters under Title VII. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies of such submissions. The Commission proposes to remove language related to electronic filing since that requirement is in section 201.8. The Commission also proposes to refer to ''submissions'' throughout the section for consistency.

Section 207.30

Section 207.30 provides for final comments on information in final phase antidumping and countervailing duty investigations. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies of such comments. The Commission proposes to remove language related to electronic filing since that requirement is in section 201.8.

Subpart E—Five-Year Reviews

Section 207.61

Section 207.61 provides for responses to notices of institution of five-year reviews. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate paragraph (e), including the requirement for submission of paper copies of responses and the language related to electronic filing since that requirement is in section 201.8.

Section 207.62

Section 207.62 provides for rulings on adequacy and nature of Commission review in five-year reviews. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies for comments filed under this section. The Commission proposes to remove language related to electronic filing since that requirement is in section 201.8.

Section 207.65 and Section 207.67

Sections 207.65 and 207.67 provide for prehearing briefs and posthearing briefs, respectively, in five-year reviews. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies of prehearing briefs and posthearing briefs. The Commission proposes to remove language related to electronic filing since that requirement is in section 201.8.

Section 207.68

Section 207.68 provides for final comments on information in five-year reviews. Consistent with the proposed amendments to section 201.8, the Commission proposes to eliminate the requirement for submission of paper copies for comments filed under this section. The Commission proposes to remove language related to electronic filing since that requirement is in section 201.8.

Subchapter C—Investigations of Unfair Practices in Import Trade (Section 337)

Part 210—Adjudication and Enforcement

Subpart A—Rules of General Applicability

Section 210.4

Section 210.4 provides for written submissions, representations, and sanctions in section 337 proceedings. The proposed rule makes several amendments to the existing rule. Specifically: For the reasons discussed in connection with section 201.8, the Commission proposes to replace ''agent'' in paragraph (b) with ''corporate representative.''

The Commission also proposes to correct a typographical error in paragraph 210.4(d)(1)(i), which should refer to ''paragraph (i) of this section'' rather than to ''paragraph (g) of this section.''

Consistent with the proposed amendments to sections 201.8, 206, 207, 201.12, and 201.14, the Commission proposes to require electronic filing of all documents filed under this part by adding new paragraph (f)(2) and to eliminate the requirements provided under existing paragraph (f)(2) (renumbered as paragraph (f)(3)) for submission of paper copies for all filings. The Commission proposes to remove existing paragraphs (f)(3) through (f)(6) and renumber the remaining paragraphs accordingly. Renumbered paragraphs (f)(4) and (f)(5) (current paragraphs (f)(7) and (f)(8)) remain unchanged. The Commission also proposes to revise existing paragraphs (f)(9) (renumbered paragraph (f)(6)), (g), and (h)(1) to remove a disallowed paragraph heading and to remove language related to paper filings, while also recognizing that paper copies might be necessary in certain situations. The Secretary retains discretion to make exceptions or modifications to the filing requirements per existing paragraph (f)(8) (renumbered paragraph (f)(5)), including requiring or authorizing paper copies.

There are several sentences throughout part 210 of the Commission's Rules of Practice and Procedure that contain gender-specific language, including in paragraph 210.4(b) to change ''his'' to ''a'' and 210.4(h)(2) to change ''he'' to ''the administrative law judge.'' For the reasons noted above under paragraph

201.3a(c), the Commission proposes to replace gender-specific language with gender-neutral terminology. No substantive changes are intended.

Section 210.7

Section 210.7 provides for the service of process and other documents and for the publication of notices. In particular, paragraph (a)(2) identifies documents issued by or on behalf of the Commission or an administrative law judge that shall be served by express delivery on a private party. The Commission proposes to amend paragraph 210.7(a)(2) by revising the list of documents to add show cause orders issued under paragraph 210.16(b)(1)(i). Such orders direct a respondent that has failed to respond or appear in the manner described in paragraph (a)(1) of section 210.16 to show cause why it should not be found in default. The revision is a clarification of existing practice rather than a substantive change in Commission procedures.

Subpart B—Commencement of Preinstitution Proceedings and Investigations

Section 210.8

Section 210.8 generally provides for the filing of a complaint, enforcement complaint, supplement, or pre-institution amendment under paragraph 210.14(a) thereto, and for filings by complainants, respondents, and members of the public concerning public interest issues raised by the complaint. The Commission proposes to remove the requirement for paper filings in section 337 investigations and to require filing of the documents listed above in accordance with section 210.4. The proposed rule amends paragraph (a)(1) to allow the complainant until the close of the next business day to deliver to the Secretary paper service copies of the complaint, enforcement complaint, supplement, or pre-institution amendment under paragraph 210.14(a) thereto, and electronic copies of the exhibits on a CD ROM, DVD, or other portable electronic media approved by the Secretary. The amendment to paragraph (a)(1) also proposes adding the provision that failure to timely provide service copies may result in a delay or denial of institution of an investigation under section 210.10 for failure to properly file the complaint. The Commission also clarifies that the rule applies to original complaints, enforcement complaints, supplements, or amendments thereto and adds a new heading to paragraph (a).

For original complaints, enforcement complaints, supplements, or pre-institution amendments thereto requesting temporary relief, the Commission proposes to remove paper filing requirements. The proposed rule amends paragraph (a)(2) to allow the complainant until the close of the next business day to deliver to the Secretary paper service copies of the motion and electronic copies of the exhibits on a CD ROM, DVD, or other portable electronic media approved by the Secretary. Nothing in the amendments waives the requirement that complainant serve a motion for temporary relief on respondents under section 210.54.

The proposed rule amends paragraph 210.8(c) to allow a member of the public, interested government agencies, or proposed respondents to file comments that address not only the public interest but other issues, for example whether the Commission should place a pending investigation into the 100-day program pursuant to paragraph 210.10(b)(3) for early disposition of a potentially dispositive issue, or provision of information regarding prior relationships between proposed respondents and/or the complainant. If a confidential version of such comments is filed, the proposed rule requires the filer to concurrently provide a public version of the submission to both the Secretary to the Commission and the complainant. This ensures that a complainant will be promptly notified of submissions even when the publication of the public version of such filings on EDIS is delayed.

The Commission notes that paragraph 210.8(c)(2) currently provides that a complainant's reply to any submissions received under paragraph (c)(1) of this section is due within three (3) calendar days following the filing of the submissions. The Commission proposes to clarify that, while these three (3) calendar days commence on the first business day following the day on which submissions under paragraph (c)(1) are due, they will include subsequent Saturdays, Sundays, and Federal legal holidays, notwithstanding the language of section 201.14. If the last day of the period so computed is a Saturday, Sunday, or Federal legal holiday, the period will run until the end of the next business day. This reflects the Commission's current practice, and the proposed amendment to paragraph 210.8(c)(2) is merely intended to eliminate any perceived ambiguity regarding this deadline. Paragraph (c)(2) is also amended to clarify that such public interest filings may be submitted by interested government agencies.

The proposed rule further amends paragraph 210.8(c) by adding an additional paragraph (3) to clarify that no additional submissions beyond those already contemplated by paragraph 210.8(c) will be accepted unless requested by the Commission.

Finally, the Commission proposes to specify numerically and in words the time periods and page limits in paragraph (c) for clarity. This change is seen throughout the proposed rules. No substantive change is intended.

Section 210.10

Section 210.10 provides the general provisions for institution of an investigation. The proposed rule amends paragraph (a)(1) of this section to add that the Commission will not institute an investigation within thirty (30) days after the complaint is filed if the Commission determines that the complaint or any exhibits or attachments thereto contain excessive designations of confidentiality that are not warranted under paragraph 201.6(a) and section 210.5 of this chapter. Proposed paragraph (a)(7) explains that, under such circumstances, the Commission may require the complainant to file new nonconfidential versions of the aforesaid submissions in accordance with section 210.8 and may determine that the thirty (30) day period for deciding whether to institute an investigation shall begin to run anew from the date that the new nonconfidential versions are filed with the Commission. This is consistent with existing paragraph 210.55(b) of this chapter, which contains similar provisions pertaining to complaints accompanied by a motion for temporary relief and is also proposed to be added to section 210.75.

Section 210.11

Section 210.11 provides the general provisions for the service of the complaint and notice of investigation. The proposed rule removes the phrase ''[u]nless the Commission institutes temporary relief proceedings'' from paragraph (a)(1) to require that the paper service copies be provided to the Secretary in every investigation that is instituted. The proposed rule also indicates that the requirements of paragraph (a)(2) are in addition to paragraph (a)(1) and removes paragraph (a)(2)(ii) as duplicative of paragraph (a)(1)(ii). The proposed rule also removes paragraph (a)(3) in light of proposed revisions to paragraph 210.14(b)(i), which memorialize the Commission's practice regarding amended complaints that name an additional respondent.

Subpart C—Pleadings

Section 210.12

Section 210.12 contains the provisions governing the content, sufficiency, and submission of a complaint alleging a violation of section 337. The proposed rule makes several amendments to the existing rule. Specifically:

For the reasons discussed in connection with section 201.8, the Commission proposes to replace ''agent'' in paragraph (a)(1) with ''corporate representative'' and to amend certain gender-specific language in paragraphs (a)(1) and (j). The proposed rule amends paragraph 210.12(a)(1) to require a complaint to include email addresses for the complainant and its duly authorized officer, attorney, or corporate representative who has signed the complaint. The proposed rule amends paragraph 210.12(a)(3) to remove reference to the Tariff Schedules of the United States that applied prior to January 1, 1989. The proposed rule amends paragraph 210.12(a)(5) to expand the required disclosure to include information about arbitrations concerning the alleged unfair methods of competition and unfair acts, or the subject matter thereof.

The proposed rule amends paragraph 210.12(a)(6)(i) by reorganizing the rule to more clearly distinguish between the information required to support a complaint based on an alleged domestic industry that exists and the information required to support a complaint based on an alleged domestic industry in the process of being established for complaints that allege a violation based on infringement of a U.S. patent, or a federally registered copyright, trademark, mask work, or vessel hull design. The proposed rule also corrects typographical errors in spacing and punctuation in paragraphs 210.12(a)(6)(ii) and 210.12(a)(6)(iii).

The proposed rule amends paragraph 210.12(a)(7) by removing an extraneous ''and'' at the end of paragraph (a)(7).

The proposed rule amends paragraphs 210.12(a)(8)(i) and (ii) to clarify that, for complaints based on an unfair act or method of competition under section 337(a)(1)(A), the complaint's statement of facts should include factual allegations that would show the existence of each element of the cause of action underlying the unfair act or method of competition. The purpose of these amendments is to make clear that bare assertions of unfair acts or methods of competition without factual allegations supporting all elements of a cognizable legal theory do not meet the requirements of paragraph 210.12(a)(2). For example, if a complaint is based on trade secret misappropriation, it must include factual allegations sufficient to establish every element of a trade secret misappropriation claim. The proposed rule also corrects the terminal punctuation for paragraph 210.12(a)(8)(ii) and requires that the complaint state the elements of the proposed theory.

The proposed rule amends paragraph 210.12(a)(9)(v) by adding a requirement to disclose known domestic patent applications that correspond to the patents asserted in the investigation in addition to the existing required disclosure of foreign patent applications. The Commission is interested in comments from the public regarding the burden this amendment would place on complainants.

The proposed rule corrects the terminal punctuation for paragraph 210.12(a)(9)(xi) and adds an ''and'' at the end of paragraph 210.12(a)(10)(i) for grammatical purposes.

The proposed rule amends paragraph 210.12(a)(11) by adding a requirement that a complaint seeking a general exclusion order must plead factual allegations sufficient to show that such an order is available under the requirements of paragraph 337(d)(2). The Commission notes that this information has been voluntarily included in various complaints filed under the current rules. This proposed amendment would formalize the requirement to include such information in complaints going forward. The Commission believes this amendment will lead to greater efficiency in investigations where general exclusion orders are requested. The proposed rule also adds an ''and'' at the end of paragraph 210.12(a)(11)(ii) for grammatical purposes.

The proposed rule amends paragraph 210.12(b) to change the word ''all'' to ''exemplary.'' It might not be feasible to submit all imports.

The proposed rule amends paragraphs 210.12(c) through (h) to remove the reference to the ''original'' complaint because the rules propose to remove paper filings. The proposed rule amends paragraph 210.12(c)(2) by eliminating the requirement that the complaint be accompanied by the applicable pages of each technical reference mentioned in the prosecution history of each involved U.S. patent. The Commission believes that this requirement is no longer necessary given the availability of such materials online. The proposed rule also amends paragraph 210.12(c) by removing the requirement in paragraph (2) for four (4) copies of the patent, because it is duplicative of paragraph 210.12(a)(9)(i), and by adding new paragraph (2) requiring one copy of each prosecution history of any priority applications for the asserted patents to accompany a patent-based complaint.

Section 210.13

Section 210.13 provides the general provisions for filing a response to a complaint. For the reasons discussed in connection with section 201.8, the Commission proposes to replace ''agent'' in paragraph (b) with ''corporate representative'' and to amend certain gender-specific language in paragraph (b) to eliminate a reference to ''his'' duly authorized officer. The Commission also proposes requiring an email address for each respondent.

Section 210.14

Section 210.14 generally provides for amendments to the pleadings and notice of investigation. Paragraph (a) provides for preinstitution amendments to the complaint and notice of investigation, while paragraph (b) provides for post-institution amendments.

The Commission proposes amending the heading of this section to indicate the existing severance provision under paragraph (h). The Commission further proposes to add the requirement that amended complaints, exhibits, and supplements thereto, filed under this section shall be filed electronically with the Secretary pursuant to section 210.4.

The Commission further proposes to amend paragraphs (a) and (b)(1) to clarify that any proposed amendment to the complaint and notice of investigation that introduces an additional unfair act or an additional respondent must comply with the content requirements of paragraph 210.12(a). *See Certain Skin Rejuvenation Resurfacing Devices, Components Thereof, and Products Containing the Same,* Inv. No. 337–TA–1262, Notice of Commission Decision to Review, and on Review to Vacate and Remand, an Initial Determination Granting Complainants' Motion to Amend the Complaint and Notice of Investigation (Sept. 22, 2021). For example, an amendment to add a cause of action under section 337(a)(1)(A) of the Tariff Act of 1930 to an investigation instituted under section 337(a)(1)(B) of that Act would be required to contain all of the information required in the relevant portions of paragraph 210.12(a) of the Commission's Rules. The purpose of the amendment is to ensure that the public, all affected parties, and/or new respondents have adequate notice of the scope of any substantive amendment to

the complaint and notice of investigation.

For paragraph 210.14(b)(1), the requirement is also intended to provide the presiding administrative law judge and the Commission with the information needed to determine whether good cause exists to allow the proposed amendment after institution. This section is also amended to make clear that the complainant shall serve the motion to amend the complaint and notice of investigation on the new respondent and on all current respondents. It also is amended to require the Commission to serve the amended complaint and notice of investigation on any new respondent and the embassies of the relevant foreign countries after the Commission determines to affirm or not review an initial determination granting the motion. Further, this section is amended to require complainants to file service copies of the complaint and exhibits, including paper service copies of the amended complaint, for each new respondent and for the embassy of the country in which the respondent is located by the close of the next business day after the amended complaint is filed.

Paragraph 210.14(b)(1) currently lacks any indication of whether and when a response to an amended complaint and notice of investigations is required. The absence of such guidance has led to inconsistent practice across investigations. Accordingly, the Commission proposes to amend paragraph 210.14(b)(1) by clarifying that responses from respondents currently in the investigation are required and that they shall be due within ten (10) days of the service of the order, or of the Commission determination affirming or not reviewing an initial determination, as applicable, that grants a motion to amend the complaint and/or notice of investigation. The Commission intends that any response to an amended complaint and/or notice of investigation should conform to the same content requirements applicable to a response to an initial complaint and notice of investigation, as provided in paragraph 210.13(b).

The proposed rule also specifies that if any additional respondents are added to the investigation, they shall have twenty (20) days from the date of service of the amended complaint and notice of investigation to file a written response.

