260. We are not persuaded by Clean Energy Associations' and Shell's calls to set an earlier cut-off date, the issuance date of Order No. 2023, as the date for eligibility for transitional cluster study participation. Clean Energy Associations and Shell argue that an earlier cut-off date would be fair to those generators who have been waiting in interconnection queues for years and submitted their interconnection request under a different queue structure. However, the fact that more recent interconnection requests may be included in the transitional cluster does not in and of itself render the eligibility cut-off date unjust and unreasonable. As the Commission has stated in multiple queue reform proceedings, ''any cut-off date inevitably will [exclude certain interconnection customers].'' [396] Likewise, the inverse of this statement holds true: any cut-off date inevitably will include certain interconnection customers. The Commission's decision to set the eligibility cut-off date as 30 calendar days after the filing date of the transmission provider's initial compliance filing was reasonable.

261. Additionally, Commission precedent does not require a certain cluster size, nor do Clean Energy Associations and Shell provide evidence to suggest that the size of the transitional cluster would be unworkable. Rather, because there are stricter requirements to join the transitional cluster than those adopted for the cluster study process,[397] it is unlikely that non-ready projects would be able to join the transitional cluster. Furthermore, due to existing interconnection queue backlogs, the Commission anticipated that the transition process will involve more interconnection customers than standard annual clusters and established the transition date along with the accompanying requirements to enter the transition with this knowledge in mind. The alternative, moving the eligibility date earlier, would simply shift interconnection customers into the first cluster following the transitional cluster. We lack a basis in the record to conclude, as Clean Energy Associations and Shell appear to argue, that a somewhat larger transitional cluster is not just and reasonable, but a somewhat larger post-transition cluster would be just and reasonable.

262. We are also unpersuaded by Shell's assertion that the current eligibility cut-off date could lead to a queue rush. Such a concern is speculative. We reiterate that the higher deposit requirements for the transitional cluster study process than those adopted for the non-transitional cluster study process helps ensure that the transitional process is used by interconnection customers that intend to proceed with their proposed generating facilities.

263. Lastly, we add definitions to the *pro forma* LGIP for the terms ''Transitional Cluster Study Agreement'' and ''Transitional Serial Interconnection Facilities Study Agreement.''

D. Reforms To Increase the Speed of Interconnection Queue Processing

1. Elimination of Reasonable Efforts Standard and Implementation of a Replacement Rate

a. Order No. 2023 Requirements

264. In Order No. 2023, the Commission revised sections 2.2, 3.5.4(i), 7.4, 8.3, and Attachment A to Appendix 3 (formerly Appendix 4) of the *pro forma* LGIP to eliminate the reasonable efforts standard for conducting cluster studies, cluster restudies, facilities studies, and affected system studies by the tariff-specified deadlines.[398] The Commission added new section 3.9 to the *pro forma* LGIP

[391] Shell Rehearing Request at 7.

[398] Order No. 2023, 184 FERC ¶ 61,054 at P 962.

to implement a study delay penalty structure. Specifically, delays of cluster studies beyond the tariff-specified deadline will incur a penalty of $1,000 per business day; delays of cluster restudies beyond the tariff-specified deadline will incur a penalty of $2,000 per business day; delays of affected system studies beyond the tariff-specified deadline will incur a penalty of $2,000 per business day; and delays of facilities studies beyond the tariff-specified deadline will incur a penalty of $2,500 per business day. The Commission explained that, among other things, these penalty amounts are intended to incentivize transmission providers to meet study deadlines and that the structure of increasing penalties reflects the progressively greater harm caused by delayed studies at later interconnection stages.[399]

265. The Commission also specified that the study delay penalty regime contains the following safeguards for transmission providers: (1) no study delay penalties will be assessed until the third cluster study cycle (including any transitional cluster study cycle, but not transitional serial studies) after the Commission-approved effective date of the transmission provider's filing in compliance with Order No. 2023; (2) there will be a 10-business day grace period, such that no study delay penalties will be assessed for a study that is delayed by 10 business days or fewer; (3) deadlines may be extended for a particular study by 30 business days by mutual agreement of the transmission provider and all interconnection customers with interconnection requests in the relevant study; (4) study delay penalties will be capped at 100% of the initial study deposits received for all of the interconnection requests in the relevant study; and (5) transmission providers will have the ability to appeal any study delay penalties to the Commission, with the Commission determining whether good cause exists to grant the relief requested on appeal.[400]

266. The Commission further included the following features in the study delay penalty structure: (1) transmission providers must distribute study delay penalties to interconnection customers in the relevant study that did not withdraw, or were not deemed withdrawn, from the interconnection queue before the missed study deadline on a pro rata per interconnection request basis to offset their study costs; (2) non-RTO/ISO transmission providers and transmission-owning members of RTOs/ISOs may not recover study delay penalties through transmission rates; (3) RTOs/ISOs may submit an FPA section 205 filing to propose a default structure for recovering study delay penalties and/or to recover the costs of any specific study delay penalties;[401] and (4) transmission providers must post quarterly on their OASIS or other publicly accessible website (a) the total amount of study delay penalties from the previous reporting quarter and (b) the highest study delay penalty paid to a single interconnection customer in the previous reporting quarter.[402] The Commission also added new section (f)(1)(ii) to 18 CFR 35.28(f)(1) to specify that any public utility that conducts interconnection studies shall be subject to and eligible to appeal penalties following that public utility's failure to complete an interconnection study by the appropriate deadline.[403]

267. The Commission explained that the lengthy interconnection study delays and interconnection queue backlogs throughout the country support a conclusion that the reasonable efforts standard does not provide an adequate incentive for transmission providers to complete interconnection studies on time.[404] The Commission stated that there is every reason to believe that many of the factors contributing to significant interconnection queue backlogs and delay—including the rapidly changing resource mix, market forces, and emerging technologies—will persist. The Commission explained that the reasonable efforts standard worsens current-day challenges, as it fails to ensure that transmission providers are keeping pace with the changing and complex dynamics of today's interconnection queues.[405] Therefore, in response to those ongoing challenges and based on the record, the Commission found that the elimination of the reasonable efforts standard and its replacement with firm deadlines and penalties are needed to remedy unjust and unreasonable rates and ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.[406]

268. The Commission noted that its conclusions were not based on a finding that transmission providers have necessarily acted in bad faith or that their actions are the sole reason for the queue delays.[407] The Commission explained that it adopted numerous other reforms to appropriately incentivize interconnection customers to help reduce interconnection delays that may result from their conduct. However, the Commission found that the elimination of the reasonable efforts standard and the adoption of firm deadlines and penalties for late studies are needed to create an incentive for transmission providers, which will help reduce interconnection delays and ensure that Commission-jurisdictional rates are just, reasonable, and not unduly discriminatory or preferential. The Commission further found that distribution of these penalties to interconnection customers in the relevant studies was appropriate as a means of offsetting these customers' study costs. The Commission further explained that the study delay penalty regime balances the harm to interconnection customers of interconnection study delays and the associated need to incentivize transmission providers to timely complete interconnection studies with the burdens on transmission providers of conducting interconnection studies and potentially facing penalties for delays, including those that may be caused or exacerbated by factors beyond their control.[408]

269. As noted above, the Commission adopted a process for transmission providers to appeal any study delay penalties they incur.[409] The Commission explained that any such appeal must be filed no later than 45 calendar days after the late study has been completed. The Commission stated that it will evaluate whether good cause exists to grant relief from the study delay penalty and will issue an order granting or denying relief. The Commission noted that in evaluating whether there is good cause to grant such relief, the Commission may consider, among other factors: (1) extenuating circumstances outside the transmission provider's control, such as delays in affected system study results; (2) efforts of the transmission provider to mitigate delays; and (3) the extent to which the transmission provider has proposed process enhancements either in the stakeholder process or at the Commission to prevent future delays. The Commission further provided that the filing of an appeal will stay the

transmission providers' obligation to distribute the study delay penalty funds to interconnection customers until 45 calendar days after (1) the deadline for filing a rehearing request has ended, if no requests for rehearing of the Commission's decision on the appeal have been filed, or (2) the date that any requests for rehearing of the Commission's decision on the appeal are no longer pending before the Commission. The Commission explained that the appeals process balances the need to ensure that transmission providers have an incentive to meet interconnection study deadlines with protections to ensure that any such penalties are fair and not triggered if good cause justifies the delay.[410] The Commission further explained that the protections embedded in this appeal process address commenters' concerns that there should be adequate process and/or fact-finding before imposing a study delay penalty on transmission providers.

270. Additionally, the Commission specified that transmission providers must distribute study delay penalties to the interconnection customers and affected system interconnection customers included in the relevant study that did not withdraw, or were not deemed withdrawn, from the interconnection queue before the missed study deadline.[411] The Commission explained that, unless the transmission provider files an appeal to the study penalty, the study delay penalty must be distributed no later than 45 calendar days after the late study has been completed. The Commission further specified that a study delay penalty for a delayed cluster study or cluster restudy must be distributed on a pro rata basis per interconnection request to all interconnection customers in the cluster, while a study delay penalty for a delayed facilities study must be distributed to the interconnection customer whose facilities were being studied, and a study delay penalty for a delayed affected system study must be distributed to the affected system interconnection customer(s) whose generating facility was being studied by an affected system transmission provider. The Commission provided that the study delay penalties are on a per business day basis and will be distributed equally to each delayed interconnection customer per the requirements above. The Commission explained that this distribution defrays the study costs of the interconnection customers affected by that delay.[412]

271. The Commission also declined to adopt the NOPR's proposed *force majeure* penalty exception.[413] The Commission explained that this exemption is unwarranted given the adoption of an appeal mechanism, which provides transmission providers the opportunity to explain to the Commission any circumstances that caused the delay, including any events that qualify as *force majeure.*[414]

b. Elimination of the Reasonable Efforts Standard

i. Requests for Rehearing

272. Many rehearing requests argue that the decision to eliminate the reasonable efforts standard is not supported by substantial record evidence.[415] They argue that the Commission failed to meet its FPA section 206 burden because the Commission failed to show that (1) this standard is causing or materially contributing to delays or (2) the elimination of this standard will increase the timely provision of interconnection service, especially given the other factors that may cause study delays.[416] NYTOs argue that Order No. 2023's observation that, under the reasonable efforts standard, interconnection studies have been delayed ''conflates correlation with causation.'' [417] Others argue that the Commission failed to address the root cause of study delays—namely, the volume of interconnection requests, which they claim Order No. 2023 will increase.[418] Avangrid disputes Order No. 2023's conclusion that the other reforms adopted therein are expected to ease the burdens on transmission providers by streamlining and reducing the number of interconnection studies.[419]

273. Several of the rehearing requests assert that the Commission has not demonstrated that interconnection study delays and backlogs are connected to transmission provider actions, such as wrongdoing, incompetence, lack of appropriate incentives, bad faith, or failure to exercise due diligence.[420] SPP and ITC claim that there are already many strong incentives to timely perform interconnection studies and the record does not contain the necessary support to conclude that a lack of incentives, as opposed to various other factors outside of transmission providers' control, are the cause for interconnection queue backlogs or study delays.[421] Many rehearing requests detail numerous factors contributing to delays and backlogs that they assert are outside of the transmission provider's control (*e.g.,* the volume of interconnection requests, complexity of studies, staffing shortages, the shortage of qualified engineers, withdrawals triggering the need for restudies, delayed data from interconnection customers, affected system coordination, a rapidly changing resource mix, market forces, and emerging technologies) and argue that these conditions will persist, such that study delay penalties on transmission providers cannot be effective and are unsupported.[422]

[422] Avangrid Rehearing Request at 4–5, 12–13; Dominion Rehearing Request at 19–22; MISO TOs Rehearing Request at 14; PacifiCorp Rehearing

Continued

274. AEP, EEI, and MISO TOs contend that the Commission's elimination of the reasonable efforts standard and its replacement with the deadline and penalty framework is based on notions of fairness or equity between transmission providers and interconnection customers, but they contend that this is an inadequate basis for reform.[423] EEI asserts that penalties assessed against transmission providers therefore cannot be effective in reducing such delays and backlogs.[424]

275. Certain rehearing requests also cite the purported benefits of the reasonable efforts standard, including the consistency of that standard with good utility practice and the flexibility afforded by that standard, urging that the reasonable efforts standard remains just and reasonable.[425] As a result, ITC argues that the ''reasonable efforts'' standard ensures that transmission providers treat other parties comparably to how they will protect their own interests.[426] NYTOs assert that the reasonable efforts standard is just and reasonable because each generator project and interconnection request is unique, such that flexibility is warranted in the face of the challenges posed by the study process, the uniqueness of each study request, mounting volumes of such requests, and because delays in that process may not be the fault of transmission providers.[427] EEI argues that retaining the reasonable efforts standard is particularly appropriate given the other requirements of Order No. 2023, contending that flexibility will be necessary given the complexity of the cluster study process, the new technologies that must be evaluated, and new NERC standards.[428] Indicated PJM TOs assert that the reasonable efforts standard provides the optimal balance of incentives to complete studies in a timely manner and the reasonable flexibility for planners to take the time needed to ensure grid reliability will be maintained in a cost-effective manner.[429]

276. Many of the rehearing requests assert that the Commission failed to demonstrate that there are steps that transmission providers can take that will, in fact, improve the timeliness of study processes and challenge the Commission's determination that transmission providers can feasibly take steps to better ensure timely interconnection request processing, such as deploying resources, exploring administrative efficiencies, and using innovative study approaches.[430] They contend that this determination is vague, poorly supported, and based on ''notions that transmission providers are not sufficiently imaginative'' or that they will be easily able to find and hire qualified staff and deploy automation and computing solutions in short order.[431] EEI asserts that replacing the reasonable efforts standard with deadlines and penalties cannot alter the number of requests submitted or the number of qualified individuals that can perform these studies.[432] SPP observes that qualified engineers may not want to work for transmission providers if they risk being identified as a cause of study delays that result in penalties or face potential liability.[433]

277. A number of the rehearing requests also contend that the Commission should have allowed the other reforms in Order No. 2023 to take effect before eliminating the reasonable efforts standard and adopting a structure of study deadlines and penalties.[434] AEP argues that the Commission should require transmission providers to augment the reports required under section 3.5 of the *pro forma* LGIP and Order No. 845 to require information regarding the effects of cluster study reforms, giving the Commission real world data regarding the causes of interconnection study delays.[435]

278. Some rehearing requests also argue that the Commission relied on stale and inapposite evidence to support the elimination of the reasonable efforts standard and replacement with the deadline and penalty structure.[436] Indicated PJM TOs assert that the vast majority of study delays reflected in the Order No. 845 data for the end of 2022 came from PJM, which had recently transitioned to a first-ready, first-served cluster cycle approach effective in January 2023.[437] Indicated PJM TOs also assert that the Commission relied on a stale record from Order No. 890 as support for imposing penalties on RTOs/ISOs that fail to meet deadlines.[438] PacifiCorp similarly contends that the evidence the Commission relied on relates to delays in the serial study process, rather than the new cluster-based process, and ''implementation of penalties, therefore, is attempting to fix a problem that has not been shown to exist.'' [439] NYISO

Request at 11–13; SPP Rehearing Request at 6–7. Dominion also asserts that Order No. 2023 will increase demand for qualified engineers, such that hiring additional staff may not be feasible. Dominion Rehearing Request at 20–21.

[437] Indicated PJM TOs Rehearing Request at 17–18 (arguing that, while the Commission points to deficiencies with serial study approaches, they do not apply to regions that have already implemented cluster studies and that those regions should be allowed to fully implement those new approaches).

[438] *Id.* at 18–19 (arguing that the ''world has changed'' in certain respects since Order No. 890 was issued, that the Order No. 890 deadlines were consistent with what was historically achievable, and the penalties in Order No. 890 were less draconian than those imposed by Order No. 2023).

[439] PacifiCorp Rehearing Request at 7–8 (referencing *Nat'l Fuel Gas Supply Corp.* v. *FERC,* 468 F.3d 831, 842 (D.C. Cir. 2006) (*National Fuel*), in which the D.C. Circuit vacated the prior version of the Commission's Standards of Conduct on the

argues that the data the Commission relied on concerns missed study deadlines in ''RTO/ISO regions that have been contending with unprecedented numbers of new interconnection requests and/or have recently made substantial improvements to their interconnection procedures that are not reflected in earlier metrics.'' [440]

279. Indicated PJM TOs and NYISO also argue that the Commission failed to justify eliminating the reasonable efforts standard and imposition of deadlines and penalties through a generic rulemaking.[441] Indicated PJM TOs contend that the Commission lacked substantial evidence to make a generic finding that all existing interconnection study regimes—some of which already use the cluster study approach—are unjust and unreasonable to the extent those regimes rely on the reasonable efforts standard rather than imposing deadlines and penalties.[442] Indicated PJM TOs further assert the Commission cannot use general or generic findings to enact an industry-wide solution for a problem that exists only in isolated pockets and that study delays are not sufficiently widespread to justify the Commission's generic approach.[443] NYISO argues that it is not reasoned decision-making to assume that all transmission providers need stronger incentives to timely complete studies and asserts that state regulators in New York support retaining some form of the reasonable efforts standard.[444]

ii. Determination

280. The gravity of the problem of increased interconnection queue backlogs and delays, leading to unjust and unreasonable rates, prompted the Commission in Order No. 2023 to adopt a comprehensive set of reforms to the interconnection process, including reforms to the reasonable efforts standard for the completion of interconnection studies.[445] As to that standard, the Commission explained that ''interconnection queue backlogs and delays, and the accompanying uncertainty, are further compounded because transmission providers have limited incentive to perform interconnection studies in a timely manner.'' [446] Under this standard, ''[t]here are no explicit consequences in the *pro forma* LGIP for transmission providers that fail to meet their study deadlines,'' [447] allowing ''significant discretion to the transmission providers in extending their own deadlines.'' [448] As the Commission found, ''[t]his outcome stands in stark contrast to interconnection customers that face financial and commercial consequences due to late interconnection study results and may be considered withdrawn from the interconnection queue for failing to meet their tariff-imposed deadlines.'' [449]

281. The history of the Commission's action with respect to interconnection queue backlogs, and particularly interconnection study delays as a contributor to such backlogs, reflects that the Commission has taken a gradual approach to addressing these problems. In Order No. 2003, the Commission first imposed the reasonable efforts standard for the timely completion of interconnection studies, without adopting firm deadlines or a structure of automatic penalties for delays.[450] As the Commission observed in Order No. 2023, the reasonable efforts standard allowed transmission providers significant discretion to extend their own deadlines for the completion of interconnection studies.[451] In 2018, in Order No. 845, the Commission rejected requests to eliminate the reasonable efforts standard in favor of firm interconnection study deadlines,[452] explaining that reliance on increased reporting was a preferable approach because the ''current record'' did not support elimination of the reasonable efforts standard, such that doing so would be inappropriate ''[a]t this time.'' [453] The Commission likewise decided not to implement automatic penalties for delayed studies, recognizing the extent to which delays could be caused by factors outside of transmission providers' control, instead adopting measures to ''improve transparency by highlighting where interconnection study delays are most common and the causes of delays in these regions.'' [454] It further stated that ''[t]his information could also be useful to the Commission in determining if additional action is required to address interconnection study delays.'' [455]

282. Order No. 2023 reflects a determination that such additional action is required. The reforms in Order No. 845 have not eliminated the problems of interconnection queue backlogs and delayed interconnection studies. These problems have only grown, notwithstanding the Commission's previous reforms.[456]

283. Broadly speaking, the Commission's conclusion that there is a need to reform the Commission's *pro forma* interconnection procedures and agreements received overwhelming support.[457] However, as summarized above, many of the rehearing requests challenge the elimination of the reasonable efforts standard set forth in sections 2.2, 3.5.4(i), 7.4, 8.3, and Attachment A to Appendix 4 of the *pro forma* LGIP,[458] leading to the adoption of firm study deadlines, claiming that the Commission failed to meet its burden to justify this specific reform under FPA section 206.[459] Many of these rehearing requests argue that the Commission recognized that there are many factors outside the control of transmission providers that can contribute to backlogs and delays in the

basis that, inter alia, the purported record evidence FERC relied upon were rulemaking comments that did not identify any actual examples of wrongdoing).

[458] *Id.* P 965; *see also id.* P 964 (''We adopt these reforms to remedy the unjust and unreasonable rates stemming from interconnection queue backlogs and to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.'').

[459] *See supra* section II.D.1.b.i.

interconnection study process.[460] In pointing to these other factors, the rehearing requests contend that holding transmission providers to standards of performance in terms of ensuring the timely completion of interconnection studies cannot be effective to ensure the timely completion of those studies. We disagree with this argument and continue to find that the elimination of the reasonable efforts standard, and its replacement with firm study deadlines, is warranted under FPA section 206 in order to address the unjust and unreasonable rates resulting from interconnection queue delays and backlogs.

284. We are not persuaded by attempts to minimize the responsibility transmission providers have for—and the ways in which they can effectuate—the timely completion of interconnection studies. Attempts to do so fail to recognize the key role transmission providers play in timely interconnection study completion: the transmission provider conducting the study is the entity with the most control over whether the study deadline is met.[461] As the entity that conducts the study, transmission providers have control over (among other things): the resources allocated to the study process; the actual conduct of the study, *e.g.,* the use of advanced computing or other methods to improve efficiency; coordination with interconnection customers and consultants; and providing the conclusions of the study.[462] They are the entities with the most complete knowledge of the transmission system to which the generator will be interconnecting.[463] Moreover, transmission providers have significant authority to help ensure that other entities do not unduly delay the results of the interconnection study, including by deeming withdrawn the requests of interconnection customers that fail to adhere to the requirements of the *pro forma* LGIP.[464]

285. That there are other factors that may also affect the timely completion of interconnection studies—and that these factors may not be within transmission providers' control, in whole or in part—does not negate the substantial control that transmission providers have over this process. To the contrary, the existence of multiple factors influencing interconnection study timeliness favors addressing the problem of interconnection queue backlogs from multiple angles, as with the comprehensive approach adopted in Order No. 2023. Even where multiple factors may cause or contribute to delays of interconnection studies, transmission providers are responsible for conducting the studies and their actions or inaction in doing so can cause or contribute to such delays.

286. Overall, the record reflects a problem of delayed study results contributing to interconnection queue backlogs,[465] numerous comments asserting that the reasonable efforts standard fails to ensure that transmission providers take adequate steps to ensure study timeliness,[466] and evidence of significant, growing backlogs leading to unjust and unreasonable rates. Based on our statutory obligation to remedy these unjust and unreasonable rates, and also in light of the significant level of control transmission providers exercise over the timeliness of the study process, we continue to find that the elimination of the reasonable efforts standard, and its replacement with firm study deadlines, is warranted as part of a package of comprehensive reforms to address interconnection queue delays and backlogs.

287. Consistent with this approach, we are not persuaded by arguments that the Commission conflated correlation and causation in concluding that unjust and unreasonable rates resulting from interconnection queue delays and backlogs, and delayed interconnection study completion, supported elimination of the reasonable efforts standard. In this vein, several of the rehearing requests assert that other factors, principally the volume and complexity of interconnection requests, are the real causes of such backlogs and delays, and that eliminating the reasonable efforts standard will not reduce the volume of such requests. We note, however, that Order No. 2023 did not claim that the reasonable efforts standard was the only driving force behind missed study deadlines. Order No. 2023 recognized that study delays are caused by a number of factors,[467] and adopted a comprehensive package of reforms aimed at alleviating many of those factors from various angles.[468] The reasonable efforts standard is but one of these factors.

288. The Commission in Order No. 2023 took significant other steps to address the volume of interconnection requests including to reduce the number of speculative requests and to improve the efficiency of interconnection studies and interconnection queue processing.[469] But to the extent that factors contributing to study delays,

[460] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 966.

[461] *See id.* P 995.

[462] *See, e.g., id.* PP 967, 975, 1007 (noting transmission providers' ability deploy resources, hire additional personnel, invest in new software, and employ innovative study approaches).

[463] *See, e.g., id.* P 201 (noting ''the transmission provider's detailed knowledge of its transmission system''); Order No. 1000, 136 FERC ¶ 61,051 at P 260 (''[W]e acknowledge that incumbent transmission providers may have unique knowledge of their own transmission systems . . . .'').

[464] *See pro forma* LGIP section 3.7 (''Transmission Provider shall deem the Interconnection Request to be withdrawn and shall provide written notice to Interconnection Customer of the deemed withdrawal and an explanation of the reasons for such deemed withdrawal . . . . Withdrawal shall result in the loss of Interconnection Customer's Queue Position. If an Interconnection Customer disputes the withdrawal and loss of its Queue Position, then during Dispute Resolution, Interconnection Customer's Interconnection Request is eliminated from the queue until such time that the outcome of Dispute Resolution would restore its Queue Position.'').

[465] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 40; *see also supra* P 39. While the rehearing requests generally point to factors that are beyond transmission providers' control (for instance, awaiting affected system study results or deficient information from interconnection customers), the record does not demonstrate that these are, in fact, the factors exclusively or even primarily causing study delays. *See, e.g.,* Order No. 2023, 184 FERC ¶ 61,054 at P 50.

[466] *See, e.g.,* ACE NY Initial Comments at 11–12 (''The Commission's review of the reported Order No. 845 metrics helps to corroborate the anecdotal experiences of interconnection customers throughout the nation and demonstrates the widespread failure to complete interconnection studies consistent with the timelines identified in the *pro forma* LGIP.''); CAISO Initial Comments at 25 (''The reasonable efforts standard has only served as the exception that swallows the rule of study deadlines.''); EPSA Initial Comments at 10–11 (acknowledging that other factors may contribute to delays but ''there have also been vast failures by Transmission Providers to process interconnection studies and provide necessary information to prospective and existing interconnection customers in a timely manner''); Invenergy Initial Comments at 29–30 (''[I]nterconnection studies are routinely delayed by several years. This is an ongoing problem and may reflect, among other things, an apparently low priority placed on adequate staffing and the lack of any accountability under the existing interconnection procedures.''); Public Interest Organizations Initial Comments at 33 (''[T]he slow pace at which interconnection requests are evaluated has contributed to a ballooning of interconnection queues across the country. . . . [B]inding deadlines are the most effective option for ensuring that prospective generation receives timely responses to interconnection requests.'').

[467] Order No. 2023, 184 FERC ¶ 61,054 at PP 40–45.

[468] *See id.* PP 45–56. For example, Order No. 2023 acknowledged that affected system study delays are a key contributor to overall delays in the interconnection queue, and adopted several specific reforms aimed at standardizing and streamlining affected system study processes. *See id.* P 51. Order No. 2023 also acknowledged that speculative interconnection requests contribute to study delays and queue backlogs, and adopted commercial readiness deposits and site control requirements aimed at alleviating this factor. *See id.* PP 47–48.

[469] *See id.* P 968; *see also id.* P 966 (''Indeed, throughout this final rule, we adopt numerous reforms to appropriately incentivize interconnection customers to help reduce interconnection delays that may result from their conduct.'').

including higher volumes or complexity of interconnection requests, are still expected to persist,[470] this does not warrant failing to pursue other available solutions to reduce such backlogs that are within transmission providers' control, especially in light of the magnitude and growth of the overall interconnection queue backlog.[471]

289. Eliminating the reasonable efforts standard, which allowed for self-extensions of interconnection study deadlines and lacked appropriate incentives for transmission providers to help ensure study timeliness, is one such further solution.[472] In its place, the Commission has specified standards of performance in the form of deadlines, accompanied by a penalty. This penalty is a self-implementing performance incentive (subject to appropriate safeguards) that also effectively adjusts what transmission providers can charge for interconnection studies that fail to meet those standards. This incentive will help ensure that transmission providers exercise the control they have over the interconnection process as to the timely conduct of those studies,[473] and thereby contribute to alleviating the problem of interconnection queue backlogs, including to address increased volumes of interconnection requests.[474] As explained below and in Order No. 2023, these deadlines should be achievable and—where there may be factors outside of a transmission provider's control that influence whether these deadlines can be met—the Commission has adopted appropriate safeguards to account for this possibility.

290. The rehearing requests misunderstand the Commission's approach in claiming that eliminating the reasonable efforts standard and adopting firm study deadlines cannot be warranted absent findings of intentional delay, bad faith, misconduct, or a ''lack of effort'' by transmission providers that fails to meet the reasonable efforts standard. Such findings are not necessary predicates to concluding that the interconnection study process must occur more expeditiously in order to help remedy the problem of unjust and unreasonable rates caused by interconnection queue backlogs. Nor are they predicates to concluding that the reasonable efforts standard was not accomplishing this goal, and that there are steps within transmission providers' control that can facilitate the timely completion of interconnection studies on timeframes set forth in Order No. 2023.[475]

291. Similarly, we are not persuaded by arguments that the structure adopted in Order No. 2023 is disproportionate to the problems identified in that order or that study delays are not sufficiently widespread to justify adoption of penalties for study delays. As discussed above in section II.A., we find that Order No. 2023's generic finding that the existing *pro forma* interconnection procedures and agreements were unjust, unreasonable, unduly discriminatory or preferential was supported by substantial evidence. The D.C. Circuit has been clear that the Commission can rely on general findings of systemic conditions to impose an industry-wide remedy, unless the deficiencies identified exist only in isolated pockets: [476] the record here indicates that interconnection study delays are a nationwide problem, not one that exists only in isolated pockets.[477] Therefore, we continue to conclude that industry-wide reform is appropriate. Furthermore, interconnection study delays and queue backlogs are severe,[478] and we continue to find that the deadline and penalty regime adopted in Order No. 2023 is proportional to the scope of the problem.

292. It appears that, in arguing that study delays are not sufficiently widespread to justify a generically applicable incentive structure, Indicated PJM TOs misread the Order No. 845 data cited in Order No. 2023: Indicated PJM TOs state that the Commission acknowledges that at the end of 2022, 14 (of 24) non-RTO/ISO transmission providers experienced no study delays.[479] However, the Commission actually stated, and the data shows, that at the end of 2022, 14 (of 24) non-RTO/ISO transmission providers *had delayed studies* still pending at the end of the year.[480] Furthermore, of the studies completed over the course of 2022, the data indicates that 16 non-RTO transmission providers completed one or more interconnection study past the deadline.[481] As stated above in section II.A.2., we recognize that PJM's data reflects its previous, serial study process. However, even excluding both PJM and SPP, the data show that three of the four remaining RTOs/ISOs reported delayed studies at the end of 2022.[482] Moreover, although we find the data even excluding PJM and SPP's backlogs is sufficient to show that study delays are not a problem that exists only in isolated pockets, the existing interconnection study backlogs in SPP and PJM reinforce that it is imperative that these entities, too, conduct their cluster study processes in a timely fashion, as will be facilitated by firm

[470] *See id.* P 966 (''There is every reason to believe that many of the factors contributing to significant interconnection queue backlogs and delay—including the rapidly changing resource mix, market forces, and emerging technologies—will persist.'').

[471] *See id.* P 968 (''In this Section, we adopt reforms to ensure that transmission providers are doing their part as well by eliminating the reasonable efforts standard . . . . Based on the record, we find that the elimination of the reasonable efforts standard and its replacement with firm deadlines and penalties are needed to remedy unjust and unreasonable rates . . . .''); *see also id.* P 966 (reform to the reasonable efforts standard was warranted based on ''ongoing challenges'' that ''will persist'').

[472] *See id.* P 967 (noting that this standard ''worsens current-day challenges'' and there are ''steps within transmission providers' control, from deploying transmission providers' resources to exploring administrative efficiencies and innovative study approaches, to better ensure timely processing of interconnection studies to remedy existing deficiencies'').

[473] *See, e.g., Cent. Hudson Gas & Elec. Corp.* v. *FERC,* 783 F.3d 92, 109 (2d Cir. 2015) (*Cent. Hudson*) (''FERC may permissibly rely on economic theory alone to support its conclusions so long as it has applied the relevant economic principles in a reasonable manner and adequately explained its reasoning''); *Sacramento Mun. Util. Dist.* v. *FERC,* 616 F.3d 520, 531 (2010) (*Sacramento*) (''[I]t was perfectly legitimate for the Commission to base its findings about the benefits of marginal loss charges on basic economic theory . . . .''); *Assoc. Gas,* 824 F.2d at 1008–09 (''Agencies do not need to conduct experiments in order to rely on the prediction that an unsupported stone will fall . . . .'').

[474] Indicated PJM TOs single out one piece of evidence that the Commission cited in the NOPR as supporting use of such incentives, the testimony of Chairman LeVar of the Utah Public Service Commission, claiming that the Commission failed to address their comments that this testimony does not support the use of penalties as incentives. *See* Indicated PJM TOs Rehearing Request at 39–40; Indicated PJM TOs Initial Comments at 38. We continue to find that this testimony is one piece of evidence that supports imposing such incentives: although Chairman LeVar testified that fines are not always the best approach, he described the need to impose consequences on transmission providers as ''a pretty intuitive, important step,'' testified that there ''needs to be some clear, predictable consequence for transmission providers not meeting their obligations,'' and identified such consequences as ''the first step in queue reform.'' May Joint Task Force Tr. 89:6–25.

[475] PacifiCorp's comparison of this case to *Nat'l Fuel Gas Supply Co.* v. *FERC,* 468 F.3d 831, 842 (vacating Commission standards of conduct that had been justified in part by a claimed record of abuse, where the court found no such record was apparent), is therefore not apt. *See* PacifiCorp Rehearing Request at 7. The Commission has not relied on claims of wrongdoing, bad faith, or abuse to justify the reforms in Order No. 2023, but rather acted based the substantial record that interconnection queue backlogs, driven in part by untimely interconnection studies, are resulting in unjust and unreasonable rates and transmission providers' have the ability to better ensure study timeliness.

[476] *TAPS,* 225 F.3d at 687–88; *INGAA,* 285 F.3d at 37; *S.C. Pub. Serv. Auth.,* 762 F.3d at 67.

[481] *Id.*

[482] *Id.* at app. B.

study deadlines.[483] The data indicate that study delays are not a problem that only exists in isolated pockets.

293. We disagree with arguments that it was disproportionate or inappropriate for the Commission to make a generic finding eliminating the reasonable efforts standard and adopting firm study deadlines, given that some regions have already adopted cluster study processes and are, therefore, generally in accord with a number of other reforms adopted in Order No. 2023. The data do not indicate that cluster studies alone are sufficient to remedy interconnection queue backlogs. To the contrary, a number of transmission providers that have already adopted cluster studies still experience substantial study delays.[484] While cluster studies are a key component of the Order No. 2023 reforms, clustering alone has not proved sufficient to solve the problems the Commission identified in Order No. 2023. We conclude that the elimination of the reasonable efforts standard, which has not yet been adopted by any transmission providers, is an appropriate and important component of the package of reforms in Order No. 2023 to remedy study delays and queue backlogs.

294. We disagree with arguments that the Commission relied on stale data to support the elimination of the reasonable efforts standard and the adoption of deadlines and study delay penalties. It appears that these rehearing requests are premised on speculation that future data might tell a different story than the data the Commission relied upon in Order No. 2023. Such speculation about potential future data does not render current data stale.[485] Order No. 2023 relied on the most recent data available, from 2020–2022.[486] Even if this dataset is not perfect, imperfection does not amount to arbitrary decision-making.[487] We also note that, for purposes of judicial review, the record consists of the information that was before the Commission *at the time* Order No. 2023 was issued.[488] Particularly given the trends of worsening queue delays and backlogs, which we have found are likely to persist in the absence of Commission action,[489] and the gravity of the problem of such delays in interconnecting new generation, the Commission was not required to wait for pending developments before issuing Order No. 2023, nor are we required to retract Order No. 2023 in order to supplement the Commission's decision with new data.[490]

295. We disagree with Indicated PJM TOs' claim that Order No. 2023 relied on the stale record from Order No. 890, even though the world has changed substantially since 2007. Order No. 2023 cited Order No. 890 as precedent reflecting that the Commission has authority to (1) implement a study delay penalty structure for RTOs/ISOs for missed tariff deadlines notwithstanding their non-profit status,[491] and (2) prohibit non-RTO transmission provider and transmission-owning members of RTOs/ISOs from recovering penalty amounts through transmission rates.[492] Order No. 2023 further acknowledged differences between the transmission service studies addressed in Order No. 890 and interconnection studies and accounted for these differences in developing this study delay penalty regime.[493]

296. We also disagree with rehearing requests that argue that the elimination of the reasonable efforts standard and the adoption of a structure of performance standards, in the form of deadlines, and performance incentives, in the form of penalties, is premature, and that the Commission should have waited until other reforms took effect before considering whether to implement this reform, or should have instead simply augmented the reporting approach set forth in Order No. 845. While the Commission could have taken a more gradual approach in addressing interconnection queue backlogs, we find that such an approach would not represent a just and reasonable replacement rate. Indeed, not only have our prior reforms failed to adequately control interconnection backlogs and delays, but the problem has instead significantly worsened, leading to unjust and unreasonable rates. Thus, notwithstanding that certain commenters may prefer a different approach—and particularly favor one that preserves for as long as possible the ability of transmission providers to extend their own deadlines to complete interconnection studies—we sustain Order No. 2023's finding that the reasonable efforts standard is contributing to those unjust and unreasonable rates such that reform of that standard is warranted now.[494] As a result, we also continue to find that Order No. 2023's approach of addressing the problem of interconnection queue backlogs and delays from multiple angles is both permissible and warranted given the

[483] *See id.* P 40, app. B, tbls. 2 & 4; NOPR, 179 FERC ¶ 61,194, at app. A, tbl. 1 n.489 (noting that SPP's ''normal interconnection queue processing has been modified to address its large queue backlog and transition to a new interconnection study process'').

[484] Order No. 2023, 184 FERC ¶ 61,054 at P 40 (indicating that multiple transmission providers that have already adopted cluster studies—including, among others, MISO, APS, Dominion, Duke, El Paso, PNM, and PSCo—still have study delays).

[485] *See ICC* v. *Jersey City,* 322 U.S. 503, 514 (1944) (''Administrative consideration of evidence . . . always creates a gap between the time the record is closed and the time the administrative decision is promulgated . . . [if] litigants might demand rehearings . . . because some new circumstance has arisen . . . there would be little hope that the administrative process could ever be consummated[.]''); *Wis. Elec. Power Co.* v. *Costle,* 715 F.2d 323, 327 (7th Cir. 1983) (finding that the record was not stale just because it did not include data collected five days before the agency issued its decision); *Vill. of Logan* v. *U.S. Dep't of Interior,* 577 F. App'x 760, 770 (10th Cir. 2014) (''Defendants likewise cannot be faulted for failing to consider a study that was published after the [agency decision] was published[.]'').

[486] *See* Order No. 2023, 184 FERC ¶ 61,054 at app. B (summarizing data from 2020–2022); *id.* at P 38 (citing Queued Up 2023 at 7–8). Cases in which courts have found data to be stale involve significantly older data. *See N. Plains Res. Council, Inc.* v. *Surface Transp. Bd.,* 668 F.3d 1067, 1086 (9th Cir. 2011) (finding that ten-year-old data was stale); *Lands Council* v. *Powell,* 395 F.3d 1019, 1031 (9th Cir. 2005) (finding that six-year-old data was stale).

[487] *See White Stallion Energy Ctr., LLC* v. *EPA,* 748 F.3d 1222, 1248 (D.C. Cir. 2014) (agency's ''data-collection process was reasonable, even if it may not have resulted in a perfect dataset''); *In re Polar Bear ESA Listing,* 709 F.3d 1, 13 (D.C. Cir. 2013) (''That a model is limited or imperfect is not, in itself, a reason to remand agency decisions based upon it.''); *Allied Local & Reg'l Mfrs. Caucus* v. *EPA,* 215 F.3d 61, 71 (D.C. Cir. 2000) (''We generally defer to an agency's decision to proceed on the basis of imperfect scientific information''); *State of N.C.* v. *FERC,* 112 F.3d 1175, 1190 (D.C. Cir. 1997) (''The mere fact that the Commission relied on necessarily imperfect information . . . does not render [its decision] arbitrary.''); *Chemical Mfrs. Ass'n* v. *EPA,* 28 F.3d 1259, 1265 (D.C. Cir. 1994) (agency may nonetheless use model ''even when faced with data indicating that it is not a perfect fit'').

[488] *See Vt. Yankee Nuclear Power Corp.* v. *Nat. Res. Def. Council, Inc.,* 435 U.S. 519, 554–55 (1978) (*Vt. Yankee*) (explaining that an agency decision ''had to be judged by the information then available to it[.]'').

[489] *See, e.g.,* Order No. 2023, 184 FERC ¶ 61,054 at P 966.

[490] *See Marsh* v. *Oregon Nat. Res. Council,* 490 U.S. 360, 373 (1989) (''agenc[ies] need not supplement [a decision] every time new information comes to light[.]''); *Friends of the River* v. *FERC,* 720 F.2d 93, 109 (D.C. Cir. 1983) (''Were we to order the Commission to reassess its decisions every time new forecasts were released, we would risk immobilizing the agency.'').

[492] *See id.* P 992.

[493] *See id.* P 1013.

[494] Notably, the rehearing requests cite no authority precluding the Commission from adopting the more comprehensive approach embodied in Order No. 2023. *See Flyers Rts. Educ. Fund, Inc.* v. *U. S. Dep't of Transp.,* 810 F. App'x 1, 3 (D.C. Cir. 2020) (explaining that *FCC* v. *Fox Television Stations, Inc.,* 556 U.S. 502 (2009) ''permits, but does not require, an agency to act incrementally.''); *WildEarth Guardians* v. *U.S. E.P.A.,* 751 F.3d 649, 655–56 (D.C. Cir. 2014) (summarizing *Defenders of Wildlife* v. *Gutierrez,* 532 F.3d 913 (D.C. Cir. 2008), upholding a decision to focus on a comprehensive approach).

extreme challenges identified in section II.A, above, and Order No. 2023.[495]

297. Moreover, under FPA section 206, the Commission need only find that the existing *pro forma* is unjust and unreasonable and that the replacement rate is just and reasonable; the Commission need not demonstrate that the replacement rate is the only just and reasonable approach.[496] We continue to find that a comprehensive approach, including the elimination of the reasonable efforts standard and adoption of performance standards and incentives (study deadlines and penalties), is necessary to remedy the unjust and unreasonable rates resulting from interconnection queue backlogs and is just and reasonable. We also note that arguments that this reform is premature are based on the premise that the other reforms in Order No. 2023 will be sufficient to remedy study delays. But at the same time, parties argue on rehearing that they cannot meet study deadlines, even with the other reforms in Order No. 2023. Both cannot be true. Either the other reforms in Order No. 2023 will be sufficient to ensure transmission providers can meet study deadlines, in which case they will not incur penalties under this regime, or—consistent with the Commission's conclusions in Order No. 2023 and herein—the other reforms will not be sufficient to ensure transmission providers meet study deadlines. In contrast, the Commission has here determined that a package of reforms—including both the elimination of the reasonable efforts standard and the other reforms required by the final rule—represents a reasonable and well-supported decision regarding the appropriate replacement rate.

298. With regard to arguments that the Commission's adoption of a deadline and penalty structure does not take into account that some transmission providers have engaged in stakeholder processes on queue reform, we note that Order No. 2023 acknowledged these efforts.[497] However, we disagree that these efforts mean that the Commission cannot or should not implement further reforms. In the regions where stakeholder reforms are ultimately successful in reducing queue backlogs and preventing delayed studies, the penalties adopted in Order No. 2023 may never be relevant. However, as explained above, many regions of the country are still seeing significant and even growing queue backlogs and study delays. It is clear that further action is warranted.

299. The rehearing requests also mischaracterize Order No. 2023 in claiming that the Commission eliminated the reasonable efforts standard based on ensuring parity or fairness, rather than evidence. Given the magnitude and growth of the interconnection queue backlog, the Commission adopted a comprehensive approach to remedying the unjust and unreasonable rates caused by that backlog.[498] Order No. 2023's references to ensuring that transmission providers were ''doing their part'' [499] and ''striking a balance'' [500] were made in this context, reflecting that transmission providers have a role to play in addressing this backlog. This comprehensive approach recognizes the importance of addressing each of the principal factors contributing to interconnection queue backlogs, including those—like study timeliness—that are within the control, whether in whole or in part, of transmission providers. We are, therefore, not persuaded by arguments that the existence of factors beyond the control of transmission providers that may delay interconnection studies means that the elimination of the reasonable efforts standard, and its replacement with firm study deadlines and incentives in the form of penalties, cannot or will not be effective in reducing study delays.

300. We further conclude that contentions that the reasonable efforts standard carries benefits, including the flexibility to account for the complexities and variability of interconnection requests that may arise in the study process, do not demonstrate that this standard remains just and reasonable. While there is some benefit to such flexibility, this benefit does not outweigh the need for reform the Commission has discussed and particularly does not change the fact that interconnection queue backlogs and study delays are resulting in unjust and unreasonable rates. Indeed, unwarranted flexibility to the detriment of timely study completion represents a defect in the reasonable efforts standard in light of the record demonstrating such backlogs: it allows transmission providers too much discretion to extend their own study deadlines. We thus disagree with arguments claiming that the reasonable efforts standard is sufficient to hold transmission providers accountable and appealing to the flexible nature of the reasonable efforts standard as purportedly demonstrating that it remains just and reasonable.

301. Furthermore, we do not agree that the deadline and penalty structure set forth in Order No. 2023 is inflexible, as certain rehearing requests attempt to portray that structure in contrasting it with the reasonable efforts standard. Order No. 2023's deadline and penalty structure reasonably accounts for the interests of transmission providers, including in maintaining flexibility and accounting for the complexities of the interconnection study process,[501] in light of the need for reform to set clear standards for timeliness and effective measures to ensure those standards are met.[502] How each transmission provider determines to meet interconnection study deadlines is left up to that transmission provider. We find that this approach is appropriate given the variation in the operations of the transmission providers and how they conduct the study process, and that they have the most complete knowledge as to what actions to better ensure study timeliness will be most effective as to their specific processes. Rather than imposing a top-down approach that mandates specific actions, the Commission in Order No. 2023 provided flexibility to transmission providers as to how they achieve those standards,[503] along with appropriate safeguards.

302. We disagree with arguments that the Commission has not demonstrated that there are steps that transmission

[495] *See, e.g.,* Order No. 2023, 184 FERC ¶ 61,054 at PP 3, 27–29, 37–60.

[496] *See Emera Me.,* 854 F.3d at 22–23 (explaining the two-step analysis under section 206 and that, on the second prong, there is a substantial spread of potentially just and reasonable rates).

[497] Order No. 2023, 184 FERC ¶ 61,054 at PP 16, 59, 1765–67. Because Order No. 2023 adopted the NOPR proposal to continue to apply the ''consistent with or superior to'' and ''independent entity variation standards,'' *see id.* P 1764, the transmission providers that have engaged in these processes may still benefit from them, although we cannot prejudge any particular compliance filings.

[498] *See id.* P 968 (discussing the other reforms the Commission was adopting).

[499] *Id.*

[500] *Id.* P 972 (''The study delay penalty structure adopted in this final rule balances the harm to interconnection customers of interconnection study delays and the associated need to incentivize transmission providers to timely complete interconnection studies with the burdens on transmission providers of conducting interconnection studies and potentially facing penalties for delays, including those that may be caused or exacerbated by factors beyond their control.'').

[501] *See, e.g., supra* section II.D.1.a. (summarizing the safeguards established in Order No. 2023, particularly including the appeals process).

[502] *See also infra* PP 374–382 (rejecting arguments that the deadline and penalty structure adopted by Order No. 2023 is not just and reasonable based on purported negative consequences of that structure).

[503] *Cf., e.g., Transp. Div. of the Int'l Ass'n of Sheet Metal, Air, Rail & Transp. Workers* v. *Fed. R.R. Admin.,* 10 F.4th 869, 876 (D.C. Cir. 2021) (affirming a performance-based approach, rather than prescriptive approach, as reasonable).

providers can take to improve the timeliness of study processing, particularly given the factors that are outside of or not fully within their control, such that implementing a structure of performance standards and penalties to incentivize transmission to providers meet study deadlines is not just and reasonable. As described above, transmission providers exercise significant control over the study process through which they can influence whether the studies are timely completed.[504] It is not the case that there is no nexus between the speed of the interconnection queue and the incentives imposed on transmission providers to timely complete interconnection studies. In Order No. 2023, the Commission explained that transmission providers should be able to implement reforms to ensure that their study process is efficient and to help meet the deadlines set forth in that rule, including examples of steps that they may be able to take.[505] To the extent that transmission providers suggest that it is generically infeasible to allocate additional resources to ensure the timely completion of interconnection studies because that will require them to bear increased study costs, we are not persuaded by these concerns. As Order No. 2023 stated, ''interconnection customers, rather than transmission providers, ultimately bear the costs of interconnection studies.'' [506] The allocation of such additional resources includes the allocation of additional personnel or consultants, as appropriate and available. Moreover, increased availability of qualified personnel may be driven, over time, by increased demand on the part of transmission providers. To the extent that transmission providers seek to retain additional personnel but there are extenuating circumstances rendering necessary personnel unavailable, leading to the assessment of penalties, transmission providers can explain the specific facts of their situation in an appeal to the Commission.

303. In addition, claims that transmission providers cannot take reasonable steps to achieve the deadlines set forth in Order No. 2023 are premised on incorrectly portraying the substantive deadlines set in Order No. 2023 and the circumstances under which penalties will be assessed as unduly burdensome or punitive. In imposing these deadlines, the Commission was mindful of the burdens on transmission providers in conducting interconnection studies.[507] Moreover, in Order No. 2023 the Commission adopted a reasonable approach to selecting the deadlines in the *pro forma* interconnection procedures and, as further explained in greater detail below, we continue to conclude that the record supports that those deadlines should be achievable for the *pro forma* study process.[508] The safeguards the Commission selected—including, but not limited to, the ability to appeal a penalty—further respond to transmission providers' objections, including the extent to which study delays may be due to factors outside of their control.[509]

c. Adoption of a Study Deadline and Penalty Structure Replacement Rate

304. Having adopted the NOPR proposal to eliminate the reasonable efforts standard in Order No. 2023, the Commission was then required to adopt a replacement rate.[510] It found that a structure in which transmission providers are required to meet firm study deadlines (a standard to measure performance) and subject to penalties (an incentive to meet the tariff-prescribed firm study deadlines) with appropriate safeguards, was a just and reasonable approach.[511] This regulation of the interconnection study process is consistent with the Commission's long-standing regulation of the interconnection process, including the terms of the relationship between interconnection customers and transmission providers.

305. Courts have affirmed that this regulation of the interconnection process, and specifically the interaction between interconnection customers and transmission providers as necessary to avoid a degradation in service leading to unjust and unreasonable rates, falls squarely within the Commission's ratemaking authority.[512] For instance, in *NARUC* v. *FERC,* the D.C. Circuit affirmed the Commission's authority to issue Order No. 2003, observing that ''Order No. 2003 asserts jurisdiction over the terms of interconnection between generators and transmission providers'' [513] and citing the connection between those terms and the prices for regulated service. Indeed, the Commission established both the timelines for interconnection studies and the reasonable efforts standard in Order No. 2003,[514] which reflects the Commission's long-standing regulation of the timeliness of the interconnection study process.[515]

[504] *See supra* P 284.

[505] *See* Order No. 2023, 184 FERC ¶ 61,054 at PP 967, 975, 1004, 1007 (identifying steps including the management of operational resources, implementing reforms to increase the efficiency of study processing, investing in new software, and hiring additional personnel).

[506] *Id.* P 1007 (''To the extent that it is more costly to complete studies in a timely and accurate fashion, these interconnection study costs will be passed on to interconnection customers.''). Nothing in Order No. 2023 or herein requires or suggests that transmission providers should attempt to hold personnel liable or punish them for study delays, and we therefore are not persuaded by SPP's claim that that qualified engineers may not want to work for transmission providers if they risk being identified as a cause of study delays that result in penalties.

[507] *See, e.g., id.* P 1004 (explaining that the Commission was adopting reforms from the NOPR such that it expected ''that a transmission provider that faces the potential of a study delay penalty for failing to meet interconnection study deadlines will be able to allocate sufficient resources to conduct interconnection studies, in addition to implementing reforms to ensure that its study process is efficient'' and declining to adopt certain proposals that might have resulted in greater burdens on transmission providers).

[508] *See infra* PP 318–320 (explaining that the *pro forma* study process should not impose a greater aggregate burden on transmission providers than the serial study process and discussing the available data reflecting the ability of transmission providers that have adopted a cluster study approach to conduct those studies within the timeframes set forth in Order No. 2023).

[509] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 987 (''In evaluating whether there is good cause to grant such relief, the Commission may consider, among other factors: (1) extenuating circumstances outside the transmission provider's control, such as delays in affected system study results; (2) efforts of the transmission provider to mitigate delays; and (3) the extent to which the transmission provider has proposed process enhancements either in the stakeholder process or at the Commission to prevent future delay''); *id.* at 979 (providing a lengthy transition period to allow transmission providers time to adapt to the new processes).

[510] *See id.* P 970.

[511] *See id.* PP 970–72.

[512] *See, e.g., S.C. Pub. Serv. Auth.,* 762 F.3d at 63; *NARUC* v. *FERC,* 475 F.3d at 1279–1280; *see also FERC* v. *Elec. Power Supply Ass'n,* 577 U.S. 260, 266 (2016) (*EPSA*) (discussing the Commission's authority to ''regulate 'the transmission of electric energy in interstate commerce' and 'the sale of electric energy at wholesale in interstate commerce' under FPA section 201(b), 16 U.S.C. 824(b), and describing FPA sections 205 and 206 as affording FERC authority to ''oversee all prices for those interstate transactions and all rules and practices affecting such prices''); *see also id.* at 277.

[513] *NARUC* v. *FERC,* 475 F.3d at 1279 (''By establishing standard agreements FERC has exercised its jurisdiction over the *terms* of those relationships.''); *see id.* at 1280; *ESI Energy, LLC* v. *FERC,* 892 F.3d 321, 324 (''[E]very time a new generator of electricity asked to use a transmission network owned by another—to interconnect the two entities—disputes between the generator and the owner of the transmission grid would arise, delaying completion of the interconnection process,'' which disputes ''delay[ed] entry into the market by new generators,'' thus ''providing an unfair competitive advantage to utilities owning both transmission and generation facilities.'').

[514] *See* Order No. 2003, 104 FERC ¶ 61,103, at app. C, LGIP section 1 (defining ''Reasonable Efforts''; *id.* sections 6.3, 7.4, 8.3 (providing for the use of reasonable efforts to complete study processes within specified timeframes).

[515] The Commission further has regulated the charges for the interconnection study process through setting the study deposit amount, *see pro forma* LGIP section 3.1.1, and the recovery of the

306. The deadline and penalty structure set forth in Order No. 2023 is a replacement of the Commission's prior study timelines, including the reasonable efforts standard, with another standard directed toward that same end.[516] Specifically, the deadline and penalty structure implemented in Order No. 2023 governs the terms of the relationship between the interconnection customer and transmission provider regarding the costs that transmission providers can recover for interconnection studies that fail to meet certain standards. Given that interconnection queue backlogs—which are driven, in part, by study delays—result in unjust and unreasonable rates through, *e.g.,* increased costs and decreased competition,[517] the study delay penalty structure is a means of ensuring just and reasonable rates, consistent with the Commission's authority under FPA section 206. Moreover, delayed interconnection studies impose costs on interconnection customers,[518] such that the value of the interconnection study to such customers is linked to its timely performance. The implementation of study delay penalties reflects this fact, and—particularly because the penalties are distributed to interconnection customers in proportion to their study costs [519]—regulates what a transmission provider can charge for an interconnection study, accounting for study timeliness, as a matter of ensuring just and reasonable rates.

307. The approach adopted in Order No. 2023 of employing penalties as an incentive for regulated actors to ensure adequate service, pursuant to the Commission's statutory mandate to ensure just and reasonable rates under FPA sections 205 and 206, is not novel. The Commission has previously accepted tariff mechanisms incorporating the use of penalties for failure to meet a performance standard as a component of a just and reasonable rate.[520] Order No. 890's implementation of operational penalties for routinely delayed transmission studies similarly reflects a structure using such penalties to accomplish the Commission's ratemaking objectives.[521]

308. To that end, the Commission adopted the study deadline and penalty structure pursuant to its authority under FPA section 206.[522] In doing so, it stated that its approach was not based on a finding of bad faith on the part of transmission providers,[523] or intended to create a punitive structure,[524] but instead reflected the need for adequate incentives for transmission providers to take the steps within their control to help alleviate unjust and unreasonable rates stemming from interconnection queue delays and backlogs.[525] In this respect, the implementation of the study deadline and penalty structure in Order No. 2023 reflects that—as a component of a comprehensive package of reforms to remedy the problem of severe interconnection queue delays and backlogs—transmission providers will be held to appropriate standards, with stated consequences for failure to meet those standards, as is also the case with interconnection customers.[526] As discussed in detail below,[527] the implementation of this incentive structure pursuant to FPA section 206 is further consistent with Supreme Court precedent differentiating civil penalties that are imposed as punishment to redress a wrong to the public versus those that serve other purposes, such as the regulation of the interaction between parties to serve a compensatory function.[528] Order No. 2023's deadline and penalty structure falls within the latter category, supported by the Commission's well-established FPA authority over the interconnection process to avoid degradation of service, its authority to regulate the relationship of the parties involved in that process, and its authority to ensure just and reasonable rates under FPA section 206.

i. Interconnection Study Deadlines

(a) Requests for Rehearing

309. Several of the rehearing requests contend that the imposition of fixed, uniform study deadlines is arbitrary and capricious because it fails to account for the specific circumstances of the cluster being studied, particularly given the complexity and variability of the study process.[529] For instance, Avangrid and EEI argue that the Commission's 150-day cluster study deadline is a ''one-size-fits-all'' approach that disregards that clusters of interconnection studies will vary widely in size and complexity, and there are numerous variables outside of transmission providers' control that contribute to delays.[530] Indicated PJM TOs argue that the Commission failed to consider the uneven and unpredictable timing of interconnection requests.[531]

costs for interconnection studies, *see* Order No. 2023, 184 FERC ¶ 61,054, *pro forma* LGIP sections 7.1, 8.1, 9.4, 13.3, app. 2 at section 6, app. 7 at section 7, app. 8 at sections 7–8, app. 9 at section 6, app. 10 at section 6 (reflecting revisions to the *pro forma* LGIP and appendices set forth in Order No. 2003).

[530] Avangrid Rehearing Request at 4–5; EEI Rehearing Request at 10.

[531] Indicated PJM TOs Rehearing Request at 16 (citing factors driving variability in the number and

Continued

310. Relatedly, Indicated PJM TOs also assert that the uniform study deadline and penalty framework is unduly discriminatory against transmission owners in regions with substantial renewable generation in development, because such regions with long queues will experience greater risk of penalties due to factors they cannot control.[532] Dominion asserts that, within RTOs and ISOs, there may be disparate outcomes in different zones because of an uneven distribution of interconnection requests, such that different transmission owners or transmission providers will face very different risks.[533]

311. A number of the rehearing requests also challenge the specific deadlines the Commission selected—including, in particular, the 150-day cluster study deadline—as insufficiently supported and/or too short, risking a less efficient interconnection process.[534] MISO TOs and NYISO argue that the deadlines imposed in Order No. 2023 have not been shown to be appropriate and achievable or are not supported by evidence.[535] NYISO argues that study deadlines should be tailored to each region.[536] NYISO and PJM argue that a 150-day timeframe for the cluster study is not achievable in their regions in particular.[537] PacifiCorp asserts that the Commission should extend the 150-day cluster study and restudy deadlines by 45 days to provide transmission providers adequate time to address third-party delays.[538]

312. Avangrid, NYISO, and PJM contend that the efficiency gains that can be expected from the other reforms set forth in Order No. 2023 will not render the deadlines imposed by that decision more achievable.[539] NYISO and PJM contend that the study entry requirements are not likely to materially deter participation in cluster studies, claiming that certain RTOs/ISOs—including NYISO—have already adopted similar requirements without a noticeable reduction in the number of study participants.[540]

313. Dominion, MISO TOs, and NYISO also challenge the effectiveness of one of the safeguards that the Commission imposed: the ability to extend a study deadline for 30 days, upon agreement of all interconnection customers.[541] Dominion argues that there is no incentive for interconnection customers to agree to such an extension where they would otherwise be entitled to a share of the penalty assessed against a transmission provider.[542] MISO TOs note that obtaining this relief requires unanimity among all interconnection customers.[543]

(b) Determination

314. We are not persuaded by the rehearing requests challenging the study deadlines set forth in Order No. 2023. The timelines set forth in Order No. 2023 are reforms to the Commission's *pro forma* LGIP, against which individual compliance filings will be assessed.[544] In Order No. 2023, the Commission declined to ''adopt suggestions to allow transmission providers flexibility to set their own study deadlines,'' instead imposing standard deadlines for the specific study processes set forth in the *pro forma* LGIP.[545] As explained below, we continue to find that the deadlines set in Order No. 2023 for the *pro forma* study process are just and reasonable and represent a reasonable policy determination that appropriately balances multiple competing considerations.[546]

315. We continue to conclude that the timeframes in Order No. 2023 for the completion of studies, including the 150-day timeframe for the completion of cluster studies, are just and reasonable for the *pro forma* study approach set forth in Order No. 2023.[547] The underlying reason for the reforms in Order No. 2023, including the deadlines imposed on transmission providers to

timing of interconnection requests in different locations); *id.* at 30–31 (arguing that the evidence of widespread study delays show that the aggressive deadlines are unreasonable, unrealistic, and arbitrary, particularly given the increased burdens that can be expected going forward, including new NERC standards; arguing that uniform study deadlines are not justified).

[532] *Id.* at 31–32.

[533] Dominion Rehearing Request at 24–25.

[534] EEI Rehearing Request at 9–10 (''Experience has shown that reliability and deliverability studies take longer than 50 days and that the development of binding cost estimates may be complex, especially in high-density urban areas.''); MISO TOs Rehearing Request at 11–12; NYISO Rehearing Request at 5–6; NYTOs Rehearing Request at 13–15; PacifiCorp Rehearing Request at 5, 15; PJM Rehearing Request at 32.

[535] MISO TOs Rehearing Request at 11–12 (also arguing that the Commission has not shown why a uniform deadline is appropriate irrespective of ''the cluster size, scope, geography, make up, proposed resource mix, and other circumstances of the particular cluster'' and that the automatic imposition of penalties exacerbates the problem posed by the deadlines); NYTOs Rehearing Request at 13–15 (citing *N.Y.* v. *EPA,* 964 F.3d 1214, 1224 (D.C. Cir. 2020) and *All. for Cannabis Therapeutics* v. *DEA.,* 930 F.2d 936, 940 (D.C. Cir. 1991) for the propositions that standards that are not reasonably attainable and conditions which are ''impossible to fulfill'' are arbitrary and capricious).

[536] NYISO Rehearing Request at 5–6; *see also id.* at 15–17 (arguing that the Commission should allow RTOs/ITOs to propose alternative study deadlines as independent entity variations, and that failure to do so unreasonably treats all transmission providers similarly, regardless of how they may be differently situated); *id.* at 40 (''[T]he Commission has not adequately addressed, or explained its response to, arguments that study deadlines themselves are unreasonable.'').

[537] *Id.* at 6–11 (describing the applicable New York reliability requirements and discussing particular challenges applicable to New York); PJM Rehearing Request at 32 (''This simply is not possible in a region such as the PJM Region, where the typical queue over a one-year period in the last few years has included in excess of 1,000 projects'').

[538] PacifiCorp Rehearing Request at 5, 15.

[539] Avangrid Rehearing Request at 12; NYISO Rehearing Request at 12–15 (arguing that much of the work in cluster studies still concerns individual projects or subsets of projects, and thus require many of the same resources as would be necessary to conduct individual studies); *see also id.* at 34 (contending that the Commission assumes, without evidence, that other improvements will fully offset the burdens imposed by Order No. 2023 on transmission providers); PJM Rehearing Request at 32.

[540] NYISO Rehearing Request at 14–15 (asserting that the entry requirements and withdrawal penalties adopted by Order No. 2023 for cluster studies are comparatively modest and likely to be only minimal deterrent to speculative projects); PJM Rehearing Request at 32 (noting that MISO received more than 960 requests following the close of its 2022 Definitive Planning Process cycle that closed in 2022).

[541] Dominion Rehearing Request at 24; MISO TOs Rehearing Request at 18–19; NYISO Rehearing Request at 35.

[542] Dominion Rehearing Request at 24.

[543] MISO TOs Rehearing Request at 18–19 (contending that this safeguard is therefore ''wholly illusory''); *see also* NYISO Rehearing Request at 35 (arguing that a 30-day extension is not a reasonable safeguard; noting that it will be conducting interconnection studies potentially involving more than 100 interconnection requests and arguing that each interconnection customer will have an incentive to oppose an extension since their study costs would be offset by penalty charges).

[544] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 10 (''We note that the compliance obligations that result from this final rule will be evaluated in light of the independent entity variation standard for [RTOs] and [ISOs] and the consistent with or superior to standard for non-RTO/ISO transmission providers.''); *id.* P 1764; *see also* Order No. 2003 104 FERC ¶ 61,103 at P 26 (discussing the standards for non-independent and independent transmission providers to seek variations from the terms of the *pro forma* LGIP and LGIA); *Preventing Undue Discrimination & Preference in Transmission Serv.,* Order No. 890–B, 123 FERC ¶ 61,299, at PP 95, 101 (2008) (''The Commission clarifies, in response to NYISO, that transmission providers are free to make filings under FPA section 205 to seek variations from the *pro forma* OATT and demonstrate that alternative tariff provisions are consistent with or superior to the *pro forma* OATT.''); *N.Y. Indep. Sys. Operator, Inc.,* 125 FERC ¶ 61,274, at P 24 & n.23 (2008) (''NYISO proposed to increase the transmission study deadlines from 60 days to 120 days. The Commission accepted the filing . . . .'').

[545] Order No. 2023, 184 FERC ¶ 61,054 at P 331 (explaining that allowing transmission providers to propose their own deadlines in the first instance ''would undermine the purpose of ensuring that transmission providers complete interconnection studies by standard deadlines prescribed by their tariffs and would thus be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner'').

[546] Transmission providers are also allowed to propose variations from the requirements of Order No. 2023, under the applicable standard, including as to the deadlines set for the *pro forma* study processes, although we cannot prejudge any such filings. *See id.* P 1764.

[547] *See id.* PP 324, 326.

conduct studies, is that interconnection queue backlogs are causing unjust and unreasonable rates and that these backlogs must, therefore, be remedied pursuant to our statutory mandate.[548] We find that the timelines set forth in Order No. 2023 appropriately address transmission providers' role and control in the interconnection study process and strike a reasonable balance between the transmission provider and other interests, such as those of interconnection customers, in addressing such unjust and unreasonable rates. As explained in greater detail below, we further find that these timelines are reasonably achievable to accomplish the *pro forma* study processes set forth in Order No. 2023. We therefore disagree that these timelines are too short or inappropriately uniform.

316. As the Commission explained in Order No. 2023, ''[t]he *pro forma* LGIP [set forth in Order No. 2003] requires that transmission providers use reasonable efforts to complete: (1) feasibility studies within 45 calendar days; (2) system impact studies within 90 calendar days; and (3) facilities studies within 90 or 180 calendar days.'' [549] Under the Commission's *pro forma* LGIP set forth in Order No. 2003, the interconnection study process for large generating facilities was a ''serial first-come, first-served study process by which transmission providers study interconnection requests individually in the order the transmission provider received them.'' [550] Under this process, the transmission provider had 135 total days to conduct both the feasibility study and system impact study for each interconnection request, with each study conducted separately.

317. Order No. 2023 eliminated the requirement to conduct a separate feasibility study under section 6 of the *pro forma* LGIP,[551] and provides a modestly longer timeframe (150 days) to conduct the cluster study and another 150 days to conduct any necessary restudy. The 150-day period to conduct the cluster study runs from the conclusion of a new 60-day customer engagement window, during which time the transmission provider can begin to coordinate with customers that have submitted interconnection requests that will be included in a particular study and ensure that the provider is considering only valid interconnection requests.[552]

318. We acknowledge that conducting a cluster study of many interconnection requests may involve increased complexity or require an increased commitment of resources in a given study timeframe as compared to conducting a single, individual study of a particular interconnection request under the serial process.[553] However, arguments to this effect do not take into account the full package of reforms aimed at improving efficiency of the study process, supporting our determination that the 150-day cluster study and cluster restudy deadlines reflect a reasonable balance of competing interests.

319. Indeed, various reforms in Order No. 2023 are directed toward ensuring that transmission providers can conduct their interconnection studies more efficiently under the cluster study process than the *pro forma* study approach previously applicable under Order No. 2003.[554] For instance, the Commission found that the cluster study ''process will increase efficiency because transmission providers can perform larger interconnection studies encompassing many proposed generating facilities, rather than separate studies for each individual interconnection customer.'' [555] Under this approach, transmission providers will be able to focus their resources on a single study, rather than conducting multiple individual studies.[556] For that reason, even if cluster studies prove more complex, that point does not undercut the Commission's conclusion that they can be performed in the time allotted in the *pro forma* LGIP. The Commission also explained that a cluster study process is likely to result in fewer interconnection customer withdrawals—which can result in cascading restudies, delays, and wasted resources which could otherwise be used productively—because ''conducting a single cluster study and cluster restudy will minimize delays that arise from proposed generating facility interdependencies under the existing serial study process.'' [557] The Commission also adopted further measures to increase efficiency, including to ''disincentivize interconnection customers from submitting interconnection requests for speculative generating facilities and ensure that ready, more viable proposed generating facilities can proceed through the study process.'' [558]

320. Thus, for the *pro forma* LGIP approach set forth in Order No. 2023, we conclude that conducting cluster studies and restudies should not, in terms of the total transmission provider resources required, be materially more burdensome than conducting serial studies and expect that the process should, in fact, be more efficient. We acknowledge that conducting a cluster study in 150 days may require a more concerted deployment of transmission provider resources than conducting serial studies, because cluster studies typically involve the evaluation of multiple interconnection requests, rather than allowing a full 135 days to separately evaluate each interconnection request. However, even absent the efficiency gains the adopted in Order No. 2023, the record here does

[548] *Id.* P 964; *see also* 16 U.S.C. 824e(a); *Coal. of MISO Transmission Customers* v. *FERC,* 45 F.4th 1004, 1020 (D.C. Cir. 2022) (''[T]he Commission is under a statutory mandate to ensure that all rates are just and reasonable . . . .'').

[549] Order No. 2023, 184 FERC ¶ 61,054 at P 13. Challenges to the timelines for interconnection studies set forth in Order No. 2023 are focused on the deadlines for conducting cluster studies, rather than facilities studies. Order No. 2023 provides 90 or 180 days to conduct facilities studies, which is consistent with the timeframe specified in Order No. 2003 under the reasonable efforts standard. *See pro forma* LGIP section 8.3. Thus, Order No. 2023 effectively eliminates the ability of transmission providers to unilaterally grant themselves extensions as to the deadline for facilities studies, but provides other avenues for relief in the form of the safeguards adopted in Order No. 2023. We continue to conclude that this is a just and reasonable result.

[550] NOPR, 179 FERC ¶ 61,194 at P 18.

[551] Order No. 2023, 184 FERC ¶ 61,054 at PP 67, 92, 316. Instead, the stability analysis, short circuit analysis, and power flow analysis that were previously part of the feasibility study and conducted on a serial basis, *see id.* at PP 297, 317; *pro forma* LGIP section 7.3, are now conducted as components of the cluster study and restudy process.

[552] *See* LGIP section 3.4.5 (describing tasks to be performed in the Customer Engagement Window and that interconnection requests not deemed valid at the close of this window shall be deemed withdrawn, with no cure period); Order No. 2023, 184 FERC ¶ 61,054 at PP 223, 233–34.

[553] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 326 (''While we have extended the timeline from that provided in the individual serial study process, we believe that 150 calendar days is a reasonable extension to account for the more complex study.'').

[554] *Id.* PP 326, 1004.

[555] *Id.* P 177.

[556] *Id.* P 326 (''We also note that transmission providers will be conducting only one interconnection study, or at most a small number of interconnection studies, at a time, allowing them to devote more resources to completing the studies in a timely manner.'').

[557] *Id.* P 177.

[558] *Id.* (discussing the cluster study process, combined with ''the increased financial commitments and requirements to enter the interconnection queue, such as a demonstration of site control''); *see also id.* P 977 (noting the ''the new site control requirements, commercial readiness deposits, and withdrawal penalties we adopt in this final rule, which also become increasingly stringent as the study process progresses''); *cf. also* LGIP sections 3.4.5, 3.7 (providing that, at the close of the customer engagement window, only valid interconnection request are included in the study process; further providing that interconnection requests may be deemed withdrawn if interconnection customers fail to adhere to the requirements of the LGIP).

not reflect that conducting a cluster study will be, in aggregate, more burdensome, let alone significantly more burdensome, than conducting a study of each interconnection request on an individualized basis. Moreover, balancing this concern regarding the burdens associated with cluster studies against interconnection customers' need for timely processing of their requests, interconnection queue backlogs, and the unjust and unreasonable rates resulting from such backlogs, we conclude that this is a necessary reform in order to improve the timeliness of interconnection study processing and should be within transmission providers' capabilities.[559]

321. Data reported as required by Order No. 845 by the non-RTO/ISO transmission providers that conducted cluster studies in 2022 also supports our conclusion that the deadlines for conducting cluster studies, restudies, and facilities studies are just and reasonable.[560] While the approaches of each transmission provider to conducting cluster studies vary and no transmission provider represented in this data employs precisely the *pro forma* study approach set forth in Order No. 2023, we find that this data provides a valid basis of comparison to assess the deadlines set in Order No. 2023. In general, this represents the most recent data set available at the time the record closed and these transmission providers' approach to cluster studies reflect some of the key substantive reforms required in Order No. 2023.[561]

322. The data reflects that five (of eight) such transmission providers were able, applying a cluster study approach, to complete system impact studies in an average of fewer than 150 days. In several cases, they did so for clusters containing significant numbers of interconnection requests. Thus, the experience of these transmission providers supports that it is reasonably feasible to complete cluster studies in the timeframe specified by Order No. 2023. Particularly given the other reforms provided in Order No. 2023 to increase the efficiency of this process, the ability of transmission providers to increase efficiency and devote more resources to this process, and the need to ensure timely processing of interconnection studies in order to ensure just and reasonable rates, this data supports our conclusion that the deadlines set by Order No. 2023 to complete such studies are just and reasonable.

323. We acknowledge that three of the transmission providers represented in this data exceeded this timeframe, in some cases by a substantial amount. This, however, does not rebut the evidence from other transmission providers that these deadlines are reasonably achievable. Moreover, that these transmission providers did not complete their studies in fewer than 150 days, operating under a regime governed by the reasonable efforts standard and the ability to self-extend such deadlines, does not demonstrate that they could not have done so if appropriately incentivized to meet these performance standards, as under the deadline and penalty structure adopted in Order No. 2023.[562]

324. We also find that the safeguards provided in Order No. 2023 help ensure that the balance struck by Order No. 2023 in setting the timeframes for the *pro forma* interconnection study process is reasonable because transmission providers will not unduly incur penalties for failing to meet these timeframes. Two of those safeguards, namely the ten-business day grace period and the potential availability of a 30-day extension upon agreement of the interconnection customers in the cluster study,[563] help accommodate the possible need for extensions to study deadlines. The significant transition period that the Commission afforded before study delay penalties might be assessed allows transmission providers ''time to adapt to the new processes'' and ''will help ensure that transmission providers' implementation of this final rule has begun to reduce backlogged interconnection queues.'' [564] The appeals process allows transmission providers the opportunity to demonstrate that, under their individualized circumstances, they should receive relief from the application of penalties for failing to meet the deadlines set in Order No. 2023.[565] To the extent that transmission providers assert that factors allegedly outside of their control may render it difficult or infeasible to meet the interconnection study deadlines, this appeals process is the avenue to raise those considerations in particular cases and seek relief.[566] Moreover, as addressed above, where transmission providers conclude that the 150-day deadline for the *pro forma* study process is not appropriate for their particular study processes, they can raise this issue in their compliance filings, under the appropriate standard. Thus, we continue to conclude that the deadlines imposed by Order No. 2023 are reasonable as to the *pro forma* LGIP approach to interconnection studies set forth therein.

325. The challenges on rehearing arguing that the timeframes set forth to conduct interconnection studies are too short or inappropriately uniform do not persuade us that these deadlines are not reasonable for the timely completion of the *pro forma* study process. We disagree with arguments that the Commission failed to adequately set forth its rationale for adopting these deadlines, and find that our reasons for adopting these deadlines have been adequately explained, including through our discussion herein. Arguments that the deadlines are too short are largely conclusory, do not support a finding that the deadlines set for the *pro forma* LGIP processes are not generally achievable as to those processes, and fail to establish that these deadlines—in light of the overall structure of Order No. 2023, including the relevant safeguards and ability to seek variations—reflect an unreasonable balance of the competing interests.

326. We are unpersuaded by arguments that uniform study deadlines are inappropriate. First, these arguments disregard the mechanisms in Order No. 2023 to account for variability, including the safeguards attendant to the potential assessment of penalties and the ability to seek variations from the *pro forma* LGIP in the compliance process. Second, general assertions that some transmission providers may have higher workloads than others do not establish that the relevant deadlines will not, as a general matter, be sufficient to allow most transmission providers to conduct the relevant studies. Third, to the extent that some transmission

[559] Order No. 2023, 184 FERC ¶ 61,054 at P 1007.

[560] *See* app. B.

[561] Moreover, that several transmission providers with somewhat variable approaches to cluster studies completed system impact studies in fewer than 150 days, on average, corroborates that—in general—it is possible to conduct such studies on this time frame.

[562] *See, e.g., Cent. Hudson,* 783 F.3d at 109 (holding that the Commission may permissibly rely on economic theory so long as it has applied the relevant economic principles in a reasonable manner and adequately explained its reasoning); *Sacramento,* 616 F.3d at 531 (''[I]t was perfectly legitimate for the Commission to base its findings about the benefits of marginal loss charges on basic economic theory, given that it explained and applied the relevant economic principles in a reasonable manner.'').

[563] *See* Order No. 2023, 184 FERC ¶ 61,054 at PP 963, 981–83; *see also infra* P 335 (recognizing that the 30-day extension is not guaranteed in all cases but disagreeing with claims that it will be ineffective in practice).

[564] Order No. 2023, 184 FERC ¶ 61,054 at P 979.

[565] *Id.* PP 987–89.

[566] *See also infra* P 363 (noting that concerns that transmission providers may not be afforded relief in the appeals process, where they believe such relief would be warranted, are premature).

providers have higher workloads associated with interconnection requests than other providers, the deadlines in Order No. 2023 incentivize those transmission providers to devote resources commensurate with those workloads to the timely processing of the interconnection requests in their queue. On that point, it bears repeating that the Commission has determined that the *status quo* is leading to unjust and unreasonable rates. As such, while the reforms in Order No. 2023 may require transmission providers to reprioritize their allocation of resources, we find that such reallocation may be necessary to satisfy the statutory mandate.

327. In response to arguments that the Commission ignored the uneven and unpredictable timing of interconnection requests, we conclude that Order No. 2023 adequately accounts for these considerations. First, interconnection requests will be submitted during an annual cluster request window, which is a 45-calendar day period with the start date to be determined by each transmission provider: under this structure, the timing of interconnection requests will not be unpredictable.[567] Second, we acknowledge that the number of interconnection requests submitted in a given cluster request window is unpredictable and impacts the deployment of resources that may be required to complete that cluster of interconnection studies.[568] However, we continue to find that it is necessary for transmission providers to have explicit and firm deadlines prescribed by their tariffs to ensure customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.[569] These deadlines, subject to the safeguards articulated in Order No. 2023 (including the appeals process), represent a just and reasonable approach that balances the competing interests of transmission providers and other entities, and should be reasonably achievable for the *pro forma* study approach adopted in Order No. 2023. And as noted above, Order No. 2023 does not foreclose transmission providers from proposing different deadlines as part of their compliance filings and supporting such proposals using either the consistent with or superior to or independent entity variation standard, as appropriate.

328. NYISO specifically asserts that the 150-day deadline for completing cluster studies is not adequate to accommodate NYISO's process.[570] In support, it introduces a new affidavit describing NYISO's performance of interconnection studies, and the timing associated with the relevant tasks.[571] Acknowledging that the Commission does not typically consider new evidence on rehearing, NYISO asserts that the Nguyen Affidavit is not new evidence because it ''provides clarifying details regarding publicly available information about the NYISO's Commission-approved interconnection procedures that the NYISO has already described in this proceeding.'' [572] It further claims that, even if the Nguyen Affidavit constitutes new evidence, the Commission should accept it to because NYISO could not have reasonably anticipated certain alleged factual misunderstandings regarding the interconnection study process, the potential benefits of interconnection studies, and the level of collaboration required to complete studies in New York in Order No. 2023.

329. We are not persuaded that the Nguyen Affidavit is properly before us. To the extent that the Nguyen Affidavit contains material not otherwise present in the record, it is new evidence. And NYISO has not shown that the evidence in this affidavit could not have been presented previously; this affidavit is not prompted by information that only recently became available or concerns driven by a material change in circumstance.[573] Indeed, NYISO's argument that the Commission should consider this evidence is, essentially, that it believes the Commission erred [574] but—if so—NYISO's proper recourse would be to demonstrate that purported error based on the existing record.

330. Regardless, we would not be persuaded by NYISO's arguments even if we were to consider the Nguyen Affidavit in assessing them. The question before the Commission in establishing the deadlines for the *pro forma* study process set forth in Order No. 2023 is whether those deadlines are reasonable as applied to that process. NYISO's argument does not address this question. Rather, NYISO's position is that the 150-day timeframe is not sufficient for NYISO's specific interconnection process, which it has adopted under the independent entity variation standard and which differs significantly from the process specified in Order No. 2023.[575] NYISO itself obliquely recognizes this point, asserting that ''NYISO anticipates that it will seek an independent entity variation from this study timeframe to better align with the study scope it will propose for the unique interconnection issues in New York.'' [576] As noted above, we will consider such arguments in individual transmission provider compliance proceedings.

331. NYISO more generally asserts that the efficiencies associated with a cluster study approach that the Commission identified in Order No. 2023 may be offset by increased volumes of interconnection requests that might participate in each cluster study.[577] NYISO further claims that additional financial requirements to enter the interconnection queue have not, in its experience, materially decreased the number of projects entering the queue.[578] Similarly,

[567] Order No. 2023, 184 FERC ¶ 61,054 at PP 223, 236.

[568] *Cf. id.* P 324 (''We note that depending on the cluster size, cluster studies may not always consume the entire 150 calendar days, and if a cluster study is complete prior to this deadline, transmission providers have flexibility to provide the cluster study report at that time prior to the deadline indicated in its LGIP[.]'')

[569] *Id.* P 331.

[570] *See* NYISO Rehearing Request at 5–6 (arguing that the Commission has not established a basis for the 150-day deadline for cluster studies and should allow each transmission provider to propose its own study deadline); *id.* at 6–12 (arguing that a 150-day study timeframe is not consistent the process NYISO follows).

[571] *See id.,* attach. I (Nguyen Aff.).

[574] We also disagree with NYISO's generalized assertion that the Commission misunderstood the interconnection study process, the benefits of such studies, or the level of collaboration involved in such studies.

[575] *See, e.g.,* NYISO Rehearing Request at 6–11; NYISO Initial Comments at 2–3 (''Among the significant variations, the NYISO already uses a first-ready, first served approach for managing projects in its interconnection queue and uses a cluster Class Year Study as the final, hallmark study in its LFIP.''); NYISO Initial Comments, app. A at 1 (explaining that ''NYISO's interconnection procedures include numerous independent-entity variations accepted by the Commission that are specifically tailored to the distinct circumstances in New York and the NYISO's wholesale market rules and planning processes.''); National Grid Initial Comments at 13–14 (discussing the NYISO ''Class Year Study'' approach and asserting that 150 days may not be sufficient for this process).

[576] NYISO Rehearing Request at 4.

[577] *Id.* at 12–14.

[578] *Id.* at 14–15 (stating that increasing study deposits and adding regulatory milestone deposits has not resulted in a corresponding decrease in projects entering the queue; also citing MISO's July 19, 2023, proposal to impose more stringent entry requirements); *see also* PJM Rehearing Request at 32 (asserting that MISO received more than 960

Continued

Avangrid claims that there is insufficient evidence that the easing of burdens on transmission providers, under Order No. 2023's reforms, will be adequate to justify the deadlines imposed by Order No. 2023.[579]

332. These arguments do not persuade us that the *pro forma* deadlines selected in Order No. 2023 for the conduct of interconnection studies are not just and reasonable. Neither NYISO nor Avangrid disputes that there will be efficiency gains from transitioning to cluster studies, which was a reform broadly supported by commenters. We further expect that the more stringent requirements to enter the interconnection queue set forth in Order No. 2023, including but not limited to financial requirements,[580] will help reduce speculative interconnection requests. To the extent that volumes of interconnection requests remain high, this counsels in favor of—not against—ensuring that that transmission providers exercise the control they have over the process to help ensure interconnection studies proceed more expeditiously. As discussed, these reforms are necessary to ensure the timely processing of interconnection requests and thereby remedy the problem of unjust and unreasonable rates resulting from queue delays and backlogs.

333. Indicated PJM TOs rely on a non-sequitur in claiming that the existence of widespread study delays in 2022 is evidence that the deadlines set in Order No. 2023 are ''inherently unreasonable.'' [581] The mere existence of past study delays, under a standard that allowed transmission providers significant discretion to extend those deadlines, does not show that any given set of deadlines to perform studies are unachievable or unreasonable.[582] It particularly does not demonstrate that the deadlines for the specific *pro forma* LGIP process set forth in Order No. 2023, with the accompanying reforms to improve efficiency, are not reasonable.[583]

334. Dominion, MISO TOs, and NYISO assert that the ability to extend a study deadline for 30 days by mutual agreement of the transmission provider and all interconnection customers with interconnection requests in the relevant study will not be effective in practice.[584] They contend that interconnection customers lack incentives to agree to such an extension, particularly given that they will be the beneficiaries of any assessed penalty, and that it will be particularly infeasible to secure agreement from all interconnection customers to such an extension.

335. We are not persuaded by speculation that interconnection customers will adopt an unreasonably adversarial approach to requests for modest extensions to study deadlines. The interconnection process is one that, by its nature, tends to require cooperation and collaboration, and all parties have a continuing interest in this process functioning smoothly.[585] Moreover, because interconnection customers have a particular interest in reliable interconnection studies, interconnection customers are not well served by refusing to accede to a transmission provider's reasonable request for an extension that is necessary, particularly in light of unique circumstances, to ensure accurate study results.[586] Likewise, there may be circumstances in which a modest extension of a cluster study would save time, for all interconnection customers in a study, for example by helping reduce the need for a restudy.[587] The prospect that interconnection customers may receive penalties for late studies is not likely to override this need for collaboration and cooperation, particularly given that any award of penalties to interconnection customers is uncertain (given the availability of an appeal) and any such penalties will be split among all interconnection customers involved in the study. Moreover, this 30-day extension is just one safeguard among several, to extend deadlines that we generally conclude should be achievable on their own terms, such that we would still reach the same result even if invocation of this safeguard turns out to be uncommon in practice.

336. NYISO challenges the 10 day grace period, under which no penalties would be assessed for a study delayed by no more than 10 business days, claiming that this grace period does not provide meaningful relief to transmission providers that will study large numbers of interconnection requests.[588] This challenge is not persuasive. The grace period is one component of the penalty structure—and, again, one safeguard among several—through which Order No. 2023 strikes an appropriate balance between

requests following the close of its 2022 Definitive Planning Process cycle that closed in 2022).

[579] Avangrid Rehearing Request at 12.

[580] NYISO discusses the effects of increased deposits, but Order No. 2023 also imposed site control requirements and withdrawal penalties that we expect will also deter speculative interconnection requests. Moreover, the MISO PowerPoint presentation that NYISO cites is best understood as reflecting MISO's view that more stringent queue requirements will help reduce speculative interconnection requests. *See* MISO Presentation, Generator Interconnection Queue Improvements, Planning Advisory Committee (July 19, 2023), *https://cdn.misoenergy.org/20230719%20PAC%20Item%2006%20GI%20Queue%20Improvements%20Proposal629634.pdf* (proposing to increase such requirements and referring to its current tariff rules as incentivizing speculative projects because they require a ''small financial commitment'' and have ''ineffective withdrawal rules'' that allow withdrawn requests ''to get most of their money back, with interest, due to lack of penalties'').

[581] Indicated PJM TOs Rehearing Request at 30.

[582] Indeed, this is a one-size-fits-all argument that could be directed toward essentially any effort to impose an interconnection study deadline as a means of expediting the study process.

[583] Indicated PJM TOs also cite new NERC standards that may require additional study elements, broadly claiming that this will add to transmission providers' workloads, Indicated PJM TOs Rehearing Request at 30–31, but do not explain why any additional workload associated with these standards would render the deadlines set in Order No. 2023 unjust and unreasonable.

[584] Dominion Rehearing Request at 24; MISO TOs Rehearing Request at 18–19; NYISO Rehearing Request at 35.

[585] *See, e.g.,* EEI Initial Comments at 16 (describing the interconnection study process as benefitting from collaboration, in which transmission providers ''work with project developers as they refine their requests, redesign projects, or modify study parameters for optimum results''); Eversource Initial Comments at 25 (similarly describing interconnection as a collaborative process between the interconnection customer and transmission provider); Indicated PJM TOs Rehearing Request at 37 (describing the ''cooperative engagement'' between transmission owners and interconnection customers and providing examples of such collaboration to resolve issues arising in the study process).

[586] *See, e.g.,* Order No. 2023, 184 FERC ¶ 61,054 at P 30 (noting that the ''vast majority of commenters overwhelmingly agree'' that reform of the Commission's *pro forma* interconnection procedures and agreements is necessary ''to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner''); MISO Initial Comments at 78 (''Errors or omissions discovered later may drive the need for a restudy, causing unscheduled surprises for Interconnection Customers who have already made decisions based on the results of a rushed study.''); SPP Initial Comments at 12 (''Interconnection Customers have expressed to SPP that timely results that are inaccurate are useless and that it is imperative that they be able to rely on study results to make sound business decisions.''); *cf.* Order No. 2023, 184 FERC ¶ 61,054 at P 1007 (rejecting arguments that imposing study deadlines and penalties will necessarily reduce study accuracy).

[587] In addition, any such extension would be time-limited and transparent, allowing interconnection customers to better plan around such extensions as compared to ad hoc self-extensions under the reasonable efforts standard. *Cf.* Fervo Reply Comments at 7–8 (explaining that under the status quo with the reasonable efforts standard, interconnection customers face uncertainty, which imposes barriers to entry); NARUC Initial Comments at 14 (explaining that missed deadlines create uncertainty in bringing new generation online); SEIA Initial Comments at 32 (noting that backlogs deprive developers of needed business certainty, which can lead to issues like losing site control rights and financing).

[588] NYISO Rehearing Request at 35 (arguing also that the grace period should not be uniform given variability in study workloads and challenges to the study deadlines themselves).

creating an incentive for transmission providers to help ensure that interconnection studies are completed in a timely fashion, while not being punitive. Specifically, the grace period, in particular, provides a ''level of flexibility for transmission providers to address unforeseen circumstances or complexities that arise in the study process,'' [589] which may necessitate modest delays. This grace period was not intended to provide an automatic, lengthy extension to the study deadlines.

337. Likewise, the longer transition period the Commission adopted does not, as NYISO claims, simply ''postpone[ ] the RTO/ISO penalty cost recovery problem.'' [590] Rather, the transition period [591] is another measure to ensure that the structure adopted in Order No. 2023 provides incentives that are appropriate, but fair. The transition period allows time for transmission providers to address and adapt to the requirements of Order No. 2023, reduce backlogs, and address other issues (which may include, for example, FPA section 205 filings to address RTO/ISO penalty cost recovery).[592] The transition process will thus help ensure that the standards for timeliness set by Order No. 2023 are reasonably achievable before penalties are assessed. Neither of NYISO's arguments regarding the ten-day grace period or the transition period demonstrates any defect in Order No. 2023's deadline and penalty structure.

ii. Reasonableness of the Study Delay Penalty and Appeal Structure

(a) Requests for Rehearing

338. Many of the rehearing requests state that Order No. 2023 assigns penalties to transmission providers without an assessment of fault, as a ''strict liability'' matter, until they demonstrate their lack of fault through the appeals process.[593] These rehearing requests variously contend that this is unjust and unreasonable, arbitrary and capricious, unsupported by substantial evidence, inequitable, and/or offends due process. Many of them object to this framework as placing the burden on the transmission provider or transmission owner to demonstrate an entitlement to relief from the assessed penalty.

339. Avangrid argues that the Commission has deemed transmission providers who fail to meet the deadlines set forth in Order No. 2023 guilty unless they can prove their innocence and thereby denies transmission providers and transmission owners due process.[594] Avangrid argues that the appeals process is inequitable because it does not ensure exoneration where a transmission provider is not at fault, such as in the case of *force majeure*.[595] Avangrid further asserts that the lack of clarity concerning when relief will be granted violates the fair notice doctrine and renders the appeals process unjust and unreasonable.

340. Indicated PJM TOs argue that the imposition of penalties subject to an appeal mechanism applying a good cause standard contravenes due process requirements.[596] They assert that it is not clear how the appeals process would apply to transmission owners seeking relief from a penalty after an RTO or ISO has determined that the transmission owner is responsible for some or all of the penalty.[597] Indicated PJM TOs claim that an RTO/ISO assignment of a penalty cannot receive deference in a proceeding where a transmission owner seeks relief from a penalty.[598]

341. MISO TOs argue that the Commission erred in creating a ''no-fault, strict liability regime'' whereas tort law reflects that strict liability is only warranted in circumstances involving very dangerous activities, such as product liability for harm caused.[599] MISO TOs also claim that the penalty and appeals structure conflicts with Commission penalty procedures in enforcement cases by imposing a penalty automatically unless the transmission provider pursues an appeal, resulting in a deprivation of due process. They further contend that the appeals process is lacking in detail and fails to address these concerns because it puts the onus on the transmission provider to appeal penalties—which the Commission does not review *de novo*—and requires transmission providers to expend resources to seek relief for penalties caused by the actions of others.[600]

342. PacifiCorp claims that ''[t]he assessment of a civil penalty before any agency adjudication is made violates the due process clause of the Fifth Amendment to the U.S. Constitution.'' [601] PacifiCorp also objects that the transmission provider has the burden to show ''good cause'' and that the Commission suggested that ''if the transmission provider offers proof that it did not cause the study delay at issue, that is only 'potentially' exculpatory.'' [602] PacifiCorp further contends that Order No. 2023 lacks a cogent explanation of the showing necessary to avoid a penalty, which offends due process requirements and renders the appeal a moving target.[603]

343. NYISO contends that the appeals process wrongly places the burden on RTOs/ISOs to demonstrate that they are not at fault, when there are good reasons to anticipate that RTOs/ISO will not actually be responsible for many study delays.[604] Moreover, NYISO asserts that, while the Commission has set forth certain factors it will consider, it does

[589] Order No. 2023, 184 FERC ¶ 61,054 at P 981.

[590] NYISO Rehearing Request at 37.

[591] Under the transition process, in Order No. 2023, the Commission specified that transmission providers already using a cluster study process will not be subject to penalties until the third cluster study cycle after the transmission providers' compliance filing becomes effective. Order No. 2023, 184 FERC ¶ 61,054 at P 980.

[592] *Id.* PP 979–80.

[593] *See, e.g.,* MISO TOs Rehearing Request at 27–29; NYISO Rehearing Request at 29–30 (arguing that ''[t]he Commission may not reasonably presume that RTOs/ISOs should be penalized at the same time that it recognizes that overwhelming record evidence demonstrates that other parties will often be solely or substantially responsible for delays'' and that RTO/ISO interconnection metrics compliance reports under Order No. 845 are specific evidence of how a variety of complex and interactive factors can cause study delays); NYTOs Rehearing Request at 11–12, 23 (citing factors that may drive delays due to following Good Utility Practice; asserting that only if the variables outside of a transmission provider's control are removed can the Commission have a sufficient evidentiary basis to determine the reasonable efforts standard is unjust and unreasonable); PacifiCorp Rehearing Request at 8–9.

[594] Avangrid Rehearing Request at 12–13.

[595] *Id.* at 15.

[597] *Id.* at 23–24 (arguing that it is ''not clear whether the Commission intends to impose the burden of proof on transmission owners to demonstrate that the assignment of costs by the transmission provider was unreasonable'' or whether transmission owners can show good cause by showing that the transmission provider or another entity caused the delay).

[598] *Id.* at 24 (arguing that the appeals process must be conducted *de novo*); *see also id.* at 24–25 (asserting that the other safeguards to the imposition of penalties that the Commission adopted in Order No. 2023 are inadequate to alleviate these concerns).

[599] MISO TOs Rehearing Request at 31–32 (citing *Acosta Orellana* v. *CropLife Int'l,* 711 F. Supp. 2d 81, 105 (D.D.C. 2010)).