Paragraph 210.14(g) currently allows two or more investigations to be consolidated in two circumstances: (1) the Commission may consolidate the investigations; or (2) the presiding administrative law judge may consolidate investigations before that judge. There is no mechanism under the current rule for investigations before different administrative law judges to be consolidated, absent Commission intervention. The proposed amendment to paragraph 210.14(g) would address this by providing that the Chief Administrative Law Judge may consolidate investigations that are before different presiding administrative law judges and assign an administrative law judge to preside over the consolidated investigations.

Subpart D—Motions

Section 210.15

Section 210.15 contains the general provisions regarding motion practice at the Commission. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (a)(2) to replace ''Chairman'' with ''Chair'' and in paragraph (c) to replace ''shall respond or he may be deemed to have consented'' with ''shall respond or may be deemed to have consented.'' In paragraph (c), the Commission also proposes to change ''10 days'' to ''ten (10) days'' for clarity. No substantive change is intended.

Section 210.16

Sections 210.16 and 210.17 govern the procedures to be followed when a party defaults or otherwise fails to act during an investigation. Paragraph (b)(3) of section 210.16 governs a respondent's ability to elect to default by notice when the respondent has failed to respond to the complaint and notice of investigation, while paragraph (h) of section 210.17 governs a respondent's ability to elect to default by notice after having responded to the complaint and notice of investigation. The similarity in the language of the two sections, however, has caused confusion about whether and how to default at different stages of an investigation, with parties often citing to the wrong rule in their submissions. Accordingly, the Commission proposes to amend paragraph 210.16(b)(3) by moving certain language from paragraph 210.17(h) into a new paragraph 210.16(b)(3)(i) and adding language common to both current sections in new paragraph 210.16(b)(3)(ii). The undesignated language after paragraph (h) would be redesignated paragraph (h) under this proposal.

For the reasons noted above under section 210.4, the Commission also proposes to amend certain gender-specific language in paragraphs 210.16(b)(1)(i) and 210.16(b)(2) by replacing ''upon his own initiative'' and ''on his own initiative,'' respectively, with ''*sua sponte.*'' No substantive change is intended. The Commission also proposes adding a reference to section 210.33 in paragraph 210.16(b)(2) relating to the failure to make or cooperate in discovery.

Section 210.17

As noted above, sections 210.16 and 210.17 govern the procedures to be followed when a party defaults or otherwise fails to act during an investigation. For the reasons described above, the Commission proposes to move certain language from paragraph 210.17(h) into paragraph 210.16(b), and to otherwise delete paragraph (h) from section 210.17.

Section 210.18

Section 210.18 governs the procedures to be followed with regard to motions for summary determination. For clarity, the Commission proposes to replace ''10 days'' with ''ten (10) days'' in the first sentence of paragraph 210.18(b). For the reasons noted above under section 210.4, the Commission also proposes to amend certain gender-specific language in paragraph (b) to remove a reference to ''his'' discretion. No substantive change is intended.

Section 210.20

Section 210.20 contains provisions regarding the declassification of confidential information. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (a) by replacing ''he'' with ''the chief administrative law judge.'' No substantive change is intended.

Section 210.25

Section 210.25 contains general provisions for the imposition of sanctions. The Commission proposes to revise paragraph (d) of section 210.25 by eliminating the statement that the period for filing petitions of an administrative law judge's initial determination concerning sanctions will be specified in a Commission notice. The purpose of this change is to eliminate confusion, as some parties have believed that they must wait for the Commission to set a briefing schedule before petitioning an initial determination on sanctions. The Commission proposes to amend the rule to clarify that the period for filing a request for an interlocutory appeal of a sanctions order is governed by paragraph 210.24(b)(1), and that, if an interlocutory appeal of a previously issued order is denied or if the sanctions

order is issued concurrently with the initial determination concerning violation of section 337, the period for filing a petition for review of a sanctions order is governed by the period in which a petition for review of the initial determination terminating the investigation may be filed in paragraph 210.43(a). If the administrative law judge defers adjudication of a motion for sanctions until after the issuance of a final initial determination concerning violation of section 337, the Commission also proposes to set deadlines of ten (10) days for comments and five (5) days for responses.

For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (f) of section 210.25 by replacing references to ''he'' and ''his.'' In the same paragraph, the Commission also proposes to change ''30 days'' to ''thirty (30) days'' for clarity. No substantive change is intended.

Subpart E—Discovery and Compulsory Process

Section 210.27

Paragraph 210.27(b) is similar to Federal Rule of Civil Procedure 26(b)(1) and provides that the scope of discovery in section 337 investigations includes any matter, not privileged, that is relevant to a claim or defense of any party. The rule currently provides that a person may not object to a discovery request as seeking inadmissible evidence if the request appears reasonably calculated to lead to the discovery of admissible evidence. In 2013, the Commission amended section 210.27 by adding paragraph (d), among others. Paragraph (d) introduced general discovery limits intended to curb the use of discovery that is disproportionate to the needs of the particular investigation in which it is requested. Paragraph (d) tracked similar proportionality requirements then effective under Federal Rule of Civil Procedure 26(b). At that time, the Commission left in place the language in paragraph 210.27(b) indicating that discovery is not objectionable if it appears reasonably calculated to lead to the discovery of admissible evidence. That language paralleled similar language then in Federal Rule of Civil Procedure 26(b). Thereafter, in 2015, Federal Rule of Civil Procedure 26 was amended to remove the ''reasonably calculated to lead to the discovery of admissible evidence'' language in favor of language that emphasizes the importance of conducting discovery in a way that is proportional to the needs of each case. The Advisory Committee Notes to the amendment of Federal Rule of Civil Procedure 26 indicate that the change in language was not intended to change already existing requirements to consider proportionality in the conduct of discovery. *See* Fed. R. Civ. P. 26 Advisory Committee Notes—2015 Amendment. Rather, the change was intended to ''restore[] the proportionality factors to their original place in defining the scope of discovery.'' *Id.*

The Commission proposes to similarly amend section 210.27(b) by deleting the reference to information that ''appears reasonably calculated to lead to the discovery of admissible evidence'' and inserting language emphasizing that discovery must be proportional to the needs of the investigation. The Commission also proposes to incorporate the sentence ''[a]ll discovery is subject to the limitations of paragraph (d) of this section'' into the beginning of paragraph (b). Unenumerated paragraphs are no longer permitted. No substantive change is intended.

Paragraph 210.27(e) concerns the procedures for claiming privilege or work product protection over information, including information already produced in discovery. Paragraph (e)(2)(ii), specifically, provides the procedure for resolving a disagreement about the basis for a claim of privilege or protection as attorney work product. As currently written, however, that paragraph could be read to require the parties to meet and confer even if there is no dispute about the claim of privilege or work product protection. The Commission thus proposes to amend paragraph 210.27(e) to make clear that the requirement to meet and confer is applicable only when the parties have a disagreement about the basis for claim of privilege or work product protection.

The proposed rule also corrects a typographical error by renumbering the phrase ''(iii) Identify assumptions that the party's attorney provided'' as ''(C) Identify assumptions that the party's attorney provided'' in paragraph 210.27(e)(5)(ii).

Section 210.28

Section 210.28 concerns the procedures governing depositions taken during Commission investigations. Current paragraph 210.28(a) limits the number of fact depositions that each party, including the Commission investigative attorney, may take in an investigation. The Commission is aware that disputes have arisen over whether depositions of non-party witnesses count towards the limits in paragraph 210.28(a). In response to those disputes, the Commission proposes to amend the rule by adding a sentence clarifying that party and third-party depositions, alike, count toward the limits recited in paragraph (a). A notice for a corporation to designate deponents, however, shall continue to count as only one deposition and shall include all corporate representatives so designated to respond.

The Commission further proposes to change the limit for complainants as a group from five (5) fact depositions per respondent to a total of twenty (20) fact depositions, regardless of the number of respondents. This amendment effects a simplification of the current rule, which permits a complainant group to take the greater of either twenty depositions or five per respondent. It also provides for the same number of fact depositions for complainants as a group and respondents as a group. The amendment does not abrogate the presiding administrative law judge's authority to increase the number of fact depositions allowed on a showing of good cause by any party. Thus, the Commission does not anticipate that the proposed amendment will foreclose a complainant group from taking additional depositions if good cause to do so exists.

While current section 210.28 limits the number of depositions that may be taken, there is no provision specifying the maximum permissible length of a deposition. By contrast, Federal Rule of Civil Procedure 30 presumptively limits depositions to one (1) day of seven (7) hours. The Committee Notes to the 2000 Amendments to Federal Rule of Civil Procedure 30(d) explain that the one-day limitation was designed to restrain undue cost and delay that can result from overlong depositions. Fed. R. Civ. P. 30(d) (2000 Advisory Committee Note). The Committee Notes explain that the rule contemplates reasonable breaks throughout the day and that only time occupied by the actual deposition will be counted. They further explain that, for purposes of the durational limit, the deposition of each person designated in response to a deposition noticed under Federal Rule of Civil Procedure 30(b)(6) should be considered a separate deposition. *Id.*

The Commission proposes to amend section 210.28 by adding a new paragraph (b), which includes a presumptive durational limitation of one (1) day of seven (7) hours to depositions conducted under that section consistent with Federal Rule of Civil Procedure 30. The Commission intends for the limitation to control in

the absence of an agreement among the parties or an order of the presiding administrative law judge otherwise. The amended rule requires the presiding administrative law judge to grant additional time as needed, to the extent consistent with the provisions of paragraphs 210.27(b) through 210.27(d), which govern the scope of and limitations on discovery, respectively. The reference to those paragraphs is intended to ensure that additional time is only granted in proportion to the needs of the investigation. The Commission intends for the same computational rules to apply as are laid out in the Committee Notes to the 2000 Amendments to Federal Rule of Civil Procedure 30. Specifically, only time actually spent conducting the deposition will count towards the seven (7) hour limit, and for the purpose of the durational limit each individual designated in response to a deposition directed to a party will be considered a separate deponent. Nothing in this proposed rule should be construed to alter the provision in paragraph (a) that specifies that each notice of deposition to a party is counted as a single deposition for purposes of calculating the total number of depositions that may be taken by a party.

Due to the addition of new paragraph (b), the Commission proposes to redesignate current paragraphs (b) through (i) as paragraphs (c) through (j), respectively.

Current paragraph (f), which in the proposed rule would be redesignated as paragraph (g), requires the party taking a deposition to promptly serve a copy of the deposition transcript on the Commission investigative attorney. As written, current paragraph (f) could be read as not requiring service of exhibits marked during the deposition. In order to remove that ambiguity, the Commission proposes amending current paragraph (f), redesignated as paragraph (g), to make clear that copies of the deposition exhibits must be included when the transcript is served on the Commission investigative attorney.

For the reasons noted above under section 210.4, the Commission also proposes to amend certain gender-specific language in current paragraphs (c) and (h)(4), redesignated as paragraphs (d) and (i)(4), respectively, by replacing references to ''he'' and ''him.'' The Commission also proposes to add that testimony may be taken by ''videoconference'' to current paragraph (c) (renumbered as (d)).

Section 210.30

Section 210.30 is similar to Federal Rule of Civil Procedure 34 and provides procedures governing requests for production or inspection of documents and things, as well as entry upon land, during discovery. Section 210.30, like Federal Rule of Civil Procedure 34, includes provisions permitting a party from whom information is requested to object to the request. Current section 210.30 differs from Federal Rule of Civil Procedure 34, however, in that it does not require an objecting party to state whether it is withholding any responsive materials on the basis of its objection. As explained in the Committee Notes to the 2015 amendments to Federal Rule of Civil Procedure 34, which added the requirement, the purpose of the amendment was to ''end the confusion that frequently arises when a producing party states several objections and still produces information, leaving the requesting party uncertain whether any relevant and responsive information has been withheld on the basis of the objections.'' Fed. R. Civ. P. 34 Advisory Committee Notes—2015 Amendment. For similar reasons, the Commission proposes to amend paragraph 210.30(b)(2) to include a requirement that any objection to a request to provide information must state whether any responsive materials are being withheld on the basis of that objection and that the party must permit inspection of any other materials not being withheld.

For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (a)(1) by replacing ''his behalf'' with ''that party's behalf.'' In paragraph (b)(2) of section 210.30, the Commission also proposes to change ''10 days'' to ''ten (10) days'' for clarity. No substantive change is intended.

Section 210.31

Section 210.31 is similar to Federal Rule of Civil Procedure 36 and provides procedures governing requests for admission of the truth of matters relevant to an investigation. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraphs (b), (c), and (d) to remove various references to ''he'' and ''him.'' No substantive changes are intended. In paragraph (b) of section 210.31, the Commission also proposes to change ''10 days'' to ''ten (10) days'' for clarity. No substantive change is intended.

Section 210.32

Section 210.32 governs the use of subpoenas in Commission investigations. Paragraph (a) deals specifically with the application for subpoenas seeking testimony and things. Paragraph (3) of that paragraph currently provides that the administrative law judge shall rule on and issue subpoenas applied for under that paragraph when warranted. While not explicitly stated in the paragraph, it is generally understood that an administrative law judge's authority to issue subpoenas does not extend to foreign discovery. Rather, a party seeking foreign discovery typically does so either through negotiated agreements with the discovery holder or through a request for judicial assistance from the appropriate foreign judicial authority. Concerning the latter approach, such requests are typically made by a United States district court at the request of the party seeking discovery and with the administrative law judge's recommendation. In rare situations, however, the party seeking discovery asks the Commission to make the request for assistance on the Commission's own authority. Because the current rule is silent on whether the administrative law judge can grant such a request, the Commission proposes to amend paragraph (a)(3) of this section to make clear that an administrative law judge may do so. The Commission believes the amendment will provide greater clarity and guidance concerning the disposition of such requests. The Commission anticipates the effect of these amendments to be minimal as they are only intended to address the infrequent instance where the Commission is asked to seek assistance directly from a foreign judicial authority on its own authority.

For the reasons noted above under section 210.4, the Commission also proposes to amend certain gender-specific language in paragraph (c)(2) by replacing ''and he'' with ''who.''

Section 210.33

Section 210.33 relates to sanctions for failure to make or cooperate in discovery. Paragraph (b) of that section provides for the imposition of non-monetary sanctions when a party fails to comply with an order compelling discovery. The Commission proposes to amend that paragraph to make it coextensive with Federal Rule of Civil Procedure 37, which similarly governs sanctions for failure to make or cooperate in discovery. Among the proposed changes is the deletion of the phrase ''as may be sufficient to compensate for the lack of withheld testimony, documents, or other evidence'' in paragraph (b)(6). This language was in dispute in *Organik Kimya,* in which the U.S. Court of

Appeals for the Federal Circuit affirmed the Commission's imposition of sanctions and held that, under this section of the Commission's rules, an administrative law judge may order any non-monetary sanction available under Rule 37(b) of the Federal Rules of Civil Procedure as appropriate, without first considering the availability or efficacy of lesser sanctions. *See Organik Kimya, San. VE. Tic. A.S.* v. *Int'l Trade Comm'n,* 848 F.3d 994, 1002–03 (Fed. Cir. 2017). For the same reason, the Commission also proposes to remove the language ''for the purpose of permitting resolution of relevant issues and disposition of the investigation without unnecessary delay despite the failure to comply'' in paragraph (b). As the Federal Circuit noted, valid purposes for imposing sanctions also include ''to penalize a party's sanctionable conduct and to deter future parties from repeating such conduct.'' *Id.* at 1004 (citing *Nat'l Hockey League* v. *Metro. Hockey Club, Inc.,* 427 U.S. 639, 643 (1976)). The Commission also proposes to make clear that the administrative law judge may issue, based on a party's motion or *sua sponte,* non-monetary sanctions for failure to comply with an order compelling discovery, including failure of a party, or an officer or corporate representative of a party, to comply with an oral or written order. The Commission also proposes to move up from paragraph (b)(6) the statement that any such sanction may be ordered in the course of the investigation or concurrently with the administrative law judge's final initial determination on violation. The Commission also proposes to make the last sentence in paragraph (b)(6), which relates to certifying a request to the Commission for judicial enforcement, a separate paragraph to clarify that it applies generally, not just to paragraph (b)(6).

For the reasons discussed in connection with section 201.8, the Commission proposes to replace ''agent'' in paragraph (b)(3) with ''corporate representative.'' And for the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (b)(3) by replacing ''his'' with ''the party's.'' No substantive change is intended.

Section 210.34

Section 210.34 provides for the issuance of protective orders to protect a party or person from annoyance, embarrassment, oppression, or undue burden or expense during discovery. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraphs (a), (c)(2), (d), and (d)(5) to remove various references to ''he,'' ''his,'' and ''him.'' No substantive change is intended.

Subpart F—Prehearing Conferences and Hearings

Section 210.35

Section 210.35 governs the conduct of prehearing conferences before an administrative law judge. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (a) by replacing ''him'' with ''the administrative law judge.'' No substantive change is intended.

Section 210.37

Section 210.37 governs the admissibility and receipt of evidence in administrative hearings at the Commission. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (g) by removing references to ''he'' and ''his.'' No substantive change is intended.

Section 210.38

Section 210.38 governs the definition and certification of the record in administrative hearings at the Commission. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (d) by changing ''upon his filing'' to ''at the time of filing'' in that paragraph. No substantive change is intended.

Section 210.40

Section 210.40 provides for the submission of proposed findings of fact and conclusions of law, as well as briefs in support of those proposed findings and conclusions, to the administrative law judge. Parties may do so following a motion for summary determination under paragraph 210.18(a) or a motion for termination under section 210.21(a), when it is found that a party is in default under section 210.16, at the close of the reception of evidence in any hearing held pursuant to this part (except as provided in section 210.63), or within a reasonable time thereafter fixed by the administrative law judge.

In the past, there has been some confusion as to whether proposed findings of fact and conclusions of law must be in a separate document or whether they may be part of the substantive briefs filed with the administrative law judge. The Commission proposes to clarify that all proposed findings of fact and conclusions of law, and submissions in support thereof, should be set forth in those briefs. Accordingly, the Commission proposes to amend section 210.40 by eliminating any requirement that proposed findings of fact and conclusions of law be set forth in a separate document.

The Commission proposes to further amend section 210.40 by adding a new paragraph (b) providing that a party may file a notice of supplemental authority with the administrative law judge. Such a notice may be filed if pertinent and significant authorities come to the party's attention after all briefs have been filed but before the administrative law judge issues a final initial determination. The notice must be served on all other parties and must describe the relevance of the supplemental citations, with reference to specific pages in either the party's briefs or the transcript of the evidentiary hearing. While parties have filed similar submissions in the past on an *ad hoc* basis, the amendment to section 210.40 expressly authorizes such submissions and provides that responses may be filed by other parties within five (5) business days after service of the notice of supplemental authority.

For the reasons noted above under section 210.4, the Commission's proposed amendment also eliminates certain gender-specific language by removing a reference to ''his consideration.'' No substantive change is intended.

Subpart G—Determinations and Actions Taken

Section 210.42

Section 210.42 governs initial determinations. Paragraph (c)(1) of that section identifies the types of motions that an administrative law judge must grant by initial determination and deny by order.

The Commission proposes to amend paragraph (c)(1) by deleting the word ''formal'' before ''enforcement proceeding.'' As the Commission no longer conducts informal enforcement proceedings, there is no need to distinguish between formal and informal enforcement proceedings.

The Commission also proposes to amend paragraph (h)(3) to clarify that an initial determination filed pursuant to paragraph (c)(1) shall become the determination of the Commission thirty (30) days after the date of service of the initial determination except as provided in newly designated paragraph (h)(5) (current paragraph (h)(6)). An initial determination filed pursuant to paragraph (c)(2) shall be governed by a

new paragraph (h)(6) as explained below.

The proposed rule also eliminates current paragraph (h)(5), redesignates current paragraph (h)(6) as paragraph (h)(5), and amends the newly designated paragraph (h)(5) to clarify that an initial determination granting a motion for summary determination under 210.18 that would terminate the investigation in its entirety shall become the final determination of the Commission forty-five (45) days after the date of service of the initial determination, unless the Commission has ordered review of the initial determination or certain issues therein, or the Commission has ordered a different deadline for determining whether to review the initial determination.

The Commission proposes to include the language eliminated from current paragraph (h)(5) in a new paragraph (h)(6). This new paragraph clarifies that an initial determination filed pursuant to paragraph (2) of paragraph 210.42(c), concerning either possible forfeiture or return of respondents' bonds as governed by paragraph 210.50(d) or possible forfeiture or return of a complainant's temporary relief bond as governed by paragraph 210.70(c), shall become the final determination of the Commission forty-five (45) days after the date of service of the initial determination, unless the Commission has ordered review of the initial determination or certain issues therein, or by order has changed the effective date of the initial determination.

Finally, the Commission proposes to specify numerically and in words the time periods in paragraphs (c) and (h) for clarity. No substantive change is intended.

Section 210.43

Section 210.43 governs petitions for review of initial determinations on matters other than temporary relief. The Commission proposes to clarify the relevant deadlines relating to a petition for review of an initial determination concerning declassification of information and an order concerning sanctions. Specifically, the Commission proposes to specify that a petition for review of an initial determination issued under paragraph 210.42(a)(2) concerning declassification of information must be filed within ten (10) days after service of the initial determination and that a petition for review of any sanctions order issued under paragraph 210.25(d) must be filed within twelve (12) days after service of the order.

The Commission also proposes to correct two typographical errors in paragraph (a)(1), which should refer to ''210.75(a)(3)'' and to ''210.42(a),'' rather than to ''210.75(b)(3)'' or ''210.42(a)(1),'' respectively.

The Commission further proposes to specify numerically and in words the time periods in paragraph (a)(1) for clarity. No substantive change is intended.

Section 210.45

Section 210.45 governs review of initial determinations on matters other than temporary relief. The proposed rule replaces ''set aside'' with ''vacate'' in paragraph (c). The Commission's previous use of the terms ''set aside'' and ''vacate'' interchangeably in its determinations has led to unnecessary confusion. Courts routinely use the term ''vacate'' when nullifying the legal effect of an opinion or judgment. The Commission finds that the term ''set aside'' is used in areas of law that are not relevant to section 337 proceedings, and the term, as used in those areas, does not have the same legal meaning as ''vacate.'' Therefore, the Commission believes that use of the term ''vacate'' with respect to initial determinations and orders will avoid confusion and is more appropriate in circumstances where the Commission determines to nullify the legal effect of all or part of an initial determination or order. The Commission's previous use of the term ''set aside'' in respect of initial determinations will be interpreted to mean ''vacate,'' unless the context clearly indicates some other meaning.

Section 210.48

Section 210.48 governs disposition of petitions for reconsideration. For reasons similar to those noted above concerning section 210.45, the Commission proposes to replace ''affirm, set aside, or modify'' with ''affirm, reverse, modify, or vacate.'' The proposed rule also clarifies that the Commission may remand the determination via an order to the administrative law judge, specifying any necessary additional findings, determinations, or recommendations.

Section 210.49

Section 210.49 governs the implementation of Commission actions. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (d) by removing references to ''he'' and ''his'' when referring to the President. No substantive change is intended.

Section 210.51

Section 210.51 governs the period for concluding an investigation under section 337. The Commission proposes to amend the introduction to paragraph (a) and paragraph (a)(2) by deleting the instances of the word ''formal'' before ''enforcement proceeding'' therein. As the Commission no longer conducts informal enforcement proceedings, there is no need to distinguish between formal and informal enforcement proceedings. The Commission also proposes to specify numerically and in words the time periods in paragraph (a) for clarity. The Commission also proposes to remove the language ''before the formal enforcement proceeding is certified to the Commission'' from paragraph (a)(2) as unnecessary. No substantive change is intended.

Subpart H—Temporary Relief

Section 210.63

Section 210.63 provides that the administrative law judge shall determine whether and to what extent submissions described in section 210.40 shall be permitted in adjudication of a motion for temporary relief. The Commission proposes to conform section 210.63 to the language of the proposed amendment to section 210.40 by eliminating the reference to separate findings of fact and conclusions of law.

Section 210.65

Section 210.65 governs certification of the record upon which an initial determination concerning temporary relief pursuant to paragraph 210.66(a) is based. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in this section by replacing ''he'' with ''the administrative law judge.'' No substantive change is intended.

Section 210.66

Section 210.66 governs initial determinations concerning temporary relief. For the reasons noted above under section 210.45, the Commission proposes to replace ''set aside'' with ''vacate'' in paragraphs (c) and (f). The Commission also proposes to specify numerically and in words the time periods and pages in paragraph (c) for clarity.

Section 210.67

Section 210.67 governs the procedure for arriving at the Commission's determination regarding the appropriate form of temporary relief, whether the statutory public interest factors preclude such relief, and the amount of the bond

under which respondents' merchandise will be permitted to enter the United States while a Commission temporary relief order is in effect. For the reasons noted above under section 210.4, the Commission proposes to amend certain gender-specific language in paragraph (a) by replacing ''he'' with ''the administrative law judge.'' No substantive change is intended.

Subpart I—Enforcement Procedures and Advisory Opinions

Section 210.75

Section 210.75 governs the conduct of proceedings for enforcement of Commission exclusion orders, cease and desist orders, consent orders, and other Commission orders. The proposed rule amends paragraph (a)(1) to indicate that the filing of an enforcement complaint must also follow section 210.4 and paragraph 210.8(a), but that no paper copies of enforcement complaints or exhibits thereto are required for the government of the foreign country in which each alleged violator is located. The proposed rule also specifies that the Commission shall serve copies of the nonconfidential version of the enforcement complaint, the nonconfidential exhibits, and the notice of investigation upon each alleged violator. The proposed rule also amends paragraph (a)(1)(i) of this section to add that the Commission will not institute an investigation within thirty (30) days after the complaint is filed if the Commission determines that the complaint or any exhibits or attachments thereto contain excessive designations of confidentiality that are not warranted under sections 201.6(a) and 210.5 of this chapter. Proposed paragraph (1)(v) explains that, under such circumstances, the Commission may require the complainant to file new nonconfidential versions of the aforesaid submissions in accordance with section 210.8 and may determine that the thirty (30) day period for deciding whether to institute an investigation shall begin to run anew from the date that the new nonconfidential versions are filed with the Commission. This is consistent with existing paragraph 210.55(b) of this chapter and with the proposed changes to 210.10 of this chapter.

Section 210.76

Section 210.76 governs the conduct of proceedings for modification or rescission of Commission exclusion orders, cease and desist orders, consent orders, and seizure and forfeiture orders. Previous amendments to this section added the words ''seizure and forfeiture orders'' to the section heading but neglected to add those words to the heading of paragraph (a). The Commission proposes amending the heading of paragraph (a) to correct that oversight and maintain consistency with the heading of the section.

For reasons similar to those noted above under section 210.45, the Commission proposes to replace ''set aside'' with ''rescinded'' in paragraph (a)(1).

The proposed rule also replaces ''request'' in paragraph (a)(1) with ''petition'' to conform with the language used in the heading of paragraph (a).

The proposed rule further replaces ''an opposition'' in paragraph (a)(1) with ''a response.'' This change is meant to clarify that a response to a petition under this paragraph need not necessarily oppose the petition.

The proposed rule also amends paragraph (a)(3) by replacing the word ''motion'' with ''petition'' in the penultimate sentence. This amendment is appropriate to conform with the language used in the heading of paragraph (a) and because paragraph (a)(3) is directed to petitions for modification or rescission, not motions.

Appendix A to Part 210—Adjudication and Enforcement

Appendix A to part 210 summarizes the deadlines for petitions for review of initial determinations issued by administrative law judges, responses to such petitions, and deadlines for the Commission to determine whether to review the specified initial determinations. The Commission proposes to amend rows 2 and 3 to clarify that the initial determinations indicated in those rows are issued pursuant to paragraph 210.42(c)(1). The Commission proposes to add a new row 4 containing the relevant deadlines relating to an initial determination concerning declassification of information issued pursuant to paragraph 210.42(a)(2). The Commission further proposes to add a new row 5 containing the relevant deadlines relating to initial determinations on potentially dispositive issues issued pursuant to paragraph 210.42(a)(3). Current rows 4 through 6 would be redesignated as rows 6 through 8.

The Commission further proposes to amend current row 6 (redesignated as row 8) of Appendix A by deleting the word ''formal'' before ''enforcement proceedings'' therein. As the Commission no longer conducts informal enforcement proceedings, there is no need to distinguish between formal and informal enforcement proceedings. The Commission also proposes to correct a typographical error in that row in the citation of the relevant section by replacing paragraph ''210.75(b)'' with paragraph ''210.75(a)(3).''

List of Subjects in 19 CFR Parts 201, 206, 207, and 210

Administration practice and procedure, Business and industry, Customs duties and inspection, Imports, Investigations Reporting and recordkeeping requirements.

For the reasons stated in the preamble, the United States International Trade Commission proposes to amend 19 CFR parts 201, 206, 207, and 210 as follows:

PART 201—RULES OF GENERAL APPLICATION

■ 1. The authority citation for part 201 is revised to read as follows:

Authority: 19 U.S.C. 1335; 19 U.S.C. 2482; the Administrative Procedure Act (5 U.S.C. 551, *et seq.*), unless otherwise noted.

Subpart A—Miscellaneous

■ 2. Amend § 201.3a by revising paragraph (c) to read as follows:

§ 201.3a Missing children information.

* * * * *

(c) The procedure established in paragraph (b) of this section will result in missing children information being inserted in an estimated 25 percent of the Commission's penalty mail and will cost an estimated $1,500 for the first year of implementation. The Chief Administrative Officer shall make such changes in the procedure as the Officer deems appropriate to maximize the use of missing children information in the Commission's mail.

Subpart B—Initiation and Conduct of Investigations

■ 3. Amend § 201.8 by revising paragraphs (a) and (c), revising and republishing paragraph (d), and revising paragraphs (e) through (g) to read as follows:

§ 201.8 Filing of documents.

(a) *Applicability; where to file; date of filing.* This section applies to all Commission proceedings except, notwithstanding any other section of this chapter, those conducted under 19 U.S.C. 1337, which are covered by requirements set out in part 210 of this chapter. Documents shall be filed with the office of the Secretary through the Commission's Electronic Document Information System (EDIS) website at *https://edis.usitc.gov.* If a paper filing is

required or authorized under paragraphs (d)(2) and (3) of this section, documents shall be filed at the office of the Secretary in Washington, DC. Such documents, if properly filed within the hours of operation specified in § 201.3(c), will be deemed to be filed on the date on which they are actually received by the Commission.

* * * * *

(c) *Specifications for documents.* Each document filed under this chapter shall be signed, double-spaced, clear and legible, except that a document of two pages or less in length need not be double-spaced. All submissions shall be in letter-sized format (8.5 x 11 inches), except copies of documents prepared for another agency or a court (*e.g.,* pleadings papers). The name of the person signing the original shall be typewritten or otherwise reproduced on each copy.

(d) *Filing.* (1) All documents filed with the Commission shall be filed electronically. All filings shall comply with the procedures set forth in the Commission's Electronic Document Information System website at *https://edis.usitc.gov. See also https://www.usitc.gov/press_room/edissupport.htm.* Failure to comply with the requirements of this chapter and the Handbook on Filing Procedures that apply to the filing of a document may result in the rejection of the document as improperly filed.

(2) Supplementary material and witness testimony provided for under § 201.13 or § 207.15 or § 207.24 of this chapter shall also be filed in accordance with the provisions of the applicable section.

(3) The Secretary may provide for exceptions and modifications to the filing requirements set out in this chapter. A person seeking an exception should consult the Handbook on Filing Procedures.

(4) During any period in which the Commission is closed, deadlines for filing documents electronically and by other means are extended so that documents are due on the first business day after the end of the closure.

(e) *Identification of party filing document.* Each document filed with the Commission for the purpose of initiating any investigation shall show on the first page thereof the name, address, and telephone number of the party or parties by whom or on whose behalf the document is filed and shall be signed by the party filing the document or by a duly authorized officer, attorney, or corporate representative of such party. Also, any attorney or corporate representative filing the document shall give a current address, electronic mail address, and telephone number. The signature of the person signing such a document constitutes a certification that the person has read the document, that to the best of that person's knowledge and belief the statements contained therein are true, and that the person signing the document was duly authorized to sign it.