[600] *Id.* at 34–36 (arguing that this inappropriately shifts the Commission's burden to prove a violation to the transmission provider to disprove it and asserting that it is not clear under what statutory provision, or under what authority, the penalty appeal will be conducted).

[601] PacifiCorp Rehearing Request at 8–9; *see also id.* at 4–5 (''The Final Rule violates the due process clause of the Fifth Amendment to the U.S. Constitution by assessing penalties with no development of a factual record about whether the transmission provider did anything wrong.'').

[602] *Id.* at 9 (citing Order No. 2023, 184 FERC ¶ 61,054 at P 993).

[603] *Id.* (asserting that the Commission has well-established standards for tariff waivers but has not been clear that the traditional waiver standards apply).

[604] NYISO Rehearing Request at 32–33 (noting that due process requirements dictate fair and proportionate penalties, rather than excessively punitive penalties) (citing *Enf't of Statutes, Ords., Rules & Reguls.,* 132 FERC ¶ 61,216, at P 222 (2008); *Enf't of Statutes, Reguls. & Ords.,* 123 FERC ¶ 61,156, at PP 50–71 (2008)).

not provide guidance as to what exactly a transmission provider must do to establish good cause for relief.[605]

344. WIRES states that the penalty structure adopted by Order No. 2023 is not just and reasonable because it is a strict liability approach that sanctions transmission providers for missing deadlines for reasons beyond the control of those providers.[606] WIRES asserts that strict liability for penalties can only reasonably be imposed if transmission providers have full control over the interconnection study process, but the Commission has acknowledged that this is not the case.[607]

345. NYTOs argue that the deadline and penalty structure, with the right to seek relief through an appeal, is vague and impermissibly presumes fault without conducting a *de novo* review of whether a penalty is warranted.[608] NYTOs claim that, in Order No. 2023, the Commission has reserved its discretion to uphold a penalty even in the absence of substantial evidence that a sanctioned transmission provider was at fault, and that the Commission will grant whatever relief it determines is appropriate.[609]

346. PJM argues that the Commission failed to adequately explain its refusal to adopt a structure in which transmission providers incur penalties only where a study delay is due to a factor that can be conclusively demonstrated to be within a transmission provider's control, and that it failed to show that this approach was consistent with due process.[610] PJM asserts that the appeals process is not just and reasonable and violates the constitutional guarantee of due process if it only provides due process ''to some extent.'' [611] PJM argues that ''[i]f a transmission provider knows it will be penalized for *any* delay in interconnection studies regardless of its role in the delays, and will have to appeal that penalty and demonstrate that the penalty imposed on it should not be assessed, *i.e.,* that it is guilty until it can prove its innocence, it might reasonably ask what deterrence or incentive purpose the penalty actually serves.'' [612]

347. Certain of the rehearing requests also assert that the appeals process set forth in Order No. 2023 is too vaguely defined. Avangrid refers to the appeal as a ''vaguely-defined waiver process.'' [613] MISO TOs assert that ''the appeals process is rife with ambiguity, making it unworkable and overly time-consuming'' and lacks detail on the process for an appeal, including the form and forum, whether interventions will be permitted, whether discovery will be allowed, and under what statutory provision the appeal is conducted.[614] NYISO asserts that the Commission did not indicate whether it would use fact-finding neutrals, paper hearing procedures, or some other method to conduct appeals of penalties, or how appeals would be further reviewed on rehearing or under the APA.[615] NYTOs state that the Commission failed to explain how the process will work, including whether—in assessing good cause—the Commission will apply the standard applicable to tariff waivers, the burdens of proof, how genuine issues of material fact will be adjudicated, clear standards for granting relief, and the parameters of the appeals process.[616]

348. A number of the rehearing requests assert that the Commission should have adopted exceptions to the assessment of penalties for failure to meet the required deadlines. Several of these rehearing requests challenge the Commission's decision not to provide an exception to such penalties for circumstances involving *force majeure*.[617] PacifiCorp argues, more broadly, that because study delays are often driven by third parties or factors beyond the control of transmission providers, the Commission should have adopted self-effectuating exemptions for study delays that are outside of a transmission provider's control.[618] In support, PacifiCorp contends that failing to provide such exemptions ''(1) ignores the frequency at which delays are caused by third parties and; (2) mistakenly assumes: (a) transmission providers can take actions to mitigate delays caused by third parties, and (b) it is prudent for transmission providers to increase expenditures in an effort to offset causes for delays that are outside of their control.'' [619]

349. Indicated PJM TOs and NYTOs also take issue with the Commission's statement that appeals of penalties for missing study deadlines ''should not be filed under FPA section 206.'' [620] Indicated PJM TOs assert that, to the extent that the Commission intends to withhold the right to seek relief under FPA section 206, ''[t]he Commission cannot deprive any aggrieved party of the right to file a complaint under FPA section 206'' [621] or limit the scope of such challenges.[622] NYTOs state that ''the appeals process specified by the Order, which requires appeals to be

[622] *Id.* (''The scope of a challenge could not be limited by the factors the Commission identified as affecting a ''good cause'' determination, nor could it be limited to whether the transmission owner caused or contributed to the study delay.'').

pursued under the Commission's procedural rules and not under section 206, effectively imposes a mandatory waiver of transmission providers' statutory rights, which is contrary to law.'' [623]

350. Many of the rehearing requests argue that replacing the reasonable efforts standard with the deadline and penalty structure set forth in Order No. 2023 will have negative, unintended consequences. Avangrid contends that this structure will result in transmission providers focusing on ''processing speed and 'checking the boxes' specified in Order No. 2023 over providing flexibility and collaboration with interconnecting generators on challenging issues unique to their situations.'' [624] Indicated PJM TOs add that this structure will divert attention from optimal system planning.[625] MISO TOs and SPP emphasize that interconnection studies must be conducted with precision to avoid inefficiency or costly mistakes.[626] NYISO argues that this structure will incentivize transmission providers to prioritize meeting deadlines over ensuring the quality and completeness of studies and that inferior studies conducted under time pressure could lead to suboptimal results or negatively impact reliability.[627] WIRES further asserts that this structure will require transmission providers to take a more rigid approach to managing the interconnection queue, reducing flexibility to allow interconnection customers to redesign projects or modify their requests, and inhibit efforts to streamline the interconnection process.[628]

351. Certain rehearing requests assert that the deadline and penalty structure in Order No. 2023 will foster a combative atmosphere and discord, potentially leading to delays. Avangrid asserts that this structure incentivizes transmission providers to no longer use reasonable efforts to work with interconnection customers to fulfill the completeness of their application information and improve effectiveness, but instead declare interconnection customers in breach for delays and remove them from the interconnection process.[629] PJM asserts that the Commission failed to address arguments that this structure would undermine collaboration, with RTOs and transmission owners instead focusing on the need to simply protect against legal exposure.[630] Indicated PJM TOs assert that this structure will lead to acrimony—particularly in the regions where the interconnection queues are the longest—that will counter any efficiency gains.[631] SPP similarly argues that Order No. 2023 leaves open the question of how transmission providers would recover study delay penalties assessed to them, and could erode the working relationship of RTOs and the transmission owners in their footprint.[632]

352. Several of the rehearing requests argue that the deadline and penalty structure will create administrative or other burdens on transmission providers, which may be counterproductive because it will consume the same resources that would otherwise be used to perform interconnection studies. AEP argues that study delay penalties will overcomplicate the interconnection process and increase litigation, administrative burden, and costs.[633] MISO TOs, PacifiCorp, and SPP claim that imposing penalties on transmission providers will make it more difficult to complete studies in a timely fashion because such penalties will deprive them of funds that could be used for qualified engineering personnel, and pursuing an appeal will create administrative burdens.[634] PJM claims that the Commission failed to address difficulties in assigning fault for delays, which will likely lead to litigation.[635] PJM also argues that the penalty structure will add time consuming study and reporting requirements, including administration to track study metrics, pursue penalty appeals, and collect and disburse penalty amounts. Indicated PJM TOs assert that the burdens imposed by the deadline and penalty structure will further strain already scarce utility resources, given other industry trends that will likely increase transmission providers' workloads.[636]

353. Indicated PJM TOs also note that managing new study deadlines by deploying additional resources will come at a cost to transmission providers.[637] Indicated PJM TOs contend that the Commission failed to consider the extent of such costs and their impacts in Order No. 2023. Indicated PJM TOs also argue that the Commission failed to respond to the argument that the NOPR misrepresented statements by Utah Public Service Commission Chairman LeVar as providing support for study delay penalties.

354. Indicated PJM TOs and NYTOs assert that Order No. 2023's deadline and penalty structure will negatively affect transmission providers' own efforts at reforming the interconnection process.[638] Indicated PJM TOs claim that imposing this structure on regions that have already adopted cluster-study processes, but chose to retain the reasonable efforts standard, sends the message that their efforts to reach consensus as to appropriate reforms do not matter.[639] NYTOs assert that strictly enforcing deadlines and penalties, without exceptions, will hinder ongoing regional queue reform efforts, perhaps stifling innovation and necessary

[623] NYTOs Rehearing Request at 23 (citing *Atl. City Elec. Co.* v. *FERC,* 295 F.3d 1, 10 (D.C. Cir. 2002) (*Atl. City I*)); *see also id.* at 13.

changes to address circumstances applicable in each region.[640]

355. Dominion contends that the Commission failed to consider whether the study deposits assessed for interconnection studies would be sufficient to support the increased personnel costs required to complete those studies by the deadlines set forth in Order No. 2023.[641] Dominion further claims that there may be perverse incentives for interconnection customers to delay the completion of studies, given that customers can benefit from the penalty funds awarded to them, and Order No. 2023 does not penalize such customers for delays.

356. Certain of the rehearing requests also assert that the deadline and penalty structure set forth in Order No. 2023 is one-sided, and therefore unduly discriminatory or unjust and unreasonable, noting that interconnection customers (or other parties) are not subject to potential penalties for the role they may play in delayed interconnection studies.[642] Avangrid also contends that Order 2023's incentives are one-sided, with interconnecting generators having both ''carrot'' incentives (in the form of profits from having generation interconnected) and ''stick'' incentives, but transmission providers and transmission owners, who perform generator interconnection activities (often on a non-profit basis) are limited to avoiding the ''stick'' of a study delay penalty.[643] Indicated PJM TOs assert that the Commission's reasoning for declining to assess such penalties against interconnection customers—that transmission providers may deem non-compliant interconnection requests withdrawn—underestimates the difficulty of removing an interconnection customer that fails to meet deadlines from the queue, particularly given that customers may seek redress at the Commission.[644]

357. Avangrid, MISO TOs, and NYTOs assert that the assessment of penalties for failing to meet a study deadline without regard to fault is confiscatory, asserting that this renders the penalties regulatory takings in violation of the Takings Clause of the Constitution.[645] Avangrid and NYTOs further contend that the penalty framework may potentially deny recovery of costs incurred for interconnection studies performed using good utility practice.[646] MISO TOs assert that the penalty framework may require transmission providers to perform interconnection studies ''*for free,* simply if they miss a deadline.''[647]

(b) Determination

358. We disagree with the rehearing requests that argue that Order No. 2023's penalty structure is unjust and unreasonable, violates due process, or is otherwise inequitable because it is a ''strict liability'' structure that assigns penalties to transmission providers regardless of fault. To begin with, the imposition of standards of performance—namely, deadlines—on transmission providers to conduct interconnection studies was based on the need for reform to ensure the timely processing of such studies given the control that transmission providers exercise over the study process. Likewise, the deadlines were selected based on timeframes that, as a general matter, should be reasonably achievable for transmission providers under the *pro forma* LGIP process, including other reforms adopted in Order No. 2023. As a result, based on the record and the Commission's findings in this proceeding, we have concluded that a failure to meet these deadlines presumptively reflects that a transmission provider has failed to respond appropriately to the need for timely interconnection study processing such that a penalty is warranted in order to ensure just and reasonable rates. That penalty reduces what transmission providers can charge for interconnection studies that fail to meet the performance standards set forth in Order No. 2023.

359. Moreover, the characterization of this structure as ''strict liability'' is inaccurate because section 3.9(3) of the *pro forma* LGIP provides a robust framework for transmission providers to appeal any study delay penalties to the Commission. Under that framework, and unlike a ''strict liability'' regime, transmission providers can raise case-specific facts and circumstances for the Commission's consideration in determining whether there is good cause to grant relief from a penalty. The list of factors that the Commission set forth in Order No. 2023 reflects that transmission providers have the opportunity to demonstrate that a penalty for a late study is not warranted, including based on considerations of the transmission provider's conduct or lack of fault for any delay.[648] In fact, the Commission will consider affording relief based not just on the transmission provider's conduct in any particular study, but also their efforts to prevent future delays. This list of factors, while reflecting the considerations that the Commission deems most likely to be pertinent to establishing good cause for relief from a penalty, is also non-exhaustive such that transmission providers may raise, for the Commission's consideration, any other circumstances that they deem pertinent to a request for relief.[649] Any final Commission order finding that there is not good cause for relief from a penalty is subject to rehearing, as appropriate, and may also be subject to judicial review, pursuant to FPA section 313.[650]

360. Arguments in the rehearing requests that the deadline and penalty structure set forth in Order No. 2023

[640] NYTOs Rehearing Request at 27.

[641] Dominion Rehearing Request at 23–24 (''There is also no discussion in Order No. 2023 as to how cost recovery for these expenses would be recovered other than through the study deposits.''); *see also id.,* attach. A (Affidavit of James R. Bailey).

[642] *See* Avangrid Rehearing Request at 14; Indicated PJM TOs Rehearing Request at 27–29; *id.* at 29 (arguing that while modification of Order No. 2023 to subject interconnection customers to penalties is necessary, it would only complicate the process further and is an additional reason the penalty structure is not workable); MISO TOs Rehearing Request at 28–29; NYTOs Rehearing Request at 23–24.

[643] Avangrid Rehearing Request at 7.

[644] Indicated PJM TOs Rehearing Request at 28.

[645] Avangrid Rehearing Request at 16 (citing *FPC* v. *Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944) (*Hope*); *Ameren Servs. Co.* v. *FERC,* 880 F.3d 571, 580 (D.C. Cir. 2018) (*Ameren*)); MISO TOs Rehearing Request at 33–34; NYTOs Rehearing Request at 25–26.

[646] Avangrid Rehearing Request at 16; NYTOs Rehearing Request at 25–26 (''In properly balancing the interests of investors and consumers, the Commission is required to allow the public utility transmission provider to recover its reasonably incurred operating expenses.'' (citing *Hope,* 320 U.S. at 603; *Bluefield Water Works & Improvement Co.* v. *Pub. Serv. Comm'n of the State of W.Va.,* 262 U.S. 679, 690 (1923); *Ameren,* 880 F.3d at 580, 581–82, 584–85; *Jersey Cent. Power & Light Co.,* 810 F.2d 1168, 1175 (D.C. Cir. 1987) (*Jersey Cent.*)); *see also id.* at 28 (''penalties are shifted to transmission owner members of RTOs/ISOs without regard to fault, equity and the Takings Clause demand that the transmission owners should be allowed to recover such costs'').

[647] MISO TOs Rehearing Request at 33–34 (''The FPA does not permit the Commission to compel utilities to provide service to others for free.'' (citing *Ameren,* 880 F.3d at 582)).

[648] Order No. 2023, 184 FERC ¶ 61,054 at P 987 (''[T]he Commission may consider, among other factors: (1) extenuating circumstances outside the transmission provider's control, such as delays in affected system study results; (2) efforts of the transmission provider to mitigate delays; and (3) the extent to which the transmission provider has proposed process enhancements either in the stakeholder process or at the Commission to prevent future delays . . . .'').

[649] In this respect, the ''good cause'' standard allows the Commission to consider the totality of the circumstances resulting in any delay, as appropriate given the variety of facts and circumstances that may arise; balances competing interests while addressing concerns that the Commission provide for adequate due process and fact-finding; and will help avoid punitive results. *See id.* PP 987–89; *cf.* NYTOs Rehearing Request at 24 (arguing that the ''good cause'' standard is a novel standard that the Commission in Order No. 2023 failed to justify).

[650] 16 U.S.C. 825*l* (setting forth the procedures for a party aggrieved by an order issued by the Commission to obtain judicial review of such orders).

violates due process are not well developed, as they largely fail to address the governing legal standards,[651] or explain how Order No. 2023 is inconsistent with judicial or Commission precedent,[652] in this respect. Moreover, the Commission's adoption of the deadline and penalty structure in Order No. 2023 reflects an exercise of its ratemaking authority under FPA section 206, setting performance standards associated with the conduct of interconnection studies and financial consequences for the failure to meet those standards.[653] In this context, the Commission exercised its discretion to adopt an appeals process. Although commenters have not established what, if any, constitutional due process rights they might possess in this context, we need not reach this question. Rather, based on the arguments that have been presented and the record before us, we find that the deadline and penalty structure in Order No. 2023 does not violate any transmission providers' potential rights to due process and is just and reasonable.

361. In particular, even assuming *arguendo* that transmission providers have due process rights relating to the appeals process the Commission chose to adopt in Order No. 2023, the hallmarks of due process are fair notice and an opportunity to be heard.[654] Transmission providers have received fair notice and an extensive opportunity to be heard through this notice-and-comment rulemaking proceeding as to, among other things, the conduct that (absent an appeal demonstrating good cause for relief) will result in a penalty,[655] the amount of the potential penalty,[656] and the ability to seek relief from a penalty through the appeals process.[657] The appeals process provides a further opportunity, prior to any obligation to distribute an assessed study penalty,[658] for transmission providers to be heard regarding whether relief from a particular assessment of a penalty, on the facts of a given case, is warranted.[659] A party aggrieved by a Commission order addressing such an appeal—which order will state the Commission's reasoning for any denial of relief—has yet another opportunity to be heard by seeking rehearing of that order.

362. Transmission providers also have fair notice[660] of the factors that the Commission has concluded are most likely to be pertinent to demonstrating good cause for relief.[661] We disagree that the Commission must specify ''exactly'' what transmission providers must do to demonstrate good cause for relief or that failing to do so renders the appeal impermissibly vague or a ''moving target'' that offends due process. The Commission's decisions addressing appeals will also be subject to the standard requirements of administrative law regarding reasoned decision-making, including that the Commission develop a consistent body of precedent in considering such appeals and explain any deviation from that precedent in a reasoned fashion.[662]

363. Indeed, arguments speculating that the Commission might, in the appeals process, decline to afford relief where a transmission provider believes the facts warrant relief, are premature. Arguments that the Commission should or must grant relief from a penalty (such that failure to do so is arbitrary and capricious, violates due process, or is otherwise unlawful) can be raised in the context of the appeals process in a given case, rehearing, and—if appropriate—judicial review, where the particular facts of the case at issue have been developed.[663] The Commission is not at this time presented with determining, and declines to prejudge, whether any particular set of facts will necessarily warrant relief, as such considerations are best left to a case-by-case assessment.[664]

364. A number of the rehearing requests assert that the appeals process impermissibly places the burden of seeking relief from a penalty on the transmission provider, rather than requiring that the penalty be determined ''de novo'' before the Commission.[665] Here, too, the rehearing requests cite no legal authority supporting this argument that the appeals process, for this reason, is unjust and unreasonable, offends due process, or is otherwise unlawful. In Order No. 2023, the Commission determined, as a rulemaking and based on the record before it, that in the

[651] *See, e.g., Mathews* v. *Eldridge,* 424 U.S. 319 (1976) (*Mathews*).

[652] A limited exception is that certain of the rehearing requests contend that the Commission's approach is inconsistent with its enforcement policies. *See* NYISO Rehearing Request at 29–30; PJM Rehearing Request at 31; *infra* P 417 (explaining that those enforcement policies are not applicable in the ratemaking context).

[653] *See supra* section II.D.1.c; *infra* section II.D.1.c.iv.

[654] *Mathews,* 424 U.S. at 348–49 (''The essence of due process is the requirement that a person in jeopardy of serious loss (be given) notice of the case against him and opportunity to meet it. All that is necessary is that the procedures be tailored, in light of the decision to be made, to the capacities and circumstances of those who are to be heard to insure that they are given a meaningful opportunity to present their case.'' (citations and quotation marks omitted)).

[657] *See id.* P 987.

[658] *See id.* (''The filing of an appeal will stay the transmission providers' obligation to distribute the study delay penalty funds to interconnection customers until 45 calendar days after (1) the deadline for filing a rehearing request has ended, if no requests for rehearing of the Commission's decision or the appeal have been filed, or (2) the date that any requests for rehearing of the Commission's decision on the appeal are no longer pending before the Commission.'').

[659] *See Opp Cotton Mills, Inc.* v. *Adm'r of Wage & Hour Div.,* 312 U.S. 126, 152–53 (1941) (''The demands of due process do not require a hearing, at the initial stage or at any particular point or at more than one point in time in an administrative proceeding so long as the requisite hearing is held before the final order becomes effective.'').

[660] *See, e.g., Fed. Express Corp.* v. *U.S. Dep't of Com.,* 39 F.4th 756, 773 (D.C. Cir. 2022) (explaining that ''[t]he Due Process Clause's fair notice requirement generally requires only that the government make the requirements of the law public and afford the citizenry a reasonable opportunity to familiarize itself with its terms and to comply'' and that even trained lawyers may find it necessary to consult legal dictionaries, treatises, and precedent); *Ramsingh* v. *Transport. Sec. Admin.,* 40 F.4th 625, 636 (D.C. Cir. 2022) (''An enactment violates the Due Process Clause if it is so vague that it fails to give ordinary people fair notice of the conduct it punishes, or so standardless that it invites arbitrary enforcement.'' (quotation marks omitted)).

[661] Order No. 2023, 184 FERC ¶ 61,054 at P 987. Having set forth these factors as most likely to be pertinent to a showing of good cause, we do not intend to apply our traditional waiver factors and confirm that the appeals process, as a tariff-specified mechanism to seek relief from penalties, is distinct from seeking a waiver of a tariff provision. *See* PacifiCorp Rehearing Request at 9–10 (asserting that the Commission had not been clear as to whether such waiver standards would apply).

[662] *See, e.g., Fairless Energy, LLC* v. *FERC,* 77 F.4th 1140, 1147 (D.C. Cir. 2023) (agencies must generally conform to prior practice and decisions or explain the reasons for departure from precedent).

[663] *See, e.g., Ohio Forestry Ass'n, Inc.* v. *Sierra Club,* 523 U.S. 726, 732–33 (1998) (explaining that, in assessing whether an argument is ripe for resolution, courts consider ''(1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further administrative action; and (3) whether the courts would benefit from further factual development of the issues presented''); *Abbott Lab'ys* v. *Gardner,* 387 U.S. 136, 148–49 (1967) (explaining that the basic rationale the ripeness requirement ''is to prevent the courts, through avoidance of premature adjudication, from entangling themselves in abstract disagreements over administrative policies, and also to protect the agencies from judicial interference until an administrative decision has been formalized and its effects felt in a concrete way by the challenging parties'').

[664] *See N. Y. State Comm'n on Cable Television* v. *F.C.C.,* 749 F.2d 804, 815 (D.C. Cir. 1984) (''The decision whether to proceed by rulemaking or adjudication lies within the Commission's discretion'' (citing *N.L.R.B.* v. *Bell Aerospace Co. Div. of Textron,* 416 U.S. 267, 293 (1974))).

[665] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 989 (''We disagree with Indicated PJM TOs that a complete *de novo* review is needed to assess study delay penalties. We find that the good cause standard adopted in this final rule provides an adequate framework through which the Commission can evaluate whether it is appropriate to grant relief from any applicable penalties.'').

context of what constitutes a just and reasonable rate, failure to meet performance standards for the timely completion of interconnection studies warrants a penalty that effectively reduces what transmission providers can charge for interconnection studies that fail to meet those standards. The appeals process is a safeguard in which the transmission provider is the proponent of a requested order seeking relief from the penalty.[666] Requiring the transmission provider to demonstrate good cause for relief is also just and reasonable under the circumstances. The application of a penalty in defined amounts for failure to meet study deadlines, absent a showing of good cause for relief, helps to ensure that transmission providers are on notice of the instances when penalties apply and in what magnitude, and that they will take seriously the prospect of a penalty. Transmission providers are also the entities with the most control over, and most knowledge regarding, the conduct of the study process and the reasons that the process may be delayed, such that it is reasonable to put the burden on transmission providers to establish a basis for relief from a penalty.

365. Likewise, we are not persuaded by arguments that, because there are other factors that can contribute to interconnection study delays, the imposition of penalties on transmission providers, under the structure set forth in Order No. 2023, is not just and reasonable. We disagree that adopting performance standards and incentives, in the form of deadlines and penalties, in Order No. 2023 cannot be just and reasonable unless the Commission first addresses and removes every other variable that may influence the timely completion of interconnection studies. As discussed above, the existence of multiple factors that may delay interconnection studies is a consideration that favors taking a comprehensive approach to address the unjust and unreasonable rates resulting from interconnection queue backlogs. Having found that the reasonable efforts standard was failing to ensure adequate incentives for transmission providers for timely study completion, we have also found that imposing deadlines[667] subject to penalties for late interconnection studies—subject to appropriate safeguards[668]—will help ensure that transmission providers take the steps that are within their control to ensure study timeliness.

366. Arguments that the procedures for an appeal are too vaguely defined are not meritorious. The Commission has broad discretion as to procedural matters,[669] and we conclude that the exercise of that discretion on a case-by-case basis is appropriate, including because doing so will help avoid undue administrative burdens attendant to employing set procedures in appeals that may not require those procedures. Similarly, as to NYTO's argument that cases involving genuine disputes of material fact require hearing beyond evaluation of a written record,[670] the Commission can order such hearings in cases that require them. If parties believe that particular procedures in a given appeal are necessary or would be beneficial, they can so inform the Commission in the context of that case.[671]

367. We disagree with arguments that the Commission inappropriately discouraged transmission providers from filing appeals of study delay penalties under FPA section 206. Order No. 2023 only clarified that, when a transmission provider that conducts interconnection studies appeals study delay penalties incurred automatically under 18 CFR 35.28(f)(1)(ii) or § 3.9 of the *pro forma* LGIP, that appeal should not be filed under FPA section 206.[672] The appeals process supplements, rather than diminishes, the transmission provider's ability to make a section 206 filing. To the extent that commenters are concerned about the ability of a transmission owner to challenge a penalty assigned to it by a transmission provider,[673] we note that nothing in Order No. 2023 prevents any entity from protesting a transmission providers' FPA section 205 filing that seeks to assign penalties or seeks to create a default structure for recovery of penalty costs. Nor does Order No. 2023 prevent any entity from challenging a transmission provider's assignment of study delay penalties to that entity under FPA section 206. Nothing in Order No. 2023 prevents any entity from exercising any statutory filing rights.

368. We also disagree with NYTOs' suggestion that the requirement for transmission providers to pursue appeals under the Commission's procedural rules and not under FPA section 206 ''effectively imposes a mandatory waiver of transmission providers' statutory rights, which is contrary to law.'' [674] The Commission did not foreclose transmission providers' abilities to exercise their statutory rights, but rather provided the appeals process as the avenue for transmission providers to seek relief under the just and reasonable tariff process established by Order No. 2023, applying the ''good cause'' standard, which provides more flexibility and is more favorable to transmission providers than requiring them to show that the penalty would be ''unjust and unreasonable'' under FPA section 206. Because Order No. 2023 provided a specific tariff-based mechanism for appeals, the filing of such appeals under FPA section 206 is unnecessary.[675]

369. We sustain the decision, in Order No. 2023, not to create generic exceptions for study delay penalties or to exempt transmission providers from such penalties in cases where they assert that *force majeure* applies, for the reasons articulated in Order No. 2023.[676] In further support, we find that creating ''self-effectuating'' exceptions

[666] *See, e.g.,* 5 U.S.C. 556(d) (''Except as otherwise provided by statute, the proponent of a rule or order has the burden of proof.''). Similarly, under FPA sections 205 and 206, the burden of proof typically rests with the proponent of a Commission order. *See* 16 U.S.C. 824e(b); *FirstEnergy Serv. Co.* v. *FERC,* 758 F.3d 346, 353 (D.C. Cir. 2014); *Midwest Indep. Transmission Sys. Operator, Inc.,* 148 FERC ¶ 61,206, at P 51 (2014).

[667] *See supra* section II.D.1.c.i (explaining why the selected deadlines are just and reasonable).

[668] *See supra* PP 359, 361 (explaining, *inter alia,* that the appeal process is a safeguard to address considerations relevant to individual cases that may warrant relief).

[669] *See Vt. Yankee,* 435 U.S. at 524–25 (agencies have broad discretion over the formulation of their procedures); *Mich. Pub. Power Agency* v. *FERC,* 963 F.2d 1574, 1578–79 (D.C. Cir. 1992) (the Commission has discretion to mold its procedures to the exigencies of the particular case); *Woolen Mill Assoc.* v. *FERC,* 917 F.2d 589, 592 (D.C. Cir. 1990) (the decision as to whether to conduct an evidentiary hearing is in the Commission's discretion).

[670] *See* NYTO Rehearing Request at 24 n.67.

[671] Similar to our reasoning above, *see supra* P 363, arguments contending that a particular procedure may be required in a particular case are premature.

[672] Order No. 2023, 184 FERC ¶ 61,054 at PP 963, 987 n.1911.

[673] Indicated PJM TOs Rehearing Request at 26 (''transmission owners should be entitled to challenge the propriety or size of the penalty amount assigned to it either 'automatically' or by a transmission provider as an unjust, unreasonable, or unduly discriminatory rate based on grounds of its own choosing.).

[674] NYTOs Rehearing Request at 23 (citing *Atl. City I,* 295 F.3d at 10).

[675] Transmission providers have initiated complaints under FPA section 206 alleging that their own tariff provisions are unjust and unreasonable, but this procedure is generally used when there is no other mechanism by which a transmission provider could change or challenge such tariff provisions. For example, PJM has initiated FPA section 206 complaints regarding its own Operating Agreement because it does not have FPA section 205 filing authority to file market rule changes to the Operating Agreement without supermajority stakeholder approval. *See, e.g.,* PJM Intra-PJM Tariffs, § 8.4, OA § 8.4 (Manner of Acting) (1.0.0); *PJM Interconnection, L.L.C.,* 180 FERC ¶ 61,051, at PP 8–9 (2022).

[676] *See* Order No. 2023, 184 FERC ¶ 61,054 at PP 1003, 1019, 1024 (explaining that transmission providers could raise these issues in an appeal). For the same reasons, we deny NYTO's request for clarification on this point.

to penalties where a delay is caused by factors outside of the control of the transmission provider is not a preferable approach to the appeals process, particularly given that there may be disputes as to whether and to what extent a delay was within a transmission provider's control. Creating an exemption for circumstances of *force majeure* is an example of this problem, as there may be disputes as to whether the declaration of *force majeure* was valid or the extent to which a delay is attributable to the alleged *force majeure.* The appeals process is a just and reasonable approach to addressing these issues.

370. MISO TOs' argument that strict liability under tort law is only imposed in circumstances involving very dangerous activities is not persuasive. As discussed above,[677] the adoption of a deadline and penalty structure in Order No. 2023 is supported by the record in this case and does not reflect a ''strict liability'' approach that is analogous to these tort law regimes. Nor did the Commission rely on tort law governing hazardous activities to support Order No. 2023.[678]

371. We disagree with arguments that Order No. 2023 created a strict liability structure. The portion of Order No. 2023 quoted by NYISO's request for rehearing in this respect [679] was addressing the ability to appeal—the mechanism through which transmission providers' responsibility for delay in individual cases can be assessed.[680] We have already explained, in both Order No. 2023 and herein, why the presumptive imposition of penalties on transmission providers should they fail to meet their study deadlines, with a subsequent evaluation of whether relief is warranted in a particular case, reflects reasoned decision-making and is a just and reasonable approach.

372. We also disagree with arguments that Order No. 2023's implementation of a study delay penalty structure is unjust and unreasonable, or unduly discriminatory or preferential, because it limits the assessment of penalties for late studies to transmission providers rather than also extending them to other entities—including interconnection customers—that may contribute to delays of interconnection studies. We similarly disagree with claims that Order No. 2023's incentives are impermissibly one-sided. Interconnection customers and transmission providers are not similarly situated with respect to the conduct of interconnection studies: transmission providers control and are responsible for the conduct of those studies, while other entities, including interconnection customers, generally are not.[681] Moreover, transmission providers are further differently situated from interconnection customers because interconnection customers already are subject to significant incentives to avoid delaying the study process that transmission providers do not face. These include interconnection customers' interest in achieving timely commercial operation of their facilities, that failure to meet their obligations in the interconnection process may result in their interconnection requests being deemed withdrawn,[682] and that they may be subject to withdrawal penalties.[683] The adoption of a penalty structure for transmission providers that fail to meet the study timeframes set by Order No. 2023 reflects, in part, that transmission providers lacked adequate incentives to ensure study timeliness and the role they can play in ensuring the timeliness of interconnection study processes.[684] It further reflects that the value of interconnection studies depends in part on their timely completion and, therefore, that it is reasonable that transmission providers may recover less for these studies where they are delayed without good cause.[685] Thus, we disagree that we must apply the study delay penalties set by Order No. 2023 to these other entities.

373. We are also not persuaded by arguments that under Order No. 2023's deadline and penalty structure, interconnection customers are incentivized to affirmatively delay the completion of interconnection studies. As explained in Order No. 2023, the economic harms to the interconnection customer of delayed study completion significantly outweigh any incentive to delay the interconnection process.[686] Moreover, the appeals process available to transmission providers undermines any incentive for strategic delay on the part of interconnection customers because it provides an opportunity for transmission providers to argue for relief from penalties, including because delays were caused by factors beyond their control, such as the actions of interconnection customers. And even if a transmission provider is subject to a penalty, those amounts will be distributed among all the interconnection customers included in the relevant study that did not withdraw, which further reduces the purported incentive for any individual interconnection customer to cause delays, as they will not receive the entirety of any penalty assessed to the transmission provider.

374. Many of the rehearing requests contend that the study deadline and penalty structure under Order No. 2023 will have certain negative consequences. As explained below, we continue to find this structure to be just and reasonable, notwithstanding these arguments. In many cases we disagree that these purported negative consequences will manifest and, to the extent there may be such consequences, we continue to find that Order No. 2023's deadline and penalty structure is just and reasonable.

375. The Commission in Order No. 2023 concluded that there is not an inherent trade-off between firm study deadlines with study delay penalties

[677] *See supra* PP 358–359.

[678] *Cf.* Order No. 2023, 184 FERC ¶ 61,054 at PP 1001, 1013, 1015 (discussing Commission precedent for the approach in Order No. 2023 including traffic ticket penalties and penalties under Order No. 890); *infra* section II.D.1.c.v (same); *infra* section II.D.1.c.iv (discussing Order No. 2023 as an application of the Commission's ratemaking authority).

[679] *See* NYISO Rehearing Request at 29–30.

[680] Order No. 2023, 184 FERC ¶ 61,054 at P 989. The Commission was particularly explaining that it would be inappropriate to adopt a structure providing for penalties ''only where a factor can be conclusively demonstrated to be within a transmission provider's control, as this would impose significant administrative burden.'' *Id.*

[681] *See, e.g., Ark. Elec. Energy Consumers* v. *FERC,* 290 F.3d 362, 367 (D.C. Cir. 2002) (''A rate is not 'unduly' preferential or 'unreasonably' discriminatory if the utility can justify the disparate effect.''); *Cities of Bethany* v. *FERC,* 727 F.2d 1131, 1139 (D.C. Cir. 1984) (*Cities of Bethany*); *El Paso Nat. Gas Co.,* 104 FERC ¶ 61,045, at P 115 (2003) (''Discrimination is undue when there is a difference in rates or services among similarly situated customers that is not justified by some legitimate factor.'').

[682] Being deemed withdrawn from the interconnection queue carries significant consequences for an interconnection customer, and—while the interconnection customer may dispute that decision—loss of queue position occurs automatically after a failure to cure (if an opportunity to cure is allowed) and lasts ''until such time that the outcome of Dispute Resolution would restore its Queue Position.'' *Pro forma* LGIP section 3.7. We are therefore not persuaded by Indicated PJM TOs' suggestion that this will not be a significant consideration discouraging interconnection customers from delaying interconnection studies. *See* Indicated PJM TOs Rehearing Request at 28.

[683] *See, e.g.,* Order No. 2023, 184 FERC ¶ 61,054 at PP 37, 43, 50, 780–84, 1020; *pro forma* LGIP section 3.7.

[684] *See* Order No. 2023, 184 FERC ¶ 61,054 at PP 50, 968, 972.

[685] *See id.* P 972 (''The study delay penalty structure adopted in this final rule balances the harm to interconnection customers of interconnection study delays and the associated need to incentivize transmission providers to timely complete interconnection studies with the burdens on transmission providers of conducting interconnection studies and potentially facing penalties for delays, including those that may be caused or exacerbated by factors beyond their control.'').

[686] *Id.* P 1020.

versus ''interconnection study flexibility and accuracy, as well as system reliability.'' [687] As explained in Order No. 2023, we are not persuaded by arguments on rehearing that such deadlines and penalties will necessarily incentivize speed and meeting deadlines over accuracy, with deleterious results. These arguments present a false dichotomy between the accuracy of interconnection studies and their timely completion,[688] fail to give appropriate weight to the reliability and economic risks associated with failure to timely interconnect new generating facilities,[689] and fail to consider the safeguards adopted in the deadline and penalty structure that allow transmission providers avenues of relief from the strict application of study deadlines.[690]

376. We are also not persuaded that Order No. 2023's deadline and penalty structure will foster a combative atmosphere, potentially increasing delays. As noted above, the interconnection process is one that has generally been characterized by cooperation.[691] Interconnection customers and transmission providers—who are all generally professional and sophisticated parties—share a reciprocal interest in the smooth functioning of the interconnection process. While it is possible that, in some cases, the increased accountability on transmission providers for timely interconnection study completion may mean that transmission providers are less inclined to accede to interconnection customer actions that may delay the study process, we find that—given the need to ensure timely interconnection study completion to ensure just and reasonable rates—this possibility is an acceptable consequence of Order No. 2023.[692] Indeed, it reflects that transmission providers can use the knowledge and control they have with respect to the study process to ensure that individual interconnection customers are not allowed to unduly delay the overall study process.[693] As to claims that the deadline and penalty structure may motivate transmission providers, including RTOs/ISOs and transmission owners, to focus on the need to protect against exposure to penalties and undermine constructive collaboration among them, the principal way for these entities to minimize that exposure will be to endeavor to complete interconnection studies in a timely fashion, which is the purpose of the deadline and penalty structure. In this respect, the interests of RTOs/ISOs and transmission owners will be aligned, and we expect that Order No. 2023 will not undermine the incentives for cooperation among RTOs/ISOs and transmission owners.

377. Several of the rehearing requests contend that adoption of interconnection study deadlines and penalties, with an appeals process, will divert resources that would otherwise be used for interconnection studies. We sustain the Commission's rejection of these arguments, for the reasons already stated in Order No. 2023.[694] We particularly note that it is not the case that the funds used to pay for penalties (or to appeal such penalties) necessarily must be diverted from those used to perform interconnection studies.[695] Indeed, although we do not prejudge the facts of any particular case, it would not appear to be generally rational or appropriate for a transmission provider to respond to the assessment of a penalty for a late interconnection study by diverting significant resources from future interconnection studies in a way that will increase the likelihood that it will incur additional penalties.

378. Similarly, while several rehearing requests contend that managing deadlines and penalties, as well as the appeals process, may create burdens on transmission providers, we conclude that—particularly given the need for replacement of the reasonable efforts standard with a standard that will better ensure the timeliness of interconnection study completion—the deadline and penalty structure is just and reasonable notwithstanding such burdens. Here, too, we do not believe it would be rational or appropriate for a transmission provider to divert significant resources from the timely completion of interconnection studies to the appeals process. As stated above, when considering appeals the Commission intends to exercise its discretion as to procedural matters on a case-by-case basis, which will help reduce the burdens attendant to pursuing an appeal.[696] Moreover, many alternative mechanisms directed toward ensuring study timeliness would consume transmission provider resources to explain why they are not responsible for study delays, and likewise invite arguments from other entities addressing such responsibility, but would have lesser utility in responding to the problem of interconnection queue backlogs.[697] In addition, the amounts of the penalties [698] are not so large that we expect that transmission providers will unduly divert large amounts of resources to an appeal of penalties, particularly those assessed for relatively short delays.[699] While the administrative appeals process may draw protests, *e.g.,* by interconnection customers, resulting in litigation, filing those protests and engaging in such litigation will also consume resources for the filing parties and any penalty funds assessed to the transmission provider will be allocated among the relevant interconnection customers.

[687] *Id.* P 1007.

[688] *See id.* (''We reiterate that it is within transmission providers' ability to improve interconnection study processes and policies and take other measures, such as hiring additional staff, to efficiently process interconnection queues without sacrificing accuracy, flexibility, or reliability.''); *id.* (also noting that transmission providers can recover increased costs of interconnection studies); *see also supra* section II.D.1.c.i (explaining that the deadlines selected for the completion of interconnection studies are just and reasonable).

[689] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 1007 (''[W]e further agree that the failure to bring new generating facilities online in a timely manner can also create reliability and economic risk.'').

[690] *See id.* (''[T]he study delay penalty structure includes significant safeguards for the transmission provider, such as the transition period, the 10-business day grace period, the penalty cap, the ability to extend deadlines by mutual agreement, and the ability to appeal any study delay penalties to the Commission.''); *id.* P 1005 (''If, for whatever reason, the transmission provider is not able to meet firm study deadlines, that is an issue the transmission provider is free to raise in appealing any penalties it incurs.'').

[691] *See supra* P 335.

[692] The various safeguards attendant to the deadline and penalty structure should also limit the likelihood that transmission providers feel constrained to take an unduly stringent response to reasonable interconnection customer requests.

[693] In this respect, the adoption of a deadline and penalty structure for transmission providers to ensure timely study completion may translate into increased accountability for interconnection customers not to delay the study process.

[694] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 1005; *see also id.* P 1007 (noting that the costs of timely completing interconnection studies are ultimately borne by interconnection customers)

[695] *See, id.* P 992 (noting that at-fault transmission provider's shareholders may pay the penalty).

[696] *See supra* P 366.

[697] *See infra* PP 429–430 (discussing why the Commission found that differences between deadline and penalty structure under Order No. 2023 and the structure under Order No. 890 were warranted).

[698] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 962 (''[D]elays of cluster studies beyond the tariff-specified deadline will incur a penalty of $1,000 per business day; delays of cluster restudies beyond the tariff-specified deadline will incur a penalty of $2,000 per business day; delays of affected system studies beyond the tariff-specified deadline will incur a penalty of $2,000 per business day; and delays of facilities studies beyond the tariff-specified deadline will incur a penalty of $2,500 per business day.'').

[699] The 10-day grace period also helps to address concerns that, for relatively short delays leading to minor penalties, transmission providers may wish to forego the burdens of seeking such an appeal. *See* NYTOs Rehearing Request at 27. It is, of course, up to transmission providers to manage their resources and determine whether taking an appeal of a minor penalty is in their best interest.

This decreases the incentive to file protests in cases where delays are small and penalty amounts are low or where there is not a genuine, credible dispute as to where responsibility for a delay of an interconnection study properly resides.[700] We conclude that the burdens that Order No. 2023 places on transmission providers do not render the rule unjust and unreasonable.

379. While Dominion argues that higher study deposits may be necessary to address increased personnel costs resulting from the penalty regime, Dominion fails to acknowledge that the Commission has already significantly increased the required study deposits for interconnection customers in Order No. 2023,[701] and that study costs exceeding study deposits can be recovered from interconnection customers.[702] We are therefore not persuaded by this argument.

380. We do not agree with Indicated PJM TOs' contention that adopting a structure of deadlines and penalties for regions that have already adopted a cluster study process sends a message that their stakeholder processes do not matter. That the Commission found, in generic proceedings, that a suite of reforms to its *pro forma* LGIP and *pro forma* LGIA approach to interconnection were necessary to ensure just and reasonable rates does not reflect any disparagement of an individual entity's or region's efforts at similar reforms, such as the adoption of cluster studies. The Commission has found that adoption of a cluster study approach is such a just and reasonable reform, but that additional reforms are also necessary. Adopting Indicated PJM TOs' contrary view in this case would—in effect—be to conclude that the Commission should have adopted a self-imposed limit on acting through a generic proceeding out of deference to stakeholder processes that have resulted in only a partial solution to the problem at hand, contrary to the Commission's FPA section 206 authority and obligation to ensure just and reasonable rates.[703]

381. We are further not convinced by NYTOs' claim that if Order No. 2023's deadlines and penalties are strictly enforced without exceptions (such as demonstration of compliance with Good Utility Practice or the presence of *force majeure*), it will hinder ongoing regional queue reform initiatives. This argument is conclusory and unexplained as to why strict application of deadlines and penalties without such exceptions would have this alleged effect.[704] Regardless, Order No. 2023 does not provide for an unduly inflexible approach by allowing for numerous flexibilities including the appeals process, as explained above.

382. We are not persuaded by PJM's claim that under Order No. 2023 transmission providers will incur penalties on a strict liability basis, reducing their deterrence and incentive effects. As already discussed, Order No. 2023 does not adopt a ''strict liability'' approach to penalties.[705] More fundamentally, PJM fails to explain why a penalty as a presumptive matter, based on objective conduct, that is then subject to an appeal, would reduce the incentive to avoid triggering the penalty.[706] Indeed, PJM's argument here appears circular: in support of its claim that the penalty structure in Order No. 2023 will reduce the deterrence and incentive effects of a penalty, PJM offers nothing more than a characterization of that structure and assertion that this structure will cause transmission providers to question the deterrence or incentive purpose of the penalty.

383. NYISO also claims that the Commission increased penalty levels from the levels proposed by the NOPR without sufficient explanation. It asserts that the example the Commission provided in support of doing so—explaining that, under the NOPR approach, a full six months of study delay (roughly 126 business days) would result in an estimated penalty of only $63,000[707]—does not support this result or show that the penalties adopted in Order No. 2023 will be non-punitive.[708] We sustain the Commission's determination to increase the study delay penalties as specified in Order No. 2023.[709] This example reflects that, under the NOPR penalty amount, a transmission provider that takes roughly twice as long as allowed to perform a cluster study would incur a relatively modest penalty,[710] which we find would not provide an appropriate incentive to spur the investments or allocation of resources necessary to facilitate timely study completion, or strike an appropriate balance between transmission provider and interconnection customer interests.[711] One point of comparison supporting this conclusion is to consider that a single proposed 250 MW generating facility is required to tender $755,000 (*i.e.,* a $5,000 application fee, a $250,000 study deposit, and a $500,000 commercial readiness deposit in cash or as an irrevocable a letter of credit) to enter the study process under the Commission's *pro forma* LGIP.[712] That facility must then progressively increase its investment in the process through increasing deposits, study costs, and potential withdrawal penalties, not to mention the dedication of resources to develop the project and shepherd it through the interconnection process.[713]

[700] We are also not persuaded by PacifiCorp's suggestion that the appeals process is not workable because ''it is highly likely that appeals will be filed faster and more frequently than the Commission can process them,'' PacifiCorp Rehearing Request at 12, which is founded on speculation that transmission providers will frequently fail to meet their deadlines leading to such appeals, and that such appeals will be onerous to process.

[701] *See pro forma* LGIP section 3.1.1.1. To the extent that study deposits must be further increased, beyond these levels, the Commission can consider that going forward, including in response to compliance proposals or—if necessary—further reforms to the *pro forma* LGIP.

[702] Order No. 2023, 184 FERC ¶ 61,054 at P 1007; *see also, e.g., pro forma* LGIP sections 7.1, 8.1, 9.4, 13.3, app. 2 at section 6, app. 7 at section 7, app. 8 at sections 7–8, app. 9 at section 6, app. 10 at section 6.

[703] This argument also overlooks transmission providers' ability to propose alternative reforms, as informed by their stakeholder processes, under the ''consistent with or superior to'' or ''independent entity variation'' standards, as applicable. *See* Order No. 2023, 184 FERC ¶ 61,054 at P 1764.

[704] *Cf. id.* P 967 (''The reasonable efforts standard worsens current-day challenges, as it fails to ensure that transmission providers are keeping pace with the changing and complex dynamics of today's interconnection queues.'').

[705] *See supra* PP –360. Indeed, PJM acknowledges that transmission providers have the ability to ''demonstrate that the penalty imposed on it should not be assessed.'' PJM Rehearing Request at 31.

[706] The economically rational response to a potential penalty, even one that is presumptively applied subject to an appeal, is to take the steps necessary to avoid or reduce the penalty, to the extent that the cost of taking such steps is lower than the expected value of the reduction in the amount of the penalty.

[707] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 975.

[708] NYISO Rehearing Request at 37 (arguing that this does not demonstrate that the Commission has set non-punitive penalty levels, particularly as applied to RTOs/ISOs).

[709] *See* Order No. 2023, 184 FERC ¶ 61,054 at PP 973–78.

[710] *Cf., e.g., pro forma* LGIP section 3.1.1.1 (specify study deposit amounts for each interconnection request).

[711] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 975 (''We view such a penalty as insufficient considering that the purpose of the penalty is to incentivize timely study completion that may be achieved, for example, by hiring additional personnel or investing in new software.''); *cf., e.g., EPSA,* 577 U.S. at 295 (ratemaking involves both technical understanding and policy judgment); *Cities of Bethany,* 727 F.2d at 1138 (explaining that because ''ratemaking is less of a science than it is an art'' such that ''substantial deference'' to the Commission's expert judgment is warranted (citing *Alabama Elec. Co-op., Inc.* v. *FERC,* 684 F.2d 20, 27 (D.C. Cir. 1982)).

[712] *See pro forma* LGIP section 3.1.1.1 (requiring $5,000 application fee and a $250,000 study deposit for interconnection requests greater than or equal to 200 MW) and section 3.4.2(vi) (requiring a commercial readiness deposit of twice the study deposit).

[713] *See, e.g., pro forma* LGIP sections 7.5(1)(b), 8.1(3), 11.3 (requiring adjustments to commercial readiness deposits to equal an increasing percentage

Continued

Viewed in this context, we disagree that the revised penalty amounts are punitive on their own, and they are particularly not punitive when considered in light of the safeguards [714] provided and avenues for RTO/ISO penalty cost recovery.

384. We disagree with Indicated PJM TOs' and Dominion's contentions that the penalty and deadline framework is unduly discriminatory, citing the uneven distribution of interconnection requests among transmission providers, such that some transmission providers may face a heightened risk of penalties as compared to other transmission providers. At the outset, given the structure of Order No. 2023—under which we have imposed deadlines that should be reasonably achievable, replaced the serial study process with cluster studies, and afforded several safeguards, including the appeals process [715]—it is not necessarily the case that some transmission providers will be more likely to have to pay penalties than others based on the uneven distribution of interconnection requests. Moreover, transmission providers may propose variations from the requirements of Order No. 2023, under the applicable standard, which provides a further vehicle to ensure that the late study deadline and penalty structure does not unduly burden certain transmission providers as compared to others.

385. But even accepting, *arguendo,* the premise of this argument that such disparate outcomes might occur, we disagree that this would necessarily render Order No. 2023's penalty structure unduly discriminatory. The increased possibility for penalties to be assessed in regions facing higher volumes of interconnection requests necessarily results from the increased likelihood of delayed results in those regions. That, however, correspondingly reflects in an increased need in these regions to ensure timely processing of those requests.[716] Thus, any increased possibility of penalties in those regions is a just and reasonable and not unduly discriminatory result.[717]

386. We reject arguments from Avangrid, MISO TOs, and NYTOs that incurring a penalty for failure to meet an interconnection study deadline is confiscatory, compelling transmission providers to provide service while not allowing them to recover their costs,[718] because these arguments were not raised in the comments received in response to the NOPR but have instead been raised for the first time on rehearing. We typically reject arguments raised for the first time on rehearing, unless those arguments could not have been previously presented, *e.g.,* claims based on information that only recently became available or concerns prompted by a change in material circumstances.[719] Commenters had the opportunity to argue that the study deadline and penalty structure is confiscatory in response to the NOPR but did not do so. We find that these arguments are, therefore, not properly before us.[720]

387. Even had these arguments been properly raised, these arguments would also be premature because they depend on speculative assertions that the result of applying penalties to transmission providers will be confiscatory.[721] For a transmission provider to establish this premise will necessarily depend on the facts of each individual case. Transmission providers will have the opportunity to argue on appeal that there is good cause to grant relief from the penalty, for example, because delays in completing interconnection studies were due to factors beyond their control

of interconnection customer's assigned network upgrade cost as the customer progresses through the interconnection process); section 13.3 (requiring the interconnection customer to pay for interconnection study costs); and section 3.7.1 (unless certain exemptions apply, requiring interconnection customer that withdraws from the interconnection process to pay a withdrawal penalty that increases as the customer progresses through the interconnection process).

[714] Order No. 2023, 184 FERC ¶ 61,054 at P 976 (''Based on the record before us, we believe the $1,000/$2,000/$2,500 per business day penalty structure, combined with the transition, grace period, cap on penalties, and ability to appeal that we adopt below, strikes an appropriate balance because it creates an incentive for transmission providers to meet study deadlines while not being overly punitive.'').

[715] Dominion and Indicated PJM TOs' arguments also presuppose that, in any appeal, the Commission would find there is not good cause for relief from penalties, on the facts of the relevant case. That the Commission can consider the individualized factors in a particular case to determine whether to grant relief from penalties is another avenue to ensure that undue discrimination does not occur.

[716] Similarly, where transmission providers are facing comparatively high volumes of interconnection requests in a given cluster study, there are more interconnection customers who will face uncertainty and increased costs due to any delays.

[717] *See, e.g., AEMA,* 860 F.3d at 670–71 (''The law provides no basis to claim the Commission cannot approve uniform performance requirements simply because those requirements will be easier to satisfy for some generators than for others. . . . Using an annual performance standard is a reflection of the Commission's policy judgment as to the level of capacity performance the market requires, not an undue privileging of one resource's costs over another's.''); *BP Energy Co.* v. *FERC,* 828 F.3d 959, 967 (D.C. Cir. 2016) (''No undue discrimination exists where there is 'a rational basis for treating [two entities] differently' and such differential treatment is 'based on relevant, significant facts which are explained.'' (quoting *Complex Consol. Edison Co. of N.Y., Inc.* v. *FERC,* 165 F.3d 992, 1012–13 (D.C. Cir. 1999))); *Town of Norwood, Mass.* v. *FERC,* 202 F.3d 393, 402 (1st Cir. 2000) (explaining that ''differential treatment does not necessarily amount to *undue* preference where the difference in treatment can be explained by some factor deemed acceptable by the regulators (and the courts)'' (emphasis in original) (citing *Cities of Newark* v. *FERC,* 763 F.2d 533, 546 (3d Cir. 1985))).

[718] Although Avangrid and NYTOs assert that study delay penalties are ''regulatory takings,'' their arguments focus on the purportedly confiscatory nature of the study delay penalties and they do not otherwise argue that the penalties are regulatory takings under the relevant legal standard. *See, e.g., N. Y. Indep. Sys. Operator, Inc.,* 151 FERC ¶ 61,075, 61,534, at PP 64–67 (2015) (discussing the three-factor test to determine whether an action constitutes a regulatory taking under *Penn Cent. Transport. Co.* v. *City of New York,* which requires consideration of ''[t]he economic impact of the regulation on the claimant and, particularly, the extent to which the regulation has interfered with distinct investment-backed expectations;'' and ''the character of the governmental action.'' 438 U.S. 104, 123 (1978)).

[719] *See Ala. Power Co.,* 179 FERC ¶ 61,128, at P 15 (2022); *KEI (Me.) Power Mgmt. (III) LLC,* 173 FERC ¶ 61,069, at P 38 n.77 (2020); *Tex. E. Transmission, LP,* 141 FERC ¶ 61,043, at P 19 (2012) (''We do so because (1) our regulations preclude other parties from responding to a request for rehearing and (2) such behavior is disruptive to the administrative process because it has the effect of moving the target for parties seeking a final administrative decision.'' (quotation marks omitted)); *Calpine Oneta Power* v. *Am. Elec. Power Serv. Corp.,* 114 FERC ¶ 61,030, at P 7 (2006); *Iroquois Gas Transmission Sys., L.P.,* 86 FERC ¶ 61,261, at 61,949 (1999)); *Ocean State Power II,* 69 FERC ¶ 61,146, at 61,548 (1994); *NO Gas Pipeline,* 756 F.3d at 770 (''We finally note that Jersey City's alleged constitutional claim of actual bias is also barred as untimely. Jersey City has shown us nothing of record to establish that it raised this issue before FERC's issuance of the initial order.''); *see also* 18 CFR 385.713(c)(3) (providing that any request for rehearing must ''[s]et forth the matters relied upon by the party requesting rehearing, if rehearing is sought based on matters not available for consideration by the Commission at the time of the final decision or final order.'').

[720] *See U.S.* v. *L. A. Tucker Truck Lines, Inc.,* 344 U.S. 33, 37 (1952) (''Simple fairness to those who are engaged in the tasks of administration, and to litigants, requires as a general rule that courts should not topple over administrative decisions unless the administrative body not only has erred but has erred against objection made at the time appropriate under its practice.''); *cf. Reytblatt* v. *U.S. Nuclear Regul. Comm'n,* 105 F.3d 715, 723 (D.C. Cir. 1997) (agencies are not required to respond to untimely comments).

[721] *See* Avangrid Rehearing Request at 16 (similarly arguing that penalties that ''potentially denies recovery of reasonable costs incurred for interconnection studies performed according to Good Utility Practice''); MISO TOs Rehearing Request at 33–34 (arguing that ''[t]he FPA does not permit the Commission to compel utilities to provide service to others for free'' and that applying a penalty in a ''strict liability'' fashion to transmission providers ''when the fault is not theirs'' is particularly problematic); NYTOs Rehearing Request at 25–26 (arguing that penalties will be ''confiscatory'' because transmission providers may not be provided ''cost recovery plus a reasonable return on prudent investment'' such that the imposition of penalties will ''conscript public utility transmission providers into performing services without just and reasonable compensation'').

and that, as a result, they should be entitled to recovery of their costs of performing such studies; and that failure to allow such recovery would be confiscatory.

388. In the alternative, even if we were to consider these arguments as properly raised as a procedural matter and ripe for consideration at this time, we would reject them. While transmission providers have historically recovered the full costs of interconnection studies from interconnection customers, the structure adopted in Order No. 2023 reflects a different approach under which the amount transmission providers can charge for such studies will be effectively reduced if transmission providers fail to meet the relevant deadlines.[722] As the Supreme Court explained in *FPC* v. *Hope Natural Gas Co.,* ratemaking involves ''a balancing of the investor and the consumer interests,'' [723] under which regulated utilities are generally entitled to a reasonable opportunity to recover their prudently incurred costs, but are not guaranteed such cost recovery.[724]

389. Order No. 2023's deadline and penalty structure reflects this balancing of interests, providing a reasonable opportunity for cost recovery dependent on the transmission provider's performance in providing the service at issue. It allows the opportunity for full cost recovery for the conduct of interconnection studies, should transmission providers meet the relevant standards of performance (deadlines) for the timely conduct of those studies. Should transmission providers fail to meet those standards, the penalties reduce the compensation available, consistent with interconnection customers' interests in the timely completion of those studies and the extent to which delays in the completion of those studies contribute to interconnection queue backlogs, resulting in unjust and unreasonable rates to consumers. Even then, however, transmission providers may still obtain relief from penalties through the appeals process, including by arguing that factors outside of their control rather than their own conduct caused the delay, further confirming their reasonable opportunity to recover their costs.[725] Avangrid, MISO TOs, and NYTOs do not demonstrate that the deadline and penalty structure under Order No. 2023 is confiscatory.

iii. RTO/ISO Issues

(a) Requests for Rehearing

390. Several parties on rehearing raise challenges to the Commission's treatment of RTOs/ISOs under the deadline and penalty structure. NYISO asserts that imposing penalties on RTOs/ISOs is inappropriate because such penalties will be disproportionate or ineffective, and may pose an existential risk to RTOs/ISOs given their non-profit nature, lack of shareholders, and the risk that they will be denied recovery of their costs.[726] NYISO argues that Commission precedent prevents passing penalty costs to customers, but RTOs/ISOs lack shareholders to absorb the costs such that penalties pose an existential risk—and that the Commission arbitrarily and capriciously dismissed these concerns.[727] NYISO claims that the ability to make FPA section 205 filings to recover costs associated with penalties (whether through individual filings or a default structure) does not eliminate the risk that penalties pose, because such proposals will likely be contested and may be rejected.[728] NYISO also observes that Order No. 2023 ''asserts for the first time that RTOs/ISOs actually are authorized to pay penalty costs, seemingly without first making any kind of section 205 filing, by using funds that are not related to transmission services,'' but claims that the Commission ignores that any funds collected by RTOs/ISOs must come from market participants.[729] NYISO asserts that it is not clear why the Commission would allow recovery of penalty costs automatically from non-transmission charges but require FPA section 205 filings to recover costs from transmission customers.[730] NYISO also claims it is unduly discriminatory to subject them to the same penalty regime as traditional transmission providers.[731]

391. AEP argues that the Commission's approach to penalties as applied to RTOs/ISOs—providing that the transmission owner responsible for conducting a late study in an RTO/ISO will directly incur the penalty and allowing recovery of penalty costs incurred by RTOs/ISOs through FPA section 205 filings—underestimates the complexity of assigning fault for study delays.[732] AEP argues that assigning fault for study delays is not a straightforward proposition in RTOs/ISOs, noting the collaborative nature of the study process and citing an example from a recent SPP informational report that identified multiple drivers of delays, at least two of which were outside of SPP's control. AEP argues that the Commission failed to justify the imposition of administrative and litigative burdens on RTOs and ISOs related to assigning fault for delays to the completion of interconnection studies.[733] AEP also contends that the Commission appears to have restricted the appeal process to the party that conducts the interconnection study, such that other contributors to fault—to whom the RTO/ISO assigns some portion of the penalty—may be unable to appeal.[734] In addition, AEP argues that, at a minimum, the Commission should reconsider who has standing to appeal penalties under the Order No. 2023 procedures and broaden the

[722] For the reasons provided herein and in Order No. 2023, we find that this approach, under which transmission providers will be held to appropriate performance standards and incentivized to complete studies in a timely fashion, is permitted under FPA section 206, *see supra* section II.D.1.c; *infra* section II.D.1.c.iv, is just and reasonable, and reflects a preferable policy approach in light of the gravity of the problem of interconnection queue delays and backlogs.

[723] *Hope*320 U.S. at 603; *see also Jersey Cent.,* 810 F.2d at 1177–78. *Hope* interpreted the Natural Gas Act, whereas the instant proceedings concern the FPA. Nevertheless, ''courts rely interchangeably on cases construing each of these Acts when interpreting the other,'' including the standards articulated by the Court in *Hope. See Jersey Cent.,* 810 F.2d at 1175.

[724] *See Hope,* 320 U.S. at 603 (ratemaking does not guarantee that the regulated utility will produce net revenues).

[725] The arguments that Order No. 2023 is confiscatory or works a regulatory taking also depend on claims that the penalty structure set forth in Order No. 2023 is ''strict liability'' or that the deadlines selected for the completion of studies are ''unjustified and arbitrary.'' *See* Avangrid Rehearing Request at 16; MISO TOs Rehearing Request at 33*e.* As explained above, these arguments are not meritorious. *See supra* section II.D.1.c.i; PP 359–360.

[726] NYISO Rehearing Request at 17–18 (asserting that this penalty structure as applied to RTOs/ISOs is ''unjust, unreasonable, unduly discriminatory, and violative of due process, and would impede the Commission's policy goals'').

[727] *Id.* at 21–23 (arguing that NYISO and similarly-situated RTOs/ISOs cannot pay penalties without recovering costs from customers in some form and that being denied permission to recover such costs could threaten their financial viability).

[728] *Id.* at 23–24 (noting that in *N.Y. Indep. Sys. Operator, Inc.,* 127 FERC ¶ 61,196, at P 36 (2009), the Commission indicated that Commission review serves as a check on NYISO's ability to pass through a penalty and that denial of relief or other appropriate action is a possibility).

[729] *Id.* at 25.

[730] *Id.* at 25–26 (noting that NYISO anticipates that there will be objections to allowing automatic recovery via non-transmission related charges, such that recovery through this avenue is also not guaranteed).

[731] *Id.* at 38–39 (arguing that ''the same penalties are harsher when applied to the RTO/ISO'' because of potential uncertainties around the ability of RTOs/ISOs to recover penalty costs and the risks penalties pose to RTOs/ISOs).

[732] AEP Rehearing Request at 17–19.

[733] *Id.* at 18–19 (arguing that imposing such burdens is particularly unwarranted because the record does not support that penalties will reduce delays and if penalties are not assigned to the right entity, penalties cannot constitute an effective incentive).

[734] *Id.* at 19–20 (citing Order No. 2023, 184 FERC ¶ 61,054 at P 963).

standard to include parties taking part in the study process that are not tasked with conducting a study.

392. As to the direct assignment of study delay penalties, Indicated PJM TOs contend that penalties cannot be automatically assigned in this fashion and the Commission is incorrect to suggest that such assignment could occur with little to no factfinding.[735] Indicated PJM TOs assert that, to the extent that the Commission intends to assign the penalty only to the singular entity that performed the study, it is not clear how the penalty would be assigned if the study is primarily executed by the RTO/ISO but also depends on a collaborative effort between the RTO/ISO and transmission owners. On the other hand, they argue that, to the extent the Commission intends that penalties be directly assigned to the entity with the ''most control'' over the study (or allocated proportionately based on the level of control or responsibility for the delay), significant factfinding will be required, given the collaborative nature of the process. Indicated PJM TOs also note that interconnection customers may be responsible for delays, reinforcing the need for a factual analysis to determine which entity had ''more control'' over a study and caused or contributed to the study delay.[736] In addition, Indicated PJM TOs assert that Order No. 2023 empowers RTOs/ISOs to determine a transmission owner's responsibility for study delay penalties, such that RTOs/ISOs will have incentives to blame transmission owners for delays, rather than assigning fault to themselves or mitigating delays, and forcing transmission owners to appeal penalties.[737] Furthermore, they argue that the Commission cannot delegate to third parties (*i.e.,* RTOs/ISOs) the obligation to ensure the justness and reasonableness of rates.[738]

393. MISO TOs also contend that, in providing for the direct assignment of penalties where the transmission-owning members of an RTO/ISO perform interconnection studies, the Commission failed to consider the complexity of the study process and how fault for delays can rest with more than one entity.[739] They argue that, in the RTO context, both the RTO and transmission owner perform critical tasks for the completion of studies and factors outside of their control may cause delays.

394. NYISO claims that the automatic assignment of penalties to transmission-owning members of RTOs/ISOs for studies that they conduct is not a reasoned solution to how penalties should apply to RTOs/ISOs, likewise citing the complexities of how the study process works in practice and collaborative nature of that process.[740] NYISO argues that allocating responsibility for delays will be highly subjective and contentious, leading to adversarial postures and undermining necessary cooperation. NYISO further argues that if ''transmission owners bear 100% of the penalty for any study that they have any involvement with then there will foreseeably be transmission owner challenges to every penalty assignment'' and that assigning penalties to transmission owners ''only to the extent that they contributed to a missed deadline'' will require a determination of relative responsibility.[741]

395. Dominion also questions the automatic allocation of the penalty for missing deadlines to the transmission owner versus the RTO/ISO.[742] Pointing to the collaborative nature of the study process in PJM, Dominion challenges the Commission's blanket assumption that the interconnection transmission owner conducting the study has the most control over the study.

396. A number of the rehearing requests assert that the deadline and penalty structure does not impose proper or effective incentives on RTOs/ISOs. Avangrid asserts that the Commission failed to establish how this structure would incentivize RTOs/ISOs to meet fixed deadlines, but rather ''asks the non-profit transmission provider to propose how it would penalize itself.'' [743] NYSPSC argues that the Commission failed to explain how, given the mechanisms it discussed for RTOs/ISOs to recover the costs of penalties, RTOs/ISOs will be subject to an incentive to meet the study deadlines set in Order No. 2023, asserting that if RTOs/ISOs can pass-through penalty costs to market participants they will be indifferent to those penalties.[744] NYTOs argue that allowing RTOs/ISOs to avoid penalty costs ''contradicts the intended incentive, making the penalty ineffective and therefore arbitrary and capricious.'' [745] Avangrid also notes that allowing RTOs/ISOs to collect penalties from market participants ''provides no financial motivation to the ISO to change behavior to meet deadlines, as the ISO would merely be passing along the penalty costs to others.'' [746]

397. Avangrid, NYISO, NYSPC, and NYTOs assert that RTOs/ISOs may attempt to recover the cost of penalties in a manner that is not consistent with principles of cost causation or is otherwise unjust and unreasonable. Avangrid argues that allowing RTOs/ISOs to collect penalties from market participants violates cost causation principles and expresses concerns that RTOs/ISOs may attempt to allocate 100% of the penalty to a transmission owner that contributes to a delay in only a minor fashion, particularly if the RTO/ISO has no other way to recover the penalty costs. NYISO argues that RTOs/ISOs must recover costs associated with a penalty regime from their customers, and that penalties would simply punish customers that have nothing to do with missed deadlines.[747] NYSPSC contends that it is unjust and unreasonable to allow RTOs/ISOs to seek to recover the costs associated with penalties from administrative fees charged to market participants, as these are beyond the costs necessary to provide electric service to customers and should not be borne by them.[748] NYTOs claim that ''passing penalties to transmission owner members of RTOs/ISOs when those providers are not responsible for a delay violates cost causation and is not just and reasonable.'' [749]

398. NYISO argues that that it was unlawful for the Commission in Order No. 2023 to not further address the question of how RTOs/ISOs will recover the costs of study delay penalties that are not automatically imposed on a transmission-owning member, asserting that this question was raised in comments, acknowledged by the Commission, and is central to Order No. 2023's penalty regime.[750] Similarly,

[742] Dominion Rehearing Request at 25.

[743] Avangrid Rehearing Request at 6 (noting that the Commission indicated that RTOs/ISOs could submit FPA section 205 filings).

[744] NYSPSC Rehearing Request at 6–8 (arguing the Commission recognized, for non-RTO/ISO transmission providers and transmission-owning members of RTOs/ISOs, the need to have ''skin in the game'' by making shareholders accountable and urging the Commission to consider other mechanisms to incentivize RTOs/ISOs).

[745] NYTOs Rehearing Request at 28 (citing *Garcia* v. *U.S. Bd. of Parole,* 409 F. Supp. 1230, 1239 (N.D. Ill. 1976)).

[746] Avangrid Rehearing Request at 6–7.

[747] NYISO Rehearing Request at 18.

[748] NYSPC Rehearing Request at 8–9.

[749] NYTOs Rehearing Request at 28.

[750] NYISO Rehearing Request at 19–20 (''The Commission should not defer the question to future section 205 or penalty appeal proceedings. It must resolve the problem now.'').

Dominion asserts that the Commission has not articulated a sensible approach to RTO/ISO penalty costs that is supported by substantial evidence in the first instance, but is instead inappropriately deferring the issue to future RTO/ISO filings to propose a penalty allocation structure.[751]

399. MISO argues that Order No. 2023 should be revised to provide that RTOs are not required to pay any penalties until there is a Commission accepted mechanism to collect such penalties—and that the Commission failed to respond to comments raising this concern in a reasoned fashion.[752] MISO notes that the Commission recognizes that RTOs have no ability to pay study delay penalties without collecting them from another party and asserts that, until there is a mechanism in place to collect the funds to pay study delay penalties in RTOS, the RTOs may lack the authority and funds to collect and pay the penalties. However, MISO also notes that section 3.9 of the *pro forma* LGIP provides for distribution of penalties no later than 45 calendar days after the late study has been completed or 45 calendar days after the completion of any appeal and rehearing of the penalty.

(b) Determination

400. As an initial matter, we disagree with arguments that applying the penalty regime to RTOs/ISOs is inappropriate or unduly discriminatory because RTOs/ISOs do not have shareholders or guaranteed means of absorbing penalty costs whereas non-RTO/ISO transmission providers do. We believe that it would be inappropriate to categorically exempt RTOs/ISOs from the study delay penalties adopted in Order No. 2023.[753] RTOs/ISOs manage interconnection queues and process interconnection studies like non-RTO transmission providers. The available evidence indicates that study delays are just as significant a problem in RTOs/ISOs as non-RTO/ISO regions.[754] RTOs/ISOs, just like non-RTOs, are facing increases in interconnection queue size, study duration, and length of time interconnection customers are spending in the queue.[755] As noted above, Order No. 2023 explained the gravity of the national problem of interconnection queue backlogs,[756] and we continue to believe that this is a dire problem that requires nationally implemented solutions.

401. Moreover, while we agree that there are differences between RTOs/ISOs and non-RTO transmission providers, we conclude that the penalty regime adopted in Order No. 2023 sufficiently accounts for the differences. First, in RTOs/ISOs, where an interconnection study is performed by a transmission-owning member of the RTO/ISO (as is often the case for facilities studies), under Order No. 2023 the penalty for missing a study deadline is incurred by that transmission-owning member, not the RTO/ISO.[757] Second, as to penalties that are incurred directly by the RTO/ISO, the RTO/ISO is permitted to seek cost recovery of penalty costs from their transmission-owning members or other market participants, whereas non-RTO/ISO transmission providers are not. Additionally, RTOs/ISOs, as well as non-RTOs, can appeal the imposition of penalties in specific instances. In light of these avenues for an RTO/ISO to avoid or reduce the prospect that it is responsible for payment of a penalty, we find that any residual uncertainty as to an RTO/ISO's ability to recover penalty costs is outweighed by the critical need for all transmission providers, including RTOs/ISOs, to process interconnection studies in a timely manner. Furthermore, particularly given that the daily amount of the penalties is not punitive and that the penalties will be capped, we do not view the possibility that RTOs/ISOs may face some uncertainty in recovering penalty costs as an existential threat.

402. We are not persuaded by the following arguments to eliminate or modify the penalty regime: (1) RTOs/ISOs will not be incentivized to meet study deadlines; (2) the complexity of studies in RTOs/ISOs may lead to inappropriate assignment of cost responsibility; or (3) where RTOs/ISOs have dispute resolution processes, these procedures may delay assignment of fault. We continue to find that allowing RTOs/ISOs to recover penalty costs is warranted because RTOs/ISOs are differently situated than non-RTO transmission providers in terms of their ability to bear penalty costs, as RTOs/ISOs are non-profit entities and do not have shareholders. Therefore, it is appropriate for RTOs/ISOs to be permitted to seek to recover the cost of penalties they incur. We disagree that this structure will not incentivize RTOs/ISOs to mitigate study delays. Comments on the NOPR explained that RTOs/ISOs have good reason to try to avoid collecting penalty costs from their transmission-owning members, as that could create tension between RTOs/ISOs and their transmission-owning members.[758] RTO/ISOs have an interest in limiting unnecessary charges to their member transmission owners or other market participants because the case for participating in RTO/ISOs, which remains voluntary and subject to state law, is founded on the increased efficiencies and cost-savings of RTO/ISO membership. If RTO/ISOs ignore opportunities within their control to eliminate or reduce the risk of incurring penalties, they erode these benefits.

403. As a result, the record indicates that RTOs/ISOs will be incentivized to avoid incurring penalties in the first instance. And to the extent that an RTO/ISO does incur a penalty cost, it will be incentivized to appeal that penalty, where appropriate, to avoid the need to collect that penalty cost. For these reasons, we find that the incentive structure created by Order No. 2023 will function as the Commission contemplated, helping to ensure just and reasonable rates.

404. In response to the argument that assigning penalties directly to the transmission owner that conducted the study is complicated because of the collaboration between the RTO and its transmission-owning members, we note that penalties will only be directly assigned to the applicable transmission owner within an RTO/ISO where there is an identifiable transmission-owning member who is formally responsible for conducting the applicable study. In other words, even where there is collaboration between entities, it is only if the transmission-owning member is the formally designated ''lead'' of the process that the transmission-owning member will directly incur the study delay penalty. To contrast, where there is no identifiable transmission-owning member that is formally responsible for leading the interconnection study, the penalty will be incurred by the RTO/ISO itself.

405. We decline to implement MISO's suggestion that Order No. 2023 be revised to provide that RTOs/ISOs should not be required to pay any penalties until there is a Commission-accepted mechanism to recover such penalties. Order No. 2023 provides that RTOs/ISOs may—but are not required to—submit section 205 filings to propose cost recovery mechanisms to recover the costs of penalties they

[758] *See id.* P 921; OPSI Initial Comments at 9.

incur.[759] Revising the penalty structure as MISO suggests would leave open the possibility that RTOs/ISOs could avoid the penalty regime altogether by simply not proposing any cost recovery mechanism. Additionally, Order No. 2023 notes that RTOs/ISOs have multiple options for collecting necessary funds, and that one of these options is to submit an FPA section 205 filing after-the-fact to assign the cost of a specific study delay penalty. MISO's suggested revision is inconsistent with that potential avenue for cost recovery.

406. We find speculative arguments that RTOs/ISOs may attempt to recover penalties in a manner inconsistent with cost causation. RTOs/ISOs may propose under FPA section 205 either a default structure for recovering penalty costs or file section 205 proceedings to recover the costs of individual penalty costs. We will not prejudge those filings. Any arguments that those hypothetical proposals might violate cost causation principles are best addressed in the context of the specific proposal and should be raised in those FPA section 205 proceedings.

407. We disagree with arguments that it is unlawful for the Commission to defer resolution of how RTOs/ISOs can recover penalties to future section 205 filings. In Order No. 2023, the Commission responded to comments on the penalty regime as it relates to RTOs/ISOs by identifying potential avenues for RTOs/ISOs to recover penalties and modifying the NOPR proposal where appropriate.[760] We do not believe that it is unlawful to allow section 205 filings to implement specific details of this regime. We further disagree that the particulars of how RTOs/ISOs recover penalty costs are integral to this rulemaking, which is focused on the overarching penalty structure that will apply nationwide. The specifics of RTO/ISO cost recovery will be highly fact dependent based on regional tariff variations. We continue to believe that it is appropriate to address cost recovery issues in individual proceedings that can take into account the variations in tariffs in each RTO/ISO region.

iv. Statutory Authority To Implement a Study Delay Penalty Structure Under FPA Section 206

(a) Requests for Rehearing

408. Certain of the rehearing requests challenge the Commission's authority to adopt the deadline and penalty structure set forth in Order No. 2023 and/or contend that it is contrary to or not supported by Commission precedent. NYTOs and PacifiCorp claim that the penalty structure is *ultra vires* because the Commission's civil penalty authority resides in FPA sections 316[761] and 316A,[762] and that the Commission is impermissibly reading such authority into section 206, which contains no civil penalty authority.[763] PacifiCorp argues that the Commission is attempting to ''get around due process and other limits on its civil penalty authority by claiming it is only engaged in a rate-setting exercise'' but ''[a] civil penalty is a civil penalty.'' [764] NYTOs also assert that, under the Commission's policy statements on enforcement and compliance, penalties are meted out for wrongdoing or misconduct.[765] Thus, NYTOs claim, the Commission cannot adopt a structure in which transmission providers will incur penalties where the willful and knowing *mens rea* requirement is absent, or where the transmission provider is not at fault for a study delay.

409. PJM asserts that the study delay penalty structure violates FPA section 315 [766] because that section governs forfeitures for willful failures to comply with a Commission order, rule, or regulation or timely file a required report, and requires that such forfeitures be remitted to the United States Treasury.[767] PJM concedes that RTO tariffs, including its own, and other tariffs contain various penalty provisions; however, PJM attempts to differentiate these provisions by asserting that here, the Commission is imposing a mandate on transmission providers to include such a provision in their tariffs involuntarily, calling it a penalty, and using the compliance process to bypass the penalty provisions that Congress established in section 315 of the FPA.

410. AEP asserts that the penalty structure set forth in Order No. 2023 is unlawful because it constitutes monetary damages—defraying the study costs of the interconnection customers affected by a delay—and the Commission lacks authority to grant such damages.[768] AEP also contends that the Commission's decision to adopt a penalty structure for late studies is contrary to precedent, including Order No. 2003 and Order No. 845, in which the Commission rejected proposed requirements to impose liquidated damages or automatic penalties if a transmission provider failed to meet deadlines.[769]

(b) Determination

411. We are not convinced by PacifiCorp's, NYTOs', or PJM's arguments that the Commission lacked authority to implement Order No. 2023's performance standard and incentive structure by relying on deadlines and penalties because, they argue, the Commission's civil penalty authority resides exclusively in certain provisions of the FPA. To begin with, these arguments were not raised prior to rehearing, as required by the Commission's Rule of Practice and Procedure 713(c)(3).[770] Here, because the NOPR proposed the elimination of the reasonable efforts standard and its replacement with a materially similar penalty structure to that adopted in Order No. 2023,[771] nothing precluded commenters from raising these arguments prior to the issuance of Order No. 2023—yet they did not do so. Thus, here too, these arguments are not properly before us.

412. Regardless, even considering these arguments on their substance, we find that they are not meritorious. As discussed above, the deadline and penalty structure adopted in Order No. 2023 reflects an exercise of the Commission's authority under FPA section 206, consistent with its longstanding regulation of the interconnection process.[772] PJM, NYTOs, and PacifiCorp fail to acknowledge this authority or precedent. Instead, they view FPA sections 315, 316, and 316A's grant of

[772] *See supra* section II.D.1.c.

authority to assess a particular kind of monetary sanction—a civil penalty pursuant to statutorily-granted enforcement authority—as necessarily reflecting an across-the-board restriction of the Commission's other authority, including its FPA section 206 ratemaking authority. For instance, NYTOs cite the Supreme Court's decision in *Kokesh* v. *SEC* as standing for the proposition that ''government-assessed penalties are 'for the purpose of punishment, and to deter others from offending in like manner,' '' [773] while PacifiCorp asserts that ''a civil penalty is a civil penalty.'' [774] These arguments fail to recognize that not all monetary sanctions, even when labeled as penalties, are civil penalties and that monetary sanctions can serve different purposes, have different structures, and flow from different sources of authority.

413. The Supreme Court's decision in *Kokesh* [775] supports our conclusion that the fact that a financial sanction is assessed for conduct—here, failure to complete a study by the required deadline—does not render it a civil penalty of the sort that conflicts with or exceeds Congress's enactment of statutory civil penalty authorities in the FPA. In *Kokesh,* the Supreme Court differentiated between penalties, even those expressly labeled as ''penal,'' that are imposed as punishment versus other pecuniary sanctions. It explained that this inquiry turned on whether (1) the wrong sought to be redressed is a wrong to the public (an offense committed against the State) or a wrong to the individual and (2) whether it was imposed for the purpose of punishment and to deter others from offending in like manner, as opposed to compensating a victim for a loss.[776] Similarly, in *Meeker* v. *Lehigh Valley Railroad Company,* the Court held that an order by the Interstate Commerce Commission, which directed a railroad company to refund and pay damages to a shipping company for excessive shipping rates, was not imposing a penalty for purposes of the statute of limitations, given that the payment was to redress a private injury, rather than punitive.[777] Here, Order No. 2023 implemented a system of deadlines and penalties for late studies not to redress a wrong to the public, as under FPA sections 315, 316, and 316A, or to punish, but instead to effectively adjust what transmission providers can charge based on study timeliness.

414. Specifically, Order No. 2023's deadline and penalty structure was adopted to define substantive terms of the commercial relationship between particular parties—transmission providers and interconnection customers—in the Commission-jurisdictional context of regulating interconnection, ensuring just and reasonable rates, and avoiding degradation of service.[778] The Commission in Order No. 2023 did not invoke a need to punish or to label transmission providers as wrongdoers as a rationale for its action and, in fact, stated that it was ''not finding that transmission providers have necessarily acted in bad faith.'' [779] The Commission established safeguards to avoid punitive results, including the cap on penalties [780] and the appeals process.[781] The appeals process also takes into account the broader economic effects of regulating this interaction between interconnection customers and transmission providers by ensuring that transmission providers are not held to unduly strict standards that could result in economically inefficient outcomes or unjust and unreasonable rates.[782] Likewise, and contrary to PJM's claim that the failure to remit the penalties under Order No. 2023 to the Treasury demonstrates that these penalties are beyond the Commission's authority, the fact that the penalties are disbursed to interconnection customers distinguishes them from the sort of sanctions addressed in *Kokesh* and authorized in FPA sections 315, 316, and 316A.[783] And, as the Commission recognized, delayed interconnection studies impose financial harm on interconnection customers,[784] reinforcing that the penalties under Order No. 2023 help to ensure that the transmission provider is compensated for performing interconnection studies based on whether it achieves (or the extent that it fails to achieve) performance standards relating to the timeliness of those studies.[785]

415. Thus, and consistent with our broad discretion in determining how to ensure just and reasonable rates,[786] we continue to find that the study delay penalty structure implemented in Order No. 2023 is an appropriate exercise of our authority under FPA section 206. Likewise, we also are not persuaded by related arguments asserting that the study delay penalty structure is

[773] NYTOs Rehearing Request at 22–23 n.60 (quoting *Kokesh,* 581 U.S. at 461); *see also id.* at 22–23 nn. 56, 61 (citing *Cal. Indep. Sys. Operator Corp.* v. *FERC,* 372 F.3d 395, 398 (D.C. Cir. 1996) (the Commission cannot do indirectly what it could not do directly)).

[774] PacifiCorp Rehearing Request at 11.

[775] In *Kokesh,* the Court considered whether the general statute of limitations applicable for ''action, suit or proceeding for the enforcement of any civil fine, penalty, or forfeiture, pecuniary or otherwise,'' 28 U.S.C. 2462, applied to claims for disgorgement as a sanction for violating a federal securities law. 581 U.S. at 457.

[776] *Id.* at 461 (quoting *Huntington* v. *Attrill,* 146 U.S. 657, 667 (1892)).

[777] 236 U.S. 412, 423 (1915) (''The words 'penalty or forfeiture' in this section refer to something imposed in a punitive way for an infraction of a public law, and do not include a liability imposed solely for the purpose of redressing a private injury, even though the wrongful act be a public offense, and punishable as such. Here the liability sought to be enforced was not punitive, but strictly remedial . . . .'').

[778] *See supra* section II.D.1.c (explaining that the penalty structure reflects how the interconnection relationship may impact overall rates for consumers and the costs to interconnection customers of late studies, in terms of defining the charges transmission providers may assess for such studies as a function of their timeliness); *Kokesh,* 581 U.S. at 463 (explaining that one factor that favored concluding that disgorgement was a penalty falling within 28 U.S.C. 2462 was that the SEC was acting to protect the public interest, writ large, rather than standing in the shoes of particular parties, reflecting that the violation for which the remedy was sought was committed against the United States, rather than aggrieved individuals); *cf. Oneok, Inc.* v. *Learjet, Inc.,* 575 U.S. 373, 385 (2015) (discussing, in the context of preemption, the importance of looking to the aim of an initiative in assessing whether it crosses a jurisdictional boundary).

[779] Order No. 2023, 184 FERC ¶ 61,054 at P 966; *see Gabelli* v. *SEC.,* 568 U.S. 442, 451–52 (2013).

[780] *See Kokesh,* 581 U.S. at 466–67 (finding it significant that disgorgement sometimes exceeds the profits gained as the result of a violation, in rejecting an argument that disgorgement was remedial rather than punitive); *cf. also Liu* v. *Sec. & Exch. Comm'n,* 140 S. Ct. 1936, 1940, 1947 (2020) (holding that ''a disgorgement award that does not exceed a wrongdoer's net profits and is awarded for victims is equitable relief permissible under [15 U.S.C. 78u(d)(5)]'').

[781] *See* Order No. 2023, 184 FERC ¶ 61,054 at PP 875, 972, 984–85.

[782] *Cf. id.* P 1003 (noting that the appeals process is an avenue to account for delays beyond a transmission provider's control, such as those due to *force majeure,* which could excuse a failure to perform at a particular standard).

[783] *Kokesh,* 581 U.S. at 464–65 (explaining that in many cases SEC disgorgement is not compensatory, because disgorged profits are not necessarily paid to investors but rather paid to the district court and may ultimately be paid to the Treasury); *see also id.* at 462–63.

[784] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 971.

[785] *Cf. Kokesh,* 581 U.S. at 462–63 (discussing cases in which liability was found to remedy private wrongs, with payments made to the party suffering the injury, as essentially compensatory not imposing penalties).

[786] *See, e.g., Morgan Stanley Cap. Grp. Inc.* v. *Pub. Util. Dist. No. 1 of Snohomish Cnty., Wash.,* 554 U.S. 527, 532 (2008) (explaining that the just and reasonable standard is ''obviously incapable of precise definition'' such that the Commission is afforded ''great deference'' in its rate decisions); *Mobil Oil Expl. & Producing Se. Inc.* v. *United Distrib. Cos.,* 498 U.S. 211, 214 (1991) (explaining that the just and reasonable standard, ''far from binding the Commission . . . accords it broad ratemaking authority'' and does not compel a particular approach); *MISO Transmission Owners* v. *FERC,* 45 F.4th at 261 (''FERC is entitled to adopt any methodology it believes will help it ensure that rates are just and reasonable, so long as it doesn't adopt that methodology in an arbitrary and capricious manner.'') (citing *S. Cal. Edison Co.* v. *FERC,* 717 F.3d 177, 182 (D.C. Cir. 2013)).

otherwise in tension with the civil penalty provisions in the FPA or contradicts the Commission's policies on enforcement.

416. For instance, PJM argues that, in contrast to other tariff penalty provisions adopted pursuant to FPA section 205, the Commission in Order No. 2023 ''impos[ed] a mandate on transmission providers to include such a provision in their tariffs involuntarily,'' thereby bypassing the penalty provision in FPA section 315.[787] As just discussed, the study delay penalty structure does not bypass any penalty provisions of the FPA but, instead, was adopted pursuant to the Commission's independent ratemaking authority. Moreover, PJM fails to explain its assertion that the scope of permissible tariff mechanisms to ensure such rates are just and reasonable should substantially differ between FPA sections 205 and 206.[788] We do not find this argument supported by the statute, particularly given that a purpose of section 206 is to allow the Commission to replace, by its own initiative, rates that may have resulted from section 205 filings but have since become unjust and unreasonable.

417. We are also not persuaded by NYTO's reliance on the Commission's policy statements in the enforcement context.[789] These policy statements are not directed toward the study delay penalty structure set forth in Order No. 2023 as an exercise of the Commission's authority under FPA section 206, but instead address how the Commission will consider civil penalties and other remedies pursuant to its separate enforcement authorities granted under other sections of the FPA. As to similar arguments by MISO TOs, PJM, and NYISO asserting that the study delay penalty structure set forth in Order No. 2023 is in tension with Commission policy in enforcement cases,[790] the study delay penalty structure adopted in Order No. 2023 is not an implementation of the Commission's enforcement authority under FPA sections 315, 316, or 316A. Moreover, and contrary to these arguments, the Commission has adopted appropriate mechanisms to ensure that the study delay penalty structure is not punitive and can account for the facts of particular cases, as discussed above.

418. We disagree with PacifiCorp's claim that the Commission erred in Order No. 2023 because it failed to address a comment questioning whether a violation of the study deadlines giving rise to penalties under Order No. 2023 could also be treated as a tariff violation under the FPA. As an invocation of the Commission's ratemaking authority under section 206, Order No. 2023 did not address or invoke the Commission's civil enforcement authority, practices, or policies. The Commission may consider whether a particular failure to meet a study deadline meets the statutory, regulatory, and policy considerations to constitute a tariff violation warranting enforcement action in an appropriate case, on the facts presented. Attempting to further resolve this issue at this time is beyond the scope of this proceeding.

419. We further disagree with AEP's claim that the Commission lacks authority to adopt the study delay penalty structure set forth in Order No. 2023 on the theory that Commission precedent forbids it from awarding monetary damages. None of the cases AEP cites addressed a penalty structure similar to that presented here, supported by the Commission's authority to ensure just and reasonable rates. Rather, in *Bachofer* v. *Calpine Corp.,* the Commission found that it lacked jurisdiction to address claims for property damage due to the alleged actions of a generation facility, that such allegations ''are more appropriately addressed in some other forum,'' and that ''monetary damages are also beyond the scope of the Commission's authority under Part II of the Federal Power Act.'' [791] In *TranSource, LLC* v. *PJM Interconnection, L.L.C.,* the Commission explained that monetary relief for ''lost business opportunities and other litigation-related expense'' allegedly suffered by TranSource was beyond the scope of relief the Commission could award.[792] *New England Power Pool* involved a rehearing request directed toward the effective date of certain tariff changes, where no waiver of the Commission's prior notice requirements had been sought, and reflected that the Commission cannot engage in retroactive ratemaking.[793] Here, the Commission is not confronted by claims seeking post-hoc, consequential monetary damages to make a specific party whole following alleged wrongdoing. Rather, it is exercising its FPA section 206 authority to prospectively and generically regulate the commercial relationship between interconnection customers and transmission providers, including as to the appropriate charges for interconnection studies.

v. Commission Precedent

(a) Requests for Rehearing

420. MISO TOs assert that the Commission failed to heed its precedent in Order No. 2003, which rejected liquidated damages for study delays, because that approach might undermine the transmission provider's ability to economically administer its study process.[794] Likewise, MISO TOs also point to Order No. 845, asserting that the Commission there rejected requests to include penalties for study delays, recognizing that often the transmission provider will not be at fault for such delays.[795] MISO TOs also contend that, as recently as November 29, 2022, the Commission affirmed the reasonable efforts standard and rejected firm study deadlines and does not discuss in Order No. 2023 why it now abandons that result.[796] Additionally, MISO TOs claim that Order Nos. 890 and 890–A reflect that the Commission imposed study delay penalties only when transmission providers routinely failed to meet deadlines, failed to meet deadlines for a certain number of studies, and were imposed only after they had the opportunity to present evidence of extenuating circumstances.[797] MISO

[787] PJM Rehearing Request at 30.

[788] PJM's implication that penalties have only been previously adopted under FPA section 205 is also incorrect. *See* Order No. 890, 118 FERC ¶ 61,119 at PP 40, 1324–57, *order on reh'g,* Order No. 890–A, 121 FERC ¶ 61,297, *order on reh'g,* Order No. 890–B, 123 FERC ¶ 61,299, *order on reh'g,* Order No. 890–C, 126 FERC ¶ 61,228, *order on clarification,* Order No. 890–D, 129 FERC ¶ 61,126 (adopting, through generic proceedings under FPA section 206, a penalty structure that is similar in several respects to that adopted in Order No. 2023).

[789] *See* NYTOs Rehearing Request at 22 & n.60 (''Under the Commission's policy statements on enforcement and compliance, penalties are meted out for wrongdoing and misconduct.'' (citing *Enf't of Statutes, Ords., Rules, and Reguls.,* 113 FERC ¶ 61,068 at PP 14, 26); *see also id.* at 27.

[790] *See* MISO TOs Rehearing Request at 31 (asserting that the study delay penalty structure results in a deprivation of due process whereas ''both the Commission's Office of Enforcement and NERC Reliability Standard enforcement involve fact finding and affording the targeted entity the opportunity to present evidence to demonstrate lack of fault or mitigating circumstances *before* a penalty is imposed''); NYISO Rehearing Request at 31 & n.89 (arguing that ''the Commission may not establish penalties that are excessively punitive in relation to the severity of a violation'' and citing Commission policies in the enforcement context); PJM Rehearing Request at 31 n.67.

[791] 134 FERC ¶ 61,100 at P 9.

[792] 168 FERC ¶ 61,119 at P 285 & n.896.

[793] 98 FERC ¶ 61,299 at 62,290 & n.6.

[794] MISO TOs Rehearing Request at 24–25 (arguing that the Commission failed to respond to MISO TOs comments on this point).

[795] *Id.* at 25 (arguing that the Commission failed to articulate a meaningful response, but instead simply asserts that it is attempting to remedy unjust and unreasonable rates and ensure interconnection in a reliable, efficient, transparent, and timely manner; contending that the penalty structure will not accomplish these aims).

[796] *Id.* at 26 (citing *PJM Interconnection, L.L.C.,* 181 FERC ¶ 61,162 at P 138).