(f) *Nonconfidential copies.* In the event that confidential treatment of a document is requested under § 201.6(b), a nonconfidential version of the document shall be filed, in which the confidential business information shall have been deleted and which shall have been conspicuously marked ''nonconfidential'' or ''public inspection.'' The nonconfidential version shall be filed electronically. In the event that confidential treatment is not requested for a document under § 201.6(b), the document shall be conspicuously marked ''No confidential version filed,'' and the document shall be filed in accordance with paragraph (d) of this section. The name of the person signing the original shall be typewritten or otherwise reproduced on each copy.

(g) *Cover sheet.* For documents that are filed electronically, parties must complete the cover sheet form for such filing on-line at *https://edis.usitc.gov* at the time of the electronic filing. When making a paper filing, parties must complete the cover sheet form on-line at *https://edis.usitc.gov* and print out the cover sheet for submission to the Office of the Secretary with the paper filing. The party submitting the cover sheet is responsible for the accuracy of all information contained in the cover sheet, including, but not limited to, the security status and the investigation number, and must comply with applicable limitations on disclosure of business proprietary information or confidential information under § 201.6 and §§ 206.8, 206.17, 207.3, and 207.7 of this chapter.

■ 4. Revise § 201.12 to read as follows:

§ 201.12 Requests.

Any party to a nonadjudicative investigation may request the Commission to take particular action with respect to that investigation. Such requests shall be filed by letter addressed to the Secretary, shall be placed by the Secretary in the record, and shall be served on all other parties. The Commission shall take such action or make such response as it deems appropriate.

■ 5. Amend § 201.13 by revising paragraphs (d) and (f) to read as follows:

§ 201.13 Conduct of nonadjudicative hearings.

* * * * *

(d) *Witness list.* Each person who files a notice of participation pursuant to paragraph (c) of this section shall simultaneously file with the Secretary a list of the witnesses that person intends to call at the hearing.

* * * * *

(f) *Supplementary material.* (1) A party to the investigation may file with the Secretary supplementary material for acceptance into the record. The party shall file any such material with the Secretary no later than the day of the hearing. Supplementary materials must be marked with the name of the organization submitting it. As used herein, the term *supplementary material* refers to:

(i) Additional graphic material such as charts and diagrams used to illuminate an argument or clarify a position; and

(ii) Information not available to a party at the time its prehearing brief was filed.

(2) Supplementary material does not include witness statements which are addressed in §§ 207.15 and 207.24 of this chapter.

* * * * *

■ 6. Amend § 201.14 by revising paragraph (b)(3) to read as follows:

§ 201.14 Computation of time, additional hearings, postponements, continuances, and extensions of time.

* * * * *

(b) * * *

(3) A request that the Commission take any of the actions described in this section shall be filed with the Secretary and served on all parties to the investigation.

■ 7. Revise § 201.15 to read as follows:

§ 201.15 Attorneys and others practicing or appearing before the Commission.

(a) *In general.* No register of attorneys who may practice before the Commission is maintained. No separate application for admission to practice before the Commission is required. Attorneys practicing before the Commission, or desiring to so practice, must maintain a bar membership in good standing in any State of the United States or the District of Columbia. Persons practicing before the Commission must report any discipline or suspension by any bar association, court, or agency. Non-attorneys desiring to appear before the Commission may be required to show to the satisfaction of the Commission that they are acceptable in the capacity in which they seek to appear. Any person practicing or

appearing before the Commission, or desiring to do so, may for good cause shown be suspended or barred from practicing or appearing before the Commission, or may be subject to such lesser sanctions as the Commission deems appropriate, but only after having been afforded an opportunity to present that person's views in the matter.

(b) *Former officers or employees.* No former officer or employee of the Commission who personally and substantially participated in a matter which was pending in any manner or form in the Commission during that person's employment shall be eligible to practice or appear before the Commission in connection with such matter. No former officer or employee of the Commission shall be eligible to practice or appear before the Commission in connection with any matter which was pending in any manner or form in the Commission during that person's employment without first obtaining written consent from the Commission.

■ 8. Amend § 201.16 by:

■ a. Revising paragraphs (d) and (e); and

■ b. Removing the parenthetical authority citation at the end of the section.

The revisions read as follows:

§ 201.16 Service of process and other documents.

* * * * *

(d) *Additional time after service by mail.* Whenever a party or Federal agency or department has the right or is required to perform some act or take some action within a prescribed period after the service of a document upon it and the document is served upon it by mail, three (3) calendar days shall be added to the prescribed period, except that when mailing is to a person located in a foreign country, ten (10) calendar days shall be added to the prescribed period. Computation of additional time for Commission proceedings conducted under section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) is set out in § 210.6 of this chapter.

(e) *Additional time after service by express delivery.* Whenever a party or Federal agency or department has the right or is required to perform some act or take some action within a prescribed period after the service of a document upon it and the document is served by express delivery, one (1) calendar day shall be added to the prescribed period if the service is to a destination in the United States, and five (5) calendar days shall be added to the prescribed period if the service is to a destination outside the United States. ''Service by express delivery'' refers to a method that would provide delivery by the next business day within the United States and refers to the equivalent express delivery service when the delivery is to a foreign location. Computation of additional time for Commission proceedings conducted under section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) is set out in § 210.6 of this chapter.

* * * * *

Subpart C—Availability of Information to the Public Pursuant to 5 U.S.C. 552

■ 9. Amend § 201.20 by revising paragraphs (d)(2)(iii), (e), and (g)(2) to read as follows:

§ 201.20 Fees.

* * * * *

(d) * * *

(2) * * *

(iii) *The contribution of an understanding of the subject by the public likely to result from disclosure: Whether disclosure of the requested information will contribute to ''public understanding.''* The disclosure must contribute to the understanding of the public at large, as opposed to the individual understanding of the requester or a narrow segment of interested persons. A requester's identity and qualifications—*e.g.,* expertise in the subject area and ability and intention to effectively convey information to the general public—shall be considered. It will be presumed that a representative of the news media (as defined in paragraph (j)(8) of this section) who has access to the means of public dissemination readily will be able to satisfy this consideration. Requests from libraries or other record repositories (or requesters who intend merely to disseminate information to such institutions) shall be analyzed, like those of other requesters, to identify a particular person who represents that that person actually will use the requested information in scholarly or other analytic work and then disseminate it to the general public.

* * * * *

(e) *Notice of anticipated fees in excess of $25.00.* Where the Secretary determines or estimates that the fees to be assessed under this section may amount to more than $25.00, the Secretary shall notify the requester as soon as practicable of the actual or estimated amount of the fees, unless the requester has indicated in advance a willingness to pay fees as high as those anticipated. (If only a portion of the fee can be estimated readily, the Secretary shall advise the requester that the estimated fee may be only a portion of the total fee.) In cases where a requester has been notified that actual or estimated fees may amount to more than $25.00, the request will be deemed not to have been received until the requester has agreed to pay the anticipated total fee. A notice of the requester pursuant to this paragraph (e) shall offer the opportunity to confer with agency personnel in order to reformulate the request to meet the requester's needs at a lower cost.

* * * * *

(g) * * *

(2) Where a requester has previously failed to pay a records access fee within thirty (30) days of the date of billing, the Secretary may require the requester to pay the full amount owed, plus any applicable interest (as provided for in paragraph (h) of this section), and to make an advance payment of the full amount of any estimated fee before beginning to process a new request or continuing to process a pending request from that requester.

* * * * *

Subpart D—Safeguarding Individual Privacy Pursuant to 5 U.S.C. 552a

■ 10. Amend § 201.32 by revising paragraph (b) to read as follows:

§ 201.32 Specific exemptions.

* * * * *

(b) Pursuant to 5 U.S.C. 552a(k)(1) and (k)(2), records contained in the system entitled ''Freedom of Information Act and Privacy Act Records'' have been exempted from paragraphs (c)(3), (d), (e)(1), (e)(4)(G) through (I) and (f) of the Privacy Act. Pursuant to section 552a(k)(1) of the Privacy Act, the Commission exempts records that contain properly classified information pertaining to national defense or foreign policy. Application of exemption (k)(1) may be necessary to preclude individuals' access to or amendment of such classified information under the Privacy Act. Pursuant to section 552a(k)(2) of the Privacy Act, and in order to protect the effectiveness of Inspector General investigations by preventing individuals who may be the subject of an investigation from obtaining access to the records and thus obtaining the opportunity to conceal or destroy evidence or to intimidate witnesses, the Commission exempts records insofar as they include investigatory material compiled for law enforcement purposes. However, if any individual is denied any right, privilege, or benefit to which that individual is otherwise entitled under Federal law due to the maintenance of this material, such material shall be provided to such individual except to the extent that the

disclosure of such material would reveal the identity of a source who furnished information to the Government under an express promise that the identity of the source would be held in confidence.

PART 206—INVESTIGATIONS RELATING TO GLOBAL AND BILATERAL SAFEGUARD ACTIONS, MARKET DISRUPTION, TRADE DIVERSION, AND REVIEW OF RELIEF ACTIONS

■ 11. The authority citation for part 206 continues to read as follows:

Authority: 19 U.S.C. 1335, 2112 note, 2251–2254, 2436, 3805 note, 4051–4065, 4101, and 4551–4552.

Subpart A—General

■ 12. Revise § 206.2 to read as follows:

§ 206.2 Identification of type of petition or request.

An investigation under this part may be commenced on the basis of a petition, request, resolution, or motion as provided for in the statutory provisions listed in §§ 206.1 and 206.31. Each petition or request, as the case may be, filed by an entity representative of a domestic industry under this part shall state clearly on the first page thereof ''This is a [petition or request] under section [citing the statutory provision] and Subpart [B, C, D, E, F, or G] of part 206 of the rules of practice and procedure of the United States International Trade Commission.'' The petition or request, along with all exhibits, appendices, and attachments, must be filed in accordance with § 201.8.

■ 13. Amend § 206.8 by revising paragraph (d) to read as follows:

§ 206.8 Service, filing, and certification of documents.

* * * * *

(d) *Briefs.* All briefs filed in proceedings subject to this part shall be filed in accordance with § 201.8.

PART 207—INVESTIGATIONS OF WHETHER INJURY TO DOMESTIC INDUSTRIES RESULTS FROM IMPORTS SOLD AT LESS THAN FAIR VALUE OR FROM SUBSIDIZED EXPORTS TO THE UNITED STATES

■ 14. The authority citation for part 207 continues to read as follows:

Authority: 19 U.S.C. 1335, 1671–1677n, 2482, 3513, 4582.

Subpart B—Preliminary Determinations

■ 15. Amend § 207.10 by revising paragraphs (a) and (b)(1)(i) to read as follows:

§ 207.10 Filing of petition with the Commission.

(a) *Filing of the petition.* Any interested party who files a petition with the administering authority pursuant to section 702(b) or section 732(b) of the Act in a case in which a Commission determination under title VII of the Act is required, shall file copies of the petition and all exhibits, appendices, and attachments thereto, pursuant to § 201.8 of this chapter, with the Secretary on the same day the petition is filed with the administering authority. If the petition complies with the provisions of § 207.11, it shall be deemed to be properly filed on the date on which the electronic filing of the petition is received by the Secretary, provided that, if the petition is filed with the Secretary after 12 noon, eastern time, the petition shall be deemed filed on the next business day. Notwithstanding § 207.11, a petitioner need not file an entry of appearance in the investigation instituted upon the filing of its petition, which shall be deemed an entry of appearance.

(b) * * *

(1)(i) The Secretary shall promptly notify a petitioner when, before the establishment of a service list under § 207.7(a)(4), he or she approves an application under § 207.7(a). A copy of the petition including all business proprietary information shall then be served by petitioner on those approved applicants in accord with § 207.3(b) within two (2) calendar days of the time notification is made by the Secretary.

* * * * *

■ 16. Revise § 207.15 to read as follows:

§ 207.15 Written briefs and conference.

Each party may submit to the Commission on or before a date specified in the notice of investigation issued pursuant to § 207.12 a written brief containing information and arguments pertinent to the subject matter of the investigation. Briefs shall be signed, shall include a table of contents, and shall contain no more than fifty (50) pages of textual material. Any person not a party may submit a brief written statement of information pertinent to the investigation within the time specified and the same manner specified for the filing of briefs. In addition, the presiding official may permit persons to file within a specified time answers to questions or requests made by the Commission's staff. If the presiding official deems it appropriate, the presiding official shall hold a conference. The conference, if any, shall be held in accordance with the procedures in § 201.13 of this chapter, except that in connection with its presentation a party may provide written witness testimony at the conference. The party shall file the written testimony in accordance with § 201.8(d) of this chapter no later than the date of the conference. If the written testimony is filed on the day of the conference, the party shall also file with the Secretary on that day nine (9) true paper copies of any such written testimony. The presiding official may request the appearance of witnesses, take testimony, and administer oaths.

Subpart C—Final Determinations, Short Life Cycle Products

■ 17. Amend § 207.23 by revising the first and second sentences to read as follows:

§ 207.23 Prehearing brief.

Each party who is an interested party shall submit to the Commission, no later than five (5) business days prior to the date of the hearing specified in the notice of scheduling, a prehearing brief. Prehearing briefs shall be signed and shall include a table of contents. * * *

■ 18. Amend § 207.24 by revising paragraph (b) to read as follows:

§ 207.24 Hearing.

* * * * *

(b) *Procedures.* Any hearing shall be conducted after notice published in the **Federal Register**. The hearing shall not be subject to the provisions of 5 U.S.C. subchapter II, chapter 5, or to 5 U.S.C. 702. Each party shall limit its presentation at the hearing to a summary of the information and arguments contained in its prehearing brief, an analysis of the information and arguments contained in the prehearing briefs described in § 207.23, and information not available at the time its prehearing brief was filed. Unless a portion of the hearing is closed, presentations at the hearing shall not include business proprietary information. In connection with its presentation, a party may provide written witness testimony at the hearing. The party shall file the written testimony in accordance with § 201.8(d) of this chapter no later than the date of the hearing. If the written testimony is filed on the day of the hearing, the party shall also file with the Secretary on that day nine (9) true paper copies of any such written testimony. In the case of testimony to be presented at a closed session held in response to a request under paragraph (d) of this section, confidential and non-confidential versions shall be filed in accordance with § 207.3. Any person not a party may make a brief oral statement of

information pertinent to the investigation.

* * * * *

■ 19. Revise § 207.25 to read as follows:

§ 207.25 Posthearing briefs.

Any party may file a posthearing brief concerning the information adduced at or after the hearing with the Secretary within a time specified in the notice of scheduling or by the presiding official at the hearing. No such posthearing brief shall exceed fifteen (15) pages of textual material. In addition, the presiding official may permit persons to file answers to questions or requests made by the Commission at the hearing within a specified time. The Secretary shall not accept for filing posthearing briefs or answers which do not comply with this section.

■ 20. Revise § 207.28 to read as follows:

§ 207.28 Anticircumvention.

Prior to providing advice to the administering authority pursuant to section 781(e)(3) of the Act, the Commission shall publish in the **Federal Register** a notice that such advice is contemplated. Any person may file one written submission concerning the matter described in the notice no later than fourteen (14) days after publication of the notice. The submission shall contain no more than fifty (50) pages of textual material. The Commission shall by notice provide for additional submissions as it deems necessary.

■ 21. Amend § 207.30 by revising paragraph (b) to read as follows:

§ 207.30 Comment on information.

* * * * *

(b) The parties shall have an opportunity to file comments on any information disclosed to them after they have filed their posthearing brief pursuant to § 207.25. Comments shall only concern such information, and shall not exceed 15 pages of textual material. A comment may address the accuracy, reliability, or probative value of such information by reference to information elsewhere in the record, in which case the comment shall identify where in the record such information is found. Comments containing new factual information shall be disregarded. The date on which such comments must be filed will be specified by the Commission when it specifies the time that information will be disclosed pursuant to paragraph (a) of this section. The record shall close on the date such comments are due, except with respect to investigations subject to the provisions of section 771(7)(G)(iii) of the Act, and with respect to changes in bracketing of business proprietary information in the comments permitted by § 207.3(c).

Subpart F—Five-Year Reviews

■ 22. Amend § 207.61 by removing paragraph (e).

§ 207.61 [Amended]

■ 23. Amend § 207.62 by revising paragraph (b)(2) to read as follows:

§ 207.62 Rulings on adequacy and nature of Commission review.

* * * * *

(b) * * *

(2) Comments shall be submitted within the time specified in the notice of institution. In a grouped review, only one set of comments shall be filed per party. Comments shall not exceed fifteen (15) pages of textual material. Comments containing new factual information shall be disregarded.

* * * * *

■ 24. Amend § 207.65 by revising the first and second sentences to read as follows:

§ 207.65 Prehearing briefs.

Each party to a five-year review may submit a prehearing brief to the Commission on the date specified in the scheduling notice. A prehearing brief shall be signed and shall include a table of contents. * * *

■ 25. Amend § 207.67 by revising paragraph (a) to read as follows:

§ 207.67 Posthearing briefs and statements.

(a) *Briefs from parties.* Any party to a five-year review may file with the Secretary a posthearing brief concerning the information adduced at or after the hearing within a time specified in the scheduling notice or by the presiding official at the hearing. No such posthearing brief shall exceed fifteen (15) pages of textual material. In addition, the presiding official may permit persons to file answers to questions or requests made by the Commission at the hearing within a specified time. The Secretary shall not accept for filing posthearing briefs or answers which do not comply with this section.

* * * * *

■ 26. Amend § 207.68 by revising paragraph (b) to read as follows:

§ 207.68 Final comments on information.

* * * * *

(b) The parties shall have an opportunity to file comments on any information disclosed to them after they have filed their posthearing brief pursuant to § 207.67. Comments shall only concern such information, and shall not exceed 15 pages of textual material. A comment may address the accuracy, reliability, or probative value of such information by reference to information elsewhere in the record, in which case the comment shall identify where in the record such information is found. Comments containing new factual information shall be disregarded. The date on which such comments must be filed will be specified by the Commission when it specifies the time that information will be disclosed pursuant to paragraph (a) of this section. The record shall close on the date such comments are due, except with respect to changes in bracketing of business proprietary information in the comments permitted by § 207.3(c).

PART 210—ADJUDICATION AND ENFORCEMENT

■ 27. The authority citation for part 210 continues to read as follows:

Authority: 19 U.S.C. 1333, 1335, and 1337.

Subpart A—Rules of General Applicability

■ 28. Amend § 210.4 by revising paragraphs (b) and (d)(1)(i), revising and republishing paragraph (f), and revising paragraphs (g) and (h) to read as follows:

§ 210.4 Written submissions; representations; sanctions.

* * * * *

(b) *Signature.* Every pleading, written motion, and other paper of a party or proposed party who is represented by an attorney in an investigation or a related proceeding under this part shall be signed by at least one attorney of record in the attorney's individual name. A party or proposed party who is not represented by an attorney shall sign, or a duly authorized officer or corporate representative of that party or proposed party shall sign, the pleading, written motion, or other paper. Each paper shall state the signer's address and telephone number, if any. Pleadings, written motions, and other papers need not be under oath or accompanied by an affidavit, except as provided in § 210.12(a)(1), § 210.13(b), § 210.18, § 210.52(d), § 210.59(b), or another section of this part or by order of the administrative law judge or the Commission. If a pleading, motion, or other paper is not signed, it shall be stricken unless it is signed promptly after omission of the signature is called to the attention of the submitter.

* * * * *

(d) * * *

(1) * * *

(i) *By motion.* A motion for sanctions under this section shall be made separately from other motions or requests and shall describe the specific conduct alleged to violate paragraph (c) of this section. It shall be served as provided in paragraph (i) of this section, but shall not be filed with or presented to the presiding administrative law judge or the Commission unless, within seven (7) days after service of the motion (or such other period as the administrative law judge or the Commission may prescribe), the challenged paper, claim, defense, contention, allegation, or denial is not withdrawn or appropriately corrected. See also § 210.25(a) through (c). If warranted, the administrative law judge or the Commission may award to the party or proposed party prevailing on the motion the reasonable expenses and attorney's fees incurred in presenting or opposing the motion. Absent exceptional circumstances, a law firm shall be held jointly responsible for violations committed by its partners, associates, and employees.

* * * * *

(f) *Filing of documents.* (1) Written submissions that are addressed to the Commission during an investigation or a related proceeding shall comply with the Commission's Handbook on Filing Procedures, which is issued by and available from the Secretary and posted on the Commission's Electronic Document Information System website at *https://edis.usitc.gov.* Failure to comply with the requirements of this chapter and the Handbook on Filing Procedures in the filing of a document may result in the rejection of the document as improperly filed.

(2) All documents filed under this part shall be filed electronically.

(3) Sections 210.8 and 210.12 set out additional requirements for a complaint filed under § 210.8. Additional requirements for a complaint filed under § 210.75 are set forth in § 210.75.

(4)(i) If a complaint, a supplement or amendment to a complaint, a motion for temporary relief, or the documentation supporting a motion for temporary relief contains confidential business information as defined in § 201.6(a) of this chapter, the complainant shall file nonconfidential copies of the complaint, the supplement or amendment to the complaint, the motion for temporary relief, or the documentation supporting the motion for temporary relief concurrently with the requisite confidential copies, as provided in § 210.8(a). A nonconfidential copy of all exhibits, appendices, and attachments to the document shall be filed in electronic form on one CD–ROM, DVD, or other portable electronic media approved by the Secretary, separate from the media used for the confidential version.

(ii)(A) Persons who file the following submissions that contain confidential business information covered by an administrative protective order, or that are the subject of a request for confidential treatment, must file nonconfidential copies and serve them on the other parties to the investigation or related proceeding within 10 calendar days after filing the confidential version with the Commission:

(*1*) A response to a complaint and all supplements and exhibits thereto;

(*2*) All submissions relating to a motion to amend the complaint or notice of investigation; and

(*3*) All submissions addressed to the Commission.

(B) Other sections of this part may require, or the Commission or the administrative law judge may order, the filing and service of nonconfidential copies of other kinds of confidential submissions. If the submitter's ability to prepare a nonconfidential copy is dependent upon receipt of the nonconfidential version of an initial determination, or a Commission order or opinion, or a ruling by the administrative law judge or the Commission as to whether some or all of the information at issue is entitled to confidential treatment, the nonconfidential copies of the submission must be filed within 10 calendar days after service of the Commission or administrative law judge document in question. The time periods for filing specified in this paragraph (f)(4)(ii)(B) apply unless the Commission, the administrative law judge, or another section of this part specifically provides otherwise.

(5) The Secretary may provide for exceptions and modifications to the filing requirements set out in this chapter. A person seeking an exception should consult the Handbook on Filing Procedures.

(6) Documents shall be filed with the Office of the Secretary through the Commission's Electronic Document Information System (EDIS) website at *https://edis.usitc.gov.* If a paper filing is required or authorized under paragraph (f)(5) of this section, documents shall be filed at the office of the Secretary in Washington, DC. Such documents, if properly filed within the hours of operation specified in § 201.3(c) of this chapter, will be deemed to be filed on the date on which they are actually received by the Commission.

(7) Each document filed with the Commission for the purpose of initiating any investigation shall be considered properly filed if it conforms with the pertinent rules prescribed in this chapter. Substantial compliance with the pertinent rules may be accepted by the Commission provided good and sufficient reason is stated in the document for inability to comply fully with the pertinent rules.

(8) During any period in which the Commission is closed, deadlines for filing documents electronically and by other means are extended so that documents are due on the first business day after the end of the closure.

(g) *Cover sheet.* For documents that are filed electronically, parties must complete the cover sheet form for such filing on-line at *https://edis.usitc.gov* at the time of the electronic filing. When making a paper filing, parties must complete the cover sheet form online at *https://edis.usitc.gov* and print out the cover sheet for submission to the Office of the Secretary with the paper filing. The party submitting the cover sheet is responsible for the accuracy of all information contained in the cover sheet, including, but not limited to, the security status and the investigation number, and must comply with applicable limitations on disclosure of confidential information under § 210.5.

(h) *Specifications.* (1) Each document filed under this chapter shall be double-spaced, clear and legible, except that a document of two pages or less in length need not be double-spaced. All submissions shall be in letter-sized format (8.5 x 11 inches), except copies of documents prepared for another agency or a court (*e.g.,* patent file wrappers or pleadings papers). Typed matter shall not exceed 6.5 x 9.5 inches using 11-point or larger type and shall be double-spaced between each line of text using the standard of 6 lines of type per inch. Text and footnotes shall be in the same size type. Quotations more than two lines long in the text or footnotes may be indented and single-spaced. Headings and footnotes may be single-spaced.

(2) The presiding administrative law judge may impose any specifications the administrative law judge deems appropriate for submissions that are addressed to the administrative law judge.

* * * * *

■ 29. Amend § 210.7 by revising paragraph (a)(2) to read as follows:

§ 210.7 Service of process and other documents; publication of notices.

(a) * * *

(2) The service of all initial determinations as defined in § 210.42, all cease and desist orders as set forth in § 210.50(a)(1), all show cause orders issued under § 210.16(b)(1)(i), and all documents containing confidential business information as defined in § 201.6(a) of this chapter, issued by or on behalf of the Commission or the administrative law judge on a private party, shall be effected by serving a copy of the document by express delivery, as defined in § 201.16(e) of this chapter, on the person to be served, on a member of the partnership to be served, on the president, secretary, other executive officer, or member of the board of directors of the corporation, association, or other organization to be served, or, if an attorney represents a person or entity to be served in connection with an investigation under part 210, by serving a copy by express delivery on such attorney.

* * * * *

Subpart B—Commencement of Preinstitution Proceedings and Investigations

■ 30. Amend § 210.8 by revising the introductory text and paragraphs (a), (b) introductory text, (c)(1) introductory text, and (c)(2) and adding paragraph (c)(3) to read as follows:

§ 210.8 Commencement of preinstitution proceedings.

A preinstitution proceeding is commenced by filing with the Secretary a signed complaint.

(a) *Filing and Service Copies.* (1)(i) A complaint, enforcement complaint, supplement, or amendment under § 210.14(a) thereto, filed under this section shall be filed with the Secretary pursuant to § 210.4. By close of business the next business day following official receipt of the complaint, complainant must deliver copies to the Secretary for service by the Secretary as follows:

(A) For each proposed respondent, one (1) true paper copy of the nonconfidential version of the complaint, one (1) true paper copy of the confidential version of the complaint, if any, and one (1) true paper copy of any supplements or amendments under § 210.14(a), along with one (1) true copy of the nonconfidential exhibits and one (1) true copy of the confidential exhibits in electronic form on a CD ROM, DVD, or other portable electronic media approved by the Secretary; and

(B) For the government of the foreign country in which each proposed respondent is located as indicated in the complaint, one (1) true paper copy of the nonconfidential version of the complaint.

(ii) Failure to timely provide service copies may result in a delay or denial of institution of an investigation under § 210.10 for failure to properly file the complaint.

(2) If the complaint, enforcement complaint, supplement, or amendment under § 210.14(a) thereto, is seeking temporary relief, the complainant must also by close of business the next business day following official receipt of the complaint, deliver copies to the Secretary for service as follows: for each proposed respondent, one (1) true paper copy of the nonconfidential version of the motion and one (1) true paper copy of the confidential version of the motion along with one (1) true copy of the nonconfidential exhibits and one (1) true copy of the confidential exhibits filed with the motion in electronic form on a CD ROM, DVD, or other portable electronic media approved by the Secretary.

(b) *Provide specific information regarding the public interest.* Complainant must file, concurrently with the complaint, a separate statement of public interest, not to exceed five (5) pages, inclusive of attachments, addressing how issuance of the requested relief, *i.e.,* a general exclusion order, a limited exclusion order, and/or a cease and desist order, in this investigation could affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers. If the complainant files a confidential version of its submission on public interest, it shall file a public version of the submission no later than one business day after the deadline for filing the submission. In particular, the submission should:

* * * * *

(c) * * *

(1) When a complaint is filed, the Secretary to the Commission will publish a notice in the **Federal Register** inviting comments from the public, interested government agencies, and proposed respondents on any issues arising from the complaint and potential exclusion and/or cease and desist orders. In response to the notice, members of the public, interested government agencies, and proposed respondents may provide specific information regarding the public interest and other issues in a written submission not to exceed five (5) pages, inclusive of attachments, to the Secretary to the Commission within eight (8) calendar days of publication of notice of the filing of a complaint. Members of the public, interested government agencies, and proposed respondents may address how issuance of the requested exclusion order and/or a cease and desist order in this investigation could affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers. If a member of the public, interested government agency, or proposed respondent files a confidential version of its submission, it shall file a public version of the submission with the Secretary to the Commission and provide a copy of the public version of the submission to complainant no later than one (1) business day after the deadline for filing the submission. Submissions addressing the public interest should:

* * * * *

(2) Complainant may file a reply to any submissions received under paragraph (c)(1) of this section not to exceed five (5) pages, inclusive of attachments, to the Secretary to the Commission within three (3) calendar days following the filing of the submissions. Notwithstanding § 201.14(a) of this chapter, computation of the reply time period will begin with the first business day following the day on which submissions under paragraph (c)(1) are due, but will include subsequent Saturdays, Sundays, and Federal legal holidays. If the complainant files a confidential version of its submission, it shall file a public version of the submission no later than one (1) business day after the deadline for filing the submission.

(3) No further submissions will be accepted unless requested by the Commission.

* * * * *

■ 31. Amend § 210.10 by revising paragraphs (a)(1)(iii) and (iv) and adding paragraphs (a)(1)(v) and (a)(7) to read as follows:

§ 210.10 Institution of investigation.

(a)(1) * * *

(iii) The complainant requests that the Commission postpone the determination on whether to institute an investigation;

(iv) The complainant withdraws the complaint; or

(v) The complaint or any exhibits or attachments thereto contain excessive designations of confidentiality that are not warranted under § 201.6(a) of this chapter and § 210.5.

* * * * *

(7) If the Commission determines that the complaint or any exhibits or attachments thereto contain excessive designations of confidentiality that are not warranted under § 201.6(a) of this chapter and § 210.5, the Commission may require the complainant to file new nonconfidential versions of the aforesaid submissions in accordance with § 210.4(f)(7)(i) and may determine that the thirty (30) day period for deciding whether to institute an investigation shall begin to run anew from the date the new nonconfidential versions are filed with the Commission in accordance with § 210.4(f)(7)(i).

* * * * *

■ 32. Amend § 210.11 by:

■ a. Revising paragraphs (a)(1) and (2);

■ b. Removing paragraph (a)(3); and

■ c. Redesignating paragraph (a)(4) as paragraph (a)(3).

The revisions read as follows:

§ 210.11 Service of complaint and notice of investigation upon institution.

(a)(1) Upon institution of an investigation, the Commission shall serve:

(i) Copies of the nonconfidential version of the complaint, the nonconfidential exhibits, and the notice of investigation upon each respondent; and

(ii) Copies of the nonconfidential version of the complaint and the notice of investigation upon the embassy in Washington, DC, of the country in which each proposed respondent is located as indicated in the complaint.

(2) If the Commission institutes temporary relief proceedings, upon institution of an investigation, the Commission shall also serve copies of the nonconfidential version of the motion for temporary relief, the nonconfidential version of the complaint, and the notice of investigation upon each respondent.

* * * * *

Subpart C—Pleadings

■ 33. Revise and republish § 210.12 to read as follows:

§ 210.12 The complaint.

(a) *Contents of the complaint.* In addition to conforming with the requirements of §§ 210.4 and 210.5, the complaint shall—

(1) Be under oath and signed by the complainant or the complainant's duly authorized officer, attorney, or corporate representative, with the name, address, email address, and telephone number of the complainant and any such officer, attorney, or corporate representative given on the first page of the complaint, and include a statement attesting to the representations in § 210.4(c)(1) through (3).