[797] *Id.* at 20–24 (noting that in Order 890–A, the Commission clarified that such penalties would

TOs contrast Order No. 2023's penalty structure with that in Order No. 890, arguing that it does not make sense to grant less flexibility to transmission providers for conducting interconnection studies than transmission studies, given that interconnection studies are more complex, more numerous, and involve more requests to be studied.[798]

421. NYISO and Indicated PJM TOs assert that the Commission was wrong in Order No. 2023 to compare the penalty structure it adopted to ''traffic ticket'' penalties, asserting that such penalties are applied solely based on objective criteria that can be applied automatically, whereas study delays raise more complex questions regarding the fault for any delay.[799] NYISO contends that the Commission failed to address, in a reasoned fashion, NYISO's argument that reliability penalties are distinguishable from the penalty structure adopted under Order No. 2023 because reliability penalties are generally non-financial and, when such penalties apply, there are numerous mechanisms in place to avoid unfairly harsh results.[800]

422. Indicated PJM TOs also claim that Order No. 2023's penalty structure is unlawful because it impermissibly attempts to override RTO/ISO governing documents.[801] In particular, they assert that the PJM Consolidated Transmission Owners Agreement (PJM CTOA) does not authorize PJM to assign penalty amounts to PJM transmission owners. According to Indicated PJM TOs, under the *Atlantic City* precedent, the Commission cannot prevent transmission providers from deciding how to propose to recover their costs and cannot direct transmission providers to make cost recovery filings in any prescribed manner (here, in alleged contravention of the CTOA).[802]

(b) Determination

423. We are not persuaded by arguments that the deadline and penalty structure in Order No. 2023 is inconsistent with the Commission's precedent or that, to the extent it differs from other penalty structures in the Commission's precedent, that departure is insufficiently explained. For instance, certain parties argue that in Order No. 845 the Commission acknowledged that study delays may be attributable to factors not within the control of transmission providers and that the Commission in Order No. 845 declined to implement automatic penalties for study delays.[803] The Commission in Order No. 2023, however, explained the reasons for its change in approach: that its determination was based on the evidence in the record, including evidence of worsening queue delays based on the reporting data collected under Order No. 845 and that failure on the part of transmission providers to timely complete studies was a significant reason for those delays.[804] Thus, even though it remains the case that there are factors outside of a transmission providers' control that may contribute to interconnection study delays, on this record the Commission reasonably concluded that elimination of the reasonable efforts standard and adoption of a study delay penalty structure is warranted notwithstanding that it took a different approach in Order No. 845.[805] We sustain that determination.

424. We are also not convinced that the adoption of penalties for late interconnection studies conflicts with Order No. 2003, in which the Commission declined to include a liquidated damages provision in the *pro forma* LGIP, observing that it ''may undermine the Transmission Provider's ability to economically administer its study process.'' [806] At the outset, to the extent that the rehearing requests rely on the Commission's decision not to include the proposed liquidated damages provision in Article 5.1 of the *pro forma* LGIA, that proposed liquidated damages provision is distinguishable in that it is related to a transmission provider's failure to complete construction of interconnection facilities in a timely fashion.[807] Furthermore, even in this context, the Commission simply declined to impose a liquidated damages provision in the *pro forma* LGIP, but was clear that such provisions were permissible in LGIAs upon agreement of the parties.[808]

425. Moreover, the Commission in Order No. 2023 did not take action based on the record that was available in 2003. Instead, the Commission has adopted the specific deadline and penalty structure set forth in Order No. 2023, as clarified herein, based on the record before us in this proceeding. This record is informed by an additional two decades of experience,[809] which justify the need for the reforms adopted in Order No. 2023, including the adoption of study delay penalties.[810] The Commission has also taken steps (*e.g.,* site control requirements, commercial readiness deposits, and withdrawal penalties) directed toward reducing the number of speculative interconnection requests and has discussed the costs to interconnection customers of interconnection queue backlogs and late interconnection studies.[811] The penalty structure adopted in Order No. 2023 further includes several safeguards,

apply only to transmission providers unable to justify their repeated failure to meet deadlines and discussed the factors that might excuse such failures).

[798] *Id.* at 23–24; *see also* NYISO Rehearing Request at 31–32.

[799] NYISO Rehearing Request at 31 (stating that ''[t]he fact that the Commission recognized the need for an appeals process to resolve inevitable factual disputes about penalties demonstrates that the traffic ticket model is not relevant''); Indicated PJM TOs Rehearing Request at 19–21.

[800] NYISO Rehearing Request at 31–32 (asserting that the appeals process, which the Commission discussed in response to these arguments, is not an adequate process because it is inchoate and unreasonably presumes fault on the part of transmission providers and presumes that penalties are warranted for delays); *see id.* at 31 n.85 (''Violators may avoid penalties for a variety of reasons including demonstrating a culture of compliance, cooperating with investigations, and taking effective remedial actions. Thus, the reliability penalty regime incorporates due process.'').

Co.* v. *FERC,* 329 F.3d 856, 859 (2003) (per curiam) (*Atl. City II*) (''FERC has no jurisdiction to enter limitations requiring utilities to surrender their rights under § 205 of the FPA to make filings to initiate rate changes.'')).

[802] *Id.* at 11–12.

[803] *See* AEP Rehearing Request at 7–8; MISO TOs Rehearing Request at 24–25.

[804] Order No. 2023, 184 FERC ¶ 61,054 at P 1012; *see supra* PP 281–282.

[805] In particular, the Commission has established the appeals process to take into account the possibility that an interconnection study is delayed due to factors beyond the control of the transmission provider.

[806] Order No. 2003, 104 FERC ¶ 61,103 at P 898.

[807] *See id.* PP 851–52 (describing the liquidated damages provision proposed the Commission proposed to include in Article 5.1); *id.* P 854 (explaining that while there were some common issues regarding the two liquidated damages provisions the Commission was considering, ''the provisions serve different functions''); *id.* PP 868–85 (discussing the proposed LGIA liquidated damages provision, and the Commission's rationale for declining to adopt it).

[808] *See, e.g.,* Order No. 2003–A, 106 FERC ¶ 61,220 at P 249; *see also N.Y. Indep. Sys. Operator, Inc.* 108 FERC ¶ 61,159 at PP 77–78 (liquidated damages are permissible upon agreement of the parties).

[809] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 3 (''The electricity sector has transformed significantly since the issuance of Order Nos. 2003 and 2006 . . . . These new challenges are creating large interconnection queue backlogs and uncertainty regarding the cost and timing of interconnecting to the transmission system, increasing costs for consumers.'').

[810] Even in Order No. 2003—when it was not confronting the magnitude of interconnection queue backlogs and late studies occurring now—the Commission recognized ''value of providing an incentive to complete Interconnection Studies.'' Order No. 2003, 104 FERC ¶ 61,103 at P 898. It also concluded that it had statutory authority to adopt liquidated damages provisions. *Id.* P 857.

[811] *See, e.g.,* Order No. 2023, 184 FERC ¶ 61,054 at PP 3, 27, 37–40, 43, 50.

including the appeal mechanism to seek relief from penalties, and we do not believe that the penalty structure will be punitive.[812] On the record before us now, we continue to find that a structure where penalties are incurred for late interconnection studies is warranted notwithstanding that the Commission declined to adopt a proposal for liquidated damages for study delays on a different record twenty years ago.

426. MISO TOs also point to a Commission decision from the end of 2022 in which—MISO TOs claim—the Commission ''affirmed the reasonable efforts standard and eschewed the adoption of firm study deadlines.'' [813] In that decision, however, the Commission approved PJM's FPA section 205 proposal because, at that time, the reasonable efforts standard was ''the currently applicable standard under the Commission's *pro forma* LGIP and LGIA,'' noting that in Order No. 845 the Commission had declined to eliminate the reasonable efforts standard.[814] The Commission has now determined, based on the record in this proceeding and under FPA section 206, that the reasonable efforts standard is no longer just and reasonable and specified the replacement standards, and transmission providers (including PJM) are required to submit compliance filings to adopt the requirements of Order No. 2023, as modified herein.

427. We disagree with Indicated PJM TOs' and NYISO's claims that the Commission erred in comparing the penalty structure under Order No. 2023 to traffic ticket penalties, asserting that such traffic ticket penalties are assessed solely based on objective criteria. Under Order No. 2023's penalty structure, penalties are incurred based on objectively identifiable criteria set forth in the tariff (failure to complete the study in the required timeframe) and transmission providers are not subject to sanctions or consequences other than the penalty set forth in the tariff and approved by the Commission.[815] While Indicated PJM TOs and NYISO argue that, in light of the appeal process, the ultimate imposition of the penalty is not based on objectively identifiable behavior, the approach adopted in Order No. 2023 is consistent with the Commission's traffic ticket penalty precedent which includes an ''appeals process'' under which the Commission considers ''all relevant circumstances.'' [816]

428. Nor, contrary to Indicated PJM TOs' claim, is any aspect of the penalty structure impermissibly ''delegate[d] . . . to third parties'' such as ''jurisdictional utilities.'' [817] As just discussed, the trigger for penalties occurs through objective criteria, which were determined by the Commission on the record in this proceeding. The appeals process is conducted by the Commission. To the extent that RTOs/ISOs seek to recover the costs of penalties assessed to them through section 205 filings, whether through individual filings or a default structure, the Commission will review those filings to determine whether they are just and reasonable, and not unduly discriminatory or preferential.[818]

429. As to NYISO's argument that Order No. 890's transmission study penalties are not relevant to the Commission's adoption of the penalty structure in Order No. 2023, NYISO does not refute the numerous similarities between these two structures. These include that, in Order No. 890, the Commission: imposed set time frames for the completion of transmission studies and found that transmission providers must have a meaningful stake in meeting those deadlines; [819] included a process to waive penalties in unique circumstances but declined to create broad categories of exemptions from penalties; [820] rejected arguments that imposing deadlines and penalties will necessarily decrease study quality or harm system reliability; [821] discussed other reforms that would help achieve transmission deadlines, but did not take piecemeal action by waiting to observe the effects of those reforms; [822] provided for the distribution of penalties to transmission customers; [823] did not exempt RTOs; [824] and prohibited transmission providers from recovering study delay penalties through their transmission rates.[825] In light of these similarities, we continue to conclude that Order No. 890 is relevant Commission precedent supporting the study delay penalty structure adopted in Order No. 2023.[826]

430. The Commission in Order No. 2023 also recognized that there were differences between the penalty structure in Order No. 2023 as compared to Order No. 890, but found that they were ''warranted by the significant and growing interconnection queue backlogs.'' [827] In other words, far from NYISO's suggestion that the Commission was unreasonably citing ''the fact that interconnection studies are more numerous, complex, and susceptible to delays than transmission studies as a reason for treating the two identically,'' [828] the Commission was here explaining why the differences between these two structures were appropriate.[829] We continue to find

---

[812] *Id.* P 972.

[813] MISO TOs Rehearing Request at 26 (citing *PJM Interconnection, L.L.C.,* 181 FERC ¶ 61,162 at P 138).

[814] *PJM Interconnection, L.L.C.,* 181 FERC ¶ 61,162 at P 138 (''Accordingly, *at this time,* we decline to require PJM to adopt firm study deadlines instead of its proposed 'Reasonable Efforts' standard.'' (emphasis added)). Because the Commission relied on the fact that the reasonable efforts standard was the then-applicable *pro forma* standard, nothing in that case conflicts with our decision here.

[815] *See Cal. Indep. Sys. Operator Corp.,* 134 FERC ¶ 61,050, at P 34 (2011) (''[T]hree qualifications must be met: (1) The activity must be expressly set forth in the tariff; (2) The activity must involve objectively identifiable behavior; and (3) The activity does not subject the actor to sanctions or consequences other than those expressly approved by the Commission and set forth in the tariff, with the right of appeal to the Commission.'').

[816] *Id.* P 37.

[817] Indicated PJM TOs Rehearing Request at 22.

[818] Indicated PJM TOs also argue that the Commission ''cannot delegate authority to RTOs and ISOs to determine the reasonableness of study delay penalty allocations'' such that it would be inappropriate to ''giv[e] deference to the RTO's/ISO's decision in a 'good cause' proceeding.'' Indicated PJM TOs Rehearing Request at 24. This argument conflates appeals of penalties incurred by RTOs/ISOs with how those penalties may be allocated as a matter of RTO/ISO cost recovery under FPA section 205 proposals. Moreover, as just explained, the Commission has not impermissibly delegated its authority to RTOs/ISOs.

[819] Order No. 890, 118 FERC ¶ 61,119 at P 1340; Order No. 890–A, 121 FERC ¶ 61,297 at P 741.

[822] Order No. 890, 118 FERC ¶ 61,119 at P 1346.

[823] *Id.* P 1351.

[824] *Id.* P 1353.

[825] *Id.* P 1357; *see also* Order No. 890–A, 121 FERC ¶ 61,297 at PP 486, 754–57 (noting that the Commission could consider case-specific cost recovery proposals from RTOs/ISOs under FPA section 205).

[826] NYISO's argument that it does not conduct the kinds of transmission studies that Order No. 890 addressed and that such studies are ''not a major issue for most other RTOs/ISOs,'' NYISO Initial Comments at 36; *see also* NYISO Rehearing Request at 32 n.87, does not negate these similarities for purposes of determining a just and reasonable *pro forma* approach to ensuring interconnection study timeliness under Order No. 2023. *See* Order No. 2023, 184 FERC ¶ 61,054 at P 1001 (rejecting NYISO's argument); *cf.id.* PP 965–72 (finding that the imposition of study delay penalties was just and reasonable and would not be punitive as to transmission providers); *id.* PP 1004–07, 1013.

[827] Order No. 2023, 184 FERC ¶ 61,054 at P 1013 (noting that interconnection studies ''are more numerous, complex, and susceptible to delays'' and ''there is a growing number of interconnection customers affected by study delays. We believe that these factors underscore the need for transmission providers to meet study deadlines and the need to provide an incentive, in the form of study delay penalties'').

[828] NYISO Rehearing Request at 32 n.87.

[829] *See also supra* PP 281–282 (explaining how previous reforms had failed to ensure timely interconnection study queue processing or resolve significant interconnection queue backlogs). This

those differences warranted, based on the same considerations articulated in Order No. 2023,[830] notwithstanding arguments that the approach in Order No. 2023 represents a departure from the approach the Commission took in Order No. 890. These considerations reflect greater need for direct, clear, and straightforward incentives for transmission providers to achieve interconnection study timeliness than were pertinent in the context of transmission studies in Order No. 890.

431. We also find that the Commission adequately responded to NYISO's argument that ''reliability penalties are generally non-financial and that when financial penalties do apply there are numerous mechanisms in place to avoid unfairly harsh results,'' particularly a ''risk-based evaluation of all the facts and circumstances related to an individual violation.'' [831] Under Order No. 2023, transmission providers have ''the opportunity to seek relief from a penalty by filing an appeal, which the Commission will closely scrutinize and in response to which the Commission will issue an order.'' [832] We have elsewhere rejected arguments that this appeals process is impermissibly ''inchoate'' and arguments that Order No. 2023 unreasonably presumes that ''transmission providers are at fault for study delays and that all study delays warrant penalties.'' [833]

432. Indicated PJM TOs' contention that Order No. 2023 is unlawful because the Commission has attempted therein to override RTO/ISO governing documents, in contravention of *Atlantic City I* and *Atlantic City II,*[834] is misplaced.[835] Indicated PJM TOs are misreading *Atlantic City I* and *Atlantic City II,* which do not stand for the proposition that a particular RTO/ISO's approach to its own governance can override the Commission's authority under FPA section 206 to set just and reasonable rates. Rather, in *Atlantic City I,* the Commission had required modifications to a proposed ISO structure including ''to eliminate a provision allowing utilities 'to unilaterally file to make changes in rate design, terms or conditions of jurisdictional services,' except that they could still unilaterally seek a change in the transmission revenue requirements.'' [836] As a result of these required modifications, changes in rate design could not be made through unilateral FPA section 205 filings by individual utilities, but instead ''only the ISO could propose changes in rate design.'' [837] The court held that the Commission erred in doing so, explaining that the Commission lacked statutory authority ''to require the utility petitioners to cede rights expressly given to them in section 205 of the Federal Power Act.'' [838]

433. Thus, the basis for the court's remands in *Atlantic City I* and *Atlantic City II* was that the Commission exceeded its jurisdiction in requiring utilities to surrender, to an RTO/ISO, their FPA section 205 right to propose changes to rate designs. These cases do not establish that the Commission's power under FPA section 206, following appropriate findings, to ''determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force'' [839] is subordinate to a particular RTO/ISO's governing documents. To the contrary, the court acknowledged the Commission's authority to require transmission providers to file particular rates upon a finding that existing rates are unlawful, under FPA section 206.[840]

vi. Alternative Approaches and Miscellaneous Issues

(a) Requests for Rehearing

434. A number of the rehearing requests assert that the Commission could have taken an alternative approach to eliminating the reasonable efforts standard and adopting the deadline and penalty structure set forth in Order No. 2023. EEI urges that the Commission could have instead ''ensure[d] transmission providers are afforded specified timeframes to complete certain tasks during studies.'' [841] MISO TOs assert that the Commission should have taken an approach that parallels the one adopted for transmission studies in Order No. 890 of monitoring for chronic delays, investigating causes, and then imposing a remedy.[842] NYISO argues that the Commission could instead allow ''individual RTO/ISO regions to propose alternative rules as independent entity variations'' or build on Order No. 845 by updating and enhancing its reporting requirements, which would allow more targeted actions to address problems.[843]

435. NYISO asserts that Order No. 2023's adoption of a 10 business-day grace period does not provide meaningful relief to transmission providers, like NYISO, that will be required to study large numbers of interconnection requests, and that affording the same grace period to all transmission providers despite differing

explanation for the differences between Order No. 2023 and Order No. 890 also addresses the substance of NYISO's comment in which it also observed such differences. *See* NYISO Rehearing Request at 32 n.87; NYISO Initial Comments at 36 (arguing that the penalty structure proposed in the NOPR differed from that in Order No. 890 because transmission study penalties were not imposed automatically, without notification to the Commission). We further note that NYISO's characterization of Order No. 2023 as strict liability is inaccurate, and that the appeal process in particular addresses these concerns. *See supra* PP –360.

[830] Order No. 2023, 184 FERC ¶ 61,054 at P 1013 (''[C]ompared to transmission service requests, interconnection studies are more numerous, complex, and susceptible to delays. Further, as noted above, there is a growing number of interconnection customers affected by study delays. We believe that these factors underscore the need for transmission providers to meet study deadlines.'').

[831] NYISO Rehearing Request at 31–32 & n.85.

[832] Order No. 2023, 184 FERC ¶ 61,054 at P 1001.

[833] NYISO Rehearing Request at 31; *see, e.g., supra* section II.D.1.c.ii.

[834] *See* Indicated PJM TOs Rehearing Request at 6 (arguing that ''the PJM CTOA does not authorize PJM to assign penalty amounts to PJM transmission owners'' and, under these cases ''the Commission cannot prevent public utilities from deciding how to recover their costs and cannot direct public utilities to make cost recovery filings in any prescribed manner''); *id.* at 8–12.

[835] We note that this argument overstates the effect of Order No. 2023, which did not ''direct'' any RTOs/ISOs, including PJM, to make cost recovery filings at all, let alone do so according to any particular structure. *See* Order No. 2023, 184 FERC ¶ 61,054 at P 994 (providing that RTOs/ISOs ''may'' submit FPA section 205 filings and that they may propose a default structure or make individual section 205 filings to recover costs); *id.* P 998 (noting potential avenues to fund study delay penalties, such as collecting administrative fees).

[836] *Atl. City I,* 295 F.3d at 7; *see also id.* at 6–7 (explaining that the proposed agreement permitted the ''transmission owners to file changes in transmission service rate design and non-rate terms and conditions to the tariff under section 205,'' subject to potential rejection of a proposed change by the independent PJM Board by majority vote).

[837] *Id.* at 7.

[838] *Id.* at 9; *see also id.* at 10 (explaining that the Commission was ''purport[ing] to deny the utility petitioners *any* ability to initiate rate design changes with respect to services provided with their own assets,'' thereby ''eliminat[ing] the very thing that the statute was designed to protect—the ability of the utility owner to set the rates it will charge prospective customers, and change them at will, subject to review by the Commission.'' (quotation marks omitted); *id.* at 11 (holding that the Commission cannot deny ''the petitioners their rights provided for by a statute enacted by both houses of Congress and signed into law by the [p]resident''); *Atl. City II,* 329 F.3d at 859 (''[W]e reaffirm and clarify our prior decision that FERC has no jurisdiction to enter limitations requiring utilities to surrender their rights under § 205 of the FPA to make filings to initiate rate changes.'').

[839] 16 U.S.C. 824e(a).

[840] *See, e.g., Atl. City I,* 295 F.3d at 10 (''The courts have repeatedly held that FERC has no power to force public utilities to file particular rates *unless it first finds the existing filed rates unlawful.* . . . [T]he power to initiate rate changes rests with the utility and cannot be appropriated by FERC *in the absence of a finding that the existing rate was unlawful.*'' (emphasis added)).

[841] EEI Rehearing Request at 9 (arguing that this approach acknowledges that one entity's actions often cannot commence until another entity's work is completed).

[842] MISO TOs Rehearing Request at 36–37.

[843] NYISO Rehearing Request at 20–21.

workloads is not reasoned decision-making.[844] It further argues that the transition period the Commission adopted in Order No. 2023 simply postpones the problems with RTO/ISO penalty cost recovery, without resolving that problem.[845] And NYISO claims that the Commission significantly increased penalty levels from the levels proposed by the NOPR, without a reasoned basis for doing so.[846]

436. Indicated PJM TOs argue that *pro rata* disbursement of penalties to interconnection customers is unduly discriminatory, given that study deposits increase based on the size of the generating facility making the interconnection request.[847] They assert that Order No. 2023 disregards the different costs associated with larger generating facilities and seeks to treat interconnection customers with substantially fewer costs as equals, which they claim is inconsistent with precedent.[848]

437. Invenergy argues that the Commission erred in failing to provide for penalties when an affected system misses a pre-study deadline, such as the 20 business day deadline to indicate whether it will conduct an affected system study, or the 15 business day deadline to provide a cost estimate and schedule for that study.[849] Invenergy notes that, in contrast to the 150-day deadline for cluster studies, which is measured from the end of the customer engagement window, an affected system will be expected to meet pre-study deadlines only when and if the host transmission provider provides a notice that it has been identified as an affected system for a particular interconnection customer.[850] Invenergy argues that the Commission should apply a $2,000 per business day penalty on affected systems for failing to meet pre-study deadlines. Clean Energy Associations present similar arguments in a request for clarification.[851]

438. MISO argues that Order No. 2023 should be revised to provide that RTOs that conduct multiple system impact studies may include a combined timeline for cluster studies for penalty purposes.[852] MISO also argues that the Commission should modify the transition period to properly account for delays in clusters that pre-date the effective date of Order No. 2023, because delays in such clusters could cause backlogs that will affect future studies.[853] It claims that doing so is necessary to avoid retroactive effects that penalize RTOs for delays prior to Order No. 2023's effective date, which would contravene the filed rate doctrine and the rule against retroactive ratemaking.

(b) Determination

439. In Order No. 2023, the Commission stated that transmission providers should distribute any collected study delay penalties ''to interconnection customers in the relevant study on a pro rata per interconnection request basis to offset their study costs.'' [854] Indicated PJM TOs assert that this approach is unduly discriminatory because it results in equal treatment of differently situated customers, specifically those that paid larger study deposits or that may have larger final study costs versus those that paid smaller study deposits or that may have smaller final study costs.[855] While the Commission in Order No. 2023 stated that disbursement of interconnection study delay penalties would be on a ''pro rata'' (*i.e.,* proportionate) basis per interconnection request, it did not further specify how penalties would be distributed. We clarify here that study delay penalties must be distributed on a pro rata basis proportionate to the final study costs paid by each interconnection customer in the relevant study. This approach ensures that the distribution of the penalty (*i.e.,* the amount of the ''offset'' each interconnection customer receives) is related to the costs paid by the interconnection customer for the relevant study.

440. We decline Invenergy's request that the Commission grant rehearing and find that the study delay penalty of $2,000 per business day applies to the pre-study deadlines for affected systems.[856] The penalties the Commission adopted in Order No. 2023 focus on the process of conducting interconnection studies, and how delays in that process contribute to interconnection queue backlogs. The record in this proceeding does not contain sufficient information regarding persistent delays in the pre-study process for affected systems that contribute to interconnection queue backlogs to persuade us to extend the study delay penalties to such pre-study deadlines.[857] We further find that imposing penalties on affected system transmission providers would result in unduly discriminatory treatment of similarly situated entities: host transmission providers are also required to meet pre-study deadlines in the *pro forma* LGIP,[858] including deadlines for communications with affected system transmission providers, but incur no penalties for missing those deadlines.

441. In Order No. 2023, the Commission explained that it ''decline[d] to adopt alternative proposals [instead of the deadline and penalty approach set forth in Order No. 2023] suggested by various commenters,'' [859] and we sustain that decision here in response to similar arguments on rehearing.[860] As to MISO TOs' argument that the Commission should grant rehearing and adopt an approach similar to the approach taken in Order No. 890, the Commission considered the differences from the approach set forth in Order No. 890. It determined that these differences were

[844] *Id.* at 35.

[845] *Id.* at 37.

[846] *Id.* (asserting that the Commission's example estimating a $63,000 penalty for a six-month delay under the NOPR structure does not show that the penalties assessed under Order No. 2023 will be proportionate or non-punitive, particularly as to not-for-profit RTOs/ISOs).

[847] Indicated PJM TOs Rehearing Request at 40–41.

[848] *Id.* at 40 (citing *Ala. Elec. Coop.,* 684 F.2d at 28).

[849] Invenergy Rehearing Request at 2–3.

[850] *Id.* (asserting that there is a ''risk that the failure of an Affected System to meet pre-study deadlines will delay commencement of the Affected System study (and thus the start of the 150-day clock applicable to that study)'').

[851] *See* Clean Energy Associations Rehearing Request at 76–77.

[852] MISO Rehearing Request at 11–14.

[853] *Id.* at 15–16.

[854] Order No. 2023, 184 FERC ¶ 61,054 at P 963; *see also id.* at P 990; *pro forma* LGIP section 3.9.

[855] Indicated PJM TOs Rehearing Request at 40–41.

[856] For the same reasons discussed in this paragraph, we also reject Clean Energy Associations' similar argument couched as a request for clarification.

[857] The opportunities for delay that Invenergy cites are associated with tasks that—particularly compared to the conduct of an interconnection study—are relatively straightforward: providing notice of intent to conduct an affected system study and a non-binding cost estimate and schedule for that study. *See id.* It is therefore not apparent that there should be significant delays associated with these tasks as a general matter, and we will not presume that affected systems will tactically delay such tasks to avoid triggering other deadlines. If such delays arise we may consider further action.

[858] *See, e.g., pro forma* LGIP sections 3.1, 3.4, 3.6.

[859] Order No. 2023, 184 FERC ¶ 61,054 at P 1025.

[860] Even assuming that one or more of these alternative approaches might also address the problem of late interconnection studies contributing to interconnection queue backlogs, leading to unjust and unreasonable rates, this does not demonstrate that the deadline and penalty structure in Order No. 2023 is not just and reasonable. *See Petal Gas Storage, LLC* v. *FERC,* 496 F.3d 695, 703 (D.C. Cir. 2007) (''[The Commission]is not required to choose the best solution, only a reasonable one.''); *ExxonMobil Oil Corp.* v. *FERC,* 487 F.3d 945, 955 (D.C. Cir. 2007) (''We need not decide whether the Commission has adopted the best possible policy as long as the agency has acted within the scope of its discretion and reasonably explained its actions.''); *Midwest Indep. Transmission Sys. Operator, Inc.,* 127 FERC ¶ 61,109, at P 20 (2009) (''It is well established that there can be more than one just and reasonable rate . . . .'').

warranted,[861] and—on rehearing—we affirm that conclusion. The study delay penalty structure appropriately responds to the problem of interconnection study delays contributing to unjust and unreasonable rates by creating strong, direct, and clear incentives on transmission providers while recognizing that the value of interconnection studies is related to their timeliness. Moreover, given that interconnection study delays are already a significant and widespread problem, we find that it would not be appropriate to further delay imposing meaningful incentives while we further ''monitor for chronic study delays'' [862] by individual transmission providers. Likewise, we find that ''updating and enhancing [Order No. 845's] reporting requirements'' to ''create even more transparency,'' as NYISO urges,[863] or that, instead of imposing deadlines supported by penalties, the Commission simply provide ''specified timeframes to complete certain tasks during studies'' as EEI suggests,[864] would not be sufficient to address the problem of interconnection queue backlogs and repeatedly delayed interconnection studies.[865]

442. We also decline AEP's request to expand appeal rights beyond the transmission provider that is directly assigned the penalty. In instances where an RTO/ISO incurs a penalty and seeks to recover the cost of that penalty from transmission-owning members, such transmission owners would have the right to intervene in any proceeding under FPA section 205 or file a complaint challenging the recovery of that penalty cost under FPA section 206, as appropriate. We believe that this adequately protects the interests of transmission-owning members of RTOs/ISOs.

443. MISO argues that the Commission should modify the transition period to account for delays in clusters that pre-date the effective date of Order No. 2023 and can cause backlogs that will affect future studies, claiming that this modification is necessary because delays in prior study clusters may affect studies in future clusters.[866] According to MISO, it must be allowed to ''clear all pre-effective date 'baked-in' delays before penalties begin'' in order to avoid ''statutory retroactive effects by penalizing RTOs based on delays that occur prior to its effective date.'' [867] We do not agree. Order No. 2023 is directed toward future cluster studies, and—in fact—already provides a generous transition period to adapt and address existing backlogs, as a matter of ensuring that the impacts of the deadline and penalty structure are not unduly burdensome or punitive. It is not clear to us how the prospective application of penalties to the third cluster study cycle after a transmission provider's compliance filing becomes effective implicates concerns about retroactivity or the filed rate doctrine.[868] More generally, all transmission providers, including RTOs/ISOs, retain the option to argue on compliance why their particular circumstances warrant variations from Order No. 2023 using the appropriate standard.

vii. Requests for Clarification

(a) Summary of Requests for Clarification

444. AEP asks the Commission to clarify that the study delay penalties will not incur interest prior to distribution of the penalty funds and that the entity (*i.e.,* transmission provider or transmission owner) conducting the study will have no obligation to pay interest on study delay penalties.[869]

445. Joint RTOs ask the Commission to clarify that Order No. 2023's one-phase cluster study was not intended to require RTOs or others that conduct multiple system impact studies in a multi-phase study process (*e.g.,* MISO, SPP, and PJM) to impose penalties for each delayed system impact study on an individual basis.[870] They argue that an RTO with a multi-phase interconnection process should be allowed to propose on compliance that the penalty for delayed interconnection studies will be assessed based on whether the RTO has complied with the aggregate timeline provided for all of the system impact studies in a cluster.[871] They also seek clarification from the Commission that, in establishing study completion timelines in their tariffs (to the extent such timelines do not already exist), they may propose specific factors they would apply in assessing the complexity of individual clusters for the purposes of establishing such timelines and the application of penalties for exceeding such timelines.[872]

446. Joint RTOs and PJM seek clarification that all penalties for delayed studies will apply on a per cluster basis, per business day rather than per interconnection customer in the cluster, per business day.[873]

447. Joint RTOs ask the Commission to clarify that the RTO/ISO penalty recovery options provided in Order No. 2023 are not mutually exclusive, nor intended to be an exhaustive list, and that an RTO/ISO may propose using a combination of such options.[874] They also ask the Commission to clarify that, where interconnection customers contributed to the study delay, any resulting penalty may be collected from such interconnection customers under the penalty collection mechanism(s) that an RTO/ISO may adopt pursuant to Order No. 2023 and that an RTO/ISO may propose to limit any penalty distribution to those interconnection customers that have not contributed to a study delay. In addition, Joint RTOs ask the Commission to clarify that, in cases where a transmission-owing member(s) conducted the late study, the tariff mechanisms by which payments flow can be addressed in individual compliance filings where transmission providers can account for their regional processes. Lastly, Joint RTOs ask the Commission to clarify that RTOs/ISOs

[861] *See* Order No. 2023, 184 FERC ¶ 61,054 at P 1013 (noting that interconnection studies ''are more numerous, complex, and susceptible to delays'' and ''there is a growing number of interconnection customers affected by study delays. We believe that these factors underscore the need for transmission providers to meet study deadlines and the need to provide an incentive, in the form of study delay penalties''); *id.* P 1025.

are not required to collect any penalty prior to concluding the appeals process under section 3.9(3) of the *pro forma* LGIP.

448. NYTOs request clarification that Order No. 2023's prohibition against transmission owners recovering delay penalties in rates does not preclude a transmission owner from recovering such penalty costs that were caused by, and initially assessed to, the RTO/ISO.[875]

449. NYISO asks the Commission to clarify that Order No. 2023 authorizes RTOs/ISOs to recover study penalty costs from consumers without first seeking the Commission's permission, so long as they do so through non-transmission-related charges, such as administrative fees assessed against market participants.[876]

450. NYISO asks the Commission to clarify that the Commission will allow penalty waivers when a transmission provider is not solely responsible for a study delay [877] or in cases where identifying the extent to which different parties are to blame for a late study would be difficult and time-consuming.[878] NYISO also asks the Commission to clarify that reasonable penalty waiver requests will be compatible with its traditional four-prong waiver analysis.[879]

451. NYISO requests clarification that RTOs/ISOs may include study penalty cost recovery proposals in their individual compliance filings.[880] Specifically, it asks the Commission to clarify that ''default structure'' penalty cost recovery proposals may be included in Order No. 2023 compliance filings in addition to FPA section 205 filings.[881] NYISO argues that the Commission has traditionally afforded RTOs/ISOs considerable flexibility regarding the scope of compliance filings made in response to major new rules and that it would be unduly discriminatory for the Commission to leave RTOs/ISOs that need stakeholder approval to file tariff revisions with less ability to recover study penalty costs than those that do not.[882]

(b) Determination

452. We grant AEP's request for clarification that study delay penalties will not incur interest prior to distribution of the penalty funds and that the entity conducting the study (*i.e.,* transmission provider or transmission owner) will have no obligation to pay interest on study delay penalties. Assessing interest during the pendency of an appeal could be viewed as penalizing the transmission provider for making the appeal, particularly to the extent that the transmission provider does not control the timeline for resolution of the appeal.

453. We deny requests for clarification of how the penalty process would apply to RTOs/ISOs with multi-phase interconnection procedures that include multiple sequential cluster studies. Order No. 2023 did not contemplate such sequential phased cluster study procedures: thus, any such procedures and attendant penalty processes are outside the scope of the rule. However, the Commission recognized that many transmission providers have adopted or are in the process of adopting similar reforms to those adopted in Order No. 2023 and noted that it did not intend to disrupt these ongoing transition processes.[883] On compliance, transmission providers can propose deviations from the requirements adopted in Order No. 2023 and demonstrate how those deviations meet the relevant standard.[884]

454. We grant requests for clarification that all penalties for delayed studies will apply on a per-study basis, per business day that the study is delayed past the tariff-specific deadline, rather than per interconnection customer. As noted in Order No. 2023, delays of cluster studies beyond the tariff-specified deadline will incur a penalty of $1,000 per business day; delays of cluster restudies beyond the tariff-specified deadline will incur a penalty of $2,000 per business day; delays of affected system studies beyond the tariff-specified deadline will incur a penalty of $2,000 per business day; and delays of facilities studies beyond the tariff-specified deadline will incur a penalty of $2,500 per business day.[885]

455. We grant Joint RTOs' request for clarification regarding the mutual exclusivity of RTO/ISO penalty recovery options and reiterate that Order No. 2023 did not require adoption of any specific RTO/ISO penalty recovery mechanism. Order No. 2023 recognized that RTOs/ISOs have several options for collecting study delay penalties, such as submitting FPA section 205 filings to seek recovery for study delay penalties from transmission owners contributing to study delays or proposing to either establish a tariff mechanism for assigning costs generally or for assigning costs for specific study delay penalties.[886] These options were not intended to be mutually exclusive or exhaustive; rather, the Commission recognized RTOs/ISOs' flexibility to propose penalty recovery mechanisms that work for their regions.

456. We deny Joint RTOs' request to clarify that, where interconnection customers contribute to a study delay, any resulting penalty may be collected from such interconnection customers under the penalty collection mechanisms that an RTO/ISO may adopt pursuant to Order No. 2023. Indeed, the Commission explicitly stated in Order No. 2023 that it ''decline[d] to allow any transmission provider to recover study delay penalties from interconnection customers to the extent the interconnection customers cause delays.'' [887] We note, however, that to the extent that study delays result from an interconnection customer's actions, transmission providers may record the length of those delays and report that information in any appeal of study delay penalties filed with the Commission.[888] Further, in the event that an interconnection request is incomplete or an interconnection customer misses a deadline, those interconnection requests are subject to the withdrawal provisions of *pro forma* LGIP section 3.7.

457. We deny Joint RTOs' request to clarify that an RTO/ISO may propose to

[875] NYTOs Rehearing Request at 29 (arguing that ''[t]ransmission providers' investors should not bear such third-party risks and costs, especially when they have no ownership stake in the non-profit RTO/ISO,'' and that ''forcing such a burden breaches basic cost causation principles, is arbitrary and capricious, and is an uncompensated taking'').

[876] NYISO Rehearing Request at 26.

[877] *Id.* at 40 (for example, if it were shown that interconnection customers substantially caused a study delay with transmission owners and/or an RTO/ISO playing comparatively smaller roles or other potentially likely scenarios).

[878] *Id.* at 41 (arguing that it would be better for all parties and the Commission to avoid complex contested appeal proceedings).

[879] *Id.* (for example, if a study delay impacts numerous interconnection customers, that will not mean that a waiver request would be denied because it is ''not limited in scope'').

[880] *Id.* at 41–42.

[881] *Id.* at 42 (explaining that, because it must obtain super majority stakeholder approval to submit tariff revisions under FPA section 205, it and other similarly situated RTOs/ISOs would be prevented from filing ''default structure'' recovery mechanisms if a minority of their stakeholders opposed them).

[882] *Id.* at 43.

[883] Order No. 2023, 184 FERC ¶ 61,054 at P 1765.

[884] *Id.* PP 1764–1765 (citing Order No. 2003, 104 FERC ¶ 61,103 at P 825; Order No. 2006, 111 FERC ¶ 61,220 at PP 546–547; Order No. 845, 163 FERC ¶ 61,043 at P 43 (explaining that a transmission provider that is not an RTO/ISO that seeks a variation from the requirements of the final rule must present its justification for the variation as consistent with or superior to the *pro forma* LGIA or *pro forma* LGIP); Order No. 2003, 104 FERC ¶ 61,103 at P 826 (''[w]ith respect to an RTO or ISO . . . we will allow it to seek 'independent entity variations' from the Final Rule . . .)).

[885] Order No. 2023, 184 FERC ¶ 61,054 at P 973.

[886] *Id.* P 998.

[887] *Id.* P 993.

[888] *See id.* P 1019.

limit any penalty distribution to those interconnection customers that have not contributed to a study delay. We note that we agree with the principle that interconnection customers who contribute to study delays should not benefit from penalty payments the same as other interconnection customers who were affected by, but did not contribute to, the delayed study. However, the appeals process established by Order No. 2023 provides a strong safeguard against that scenario. Specifically, transmission providers will be able to appeal any penalties to the Commission and show that there is good cause to grant relief from such penalties. As Order No. 2023 noted, to the extent that study delays result from an interconnection customer's actions, transmission providers may record the length of those delays and report that information in any appeal of study delay penalties filed with the Commission.[889] Thus, if the record shows that a study delay is caused solely by the actions or inactions of interconnection customers, the Commission is likely to grant relief from that penalty, meaning that there will be no penalty to distribute to interconnection customers.

458. We recognize that a study delay might be caused only in part by an interconnection customer and in part by the actions of the transmission provider, in which case the transmission provider could incur a penalty that would then be distributed to all interconnection customers affected by the delay. Even so, we provide two reasons why the at-fault interconnection customer in that situation would likely still not benefit from penalty payments. First, interconnection customers that contribute to study delays, for example because they fail to timely submit information needed to commence a study, are not likely to remain in the queue past the missed study deadline. This is because all interconnection customers have strict deadlines during the study process and, as Order No. 2023 noted, if an interconnection customer fails to adhere to all requirements in the *pro forma* LGIP (except in the case of disputes), the transmission provider may deem the interconnection customer's interconnection request to be withdrawn pursuant to section 3.7 of the *pro forma* LGIP, in which case they would be ineligible to receive study delay penalty payments. Second, in the unlikely scenario that interconnection customers that contribute to study delays remain in the queue past the missed study deadline, and a study penalty is incurred by the transmission provider, the transmission provider would be able to provide, in an appeal to the Commission, facts sufficient to assess the length of the delay caused by the interconnection customers, because any missed LGIP deadlines and subsequent delays should be well-documented. Thus, the Commission could, for example, reduce the penalty by the length of the delay (in business days) that is attributable to the interconnection customers. In this case, the penalty distributed to all interconnection customers would exclude the number of business days the study was delayed due to the actions of the at-fault interconnection customers and would only be calculated based on the number of business days the study was delayed due to the actions of the transmission provider. In this fashion, the interconnection customers that contributed to the delay would not benefit from their contributions to the study delay.

459. For these reasons, we believe that the burden of establishing such a penalty distribution limitation would outweigh the benefit. This process would create additional litigation around penalties beyond the established appeals process, which would take up more of the parties' and Commission's resources. As discussed above, given the low likelihood that interconnection customers who contribute to study delays would be eligible for distribution of the penalty amount assessed for such delays, we do not find that the additional administrative burden is warranted.

460. We deny Joint RTOs' request for clarification that, in cases where the transmission-owning member(s) conducted the late study, the mechanisms by which payments flow can be addressed in individual compliance filings where transmission providers can account for their regional tariff processes. In Order No. 2023, the Commission adopted 18 CFR 35.28(f)(1)(ii) to specify that, for RTOs/ISOs in which the transmission-owning members perform certain interconnection studies, the study delay penalties under the new *pro forma* LGIP will be incurred directly by the transmission-owning member(s) that conducted the late study, thereby mooting the issue of how RTOs/ISOs recover those specific penalties. RTOs/ISOs will thus not be required to make any filings establishing how late study penalty payments flow from at-fault transmission owners. However, we note that RTOs/ISOs may explain specific circumstances on compliance and justify any deviations under the independent entity variation standard.

461. We grant Joint RTOs' request for clarification that transmission providers are not required to collect or earmark any late study penalty prior to concluding the appeals process under section 3.9(3) of the *pro forma* LGIP. We agree that this is not required because collecting or earmarking study penalties before the appeals process runs its course would be administratively burdensome and could entail unnecessary refund processes.

462. In response to NYISO's request for clarification that the Commission will entertain requests for appeal of a penalty in various situations, we clarify that the Commission did not limit the evidence that a transmission provider might present in its appeal. The Commission will evaluate each appeal on a case-by-case basis and determine whether good cause has been shown to grant relief from any applicable penalties.

463. We deny NYISO's request for clarification that reasonable penalty waiver requests will be compatible with the Commission's traditional four-prong waiver analysis. The four-prong waiver analysis will not be the relevant standard used in the penalty appeals process; rather, as the Commission made clear in Order No. 2023, the Commission will evaluate whether good cause exists to grant relief from the study delay penalty and will issue an order granting or denying relief.[890] We continue to find that the good cause standard provides an adequate framework through which the Commission can evaluate whether it is appropriate to grant relief from any applicable penalties.

464. We deny NYISO's request to clarify that ''default structure'' penalty cost recovery proposals may be included in Order No. 2023 compliance filings in addition to FPA section 205 filings. Order No. 2023 declined to adopt the NOPR proposal to require RTOs/ISOs to submit requests to recover the costs of specific study delay penalties; instead, Order No. 2023 stated that RTOs/ISOs may make such filings under FPA section 205 in the future if they choose.[891] We find it inappropriate to invite such proposals on compliance because the Commission did not make an FPA section 206 finding that any such default penalty structure would be just, reasonable, and not unduly discriminatory or preferential. In response to NYISO's concerns about obtaining majority stakeholder approval

[889] *Id.*

[890] *Id.* PP 987, 989.

[891] *Id.* P 994.

for FPA section 205 filings, we note that, to the extent it is concerned that the lack of a mechanism for the transmission provider to recover the costs of delay penalties renders its tariff unjust and unreasonable, NYISO has the opportunity to file an FPA section 206 complaint.

465. We deny NYTOs' request to clarify that Order No. 2023's prohibition against transmission providers recovering delay penalties in rates does not preclude a transmission owner from recovering such penalty costs that were caused by, and initially assessed to, the RTO/ISO. NYTOs are concerned that RTOs/ISOs will pass penalties to transmission owner members when those providers are not responsible for a delay. We find this concern premature because the Commission does not yet have before it any FPA section 205 proposals by an RTO/ISO to recover the costs of study delay penalties. We continue to find that concerns about any RTO/ISO proposal to recover the costs of study delay penalties are best addressed on a case-by-case basis in the relevant FPA section 205 proceedings.[892]

2. Affected Systems

a. Affected Systems Study Process

i. Order No. 2023 Requirements

466. In Order No. 2023, the Commission adopted an affected system study process and added several related definitions to the *pro forma* LGIP.[893] The Commission found that a detailed affected system study process in the *pro forma* LGIP would: (1) prevent the use of ad hoc approaches that may give rise to interconnection customers being treated in an unjust, unreasonable, and unduly discriminatory or preferential manner; (2) provide interconnection customers greater certainty regarding expectations throughout the interconnection process, including greater cost certainty, which will lead to fewer late-stage withdrawals and fewer delays; (3) ensure that the affected system study process moves along expediently, providing clarity, cost certainty, and increased transparency throughout the study process, which will minimize opportunities for undue discrimination, through firm affected system study deadlines; and (4) ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

467. The Commission adopted several definitions in section 1 of the *pro forma* LGIP related to the affected system reforms, specifically, ''affected system facilities construction agreement,'' ''affected system interconnection customer,'' ''affected system network upgrades,'' ''affected system queue position,'' ''affected system study,'' ''affected system study agreement,'' ''affected system study report,'' ''multiparty affected system facilities construction agreement,'' and ''multiparty affected system study agreement.'' [894]

468. The Commission adopted section 3.6.1 (Initial Notification) of the *pro forma* LGIP, which requires the transmission provider to notify the affected system operator within 10 business days of the first instance of an identified potential affected system impact, which may occur at the completion of either the cluster study or the cluster restudy.[895]

469. The Commission next adopted several requirements for the transmission provider when it is acting as the affected system transmission provider (*i.e.,* when the transmission provider is studying the impacts on its own transmission system of proposed interconnections to other transmission providers' transmission systems) in *pro forma* LGIP section 9 (Affected System Study).[896] First, the Commission adopted section 9.2 (Response to Initial Notification) of the *pro forma* LGIP, which requires the affected system transmission provider to respond to notification of a potential affected system impact in writing within 20 business days indicating whether it intends to conduct an affected system study.[897] Section 9.2 also requires that, within 15 business days of the affected system transmission provider's affirmative response of its intent to conduct an affected system study, the affected system transmission provider must share a non-binding good faith estimate of the cost and schedule to complete the affected system study.

470. The Commission next adopted section 9.3 (Affected System Queue Position) of the *pro forma* LGIP.[898] Under section 9.3, the interconnection requests of affected system interconnection customers that have executed an affected system study agreement will be higher-queued than the interconnection requests of those host system interconnection customers that have not yet received their cluster study results, and lower-queued than those interconnection customers that have already received their cluster study results. All affected system interconnection requests studied within the same affected system cluster will be equally queued.

471. The Commission next adopted section 9.4 (Affected System Study Agreement/Multiparty Affected System Study Agreement) of the *pro forma* LGIP to require that the transmission provider tender the affected system study agreement within 10 business days of sharing the schedule for the study with the affected system interconnection customers.[899] Section 9.4 also requires the affected system interconnection customer to compensate the affected system transmission provider for the actual costs of the affected system study, and the difference between the affected system study deposit and actual cost of the affected system study will be detailed in an invoice and paid by or refunded to the affected system interconnection customer within 30 calendar days of the receipt of such invoice.[900] An affected system interconnection customer's failure to pay the difference between these amounts will result in loss of that affected system interconnection customer's affected system queue position. Section 9.4 also requires that the affected system transmission provider notify the host transmission provider of the affected system interconnection customer's breach of its obligations under this section, should such breach occur.[901]

472. The Commission next adopted section 9.5 (Execution of Affected System Study Agreement/Multiparty Affected System Study Agreement) of the *pro forma* LGIP, which provides the affected system interconnection customer with 10 business days from the date of receipt of the affected system study agreement to execute and deliver it to the affected system transmission provider.[902] Section 9.5 also provides that, if the affected system interconnection customer does not provide all required technical data when it delivers the affected system study agreement, the affected system transmission provider shall notify the affected system interconnection customer of the deficiency within five business days of the receipt of the

affected system study agreement, and the affected system interconnection customer has 10 business days to cure the deficiency after receipt of such notice (provided that the deficiency does not include failure to deliver the executed affected system study agreement or deposit).

473. The Commission next adopted section 9.6 (Scope of Affected System Study) of the *pro forma* LGIP, which requires the affected system study to consider the base case as well as all higher-queued generating facilities on the affected system transmission provider's transmission system and to consist of a power flow, stability, and short circuit analysis.[903] Section 9.6 also requires the affected system study to provide a list of affected system network upgrades that are required because of the affected system interconnection customer's proposed interconnection, a non-binding good faith estimate of cost responsibility, and a non-binding good faith estimated time to construct.

474. The Commission next adopted section 9.7 of the *pro forma* LGIP (Affected System Study Procedures), which requires clustering of affected system interconnection customers for study purposes where multiple interconnection requests that are part of a single cluster in the host system's cluster study process cause the need for an affected system study.[904] Section 9.7 also requires the affected system transmission provider to complete the affected system study and provide the affected system interconnection customer with affected system study results within 150 calendar days after receipt of the affected system study agreement. Section 9.7 also requires the affected system transmission provider to provide the affected system study report to the host transmission provider at the same time it provides the report to the affected system interconnection customer. The affected system transmission provider must notify the affected system interconnection customer that an affected system study will be late.[905] Lastly, *pro forma* LGIP section 9.7 requires affected system transmission providers to study all affected system interconnection requests using ERIS modeling standards.[906]

475. The Commission added a new section 11.2.1 to the *pro forma* LGIP (Delay in LGIA Execution, or Filing Unexecuted, to Await Affected System Study Report).[907] Under this section, if the interconnection customer does not receive its affected system study results before the deadline in its host system for LGIA execution, or the deadline to request that the LGIA be filed unexecuted, the host transmission provider must, at the interconnection customer's request, delay the deadline for the interconnection customer to finalize its LGIA.[908] The interconnection customer will have 30 calendar days after receipt of the affected system study report to execute the LGIA, or request that the LGIA be filed unexecuted. Additionally, if the interconnection customer prefers to proceed to the execution of its LGIA, or request that the LGIA be filed unexecuted, before it has received its affected system study results, it may notify the host transmission provider of its intent to proceed with the execution of the LGIA, or request that the LGIA be filed unexecuted.[909] If the host transmission provider determines that further delay to the LGIA execution date would cause a material impact on the cost or timing of an equal- or lower-queued interconnection customer, the transmission provider must notify the relevant interconnection customer of such impact and establish that the new deadline is 30 calendar days after such notice is provided.

476. The Commission adopted section 9.8 of the *pro forma* LGIP (Meeting with Transmission Provider), which requires the affected system transmission provider and the affected system interconnection customer to meet within 10 business days of the affected system transmission provider tendering the affected system study report to the affected system interconnection customer.[910]

477. The Commission adopted section 9.9 of the *pro forma* LGIP (Affected System Cost Allocation), which requires the allocation of affected system network upgrade costs using a proportional impact method in accordance with *pro forma* LGIP section 4.2.1(1)(b).[911]

478. The Commission adopted section 9.10 of the *pro forma* LGIP (Tender of Affected System Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement).[912] Under section 9.10, an affected system transmission provider must tender an affected system facilities construction agreement to the affected system interconnection customer within 30 calendar days of providing the affected system study report. The affected system transmission provider must provide 10 business days after receipt of the affected system facilities construction agreement for the affected system interconnection customer to execute the agreement or have the affected system transmission provider file it unexecuted with the Commission.

479. The Commission adopted section 9.11 of the *pro forma* LGIP (Restudy) to include a maximum 60-calendar day restudy period for any affected system restudies.[913] Section 9.11 also adopts a 30-calendar day notification requirement for the affected system transmission provider to notify the affected system interconnection customer of the need for affected system restudy upon discovery of such need.[914]

ii. Requests for Rehearing and Clarification

480. Clean Energy Associations and Invenergy ask the Commission to clarify that there are deadlines for determining that an affected system study will be conducted.[915] Clean Energy Associations and Invenergy note that Order No. 2023 requires transmission providers to notify affected system transmission providers of potential affected system impacts at the completion of the cluster study or cluster restudy, and affected system transmission providers have 20 business days to determine whether or not to conduct an affect system study. However, Clean Energy Associations and Invenergy state that it is unclear whether an affected system may decline to conduct an affected system study after the initial notification but later elect to conduct an affected system study after the cluster restudy, even if no new potential affected system impact is found. Clean Energy Associations and Invenergy argue that affected system transmission providers may have an incentive to perform affected system studies as late as possible to: (1) give priority to queue requests on their own system; (2) avoid the volume of studies created by restudies; or (3) reduce the amount of necessary studies to reduce

[915] Clean Energy Associations Rehearing Request at 78–79; Invenergy Rehearing Request at 18–19.

the risk of study delay penalties. Clean Energy Associations and Invenergy explain that interconnection customers need to know as soon as possible if affected system studies will be performed and what the results of those studies are. Clean Energy Associations and Invenergy argue that, while it is possible that new information about an affected system impact could show up when the host transmission provider conducts its restudy (which would then require the affected system to conduct its own study), the affected system should not be permitted to wait until the restudy stage to make its determination to perform studies unless new information has been identified in the restudy. Clean Energy Associations and Invenergy therefore request clarification that, if an affected system declines to perform an affected system study after the cluster study and host transmission provider's notification of an impact on the affected system, the affected system is not eligible to run a study after the cluster restudy unless the cluster restudy results in information that was not identified in the initial notification.

481. Clean Energy Associations and Invenergy agree with Order No. 2023's directive that, if the interconnection customer does not have the results of the affected system study prior to finalizing the LGIA, the interconnection customer may request that the host transmission provider delay finalizing the LGIA.[916] However, Clean Energy Associations and Invenergy argue that a host transmission provider should not be able to reject that request if it determines that delaying the LGIA pending completion of the affected system study would materially impact the cost or timing of equal or lower-queued interconnection customers. Clean Energy Associations and Invenergy explain that, when an interconnection customer executes its LGIA, it should be able to rely on those costs and other agreement provisions without significant changes, and that allowing the host transmission provider to reject requests for delaying LGIA execution is directly at odds with the Commission's goal of ensuring that interconnection customers have adequate time to evaluate their costs prior to committing to the LGIA. When the affected system costs are not known, Clean Energy Associations and Invenergy explain, it exacerbates the cost uncertainty and late-stage upgrades that Order No. 2023 sought to ameliorate.[917] Further, they argue, allowing the host transmission provider alone to determine when the material threshold is met creates potential for undue discrimination. Therefore, Clean Energy Associations and Invenergy request that the Commission strike the last sentence in revised *pro forma* LGIP, section 11.2.1.

482. Clean Energy Associations and Invenergy also seek clarification of *pro forma* LGIP section 11.2.1, which states that the interconnection customer is not required to post security under the LGIA and fund network upgrades if the deadline for LGIA execution, or to request that the LGIA be filed unexecuted, is delayed.[918] Clean Energy Associations state that the ability to not post security or fund network upgrades should also apply when the host transmission provider determines a material impact from delay and requires that the interconnection customer move forward with LGIA execution. If the Commission does not grant this request, Clean Energy Associations and Invenergy contend that the Commission should clarify that, when an interconnection customer is not allowed to delay LGIA execution under the material impact standard, the interconnection customer will receive a refund of the deposit upon deciding to not move forward with the interconnection after receiving the affected system studies.

483. Duke Southeast Utilities ask for clarification of the requirement for a host transmission provider to notify an affected system transmission provider within 10 days of the completion of a cluster study or restudy of potential affected system impacts identified in the study.[919] Specifically, Duke Southeast Utilities ask the Commission to clarify the meaning of the ''completion of'' a cluster study or restudy, referring to a number of possible interpretations, including: (1) the date stated on the study report; (2) the date the report is provided to interconnection customers; (3) the date the report is posted to OASIS; and (4) the date of the cluster study report meeting. Duke Southeast Utilities assert that a lack of clarity will lead to lack of uniformity in how transmission providers calculate their 10-day deadline. Further, Duke Southeast Utilities note that, because affected system transmission providers have 20 days to decide whether to conduct an affected system study, and host transmission providers have 30 days after the cluster study report meeting to decide whether to conduct a cluster restudy, there is potential for an affected system transmission provider to have begun conducting an affected system study before being notified that the host transmission provider will conduct a cluster restudy. Duke Southeast Utilities request clarification on whether an affected system transmission provider may terminate an affected system study once it learns of the host transmission provider's restudy, or whether it must continue with the affected system study. Duke Southeast Utilities explain that continuing an affected system study in this case would cause affected system interconnection customers to pay for an unnecessary study.

484. Clean Energy Associations and Invenergy ask for rehearing or clarification with respect to the exclusion of affected system network upgrade costs from the penalty-free withdrawal calculation in *pro forma* LGIP section 3.7.1, which allows for penalty-free withdrawal if the withdrawal follows significant, unanticipated increases in network upgrade cost estimates.[920] Clean Energy Associations request rehearing and argue that failing to include affected system network upgrade costs in withdrawal penalty exemption calculations will discourage generating facilities that experience significant cost increases from withdrawing from the interconnection process in a timely way.[921] Clean Energy Associations state that an interconnection customer will be incentivized to remain in the queue despite significant cost increases from the transmission provider and affected system transmission provider in the hopes that either other interconnection customers withdraw, or other conditions change such that the generating facility faces reduced network upgrade and affected system network upgrade costs and becomes financially viable again. Clean Energy Associations further state that it is unreasonable to penalize an interconnection customer for proceeding when its costs increase dramatically due to affected system interconnection study results. Clean Energy Associations state that affected system study results are not known at the conclusion of the cluster study and are also subject to errors or significant

[916] Clean Energy Associations Rehearing Request at 79; Invenergy Rehearing Request at 4 (both citing Order No. 2023, 184 FERC ¶ 61,054 at PP 1124–1125).

[917] Clean Energy Associations Rehearing Request at 80; Invenergy Rehearing Request at 5.

[918] Clean Energy Associations Rehearing Request at 80–81; Invenergy Rehearing Request at 5–6.

[919] Duke Southeast Utilities Rehearing Request at 2–4.

[920] Clean Energy Associations Rehearing Request at 34; Invenergy Rehearing Request at 7.

[921] Clean Energy Associations Rehearing Request at 34–35.

inaccuracies. Invenergy argues that the differing treatment in withdrawal penalties for host transmission system studies versus affected system studies is arbitrary and capricious and not a result of reasoned decision-making.[922]

485. Clean Energy Associations and Invenergy further argue that the Commission erred by failing to set any penalty-free withdrawal threshold based upon costs identified in an affected system study, which would result in essentially uncapped liability for interconnection customers.[923]

486. Clean Energy Associations and Invenergy disagree with the Commission's statement that the use of ERIS modeling standard to conduct affected system studies should reduce the number and total cost of affected system network upgrades assigned to affected system interconnection customers.[924] Clean Energy Associations argue that the ERIS modeling standard in no way guarantees a small number of assigned affected system network upgrades or total assigned network upgrade costs to any one affected system interconnection customer, and that significant impacts can occur in both large and small transmission systems.[925] Invenergy similarly argues that the ERIS modeling standard does not guarantee fewer assigned costs, and that even if using ERIS modeling decreases the number of interconnection customers receiving significant affected system upgrade costs, the lack of penalty-free withdrawal for when affected system network upgrade costs remain significant is unjust and unreasonable.[926] Invenergy states that the Commission's reasoning does not ameliorate the differing treatment of interconnection customers with significant network upgrades and those with significant affected system network upgrades merely because significant affected system upgrade costs might occur less often.

487. Clean Energy Associations request that the Commission match the penalty-free withdrawal cost increase thresholds for both the host and affected systems at the facilities study phase at 50%.[927] In the alternative, Clean Energy Associations argue that the Commission should allow penalty-free withdrawal for interconnection customers based upon the same 100% cost increase on the affected system as on the host transmission system. Invenergy requests that the Commission modify *pro forma* LGIP section 3.7.1 to include that an interconnection customer may withdraw penalty free after receiving the affected system study and the affected system network upgrade costs identified in the report have increased the interconnection customer's costs by more than 25% compared to the costs assigned by the host system.[928] Invenergy asserts that such modification is consistent with MISO's withdrawal process, which progressively increases when interconnection customers may withdraw penalty free, including for affected system network upgrade costs.[929]

488. SPP states that the Commission's decision to require affected system operators to study all interconnection requests on neighboring systems using the ERIS modeling standard is unsupported.[930] SPP argues that limiting affected system transmission providers to use of the ERIS standard will result in significant equity issues when certain generating facilities that are deemed firm by one transmission provider will not be required to mitigate issues on another transmission provider's system unless they impact a constraint at a level significantly higher than internal generating facilities requesting firm service. SPP asserts that Order No. 2023 ignores this issue by claiming to ensure that all affected system interconnection customers are studied similarly, while the root issue of the inequity (*i.e.,* the point at which deliverability is determined) remains unaddressed. SPP states that the Commission's rationalization, that studying affected system impacts using ERIS lowers affected system network upgrade costs and makes requests less likely to withdraw at a late stage, conflicts with the Commission's long-standing policy that interconnection customers should be responsible for the costs of all network upgrades that would not be required ''but for'' their interconnection.

489. SPP contends that the Commission's reliance on MISO's use of only ERIS in affected system studies fails to recognize that SPP assesses deliverability through the transmission service process.[931] As such, SPP asserts that MISO has the opportunity to assess the impacts on its system of firm deliverability granted to generating facilities on the SPP system through transmission service study coordination. SPP states that it does not get the same opportunity as MISO, who determines and grants deliverability on its own system through its awarding of NRIS during the interconnection process without a subsequent request for transmission service. SPP concludes that the Commission's failure to recognize this problem renders Order No. 2023 both discriminatory toward interconnection customers in RTOs/ISOs like SPP and arbitrary and capricious.

490. Similarly, PJM asserts that, because it studies affected system interconnection customers to ensure deliverability anywhere on PJM's transmission system, studying affected systems interconnection customers based on a lesser standard than that applied to directly connected interconnection customers would be unduly discriminatory and inconsistent with how PJM plans its transmission system.[932] PJM requests clarification that the requirement for all affected system studies to be performed using ERIS will not apply to affected system studies that PJM performs under the interconnection reforms accepted by the Commission in November 2022.

491. SPP notes that Order No. 2023 directly contradicts recent Commission precedent holding that use of NRIS modeling standards in affected system studies is just and reasonable where the interconnection customer requested NRIS-level interconnection service on the host transmission system.[933] SPP asserts that, by failing to acknowledge its prior holdings and relying on a blanket unsupported assertion that any significant impact would generally be captured by an ERIS study, the Commission's determination in Order No. 2023 constitutes an arbitrary and capricious departure from prior precedent.

iii. Determination

492. In response to Clean Energy Associations' and Invenergy's requests for clarification that there are deadlines for determining that an affected system study will be conducted, we clarify that there are such deadlines. Pursuant to

[930] SPP Rehearing Request at 12–14.

[931] *Id.* at 14.

[932] PJM Rehearing Request at 24.

[933] SPP Rehearing Request at 16–17 (citing *Tenaska Clear Creek Wind, LLC* v. *Sw. Power Pool, Inc.,* 180 FERC ¶ 61,160 at P 62; *EDF Renewable Energy Inc.* v. *Midcontinent Indep. Sys. Operator, Inc.,* 168 FERC ¶ 61,173, at P 86 (2019)).

pro forma LGIP section 9.2, the affected system transmission provider is required to respond in writing within 20 business days of receipt of the initial notification from the host transmission provider that interconnection requests may impact the affected system transmission provider's transmission system. From the point of written notification of the intention to conduct the affected system study, the affected system transmission provider then has 15 business days to share a non-binding good faith estimate of the cost and schedule to complete the affected system study.

493. We reject Clean Energy Associations' and Invenergy's requests for clarification that, if an affected system transmission provider declines to perform an affected system study after the cluster study and the host transmission provider's notification of an impact on the affected system, the affected system transmission provider is ineligible to run a study after the cluster restudy unless the cluster restudy results in information that was not identified in the initial notification. We understand Clean Energy Associations' and Invenergy's concern to be that affected system transmission providers may have an incentive to perform affected system studies as late as possible, and therefore might decline to conduct an affected system study after the initial notification but later elect to conduct an affected system study, even if no new potential affected system impact is found. We expect affected system transmission providers to adhere to the affected system study process timelines prescribed in Order No. 2023. We therefore expect that an affected system transmission provider will respond within 20 business days following notification, pursuant to *pro forma* LGIP section 9.2, if it intends to conduct an affected system study based on the initial host transmission provider notification, and there is no need for the further clarification requested.

494. We are not persuaded by Clean Energy Associations' request to strike the last sentence of *pro forma* LGIP section 11.2.1, which allows a transmission provider to reject an interconnection customer's request for extension of the deadline to execute its LGIA (or request that the LGIA be filed unexecuted) if the transmission provider determines that such delay would cause a material impact on the cost or timing of an equal- or lower-queued interconnection customer. We also disagree with Invenergy's assertion that the material exception language in *pro forma* LGIP section 11.2.1 makes Order No. 2023 arbitrary and capricious and not the result of reasoned decision-making. We find that allowing a transmission provider to determine what constitutes a material impact on interconnection customers in a single cluster due to another interconnection customer's delay in LGIA execution appropriately balances the benefits of delay due to one interconnection customer's network upgrade cost certainty with the potential burdens on other interconnection customers in that cluster as a result of such delay. Allowing the transmission provider discretion in determining what constitutes a material impact provides a necessary degree of flexibility for each transmission provider. We disagree with Clean Energy Associations that this provision undermines the goal of LGIA cost certainty for interconnection customers because there is no requirement for affected system network upgrade costs to be known at the time of LGIA execution: the costs included in the LGIA are estimates and always subject to true-up once final costs are known, pursuant to *pro forma* LGIA article 12.2 (Final Invoice). The goal is a better estimate of costs at the time of LGIA execution, and the material impact language in *pro forma* LGIP section 11.2.1 provides a check to ensure a balance between multiple interconnection customers' competing needs for certainty.

495. We reject Clean Energy Associations' and Invenergy's requests for clarification that the interconnection customer should be exempt from the requirement to post security or fund network upgrades when the host transmission provider determines a material impact from delay and requires that the interconnection customer moves forward with LGIA execution. We further disagree with Clean Energy Associations' assertion that we should clarify that when an interconnection customer is not allowed to delay LGIA execution under the material impact standard the interconnection customer will receive a refund of the deposit upon deciding to not move forward with the interconnection after receiving the affected system studies. Once an interconnection customer executes an LGIA, or requests that it be filed unexecuted, it must fulfill its obligations under the LGIA, which include the requirements to provide financial security and fund assigned network upgrades.[934] Similarly, an interconnection customer that has finalized its LGIA is not entitled to a refund of its deposit.[935] We note that the transmission provider may only require an interconnection customer to finalize its LGIA, despite waiting for its affected system study report, because it materially impacts other interconnection customers. Allowing an interconnection customer to avoid its financial responsibilities under a finalized LGIA or to have its deposit refunded upon withdrawal after it has finalized its LGIA would nullify the purpose of requiring the interconnection customer to finalize its LGIA—to provide greater certainty to other interconnection customers that would be materially impacted by the interconnection request's delay or withdrawal. To the contrary, allowing an interconnection customer to evade these financial risks increases the likelihood it proceeds to finalize its LGIA although its proposed generating facility may no longer be commercially viable. The other materially impacted interconnection customers, who, for example, may share network upgrade costs with the delayed interconnection customer, would face greater risk of cost increases or timing delays should the delayed interconnection request later be withdrawn, even as they are required to finalize their LGIAs.[936]

496. In response to Duke Southeast Utilities' request for clarification of the requirement for a host transmission provider to notify an affected system transmission provider within 10 days of the completion of a cluster study or restudy of potential affected system impacts identified in the study, we clarify that the meaning of the ''completion of'' a cluster study or restudy is the date the cluster study report or cluster restudy report is provided to interconnection customers.

497. In response to Duke Southeast Utilities' request for clarification regarding whether an affected system transmission provider may terminate an affected system study once it learns of the host transmission provider's restudy or whether it must continue with the affected system study, we clarify that an affected system transmission provider may pause an affected system study that is planned or in progress if the host transmission provider decides to conduct a cluster restudy. We also clarify that, if a host transmission provider decides to conduct a cluster restudy, then the affected system transmission provider may delay the affected system study until after the completion of the cluster restudy, following which the host transmission provider will notify the affected system transmission provider that the cluster

[934] *See pro forma* LGIA arts. 11.5, 12.1.

[935] *See pro forma* LGIP section 11.3.

[936] *See infra* P 502.

restudy is complete and of any possible affected system impacts. The cluster restudy may result in further withdrawals on the host transmission system, which in turn, would impact the affected system study results, possibly resulting in an affected system restudy. Allowing an affected system transmission provider to delay the affected system study in the event that the host transmission provider is conducting a cluster restudy will prevent unnecessary studies, and potentially cascading restudies, and the resultant costs to interconnection customers, in the affected system transmission provider's queue.

498. To ensure that the affected system transmission provider is timely informed of the host transmission provider's decision to conduct a cluster restudy, we add to *pro forma* LGIP section 3.6.2 (Notification of Cluster Restudy) the requirement that the host transmission provider notify any relevant affected system operators of a cluster restudy at the same time that it notifies the interconnection customers in the cluster restudy. Through this modification, the affected system transmission provider will receive notification of the cluster restudy before commencement or completion of a planned or in-progress affected system study and can use that information to decide whether to move forward with the affected system study or to delay the affected system study until the host transmission provider completes the cluster restudy. We also add *pro forma* LGIP section 9.2.2 (Response to Notification of Cluster Restudy) to allow the affected system transmission provider five business days from receiving notification of the cluster restudy to send a written notification to the relevant affected system interconnection customers and the host transmission provider if it intends to delay commencement or completion of a planned or in-progress affected system study until after the completion of the cluster restudy. If the affected system transmission provider decides to delay the affected system study, then it is not required to perform its obligations under *pro forma* LGIP section 9 until the time that it receives notification from the host transmission provider that the cluster restudy is complete. In contrast, if the affected system transmission provider decides to move forward with its affected system study despite the cluster restudy, then it must meet all obligations to proceed with the affected system study process under *pro forma* LGIP section 9.

499. Additionally, we modify *pro forma* LGIP section 9.5 (Execution of Affected System Study Agreement/Multiparty Affected System Study Agreement) to remove the requirement for an affected system interconnection customer to execute and return its previously received affected system study agreement/multiparty affected system study agreement and submit its affected system study deposit if the affected system transmission provider decides to delay the affected system study, pursuant to *pro forma* LGIP section 9.2.2. We find this modification necessary because the affected system transmission provider will provide the affected system interconnection customer with a new affected system study agreement/multiparty affected system study agreement in this circumstance, and the previously tendered agreement will be moot.

500. We add a new *pro forma* LGIP section 3.6.3 (Notification of Cluster Restudy Completion) to require that, upon the completion of the host transmission provider's cluster restudy, the host transmission provider will notify the affected system transmission provider the completion of the cluster restudy and of a potential affected system impact caused by an interconnection request within 10 business days of the completion of the cluster restudy, regardless of whether that potential affected system impact was previously identified. At the time of the notification of the completion of the cluster restudy to the affected system operator, the host transmission provider must provide the interconnection customer with a list of potential affected systems, along with relevant contact information.

501. Moreover, we clarify that, upon the receipt of notification of any potential affected system impacts from interconnection customers in the cluster restudy, the affected system transmission provider must respond in writing to such interconnection customers within 20 business days whether it intends to conduct an affected system study. Accordingly, we rename former *pro forma* LGIP section 9.2 (Response to Initial Notification) to ''Response to Notifications'' and move the requirements into new section 9.2.1 (Response to Initial Notification). We revise the requirements to clarify that an affected system transmission provider's obligations under section 9.2.1 apply whether in response to a notification that an affected system interconnection customer's proposed interconnection to its host transmission provider may impact the affected system based on a cluster study or a cluster restudy. Finally, we revise a reference in *pro forma* LGIP section 9.4 (Affected System Study Agreement/Multiparty Affected System Study Agreement) from section 9.2 to section 9.2.1.

502. We disagree with Clean Energy Associations' and Invenergy's assertions that Order No. 2023 was arbitrary and capricious because it failed to allow interconnection customers to withdraw penalty-free from the interconnection queue if such withdrawal follows significant, unanticipated increases in affected system network upgrade cost estimates. Although the affected system study process reforms seek to coordinate the host system and affected system studies, there is no guarantee that affected system network upgrade costs will be known even at the time of LGIA finalization, particularly where the affected system is non-jurisdictional and, therefore, not governed by the *pro forma* LGIP affected systems processes. The possibility of a long lag between delivery of host system facilities study report and affected system study report could lead to uncertainty for other interconnection customers in the same cluster who are not awaiting affected system study reports and thus must finalize their LGIAs pursuant to *pro forma* LGIP section 11.2.1. Allowing late-stage, penalty-free withdrawal for interconnection customers after potentially delayed receipt of the affected system study report could substantially harm those interconnection customers who had to finalize their LGIAs and share network upgrade costs with the withdrawing interconnection customer. Such a practice of penalty-free withdrawal after other interconnection customers in the same cluster have finalized their LGIAs would give greater weight to cost certainty of a few interconnection customers who are awaiting affected system study results than to the many interconnection customers who did not impact an affected system and had to finalize their LGIAs. Furthermore, penalty-free withdrawal of interconnection customers after they have received their affected system study results and after other interconnection customers in the same cluster have finalized their LGIAs could lead to one of the very problems Order No. 2023 sought to mitigate—cascading withdrawals and restudies—which can result in cost increases and delays, which in turn can prompt further late-stage withdrawals.[937] It is, therefore, more important for *all* interconnection customers in a cluster to have greater certainty that, once interconnection customers decide whether to proceed after the final facilities study report,

[937] Order No. 2023, 184 FERC ¶ 61,054 at P 49.

withdrawals are less likely, than for one or few interconnection customers in a cluster to have cost estimate certainty inclusive of affected system study results.

503. We expect that the affected system study process reforms in Order No. 2023 should reduce affected system network upgrade costs. Specifically, as Clean Energy Associations and Invenergy point out, the Commission stated in Order No. 2023 that the use of ERIS to conduct affected system studies *should* reduce the number and total cost of affected system network upgrades assigned to interconnection customers with affected system impacts. We did not, as Invenergy implies, state that the use of ERIS in affected system studies *guarantees* fewer assigned costs. As the Commission noted in Order No. 2023, interconnection customers inherently assume some risk.[938] Interconnection customers will calculate that risk into their decision as to whether to stay in the queue following the receipt of their facilities study reports, and we note that interconnection customers are always able to withdraw, pursuant to *pro forma* LGIP section 3.7, if their project becomes uneconomical based on significant affected system network upgrade costs. We also note that the language in *pro forma* LGIP section 3.7.1 applies to network upgrades costs assigned to the interconnection request, and, because an affected system network upgrade is a subset of network upgrades, affected system network upgrade cost estimates should be included in the total cost increase if listed in the facilities study report. In such a situation, if the network upgrades costs (including the affected system network upgrade costs) in the facilities study report were more than 100% higher than the cluster study report, then the interconnection customer may be eligible for penalty-free withdrawals.

504. We are unpersuaded by Clean Energy Associations' and Invenergy's assertions that, even if ERIS modeling decreases the number of interconnection customers receiving significant affected system network upgrades costs, this does not ameliorate the differing treatment between interconnection customers with significant network upgrades and those with significant affected system network upgrades. An interconnection customer that is notified of significant network upgrades and one that is notified of significant affected system network upgrades are not differently situated, as alleged, because affected system network upgrade costs may occur less often, but rather because of the timing within the interconnection study process that such notices occur, and the increased impacts on other interconnection customers of allowing for penalty-free withdrawal late within that process. As discussed above, because allowing late-stage, penalty-free withdrawal for interconnection customers after potentially delayed receipt of the affected system study report could substantially harm those interconnection customers who had to finalize their LGIAs and share network upgrade costs with the withdrawing interconnection customer, the differing requirements are justified.

505. We, therefore, are not persuaded to extend penalty-free withdrawal provisions to interconnection customers for affected system network upgrade cost increases beyond a certain threshold. As noted, in the interest of greater cost certainty for all interconnection customers, we maintain that penalty-free withdrawal exemptions triggered by cost increases above a certain threshold are not applicable after the finalization of the LGIA for any interconnection customers in the same cluster, even an interconnection customer that must finalize its LGIA before receiving its affected system study report. We also disagree that the lack of penalty-free withdrawal thresholds essentially results in uncapped liability because the interconnection customer may still withdraw and face only the withdrawal penalty.

506. We disagree with Clean Energy Associations' and Invenergy's arguments that failing to include affected system network upgrade costs in withdrawal penalty exemption calculations will discourage generating facilities that experience significant cost increases from withdrawing from the interconnection process in a timely manner. As long as the interconnection customer fulfills its obligations under the *pro forma* LGIP, it may opt to stay in the queue until it decides that its project is uneconomical. If the interconnection customer decides after receiving its affected system study report that significant cost increases render its project uneconomical, nothing in the *pro forma* LGIP prohibits it from withdrawing from the queue at that time. Moreover, if affected system network upgrade costs were included as a basis for withdrawal penalty-free in all cases, this could encourage interconnection customers waiting for their affected systems study results to remain in the queue, even if they have determined that their proposed generating facility is no longer commercially viable, because the possibility of significant affected systems network upgrade costs in such study could allow for withdrawal penalty-free.

507. We disagree with SPP's assertion that requiring affected system transmission providers to use ERIS in affected system studies will result in significant equity issues because of the differences in how neighboring transmission providers study generators requesting firm transmission service. SPP states that each RTO/ISO evaluates deliverability of resources pursuant to its individual Commission-approved processes and relies on the differences between SPP's and MISO's interconnection and transmission service study processes as evidence for its need to use NRIS for affected system interconnection requests requesting NRIS on their host system to ensure deliverability. However, as the Commission found in Order No. 2003 and reiterated in Order No. 2023, interconnection service is an element of, but separate from the delivery component of, transmission service, and, in the majority of circumstances, interconnection alone is unlikely to affect the reliability of an affected system transmission provider's transmission system.[939] Furthermore, the differences between SPP's and MISO's interconnection and transmission study processes that SPP describes do not undermine the bases on which the Commission determined that continuing to permit affected system transmission providers to study affected system interconnection customers using NRIS assumptions would allow unjust and unreasonable rates to persist.[940] A primary basis on which the Commission found the ERIS requirement just and reasonable is that even when an interconnection customer seeks NRIS on the host system, it does not seek—and an affected system transmission provider has no obligation to continually ensure—deliverability on the affected system.[941] To instead permit an affected system transmission provider to use NRIS assumptions risks

[938] *Id.* P 1151.

[939] *Id.* P 1288 (citing Order No. 2003, 104 FERC ¶ 61,103 at PP 118–120; Order No. 2003–A, 106 FERC ¶ 61,220 at P 113); *see also Tenn. Power Co.,* 90 FERC ¶ 61,238, at 61,761 (2000) (finding that interconnection is an element of transmission service but that the interconnection component of transmission service may be requested separately from the delivery component (*i.e.,* interconnection is distinct from transmission service)); *see also* Fervo Energy Initial Comments at 6, Shell Initial Comments at 32, Utah Municipal Power Initial Comments at 6 (all stating that the use of ERIS in affected system studies will reduce the assignment of unnecessary network upgrades).

[940] *Id.* P 1278.

[941] *Id.* P 1277. *See also infra* n.1193.

''an affected system interconnection customer [facing] increased costs without a commensurate increase in service.'' [942] We continue to find that adopting the ERIS requirement for affected system transmission providers will provide important benefits [943] even where the details of study processes may differ somewhat across transmission providers, and that such requirement is sufficient to capture reliability impacts of affected system interconnection requests on the affected system.[944]

508. We similarly reject PJM's request for clarification that Order No. 2023's requirement for affected system transmission providers to use ERIS when conducting affected system studies will not apply to PJM's affected system studies. We reject this clarification because it is essentially a request for the Commission to allow PJM to deviate from the requirements outlined in Order No. 2023 based on its individual interconnection study procedures. Consistent with the Commission's statements in Order No. 2023, transmission providers may explain specific circumstances on compliance and justify why any deviations are either 'consistent with or superior to' the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs.[945]

509. We also disagree with SPP's assertion that the Commission's rationale for requiring ERIS conflicts with the Commission's long-standing policy that interconnection customers should be responsible for the costs of all network upgrades that would not be required ''but for'' their interconnection. This policy only requires interconnection customers to pay initially the costs of network upgrades that would not have been needed but for the interconnection of the interconnection customer's generating facility.[946] The Commission has not defined a particular technical approach that must be implemented in order to reasonably capture these ''but for'' network upgrade costs; instead, the Commission has accepted varying approaches as just and reasonable and not unduly discriminatory or preferential.[947] In Order No. 2023, the Commission found that ''any significant impact would generally be captured by an ERIS study'' and such study would ''ensure any reliability impacts on the affected system are mitigated to accommodate the affected systems interconnection customer's proposed generating facility to the host system.'' [948] Accordingly, requiring use of an ERIS study to assign affected system network upgrades to affected system interconnection customers does not conflict with the Commission's ''but for'' pricing policy.

510. We disagree with SPP's assertion that the Commission's reliance on MISO's use of ERIS in affected system studies fails to recognize that SPP assesses deliverability through the transmission service process. Order No. 2023 relies on MISO's use of ERIS in affected system studies simply to demonstrate that, as noted by MISO itself, this requirement does not result in reliability issues and will not cause unnecessary curtailment or redispatch on affected systems.[949]

511. We are unpersuaded by SPP's claim that the findings in Order No. 2023 contradict recent Commission precedent holding that the use of NRIS modeling standards in affected system studies is just and reasonable where the interconnection customer requested NRIS-level interconnection service on the host transmission system.[950] While the Commission previously allowed affected system transmission providers to justify their own approach to selecting the modeling standard used to evaluate affected system impacts, we found in Order No. 2023 that the assignment of significant affected system network upgrades under an NRIS study without a commensurate increase in service would result in unjust and unreasonable rates.[951] This is because the affected system transmission provider has no obligation to ensure that the output from an affected system interconnection customer's generating facility is integrated on the affected system similar to generating facilities that serve the affected system transmission provider's native load customers or network resources.[952] The Commission found that the mismatch between costs and services received would occur because the affected system transmission provider has no obligation to ensure that the output from the affected system interconnection customer's generating facility is studied so that it could be integrated on the affected system similar to generating facilities that serve the affected system transmission provider's native load or customers and could lead to curtailment of the generating facility or there could be congestion on the affected system preventing deliverability of the generating facility's output.[953] Thus, we sustain Order No. 2023's finding that being assigned significant affected system network upgrades under an NRIS study, without the obligation for the affected system transmission provider to ensure that the output from an affected system interconnection customer's generating facility is integrated on the affected system similar to generating facilities that serve the affected system transmission provider's native load customers or network resources, results in unjust and unreasonable rates by increasing the cost for affected system interconnection customers without a

[942] Order No. 2023, 184 FERC ¶ 61,054 at P 1278.

[943] *Id.* at PP 1278–1280 (identifying as benefits that affected system interconnection customers (1) will not be required to construct significant network upgrades on the affected system while not receiving deliverability on that system due to curtailment or congestion on the affected system; (2) will not face significant upfront costs to construct affected system network upgrades, which could lead to late-stage withdrawals given that interconnection customers will not receive affected system study results until late in the interconnection process; and (3) will be studied in a consistent and transparent manner across transmission provider regions, thus avoiding potentially dramatically different affected system network upgrades costs due to varying modeling standards without any factual or service differences to justify discriminatory treatment).

[944] *Id.* PP 1285, 1290. As Order No. 2023 explained transmission providers may explain specific circumstances on compliance and justify why any deviations are either ''consistent with or superior to'' the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs. *Id.* P 1764.

[945] *Id.*

[946] Order No. 2003, 104 FERC ¶ 61,103 at P 694 (finding that ''it is appropriate for the Interconnection Customer to pay initially the full cost of . . . Network Upgrades that would not be needed but for the interconnection'').

[947] We note that MISO's joint operating agreement with SPP states that MISO will use ERIS to study the impact of SPP's interconnection customers on MISO's system. *See* Southwest Power Pool Inc., Rate and Schedules and Seams Agreement Tariff, MISO–SPP Joint Operating Agreement, § 9.4 (Analysis of Interconnection Requests) § 9.4.d.iii (7.0.0); *Xcel Energy Servs., Inc.* v. *FERC,* 77 F.4th 1057, 1064 (D.C. Cir. 2023) (finding that the plain text of SPP's Attachment Z2, Section II.B, was ambiguous with respect to what methodology could be used to calculate charges under the ''but for'' standard in the tariff).

[948] Order No. 2023, 184 FERC ¶ 61,054 at P 1285.

[949] *Id.* P 1285 (citing MISO Initial Comments at 98).

[950] *See Tenaska Clear Creek Wind, LLC* v. *Sw. Power Pool, Inc.,* 180 FERC ¶ 61,160; *EDF Renewable Energy Inc.* v. *Midcontinent Indep. Sys. Operator, Inc.,* 168 FERC ¶ 61,173.

[951] Order No. 2023, 184 FERC ¶ 61,054 at P 1288.

[952] The *pro forma* LGIP defines NRIS service as ''an Interconnection Service that allows the Interconnection Customer to integrate its Large Generating Facility with the Transmission Provider's Transmission System (1) in a manner comparable to that in which the Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an RTO or ISO with market-based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service in and of itself does not convey transmission service.'' *Pro forma* LGIP section 1.

[953] Order No. 2023, 184 FERC ¶ 61,054 at P 1278.

commensurate increase in service.[954] Given this finding, the Commission's previous permissiveness in allowing transmission providers to justify their own approach to affected system study modeling criteria is no longer appropriate.

512. Additionally, we note that the issue raised in *EDF Renewable Energy Inc.* v. *Midcontinent Indep. Sys. Operator, Inc.* was not whether the use of NRIS in affected system studies results in just and reasonable and not unduly discriminatory or preferential treatment of affected system interconnection customers. Rather, the issue was whether lack of transparency as to whether MISO, SPP, and PJM, as affected system transmission providers, would conduct affected system studies using NRIS or ERIS standards results in unjust and unreasonable rates. The Commission addressed in its holding the complainants' core concerns regarding transparency, finding, on the record in that proceeding, that there was not sufficient evidence to demonstrate that current modeling practices in those RTOs were unjust and unreasonable.[955] In any event, the Commission has sufficiently explained its evolution in thinking, as discussed above.

b. Affected System Pro Forma Agreements

i. Order No. 2023 Requirements

513. The Commission adopted several *pro forma* agreements to improve the efficiency and transparency of the interactions among the parties during the affected system study process. The Commission first adopted a *pro forma* affected system study agreement in new Appendix 9 of the *pro forma* LGIP and a *pro forma* multiparty affected system study agreement in new Appendix 10 of the *pro forma* LGIP.[956] These *pro forma* affected system study agreements stipulate how to study the impact of interconnecting generating facilities on an affected system to identify network upgrades needed to accommodate the interconnection request. The Commission next adopted a *pro forma* affected system facilities construction agreement in new Appendix 11 of the *pro forma* LGIP and a *pro forma* multiparty affected system facilities construction agreement in new Appendix 12 of the *pro forma* LGIP.[957] These *pro forma* affected system facilities construction agreements standardize the terms and conditions regarding construction of affected system network upgrades.

ii. Requests for Rehearing and Clarification

514. Duke Southeast Utilities take issue with article 3.2.2.1 (Repayment) of the *pro forma* affected system facilities construction agreement, which states that the affected system interconnection customer shall be entitled to a cash repayment of the amount it paid for any affected system network upgrades.[958]

515. Duke Southeast Utilities state that, despite conceding that the repayment policy for affected system network upgrades was a NOPR proposal, the Commission declined to address arguments on the merits of this policy on the basis that the Commission simply proposed to memorialize the Commission's existing policy in a *pro forma* agreement for affected systems.[959] Duke Southeast Utilities contend that the Commission's refusal to engage on this critical question was wrong on the law and renders this portion of Order No. 2023 reversible error. Duke Southeast Utilities state that the Commission's central argument is that the cost allocation question is beyond the scope of Order No. 2023 because the Commission did not propose to change its existing policy. Duke Southeast Utilities assert that the Commission's ''existing policy'' is the subject of significant debate and ongoing litigation in the courts.[960] Duke Southeast Utilities state that they have steadfastly maintained that, before Order No. 2023, there was no such existing policy that required affected system operators to reimburse distant interconnection customers. Duke Southeast Utilities explain that, first, because there was no *pro forma* affected system facilities construction agreement before now, transmission owners fashioned their own agreements and filed them with the Commission. Duke Southeast Utilities state that the Commission had routinely accepted such affected system agreements *without* reimbursement provisions, which it clearly would not have done if such filed agreements violated an ''existing policy'' of the Commission.[961]

516. Duke Southeast Utilities explain that, second, while the Commission has claimed that Order No. 2003 and the LGIA contain a requirement that affected system operators reimburse distant interconnection customers, the Commission was equally clear that the LGIA adopted in Order No. 2003 by its terms does not apply to affected system operators.[962] Duke Southeast Utilities state that, in *Midwest Independent Transmission System Operator, Inc.,* the Commission accepted an agreement between an affected system and an interconnection customer that allocated 50% of the network upgrade costs to the interconnection customer without reimbursement.[963] Duke Southeast Utilities state that, in the process of accepting that agreement, the Commission rejected the interconnection customer's argument that Order No. 2003 entitled it to 100% reimbursement, because the affected system there ''was not a party to the interconnection agreement and cannot be bound by a contract to which it is not a party'' and because ''Order [ ] 2003 [ ] acknowledges that an Affected System is not bound by the Final Rule [Large Generator Interconnection Procedures] and interconnection agreement.'' [964] Duke Southeast Utilities conclude that it is therefore clear that there was no ''existing policy'' that would justify the Commission's refusal to engage this question in the present rulemaking.

517. Duke Southeast Utilities state that the Commission adopted a brand new agreement—the *pro forma* affected system facilities construction agreement—that includes a mandatory reimbursement requirement without acknowledging its past practice of accepting such agreements without

[962] *Id.*

[963] *Id.* at 5–6 (citing *Midcontinent Indep. Trans. Sys. Operator, Inc.,* 120 FERC ¶ 61,066, at PP 16, 23–25 (2007) (*Midwest ISO*)).

[964] *Id.* at 6 (citing *Midwest ISO,* 120 FERC ¶ 61,066 at P 25 (capitalization altered) (citation omitted)).

reimbursement language.[965] Duke Southeast Utilities assert that the Commission has repeatedly accepted proposed affected system agreements that allocate affected system network upgrade costs to affected system interconnection customers without reimbursement.[966] Duke Southeast Utilities argue that this reflects the Commission's practice of accepting as just and reasonable and not unduly discriminatory affected system agreements in which the affected system interconnection customer has no right to reimbursement. Duke Southeast Utilities contend that the Commission's failure to explain its change of course on its reimbursement policy without addressing the precedent from which it departs is a direct violation of the APA.[967]

518. Duke Southeast Utilities contend that, under this repayment provision, customers on the affected system must bear higher transmission costs to pay for network upgrades they do not need (by reimbursing interconnection customers who provide upfront funding), so that an interconnection customer can interconnect on a neighboring transmission system.[968] Duke Southeast Utilities state that, in the case of the Duke Southeast Utilities, and as shown in the rulemaking comments filed by North Carolina state regulators and consumer advocate bodies, this often means that the retail customers of North Carolina are forced to subsidize generating facilities interconnecting to, and selling into, PJM.[969] Duke Southeast Utilities assert that the Commission was not entitled to willfully ignore changed circumstances and refuse to provide meaningful answers to arguments presented by North Carolina stakeholders.[970] Duke Southeast Utilities state that the Commission (1) acted arbitrarily and capriciously by failing to address the various commenters' concerns, and such actions without substantial evidence in support is grounds for reversal on its own under the APA[971] and (2) violated section 205 of the FPA by mandating a new *pro forma* cost allocation agreement without meaningfully considering the needs of impacted customers.[972]

519. Duke Southeast Utilities state that the Commission has not conducted an analysis based on the specific facts and record presented in this case to justify allocating these network upgrade costs to Duke Southeast Utilities' existing transmission customers.[973] Duke Southeast Utilities state that Order No. 2023 contains no explanation or evidence that the Commission considered the impacts to native transmission customers at all. Duke Southeast Utilities assert that, if the Commission undertook such a balancing of interests, it had a responsibility under the APA to explain itself.[974] Duke Southeast Utilities argue that, on rehearing, the Commission should explain in detail what this analysis entailed.[975]

520. Duke Southeast Utilities argues that the Commission's cost allocation decision is inconsistent with the cost causation principle, which states that all approved rates must reflect to some degree the costs actually caused by the customer who must pay them[976] and that benefits must be at least roughly commensurate with costs.[977]

521. Duke Southeast Utilities state that the Commission declined in Order No. 2023 to respond to Duke Southeast Utilities' arguments that the reimbursement policy goes against the Commission's cost causation principles.[978] Duke Southeast Utilities state that the mere fact is that, ''but for'' the affected system interconnection customers' interconnection with the host transmission provider, there would be no need for the affected system network upgrades. Duke Southeast Utilities contend that customers on the affected system will not benefit from the interconnection of the affected system interconnection customers onto the interconnecting transmission provider's transmission system from an energy and capacity perspective because the affected system is not receiving energy and capacity from the host transmission provider: therefore, Duke Southeast Utilities' retail customers will not be receiving the generation. Duke Southeast Utilities state that the required network upgrades also provide no benefit to the customers of the affected system from a transmission perspective because they are not needed ''but for'' the affected system interconnection customers interconnection to the host transmission provider.

522. Duke Southeast Utilities' argue that, in the context of affected system network upgrades, the Commission should require affected system interconnection customers to fund the cost of affected system network upgrades because (a) such network upgrades would not be necessary but for the affected system interconnection request and (b) doing so would allocate the network upgrades costs to the party that caused the costs to be incurred and reaps the resulting benefits—the affected system interconnection customers.[979]

iii. Determination

523. We disagree with Duke Southeast Utilities' characterization that the Commission conceded that the affected system network upgrade reimbursement provisions in the *pro forma* affected system facilities construction agreements were a ''NOPR proposal;'' rather, the Commission merely acknowledged that in the NOPR it included the existing affected system network upgrade reimbursement in the newly proposed *pro forma* affected system facilities construction agreements. The Commission did not state that the affected system network upgrade reimbursement was a ''NOPR proposal'' of new regulations.

524. In response to Duke Southeast Utilities' request for rehearing of the affected system network upgrade reimbursement provisions in the *pro forma* affected system facilities construction agreements, we note that, although we are not changing existing Commission policy, we continue to find that policy to be just, reasonable, and not unduly discriminatory or preferential. We disagree with Duke Southeast Utilities' assertion that, before Order No. 2023, there was no such existing affected system network

upgrade reimbursement policy. As the Commission concluded in Order No. 2003, and we affirm here, the Commission's interconnection pricing policy as it applies to a non-independent affected system transmission provider should be consistent with the policy the Commission adopted for non-independent host transmission providers.[980] Specifically, under the Commission's interconnection pricing policy, the costs of interconnection facilities are the responsibility of the interconnection customer and the costs of network upgrades are funded initially by the interconnection customer (unless the transmission provider elects to fund them), and the interconnection customer is entitled to a cash equivalent refund equal to the total amount paid for the network upgrades.[981]

525. We find that it is important for the repayment provisions for affected system interconnection customers to be consistent with the manner that the transmission provider repays its own interconnection customers. For example, the Commission in Order No. 2003 explained that non-independent transmission providers have an incentive to frustrate rival interconnection customers, and, absent a reimbursement requirement, such transmission providers might discriminate against independent interconnection customers by, for example, finding that a disproportionate share of the costs of expansions needed to serve its own power customers is attributable to competing interconnection customers.[982] This rationale applies equally to affected system transmission providers.

526. Affected system transmission providers might source generation from the host transmission provider's transmission system to serve its own load, and such affected system transmission provider's interests might benefit from additional network upgrades to facilitate transactions across the seam between transmission providers. If that is the case, the affected system transmission provider would have an incentive to impose additional burdensome and unnecessary affected system network upgrades on affected system interconnection customers; however, because under Commission policy the affected system transmission providers are required to reimburse the affected system interconnection customer for those network upgrade costs, the incentive for discriminatory behavior is absent.