(2) Include a statement of the facts constituting the alleged unfair methods of competition and unfair acts.

(3) Describe specific instances of alleged unlawful importations or sales, and shall provide the Harmonized Tariff Schedule of the United States item number(s) for such importations.

(4) State the name, address, and nature of the business (when such nature is known) of each person alleged to be violating section 337 of the Tariff Act of 1930.

(5) Include a statement as to whether the alleged unfair methods of competition and unfair acts, or the subject matter thereof, are or have been the subject of any court or agency litigation, or of any arbitration, and, if so, include a brief summary of such proceeding.

(6)(i) If the complaint alleges a violation of section 337 based on infringement of a U.S. patent, or a federally registered copyright, trademark, mask work, or vessel hull design, under section 337(a)(1)(B), (C), (D), or (E) of the Tariff Act of 1930, include a statement as to whether an alleged domestic industry exists or is in the process of being established as defined in section 337(a)(2). Include the following information with the statement:

(A) For complaints alleging that a domestic industry exists, a detailed description of the relevant domestic industry as defined in section 337(a)(3) that allegedly exists including facts showing significant/substantial investment and employment, and also including the relevant operations of any licensees;

(B) For complaints alleging a domestic industry that is in the process of being established, a detailed description of the relevant domestic industry that is in the process of being established including facts showing that complainant is actively engaged in the steps leading to the exploitation of its intellectual property rights and that there is a significant likelihood that an industry will be established in the future, and also including the relevant operations of any licensees; and

(C) Relevant information that should be included in the statements pursuant to paragraphs (a)(6)(i)(A) and (B) of this section includes but is not limited to:

(*1*) Significant investment in plant and equipment;

(*2*) Significant employment of labor or capital; or

(*3*) Substantial investment in the exploitation of the subject patent, copyright, trademark, mask work, or vessel hull design, including engineering, research and development, or licensing;

(ii) If the complaint alleges a violation of section 337 of the Tariff Act of 1930 based on unfair methods of competition and unfair acts in the importation or sale of articles in the United States that have the threat or effect of destroying or substantially injuring an industry in the United States or preventing the establishment of such an industry under section 337(a)(1)(A)(i) or (ii), include a detailed statement as to whether an alleged domestic industry exists or is in the process of being established (*i.e.,* for the latter, facts showing that there is a significant likelihood that an industry will be established in the future), and include a detailed description of the domestic industry affected, including the relevant operations of any licensees; or

(iii) If the complaint alleges a violation of section 337 of the Tariff Act of 1930 based on unfair methods of competition or unfair acts that have the threat or effect of restraining or monopolizing trade and commerce in the United States under section 337(a)(1)(A)(iii), include a description of the trade and commerce affected.

(7) Include a description of the complainant's business and its interests in the relevant domestic industry or the relevant trade and commerce. For every intellectual property based complaint (regardless of the type of intellectual property right involved), include a showing that at least one complainant is the owner or exclusive licensee of the subject intellectual property.

(8) If the alleged violation involves an unfair method of competition or an unfair act other than those listed in paragraph (a)(6)(i) of this section:

(i) Include in the statement of facts required by paragraph (a)(2) of this section factual allegations that would show the existence of each element of the cause of action underlying the unfair act or method of competition; and

(ii) State a specific theory, and elements thereof, and provide supporting factual allegations concerning the existence of a threat or effect to destroy or substantially injure a domestic industry, to prevent the establishment of a domestic industry, or to restrain or monopolize trade and commerce in the United States. The information that should ordinarily be provided includes the volume and trend of production, sales, and inventories of the involved domestic article; a description of the facilities and number and type of workers employed in the production of the involved domestic

article; profit-and-loss information covering overall operations and operations concerning the involved domestic article; pricing information with respect to the involved domestic article; when available, volume and sales of imports; and other pertinent data.

(9) Include, when a complaint is based upon the infringement of a valid and enforceable U.S. patent—

(i) The identification of each U.S. patent and a certified copy thereof (a legible copy of each such patent will suffice for each required copy of the complaint);

(ii) The identification of the ownership of each involved U.S. patent and a certified copy of each assignment of each such patent (a legible copy thereof will suffice for each required copy of the complaint);

(iii) The identification of each licensee under each involved U.S. patent;

(iv) A copy of each license agreement (if any) for each involved U.S. patent that complainant relies upon to establish its standing to bring the complaint or to support its contention that a domestic industry as defined in section 337(a)(3) exists or is in the process of being established as a result of the domestic activities of one or more licensees;

(v) When known, a list of each foreign patent, each foreign or domestic patent application (not already issued as a patent), and each foreign or domestic patent application that has been denied, abandoned or withdrawn, corresponding to each involved U.S. patent, with an indication of the prosecution status of each such patent application;

(vi) A nontechnical description of the invention of each involved U.S. patent;

(vii) A reference to the specific claims in each involved U.S. patent that allegedly cover the article imported or sold by each person named as violating section 337 of the Tariff Act of 1930, or the process under which such article was produced;

(viii) A showing that each person named as violating section 337 of the Tariff Act of 1930 is importing or selling the article covered by, or produced under the involved process covered by, the specific, asserted claims of each involved U.S. patent. The complainant shall make such showing by appropriate allegations, and when practicable, by a chart that applies each asserted independent claim of each involved U.S. patent to a representative involved article of each person named as violating section 337 of the Tariff Act or to the process under which such article was produced;

(ix) A showing that an industry in the United States, relating to the articles protected by the patent exists or is in the process of being established. The complainant shall make such showing by appropriate allegations, and when practicable, by a chart that applies an exemplary claim of each involved U.S. patent to a representative involved domestic article or to the process under which such article was produced;

(x) Drawings, photographs, or other visual representations of both the involved domestic article or process and the involved article of each person named as violating section 337 of the Tariff Act of 1930, or of the process utilized in producing the imported article, and, when a chart is furnished under paragraphs (a)(9)(viii) and (ix) of this section, the parts of such drawings, photographs, or other visual representations should be labeled so that they can be read in conjunction with such chart; and

(xi) The expiration date of each patent asserted.

(10) Include, when a complaint is based upon the infringement of a federally registered copyright, trademark, mask work, or vessel hull design—

(i) The identification of each licensee under each involved copyright, trademark, mask work, and vessel hull design; and

(ii) A copy of each license agreement (if any) that complainant relies upon to establish its standing to bring the complaint or to support its contention that a domestic industry as defined in section 337(a)(3) exists or is in the process of being established as a result of the domestic activities of one or more licensees.

(11) Contain a request for relief, including a statement as to whether a limited exclusion order, general exclusion order, and/or cease and desist orders are being requested, and if temporary relief is requested under section 337(e) and/or (f) of the Tariff Act of 1930, a motion for such relief, which shall either accompany the complaint as provided in § 210.52(a) or follow the complaint as provided in § 210.53(a). Complaints requesting issuance of a general exclusion order shall include a statement of factual allegations that would satisfy the requirements of section 337(d)(2), including, for example:

(i) factual allegations showing that a general exclusion order is necessary to prevent circumvention of a limited exclusion order; or

(ii) factual allegations showing a pattern of violation of section 337 and difficulty in identifying the source of infringing products.

(12) Contain a clear statement in plain English of the category of products accused. For example, the caption of the investigation might refer to ''certain electronic devices,'' but the complaint would provide a further statement to identify the type of products involved in plain English such as mobile devices, tablets, or computers.

(b) *Submissions of articles as exhibits.* At the time the complaint is filed, if practicable, the complainant shall submit both the domestic article and exemplary imported articles that are the subject of the complaint.

(c) *Additional material to accompany each patent-based complaint.* There shall accompany the submission of each complaint based upon the alleged unauthorized importation or sale of an article covered by, or produced under a process covered by, the claims of a valid U.S. patent the following:

(1) One (1) certified copy of the U.S. Patent and Trademark Office prosecution history for each involved U.S. patent, plus three additional copies thereof; and

(2) One (1) copy of the prosecution histories of any priority applications for each involved U.S. patent.

(d) *Additional material to accompany each registered trademark-based complaint.* There shall accompany the submission of each complaint based upon the alleged unauthorized importation or sale of an article covered by a federally registered trademark, one certified copy of the Federal registration and three additional copies, and one certified copy of the prosecution history for each federally registered trademark.

(e) *Additional material to accompany each complaint based on a non-federally registered trademark.* There shall accompany the submission of each complaint based upon the alleged unauthorized importation or sale of an article covered by a non-federally registered trademark the following:

(1) A detailed and specific description of the alleged trademark;

(2) Information concerning prior attempts to register the alleged trademark; and

(3) Information on the status of current attempts to register the alleged trademark.

(f) *Additional material to accompany each copyright-based complaint.* There shall accompany the submission of each complaint based upon the alleged unauthorized importation or sale of an article covered by a copyright one

certified copy of the Federal registration and three additional copies.

(g) *Additional material to accompany each registered mask work-based complaint.* There shall accompany the submission of each complaint based upon the alleged unauthorized importation or sale of a semiconductor chip in a manner that constitutes infringement of a federally registered mask work, one certified copy of the Federal registration and three additional copies.

(h) *Additional material to accompany each vessel hull design-based complaint.* There shall accompany the submission of each complaint based upon the alleged unauthorized importation or sale of an article covered by a vessel hull design, one certified copy of the Federal registration (including all deposited drawings, photographs, or other pictorial representations of the design), and three additional copies.

(i) *Initial disclosures.* Complainant shall serve on each respondent represented by counsel who has agreed to be bound by the terms of the protective order one copy of each document submitted with the complaint pursuant to paragraphs (c) through (h) of this section within five days of service of a notice of appearance and agreement to be bound by the terms of the protective order.

(j) *Duty to supplement complaint.* Complainant shall supplement the complaint prior to institution of an investigation if complainant obtains information upon the basis of which complainant knows or reasonably should know that a material legal or factual assertion in the complaint is false or misleading.

■ 34. Amend § 210.13 by revising the first sentence of paragraph (b) introductory text to read as follows:

§ 210.13 The response.

* * * * *

(b) * * * In addition to conforming to the requirements of §§ 210.4 and 210.5, each response shall be under oath and signed by respondent or by respondent's duly authorized officer, attorney, or corporate representative with the name, address, email address, and telephone number of the respondent and any such officer, attorney, or corporate representative given on the first page of the response. * * *

* * * * *

■ 35. Amend § 210.14 by:

■ a. Revising the section heading;

■ b. Adding introductory text; and

■ c. Revising paragraphs (a), (b)(1), and (g).

The revisions and addition read as follows:

§ 210.14 Amendments to pleadings and notice; supplemental submissions; counterclaims; severance and consolidation of investigations.

Amended complaints, exhibits, and supplements thereto, filed under this section shall be filed with the Secretary pursuant to § 210.4.

(a) *Preinstitution amendments.* The complaint may be amended at any time prior to the institution of the investigation. Any amendment that introduces an additional unfair act or additional respondent shall be in the form of an amended complaint that complies with the requirements of § 210.12(a). If, prior to institution, the complainant seeks to amend a complaint to add a respondent or to assert an additional unfair act not in the original complaint, including asserting a new patent or patent claim, then the complaint shall be treated as if it had been filed on the date the amendment is filed for purposes of §§ 210.8(b) and (c), 210.9, and 210.10(a).

(b) * * *

(1) After an investigation has been instituted, the complaint or notice of investigation may be amended only by leave of the Commission for good cause shown and upon such conditions as are necessary to avoid prejudicing the public interest and the rights of the parties to the investigation. A motion for amendment must be made to the presiding administrative law judge. Complainant shall serve one (1) copy of any motion to amend the complaint and notice of investigation to name an additional respondent after institution on the proposed respondent and on all other respondents. If the proposed amendment of the complaint would introduce an additional unfair act or an additional respondent, the motion shall be accompanied by a proposed amended complaint that complies with the requirements of § 210.12(a). If the proposed amendment of the complaint would require amending the notice of investigation, the presiding administrative law judge may grant the motion only by filing with the Commission an initial determination. All other dispositions of such motions shall be by order. Respondents shall have ten (10) calendar days from the date of service of an order granting the motion or, in cases where the amendment requires amending the notice of investigation, a Commission determination affirming or not reviewing an initial determination granting the motion, to file a written response to the amended complaint and/or notice of investigation. The contents of such response shall be governed by § 210.13(b).

(i) If the amended complaint and notice of investigation name an additional respondent, the Commission shall serve one (1) copy of the amended complaint and notice of investigation on the additional respondent and the embassies of the relevant foreign countries, in the manner specified in § 201.16(b) of this chapter, after a Commission determination affirming or not reviewing an initial determination granting the motion.

(ii) By close of business the next business day following official receipt of the amended complaint, Complainant must deliver copies to the Secretary for service by the Secretary as follows:

(A) For each proposed additional respondent, one (1) true paper copy of the nonconfidential version of the amended complaint and one (1) true paper copy of the confidential version of the amended complaint, if any, along with one (1) true copy of the nonconfidential exhibits and one (1) true copy of the confidential exhibits in electronic form on a CD ROM, DVD, or other portable electronic media approved by the Secretary; and

(B) For the government of the foreign country in which each proposed respondent is located as indicated in the amended complaint, one (1) true paper copy of the nonconfidential version of the complaint shall be filed.

(iii) Unless otherwise ordered in the notice of investigation or by the presiding administrative law judge, an additional respondent named in the amended complaint and notice of investigation shall have twenty (20) days from the date of service of the amended complaint and notice of investigation to file a written response in the manner specified in § 210.13.

* * * * *

(g) *Consolidation of investigations.* The Commission may consolidate two or more investigations. If the investigations are currently before the same presiding administrative law judge, he or she may consolidate the investigations. If the investigations are not currently before the same presiding administrative law judge, the chief administrative law judge may consolidate the investigations and assign an administrative law judge to preside over the consolidated investigations. The investigation number in the caption of the consolidated investigation will include the investigation numbers of the investigations being consolidated. The investigation number in which the

matter will be proceeding (the lead investigation) will be the first investigation number named in the consolidated caption.

* * * * *

Subpart D—Motions

■ 36. Amend § 210.15 by revising paragraphs (a)(2) and (c) to read as follows:

§ 210.15 Motions.

(a) * * *

(2) When an investigation or related proceeding is before the Commission, all motions shall be addressed to the Chair of the Commission. All such motions shall be filed with the Secretary and shall be served upon each party. Motions may not be filed with the Commission during preinstitution proceedings except for motions for temporary relief pursuant to § 210.53.

* * * * *

(c) *Responses to motions.* Within ten (10) days after service of any written motions, or within such longer or shorter time as may be designated by the administrative law judge or the Commission, a nonmoving party, or in the instance of a motion to amend the complaint or notice of investigation to name an additional respondent after institution, the proposed respondent, shall respond or may be deemed to have consented to the granting of the relief asked for in the motion. The moving party shall have no right to reply, except as permitted by the administrative law judge or the Commission.

* * * * *

■ 37. Amend § 210.16 by revising paragraphs (b)(1)(i) and (b)(2) and (3) to read as follows:

§ 210.16 Default.

* * * * *

(b) * * *

(1)(i) If a respondent has failed to respond or appear in the manner described in paragraph (a)(1) of this section, a party may file a motion for, or the administrative law judge may issue *sua sponte,* an order directing the respondent to show cause why it should not be found in default.

* * * * *

(2) Any party may file a motion for issuance of, or the administrative law judge may issue *sua sponte,* an initial determination finding a party in default for abuse of process under § 210.4(c) or failure to make or cooperate in discovery under § 210.33. A motion for a finding of default as a sanction for abuse of process or failure to make or cooperate in discovery shall be granted by initial determination or denied by order.

(3)(i) A proposed respondent may file a notice of intent to default under this section with the administrative law judge at any time before the issuance of the final initial determination.

(ii) Upon the filing of a notice of intent to default under paragraph (b)(3)(i) of this section, the administrative law judge shall issue an initial determination finding the respondent in default without first issuing the show-cause order of paragraph (b)(1)(i) of this section. Such default will be treated in the same manner as any other default under this section.

* * * * *

■ 38. Amend § 210.17 by:

■ a. Revising paragraph (h); and

■ b. Removing the undesignated text at the end of the section.

The revision reads as follows:

§ 210.17 Other failure to act and default.

* * * * *

(h) The presiding administrative law judge or the Commission may take action under this rule *sua sponte* or in response to the motion of a party.

■ 39. Amend § 210.18 by revising paragraph (b) to read as follows:

§ 210.18 Summary determinations.

* * * * *

(b) *Opposing affidavits; oral argument; time and basis for determination.* Any nonmoving party may file opposing affidavits within ten (10) days after service of the motion for summary determination. At the discretion of the administrative law judge or at the request of any party, the administrative law judge may set the matter for oral argument and call for the submission of briefs or memoranda. The determination sought by the moving party shall be rendered if pleadings and any depositions, answers to interrogatories, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a summary determination as a matter of law.

* * * * *

■ 40. Amend § 210.20 by revising paragraph (a) to read as follows:

§ 210.20 Declassification of confidential information.

(a) Any party may move to declassify documents (or portions thereof) that have been designated confidential by the submitter but that do not satisfy the confidentiality criteria set forth in § 201.6(a) of this chapter. All such motions, whether brought at any time during the investigation or after conclusion of the investigation shall be addressed to and ruled upon by the presiding administrative law judge, or if the investigation is not before a presiding administrative law judge, by the chief administrative law judge or such administrative law judge as the chief administrative law judge may designate.

* * * * *

■ 41. Amend § 210.25 by revising paragraphs (d) and (f) to read as follows:

§ 210.25 Sanctions.

* * * * *

(d) If an administrative law judge's order concerning sanctions is issued before the initial determination concerning violation of section 337 of the Tariff Act of 1930 or termination of the investigation, it may be appealed under § 210.24(b)(1) with leave from the administrative law judge, if the requirements of that section are satisfied. If the order is issued concurrently with the initial determination, or if the administrative law judge denies leave to appeal a previously issued order under § 210.24(b)(1), the order may be appealed by filing a petition meeting the requirements of § 210.43(b) within the same time period specified in § 210.43(a) in which a petition for review of the initial determination terminating the investigation may be filed. The Commission will determine whether to adopt the order after disposition of the initial determination concerning violation of section 337 or termination of the investigation.

* * * * *

(f) If a motion for sanctions is filed with the administrative law judge during an investigation, the administrative law judge may defer adjudication of the motion until after the administrative law judge has issued a final initial determination concerning violation of section 337 of the Tariff Act of 1930 or termination of investigation. If the administrative law judge defers adjudication in such a manner, the administrative law judge's ruling on the motion for sanctions must be in the form of a recommended determination and shall be issued no later than thirty (30) days after issuance of the Commission's final determination on violation of section 337 or termination of the investigation. Parties may submit comments on the recommended determination within ten (10) days from the service of the recommended determination. Parties may submit responses thereto within five (5)

business days from service of any comments.

Subpart E—Discovery and Compulsory Process

■ 42. Amend § 210.27 by:
■ a. Revising and republishing paragraph (b);
■ b. Revising paragraph (e)(2)(ii); and
■ c. Redesignating paragraph (e)(5)(iii) as (e)(5)(ii)(C).

The revisions read as follows:

§ 210.27 General provisions governing discovery.

* * * * *

(b) *Scope of discovery.* Regarding the scope of discovery for the temporary relief phase of an investigation, see § 210.61 and the limitations of paragraph (d) of this section. For the permanent relief phase of an investigation, unless otherwise ordered by the administrative law judge, a party may obtain discovery, subject to the limitations of paragraph (d) of this section, regarding any matter, not privileged, that is proportional to the needs of the investigation and relevant to the following:

(1) The claim or defense of the party seeking discovery or to the claim or defense of any other party, including the existence, description, nature, custody, condition, and location of any books, documents, or other tangible things;

(2) The identity and location of persons having knowledge of any discoverable matter;

(3) The appropriate remedy for a violation of section 337 of the Tariff Act of 1930 (see § 210.42(a)(1)(ii)(A)); or

(4) The appropriate bond for the respondents, under section 337(j)(3) of the Tariff Act of 1930, during Presidential review of the remedial order (if any) issued by the Commission (see § 210.42(a)(1)(ii)(B)).

* * * * *

(e) * * *

(2) * * *

(ii) If there exists a disagreement about the basis for the claim of privilege or protection as attorney work product, within seven (7) days of service of the notice, the claimant and the parties shall meet and confer in good faith to resolve the claim of privilege or protection. If, after meeting and conferring there continues to be a disagreement, within five (5) days after the conference, a party may file a motion to compel the production of the document and may, in the motion to compel, use a description of the document from the notice produced under this paragraph (e)(2). In connection with the motion to compel, the party may submit the document *in camera* for consideration by the administrative law judge. The person that produced the document must preserve the document until the claim of privilege or protection is resolved.

* * * * *

■ 43. Amend § 210.28 by:
■ a. Revising paragraph (a);
■ b. Redesignating paragraphs (b) through (i) as paragraphs (c) through (j);
■ c. Adding new paragraph (b); and
■ d. Revising newly redesignated paragraph (d), the last sentence of newly redesignated paragraph (e), and newly redesignated paragraphs (g) and (i)(4).

The revisions and addition read as follows:

§ 210.28 Depositions.

(a) *When depositions may be taken.* Following publication in the **Federal Register** of a Commission notice instituting the investigation, any party may take the testimony of any person, including a party, by deposition upon oral examination or written questions. The presiding administrative law judge will determine the permissible dates or deadlines for taking such depositions. Unless stipulated otherwise by the parties, the complainants as a group and the respondents as a group may each take a maximum of twenty (20) fact depositions. If the Office of Unfair Import Investigations is a party, the Commission investigative attorney may take a maximum of ten (10) fact depositions and is permitted to participate in all depositions taken by any parties in the investigation. The presiding administrative law judge may set the maximum number of depositions permitted to be taken by an intervenor. Depositions of party witnesses and non-party witnesses alike shall count towards the limits on fact depositions. A notice for a corporation to designate deponents shall count as only one deposition and shall include all corporate representatives so designated to respond. The presiding administrative law judge may increase or limit the number of depositions on written motion for good cause shown.

(b) *Duration.* Unless otherwise ordered by the presiding administrative law judge or stipulated by the parties, including, when participating in the investigation, the Commission investigative attorney, a deposition is limited to one (1) day of seven (7) hours. The presiding administrative law judge must allow additional time, in a manner consistent with § 210.27(b) through (d), if needed to fairly examine the deponent or if the deponent, another person, or any other circumstance impedes or delays the examination.

* * * * *

(d) *Notice of examination.* A party desiring to take the deposition of a person shall give notice in writing to every other party to the investigation. The administrative law judge shall determine the appropriate period for providing such notice. A party upon whom a notice of deposition is served may make objections to a notice of deposition and state the reasons therefor within ten (10) days of service of the notice of deposition. The notice shall state the time and place for taking the deposition and the name and address of each person to be examined, if known, and, if the name is not known, a general description sufficient to identify the person or the particular class or group to which the person belongs. A notice may provide for the taking of testimony by telephone or videoconference, but the administrative law judge may, on motion of any party, require that the deposition be taken in the presence of the deponent. The parties may stipulate in writing, or the administrative law judge may upon motion order, that the testimony at a deposition be recorded by other than stenographic means. If a subpoena duces tecum is to be served on the person to be examined, the designation of the materials to be produced as set forth in the subpoena shall be attached to or included in the notice.

(e) * * * See paragraph (j) of this section concerning the effect of errors and irregularities in depositions.

* * * * *

(g) *Service of deposition transcripts on the Commission staff.* The party taking the deposition shall promptly serve one copy of the deposition transcript and exhibits on the Commission investigative attorney.

* * * * *

(i) * * *

(4) If only part of a deposition is offered in evidence by a party, an adverse party may require the offering party to introduce any other part that ought in fairness to be considered with the part introduced, and any party may introduce any other parts.

* * * * *

■ 44. Amend § 210.30 by revising paragraphs (a)(1) and (b)(2) to read as follows:

§ 210.30 Requests for production of documents and things and entry upon land.

(a) * * *

(1) To produce and permit the party making the request, or someone acting on that party's behalf, to inspect and

copy any designated documents (including writings, drawings, graphs, charts, photographs, and other data compilations from which information can be obtained), or to inspect and copy, test, or sample any tangible things that are in the possession, custody, or control of the party upon whom the request is served; or

* * * * *

(b) * * *

(2) The party upon whom the request is served shall serve a written response within ten (10) days or the time specified by the administrative law judge. The response shall state, with respect to each item or category, that inspection and related activities will be permitted as requested, unless the request is objected to, in which event the reasons for objection shall be stated. An objection must state whether any responsive materials are being withheld on the basis of that objection. An objection to part of a request must specify the part and permit inspection of the rest. The party submitting the request may move for an order under § 210.33(a) with respect to any objection to or other failure to respond to the request or any part thereof, or any failure to permit inspection as requested. A party who produces documents for inspection shall produce them as they are kept in the usual course of business or shall organize and label them to correspond to the categories in the request.

* * * * *

■ 45. Amend § 210.31 by revising paragraphs (b) through (d) to read as follows:

§ 210.31 Requests for admission.

* * * * *

(b) *Answers and objections to requests for admissions.* A party answering a request for admission shall repeat the request for admission immediately preceding the answer to the request. The matter may be deemed admitted unless, within ten (10) days or the period specified by the administrative law judge, the party to whom the request is directed serves upon the party requesting the admission a sworn written answer or objection addressed to the matter. If objection is made, the reason therefor shall be stated. The answer shall specifically deny the matter or set forth in detail the reasons why the answering party cannot truthfully admit or deny the matter. A denial shall fairly meet the substance of the requested admission, and when good faith requires that a party qualify an answer or deny only a part of the matter as to which an admission is requested, the party shall specify so much of it as is true and qualify or deny the remainder. An answering party may not give lack of information or knowledge as a reason for failure to admit or deny unless the party has made reasonable inquiry and states that the information known to or readily obtainable by that party is insufficient to enable the party to admit or deny. A party who considers that a matter as to which an admission has been requested presents a genuine issue for a hearing may not object to the request on that ground alone; the party may deny the matter or set forth reasons why it cannot be admitted or denied.

(c) *Sufficiency of answers.* The party who has requested the admissions may move to determine the sufficiency of the answers or objections. Unless the objecting party sustains the burden of showing that the objection is justified, the administrative law judge shall order that an answer be served. If the administrative law judge determines that an answer does not comply with the requirements of this section, the administrative law judge may order either that the matter is admitted or that an amended answer be served. The administrative law judge may, in lieu of these orders, determine that final disposition of the request be made at a prehearing conference or at a designated time prior to a hearing under this part.

(d) *Effect of admissions; withdrawal or amendment of admission.* Any matter admitted under this section may be conclusively established unless the administrative law judge on motion permits withdrawal or amendment of the admission. The administrative law judge may permit withdrawal or amendment when the presentation of the issues of the investigation will be subserved thereby and the party who obtained the admission fails to satisfy the administrative law judge that withdrawal or amendment will prejudice that party in maintaining its position on the issue of the investigation. Any admission made by a party under this section is for the purpose of the pending investigation and any related proceeding as defined in § 210.3.

■ 46. Amend § 210.32 by revising paragraphs (a)(3) and (c)(2) to read as follows:

§ 210.32 Subpoenas.

(a) * * *

(3) The administrative law judge shall rule on all applications filed under paragraph (a)(1) or (2) of this section and may issue subpoenas when warranted. The administrative law judge shall also rule on any motion seeking foreign judicial assistance to obtain testimony or documents outside the United States.

* * * * *

(c) * * *

(2) *Ruling.* Such applications shall be ruled upon by the administrative law judge, who may issue such subpoenas when warranted. To the extent that the motion is granted, the administrative law judge shall provide such terms and conditions for the production of the material, the disclosure of the information, or the appearance of the official or employee as may appear necessary and appropriate for the protection of the public interest.

* * * * *

■ 47. Amend § 210.33 by revising paragraphs (b) introductory text and (b)(3) and (6) to read as follows:

§ 210.33 Failure to make or cooperate in discovery; sanctions.

* * * * *

(b) *Non-monetary sanctions for failure to comply with an order compelling discovery.* The administrative law judge may issue, based on a party's motion or *sua sponte,* non-monetary sanctions for failure to comply with an order compelling discovery. Such failure to comply may include failure of a party, or an officer or corporate representative of a party, to comply with an oral or written order including, but not limited to, an order for the taking of a deposition or the production of documents, an order to answer interrogatories, an order issued pursuant to a request for admissions, or an order to comply with a subpoena. Any such sanction may be ordered in the course of the investigation or concurrently with the administrative law judge's final initial determination on violation. The administrative law judge may take such action in regard to a failure to comply with an order compelling discovery as is just, including, but not limited to the following:

* * * * *

(3) Rule that the party may not introduce into evidence or otherwise rely upon testimony by the party, officer, or corporate representative, or documents, or other material in support of the party's position in the investigation;

* * * * *

(6) Order any other non-monetary sanction available under Rule 37(b) of the Federal Rules of Civil Procedure.

* * * * *

■ 48. Amend § 210.34 by revising paragraphs (a) introductory text, (c)(2), (d) introductory text, and (d)(5) to read as follows:

§ 210.34 Protective orders; reporting requirement; sanctions and other actions.

(a) *Issuance of protective order.* Upon motion by a party or by the person from whom discovery is sought or by the administrative law judge *sua sponte,* and for good cause shown, the administrative law judge may make any order that may appear necessary and appropriate for the protection of the public interest or that justice requires to protect a party or person from annoyance, embarrassment, oppression, or undue burden or expense, including one or more of the following:

* * * * *

(c) * * *

(2) If the breach occurs while the investigation is before an administrative law judge, any determination on sanctions of the type enumerated in paragraphs (c)(3)(i) through (iv) of this section shall be in the form of a recommended determination. The Commission may then consider both the recommended determination and any related orders in making a determination on sanctions. When the motion is addressed to the administrative law judge for sanctions of the type enumerated in paragraph (c)(3)(v) of this section, the administrative law judge shall grant or deny a motion by issuing an order.

* * * * *

(d) *Reporting requirement.* Each person who is subject to a protective order issued pursuant to paragraph (a) of this section shall report in writing to the Commission immediately upon learning that confidential business information disclosed to that person pursuant to the protective order is the subject of:

* * * * *

(5) Any other written request, if the request or order seeks disclosure, by that person or any other person, of the subject confidential business information to a person who is not, or may not be, permitted access to that information pursuant to either a Commission protective order or § 210.5(b).

* * * * *

Subpart F—Prehearing Conferences and Hearings

■ 49. Amend § 210.35 by revising paragraph (a) introductory text to read as follows:

§ 210.35 Prehearing conferences.

(a) *When appropriate.* The administrative law judge in any investigation may direct counsel or other representatives for all parties to meet with the administrative law judge for one or more conferences to consider any or all of the following:

* * * * *

■ 50. Amend § 210.37 by revising paragraph (g) to read as follows:

§ 210.37 Evidence.

* * * * *

(g) *Excluded evidence.* When an objection to a question propounded to a witness is sustained, the examining party may make a specific offer of what that party expects to prove by the answer of the witness, or the administrative law judge may as a matter of discretion receive and report the evidence in full. Rejected exhibits, adequately marked for identification, shall be retained with the record so as to be available for consideration by any reviewing authority.

■ 51. Amend § 210.38 by revising paragraph (d) to read as follows:

§ 210.38 Record.

* * * * *

(d) *Certification of record.* Any record created, including all physical exhibits entered into evidence or such photographic reproductions thereof as the administrative law judge approves, shall be certified to the Commission by the administrative law judge at the time the administrative law judge files an initial determination, or a recommended determination, or at such earlier time as the Commission may order.

■ 52. Revise § 210.40 to read as follows:

§ 210.40 Briefs and notices of supplemental authority.