527. The Commission also found in Order No. 2003 that the reimbursement requirement would enhance competition by promoting new generation.[983] We similarly find that the requirement for affected system transmission providers to repay affected system interconnection customers will enhance competition because it will discourage affected system transmission providers from assigning unnecessary affected system network upgrade costs to interconnection customers if the transmission provider ultimately must reimburse the affected system interconnection customer for such costs.[984] In doing so, we continue to maintain that such additional generation and related enhanced competition will generally cause the average embedded cost transmission rate to decline for all remaining customers.[985]

528. We also continue to find, as we did in Order Nos. 2003 and 2003–A, that ''network facilities are not 'sole use' facilities but facilities that benefit all Transmission Customers . . . the addition [of a network upgrade facility] represents a system expansion used by and benefiting all users due to the integrated nature of the grid.'' [986]

529. In response to Duke Southeast Utilities' assertion that the Commission has routinely accepted affected system agreements without affected system network upgrade reimbursement provisions, we clarify that such acceptances were in error and in contravention of Commission policy as established in Order No. 2003.[987] In Docket No. ER20–2419–000, the two service agreements at issue involved system protection facilities, the costs of which, per Duke Southeast Utilities' tariff, are directly assignable to an interconnection customer without reimbursement.[988]

530. We also disagree with Duke Southeast Utilities' assertion that the Commission has been clear that the *pro forma* LGIA adopted in Order No. 2003 does not apply to affected system operators. We reiterate that Order No. 2003's reimbursement requirements are reflected both in the preamble of Order No. 2003 and *pro forma* LGIA Article 11.4, which Order No. 2003 explicitly made applicable to all jurisdictional affected system operators.[989]

531. The *Midwest Independent Transmission System Operator, Inc.* proceeding that Duke Southeast Utilities cites is inapposite to the status quo as established in Order No. 2003. First, the affected system transmission owner was not a party to the agreement in that proceeding and was not required to reimburse the interconnection customer in a region that had transitioned to participant funding prior to the filing of the interconnection agreement at issue in that proceeding.[990] Second, the affected system ''operator'' was a transmission owner within the MISO footprint, not a transmission provider in a separate service territory with its own tariff.[991] Furthermore, in Order No. 2003, the Commission limited the use of participant funding to independent transmission providers, such as MISO, because of its concern that for a non-independent transmission provider, such as Duke Southeast Utilities, the implementation of participant funding creates opportunities for undue discrimination.[992] The Commission also stated that, if the affected system operator is an independent transmission provider, then it has flexibility regarding its interconnection pricing policy (including participant funding) that the affected system operator may propose while as discussed above, an affected system operator that is not independent must be consistent with the policy adopted for non-independent transmission providers (*i.e.,*

[989] Order No. 2003, 106 FERC ¶ 61,220 at P 738; *see also Duke Energy Progress, LLC,* 177 FERC ¶ 61,001, *on reh'g,* 179 FERC ¶ 61,007, at P 33 (''Order No. 2003 explicitly requires jurisdictional affected system operators to reimburse interconnection customers for network upgrade costs.'').

[990] *Midwest Indep. Transmission Sys. Operator, Inc.,* 120 FERC ¶ 61,066, at PP 24–25.

[991] In MISO, the definition of affected system encompasses an electric transmission or distribution system other than the transmission *owner's* transmission system that is affected by an interconnection request. MISO, FERC Electric Tariff, attach. X (Generator Interconnection Procedures (GIP)), (161.0.0) § 1.

[992] Order No. 2003, 106 FERC ¶ 61,220 at P 696.

reimbursement).[993] This circumstance does not even speak to Order No. 2003's network upgrade reimbursement requirement for jurisdictional affected system operators, much less undermine it.

532. In response to Duke Southeast Utilities' allegation that the Commission failed to address commenters' concerns in Order No. 2023, we are not obligated to respond to each argument that goes to issues outside the scope of the proceeding one-by-one.[994] We reiterate that the affected system network upgrade reimbursement provisions in the *pro forma* affected system facilities construction agreements are a codification of existing Commission policy and are not a new policy proposal. Order No. 2023 is not a vehicle for challenging existing Commission policy [995] and, accordingly, the Commission did not need to address each individual argument attempting to undermine existing Commission policy because Order No. 2023 did not revise the Commission's existing reimbursement policy.

533. Finally, we remove from the *pro forma* affected system facilities construction agreements sections 3.1.2.2 (Recommencing of Work) and 3.1.2.3 (Right to Suspend Due to Default). We find that these provisions are inconsistent with the *pro forma* LGIA and, accordingly, are unnecessary.

c. Miscellaneous

i. Requests for Rehearing and Clarification

534. MISO asks the Commission to require MISO, PJM, and SPP to coordinate their affected systems revisions on compliance.[996] MISO explains that Order No. 2023 only encourages, but does not require, ''voluntary coordination between transmission providers who share transmission system seams and whose customers frequently impact each other's systems.'' [997] MISO argues that this could potentially allow neighboring RTOs/ISOs to independently develop affected systems approaches that could conflict with each other's procedures and disrupt or sideline existing joint operating agreement coordination processes.[998] MISO states that MISO, PJM, and SPP would need to intervene in each other's compliance proceedings to monitor proposed revisions and protest if needed, which would be less efficient than the current joint affected system coordination process. MISO adds that misalignment on affected systems studies between MISO, PJM, and SPP could lead to delayed study penalties. Further, MISO explains that the Commission has previously required coordinated filings by RTO/ISOs proposing identical changes to their joint operating agreements. MISO states that it addressed these concerns in its comments but asserts that Order No. 2023 did not meaningfully respond to them and failed to acknowledge the unique status of MISO, PJM, and SPP's affected system coordination procedures. Rather, MISO explains that Order No. 2023 states that the Commission ''is not persuaded that any potential efficiencies of such coordination outweigh the burdens that may be placed on host transmission providers.'' [999] MISO argues that ignoring these arguments violates the requirement of reasoned decision-making and asserts that it is arbitrary and capricious that the Commission did not justify its departure from its precedent of requiring coordination between transmission providers.

535. Shell requests clarification that affected system transmission providers must reimburse affected system interconnection customers for affected system network upgrades, not only when those network upgrades are identified via a traditional affected system study, but also when identified through a seams study.[1000] Shell explains that seams studies integrate generator interconnection and regional and inter-regional transmission planning and cost allocation. Shell asserts that it would be unjust, unreasonable, and unduly discriminatory to reimburse interconnection customers for affected systems network upgrades identified under the revised *pro forma,* but not those identified under a seams arrangement.

536. Southeastern Utilities agree with the Commission that, in most cases, an affected system transmission provider will receive the opportunity to study a delivery request if the ''affected system interconnection customer subsequently seeks deliverability on either the host system or an affected system.'' [1001] However, Southeastern Utilities explain that, in some cases, the host transmission provider may not perform a transmission service study before power flows from a generating facility based on an NRIS request, and in those cases, it is not clear how or when the affected system transmission provider would have the opportunity to study the transmission service request. For example, Southeastern Utilities note that MISO's business practice manual allows MISO to accept a network service request ''without further analysis'' if the generating facility implicated in the request is a MISO aggregate deliverable resource that is identified during an NRIS deliverability study.[1002] Therefore, Southeastern Utilities ask the Commission to clarify that, in the event a host transmission provider performs a delivery analysis as part of its interconnection study, the affected system transmission provider can also study both interconnection and delivery requirements because the affected system transmission provider may not have an opportunity to study a transmission service request related to the generating facility.[1003] Southeastern Utilities argue that this clarification is needed to better consider impacts on their systems from delivery of power on neighboring systems. If the Commission does not provide clarification, Southeastern Utilities request rehearing on this matter. Southeastern Utilities argue that prohibiting affected system transmission providers to perform a delivery study along with an interconnection study under the circumstances it describes would be arbitrary and capricious and contrary to law for failing to consider all aspects of the issue under consideration, inconsistent with the Commission's stated rationale, and would jeopardize system reliability.

ii. Determination

537. We reject MISO's request that the Commission require MISO, PJM, and SPP to coordinate their affected systems revisions on compliance. We disagree with MISO's argument that failing to include a directive for joint operating parties to coordinate affected systems was arbitrary and capricious. Order No. 2023 sets the requirements in the *pro forma* LGIP for the affected system study process. As MISO acknowledges

[1003] *Id.* at 5–6.

in its rehearing request, the RTOs'/ISOs' joint operating agreements are ''unique'' and thus are not part of the Commission's *pro forma* LGIP. We recognize that MISO has joint operating agreements with SPP and PJM that may need to be updated to reflect the requirements of Order No. 2023, and to the extent that revisions are needed, then we expect that MISO, PJM, and SPP will propose revisions to their joint operating agreements to ensure that there are no conflicts among their joint operating agreements, their LGIPs, and Order No. 2023's requirements.

538. We also disagree with MISO's argument that failing to include a directive for joint operating parties to coordinate affected systems is a departure from Commission precedent. We note that MISO points to a complaint that was specifically filed against MISO's, PJM's, and SPP's joint operating agreements and tariffs. However, here, we are revising the Commission's *pro forma* LGIP. Order No. 2023 does not modify or address individual seams arrangements, which are not part of the Commission's *pro forma* LGIP. We agree that alignment among neighboring processes is important, and we continue to encourage voluntary coordination between transmission providers who share transmission seams.[1004]

539. We also reject Shell's request for clarification that affected system transmission providers must reimburse affected system interconnection customers for affected system network upgrades whether identified via a traditional affected system study or through a seams study, because such clarification is outside of the scope of Order No. 2023. As discussed above, Order No. 2023 modifies the Commission's *pro forma* LGIP to establish a standardized affected system study process. Additionally, as discussed above, we note that Order No. 2023 does not alter the Commission's existing reimbursement requirements for affected system network upgrades.

540. We reject Southeastern Utilities' request for rehearing that, in the event a host transmission provider does not perform a delivery analysis as part of its interconnection study, the affected system transmission provider can also study both interconnection and delivery requirements. In Order No. 2023, the Commission found, and we continue to find, that an affected system transmission provider must use ERIS studies on affected system interconnection requests regardless of the level of service requested on the host system. Southeastern Utilities argue that there are some instances where the affected system transmission provider will not have the opportunity to study the impact of the generating facility in the context of the associated transmission service request before any power flow from that generating facility and notes, as an example, that MISO does not conduct a deliverability study for network service requests when an interconnection customer requests NRIS. However, as discussed in Order No. 2023, the ERIS modeling requirement applies to the *pro forma* LGIP affected system study process and the Commission explicitly stated that it would not address whether a transmission provider has adequate transmission service studies.[1005] As discussed above, the Commission found in Order No. 2003 and reiterated in Order No. 2023 that interconnection service is an element of, but separate from the delivery component of, transmission service.[1006]

E. Reforms To Incorporate Technological Advancements Into the Interconnection Process

1. Increasing Flexibility in the Generation Interconnection Process

a. Co-Located Generating Facilities Behind One Point of Interconnection

i. Order No. 2023 Requirements

541. In Order No. 2023, the Commission revised *pro forma* LGIP section 3.1.2 to require transmission providers to allow more than one generating facility to co-locate on a shared site behind a single point of interconnection and share a single interconnection request.[1007] The Commission clarified that interconnection customers have the choice to structure their interconnection requests for co-located generating facilities according to their preference (*i.e.,* as separate interconnection requests or as a shared interconnection request) and that Order No. 2023 does not require interconnection customers to share a single interconnection request for multiple generating facilities located on the same site.[1008] The Commission also clarified that co-located generating facilities can be owned by a single interconnection customer with multiple generating facilities sharing a site, or by multiple interconnection customers that have a contract or other agreement that allows for shared land use.[1009]

542. The Commission found that co-located generating facilities, in spite of being prevalent in current interconnection queues, face barriers to interconnection under existing interconnection procedures, and that this reform will effectively remove such barriers.[1010] The Commission further found that requiring transmission providers to allow interconnection customers to submit a single interconnection request that represents multiple generating facilities that are located behind a single point of interconnection is required to ensure just and reasonable rates. The Commission stated that this reform will improve efficiency for transmission providers in the study process by reducing the number of interconnection requests in the interconnection queue and will reduce costs for interconnection customers because they will only submit a single set of deposits to enter the interconnection queue. The Commission also stated that this reform will improve interconnection queue efficiency without imposing an adverse impact on the efficacy of interconnection study results or other interconnection customers.[1011]

ii. Requests for Rehearing and Clarification

543. MISO urges the Commission to clarify that the requirement to allow co-located resources to share an interconnection request is limited to co-located resources owned by the same interconnection customer.[1012] MISO states that requiring or even allowing separate interconnection customers to combine their projects into a single interconnection request would create numerous opportunities for conflict and interconnection management challenges. MISO argues, for example, that, if one of two interconnection customers sharing an interconnection request fails to adhere to the requirements of MISO's LGIP and must be withdrawn, MISO would need to develop an extensive set of revisions to the LGIP and new procedures for separating one interconnection customer's facilities out of a shared interconnection request. MISO asserts that it is not necessary to require a transmission provider to allow separate interconnection customers to share an interconnection request for separate projects just to allow them to co-locate

[1004] Order No. 2023, 184 FERC ¶ 61,054 at PP 1172, 1194.

[1005] *Id.* P 1290.

[1006] *Id.* P 1288 (citing Order No. 2003, 104 FERC ¶ 61,103 at P 118; Order No. 2003–A, 106 FERC ¶ 61,220 at P 113).

[1007] *Id.* P 1346.

[1008] *Id.* PP 1351–1352.

[1009] *Id.* P 1355.

[1010] *Id.* P 1349.

[1011] *Id.* P 1350.

[1012] MISO Rehearing Request at 23–25.

behind a common point of interconnection. Therefore, MISO asks the Commission to clarify that allowing multiple interconnection customers to share an interconnection request is merely one mechanism to achieve Order No. 2023's goal allowing interconnection customers to co-locate their generating facilities and that transmission providers are not required to use that particular mechanism provided they adopt procedures to allow the intended result.

544. NYTOs ask the Commission to clarify the definition of stand alone network upgrades and the option to build standalone network upgrades in situations of co-located generating facilities.[1013] Specifically, NYTOs note that Order No. 2023 maintains the definition of stand alone network upgrades as ''only those required for a single interconnection customer,'' [1014] but also requires transmission providers to allow interconnection customers to submit a single interconnection request that represents multiple generating facilities that are located behind a single point of interconnection.[1015] Therefore, NYTOs urge the Commission to clarify application of the option to build stand alone network upgrades when required for a shared interconnection request.

iii. Determination

545. We are unpersuaded by MISO's arguments that the requirement to allow co-located resources to share an interconnection request should be limited to co-located resources owned by the same interconnection customer. We sustain our findings in Order No. 2023 that transmission providers must allow more than one generating facility to co-locate on a shared site behind a single point of interconnection and share a single interconnection request, and that such co-located generating facilities can be owned by a single interconnection customer with multiple generating facilities sharing a site, or by multiple interconnection customers that have a contract or other agreement that allows for shared land use.[1016] We continue to find that this reform will improve efficiency for transmission providers in the study process by reducing the number of interconnection requests in the interconnection queue and will reduce costs for interconnection customers because they will only submit a single set of deposits to enter the interconnection queue. For these reasons, we continue to believe that this reform will improve efficiency for both transmission providers and interconnection customers, and that this reform is necessary to ensure just and reasonable rates.

546. Regarding the situation that MISO describes, in which one of the co-located generating facilities sharing an interconnection request is withdrawn or requested to be withdrawn, we do not believe that revisions to the *pro forma* LGIP are needed to separate the facilities in the shared interconnection request. Rather, we believe that transmission providers should determine whether the entire shared interconnection request should proceed or be withdrawn using the existing withdrawal provisions in section 3.7 of the *pro forma* LGIP or the existing material modification procedures in section 4.4 of the *pro forma* LGIP. If a transmission provider would like to propose revisions to its LGIP to allow one co-located generating facility sharing an interconnection request to withdraw from the queue while allowing another co-located generating facility sharing the same interconnection request to proceed in the interconnection queue, it may do so in an FPA section 205 filing.

547. In response to NYTOs' request for clarification, we believe that the revisions to the definition of stand alone network upgrades earlier in this order in response to Clean Energy Associations' request for rehearing should resolve NYTOs' concern and clarify the option to build stand alone network upgrades when required for a shared interconnection request.[1017]

b. Revisions to the Modification Process To Require Consideration of Generating Facility Additions

i. Order No. 2023 Requirements

548. In Order No. 2023, the Commission revised section 4.4.3 of the *pro forma* LGIP to require transmission providers to evaluate the proposed addition of a generating facility at the same point of interconnection prior to deeming such an addition a material modification, if the addition does not change the originally requested interconnection service level.[1018] The Commission found that automatically deeming a request to add a generating facility to an existing interconnection request to be a material modification without such evaluation creates a significant barrier to access to the transmission system and renders existing interconnection processes unjust and unreasonable.[1019]

549. The Commission clarified that interconnection customers may continue to request changes to proposed generating facilities at any time in the interconnection process; however, transmission providers are only required to evaluate whether a request to add a generating facility to an existing interconnection request is material if the request is submitted before the interconnection customer returns the executed facilities study agreement to the transmission provider. Once the executed facilities study agreement is returned, the transmission provider may decide to automatically treat requests to add a generating facility to an existing interconnection request as material modifications without review.[1020] The Commission also created an exception from these requirements for transmission providers that employ fuel-based dispatch assumptions.[1021]

550. The Commission clarified that, per *pro forma* LGIP section 4.4.1, prior to the return of the cluster study agreement from the transmission provider to the interconnection customer, a decrease of up to 60% of electrical output (MW) must not be considered a material modification.[1022] In addition, per *pro forma* LGIP section 4.4.2, prior to the return of the executed interconnection facilities study, an additional 15% decrease of electrical output of the proposed project must not be considered a material modification if the change occurred either through a decrease in plant size (MW) or a decrease in interconnection service level accomplished by applying transmission provider-approved injection-limiting equipment.

ii. Requests for Rehearing and Clarification

551. PJM seeks rehearing of this reform because it believes that the Commission fails to address the concerns PJM raised in its NOPR comments that locating an additional facility at the site of the first project can affect other interconnection customers, especially if the additional facility has a different fuel type than the initial facility.[1023] PJM adds that the Commission's determination is arbitrary and capricious because a project developer who is unsure which facilities it seeks to interconnect at the time of its application is not ready to

[1022] *Id.* P 1417.

[1023] PJM Rehearing Request at 41–42.

proceed and performing a material modification analysis is time-consuming: therefore, this requirement is inconsistent with Order No. 2023's stated goal of facilitating a prompt study process that allows ready projects to move forward.

552. Shell seeks rehearing regarding the deadlines by which an interconnection customer can reduce the size of its generating facilities without the change being deemed a material modification.[1024] Shell notes that Order No. 2023 allows an initial 60% size reduction prior to the interconnection customer executing the cluster study agreement. Shell states that, because Order No. 2023 eliminated the feasibility study from the interconnection study process, interconnection customers no longer have a basis at that point in the study process from which to determine if they should decrease the size of their generating facility. Shell argues that the Commission should revise *pro forma* LGIP section 4.4.1 to allow interconnection customers to reduce their project size after the initial cluster study report and prior to the start of the subsequent cluster re-study or facilities study.

553. Clean Energy Associations ask the Commission to clarify that changing solar modules or wind turbines, adding storage capacity, or making minor adjustment to inverter performance are presumptively immaterial if the project's planned export and import capacity remains the same.[1025] Clean Energy Associations state that finalizing procurement is highly reliant on the results and timing of the interconnection studies and argue that this clarification is necessary to ensure that project developers are not effectively forced into locking in inefficient equipment early in the interconnection process.

iii. Determination

554. We disagree with PJM that the Commission did not sufficiently address PJM's concerns that locating an additional facility at the site of the first project could affect other interconnection customers. In Order No. 2023, the Commission established a procedural requirement for transmission providers to evaluate the proposed addition of a generating facility at the same point of interconnection prior to deeming such an addition a material modification, if the addition does not change the originally requested interconnection service level.[1026] The Commission did not require any particular substantive outcome following this evaluation; rather, transmission providers may still find that a proposed modification involving the proposed addition of a generating facility at the same point of interconnection would have a material impact on the cost or timing of any interconnection request with an equal or later queue position, and therefore constitutes a material modification. While such evaluation likely entails some additional burden on the transmission provider, we continue to find that this outcome is warranted given the countervailing benefits. Specifically, we sustain our finding that transmission providers automatically deeming a request to add a generating facility to an existing interconnection request to be a material modification creates a significant barrier to access to the transmission system and renders existing interconnection processes unjust and unreasonable.[1027] Further, we continue to find that this reform will ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, and will prevent undue discrimination.

555. We are not persuaded by Shell's arguments on rehearing that the Commission should allow a 60% size reduction after the initial cluster study report and prior to the start of the subsequent cluster re-study or facilities study. We find that allowing every interconnection customer in a cluster a 60% size reduction after the initial cluster study report will significantly impact the amount of uncertainty faced by interconnection customers in a cluster—because each change in proposed generating facility size may shift network upgrade costs to other interconnection customers, who in turn, may elect to re-size—and may lead to withdrawals and restudies. Rather, we reiterate our finding that, per *pro forma* LGIP section 4.4.1, prior to the return of the cluster study agreement from the transmission provider to the interconnection customer, the proposed decrease of up to 60% of a generating facility's electrical output (MW) must not be considered a material modification.[1028] We clarify that this allowable decrease of up to 60% of a generating facility's electrical output may occur during the customer engagement window (*i.e.,* prior to the return of the cluster study agreement from the transmission provider to the interconnection customer). Further, we note that interconnection customers have an additional opportunity to propose a decrease in the output of the generation facility after the cluster study report: per *pro forma* LGIP section 4.4.2, prior to the return of the executed interconnection facilities study, an additional 15% decrease of electrical output of the proposed project must not be considered a material modification if the change occurred either through a decrease in plant size (MW) or a decrease in interconnection service level accomplished by applying transmission provider-approved injection-limiting equipment.

556. We find Clean Energy Associations' requested clarification that changing solar modules or wind turbines, adding storage capacity, or making minor adjustments to inverter performance are presumptively immaterial if the project's planned export and import capacity remains the same, is outside the scope of this rulemaking. In Order No. 2023, the Commission did not establish a presumption of immateriality for any specific changes to an interconnection request that do not impact the requested interconnection service level. Rather, the Commission established a procedural requirement for transmission providers to evaluate the proposed addition of a generating facility at the same point of interconnection prior to deeming such an addition a material modification, if the addition does not change the originally requested interconnection service level.[1029] We decline to establish any presumption of immateriality here for specific changes to an interconnection request that do not impact the requested interconnection service level. We do note that Order No. 845 established the technological change procedure to provide for the evaluation of whether a technological advancement can be incorporated into an interconnection request without the change being considered a material modification (*i.e.,* whether the change is a permissible technological advancement).[1030] Any such technical change procedures are in the transmission provider's tariff, and Order No. 2023 did not affect them.

c. Availability of Surplus Interconnection Service

i. Order No. 2023 Requirements

557. In Order No. 2023, the Commission revised section 3.3.1 of the *pro forma* LGIP to require transmission providers to allow interconnection customers to access the surplus interconnection service process once the original interconnection customer has an executed LGIA or requests the filing of an unexecuted LGIA.[1031] The Commission found that this reform will enable interconnection customers with unused interconnection service to let other generating facilities use that interconnection service earlier than is currently allowed and, therefore, increase overall efficiency of the interconnection queue and in turn ensure just and reasonable rates.[1032] The Commission clarified that this reform does not modify how the surplus interconnection service process is conducted, but rather addresses when a request for surplus interconnection service may be submitted.[1033] The Commission further clarified that the original interconnection customer must have an LGIA in place, either executed or requested to be filed unexecuted with the Commission, prior to the transmission provider tendering any LGIA for surplus interconnection service.[1034]

ii. Requests for Rehearing and Clarification

558. PJM requests clarification or, in the alternative, rehearing of Order No. 2023's requirement regarding surplus interconnection service.[1035] PJM asserts that, when the initial interconnection customer signs an LGIA, none of the network upgrades or customer interconnection facilities will have been built, such that there will be no service, much less ''surplus'' service, available. PJM argues that the requirement would introduce additional administrative burden, thereby detracting from the timely completion of interconnection studies and increasing the potential for study delay penalties, while providing little additional benefit to interconnection customers.[1036] PJM adds that studying co-located generating facilities of different fuel types is appropriate within the same cluster study rather than at disjointed points in time given that such generating facilities can have very different electrical characteristics. Therefore, PJM seeks clarification that it is entitled to an independent entity variation to not provide surplus interconnection service at such an early stage of project development or to not provide the service at any stage if it demonstrates that surplus interconnection service requests are inconsistent with its cluster study processes and will hinder efficient and timely clustered interconnection studies. In the alternative, PJM seeks rehearing of the requirement for being arbitrary and capricious because the expansion of surplus interconnection service runs contrary to Order No. 2023's goal of speeding up interconnection processes.

559. SPP asks the Commission to clarify that Order No. 2023 requires transmission providers to allow interconnection customers to *apply for* surplus interconnection service once the underlying GIA is executed or filed unexecuted, not that transmission providers must allow interconnection customers to begin receiving surplus interconnection service at that point.[1037] Because surplus interconnection service fundamentally relies upon another interconnection service request, SPP asks the Commission to clarify that Order No. 2023 does not obligate transmission providers to provide surplus interconnection service earlier than they provide interconnection service to the underlying interconnection service request. In the alternative, SPP requests rehearing of the requirement because it would be impossible for transmission providers to provide surplus interconnection service before providing service for the underlying interconnection request and would threaten system reliability.

iii. Determination

560. We are unpersuaded by PJM's arguments on rehearing that the Commission should eliminate this reform because it would detract from the timely completion of interconnection studies without providing any measurable benefit to interconnection customers. We reiterate that the reform solely modifies when an interconnection customer can submit a request for surplus interconnection service, allowing interconnection customers to access the surplus interconnection service process once the initial interconnection customer has an executed LGIA or requests the filing of an unexecuted LGIA. Surplus interconnection service is defined as any unneeded portion of interconnection service established in an LGIA, such that if surplus interconnection service is utilized, the total amount of interconnection service at the point of interconnection would remain the same.[1038] PJM notes that, when the initial interconnection customer signs an LGIA, the interconnection facilities and network upgrades to accommodate the initial interconnection customer's generating facility will not yet have been built. At that point, however, it will be known whether there is any unneeded portion of interconnection service established in the LGIA that a surplus interconnection customer could utilize. For this reason, we disagree with PJM that interconnection customers should not be allowed to request surplus interconnection service once the initial interconnection customer signs an LGIA. We continue to find that this reform will enable interconnection customers with unused interconnection service to allow other generating facilities to use that interconnection service earlier than was previously allowed and, therefore, will increase the overall efficiency of the interconnection queue. We continue to find that this reform will ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, and will prevent undue discrimination.

561. We also decline to grant PJM's request for clarification that PJM is entitled to an independent entity variation to not provide surplus interconnection service. Consistent with the Commission's statements in Order No. 2023, transmission providers may explain specific circumstances on compliance and justify why any deviations are either consistent with or superior to the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs.

562. We grant SPP's request for clarification that Order No. 2023 requires transmission providers to allow interconnection customers to *apply for* surplus interconnection service once the underlying LGIA is executed or filed unexecuted, not that transmission providers must allow interconnection customers to begin receiving surplus interconnection service at that point. As the Commission stated in Order No. 2023, and as SPP describes, this reform modifies when a request for surplus interconnection service may be submitted.[1039] We reiterate the

clarification in Order No. 2023 that the initial interconnection customer must have an LGIA in place, either executed or requested to be filed unexecuted with the Commission, prior to the transmission provider tendering any LGIA for surplus interconnection service.[1040]

d. Operating Assumptions for Interconnection Studies

i. Order No. 2023 Requirements

563. In Order No. 2023, the Commission revised sections 3.1.2, 3.2.1.2, 3.2.2.2, 3.3.1, 3.4.2, 4.4.3, 7.3, 8.2, and Appendix 1 of the *pro forma* LGIP and article 17.2 and Appendix H of the *pro forma* LGIA to require transmission providers, at the request of the interconnection customer, to use operating assumptions in interconnection studies that reflect the proposed charging behavior of electric storage resources [1041] (whether standalone, co-located generating facilities,[1042] or part of a hybrid generating facility [1043])—*i.e.,* whether the interconnecting generating facility will or will not charge during peak load conditions—unless good utility practice, including applicable reliability standards,[1044] otherwise requires the use of different operating assumptions.[1045] The Commission clarified that studying electric storage resources, at the request of the interconnection customer, according to their planned operating assumptions refers only to the operating assumptions for withdrawals of energy (*e.g.,* the charging of an electric storage resource) in interconnection studies. The Commission further clarified that the reforms described in that determination section of Order No. 2023 and the related sections of the *pro forma* LGIP apply to all interconnecting electric storage resources, whether they are standalone, co-located generating facilities, or part of a hybrid generating facility.[1046]

564. The Commission stated that, if an interconnection customer fails to operate its electric storage resource in accordance with the operating assumptions memorialized in the interconnection customer's LGIA, the procedure for termination of the LGIA pursuant to articles 17.1.1 and 17.1.2 of the *pro forma* LGIA is appropriate.[1047] The Commission further found that an electric storage resource that operates contrary to the operating assumptions specified in its LGIA must not be considered in breach of its LGIA by the transmission provider if its operation is at the direction of the transmission provider to maintain the reliable and efficient operation of the transmission system.

565. The Commission found that, by more accurately reflecting the technical capabilities of electric storage resources in interconnection studies through the use of appropriate operating assumptions, this reform will ensure the reliable interconnection of new electric storage resources without overestimating their impact on the transmission system, thereby ensuring just and reasonable rates by avoiding excessive and unnecessary network upgrades that may hinder the timely development of new generating facilities that stifles competition in the wholesale market.[1048] The Commission also found that this reform reduces unduly discriminatory or preferential barriers to the interconnection of electric storage resources.

566. The Commission found that, taken together, the revisions to the *pro forma* LGIP and *pro forma* LGIA adopted in Order No. 2023 will ensure that interconnection customers adhere to the operating assumptions used to study their electric storage resource and ameliorate concerns about possible reliability problems expressed by commenters.[1049] The Commission further found that: (1) control devices can prevent electric storage resources from charging during peak load conditions; (2) modern electric storage resources can respond to signals from the transmission provider within seconds; (3) electric storage resources generally do not have an economic incentive to charge during peak load conditions; and (4) the consequence of being considered in breach of the LGIA provides an additional incentive for electric storage resources to follow the agreed-upon operating assumptions memorialized in their LGIA. Further, the Commission noted that some transmission providers already assume in their interconnection studies that electric storage resources will not charge during peak load conditions.[1050] The Commission emphasized that, irrespective of these changes to operating assumptions, all electric storage resources must continue to meet all requirements in the *pro forma* LGIP and *pro forma* LGIA, as well as all applicable reliability standards.

567. The Commission found that the speed and control with which electric storage resources can respond to signals from transmission providers sufficiently distinguishes the charging behavior of electric storage resources from that of firm customer end-use load.[1051] Therefore, for purposes of determining any network upgrades necessary to accommodate the reliable interconnection of electric storage resources, the Commission found that the charging of electric storage resources should not be modeled equivalently to firm customer end-use load in interconnection studies if the interconnection customer memorializes its operating assumptions in the LGIA and installs control technologies, if required, to limit its operations as specified. The Commission further clarified that the transmission provider must not assign network upgrade costs to the interconnection customer based on those worst-case operating assumptions (*e.g.,* charging at maximum capacity during peak load conditions) where there is agreement from the interconnection customer to, if required, implement operating restrictions including installing or demonstrating that the generating facility already has control technologies (software and/or hardware) to limit its operations during peak load conditions.[1052]

568. Additionally, in Order No. 2023 the Commission declined to extend the reform to apply to additional generating facility technologies (*e.g.,* natural gas, solar, wind) or to other operating assumptions, including the injection of power.[1053] The Commission encouraged

transmission providers to examine on an individual basis what operating assumptions used to study the injection of power may be appropriate to render the study process more accurate. The Commission also clarified that this requirement does not apply to transmission service requests and that Order No. 2023 does not modify the process for requesting transmission service.[1054]

ii. Requests for Rehearing and Clarification

569. Joint RTOs and PJM request rehearing of the operating assumptions reform because they assert that the Commission failed to respond meaningfully to the concerns raised that the use of customer-provided operating assumptions in interconnection studies (1) is not consistent with how planning studies are performed, (2) will add additional administrative burdens for transmission providers, and (3) may jeopardize reliability and shift costs to load.[1055] Joint RTOs also urge the Commission to revise or clarify Order No. 2023 to allow RTOs/ISOs to develop generally applicable procedures for addressing storage charging assumptions rather than burdensome ad hoc analyses for each interconnection customer.[1056] Joint RTOs argue that the operating assumptions reform is impractical and creates reliability problems due to the complexities of the required studies and lack of feasible enforcement mechanisms, and will burden real-time operations to limit these units to assumptions they provided as part of their interconnection application.[1057]

570. Joint RTOs and PJM assert that transmission providers have no ability to monitor in real time if an interconnection customer violates its operating limits, which could threaten reliability, and contend that Order No. 2023 does not explain how transmission providers would police storage resources' operations and enforce the operating assumptions on which their interconnection studies were based.[1058] Joint RTOs and PJM add that, to the extent electric storage resources exceed their operating parameters in real time, the costs of network upgrades would fall unfairly upon load because, once interconnected, load (rather than the interconnection customer) is responsible for the costs of upgrading the system to maintain the unit's deliverability over its lifetime.[1059] Joint RTOs and PJM state that interconnection studies are not designed to incorporate the real-time dispatch of resources or withdrawals of load or storage resources, arguing that the Commission fails to distinguish how storage resources differ from other generating facilities so as to justify this unwarranted departure from the principles which underlie planning and interconnection analyses. Joint RTOs and PJM also argue that implementing this reform, including the requirement to provide an interconnection customer with an explanation of why the submitted operating assumptions are insufficient or inappropriate and allow the interconnection customer to revise and resubmit the operating assumptions, is likely to add more time to the interconnection study process and engender arguments of unequal treatment by other resources within a cluster.[1060] PJM adds that Order No. 2023 is unduly discriminatory and provides no clear basis for favoring storage projects over all other types of generating resources or other types of load.[1061]

571. NYISO requests rehearing of the operating assumptions reform because it is inconsistent with the NYISO-administered markets given that storage resources participating as installed capacity suppliers are required to bid, schedule, and/or declare unavailable their entire withdrawal operating range during the day-ahead market, or otherwise may be subject to financial penalties.[1062] NYISO adds that grid or market conditions may make it desirable for storage resources to charge during peak demand hours and/or during NYISO's peak load window, for example to capture energy production during peak output of solar generating facilities.[1063] NYISO argues that the reform will add significant new complexity to interconnection studies and increase the time required to complete such studies, which is at odds with the intent of Order No. 2023 to expedite such studies by establishing firm deadlines subject to penalties.[1064] NYISO asserts that requiring a transmission provider to consider the individual operating assumptions of each storage project would require that it create additional off-peak system base cases that are tailored for each individual project as the standardized set of system base cases may not represent the system conditions where the developer of the storage project opts to charge.

572. In contrast, Public Interest Organizations argue that the Commission erred in limiting the reform to only the operating parameters for withdrawals of energy by storage resources and declining to extend it to storage injections or other technologies.[1065] Public Interest Organizations contend that the Commission's reasoning that the potential reliability impacts and administrative burden of extending the reform to injections of energy is arbitrary and capricious given (1) the broad support among commenters that the failure to use realistic operating assumptions for injections of power can result in unnecessary network upgrades, stifle competition, and create unduly discriminatory barriers and (2) the ample evidence presented of how the reliability impacts of injections are already being sufficiently managed by grid operators during real-time operations. Public Interest Organizations aver that, without consideration of operating parameters in interconnection studies, certain interconnection customers will be forced to pay for increasingly excessive and unnecessary upgrades that will sit unused, which will ultimately lead to a less efficient power system and unjust and unreasonable electricity costs for ratepayers.[1066]

573. Clean Energy Associations request clarification, or in the alternative rehearing, so that the *pro forma* LGIP requires that the interconnection customer and transmission provider mutually agree in the cluster study agreement as to (1) which loading cases are applied to storage charging and discharging and (2) what power level or percentage output or percentage charging is applied to each case.[1067] Clean Energy Associations also ask the Commission to require transmission providers to identify which loading case triggered identified upgrades in the cluster study results. Further, to ensure that interconnection customers and transmission providers have clarity

about the operating constraints that apply in an LGIA, Clean Energy Associations urge the Commission to specify requirements for operating assumptions in the cluster study agreement as well as what the transmission provider must deliver to the electric storage resource owner interconnection customer in cluster study results, rather than having the utility state when their peak load applies. Clean Energy Associations state that, because Order No. 2023 does not provide for any means to address situations in which the interconnection customer and transmission provider continue to have a disagreement after the revision and resubmittal of the operating assumptions during the customer engagement window, they seek clarification or, in the alternative rehearing, that interconnection customers may submit conflicting situations to the Commission along with a request to file the applicable study agreement unexecuted, with a request that the Commission determine which operating assumption should be used in the applicable study.

574. Clean Energy Associations ask the Commission to clarify that the planned operating assumptions of electric storage resources must be considered as part of the interconnection process.[1068] Clean Energy Associations assert that planned operating assumptions should also be considered part of transmission service requests. Clean Energy Associations also ask the Commission to clarify that the operating assumption requirement applies not just to standalone storage, but to hybrid and co-located resources as well. Clean Energy Associations add that, given the Commission's findings regarding the capabilities and incentives of energy storage resources, the Commission should clarify that modeling energy storage charging equivalently to firm customer end-use load for purposes of determining network upgrades is inconsistent with good utility practice going forward.[1069]

iii. Determination

575. We are not persuaded by PJM's and Joint RTOs' arguments on rehearing. First, we disagree with PJM and Joint RTOs that the Commission did not sufficiently articulate how electric storage resources are distinct from other types of generating facilities, why this reform is needed to ensure just and reasonable rates, and why this reform is not unduly discriminatory or preferential. As the Commission stated in Order No. 2023, electric storage resources have operating parameters that differ from traditional types of generating facilities for which the generator interconnection process was originally designed, namely their ability to both inject power and withdraw power.[1070] The instant reform is directed specifically and exclusively at how transmission providers study the withdrawal of power from electric storage resources (*i.e.,* the unique feature of electric storage resources compared to other types of generating facilities) within the generator interconnection process.

576. As the record indicates, the existing practice of some transmission providers is to study withdrawals of power from electric storage resources during peak load conditions equivalently to firm customer end-use load, and this practice results in excessive and unnecessary network upgrades and may hinder the timely development of new generation, thereby stifling competition in the wholesale markets, and resulting in rates, terms, and conditions that are unjust and unreasonable.[1071] We continue to find that the speed and control with which electric storage resources can respond to signals from transmission providers sufficiently distinguishes the charging behavior of electric storage resources from that of firm customer end-use load, and that reflecting the technical capabilities of electric storage resources through the use of appropriate operating assumptions in interconnection studies reduces unduly discriminatory or preferential barriers to the interconnection of electric storage resources.[1072]

577. We are unpersuaded by PJM's and Joint RTOs' arguments that reflecting whether an interconnecting electric storage resource will or will not charge during peak load conditions is fundamentally incompatible with interconnection studies. We reiterate that Order No. 2023 requires transmission providers, at the request of the interconnection customer, to reflect in their interconnection studies whether an interconnecting electric storage resource will or will not charge during peak load conditions (unless good utility practice, including applicable reliability standards, otherwise requires the use of different operating assumptions).[1073] We clarify that the instant reform does not require transmission providers to develop new base cases for each interconnecting electric storage resource to reflect when that resource intends to charge. Rather, the reform requires transmission providers to reflect whether an electric storage resource will or will not charge in any studies of peak load conditions in the interconnection process. Transmission providers regularly evaluate the impact of an interconnecting generating facility on the transmission system during anticipated peak load conditions as part of their interconnection studies, and we note that some transmission providers already assume in their interconnection studies that electric storage resources will not charge during peak load conditions.[1074] Further, we agree with commenters in this record that, when transmission providers' interconnection studies rely on the assumption that all electric storage resources will withdraw power at their maximum capacity during peak load conditions (*i.e.,* modeling the charging of electric storage resources equivalently to firm end-use customer demand), this practice fails to recognize the real-time attributes of electric storage resources, such as the ability to respond within seconds to dispatch signals from the transmission provider.[1075]

578. We disagree with PJM and Joint RTOs that this requirement will compromise reliability because, they argue, transmission providers are unable to monitor and enforce interconnection customer-provided operating assumptions. We continue to maintain that this reform will ensure the reliable operation of the transmission system because: (1) control devices are able to prevent electric storage resources from charging during peak load conditions; (2) modern electric storage resources are able to respond to signals from the transmission provider within seconds; (3) electric storage resources generally

[1073] *Id.* P 1509.

[1074] *See* Bonneville Initial Comments at 23; MISO Comments at 117; *see also PacifiCorp,* 182 FERC ¶ 61,131 (accepting, subject to condition, revisions to PacifiCorp's LGIP and LGIA to allow PacifiCorp to study electric storage resources in its interconnection study process using operating assumptions that more accurately reflect their expected operation).

[1075] *See, e.g.,* Clean Energy Alliance Initial Comments at 14–15; NARUC Initial Comments at 37; NESCOE Reply Comments at 18; PacifiCorp Initial Comments at 41; Pattern Energy Initial Comments at 12; Pine Gate Initial Comments at 51; SEIA Initial Comments at 40; Union of Concerned Scientists Reply Comments at 10–11.

do not have an economic incentive to charge during peak load conditions; and (4) the consequence of being considered in breach of the LGIA provides an additional incentive for electric storage resources to follow the agreed-upon operating assumptions memorialized in their LGIA, unless otherwise directed by the transmission provider. Further, we believe that ensuring that an electric storage resource adheres to the operating assumptions memorialized in its LGIA presents substantially similar concerns to ensuring that any generating facility stays within its interconnection service level (*e.g.,* a generating facility that requests interconnection service less than its full generating facility capacity). We emphasize again that, irrespective of these changes to operating assumptions, all electric storage resources must continue to meet all requirements in the *pro forma* LGIP and *pro forma* LGIA, as well as all applicable reliability standards.

579. We disagree with Joint RTOs and PJM that, if an electric storage resource fails to adhere to its operating assumptions during real-time operations, load will be required to bear the costs of network upgrades needed to maintain deliverability of the electric storage resource over its lifetime. As the Commission stated in Order No. 2023, if an interconnection customer fails to operate its electric storage resource in accordance with the operating assumptions memorialized in the interconnection customer's LGIA (absent instructions from the transmission provider to the contrary), the transmission provider may consider the electric storage resource to be in breach and may pursue termination of the LGIA pursuant to article 17 of the LGIA.[1076]

580. Regarding Joint RTOs' and PJM's argument that this reform will add administrative burdens for transmission providers, we continue to find that the benefits of this reform—reducing unduly discriminatory or preferential barriers to the interconnection of electric storage resources—outweigh the added burden to transmission providers. We decline to grant Joint RTOs' request for clarification that the Joint RTOs are entitled to an independent entity variation to develop generally applicable procedures for addressing storage charging assumptions rather than the reform as constructed in Order No. 2023. Consistent with the Commission's statements in Order No. 2023, transmission providers may explain specific circumstances on compliance and justify why any deviations are either consistent with or superior to the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs.

581. We are not persuaded by NYISO's arguments on rehearing. We note that NYISO's arguments relate to NYISO's specific market rules and do not necessarily apply to the reform more broadly. In Order No. 2023, the Commission clarified that, if done so at the direction of the transmission provider to maintain the reliable and efficient operation of the transmission system, an electric storage resource that operates contrary to the operating assumptions specified in its LGIA must not be considered in breach of its LGIA by the transmission provider.[1077] We believe this clarification ensures that the instant reform will work in concert with RTOs'/ISOs' existing congestion management practices. Additionally, we reiterate the clarification above that the instant reform does not require transmission providers to develop new base cases for each interconnecting electric storage resource to reflect when that resource intends to charge, as NYISO suggests. Rather, the reform requires transmission providers to reflect whether an electric storage resource will or will not charge in any studies of peak load conditions in the interconnection process. However, if NYISO continues to believe the instant reform conflicts with its market rules, NYISO may explain the specific circumstances on compliance and justify why any deviations merit an independent entity variation.

582. We are unpersuaded by Public Interest Organizations' arguments on rehearing that the Commission should extend this reform to apply to operating assumptions for injections of power from electric storage resources and other technologies. Although several commenters urged the use of more accurate operating assumptions for injections of power from certain types of generating facilities, we believe that the current record does not sufficiently support extending the instant reform to injections of power from all types of generating facilities and does not provide sufficient information on the incremental burden that such a reform could place on transmission providers' study methods and timelines. Further, we are concerned that extending the reform to apply to operating assumptions for injections of power from only some types of generating facilities and not all types of generating facilities that are capable of injecting power could potentially be unduly discriminatory or preferential. We continue to encourage transmission providers to examine on an individual basis what operating assumptions used to study the injection of power from generating facilities may be appropriate to render the study process more accurate. Similarly, we continue to acknowledge that fuel-based dispatch assumptions may be able to address some of the identified challenges associated with inaccurate modeling assumptions for all generating facility types and encourage transmission providers to evaluate the merits of adopting them.[1078]

583. We decline to grant Clean Energy Associations' requested clarification that the *pro forma* LGIP requires the interconnection customer and transmission provider to mutually agree in the cluster study agreement as to (1) which loading cases are applied to storage charging and discharging and (2) what power level or % output or % charging is applied to each case. The instant reform is directed specifically and exclusively at how transmission providers study the withdrawal of power from electric storage resources within the generator interconnection process (namely, whether an electric storage resource will or will not charge during peak load conditions). The Commission did not require transmission providers to revise how they study injections of power from electric storage resources, and we decline to do so now. For the same reason, we are unpersuaded by Clean Energy Associations' rehearing request on the same issue.

584. We also decline to grant Clean Energy Associations' requested clarification that, in situations in which the interconnection customer and transmission provider disagree about operating assumptions, the interconnection customers may request to file the applicable study agreement with the Commission unexecuted, with a request that the Commission determine which operating assumptions should be used in the applicable study. In such a situation, we find it more appropriate for the interconnection customer to instead use the dispute resolution procedures in section 13.5 of the *pro forma* LGIP. For the same reason, we are unpersuaded by Clean Energy Associations' rehearing request on the same issue.

585. We decline to grant Energy Associations' requested clarification that the planned operating assumptions of electric storage resources must be considered as part of the

[1076] Order No. 2023, 184 FERC ¶ 61,054 at P 1521.

[1077] *Id.* P 1521.

[1078] *Id.* P 1529.

interconnection process and in transmission service requests. In Order No. 2023, the Commission explained that the instant reform does not require transmission providers to study charging as part of the interconnection process if they do not already to so, and we decline to require so now.[1079] We reiterate that, if a transmission provider does not determine the network upgrades needed to accommodate the charging of an electric storage resource through the interconnection process (*e.g.,* the transmission provider determines such upgrades as part of the transmission service request process), then the transmission provider must demonstrate on compliance why this reform does not apply to that particular transmission provider. Additionally, the Commission clarified in Order No. 2023 that the instant reform does not apply to transmission service requests, and Order No. 2023 does not modify the process for requesting transmission service.

586. In response to Clean Energy Associations' requested clarification that all aspects of the operating assumption reform of Order No. 2023 [1080] apply not just to standalone storage, but also to hybrid and co-located generating facilities that contain an electric storage resource, we reiterate the clarification the Commission made in Order No. 2023: ''For clarity, we note that the reforms described in this determination section and the related sections of the *pro forma* LGIP apply to all interconnecting electric storage resources, whether they are standalone, co-located generating facilities, or part of a hybrid generating facility.'' [1081]

587. We decline to grant Clean Energy Associations' requested clarification that modeling the charging of an electric storage resource equivalently to firm customer end-use load for purposes of determining network upgrades is inconsistent with good utility practice. We reiterate our finding that, for purposes of determining any network upgrades necessary to accommodate the reliable interconnection of electric storage resources, the charging of electric storage resources should not be modeled equivalently to firm customer end-use load in interconnection studies if the interconnection customer agrees to memorialize its operating assumptions in the LGIA and installs control technologies, if required by the transmission provider, to limit its operations as specified.[1082] However, there are still situations in which we believe it is acceptable, and Order No. 2023 allows, for a transmission provider to continue to model an electric storage resource in interconnection studies as charging during peak load conditions, for example: (1) if the interconnection customer does not request during the interconnection process that the transmission provider study the electric storage resource as not charging during peak load conditions; (2) if the interconnection customer declines the transmission provider's request to install or demonstrate that it has installed control technologies sufficient to prevent it from charging during peak load conditions unless otherwise directed by the transmission provider; or (3) if the interconnection customer declines the transmission provider's request to memorialize the requested operating assumptions in its LGIA.

2. Incorporating the Enumerated Alternative Transmission Technologies Into the Generator Interconnection Process

a. Consideration of the Enumerated Alternative Transmission Technologies in Interconnection Studies Upon Request of the Interconnection Customer

i. Order No. 2023 Requirements

588. In Order No. 2023, the Commission revised section 7.3 of the *pro forma* LGIP, and sections 3.3.6 and 3.4.10 of the *pro forma* SGIP.[1083] The Commission required transmission providers to evaluate the following enumerated list of alternative transmission technologies: static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. The Commission revised *pro forma* LGIP section 7.3 to require transmission providers to evaluate the list of alternative transmission technologies enumerated in Order No. 2023 during the cluster study, including any restudies, of the generator interconnection process in all instances (*i.e.,* for all interconnection customers in a cluster), without the need for a request from an interconnection customer. The Commission required transmission providers to evaluate each alternative transmission technology listed in *pro forma* LGIP section 7.3 and to determine, in the transmission provider's sole discretion, whether it should be used, consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements. Finally, the Commission required transmission providers to include, in the *pro forma* LGIP cluster study report, an explanation of the results of the evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade.

589. The Commission modified the enumerated list of alternative transmission technologies from the NOPR proposal to: (1) retain synchronous, static VAR compensators, advanced power flow control, and transmission switching in the list; (2) add synchronous condensers, voltage source converters, advanced conductors, and tower lifting to the list; and (3) remove dynamic line ratings from the list.[1084] Generally, the Commission found that these enumerated alternative transmission technologies are those with the most potential to be useful to reduce interconnection costs by providing lower cost network upgrades to interconnect new generating facilities and thus required transmission providers to evaluate these technologies in the interconnection process for their feasibility, cost, and time savings potential.

590. The Commission revised sections 3.3.6 and 3.4.10 of the *pro forma* SGIP, consistent with the *pro forma* LGIP requirement, to require transmission providers to evaluate the enumerated alternative transmission technologies when performing interconnection studies for small generating facilities, without the need for a request from an interconnection customer.[1085] The Commission required such evaluations to occur during the *pro forma* SGIP feasibility study and system impact study of the generator interconnection process. The Commission found that it is appropriate for these evaluations to occur during the relevant *pro forma* SGIP studies where network upgrades are identified, consistent with the *pro forma* LGIP requirement. The Commission required transmission providers to evaluate each alternative transmission technology listed in *pro forma* SGIP sections 3.3.6 and 3.4.10 and determine, in the transmission provider's sole discretion, whether it should be used, consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements. Finally, the Commission required transmission providers to include, in the feasibility study report and system impact study report, an explanation of

[1079] *Id.* P 1526.

[1080] *Id.* PP 1509–1533.

[1081] *Id.* P 1509 n.2858.

[1082] *Id.* P 1523.

[1083] *Id.* P 1578.

[1084] *Id.* P 1579.

[1085] *Id.* P 1580.

the results of the evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade.[1086] The Commission noted that this reform is one of the few reforms in Order No. 2023 that applies to small generating facilities, in addition to large generating facilities. The Commission found that the enumerated alternative transmission technologies that it required transmission providers to evaluate in their interconnection studies are appropriate for evaluation in the *pro forma* SGIP context because they are scalable and that the enumerated alternative transmission technologies have the potential to provide similar benefits in the context of both small and large generating facilities, including cost and time savings.

592. Based on the record, the Commission found that alternative transmission technologies have the potential to provide benefits to optimize the transmission system in specific scenarios.[1087] The Commission found that failing to evaluate the enumerated alternative transmission technologies renders Commission-jurisdictional rates unjust and unreasonable and fails to ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner.[1088]

593. The Commission found that the record demonstrated that the requirements adopted in Order No. 2023 will not overly burden transmission providers.[1089] The Commission also maintained that the requirement that transmission providers evaluate the enumerated alternative transmission technologies for an entire cluster—rather than on an individual interconnection customer-request basis—and the modifications to the enumerated list of alternative transmission technologies will ease the burden on transmission providers, thereby lessening the risk that they are unable to complete studies by the required deadlines.[1090] The Commission noted that it was not dictating how a transmission provider must evaluate each enumerated alternative transmission technology on the list in each instance. The Commission recognized that in some cases transmission providers may be able to rapidly determine if a certain enumerated alternative transmission technology is inappropriate for further study.

594. The Commission also found that the benefits of evaluating and implementing the enumerated alternative transmission technologies outweigh any potential burden or the potential of increased study times.[1091] The Commission stated that, as recognized by commenters and explained earlier in Order No. 2023, the evaluation and use, at the transmission provider's sole discretion, of the enumerated alternative transmission technologies could decrease network upgrade costs, withdrawals, and restudies, thereby increasing the efficiency of the interconnection process overall. For these reasons, the Commission disagreed with commenters who argued that requiring transmission providers to evaluate the enumerated alternative transmission technologies is contrary to the NOPR's goal of increasing the speed of interconnection queue processing.

595. The Commission explained that Order No. 2023 did not create a presumption in favor of substituting alternative transmission technologies for necessary traditional network upgrades, either categorically or in specific cases.[1092] The Commission stated that Order No. 2023 is agnostic as to whether, in a specific case, an alternative transmission technology is an acceptable alternative to a traditional network upgrade.[1093] The Commission explained that the rule mandates a *process* of evaluation of alternatives to traditional network upgrades, not outcomes in specific cases.[1094]

596. The Commission stated that the requirement is to evaluate the enumerated alternative transmission technologies in the interconnection process for feasibility, cost, and time savings and to determine whether, in the transmission provider's sole discretion, an alternative transmission technology should be used as a solution—consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements.[1095] The Commission found that it is appropriate to continue to rely on transmission providers to use good utility practice, applicable reliability standards, and other applicable regulatory requirements, in their evaluations of alternative transmission technologies, including the enumerated list, because the specific evaluation may depend on the transmission provider's individual transmission system, cluster makeup, and other factors.[1096]

597. The Commission explained that the transmission provider must determine whether using any of the enumerated alternative transmission technologies is an appropriate and reliable network upgrade ''that would allow the interconnection customer to flow the output of its generating facility onto the transmission provider's transmission system in a safe and reliable manner.'' [1097] The Commission

[1086] *Id.* P 1581.

[1087] *Id.* P 1583 (noting arguments that selecting alternative transmission technologies: may reduce interconnection costs by providing lower cost transmission solutions to interconnecting new generating facilities; may allow faster interconnection by providing solutions that can be implemented more quickly; may allow better use of the existing transmission system, enhance reliability, reduce withdrawals, restudies, and overall interconnection delays; would decrease network upgrade costs that will reduce the number of withdrawals from interconnection queues, ultimately creating a more efficient interconnection process by reducing the number of restudies triggered by withdrawals; and would offer additional value because they are scalable and modular to address evolving needs and can be redeployed as those needs continue to change).

[1092] *Id.* PP 1582, 1584 (citing PJM Initial Comments at 68 (''PJM therefore cautions the Commission not to conflate the operational benefits of alternative transmission technologies . . . with the need to address significant capacity enhancement needs (short and long-term) or long-range transmission needs under rapid growth or changing resource mix scenarios.''); MISO Initial Comments at 120 (''However, the Commission fails to recognize that these technologies may be evaluated in the generator interconnection process already but may nonetheless not be adopted as they are not the appropriate solution to a Transmission Issue related to an interconnection.'')).

[1093] *Id.* P 1582 (citing MISO Initial Comments at 121–22 (''Further, although these technologies may be evaluated, the technologies identified by the Commission still may not provide the appropriate solution from a planning perspective. Many of the technologies identified are appropriately considered as operational tools or short-term solutions but are not necessarily appropriate for planning to support a particular generator interconnection.'') (citation omitted)).

[1094] *Id.* PP 1582, 1584.

[1095] *Id.* PP 1584, 1587, 1589.

[1096] *Id.* P 1589 (adding that ''the transmission provider—consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements—retains the sole discretion to determine whether a particular technology in the enumerated list of alternative transmission technologies is appropriate and reliable as a network upgrade, or not, for a given cluster.'').

[1097] *Id.* P 1582 (citing Order No. 2003, 104 FERC ¶ 61,103 at P 767 (''Both Energy Resource Interconnection Service and Network Resource Interconnection Service provide for the construction of Network Upgrades that would allow the Interconnection Customer to flow the output of its Generating Facility onto the Transmission Provider's Transmission System in a safe and reliable manner''); Order No. 2003–A, 106 FERC

Continued

further explained that the requirement to make such a determination before allowing for the use of the enumerated alternative transmission technologies addresses concerns that their use may impinge on reliability, delay network upgrades instead of reducing the need for them or obviating the need for them altogether, or fail to address all transmission system issues that a traditional network upgrade would address. The Commission recognized the need to avoid time-consuming delays and costly disputes or litigation over interconnection costs that could arise as a result of this reform.[1098] Therefore, the Commission found that, if a transmission provider evaluates the enumerated alternative transmission technologies as required herein and, in its sole discretion, determines not to use any enumerated alternative transmission technologies as an alternative to a traditional network upgrade, the transmission provider has complied with Order No. 2023, including tariffs filed pursuant thereto.

598. The Commission explained that transmission providers are required to include an explanation of the results of the evaluation of the required alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade in the applicable study report.[1099] The Commission found the required explanation of the results of the transmission provider's evaluation included in the applicable study report provides sufficient transparency without placing a further burden on transmission providers that would delay the processing of interconnection requests.

¶ 61,220 at P 404; *pro forma* LGIA art. 9.3 (''Transmission Provider shall cause the Transmission System and the Transmission Provider's Interconnection Facilities to be operated, maintained and controlled in a safe and reliable manner and in accordance with this LGIA''); *Midwest Indep. [1099] *Id.* P 1590.

ii. Requests for Rehearing and Clarification

599. SPP seeks rehearing of the requirement for transmission providers to evaluate certain enumerated alternative transmission technologies in the interconnection study process because SPP argues that this requirement will burden transmission providers and lengthen the interconnection process.[1100] SPP also asserts that the Commission does not provide adequate guidance on what metrics would be sufficient to support the use or non-use of a specific alternative technology, which SPP contends will invite litigation from interconnection customers and further lengthen the interconnection process. WATT Coalition also contends that, to comply with the FPA, the Commission must grant rehearing to set a meaningful standard for evaluation and ensure that alternative transmission technologies are used if they are the most cost-effective and fastest interconnection upgrade solution.[1101]

600. PJM asks the Commission to clarify that Order No. 2023's requirement for transmission providers to explain their evaluation of the enumerated alternative transmission technologies in their cluster study reports does not apply when a transmission provider already includes all the enumerated technologies in its studies.[1102] PJM argues that this reporting requirement is administratively burdensome with no corresponding benefit because PJM already studies all of the enumerated technologies in its interconnection process. PJM also asserts that Order No. 2023's requirement that transmission providers evaluate the enumerated alternative transmission technologies will be burdensome because interconnection customers are likely to demand re-evaluation of the technologies.

601. Clean Energy Associations, Public Interest Organizations, and WATT Coalition request rehearing of Order No. 2023's requirement that transmission providers have sole discretion over the evaluation and use of an enumerated alternative transmission technologies.[1103] Public Interest Organizations argue that Order No. 2023's requirement that transmission providers' decisions be consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements is vague and will allow transmission providers to reject the enumerated alternative transmission technologies, even when studies demonstrate them to be lower cost and faster than traditional network upgrades.[1104] Public Interest Organizations further argue that, because transmission providers have sole discretion over implementing the enumerated alternative transmission technologies, the study process will be a mere formality that allows the transmission provider to reject an enumerated alternative transmission technology, even if its own studies have demonstrated that they are the least cost and/or fastest solutions. Public Interest Organizations contend that requiring traditional network upgrades when a transmission provider's own study has found that an enumerated alternative transmission technology would be cheaper and/or faster imposes excessive costs on consumers, leading to unjust and unreasonable rates, and unduly discriminates against providers of alternative transmission technologies.

602. Clean Energy Associations contend that giving transmission providers sole discretion insulates transmission providers from challenges to inadequate evaluations or unjustified adoption decisions.[1105] Clean Energy Associations assert that, absent some form of review and recourse, transmission providers might only cursorily evaluate alternative transmission technologies and interconnection customers will have no opportunity to respond to unjust and unreasonable charges. Clean Energy Associations argue that the FPA requires a more nuanced analysis than Order No. 2023's requirement that determinations be consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements. Clean Energy Associations ask the Commission to allow challenges to the transmission provider's evaluation of the enumerated alternative transmission technologies as a means to ensure meaningful consideration of these technologies.

603. WATT Coalition argues that Order No. 2023 unlawfully gives transmission providers unfettered discretion to disregard and disadvantage alternative transmission technologies as

[1100] SPP Rehearing Request at 19.

[1101] WATT Coalition Rehearing Request at 24.

[1102] PJM Rehearing Request at 45–46.

[1103] Clean Energy Associations Rehearing Request at 48; Public Interest Organizations Rehearing Request at 13–15; WATT Coalition Rehearing Request at 1–2, 14–15, 24–30.

[1104] Public Interest Organizations Rehearing Request at 13–15.

[1105] Clean Energy Associations Rehearing Request at 46–48.

network upgrades.[1106] WATT Coalition argues that the Commission undermined its decision to provide a pre-defined list of alternative transmission technologies evaluated as a matter of course in every cluster study by failing to require meaningful consideration of alternative transmission technologies and by placing alternative transmission technologies at an artificial disadvantage to ''traditional'' network upgrades.[1107] WATT Coalition asserts that enshrining a preferential advantage for more expensive and longer lead-time traditional network upgrades, at the expense of more efficient, cost-effective, and quicker solutions, will increase rates and slow down the interconnection process. WATT Coalition points to dynamic line ratings' ability to resolve a thermal overload, rather than spending $50 million on a line rebuild, to demonstrate that requiring a traditional network upgrade would unduly discriminate against interconnection customers and in favor of transmission providers, impose excessive costs on interconnection customers (and ultimately consumers), and work against Order No. 2023's goal of making the interconnection process more efficient. WATT Coalition argues that, contrary to the FPA, the Commission has deprived interconnection customers of the opportunity to interconnect at a just and reasonable rate and unduly discriminates against interconnection customers to the benefit of transmission providers.

604. WATT Coalition questions the Commission's reliance on MISO's initial comments as ground for allowing transmission providers to use their sole discretion consistent with ''good utility practice'' and ''applicable regulatory standards.'' [1108] WATT Coalition argues that MISO's comments merely quoted the NOPR, which suggested that the use of alternative transmission technologies may not meet these standards, without providing justification. WATT Coalition contends that requiring transmission providers to ''use good utility practice, applicable reliability standards, and other applicable regulatory requirements'' is insufficient because making such a determination is not the same as determining whether that decision is consistent with the FPA, which is a transmission provider's most fundamental responsibility.[1109] WATT Coalition argues that the Commission made no attempt to explain whether it believes satisfying those standards will, in all cases, produce a lawful result under the FPA.[1110] WATT Coalition argues that the Commission has no authority to grant transmission providers the ability to unduly discriminate or implement a rate that is unjust and unreasonable.[1111] WATT Coalition asserts that the Commission's failure to explain and support that decision violates the APA.[1112]

605. WATT Coalition adds that Order No. 2023 deprives interconnection customers of a meaningful opportunity to inform the evaluations and appears to close off any input or challenge to transmission provider evaluation.[1113] WATT Coalition asks the Commission to grant rehearing to allow interconnection customers to engage in the transmission provider's alternative transmission technologies evaluations and ensure that they are both technically sound and consistent with the FPA. WATT Coalition suggests allowing either the interconnection customer or the transmission provider to request such an evaluation at any point during the interconnection study process as more information becomes available. WATT Coalition asks the Commission to allow developers to conduct their own analysis in response to an initial interconnection study result to demonstrate that a FERC-enumerated technology, or another technology, can reduce interconnection costs or timelines and require transmission providers to evaluate those solutions. WATT Coalition states that interconnection customers' right to register objections and identify deficiencies in a transmission provider's identification of network upgrades in interconnection studies must extend to an interconnection study's evaluation of alternative transmission technologies, not just traditional network upgrades.[1114] WATT Coalition asserts that including interconnection customer input on the evaluation of alternative transmission technologies after the initial phase of the cluster study, with a requirement for the transmission provider's decision regarding deployment to be in line with the FPA, would achieve just and reasonable rates.[1115]

606. If the Commission does not grant rehearing, WATT Coalition requests that the Commission make two clarifications.[1116] First, WATT Coalition asks the Commission to clarify that interconnection customers have the right and opportunity to identify potential deficiencies and errors in a transmission provider's evaluation of alternative transmission technologies in a cluster study, and the transmission provider must address those potential deficiencies and errors in its cluster study report. WATT Coalition states that the Commission must correct the implication that a transmission provider's evaluation and determination to deploy or not deploy alternative transmission technologies are immune from challenge by allowing interconnection customers to review the initial evaluation and provide their own analysis to inform the transmission provider's decision. Second, WATT Coalition asks the Commission to clarify that it did not intend to exempt transmission providers' consideration of, and determinations regarding, the use of alternative transmission technologies in a cluster study from compliance with the FPA, making clear that complying with ''good utility practice'' does not supersede the foundational requirements of the FPA.

607. A number of parties seek rehearing or clarification regarding the technologies included in the list of the enumerated alternative transmission technologies that transmission providers are required to evaluate. SPP asks the Commission to reconsider the inclusion of transmission switching in the list of enumerated alternative transmission technologies, arguing that it is a short-term operational tool that is inappropriate for use in long-term planning applications.[1117] VEIR asks the Commission to clarify the scope of the technologies that are considered advanced conductors under Order No. 2023.[1118] VEIR argues that, although Order No. 2023 does not describe the advanced conductors that must be studied, it is consistent with the Commission's intent and the intent of the Energy Policy Act of 2005 for the Commission to clarify that there are a range of permissible present and future technologies that ''significantly increase transmission capacity and allow for the interconnection of new generating facilities without the construction of

[1117] SPP Rehearing Request at 20.

[1118] VEIR Rehearing Request at 3–6.

new network upgrades.'' [1119] VEIR contends that this clarification will help ensure that Commission regulations will help stimulate innovation—rather than freeze it within the confines of an existing set of technologies—consistent with the Commission's overall mandate that alternative transmission technologies be considered by transmission providers seeking to provide reliable transmission solutions in the most cost effective manner. VEIR adds that this clarification will ensure that the term ''advanced conductors'' contemplates a wide-range of present and future transmission line technologies, such as VEIR's technology, whose power flow capacities exceed the power flow capacities of conventional transmission line technologies, thus achieving the Commission's objectives for transmission providers to evaluate technologies that are deployed more quickly and at a lower cost than other network upgrades.[1120]

608. Clean Energy Associations and WATT Coalition request rehearing of Order No. 2023's exclusion of dynamic line ratings from the enumerated list of alternative transmission technologies.[1121] WATT Coalition claims that the Commission excluded dynamic line ratings, while retaining four other technologies in the NOPR and adding four that were not included in the NOPR, without a reasoned basis for why dynamic line ratings provided less relative potential to be useful in reducing interconnection costs.[1122] WATT Coalition argues that it is arbitrary and capricious and contrary to law to exclude dynamic line ratings on the basis that they ''may'' not be as beneficial, while at the same time conceding that other technologies that were included on the list have certain limitations that render them no more or less useful than dynamic line ratings. WATT Coalition states that dynamic line ratings are regularly a cost-effective solution in generator interconnection. WATT Coalition claims that its comments on the value of dynamic line ratings in planning, including interconnection, and statements in support of dynamic line ratings are not addressed in the Commission's reasoning.[1123] WATT Coalition states that the only citation the Commission provided to support its determination to exclude dynamic line ratings refers only to the few adverse comments submitted by PJM Transmission Owners, ISO–NE, NYTOs, PacifiCorp, Tri-State, and the Chamber of Commerce.[1124] WATT Coalition argues that the Commission did not address the Environmental Defense Fund's argument that excluding dynamic line ratings is not consistent with transmission providers' least-cost obligation and concerns about technology implementation do not warrant failing to consider alternative transmission technologies.[1125] Clean Energy Associations assert that the Commission's general justification that alternative transmission technology could decrease network upgrade costs, withdrawals, and restudies, which increases the efficiency of the interconnection process, applies to dynamic line ratings, arguing that the Commission acknowledges that dynamic line ratings could be beneficial to the interconnection process.[1126]

609. Clean Energy Associations and WATT Coalition contend that the Commission did not address the benefits of dynamic line ratings set forth in the record.[1127] WATT Coalition notes the Commission previously recognized the potential of dynamic line ratings to provide benefits to the interconnection process.[1128] WATT Coalition further notes that, in Order No. 881, the Commission took initial steps to reduce barriers to operational deployment by requiring RTO/ISOs to ''establish and implement the systems and procedures necessary to allow transmission owners to electronically update transmission line ratings at least hourly.'' [1129] WATT Coalition argues that dynamic line ratings is a solution that could bring projects into viability if permitted by the transmission owner.[1130]

610. WATT Coalition contends that the Commission has failed to meet its burden to provide an explanation supported by evidence in the record for its suggestion that dynamic line ratings are better applied in operations and planning.[1131] WATT Coalition adds that, because transmission planning and interconnection processes typically use similar or identical study processes (for example, steady state, short circuit, and stability analysis) and share common models of the transmission system representing expected future system conditions such as Summer Peak or High Wind Low Load, it is not logical to expect the consideration of dynamic line ratings to benefit transmission planning and interconnection in a demonstrably different manner.

611. However, WATT Coalition argues that the relative value of dynamic line ratings in interconnection versus transmission planning is irrelevant.[1132] WATT Coalition contends that the Commission made no determination as to the absolute value of dynamic line ratings in the interconnection context, which it argues is the relevant inquiry in determining whether the interconnection reforms are just and reasonable.[1133] WATT Coalition argues

[1119] *Id.* at 4–5 (quoting Order No. 2023, 184 FERC ¶ 61,054 at P 1597 (citing Energy Policy Act of 2005, 42 U.S.C. 16422(a), (b))). VEIR points to several definitions of advanced conductors: (1) advanced conductor technology include advanced composite conductors high temperature low-sag conductors, and fiber optic temperature sensing conductors, 42 U.S.C. 16422(a); (2) advanced conductors and cables include advanced overhead conductors that are facilities that ''employ advanced aluminum alloys, steel, and composite material in novel ways that provide enhanced performance over conventional overhead conductors,'' advanced-transmission-technologies-report (energy.gov), at p. 26, and (3) advanced conductors and cables are ''superconducting cables'' composed of materials that have near zero resistance at extremely low temperatures, offering little to no electrical losses if used in transmission, advanced-transmission-technologies-report (energy.gov), at p. 26.

[1133] *Id.* at 22–23 (citing *Am. Clean Power Ass'n* v. *FERC,* 54 F.4th 722 (D.C. Cir. 2022) (finding that the Commission failed to reasonably explain its decision, noting it gave short shrift to the Petitioner's concern)).

that, if dynamic line ratings are highly beneficial in one and extremely beneficial in the other, it should be adopted in both, not excluded from the former.[1134] WATT Coalition adds that the example the Commission gave for why dynamic line ratings may be less beneficial in the interconnection context is flawed. WATT Coalition argues that the assertion that its value ''depends on favorable weather and congestion parameters'' is wrong. WATT Coalition explains that many lines are chronically underrated, regardless of weather and congestion parameters, ''congestion parameters'' themselves are often inaccurate precisely because dynamic line ratings are not used on a line.

612. WATT Coalition claims that the following statement in Order No. 2023 is inaccurate and does not reflect the record:

> [W]hile dynamic line ratings may relieve congestion to increase available interconnection service temporarily or in the short-term, they may not be an adequate substitute for building interconnection facilities and/or traditional network upgrades identified through the interconnection study process that are needed to reliably interconnect a generating facility to the transmission system during all hours.[1135]

WATT Coalition states that dynamic line ratings are not a temporary or short-term fix; they are a long-term fix for the specific parameters of the cluster study. WATT Coalition explains that, if system conditions change subsequent to the cluster study such that additional investment in the transmission system is needed, that does not mean that the value of dynamic line ratings is diminished. WATT Coalition states that any other alternative transmission technology or even traditional upgrade could see its value change based on system conditions in the same way. WATT Coalition argues that implementing network upgrades when dynamic line ratings would satisfy the identified need will cause overbuilding the system and saddling interconnection customers and consumers with unnecessary costs.

613. WATT Coalition contends that these unnecessary costs mean that the Commission's decision is also contrary to the FPA.[1136] WATT Coalition argues that the Commission has failed to demonstrate that the rates established through this order will be just and reasonable because it lacks justification for the exclusion of dynamic line ratings and fails to respond to the comments arguing that including dynamic line ratings would reduce costs to consumers. WATT Coalition claims that, if the Commission included dynamic line ratings in all studies, all generators would potentially see their interconnection costs reduced and timelines shortened. WATT Coalition argues that, by excluding dynamic line ratings, generators in windy regions especially will be disadvantaged because one of the core solutions for increasing transmission capacity rapidly will not be evaluated in their interconnection studies. WATT Coalition notes Advanced Energy Economy's comment that, ''[w]hile not all interconnections may benefit from [grid enhancing technologies], evaluating their use at every opportunity ensures that their contributions and savings will not be lost.'' [1137] WATT Coalition contends that the Commission erred by instead ensuring that dynamic line ratings' contributions and savings will be lost, interconnection customers will pay vastly higher costs for network upgrades, and consumers ultimately will pay higher rates as a result.[1138]

614. Clean Energy Associations request rehearing of Order No. 2023's exclusion of energy storage serving as a transmission asset from the enumerated list of alternative transmission technologies.[1139] Clean Energy Associations argue that excluding storage resources because ''the evaluation of whether a storage resource performs a transmission function requires a case-by-case analysis'' does not constitute reasoned decision-making because the Commission directs the transmission providers to conduct a case-by-case evaluation of the alternative transmission technologies included in Order No. 2023's list of enumerated technologies.[1140] Clean Energy Associations assert that, without a specific requirement to evaluate dynamic line ratings and energy storage, these technologies will be excluded from the interconnection process despite the record demonstrating that these technologies can improve interconnection process efficiency.[1141]

iii. Determination

615. We are not persuaded by SPP's request to revisit the requirement to evaluate the enumerated list of alternative transmission technologies, which SPP argues will burden transmission providers and lengthen the interconnection process. As explained in Order No. 2023, the Commission found that the record supported a finding that these alternative transmission technologies can provide benefits to optimize the transmission system in specific scenarios.[1142] SPP has not convinced us otherwise. We also find it unnecessary to provide metrics for determining what would support the use, or non-use of, an alternative transmission technology to avoid litigation and lengthening the interconnection process, as SPP requests. In Order No. 2023, the Commission recognized the need to avoid time-consuming delays and costly disputes or litigation over interconnection costs that could arise as a result of this reform.[1143] Consequently, the Commission found that, if a transmission provider evaluates the enumerated alternative transmission technologies as required herein and, in its sole discretion, determines not to use any enumerated alternative transmission technologies as an alternative to a traditional network upgrade, the transmission provider has complied with Order No. 2023, including tariffs filed pursuant to Order No. 2023. Similarly, we disagree with WATT's contention that Order No. 2023 does not set a standard for evaluation and does not ensure that alternative transmission technologies are used if they are the most cost-effective and fastest interconnection upgrade solution. In Order No. 2023, as modified below, the Commission set forth the standard for evaluation, explaining that the requirement is to evaluate the enumerated alternative transmission technologies in the interconnection process for feasibility, cost, and time savings and to determine whether, in the transmission provider's sole discretion, an alternative transmission technology should be used as a solution—consistent with good utility practice, applicable reliability standards, and applicable laws and

[1141] *Id.* at 43–44.

[1142] Order No. 2023, 184 FERC ¶ 61,054 at P 1583 (citing NOPR, 179 FERC ¶ 61,194 at PP 294–295).

[1143] *Id.* P 1587 (citing SPP Initial Comments at 26 (''Even though the Commission has stated that transmission providers retain the discretion regarding whether to use such technologies, the very fact that the transmission provider is required to evaluate them will lead to disputes if the transmission provider then exercises that discretion.'')).

regulations.[1144] This standard will ensure transmission providers identify network upgrades in a manner that ensures just and reasonable rates.

616. We deny PJM's requested clarification about whether Order No. 2023 requires transmission providers that already include all the enumerated technologies in its studies to explain their evaluation of the enumerated alternative transmission technologies in their cluster study reports. Consistent with the Commission's statements in Order No. 2023, transmission providers may explain specific circumstances on compliance and justify why any deviations are either consistent with or superior to the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs.[1145]

617. We disagree with PJM that the requirement in Order No. 2023 for transmission providers to evaluate the enumerated alternative transmission technologies will be burdensome because interconnection customers are likely to demand re-evaluation of the technologies. The Commission determined that, if a transmission provider evaluates the enumerated alternative transmission technologies as required herein and, in its sole discretion, determines not to use any enumerated alternative transmission technologies as an alternative to a traditional network upgrade, and explains its evaluation of the enumerated alternative transmission technologies in the applicable study report(s), the transmission provider has complied with Order No. 2023, including tariffs filed pursuant thereto. We continue to find that these limitations on review address concerns about time-consuming delays and costly disputes or litigation.

618. In response to Clean Energy Associations', Public Interest Organizations', and WATT Coalition's requests for rehearing regarding transmission provider discretion, we sustain the discretion that Order No. 2023 affords transmission providers in determining whether to use an alternative transmission technology for several reasons. First, we continue to find that this level of discretion is justified because (1) the transmission provider is responsible for determining whether using any of the enumerated alternative transmission technologies is an appropriate and reliable network upgrade that allows the interconnection customer to flow the output of its generating facility onto the transmission provider's transmission system in a safe and reliable manner; [1146] (2) the requirement to make such a determination before allowing for the use of the enumerated alternative transmission technologies addresses concerns that their use may impinge on reliability, delay network upgrades instead of reducing the need for them or obviating the need for them altogether, or fail to address all transmission system issues that a traditional network upgrade would address; [1147] and (3) there is a need to avoid time-consuming delays and costly disputes or litigation over interconnection costs that could arise as a result of this reform.[1148]

619. Second, contrary to WATT Coalition's and Clean Energy Associations' assertions, Order No. 2023 does not give transmission providers unfettered discretion to disregard alternative transmission technologies. In spite of the discretion provided to transmission providers, they must explain their evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade in their applicable study report(s), and their use determinations must be consistent with good utility practice, applicable reliability standards, and applicable laws and regulations.[1149] An interconnection customer may contest a transmission provider's evaluation and use determination, just as it does with respect to traditional network upgrades.[1150] This ensures that the transmission provider's explanation of its evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade in its applicable study report(s) as well as its determinations regarding the use of a network upgrade and/or an alternative transmission technology are consistent with the FPA and the transmission provider's tariff.

620. Finally, the level of discretion that Order No. 2023 affords transmission providers is consistent with the general discretion the Commission affords transmission providers to maintain a reliable system.[1151] The transmission provider is the only entity responsible for determining appropriate and reliable network upgrades for its transmission system. Applying this general interconnection *status quo ante* to the determination of whether an alternative transmission technology could serve as a network upgrade inevitably means that the transmission provider is the only entity responsible for determining ''whether using any of the enumerated alternative transmission technologies is an appropriate and reliable network upgrade 'that would allow the interconnection customer to flow the output of its generating facility onto the transmission provider's transmission system in a safe and reliable manner.' '' [1152] In fact, the transmission provider may be subject to penalties if its transmission system does not function in a reliable manner as required by the provisions of the Reliability Standards.[1153] Thus, Commission precedent supports a finding that the transmission provider is the entity with sole discretion as to which network upgrades must be constructed to ensure the safe and reliable operation of the transmission system as a new generating facility interconnects.[1154] The term ''sole discretion'' does not absolve the transmission provider from making a use determination that is consistent with the FPA and its tariff.

621. We sustain the performance standards that Order No. 2023 applies to a transmission provider's evaluation of each alternative transmission technology listed in *pro forma* LGIP section 7.3 and *pro forma* SGIP sections 3.3.6 and 3.4.10 and to its determination whether it should be used. Specifically, Order No. 2023 requires that a

[1154] Order No. 2023, 184 FERC ¶ 61,054 at P 1582 (citing Order No. 2003, 104 FERC ¶ 61,103 at P 767; Order No. 2003–A, 106 FERC ¶ 61,220 at P 404; *pro forma* LGIA arts. 9.3, 9.4).

transmission provider evaluate each alternative transmission technology listed in *pro forma* LGIP section 7.3 and *pro forma* SGIP sections 3.3.6 and 3.4.10 and determine whether it should be used ''consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements.'' [1155] Order No. 2023 also adopted corresponding modifications to the *pro forma* LGIP and *pro forma* SGIP. Below, we discuss further modifications to these *pro forma* documents.

622. As discussed above, Order No. 2023 requires transmission providers to conduct their alternative transmission technology evaluations and use determinations consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements. We address each performance standard in turn. First, we disagree with Public Interest Organizations that ''good utility practice'' is vague or ambiguous because that term is defined in the *pro forma* LGIP [1156] and the *pro forma* SGIP.[1157]

623. Second, we disagree with Public Interest Organizations that ''applicable reliability standards'' is vague or ambiguous because that term is defined in the *pro forma* LGIP.[1158] We note, however, that, unlike the *pro forma* LGIP, ''applicable reliability standards'' is not defined in the *pro forma* SGIP. Therefore, consistent with the definition in the *pro forma* LGIP and Order No. 2023, we modify the *pro forma* SGIP to define ''Applicable Reliability Standards'' as ''the requirements and guidelines of the Electric Reliability Organization and the Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.'' [1159] We also find that the words ''applicable reliability standards'' were inadvertently not included in the performance standards that Order No. 2023 added to *pro forma* LGIP section 7.3 and *pro forma* SGIP sections 3.3.6 and 3.4.10. Therefore, we include that term in those *pro forma* sections now.

624. Finally, we find that the use of the catchall phrase ''*other applicable regulatory requirements*'' is vague or ambiguous. Unlike the two standards discussed above, this phrase is not defined in either the *pro forma* LGIP or the *pro forma* SGIP. In order to remedy this deficiency, we modify Order No. 2023 to replace ''other applicable regulatory requirements'' with the term ''applicable laws and regulations,'' which is a defined term in the *pro forma* LGIP. We note, however, that, unlike the *pro forma* LGIP, ''applicable laws and regulations'' is not defined in the *pro forma* SGIP. Therefore, consistent with the definition in the *pro forma* LGIP and Order No. 2023, we modify the *pro forma* SGIP to define ''applicable laws and regulations'' as ''all duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.'' [1160] We also modify *pro forma* LGIP section 7.3 and *pro forma* SGIP sections 3.3.6 and 3.4.10 to reflect this change in terminology.

625. Finally, we find that, although Order No. 2023 applies the performance standards to both the transmission provider's evaluation of the enumerated alternative transmission technologies *and* the determination to use the technology,[1161] *pro forma* LGIP section 7.3 does not apply the standards to the former. We therefore modify *pro forma* LGIP section 7.3 to remedy this deficiency.

626. Based on these findings, we modify *pro forma* LGIP section 7.3, in relevant part, as follows: ''Transmission Provider shall *evaluate each identified alternative transmission technology and* determine whether the above technologies should be used, consistent with Good Utility Practice, *Applicable Reliability Standards,* and [other applicable regulatory requirements]*Applicable Laws and Regulations*.''

627. We also modify *pro forma* SGIP sections 3.3.6 and 3.4.10, in relevant part, as follows: ''Transmission Provider shall evaluate each identified alternative transmission technology and determine whether it should be used, consistent with Good Utility Practice, *Applicable Reliability Standards,* and [other applicable regulatory requirements]*Applicable Laws and Regulations*.''

628. We disagree with Clean Energy Associations, Public Interest Organizations and WATT Coalition that requiring a transmission provider to evaluate the list of enumerated alternative transmission technologies and determine the use of those technologies consistent with these performance standards will negatively impact an interconnection customer's ability to challenge a transmission provider's actions. As explained above, the performance standards applied in this context are the same as, or similar to, those that apply to other sections of the *pro forma* LGIP and *pro forma* SGIP. Therefore, the use of these performance standards in this context does not in and of itself change an interconnection customer's ability to challenge a transmission provider's conduct. As discussed above, an interconnection customer may challenge a transmission provider's evaluation of the enumerated alternative transmission technologies and its determination about whether to use alternative transmission technologies as it can challenge other conduct in the *pro forma* LGIP and *pro forma* SGIP that is allegedly inconsistent with the performance standards.[1162]

629. We do not believe that WATT's suggestion to allow an interconnection customer to provide input on the evaluation of alternative transmission technologies after the initial phase of the cluster study within the *pro forma* LGIP is necessary. The existing interconnection procedures already provide the opportunity for interconnection customer input with respect to all aspects of a cluster study after the cluster study report is completed, which necessarily provides an opportunity for input as to the evaluation of the enumerated alternative transmission technologies. Specifically, *pro forma* LGIP section 7.4 provides that, ''[w]ithin ten (10) Business Days of simultaneously furnishing a Cluster Study Report to each Interconnection Customer within the Cluster and posting such report on OASIS, Transmission Provider shall convene a Cluster Study Report Meeting.'' *Pro forma* LGIP section 7.5 provides a similar opportunity for input after the completion of a cluster restudy report. WATT Coalition does not explain how an additional opportunity to provide input after the initial phase of a cluster study would be beneficial and ensure just and reasonable rates. We find that, to the contrary, WATT's request for an additional opportunity to provide input would slow down the interconnection process, which would undermine the Commission's efforts to ensure a reliable, efficient, transparent, and timely interconnection process.

630. We address in turn rehearing parties' requests for rehearing and/or clarification related to the list of enumerated alternative transmission

[1155] *Id.* PP 1578, 1580, 1582, 1584, 1587, 1589. Below, we discuss modifying this standard to refer to ''applicable laws and regulations'' rather than ''other applicable regulatory requirements.'' *See infra* PP 624, 626–627.

[1161] Order No. 2023, 184 FERC ¶ 61,054 at P 1589.

[1162] *See supra* P 619.

technologies in Order No. 2023. We are not persuaded by SPP's request to reconsider the inclusion of transmission switching in the list of enumerated alternative transmission technologies. While transmission switching may be used more often in short-term, operational timeframes, we continue to find that it is just and reasonable to include transmission switching on the list of technologies that transmission providers are required to evaluate because it could provide topology solutions that relieve transmission constraints for the duration of the requested interconnection service and does not rely only on transient conditions. As discussed above, Order No. 2023 did not create a presumption in favor of substituting alternative transmission technologies for necessary traditional network upgrades, either categorically or in specific cases.[1163]

631. We are persuaded by VEIR's arguments raised on rehearing and clarify that there are a range of permissible present and future advanced conductor technologies that fall within this class of technologies that transmission providers are required to evaluate pursuant to Order No. 2023. We agree that this clarification will ensure that the term ''advanced conductors'' includes present and future transmission line technologies whose power flow capacities exceed the power flow capacities of conventional transmission line technologies, thus achieving the Commission's objectives in Order No. 2023. Consistent with VEIR's request for clarification, we further clarify that advanced conductors are advanced relative to conventional aluminum conductor steel reinforced conductors and include, but are not limited to, superconducting cables, advanced composite conductors, high temperature low-sag conductors, fiber optic temperature sensing conductors, and advanced overhead conductors.[1164]

632. We sustain the Commission's decision in Order No. 2023 not to include dynamic line ratings in the enumerated list of alternative transmission technologies that a transmission provider must evaluate. In Order No. 2023, the Commission properly exercised its discretion to determine just and reasonable rates and balanced various factors to establish a list of alternative transmission technologies that transmission providers are required to evaluate.[1165] Specifically, the Commission balanced two competing objectives in its effort to ensure just and reasonable rates: (1) the speed of interconnection queue processing times and (2) the cost and the speed at which network upgrades can be constructed. In particular, the Commission recognized that evaluating the enumerated alternative transmission technologies in the cluster studies has the potential to identify network upgrade solutions that are cheaper and faster to construct but, all else equal, may also increase interconnection study processing times by increasing the scope and complexity of the cluster studies.[1166]

633. The list of alternative transmission technologies enumerated in Order No. 2023 that transmission providers must evaluate includes those technologies that can serve as network upgrade solutions even in high stress conditions and scenarios in which weather conditions are less favorable. Unlike the alternative transmission technologies on the list, dynamic line ratings are dependent on weather conditions (*e.g.,* wind speed and direction and solar irradiance level). If weather conditions change, the interconnection customer and the load reliant on that interconnection customer are both at risk of the interconnection customer's energy not being deliverable during real-time operations. Given that interconnection studies for NRIS incorporate a range of simulations assuming worst-case conditions,[1167] worst-case line rating input assumptions are appropriate in this context as inputs to interconnection studies, as explained further below. Because dynamic line ratings use non-worst case scenario input assumptions, it is not arbitrary and capricious to exempt dynamic line ratings from the enumerated list of technologies that must be considered in interconnection studies.

634. WATT Coalition further asserts that line ratings in interconnection studies are chronically underrated, and that, without dynamic line ratings, lower wind assumptions are used, causing transmission lines to be rated lower in planning studies. This assertion does not properly address how transmission providers conduct interconnection studies. Under the current approach to interconnection studies, which the Commission did not fundamentally change in Order No. 2023, transmission providers study requests for NRIS using line ratings that assume worst case inputs in order to ensure reliability under the most restrictive operating conditions anticipated to occur.[1168]

635. We also disagree that the evaluation of potential benefits of dynamic line ratings in transmission planning and interconnection should be analogous. Operational studies, transmission planning studies, and interconnection studies have distinct goals. The objective of an interconnection study, which is inherently a type of reliability study, is to identify interconnection facilities and/or traditional network upgrades that are needed to safely and reliably interconnect a generating facility to the transmission system.[1169] Contrary to WATT Coalition's assertion, there is limited record evidence that dynamic line ratings are well-suited to meeting the reliability goals of interconnection studies, and several commenters express concerns that dynamic line ratings cannot reliably serve as network upgrades.[1170] In particular, dynamic line ratings only alter line ratings as operational conditions, such as wind speed and direction or solar irradiance level, warrant as forecasted over a particular timeframe. Therefore, dynamic line ratings cannot guarantee that an increased line rating will be available at any particular time, including times of system stress such as those studied to evaluate the reliability impact of an interconnection request.

636. In terms of evidence, WATT Coalition provides instances in which dynamic line ratings have been studied as a pilot project or have been used in operations and some theoretical examples of how dynamic line ratings can raise line ratings and thus could be helpful in interconnection; however, WATT Coalition does not provide evidence that interconnection studies have relied upon dynamic line ratings in the place of a network upgrade to resolve potential reliability violations.

[1163] Order No. 2023, 184 FERC ¶ 61,054 at PP 1582, 1584.

[1164] *See* VEIR Rehearing Request at 3–6 (citing 42 U.S.C. 16422(a); U.S. Department of Energy December 2020 Report (Advanced Transmission Technologies)).

[1165] Order No. 2023, 184 FERC ¶ 61,054 at P 1586.

[1166] We acknowledge that the Commission found that ''in some cases transmission providers may be able to rapidly determine if a certain enumerated alternative transmission technology is inappropriate for further study.'' *See id.* P 1590. In such instances, the transmission provider would be able to exclude dynamic line ratings as a possible solution for certain reliability violations identified in the cluster study. In so doing, interconnection queue processing times would be unaffected.

[1167] Order No. 2003–A, 106 FERC ¶ 61,220 at P 500.

[1168] *Id.*

[1169] *See, e.g.,* LGIP section 7.3 (''[t]he [c]luster [s]tudy shall evaluate the impact of the proposed interconnection on the reliability of the [t]ransmission [s]ystem.'').

[1170] Order No. 2023, 184 FERC ¶ 61,054 at P 1545 (citing AECI Initial Comments at 9; AEP Initial Comments at 51; Avangrid Initial Comments at 36; Southern Initial Comments at 29; U.S. Chamber of Commerce Initial Comments at 12).

We are not persuaded by the examples that WATT Coalition uses as the basis for its rehearing request for both procedural and substantive reasons. First, WATT Coalition provides a few examples for the first time on rehearing that could have been provided earlier in the proceeding, which is impermissible under the Commission's precedent.[1171]

637. Second, substantively, WATT Coalition's reliance on the scenarios is also misplaced. In particular, in the case of high-wind scenarios cited by WATT Coalition, it is possible that a dynamic line rating studied in lieu of a traditional network upgrade would be able to resolve a thermal overload in a high-wind scenario. However, under NRIS, ''[t]ransmission [p]roviders must study the [t]ransmission [s]ystem at peak load, under a variety of severely stressed conditions to determine whether, with the [g]enerating [f]acility at full output, the aggregate of generation in the local area can be delivered to the aggregate of load, consistent with [t]ransmission [p]rovider's reliability criteria and procedures.'' [1172] As a weather dependent technology, if there are thermal overloads or other contingencies not connected to a high-wind scenario, dynamic line ratings cannot necessarily ensure the needed local area deliverability to the aggregate of load.[1173]

638. We are also not persuaded by WATT Coalition's contention that Order No. 2023's statements that dynamic line ratings may relieve congestion by increasing available interconnection capacity only temporarily or in the short-term are incorrect and that, instead, dynamic line ratings are a long-term solution for the specific parameter of the cluster study. The issue is not whether dynamic line ratings can provide additional transmission capacity at a specific point in time; rather, the issue is whether, as a weather dependent technology, they can be relied upon to replace the need for a different network upgrade by ensuring the necessary local area deliverability to the aggregate of load if there are thermal overloads or other contingencies not connected to a high-wind scenario. Moreover, because transmission providers generally consider worst-case scenarios in interconnection studies, such transmission providers would still have to use worst-case line rating input assumptions, which are typically the seasonal line rating (assuming high air temperature, full sun, and low or no wind) on a system using dynamic line ratings, not the highest dynamic rating that would apply in more favorable conditions (*e.g.,* low air temperature, no sun, strong sustained winds). For these reasons, WATT Coalition's rehearing arguments do not refute Order No. 2023's finding that dynamic line ratings ''may be less beneficial in the interconnection context.'' [1174] As explained above, in Order No. 2023, the Commission balanced various factors (*i.e.,* the potential benefits of studying the technology with the burden on the transmission provider and the increase in study times) and established a list of alternative transmission technologies that are most likely to ensure just and reasonable rates.[1175]

639. We disagree with WATT Coalition's assertion that the Commission did not engage in reasoned decision-making by excluding dynamic line ratings from this enumerated list of alternative transmission technologies. In Order No. 2023, the Commission explained that, because the benefits of evaluating dynamic line ratings did not outweigh the burden and the potential increase in study times, dynamic line ratings were less beneficial than other alternative transmission technologies in the interconnection context and did not include it on the final enumerated list. Regarding the burden, for example, both MISO and the MISO TOs highlighted the additional studies and requirements that an obligation to evaluate dynamic line ratings would impose on the first phase of the interconnection study process.[1176] These entities further highlighted that these additional obligations could also necessitate further debate about the impact that such dynamic line ratings may have on the rest of the transmission system and were in contrast to the need to accelerate the interconnection process. After having determined that the existing *pro forma* LGIP and *pro forma* SGIP are not just and reasonable, the Commission must determine, based on substantial evidence, a replacement rate that is just, reasonable and not unduly preferential.[1177] Thus, the Commission both provided a reasoned explanation for excluding dynamic line ratings from the final enumerated list of alternative transmission technologies and established a just and reasonable replacement rate. Further, we note, that the Commission did not ''exclude'' dynamic line ratings from consideration in cluster studies, as WATT Coalition claims. Order No. 2023 specifically provided that transmission providers are permitted to go beyond the enumerated list and can do so without changing their tariffs.[1178]

640. We are not persuaded by Clean Energy Associations' arguments that energy storage serving as a transmission asset should be included in the enumerated list of alternative transmission technologies. We agree with Clean Energy Associations that energy storage, like other alternative transmission technologies on the list, would need to be evaluated on a case-by-case basis to determine if the technology can serve in the place of a network upgrade. However, we continue to find that, as discussed in Order No. 2023, energy storage requires an *additional* case-by-case analysis that distinguishes it from the enumerated list of alternative transmission technologies: storage resources must also be evaluated to determine whether a storage resource performs a transmission function through a case-by-case analysis of either how a particular storage resource would be operated or the requirements set forth in a tariff governing selection of such

[1171] *See supra* PP 386, 609 n.1145.

[1172] Order No. 2003–A, 106 FERC ¶ 61,220 at P 500 (also stating that, ''[h]owever, [NRIS] does not necessarily provide the [i]nterconnection [c]ustomer with the capability to physically deliver the output of its [g]enerating [f]acility to any particular load without incurring congestion costs. Nor does [NRIS] convey a right to deliver the output of the [g]enerating [f]acility to any particular customer.'').

[1173] *Id. See also* Order No. 881, 177 FERC ¶ 61,179 at P 35 (explaining that ''while current transmission line rating practices usually understate transfer capability, they can also overstate transfer capability . . .'').

[1174] WATT Coalition Rehearing Request at 21–23 (quoting Order No. 2023, 184 FERC ¶ 61,054 at P 1598).

[1175] Order No. 2023, 184 FERC ¶ 61,054 at P 1586.

[1176] *Id.* P 1549 (citing MISO TOs Initial Comments at 30; MISO Initial Comments at 11).

[1177] FPA section 206 requires that, when the Commission finds a rate subject to its jurisdiction to be ''unjust, unreasonable, unduly discriminatory or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order.'' 16 U.S.C. 824e; *see also Del. Pub. Serv. Comm'n* v. *PJM Interconnection, L.L.C,* 166 FERC ¶ 61,161, at P 16 (2019) (''In finding [certain tariff provisions] unjust and unreasonable . . . pursuant to FPA section 206, the Commission is required to establish the just and reasonable replacement rate.'').

[1178] Order No. 2023, 184 FERC ¶ 61,054 at P 1600. While we are declining to include dynamic line ratings among the enumerated technologies for the reasons explained herein, we note that dynamic line ratings may have greater utility when studying an interconnection customer requesting ERIS because such a customer is opting for ''as available'' service. *See* Order No. 2003–A, 106 FERC ¶ 61,220 at P 499. By contrast, for NRIS, ''[t]ransmission [p]roviders must study the [t]ransmission [s]ystem at peak load, under a variety of severely stressed conditions to determine whether, with the [g]enerating [f]acility at full output, the aggregate of generation in the local area can be delivered to the aggregate of load, consistent with [t]ransmission [p]rovider's reliability criteria and procedures.'' Order No. 2003–A, 106 FERC ¶ 61,220 at P 500.

storage resources.[1179] That analysis would determine whether the storage resource's cost can be recovered in transmission rate base or as a network upgrade. This additional analysis distinguishes energy storage from the other technologies on the enumerated list of alternative transmission technologies and is the basis for its exclusion from the list. We reiterate, however, that Order No. 2023 does not preclude a transmission provider from studying or evaluating any technology that was not included in the enumerated list of alternative transmission technologies.[1180]

3. Modeling and Ride Through Requirements for Non-Synchronous Generating Facilities

a. Modeling Requirements

i. Order No. 2023 Requirements

641. In Order No. 2023, the Commission revised Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP to require each interconnection customer requesting to interconnect a non-synchronous generating facility to submit to the transmission provider: (1) a validated user-defined root mean square (RMS) positive sequence dynamic model; (2) an appropriately parameterized generic library RMS positive sequence dynamic model, including a model block diagram of the inverter control system and plant control system, that corresponds to a model listed in a new table of acceptable models or a model otherwise approved by the Western Electricity Coordinating Council (WECC); and (3) a validated electromagnetic transient (EMT) model, if the transmission provider performs an EMT study as part of the interconnection study process.[1181]

642. The Commission also adopted the NOPR proposals to: (1) define a user-defined model as any set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly software-based and represent the entities' control strategies but does not necessarily correspond to any particular generic library model, as contained in Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP; (2) revise Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP to add a table of acceptable generic library models, based on the current WECC list of approved dynamic models for renewable energy generating facilities; and (3) revise section 4.4.4 of the *pro forma* LGIP and section 1.4 of the *pro forma* SGIP to require that any proposed modification of the interconnection request be accompanied by updated models of the proposed generating facility.[1182]

ii. Requests for Rehearing and Clarification

643. Invenergy asks the Commission to modify the *pro forma* LGIP, Appendix 1, Attachment A to state that, if a validated EMT model is not available, a preliminary EMT model may be provided, and, if a validated EMT model is determined to be necessary, the interconnection customer shall submit the validated EMT model no later than needed for the cluster restudy.[1183] Invenergy argues that requiring validation of EMT models at the time of the interconnection application will impede an interconnection customer's ability to use an advanced product with higher annual energy production values because such products will not be validated.[1184] Invenergy explains that the only equipment with an available, validated EMT model is equipment that has been in the market for some years, and it is unreasonable to require an interconnection customer to submit a validated EMT model at the time of interconnection application even if the proposed commercial operation date may be in five or six years. Invenergy asserts that it is unclear whether a project developer might be able to provide EMT models for different equipment later in the process as newer equipment becomes field tested without the transmission provider determining that it is a material modification, leading some developers to forego using state-of-the-art technology otherwise available under the commercial operation deadline.

644. Invenergy contends that the Commission's alternative to a validated EMT model that the customer could pursue is not accurate.[1185] Invenergy asserts that the interconnection customer cannot attest to the accuracy of model information because model information is provided by the manufacturer, and equipment manufacturers will not attest to model data until the field test is done, which is later in the process. Invenergy argues that requiring validation is not necessary to achieve the Commission's goal of ensuring that accurate information is used in studies. In particular, Invenergy notes that preliminary models contain the same information as a validated model and are developed based on real design codes but have not been field tested.

645. Invenergy contends that, much like EMT models, requiring validated RMS models at the beginning of the interconnection process will force developers to use older technology and thus stifle innovation and waste time and resources.[1186] Invenergy also argues that the Commission's requirement is not necessary to ensure accurate model information. Therefore, Invenergy asks the Commission to modify the *pro forma* LGIP, Appendix 1, Attachment A and *pro forma* SGIP, Attachment 2, to state that, if a validated RMS model is not available, a preliminary RMS model may be provided and the interconnection customer shall submit the validated RMS model no later than needed for the cluster restudy.

646. Ørsted argues that the Commission's decision to require a validated EMT model when seeking to interconnect is arbitrary and capricious and not supported by reasoned decision-making.[1187] Ørsted contends that accurate models for nonsynchronous resources may not be available early in the interconnection process due to rapid advances in inverter and control technologies and that some resources may need customization requiring interconnection customers to make decisions about specific types of technology they may use later in the interconnection process. Ørsted claims that the Commission's requirement does not provide a path forward for such resources and could deter the use of new and more efficient technologies or delay interconnection of needed resources.

647. Ørsted also argues that transmission providers generally do not conduct EMT studies until much later in the interconnection process, resulting in minimal value in the interconnection customer providing and subsequently updating EMT models at the time of interconnection application.[1188] Ørsted asserts that EMT study results typically reveal the need for items such as control

[1179] Order No. 2023, 184 FERC ¶ 61,054 at P 1599. In Order No. 2023, the Commission pointed to the process in SPP, which takes into account five considerations that, together, ensure that a selected storage resource will serve a transmission function. *Id.* (citing *Sw. Power Pool, Inc.,* 183 FERC ¶ 61,153, at P 29 (2023)).

[1180] *Id.* P 1600.

[1182] *Id.* P 1660.

[1183] Invenergy Rehearing Request at 13.

[1184] *Id.* at 10–12.

[1185] *Id.* at 12–13.

[1186] *Id.* at 14.

[1187] Ørsted Rehearing Request at 6–7.

[1188] *Id.* at 7–8.

tuning rather than additional transmission system upgrades, but this requires an EMT model that accurately represents how the plant is installed and configured as well as transmission system data that can only be provided by the transmission provider, so the Commission's requirement is not likely to provide information that is useful for reliability studies and will waste time and resources for both the interconnection customer and the transmission provider.[1189]

648. Ørsted asks the Commission to clarify how to provide a validated model for equipment that does not yet exist.[1190] Ørsted suggests, as example, that the interconnection customer or vendor could self-attest that, to the best of their knowledge, the equipment response is expected to be consistent with the RMS and the EMT models provided at the time of interconnection study.

649. PacifiCorp asks the Commission to add two models to the table of acceptable models that are approved by WECC and relate to ride through requirements.[1191] PacifiCorp states that these qualify as validated user-defined root mean squared positive sequency dynamic models and their inclusion will allow transmission providers to accurately model the ride through characteristics of these resources and help understand if the resource will be tripped for any transmission related event away from the resource.

iii. Determination

650. We are unpersuaded by Invenergy's request for rehearing regarding potential barriers to validation of EMT models at the time of the interconnection application. Pursuant to Order No. 2023's definition of a validated model, the interconnection customer has a number of options that do not require field data, such as an attestation that the models accurately reflect the expected behavior of a proposed generating facility based on the interconnection customer's best understanding at the time of the interconnection request.[1192] Therefore, we are not persuaded that the interconnection customer is unable to provide this attestation, even for advanced products.

651. We also find it unnecessary to grant Invenergy's request to modify the *pro forma* LGIP, Appendix 1, Attachment A and *pro forma* SGIP, Attachment 2, to state that, if a validated EMT or RMS model is not available, a preliminary model may be provided, and the interconnection customer shall submit the validated model no later than needed for the cluster restudy. As noted above, such preliminary models are acceptable under Order No. 2023's definition of a validated model, as long as it is based on the actual programming code used by the manufacturer to program equipment.

652. We deny Ørsted's request for clarification regarding how to provide a validated model for equipment that does not yet exist. An interconnection request that fails to specify the equipment to be used, including, for example, the inverter manufacturer, model name, number, and version, is not a complete application.[1193] However, we acknowledge that equipment, including inverters, may advance over the period of time an interconnection customer proceeds through the queue. We note that section 4.6 of the *pro forma* LGIP contains the transmission provider's technological change procedure, which is designed to allow transmission providers to evaluate equipment changes to an interconnection request.[1194]

653. We are unpersuaded by Invenergy's request for rehearing regarding whether a project developer might be able to provide EMT models for different equipment later in the process as newer equipment becomes field tested without the transmission provider determining that it is a material modification. Order No. 2023 was clear that section 4.4 of the *pro forma* LGIP and section 1.4 of the *pro forma* SGIP set forth procedures for modifications to an interconnection request, including the evaluation of technical changes to a request, and such changes may be determined to be a material modification.[1195] Furthermore, as noted above, section 4.6 of the *pro forma* LGIP contains the transmission provider's technological change procedure, which is designed to allow transmission providers to evaluate equipment changes to an interconnection request.

654. We are unpersuaded by Ørsted's rehearing request regarding the timing of EMT model availability. While the Commission has approved proposals to perform an EMT study following execution of the LGIA, the *pro forma* LGIP and *pro forma* SGIP contain no such study.[1196] We sustain the finding in Order No. 2023 that requiring models to be submitted with the interconnection request is consistent with the principles underpinning other requirements in the *pro forma* LGIP and *pro forma* SGIP. Allowing model validation at a point further into the interconnection process could lead to restudies and subsequent delays that would frustrate the efficiency gained by the other reforms in Order No. 2023.[1197]

655. We are unpersuaded by PacifiCorp's request for the Commission to add two models to the table of acceptable models that are approved by WECC and relate to ride through requirements.[1198] PacifiCorp presents this issue for the first time in its rehearing request. In general, we reject rehearing requests that raise a new issue, unless we find that the issue could not have been previously presented.[1199] We are not persuaded that PacifiCorp could not have raised this issue earlier in this proceeding. However, we also note that transmission providers may explain specific circumstances on compliance and justify why any deviations are either consistent with or superior to the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs.

b. Ride Through Requirements

i. Order No. 2023 Requirements

656. The Commission revised article 9.7.3 of the *pro forma* LGIA and article 1.5.7 of the *pro forma* SGIA to require that, during abnormal frequency conditions and voltage conditions within the ''no trip zone'' defined by Reliability Standard PRC–024–3 or successor mandatory ride through reliability standards, the non-synchronous generating facility must ensure that, within any physical limitations of the generating facility, its control and protection settings are configured or set to: (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels unless providing primary frequency response or fast frequency response; (2) minimize reductions in active power and remain within dynamic voltage and current limits, if reactive power priority mode is enabled, unless providing primary frequency response or fast frequency response; (3) not artificially limit

[1189] *Id.* at 8–9.

[1190] *Id.* at 9.

[1192] Order No. 2023, 184 FERC ¶ 61,054 at P 1675.

[1193] *See pro forma* LGIP, attach. A to app. 1.

[1194] Order No. 2023, 184 FERC ¶ 61,054 at P 1682.

[1195] *Id.*

[1196] *See Sw. Power Pool Inc.,* 181 FERC ¶ 61,018, at P 8 (2022).

[1197] Order No. 2023, 184 FERC ¶ 61,054 at P 1669.

[1198] PacifiCorp Rehearing Request at 23–24. It is unclear which models PacifiCorp would like to add, but it appears that they might be LHFRT (Low/High Frequency Ride Through) and LHVRT (Low/High Voltage Ride Through).

[1199] *See supra* P 386.

dynamic reactive power capability during disturbances; and (4) return to pre-disturbance active power levels without artificial ramp rate limits if active power is reduced, unless providing primary frequency response or fast frequency response.[1200]

ii. Requests for Rehearing and Clarification

657. Invenergy argues that the proposed ride through requirements impose requirements on non-synchronous generators that they may not be able to meet because the generator can only maintain active current, not power, and may not have a choice to choose between reactive and real power output during a disturbance due to equipment limitations.[1201] Invenergy asserts that requiring a non-synchronous generator to produce active power instead of providing reactive support is very likely to exacerbate, rather than alleviate, the disturbance. Therefore, Invenergy asks the Commission to modify section 9.7.3 of the *pro forma* LGIA to limit the prioritization of active power to frequency response disturbances and clarify that the default ride-though rule for other disturbances can be prioritizing reactive power. Invenergy also asks the Commission to consider establishing a technical conference to obtain information directly from the standards setting bodies, the companies that design and supply the equipment, and other engineering experts to support the Commission's determinations.

658. Similarly, Clean Energy Associations ask the Commission to clarify that the text ''within any physical limitations of the generating facility'' allows a resource that is responding to a disturbance in reactive power priority mode to reduce its active power production if it does not have sufficient headroom to increase reactive power to provide required voltage support, without violating the requirement to continue active power production during disturbance and post disturbance periods at pre-disturbance levels.[1202]

iii. Determination

659. We are not persuaded by Invenergy's request to modify section 9.7.3 of the *pro forma* LGIA to limit the prioritization of active power to frequency response disturbances and clarify that the default ride-though rule for other disturbances can be prioritizing reactive power. As further explained below, Order No. 2023 allows a non-synchronous generating facility with physical limitations to prioritize reactive power. The extent to which a non-synchronous generating facility prioritizes real or reactive power is best handled on a case-by-case basis based on the transmission provider's evaluation of the reliability needs of its system, because different transmission systems and different operating conditions may require different responses from interconnected resources, as opposed to a default response.

660. We grant Clean Energy Associations' request for clarification. In Order No. 2023, the Commission noted that the modified reform accommodates existing technical capabilities and physical limitations of non-synchronous generating facilities by providing for reductions in active power to prioritize reactive power.[1203] A generating facility's inability to prioritize reactive power without a reduction in active power is considered one of the ''physical limitations of the generating facility'' that provides an exception, albeit limited, to the requirement that the generating facility continue active power production during disturbance and post disturbance periods at pre-disturbance levels.

661. However, given the importance of prioritization of reactive power, we are persuaded that additional clarity is necessary. Accordingly, we revise section 9.7.3 of the *pro forma* LGIA and article 1.5.7 of the *pro forma* SGIA to state that a non-synchronous generating facility must ensure that, within any physical limitations of the generating facility:

> . . . its control and protection settings are configured or set to (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels, *unless reactive power priority mode is enabled* or unless providing primary frequency response or fast frequency response. . . .

662. Given this modification, we do not believe a technical conference, as suggested by Invenergy, is necessary at this time.

F. Compliance Procedures

1. Order No. 2023 Requirements

663. The Commission required transmission providers to submit compliance filings within 90 calendar days of the publication date of Order No. 2023 in the **Federal Register**, rather than the proposed 180 days from the effective date of Order No. 2023.

2. Requests for Rehearing and Clarification

664. A number of entities asked the Commission to extend the deadline for compliance established in Order No. 2023.[1204]

665. Indicated PJM TOs argue that Order No. 2023 is unduly discriminatory and will inappropriately impose substantial administrative burdens on all transmission providers, even though transmission providers who have already adopted cluster study processes are not similarly situated to those transmission providers who have not adopted such processes.[1205]

666. Dominion states that it understands that the Commission intended tariff revisions made in compliance with Order No. 2023 to be prospective, but Dominion argues that the Commission did not provide guidance as to what effective date transmission providers should use for purposes of their compliance filing.[1206] Dominion asks the Commission to clarify that any compliance filings can be made effective in a way that will align with cluster processing dates, such as the start of a new processing window. Dominion asserts that such an effective date would allow the required revisions to be implemented on a going-forward and efficient basis and would not require any mid-process changes by requiring revisions to go into effect in the middle of a cluster window.

3. Determination

667. On October 25, 2023, the Commission addressed arguments on rehearing regarding extending the deadline for compliance established in Order No. 2023.[1207] The Commission

[1200] Order No. 2023, 184 FERC ¶ 61,054 at P 1715.

[1201] Invenergy Rehearing Request at 16–17.

[1202] Clean Energy Associations Rehearing Request at 83.

[1203] Order No. 2023, 184 FERC ¶ 61,054 at P 1717.

[1204] *See* AEP Rehearing Request at 26–28 (requesting more time for compliance); Dominion Rehearing Request at 26–30 (requesting a year to submit compliance filings); EEI Rehearing Request at 10–11 (requesting the compliance deadline be set to 180 days from the effective date of the final rule); PacifiCorp Rehearing Request at 20–22 (requesting the compliance deadline be set to 180 days from the effective date of the final rule, or alternatively, 120 days); PJM Rehearing Request at 46–48 (requesting the Commission delay compliance such that the 90 day clock would start upon the Commission's issuance of an order on rehearing).

[1205] Indicated PJM TOs Rehearing Request at 17.

[1206] Dominion Rehearing Request at 30 (citing Order No. 2023, 184 FERC ¶ 61,054 at P 1769 (''This final rule will be effective as described above; however, the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP], and *pro forma* SGIP requirements in transmission providers' tariffs will not be effective until the Commission-approved effective date of the transmission provider's filing in compliance with this final rule.'')).

[1207] *Order on Motions and Addressing Limited Arguments Raised on Rehearing and Setting Aside*

extended the compliance deadline to require compliance filings to be submitted within 210 calendar days of the publication of Order No. 2023 in the **Federal Register** (*i.e.,* within 149 calendar days of the effective date of Order No. 2023, or April 3, 2024). To incorporate the changes made herein, we further extend the deadline until the effective date of this order (*i.e.,* the deadline for compliance with Order No. 2023 will be 30 days after the publication of this order in the **Federal Register**, and must include the further revisions reflected in this order).

668. We disagree with arguments that Order No. 2023 imposes an inappropriately large compliance burden on regions already generally in accord with the approach adopted in Order No. 2023, or that it is unduly discriminatory to impose the same compliance obligations on both entities that have already adopted cluster study processes and those that have not. We find that the compliance burden imposed by Order No. 2023 is appropriate given the scope of the problem at hand. It is not unduly discriminatory to require all transmission providers subject to the Commission's jurisdiction to comply with Commission rules.

669. Regarding Dominion's request for clarification, we confirm that transmission providers may propose effective dates in their compliance filings that align with their existing queue processing dates, such as the start of a new processing window. We will consider these requests on a case-by-case basis in each individual compliance filing. To the extent Order No. 2023 suggested, by referencing MISO's compliance filing, that transmission providers may not be granted an effective date that predates the Commission order on compliance,[1208] we clarify that the Commission will consider, and may grant, requests from transmission providers for an effective date that predates the Commission's order on their compliance filing, on a case-by-case basis.

III. Information Collection Statement

670. The information collection requirements contained in this final rule are subject to review by the Office of Management and Budget (OMB) under section 3507(d) of the Paperwork Reduction Act of 1995.[1209] OMB's regulations require approval of certain information collection requirements imposed by agency rules.[1210] Respondents subject to the filing requirements of this order on rehearing will not be penalized for failing to respond to the collection of information unless the collection of information displays a valid OMB control number.

671. Previously, the Commission submitted to OMB the information collection requirements arising from Order No. 2023 and OMB approved those requirements. In this order on rehearing, the Commission makes no substantive changes to those requirements, but does make some modifications to the Commission's standard large generator interconnection procedures and agreements (*i.e.,* the *pro forma* LGIP and *pro forma* LGIA) and the Commission's standard small generator interconnection procedures and agreement (*i.e.,* the *pro forma* SGIP and *pro forma* SGIA) that every public utility transmission provider is required to include in their tariff under section 35.28 of the Commission's regulations.[1211] This order on rehearing in Docket No. RM22–14–001 requires each transmission provider to amend its tariff to implement the modifications adopted in this order on rehearing and submit a compliance filing to the Commission for approval of those modifications. Therefore, the Commission finds it necessary to make a formal submission to OMB for review and approval under section 3507(d) of the Paperwork Reduction Act of 1995.[1212]

672. The modifications in the Docket No. RM22–14–001 affect the following currently approved information collections: *FERC–516, Electric Rate Schedules and Tariff Filings (Control No. 1902–0096);* and *FERC–516A, Standardization of Small Generator Interconnection Agreements and Procedures (Control No. 1902–0203).* The Commission, in this order on rehearing, is updating the burden [1213] estimates associated with *FERC–516* and *FERC–516A* information collections to reflect the incremental burden of complying with the new requirements set forth in this order.

673. Summary of the Revisions to the Collection of Information due to the order on rehearing in Docket No. RM22–14–001:

- *FERC–516:* This order on rehearing revises the Commission's *pro forma* LGIP and LGIA and requires each public utility to amend its LGIP and LGIA. The amendments pertain to the first ready, first served cluster study process, withdrawal penalties, affected systems study process, the evaluation of alternative transmission technologies, and the maintenance of power production during abnormal frequency conditions and certain voltage conditions.
- *FERC–516A:* This order on rehearing amends the Commission's standard small generator interconnection procedures and agreement (*i.e.,* the *pro forma* SGIP and *pro forma* SGIA) regarding the evaluation of alternative transmission technologies and the maintenance of power production during abnormal frequency conditions and certain voltage conditions.
- *Title:* Electric Rate Schedules and Tariff Filings (FERC–516), and Standardization of Small Generator Interconnection Agreements and Procedures (FERC–516A).
- *Action:* Revision of information collections in accordance with Docket No. RM22–14–001.
- *OMB Control Nos.:* 1902–0096 (FERC–516) and 1902–0203 (FERC–516A).
- *Respondents:* Public utility transmission providers, including RTOs/ISOs.
- *Frequency of Information Collection:* One time during Year 1.
- *Necessity of Information:* The LGIP, LGIA, SGIP, and SGIA modifications in this order on rehearing ensure that interconnection customers can interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, and prevent undue discrimination. The modifications are intended to ensure that the generator interconnection process is just, reasonable, and not unduly discriminatory or preferential.
- *Internal Review:* We have reviewed the requirements set forth in this order on rehearing that impose information collection burdens and have determined that such requirements are necessary. These requirements conform to the Commission's need for efficient information collection, communication, and management within the energy industry. We have specific, objective support for the burden estimates associated with the information collection requirements.
- *Public Reporting Burden:* As with Order No. 2023, we estimate that 44 transmission providers, including RTOs/ISOs, will be subject to this order on rehearing. The burden and cost estimates below reflect the incremental burden of complying with this order on rehearing, which will require a single

Prior Order, In Part, Docket No. RM22–14 (Oct. 25, 2023).

[1208] Order No. 2023, 184 FERC ¶ 61,054 at P 1769.

[1209] 44 U.S.C. 3507(d).

[1210] 5 CFR 1320.11.

[1211] 18 CFR 35.28(f)(1).

[1212] 44 U.S.C. 3507(d).

[1213] 5 CFR 1320.3(b)(1).

compliance filing to be submitted to the Commission. We estimate no ongoing information collection burden because there is either no information collection aspect of the requirement or the requirements would merely supplant existing ones. The Commission estimates that the order on rehearing in Docket No. RM22–14–001 will adjust the burden and cost of FERC–516 and FERC–516A as follows:

TABLE 1—INFORMATION COLLECTION REQUIREMENTS

Changes due to order on rehearing in Docket No. RM22–14–001					
Reforms	Number of respondents (1)	Annual number of responses per respondent (2)	Total number of responses (rounded) (1) * (2) = (3)	Average burden (hr.) & cost ($) per response [1214] (4)	Total annual burden hours & total annual cost ($) (rounded) (3) * (4) = (5)
FERC–516					
First Ready, First Served Cluster Study	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 2 hr; $200 Ongoing: 0	Year 1: 88 hr; $8,800 Ongoing: 0
Allocation of Cluster Network Upgrade Costs	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Affected System Study Process	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0 [1215]	Year 1: 2 hr; $200 Ongoing: 0	Year 1: 88 hr; $8,800 Ongoing: 0
Study Deposits and LGIA Deposit	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0.	Year 1: 44 hr; $4,400 Ongoing: 0
Commercial Readiness	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 3 hrs; $300 Ongoing: 0	Year 1: 132 hr; $13,200 Ongoing: 0
Withdrawal Penalties	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 2 hr; $200 Ongoing: 0	Year 1: 88 hr; $8,800 Ongoing: 0
Elimination of Reasonable Efforts Standard	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Transition Process	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Co-Located Generating Facilities Behind One Point of Interconnection with Shared Interconnection Requests.	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Ride Through Requirements	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Incorporating Enumerated Alternative Transmission Technologies into the Generator Interconnection Process.	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Total New Burden for FERC–516 (due to Docket No. RM22–14–001).	Year 1: 484 responses			Year 1: 704 hr; $70,400	
	Ongoing: 0			Ongoing: 0 hr; 0	
FERC–516A					
Ride Through Requirements	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Incorporating Enumerated Alternative Transmission Technologies into the Generator Interconnection Process.	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 1 hr; $100 Ongoing: 0	Year 1: 44 hr; $4,400 Ongoing: 0
Total New Burden for FERC–516A (due to Docket No. RM22–14–001).	Year 1: 88 responses; Ongoing: 0			Year 1: 88 hr; $8,800; Ongoing: 0	
Grand Total (FERC–516 plus FERC–516A, including all respondents).	Year 1: 572 responses; Ongoing: 0			Year 1: 792 hr; $79,200; Ongoing: 0	
Grand Total Average Per Entity Cost (44 TPs).				Year 1: $1,800; Ongoing: 0	

674. Interested persons may obtain information on the reporting requirements by contacting Jean Sonneman via email at *DataClearance@ferc.gov* or telephone (202) 502–6362.

IV. Environmental Analysis

675. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[1216] We conclude that neither an Environmental Assessment nor an Environmental Impact Statement is required for this final rule under § 380.4(a)(15) of the Commission's regulations, which provides a categorical exemption for approval of actions under sections 205 and 206 of

[1214] Commission staff estimate that respondents' hourly wages plus benefits are comparable to those of FERC employees (2024). Therefore, the 2024 FERC hourly cost estimate in this analysis is $100 per hour ($207,786 per year).

[1215] Order No. 2023 erroneously reported 44 ongoing responses for Affected Systems Study Process reforms. This was an error and the current number of estimated ongoing responses is zero. However, the burden cost per response and total burden estimates for Affected Systems Study Process reforms were correctly calculated and reported.

[1216] *Reguls. Implementing the Nat'l. Env't Pol'y Act,* Order No. 486, 52 FR 47897 (Dec. 17, 1987), FERC Stats. & Regs. Preambles 1986–1990 ¶ 30,783 (1987) (cross-referenced at 41 FERC ¶ 61,284).

the FPA relating to the filing of schedules containing all rates and charges for the transmission or sale of electric energy subject to the Commission's jurisdiction, plus the classification, practices, contracts, and regulations that affect rates, charges, classification, and services.[1217]

V. Regulatory Flexibility Act

676. The Regulatory Flexibility Act of 1980 [1218] requires a description and analysis of proposed and final rules that will have significant economic impact on a substantial number of small entities. The Commission continues to certify that the reforms adopted in this order on rehearing would not have a significant economic impact on a substantial number of small entities.

677. The Small Business Administration (SBA) sets the threshold for what constitutes a small business. Under SBA's size standards,[1219] transmission providers and RTOs/ISOs fall under the category of Electric Bulk Power Transmission and Control (NAICS code 221121), that has a size threshold of under 950 employees including the entity and its associates.[1220] This order on rehearing modifies the Commission's standard large generator interconnection procedures and agreements (*i.e.,* the *pro forma* LGIP and *pro forma* LGIA) and the Commission's standard small generator interconnection procedures and agreement (*i.e.,* the *pro forma* SGIP and *pro forma* SGIA) that every public utility transmission provider is required to include in their tariff under section 35.28 of the Commission's regulations, regardless of the size of the entity.[1221]

678. As with Order No. 2023, we estimate that there are 44 transmission providers affected by the reforms proposed in this order on rehearing. Furthermore, we estimate that six of the 44 total transmission providers, approximately 14% (rounded), are small entities.

679. We estimate that one-time costs (in Year 1) associated with the reforms required by this order on rehearing for one transmission provider (as shown in the table in the Information Collection Statement above) would be $1,800. Following Year 1, we estimate that there will be no ongoing costs for transmission providers. According to SBA guidance, the determination of significance of impact ''should be seen as relative to the size of the business, the size of the competitor's business, and the impact the regulation has on larger competitors.'' [1222] The Year 1 estimated cost of this order on rehearing reflects 2.5% of the Year 1 estimated cost of Order No. 2023, which the Commission found to not have a significant economic impact. Further, this order on rehearing will create no ongoing costs for transmission providers in addition to those in Order No. 2023. We therefore do not consider the estimated cost of $1,800 per transmission provider due to this order on rehearing to be a significant economic impact. As a result, as the Commission concluded in Order 2023, we certify that the reforms proposed in this order on rehearing would not have a significant economic impact on a substantial number of small entities.

VI. Document Availability

680. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*).

681. From FERC's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

682. User assistance is available for eLibrary and the FERC's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov*, or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

VII. Effective Date

683. This order is effective May 16, 2024.

By the Commission. Commissioner Christie is concurring with a separate statement attached.

Issued: March 22, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendix A: Abbreviated Names of Rehearing Parties

American Clean Power Association	ACP.
American Electric Power Service Corporation	AEP.
Avangrid, Inc	Avangrid.
California Independent System Operator Corporation	CAISO.
Advanced Energy United, American Clean Power Association, and Solar Energy Industries Association.	Clean Energy Associations.
Dominion Energy Services, Inc	Dominion.
Duke Energy Carolinas, LLC; Duke Energy Progress, LLC; and Duke Energy Florida, LLC	Duke Southeast Utilities.
Edison Electric Institute	EEI.
National Grid Renewables Development, LLC, Clearway Energy Group LLC, and Pine Gate Renewables, LLC.	Generation Developers.
Cypress Creek Renewables, LLC, New Leaf Energy, Inc., and Enel Green Power	IPP Coalition.
Indicated PJM Transmission Owners	Indicated PJM TOs.
Invenergy Solar Development North America LLC; Invenergy Thermal Development LLC; Invenergy Wind Development North America LLC; and Invenergy Transmission LLC.	Invenergy.

Section 1. Definitions

Adverse System Impact shall mean the negative effects due to technical or operational limits on conductors or equipment being exceeded that may compromise the safety and reliability of the electric system.

Affected System shall mean an electric system other than Transmission Provider's Transmission System that may be affected by the proposed interconnection.

Affected System Facilities Construction Agreement shall mean the agreement contained in Appendix 11 to this LGIP that is made between Transmission Provider and Affected System Interconnection Customer to facilitate the construction of and to set forth cost responsibility for necessary Affected System Network Upgrades on Transmission Provider's Transmission System.

Affected System Interconnection Customer shall mean any entity that submits an interconnection request for a generating facility to a transmission system other than Transmission Provider's Transmission System that may cause the need for Affected System Network Upgrades on [the] Transmission Provider's Transmission System.

Affected System Network Upgrades shall mean the additions, modifications, and upgrades to Transmission Provider's Transmission System required to accommodate Affected System Interconnection Customer's proposed interconnection to a transmission system other than Transmission Provider's Transmission System.

Affected System Operator shall mean the entity that operates an Affected System.

Affected System Queue Position shall mean the queue position of an Affected System Interconnection Customer in Transmission Provider's interconnection queue relative to Transmission Provider's Interconnection Customers' Queue Positions.

Affected System Study shall mean the evaluation of Affected System Interconnection Customers' proposed interconnection(s) to a transmission system other than Transmission Provider's Transmission System that have an impact on Transmission Provider's Transmission System, as described in Section 9 of this LGIP.

Affected System Study Agreement shall mean the agreement contained in Appendix 9 to this LGIP that is made between Transmission Provider and Affected System Interconnection Customer to conduct an Affected System Study pursuant to Section 9 of this LGIP.

Affected System Study Report shall mean the report issued following completion of an Affected System Study pursuant to Section 9.[6]*7* of this LGIP.

Affiliate shall mean, with respect to a corporation, partnership or other entity, each such other corporation, partnership or other entity that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such corporation, partnership or other entity.

Ancillary Services shall mean those services that are necessary to support the transmission of capacity and energy from resources to loads while maintaining reliable operation of [the] Transmission Provider's Transmission System in accordance with Good Utility Practice.

Applicable Laws and Regulations shall mean all duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

Applicable Reliability Standards shall mean the requirements and guidelines of the Electric Reliability Organization and the Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.

Balancing Authority shall mean an entity that integrates resource plans ahead of time, maintains demand and resource balance within a Balancing Authority Area, and supports interconnection frequency in real time.

Balancing Authority Area shall mean the collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.

Base Case shall mean the base case power flow, short circuit, and stability data bases used for the Interconnection Studies by Transmission Provider or Interconnection Customer.

Breach shall mean the failure of a Party to perform or observe any material term or condition of the Standard Large Generator Interconnection Agreement.

Breaching Party shall mean a Party that is in Breach of the Standard Large Generator Interconnection Agreement.

Business Day shall mean Monday through Friday, excluding Federal Holidays.

Calendar Day shall mean any day including Saturday, Sunday or a Federal Holiday.

Cluster shall mean a group of one or more Interconnection Requests that are studied together for the purpose of conducting a Cluster Study.

Cluster Request Window shall mean the time period set forth in Section 3.4.1 of this LGIP.

Cluster Restudy shall mean a restudy of a Cluster Study conducted pursuant to Section 7.5 of this LGIP.

Cluster Restudy Report shall mean the report issued following completion of a Cluster Restudy pursuant to Section 7.5 of this LGIP.

Cluster Restudy Report Meeting shall mean the meeting held to discuss the results of a Cluster Restudy pursuant to Section 7.5 of this LGIP.

[Cluster Restudy Report shall mean the report issued following completion of a Cluster Restudy pursuant to Section 7.5 of this LGIP.]

Cluster Study shall mean the evaluation of one or more Interconnection Requests within a Cluster as described in Section 7 of this LGIP.

Cluster Study Agreement shall mean the agreement contained in Appendix 2 to this LGIP for conducting the Cluster Study.

Cluster Study Process shall mean the following processes, conducted in sequence: the Cluster Request Window; the Customer Engagement Window and Scoping Meetings therein; the Cluster Study; any needed Cluster Restudies; and the Interconnection Facilities Study.

Cluster Study Report shall mean the report issued following completion of a Cluster Study pursuant to Section 7 of this LGIP.

Cluster Study Report Meeting shall mean the meeting held to discuss the results of a Cluster Study pursuant to Section 7 of this LGIP.

Clustering shall mean the process whereby one or more Interconnection Requests are studied together, instead of serially, as described in Section 7 of this LGIP.

Commercial Operation shall mean the status of a Generating Facility that has commenced generating electricity for sale, excluding electricity generated during Trial Operation.

Commercial Operation Date of a unit shall mean the date on which the Generating Facility commences Commercial Operation as agreed to by the Parties pursuant to Appendix E to the Standard Large Generator Interconnection Agreement.

Commercial Readiness Deposit shall mean a deposit paid as set forth in Sections 3.4.2, 7.5, and 8.1 of this LGIP.

Confidential Information shall mean any confidential, proprietary or trade secret information of a plan, specification, pattern, procedure, design, device, list, concept, policy or compilation relating to the present or planned business of a Party, which is designated as confidential by the Party supplying the information, whether conveyed orally, electronically, in writing, through inspection, or otherwise.

Contingent Facilities shall mean those unbuilt Interconnection Facilities and Network Upgrades upon which the Interconnection Request's costs, timing, and study findings are dependent, and if delayed or not built, could cause a need for restudies of the Interconnection Request or a reassessment of the Interconnection Facilities and/or Network Upgrades and/or costs and timing.

Customer Engagement Window shall mean the time period set forth in Section 3.4.5 of this LGIP.

Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 17 of the Standard Large Generator Interconnection Agreement.

Dispute Resolution shall mean the procedure for resolution of a dispute between the Parties in which they will first attempt to resolve the dispute on an informal basis.

Distribution System shall mean [the] Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which distribution systems operate differ among areas.

Distribution Upgrades shall mean the additions, modifications, and upgrades to [the] Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Generating Facility and render the transmission service necessary to effect Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Effective Date shall mean the date on which the Standard Large Generator Interconnection Agreement becomes effective upon execution by the Parties subject to acceptance by FERC, or if filed unexecuted, upon the date specified by FERC.

Electric Reliability Organization shall mean the North American Electric Reliability Corporation (*NERC*) or its successor organization.

Emergency Condition shall mean a condition or situation: (1) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (2) that, in the case of a Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to Transmission Provider's Transmission System, Transmission Provider's Interconnection Facilities or the electric systems of others to which [the] Transmission Provider's Transmission System is directly connected; or (3) that, in the case of Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Generating Facility or Interconnection Customer's Interconnection Facilities. System restoration and black start shall be considered Emergency Conditions; provided that Interconnection Customer is not obligated by the Standard Large Generator Interconnection Agreement to possess black start capability.

Energy Resource Interconnection Service shall mean an Interconnection Service that allows [the] Interconnection Customer to connect its Generating Facility to [the] Transmission Provider's Transmission System to be eligible to deliver the Generating Facility's electric output using the existing firm or nonfirm capacity of [the] Transmission Provider's Transmission System on an as available basis. Energy Resource Interconnection Service in and of itself does not convey transmission service.

Engineering & Procurement (E&P) Agreement shall mean an agreement that authorizes [the] Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection in order to advance the implementation of the Interconnection Request.

Environmental Law shall mean Applicable Laws or Regulations relating to pollution or protection of the environment or natural resources.

Federal Power Act shall mean the Federal Power Act, as amended, 16 U.S.C. §§ 791a *et seq.*

FERC shall mean the Federal Energy Regulatory Commission (Commission) or its successor.

Force Majeure shall mean any act of God, labor disturbance, act of the public enemy, war, insurrection, riot, fire, storm or flood, explosion, breakage or accident to machinery or equipment, any order, regulation or restriction imposed by governmental, military or lawfully established civilian authorities, or any other cause beyond a Party's control. A Force Majeure event does not include acts of negligence or intentional wrongdoing by the Party claiming Force Majeure.

Generating Facility shall mean Interconnection Customer's device(s) for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include Interconnection Customer's Interconnection Facilities.

Generating Facility Capacity shall mean the net capacity of the Generating Facility or the aggregate net capacity of the Generating Facility where it includes more than one device for the production and/or storage for later injection of electricity.

Good Utility Practice shall mean any of the practices, methods and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods and acts which, in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Governmental Authority shall mean any federal, state, local or other governmental regulatory or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, police, or taxing authority or power; provided, however, that such term does not include Interconnection Customer, Transmission Provider, or any Affiliate thereof.

Hazardous Substances shall mean any chemicals, materials or substances defined as or included in the definition of ''hazardous substances,'' ''hazardous wastes,'' ''hazardous materials,'' ''hazardous constituents,'' ''restricted hazardous materials,'' ''extremely hazardous substances,'' ''toxic substances,'' ''radioactive substances,'' ''contaminants,'' ''pollutants,'' ''toxic pollutants'' or words of similar meaning and regulatory effect under any applicable Environmental Law, or any other chemical, material or substance, exposure to which is prohibited, limited or regulated by any applicable Environmental Law.

Initial Synchronization Date shall mean the date upon which the Generating Facility is initially synchronized and upon which Trial Operation begins.

In-Service Date shall mean the date upon which [the] Interconnection Customer reasonably expects it will be ready to begin use of [the] Transmission Provider's Interconnection Facilities to obtain back feed power.

Interconnection Customer shall mean any entity, including [the] Transmission Provider, Transmission Owner or any of the Affiliates or subsidiaries of either, that proposes to interconnect its Generating Facility with [the] Transmission Provider's Transmission System.

Interconnection Customer's Interconnection Facilities shall mean all facilities and equipment, as identified in Appendix A of the Standard Large Generator Interconnection Agreement, that are located between the Generating Facility and the Point of Change of Ownership, including any modification, addition, or upgrades to such facilities and equipment necessary to physically and electrically interconnect the Generating Facility to Transmission Provider's Transmission System. Interconnection Customer's Interconnection Facilities are sole use facilities.

Interconnection Facilities shall mean Transmission Provider's Interconnection Facilities and Interconnection Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Generating Facility to Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Interconnection Facilities Study shall mean a study conducted by Transmission Provider or a third party consultant for Interconnection Customer to determine a list of facilities (including Transmission Provider's Interconnection Facilities and Network Upgrades as identified in the Cluster Study), the cost of those facilities, and the time required to interconnect the Generating Facility with Transmission Provider's Transmission System. The scope of the study is defined in Section 8 of this LGIP.

Interconnection Facilities Study Agreement shall mean the form of agreement contained in Appendix 3 of this LGIP for conducting the Interconnection Facilities Study.

Interconnection Facilities Study Report shall mean the report issued following completion of an Interconnection Facilities Study pursuant to Section 8 of this LGIP.

Interconnection Request shall mean an Interconnection Customer's request, in the form of Appendix 1 to this LGIP, in accordance with the Tariff, to interconnect a new Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics of, an existing Generating Facility that is interconnected with [the] Transmission Provider's Transmission System.

Interconnection Service shall mean the service provided by [the] Transmission Provider associated with interconnecting [the] Interconnection Customer's Generating Facility to [the] Transmission Provider's Transmission System and enabling it to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Standard Large Generator Interconnection Agreement and, if applicable, [the] Transmission Provider's Tariff.

Interconnection Study shall mean any of the following studies: the Cluster Study, the Cluster Restudy, the Surplus Interconnection Service [System Impact] Study, [and] the Interconnection Facilities Study, *the Affected System Study, Optional Interconnection Study, and Material Modification assessment,* described in this LGIP.

IRS shall mean the Internal Revenue Service.

Joint Operating Committee shall be a group made up of representatives from Interconnection Customers and [the] Transmission Provider to coordinate operating and technical considerations of Interconnection Service.

Large Generating Facility shall mean a Generating Facility having a Generating Facility Capacity of more than 20 MW.

LGIA Deposit shall mean the deposit Interconnection Customer submits when returning the executed LGIA, or within *ten* (10) Business Days of requesting that the LGIA be filed unexecuted at the Commission, in accordance with Section 11.3 of this LGIP.

Loss shall mean any and all losses relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's performance, or non-performance of its obligations under the Standard Large Generator Interconnection Agreement on behalf of the Indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the Indemnifying Party.

Material Modification shall mean those modifications that have a material impact on the cost or timing of any Interconnection Request with an equal or later Queue Position.

Metering Equipment shall mean all metering equipment installed or to be installed at the Generating Facility pursuant to the Standard Large Generator Interconnection Agreement at the metering points, including but not limited to

instrument transformers, MWh-meters, data acquisition equipment, transducers, remote terminal unit, communications equipment, phone lines, and fiber optics.

Multiparty Affected System Facilities Construction Agreement shall mean the agreement contained in Appendix 12 to this LGIP that is made among Transmission Provider and multiple Affected System Interconnection Customers to facilitate the construction of and to set forth cost responsibility for necessary Affected System Network Upgrades on Transmission Provider's Transmission System.

Multiparty Affected System Study Agreement shall mean the agreement contained in Appendix 10 to this LGIP that is made among Transmission Provider and multiple Affected System Interconnection Customers to conduct an Affected System Study pursuant to Section 9 of this LGIP.

Network Resource shall mean any designated generating resource owned, purchased, or leased by a Network Customer under the Network Integration Transmission Service Tariff. Network Resources do not include any resource, or any portion thereof, that is committed for sale to third parties or otherwise cannot be called upon to meet the Network Customer's Network Load on a non-interruptible basis.

Network Resource Interconnection Service shall mean an Interconnection Service that allows [the] Interconnection Customer to integrate its Large Generating Facility with [the] Transmission Provider's Transmission System (1) in a manner comparable to that in which [the] Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an RTO or ISO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service in and of itself does not convey transmission service.

Network Upgrades shall mean the additions, modifications, and upgrades to [the] Transmission Provider's Transmission System required at or beyond the point at which the Interconnection Facilities connect to [the] Transmission Provider's Transmission System to accommodate the interconnection of the Large Generating Facility to [the] Transmission Provider's Transmission System.

Notice of Dispute shall mean a written notice of a dispute or claim that arises out of or in connection with the Standard Large Generator Interconnection Agreement or its performance.

Optional Interconnection Study shall mean a sensitivity analysis based on assumptions specified by [the] Interconnection Customer in the Optional Interconnection Study Agreement.

Optional Interconnection Study Agreement shall mean the form of agreement contained in Appendix 4 of this LGIP for conducting the Optional Interconnection Study.

Party or Parties shall mean Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Permissible Technological Advancement {Transmission Provider inserts definition here}.

Point of Change of Ownership shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where [the] Interconnection Customer's Interconnection Facilities connect to [the] Transmission Provider's Interconnection Facilities.

Point of Interconnection shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where the Interconnection Facilities connect to [the] Transmission Provider's Transmission System.

Proportional Impact Method shall mean a technical analysis conducted by Transmission Provider to determine the degree to which each Generating Facility in the Cluster Study contributes to the need for a specific System Network Upgrade.

Provisional Interconnection Service shall mean Interconnection Service provided by Transmission Provider associated with interconnecting [the] Interconnection Customer's Generating Facility to Transmission Provider's Transmission System and enabling that Transmission System to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Provisional Large Generator Interconnection Agreement and, if applicable, the Tariff.

Provisional Large Generator Interconnection Agreement shall mean the interconnection agreement for Provisional Interconnection Service established between Transmission Provider and/or [the] Transmission Owner and [the] Interconnection Customer. This agreement shall take the form of the *Standard* Large Generator Interconnection Agreement, modified for provisional purposes.

Queue Position shall mean the order of a valid Interconnection Request, relative to all other pending valid Interconnection Requests, established pursuant to Section 4.1 of this LGIP.

Reasonable Efforts shall mean, with respect to an action required to be attempted or taken by a Party under the Standard Large Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.

Scoping Meeting shall mean the meeting between representatives of Interconnection Customer(s) and Transmission Provider conducted for the purpose of discussing the proposed Interconnection Request and any alternative interconnection options, exchanging information including any transmission data and earlier study evaluations that would be reasonably expected to impact such interconnection options, refining information and models provided by Interconnection Customer(s), discussing the Cluster Study materials posted to OASIS pursuant to Section 3.5 of this LGIP, and analyzing such information.

Site Control shall mean the exclusive land right to develop, construct, operate, and maintain the Generating Facility over the term of expected operation of the Generating Facility. Site Control may be demonstrated by documentation establishing: (1) ownership of, a leasehold interest in, or a right to develop a site of sufficient size to construct and operate the Generating Facility; (2) an option to purchase or acquire a leasehold site of sufficient size to construct and operate the Generating Facility; or (3) any other documentation that clearly demonstrates the right of Interconnection Customer to exclusively occupy a site of sufficient size to construct and operate the Generating Facility. Transmission Provider will maintain acreage requirements for each Generating Facility type on its OASIS or public website.

Small Generating Facility shall mean a Generating Facility that has a Generating Facility Capacity of no more than 20 MW.

Stand Alone Network Upgrades shall mean Network Upgrades that are not part of an Affected System that [an] Interconnection Customer may construct without affecting day-to-day operations of the Transmission System during their construction [and the following conditions are met: (1) a Substation Network Upgrade must only be required for a single Interconnection Customer in the Cluster and no other Interconnection Customer in that Cluster is required to interconnect to the same Substation Network Upgrades, and (2) a System Network Upgrade must only be required for a single Interconnection Customer in the Cluster, as indicated under the Transmission Provider's Proportional Impact Method]. Both Transmission Provider and Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify them in Appendix A to the Standard Large Generator Interconnection Agreement. If Transmission Provider and Interconnection Customer disagree about whether a particular Network Upgrade is a Stand Alone Network Upgrade, Transmission Provider must provide Interconnection Customer a written technical explanation outlining why Transmission Provider does not consider the Network Upgrade to be a Stand Alone Network Upgrade within *fifteen* (15) *Business* [d]*D*ays of its determination.

Standard Large Generator Interconnection Agreement (LGIA) shall mean the form of interconnection agreement applicable to an Interconnection Request pertaining to a Large Generating Facility that is included in [the] Transmission Provider's Tariff.

Standard Large Generator Interconnection Procedures (LGIP) shall mean the interconnection procedures applicable to an Interconnection Request pertaining to a Large Generating Facility that are included in [the] Transmission Provider's Tariff.

Substation Network Upgrades shall mean Network Upgrades that are required at the substation located at the Point of Interconnection.

Surplus Interconnection Service shall mean any unneeded portion of Interconnection Service established in a *Standard* Large Generator Interconnection Agreement, such that if Surplus Interconnection Service is utilized, the total amount of Interconnection Service at the Point of Interconnection would remain the same.

System Network Upgrades shall mean Network Upgrades that are required beyond the substation located at the Point of Interconnection.

System Protection Facilities shall mean the equipment, including necessary protection signal communications equipment, required to protect (1) [the] Transmission Provider's Transmission System from faults or other electrical disturbances occurring at the Generating Facility and (2) the Generating Facility from faults or other electrical system disturbances occurring on [the] Transmission Provider's Transmission System or on other delivery systems or other generating systems to which [the] Transmission Provider's Transmission System is directly connected.

Tariff shall mean [the] Transmission Provider's Tariff through which open access transmission service and Interconnection Service are offered, as filed with FERC, and as amended or supplemented from time to time, or any successor tariff.

Transitional Cluster Study shall mean an Interconnection Study evaluating a Cluster of Interconnection Requests during the transition to the Cluster Study Process, as set forth in Section 5.1.1.2 of this LGIP.

Transitional Cluster Study Agreement shall mean the agreement contained in Appendix 7 to this LGIP that is made between Transmission Provider and Interconnection Customer to conduct a Transitional Cluster Study pursuant to Section 5.1.1.2 of this LGIP.

Transitional Cluster Study Report shall mean the report issued following completion of a Transitional Cluster Study pursuant to Section 5.1.1.2 of this LGIP.

Transitional Serial Interconnection Facilities Study shall mean an Interconnection Facilities Study evaluating an Interconnection Request on a serial basis during the transition to the Cluster Study Process, as set forth in Section 5.1.1.1 of this LGIP.

Transitional Serial Interconnection Facilities Study Agreement shall mean the agreement contained in Appendix 8 to this LGIP that is made between Transmission Provider and Interconnection Customer to conduct a Transitional Serial Interconnection Facilities Study pursuant to Section 5.1.1.1 of this LGIP.

Transitional Serial Interconnection Facilities Study Report shall mean the report issued following completion of a Transitional *Serial* Interconnection Facilities Study pursuant to Section 5.1.1.1 of this LGIP.

Transitional Withdrawal Penalty shall mean the penalty assessed by Transmission Provider to Interconnection Customer that has entered the Transitional Cluster Study or Transitional Serial Interconnection Facilities Study and chooses to withdraw or is deemed withdrawn from Transmission Provider's interconnection queue or whose Generating Facility does not otherwise reach Commercial Operation. The calculation of the Transitional Withdrawal Penalty is set forth in Sections 5.1.1.1 and 5.1.1.2 of this LGIP.

Transmission Owner shall mean an entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Standard Large Generator Interconnection Agreement to the extent necessary.

Transmission Provider shall mean the public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from [the] Transmission Provider.

Transmission Provider's Interconnection Facilities shall mean all facilities and equipment owned, controlled, or operated by Transmission Provider from the Point of Change of Ownership to the Point of Interconnection as identified in Appendix A to the Standard Large Generator Interconnection Agreement, including any modifications, additions or upgrades to such facilities and equipment. Transmission Provider's Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Transmission System shall mean the facilities owned, controlled or operated by [the] Transmission Provider or Transmission Owner that are used to provide transmission service under the Tariff.

Trial Operation shall mean the period during which Interconnection Customer is engaged in on-site test operations and commissioning of the Generating Facility prior to Commercial Operation.

Withdrawal Penalty shall mean the penalty assessed by Transmission Provider to an Interconnection Customer that chooses to withdraw or is deemed withdrawn from Transmission Provider's interconnection queue or whose Generating Facility does not otherwise reach Commercial Operation. The calculation of the Withdrawal Penalty is set forth in Section 3.7.1 of this LGIP.

Section 2. Scope and Application

2.1 Application of Standard Large Generator Interconnection Procedures

Sections 2 through 13 *of this LGIP* apply to processing an Interconnection Request pertaining to a Large Generating Facility.

2.2 Comparability

Transmission Provider shall receive, process and analyze all Interconnection Requests in a timely manner as set forth in this LGIP. Transmission Provider shall process and analyze Interconnection Requests from all Interconnection Customers comparably, regardless of whether the Generating Facilities are owned by Transmission Provider, its subsidiaries or Affiliates or others.

2.3 Base Case Data

Transmission Provider shall maintain base power flow, short circuit and stability databases, including all underlying assumptions, and contingency list on either its OASIS site or a password-protected website, subject to confidentiality provisions in LGIP Section 13.1. In addition, Transmission Provider shall maintain network models and underlying assumptions on either its OASIS site or a password-protected website. Such network models and underlying assumptions should reasonably represent those used during the most recent [i]*I*nterconnection [s]*S*tudy and be representative of current system conditions. If Transmission Provider posts this information on a password-protected website, a link to the information must be provided on Transmission Provider's OASIS site. Transmission Provider is permitted to require that Interconnection Customers, OASIS site users and password-protected website users sign a confidentiality agreement before the release of commercially sensitive information or Critical Energy Infrastructure Information in the Base Case data. Such databases and lists, hereinafter referred to as Base Cases, shall include all (1) generation projects and (2) transmission projects, including merchant transmission projects that are proposed for the Transmission System for which a transmission expansion plan has been submitted and approved by the applicable authority.

2.4 No Applicability to Transmission Service

Nothing in this LGIP shall constitute a request for transmission service or confer upon an Interconnection Customer any right to receive transmission service.

Section 3. Interconnection Requests

3.1 Interconnection Requests

3.1.1 Study Deposits

3.1.1.1 Study Deposit

Interconnection Customer shall submit to Transmission Provider, during a Cluster Request Window, an Interconnection Request in the form of Appendix 1 to this LGIP, a[n] *non-refundable* application fee of $5,000, and a refundable study deposit of:

(a) $35,000 plus $1,000 per MW for Interconnection Requests [≥ 20 MW] < 80 MW; or

(b) $150,000 for Interconnection Requests ≥ 80 MW < 200 MW; or

(c) $250,000 for Interconnection Requests ≥ 200 MW.

Transmission Provider shall apply the study deposit toward the cost of the Cluster Study Process.

3.1.2 Submission

Interconnection Customer shall submit a separate Interconnection Request for each site. Where multiple Generating Facilities share a site, Interconnection Customer(s) may submit separate Interconnection Requests or a single Interconnection Request. An Interconnection Request to evaluate one site at two different voltage levels shall be treated as two Interconnection Requests.

At Interconnection Customer's option, Transmission Provider and Interconnection Customer will identify alternative Point(s) of Interconnection and configurations at a Scoping Meeting within the Customer Engagement Window to evaluate in this process and attempt to eliminate alternatives in a reasonable fashion given resources and information available. Interconnection Customer will select the definitive Point of Interconnection to be studied no later than the execution of the Cluster Study Agreement. For purposes of clustering Interconnection Requests, Transmission Provider may propose changes to the requested Point of Interconnection to

facilitate efficient interconnection of Interconnection Customers at common Point(s) of Interconnection. Transmission Provider shall notify Interconnection Customers in writing of any intended changes to the requested Point of Interconnection within the Customer Engagement Window, and the Point of Interconnection shall only change upon mutual agreement.

Transmission Provider shall have a process in place to consider requests for Interconnection Service below the Generating Facility Capacity. These requests for Interconnection Service shall be studied at the level of Interconnection Service requested for purposes of Interconnection Facilities, Network Upgrades, and associated costs, but may be subject to other studies at the full Generating Facility Capacity to ensure safety and reliability of the system, with the study costs borne by Interconnection Customer. If after the additional studies are complete, Transmission Provider determines that additional Network Upgrades are necessary, then Transmission Provider must: (1) specify which additional Network Upgrade costs are based on which studies; and (2) provide a detailed explanation of why the additional Network Upgrades are necessary. Any Interconnection Facility and/or Network Upgrade costs required for safety and reliability also would be borne by Interconnection Customer. Interconnection Customers may be subject to additional control technologies as well as testing and validation of those technologies consistent with Article 6 of the LGIA. The necessary control technologies and protection systems shall be established in Appendix C of that executed, or requested to be filed unexecuted, LGIA.

Transmission Provider shall have a process in place to study Generating Facilities that include at least one electric storage resource using operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of the Generating Facility as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions. If Transmission Provider finds Interconnection Customer's requested operating assumptions conflict with Good Utility Practice, Transmission Provider must provide Interconnection Customer an explanation in writing of why the submitted operating assumptions are insufficient or inappropriate by no later than thirty (30) Calendar Days before the end of the Customer Engagement Window and allow Interconnection Customer to revise and resubmit requested operating assumptions one time at least ten (10) Calendar Days prior to the end of the Customer Engagement Window. Transmission Provider shall study these requests for Interconnection Service, with the study costs borne by Interconnection Customer, using the submitted operating assumptions for purposes of Interconnection Facilities, Network Upgrades, and associated costs. These requests for Interconnection Service also may be subject to other studies at the full Generating Facility Capacity to ensure safety and reliability of the system, with the study costs borne by Interconnection Customer. Interconnection Customer's Generating Facility may be subject to additional control technologies as well as testing and validation of such additional control technologies consistent with Article 6 of the LGIA. The necessary control technologies and protection systems shall be set forth in Appendix C of [the] Interconnection Customer's LGIA.

3.2 Identification of Types of Interconnection Services

At the time the Interconnection Request is submitted, Interconnection Customer must request either Energy Resource Interconnection Service or Network Resource Interconnection Service, as described; provided, however, any Interconnection Customer requesting Network Resource Interconnection Service may also request that it be concurrently studied for Energy Resource Interconnection Service, up to the point when an Interconnection Facilities Study Agreement is executed. Interconnection Customer may then elect to proceed with Network Resource Interconnection Service or to proceed under a lower level of interconnection service to the extent that only certain upgrades will be completed.

3.2.1 Energy Resource Interconnection Service

3.2.1.1 The Product

Energy Resource Interconnection Service allows Interconnection Customer to connect the Large Generating Facility to the Transmission System and be eligible to deliver the Large Generating Facility's output using the existing firm or non-firm capacity of the Transmission System on an ''as available'' basis. Energy Resource Interconnection Service does not in and of itself convey any right to deliver electricity to any specific customer or Point of Delivery.

3.2.1.2 The Study

The study consists of short circuit/fault duty, steady state (thermal and voltage) and stability analyses. The short circuit/fault duty analysis would identify direct Interconnection Facilities required and the Network Upgrades necessary to address short circuit issues associated with the Interconnection Facilities. The stability and steady state studies would identify necessary upgrades to allow full output of the proposed Large Generating Facility, except for Generating Facilities that include at least one electric storage resource that request to use operating assumptions pursuant to Section 3.1.2, unless [the] Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions, and would also identify the maximum allowed output, at the time the study is performed, of the interconnecting Large Generating Facility without requiring additional Network Upgrades.

3.2.2 Network Resource Interconnection Service

3.2.2.1 The Product

Transmission Provider must conduct the necessary studies and construct the Network Upgrades needed to integrate the Large Generating Facility (1) in a manner comparable to that in which Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an ISO or RTO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service [A]*a*llows Interconnection Customer's Large Generating Facility to be designated as a Network Resource, up to the Large Generating Facility's full output, on the same basis as existing Network Resources interconnected to Transmission Provider's Transmission System, and to be studied as a Network Resource on the assumption that such a designation will occur.

3.2.2.2 The Study

The Interconnection Study for Network Resource Interconnection Service shall assure that Interconnection Customer's Large Generating Facility meets the requirements for Network Resource Interconnection Service and as a general matter, that such Large Generating Facility's interconnection is also studied with Transmission Provider's Transmission System at peak load, under a variety of severely stressed conditions, to determine whether, with the Large Generating Facility at full output, except for Generating Facilities that include at least one electric storage resource that request to use, and for which Transmission Provider approves, operating assumptions pursuant to Section 3.1.2, the aggregate of generation in the local area can be delivered to the aggregate of load on Transmission Provider's Transmission System, consistent with Transmission Provider's reliability criteria and procedures. This approach assumes that some portion of existing Network Resources are displaced by the output of Interconnection Customer's Large Generating Facility. Network Resource Interconnection Service in and of itself does not convey any right to deliver electricity to any specific customer or Point of Delivery. [The] Transmission Provider may also study the Transmission System under non-peak load conditions. However, upon request by [the] Interconnection Customer, [the] Transmission Provider must explain in writing to [the] Interconnection Customer why the study of non-peak load conditions is required for reliability purposes.

3.3 Utilization of Surplus Interconnection Service

Transmission Provider must provide a process that allows an Interconnection Customer to utilize or transfer Surplus Interconnection Service at an existing Point of Interconnection. The original Interconnection Customer or one of its affiliates shall have priority to utilize Surplus Interconnection Service. If the existing Interconnection Customer or one of its affiliates does not exercise its priority, then that service may be made available to other potential Interconnection Customers.

3.3.1 Surplus Interconnection Service Requests

Surplus Interconnection Service requests may be made by the existing Interconnection Customer or one of its affiliates or may be submitted once Interconnection Customer has executed the LGIA or requested that the LGIA be filed unexecuted. Surplus Interconnection Service requests also may be made by another Interconnection Customer. Transmission Provider shall provide a process for evaluating Interconnection Requests for Surplus Interconnection Service. Studies for Surplus Interconnection Service shall consist of reactive power, short circuit/fault duty, stability analyses, and any other appropriate studies. Steady-state (thermal/voltage) analyses may be performed as necessary to ensure that all required reliability conditions are studied. If the Surplus Interconnection Service was not studied under off-peak conditions, off-peak steady state analyses shall be performed to the required level necessary to demonstrate reliable operation of the Surplus Interconnection Service. If the original system impact study report or Cluster Study Report is not available for the Surplus Interconnection Service, both off-peak and peak analysis may need to be performed for the existing Generating Facility associated with the request for Surplus Interconnection Service. The reactive power, short circuit/fault duty, stability, and steady-state analyses for Surplus Interconnection Service will identify any additional Interconnection Facilities and/or Network Upgrades necessary.

Transmission Provider shall study Surplus Interconnection Service requests for a Generating Facility that includes at least one electric storage resource using operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of the Generating Facility as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions.

3.4 Valid Interconnection Request

3.4.1 Cluster Request Window

Transmission Provider shall accept Interconnection Requests during a forty-five (45) Calendar Day period (the Cluster Request Window). The initial Cluster Request Window shall open for Interconnection Requests beginning {Transmission Provider to provide number of Calendar Days} after the conclusion of the transition process set out in Section 5.1 of this LGIP and successive Cluster Request Windows shall open annually every {Transmission Provider to provide Month and Day (*e.g.,* January 1)} thereafter.

3.4.2 Initiating an Interconnection Request

An Interconnection Customer seeking to join a Cluster shall submit its Interconnection Request to Transmission Provider within, and no later than the close of, the Cluster Request Window. Interconnection Requests submitted outside of the Cluster Request Window will not be considered. To initiate an Interconnection Request, Interconnection Customer must submit all of the following:

(i) [a]*A*pplicable study deposit amount, pursuant to Section 3.1.1.1 of this LGIP,

(ii) [a]*A* completed application in the form of Appendix 1,

(iii) [d]*D*emonstration of no less than ninety percent (90%) Site Control or (1) a signed affidavit from an officer of the company indicating that Site Control is unobtainable due to regulatory limitations as such term is defined by [the] Transmission Provider; and (2) documentation sufficiently describing and explaining the source and effects of such regulatory limitations, including a description of any conditions that must be met to satisfy the regulatory limitations and the anticipated time by which Interconnection Customer expects to satisfy the regulatory requirements and (3) a deposit in lieu of Site Control of $10,000 per MW, subject to a minimum of $500,000 and a maximum of $2,000,000. Interconnection Requests from multiple Interconnection Customers for multiple Generating Facilities that share a site must include a contract or other agreement that allows for shared land use[.],

(iv) Generating Facility Capacity (MW) (and requested Interconnection Service level if the requested Interconnection Service is less than the Generating Facility Capacity),

(v) If applicable, (1) the requested operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) to be used by Transmission Provider that reflect the proposed charging behavior of the Generating Facility that includes at least one electric storage resource, and (2) a description of any control technologies (software and/or hardware) that will limit the operation of the Generating Facility to the operating assumptions submitted by Interconnection Customer[.],

(vi) A Commercial Readiness Deposit equal to two times the study deposit described in Section 3.1.1.1 of this LGIP in the form of an irrevocable letter of credit, [or] cash, *a surety bond, or other form of security that is reasonably acceptable to Transmission Provider.* This Commercial Readiness Deposit is refunded to Interconnection Customer according to Section 3.7 of this LGIP,

(vii) A Point of Interconnection, and

(viii) Whether the Interconnection Request shall be studied for Network Resource Interconnection Service or for Energy Resource Interconnection Service, consistent with Section 3.2 of this LGIP.

An Interconnection Customer that submits a deposit in lieu of Site Control due to demonstrated regulatory limitations must demonstrate that it is taking identifiable steps to secure the necessary regulatory approvals from the applicable federal, state, and/or tribal entities before execution of the Cluster Study Agreement. Such deposit will be held by Transmission Provider until Interconnection Customer provides the required Site Control demonstration for its point in the Cluster Study Process. Interconnection Customers facing qualifying regulatory limitations must demonstrate one[-] hundred percent (100%) Site Control within one[-] hundred eighty (180) Calendar Days of the effective date of the LGIA.

Interconnection Customer shall promptly inform Transmission Provider of any material change to Interconnection Customer's demonstration of Site Control under Section 3.4.2(iii) of this LGIP. If Transmission Provider determines, based on Interconnection Customer's information, that Interconnection Customer no longer satisfies the Site Control requirement, Transmission Provider shall give Interconnection Customer ten (10) Business Days to demonstrate satisfaction with the applicable requirement subject to Transmission Provider's approval. Absent such, Transmission Provider shall deem the Interconnection Request withdrawn pursuant to Section 3.7 of this LGIP.

The expected In-Service Date of the new Large Generating Facility or increase in capacity of the existing Generating Facility shall be no more than the process window for the regional expansion planning period (or in the absence of a regional planning process, the process window for Transmission Provider's expansion planning period) not to exceed seven *(7)* years from the date the Interconnection Request is received by Transmission Provider, unless Interconnection Customer demonstrates that engineering, permitting and construction of the new Large Generating Facility or increase in capacity of the existing Generating Facility will take longer than the regional expansion planning period. The In-Service Date may succeed the date the Interconnection Request is received by Transmission Provider by a period up to ten *(10)* years, or longer where Interconnection Customer and Transmission Provider agree, such agreement not to be unreasonably withheld.

3.4.3 Acknowledgment of Interconnection Request

Transmission Provider shall acknowledge receipt of the Interconnection Request within five (5) Business Days of receipt of the request and attach a copy of the received Interconnection Request to the acknowledgement.

3.4.4 Deficiencies in Interconnection Request

An Interconnection Request will not be considered to be a valid request until all items in Section 3.4.2 of this LGIP have been received by Transmission Provider *during the Cluster Request Window.* If an Interconnection Request fails to meet the requirements set forth in Section 3.4.2 of this LGIP, Transmission Provider shall notify Interconnection Customer within five (5) Business Days of receipt of the initial Interconnection Request of the reasons for such failure and that the Interconnection Request does not constitute a valid request. Interconnection Customer shall provide Transmission Provider the additional requested information needed to constitute a valid request within ten (10) Business Days after receipt of such notice but no later than the close of the Cluster Request Window. At any time, if Transmission Provider finds that the technical data provided by Interconnection Customer is incomplete or contains errors, Interconnection Customer and Transmission Provider shall work

expeditiously and in good faith to remedy such issues. In the event that Interconnection Customer fails to comply with this Section 3.4.4 of this LGIP, Transmission Provider[s] shall deem the Interconnection Request withdrawn (without the cure period provided under Section 3.7 of this LGIP), the application fee is forfeited to [the] Transmission Provider, and the study deposit and Commercial Readiness Deposit shall be returned to Interconnection Customer.

3.4.5 Customer Engagement Window

Upon the close of each Cluster Request Window, Transmission Provider shall open a sixty (60) Calendar Day period (Customer Engagement Window). During the Customer Engagement Window, Transmission Provider shall hold a Scoping Meeting with all interested Interconnection Customers. Notwithstanding the preceding requirements and upon written consent of all Interconnection Customers within the Cluster, Transmission Provider may shorten the Customer Engagement Window and begin the Cluster Study. Within ten (10) Business Days of the opening of the Customer Engagement Window, Transmission Provider shall post on its OASIS a list of Interconnection Requests for that Cluster. The list shall identify, for each anonymized Interconnection Request: (1) the requested amount of Interconnection Service; (2) the location by county and state; (3) the station or transmission line or lines where the interconnection will be made; (4) the projected In-Service Date; (5) the type of Interconnection Service requested; and (6) the type of Generating Facility or Facilities to be constructed, including fuel types, such as coal, natural gas, solar, or wind. [The] Transmission Provider must ensure that project information is anonymized and does not reveal the identity or commercial information of [i]*I*nterconnection [c]*C*ustomers with submitted requests. During the Customer Engagement Window, Transmission Provider shall provide to Interconnection Customer a non-binding updated good faith estimate of the cost and timeframe for completing the cluster Study and a Cluster Study Agreement to be executed prior to the close of the Customer Engagement Window.

At the end of the Customer Engagement Window, all Interconnection Requests deemed valid that have executed a Cluster Study Agreement in the form of Appendix 2 to this LGIP shall be included in the Cluster Study. Any Interconnection Requests *for which Interconnection Customer has not executed a Cluster Study Agreement* [not deemed valid at the close of the Customer Engagement Window] shall be deemed withdrawn (without the cure period provided under Section 3.7 of this LGIP) by Transmission Provider, the application fee shall be forfeited to [the] Transmission Provider, and [the] Transmission Provider shall return the study deposit and Commercial Readiness Deposit to Interconnection Customer. Immediately following the Customer Engagement Window, Transmission Provider shall initiate the Cluster Study described in Section 7 of this LGIP.

3.4.6 Cluster Study Scoping Meeting

During the Customer Engagement Window, Transmission Provider shall hold a Scoping Meeting with all Interconnection Customers whose valid Interconnection Requests were received in that Cluster Request Window.

The purpose of the Cluster Study Scoping Meeting shall be to discuss alternative interconnection options, to exchange information including any transmission data and earlier study evaluations that would reasonably be expected to impact such interconnection options, to discuss the Cluster Study materials posted to OASIS pursuant to Section 3.5 of this LGIP, if applicable, and to analyze such information. Transmission Provider and Interconnection Customer(s) will bring to the meeting such technical data, including, but not limited to: (i) general facility loadings, (ii) general instability issues, (iii) general short circuit issues, (iv) general voltage issues, and (v) general reliability issues as may be reasonably required to accomplish the purpose of the meeting. Transmission Provider and Interconnection Customer(s) will also bring to the meeting personnel and other resources as may be reasonably required to accomplish the purpose of the meeting in the time allocated for the meeting. On the basis of the meeting, Interconnection Customer(s) shall designate its Point of Interconnection [and one or more available alternative Point(s) of Interconnection]. The duration of the meeting shall be sufficient to accomplish its purpose. If the Cluster Study Scoping Meeting consists of more than one Interconnection Customer, Transmission Provider shall issue, no later than fifteen (15) Business Days after the commencement of the Customer Engagement Window, and Interconnection Customer shall execute a non-disclosure agreement prior to a group Cluster Study Scoping Meeting, which will provide for confidentiality of identifying *information or* commercially sensitive information pertaining to any other Interconnection Customers.

3.5. OASIS Posting

3.5.1 OASIS Posting

Transmission Provider will maintain on its OASIS a list of all Interconnection Requests. The list will identify, for each Interconnection Request: (i) the maximum summer and winter megawatt electrical output; (ii) the location by county and state; (iii) the station or transmission line or lines where the interconnection will be made; (iv) the projected In-Service Date; (v) the status of the Interconnection Request, including Queue Position; (vi) the type of Interconnection Service being requested; [and] (vii) the availability of any studies related to the Interconnection Request; (viii) the date of the Interconnection Request; (ix) the type of Generating Facility to be constructed; and (x) for Interconnection Requests that have not resulted in a completed interconnection, an explanation as to why it was not completed. Except in the case of an Affiliate, the list will not disclose the identity of Interconnection Customer until Interconnection Customer executes an LGIA or requests that Transmission Provider file an unexecuted LGIA with FERC. Before holding a Scoping Meeting with its Affiliate, Transmission Provider shall post on OASIS an advance notice of its intent to do so. Transmission Provider shall post to its OASIS site any deviations from the study timelines set forth herein. Interconnection Study reports and Optional Interconnection Study reports shall be posted to Transmission Provider's OASIS site subsequent to the meeting between Interconnection Customer and Transmission Provider to discuss the applicable study results. Transmission Provider shall also post any known deviations in the Large Generating Facility's In-Service Date.

3.5.2 Requirement To Post Interconnection Study Metrics

Transmission Provider will maintain on its OASIS or its website summary statistics related to processing Interconnection Studies pursuant to Interconnection Requests, updated quarterly. If Transmission Provider posts this information on its website, a link to the information must be provided on Transmission Provider's OASIS site. For each calendar quarter, Transmission Provider[s] must calculate and post the information detailed in Sections 3.5.2.1 through 3.5.2.4 of this LGIP.

3.5.2.1 Interconnection Cluster Study Processing Time

(A) Number of Interconnection Requests that had Cluster Studies completed within Transmission Provider's coordinated region during the reporting quarter,

(B) Number of Interconnection Requests that had Cluster Studies completed within Transmission Provider's coordinated region during the reporting quarter that were completed more than one hundred fifty (150) Calendar Days after the close of the Customer Engagement Window,

(C) At the end of the reporting quarter, the number of active valid Interconnection Requests with ongoing incomplete Cluster Studies where such Interconnection Requests had executed a Cluster Study Agreement received by Transmission Provider more than one hundred fifty (150) Calendar Days before the reporting quarter end,

(D) Mean time (in days), Cluster Studies completed within Transmission Provider's coordinated region during the reporting quarter, from the commencement of the Cluster Study to the date when Transmission Provider provided the completed Cluster Study Report to Interconnection Customer,

(E) Mean time (in days), Cluster Studies were completed within Transmission Provider's coordinated region during the reporting quarter, from the close of the Cluster Request Window to the date when Transmission Provider provided the completed Cluster Study Report to Interconnection Customer,[.]

(F) Percentage of Cluster Studies exceeding one hundred fifty (150) Calendar Days to complete this reporting quarter, calculated as the sum of *Section* 3.5.2.1(B) plus *Section* 3.5.2.1(C) divided by the sum of *Section* 3.5.2.1(A) plus *Section* 3.5.2.1(C) *of this LGIP.*

3.5.2.2 Cluster Restudies Processing Time

(A) Number of Interconnection Requests that had Cluster Restudies completed within

Transmission Provider's coordinated region during the reporting quarter,

(B) Number of Interconnection Requests that had Cluster Restudies completed within Transmission Provider's coordinated region during the reporting quarter that were completed more than one hundred fifty (150) Calendar Days after Transmission Provider notifies Interconnection Customers in the Cluster that a Cluster Restudy is required pursuant to Section 7.5(4) of this LGIP,

(C) At the end of the reporting quarter, the number of active valid Interconnection Requests with ongoing incomplete Cluster Restudies where Transmission Provider notified Interconnection Customers in the Cluster that a Cluster Restudy is required pursuant to Section 7.5(4) of this LGIP more than one hundred fifty (150) Calendar Days before the reporting quarter end,

(D) Mean time (in days), Cluster Restudies completed within Transmission Provider's coordinated region during the reporting quarter, from the date when Transmission Provider notifies Interconnection Customers in the Cluster that a Cluster Restudy is required pursuant to Section 7.5(4) of this LGIP to the date when Transmission Provider provided the completed Cluster Restudy Report to Interconnection Customer,

(E) Mean time (in days), Cluster Restudies completed within Transmission Provider's coordinated region during the reporting quarter, from the close of the Cluster Request Window to the date when Transmission Provider provided the completed Cluster Restudy Report to Interconnection Customer,[.]

(F) Percentage of Cluster Restudies exceeding one hundred fifty (150) Calendar Days to complete this reporting quarter, calculated as the sum of *Section* 3.5.2.2(B) plus *Section* 3.5.2.2(C) divided by the sum of *Section* 3.5.2.2(A) plus *Section* 3.5.2.2(C)[)] *of this LGIP.*

3.5.2.3 Interconnection Facilities Studies Processing Time

(A) Number of Interconnection Requests that had Interconnection Facilities Studies that are completed within Transmission Provider's coordinated region during the reporting quarter,

(B) Number of Interconnection Requests that had Interconnection Facilities Studies that are completed within Transmission Provider's coordinated region during the reporting quarter that were completed more than {timeline as listed in Transmission Provider's LGIP} after receipt by Transmission Provider of [the] Interconnection Customer's executed Interconnection Facilities Study Agreement,

(C) At the end of the reporting quarter, the number of active valid Interconnection Service requests with ongoing incomplete Interconnection Facilities Studies where such Interconnection Requests had executed Interconnection Facilities Studies Agreement received by Transmission Provider more than {timeline as listed in Transmission Provider's LGIP} before the reporting quarter end,

(D) Mean time (in days), for Interconnection Facilities Studies completed within Transmission Provider's coordinated region during the reporting quarter, calculated from the date when Transmission Provider received the executed Interconnection Facilities Study Agreement to the date when Transmission Provider provided the completed Interconnection Facilities Study to [the] Interconnection Customer,

(E) Mean time (in days), Interconnection Facilities Studies completed within Transmission Provider's coordinated region during the reporting quarter, from the close of the Cluster Request Window to the date when Transmission Provider provided the completed Interconnection Facilities Study to Interconnection Customer,[.]

(F) Percentage of delayed Interconnection Facilities Studies this reporting quarter, calculated as the sum of *Section* 3.5.2.3(B) plus *Section* 3.5.2.3(C) divided by the sum of *Section* 3.5.2.3(A) plus *Section* 3.5.2.3(C)[)] *of this LGIP.*

3.5.2.4 Interconnection Service Requests Withdrawn From Interconnection Queue

(A) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter,

(B) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter before completion of any [i]*I*nterconnection [s]*S*tudies or execution of any [i]*I*nterconnection [s]*S*tudy agreements,

(C) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter before completion of a Cluster Study,

(D) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter before completion of an Interconnection Facilities Study,

(E) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue after *completion of an Interconnection Facilities Study but before* execution of a*n* [generator interconnection agreement] *LGIA* or Interconnection Customer requests the filing of an unexecuted, new [interconnection agreement] *LGIA,*

(F) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue after execution of an LGIA or Interconnection Customer requests the filing of an unexecuted, new LGIA

([F]*G*) Mean time (in days), for all withdrawn Interconnection Requests, from the date when the request was determined to be valid to when Transmission Provider received the request to withdraw from the queue.

3.5.3

Transmission Provider is required to post on OASIS or its website the measures in [paragraph] *Section* 3.5.2.1(A) through [paragraph] *Section* 3.5.2.4([F]*G*) for each calendar quarter within *thirty (*30*) Calendar* [d]*D*ays of the end of the calendar quarter. Transmission Provider will keep the quarterly measures posted on OASIS or its website for three *(3)* calendar years with the first required report to be in the first quarter of 2020. If Transmission Provider retains this information on its website, a link to the information must be provided on Transmission Provider's OASIS site.

3.5.4

In the event that any of the values calculated in [paragraphs] *Sections* 3.5.2.1(E), 3.5.2.2(E) or 3.5.2.3(E) exceeds *twenty-five* [25] percent *(25%)* for two *(2)* consecutive calendar quarters, Transmission Provider will have to comply with the measures below for the next four *(4)* consecutive calendar quarters and must continue reporting this information until Transmission Provider reports four *(4)* consecutive calendar quarters without the values calculated in *Sections* 3.5.2.1(E), 3.5.2.2(E) or 3.5.2.3(E) exceeding [25] *twenty-five* percent *(25%)* for two *(2)* consecutive calendar quarters:

(i) Transmission Provider must submit a report to the Commission describing the reason for each Cluster Study, Cluster Restudy, or individual Interconnection Facilities Study pursuant to one or more Interconnection Request(s) that exceeded its deadline (*i.e.,* 150, 90 or 180 *Calendar* [d]*D*ays) for completion. Transmission Provider must describe the reasons for each study delay and any steps taken to remedy these specific issues and, if applicable, prevent such delays in the future. The report must be filed at the Commission within *forty-five (*45*) Calendar* [d]*D*ays of the end of the calendar quarter.

(ii) Transmission Provider shall aggregate the total number of employee-hours and third party consultant hours expended towards [i]*I*nterconnection [s]*S*tudies within its coordinated region that quarter and post on OASIS or its website. If Transmission Provider posts this information on its website, a link to the information must be provided on Transmission Provider's OASIS site. This information is to be posted within *thirty (*30*) Calendar* [d]*D*ays of the end of the calendar quarter.

3.6 Coordination With Affected Systems

Transmission Provider will coordinate the conduct of any studies required to determine the impact of the Interconnection Request on Affected Systems with Affected System Operators. Interconnection Customer will cooperate with Transmission Provider and Affected System Operator in all matters related to the conduct of studies and the determination of modifications to Affected Systems.

A Transmission Provider whose system may be impacted by a proposed interconnection on another transmission provider's transmission system shall cooperate with [the] transmission provider with whom interconnection has been requested in all matters related to the conduct of studies and the determination of modifications to Transmission Provider's Transmission System.

3.6.1 Initial Notification

Transmission Provider must notify Affected System Operator of a potential Affected System impact caused by an Interconnection Request within ten (10) Business Days of the completion of the Cluster Study[or, if the potential Affected System impact is only determined in the Cluster Restudy, the completion of the Cluster Restudy].

At the time of initial notification, Transmission Provider must provide Interconnection Customer with a list of potential Affected Systems, along with relevant contact information.

3.6.2 Notification of Cluster Restudy

Transmission Provider must notify Affected System Operator of a Cluster Restudy concurrently with its notification of such Cluster Restudy to Interconnection Customers.

3.6.3 Notification of Cluster Restudy Completion

Upon the completion of Transmission Provider's Cluster Restudy, Transmission Provider will notify Affected System Operator of a potential Affected System impact caused by an Interconnection Request within ten (10) Business Days of the completion of the Cluster Restudy, regardless of whether that potential Affected System impact was previously identified. At the time of the notification of the completion of the Cluster Restudy to the Affected System Operator, Transmission Provider must provide Interconnection Customer with a list of potential Affected System Operators, along with relevant contact information.

3.7 Withdrawal

Interconnection Customer may withdraw its Interconnection Request at any time by written notice of such withdrawal to Transmission Provider. In addition, if Interconnection Customer fails to adhere to all requirements of this LGIP, except as provided in Section 13.5 (Disputes), Transmission Provider shall deem the Interconnection Request to be withdrawn and shall provide written notice to Interconnection Customer of the deemed withdrawal and an explanation of the reasons for such deemed withdrawal. Upon receipt of such written notice, Interconnection Customer shall have fifteen (15) Business Days in which to either respond with information or actions that cures the deficiency or to notify Transmission Provider of its intent to pursue Dispute Resolution.

Withdrawal shall result in the loss of Interconnection Customer's Queue Position. If an Interconnection Customer disputes the withdrawal and loss of its Queue Position, then during Dispute Resolution, Interconnection Customer's Interconnection Request is eliminated from the queue until such time that the outcome of Dispute Resolution would restore its Queue Position. An Interconnection Customer that withdraws or is deemed to have withdrawn its Interconnection Request shall pay to Transmission Provider all costs that Transmission Provider prudently incurs with respect to that Interconnection Request prior to Transmission Provider's receipt of notice described above. Interconnection Customer must pay all monies due to Transmission Provider before it is allowed to obtain any Interconnection Study data or results.

If Interconnection Customer withdraws its Interconnection Request or is deemed withdrawn by Transmission Provider under Section 3.7 of this LGIP, Transmission Provider shall (i) update the OASIS Queue Position posting; (ii) impose the Withdrawal Penalty described in Section 3.7.1 of this LGIP; and (iii) refund to Interconnection Customer any portion of the refundable portion of Interconnection Customer's study deposit that exceeds the costs that Transmission Provider has incurred, including interest calculated in accordance with Section 35.19a(a)(2) of FERC's regulations. Transmission Provider shall also refund any portion of the Commercial Readiness Deposit not applied to the Withdrawal Penalty and, if applicable, the deposit in lieu of site control. In the event of such withdrawal, Transmission Provider, subject to the confidentiality provisions of Section 13.1 of this LGIP, shall provide, at Interconnection Customer's request, all information that Transmission Provider developed for any completed study conducted up to the date of withdrawal of the Interconnection Request.

3.7.1 Withdrawal Penalty

Interconnection Customer shall be subject to a Withdrawal Penalty if it withdraws its Interconnection Request or is deemed withdrawn, or the Generating Facility does not otherwise reach Commercial Operation unless: (1) the withdrawal does not have a material impact on the cost or timing of any Interconnection Request [with an equal or lower Queue Position]*in the same Cluster;* (2) Interconnection Customer withdraws after receiving Interconnection Customer's most recent Cluster Restudy Report and the Network Upgrade costs assigned to the Interconnection Request identified in that report have increased by more than twenty-five percent (25%) compared to costs identified in Interconnection Customer's preceding Cluster Study Report or Cluster Restudy Report; or (3) Interconnection Customer withdraws after receiving Interconnection Customer's Interconnection Facilities Study Report and the Network Upgrade costs assigned to the Interconnection Request identified in that report have increased by more than one hundred percent (100%) compared to costs identified in the Cluster Study Report *or Cluster Restudy Report.*

3.7.1.1 Calculation of the Withdrawal Penalty

If Interconnection Customer withdraws its Interconnection Request or is deemed withdrawn prior to the commencement of the initial Cluster Study, Interconnection Customer shall not be subject to a Withdrawal Penalty. If Interconnection Customer withdraws, is deemed withdrawn, or otherwise does not reach Commercial Operation at any point after the commencement of the initial Cluster Study, that Interconnection Customer's Withdrawal Penalty will be the greater of: (1) [the] Interconnection Customer's study deposit required under Section 3.1.1.1 of this LGIP; or (2) as follows in (a)–(d):

(a) If Interconnection Customer withdraws or is deemed withdrawn during the Cluster Study or after receipt of a Cluster Study Report, but prior to commencement of the Cluster Restudy or Interconnection Facilities Study *if no Cluster Restudy is required,* Interconnection Customer shall be charged two (2) times its actual allocated cost of all studies performed for Interconnection Customers in the Cluster up until that point in the [i]*I*nterconnection [s]*S*tudy process.

(b) If Interconnection Customer withdraws or is deemed withdrawn during the Cluster Restudy or after receipt of any applicable restudy reports issued pursuant to Section 7.5 of this LGIP, but prior to commencement of the Interconnection Facilities Study, Interconnection Customer shall be charged five percent (5%) its estimated Network Upgrade costs.

(c) If Interconnection Customer withdraws or is deemed withdrawn during the Interconnection Facilities Study, after receipt of the Interconnection Facilities Study Report issued pursuant to Section 8.3 of this LGIP, or after receipt of the draft LGIA but before Interconnection Customer has executed an LGIA or has requested that its LGIA be filed unexecuted, and has satisfied the other requirements described in Section 11.3 of this LGIP (*i.e.,* Site Control demonstration, LGIA Deposit, reasonable evidence of one or more milestones in the development of the Generating Facility), Interconnection Customer shall be charged ten percent (10%) its estimated Network Upgrade costs.

(d) If Interconnection Customer has executed an LGIA or has requested that its LGIA be filed unexecuted and has satisfied the other requirements described in Section 11.3 of this LGIP (*i.e.,* Site Control demonstration, LGIA Deposit, reasonable evidence of one or more milestones in the development of the Generating Facility) and subsequently withdraws its Interconnection Request or if Interconnection Customer's Generating Facility otherwise does not reach Commercial Operation, that Interconnection Customer's Withdrawal Penalty shall be twenty percent (20%) its estimated Network Upgrade costs.

3.7.1.2 Distribution of the Withdrawal Penalty

3.7.1.2.1 Initial Distribution of Withdrawal Penalties Prior to Assessment of Network Upgrade Costs Previously Shared With Withdrawn Interconnection Customers in the Same Cluster

For a single [c]*C*luster, Transmission Provider shall hold all Withdrawal Penalty funds until all Interconnection Customers in that Cluster have either: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted. Any Withdrawal Penalty funds collected from the Cluster shall first be used to fund studies conducted under the Cluster Study Process for Interconnection Customers in the same Cluster that have executed the LGIA or requested the LGIA to be filed unexecuted. Next, after the Withdrawal Penalty funds are applied to relevant study costs in the same Cluster, Transmission Provider will apply the remaining Withdrawal Penalty funds to reduce net increases, for Interconnection Customers in the same Cluster, in Interconnection Customers' Network Upgrade cost assignment and associated financial security requirements under Article 11.5 of the *pro forma* LGIA attributable to the impacts of withdrawn Interconnection Customers that shared an obligation with the remaining

Interconnection Customers to fund a Network Upgrade, as described in more detail in Sections 3.7.1.2.3 and 3.7.1.2.4. *The total amount of funds used to fund these studies under the Cluster Study Process or those applied to any net increases in Network Upgrade costs for Interconnection Customers in the same Cluster shall not exceed the total amount of Withdrawal Penalty funds collected from the Cluster.*

Withdrawal Penalty funds shall first be applied as a refund to invoiced study costs for Interconnection Customers in the same Cluster that did not withdraw within *thirty (*30*)* Calendar Days of such Interconnection Customers executing their LGIA or requesting to have their LGIA filed unexecuted. Distribution of Withdrawal Penalty funds within one specific Cluster [Study]for study costs shall not exceed the total actual Cluster Study *Process* costs *for the Cluster.* Withdrawal Penalty funds applied to study costs shall be allocated within the same Cluster to Interconnection Customers in a manner consistent with [the] Transmission Provider's method in Section 13.3 of this LGIP for allocating the costs of [i]*I*nterconnection [s]*S*tudies conducted on a clustered basis. Transmission Provider shall post the balance of Withdrawal Penalty funds held by Transmission Provider but not yet dispersed on its OASIS site and update this posting on a quarterly basis.

If an Interconnection Customer withdraws after it executes, or requests the unexecuted filing of, its LGIA, Transmission Provider shall first apply such Interconnection Customer's Withdrawal Penalty funds to any restudy costs required due to [the] Interconnection Customer's withdrawal as a credit to as-yet-to be invoiced study costs to be charged to the remaining Interconnection Customers in the same Cluster in a manner consistent with [the] Transmission Provider's method in Section 13.3 of this LGIP for allocating the costs of [i]*I*nterconnection [s]*S*tudies conducted on a clustered basis. Distribution of the Withdrawal Penalty funds for such restudy costs shall not exceed the total actual restudy costs.

3.7.1.2.2 Assessment of Network Upgrade Costs Previously Shared With Withdrawn Interconnection Customers in the Same Cluster

If Withdrawal Penalty funds remain for the same Cluster after the Withdrawal Penalty funds are applied to relevant study costs, Transmission Provider will determine if the withdrawn Interconnection Customers, at any point in the Cluster Study Process, shared cost assignment for one or more Network Upgrades with any remaining Interconnection Customers in the same Cluster based on the Cluster Study Report, Cluster Restudy Report(s), Interconnection Facilities Study Report, and any subsequent issued restudy report issued for the Cluster.

In [s]*S*ection 3.7.1.2 of this LGIP, shared cost assignments for Network Upgrades refers to the cost of Network Upgrades still needed for the same Cluster for which an Interconnection Customer, prior to withdrawing its Interconnection Request, shared the obligation to fund along with Interconnection Customers that have executed an LGIA, or requested the LGIA to filed unexecuted.

If Transmission Provider's assessment determines that there are no shared cost assignments for any Network Upgrades in the same Cluster for the withdrawn Interconnection Customer, or determines that the withdrawn Interconnection Customer's withdrawal did not cause a net increase in the shared cost assignment for any remaining Interconnection Customers' Network Upgrade(s) in the same Cluster, Transmission Provider will return any remaining Withdrawal Penalty funds to the withdrawn Interconnection Customer(s). Such remaining Withdrawal Penalty funds will be returned to withdrawn Interconnection Customers based on the proportion of each withdrawn Interconnection Customer's contribution to the total amount of Withdrawal Penalty funds collected for the Cluster (*i.e.,* the total amount before the initial disbursement required under Section 3.7.1.2.1 of this LGIP). Transmission Provider must make such disbursement within sixty (60) Calendar Days of the date on which all Interconnection Customers in the same Cluster have either: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted. For the withdrawn Interconnection Customers that Transmission Provider determines have caused a net increase in the shared cost assignment for one or more Network Upgrade(s) in the same Cluster under [subs]*S*ection 3.7.1.2.3(a) *of this LGIP,* Transmission Provider will determine each such withdrawn Interconnection Customers' Withdrawal Penalty funds remaining balance that will be applied toward net increases in Network Upgrade shared costs calculated under [subs]*S*ections 3.7.1.2.3(a) and 3.7.1.2.3(b) *of this LGIP* based on each such withdrawn Interconnection Customer's proportional contribution to the total amount of Withdrawal Penalty funds collected for the same Cluster (*i.e.,* the total amount before the initial disbursement requirement under Section 3.7.1.2.1 of this LGIP).

If [the] Transmission Provider's assessment determines that there are shared cost assignments for Network Upgrades in the same Cluster, Transmission Provider will calculate the remaining Interconnection Customers' net increase in cost assignment for Network Upgrades due to a shared cost assignment for Network Upgrades with the withdrawn Interconnection Customer and distribute Withdrawal Penalty funds as described in Section 3.7.1.2.3, depending on whether the withdrawal occurred before the withdrawing Interconnection Customer executed the LGIA (or filed unexecuted), as described in [subs]*S*ection 3.7.1.2.3(a) *of this LGIP,* or after such execution (or filing unexecuted) of an LGIA, as described in [subs]*S*ection 3.7.1.2.3(b) *of this LGIP.*

As discussed in [subs]*S*ection 3.7.1.2.4 *of this LGIP,* Transmission Provider will amend executed (or filed unexecuted) LGIAs of the remaining Interconnection Customers in the same Cluster to apply the remaining Withdrawal Penalty funds to reduce net increases in Interconnection Customers' Network Upgrade cost assignment and associated financial security requirements under Article 11.5 of the pro forma LGIA attributable to the impacts of withdrawn Interconnection Customers on Interconnection Customers remaining in the same Cluster that had a shared cost assignment for Network Upgrades with the withdrawn Interconnection Customers.

3.7.1.2.3 Impact Calculations

3.7.1.2.3(a) Impact Calculation for Withdrawals During the Cluster Study Process

If an Interconnection Customer withdraws before it executes, or requests the unexecuted filing of, its LGIA, [the] Transmission Provider will distribute in the following manner the Withdrawal Penalty funds to reduce the Network Upgrade cost impact on the remaining Interconnection Customers in the same Cluster who had a shared cost assignment for a Network Upgrade with the withdrawn Interconnection Customer.

To calculate the reduction in the remaining Interconnection Customers' net increase in Network Upgrade costs and associated financial security requirements under Article 11.5 of the pro forma LGIA, [the] Transmission Provider will determine the financial impact of a withdrawing Interconnection Customer on other Interconnection Customers in the same Cluster that shared an obligation to fund the same Network Upgrade(s). Transmission Provider shall calculate this financial impact once all [the] Interconnection Customers in the same Cluster either: (1) have withdrawn or have been deemed withdrawn; (2) executed an LGIA; or (3) request an LGIA to be filed unexecuted. Transmission Provider will perform the financial impact calculation using the following steps.

First, Transmission Provider must determine which withdrawn Interconnection Customers shared an obligation to fund Network Upgrades with Interconnection Customers from the same Cluster that have LGIAs that are executed or have been requested to be filed unexecuted. Next, Transmission Provider shall perform the calculation of the financial impact of a withdrawal on another Interconnection Request in the same Cluster by performing a comparison of the Network Upgrade cost estimates between each of the following:

(1) Cluster Study phase to Cluster Restudy phase (if Cluster Restudy was necessary);

(2) Cluster Restudy phase to *Interconnection* Facilities Study phase (if a Cluster Restudy was necessary);

(3) Cluster Study phase to *Interconnection* Facilities Study phase (if no Cluster Restudy was performed);

(4) *Interconnection* Facilities Study phase to any subsequent restudy that was performed before the execution or filing of an unexecuted LGIA;

(5) the restudy to the executed, or filed unexecuted, LGIA (if a restudy was performed after the *Interconnection* Facilities Study phase and before the execution or filing of an unexecuted LGIA).

If, based on the above calculations, Transmission Provider determines:

(i) that the costs assigned to an Interconnection Customer in the same Cluster for Network Upgrades that a

withdrawn Interconnection Customer shared cost assignment for increased between any two studies, and

(ii) after the impacted Interconnection Customer's LGIA was executed or filed unexecuted, [the] Interconnection Customer's cost assignment for the relevant Network Upgrade is greater than it was prior to the withdrawal of [the] Interconnection Customer in the same Cluster that shared cost assignment for the Network Upgrade, then Transmission Provider shall apply the withdrawn Interconnection Customer's Withdrawal Penalty funds that has not already been applied to study costs in the amount of the financial impact by reducing, in the same Cluster, the remaining Interconnection Customer's Network Upgrade costs and associated financial security requirements under Article 11.5 of the *pro forma* LGIA.

If Transmission Provider determines that more than one Interconnection Customer in the same Cluster was financially impacted by the same withdrawn Interconnection Customer, Transmission Provider will apply the relevant withdrawn Interconnection Customer's Withdrawal Penalty funds that has not already been applied to study costs to reduce the financial impact to each Interconnection Customer based on each Interconnection Customer's proportional share of the financial impact, as determined by either the [p]*P*roportional [i]*I*mpact [m]*M*ethod if it is a System Network Upgrade or on a per capita basis if it is a Substation Network Upgrade, as described under Section 4.2.1 of this LGIP.

3.7.1.2.3(b) Impact Calculation for Withdrawals in the Same Cluster After the Cluster Study Process

If an Interconnection Customer withdraws after it executes, or requests the unexecuted filing of, its LGIA, Transmission Provider will distribute in the following manner the remaining Withdrawal Penalty funds to reduce the Network Upgrade cost impact on the remaining Interconnection Customers in the same Cluster who had a shared cost assignment with the withdrawn Interconnection Customer for one or more Network Upgrades.

Transmission Provider will determine the financial impact on the remaining Interconnection Customers in the same Cluster within *thirty (*30*)* [c]*C*alendar [d]*D*ays after the withdrawal occurs. [The] Transmission Provider will determine that financial impact by comparing the Network Upgrade cost funding obligations [the] Interconnection Customers shared with the withdrawn Interconnection Customer before the withdrawal of [the] Interconnection Customer and after the withdrawal of [the] Interconnection Customer. If that comparison indicates an increase in Network Upgrade costs for an Interconnection Customer, Transmission Provider shall apply the withdrawn Interconnection Customer's Withdrawal Penalty funds to the increased costs each impacted Interconnection Customer in the same Cluster experienced associated with such Network Upgrade(s) in proportion to each Interconnection Customer's increased cost assignment, as determined by Transmission Provider.

3.7.1.2.4 Amending LGIA To Apply Reductions to Interconnection Customer's Assigned Network Upgrade Costs and Associated Financial Security Requirement With Respect to Withdrawals in the Same Cluster

Within *thirty (*30*)* Calendar Days of all Interconnection Customers in the same Cluster having: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted, Transmission Provider must perform the calculations described in [subs]*S*ection 3.7.1.2.3(a) of this LGIP and provide such Interconnection Customers with an amended LGIA that provides the reduction in Network Upgrade cost assignment and associated reduction to [the] Interconnection Customer's financial security requirements, under Article 11.5 of the pro forma LGIA, due from [the] Interconnection Customer to [the] Transmission Provider.

Where an Interconnection Customer executes the LGIA (or requests the filing of an unexecuted LGIA) and is later withdrawn or its LGIA is terminated, Transmission Provider must, within *thirty (*30*)* Calendar Days of such withdrawal or termination, perform the calculations described in [subs]*S*ection 3.7.1.2.3(b) of this LGIP and provide such Interconnection Customers in the same Cluster with an amended LGIA that provides the reduction in Network Upgrade cost assignment and associated reduction to [the] Interconnection Customer's financial security requirements, under Article 11.5 of the pro forma LGIA, due from [the] Interconnection Customer to Transmission Provider.

Any repayment by Transmission Provider to Interconnection Customer under Article 11.4 of the pro forma LGIA of amounts advanced for Network Upgrades after the Generating Facility achieves Commercial Operation shall be limited to [the] Interconnection Customer's total amount of Network Upgrade costs paid and associated financial security provided to Transmission Provider under Article 11.5 of the pro forma LGIA.

3.7.1.2.5 Final Distribution of Withdrawal Penalty Funds

If Withdrawal Penalty funds remain for the Cluster after the Withdrawal Penalty funds are applied to relevant study costs and net increases in shared cost assignments for Network Upgrades to remaining Interconnection Customers, Transmission Provider will return any remaining Withdrawal Penalty funds to the withdrawn Interconnection Customers in the same Cluster net of the amount of each withdrawn Interconnection Customer's Withdrawal Penalty funds applied to study costs and net increases in shared cost assignments for Network Upgrades to remaining Interconnection Customers.

3.8 Identification of Contingent Facilities

Transmission Provider shall post in this section a method for identifying the Contingent Facilities to be provided to Interconnection Customer at the conclusion of the Cluster Study and included in Interconnection Customer's Large Generator Interconnection Agreement. The method shall be sufficiently transparent to determine why a specific Contingent Facility was identified and how it relates to the Interconnection Request. Transmission Provider shall also provide, upon request of Interconnection Customer, the estimated Interconnection Facility and/or Network Upgrade costs and estimated in-service completion time of each identified Contingent Facility when this information is readily available and not commercially sensitive.

3.9 Penalties for Failure To Meet Study Deadlines

(1) Transmission Provider shall be subject to a penalty if it fails to complete a Cluster Study, Cluster Restudy, Interconnection Facilities Study, or Affected Systems Study by the applicable deadline set forth in this LGIP. Transmission Provider must pay the penalty for each late Cluster Study, Cluster Restudy, and Interconnection Facilities Study on a pro rata basis per Interconnection Request to all Interconnection Customer(s) included in the relevant study that did not withdraw, or were not deemed withdrawn, from Transmission Provider's interconnection queue before the missed study deadline, *in proportion to each Interconnection Customer's final study cost.* Transmission Provider must pay the penalty for a late Affected Systems Study on a pro rata basis per interconnection request to all Affected System Interconnection Customer(s) included in the relevant Affected System Study that did not withdraw, or were not deemed withdrawn, from the host transmission provider's interconnection queue before the missed study deadline, *in proportion to each Interconnection Customer's final study cost.* The study delay penalty for each late study shall be distributed no later than forty-five (45) Calendar Days after the late study has been completed.

(2) For penalties assessed in accordance with this Section, the penalty amount will be equal to: $1,000 per Business Day for delays of Cluster Studies beyond the applicable deadline set forth in this LGIP; $2,000 per Business Day for delays of Cluster Re[-S]studies beyond the applicable deadline set forth in this LGIP; $2,000 per Business Day for delays of Affected System Studies beyond the applicable deadline set forth in this LGIP; and $2,500 per Business Day for delays of Interconnection Facilities Studies beyond the applicable deadline set forth in this LGIP. The total amount of a penalty assessed under this Section shall not exceed: (a) one hundred percent (100%) of the initial study deposit(s) received for all of the Interconnection Requests in the Cluster for Cluster Studies and Cluster Restudies; (b) one hundred percent (100%) of the initial study deposit received for the single Interconnection Request in the study for *Interconnection* Facilities Studies; and (c) one hundred percent (100%) of the study deposit(s) that Transmission Provider collects for conducting the Affected System Study.

(3) Transmission Provider may appeal to the Commission any penalties imposed under this Section. Any such appeal must be filed no later than forty-five (45) Calendar

Days after the late study has been completed. While an appeal to the Commission is pending, Transmission Provider shall remain liable for the penalty, but need not distribute the penalty until forty-five (45) Calendar Days after (1) the deadline for filing a rehearing request has ended, if no requests for rehearing of the appeal have been filed, or (2) the date that any requests for rehearing of the Commission's decision on the appeal are no longer pending before the Commission. The Commission may excuse Transmission Provider from penalties under this Section for good cause.

(4) No penalty will be assessed under this Section where a study is delayed by ten (10) Business Days or less. If the study is delayed by more than ten (10) Business Days, the penalty amount will be calculated from the first Business Day [the] Transmission Provider misses the applicable study deadline.

(5) If (a) Transmission Provider needs to extend the deadline for a particular study subject to penalties under this Section and (b) all Interconnection Customers or Affected System Interconnection Customers included in the relevant study mutually agree to such an extension, the deadline for that study shall be extended thirty (30) Business Days from the original deadline. In such a scenario, no penalty will be assessed for Transmission Provider missing the original deadline.

(6) No penalties shall be assessed until the third Cluster Study cycle (including any Transitional Cluster Study cycle, but not Transitional Serial *Interconnection Facilities* Studies) after the Commission-approved effective date of Transmission Provider's filing made in compliance with the Final Rule in Docket No. RM22–14–000.

(7) Transmission Provider must maintain on its OASIS or its public website summary statistics related to penalties assessed under this Section, updated quarterly. For each calendar quarter, Transmission Provider must calculate and post (1) the total amount of penalties assessed under this Section during the previous reporting quarter and (2) the highest penalty assessed under this Section paid to a single Interconnection Customer or Affected System Interconnection Customer during the previous reporting quarter. Transmission Provider must post on its OASIS or its website these penalty amounts for each calendar quarter within thirty (30) Calendar Days of the end of the calendar quarter. Transmission Provider must maintain the quarterly measures posted on its OASIS or its website for three (3) calendar years with the first required posting to be the third Cluster Study cycle (including any Transitional Cluster Study cycle, but not Transitional Serial *Interconnection Facilities* Studies) after Transmission Provider transitions to the Cluster Study Process.

Section 4. Interconnection Request Evaluation Process

Once an Interconnection Customer has submitted a valid Interconnection Request pursuant to Section 3.4 of this LGIP, such Interconnection Request shall become part of [the] Transmission Provider's interconnection queue for further processing pursuant to the following procedures.

4.1 Queue Position

4.1.1 Assignment of Queue Position

Transmission Provider shall assign a Queue Position as follows: the Queue Position within the queue shall be assigned based upon the date and time of receipt of all items required pursuant to the provisions of Section 3.4 of this LGIP. All Interconnection Requests submitted and validated in a single Cluster Request Window shall be considered equally queued.

4.1.2 Higher Queue Position

A higher Queue Position assigned to an Interconnection Request is one that has been placed ''earlier'' in the queue in relation to another Interconnection Request that is assigned a lower Queue Position. All requests studied in a single Cluster shall be considered equally queued. Interconnection Customers that are part of Clusters initiated earlier in time than an instant [Q]*q*ueue shall be considered to have a higher Queue Position than Interconnection Customers that are part of Clusters initiated later than an instant [Q]*q*ueue.

4.2 General Study Process

Interconnection Studies performed within the Cluster Study Process shall be conducted in such a manner to ensure the efficient implementation of the applicable regional transmission expansion plan in light of the Transmission System's capabilities at the time of each study and consistent with Good Utility Practice.

Transmission Provider may use subgroups in the Cluster Study Process. In all instances in which Transmission Provider elects to use subgroups in the [c]*C*luster [s]*S*tudy [p]*P*rocess, Transmission Provider must publish the criteria used to define and determine subgroups on its OASIS or public website.

4.2.1 Cost Allocation for Interconnection Facilities and Network Upgrades

(1) For Network Upgrades identified in Cluster Studies, Transmission Provider shall calculate each Interconnection Customer's share of the costs as follows:

(a) Substation Network Upgrades, including all switching stations, shall be allocated *first* per capita *to Interconnection Facilities interconnecting to the substation at the same voltage level, and then per capita* to each Generating Facility *sharing the Interconnection Facility* [interconnecting at the same substation].

(b) System Network Upgrades shall be allocated based on the proportional impact of each individual Generating Facility in the Cluster Study on the need for a specific System Network Upgrade. {Transmission Provider shall include in this section a description of how cost for each facility type designated as a network upgrade will be allocated using its proportional impact method.}

(c) An Interconnection Customer that funds Substation Network Upgrades and/or System Network Upgrades shall be entitled to transmission credits as provided in Article 11.4 of the LGIA.

(2) The costs of any needed Interconnection Facilities identified in the Cluster Study Process will be directly assigned to [the] Interconnection Customer(s) using such facilities. Where Interconnection Customers in the Cluster agree to share Interconnection Facilities, the cost of such Interconnection Facilities shall be allocated based on the number of Generating Facilities sharing use of such Interconnection Facilities on a per capita basis (*i.e.,* on a per Generating Facility basis), unless Parties mutually agree to a different cost sharing arrangement.

4.3 Transferability of Queue Position

An Interconnection Customer may transfer its Queue Position to another entity only if such entity acquires the specific Generating Facility identified in the Interconnection Request and the Point of Interconnection does not change.

4.4 Modifications

Interconnection Customer shall submit to Transmission Provider, in writing, modifications to any information provided in the Interconnection Request. Interconnection Customer shall retain its Queue Position if the modifications are in accordance with Sections 4.4.1, 4.4.2, or 4.4.5 of this LGIP, or are determined not to be Material Modifications pursuant to Section 4.4.3 of this LGIP.

Notwithstanding the above, during the course of the Interconnection Studies, either Interconnection Customer or Transmission Provider may identify changes to the planned interconnection that may improve the costs and benefits (including reliability) of the interconnection, and the ability of the proposed change to accommodate the Interconnection Request. To the extent the identified changes are acceptable to Transmission Provider and Interconnection Customer, such acceptance not to be unreasonably withheld, Transmission Provider shall modify the Point of Interconnection prior to return of the executed Cluster Study Agreement, and Interconnection Customer shall retain its Queue Position.

4.4.1 Prior to the return of the executed Cluster Study Agreement to Transmission Provider, modifications permitted under this Section shall include specifically: (a) a decrease of up to [60] *sixty* percent (*60%*) of electrical output (MW) of the proposed project, through either (1) a decrease in plant size or (2) a decrease in Interconnection Service level (consistent with the process described in Section 3.1 of this LGIP) accomplished by applying Transmission Provider-approved injection-limiting equipment; (b) modifying the technical parameters associated with the Large Generating Facility technology or the Large Generating Facility step-up transformer impedance characteristics; and (c) modifying the interconnection configuration. For plant increases, the incremental increase in plant output will go in the next Cluster [Study]*Request* Window for the purposes of cost allocation and study analysis.

4.4.2 Prior to the return of the executed Interconnection Facilities Study Agreement to Transmission Provider, the modifications permitted under this Section shall include specifically: (a) additional [15] *fifteen* percent (*15%*) decrease of electrical output of the

proposed project through either (1) a decrease in plant size (MW) or (2) a decrease in Interconnection Service level (consistent with the process described in Section 3.1) accomplished by applying Transmission Provider-approved injection-limiting equipment; (b) Large Generating Facility technical parameters associated with modifications to Large Generating Facility technology and transformer impedances; provided, however, the incremental costs associated with those modifications are the responsibility of the requesting Interconnection Customer; and (c) a Permissible Technological Advancement for the Large Generating Facility after the submission of the Interconnection Request. Section 4.4.6 *of this LGIP* specifies a separate technological change procedure including the requisite information and process that will be followed to assess whether [the] Interconnection Customer's proposed technological advancement under Section 4.4.2(c) *of this LGIP* is a Material Modification. Section 1 *of this LGIP* contains a definition of Permissible Technological Advancement.

4.4.3 Prior to making any modification other than those specifically permitted by Sections 4.4.1, 4.4.2, and 4.4.5 of this LGIP, Interconnection Customer may first request that Transmission Provider evaluate whether such modification is a Material Modification. In response to Interconnection Customer's request, Transmission Provider shall evaluate the proposed modifications prior to making them and inform Interconnection Customer in writing of whether the modifications would constitute a Material Modification. Any change to the Point of Interconnection, except those deemed acceptable under Sections 3.1.2 or 4.4 of this LGIP or so allowed elsewhere, shall constitute a Material Modification. Interconnection Customer may then withdraw the proposed modification or proceed with a new Interconnection Request for such modification. Transmission Provider shall study the addition of a Generating Facility that includes at least one electric storage resource using operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of the Generating Facility as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions.

{Transmission Providers using fuel-based dispatch assumptions in Interconnection Studies are not required to include Section 4.4.3.1 because it does not apply to them}

4.4.3.1 Interconnection Customer may request, and Transmission Provider shall evaluate, the addition to the Interconnection Request of a Generating Facility with the same Point of Interconnection indicated in the initial Interconnection Request, if the addition of the Generating Facility does not increase the requested Interconnection Service level. Transmission Provider must evaluate such modifications prior to deeming them a Material Modification, but only if Interconnection Customer submits them prior to the return of the executed *Interconnection* Facilities Study Agreement by Interconnection Customer to Transmission Provider. Interconnection Customers requesting that such a modification be evaluated must demonstrate the required Site Control at the time such request is made.

4.4.4 Upon receipt of Interconnection Customer's request for modification permitted under this Section 4.4 *of this LGIP,* Transmission Provider shall commence and perform any necessary additional studies as soon as practicable, but in no event shall Transmission Provider commence such studies later than thirty (30) Calendar Days after receiving notice of Interconnection Customer's request. Any additional studies resulting from such modification shall be done at Interconnection Customer's cost. Any such request for modification of the Interconnection Request must be accompanied by any resulting updates to the models described in Attachment A to Appendix 1 of this LGIP.

4.4.5 Extensions of less than three (3) cumulative years in the Commercial Operation Date of the Large Generating Facility to which the Interconnection Request relates are not material and should be handled through construction sequencing. For purposes of this section, the Commercial Operation Date reflected in the initial Interconnection Request shall be used to calculate the permissible extension prior to Interconnection Customer executing an LGIA or requesting that the LGIA be filed unexecuted. After an LGIA is executed or requested to be filed unexecuted, the Commercial Operation Date reflected in the LGIA shall be used to calculate the permissible extension. Such cumulative extensions may not exceed three years including both extensions requested after execution of the LGIA by Interconnection Customer or the filing of an unexecuted LGIA by Transmission Provider and those requested prior to execution of the LGIA by Interconnection Customer or the filing of an unexecuted LGIA by Transmission Provider.

4.4.6 Technological Change Procedures

{Insert technological change procedure here}

Section 5. Procedures for Interconnection Requests Submitted Prior to Effective Date of the Cluster Study Revisions

5.1 Procedures for Transitioning to the Cluster Study Process

5.1.1 Any Interconnection Customer assigned a Queue Position as of thirty (30) Calendar Days after {Transmission Provider to insert filing date} (the filing date of this LGIP) shall retain that Queue Position subject to the requirements in Sections 5.1.1.1 and 5.1.1.2 of this LGIP. Any Interconnection Customer that fails to meet these requirements shall have its Interconnection Request deemed withdrawn by Transmission Provider pursuant to Section 3.7 of this LGIP. In such case, Transmission Provider shall not assess [the] Interconnection Customer any Withdrawal Penalty.

Any Interconnection Customer that has received a final Interconnection Facilities Study Report before the commencement of the studies under the transition process set forth in this [s]*S*ection shall be tendered an LGIA pursuant to Section 11 of this LGIP, and shall not be required to enter this transition process.

5.1.1.1 Transitional Serial Study

An Interconnection Customer that has been tendered an Interconnection Facilities Study Agreement as of thirty (30) Calendar Days after {Transmission Provider to insert filing date} (the filing date of this LGIP) may opt to proceed with an Interconnection Facilities Study. Transmission Provider shall tender each eligible Interconnection Customer a Transitional Serial Interconnection Facilities Study Agreement, in the form of Appendix 8 to this LGIP, no later than the Commission-approved effective date of this LGIP. Transmission Provider shall proceed with the Interconnection Facilities Study, provided that [the] Interconnection Customer: (1) meets each of the following requirements; and (2) executes the Transitional Serial Interconnection Facilities Study Agreement within sixty (60) Calendar Days of the Commission-approved effective date of this LGIP. If an eligible Interconnection Customer does not meet these requirements, its Interconnection Request shall be deemed withdrawn without penalty. Transmission Provider must commence the Transitional Serial Interconnection Facilities Study at the conclusion of this sixty (60) Calendar Day period. Transitional Serial Interconnection Facilities Study costs shall be allocated according to the method described in Section 13.3 of this LGIP.

All of the following must be included when an Interconnection Customer returns the Transitional Serial Interconnection Facilities Study Agreement:

(1) A deposit equal to one hundred percent (100%) of the costs identified for Transmission Provider's Interconnection Facilities and Network Upgrades in Interconnection Customer's system impact study report. If Interconnection Customer does not withdraw, the deposit shall be trued up to actual costs once they are known and applied to future construction costs described in Interconnection Customer's eventual LGIA. Any amounts in excess of the actual construction costs shall be returned to Interconnection Customer within thirty (30) Calendar Days of the issuance of a final invoice for construction costs, in accordance with Article 12.2 of the pro forma LGIA. If Interconnection Customer withdraws or otherwise does not reach Commercial Operation, Transmission Provider shall refund the remaining deposit after the final invoice for study costs and *Transitional* Withdrawal Penalty is settled. The deposit shall be in the form of an irrevocable letter of credit,[or] cash, *a surety bond, or other form of security that is reasonably acceptable to Transmission Provider,* where cash deposits shall be treated according to Section 3.7 of this LGIP.

(2) Exclusive Site Control for 100% of the proposed Generating Facility.

Transmission Provider shall conduct each Transitional Serial Interconnection Facilities Study and issue the associated Transitional Serial Interconnection Facilities Study Report within one hundred fifty (150)

Calendar Days of the Commission-approved effective date of this LGIP.

After Transmission Provider issues each Transitional Interconnection Facilities Study Report, Interconnection Customer shall proceed pursuant to Section 11 of this LGIP. If Interconnection Customer withdraws its Interconnection Request or if Interconnection Customer's Generating Facility otherwise does not reach Commercial Operation, a *Transitional* Withdrawal Penalty shall be imposed on Interconnection Customer equal to nine (9) times Interconnection Customer's total study cost incurred since entering [the] Transmission Provider's interconnection queue (including the cost of studies conducted under Section 5 of this LGIP).

5.1.1.2 Transitional Cluster Study

An Interconnection Customer with an assigned Queue Position as of thirty (30) Calendar Days after {Transmission Provider to insert filing date} (the filing date of this LGIP) may opt to proceed with a Transitional Cluster Study. Transmission Provider shall tender each eligible Interconnection Customer a Transitional Cluster Study Agreement, in the form of Appendix 7 to this LGIP, no later than the Commission-approved effective date of this LGIP. Transmission Provider shall proceed with the Transitional Cluster Study that includes each Interconnection Customer that: (1) meets each of the following requirements listed as (1)–(3) in this section; and (2) executes the Transitional Cluster Study Agreement within sixty (60) Calendar Days of the Commission-approved effective date of this LGIP. All Interconnection Requests that enter the Transitional Cluster Study shall be considered to have an equal Queue Position that is lower than Interconnection Customer(s) proceeding with Transitional Serial Interconnection Facilities Study. If an eligible Interconnection Customer does not meet these requirements, its Interconnection Request shall be deemed withdrawn without penalty. Transmission Provider must commence the Transitional Cluster Study at the conclusion of this sixty (60) Calendar Day period. All identified Transmission Provider's Interconnection Facilities and Network Upgrade costs shall be allocated according to Section 4.2.1 of this LGIP. Transitional Cluster Study costs shall be allocated according to the method described in Section 13.3 of this LGIP.

Interconnection Customer may make a one-time extension to its requested Commercial Operation Date upon entry into the Transitional Cluster Study, where any such extension shall not result in a Commercial Operation Date later than December 31, 2027.

All of the following must be included when an Interconnection Customer returns the Transitional Cluster Study Agreement:

(1) A selection of either Energy Resource Interconnection Service or Network Resource Interconnection Service.

(2) A deposit of five million dollars ($5,000,000) in the form of an irrevocable letter of credit,[or] cash, *a surety bond, or other form of security that is reasonably acceptable to Transmission Provider,* where cash deposits will be treated according to Section 3.7 of this LGIP. If Interconnection Customer does not withdraw, the deposit shall be reconciled with and applied towards future construction costs described in the LGIA. Any amounts in excess of the actual construction costs shall be returned to Interconnection Customer within thirty (30) Calendar Days of the issuance of a final invoice for construction costs, in accordance with Article 12.2 of the pro forma LGIA. If Interconnection Customer withdraws or otherwise does not reach Commercial Operation, Transmission Provider must refund the remaining deposit once the final invoice for study costs and *Transitional* Withdrawal Penalty is settled.

(3) Exclusive Site Control for 100% of the proposed Generating Facility.

Transmission Provider shall conduct the Transitional Cluster Study and issue both an associated interim Transitional Cluster Study Report and an associated final Transitional Cluster Study Report. The interim Transitional Cluster Study Report shall provide the following information:

—identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;
—identification of any thermal overload or voltage limit violations resulting from the interconnection;
—identification of any instability or inadequately damped response to system disturbances resulting from the interconnection; and
—Transmission Provider's Interconnection Facilities and Network Upgrades that are expected to be required as a result of the Interconnection Request(s) and a non-binding, good faith estimate of cost responsibility and a non-binding, good faith estimated time to construct.

In addition to the information provided in the interim Transitional Cluster Study Report, the final Transitional Cluster Study Report shall provide a description of, estimated cost of, and schedule for construction of [the] Transmission Provider's Interconnection Facilities and Network Upgrades required to interconnect the Generating Facility to the Transmission System that resolve issues identified in the interim Transitional Cluster Study Report.

The interim and final Transitional Cluster Study Reports shall be issued within three hundred (300) and three hundred sixty (360) Calendar Days of the Commission-approved effective date of this LGIP, respectively, and shall be posted on Transmission Provider's OASIS consistent with the posting of other study results pursuant to Section 3.5.1 of this LGIP. Interconnection Customer shall have thirty (30) Calendar Days to comment on the interim Transitional Cluster Study Report, once it has been received.

After Transmission Provider issues the final Transitional Cluster Study Report, Interconnection Customer shall proceed pursuant to Section 11 of this LGIP. If Interconnection Customer withdraws its Interconnection Request or if Interconnection Customer's Generating Facility otherwise does not reach Commercial Operation, a *Transitional* Withdrawal Penalty will be imposed o*n*[m] Interconnection Customer equal to nine (9) times Interconnection Customer's total study cost incurred since entering [the] Transmission Provider's interconnection queue (including the cost of studies conducted under Section 5 of this LGIP).

5.1.2 Transmission Providers With Existing Cluster Study Processes or Currently in Transition

If Transmission Provider is not conducting a transition process under Section 5.1.1, it will continue processing Interconnection Requests under its current Cluster Study Process. Within sixty (60) Calendar Days of the Commission-approved effective date of this LGIP, Interconnection Customers that have not executed an LGIA or requested an LGIA to be filed unexecuted must meet the requirements of Sections 3.4.2, 7.5, or 8.1 of this LGIP, based on Interconnection Customer's Queue Position.

Any Interconnection Customer that fails to meet these requirements within sixty (60) Calendar Days of the Commission-approved effective date of this LGIP shall have its Interconnection Request deemed withdrawn by Transmission Provider pursuant to Section 3.7 of this LGIP. In such case, Transmission Provider shall not assess Interconnection Customer any Withdrawal Penalty.

5.2 New Transmission Provider

If Transmission Provider transfers control of its Transmission System to a successor Transmission Provider during the period when an Interconnection Request is pending, the original Transmission Provider shall transfer to the successor Transmission Provider any amount of the deposit or payment with interest thereon that exceeds the cost that it incurred to evaluate the request for interconnection. Any difference between such net amount and the deposit or payment required by this LGIP shall be paid by or refunded to [the] Interconnection Customer, as appropriate. The original Transmission Provider shall coordinate with the successor Transmission Provider to complete any Interconnection Study, as appropriate, that the original Transmission Provider has begun but has not completed. If Transmission Provider has tendered a draft LGIA to Interconnection Customer but Interconnection Customer has not either executed the LGIA or requested the filing of an unexecuted LGIA with FERC, unless otherwise provided, Interconnection Customer must complete negotiations with the successor Transmission Provider.

Section 6. Interconnection Information Access

6.1 Publicly Posted Interconnection Information

Transmission Provider shall maintain and make publicly available: (1) an interactive visual representation of the estimated incremental injection capacity (in megawatts) available at each point of interconnection in Transmission Provider's footprint under N–1 conditions, and (2) a table of metrics concerning the estimated impact of a potential Generating Facility on Transmission Provider's Transmission System based on a user-specified addition of a particular number of megawatts at a particular voltage level at a particular point

of interconnection. At a minimum, for each transmission facility impacted by the user-specified megawatt addition, the following information will be provided in the table: (1) the distribution factor; (2) the megawatt impact (based on the megawatt values of the proposed Generating Facility and the distribution factor); (3) the percentage impact on each impacted transmission facility (based on the megawatt values of the proposed Generating Facility and the facility rating); (4) the percentage of power flow on each impacted transmission facility before the injection of the proposed project; (5) the percentage power flow on each impacted transmission facility after the injection of the proposed Generating Facility. These metrics must be calculated based on the power flow model of the Transmission System with the transfer simulated from each point of interconnection to the whole Transmission Provider's footprint (to approximate Network Resource Interconnection Service), and with the incremental capacity at each point of interconnection decremented by the existing and queued Generating Facilities (based on the existing or requested interconnection service limit of the generation). These metrics must be updated within thirty (30) Calendar Days after the completion of each Cluster Study and Cluster Restudy. This information must be publicly posted, without a password or a fee. The website will define all underlying assumptions, including the name of the most recent Cluster Study or Restudy used in the Base Case.

Section 7. Cluster Study

7.1 Cluster Study Agreement

No later than five (5) Business Days after the close of a Cluster Request Window, Transmission Provider shall tender to each Interconnection Customer that submitted a valid Interconnection Request a Cluster Study Agreement in the form of Appendix 2 to this LGIP. The Cluster Study Agreement shall require Interconnection Customer to compensate Transmission Provider for the actual cost of the Cluster Study pursuant to Section 13.3 of this LGIP. The specifications, assumptions, or other provisions in the appendices of the Cluster Study Agreement provided pursuant to Section 7.1 of this LGIP shall be subject to change by Transmission Provider following the conclusion of the Scoping Meeting.

7.2 Execution of Cluster Study Agreement

Interconnection Customer shall execute the Cluster Study Agreement and deliver the executed Cluster Study Agreement to Transmission Provider no later than the close of the Customer Engagement Window.

If Interconnection Customer does not provide all required technical data when it delivers the Cluster Study Agreement, Transmission Provider shall notify Interconnection Customer of the deficiency within five (5) Business Days of the receipt of the executed Cluster Study Agreement and Interconnection Customer shall cure the deficiency within ten (10) Business Days of receipt of the notice, provided, however, such deficiency does not include failure to deliver the executed Cluster Study Agreement or [S]*s*tudy [D]*d*eposit.

7.3 Scope of Cluster Study

The Cluster Study shall evaluate the impact of the proposed interconnection on the reliability of the Transmission System. The Cluster Study will consider the Base Case as well as all Generating Facilities (and with respect to (iii) below, any identified Network Upgrades associated with such higher queued interconnection) that, on the date the Cluster Study is commenced: (i) are directly interconnected to the Transmission System; (ii) are interconnected to Affected Systems and may have an impact on the Interconnection Request; (iii) have a pending higher queued Interconnection Request to interconnect to the Transmission System; and (iv) have no Queue Position but have executed an LGIA or requested that an unexecuted LGIA be filed with FERC.

For purposes of determining necessary Interconnection Facilities and Network Upgrades, the Cluster Study shall use the level of Interconnection Service requested by Interconnection Customers in the Cluster, except where [the] Transmission Provider otherwise determines that it must study the full Generating Facility Capacity due to safety or reliability concerns.

The Cluster Study will consist of power flow, stability, and short circuit analyses, the results of which are documented in a single Cluster Study Report, as applicable. At the conclusion of the Cluster Study, Transmission Provider shall issue a Cluster Study Report. The Cluster Study Report will state the assumptions upon which it is based; state the results of the analyses; and provide the requirements or potential impediments to providing the requested [i]*I*nterconnection [s]*S*ervice, including a preliminary indication of the cost and length of time that would be necessary to correct any problems identified in those analyses and implement the interconnection. The Cluster Study Report shall identify the Interconnection Facilities and Network Upgrades expected to be required to reliably interconnect the Generating Facilities in that Cluster Study at the requested Interconnection Service level and shall provide non-binding cost estimates for required Network Upgrades. The Cluster Study Report shall identify each Interconnection Customer's estimated allocated costs for Interconnection Facilities and Network Upgrades pursuant to the method in Section 4.2.1 of this LGIP. Transmission Provider shall hold an open stakeholder meeting pursuant to Section 7.4 of this LGIP.

For purposes of determining necessary Interconnection Facilities and Network Upgrades, the Cluster Study shall use operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of a Generating Facility that includes at least one electric storage resource as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions. Transmission Provider may require the inclusion of control technologies sufficient to limit the operation of the Generating Facility per the operating assumptions as set forth in the Interconnection Request and to respond to dispatch instructions by Transmission Provider. As determined by Transmission Provider, Interconnection Customer may be subject to testing and validation of those control technologies consistent with Article 6 of the LGIA.

[The Cluster Study Report will provide a list of facilities that are required as a result of the Interconnection Requests within the Cluster and a non-binding good faith estimate of cost responsibility and a non-binding good faith estimated time to construct.]

[Upon issuance of a Cluster Study Report, or Cluster Restudy Report, if any, Transmission Provider shall simultaneously tender a draft Interconnection Facilities Study Agreement to each Interconnection Customer within the Cluster, subject to the conditions in Section 8.1 of this LGIP.]

The Cluster Study shall evaluate the use of static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. Transmission Provider shall *evaluate each identified alternative transmission technology and* determine whether the above technologies should be used, consistent with Good Utility Practice, *Applicable Reliability Standards,* and *Applicable Laws and Regulations*[other applicable regulatory requirements]. Transmission Provider shall include an explanation of the results of [the] Transmission Provider's evaluation for each technology in the Cluster Study Report.

The Cluster Study Report will provide a list of facilities that are required as a result of the Interconnection Requests within the Cluster and a non-binding good faith estimate of cost responsibility and a non-binding good faith estimated time to construct.

7.4 Cluster Study Procedures

Transmission Provider shall coordinate the Cluster Study with any Affected System *Operator* that is affected by the Interconnection Request pursuant to Section 3.6 of this LGIP. Transmission Provider shall utilize existing studies to the extent practicable when it performs the Cluster Study. Interconnection Requests for a Cluster Study may be submitted only within the Cluster Request Window and Transmission Provider shall initiate the Cluster Study [p]*P*rocess pursuant to Section 7 of this LGIP.

Transmission Provider shall complete the Cluster Study within one hundred fifty (150) Calendar Days of the close of the Customer Engagement Window.

Within ten (10) Business Days of simultaneously furnishing a Cluster Study Report to each Interconnection Customer within the Cluster and posting such report on OASIS, Transmission Provider shall convene a Cluster Study Report Meeting.

At the request of Interconnection Customer or at any time Transmission Provider determines that it will not meet the required time frame for completing the Cluster Study, Transmission Provider shall notify Interconnection Customers as to the schedule status of the Cluster Study. If Transmission Provider is unable to complete the Cluster Study within the time period, it shall notify

Interconnection Customers and provide an estimated completion date with an explanation of the reasons why additional time is required. Upon request, Transmission Provider shall provide Interconnection Customers all supporting documentation, workpapers and relevant pre-Interconnection Request and post-Interconnection Request power flow, short circuit and stability databases for the Cluster Study, subject to confidentiality arrangements consistent with Section 13.1 of this LGIP.

7.5 Cluster Study Restudies

(1) Within twenty (20) Calendar Days after the Cluster Study Report Meeting, Interconnection Customer must provide the following:

(a) Demonstration of continued Site Control pursuant to Section 3.4.2(iii) of this LGIP; and

(b) An additional deposit that brings the total Commercial Readiness Deposit submitted to Transmission Provider to five percent (5%) of [the] Interconnection Customer's Network Upgrade cost assignment identified in the Cluster Study in the form of an irrevocable letter of credit,[or] cash, *a surety bond, or other form of security that is reasonably acceptable to Transmission Provider.* Transmission Provider shall refund the deposit to Interconnection Customer upon withdrawal in accordance with Section 3.7 of this LGIP.

Interconnection Customer shall promptly inform Transmission Provider of any material change to Interconnection Customer's demonstration of Site Control under Section 3.4.2(iii) of this LGIP. Upon Transmission Provider determining that Interconnection Customer no longer satisfies the Site Control requirement, Transmission Provider shall notify Interconnection Customer. Within ten (10) Business Days of such notification, Interconnection Customer must demonstrate compliance with the applicable requirement subject to Transmission Provider's approval, not to be unreasonably withheld. Absent such demonstration, Transmission Provider shall deem the subject Interconnection Request withdrawn pursuant to Section 3.7 of this LGIP.

(2) If no Interconnection Customer withdraws from the Cluster after completion of the Cluster Study or Cluster Restudy or is deemed withdrawn pursuant to Section 3.7 of this LGIP after completion of the Cluster Study or Cluster Restudy, Transmission Provider shall notify Interconnection Customers in the Cluster that a Cluster Restudy is not required.

(3) If one or more Interconnection Customers withdraw from the Cluster or are deemed withdrawn pursuant to Section 3.7 of this LGIP, Transmission Provider shall determine if a Cluster Restudy is necessary within thirty (30) Calendar Days after the Cluster Study Report Meeting. If Transmission Provider determines a Cluster Restudy is not necessary, Transmission Provider shall notify Interconnection Customers in the Cluster that a Cluster Restudy is not required and Transmission Provider shall provide an updated Cluster Study Report within thirty (30) Calendar Days of such determination.

(4) If one or more Interconnection Customers withdraws from the Cluster or is deemed withdrawn pursuant to Section 3.7 of this LGIP, and Transmission Provider determines a Cluster Restudy is necessary as a result, Transmission Provider shall notify Interconnection Customers in the Cluster and post on OASIS that a Cluster Restudy is required within thirty (30) Calendar Days after the Cluster Study Report Meeting. Transmission Provider shall continue with such restudies until Transmission Provider determines that no further restudies are required. If an Interconnection Customer withdraws or is deemed withdrawn pursuant to Section 3.7 of this LGIP during the Interconnection Facilities Study, or after other Interconnection Customers in the same Cluster have executed LGIAs, or requested that unexecuted LGIAs be filed, and Transmission Provider determines a Cluster Restudy is necessary, the Cluster shall be restudied. *If a Cluster Restudy is required due to a higher queued project withdrawing from the queue, or a modification of a higher or equally queued project subject to Section 4.4 of this LGIP, Transmission Provider shall so notify affected Interconnection Customers in writing. Except as provided in Section 3.7 of this LGIP in the case of withdrawing Interconnection Customers, any cost of Restudy shall be borne by Interconnection Customers being restudied.*

(5) The scope of any Cluster Restudy shall be consistent with the scope of an initial Cluster Study pursuant to Section 7.3 of this LGIP. Transmission Provider shall complete the Cluster Restudy within one hundred fifty (150) Calendar Days of [the] Transmission Provider informing [the] Interconnection Customers in the [c]*C*luster that restudy is needed. The results of the Cluster Restudy shall be combined into a single report (Cluster Restudy Report). Transmission Provider shall hold a meeting with [the] Interconnection Customers in the [c]*C*luster (Cluster Restudy Report Meeting) within ten (10) Business Days of simultaneously furnishing the Cluster Restudy Report to each Interconnection Customer in the Cluster Restudy and publishing the Cluster Restudy Report on OASIS.

If additional restudies are required, Interconnection Customer and Transmission Provider shall follow the procedures of this Section 7.5 of this LGIP until such time that Transmission Provider determines that no further restudies are required. Transmission Provider shall notify each Interconnection Customer within the Cluster when no further restudies are required.

Section 8. Interconnection Facilities Study

8.1 Interconnection Facilities Study Agreement

[Simultaneously with the delivery of the Cluster Study Report, or Cluster Restudy Report if applicable,] *Within five (5) Business Days following Transmission Provider notifying each Interconnection Customer within the Cluster that no further Cluster Restudy is required (per Section 7.5 of this LGIP),* Transmission Provider shall provide to Interconnection Customer an Interconnection Facilities Study Agreement in the form of Appendix 3 to this LGIP. Interconnection Customer shall compensate Transmission Provider for the actual cost of the Interconnection Facilities Study. Within five (5) Business Days following the Cluster Report Meeting or Cluster Restudy Report Meeting if applicable, Transmission Provider shall provide to Interconnection Customer a non-binding good faith estimate of the cost and timeframe for completing the Interconnection Facilities Study. Interconnection Customer shall execute the Interconnection Facilities Study Agreement and deliver the executed Interconnection Facilities Study Agreement to Transmission Provider within thirty (30) Calendar Days after its receipt, together with:

(1) Any required technical data;

(2) Demonstration of one-hundred percent (100%) Site Control or demonstration of a regulatory limitation and applicable deposit in lieu of Site Control provided to [the] Transmission Provider in accordance with [s]*S*ection 3.4.2 of this LGIP; and

(3) An additional deposit that brings the total Commercial Readiness Deposit submitted to [the] Transmission Provider to ten percent (10%) of [the] Interconnection Customer's Network Upgrade cost assignment identified in the Cluster Study or Cluster Restudy, if applicable, in the form of an irrevocable letter of credit,[or] cash, *a surety bond, or other form of security that is reasonably acceptable to Transmission Provider.* Transmission Provider shall refund the deposit to Interconnection Customer upon withdrawal in accordance with Section 3.7 of this LGIP.

Interconnection Customer shall promptly inform Transmission Provider of any material change to Interconnection Customer's demonstration of Site Control under Section 3.4.2(iii) of this LGIP. Upon Transmission Provider determining separately that Interconnection Customer no longer satisfies the Site Control requirement, Transmission Provider shall notify Interconnection Customer. Within ten (10) Business Days of such notification, Interconnection Customer must demonstrate compliance with the applicable requirement subject to Transmission Provider's approval, not to be unreasonably withheld. Absent such demonstration, Transmission Provider shall deem the subject Interconnection Request withdrawn pursuant to Section 3.7 of this LGIP.

8.2 Scope of Interconnection Facilities Study

The Interconnection Facilities Study shall be specific to each Interconnection Request and performed on an individual, *i.e.,* non-clustered, basis. The Interconnection Facilities Study shall specify and provide a non-binding estimate of the cost of the equipment, engineering, procurement and construction work needed to implement the conclusions of the Cluster Study Report (and any associated restudies) in accordance with Good Utility Practice to physically and electrically connect the Interconnection Facilities to the Transmission System. The Interconnection Facilities Study shall also identify the electrical switching configuration of the connection equipment, including, without limitation: the transformer, switchgear, meters, and other

station equipment; the nature and estimated cost of any Transmission Provider's Interconnection Facilities and Network Upgrades necessary to accomplish the interconnection; and an estimate of the time required to complete the construction and installation of such facilities. The Interconnection Facilities Study will also identify any potential control equipment for (1) requests for Interconnection Service that are lower than the Generating Facility Capacity, and/or (2) requests to study a Generating Facility that includes at least one electric storage resource using operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) that reflect its proposed charging behavior, as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise require the use of different operating assumptions.

8.3 Interconnection Facilities Study Procedures

Transmission Provider shall coordinate the Interconnection Facilities Study with any Affected System *Operator* pursuant to Section 3.6 of this LGIP. Transmission Provider shall utilize existing studies to the extent practicable in performing the Interconnection Facilities Study. Transmission Provider shall complete the study and issue a draft Interconnection Facilities Study Report to Interconnection Customer within the following number of days after receipt of an executed Interconnection Facilities Study Agreement: ninety (90) Calendar Days after receipt of an executed Interconnection Facilities Study Agreement, with no more than a +/− [20] *twenty* percent *(20%)* cost estimate contained in the report; or one hundred eighty (180) Calendar Days, if Interconnection Customer requests a +/− [10] *ten* percent *(10%)* cost estimate.

At the request of Interconnection Customer or at any time Transmission Provider determines that it will not meet the required time frame for completing the Interconnection Facilities Study, Transmission Provider shall notify Interconnection Customer as to the schedule status of the Interconnection Facilities Study. If Transmission Provider is unable to complete the Interconnection Facilities Study and issue a draft Interconnection Facilities Study Report within the time required, it shall notify Interconnection Customer and provide an estimated completion date and an explanation of the reasons why additional time is required.

Interconnection Customer may, within thirty (30) Calendar Days after receipt of the draft Interconnection Facilities Study Report, provide written comments to Transmission Provider, which Transmission Provider shall include in completing the final Interconnection Facilities Study Report. Transmission Provider shall issue the final Interconnection Facilities Study Report within fifteen (15) Business Days of receiving Interconnection Customer's comments or promptly upon receiving Interconnection Customer's statement that it will not provide comments. Transmission Provider may reasonably extend such fifteen (15) Business Day period upon notice to Interconnection Customer if Interconnection Customer's comments require Transmission Provider to perform additional analyses or make other significant modifications prior to the issuance of the final Interconnection Facilities Study Report. Upon request, Transmission Provider shall provide Interconnection Customer supporting documentation, workpapers, and databases or data developed in the preparation of the Interconnection Facilities Study, subject to confidentiality arrangements consistent with Section 13.1 of this LGIP.

8.4 Meeting with Transmission Provider

Within ten (10) Business Days of providing a draft Interconnection Facilities Study Report to Interconnection Customer, Transmission Provider and Interconnection Customer shall meet to discuss the results of the Interconnection Facilities Study.

8.5 Restudy

If [R]*r*estudy of the Interconnection Facilities Study is required due to a higher or equally queued project withdrawing from the queue or a modification of a higher or equally queued project pursuant to Section 4.4 of this LGIP, Transmission Provider shall so notify Interconnection Customer in writing. Transmission Provider shall ensure that such [R]*r*estudy takes no longer than sixty (60) Calendar Days from the date of notice. Except as provided in Section 3.7 of this LGIP in the case of withdrawing Interconnection Customers, any cost of [R]*r*estudy shall be borne by Interconnection Customer being restudied.

Section 9. Affected System Study

9.1 Applicability

This Section 9 outlines the duties of Transmission Provider when it receives notification that an Affected System Interconnection Customer's proposed interconnection to its host transmission provider may impact Transmission Provider's Transmission System.

9.2 *Response to Notifications*

9.2.1 Response to Initial Notification

When Transmission Provider receives *initial* notification *either following the Cluster Study or a Cluster Restudy* that an Affected System Interconnection Customer's proposed interconnection to its host transmission provider may impact Transmission Provider's Transmission System, Transmission Provider must respond in writing within twenty (20) Business Days whether it intends to conduct an Affected System Study.

By fifteen (15) Business Days after [the] Transmission Provider responds with its affirmative intent to conduct an Affected System Study, Transmission Provider shall share with Affected System Interconnection Customer(s) and the Affected System Interconnection Customer's host transmission provider a non-binding good faith estimate of the cost and the schedule to complete the Affected System Study.

9.2.2 Response to Notification of Cluster Restudy

Within five (5) Business Days of receipt of notification of Cluster Restudy, Transmission Provider will send written notification to Affected System Interconnection Customer(s) involved in the Cluster Restudy and the host transmission provider that Transmission Provider intends to delay a planned or in-progress Affected System Study until after completion of the Cluster Restudy. If Transmission Provider decides to delay the Affected System Study, it is not required to meet its obligations under Section 9 of this LGIP until the time that it receives notification from the host transmission provider that the Cluster Restudy is complete. If Transmission Provider decides to move forward with its Affected System Study despite the Cluster Restudy, then it must meet all requirements under Section 9 of this LGIP.

9.3 Affected System Queue Position

Transmission Provider must assign an Affected System Queue Position to Affected System Interconnection Customer(s) that require(s) an Affected System Study. Such Affected System Queue Position shall be assigned based upon the date of execution of the Affected System Study Agreement. Relative to [the] Transmission Provider's Interconnection Customers, this Affected System Queue Position shall be higher-queued than any Cluster that has not yet received its Cluster Study Report and shall be lower-queued than any Cluster that has already received its Cluster Study Report. Consistent with Section 9.7 of this LGIP, Transmission Provider shall study the Affected System Interconnection Customer(s) via Clustering, and all Affected System Interconnection Customers studied in the same Cluster under Section 9.7 *of this LGIP* shall be equally queued. For Affected System Interconnection Customers that are equally queued, the Affected System Queue Position shall have no bearing on the assignment of Affected System Network Upgrades identified in the applicable Affected System Study. The costs of the Affected System Network Upgrades shall be allocated among the Affected System Interconnection Customers in accordance with Section 9.9 of this LGIP.

9.4 Affected System Study Agreement/ Multiparty Affected System Study Agreement

Unless otherwise agreed, Transmission Provider shall provide to Affected System Interconnection Customer(s) an Affected System Study Agreement/Multiparty Affected System Study Agreement, in the form of Appendix 9 or Appendix 10 to this LGIP, as applicable, within ten (10) Business Days of Transmission Provider sharing the schedule for the Affected System Study per Section 9.2.*1* of this LGIP.

Upon Affected System Interconnection Customer(s)' receipt of the Affected System Study Report, Affected System Interconnection Customer(s) shall compensate Transmission Provider for the actual cost of the Affected System Study. Any difference between the study deposit and the actual cost of the Affected System Study shall be paid by or refunded to the

Affected System Interconnection Customer(s). Any invoices for the Affected System Study shall include a detailed and itemized accounting of the cost of the study. Affected System Interconnection Customer(s) shall pay any excess costs beyond the already-paid Affected System Study deposit or be reimbursed for any costs collected over the actual cost of the Affected System Study within thirty (30) Calendar Days of receipt of an invoice thereof. If Affected System Interconnection Customer(s) fail to pay such undisputed costs within the time allotted, it shall lose its Affected System Queue Position. Transmission Provider shall notify Affected System Interconnection Customer's host transmission provider of such failure to pay.

9.5 Execution of Affected System Study Agreement/Multiparty Affected System Study Agreement

Affected System Interconnection Customer(s) shall execute the Affected System Study Agreement/Multiparty Affected System Study Agreement, deliver the executed Affected System Study Agreement/Multiparty Affected System Study Agreement to Transmission Provider, and provide the Affected System Study deposit within ten (10) Business Days of receipt. *If Transmission Provider notifies Affected System Interconnection Customer(s) that it will delay the Affected System Study pursuant to Section 9.2.2 of this LGIP, Affected System Interconnection Customer(s) are neither required to execute and return the previously tendered Affected System Study/Multiparty Affected System Study Agreement nor provide the Affected System Study deposit for the previously tendered Affected System Study/Multiparty Affected System Study Agreement.*

If Affected System Interconnection Customer does not provide all required technical data when it delivers the Affected System Study Agreement/Multiparty Affected System Study Agreement, Transmission Provider shall notify the deficient Affected System Interconnection Customer, as well as the host transmission provider with which Affected System Interconnection Customer seeks to interconnect, of the *technical data* deficiency within five (5) Business Days of the receipt of the executed Affected System Study Agreement/Multiparty Affected System Study Agreement and the deficient Affected System Interconnection Customer shall cure the *technical* deficiency within ten (10) Business Days of receipt of the notice: provided, however, that such deficiency does not include failure to deliver the executed Affected System Study Agreement/Multiparty Affected System Study Agreement or deposit for the Affected System Study Agreement/Multiparty Affected System Study Agreement. If Affected System Interconnection Customer does not cure the *technical data* deficiency *within the cure period* or fails to execute the Affected System Study Agreement/Multiparty Affected System Study Agreement or provide the deposit, the Affected System Interconnection Customer shall lose its Affected System Queue Position.

9.6 Scope of Affected System Study

The Affected System Study shall evaluate the impact that any Affected System Interconnection Customer's proposed interconnection to another transmission provider's transmission system will have on the reliability of Transmission Provider's Transmission System. The Affected System Study shall consider the Base Case as well as all Generating Facilities (and with respect to (iii) below, any identified Affected System Network Upgrades associated with such higher-queued Interconnection Request) that, on the date the Affected System Study is commenced: (i) are directly interconnected to Transmission Provider's Transmission System; (ii) are directly interconnected to another transmission provider's transmission system and may have an impact on Affected System Interconnection Customer's interconnection request; (iii) have a pending higher-queued Interconnection Request to interconnect to Transmission Provider's Transmission System; and (iv) have no queue position but have executed an LGIA or requested that an unexecuted LGIA be filed with FERC. Transmission Provider has no obligation to study impacts of Affected System Interconnection Customers of which it is not notified.

The Affected System Study shall consist of a power flow, stability, and short circuit analysis. The Affected System Study *Report* will: state the assumptions upon which it is based; state the results of the analyses; and provide the potential impediments to Affected System Interconnection Customer's receipt if interconnection service on its host transmission provider's transmission system, including a preliminary indication of the cost and length of time that would be necessary to correct any problems identified in those analyses and implement the interconnection. For purposes of determining necessary Affected System Network Upgrades, the Affected System Study shall consider the level of interconnection service requested in megawatts by Affected System Interconnection Customer, unless otherwise required to study the full generating facility capacity due to safety or reliability concerns. The Affected System Study *Report* shall provide a list of facilities that are required as a result of Affected System Interconnection Customer's proposed interconnection to another transmission provider's system, a non-binding good faith estimate of cost responsibility, and a non-binding good faith estimated time to construct. The Affected System Study may consist of a system impact study, a facilities study, or some combination thereof.

9.7 Affected System Study Procedures

Transmission Provider shall use Clustering in conducting the Affected System Study and shall use existing studies to the extent practicable, when multiple Affected System Interconnection Customers that are part of a single Cluster may cause the need for Affected System Network Upgrades. Transmission Provider shall complete the Affected System Study and provide the Affected System Study Report to Affected System Interconnection Customer(s) and the host transmission provider with whom interconnection has been requested within one hundred fifty (150) Calendar Days after the receipt of the Affected System Study Agreement and deposit.

At the request of Affected System Interconnection Customer, Transmission Provider shall notify Affected System Interconnection Customer as to the status of the Affected System Study. If Transmission Provider is unable to complete the Affected System Study within the requisite time period, it shall notify Affected System Interconnection Customer(s), as well as [the] transmission provider with which Affected System Interconnection Customer seeks to interconnect, and shall provide an estimated completion date with an explanation of the reasons why additional time is required. If Transmission Provider does not meet the deadlines in this [s]*S*ection, Transmission Provider shall be subject to the financial penalties as described in Section 3.9 of this LGIP. Upon request, Transmission Provider shall provide Affected System Interconnection Customer(s) with all supporting documentation, workpapers and relevant power flow, short circuit and stability databases for the Affected System Study, subject to confidentiality arrangements consistent with Section 13.1 of this LGIP.

Transmission Provider must study an Affected System Interconnection Customer using the Energy Resource Interconnection Service modeling standard used for Interconnection Requests on its own Transmission System, regardless of the level of interconnection service that Affected System Interconnection Customer is seeking from the host transmission provider with whom it seeks to interconnect.

9.8 Meeting with Transmission Provider

Within ten (10) Business Days of providing the Affected System Study Report to Affected System Interconnection Customer(s), Transmission Provider and Affected System Interconnection Customer(s) shall meet to discuss the results of the Affected System Study.

9.9 Affected System Cost Allocation

Transmission Provider shall allocate Affected System Network Upgrade costs identified during the Affected System Study to Affected System Interconnection Customer(s) using a proportional impact method, consistent with Section 4.2.1(1)(b) of this LGIP.

9.10 Tender of Affected Systems Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement

Transmission Provider shall tender to Affected System Interconnection Customer(s) an Affected System Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement, as applicable, in the form of Appendix 11 or 12 to this LGIP, within thirty (30) Calendar Days of providing the Affected System Study Report. Within ten (10) Business Days of the receipt of the Affected System Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement, the Affected System Interconnection Customer(s) must execute the agreement or

request the agreement to be filed unexecuted with FERC. Transmission Provider shall execute the agreement or file the agreement unexecuted within five (5) Business Days after receiving direction from Affected System Interconnection Customer(s). Affected System Interconnection Customer's failure to execute the Affected System Facilities Construction Agreement/ Multiparty Affected System Facilities Construction Agreement, or failure to request the agreement to be filed unexecuted with FERC, shall result in the loss of its Affected System Queue Position.

9.11 Restudy

If restudy of the Affected System Study is required, Transmission Provider shall notify Affected System Interconnection Customer(s) in writing within thirty (30) Calendar Days of discovery of the need for restudy. Such restudy shall take no longer than sixty (60) Calendar Days from the date of notice. Any cost of restudy shall be borne by the Affected System Interconnection Customer(s) being restudied.

Section 10. Optional Interconnection Study

10.1 Optional Interconnection Study Agreement

On or after the date when Interconnection Customer receives Cluster Study results, Interconnection Customer may request, and Transmission Provider shall perform a reasonable number of Optional *Interconnection* Studies. The request shall describe the assumptions that Interconnection Customer wishes Transmission Provider to study within the scope described in Section 10.2 *of this LGIP*. Within five (5) Business Days after receipt of a request for an Optional Interconnection Study, Transmission Provider shall provide to Interconnection Customer an Optional Interconnection Study Agreement in the form of Appendix 4.

The Optional Interconnection Study Agreement shall: (i) specify the technical data that Interconnection Customer must provide for each phase of the Optional Interconnection Study, (ii) specify Interconnection Customer's assumptions as to which Interconnection Requests with earlier queue priority dates will be excluded from the Optional Interconnection Study case and assumptions as to the type of *I*[i]nterconnection *S*[s]ervice for Interconnection Requests remaining in the Optional Interconnection Study case, and (iii) Transmission Provider's estimate of the cost of the Optional Interconnection Study. To the extent known by Transmission Provider, such estimate shall include any costs expected to be incurred by any Affected System *Operator* whose participation is necessary to complete the Optional Interconnection Study. Notwithstanding the above, Transmission Provider shall not be required as a result of an Optional Interconnection Study request to conduct any additional Interconnection Studies with respect to any other Interconnection Request.

Interconnection Customer shall execute the Optional Interconnection Study Agreement within ten (10) Business Days of receipt and deliver the Optional Interconnection Study Agreement, the technical data and a $10,000 deposit to Transmission Provider.

10.2 Scope of Optional Interconnection Study

The Optional Interconnection Study will consist of a sensitivity analysis based on the assumptions specified by Interconnection Customer in the Optional Interconnection Study Agreement. The Optional Interconnection Study will also identify Transmission Provider's Interconnection Facilities and the Network Upgrades, and the estimated cost thereof, that may be required to provide transmission service or Interconnection Service based upon the results of the Optional Interconnection Study. The Optional Interconnection Study shall be performed solely for informational purposes. Transmission Provider shall use Reasonable Efforts to coordinate the study with any Affected Systems that may be affected by the types of Interconnection Services that are being studied. Transmission Provider shall utilize existing studies to the extent practicable in conducting the Optional Interconnection Study.

10.3 Optional Interconnection Study Procedures

The executed Optional Interconnection Study Agreement, the prepayment, and technical and other data called for therein must be provided to Transmission Provider within ten (10) Business Days of Interconnection Customer receipt of the Optional Interconnection Study Agreement. Transmission Provider shall use Reasonable Efforts to complete the Optional Interconnection Study within a mutually agreed upon time period specified within the Optional Interconnection Study Agreement. If Transmission Provider is unable to complete the Optional Interconnection Study within such time period, it shall notify Interconnection Customer and provide an estimated completion date and an explanation of the reasons why additional time is required. Any difference between the study payment and the actual cost of the study shall be paid to Transmission Provider or refunded to Interconnection Customer, as appropriate. Upon request, Transmission Provider shall provide Interconnection Customer supporting documentation and workpapers and databases or data developed in the preparation of the Optional Interconnection Study, subject to confidentiality arrangements consistent with Section 13.1 *of this LGIP.*

Section 11. Standard Large Generator Interconnection Agreement (LGIA)

11.1 Tender

Interconnection Customer shall tender comments on the draft Interconnection Facilities Study Report within thirty (30) Calendar Days of receipt of the report. Within thirty (30) Calendar Days after the comments are submitted or after Interconnection Customer notifies Transmission Provider that it will not provide comments, Transmission Provider shall tender a draft LGIA, together with draft appendices. The draft LGIA shall be in the form of Transmission Provider's FERC-approved standard form LGIA, which is in Appendix 5. Interconnection Customer shall execute and return the LGIA and completed draft appendices within thirty (30) Calendar Days, unless (1) the sixty (60) Calendar Day negotiation period under Section 11.2 of this LGIP has commenced, or (2) LGIA execution, or filing unexecuted, has been delayed to await the Affected System Study Report pursuant to Section 11.2.1 of this LGIP.

11.2 Negotiation

Notwithstanding Section 11.1 *of this LGIP,* at the request of Interconnection Customer, Transmission Provider shall begin negotiations with Interconnection Customer concerning the appendices to the LGIA at any time after Interconnection Customer executes the Interconnection Facilities Study Agreement. Transmission Provider and Interconnection Customer shall negotiate concerning any disputed provisions of the appendices to the draft LGIA for not more than sixty (60) Calendar Days after tender of the final Interconnection Facilities Study Report. If Interconnection Customer determines that negotiations are at an impasse, it may request termination of the negotiations at any time after tender of the draft LGIA pursuant to Section 11.1 *of this LGIP* and request submission of the unexecuted LGIA with FERC or initiate Dispute Resolution procedures pursuant to Section 13.5 *of this LGIP.* If Interconnection Customer requests termination of the negotiations, but within sixty (60) Calendar Days thereafter fails to request either the filing of the unexecuted LGIA or initiate Dispute Resolution, it shall be deemed to have withdrawn its Interconnection Request. Unless otherwise agreed by the Parties, if Interconnection Customer has not executed the LGIA, requested filing of an unexecuted LGIA, or initiated Dispute Resolution procedures pursuant to Section 13.5 *of this LGIP* within sixty (60) Calendar Days of tender of draft LGIA, it shall be deemed to have withdrawn its Interconnection Request. Transmission Provider shall provide to Interconnection Customer a final LGIA within fifteen (15) Business Days after the completion of the negotiation process.

11.2.1 Delay in LGIA Execution, or Filing Unexecuted, To Await Affected System Study Report

If Interconnection Customer has not received its Affected System Study Report from the Affected System Operator prior to the date that it would be required to execute its LGIA (or request that its LGIA be filed unexecuted) pursuant to Section 11.1 of this LGIP, Transmission Provider shall, upon request of Interconnection Customer, extend this deadline to thirty (30) Calendar Days after Interconnection Customer's receipt of the Affected System Study Report. If Interconnection Customer, after delaying LGIA execution, or requesting unexecuted filing, to await Affected System Study [Results]*Report,* decides to proceed to LGIA execution, or request unexecuted filing, without those results, it may notify Transmission Provider of its intent to proceed with LGIA execution (or request that its LGIA be filed unexecuted) pursuant to Section 11.1 of this LGIP. If Transmission Provider determines that further delay to the

LGIA execution date would cause a material impact on the cost or timing of an equal- or lower-queued [i]*I*nterconnection [c]*C*ustomer, Transmission Provider must notify Interconnection Customer of such impacts and set the deadline to execute the LGIA (or request that the LGIA be filed unexecuted) to thirty (30) Calendar Days after such notice is provided.

11.3 Execution and Filing

Simultaneously with submitting the executed LGIA to Transmission Provider, or within ten (10) Business Days after [the] Interconnection Customer requests that [the] Transmission Provider file the LGIA unexecuted at the Commission, Interconnection Customer shall provide Transmission Provider with *the following:* (1) demonstration of continued Site Control pursuant to Section 8.1(2) of this LGIP; and (2) the LGIA Deposit equal to twenty percent (20%) of Interconnection Customer's estimated Network Upgrade costs identified in the draft LGIA minus the total amount of Commercial Readiness Deposits that Interconnection Customer has provided to Transmission Provider for its Interconnection Request. Transmission Provider shall use LGIA Deposit as (or as a portion of) [the] Interconnection Customer's security required under LGIA Article 11.5. Interconnection Customer may not request to suspend its LGIA under LGIA Article 5.16 until Interconnection Customer has provided (1) and (2) to Transmission Provider. If Interconnection Customer fails to provide (1) and (2) to Transmission Provider within the thirty (30) Calendar Days allowed for returning the executed LGIA and appendices under LGIP Section 11.1, or within ten (10) Business Days after Interconnection Customer requests that Transmission Provider file the LGIA unexecuted at the Commission as allowed in this Section 11.3 of this LGIP, the Interconnection Request will be deemed withdrawn pursuant to Section 3.7 of this LGIP.

At the same time, Interconnection Customer also shall provide reasonable evidence that one or more of the following milestones in the development of the Large Generating Facility, at Interconnection Customer election, has been achieved (unless such milestone is inapplicable due to the characteristics of the Generating Facility): (i) the execution of a contract for the supply or transportation of fuel to the Large Generating Facility; (ii) the execution of a contract for the supply of cooling water to the Large Generating Facility; (iii) execution of a contract for the engineering for, procurement of major equipment for, or construction of, the Large Generating Facility; (iv) execution of a contract (or comparable evidence) for the sale of electric energy or capacity from the Large Generating Facility; or (v) application for an air, water, or land use permit.

Interconnection Customer shall either: (i) execute two originals of the tendered LGIA and return them to Transmission Provider; or (ii) request in writing that Transmission Provider file with FERC an LGIA in unexecuted form. As soon as practicable, but not later than ten (10) Business Days after receiving either the two executed originals of the tendered LGIA (if it does not conform with a FERC-approved [standard form of interconnection agreement] *Standard Large Generator Interconnection Agreement*) or the request to file an unexecuted LGIA, Transmission Provider shall file the LGIA with FERC, together with its explanation of any matters as to which Interconnection Customer and Transmission Provider disagree and support for the costs that Transmission Provider proposes to charge to Interconnection Customer under the LGIA. An unexecuted LGIA should contain terms and conditions deemed appropriate by Transmission Provider for the Interconnection Request. If the Parties agree to proceed with design, procurement, and construction of facilities and upgrades under the agreed-upon terms of the unexecuted LGIA, they may proceed pending FERC action.

11.4 Commencement of Interconnection Activities

If Interconnection Customer executes the final LGIA, Transmission Provider and Interconnection Customer shall perform their respective obligations in accordance with the terms of the LGIA, subject to modification by FERC. Upon submission of an unexecuted LGIA, Interconnection Customer and Transmission Provider shall promptly comply with the unexecuted LGIA, subject to modification by FERC.

Section 12. Construction of Transmission Provider's Interconnection Facilities and Network Upgrades

12.1 Schedule

Transmission Provider and Interconnection Customer shall negotiate in good faith concerning a schedule for the construction of Transmission Provider's Interconnection Facilities and the Network Upgrades.

12.2 Construction Sequencing

12.2.1 General

In general, the In-Service Date of an Interconnection Customer[s] seeking interconnection to the Transmission System will determine the sequence of construction of Network Upgrades.

12.2.2 Advance Construction of Network Upgrades That Are an Obligation of an Entity Other Than Interconnection Customer

An Interconnection Customer with an LGIA, in order to maintain its In-Service Date, may request that Transmission Provider advance to the extent necessary the completion of Network Upgrades that: (i) were assumed in the Interconnection Studies for such Interconnection Customer, (ii) are necessary to support such In-Service Date, and (iii) would otherwise not be completed, pursuant to a contractual obligation of an entity other than Interconnection Customer that is seeking interconnection to the Transmission System, in time to support such In-Service Date. Upon such request, Transmission Provider will use Reasonable Efforts to advance the construction of such Network Upgrades to accommodate such request; provided that Interconnection Customer commits to pay Transmission Provider: (i) any associated expediting costs and (ii) the cost of such Network Upgrades. Transmission Provider will refund to Interconnection Customer both the expediting costs and the cost of Network Upgrades, in accordance with Article 11.4 of the LGIA. Consequently, the entity with a contractual obligation to construct such Network Upgrades shall be obligated to pay only that portion of the costs of the Network Upgrades that Transmission Provider has not refunded to Interconnection Customer. Payment by that entity shall be due on the date that it would have been due had there been no request for advance construction. Transmission Provider shall forward to Interconnection Customer the amount paid by the entity with a contractual obligation to construct the Network Upgrades as payment in full for the outstanding balance owed to Interconnection Customer. Transmission Provider then shall refund to that entity the amount that it paid for the Network Upgrades, in accordance with Article 11.4 of the LGIA.

12.2.3 Advancing Construction of Network Upgrades That Are Part of an Expansion Plan of [the] Transmission Provider

An Interconnection Customer with an LGIA, in order to maintain its In-Service Date, may request that Transmission Provider advance to the extent necessary the completion of Network Upgrades that: (i) are necessary to support such In-Service Date and (ii) would otherwise not be completed, pursuant to an expansion plan of Transmission Provider, in time to support such In-Service Date. Upon such request, Transmission Provider will use Reasonable Efforts to advance the construction of such Network Upgrades to accommodate such request; provided that Interconnection Customer commits to pay Transmission Provider any associated expediting costs. Interconnection Customer shall be entitled to transmission credits, if any, for any expediting costs paid.

12.2.4 Amended Interconnection Cluster Study Report

An Interconnection Cluster Study Report will be amended to determine the facilities necessary to support the requested In-Service Date. This amended study report will include those transmission and Large Generating Facilities that are expected to be in service on or before the requested In-Service Date.

Section 13. Miscellaneous

13.1 Confidentiality

Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied by either of the Parties to the other prior to the execution of an LGIA.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential.

If requested by either Party, the other Party shall provide in writing, the basis for asserting that the information referred to in

this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

13.1.1 Scope

Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a third party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of the LGIA; or (6) is required, in accordance with Section 13.1.6 *of this LGIP,* Order of Disclosure, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under the LGIA. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the other Party that it no longer is confidential.

13.1.2 Release of Confidential Information

Neither Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), employees, consultants, or to parties who may be or considering providing financing to or equity participation with Interconnection Customer, or to potential purchasers or assignees of Interconnection Customer, on a need-to-know basis in connection with these procedures, unless such person has first been advised of the confidentiality provisions of this Section 13.1 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Section 13.1.

13.1.3 Rights

Each Party retains all rights, title, and interest in the Confidential Information that each Party discloses to the other Party. The disclosure by each Party to the other Party of Confidential Information shall not be deemed a waiver by either Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

13.1.4 No Warranties

By providing Confidential Information, neither Party makes any warranties or representations as to its accuracy or completeness. In addition, by supplying Confidential Information, neither Party obligates itself to provide any particular information or Confidential Information to the other Party nor to enter into any further agreements or proceed with any other relationship or joint venture.

13.1.5 Standard of Care

Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under these procedures or its regulatory requirements.

13.1.6 Order of Disclosure

If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires either Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the other Party with prompt notice of such request(s) or requirement(s) so that the other Party may seek an appropriate protective order or waive compliance with the terms of the LGIA. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

13.1.7 Remedies

The Parties agree that monetary damages would be inadequate to compensate a Party for the other Party's Breach of its obligations under this Section 13.1. Each Party accordingly agrees that the other Party shall be entitled to equitable relief, by way of injunction or otherwise, if the first Party Breaches or threatens to Breach its obligations under this Section 13.1, which equitable relief shall be granted without bond or proof of damages, and the receiving Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Section 13.1, but shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Section 13.1.

13.1.8 Disclosure to FERC, its Staff, or a State

Notwithstanding anything in this Section 13.1 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from one of the Parties that is otherwise required to be maintained in confidence pursuant to the LGIP, the Party shall provide the requested information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Party to the LGIA when it[s] is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner, consistent with applicable state rules and regulations.

13.1.9

Subject to the exception in Section 13.1.8 of this LGIP, any information that a Party claims is competitively sensitive, commercial or financial information (''Confidential Information'') shall not be disclosed by the other Party to any person not employed or retained by the other Party, except to the extent disclosure is (i) required by law; (ii) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (iii) otherwise permitted by consent of the other Party, such consent not to be unreasonably withheld; or (iv) necessary to fulfill its obligations under this LGIP or as a transmission service provider or a Balancing Authority Area operator including disclosing the Confidential Information to an RTO or ISO or to a subregional, regional or national reliability organization or planning group. The Party asserting confidentiality shall notify the other Party in writing of the information it claims is confidential. Prior to any disclosures of the other Party's Confidential Information under this subparagraph, or if any third party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the disclosing Party agrees to promptly notify the other Party in writing and agrees to assert confidentiality and cooperate with the other Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order or other reasonable measures.

13.1.10

This provision shall not apply to any information that was or is hereafter in the public domain (except as a result of a Breach of this provision).

13.1.11

Transmission Provider shall, at Interconnection Customer's election, destroy, in a confidential manner, or return the Confidential Information provided at the time of Confidential Information is no longer needed.

13.2 Delegation of Responsibility

Transmission Provider may use the services of subcontractors as it deems appropriate to perform its obligations under this LGIP. Transmission Provider shall remain primarily liable to Interconnection Customer for the performance of such subcontractors and compliance with its obligations of this LGIP. The subcontractor shall keep all information provided confidential and shall use such information solely for the performance of such obligation for which it was provided and no other purpose.

13.3 Obligation for Study Costs

In the event an Interconnection Customer withdraws its Interconnection Request prior to the commencement of the Cluster Study, Interconnection Customer must pay Transmission Provider the actual costs of processing its Interconnection Request. In the event an Interconnection Customer withdraws after the commencement of the Cluster Study, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Interconnection Studies. The costs of any interconnection study conducted on a clustered basis shall be allocated among each Interconnection Customer within the cluster as follows: {Transmission Provider shall include in this section a description of how the cost of any clustered interconnection study will be allocated.}

Any difference between the study deposit and the actual cost of the [applicable] Interconnection Stud*ies*[y] shall be paid by or refunded *to,* except as otherwise provided herein, to Interconnection Customers [or offset against the cost of any future Interconnection Studies associated with the applicable Cluster prior to beginning of any such future Interconnection Studies]. Any invoices for Interconnection Studies shall include a detailed and itemized accounting of the cost of each Interconnection Study. Interconnection Customers shall pay any such undisputed costs within thirty (30) Calendar Days of receipt of an invoice therefor. If [an] Interconnection Customer fails to pay such undisputed costs within the time allotted, its Interconnection Request shall be deemed withdrawn from the Cluster Study Process and will be subject to Withdrawal Penalties pursuant to Section 3.7 of this LGIP.

13.4 Third Parties Conducting Studies

If (i) at the time of the signing of an Interconnection Study Agreement there is disagreement as to the estimated time to complete an Interconnection Study, (ii) Interconnection Customer receives notice pursuant to Sections 6.3, 7.4 or 8.3 *of this LGIP* that Transmission Provider will not complete an Interconnection Study within the applicable timeframe for such Interconnection Study, or (iii) Interconnection Customer receives neither the Interconnection Study nor a notice under Sections 6.3, 7.4 or 8.3 *of this LGIP* within the applicable timeframe for such Interconnection Study, then Interconnection Customer may require Transmission Provider to utilize a third party consultant reasonably acceptable to Interconnection Customer and Transmission Provider to perform such Interconnection Study under the direction of Transmission Provider. At other times, Transmission Provider may also utilize a third party consultant to perform such Interconnection Study, either in response to a general request of Interconnection Customer, or on its own volition.

In all cases, use of a third party consultant shall be in accord with Article 26 of the LGIA (Subcontractors) and limited to situations where Transmission Provider determines that doing so will help maintain or accelerate the study process for Interconnection Customer's pending Interconnection Request and not interfere with Transmission Provider's progress on Interconnection Studies for other pending Interconnection Requests. In cases where Interconnection Customer requests use of a third party consultant to perform such Interconnection Study, Interconnection Customer and Transmission Provider shall negotiate all of the pertinent terms and conditions, including reimbursement arrangements and the estimated study completion date and study review deadline. Transmission Provider shall convey all workpapers, data bases, study results and all other supporting documentation prepared to date with respect to the Interconnection Request as soon as soon as practicable upon Interconnection Customer's request subject to the confidentiality provision in Section 13.1 *of this LGIP.* In any case, such third party contract may be entered into with either Interconnection Customer or Transmission Provider at Transmission Provider's discretion. In the case of (iii) Interconnection Customer maintains its right to submit a claim to Dispute Resolution to recover the costs of such third party study. Such third party consultant shall be required to comply with this LGIP, Article 26 of the LGIA (Subcontractors), and the relevant Tariff procedures and protocols as would apply if Transmission Provider were to conduct the Interconnection Study and shall use the information provided to it solely for purposes of performing such services and for no other purposes. Transmission Provider shall cooperate with such third party consultant and Interconnection Customer to complete and issue the Interconnection Study in the shortest reasonable time.

13.5 Disputes

13.5.1 Submission

In the event either Party has a dispute, or asserts a claim, that arises out of or in connection with the LGIA, the LGIP, or their performance, such Party (the ''disputing Party'') shall provide the other Party with written notice of the dispute or claim (''Notice of Dispute''). Such dispute or claim shall be referred to a designated senior representative of each Party for resolution on an informal basis as promptly as practicable after receipt of the Notice of Dispute by the other Party. In the event the designated representatives are unable to resolve the claim or dispute through unassisted or assisted negotiations within thirty (30) Calendar Days of the other Party's receipt of the Notice of Dispute, such claim or dispute may, upon mutual agreement of the Parties, be submitted to arbitration and resolved in accordance with the arbitration procedures set forth below. In the event the Parties do not agree to submit such claim or dispute to arbitration, each Party may exercise whatever rights and remedies it may have in equity or at law consistent with the terms of this LGIA.

13.5.2 External Arbitration Procedures

Any arbitration initiated under these procedures shall be conducted before a single neutral arbitrator appointed by the Parties. If the Parties fail to agree upon a single arbitrator within ten (10) Calendar Days of the submission of the dispute to arbitration, each Party shall choose one arbitrator who shall sit on a three-member arbitration panel. The two arbitrators so chosen shall within twenty (20) Calendar Days select a third arbitrator to chair the arbitration panel. In either case, the arbitrators shall be knowledgeable in electric utility matters, including electric transmission and bulk power issues, and shall not have any current or past substantial business or financial relationships with any party to the arbitration (except prior arbitration). The arbitrator(s) shall provide each of the Parties an opportunity to be heard and, except as otherwise provided herein, shall conduct the arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association (''Arbitration Rules'') and any applicable FERC regulations or RTO rules; provided, however, in the event of a conflict between the Arbitration Rules and the terms of this Section 13, the terms of this Section 13 shall prevail.

13.5.3 Arbitration Decisions

Unless otherwise agreed by the Parties, the arbitrator(s) shall render a decision within ninety (90) Calendar Days of appointment and shall notify the Parties in writing of such decision and the reasons therefor. The arbitrator(s) shall be authorized only to interpret and apply the provisions of the LGIA and LGIP and shall have no power to modify or change any provision of the LGIA and LGIP in any manner. The decision of the arbitrator(s) shall be final and binding upon the Parties, and judgment on the award may be entered in any court having jurisdiction. The decision of the arbitrator(s) may be appealed solely on the grounds that the conduct of the arbitrator(s), or the decision itself, violated the standards set forth in the Federal Arbitration Act or the Administrative Dispute Resolution Act. The final decision of the arbitrator must also be filed with FERC if it affects jurisdictional rates, terms and conditions of service, Interconnection Facilities, or Network Upgrades.

13.5.4 Costs

Each Party shall be responsible for its own costs incurred during the arbitration process and for the following costs, if applicable: (1) the cost of the arbitrator chosen by the Party to sit on the three member panel and one half of the cost of the third arbitrator chosen; or (2) one half the cost of the single arbitrator jointly chosen by the Parties.

13.5.5 Non-Binding Dispute Resolution Procedures

If a Party has submitted a Notice of Dispute pursuant to Section 13.5.1 *of this LGIP,* and

the Parties are unable to resolve the claim or dispute through unassisted or assisted negotiations within the thirty (30) Calendar Days provided in that section, and the Parties cannot reach mutual agreement to pursue the Section 13.5 arbitration process, a Party may request that Transmission Provider engage in Non-binding Dispute Resolution pursuant to this [s]*S*ection by providing written notice to Transmission Provider (''Request for Non-binding Dispute Resolution''). Conversely, either Party may file a Request for Non-binding Dispute Resolution pursuant to this [s]*S*ection without first seeking mutual agreement to pursue the Section 13.5 arbitration process. The process in *this* Section 13.5.5 shall serve as an alternative to, and not a replacement of, the Section 13.5 arbitration process. Pursuant to this process, a Transmission Provider must within *thirty* (30) *Calendar* [d]*D*ays of receipt of the Request for Non-binding Dispute Resolution appoint a neutral decision-maker that is an independent subcontractor that shall not have any current or past substantial business or financial relationships with either Party. Unless otherwise agreed by the Parties, the decision-maker shall render a decision within sixty (60) Calendar Days of appointment and shall notify the Parties in writing of such decision and reasons therefore. This decision-maker shall be authorized only to interpret and apply the provisions of the LGIP and LGIA and shall have no power to modify or change any provision of the LGIP and LGIA in any manner. The result reached in this process is not binding, but, unless otherwise agreed, the Parties may cite the record and decision in the non-binding dispute resolution process in future dispute resolution processes, including in a Section 13.5 arbitration, or in a Federal Power Act section 206 complaint. Each Party shall be responsible for its own costs incurred during the process and the cost of the decision-maker shall be divided equally among each Party to the dispute.

13.6 Local Furnishing Bonds

13.6.1 Transmission Providers That Own Facilities Financed by Local Furnishing Bonds

This provision is applicable only to a Transmission Provider that has financed facilities for the local furnishing of electric energy with tax-exempt bonds, as described in Section 142(f) of the Internal Revenue Code (''local furnishing bonds''). Notwithstanding any other provision of this LGIA and LGIP, Transmission Provider shall not be required to provide Interconnection Service to Interconnection Customer pursuant to this LGIA and LGIP if the provision of such Transmission Service would jeopardize the tax-exempt status of any local furnishing bond(s) used to finance Transmission Provider's facilities that would be used in providing such Interconnection Service.

13.6.2 Alternative Procedures for Requesting Interconnection Service

If Transmission Provider determines that the provision of Interconnection Service requested by Interconnection Customer would jeopardize the tax-exempt status of any local furnishing bond(s) used to finance its facilities that would be used in providing such Interconnection Service, it shall advise [the] Interconnection Customer within thirty (30) Calendar Days of receipt of the Interconnection Request.

Interconnection Customer thereafter may renew its request for interconnection using the process specified in [Article]*Section* 5.2(ii) of [the] Transmission Provider's Tariff.

13.7 Engineering & Procurement ('E&P') Agreement

Prior to executing an LGIA, an Interconnection Customer may, in order to advance the implementation of its interconnection, request and Transmission Provider shall offer Interconnection Customer, an E&P Agreement that authorizes Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection. However, Transmission Provider shall not be obligated to offer an E&P Agreement if Interconnection Customer is in Dispute Resolution as a result of an allegation that Interconnection Customer has failed to meet any milestones or comply with any prerequisites specified in other parts of the LGIP. The E&P Agreement is an optional procedure and it will not alter Interconnection Customer's Queue Position or In-Service Date. The E&P Agreement shall provide for Interconnection Customer to pay the cost of all activities authorized by Interconnection Customer and to make advance payments or provide other satisfactory security for such costs.

Interconnection Customer shall pay the cost of such authorized activities and any cancellation costs for equipment that is already ordered for its interconnection, which cannot be mitigated as hereafter described, whether or not such items or equipment later become unnecessary. If Interconnection Customer withdraws its Interconnection Request or either Party terminates the E&P Agreement, to the extent the equipment ordered can be canceled under reasonable terms, Interconnection Customer shall be obligated to pay the associated cancellation costs. To the extent that the equipment cannot be reasonably canceled, Transmission Provider may elect: (i) to take title to the equipment, in which event Transmission Provider shall refund Interconnection Customer any amounts paid by Interconnection Customer for such equipment and shall pay the cost of delivery of such equipment, or (ii) to transfer title to and deliver such equipment to Interconnection Customer, in which event Interconnection Customer shall pay any unpaid balance and cost of delivery of such equipment.

Appendix 1 to LGIP

Interconnection Request for a Large Generating Facility

1. The undersigned Interconnection Customer submits this request to interconnect its Large Generating Facility with Transmission Provider's Transmission System pursuant to a Tariff.

2. This Interconnection Request is for (check one):

____ A proposed new Large Generating Facility.

____ An increase in the generating capacity or a Material Modification of an existing Generating Facility.

3. The type of interconnection service requested (check one):

____ Energy Resource Interconnection Service.

____ Network Resource Interconnection Service.

4. ____ Check here only if Interconnection Customer requesting Network Resource Interconnection Service also seeks to have its Generating Facility studied for Energy Resource Interconnection Service.

5. Interconnection Customer provides the following information:

a. Address or location or the proposed new Large Generating Facility site (to the extent known) or, in the case of an existing Generating Facility, the name and specific location of the existing Generating Facility;

b. Maximum summer at ____ degrees C and winter at ____ degrees C megawatt electrical output of the proposed new Large Generating Facility or the amount of megawatt increase in the generating capacity of an existing Generating Facility;

c. General description of the equipment configuration;

d. Commercial Operation Date (Day, Month, and Year);

e. Name, address, telephone number, and email address of Interconnection Customer's contact person;

f. Approximate location of the proposed Point of Interconnection (optional);

g. Interconnection Customer Data (set forth in Attachment A);

h. Primary frequency response operating range for electric storage resources;

i. Requested capacity (in MW) of Interconnection Service (if lower than the Generating Facility Capacity);

j. If applicable, (1) the requested operating assumptions (*i.e.,* whether the interconnecting Generating Facility will or will not charge at peak load) to be used by Transmission Provider that reflect the proposed charging behavior of a Generating Facility that includes at least one electric storage resource, and (2) a description of any control technologies (software and/or hardware) that will limit the operation of the Generating Facility to its intended operation.

6. Applicable deposit amount as specified in the LGIP.

7. Evidence of Site Control as specified in the LGIP (check one).

____ Is attached to this Interconnection Request.

____ Will be provided at a later date in accordance with this LGIP.

8. This Interconnection Request shall be submitted to the representative indicated below:

{To be completed by Transmission Provider}

9. Representative of Interconnection Customer to contact:

{To be completed by Interconnection Customer}

10. This Interconnection Request is submitted by:

Name of Interconnection Customer: _____

By (signature): _____ Date: _____
Name (type or print): _____

Models for Non-Synchronous Generators

For a non-synchronous Large Generating Facility, Interconnection Customer shall provide (1) a validated user-defined root mean squared (RMS) positive sequence dynamics model; (2) an appropriately parameterized generic library RMS positive sequence dynamics model, including model block diagram of the inverter control and plant control systems, as defined by the selection in Table 1 or a model otherwise approved by the Western Electricity Coordinating Council, that corresponds to Interconnection Customer's Large Generating Facility; and (3) if applicable, a validated electromagnetic transient model if Transmission Provider performs an electromagnetic transient study as part of the interconnection study process. A user-defined model is a set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly software based and represents the entities' control strategies but does not necessarily correspond to any generic library model. Interconnection Customer must also demonstrate that the model is validated by providing evidence that the equipment behavior is consistent with the model behavior (*e.g.,* an attestation from Interconnection Customer that the model accurately represents the entire Large Generating Facility; attestations from each equipment manufacturer that the user defined model accurately represents the component of the Large Generating Facility; or test data).

Appendix 2 to LGIP

Cluster Study Agreement

This Agreement is made and entered into this ____day of_____, 20____ by and between _____, a _____ organized and existing under the laws of the State of_____, (''Interconnection Customer,'') and _____a _____ organized and existing under the laws of the State of ____, (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____; and

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; *and*

Whereas, Interconnection Customer has requested Transmission Provider to perform a Cluster Study to assess the impact of interconnecting the Large Generating Facility to the Transmission System, and of any Affected Systems; *and*

Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause to be performed a Cluster Study consistent with Section 7.0 of this LGIP in accordance with the Tariff.

3.0 The scope of the Cluster Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The Cluster Study will be based upon the technical information provided by Interconnection Customer in the Interconnection Request, subject to any modifications in accordance with Section 4.4 of this LGIP. Transmission Provider reserves the right to request additional technical information from Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the Cluster Study.

5.0 The Cluster Study Report shall provide the following information:

—identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;

—identification of any thermal overload or voltage limit violations resulting from the interconnection;

—identification of any instability or inadequately damped response to system disturbances resulting from the interconnection and

—description and non-binding, good faith estimated cost of facilities required to interconnect the Large Generating Facility to the Transmission System and to address the identified short circuit, instability, and power flow issues.

6.0 Transmission Provider's good faith estimate for the time of completion of the Cluster Study is {insert date}.

Upon receipt of the Cluster Study Report, Transmission Provider shall charge and Interconnection Customer shall pay its share of the actual costs of the Cluster Study, consistent with Section 13.3 of this LGIP.

Any difference between the deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.

7.0 Miscellaneous. The Cluster Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and *the* LGIA.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 2

Cluster Study Agreement

Assumptions Used in Conducting the Cluster Study

The Cluster Study will be based upon the technical information provided by [the] Interconnection Customer in the Interconnection Request, subject to any modifications in accordance with Section 4.4 of this LGIP, and the following assumptions:

Designation of Point of Interconnection and configuration to be studied.

Designation of alternative Point(s) of Interconnection and configuration.

{Above assumptions to be completed by Interconnection Customer and other assumptions to be provided by Interconnection Customer and Transmission Provider}

Appendix 3 to LGIP

Interconnection Facilities Study Agreement

This agreement is made and entered into this ____ day of _____, 20____by and between _____, a _____organized and existing under the laws of the State of _____, (''Interconnection Customer,'') and _____ a _____ *organized and* existing under the laws of the State of _____, (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated __ ; and

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; *and*

Whereas, Transmission Provider has completed a[n Interconnection] Cluster Study (the ''Cluster Study'') and provided the results of said study to Interconnection Customer; and

Whereas, Interconnection Customer has requested Transmission Provider to perform an Interconnection Facilities Study to specify and estimate the cost of the equipment, engineering, procurement and construction work needed to implement the conclusions of the Cluster Study in accordance with Good Utility Practice to physically and electrically connect the Large Generating Facility to the Transmission System.

Now, Therefore, in consideration of and subject to the mutual covenants contained herein the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in Transmission Provider's FERC-approved LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause an Interconnection Facilities Study consistent with Section 8.0 of this LGIP to be performed in accordance with the Tariff.

3.0 The scope of the Interconnection Facilities Study shall be subject to the assumptions set forth in Attachment A and the data provided in Attachment B to this Agreement.

4.0 The Interconnection Facilities Study Report (i) shall provide a description, estimated cost of (consistent with Attachment A), schedule for required facilities to interconnect the Large Generating Facility to the Transmission System and (ii) shall address the short circuit, instability, and power flow issues identified in the Cluster Study.

5.0 Interconnection Customer shall provide a Commercial Readiness Deposit per Section 8.1 of this LGIP to enter the Interconnection Facilities Study. The time for completion of the Interconnection Facilities Study is specified in Attachment A.

6.0 Miscellaneous. The Interconnection Facilities Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP and the LGIA.

In witness whereof, the Parties have caused this Agreement to be duly executed by their

duly authorized officers or agents on the day and year first above written.

Attachment A To Appendix 3

Interconnection Facilities Study Agreement

Interconnection Customer Schedule Election for Conducting the Interconnection Facilities Study

Transmission Provider shall complete the study and issue a draft Interconnection Facilities Study Report to Interconnection Customer within the following number of days after receipt of an executed copy of this Interconnection Facilities Study Agreement:

—ninety (90) Calendar Days with no more than a +/− 20 percent cost estimate contained in the report, or

—one hundred eighty (180) Calendar Days with no more than a +/− 10 percent cost estimate contained in the report.

Interconnection Facilities

Study Agreement

DATA FORM TO BE PROVIDED BY INTERCONNECTION CUSTOMER WITH THE

INTERCONNECTION FACILITIES STUDY AGREEMENT

Provide location plan and simplified one-line diagram of the plant and station facilities. For staged projects, please indicate future generation, transmission circuits, etc.

One set of metering is required for each generation connection to the new ring bus or existing Transmission Provider station. Number of generation connections:

On the one-line diagram indicate the generation capacity attached at each metering location. (Maximum load on CT/PT)

On the one-line diagram indicate the location of auxiliary power. (Minimum load on CT/PT) Amps

Will an alternate source of auxiliary power be available during CT/PT maintenance?

_____Yes _____ No

Will a transfer bus on the generation side of the metering require that each meter set be designed for the total plant generation? _____Yes _____No (Please indicate on one line diagram).

What type of control system or PLC will be located at Interconnection Customer's Large Generating Facility?

_____

_____

What protocol does the control system or PLC use?

Please provide a 7.5-minute quadrangle of the site. Sketch the plant, station, transmission line, and property line.

Physical dimensions of the proposed interconnection station:

Bus length from generation to interconnection station:

Line length from interconnection station to Transmission Provider's transmission line.

Tower number observed in the field. (Painted on tower leg)* _____

Number of third party easements required for transmission lines*:

* To be completed in coordination with Transmission Provider.

Is the Large Generating Facility in [the] Transmission Provider's service area?

_____Yes _____No Local provider: _____

Please provide proposed schedule dates:

Begin Construction	Date: _____
Generator step-up transformer receives back feed power	Date: _____
Generation Testing	Date: _____
Commercial Operation	Date: _____

Appendix 4 to LGIP

Optional Interconnection Study Agreement

This agreement is made and entered into this ____ day of _____, 20____ by and between _____, a _____ organized and existing under the laws of the State of ____ ____, (''Interconnection Customer,'') and ____ ____ a _____ *organized and* existing under the laws of the State of ____-____, (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____; *and*

Whereas, Interconnection Customer is proposing to establish an interconnection with the Transmission System; and

Whereas, Interconnection Customer has submitted to Transmission Provider an Interconnection Request; and

Whereas, on or after the date when Interconnection Customer receives the Cluster Study results, Interconnection Customer has further requested that Transmission Provider prepare an Optional Interconnection Study;

Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in Transmission Provider's FERC-approved LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause an Optional Interconnection Study consistent with Section 10.0 of this LGIP to be performed in accordance with the Tariff.

3.0 The scope of the Optional Interconnection Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The Optional Interconnection Study shall be performed solely for informational purposes.

5.0 The Optional Interconnection Study report shall provide a sensitivity analysis based on the assumptions specified by Interconnection Customer in Attachment A to this Agreement. The Optional Interconnection Study will identify Transmission Provider's Interconnection Facilities and the Network Upgrades, and the estimated cost thereof, that may be required to provide transmission service or interconnection service based upon the assumptions specified by Interconnection Customer in Attachment A.

6.0 Interconnection Customer shall provide a deposit of $10,000 for the performance of the Optional Interconnection Study. Transmission Provider's good faith estimate for the time of completion of the Optional Interconnection Study is {insert date}.

Upon receipt of the Optional Interconnection Study, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Optional Study.

Any difference between the initial payment and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.

7.0 Miscellaneous. The Optional Interconnection Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP and the LGIA.

In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Appendix 5 to LGIP

Large Generator Interconnection Agreement (See LGIA)

Appendix 6 to LGIP

Interconnection Procedures for a Wind Generating Plant

Appendix 6 sets forth procedures specific to a wind generating plant. All other requirements of this LGIP continue to apply to wind generating plant interconnections.

A. Special Procedures Applicable to Wind Generators

The wind plant Interconnection Customer, in completing the Interconnection Request required by Section 3.3 of this LGIP, may provide to [the] Transmission Provider a set of preliminary electrical design specifications depicting the wind plant as a single equivalent generator. Upon satisfying these and other applicable Interconnection Request conditions, the wind plant may enter the queue and receive the base case data as provided for in this LGIP.

No later than six months after submitting an Interconnection Request completed in this manner, the wind plant Interconnection Customer must submit completed detailed electrical design specifications and other data (including collector system layout data) needed to allow [the] Transmission Provider to complete the Cluster Study.

Appendix 7 to LGIP

Transitional Cluster Study Agreement

This agreement is made and entered into this ____ day of _____, 20____ by and between _____, a _____ organized and existing under the laws of the State of ____ ____ (''Interconnection Customer''), and ____ ____, a _____ organized and existing under the laws of the State of _____ (''Transmission Provider''). Interconnection

Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____;

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; and

Whereas, Interconnection Customer has requested Transmission Provider to perform a ''Transitional Cluster Study,'' which combines the Cluster Study and Interconnection Facilities Study, in a single cluster study, followed by any needed restudies, to specify and estimate the cost of the equipment, engineering, procurement, and construction work needed to physically and electrically connect the Large Generating Facility to Transmission Provider's Transmission System; and

Whereas, Interconnection Customer has a valid Queue Position as of the {Transmission Provider to insert *Commission-approved* effective date of compliance filing}.

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Interconnection Customer elects, and Transmission Provider shall cause to be performed, a Transitional Cluster Study.

3.0 The Transitional Cluster Study shall be based upon the technical information provided by Interconnection Customer in the Interconnection Request. Transmission Provider reserves the right to request additional technical information from Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the Transitional Cluster Study and Interconnection Customer shall provide such data as quickly as reasonable.

4.0 Pursuant to Section 5.1.1.2 of this LGIP, the interim Transitional Cluster Study Report shall provide the information below:

—identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;

—identification of any thermal overload or voltage limit violations resulting from the interconnection;

—identification of any instability or inadequately damped response to system disturbances resulting from the interconnection; and

—Transmission Provider's Interconnection Facilities and Network Upgrades that are expected to be required as a result of the Interconnection Request(s) and a non-binding, good faith estimate of cost responsibility and a non-binding, good faith estimated time to construct.

5.0 Pursuant to Section 5.1.1.2 of this LGIP, the final Transitional Cluster Study Report shall: (1) provide all the information included in the interim Transitional Cluster Study Report; (2) provide a description of, estimated cost of, and schedule for required facilities to interconnect the Generating Facility to the Transmission System; and (3) address the short circuit, instability, and power flow issues identified in the interim Transitional Cluster Study Report.

6.0 Interconnection Customer has met the requirements described in Section 5.1.1.2 of this LGIP.

7.0 Interconnection Customer previously provided a deposit for the performance of Interconnection Studies. Upon receipt of the final Transitional Cluster Study Report, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Transitional Cluster Study. Any difference between the study deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, in accordance with the provisions of Section 13.3 of this LGIP.

8.0 Miscellaneous. The Transitional Cluster Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and the LGIA.

In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Appendix 8 to LGIP

Transitional Serial Interconnection Facilities Study Agreement

This agreement is made and entered into this ____ day of ____, 20____, by and between _____, a _____ organized and existing under the laws of the State of _____ (''Interconnection Customer'') and _____, a _____ organized and existing under the laws of the State of _____ (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Large Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated ____; and

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; and

Whereas, Interconnection Customer has requested Transmission Provider to continue processing its Interconnection Facilities Study to specify and estimate the cost of the equipment, engineering, procurement, and construction work needed to implement the conclusions of the final interconnection system impact study (from the previously effective serial study process) in accordance with Good Utility Practice to physically and electrically connect the Large Generating Facility to the Transmission System; and

Whereas, Transmission Provider has provided an Interconnection Facilities Study Agreement to [the] Interconnection Customer on or before {Transmission Provider to insert *Commission-approved* effective date of compliance filing}.

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause to be performed an Interconnection Facilities Study consistent with Section 8 of this LGIP.

3.0 The scope of the Interconnection Facilities Study shall be subject to the assumptions set forth in Attachment A to this Agreement, which shall be the same assumptions as the previous Interconnection Facilities Study Agreement executed by [the] Interconnection Customer.

4.0 The Interconnection Facilities Study Report shall: (1) provide a description, estimated cost of (consistent with Attachment A), and schedule for required facilities to interconnect the Large Generating Facility to the Transmission System; and (2) address the short circuit, instability, and power flow issues identified in the most recently published Cluster Study Report.

5.0 Interconnection Customer has met the requirements described in Section 5.1.1.1 of this LGIP. The time for completion of the Interconnection Facilities Study is specified in Attachment A, and shall be no later than *one hundred fifty* (150) Calendar Days after {Transmission Provider to insert *Commission-approved* effective date [accepted on]*of* compliance *filing*}.

6.0 Interconnection Customer previously provided a deposit of _____ dollars ($____) for the performance of the Interconnection Facilities Study.

7.0 Upon receipt of the Interconnection Facilities Study results, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Interconnection Facilities Study.

8.0 Any difference between the study deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.

9.0 Miscellaneous. The Interconnection Facilities Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices,

Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and this LGIA.

In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 8

Transitional Serial Interconnection Facilities Study Agreement

Assumptions Used in Conducting the Transitional Serial Interconnection Facilities Study

{Assumptions to be completed by Interconnection Customer and Transmission Provider}

Appendix 9 to LGIP

Two-Party Affected System Study Agreement

This agreement is made and entered into this ____ day of _____, 20, by and between _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer) and _____, a organized and existing under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Affected System Interconnection Customer is proposing to develop a {description of generating facility or generating capacity addition to an existing generating facility} consistent with the interconnection request submitted by Affected System Interconnection Customer to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customer desires to interconnect the {generating facility} with {name of host transmission provider}'s transmission system;

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Transmission Provider shall coordinate with Affected System Interconnection Customer to perform an Affected System Study consistent with Section 9 of this LGIP.

3.0 The scope of the Affected System Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The Affected System Study will be based upon the technical information provided by Affected System Interconnection Customer and {name of host transmission provider}. Transmission Provider reserves the right to request additional technical information from Affected System Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the Affected System Study.

5.0 The Affected System Study shall provide the following information:

—identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;

—identification of any thermal overload or voltage limit violations resulting from the interconnection;

—identification of any instability or inadequately damped response to system disturbances resulting from the interconnection;

—non-binding, good faith estimated cost and time required to construct facilities required on Transmission Provider's Transmission System to accommodate the interconnection of the {generating facility} to the transmission system of the host transmission provider; and

—description of how such facilities will address the identified short circuit, instability, and power flow issues.

6.0 Affected System Interconnection Customer shall provide a deposit of ____ for performance of the Affected System Study. Upon receipt of the results of the Affected System Study by the Affected System Interconnection Customer, Transmission Provider shall charge, and Affected System Interconnection Customer shall pay, the actual cost of the Affected System Study. Any difference between the deposit and the actual cost of the Affected System Study shall be paid by or refunded to Affected System Interconnection Customer, as appropriate, including interest calculated in accordance with section 35.19a(a)(2) of FERC's regulations.

7.0 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability, and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Two-Party Affected System Study Agreement

Assumptions Used in Conducting the Affected System Study

The Affected System Study will be based upon the following assumptions:

{Assumptions to be completed by Affected System Interconnection Customer and Transmission Provider}

Appendix 10 to LGIP

Multiparty Affected System Study Agreement

This agreement is made and entered into this ____ day of _____, 20 ____, by and among _____, a _____ organized and existing under the laws of the State of ____ ____ (Affected System Interconnection Customer); _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); and _____, a _____ organized and existing under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customers and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.'' When it is not important to differentiate among them, Affected System Interconnection Customers each may be referred to as ''Affected System Interconnection Customer'' or collectively as the ''Affected System Interconnection Customers.''

Recitals

Whereas, Affected System Interconnection Customers are proposing to develop {description of generating facilities or generating capacity additions to an existing generating facility}, consistent with the interconnection requests submitted by Affected System Interconnection Customers to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customers desire to interconnect the {generating facilities} with {name of host transmission provider}'s transmission system;

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Transmission Provider shall coordinate with Affected System Interconnection Customers to perform an Affected System Study consistent with Section 9 of this LGIP.

3.0 The scope of the Affected System Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The Affected System Study will be based upon the technical information provided by Affected System Interconnection Customers and {name of host transmission provider}. Transmission Provider reserves the right to request additional technical information from Affected System Interconnection Customers as may reasonably become necessary consistent with Good Utility Practice during the course of the Affected System Study.

5.0 The Affected System Study shall provide the following information:

—identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;

—identification of any thermal overload or voltage limit violations resulting from the interconnection;

—identification of any instability or inadequately damped response to system disturbances resulting from the interconnection;

—non-binding, good faith estimated cost and time required to construct facilities required on Transmission Provider's Transmission System to accommodate the interconnection of the {generating facilities} to the transmission system of the host transmission provider; and

—description of how such facilities will address the identified short circuit, instability, and power flow issues.

6.0 Affected System Interconnection Customers shall each provide a deposit of ____ for performance of the Affected System Study. Upon receipt of the results of the Affected System Study by the Affected System Interconnection Customers, Transmission Provider shall charge, and Affected System Interconnection Customers shall pay, the actual cost of the Affected System Study. Any difference between the deposit and the actual cost of the Affected System Study shall be paid by or refunded to Affected System Interconnection Customers, as appropriate, including interest calculated in accordance with section 35.19a(a)(2) of FERC's regulations.

7.0 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability, and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 10

Multiparty Affected System Study Agreement

Assumptions Used in Conducting the Multiparty Affected System Study

The Affected System Study will be based upon the following assumptions:

{Assumptions to be completed by Affected System Interconnection Customers and Transmission Provider}

Appendix 11 to LGIP

Two-Party Affected System Facilities Construction Agreement

This agreement is made and entered into this ____ day of _____, 20____, by and between _____, organized and existing under the laws of the State of _____ (Affected System Interconnection Customer) and _____, an entity organized *and existing* under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customer and Transmission Provider each may be referred to as a ''Party'' or collectively as the ''Parties.''

Recitals

Whereas, Affected System Interconnection Customer is proposing to develop a {description of generating facility or generating capacity addition to an existing generating facility} consistent with the interconnection request submitted by Affected System Interconnection Customer to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customer desires to interconnect the {generating facility} to {name of host transmission provider}'s transmission system; and

Whereas, additions, modifications, and upgrade(s) must be made to certain existing facilities of Transmission Provider's Transmission System to accommodate such interconnection; and

Whereas, Affected System Interconnection Customer has requested, and Transmission Provider has agreed, to enter into this Agreement for the purpose of facilitating the construction of necessary Affected System Network Upgrade(s);

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

Article 1—Definitions

When used in this Agreement, with initial capitalization, the terms specified and not otherwise defined in this Agreement shall have the meanings indicated in this LGIP.

Article 2—Term of Agreement

2.1 Effective Date. This Agreement shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by FERC.

2.2 Term.

2.2.1 General. This Agreement shall become effective as provided in Article 2.1 and shall continue in full force and effect until the earlier of (1) the final repayment, where applicable, by Transmission Provider of the amount funded by Affected System Interconnection Customer for Transmission Provider's design, procurement, construction and installation of the Affected System Network Upgrade(s) provided in Appendix A; (2) the Parties agree to mutually terminate this Agreement; (3) earlier termination is permitted or provided for under Appendix A of this Agreement; or (4) Affected System Interconnection Customer terminates this Agreement after providing Transmission Provider with written notice at least sixty (60) Calendar Days prior to the proposed termination date, provided that Affected System Interconnection Customer has no outstanding contractual obligations to Transmission Provider under this Agreement. No termination of this Agreement shall be effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination. The term of this Agreement may be adjusted upon mutual agreement of the Parties if (1) the commercial operation date for the {generating facility} is adjusted in accordance with the rules and procedures established by {name of host transmission provider} or (2) the in-service date for the Affected System Network Upgrade(s) is adjusted in accordance with the rules and procedures established by Transmission Provider.

2.2.2 Termination Upon Default. Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 5 of this Agreement where Breach and Breaching Party are defined in Article 5. Defaulting Party shall mean the Party that is in Default. In the event of a Default by a Party, the non-Defaulting Party shall have the termination rights described in Articles 5 and 6; provided, however, Transmission Provider may not terminate this Agreement if Affected System Interconnection Customer is the Defaulting Party and compensates Transmission Provider within thirty (30) Calendar Days for the amount of damages billed to Affected System Interconnection Customer by Transmission Provider for any such damages, including costs and expenses, incurred by Transmission Provider as a result of such Default.

2.2.3 Consequences of Termination. In the event of a termination by either Party, other than a termination by Affected System Interconnection Customer due to a Default by Transmission Provider, Affected System Interconnection Customer shall be responsible for the payment to Transmission

Provider of all amounts then due and payable for construction and installation of the Affected System Network Upgrade(s) (including, without limitation, any equipment ordered related to such construction), plus all out-of-pocket expenses incurred by Transmission Provider in connection with the construction and installation of the Affected System Network Upgrade(s), through the date of termination, and, in the event of the termination of the entire Agreement, any actual costs which Transmission Provider reasonably incurs in (1) winding up work and construction demobilization and (2) ensuring the safety of persons and property and the integrity and safe and reliable operation of Transmission Provider's Transmission System. Transmission Provider shall use Reasonable Efforts to minimize such costs.

2.2.4 Reservation of Rights. Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and Affected System Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations thereunder, except to the extent that the Parties otherwise mutually agree as provided herein.

2.3 Filing. Transmission Provider shall file this Agreement (and any amendment hereto) with the appropriate Governmental Authority, if required. Affected System Interconnection Customer may request that any information so provided be subject to the confidentiality provisions of Article 8. If Affected System Interconnection Customer has executed this Agreement, or any amendment thereto, Affected System Interconnection Customer shall reasonably cooperate with Transmission Provider with respect to such filing and to provide any information reasonably requested by Transmission Provider needed to comply with applicable regulatory requirements.

2.4 Survival. This Agreement shall continue in effect after termination, to the extent necessary, to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this Agreement; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this Agreement or other applicable agreements, to disconnect, remove, or salvage its own facilities and equipment.

2.5 Termination Obligations. Upon any termination pursuant to this Agreement, Affected System Interconnection Customer shall be responsible for the payment of all costs or other contractual obligations incurred prior to the termination date, including previously incurred capital costs, penalties for early termination, and costs of removal and site restoration.

Article 3—Construction of Affected System Network Upgrade(s)

3.1 Construction.

3.1.1 Transmission Provider Obligations. Transmission Provider shall (or shall cause such action to) design, procure, construct, and install, and Affected System Interconnection Customer shall pay, consistent with Article 3.2, the costs of all Affected System Network Upgrade(s) identified in Appendix A. All Affected System Network Upgrade(s) designed, procured, constructed, and installed by Transmission Provider pursuant to this Agreement shall satisfy all requirements of applicable safety and/or engineering codes and comply with Good Utility Practice, and further, shall satisfy all Applicable Laws and Regulations. Transmission Provider shall not be required to undertake any action which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, or any Applicable Laws and Regulations.

3.1.2 Suspension of Work.

3.1.2.1 Right to Suspend. Affected System Interconnection Customer must provide to Transmission Provider written notice of its request for suspension. Only the milestones described in the Appendices of this Agreement are subject to suspension under this Article 3.1.2. Affected System Network Upgrade(s) will be constructed on the schedule described in the Appendices of this Agreement unless: (1) construction is prevented by the order of a Governmental Authority; (2) the Affected System Network Upgrade(s) are not needed by any other Interconnection Customer; or (3) Transmission Provider determines that a Force Majeure event prevents construction. In the event of (1), (2), or (3), any security paid to Transmission Provider under Article 4.1 of this Agreement shall be released by Transmission Provider upon the determination by Transmission Provider that the Affected System Network Upgrade(s) will no longer be constructed. If suspension occurs, Affected System Interconnection Customer shall be responsible for the costs which Transmission Provider incurs (i) in accordance with this Agreement prior to the suspension; (ii) in suspending such work, including any costs incurred to perform such work as may be necessary to ensure the safety of persons and property and the integrity of Transmission Provider's Transmission System and, if applicable, any costs incurred in connection with the cancellation of contracts and orders for material which Transmission Provider cannot reasonably avoid; and (iii) reasonably incurs in winding up work and construction demobilization; provided, however, that, prior to canceling any such contracts or orders, Transmission Provider shall obtain Affected System Interconnection Customer's authorization. Affected System Interconnection Customer shall be responsible for all costs incurred in connection with Affected System Interconnection Customer's failure to authorize cancellation of such contracts or orders.

Interest on amounts paid by Affected System Interconnection Customer to Transmission Provider for the design, procurement, construction, and installation of the Affected System Network Upgrade(s) shall not accrue during periods in which Affected System Interconnection Customer has suspended construction under this Article 3.1.2.

Transmission Provider shall invoice Affected System Interconnection Customer pursuant to Article 4 and will use Reasonable Efforts to minimize its costs. In the event Affected System Interconnection Customer suspends work by Affected System Transmission Provider required under this Agreement pursuant to this Article 3.1.2.1, and has not requested Affected System Transmission Provider to recommence the work required under this Agreement on or before the expiration of three (3) years following commencement of such suspension, this Agreement shall be deemed terminated. The three-year period shall begin on the date the suspension is requested, or the date of the written notice to Affected System Transmission Provider, whichever is earlier, if no effective date of suspension is specified.

[3.1.2.2 Recommencing of Work. If Affected System Interconnection Customer requests that Transmission Provider recommence construction of Affected System Network Upgrade(s), Transmission Provider shall have no obligation to afford such work the priority it would have had but for the prior actions of Affected System Interconnection Customer to suspend the work. In such event, Affected System Interconnection Customer shall be responsible for any costs incurred in recommencing the work. All recommenced work shall be completed pursuant to an amended schedule for the interconnection agreed to by the Parties. Transmission Provider has the right to conduct a restudy of the Affected System Study if conditions have materially changed subsequent to the request to suspend. Affected System Interconnection Customer shall be responsible for the costs of any studies or restudies required.**]**

[3.1.2.3 Right to Suspend Due to Default. Transmission Provider reserves the right, upon written notice to Affected System Interconnection Customer, to suspend, at any time, work by Transmission Provider due to Default by Affected System Interconnection Customer. Affected System Interconnection Customer shall be responsible for any additional expenses incurred by Transmission Provider associated with the construction and installation of the Affected System Network Upgrade(s) (as set forth in Article 2.2.3) upon the occurrence of either a Breach that Affected System Interconnection Customer is unable to cure-

pursuant to Article 5 or a Default pursuant to Article 5. Any form of suspension by Transmission Provider shall not be barred by Articles 2.2.2, 2.2.3, or 5.2.2, nor shall it affect Transmission Provider's right to terminate the work or this Agreement pursuant to Article 6.**]**

3.1.3 Construction Status. Transmission Provider shall keep Affected System Interconnection Customer advised periodically as to the progress of its design, procurement and construction efforts, as described in Appendix A. Affected System Interconnection Customer may, at any time and reasonably, request a progress report from Transmission Provider. If, at any time, Affected System Interconnection Customer determines that the completion of the Affected System Network Upgrade(s) will not be required until after the specified in-service date, Affected System Interconnection Customer will provide written notice to Transmission Provider of such later date upon which the completion of the Affected System Network Upgrade(s) would be required. Transmission Provider may delay the in-service date of the Affected System Network Upgrade(s) accordingly.

3.1.4 Timely Completion. Transmission Provider shall use Reasonable Efforts to design, procure, construct, install, and test the Affected System Network Upgrade(s) in accordance with the schedule set forth in Appendix A, which schedule may be revised from time to time by mutual agreement of the Parties. If any event occurs that will affect the time or ability to complete the Affected System Network Upgrade(s), Transmission Provider shall promptly notify Affected System Interconnection Customer. In such circumstances, Transmission Provider shall, within fifteen (15) Calendar Days of such notice, convene a meeting with Affected System Interconnection Customer to evaluate the alternatives available to Affected System Interconnection Customer. Transmission Provider shall also make available to Affected System Interconnection Customer all studies and work papers related to the event and corresponding delay, including all information that is in the possession of Transmission Provider that is reasonably needed by Affected System Interconnection Customer to evaluate alternatives, subject to confidentiality arrangements consistent with Article 8. Transmission Provider shall, at Affected System Interconnection Customer's request and expense, use Reasonable Efforts to accelerate its work under this Agreement to meet the schedule set forth in Appendix A, provided that (1) Affected System Interconnection Customer authorizes such actions, such authorization to be withheld, conditioned, or delayed by Affected System Interconnection Customer only if it can demonstrate that the acceleration would have a material adverse effect on it; and (2) the Affected System Interconnection Customer funds costs associated therewith in advance.

3.2 Interconnection Costs.

3.2.1 Costs. Affected System Interconnection Customer shall pay to Transmission Provider costs (including taxes and financing costs) associated with seeking and obtaining all necessary approvals and of designing, engineering, constructing, and testing the Affected System Network Upgrade(s), as identified in Appendix A, in accordance with the cost recovery method provided herein. Unless Transmission Provider elects to fund the Affected System Network Upgrade(s), they shall be initially funded by Affected System Interconnection Customer.

3.2.1.1 Lands of Other Property Owners. If any part of the Affected System Network Upgrade(s) is to be installed on property owned by persons other than Affected System Interconnection Customer or Transmission Provider, Transmission Provider shall, at Affected System Interconnection Customer's expense, use efforts similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority to the extent permitted and consistent with Applicable Laws and Regulations and, to the extent consistent with such Applicable Laws and Regulations, to procure from such persons any rights of use, licenses, rights-of-way, and easements that are necessary to construct, operate, maintain, test, inspect, replace, or remove the Affected System Network Upgrade(s) upon such property.

3.2.2 Repayment.

3.2.2.1 Repayment. Consistent with Articles 11.4.1 and 11.4.2 of [the] Transmission Provider's pro forma LGIA, Affected System Interconnection Customer shall be entitled to a cash repayment by Transmission Provider of the amount paid to Transmission Provider, if any, for the Affected System Network Upgrade(s), including any tax gross-up or other tax-related payments associated with the Affected System Network Upgrade(s), and not refunded to Affected System Interconnection Customer pursuant to Article 3.3.1 or otherwise. The Parties may mutually agree to a repayment schedule, to be outlined in Appendix A, not to exceed twenty (20) years from the commercial operation date, for the complete repayment for all applicable costs associated with the Affected System Network Upgrade(s). Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19 a(a)(2)(iii) from the date of any payment for Affected System Network Upgrade(s) through the date on which Affected System Interconnection Customer receives a repayment of such payment pursuant to this subparagraph. Interest shall not accrue during periods in which Affected System Interconnection Customer has suspended construction pursuant to Article 3.1.2. Affected System Interconnection Customer may assign such repayment rights to any person.

3.2.2.2 Impact of Failure to Achieve Commercial Operation. If the Affected System Interconnection Customer's generating facility fails to achieve commercial operation, but it or another generating facility is later constructed and makes use of the Affected System Network Upgrade(s), Transmission Provider shall at that time reimburse Affected System Interconnection Customer for the amounts advanced for the Affected System Network Upgrade(s). Before any such reimbursement can occur, Affected System Interconnection Customer (or the entity that ultimately constructs the generating facility, if different), is responsible for identifying the entity to which the reimbursement must be made.

3.3 Taxes.

3.3.1 Indemnification for Contributions in Aid of Construction. With regard only to payments made by Affected System Interconnection Customer to Transmission Provider for the installation of the Affected System Network Upgrade(s), Transmission Provider shall not include a gross-up for income taxes in the amounts it charges Affected System Interconnection Customer for the installation of the Affected System Network Upgrade(s) unless (1) Transmission Provider has determined, in good faith, that the payments or property transfers made by Affected System Interconnection Customer to Transmission Provider should be reported as income subject to taxation, or (2) any Governmental Authority directs Transmission Provider to report payments or property as income subject to taxation. Affected System Interconnection Customer shall reimburse Transmission Provider for such costs on a fully grossed-up basis, in accordance with this Article, within thirty (30) Calendar Days of receiving written notification from Transmission Provider of the amount due, including detail about how the amount was calculated.

The indemnification obligation shall terminate at the earlier of (1) the expiration Of the ten (10)-year testing period and the applicable statute of limitation, as it may be extended by Transmission Provider upon request of the Internal Revenue Service, to keep these years open for audit or adjustment, or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article. Notwithstanding the foregoing provisions of this Article 3.3.1, and to the extent permitted by law, to the extent that the receipt of such payments by Transmission Provider is determined by any Governmental Authority to constitute income by Transmission Provider subject to taxation, Affected System Interconnection Customer shall protect, indemnify, and hold harmless Transmission Provider and its Affiliates, from all claims by any such Governmental Authority for any tax, interest, and/or penalties associated with such determination. Upon receiving written notification of such determination from the Governmental Authority, Transmission Provider shall provide Affected System Interconnection Customer with written notification within thirty (30) Calendar Days of such determination and notification. Transmission Provider, upon the timely written request by Affected System Interconnection Customer and at Affected System Interconnection Customer's expense, shall appeal, protest, seek abatement of, or otherwise oppose such determination. Transmission Provider reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement, or other contest, including the compromise or settlement of the claim; provided that Transmission Provider shall

cooperate and consult in good faith with Affected System Interconnection Customer regarding the conduct of such contest. Affected System Interconnection Customer shall not be required to pay Transmission Provider for the tax, interest, and/or penalties prior to the seventh (7th) Calendar Day before the date on which Transmission Provider (1) is required to pay the tax, interest, and/or penalties or other amount in lieu thereof pursuant to a compromise or settlement of the appeal, protest, abatement, or other contest; (2) is required to pay the tax, interest, and/or penalties as the result of a final, non-appealable order by a Governmental Authority; or (3) is required to pay the tax, interest, and/or penalties as a prerequisite to an appeal, protest, abatement, or other contest. In the event such appeal, protest, abatement, or other contest results in a determination that Transmission Provider is not liable for any portion of any tax, interest, and/or penalties for which Affected System Interconnection Customer has already made payment to Transmission Provider, Transmission Provider shall promptly refund to Affected System Interconnection Customer any payment attributable to the amount determined to be non-taxable, plus any interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)) or other payments Transmission Provider receives or which Transmission Provider may be entitled with respect to such payment. Affected System Interconnection Customer shall provide Transmission Provider with credit assurances sufficient to meet Affected System Interconnection Customer's estimated liability for reimbursement of Transmission Provider for taxes, interest, and/or penalties under this Article 3.3.1. Such estimated liability shall be stated in Appendix A.

To the extent that Transmission Provider is a limited liability company and not a corporation, and has elected to be taxed as a partnership, then the following shall apply: Transmission Provider represents, and the Parties acknowledge, that Transmission Provider is a limited liability company and is treated as a partnership for federal income tax purposes. Any payment made by Affected System Interconnection Customer to Transmission Provider for Affected System Network Upgrade(s) is to be treated as an upfront payment. It is anticipated by the Parties that any amounts paid by Affected System Interconnection Customer to Transmission Provider for Affected System Network Upgrade(s) will be reimbursed to Affected System Interconnection Customer in accordance with the terms of this Agreement, provided Affected System Interconnection Customer fulfills its obligations under this Agreement.

3.3.2 Private Letter Ruling. At Affected System Interconnection Customer's request and expense, Transmission Provider shall file with the Internal Revenue Service a request for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by Affected System Interconnection Customer to Transmission Provider under this Agreement are subject to federal income taxation. Affected System Interconnection Customer will prepare the initial draft of the request for a private letter ruling and will certify under penalties of perjury that all facts represented in such request are true and accurate to the best of Affected System Interconnection Customer's knowledge. Transmission Provider and Affected System Interconnection Customer shall cooperate in good faith with respect to the submission of such request.

3.3.3 Other Taxes. Upon the timely request by Affected System Interconnection Customer, and at Affected System Interconnection Customer's sole expense, Transmission Provider shall appeal, protest, seek abatement of, or otherwise contest any tax (other than federal or state income tax) asserted or assessed against Transmission Provider for which Affected System Interconnection Customer may be required to reimburse Transmission Provider under the terms of this Agreement. Affected System Interconnection Customer shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement, or other contest. Affected System Interconnection Customer and Transmission Provider shall cooperate in good faith with respect to any such contest. Unless the payment of such taxes is a prerequisite to an appeal or abatement or cannot be deferred, no amount shall be payable by Affected System Interconnection Customer to Transmission Provider for such taxes until they are assessed by a final, non-appealable order by any court or agency of competent jurisdiction. In the event that a tax payment is withheld and ultimately due and payable after appeal, Affected System Interconnection Customer will be responsible for all taxes, interest and penalties, other than penalties attributable to any delay caused by Transmission Provider. Each Party shall cooperate with the other Party to maintain each Party's tax status. Nothing in this Agreement is intended to adversely affect any Party's tax-exempt status with respect to the issuance of bonds including, but not limited to, local furnishing bonds, as described in section 142(f) of the Internal Revenue Code.

Article 4—Security, Billing, and Payments

4.1 Provision of Security. By the earlier of (1) thirty (30) Calendar Days prior to the due date for Affected System Interconnection Customer's first payment under the payment schedule specified in Appendix A, or (2) the first date specified in Appendix A for the ordering of equipment by Transmission Provider for installing the Affected System Network Upgrade(s), Affected System Interconnection Customer shall provide Transmission Provider, at Affected System Interconnection Customer's option, a guarantee, a surety bond, letter of credit or other form of security that is reasonably acceptable to Transmission Provider. Such security for payment shall be in an amount sufficient to cover the costs for constructing, procuring, and installing the applicable portion of Affected System Network Upgrade(s) and shall be reduced on a dollar-for-dollar basis for payments made to Transmission Provider for these purposes.

The guarantee must be made by an entity that meets the creditworthiness requirements of Transmission Provider and contain terms and conditions that guarantee payment of any amount that may be due from Affected System Interconnection Customer, up to an agreed-to maximum amount. The letter of credit must be issued by a financial institution reasonably acceptable to Transmission Provider and must specify a reasonable expiration date. The surety bond must be issued by an insurer reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

4.2 Invoice. Each Party shall submit to the other Party, on a monthly basis, invoices of amounts due, if any, for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to the other Party under this Agreement, including interest payments, shall be netted so that only the net amount remaining due shall be paid by the owing Party.

4.3 Payment. Invoices shall be rendered to the paying Party at the address specified by the Parties. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by a Party will not constitute a waiver of any rights or claims that Party may have under this Agreement.

4.4 Final Invoice. Within six (6) months after completion of the construction of the Affected System Network Upgrade(s), Transmission Provider shall provide an invoice of the final cost of the construction of the Affected System Network Upgrade(s) and shall set forth such costs in sufficient detail to enable Affected System Interconnection Customer to compare the actual costs with the estimates and to ascertain deviations, if any, from the cost estimates. Transmission Provider shall refund, with interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)), to Affected System Interconnection Customer any amount by which the actual payment by Affected System Interconnection Customer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

4.5 Interest. Interest on any unpaid amounts shall be calculated in accordance with 18 CFR 35.19a(a)(2)(iii).

4.6 Payment During Dispute. In the event of a billing dispute among the Parties, Transmission Provider shall continue to construct the Affected System Network Upgrade(s) under this Agreement as long as Affected System Interconnection Customer: (1) continues to make all payments not in dispute; and (2) pays to Transmission Provider or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If Affected System Interconnection Customer

fails to meet these two requirements, then Transmission Provider may provide notice to Affected System Interconnection Customer of a Default pursuant to Article 5. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to another Party shall pay the amount due with interest calculated in accordance with the methodology set forth in 18 CFR 35.19a(a)(2)(iii).

Article 5—Breach, Cure and Default

5.1 Events of Breach. A Breach of this Agreement shall include the:

(a) Failure to pay any amount when due;

(b) Failure to comply with any material term or condition of this Agreement, including but not limited to any material Breach of a representation, warranty, or covenant made in this Agreement;

(c) Failure of a Party to provide such access rights, or a Party's attempt to revoke access or terminate such access rights, as provided under this Agreement; or

(d) Failure of a Party to provide information or data to another Party as required under this Agreement, provided the Party entitled to the information or data under this Agreement requires such information or data to satisfy its obligations under this Agreement.

5.2 Definition. Breaching Party shall mean the Party that is in Breach.

5.3 Notice of Breach, Cure, and Default. Upon the occurrence of an event of Breach, the Party not in Breach, when it becomes aware of the Breach, shall give written notice of the Breach to the Breaching Party and to any other person representing a Party to this Agreement identified in writing to the other Party in advance. Such notice shall set forth, in reasonable detail, the nature of the Breach, and where known and applicable, the steps necessary to cure such Breach.

5.3.1 Upon receiving written notice of the Breach hereunder, the Breaching Party shall have a period to cure such Breach (hereinafter referred to as the ''Cure Period'') which shall be sixty (60) Calendar Days.

5.3.2 In the event the Breaching Party fails to cure within the Cure Period, the Breaching Party will be in Default of this Agreement, and the non-Defaulting Party may terminate this Agreement in accordance with Article 6.2 of this Agreement or take whatever action at law or in equity as may appear necessary or desirable to enforce the performance or observance of any rights, remedies, obligations, agreement, or covenants under this Agreement.

5.4 Rights in the Event of Default. Notwithstanding the foregoing, upon the occurrence of a Default, the non-Defaulting Party shall be entitled to exercise all rights and remedies it may have in equity or at law.

Article 6—Termination of Agreement

6.1 Expiration of Term. Except as otherwise specified in this Article 6, the Parties' obligations under this Agreement shall terminate at the conclusion of the term of this Agreement.

6.2 Termination. In addition to the termination provisions set forth in Article 2.2, a Party may terminate this Agreement upon the Default of the other Party in accordance with Article 5.2.2 of this Agreement. Subject to the limitations set forth in Article 6.3, in the event of a Default, the termination of this Agreement by the non-Defaulting Party shall require a filing at FERC of a notice of termination, which filing must be accepted for filing by FERC.

6.3 Disposition of Facilities Upon Termination of Agreement.

6.3.1 Transmission Provider Obligations. Upon termination of this Agreement, unless otherwise agreed to by the Parties in writing, Transmission Provider:

(a) shall, prior to the construction and installation of any portion of the Affected System Network Upgrade(s) and to the extent possible, cancel any pending orders of, or return, such equipment or material for such Affected System Network Upgrade(s);

(b) may keep in place any portion of the Affected System Network Upgrade(s) already constructed and installed; and,

(c) shall perform such work as may be necessary to ensure the safety of persons and property and to preserve the integrity of Transmission Provider's Transmission System (*e.g.,* construction demobilization to return the system to its original state, wind-up work).

6.3.2 Affected System Interconnection Customer Obligations. Upon billing by Transmission Provider, Affected System Interconnection Customer shall reimburse Transmission Provider for any costs incurred by Transmission Provider in performance of the actions required or permitted by Article 6.3.1 and for the cost of any Affected System Network Upgrade(s) described in Appendix A. Transmission Provider shall use Reasonable Efforts to minimize costs and shall offset the amounts owed by any salvage value of facilities, if applicable. Affected System Interconnection Customer shall pay these costs pursuant to Article 4.3 of this Agreement.

6.3.3 Pre-construction or Installation. Upon termination of this Agreement and prior to the construction and installation of any portion of the Affected System Network Upgrade(s), Transmission Provider may, at its option, retain any portion of such Affected System Network Upgrade(s) not cancelled or returned in accordance with Article 6.3.1(a), in which case Transmission Provider shall be responsible for all costs associated with procuring such Affected System Network Upgrade(s). To the extent that Affected System Interconnection Customer has already paid Transmission Provider for any or all of such costs, Transmission Provider shall refund Affected System Interconnection Customer for those payments. If Transmission Provider elects to not retain any portion of such facilities, Transmission Provider shall convey and make available to Affected System Interconnection Customer such facilities as soon as practicable after Affected System Interconnection Customer's payment for such facilities.

6.4 Survival of Rights. Termination or expiration of this Agreement shall not relieve either Party of any of its liabilities and obligations arising hereunder prior to the date termination becomes effective, and each Party may take whatever judicial or administrative actions as appear necessary or desirable to enforce its rights hereunder. The applicable provisions of this Agreement will continue in effect after expiration, or early termination hereof to the extent necessary to provide for (1) final billings, billing adjustments, and other billing procedures set forth in this Agreement; (2) the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and (3) the confidentiality provisions set forth in Article 8.

Article 7—Subcontractors

7.1 Subcontractors. Nothing in this Agreement shall prevent a Party from utilizing the services of subcontractors, as it deems appropriate, to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services, and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

7.1.1 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. In accordance with the provisions of this Agreement, each Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor it hires as if no subcontract had been made. Any applicable obligation imposed by this Agreement upon a Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

7.1.2 No Third-Party Beneficiary. Except as may be specifically set forth to the contrary herein, no subcontractor or any other party is intended to be, nor will it be deemed to be, a third-party beneficiary of this Agreement.

7.1.3 No Limitation by Insurance. The obligations under this Article 7 will not be limited in any way by any limitation of any insurance policies or coverages, including any subcontractor's insurance.

Article 8—Confidentiality

8.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied to the other Party prior to the execution of this Agreement.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential. The Parties shall maintain as confidential any information that is provided and identified by a Party as Critical Energy Infrastructure Information (CEII), as that term is defined in 18 CFR 388.113(c).

Such confidentiality will be maintained in accordance with this Article 8. If requested by the receiving Party, the disclosing Party shall provide in writing, the basis for

asserting that the information referred to in this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

8.1.1 Term. During the term of this Agreement, and for a period of three (3) years after the expiration or termination of this Agreement, except as otherwise provided in this Article 8 or with regard to CEII, each Party shall hold in confidence and shall not disclose to any person Confidential Information. CEII shall be treated in accordance with FERC policies and regulations.

8.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a non-Party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this Agreement; or (6) is required, in accordance with Article 8.1.6 of this Agreement, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under this Agreement. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the receiving Party that it no longer is confidential.

8.1.3 Release of Confidential Information. No Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, agents, consultants, or to non-Parties that may be or are considering providing financing to or equity participation with Affected System Interconnection Customer, or to potential purchasers or assignees of Affected System Interconnection Customer, on a need-to-know basis in connection with this Agreement, unless such person has first been advised of the confidentiality provisions of this Article 8 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Article 8.

8.1.4 Rights. Each Party shall retain all rights, title, and interest in the Confidential Information that it discloses to the receiving Party. The disclosure by a Party to the receiving Party of Confidential Information shall not be deemed a waiver by the disclosing Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

8.1.5 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication, or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under this Agreement or its regulatory requirements.

8.1.6 Order of Disclosure. If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires either Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the disclosing Party with prompt notice of such request(s) or requirement(s) so that the disclosing Party may seek an appropriate protective order or waive compliance with the terms of this Agreement. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

8.1.7 Termination of Agreement. Upon termination of this Agreement for any reason, each Party shall, within ten (10) Business Days of receipt of a written request from the other Party, use Reasonable Efforts to destroy, erase, or delete (with such destruction, erasure, and deletion certified in writing to the requesting Party) or return to the requesting Party any and all written or electronic Confidential Information received from the requesting Party, except that each Party may keep one copy for archival purposes, provided that the obligation to treat it as Confidential Information in accordance with this Article 8 shall survive such termination.

8.1.8 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for the other Party's Breach of its obligations under this Article 8. Each Party accordingly agrees that the disclosing Party shall be entitled to equitable relief, by way of injunction or otherwise, if the receiving Party Breaches or threatens to Breach its obligations under this Article 8, which equitable relief shall be granted without bond or proof of damages, and the breaching Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 8, but it shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. Neither Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 8.

8.1.9 Disclosure to FERC, its Staff, or a State Regulatory Body. Notwithstanding anything in this Article 8 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from a Party that is otherwise required to be maintained in confidence pursuant to this Agreement, the Party shall provide the requested information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party to this Agreement prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Party to the Agreement when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

8.1.10 Subject to the exception in Article 8.1.9, any information that a disclosing Party claims is competitively sensitive, commercial, or financial information under this Agreement shall not be disclosed by the receiving Party to any person not employed or retained by the receiving Party, except to the extent disclosure is (1) required by law; (2) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (3) otherwise permitted by consent of the disclosing Party, such consent not to be unreasonably withheld; or (4) necessary to fulfill its obligations under this Agreement or as [the] Transmission Provider or a balancing authority, including disclosing the Confidential Information to a regional or national reliability organization. The Party asserting confidentiality shall notify the receiving Party in writing of the information that Party claims is confidential. Prior to any disclosures of that Party's Confidential Information under this subparagraph, or if any non-Party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the Party that received the Confidential Information from the disclosing Party agrees to promptly notify the disclosing Party in writing and agrees to assert confidentiality and cooperate with the disclosing Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order, or other reasonable measures.

Article 9—Information Access and Audit Rights

9.1 Information Access. Each Party shall make available to the other Party information

necessary to verify the costs incurred by the other Party for which the requesting Party is responsible under this Agreement and carry out obligations and responsibilities under this Agreement, provided that the Parties shall not use such information for purposes other than those set forth in this Article 9.1 and to enforce their rights under this Agreement.

9.2 Audit Rights. Subject to the requirements of confidentiality under Article 8 of this Agreement, the accounts and records related to the design, engineering, procurement, and construction of the Affected System Network Upgrade(s) shall be subject to audit during the period of this Agreement and for a period of twenty-four (24) months following Transmission Provider's issuance of a final invoice in accordance with Article 4.4. Affected System Interconnection Customer at its expense shall have the right, during normal business hours, and upon prior reasonable notice to Transmission Provider, to audit such accounts and records. Any audit authorized by this Article 9.2 shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to obligations under this Agreement.

Article 10—Notices

10.1—General. Any notice, demand, or request required or permitted to be given by a Party to the other Party, and any instrument required or permitted to be tendered or delivered by a Party in writing to another Party, may be so given, tendered, or delivered, as the case may be, by depositing the same with the United States Postal Service with postage prepaid, for transmission by certified or registered mail, addressed to the Parties, or personally delivered to the Parties, at the address set out below:

To Transmission Provider:
To Affected System Interconnection Customer:

10.2 Billings and Payments. Billings and payments shall be sent to the addresses shown in Article 10.1 unless otherwise agreed to by the Parties.

10.3 Alternative Forms of Notice. Any notice or request required or permitted to be given by a Party to the other Party and not required by this Agreement to be given in writing may be so given by telephone, facsimile or email to the telephone numbers and email addresses set out below:

To Transmission Provider:
To Affected System Interconnection Customer:

10.4 Execution and Filing. Affected System Interconnection Customer shall either: (i) execute two originals of this tendered Agreement and return them to Transmission Provider; or (ii) request in writing that Transmission Provider file with FERC this Agreement in unexecuted form. As soon as practicable, but not later than ten (10) Business Days after receiving either the two executed originals of this tendered Agreement (if it does not conform with a FERC-approved standard form of this Agreement) or the request to file this Agreement unexecuted, Transmission Provider shall file this Agreement with FERC, together with its explanation of any matters as to which Affected System Interconnection Customer and Transmission Provider disagree and support for the costs that Transmission Provider proposes to charge to Affected System Interconnection Customer under this Agreement. An unexecuted version of this Agreement should contain terms and conditions deemed appropriate by Transmission Provider for the Affected System Interconnection Customer's generating facility. If the Parties agree to proceed with design, procurement, and construction of facilities and upgrades under the agreed-upon terms of the unexecuted version of this Agreement, they may proceed pending FERC action.

Article 11—Miscellaneous

11.1 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP.

{Signature Page to Follow}

In witness whereof, the Parties have executed this Agreement in multiple originals, each of which shall constitute and be an original Agreement among the Parties.

Attachment A to Appendix 11

Two-Party Affected System Facilities Construction Agreement

Affected System Network Upgrade(s), Cost Estimates and Responsibility, Construction Schedule and Monthly Payment Schedule

This Appendix A is a part of the Affected System Facilities Construction Agreement between Affected System Interconnection Customer and Transmission Provider.

1.1 Affected System Network Upgrade(s) to be installed by Transmission Provider.

{description}

1.2 First Equipment Order (including permitting).

{description}

1.2.1. Permitting and Land Rights—Transmission Provider Affected System Network Upgrade(s)

{description}

1.3 Construction Schedule. Where applicable, construction of the Affected System Network Upgrade(s) is scheduled as follows and will be periodically updated as necessary:

TABLE 1—TRANSMISSION PROVIDER CONSTRUCTION ACTIVITIES

Milestone No.	Description	Start date	End date

Note: Construction schedule assumes that Transmission Provider has obtained final authorizations and security from Affected System Interconnection Customer and all necessary permits from Governmental Authorities as necessary prerequisites to commence construction of any of the Affected System Network Upgrade(s).

1.4 Payment Schedule.

1.4.1 Timing of and Adjustments to Affected System Interconnection Customer's Payments and Security.

{description}

1.4.2 Monthly Payment Schedule. Affected System Interconnection Customer's payment schedule is as follows.

{description}

TABLE 2—AFFECTED SYSTEM INTERCONNECTION CUSTOMER'S PAYMENT/SECURITY OBLIGATIONS FOR AFFECTED SYSTEM NETWORK UPGRADE(S)

Milestone No.	Description	Date

Note: Affected System Interconnection Customer's payment or provision of security as provided in this Agreement operates as a condition precedent to Transmission Provider's obligations to construct any Affected System Network Upgrade(s), and failure to meet this schedule will constitute a Breach pursuant to Article 5.1 of this Agreement.

1.5 Permits, Licenses, and Authorizations.

{description}

Attachment B to Appendix 11

Two-Party Affected System Facilities Construction Agreement

Notification of Completed Construction

This Appendix B is a part of the Affected Systems Facilities Construction Agreement between Affected System Interconnection Customer and Transmission Provider. Where applicable, when Transmission Provider has completed construction of the Affected System Network Upgrade(s), Transmission Provider shall send notice to Affected System Interconnection Customer in substantially the form following:

{Date}

{Affected System Interconnection Customer Address}

Re: Completion of Affected System Network Upgrade(s)

Dear {Name or Title}:

This letter is sent pursuant to the Affected System Facilities Construction Agreement between {Transmission Provider} and {Affected System Interconnection Customer}, dated _____, 20____.

On {Date}, Transmission Provider completed to its satisfaction all work on the Affected System Network Upgrade(s) required to facilitate the safe and reliable interconnection and operation of Affected System Interconnection Customer's {description of generating facility}. Transmission Provider confirms that the Affected System Network Upgrade(s) are in place.

Thank you.

Appendix 12 to LGIP

Multiparty Affected System Facilities Construction Agreement

This Agreement is made and entered into this ____ day of _____, 20____, by and among _____, organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); and _____, an entity organized *and existing* under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customers and Transmission Provider each may be referred to as a ''Party'' or collectively as the ''Parties.'' When it is not important to differentiate among them, Affected System Interconnection Customers each may be referred to as ''Affected System Interconnection Customer'' or collectively as ''Affected System Interconnection Customers.''

Recitals

Whereas, Affected System Interconnection Customers are proposing to develop {description of generating facilities or generating capacity additions to an existing generating facility}, consistent with the interconnection requests submitted by Affected System Interconnection Customers to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customers desire to interconnect the {generating facilities} to {name of host transmission provider}'s transmission system; and

Whereas, additions, modifications, and upgrade(s) must be made to certain existing facilities of Transmission Provider's Transmission System to accommodate such interconnection; and

Whereas, Affected System Interconnection Customers have requested, and Transmission Provider has agreed, to enter into this Agreement for the purpose of facilitating the construction of necessary Affected System Network Upgrade(s);

Now, Therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

Article 1—Definitions

When used in this Agreement, with initial capitalization, the terms specified and not otherwise defined in this Agreement shall have the meanings indicated in this LGIP.

Article 2—Term of Agreement

2.1 Effective Date. This Agreement shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by FERC.

2.2 Term.

2.2.1 General. This Agreement shall become effective as provided in Article 2.1 and shall continue in full force and effect until the earlier of (1) the final repayment, where applicable, by Transmission Provider of the amount funded by Affected System Interconnection Customers for Transmission Provider's design, procurement, construction, and installation of the Affected System Network Upgrade(s) provided in Appendix A; (2) the Parties agree to mutually terminate this Agreement; (3) earlier termination is permitted or provided for under Appendix A of this Agreement; or (4) Affected System Interconnection Customers terminate this Agreement after providing Transmission Provider with written notice at least sixty (60) Calendar Days prior to the proposed termination date, provided that Affected System Interconnection Customers have no outstanding contractual obligations to Transmission Provider under this Agreement. No termination of this Agreement shall be effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination. The term of this Agreement may be adjusted upon mutual agreement of the Parties if the commercial operation date(s) for the {generating facilities} is adjusted in accordance with the rules and procedures established by {name of host transmission provider} or the in-service date for the Affected System Network Upgrade(s) is adjusted in accordance with the rules and procedures established by Transmission Provider.

2.2.2 Termination Upon Default. Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 5 of this Agreement where Breach and Breaching Party are defined in Article 5. Defaulting Party shall mean the Party that is in Default. In the event of a Default by a Party, each non-Defaulting Party shall have the termination rights described in Articles 5 and 6; provided, however, Transmission Provider may not terminate this Agreement if an Affected System Interconnection Customer is the Defaulting Party and compensates Transmission Provider within thirty (30) Calendar Days for the amount of damages billed to Affected System Interconnection Customer(s) by Transmission Provider for any such damages, including costs and expenses incurred by Transmission Provider as a result of such Default. Notwithstanding the foregoing, Default by one or more Affected System Interconnection Customers shall not provide the other Affected System Interconnection Customer(s), either individually or in concert, with the right to terminate the entire Agreement. The non-Defaulting Party/Parties may, individually or in concert, initiate the removal of an Affected System Interconnection Customer that is a Defaulting Party from this Agreement. Transmission Provider shall not terminate this Agreement or the participation of any Affected System Interconnection Customer without provision being made for Transmission Provider to be fully reimbursed for all of its costs incurred under this Agreement.

2.2.3 Consequences of Termination. In the event of a termination by a Party, other than a termination by Affected System Interconnection Customer(s) due to a Default by Transmission Provider, each Affected System Interconnection Customer whose participation in this Agreement is terminated shall be responsible for the payment to Transmission Provider of all amounts then due and payable for construction and installation of the Affected System Network Upgrade(s) (including, without limitation, any equipment ordered related to such construction), plus all out-of-pocket expenses incurred by Transmission Provider in connection with the construction and installation of the Affected System Network Upgrade(s), through the date of termination, and, in the event of the termination of the entire Agreement, any actual costs which Transmission Provider reasonably incurs in (1) winding up work and construction demobilization and (2) ensuring the safety of persons and property and the integrity and safe and reliable operation of Transmission Provider's Transmission System. Transmission Provider shall use Reasonable Efforts to minimize such costs. The cost responsibility of other Affected System Interconnection Customers shall be adjusted, as necessary, based on the payments by an Affected System Interconnection Customer that is terminated from the Agreement.

2.2.4 Reservation of Rights. Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and Affected System Interconnection Customers shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations thereunder, except to the extent that the Parties otherwise mutually agree as provided herein.

2.3 Filing. Transmission Provider shall file this Agreement (and any amendment hereto) with the appropriate Governmental Authority, if required. Affected System Interconnection Customers may request that any information so provided be subject to the confidentiality provisions of Article 8. Each Affected System Interconnection Customer that has executed this Agreement, or any amendment thereto, shall reasonably cooperate with Transmission Provider with respect to such filing and to provide any information reasonably requested by Transmission Provider needed to comply with applicable regulatory requirements.

2.4 Survival. This Agreement shall continue in effect after termination, to the extent necessary, to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this Agreement; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this Agreement or other applicable agreements, to disconnect, remove, or salvage its own facilities and equipment.

2.5 Termination Obligations. Upon any termination pursuant to this Agreement or termination of the participation in this Agreement of an Affected System Interconnection Customer, each Affected System Interconnection Customer shall be responsible for the payment of its proportionate share of all costs or other contractual obligations incurred prior to the termination date, including previously incurred capital costs, penalties for early termination, and costs of removal and site restoration. The cost responsibility of the other Affected System Interconnection Customers shall be adjusted as necessary.

Article 3—Construction of Affected System Network Upgrade(s)

3.1 Construction.

3.1.1 Transmission Provider Obligations. Transmission Provider shall (or shall cause such action to) design, procure, construct, and install, and Affected System Interconnection Customers shall pay, consistent with Article 3.2, the costs of all Affected System Network Upgrade(s) identified in Appendix A. All Affected System Network Upgrade(s) designed, procured, constructed, and installed by Transmission Provider pursuant to this Agreement shall satisfy all requirements of applicable safety and/or engineering codes and comply with Good Utility Practice, and further, shall satisfy all Applicable Laws and Regulations. Transmission Provider shall not be required to undertake any action which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, or any Applicable Laws and Regulations.

3.1.2 Suspension of Work.

3.1.2.1 Right to Suspend. Affected System Interconnection Customers must jointly provide to Transmission Provider written notice of their request for suspension. Only the milestones described in the Appendices of this Agreement are subject to suspension under this Article 3.1.2. Affected System Network Upgrade(s) will be constructed on the schedule described in the Appendices of this Agreement unless: (1) construction is prevented by the order of a Governmental Authority; (2) the Affected System Network Upgrade(s) are not needed by any other Interconnection Customer; or (3) Transmission Provider determines that a Force Majeure event prevents construction. In the event of (1), (2), or (3), any security paid to Transmission Provider under Article 4.1 of this Agreement shall be released by Transmission Provider upon the determination by Transmission Provider that the Affected System Network Upgrade(s) will no longer be constructed. If suspension occurs, Affected System Interconnection Customers shall be responsible for the costs which Transmission Provider incurs (i) in accordance with this Agreement prior to the suspension; (ii) in suspending such work, including any costs incurred to perform such work as may be necessary to ensure the safety of persons and property and the integrity of Transmission Provider's Transmission System and, if applicable, any costs incurred in connection with the cancellation of contracts and orders for material which Transmission Provider cannot reasonably avoid; and (iii) reasonably incurs in winding up work and construction demobilization; provided, however, that, prior to canceling any such contracts or orders, Transmission Provider shall obtain Affected System Interconnection Customers' authorization. Affected System Interconnection Customers shall be responsible for all costs incurred in connection with Affected System Interconnection Customers' failure to authorize cancellation of such contracts or orders.

Interest on amounts paid by Affected System Interconnection Customers to Transmission Provider for the design, procurement, construction, and installation of the Affected System Network Upgrade(s) shall not accrue during periods in which Affected System Interconnection Customers have suspended construction under this Article 3.1.2.

Transmission Provider shall invoice Affected System Interconnection Customers

pursuant to Article 4 and will use Reasonable Efforts to minimize its costs. In the event Affected System Interconnection Customers suspend work by Affected System Transmission Provider required under this Agreement pursuant to this Article 3.1.2.1, and have not requested Affected System Transmission Provider to recommence the work required under this Agreement on or before the expiration of three (3) years following commencement of such suspension, this Agreement shall be deemed terminated. The three-year period shall begin on the date the suspension is requested, or the date of the written notice to Affected System Transmission Provider, whichever is earlier, if no effective date of suspension is specified.

[3.1.2.2 Recommencing of Work. If Affected System Interconnection Customers request that Transmission Provider recommence construction of Affected System Network Upgrade(s), Transmission Provider shall have no obligation to afford such work the priority it would have had but for the prior actions of Affected System Interconnection Customers to suspend the work. In such event, Affected System Interconnection Customers shall be responsible for any costs incurred in recommencing the work. All recommenced work shall be completed pursuant to an amended schedule for the interconnection agreed to by the Parties. Transmission Provider has the right to conduct a restudy of the Affected System Study if conditions have materially changed subsequent to the request to suspend. Affected System Interconnection Customers shall be responsible for the costs of any studies or restudies required.**]**

[3.1.2.3 Right to Suspend Due to Default. Transmission Provider reserves the right, upon written notice to Affected System Interconnection Customers, to suspend, at any time, work by Transmission Provider due to a Default by Affected System Interconnection Customer(s). Defaulting-Affected System Interconnection Customer(s) shall be responsible for any additional expenses incurred by Transmission Provider associated with the construction and installation of the Affected System Network Upgrade(s) (as set forth in Article 2.2.3) upon the occurrence of a Default pursuant to Article 5. Any form of suspension by Transmission Provider shall not be barred by Articles 2.2.2, 2.2.3, or 5.2.2, nor shall it affect Transmission Provider's right to terminate the work or this Agreement pursuant to Article 6.**]**

3.1.3 Construction Status. Transmission Provider shall keep Affected System Interconnection Customers advised periodically as to the progress of its design, procurement, and construction efforts, as described in Appendix A. An Affected System Interconnection Customer may, at any time and reasonably, request a progress report from Transmission Provider. If, at any time, an Affected System Interconnection Customer determines that the completion of the Affected System Network Upgrade(s) will not be required until after the specified in-service date, such Affected System Interconnection Customer will provide written notice to all other Parties of such later date for which the completion of the Affected System Network Upgrade(s) would be required. Transmission Provider may delay the in-service date of the Affected System Network Upgrade(s) accordingly, but only if agreed to by all other Affected System Interconnection Customers.

3.1.4 Timely Completion. Transmission Provider shall use Reasonable Efforts to design, procure, construct, install, and test the Affected System Network Upgrade(s) in accordance with the schedule set forth in Appendix A, which schedule may be revised from time to time by mutual agreement of the Parties. If any event occurs that will affect the time or ability to complete the Affected System Network Upgrade(s), Transmission Provider shall promptly notify all other Parties. In such circumstances, Transmission Provider shall, within fifteen (15) Calendar Days of such notice, convene a meeting with Affected System Interconnection Customers to evaluate the alternatives available to Affected System Interconnection Customers. Transmission Provider shall also make available to Affected System Interconnection Customers all studies and work papers related to the event and corresponding delay, including all information that is in the possession of transmission Provider that is reasonably needed by Affected System Interconnection Customers to evaluate alternatives, subject to confidentiality arrangements consistent with Article 8. Transmission Provider shall, at any Affected System Interconnection Customer's request and expense, use Reasonable Efforts to accelerate its work under this Agreement to meet the schedule set forth in Appendix A, provided that (1) Affected System Interconnection Customers jointly authorize such actions, such authorizations to be withheld, conditioned, or delayed by a given Affected System Interconnection Customer only if it can demonstrate that the acceleration would have a material adverse effect on it; and (2) the requesting Affected System Interconnection Customer(s) funds the costs associated therewith in advance, or all Affected System Interconnection Customers agree in advance to fund such costs based on such other allocation method as they may adopt.

3.2 Interconnection Costs.

3.2.1 Costs. Affected System Interconnection Customers shall pay to Transmission Provider costs (including taxes and financing costs) associated with seeking and obtaining all necessary approvals and of designing, engineering, constructing, and testing the Affected System Network Upgrade(s), as identified in Appendix A, in accordance with the cost recovery method provided herein. Except as expressly otherwise agreed, Affected System Interconnection Customers shall be collectively responsible for these costs, based on their proportionate share of cost responsibility, as provided in Appendix A. Unless Transmission Provider elects to fund the Affected System Network Upgrade(s), they shall be initially funded by the applicable Affected System Interconnection Customer.

3.2.1.1 Lands of Other Property Owners. If any part of the Affected System Network Upgrade(s) is to be installed on property owned by persons other than Affected System Interconnection Customers or Transmission Provider, Transmission Provider shall, at Affected System Interconnection Customers' expense, use efforts similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority to the extent permitted and consistent with Applicable Laws and Regulations and, to the extent consistent with such Applicable Laws and Regulations, to procure from such persons any rights of use, licenses, rights-of-way, and easements that are necessary to construct, operate, maintain, test, inspect, replace, or remove the Affected System Network Upgrade(s) upon such property.

3.2.2 Repayment.

3.2.2.1 Repayment. Consistent with articles 11.4.1 and 11.4.2 of [the] Transmission Provider's pro forma LGIA, each Affected System Interconnection Customer shall be entitled to a cash repayment by Transmission Provider of the amount each Affected System Interconnection Customer paid to Transmission Provider, if any, for the Affected System Network Upgrade(s), including any tax gross-up or other tax-related payments associated with the Affected System Network Upgrade(s), and not refunded to Affected System Interconnection Customer pursuant to Article 3.3.1 or otherwise. The Parties may mutually agree to a repayment schedule, to be outlined in Appendix A, not to exceed twenty (20) years from the commercial operation date, for the complete repayment for all applicable costs associated with the Affected System Network Upgrade(s). Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19 a(a)(2)(iii) from the date of any payment for Affected System Network Upgrade(s) through the date on which Affected System Interconnection Customers receive a repayment of such payment pursuant to this subparagraph. Interest shall not accrue during periods in which Affected System Interconnection Customers have suspended construction pursuant to Article 3.1.2.1. Affected System Interconnection Customers may assign such repayment rights to any person.

3.2.2.2 Impact of Failure to Achieve Commercial Operation. If an Affected System Interconnection Customer's generating facility fails to achieve commercial operation, but it or another generating facility is later constructed and makes use of the Affected System Network Upgrade(s), Transmission Provider shall at that time reimburse such Affected System Interconnection Customers for the portion of the Affected System Network Upgrade(s) it funded. Before any such reimbursement can occur, Affected System Interconnection Customer (or the entity that ultimately constructs the generating facility, if different), is responsible for identifying the entity to which the reimbursement must be made.

3.3 Taxes.

3.3.1 Indemnification for Contributions in Aid of Construction. With regard only to

payments made by Affected System Interconnection Customers to Transmission Provider for the installation of the Affected System Network Upgrade(s), Transmission Provider shall not include a gross-up for income taxes in the amounts it charges Affected System Interconnection Customers for the installation of the Affected System Network Upgrade(s) unless (1) Transmission Provider has determined, in good faith, that the payments or property transfers made by Affected System Interconnection Customers to Transmission Provider should be reported as income subject to taxation, or (2) any Governmental Authority directs Transmission Provider to report payments or property as income subject to taxation. Affected System Interconnection Customers shall reimburse Transmission Provider for such costs on a fully grossed-up basis, in accordance with this Article, within thirty (30) Calendar Days of receiving written notification from Transmission Provider of the amount due, including detail about how the amount was calculated.

The indemnification obligation shall terminate at the earlier of (1) the expiration of the ten (10)-year testing period and the applicable statute of limitation, as it may be extended by Transmission Provider upon request of the Internal Revenue Service, to keep these years open for audit or adjustment, or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article. Notwithstanding the foregoing provisions of this Article 3.3.1, and to the extent permitted by law, to the extent that the receipt of such payments by Transmission Provider is determined by any Governmental Authority to constitute income by Transmission Provider subject to taxation, Affected System Interconnection Customers shall protect, indemnify, and hold harmless Transmission Provider and its Affiliates, from all claims by any such Governmental Authority for any tax, interest, and/or penalties associated with such determination. Upon receiving written notification of such determination from the Governmental Authority, Transmission Provider shall provide Affected System Interconnection Customers with written notification within thirty (30) Calendar Days of such determination and notification. Transmission Provider, upon the timely written request by any one or more Affected System Interconnection Customer(s) and at the expense of such Affected System Interconnection Customer(s), shall appeal, protest, seek abatement of, or otherwise oppose such determination. Transmission Provider reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement or other contest, including the compromise or settlement of the claim; provided that Transmission Provider shall cooperate and consult in good faith with the requesting Affected System Interconnection Customer(s) regarding the conduct of such contest. Affected System Interconnection Customer(s) shall not be required to pay Transmission Provider for the tax, interest, and/or penalties prior to the seventh (7th) Calendar Day before the date on which Transmission Provider (1) is required to pay the tax, interest, and/or penalties or other amount in lieu thereof pursuant to a compromise or settlement of the appeal, protest, abatement, or other contest; (2) is required to pay the tax, interest, and/or penalties as the result of a final, non-appealable order by a Governmental Authority; or (3) is required to pay the tax, interest, and/or penalties as a prerequisite to an appeal, protest, abatement, or other contest. In the event such appeal, protest, abatement, or other contest results in a determination that Transmission Provider is not liable for any portion of any tax, interest, and/or penalties for which any Affected System Interconnection Customer(s) has already made payment to Transmission Provider, Transmission Provider shall promptly refund to such Affected System Interconnection Customer(s) any payment attributable to the amount determined to be non-taxable, plus any interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)) or other payments Transmission Provider receives or to which Transmission Provider may be entitled with respect to such payment. Each Affected System Interconnection Customer shall provide Transmission Provider with credit assurances sufficient to meet each Affected System Interconnection Customer's estimated liability for reimbursement of Transmission Provider for taxes, interest, and/or penalties under this Article 3.3.1. Such estimated liability shall be stated in Appendix A.

To the extent that Transmission Provider is a limited liability company and not a corporation, and has elected to be taxed as a partnership, then the following shall apply: Transmission Provider represents, and the Parties acknowledge, that Transmission Provider is a limited liability company and is treated as a partnership for federal income tax purposes. Any payment made by Affected System Interconnection Customers to Transmission Provider for Affected System Network Upgrade(s) is to be treated as an upfront payment. It is anticipated by the Parties that any amounts paid by each Affected System Interconnection Customer to Transmission Provider for Affected System Network Upgrade(s) will be reimbursed to such Affected System Interconnection Customer in accordance with the terms of this Agreement, provided such Affected System Interconnection Customer fulfills its obligations under this Agreement.

3.3.2 Private Letter Ruling. At the request and expense of any Affected System Interconnection Customer(s), Transmission Provider shall file with the Internal Revenue Service a request for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by such Affected System Interconnection Customer(s) to Transmission Provider under this Agreement are subject to federal income taxation. Each Affected System Interconnection Customer desiring such a request will prepare the initial draft of the request for a private letter ruling and will certify under penalties of perjury that all facts represented in such request are true and accurate to the best of such Affected System Interconnection Customer's knowledge. Transmission Provider and such Affected System Interconnection Customer(s) shall cooperate in good faith with respect to the submission of such request.

3.3.3 Other Taxes. Upon the timely request by any one or more Affected System Interconnection Customer(s), and at such Affected System Interconnection Customer(s)' sole expense, Transmission Provider shall appeal, protest, seek abatement of, or otherwise contest any tax (other than federal or state income tax) asserted or assessed against Transmission Provider for which such Affected System Interconnection Customer(s) may be required to reimburse Transmission Provider under the terms of this Agreement. Affected System Interconnection Customer(s) who requested the action shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement, or other contest. The requesting Affected System Interconnection Customer(s) and Transmission Provider shall cooperate in good faith with respect to any such contest. Unless the payment of such taxes is a prerequisite to an appeal or abatement or cannot be deferred, no amount shall be payable by Affected System Interconnection Customer(s) to Transmission Provider for such taxes until they are assessed by a final, non-appealable order by any court or agency of competent jurisdiction. In the event that a tax payment is withheld and ultimately due and payable after appeal, Affected System Interconnection Customer(s) will be responsible for all taxes, interest, and penalties, other than penalties attributable to any delay caused by Transmission Provider. Each Party shall cooperate with the other Party to maintain each Party's tax status. Nothing in this Agreement is intended to adversely affect any Party's tax-exempt status with respect to the issuance of bonds including, but not limited to, local furnishing bonds, as described in section 142(f) of the Internal Revenue Code.

Article 4

Security, Billing, and Payments

4.1 Provision of Security. By the earlier of (1) thirty (30) Calendar Days prior to the due date for each Affected System Interconnection Customer's first payment under the payment schedule specified in Appendix A, or (2) the first date specified in Appendix A for the ordering of equipment by Transmission Provider for installing the Affected System Network Upgrade(s), each Affected System Interconnection Customer shall provide Transmission Provider, at each Affected System Interconnection Customer's option, a guarantee, a surety bond, letter of credit, or other form of security that is reasonably acceptable to Transmission Provider. Such security for payment shall be in an amount sufficient to cover the costs for constructing, procuring, and installing the applicable portion of Affected System Network Upgrade(s) and shall be reduced on a dollar-for-dollar basis for payments made to Transmission Provider for these purposes.

The guarantee must be made by an entity that meets the creditworthiness requirements of Transmission Provider and contain terms and conditions that guarantee payment of

any amount that may be due from such Affected System Interconnection Customer, up to an agreed-to maximum amount. The letter of credit must be issued by a financial institution reasonably acceptable to Transmission Provider and must specify a reasonable expiration date. The surety bond must be issued by an insurer reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

4.2 Invoice. Each Party shall submit to the other Parties, on a monthly basis, invoices of amounts due, if any, for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to another Party under this Agreement, including interest payments, shall be netted so that only the net amount remaining due shall be paid by the owing Party.

4.3 Payment. Invoices shall be rendered to the paying Party at the address specified by the Parties. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by a Party will not constitute a waiver of any rights or claims that Party may have under this Agreement.

4.4 Final Invoice. Within six (6) months after completion of the construction of the Affected System Network Upgrade(s) Transmission Provider shall provide an invoice of the final cost of the construction of the Affected System Network Upgrade(s) and shall set forth such costs in sufficient detail to enable each Affected System Interconnection Customer to compare the actual costs with the estimates and to ascertain deviations, if any, from the cost estimates. Transmission Provider shall refund, with interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)), to each Affected System Interconnection Customer any amount by which the actual payment by Affected System Interconnection Customer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

4.5 Interest. Interest on any unpaid amounts shall be calculated in accordance with 18 CFR 35.19a(a)(2)(iii).

4.6 Payment During Dispute. In the event of a billing dispute among the Parties, Transmission Provider shall continue to construct the Affected System Network Upgrade(s) under this Agreement as long as each Affected System Interconnection Customer: (1) continues to make all payments not in dispute; and (2) pays to Transmission Provider or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If any Affected System Interconnection Customer fails to meet these two requirements, then Transmission Provider may provide notice to such Affected System Interconnection Customer of a Default pursuant to Article 5. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to another Party shall pay the amount due with interest calculated in accordance with the methodology set forth in 18 CFR 35.19a(a)(2)(iii).

Article 5

Breach, Cure, and Default

5.1 Events of Breach. A Breach of this Agreement shall include the:

(a) Failure to pay any amount when due;

(b) Failure to comply with any material term or condition of this Agreement, including but not limited to any material Breach of a representation, warranty, or covenant made in this Agreement;

(c) Failure of a Party to provide such access rights, or a Party's attempt to revoke access or terminate such access rights, as provided under this Agreement; or

(d) Failure of a Party to provide information or data to another Party as required under this Agreement, provided the Party entitled to the information or data under this Agreement requires such information or data to satisfy its obligations under this Agreement.

5.2 Definition. Breaching Party shall mean the Party that is in Breach.

5.3 Notice of Breach, Cure, and Default. Upon the occurrence of an event of Breach, any Party aggrieved by the Breach, when it becomes aware of the Breach, shall give written notice of the Breach to the Breaching Party and to any other person representing a Party to this Agreement identified in writing to the other Party in advance. Such notice shall set forth, in reasonable detail, the nature of the Breach, and where known and applicable, the steps necessary to cure such Breach.

5.2.1 Upon receiving written notice of the Breach hereunder, the Breaching Party shall have a period to cure such Breach (hereinafter referred to as the ''Cure Period'') which shall be sixty (60) Calendar Days. If an Affected System Interconnection Customer is the Breaching Party and the Breach results from a failure to provide payments or security under Article 4.1 of this Agreement, the other Affected System Interconnection Customers, either individually or in concert, may cure the Breach by paying the amounts owed or by providing adequate security, without waiver of contribution rights against the breaching Affected System Interconnection Customer. Such cure for the Breach of an Affected System Interconnection Customer is subject to the reasonable consent of Transmission Provider. Transmission Provider may also cure such Breach by funding the proportionate share of the Affected System Network Upgrade costs related to the Breach of Affected System Interconnection Customer. Transmission Provider must notify all Parties that it will exercise this option within thirty (30) Calendar Days of notification that an Affected System Interconnection Customer has failed to provide payments or security under Article 4.1.

5.2.2 In the event the Breach is not cured within the Cure Period, the Breaching Party will be in Default of this Agreement, and the non-Defaulting Parties may (1) act in concert to amend the Agreement to remove an Affected System Interconnection Customer that is in Default from this Agreement for cause and to make other changes as necessary, or (2) either in concert or individually take whatever action at law or in equity as may appear necessary or desirable to enforce the performance or observance of any rights, remedies, obligations, agreement, or covenants under this Agreement.

5.3 Rights in the Event of Default. Notwithstanding the foregoing, upon the occurrence of Default, the non-Defaulting Parties shall be entitled to exercise all rights and remedies it may have in equity or at law.

Article 6

Termination of Agreement

6.1 Expiration of Term. Except as otherwise specified in this Article 6, the Parties' obligations under this Agreement shall terminate at the conclusion of the term of this Agreement.

6.2 Termination and Removal. Subject to the limitations set forth in Article 6.3, in the event of a Default, termination of this Agreement, as to a given Affected System Interconnection Customer or in its entirety, shall require a filing at FERC of a notice of termination, which filing must be accepted for filing by FERC.

6.3 Disposition of Facilities Upon Termination of Agreement.

6.3.1 Transmission Provider Obligations. Upon termination of this Agreement, unless otherwise agreed to by the Parties in writing, Transmission Provider:

(a) shall, prior to the construction and installation of any portion of the Affected System Network Upgrade(s) and to the extent possible, cancel any pending orders of, or return, such equipment or material for such Affected System Network Upgrade(s);

(b) may keep in place any portion of the Affected System Network Upgrade(s) already constructed and installed; and,

(c) shall perform such work as may be necessary to ensure the safety of persons and property and to preserve the integrity of Transmission Provider's Transmission System (*e.g.,* construction demobilization to return the system to its original state, wind-up work).

6.3.2 Affected System Interconnection Customer Obligations. Upon billing by Transmission Provider, each Affected System Interconnection Customer shall reimburse Transmission Provider for its share of any costs incurred by Transmission Provider in performance of the actions required or permitted by Article 6.3.1 and for its share of the cost of any Affected System Network Upgrade(s) described in Appendix A. Transmission Provider shall use Reasonable Efforts to minimize costs and shall offset the amounts owed by any salvage value of facilities, if applicable. Each Affected System Interconnection Customer shall pay these costs pursuant to Article 4.3 of this Agreement.

6.3.3 Pre-construction or Installation. Upon termination of this Agreement and prior to the construction and installation of any portion of the Affected System Network Upgrade(s), Transmission Provider may, at its

option, retain any portion of such Affected System Network Upgrade(s) not cancelled or returned in accordance with Article 6.3.1(a), in which case Transmission Provider shall be responsible for all costs associated with procuring such Affected System Network Upgrade(s). To the extent that an Affected System Interconnection Customer has already paid Transmission Provider for any or all of such costs, Transmission Provider shall refund Affected System Interconnection Customer for those payments. If Transmission Provider elects to not retain any portion of such facilities, and one or more of Affected System Interconnection Customers wish to purchase such facilities, Transmission Provider shall convey and make available to the applicable Affected System Interconnection Customer(s) such facilities as soon as practicable after Affected System Interconnection Customer(s)' payment for such facilities.

6.4 Survival of Rights. Termination or expiration of this Agreement shall not relieve any Party of any of its liabilities and obligations arising hereunder prior to the date termination becomes effective, and each Party may take whatever judicial or administrative actions as appear necessary or desirable to enforce its rights hereunder. The applicable provisions of this Agreement will continue in effect after expiration, or early termination hereof, to the extent necessary to provide for (1) final billings, billing adjustments, and other billing procedures set forth in this Agreement; (2) the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and (3) the confidentiality provisions set forth in Article 8.

Article 7

Subcontractors

7.1 Subcontractors. Nothing in this Agreement shall prevent a Party from utilizing the services of subcontractors, as it deems appropriate, to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services, and each Party shall remain primarily liable to the other Parties for the performance of such subcontractor.

7.1.1 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. In accordance with the provisions of this Agreement, each Party shall be fully responsible to the other Parties for the acts or omissions of any subcontractor it hires as if no subcontract had been made. Any applicable obligation imposed by this Agreement upon a Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

7.1.2 No Third-Party Beneficiary. Except as may be specifically set forth to the contrary herein, no subcontractor or any other party is intended to be, nor will it be deemed to be, a third-party beneficiary of this Agreement.

7.1.3 No Limitation by Insurance. The obligations under this Article 7 will not be limited in any way by any limitation of any insurance policies or coverages, including any subcontractor's insurance.

Article 8

Confidentiality

8.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied to the other Parties prior to the execution of this Agreement.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential. The Parties shall maintain as confidential any information that is provided and identified by a Party as Critical Energy Infrastructure Information (CEII), as that term is defined in 18 CFR 388.113(c).

Such confidentiality will be maintained in accordance with this Article 8. If requested by the receiving Party, the disclosing Party shall provide in writing, the basis for asserting that the information referred to in this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

8.1.1 Term. During the term of this Agreement, and for a period of three (3) years after the expiration or termination of this Agreement, except as otherwise provided in this Article 8 or with regard to CEII, each Party shall hold in confidence and shall not disclose to any person Confidential Information. CEII shall be treated in accordance with FERC policies and regulations.

8.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a non-Party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this Agreement; or (6) is required, in accordance with Article 8.1.6 of this Agreement, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under this Agreement. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the receiving Party that it no longer is confidential.

8.1.3 Release of Confidential Information. No Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, agents, consultants, or to non-Parties that may be or are considering providing financing to or equity participation with Affected System Interconnection Customer(s), or to potential purchasers or assignees of Affected System Interconnection Customer(s), on a need-to-know basis in connection with this Agreement, unless such person has first been advised of the confidentiality provisions of this Article 8 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Article 8.

8.1.4 Rights. Each Party shall retain all rights, title, and interest in the Confidential Information that it discloses to the receiving Party. The disclosure by a Party to the receiving Party of Confidential Information shall not be deemed a waiver by the disclosing Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

8.1.5 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication, or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under this Agreement or its regulatory requirements.

8.1.6 Order of Disclosure. If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires any Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the disclosing Party with prompt notice of such request(s) or requirement(s) so that the disclosing Party may seek an appropriate protective order or waive compliance with the terms of this Agreement. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

8.1.7 Termination of Agreement. Upon termination of this Agreement for any reason, each Party shall, within ten (10) Business Days of receipt of a written request from the other Party, use Reasonable Efforts to destroy, erase, or delete (with such destruction, erasure, and deletion certified in writing to the requesting Party) or return to the requesting Party any and all written or electronic Confidential Information received from the requesting Party, except that each

Party may keep one copy for archival purposes, provided that the obligation to treat it as Confidential Information in accordance with this Article 8 shall survive such termination.

8.1.8 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for another Party's Breach of its obligations under this Article 8. Each Party accordingly agrees that the disclosing Party shall be entitled to equitable relief, by way of injunction or otherwise, if the receiving Party Breaches or threatens to Breach its obligations under this Article 8, which equitable relief shall be granted without bond or proof of damages, and the Breaching Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 8, but it shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 8.

8.1.9 Disclosure to FERC, its Staff, or a State Regulatory Body. Notwithstanding anything in this Article 8 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from a Party that is otherwise required to be maintained in confidence pursuant to this Agreement, the Party shall provide the requested information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Parties to this Agreement prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Parties to the Agreement when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

8.1.10 Subject to the exception in Article 8.1.9, any information that a disclosing Party claims is competitively sensitive, commercial, or financial information under this Agreement shall not be disclosed by the receiving Party to any person not employed or retained by the receiving Party, except to the extent disclosure is (1) required by law; (2) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (3) otherwise permitted by consent of the disclosing Party, such consent not to be unreasonably withheld; or (4) necessary to fulfill its obligations under this Agreement or as Transmission Provider or a balancing authority, including disclosing the Confidential Information to a regional or national reliability organization. The Party asserting confidentiality shall notify the receiving Party in writing of the information that Party claims is confidential. Prior to any disclosures of that Party's Confidential Information under this subparagraph, or if any non-Party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the Party that received the Confidential Information from the disclosing Party agrees to promptly notify the disclosing Party in writing and agrees to assert confidentiality and cooperate with the disclosing Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order, or other reasonable measures.

Article 9

Information Access and Audit Rights

9.1 Information Access. Each Party shall make available to the other Parties information necessary to verify the costs incurred by the other Parties for which the requesting Party is responsible under this Agreement and carry out obligations and responsibilities under this Agreement, provided that the Parties shall not use such information for purposes other than those set forth in this Article 9.1 and to enforce their rights under this Agreement.

9.2 Audit Rights. Subject to the requirements of confidentiality under Article 8 of this Agreement, the accounts and records related to the design, engineering, procurement, and construction of the Affected System Network Upgrade(s) shall be subject to audit during the period of this Agreement and for a period of twenty-four (24) months following Transmission Provider's issuance of a final invoice in accordance with Article 4.4. Affected System Interconnection Customers may, jointly or individually, at the expense of the requesting Party(ies), during normal business hours, and upon prior reasonable notice to Transmission Provider, audit such accounts and records. Any audit authorized by this Article 9.2 shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to obligations under this Agreement.

Article 10

Notices

10.1 General. Any notice, demand, or request required or permitted to be given by a Party to the other Parties, and any instrument required or permitted to be tendered or delivered by a Party in writing to another Party, may be so given, tendered, or delivered, as the case may be, by depositing the same with the United States Postal Service with postage prepaid, for transmission by certified or registered mail, addressed to the Parties, or personally delivered to the Parties, at the address set out below:

To Transmission Provider:
To Affected System Interconnection Customers:

10.2 Billings and Payments. Billings and payments shall be sent to the addresses shown in Article 10.1 unless otherwise agreed to by the Parties.

10.3 Alternative Forms of Notice. Any notice or request required or permitted to be given by a Party to the other Parties and not required by this Agreement to be given in writing may be so given by telephone, facsimile, or email to the telephone numbers and email addresses set out below:

To Transmission Provider:
To Affected System Interconnection Customers:

10.4 Execution and Filing. Affected System Interconnection Customers shall either: (i) execute two originals of this tendered Agreement and return them to Transmission Provider; or (ii) request in writing that Transmission Provider file with FERC this Agreement in unexecuted form. As soon as practicable, but not later than ten (10) Business Days after receiving either the two executed originals of this tendered Agreement (if it does not conform with a FERC-approved standard form of this Agreement) or the request to file this Agreement unexecuted, Transmission Provider shall file this Agreement with FERC, together with its explanation of any matters as to which Affected System Interconnection Customers and Transmission Provider disagree and support for the costs that Transmission Provider proposes to charge to Affected System Interconnection Customers under this Agreement. An unexecuted version of this Agreement should contain terms and conditions deemed appropriate by Transmission Provider for the Affected System Interconnection Customers' generating facilities. If the Parties agree to proceed with design, procurement, and construction of facilities and upgrades under the agreed-upon terms of the unexecuted version of this Agreement, they may proceed pending FERC action.

Article 11

Miscellaneous

11.1 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability, and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP.

{Signature Page to Follow}

In witness whereof, the Parties have executed this Agreement in multiple originals, each of which shall constitute and be an original Agreement among the Parties.

Attachment A to Appendix 12

Multiparty Affected System Facilities Construction Agreement

Affected System Network Upgrade(s), Cost Estimates and Responsibility, Construction Schedule, and Monthly Payment Schedule

This Appendix A is a part of the Multiparty Affected System Facilities Construction Agreement [between] *among* Affected System Interconnection Customers and Transmission Provider.

1.1 Affected System Network Upgrade(s) to be installed by Transmission Provider.

{description}

1.2 First Equipment Order (including permitting).

{description}

1.2.1. Permitting and Land Rights—Transmission Provider Affected System Network Upgrade(s)

{description}

1.3 Construction Schedule. Where applicable, construction of the Affected System Network Upgrade(s) is scheduled as follows and will be periodically updated as necessary:

TABLE 3—TRANSMISSION PROVIDER CONSTRUCTION ACTIVITIES

Milestone No.	Description	Start Date	End Date

Note: Construction schedule assumes that Transmission Provider has obtained final authorizations and security from Affected System Interconnection Customers and all necessary permits from Governmental Authorities as necessary prerequisites to commence construction of any of the Affected System Network Upgrade(s).

1.4 Payment Schedule.

1.4.1 Timing of and Adjustments to Affected System Interconnection Customers' Payments and Security.

{description}

1.4.2 Monthly Payment Schedule. Affected System Interconnection Customers' payment schedule is as follows.

{description}

TABLE 4—AFFECTED SYSTEM INTERCONNECTION CUSTOMERS' PAYMENT/SECURITY OBLIGATIONS FOR AFFECTED SYSTEM NETWORK UPGRADE(S)

Milestone No.	Description	Date

* Affected System Interconnection Customers' proportionate responsibility for each payment is as follows:

Affected System Interconnection Customer 1 ____.__%
Affected System Interconnection Customer 2 ____.__%
Affected System Interconnection Customer N ____.__%

Note: Affected System Interconnection Customers' payment or provision of security as provided in this Agreement operates as a condition precedent to Transmission Provider's obligations to construct any Affected System Network Upgrade(s), and failure to meet this schedule will constitute a Breach pursuant to Article 5.1 of this Agreement.

1.5 Permits, Licenses, and Authorizations.

{description}

Attachment B to Appendix 12

Multiparty Affected System Facilities Construction Agreement

Notification of Completed Construction

This Appendix B is a part of the Multiparty Affected System Facilities Construction Agreement among Affected System Interconnection Customers and Transmission Provider. Where applicable, when Transmission Provider has completed construction of the Affected System Network Upgrade(s), Transmission Provider shall send notice to Affected System Interconnection Customers in substantially the form following:

{Date}
{Affected System Interconnection Customers Addresses}
Re: Completion of Affected System Network Upgrade(s)
Dear {Name or Title}:

This letter is sent pursuant to the Multiparty Affected System Facilities Construction Agreement among {Transmission Provider} and {Affected System Interconnection Customers}, dated , 20.

On {Date}, Transmission Provider completed to its satisfaction all work on the Affected System Network Upgrade(s) required to facilitate the safe and reliable interconnection and operation of Affected System Interconnection Customer's generating facilities. Transmission Provider confirms that the Affected System Network Upgrade(s) are in place.

Thank you.

Appendix 5 to the Standard Large Generator Interconnection Procedures

Standard Large Generator Interconnection Agreement (LGIA)

Table of Contents

Standard Large Generator Interconnection Agreement

This Standard Large Generator Interconnection Agreement (''Agreement'') is made and entered into this ____ day of _____ 20____, by and between _____, a _____ organized and existing under the laws of the State/Commonwealth of _____ (''Interconnection Customer'' with a Large Generating Facility), and _____ , a _____ organized and existing under the laws of the State/Commonwealth of _____ (''Transmission Provider and/or Transmission Owner''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party'' or collectively as the ''Parties.''

Recitals

Whereas, Transmission Provider operates the Transmission System; and

Whereas, Interconnection Customer intends to own, lease and/or control and operate the Generating Facility identified as a Large Generating Facility in Appendix C to this Agreement; and

Whereas, Interconnection Customer and Transmission Provider have agreed to enter into this Agreement for the purpose of interconnecting the Large Generating Facility with the Transmission System;

Now, Therefore, in consideration of and subject to the mutual covenants contained herein, it is agreed:

When used in this Standard Large Generator Interconnection Agreement, terms with initial capitalization that are not defined in Article 1 shall have the meanings specified in the Article in which they are used or the Open Access Transmission Tariff (Tariff).

Article 1. Definitions

Adverse System Impact shall mean the negative effects due to technical or operational limits on conductors or equipment being exceeded that may compromise the safety and reliability of the electric system.

Affected System shall mean an electric system other than [the] Transmission Provider's Transmission System that may be affected by the proposed interconnection.

Affected System Operator shall mean the entity that operates an Affected System.

Affiliate shall mean, with respect to a corporation, partnership or other entity, each such other corporation, partnership or other entity that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such corporation, partnership or other entity.

Ancillary Services shall mean those services that are necessary to support the transmission of capacity and energy from resources to loads while maintaining reliable operation of [the] Transmission Provider's Transmission System in accordance with Good Utility Practice.

Applicable Laws and Regulations shall mean all duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

Applicable Reliability Standards shall mean the requirements and guidelines of the Electric Reliability Organization and the Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.

Balancing Authority shall mean an entity that integrates resource plans ahead of time, maintains demand and resource balance within a Balancing Authority Area, and supports interconnection frequency in real time.

Balancing Authority Area shall mean the collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.

Base Case shall mean the base case power flow, short circuit, and stability data bases used for the Interconnection Studies by Transmission Provider or Interconnection Customer.

Breach shall mean the failure of a Party to perform or observe any material term or condition of the Standard Large Generator Interconnection Agreement.

Breaching Party shall mean a Party that is in Breach of the Standard Large Generator Interconnection Agreement.

Business Day shall mean Monday through Friday, excluding Federal Holidays.

Calendar Day shall mean any day including Saturday, Sunday or a Federal Holiday.

Cluster shall mean a group of one or more Interconnection Requests that are studied together for the purpose of conducting a Cluster Study.

Cluster Restudy shall mean a restudy of a Cluster Study conducted pursuant to Section 7.5 of the LGIP.

Cluster Study shall mean the evaluation of one or more Interconnection Requests within a Cluster as described in Section 7 of the LGIP.

Clustering shall mean the process whereby one or more Interconnection Requests are studied together, instead of serially, as described in Section 7 of the LGIP.

Commercial Operation shall mean the status of a Generating Facility that has commenced generating electricity for sale, excluding electricity generated during Trial Operation.

Commercial Operation Date of a unit shall mean the date on which the Generating Facility commences Commercial Operation as agreed to by the Parties pursuant to Appendix E to the Standard Large Generator Interconnection Agreement.

Confidential Information shall mean any confidential, proprietary or trade secret information of a plan, specification, pattern, procedure, design, device, list, concept, policy or compilation relating to the present or planned business of a Party, which is designated as confidential by the Party supplying the information, whether conveyed orally, electronically, in writing, through inspection, or otherwise.

Contingent Facilities shall mean those unbuilt Interconnection Facilities and Network Upgrades upon which the Interconnection Request's costs, timing, and study findings are dependent, and if delayed or not built, could cause a need for restudies of the Interconnection Request or a reassessment of the Interconnection Facilities and/or Network Upgrades and/or costs and timing.

Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 17 of the Standard Large Generator Interconnection Agreement.

Dispute Resolution shall mean the procedure for resolution of a dispute between the Parties in which they will first attempt to resolve the dispute on an informal basis.

Distribution System shall mean [the] Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which distribution systems operate differ among areas.

Distribution Upgrades shall mean the additions, modifications, and upgrades to [the] Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Generating Facility and render the transmission service necessary to effect Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Effective Date shall mean the date on which the Standard Large Generator Interconnection Agreement becomes effective upon execution by the Parties subject to acceptance by FERC, or if filed unexecuted, upon the date specified by FERC.

Electric Reliability Organization shall mean the North American Electric Reliability Corporation *(NERC)* or its successor organization.

Emergency Condition shall mean a condition or situation: (1) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (2) that, in the case of a Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to Transmission Provider's Transmission System, Transmission Provider's Interconnection Facilities or the electric systems of others to which [the] Transmission Provider's Transmission System is directly connected; or (3) that, in the case of Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Generating Facility or Interconnection Customer's Interconnection Facilities. System restoration and black start shall be considered Emergency Conditions; provided, that Interconnection Customer is not obligated by the Standard Large Generator Interconnection Agreement to possess black start capability.

Energy Resource Interconnection Service shall mean an Interconnection Service that allows [the] Interconnection Customer to connect its Generating Facility to [the] Transmission Provider's Transmission System to be eligible to deliver the Generating Facility's electric output using the existing firm or nonfirm capacity of [the] Transmission Provider's Transmission System on an as available basis. Energy Resource Interconnection Service in and of itself does not convey transmission service.

Engineering & Procurement (E&P) Agreement shall mean an agreement that authorizes [the] Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection in order to advance the implementation of the Interconnection Request.

Environmental Law shall mean Applicable Laws or Regulations relating to pollution or protection of the environment or natural resources.

Federal Power Act shall mean the Federal Power Act, as amended, 16 U.S.C. §§ 791a *et seq.*

FERC shall mean the Federal Energy Regulatory Commission (Commission) or its successor.

Force Majeure shall mean any act of God, labor disturbance, act of the public enemy, war, insurrection, riot, fire, storm or flood, explosion, breakage or accident to machinery or equipment, any order, regulation or restriction imposed by governmental, military or lawfully established civilian authorities, or any other cause beyond a Party's control. A Force Majeure event does not include acts of negligence or intentional wrongdoing by the Party claiming Force Majeure.

Generating Facility shall mean Interconnection Customer's devices for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include Interconnection Customer's Interconnection Facilities.

Generating Facility Capacity shall mean the net capacity of the Generating Facility or the aggregate net capacity of the Generating Facility where it includes more than one device for the production and/or storage for later injection of electricity.

Good Utility Practice shall mean any of the practices, methods and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods and acts which, in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Governmental Authority shall mean any federal, state, local or other governmental regulatory or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, police, or taxing authority or power; provided, however, that such term does not include Interconnection Customer, Transmission Provider, or any Affiliate thereof.

Hazardous Substances shall mean any chemicals, materials or substances defined as or included in the definition of ''hazardous substances,'' ''hazardous wastes,'' ''hazardous materials,'' ''hazardous constituents,'' ''restricted hazardous materials,'' ''extremely hazardous substances,'' ''toxic substances,'' ''radioactive substances,'' ''contaminants,'' ''pollutants,'' ''toxic pollutants'' or words of similar meaning and regulatory effect under any applicable Environmental Law, or any other chemical, material or substance, exposure to which is prohibited, limited or regulated by any applicable Environmental Law.

Initial Synchronization Date shall mean the date upon which the Generating Facility is initially synchronized and upon which Trial Operation begins.

In-Service Date shall mean the date upon which [the] Interconnection Customer reasonably expects it will be ready to begin use of [the] Transmission Provider's Interconnection Facilities to obtain back feed power.

Interconnection Customer shall mean any entity, including [the] Transmission Provider, Transmission Owner or any of the Affiliates or subsidiaries of either, that proposes to interconnect its Generating Facility with [the] Transmission Provider's Transmission System.

Interconnection Customer's Interconnection Facilities shall mean all facilities and equipment, as identified in Appendix A of the Standard Large Generator Interconnection Agreement, that are located between the Generating Facility and the Point of Change of Ownership, including any modification, addition, or upgrades to such facilities and equipment necessary to physically and electrically interconnect the Generating Facility to [the] Transmission Provider's Transmission System. Interconnection Customer's Interconnection Facilities are sole use facilities.

Interconnection Facilities shall mean Transmission Provider's Interconnection Facilities and Interconnection Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Generating Facility to Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Interconnection Facilities Study shall mean a study conducted by Transmission Provider or a third party consultant for Interconnection Customer to determine a list of facilities (including Transmission Provider's Interconnection Facilities and Network Upgrades as identified in the Cluster Study), the cost of those facilities, and the time required to interconnect the Generating Facility with Transmission Provider's Transmission System. The scope of the study is defined in Section 8 of the LGIP.

Interconnection Facilities Study Agreement shall mean the form of agreement contained in Appendix 3 of the Standard Large Generator Interconnection Procedures for conducting the Interconnection Facilities Study.

Interconnection Request shall mean an Interconnection Customer's request, in the form of Appendix 1 to the LGIP, in accordance with the Tariff, to interconnect a new Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics of, an existing Generating Facility that is interconnected with [the] Transmission Provider's Transmission System.

Interconnection Service shall mean the service provided by [the] Transmission Provider associated with interconnecting [the] Interconnection Customer's Generating Facility to [the] Transmission Provider's Transmission System and enabling it to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Standard Large Generator Interconnection Agreement and, if applicable, [the] Transmission Provider's Tariff.

Interconnection Study shall mean any of the following studies: the Cluster Study, the Cluster Restudy, the Surplus Interconnection Service [System Impact] Study, [and] the Interconnection Facilities Study, *the Affected System Study, Optional Interconnection Study, and Material Modification assessment,* described in the LGIP.

IRS shall mean the Internal Revenue Service.

Joint Operating Committee shall be a group made up of representatives from Interconnection Customers and [the]

Transmission Provider to coordinate operating and technical considerations of Interconnection Service.

Large Generating Facility shall mean a Generating Facility having a Generating Facility Capacity of more than 20 MW.

LGIA Deposit shall mean the deposit Interconnection Customer submits when returning the executed LGIA, or within *ten* (10) Business Days of requesting that the LGIA be filed unexecuted at the Commission, in accordance with Section 11.3 of the LGIP.

Loss shall mean any and all losses relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's performance, or non-performance of its obligations under the Standard Large Generator Interconnection Agreement on behalf of the Indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the Indemnifying Party.

Material Modification shall mean those modifications that have a material impact on the cost or timing of any Interconnection Request with an equal or later Queue Position.

Metering Equipment shall mean all metering equipment installed or to be installed at the Generating Facility pursuant to the Standard Large Generator Interconnection Agreement at the metering points, including but not limited to instrument transformers, MWh-meters, data acquisition equipment, transducers, remote terminal unit, communications equipment, phone lines, and fiber optics.

Network Resource shall mean any designated generating resource owned, purchased, or leased by a Network Customer under the Network Integration Transmission Service Tariff. Network Resources do not include any resource, or any portion thereof, that is committed for sale to third parties or otherwise cannot be called upon to meet the Network Customer's Network Load on a non-interruptible basis.

Network Resource Interconnection Service shall mean an Interconnection Service that allows [the] Interconnection Customer to integrate its Large Generating Facility with [the] Transmission Provider's Transmission System (1) in a manner comparable to that in which [the] Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an RTO or ISO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service in and of itself does not convey transmission service.

Network Upgrades shall mean the additions, modifications, and upgrades to [the] Transmission Provider's Transmission System required at or beyond the point at which the Interconnection Facilities connect to [the] Transmission Provider's Transmission System to accommodate the interconnection of the Large Generating Facility to [the] Transmission Provider's Transmission System.

Notice of Dispute shall mean a written notice of a dispute or claim that arises out of or in connection with the Standard Large Generator Interconnection Agreement or its performance.

Optional Interconnection Study shall mean a sensitivity analysis based on assumptions specified by [the] Interconnection Customer in the Optional Interconnection Study Agreement.

Optional Interconnection Study Agreement shall mean the form of agreement contained in Appendix 4 of the LGIP for conducting the Optional Interconnection Study.

Party or Parties shall mean Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Point of Change of Ownership shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where [the] Interconnection Customer's Interconnection Facilities connect to [the] Transmission Provider's Interconnection Facilities.

Point of Interconnection shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where the Interconnection Facilities connect to [the] Transmission Provider's Transmission System.

Proportional Impact Method shall mean a technical analysis conducted by Transmission Provider to determine the degree to which each Generating Facility in the Cluster Study contributes to the need for a specific System Network Upgrade.

Provisional Interconnection Service shall mean Interconnection Service provided by Transmission Provider associated with interconnecting [the] Interconnection Customer's Generating Facility to Transmission Provider's Transmission System and enabling that Transmission System to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Provisional Large Generator Interconnection Agreement and, if applicable, the Tariff.

Provisional Large Generator Interconnection Agreement shall mean the interconnection agreement for Provisional Interconnection Service established between Transmission Provider and/or the Transmission Owner and [the] Interconnection Customer. This agreement shall take the form of the *Standard* Large Generator Interconnection Agreement, modified for provisional purposes.

Queue Position shall mean the order of a valid Interconnection Request, relative to all other pending valid Interconnection Requests, established pursuant to Section 4.1 of this LGIP.

Reasonable Efforts shall mean, with respect to an action required to be attempted or taken by a Party under the Standard Large Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.

Scoping Meeting shall mean the meeting between representatives of Interconnection Customer(s) and Transmission Provider conducted for the purpose of discussing the proposed Interconnection Request and any alternative interconnection options, exchanging information including any transmission data and earlier study evaluations that would be reasonably expected to impact such interconnection options, refining information and models provided by Interconnection Customer(s), discussing the Cluster Study materials posted to OASIS pursuant to Section 3.5 of the LGIP, and analyzing such information.

Site Control shall mean the exclusive land right to develop, construct, operate, and maintain the Generating Facility over the term of expected operation of the Generating Facility. Site Control may be demonstrated by documentation establishing: (1) ownership of, a leasehold interest in, or a right to develop a site of sufficient size to construct and operate the Generating Facility; (2) an option to purchase or acquire a leasehold site of sufficient size to construct and operate the Generating Facility for such purpose; or (3) any other documentation that clearly demonstrates the right of Interconnection Customer to exclusively occupy a site of sufficient size to construct and operate the Generating Facility. Transmission Provider will maintain acreage requirements for each Generating Facility type on its OASIS or public website.

Small Generating Facility shall mean a Generating Facility that has a Generating Facility Capacity of no more than 20 MW.

Stand Alone Network Upgrades shall mean Network Upgrades that are not part of an Affected System that an Interconnection Customer may construct without affecting day-to-day operations of the Transmission System during their construction [and the following conditions are met: (1) a Substation Network Upgrade must only be required for a single Interconnection Customer in the Cluster and no other Interconnection Customer in that Cluster is required to interconnect to the same Substation Network Upgrades, and (2) a System Network Upgrade must only be required for a single Interconnection Customer in the Cluster, as indicated under Transmission Provider's Proportional Impact Method]. Both Transmission Provider and Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify them in Appendix A to the Standard Large Generator Interconnection Agreement. If Transmission Provider and Interconnection Customer disagree about whether a particular Network Upgrade is a Stand Alone Network Upgrade, Transmission Provider must provide Interconnection Customer a written technical explanation outlining why Transmission Provider does not consider the Network Upgrade to be a Stand Alone Network Upgrade within *fifteen (*15*) Business* [d]*D*ays of its determination.

Standard Large Generator Interconnection Agreement (LGIA) shall mean the form of interconnection agreement applicable to an Interconnection Request pertaining to a Large Generating Facility that is included in [the] Transmission Provider's Tariff.

Standard Large Generator Interconnection Procedures (LGIP) shall mean the interconnection procedures applicable to an Interconnection Request pertaining to a Large Generating Facility that are included in [the] Transmission Provider's Tariff.

Substation Network Upgrades shall mean Network Upgrades that are required at the

substation located at the Point of Interconnection.

Surplus Interconnection Service shall mean any unneeded portion of Interconnection Service established in a *Standard* Large Generator Interconnection Agreement, such that if Surplus Interconnection Service is utilized the total amount of Interconnection Service at the Point of Interconnection would remain the same.

System Network Upgrades shall mean Network Upgrades that are required beyond the substation located at the Point of Interconnection.

System Protection Facilities shall mean the equipment, including necessary protection signal communications equipment, required to protect (1) [the] Transmission Provider's Transmission System from faults or other electrical disturbances occurring at the Generating Facility and (2) the Generating Facility from faults or other electrical system disturbances occurring on [the] Transmission Provider's Transmission System or on other delivery systems or other generating systems to which [the] Transmission Provider's Transmission System is directly connected.

Tariff shall mean [the] Transmission Provider's Tariff through which open access transmission service and Interconnection Service are offered, as filed with FERC, and as amended or supplemented from time to time, or any successor tariff.

Transmission Owner shall mean an entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Standard Large Generator Interconnection Agreement to the extent necessary.

Transmission Provider shall mean the public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from [the] Transmission Provider.

Transmission Provider's Interconnection Facilities shall mean all facilities and equipment owned, controlled, or operated by Transmission Provider from the Point of Change of Ownership to the Point of Interconnection as identified in Appendix A to the Standard Large Generator Interconnection Agreement, including any modifications, additions or upgrades to such facilities and equipment. Transmission Provider's Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Transmission System shall mean the facilities owned, controlled or operated by [the] Transmission Provider or Transmission Owner that are used to provide transmission service under the Tariff.

Trial Operation shall mean the period during which Interconnection Customer is engaged in on-site test operations and commissioning of the Generating Facility prior to Commercial Operation.

Variable Energy Resource shall mean a device for the production of electricity that is characterized by an energy source that: (1) is renewable; (2) cannot be stored by the facility owner or operator; and (3) has variability that is beyond the control of the facility owner or operator.

Withdrawal Penalty shall mean the penalty assessed by Transmission Provider to an Interconnection Customer that chooses to withdraw or is deemed withdrawn from Transmission Provider's interconnection queue or whose Generating Facility does not otherwise reach Commercial Operation. The calculation of the Withdrawal Penalty is set forth in Section 3.7.1 of the LGIP.

Article 2. Effective Date, Term, and Termination

2.1 Effective Date. This LGIA shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by FERC. Transmission Provider shall promptly file this LGIA with FERC upon execution in accordance with Article 3.1, if required.

2.2 Term of Agreement. Subject to the provisions of Article 2.3, this LGIA shall remain in effect for a period of ten (10) years from the Effective Date or such other longer period as Interconnection Customer may request (Term to be specified in individual agreements) and shall be automatically renewed for each successive one-year period thereafter.

2.3 Termination Procedures.

2.3.1 Written Notice. This LGIA may be terminated by Interconnection Customer after giving Transmission Provider ninety (90) Calendar Days advance written notice, or by Transmission Provider notifying FERC after the Generating Facility permanently ceases Commercial Operation.

2.3.2 Default. Either Party may terminate this LGIA in accordance with Article 17.

2.3.3 Notwithstanding Articles 2.3.1 and 2.3.2, no termination shall become effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination, including the filing with FERC of a notice of termination of this LGIA, which notice has been accepted for filing by FERC.

2.4 Termination Costs. If a Party elects to terminate this Agreement pursuant to Article 2.3 above, each Party shall pay all costs incurred (including any cancellation costs relating to orders or contracts for Interconnection Facilities and equipment) or charges assessed by the other Party, as of the date of the other Party's receipt of such notice of termination, that are the responsibility of the Terminating Party under this LGIA. In the event of termination by a Party, the Parties shall use commercially Reasonable Efforts to mitigate the costs, damages and charges arising as a consequence of termination. Upon termination of this LGIA, unless otherwise ordered or approved by FERC:

2.4.1 With respect to any portion of Transmission Provider's Interconnection Facilities that have not yet been constructed or installed, Transmission Provider shall to the extent possible and with Interconnection Customer's authorization cancel any pending orders of, or return, any materials or equipment for, or contracts for construction of, such facilities; provided that in the event Interconnection Customer elects not to authorize such cancellation, Interconnection Customer shall assume all payment obligations with respect to such materials, equipment, and contracts, and Transmission Provider shall deliver such material and equipment, and, if necessary, assign such contracts, to Interconnection Customer as soon as practicable, at Interconnection Customer's expense. To the extent that Interconnection Customer has already paid Transmission Provider for any or all such costs of materials or equipment not taken by Interconnection Customer, Transmission Provider shall promptly refund such amounts to Interconnection Customer, less any costs, including penalties incurred by Transmission Provider to cancel any pending orders of or return such materials, equipment, or contracts.

If an Interconnection Customer terminates this LGIA, it shall be responsible for all costs incurred in association with that Interconnection Customer's interconnection, including any cancellation costs relating to orders or contracts for Interconnection Facilities and equipment, and other expenses including any Network Upgrades for which Transmission Provider has incurred expenses and has not been reimbursed by Interconnection Customer.

2.4.2 Transmission Provider may, at its option, retain any portion of such materials, equipment, or facilities that Interconnection Customer chooses not to accept delivery of, in which case Transmission Provider shall be responsible for all costs associated with procuring such materials, equipment, or facilities.

2.4.3 With respect to any portion of the Interconnection Facilities, and any other facilities already installed or constructed pursuant to the terms of this LGIA, Interconnection Customer shall be responsible for all costs associated with the removal, relocation or other disposition or retirement of such materials, equipment, or facilities.

2.5 Disconnection. Upon termination of this LGIA, the Parties will take all appropriate steps to disconnect the Large Generating Facility from the Transmission System. All costs required to effectuate such disconnection shall be borne by the terminating Party, unless such termination resulted from the non-terminating Party's Default of this LGIA or such non-terminating Party otherwise is responsible for these costs under this LGIA.

2.6 Survival. This LGIA shall continue in effect after termination to the extent necessary to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this LGIA; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this LGIA was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this LGIA or other applicable agreements, to disconnect, remove or salvage its own facilities and equipment.

Article 3. Regulatory Filings

3.1 Filing. Transmission Provider shall file this LGIA (and any amendment hereto) with the appropriate Governmental Authority, if required. Interconnection Customer may request that any information so provided be subject to the confidentiality provisions of Article 22. If Interconnection Customer has executed this LGIA, or any amendment thereto, Interconnection Customer shall reasonably cooperate with Transmission Provider with respect to such filing and to provide any information reasonably requested by Transmission Provider needed to comply with applicable regulatory requirements.

Article 4. Scope of Service

4.1 Interconnection Product Options. Interconnection Customer has selected the following (checked) type of Interconnection Service:

4.1.1 Energy Resource Interconnection Service.

4.1.1.1 The Product. Energy Resource Interconnection Service allows Interconnection Customer to connect the Large Generating Facility to the Transmission System and be eligible to deliver the Large Generating Facility's output using the existing firm or non-firm capacity of the Transmission System on an ''as available'' basis. To the extent Interconnection Customer wants to receive Energy Resource Interconnection Service, Transmission Provider shall construct facilities identified in Attachment A.

4.1.1.2 Transmission Delivery Service Implications.

Under Energy Resource Interconnection Service, Interconnection Customer will be eligible to inject power from the Large Generating Facility into and deliver power across the interconnecting Transmission Provider's Transmission System on an ''as available'' basis up to the amount of MWs identified in the applicable stability and steady state studies to the extent the upgrades initially required to qualify for Energy Resource Interconnection Service have been constructed. Where eligible to do so (*e.g.,* PJM, ISO–NE, NYISO), Interconnection Customer may place a bid to sell into the market up to the maximum identified Large Generating Facility output, subject to any conditions specified in the interconnection service approval, and the Large Generating Facility will be dispatched to the extent Interconnection Customer's bid clears. In all other instances, no transmission delivery service from the Large Generating Facility is assured, but Interconnection Customer may obtain Point-to-Point Transmission Service, Network Integration Transmission Service, or be used for secondary network transmission service, pursuant to Transmission Provider's Tariff, up to the maximum output identified in the stability and steady state studies. In those instances, in order for Interconnection Customer to obtain the right to deliver or inject energy beyond the Large Generating Facility Point of Interconnection or to improve its ability to do so, transmission delivery service must be obtained pursuant to the provisions of Transmission Provider's Tariff. [The] Interconnection Customer's ability to inject its Large Generating Facility output beyond the Point of Interconnection, therefore, will depend on the existing capacity of Transmission Provider's Transmission System at such time as a transmission service request is made that would accommodate such delivery. The provision of firm Point-to-Point Transmission Service or Network Integration Transmission Service may require the construction of additional Network Upgrades.

4.1.2 Network Resource Interconnection Service.

4.1.2.1 The Product. Transmission Provider must conduct the necessary studies and construct the Network Upgrades needed to integrate the Large Generating Facility (1) in a manner comparable to that in which Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an ISO or RTO with market based congestion management, in the same manner as all Network Resources. To the extent Interconnection Customer wants to receive Network Resource Interconnection Service, Transmission Provider shall construct the facilities identified in Attachment A to this LGIA.

4.1.2.2 Transmission Delivery Service Implications. Network Resource Interconnection Service allows Interconnection Customer's Large Generating Facility to be designated by any Network Customer under the Tariff on Transmission Provider's Transmission System as a Network Resource, up to the Large Generating Facility's full output, on the same basis as existing Network Resources interconnected to Transmission Provider's Transmission System, and to be studied as a Network Resource on the assumption that such a designation will occur. Although Network Resource Interconnection Service does not convey a reservation of transmission service, any Network Customer under the Tariff can utilize its network service under the Tariff to obtain delivery of energy from the interconnected Interconnection Customer's Large Generating Facility in the same manner as it accesses Network Resources. A Large Generating Facility receiving Network Resource Interconnection Service may also be used to provide Ancillary Services after technical studies and/or periodic analyses are performed with respect to the Large Generating Facility's ability to provide any applicable Ancillary Services, provided that such studies and analyses have been or would be required in connection with the provision of such Ancillary Services by any existing Network Resource. However, if an Interconnection Customer's Large Generating Facility has not been designated as a Network Resource by any load, it cannot be required to provide Ancillary Services except to the extent such requirements extend to all generating facilities that are similarly situated. The provision of Network Integration Transmission Service or firm Point-to-Point Transmission Service may require additional studies and the construction of additional upgrades. Because such studies and upgrades would be associated with a request for delivery service under the Tariff, cost responsibility for the studies and upgrades would be in accordance with FERC's policy for pricing transmission delivery services.

Network Resource Interconnection Service does not necessarily provide Interconnection Customer with the capability to physically deliver the output of its Large Generating Facility to any particular load on Transmission Provider's Transmission System without incurring congestion costs. In the event of transmission constraints on Transmission Provider's Transmission System, Interconnection Customer's Large Generating Facility shall be subject to the applicable congestion management procedures in Transmission Provider's Transmission System in the same manner as Network Resources.

There is no requirement either at the time of study or interconnection, or at any point in the future, that Interconnection Customer's Large Generating Facility be designated as a Network Resource by a Network Service Customer under the Tariff or that Interconnection Customer identify a specific buyer (or sink). To the extent a Network Customer does designate the Large Generating Facility as a Network Resource, it must do so pursuant to Transmission Provider's Tariff.

Once an Interconnection Customer satisfies the requirements for obtaining Network Resource Interconnection Service, any future transmission service request for delivery from the Large Generating Facility within Transmission Provider's Transmission System of any amount of capacity and/or energy, up to the amount initially studied, will not require that any additional studies be performed or that any further upgrades associated with such Large Generating Facility be undertaken, regardless of whether or not such Large Generating Facility is ever designated by a Network Customer as a Network Resource and regardless of changes in ownership of the Large Generating Facility. However, the reduction or elimination of congestion or redispatch costs may require additional studies and the construction of additional upgrades.

To the extent Interconnection Customer enters into an arrangement for long term transmission service for deliveries from the Large Generating Facility outside Transmission Provider's Transmission System, such request may require additional studies and upgrades in order for Transmission Provider to grant such request.

4.2 Provision of Service. Transmission Provider shall provide Interconnection Service for the Large Generating Facility at the Point of Interconnection.

4.3 Performance Standards. Each Party shall perform all of its obligations under this LGIA in accordance with Applicable Laws and Regulations, Applicable Reliability Standards, and Good Utility Practice, and to the extent a Party is required or prevented or limited in taking any action by such regulations and standards, such Party shall not be deemed to be in Breach of this LGIA for its compliance therewith. If such Party is a Transmission Provider or Transmission Owner, then that Party shall amend the LGIA and submit the amendment to FERC for approval.

4.4 No Transmission Delivery Service. The execution of this LGIA does not constitute a request for, nor the provision of, any transmission delivery service under Transmission Provider's Tariff, and does not convey any right to deliver electricity to any specific customer or Point of Delivery.

4.5 Interconnection Customer Provided Services. The services provided by Interconnection Customer under this LGIA are set forth in Article 9.6 and Article 13.5.1. Interconnection Customer shall be paid for such services in accordance with Article 11.6.

Article 5. Interconnection Facilities Engineering, Procurement, and Construction

5.1 Options. Unless otherwise mutually agreed to between the Parties, Interconnection Customer shall select the In-Service Date, Initial Synchronization Date, and Commercial Operation Date; and either the Standard Option or Alternate Option set forth below, and such dates and selected option shall be set forth in Appendix B, Milestones. At the same time, Interconnection Customer shall indicate whether it elects to exercise the Option to Build set forth in Article 5.1.3 below. If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, Transmission Provider shall so notify Interconnection Customer within thirty (30) Calendar Days. Upon receipt of the notification that Interconnection Customer's designated dates are not acceptable to Transmission Provider, [the] Interconnection Customer shall notify Transmission Provider within thirty (30) Calendar Days whether it elects to exercise the Option to Build if it has not already elected to exercise the Option to Build.

5.1.1 Standard Option. Transmission Provider shall design, procure, and construct Transmission Provider's Interconnection Facilities and Network Upgrades, using Reasonable Efforts to complete Transmission Provider's Interconnection Facilities and Network Upgrades by the dates set forth in Appendix B, Milestones. Transmission Provider shall not be required to undertake any action which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, and Applicable Laws and Regulations. In the event Transmission Provider reasonably expects that it will not be able to complete Transmission Provider's Interconnection Facilities and Network Upgrades by the specified dates, Transmission Provider shall promptly provide written notice to Interconnection Customer and shall undertake Reasonable Efforts to meet the earliest dates thereafter.

5.1.2 Alternate Option. If the dates designated by Interconnection Customer are acceptable to Transmission Provider, Transmission Provider shall so notify Interconnection Customer within thirty (30) Calendar Days, and shall assume responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities by the designated dates.

If Transmission Provider subsequently fails to complete Transmission Provider's Interconnection Facilities by the In-Service Date, to the extent necessary to provide back feed power; or fails to complete Network Upgrades by the Initial Synchronization Date to the extent necessary to allow for Trial Operation at full power output, unless other arrangements are made by the Parties for such Trial Operation; or fails to complete the Network Upgrades by the Commercial Operation Date, as such dates are reflected in Appendix B, Milestones; Transmission Provider shall pay Interconnection Customer liquidated damages in accordance with Article 5.3, Liquidated Damages, provided, however, the dates designated by Interconnection Customer shall be extended day for day for each day that the applicable RTO or ISO refuses to grant clearances to install equipment.

5.1.3 Option to Build. *Individual or Multiple* Interconnection Customer shall have the option to assume responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades on the dates specified in Article 5.1.2, *if the requirements of this Article 5.1.3 are met. When multiple Interconnection Customers exercise this option, multiple Interconnection Customers may agree to exercise this option provided (1) all Transmission Provider's Interconnection Facilities and Stand Alone Network upgrades constructed under this option are only required for Interconnection Customers in a single Cluster and (2) all impacted Interconnection Customers execute and provide to Transmission Provider an agreement regarding responsibilities and payment for the construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades planned to be built under this option.* Transmission Provider and *the individual Interconnection Customer or each of the multiple* Interconnection Customers must agree as to what constitutes Stand Alone Network Upgrades and identify such Stand Alone Network Upgrades in Appendix A. Except for Stand Alone Network Upgrades, Interconnection Customer shall have no right to construct Network Upgrades under this option.

5.1.4 Negotiated Option. If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, the Parties shall in good faith attempt to negotiate terms and conditions (including revision of the specified dates and liquidated damages, the provision of incentives, or the procurement and construction of all facilities other than Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades if [the] Interconnection Customer elects to exercise the Option to Build under Article 5.1.3). If the Parties are unable to reach agreement on such terms and conditions, then pursuant to Article 5.1.1 (Standard Option), Transmission Provider shall assume responsibility for the design, procurement and construction of all facilities other than Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades if [the] Interconnection Customer elects to exercise the Option to Build.

5.2 General Conditions Applicable to Option to Build. If Interconnection Customer assumes responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades,

(1) Interconnection Customer shall engineer, procure equipment, and construct Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades (or portions thereof) using Good Utility Practice and using standards and specifications provided in advance by Transmission Provider;

(2) Interconnection Customer's engineering, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades shall comply with all requirements of law to which Transmission Provider would be subject in the engineering, procurement or construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades;

(3) Transmission Provider shall review and approve the engineering design, equipment acceptance tests, and the construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades;

(4) prior to commencement of construction, Interconnection Customer shall provide to Transmission Provider a schedule for construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades, and shall promptly respond to requests for information from Transmission Provider;

(5) at any time during construction, Transmission Provider shall have the right to gain unrestricted access to Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades and to conduct inspections of the same;

(6) at any time during construction, should any phase of the engineering, equipment procurement, or construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades not meet the standards and specifications provided by Transmission Provider, Interconnection Customer shall be obligated to remedy deficiencies in that portion of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades;

(7) Interconnection Customer shall indemnify Transmission Provider for claims arising from Interconnection Customer's construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades under the terms and procedures applicable to Article 18.1 Indemnity;

(8) Interconnection Customer shall transfer control of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades to Transmission Provider;

(9) Unless Parties otherwise agree, Interconnection Customer shall transfer ownership of Transmission Provider's Interconnection Facilities and Stand-Alone Network Upgrades to Transmission Provider;

(10) Transmission Provider shall approve and accept for operation and maintenance

Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades to the extent engineered, procured, and constructed in accordance with this Article 5.2; and

(11) Interconnection Customer shall deliver to Transmission Provider ''as-built'' drawings, information, and any other documents that are reasonably required by Transmission Provider to assure that the Interconnection Facilities and Stand-Alone Network Upgrades are built to the standards and specifications required by Transmission Provider.

(12) If Interconnection Customer exercises the Option to Build pursuant to Article 5.1.3, Interconnection Customer shall pay Transmission Provider the agreed upon amount of {$ PLACEHOLDER} for Transmission Provider to execute the responsibilities enumerated to Transmission Provider under Article 5.2. Transmission Provider shall invoice Interconnection Customer for this total amount to be divided on a monthly basis pursuant to Article 12.

5.3 Liquidated Damages. The actual damages to Interconnection Customer, in the event Transmission Provider's Interconnection Facilities or Network Upgrades are not completed by the dates designated by Interconnection Customer and accepted by Transmission Provider pursuant to subparagraphs 5.1.2 or 5.1.4, above, may include Interconnection Customer's fixed operation and maintenance costs and lost opportunity costs. Such actual damages are uncertain and impossible to determine at this time. Because of such uncertainty, any liquidated damages paid by Transmission Provider to Interconnection Customer in the event that Transmission Provider does not complete any portion of Transmission Provider's Interconnection Facilities or Network Upgrades by the applicable dates, shall be an amount equal to ½ of 1 percent per day of the actual cost of Transmission Provider's Interconnection Facilities and Network Upgrades, in the aggregate, for which Transmission Provider has assumed responsibility to design, procure and construct.

However, in no event shall the total liquidated damages exceed 20 percent of the actual cost of Transmission Provider's Interconnection Facilities and Network Upgrades for which Transmission Provider has assumed responsibility to design, procure, and construct. The foregoing payments will be made by Transmission Provider to Interconnection Customer as just compensation for the damages caused to Interconnection Customer, which actual damages are uncertain and impossible to determine at this time, and as reasonable liquidated damages, but not as a penalty or a method to secure performance of this LGIA. Liquidated damages, when the Parties agree to them, are the exclusive remedy for [the] Transmission Provider's failure to meet its schedule.

No liquidated damages shall be paid to Interconnection Customer if: (1) Interconnection Customer is not ready to commence use of Transmission Provider's Interconnection Facilities or Network Upgrades to take the delivery of power for the Large Generating Facility's Trial Operation or to export power from the Large Generating Facility on the specified dates, unless Interconnection Customer would have been able to commence use of Transmission Provider's Interconnection Facilities or Network Upgrades to take the delivery of power for Large Generating Facility's Trial Operation or to export power from the Large Generating Facility, but for Transmission Provider's delay; (2) Transmission Provider's failure to meet the specified dates is the result of the action or inaction of Interconnection Customer or any other Interconnection Customer who has entered into an LGIA with Transmission Provider or any cause beyond Transmission Provider's reasonable control or reasonable ability to cure; (3) [the] Interconnection Customer has assumed responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades; or (4) the Parties have otherwise agreed.

5.4 Power System Stabilizers. Interconnection Customer shall procure, install, maintain and operate Power System Stabilizers in accordance with the guidelines and procedures established by the Electric Reliability Organization. Transmission Provider reserves the right to reasonably establish minimum acceptable settings for any installed Power System Stabilizers, subject to the design and operating limitations of the Large Generating Facility. If the Large Generating Facility's Power System Stabilizers are removed from service or not capable of automatic operation, Interconnection Customer shall immediately notify Transmission Provider's system operator, or its designated representative. The requirements of this paragraph shall not apply to wind generators.

5.5 Equipment Procurement. If responsibility for construction of Transmission Provider's Interconnection Facilities or Network Upgrades is to be borne by Transmission Provider, then Transmission Provider shall commence design of Transmission Provider's Interconnection Facilities or Network Upgrades and procure necessary equipment as soon as practicable after all of the following conditions are satisfied, unless the Parties otherwise agree in writing:

5.5.1 Transmission Provider has completed the *Interconnection* Facilities Study pursuant to the *Interconnection* Facilities Study Agreement;

5.5.2 Transmission Provider has received written authorization to proceed with design and procurement from Interconnection Customer by the date specified in Appendix B, Milestones; and

5.5.3 Interconnection Customer has provided security to Transmission Provider in accordance with Article 11.5 by the dates specified in Appendix B, Milestones.

5.6 Construction Commencement. Transmission Provider shall commence construction of Transmission Provider's Interconnection Facilities and Network Upgrades for which it is responsible as soon as practicable after the following additional conditions are satisfied:

5.6.1 Approval of the appropriate Governmental Authority has been obtained for any facilities requiring regulatory approval;

5.6.2 Necessary real property rights and rights-of-way have been obtained, to the extent required for the construction of a discrete aspect of Transmission Provider's Interconnection Facilities and Network Upgrades;

5.6.3 Transmission Provider has received written authorization to proceed with construction from Interconnection Customer by the date specified in Appendix B, Milestones; and

5.6.4 Interconnection Customer has provided security to Transmission Provider in accordance with Article 11.5 by the dates specified in Appendix B, Milestones.

5.7 Work Progress. The Parties will keep each other advised periodically as to the progress of their respective design, procurement and construction efforts. Either Party may, at any time, request a progress report from the other Party. If, at any time, Interconnection Customer determines that the completion of Transmission Provider's Interconnection Facilities will not be required until after the specified In-Service Date, Interconnection Customer will provide written notice to Transmission Provider of such later date upon which the completion of Transmission Provider's Interconnection Facilities will be required.

5.8 Information Exchange. As soon as reasonably practicable after the Effective Date, the Parties shall exchange information regarding the design and compatibility of the Parties' Interconnection Facilities and compatibility of the Interconnection Facilities with Transmission Provider's Transmission System, and shall work diligently and in good faith to make any necessary design changes.

5.9 Other Interconnection Options.

5.9.1 Limited Operation. If any of Transmission Provider's Interconnection Facilities or Network Upgrades are not reasonably expected to be completed prior to the Commercial Operation Date of the Large Generating Facility, Transmission Provider shall, upon the request and at the expense of Interconnection Customer, perform operating studies on a timely basis to determine the extent to which the Large Generating Facility and Interconnection Customer's Interconnection Facilities may operate prior to the completion of Transmission Provider's Interconnection Facilities or Network Upgrades consistent with Applicable Laws and Regulations, Applicable Reliability Standards, Good Utility Practice, and this LGIA. Transmission Provider shall permit Interconnection Customer to operate the Large Generating Facility and Interconnection Customer's Interconnection Facilities in accordance with the results of such studies.

5.9.2 Provisional Interconnection Service. Upon the request of Interconnection Customer, and prior to completion of requisite Interconnection Facilities, Network Upgrades, Distribution Upgrades, or System Protection Facilities Transmission Provider may execute a Provisional Large Generator Interconnection Agreement or

Interconnection Customer may request the filing of an unexecuted Provisional Large Generator Interconnection Agreement with [the] Interconnection Customer for limited Interconnection Service at the discretion of Transmission Provider based upon an evaluation that will consider the results of available studies. Transmission Provider shall determine, through available studies or additional studies as necessary, whether stability, short circuit, thermal, and/or voltage issues would arise if Interconnection Customer interconnects without modifications to the Generating Facility or Transmission System. Transmission Provider shall determine whether any Interconnection Facilities, Network Upgrades, Distribution Upgrades, or System Protection Facilities that are necessary to meet the requirements of the Electric Reliability Organization, or any applicable Regional Entity for the interconnection of a new, modified and/or expanded Generating Facility are in place prior to the commencement of Interconnection Service from the Generating Facility. Where available studies indicate that such, Interconnection Facilities, Network Upgrades, Distribution Upgrades, and/or System Protection Facilities that are required for the interconnection of a new, modified and/or expanded Generating Facility are not currently in place, Transmission Provider will perform a study, at [the] Interconnection Customer's expense, to confirm the facilities that are required for Provisional Interconnection Service. The maximum permissible output of the Generating Facility in the Provisional Large Generator Interconnection Agreement shall be studied and updated {on a frequency determined by Transmission Provider and at [the] Interconnection Customer's expense}. Interconnection Customer assumes all risk and liabilities with respect to changes between the Provisional Large Generator Interconnection Agreement and the Large Generator Interconnection Agreement, including changes in output limits and Interconnection Facilities, Network Upgrades, Distribution Upgrades, and/or System Protection Facilities cost responsibilities.

5.10 Interconnection Customer's Interconnection Facilities ('ICIF'). Interconnection Customer shall, at its expense, design, procure, construct, own and install the ICIF, as set forth in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades.

5.10.1 Interconnection Customer's Interconnection Facility Specifications. Interconnection Customer shall submit initial specifications for the ICIF, including System Protection Facilities, to Transmission Provider at least one hundred eighty (180) Calendar Days prior to the Initial Synchronization Date; and final specifications for review and comment at least ninety (90) Calendar Days prior to the Initial Synchronization Date. Transmission Provider shall review such specifications to ensure that the ICIF are compatible with the technical specifications, operational control, and safety requirements of Transmission Provider and comment on such specifications within thirty (30) Calendar Days of Interconnection Customer's submission. All specifications provided hereunder shall be deemed confidential.

5.10.2 Transmission Provider's Review. Transmission Provider's review of Interconnection Customer's final specifications shall not be construed as confirming, endorsing, or providing a warranty as to the design, fitness, safety, durability or reliability of the Large Generating Facility, or the ICIF. Interconnection Customer shall make such changes to the ICIF as may reasonably be required by Transmission Provider, in accordance with Good Utility Practice, to ensure that the ICIF are compatible with the technical specifications, operational control, and safety requirements of Transmission Provider.

5.10.3 ICIF Construction. The ICIF shall be designed and constructed in accordance with Good Utility Practice. Within one hundred twenty (120) Calendar Days after the Commercial Operation Date, unless the Parties agree on another mutually acceptable deadline, Interconnection Customer shall deliver to Transmission Provider ''as-built'' drawings, information and documents for the ICIF, such as: a one-line diagram, a site plan showing the Large Generating Facility and the ICIF, plan and elevation drawings showing the layout of the ICIF, a relay functional diagram, relaying AC and DC schematic wiring diagrams and relay settings for all facilities associated with Interconnection Customer's step-up transformers, the facilities connecting the Large Generating Facility to the step-up transformers and the ICIF, and the impedances (determined by factory tests) for the associated step-up transformers and the Large Generating Facility. [The] Interconnection Customer shall provide Transmission Provider specifications for the excitation system, automatic voltage regulator, Large Generating Facility control and protection settings, transformer tap settings, and communications, if applicable.

5.11 Transmission Provider's Interconnection Facilities Construction. Transmission Provider's Interconnection Facilities shall be designed and constructed in accordance with Good Utility Practice. Upon request, within one hundred twenty (120) Calendar Days after the Commercial Operation Date, unless the Parties agree on another mutually acceptable deadline, Transmission Provider shall deliver to Interconnection Customer the following ''as-built'' drawings, information and documents for Transmission Provider's Interconnection Facilities {include appropriate drawings and relay diagrams}.

Transmission Provider will obtain control of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades upon completion of such facilities.

5.12 Access Rights. Upon reasonable notice and supervision by a Party, and subject to any required or necessary regulatory approvals, a Party (''Granting Party'') shall furnish at no cost to the other Party (''Access Party'') any rights of use, licenses, rights of way and easements with respect to lands owned or controlled by the Granting Party, its agents (if allowed under the applicable agency agreement), or any Affiliate, that are necessary to enable the Access Party to obtain ingress and egress to construct, operate, maintain, repair, test (or witness testing), inspect, replace or remove facilities and equipment to: (i) interconnect the Large Generating Facility with the Transmission System; (ii) operate and maintain the Large Generating Facility, the Interconnection Facilities and the Transmission System; and (iii) disconnect or remove the Access Party's facilities and equipment upon termination of this LGIA. In exercising such licenses, rights of way and easements, the Access Party shall not unreasonably disrupt or interfere with normal operation of the Granting Party's business and shall adhere to the safety rules and procedures established in advance, as may be changed from time to time, by the Granting Party and provided to the Access Party.

5.13 Lands of Other Property Owners. If any part of Transmission Provider or Transmission Owner's Interconnection Facilities and/or Network Upgrades is to be installed on property owned by persons other than Interconnection Customer or Transmission Provider or Transmission Owner, Transmission Provider or Transmission Owner shall at Interconnection Customer's expense use efforts, similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority, and to the extent consistent with state law, to procure from such persons any rights of use, licenses, rights of way and easements that are necessary to construct, operate, maintain, test, inspect, replace or remove Transmission Provider or Transmission Owner's Interconnection Facilities and/or Network Upgrades upon such property.

5.14 Permits. Transmission Provider or Transmission Owner and Interconnection Customer shall cooperate with each other in good faith in obtaining all permits, licenses, and authorizations that are necessary to accomplish the interconnection in compliance with Applicable Laws and Regulations. With respect to this paragraph, Transmission Provider or Transmission Owner shall provide permitting assistance to Interconnection Customer comparable to that provided to Transmission Provider's own, or an Affiliate's generation.

5.15 Early Construction of Base Case Facilities. Interconnection Customer may request Transmission Provider to construct, and Transmission Provider shall construct, using Reasonable Efforts to accommodate Interconnection Customer's In-Service Date, all or any portion of any Network Upgrades required for Interconnection Customer to be interconnected to the Transmission System which are included in the Base Case of the *Interconnection* Facilities Study for Interconnection Customer, and which also are required to be constructed for another Interconnection Customer, but where such construction is not scheduled to be completed in time to achieve Interconnection Customer's In-Service Date.

5.16 Suspension. Interconnection Customer reserves the right, upon written

notice to Transmission Provider, to suspend at any time all work by Transmission Provider associated with the construction and installation of Transmission Provider's Interconnection Facilities and/or Network Upgrades required under this LGIA with the condition that Transmission System shall be left in a safe and reliable condition in accordance with Good Utility Practice and Transmission Provider's safety and reliability criteria. In such event, Interconnection Customer shall be responsible for all reasonable and necessary costs which Transmission Provider (i) has incurred pursuant to this LGIA prior to the suspension and (ii) incurs in suspending such work, including any costs incurred to perform such work as may be necessary to ensure the safety of persons and property and the integrity of the Transmission System during such suspension and, if applicable, any costs incurred in connection with the cancellation or suspension of material, equipment and labor contracts which Transmission Provider cannot reasonably avoid; provided, however, that prior to canceling or suspending any such material, equipment or labor contract, Transmission Provider shall obtain Interconnection Customer's authorization to do so.

Transmission Provider shall invoice Interconnection Customer for such costs pursuant to Article 12 and shall use due diligence to minimize its costs. In the event Interconnection Customer suspends work by Transmission Provider required under this LGIA pursuant to this Article 5.16, and has not requested Transmission Provider to recommence the work required under this LGIA on or before the expiration of three (3) years following commencement of such suspension, this LGIA shall be deemed terminated. The three-year period shall begin on the date the suspension is requested, or the date of the written notice to Transmission Provider, if no effective date is specified.

5.17 Taxes.

5.17.1 Interconnection Customer Payments Not Taxable. The Parties intend that all payments or property transfers made by Interconnection Customer to Transmission Provider for the installation of Transmission Provider's Interconnection Facilities and the Network Upgrades shall be non-taxable, either as contributions to capital, or as an advance, in accordance with the Internal Revenue Code and any applicable state income tax laws and shall not be taxable as contributions in aid of construction or otherwise under the Internal Revenue Code and any applicable state income tax laws.

5.17.2 Representations and Covenants. In accordance with IRS Notice 2001–82 and IRS Notice 88–129, Interconnection Customer represents and covenants that (i) ownership of the electricity generated at the Large Generating Facility will pass to another party prior to the transmission of the electricity on the Transmission System, (ii) for income tax purposes, the amount of any payments and the cost of any property transferred to Transmission Provider for Transmission Provider's Interconnection Facilities will be capitalized by Interconnection Customer as an intangible asset and recovered using the straight-line method over a useful life of twenty (20) years, and (iii) any portion of Transmission Provider's Interconnection Facilities that is a ''dual-use intertie,'' within the meaning of IRS Notice 88–129, is reasonably expected to carry only a de minimis amount of electricity in the direction of the Large Generating Facility. For this purpose, ''de minimis amount'' means no more than 5 percent of the total power flows in both directions, calculated in accordance with the ''5 percent test'' set forth in IRS Notice 88–129. This is not intended to be an exclusive list of the relevant conditions that must be met to conform to IRS requirements for non-taxable treatment.

At Transmission Provider's request, Interconnection Customer shall provide Transmission Provider with a report from an independent engineer confirming its representation in clause (iii), above. Transmission Provider represents and covenants that the cost of Transmission Provider's Interconnection Facilities paid for by Interconnection Customer will have no net effect on the base upon which rates are determined.

5.17.3 Indemnification for the Cost Consequences of Current Tax Liability Imposed Upon [the] Transmission Provider. Notwithstanding Article 5.17.1, Interconnection Customer shall protect, indemnify and hold harmless Transmission Provider from the cost consequences of any current tax liability imposed against Transmission Provider as the result of payments or property transfers made by Interconnection Customer to Transmission Provider under this LGIA for Interconnection Facilities, as well as any interest and penalties, other than interest and penalties attributable to any delay caused by Transmission Provider.

Transmission Provider shall not include a gross-up for the cost consequences of any current tax liability in the amounts it charges Interconnection Customer under this LGIA unless (i) Transmission Provider has determined, in good faith, that the payments or property transfers made by Interconnection Customer to Transmission Provider should be reported as income subject to taxation or (ii) any Governmental Authority directs Transmission Provider to report payments or property as income subject to taxation; *provided, however,* that Transmission Provider may require Interconnection Customer to provide security for Interconnection Facilities, in a form reasonably acceptable to Transmission Provider (such as a parental guarantee or a letter of credit), in an amount equal to the cost consequences of any current tax liability under this Article 5.17. Interconnection Customer shall reimburse Transmission Provider for such costs on a fully grossed-up basis, in accordance with Article 5.17.4, within thirty (30) Calendar Days of receiving written notification from Transmission Provider of the amount due, including detail about how the amount was calculated.

The indemnification obligation shall terminate at the earlier of (1) the expiration of the ten year testing period and the applicable statute of limitation, as it may be extended by Transmission Provider upon request of the IRS, to keep these years open for audit or adjustment, or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article 5.17.

5.17.4 Tax Gross-Up Amount. Interconnection Customer's liability for the cost consequences of any current tax liability under this Article 5.17 shall be calculated on a fully grossed-up basis. Except as may otherwise be agreed to by the parties, this means that Interconnection Customer will pay Transmission Provider, in addition to the amount paid for the Interconnection Facilities and Network Upgrades, an amount equal to (1) the current taxes imposed on Transmission Provider (''Current Taxes'') on the excess of (a) the gross income realized by Transmission Provider as a result of payments or property transfers made by Interconnection Customer to Transmission Provider under this LGIA (without regard to any payments under this Article 5.17) (the ''Gross Income Amount'') over (b) the present value of future tax deductions for depreciation that will be available as a result of such payments or property transfers (the ''Present Value Depreciation Amount''), plus (2) an additional amount sufficient to permit Transmission Provider to receive and retain, after the payment of all Current Taxes, an amount equal to the net amount described in clause (1).

For this purpose, (i) Current Taxes shall be computed based on Transmission Provider's composite federal and state tax rates at the time the payments or property transfers are received and Transmission Provider will be treated as being subject to tax at the highest marginal rates in effect at that time (the ''Current Tax Rate''), and (ii) the Present Value Depreciation Amount shall be computed by discounting Transmission Provider's anticipated tax depreciation deductions as a result of such payments or property transfers by Transmission Provider's current weighted average cost of capital. Thus, the formula for calculating Interconnection Customer's liability to Transmission Owner pursuant to this Article 5.17.4 can be expressed as follows: (Current Tax Rate x (Gross Income Amount—Present Value of Tax Depreciation))/(1-Current Tax Rate). Interconnection Customer's estimated tax liability in the event taxes are imposed shall be stated in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades.

5.17.5 Private Letter Ruling or Change or Clarification of Law. At Interconnection Customer's request and expense, Transmission Provider shall file with the IRS a request for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by Interconnection Customer to Transmission Provider under this LGIA are subject to federal income taxation. Interconnection Customer will prepare the initial draft of the request for a private letter ruling, and will certify under penalties of perjury that all facts represented in such request are true and accurate to the best of Interconnection Customer's knowledge. Transmission Provider and Interconnection Customer shall cooperate in good faith with respect to the submission of such request.

Transmission Provider shall keep Interconnection Customer fully informed of the status of such request for a private letter ruling and shall execute either a privacy act waiver or a limited power of attorney, in a form acceptable to the IRS, that authorizes Interconnection Customer to participate in all discussions with the IRS regarding such request for a private letter ruling. Transmission Provider shall allow Interconnection Customer to attend all meetings with IRS officials about the request and shall permit Interconnection Customer to prepare the initial drafts of any follow-up letters in connection with the request.

5.17.6 Subsequent Taxable Events. If, within 10 years from the date on which the relevant Transmission Provider's Interconnection Facilities are placed in service, (i) Interconnection Customer Breaches the covenants contained in Article 5.17.2, (ii) a ''disqualification event'' occurs within the meaning of IRS Notice 88–129, or (iii) this LGIA terminates and Transmission Provider retains ownership of the Interconnection Facilities and Network Upgrades, Interconnection Customer shall pay a tax gross-up for the cost consequences of any current tax liability imposed on Transmission Provider, calculated using the methodology described in Article 5.17.4 and in accordance with IRS Notice 90–60.

5.17.7 Contests. In the event any Governmental Authority determines that Transmission Provider's receipt of payments or property constitutes income that is subject to taxation, Transmission Provider shall notify Interconnection Customer, in writing, within thirty (30) Calendar Days of receiving notification of such determination by a Governmental Authority. Upon the timely written request by Interconnection Customer and at Interconnection Customer's sole expense, Transmission Provider may appeal, protest, seek abatement of, or otherwise oppose such determination. Upon Interconnection Customer's written request and sole expense, Transmission Provider may file a claim for refund with respect to any taxes paid under this Article 5.17, whether or not it has received such a determination. Transmission Provider reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement or other contest, including the selection of counsel and compromise or settlement of the claim, but Transmission Provider shall keep Interconnection Customer informed, shall consider in good faith suggestions from Interconnection Customer about the conduct of the contest, and shall reasonably permit Interconnection Customer or an Interconnection Customer representative to attend contest proceedings.

Interconnection Customer shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement or other contest. At any time during the contest, Transmission Provider may agree to a settlement either with Interconnection Customer's consent or after obtaining written advice from nationally-recognized tax counsel, selected by Transmission Provider, but reasonably acceptable to Interconnection Customer, that the proposed settlement represents a reasonable settlement given the hazards of litigation. Interconnection Customer's obligation shall be based on the amount of the settlement agreed to by Interconnection Customer, or if a higher amount, so much of the settlement that is supported by the written advice from nationally-recognized tax counsel selected under the terms of the preceding sentence. The settlement amount shall be calculated on a fully grossed-up basis to cover any related cost consequences of the current tax liability. Any settlement without Interconnection Customer's consent or such written advice will relieve Interconnection Customer from any obligation to indemnify Transmission Provider for the tax at issue in the contest.

5.17.8 Refund. In the event that (a) a private letter ruling is issued to Transmission Provider which holds that any amount paid or the value of any property transferred by Interconnection Customer to Transmission Provider under the terms of this LGIA is not subject to federal income taxation, (b) any legislative change or administrative announcement, notice, ruling or other determination makes it reasonably clear to Transmission Provider in good faith that any amount paid or the value of any property transferred by Interconnection Customer to Transmission Provider under the terms of this LGIA is not taxable to Transmission Provider, (c) any abatement, appeal, protest, or other contest results in a determination that any payments or transfers made by Interconnection Customer to Transmission Provider are not subject to federal income tax, or (d) if Transmission Provider receives a refund from any taxing authority for any overpayment of tax attributable to any payment or property transfer made by Interconnection Customer to Transmission Provider pursuant to this LGIA, Transmission Provider shall promptly refund to Interconnection Customer the following:

(i) any payment made by Interconnection Customer under this Article 5.17 for taxes that is attributable to the amount determined to be non-taxable, together with interest thereon,

(ii) interest on any amounts paid by Interconnection Customer to Transmission Provider for such taxes which Transmission Provider did not submit to the taxing authority, calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19a(a)(2)(iii) from the date payment was made by Interconnection Customer to the date Transmission Provider refunds such payment to Interconnection Customer, and

(iii) with respect to any such taxes paid by Transmission Provider, any refund or credit Transmission Provider receives or to which it may be entitled from any Governmental Authority, interest (or that portion thereof attributable to the payment described in clause (i), above) owed to Transmission Provider for such overpayment of taxes (including any reduction in interest otherwise payable by Transmission Provider to any Governmental Authority resulting from an offset or credit); *provided, however,* that Transmission Provider will remit such amount promptly to Interconnection Customer only after and to the extent that Transmission Provider has received a tax refund, credit or offset from any Governmental Authority for any applicable overpayment of income tax related to Transmission Provider's Interconnection Facilities.

The intent of this provision is to leave the Parties, to the extent practicable, in the event that no taxes are due with respect to any payment for Interconnection Facilities and Network Upgrades hereunder, in the same position they would have been in had no such tax payments been made.

5.17.9 Taxes Other Than Income Taxes. Upon the timely request by Interconnection Customer, and at Interconnection Customer's sole expense, Transmission Provider may appeal, protest, seek abatement of, or otherwise contest any tax (other than federal or state income tax) asserted or assessed against Transmission Provider for which Interconnection Customer may be required to reimburse Transmission Provider under the terms of this LGIA. Interconnection Customer shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement, or other contest. Interconnection Customer and Transmission Provider shall cooperate in good faith with respect to any such contest. Unless the payment of such taxes is a prerequisite to an appeal or abatement or cannot be deferred, no amount shall be payable by Interconnection Customer to Transmission Provider for such taxes until they are assessed by a final, non-appealable order by any court or agency of competent jurisdiction. In the event that a tax payment is withheld and ultimately due and payable after appeal, Interconnection Customer will be responsible for all taxes, interest and penalties, other than penalties attributable to any delay caused by Transmission Provider.

5.17.10 Transmission Owners Who Are Not Transmission Providers. If Transmission Provider is not the same entity as the Transmission Owner, then (i) all references in this Article 5.17 to Transmission Provider shall be deemed also to refer to and to include the Transmission Owner, as appropriate, and (ii) this LGIA shall not become effective until such Transmission Owner shall have agreed in writing to assume all of the duties and obligations of Transmission Provider under this Article 5.17 of this LGIA.

5.18 Tax Status. Each Party shall cooperate with the other to maintain the other Party's tax status. Nothing in this LGIA is intended to adversely affect any Transmission Provider's tax exempt status with respect to the issuance of bonds including, but not limited to, Local Furnishing Bonds.

5.19 Modification.

5.19.1 General. Either Party may undertake modifications to its facilities. If a Party plans to undertake a modification that reasonably may be expected to affect the other Party's facilities, that Party shall provide to the other Party sufficient information regarding such modification so

that the other Party may evaluate the potential impact of such modification prior to commencement of the work. Such information shall be deemed to be confidential hereunder and shall include information concerning the timing of such modifications and whether such modifications are expected to interrupt the flow of electricity from the Large Generating Facility. The Party desiring to perform such work shall provide the relevant drawings, plans, and specifications to the other Party at least ninety (90) Calendar Days in advance of the commencement of the work or such shorter period upon which the Parties may agree, which agreement shall not unreasonably be withheld, conditioned or delayed.

In the case of Large Generating Facility modifications that do not require Interconnection Customer to submit an Interconnection Request, Transmission Provider shall provide, within thirty (30) Calendar Days (or such other time as the Parties may agree), an estimate of any additional modifications to the Transmission System, Transmission Provider's Interconnection Facilities or Network Upgrades necessitated by such Interconnection Customer modification and a good faith estimate of the costs thereof.

5.19.2 Standards. Any additions, modifications, or replacements made to a Party's facilities shall be designed, constructed and operated in accordance with this LGIA and Good Utility Practice.

5.19.3 Modification Costs. Interconnection Customer shall not be directly assigned for the costs of any additions, modifications, or replacements that Transmission Provider makes to Transmission Provider's Interconnection Facilities or the Transmission System to facilitate the interconnection of a third party to Transmission Provider's Interconnection Facilities or the Transmission System, or to provide transmission service to a third party under Transmission Provider's Tariff. Interconnection Customer shall be responsible for the costs of any additions, modifications, or replacements to Interconnection Customer's Interconnection Facilities that may be necessary to maintain or upgrade such Interconnection Customer's Interconnection Facilities consistent with Applicable Laws and Regulations, Applicable Reliability Standards or Good Utility Practice.

Article 6. Testing and Inspection

6.1 Pre-Commercial Operation Date Testing and Modifications. Prior to the Commercial Operation Date, Transmission Provider shall test Transmission Provider's Interconnection Facilities and Network Upgrades and Interconnection Customer shall test the Large Generating Facility and Interconnection Customer's Interconnection Facilities to ensure their safe and reliable operation. Similar testing may be required after initial operation. Each Party shall make any modifications to its facilities that are found to be necessary as a result of such testing. Interconnection Customer shall bear the cost of all such testing and modifications. Interconnection Customer shall generate test energy at the Large Generating Facility only if it has arranged for the delivery of such test energy.

6.2 Post-Commercial Operation Date Testing and Modifications. Each Party shall at its own expense perform routine inspection and testing of its facilities and equipment in accordance with Good Utility Practice as may be necessary to ensure the continued interconnection of the Large Generating Facility with the Transmission System in a safe and reliable manner. Each Party shall have the right, upon advance written notice, to require reasonable additional testing of the other Party's facilities, at the requesting Party's expense, as may be in accordance with Good Utility Practice.

6.3 Right to Observe Testing. Each Party shall notify the other Party in advance of its performance of tests of its Interconnection Facilities. The other Party has the right, at its own expense, to observe such testing.

6.4 Right to Inspect. Each Party shall have the right, but shall have no obligation to: (i) observe the other Party's tests and/or inspection of any of its System Protection Facilities and other protective equipment, including Power System Stabilizers; (ii) review the settings of the other Party's System Protection Facilities and other protective equipment; and (iii) review the other Party's maintenance records relative to the Interconnection Facilities, the System Protection Facilities and other protective equipment. A Party may exercise these rights from time to time as it deems necessary upon reasonable notice to the other Party. The exercise or non-exercise by a Party of any such rights shall not be construed as an endorsement or confirmation of any element or condition of the Interconnection Facilities or the System Protection Facilities or other protective equipment or the operation thereof, or as a warranty as to the fitness, safety, desirability, or reliability of same. Any information that a Party obtains through the exercise of any of its rights under this Article 6.4 shall be deemed to be Confidential Information and treated pursuant to Article 22 of this LGIA.

Article 7. Metering

7.1 General. Each Party shall comply with the Electric Reliability Organization requirements. Unless otherwise agreed by the Parties, Transmission Provider shall install Metering Equipment at the Point of Interconnection prior to any operation of the Large Generating Facility and shall own, operate, test and maintain such Metering Equipment. Power flows to and from the Large Generating Facility shall be measured at or, at Transmission Provider's option, compensated to, the Point of Interconnection. Transmission Provider shall provide metering quantities, in analog and/or digital form, to Interconnection Customer upon request. Interconnection Customer shall bear all reasonable documented costs associated with the purchase, installation, operation, testing and maintenance of the Metering Equipment.

7.2 Check Meters. Interconnection Customer, at its option and expense, may install and operate, on its premises and on its side of the Point of Interconnection, one or more check meters to check Transmission Provider's meters. Such check meters shall be for check purposes only and shall not be used for the measurement of power flows for purposes of this LGIA, except as provided in Article 7.4 below. The check meters shall be subject at all reasonable times to inspection and examination by Transmission Provider or its designee. The installation, operation and maintenance thereof shall be performed entirely by Interconnection Customer in accordance with Good Utility Practice.

7.3 Standards. Transmission Provider shall install, calibrate, and test revenue quality Metering Equipment in accordance with applicable ANSI standards.

7.4 Testing of Metering Equipment. Transmission Provider shall inspect and test all Transmission Provider-owned Metering Equipment upon installation and at least once every two (2) years thereafter. If requested to do so by Interconnection Customer, Transmission Provider shall, at Interconnection Customer's expense, inspect or test Metering Equipment more frequently than every two (2) years. Transmission Provider shall give reasonable notice of the time when any inspection or test shall take place, and Interconnection Customer may have representatives present at the test or inspection. If at any time Metering Equipment is found to be inaccurate or defective, it shall be adjusted, repaired or replaced at Interconnection Customer's expense, in order to provide accurate metering, unless the inaccuracy or defect is due to Transmission Provider's failure to maintain, then Transmission Provider shall pay. If Metering Equipment fails to register, or if the measurement made by Metering Equipment during a test varies by more than two percent from the measurement made by the standard meter used in the test, Transmission Provider shall adjust the measurements by correcting all measurements for the period during which Metering Equipment was in error by using Interconnection Customer's check meters, if installed. If no such check meters are installed or if the period cannot be reasonably ascertained, the adjustment shall be for the period immediately preceding the test of the Metering Equipment equal to one-half the time from the date of the last previous test of the Metering Equipment.

7.5 Metering Data. At Interconnection Customer's expense, the metered data shall be telemetered to one or more locations designated by Transmission Provider and one or more locations designated by Interconnection Customer. Such telemetered data shall be used, under normal operating conditions, as the official measurement of the amount of energy delivered from the Large Generating Facility to the Point of Interconnection.

Article 8. Communications

8.1 Interconnection Customer Obligations. Interconnection Customer shall maintain satisfactory operating communications with Transmission Provider's Transmission System dispatcher or representative designated by Transmission Provider. Interconnection Customer shall

provide standard voice line, dedicated voice line and facsimile communications at its Large Generating Facility control room or central dispatch facility through use of either the public telephone system, or a voice communications system that does not rely on the public telephone system. Interconnection Customer shall also provide the dedicated data circuit(s) necessary to provide Interconnection Customer data to Transmission Provider as set forth in Appendix D, Security Arrangements Details. The data circuit(s) shall extend from the Large Generating Facility to the location(s) specified by Transmission Provider. Any required maintenance of such communications equipment shall be performed by Interconnection Customer. Operational communications shall be activated and maintained under, but not be limited to, the following events: system paralleling or separation, scheduled and unscheduled shutdowns, equipment clearances, and hourly and daily load data.

8.2 Remote Terminal Unit. Prior to the Initial Synchronization Date of the Large Generating Facility, a Remote Terminal Unit, or equivalent data collection and transfer equipment acceptable to the Parties, shall be installed by Interconnection Customer, or by Transmission Provider at Interconnection Customer's expense, to gather accumulated and instantaneous data to be telemetered to the location(s) designated by Transmission Provider through use of a dedicated point-to-point data circuit(s) as indicated in Article 8.1. The communication protocol for the data circuit(s) shall be specified by Transmission Provider. Instantaneous bi-directional analog real power and reactive power flow information must be telemetered directly to the location(s) specified by Transmission Provider.

Each Party will promptly advise the other Party if it detects or otherwise learns of any metering, telemetry or communications equipment errors or malfunctions that require the attention and/or correction by the other Party. The Party owning such equipment shall correct such error or malfunction as soon as reasonably feasible.

8.3 No Annexation. Any and all equipment placed on the premises of a Party shall be and remain the property of the Party providing such equipment regardless of the mode and manner of annexation or attachment to real property, unless otherwise mutually agreed by the Parties.

8.4 Provision of Data from a Variable Energy Resource. [The] Interconnection Customer whose Generating Facility contains at least one Variable Energy Resource shall provide meteorological and forced outage data to [the] Transmission Provider to the extent necessary for [the] Transmission Provider's development and deployment of power production forecasts for that class of Variable Energy Resources. [The] Interconnection Customer with a Variable Energy Resource having wind as the energy source, at a minimum, will be required to provide [the] Transmission Provider with site-specific meteorological data including: temperature, wind speed, wind direction, and atmospheric pressure. [The] Interconnection Customer with a Variable Energy Resource having solar as the energy source, at a minimum, will be required to provide [the] Transmission Provider with site-specific meteorological data including: temperature, atmospheric pressure, and irradiance. [The] Transmission Provider and Interconnection Customer whose Generating Facility contains a Variable Energy Resource shall mutually agree to any additional meteorological data that are required for the development and deployment of a power production forecast. [The] Interconnection Customer whose Generating Facility contains a Variable Energy Resource also shall submit data to [the] Transmission Provider regarding all forced outages to the extent necessary for [the] Transmission Provider's development and deployment of power production forecasts for that class of Variable Energy Resources. The exact specifications of the meteorological and forced outage data to be provided by [the] Interconnection Customer to [the] Transmission Provider, including the frequency and timing of data submittals, shall be made taking into account the size and configuration of the Variable Energy Resource, its characteristics, location, and its importance in maintaining generation resource adequacy and transmission system reliability in its area. All requirements for meteorological and forced outage data must be commensurate with the power production forecasting employed by [the] Transmission Provider. Such requirements for meteorological and forced outage data are set forth in Appendix C, Interconnection Details, of this LGIA, as they may change from time to time.

Article 9. Operations

9.1 General. Each Party shall comply with the Electric Reliability Organization requirements. Each Party shall provide to the other Party all information that may reasonably be required by the other Party to comply with Applicable Laws and Regulations and Applicable Reliability Standards.

9.2 Balancing Authority Area Notification. At least three months before Initial Synchronization Date, Interconnection Customer shall notify Transmission Provider in writing of the Balancing Authority Area in which the Large Generating Facility will be located. If Interconnection Customer elects to locate the Large Generating Facility in a Balancing Authority Area other than the Balancing Authority Area in which the Large Generating Facility is physically located, and if permitted to do so by the relevant transmission tariffs, all necessary arrangements, including but not limited to those set forth in Article 7 and Article 8 of this LGIA, and remote Balancing Authority Area generator interchange agreements, if applicable, and the appropriate measures under such agreements, shall be executed and implemented prior to the placement of the Large Generating Facility in the other Balancing Authority Area.

9.3 Transmission Provider Obligations. Transmission Provider shall cause the Transmission System and Transmission Provider's Interconnection Facilities to be operated, maintained and controlled in a safe and reliable manner and in accordance with this LGIA. Transmission Provider may provide operating instructions to Interconnection Customer consistent with this LGIA and Transmission Provider's operating protocols and procedures as they may change from time to time. Transmission Provider will consider changes to its operating protocols and procedures proposed by Interconnection Customer.

9.4 Interconnection Customer Obligations. Interconnection Customer shall at its own expense operate, maintain and control the Large Generating Facility and Interconnection Customer's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA. Interconnection Customer shall operate the Large Generating Facility and Interconnection Customer's Interconnection Facilities in accordance with all applicable requirements of the Balancing Authority Area of which it is part, as such requirements are set forth in Appendix C, Interconnection Details, of this LGIA. Appendix C, Interconnection Details, will be modified to reflect changes to the requirements as they may change from time to time. Either Party may request that the other Party provide copies of the requirements set forth in Appendix C, Interconnection Details, of this LGIA.

9.5 Start-Up and Synchronization. Consistent with the Parties' mutually acceptable procedures, Interconnection Customer is responsible for the proper synchronization of the Large Generating Facility to Transmission Provider's Transmission System.

9.6 Reactive Power and Primary Frequency Response.

9.6.1 Power Factor Design Criteria.

9.6.1.1 Synchronous Generation. Interconnection Customer shall design the Large Generating Facility to maintain a composite power delivery at continuous rated power output at the Point of Interconnection at a power factor within the range of 0.95 leading to 0.95 lagging, unless Transmission Provider has established different requirements that apply to all synchronous generators in the Balancing Authority Area on a comparable basis.

9.6.1.2 Non-Synchronous Generation. Interconnection Customer shall design the Large Generating Facility to maintain a composite power delivery at continuous rated power output at the high-side of the generator substation at a power factor within the range of 0.95 leading to 0.95 lagging, unless Transmission Provider has established a different power factor range that applies to all non-synchronous generators in the Balancing Authority Area on a comparable basis. This power factor range standard shall be dynamic and can be met using, for example, power electronics designed to supply this level of reactive capability (taking into account any limitations due to voltage level, real power output, etc.) or fixed and switched capacitors, or a combination of the two. This requirement shall only apply to newly interconnecting non-synchronous generators that have not yet executed a Facilities Study Agreement as of the effective date of the Final Rule establishing this requirement (Order No. 827).

9.6.2 Voltage Schedules. Once Interconnection Customer has synchronized the Large Generating Facility with the Transmission System, Transmission Provider shall require Interconnection Customer to operate the Large Generating Facility to produce or absorb reactive power within the design limitations of the Large Generating Facility set forth in Article 9.6.1 (Power Factor Design Criteria). Transmission Provider's voltage schedules shall treat all sources of reactive power in the Balancing Authority Area in an equitable and not unduly discriminatory manner. Transmission Provider shall exercise Reasonable Efforts to provide Interconnection Customer with such schedules at least one (1) day in advance, and may make changes to such schedules as necessary to maintain the reliability of the Transmission System. Interconnection Customer shall operate the Large Generating Facility to maintain the specified output voltage or power factor at the Point of Interconnection within the design limitations of the Large Generating Facility set forth in Article 9.6.1 (Power Factor Design Criteria). If Interconnection Customer is unable to maintain the specified voltage or power factor, it shall promptly notify the System Operator.

9.6.2.1 Voltage Regulators. Whenever the Large Generating Facility is operated in parallel with the Transmission System and voltage regulators are capable of operation, Interconnection Customer shall operate the Large Generating Facility with its voltage regulators in automatic operation. If the Large Generating Facility's voltage regulators are not capable of such automatic operation, Interconnection Customer shall immediately notify Transmission Provider's system operator, or its designated representative, and ensure that such Large Generating Facility's reactive power production or absorption (measured in MVARs) are within the design capability of the Large Generating Facility's generating unit(s) and steady state stability limits. Interconnection Customer shall not cause its Large Generating Facility to disconnect automatically or instantaneously from the Transmission System or trip any generating unit comprising the Large Generating Facility for an under or over frequency condition unless the abnormal frequency condition persists for a time period beyond the limits set forth in ANSI/IEEE Standard C37.106, or such other standard as applied to other generators in the Balancing Authority Area on a comparable basis.

9.6.3 Payment for Reactive Power. Transmission Provider is required to pay Interconnection Customer for reactive power that Interconnection Customer provides or absorbs from the Large Generating Facility when Transmission Provider requests Interconnection Customer to operate its Large Generating Facility outside the range specified in Article 9.6.1, provided that if Transmission Provider pays its own or affiliated generators for reactive power service within the specified range, it must also pay Interconnection Customer. Payments shall be pursuant to Article 11.6 or such other agreement to which the Parties have otherwise agreed.

9.6.4 Primary Frequency Response. Interconnection Customer shall ensure the primary frequency response capability of its Large Generating Facility by installing, maintaining, and operating a functioning governor or equivalent controls. The term ''functioning governor or equivalent controls'' as used herein shall mean the required hardware and/or software that provides frequency responsive real power control with the ability to sense changes in system frequency and autonomously adjust the Large Generating Facility's real power output in accordance with the droop and deadband parameters and in the direction needed to correct frequency deviations. Interconnection Customer is required to install a governor or equivalent controls with the capability of operating: (1) with a maximum 5 percent droop and ±0.036 Hz deadband; or (2) in accordance with the relevant droop, deadband, and timely and sustained response settings from an approved Electric Reliability Organization reliability standard providing for equivalent or more stringent parameters. The droop characteristic shall be: (1) based on the nameplate capacity of the Large Generating Facility, and shall be linear in the range of frequencies between 59 to 61 Hz that are outside of the deadband parameter; or (2) based an approved Electric Reliability Organization reliability standard providing for an equivalent or more stringent parameter. The deadband parameter shall be: the range of frequencies above and below nominal (60 Hz) in which the governor or equivalent controls is not expected to adjust the Large Generating Facility's real power output in response to frequency deviations. The deadband shall be implemented: (1) without a step to the droop curve, that is, once the frequency deviation exceeds the deadband parameter, the expected change in the Large Generating Facility's real power output in response to frequency deviations shall start from zero and then increase (for under-frequency deviations) or decrease (for over-frequency deviations) linearly in proportion to the magnitude of the frequency deviation; or (2) in accordance with an approved Electric Reliability Organization reliability standard providing for an equivalent or more stringent parameter. Interconnection Customer shall notify Transmission Provider that the primary frequency response capability of the Large Generating Facility has been tested and confirmed during commissioning. Once Interconnection Customer has synchronized the Large Generating Facility with the Transmission system, Interconnection Customer shall operate the Large Generating Facility consistent with the provisions specified in [Sections] *articles* 9.6.4.1 and 9.6.4.2 of this Agreement. The primary frequency response requirements contained herein shall apply to both synchronous and non-synchronous Large Generating Facilities.

9.6.4.1 Governor or Equivalent Controls. Whenever the Large Generating Facility is operated in parallel with the Transmission System, Interconnection Customer shall operate the Large Generating Facility with its governor or equivalent controls in service and responsive to frequency. Interconnection Customer shall: (1) in coordination with Transmission Provider and/or the relevant balancing authority, set the deadband parameter to: (1) a maximum of ±0.036 Hz and set the droop parameter to a maximum of 5 percent; or (2) implement the relevant droop and deadband settings from an approved Electric Reliability Organization reliability standard that provides for equivalent or more stringent parameters. Interconnection Customer shall be required to provide the status and settings of the governor or equivalent controls to Transmission Provider and/or the relevant balancing authority upon request. If Interconnection Customer needs to operate the Large Generating Facility with its governor or equivalent controls not in service, Interconnection Customer shall immediately notify Transmission Provider and the relevant balancing authority, and provide both with the following information: (1) the operating status of the governor or equivalent controls (*i.e.,* whether it is currently out of service or when it will be taken out of service); (2) the reasons for removing the governor or equivalent controls from service; and (3) a reasonable estimate of when the governor or equivalent controls will be returned to service. Interconnection Customer shall make Reasonable Efforts to return its governor or equivalent controls into service as soon as practicable. Interconnection Customer shall make Reasonable Efforts to keep outages of the Large Generating Facility's governor or equivalent controls to a minimum whenever the Large Generating Facility is operated in parallel with the Transmission System.

9.6.4.2 Timely and Sustained Response. Interconnection Customer shall ensure that the Large Generating Facility's real power response to sustained frequency deviations outside of the deadband setting is automatically provided and shall begin immediately after frequency deviates outside of the deadband, and to the extent the Large Generating Facility has operating capability in the direction needed to correct the frequency deviation. Interconnection Customer shall not block or otherwise inhibit the ability of the governor or equivalent controls to respond and shall ensure that the response is not inhibited, except under certain operational constraints including, but not limited to, ambient temperature limitations, physical energy limitations, outages of mechanical equipment, or regulatory requirements. The Large Generating Facility shall sustain the real power response at least until system frequency returns to a value within the deadband setting of the governor or equivalent controls. A Commission-approved reliability standard with equivalent or more stringent requirements shall supersede the above requirements.

9.6.4.3 Exemptions. Large Generating Facilities that are regulated by the United States Nuclear Regulatory Commission shall be exempt from [Sections]*articles* 9.6.4, 9.6.4.1, and 9.6.4.2 of this Agreement. Large Generating Facilities that are behind the meter generation that is sized-to-load (*i.e.,* the thermal load and the generation are near-balanced in real-time operation and the generation is primarily controlled to maintain the unique thermal, chemical, or

mechanical output necessary for the operating requirements of its host facility) shall be required to install primary frequency response capability in accordance with the droop and deadband capability requirements specified in [Section]*article* 9.6.4, but shall be otherwise exempt from the operating requirements in [Sections]*articles* 9.6.4, 9.6.4.1, 9.6.4.2, and 9.6.4.4 of this Agreement.

9.6.4.4[.] Electric Storage Resources. Interconnection Customer interconnecting a Generating Facility that contains an electric storage resource shall establish an operating range in Appendix C of its LGIA that specifies a minimum state of charge and a maximum state of charge between which the electric storage resource will be required to provide primary frequency response consistent with the conditions set forth in [Sections] *articles* 9.6.4, 9.6.4.1, 9.6.4.2 and 9.6.4.3 of this Agreement. Appendix C shall specify whether the operating range is static or dynamic, and shall consider (1) the expected magnitude of frequency deviations in the interconnection; (2) the expected duration that system frequency will remain outside of the deadband parameter in the interconnection; (3) the expected incidence of frequency deviations outside of the deadband parameter in the interconnection; (4) the physical capabilities of the electric storage resource; (5) operational limitations of the electric storage resource due to manufacturer specifications; and (6) any other relevant factors agreed to by Transmission Provider and Interconnection Customer, and in consultation with the relevant transmission owner or balancing authority as appropriate. If the operating range is dynamic, then Appendix C must establish how frequently the operating range will be reevaluated and the factors that may be considered during its reevaluation.

Interconnection Customer's electric storage resource is required to provide timely and sustained primary frequency response consistent with [Section]*article* 9.6.4.2 of this Agreement when it is online and dispatched to inject electricity to the Transmission System and/or receive electricity from the Transmission System. This excludes circumstances when the electric storage resource is not dispatched to inject electricity to the Transmission System and/or dispatched to receive electricity from the Transmission System. If Interconnection Customer's electric storage resource is charging at the time of a frequency deviation outside of its deadband parameter, it is to increase (for over-frequency deviations) or decrease (for under-frequency deviations) the rate at which it is charging in accordance with its droop parameter. Interconnection Customer's electric storage resource is not required to change from charging to discharging, or vice versa, unless the response necessitated by the droop and deadband settings requires it to do so and it is technically capable of making such a transition.

9.7 Outages and Interruptions.

9.7.1 Outages.

9.7.1.1 Outage Authority and Coordination. Each Party may in accordance with Good Utility Practice in coordination with the other Party remove from service any of its respective Interconnection Facilities or Network Upgrades that may impact the other Party's facilities as necessary to perform maintenance or testing or to install or replace equipment. Absent an Emergency Condition, the Party scheduling a removal of such facility(ies) from service will use Reasonable Efforts to schedule such removal on a date and time mutually acceptable to the Parties. In all circumstances, any Party planning to remove such facility(ies) from service shall use Reasonable Efforts to minimize the effect on the other Party of such removal.

9.7.1.2 Outage Schedules. Transmission Provider shall post scheduled outages of its transmission facilities on the OASIS. Interconnection Customer shall submit its planned maintenance schedules for the Large Generating Facility to Transmission Provider for a minimum of a rolling twenty-four month period. Interconnection Customer shall update its planned maintenance schedules as necessary. Transmission Provider may request Interconnection Customer to reschedule its maintenance as necessary to maintain the reliability of the Transmission System; provided, however, adequacy of generation supply shall not be a criterion in determining Transmission System reliability. Transmission Provider shall compensate Interconnection Customer for any additional direct costs that Interconnection Customer incurs as a result of having to reschedule maintenance, including any additional overtime, breaking of maintenance contracts or other costs above and beyond the cost Interconnection Customer would have incurred absent Transmission Provider's request to reschedule maintenance. Interconnection Customer will not be eligible to receive compensation, if during the twelve (12) months prior to the date of the scheduled maintenance, Interconnection Customer had modified its schedule of maintenance activities.

9.7.1.3 Outage Restoration. If an outage on a Party's Interconnection Facilities or Network Upgrades adversely affects the other Party's operations or facilities, the Party that owns or controls the facility that is out of service shall use Reasonable Efforts to promptly restore such facility(ies) to a normal operating condition consistent with the nature of the outage. The Party that owns or controls the facility that is out of service shall provide the other Party, to the extent such information is known, information on the nature of the Emergency Condition, an estimated time of restoration, and any corrective actions required. Initial verbal notice shall be followed up as soon as practicable with written notice explaining the nature of the outage.

9.7.2 Interruption of Service. If required by Good Utility Practice to do so, Transmission Provider may require Interconnection Customer to interrupt or reduce deliveries of electricity if such delivery of electricity could adversely affect Transmission Provider's ability to perform such activities as are necessary to safely and reliably operate and maintain the Transmission System. The following provisions shall apply to any interruption or reduction permitted under this Article 9.7.2:

9.7.2.1 The interruption or reduction shall continue only for so long as reasonably necessary under Good Utility Practice;

9.7.2.2 Any such interruption or reduction shall be made on an equitable, non-discriminatory basis with respect to all generating facilities directly connected to the Transmission System;

9.7.2.3 When the interruption or reduction must be made under circumstances which do not allow for advance notice, Transmission Provider shall notify Interconnection Customer by telephone as soon as practicable of the reasons for the curtailment, interruption, or reduction, and, if known, its expected duration. Telephone notification shall be followed by written notification as soon as practicable;

9.7.2.4 Except during the existence of an Emergency Condition, when the interruption or reduction can be scheduled without advance notice, Transmission Provider shall notify Interconnection Customer in advance regarding the timing of such scheduling and further notify Interconnection Customer of the expected duration. Transmission Provider shall coordinate with Interconnection Customer using Good Utility Practice to schedule the interruption or reduction during periods of least impact to Interconnection Customer and Transmission Provider;

9.7.2.5 The Parties shall cooperate and coordinate with each other to the extent necessary in order to restore the Large Generating Facility, Interconnection Facilities, and the Transmission System to their normal operating state, consistent with system conditions and Good Utility Practice.

9.7.3 Ride Through Capability and Performance. The Transmission System is designed to automatically activate a load-shed program as required by the Electric Reliability Organization in the event of an under-frequency system disturbance. Interconnection Customer shall implement under-frequency and over-frequency relay set points for the Large Generating Facility as required by the Electric Reliability Organization to ensure frequency ''ride through'' capability of the Transmission System. Large Generating Facility response to frequency deviations of pre-determined magnitudes, both under-frequency and over-frequency deviations, shall be studied and coordinated with Transmission Provider in accordance with Good Utility Practice. Interconnection Customer shall also implement under-voltage and over-voltage relay set points, or equivalent electronic controls, as required by the Electric Reliability Organization to ensure voltage ''ride through'' capability of the Transmission System. The term ''ride through'' as used herein shall mean the ability of a Generating Facility to stay connected to and synchronized with the Transmission System during system disturbances within a range of under-frequency, over-frequency, under-voltage, and over-voltage conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other Generating Facilities in the Balancing Authority Area on a comparable basis. For abnormal frequency conditions and

voltage conditions within the ''no trip zone'' defined by Reliability Standard PRC–024–3 or successor mandatory ride through reliability standards, the non-synchronous Large Generating Facility must ensure that, within any physical limitations of the Large Generating Facility, its control and protection settings are configured or set to (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels, *unless reactive power priority mode is enabled or* unless providing primary frequency response or fast frequency response; (2) minimize reductions in active power and remain within dynamic voltage and current limits, if reactive power priority mode is enabled, unless providing primary frequency response or fast frequency response; (3) not artificially limit dynamic reactive power capability during disturbances; and (4) return to pre-disturbance active power levels without artificial ramp rate limits if active power is reduced, unless providing primary frequency response or fast frequency response.

9.7.4 System Protection and Other Control Requirements.

9.7.4.1 System Protection Facilities. Interconnection Customer shall, at its expense, install, operate and maintain System Protection Facilities as a part of the Large Generating Facility or Interconnection Customer's Interconnection Facilities. Transmission Provider shall install at Interconnection Customer's expense any System Protection Facilities that may be required on Transmission Provider's Interconnection Facilities or the Transmission System as a result of the interconnection of the Large Generating Facility and Interconnection Customer's Interconnection Facilities.

9.7.4.2 Each Party's protection facilities shall be designed and coordinated with other systems in accordance with Good Utility Practice.

9.7.4.3 Each Party shall be responsible for protection of its facilities consistent with Good Utility Practice.

9.7.4.4 Each Party's protective relay design shall incorporate the necessary test switches to perform the tests required in Article 6. The required test switches will be placed such that they allow operation of lockout relays while preventing breaker failure schemes from operating and causing unnecessary breaker operations and/or the tripping of Interconnection Customer's units.

9.7.4.5 Each Party will test, operate and maintain System Protection Facilities in accordance with Good Utility Practice.

9.7.4.6 Prior to the In-Service Date, and again prior to the Commercial Operation Date, each Party or its agent shall perform a complete calibration test and functional trip test of the System Protection Facilities. At intervals suggested by Good Utility Practice and following any apparent malfunction of the System Protection Facilities, each Party shall perform both calibration and functional trip tests of its System Protection Facilities. These tests do not require the tripping of any in-service generation unit. These tests do, however, require that all protective relays and lockout contacts be activated.

9.7.5 Requirements for Protection. In compliance with Good Utility Practice, Interconnection Customer shall provide, install, own, and maintain relays, circuit breakers and all other devices necessary to remove any fault contribution of the Large Generating Facility to any short circuit occurring on the Transmission System not otherwise isolated by Transmission Provider's equipment, such that the removal of the fault contribution shall be coordinated with the protective requirements of the Transmission System. Such protective equipment shall include, without limitation, a disconnecting device or switch with load-interrupting capability located between the Large Generating Facility and the Transmission System at a site selected upon mutual agreement (not to be unreasonably withheld, conditioned or delayed) of the Parties. Interconnection Customer shall be responsible for protection of the Large Generating Facility and Interconnection Customer's other equipment from such conditions as negative sequence currents, over- or under-frequency, sudden load rejection, over- or under-voltage, and generator loss-of-field. Interconnection Customer shall be solely responsible to disconnect the Large Generating Facility and Interconnection Customer's other equipment if conditions on the Transmission System could adversely affect the Large Generating Facility.

9.7.6 Power Quality. Neither Party's facilities shall cause excessive voltage flicker nor introduce excessive distortion to the sinusoidal voltage or current waves as defined by ANSI Standard C84.1–1989, in accordance with IEEE Standard 519, or any applicable superseding electric industry standard. In the event of a conflict between ANSI Standard C84.1–1989, or any applicable superseding electric industry standard, ANSI Standard C84.1–1989, or the applicable superseding electric industry standard, shall control.

9.8 Switching and Tagging Rules. Each Party shall provide the other Party a copy of its switching and tagging rules that are applicable to the other Party's activities. Such switching and tagging rules shall be developed on a non-discriminatory basis. The Parties shall comply with applicable switching and tagging rules, as amended from time to time, in obtaining clearances for work or for switching operations on equipment.

9.9 Use of Interconnection Facilities by Third Parties.

9.9.1 Purpose of Interconnection Facilities. Except as may be required by Applicable Laws and Regulations, or as otherwise agreed to among the Parties, the Interconnection Facilities shall be constructed for the sole purpose of interconnecting the Large Generating Facility to the Transmission System and shall be used for no other purpose.

9.9.2 Third Party Users. If required by Applicable Laws and Regulations or if the Parties mutually agree, such agreement not to be unreasonably withheld, to allow one or more third parties to use Transmission Provider's Interconnection Facilities, or any part thereof, Interconnection Customer will be entitled to compensation for the capital expenses it incurred in connection with the Interconnection Facilities based upon the pro rata use of the Interconnection Facilities by Transmission Provider, all third party users, and Interconnection Customer, in accordance with Applicable Laws and Regulations or upon some other mutually-agreed upon methodology. In addition, cost responsibility for ongoing costs, including operation and maintenance costs associated with the Interconnection Facilities, will be allocated between Interconnection Customer and any third party users based upon the pro rata use of the Interconnection Facilities by Transmission Provider, all third party users, and Interconnection Customer, in accordance with Applicable Laws and Regulations or upon some other mutually agreed upon methodology. If the issue of such compensation or allocation cannot be resolved through such negotiations, it shall be submitted to FERC for resolution.

9.10 Disturbance Analysis Data Exchange. The Parties will cooperate with one another in the analysis of disturbances to either the Large Generating Facility or Transmission Provider's Transmission System by gathering and providing access to any information relating to any disturbance, including information from oscillography, protective relay targets, breaker operations and sequence of events records, and any disturbance information required by Good Utility Practice.

Article 10. Maintenance

10.1 Transmission Provider Obligations. Transmission Provider shall maintain the Transmission System and Transmission Provider's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA.

10.2 Interconnection Customer Obligations. Interconnection Customer shall maintain the Large Generating Facility and Interconnection Customer's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA.

10.3 Coordination. The Parties shall confer regularly to coordinate the planning, scheduling and performance of preventive and corrective maintenance on the Large Generating Facility and the Interconnection Facilities.

10.4 Secondary Systems. Each Party shall cooperate with the other in the inspection, maintenance, and testing of control or power circuits that operate below 600 volts, AC or DC, including, but not limited to, any hardware, control or protective devices, cables, conductors, electric raceways, secondary equipment panels, transducers, batteries, chargers, and voltage and current transformers that directly affect the operation of a Party's facilities and equipment which may reasonably be expected to impact the other Party. Each Party shall provide advance notice to the other Party before undertaking any work on such circuits, especially on electrical circuits involving circuit breaker trip and close contacts, current transformers, or potential transformers.

10.5 Operating and Maintenance Expenses. Subject to the provisions herein addressing the use of facilities by others, and except for operations and maintenance expenses associated with modifications made

for providing interconnection or transmission service to a third party and such third party pays for such expenses, Interconnection Customer shall be responsible for all reasonable expenses including overheads, associated with: (1) owning, operating, maintaining, repairing, and replacing Interconnection Customer's Interconnection Facilities; and (2) operation, maintenance, repair and replacement of Transmission Provider's Interconnection Facilities.

Article 11. Performance Obligation

11.1 Interconnection Customer Interconnection Facilities. Interconnection Customer shall design, procure, construct, install, own and/or control Interconnection Customer Interconnection Facilities described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades, at its sole expense.

11.2 Transmission Provider's Interconnection Facilities. Transmission Provider or Transmission Owner shall design, procure, construct, install, own and/or control [the] Transmission Provider's Interconnection Facilities described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades, at the sole expense of [the] Interconnection Customer.

11.3 Network Upgrades and Distribution Upgrades. Transmission Provider or Transmission Owner shall design, procure, construct, install, and own the Network Upgrades and Distribution Upgrades described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades. Interconnection Customer shall be responsible for all costs related to Distribution Upgrades. Unless Transmission Provider or Transmission Owner elects to fund the capital for the Network Upgrades, they shall be solely funded by Interconnection Customer.

11.4 Transmission Credits.

11.4.1 Repayment of Amounts Advanced for Network Upgrades. Interconnection Customer shall be entitled to a cash repayment, equal to the total amount paid to Transmission Provider and Affected System Operator, if any, for the Network Upgrades, including any tax gross-up or other tax-related payments associated with Network Upgrades, and not refunded to Interconnection Customer pursuant to Article 5.17.8 or otherwise, to be paid to Interconnection Customer on a dollar-for-dollar basis for the non-usage sensitive portion of transmission charges, as payments are made under Transmission Provider's Tariff and Affected System's Tariff for transmission services with respect to the Large Generating Facility. Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19a(a)(2)(iii) from the date of any payment for Network Upgrades through the date on which [the] Interconnection Customer receives a repayment of such payment pursuant to this subparagraph. Interconnection Customer may assign such repayment rights to any person.

Notwithstanding the foregoing, Interconnection Customer, Transmission Provider, and Affected System Operator may adopt any alternative payment schedule that is mutually agreeable so long as Transmission Provider and Affected System Operator take one of the following actions no later than five years from the Commercial Operation Date: (1) return to Interconnection Customer any amounts advanced for Network Upgrades not previously repaid, or (2) declare in writing that Transmission Provider or Affected System Operator will continue to provide payments to Interconnection Customer on a dollar-for-dollar basis for the non-usage sensitive portion of transmission charges, or develop an alternative schedule that is mutually agreeable and provides for the return of all amounts advanced for Network Upgrades not previously repaid; however, full reimbursement shall not extend beyond twenty (20) years from the Commercial Operation Date.

If the Large Generating Facility fails to achieve commercial operation, but it or another Generating Facility is later constructed and makes use of the Network Upgrades, Transmission Provider and Affected System Operator shall at that time reimburse Interconnection Customer for the amounts advanced for the Network Upgrades. Before any such reimbursement can occur, [the] Interconnection Customer, or the entity that ultimately constructs the Generating Facility, if different, is responsible for identifying the entity to which reimbursement must be made.

11.4.2 Special Provisions for Affected Systems. Unless Transmission Provider provides, under the LGIA, for the repayment of amounts advanced to Affected System Operator for Network Upgrades, Interconnection Customer and Affected System Operator shall enter into an agreement that provides for such repayment. The agreement shall specify the terms governing payments to be made by Interconnection Customer to the Affected System Operator as well as the repayment by the Affected System Operator.

11.4.3 Notwithstanding any other provision of this LGIA, nothing herein shall be construed as relinquishing or foreclosing any rights, including but not limited to firm transmission rights, capacity rights, transmission congestion rights, or transmission credits, that Interconnection Customer, shall be entitled to, now or in the future under any other agreement or tariff as a result of, or otherwise associated with, the transmission capacity, if any, created by the Network Upgrades, including the right to obtain cash reimbursements or transmission credits for transmission service that is not associated with the Large Generating Facility.

11.5 Provision of Security. At least thirty (30) Calendar Days prior to the commencement of the procurement, installation, or construction of a discrete portion of a Transmission Provider's Interconnection Facilities, Network Upgrades, or Distribution Upgrades, Interconnection Customer shall provide Transmission Provider, at Interconnection Customer's option, a guarantee, a surety bond, letter of credit or other form of security that is reasonably acceptable to Transmission Provider and is consistent with the Uniform Commercial Code of the jurisdiction identified in Article 14.2.1. Such security for payment, as specified in Appendix B of this LGIA, shall be in an amount sufficient to cover the costs for constructing, procuring and installing the applicable portion of Transmission Provider's Interconnection Facilities, Network Upgrades, or Distribution Upgrades and shall be reduced on a dollar-for-dollar basis for payments made to Transmission Provider for these purposes. Transmission Provider must use the LGIA Deposit required in Section 11.3 of the LGIP before requiring Interconnection Customer to submit security in addition to that LGIA Deposit. Transmission Provider must specify, in Appendix B of this LGIA, the dates for which Interconnection Customer must provide additional security for construction of each discrete portion of Transmission Provider's Interconnection Facilities, Network Upgrades, or Distribution Upgrades and Interconnection Customer must provide such additional security.

In addition:

11.5.1 The guarantee must be made by an entity that meets the creditworthiness requirements of Transmission Provider, and contain terms and conditions that guarantee payment of any amount that may be due from Interconnection Customer, up to an agreed-to maximum amount.

11.5.2 The letter of credit must be issued by a financial institution reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

11.5.3 The surety bond must be issued by an insurer reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

11.6 Interconnection Customer Compensation. If Transmission Provider requests or directs Interconnection Customer to provide a service pursuant to Articles 9.6.3 (Payment for Reactive Power), or 13.5.1 of this LGIA, Transmission Provider shall compensate Interconnection Customer in accordance with Interconnection Customer's applicable rate schedule then in effect unless the provision of such service(s) is subject to an RTO or ISO FERC-approved rate schedule. Interconnection Customer shall serve Transmission Provider or RTO or ISO with any filing of a proposed rate schedule at the time of such filing with FERC. To the extent that no rate schedule is in effect at the time [the] Interconnection Customer is required to provide or absorb any Reactive Power under this LGIA, Transmission Provider agrees to compensate Interconnection Customer in such amount as would have been due Interconnection Customer had the rate schedule been in effect at the time service commenced; provided, however, that such rate schedule must be filed at FERC or other appropriate Governmental Authority within sixty (60) Calendar Days of the commencement of service.

11.6.1 Interconnection Customer Compensation for Actions During Emergency Condition. Transmission Provider or RTO or ISO shall compensate Interconnection Customer for its provision of real and reactive power and other Emergency Condition services that Interconnection Customer provides to support the Transmission System during an Emergency Condition in accordance with Article 11.6.

Article 12. Invoice

12.1 General. Each Party shall submit to the other Party, on a monthly basis, invoices of amounts due for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to the other Party under this LGIA, including interest payments or credits, shall be netted so that only the net amount remaining due shall be paid by the owing Party.

12.2 Final Invoice. Within six months after completion of the construction of Transmission Provider's Interconnection Facilities and the Network Upgrades, Transmission Provider shall provide an invoice of the final cost of the construction of Transmission Provider's Interconnection Facilities and the Network Upgrades and shall set forth such costs in sufficient detail to enable Interconnection Customer to compare the actual costs with the estimates and to ascertain deviations, if any, from the cost estimates. Transmission Provider shall refund to Interconnection Customer any amount by which the actual payment by Interconnection Customer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

12.3 Payment. Invoices shall be rendered to the paying Party at the address specified in Appendix F. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by either Party will not constitute a waiver of any rights or claims either Party may have under this LGIA.

12.4 Disputes. In the event of a billing dispute between Transmission Provider and Interconnection Customer, Transmission Provider shall continue to provide Interconnection Service under this LGIA as long as Interconnection Customer: (i) continues to make all payments not in dispute; and (ii) pays to Transmission Provider or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If Interconnection Customer fails to meet these two requirements for continuation of service, then Transmission Provider may provide notice to Interconnection Customer of a Default pursuant to Article 17. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to the other Party shall pay the amount due with interest calculated in accord with the methodology set forth in FERC's regulations at 18 CFR 35.19a(a)(2)(iii).

Article 13. Emergencies

13.1 Definition. ''Emergency Condition'' shall mean a condition or situation: (i) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (ii) that, in the case of Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to the Transmission System, Transmission Provider's Interconnection Facilities or the Transmission Systems of others to which the Transmission System is directly connected; or (iii) that, in the case of Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Large Generating Facility or Interconnection Customer's Interconnection Facilities' System restoration and black start shall be considered Emergency Conditions; provided, that Interconnection Customer is not obligated by this LGIA to possess black start capability.

13.2 Obligations. Each Party shall comply with the Emergency Condition procedures of the applicable ISO/RTO, the Electric Reliability Organization, Applicable Laws and Regulations, and any emergency procedures agreed to by the Joint Operating Committee.

13.3 Notice. Transmission Provider shall notify Interconnection Customer promptly when it becomes aware of an Emergency Condition that affects Transmission Provider's Interconnection Facilities or the Transmission System that may reasonably be expected to affect Interconnection Customer's operation of the Large Generating Facility or Interconnection Customer's Interconnection Facilities. Interconnection Customer shall notify Transmission Provider promptly when it becomes aware of an Emergency Condition that affects the Large Generating Facility or Interconnection Customer's Interconnection Facilities that may reasonably be expected to affect the Transmission System or Transmission Provider's Interconnection Facilities. To the extent information is known, the notification shall describe the Emergency Condition, the extent of the damage or deficiency, the expected effect on the operation of Interconnection Customer's or Transmission Provider's facilities and operations, its anticipated duration and the corrective action taken and/or to be taken. The initial notice shall be followed as soon as practicable with written notice.

13.4 Immediate Action. Unless, in Interconnection Customer's reasonable judgment, immediate action is required, Interconnection Customer shall obtain the consent of Transmission Provider, such consent to not be unreasonably withheld, prior to performing any manual switching operations at the Large Generating Facility or Interconnection Customer's Interconnection Facilities in response to an Emergency Condition either declared by Transmission Provider or otherwise regarding the Transmission System.

13.5 Transmission Provider Authority.

13.5.1 General. Transmission Provider may take whatever actions or inactions with regard to the Transmission System or Transmission Provider's Interconnection Facilities it deems necessary during an Emergency Condition in order to (i) preserve public health and safety, (ii) preserve the reliability of the Transmission System or Transmission Provider's Interconnection Facilities, (iii) limit or prevent damage, and (iv) expedite restoration of service.

Transmission Provider shall use Reasonable Efforts to minimize the effect of such actions or inactions on the Large Generating Facility or Interconnection Customer's Interconnection Facilities. Transmission Provider may, on the basis of technical considerations, require the Large Generating Facility to mitigate an Emergency Condition by taking actions necessary and limited in scope to remedy the Emergency Condition, including, but not limited to, directing Interconnection Customer to shut-down, start-up, increase or decrease the real or reactive power output of the Large Generating Facility; implementing a reduction or disconnection pursuant to Article 13.5.2; directing Interconnection Customer to assist with blackstart (if available) or restoration efforts; or altering the outage schedules of the Large Generating Facility and Interconnection Customer's Interconnection Facilities. Interconnection Customer shall comply with all of Transmission Provider's operating instructions concerning Large Generating Facility real power and reactive power output within the manufacturer's design limitations of the Large Generating Facility's equipment that is in service and physically available for operation at the time, in compliance with Applicable Laws and Regulations.

13.5.2 Reduction and Disconnection. Transmission Provider may reduce Interconnection Service or disconnect the Large Generating Facility or Interconnection Customer's Interconnection Facilities, when such, reduction or disconnection is necessary under Good Utility Practice due to Emergency Conditions. These rights are separate and distinct from any right of curtailment of Transmission Provider pursuant to Transmission Provider's Tariff. When Transmission Provider can schedule the reduction or disconnection in advance, Transmission Provider shall notify Interconnection Customer of the reasons, timing and expected duration of the reduction or disconnection. Transmission Provider shall coordinate with Interconnection Customer using Good Utility Practice to schedule the reduction or disconnection during periods of least impact to Interconnection Customer and Transmission Provider. Any reduction or disconnection shall continue only for so long as reasonably necessary under Good Utility Practice. The Parties shall cooperate with each other to restore the Large Generating Facility, the Interconnection Facilities, and the Transmission System to their normal operating state as soon as practicable consistent with Good Utility Practice.

13.6 Interconnection Customer Authority. Consistent with Good Utility Practice and the LGIA and the LGIP, Interconnection Customer may take actions or inactions with regard to the Large Generating Facility or Interconnection Customer's Interconnection Facilities during an Emergency Condition in order to (i) preserve public health and safety, (ii) preserve the reliability of the Large Generating Facility or Interconnection Customer's Interconnection Facilities, (iii)

limit or prevent damage, and (iv) expedite restoration of service. Interconnection Customer shall use Reasonable Efforts to minimize the effect of such actions or inactions on the Transmission System and Transmission Provider's Interconnection Facilities. Transmission Provider shall use Reasonable Efforts to assist Interconnection Customer in such actions.

13.7 Limited Liability. Except as otherwise provided in Article 11.6.1 of this LGIA, neither Party shall be liable to the other for any action it takes in responding to an Emergency Condition so long as such action is made in good faith and is consistent with Good Utility Practice.

Article 14. Regulatory Requirements and Governing Law

14.1 Regulatory Requirements. Each Party's obligations under this LGIA shall be subject to its receipt of any required approval or certificate from one or more Governmental Authorities in the form and substance satisfactory to the applying Party, or the Party making any required filings with, or providing notice to, such Governmental Authorities, and the expiration of any time period associated therewith. Each Party shall in good faith seek and use its Reasonable Efforts to obtain such other approvals. Nothing in this LGIA shall require Interconnection Customer to take any action that could result in its inability to obtain, or its loss of, status or exemption under the Federal Power Act, the Public Utility Holding Company Act of 1935, as amended, or the Public Utility Regulatory Policies Act of 1978.

14.2 Governing Law.

14.2.1 The validity, interpretation and performance of this LGIA and each of its provisions shall be governed by the laws of the state where the Point of Interconnection is located, without regard to its conflicts of law principles.

14.2.2 This LGIA is subject to all Applicable Laws and Regulations.

14.2.3 Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, rules, or regulations of a Governmental Authority.

Article 15. Notices

15.1 General. Unless otherwise provided in this LGIA, any notice, demand or request required or permitted to be given by either Party to the other and any instrument required or permitted to be tendered or delivered by either Party in writing to the other shall be effective when delivered and may be so given, tendered or delivered, by recognized national courier, or by depositing the same with the United States Postal Service with postage prepaid, for delivery by certified or registered mail, addressed to the Party, or personally delivered to the Party, at the address set out in Appendix F, Addresses for Delivery of Notices and Billings.

Either Party may change the notice information in this LGIA by giving five (5) Business