(a) At the time a motion for summary determination under § 210.18(a) or a motion for termination under § 210.21(a) is made, or when it is found that a party is in default under § 210.16, or at the close of the reception of evidence in any hearing held pursuant to this part (except as provided in § 210.63), or within a reasonable time thereafter fixed by the administrative law judge, any party may file briefs in support of that party's positions, in the form specified by the administrative law judge, for the administrative law judge's consideration. Such briefs shall be in writing, shall be served upon all parties in accordance with § 210.4(g), and shall contain adequate references to the record and the authorities on which the submitter is relying.

(b) If pertinent and significant authorities come to a party's attention after the party's brief has been filed but before the final initial determination has issued, the party may promptly advise the administrative law judge by filing a written notice of supplemental authority, no more than two (2) double-spaced pages in length. The notice must be served on all other parties and must describe the relevance of the supplemental authority, with reference to specific pages in either the party's briefs or the transcript of the evidentiary hearing. Any other party may file a response of no more than two (2) double-spaced pages within five (5) business days after the date of service of the notice of supplemental authority.

Subpart G—Determinations and Actions Taken

■ 53. Amend § 210.42 by:

■ a. Revising paragraph (c)(1) and (h)(3);

■ b. Removing paragraph (h)(5);

■ c. Redesignating paragraph (h)(6) as paragraph (h)(5);

■ d. Revising newly redesignated paragraph (h)(5); and

■ e. Adding new paragraph (h)(6).

The revisions and addition read as follows:

§ 210.42 Initial determinations.

* * * * *

(c) * * *

(1) The administrative law judge shall grant the following types of motions by issuing an initial determination or shall deny them by issuing an order: a motion to amend the complaint or notice of investigation pursuant to § 210.14(b); a motion for a finding of default pursuant to §§ 210.16 and 210.17; a motion for summary determination pursuant to § 210.18; a motion for intervention pursuant to § 210.19; a motion for termination pursuant to § 210.21; a motion to suspend an investigation pursuant to § 210.23; or a motion to set a target date for an original investigation exceeding 16 months pursuant to § 210.51(a)(1); or a motion to set a target date for an enforcement proceeding exceeding twelve (12) months pursuant to § 210.51(a)(2).

* * * * *

(h) * * *

(3) An initial determination filed pursuant to paragraph (c)(1) of this section shall become the determination of the Commission thirty (30) days after the date of service of the initial determination, except as provided for in paragraph (h)(5) of this section, unless the Commission, within thirty (30) days after the date of such service shall have ordered review of the initial determination or certain issues therein or by order has changed the effective date of the initial determination.

* * * * *

(5) The disposition of an initial determination filed pursuant to paragraph (c)(1) of this section which grants a motion for summary

determination pursuant to § 210.18 that would terminate the investigation in its entirety if it were to become the Commission's final determination, shall become the final determination of the Commission forty-five (45) days after the date of service of the initial determination, unless the Commission has ordered review of the initial determination or certain issues therein, or by order has changed the effective date of the initial determination.

(6) The disposition of an initial determination filed pursuant to paragraph (c)(2) of this section, concerning possible forfeiture or return of a respondent's bonds as governed by § 210.50(d) or possible forfeiture or return of a complainant's temporary relief bond as governed § 210.70(c), shall become the final determination of the Commission forty-five (45) days after the date of service of the initial determination, unless the Commission has ordered review of the initial determination or certain issues therein, or by order has changed the effective date of the initial determination.

* * * * *

■ 54. Amend § 210.43 by revising paragraph (a)(1) to read as follows:

§ 210.43 Petitions for review of initial determinations on matters other than temporary relief.

(a) * * *

(1) Except as provided in paragraph (a)(2) of this section, any party to an investigation may request Commission review of an initial determination issued under § 210.42(a) or (c), § 210.50(d)(3), § 210.70(c), or § 210.75(a)(3) by filing a petition with the Secretary. A petition for review of an initial determination issued under § 210.42(a)(1) and a petition for review of any sanctions order issued under § 210.25(d) must be filed within twelve (12) days after service of the initial determination or order. A petition for review of an initial determination issued under § 210.42(a)(3) must be filed within five (5) business days after service of the initial determination. A petition for review of an initial determination issued under § 210.42(c) that terminates the investigation in its entirety on summary determination, or an initial determination issued under § 210.42(a)(2), § 210.50(d)(3), § 210.70(c), or § 210.75(a)(3), must be filed within ten (10) days after service of the initial determination. Petitions for review of all other initial determinations under § 210.42(c) must be filed within five (5) business days after service of the initial determination. A petition for review of an initial determination issued under § 210.50(d)(3) or § 210.70(c) must be filed within ten (10) days after service of the initial determination.

* * * * *

■ 55. Amend § 210.45 by revising paragraph (c) to read as follows:

§ 210.45 Review of initial determinations on matters other than temporary relief.

* * * * *

(c) *Determination on review.* On review, the Commission may affirm, reverse, modify, vacate, or remand for further proceedings, in whole or in part, the initial determination of the administrative law judge. In addition, the Commission may take no position on specific issues or portions of the initial determination of the administrative law judge. The Commission also may make any findings or conclusions that in its judgment are proper based on the record in the proceeding. If the Commission's determination on review terminates the investigation in its entirety, a notice will be published in the **Federal Register**.

■ 56. Revise § 210.48 to read as follows:

§ 210.48 Disposition of petitions for reconsideration.

The Commission may affirm, reverse, modify, or vacate its determination, in whole or part, including any action ordered by it to be taken thereunder. When appropriate, the Commission may remand to the administrative law judge via an order, specifying any necessary additional findings, determinations, or recommendations.

■ 57. Amend § 210.49 by revising paragraph (d) to read as follows:

§ 210.49 Implementation of Commission action.

* * * * *

(d) *Finality of affirmative Commission action.* If the President does not disapprove the Commission's action within a 60-day period beginning the day after a copy of the Commission's action is delivered to the President, or if the President notifies the Commission before the close of the 60-day period that the President approves the Commission's action, such action shall become final the day after the close of the 60-day period or the day the President notifies the Commission of the President's approval, as the case may be.

* * * * *

■ 58. Amend § 210.51 by revising paragraph (a) introductory text and (a)(2) to read as follows:

§ 210.51 Period for concluding investigation.

(a) *Permanent relief.* Within forty-five (45) days after institution of an original investigation as to whether there is a violation of section 337 or an investigation that is an enforcement proceeding, the administrative law judge shall issue an order setting a target date for completion of the investigation. After the target date has been set, it can be modified by the administrative law judge for good cause shown before the investigation is certified to the Commission or by the Commission after the investigation is certified to the Commission.

* * * * *

(2) *Enforcement proceedings.* If the target date does not exceed twelve (12) months from the date of institution of the enforcement proceeding, the order of the administrative law judge shall be final and not subject to interlocutory review. If the target date exceeds twelve (12) months, the order of the administrative law judge shall constitute an initial determination. Any extension of the target date beyond twelve (12) months shall be by initial determination.

* * * * *

Subpart H—Temporary Relief

■ 59. Revise § 210.63 to read as follows:

§ 210.63 Briefs.

The administrative law judge shall determine whether and, if so, to what extent the parties shall be permitted to file briefs under § 210.40 concerning the issues involved in adjudication of the motion for temporary relief.

■ 60. Revise § 210.65 to read as follows:

§ 210.65 Certification of the record.

When the administrative law judge issues an initial determination concerning temporary relief pursuant to § 210.66(a), the administrative law judge shall also certify to the Commission the record upon which the initial determination is based.

■ 61. Amend § 210.66 by revising paragraphs (c) and (f) to read as follows:

§ 210.66 Initial determination concerning temporary relief; Commission action thereon.

* * * * *

(c) The Commission will not modify, reverse, or vacate an initial determination concerning temporary relief unless the Commission finds that a finding of material fact is clearly erroneous, that the initial determination contains an error of law, or that there is a policy matter warranting discussion by the Commission. All parties may file written comments concerning any clear error of material fact, error of law, or policy matter warranting such action by the Commission. Such comments must

be limited to thirty-five (35) pages in an ordinary investigation and forty-five (45) pages in a ''more complicated'' investigation. The comments must be filed no later than seven (7) calendar days after issuance of the initial determination in an ordinary case and ten (10) calendar days after issuance of the initial determination in a ''more complicated'' investigation. In computing the aforesaid 7-day and 10-day deadlines, intermediary Saturdays, Sundays, and Federal holidays shall be included. If the initial determination is issued on a Friday, however, the filing deadline for comments shall be measured from the first business day after issuance. If the last day of the filing period is a Saturday, Sunday, or Federal holiday as defined in § 201.14(a) of this chapter, the filing deadline shall be extended to the next business day. The parties shall serve their comments on other parties by messenger, overnight delivery, or equivalent means.

* * * * *

(f) If the Commission determines to modify, reverse, or vacate the initial determination, the Commission will issue a notice and, if appropriate, a Commission opinion. If the Commission does not modify, reverse, or vacate the administrative law judge's initial determination within the time provided under paragraph (b) of this section, the initial determination will automatically become the determination of the Commission. Notice of the Commission's determination concerning the initial determination will be issued on the statutory deadline for determining whether to grant temporary relief, or as soon as possible thereafter, and will be served on the parties. Notice of the determination will be published in the **Federal Register** if the Commission's disposition of the initial determination has resulted in a determination that there is reason to believe that section 337 has been violated and a temporary remedial order is to be issued. If the Commission determines (either by reversing or modifying the administrative law judge's initial determination, or by adopting the initial determination) that the complainant must post a bond as a prerequisite to the issuance of temporary relief, the Commission may issue a supplemental notice setting forth conditions for the bond if any (in addition to those outlined in the initial determination) and the deadline for filing the bond with the Commission.

■ 62. Amend § 210.67 by revising paragraph (a) to read as follows:

§ 210.67 Remedy, the public interest, and bonding.

* * * * *

(a) While the motion for temporary relief is before the administrative law judge, the administrative law judge may compel discovery on matters relating to remedy, the public interest and bonding (as provided in § 210.61). The administrative law judge also is authorized to make findings pertaining to the public interest, as provided in § 210.66(a). Such findings may be superseded, however, by Commission findings on that issue as provided in paragraph (c) of this section.

* * * * *

Subpart I—Enforcement Procedures and Advisory Opinions

■ 63. Amend § 210.75 by revising paragraphs (a)(1) introductory text and (a)(1)(i)(B) and (C) and adding paragraphs (a)(1)(i)(D) and (a)(1)(v) to read as follows:

§ 210.75 Proceedings to enforce exclusion orders, cease and desist orders, consent orders, and other Commission orders.

(a) * * *

(1) The Commission may institute an enforcement proceeding upon the filing of an enforcement complaint pursuant to §§ 210.4 and 210.8(a) by the complainant in the original investigation or the complainant's successor in interest, by the Office of Unfair Import Investigations, or by the Commission. Notwithstanding § 210.8(a)(1)(ii), no paper copies of enforcement complaints or exhibits thereto are required for the government of the foreign country in which each alleged violator is located. If a proceeding is instituted, the Commission shall publish in the **Federal Register** a notice of institution and shall serve copies of the nonconfidential version the enforcement complaint, the nonconfidential exhibits, and the notice of investigation upon each alleged violator. Within fifteen (15) days after the date of service of such a complaint, the named respondent shall file a response to it.

(i) * * *

(B) The filing party requests that the Commission postpone the determination on whether to institute an investigation;

(C) The filing party withdraws the complaint; or

(D) The complaint or any exhibits or attachments thereto contain excessive designations of confidentiality that are not warranted under § 201.6(a) of this chapter and § 210.5.

* * * * *

(v) If the Commission determines that the complaint or any exhibits or attachments thereto contain excessive designations of confidentiality that are not warranted under § 201.6(a) of this chapter and § 210.5, the Commission may require the complainant to file new nonconfidential versions of the aforesaid submissions in accordance with § 210.4(f)(7)(i) and may determine that the thirty (30) day period for deciding whether to institute an investigation shall begin to run anew from the date the new nonconfidential versions are filed with the Commission in accordance with § 210.4(f)(7)(i).

* * * * *

■ 64. Amend § 210.76 by revising the heading of paragraph (a) and paragraphs (a)(1) and (3) to read as follows:

§ 210.76 Modification or rescission of exclusion orders, cease and desist orders, consent orders, and seizure and forfeiture orders.

(a) *Petitions for modification or rescission of exclusion orders, cease and desist orders, consent orders, and seizure and forfeiture orders.* (1) Whenever any person believes that changed conditions of fact or law, or the public interest, require that an exclusion order, cease and desist order, consent order, or seizure and forfeiture order be modified or rescinded, in whole or in part, such person may file a petition, pursuant to section 337(k)(1) of the Tariff Act of 1930, requesting that the Commission make a determination that the conditions which led to the issuance of an exclusion order, cease and desist order, consent order, or seizure and forfeiture order no longer exist. The Commission may also on its own initiative consider such action. The petition shall state the changes desired and the changed circumstances or public interest warranting such action, shall include materials and argument in support thereof, and shall be served on all parties to the investigation in which the exclusion order, cease and desist order, consent order, or seizure and forfeiture order was issued. Any person may file a response to the petition within ten (10) days of service of the petition. If the Commission makes such a determination, it shall notify the Secretary of the Treasury and U.S. Customs and Border Protection.

* * * * *

(3) If the petition requests modification or rescission of an order issued pursuant to section 337(d), (e), (f), (g), or (i) of the Tariff Act of 1930 on the basis of a licensing or other settlement agreement, the petition shall contain copies of the licensing or other settlement agreements, any

supplemental agreements, any documents referenced in the petition or attached agreements, and a statement that there are no other agreements, written or oral, express or implied between the parties concerning the subject matter of the investigation. If the licensing or other settlement agreement contains confidential business information within the meaning of § 201.6(a) of this chapter, a copy of the agreement with such information deleted shall accompany the petition. On motion for good cause shown, the administrative law judge or the Commission may limit the service of the agreements to the settling parties and the Commission investigative attorney.

* * * * *

■ 65. Revise appendix A to part 210 to read as follows:

Appendix A to Part 210—Adjudication and Enforcement

Initial determination concerning:	Petitions for review due:	Response to petitions due:	Commission deadline for determining whether to review the initial determination:
1. Violation § 210.42(a)(1)	12 days from service of the initial determination.	8 days from service of any petition.	60 days from service of the initial determination (on private parties).
2. Summary initial determination that would terminate the investigation if it became the Commission's final determination § 210.42(c)(1).	10 days from service of the initial determination.	5 business days from service of any petition.	45 days from service of the initial determination (on private parties).
3. Other matters § 210.42(c)(1)	5 business days from service of the initial determination.	5 business days from service of any petition.	30 days from service of the initial determination (on private parties).
4. Declassify information § 210.42(a)(2).	10 days from service of the initial determination.	5 business days from service of any petition.	45 days from service of the initial determination (on private parties).
5. Potentially dispositive issues § 210.42(a)(3).	5 business days from service of the initial determination.	5 business days from service of any petition.	30 days from service of the initial determination (on private parties).
6. Forfeiture or return of respondents' bond § 210.50(d)(3).	10 days from service of the initial determination.	5 business days from service of any petition.	45 days from service of the initial determination (on private parties).
7. Forfeiture or return of complainant's temporary relief bond § 210.70(c).	10 days from service of the initial determination.	5 business days from service of any petition.	45 days from service of the initial determination (on private parties).
8. Enforcement proceedings § 210.75(a)(3).	10 days from service of the enforcement initial determination.	5 business days from service of any petition.	45 days from service of the enforcement initial determination (on private parties).

By order of the Commission.

Issued: March 21, 2024.

Lisa Barton,

Secretary to the Commission.

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: **www.govinfo.gov.**

Federal Register information and research tools, including Public Inspection List and electronic text are located at: **www.federalregister.gov.**

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to **https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new**, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to **http://listserv.gsa.gov/archives/publaws-l.html and select** *Join or leave the list (or change settings);* then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: **fedreg.info@nara.gov**

The Federal Register staff cannot interpret specific documents or regulations.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List March 26, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__layouts/PG/register.aspx.*

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
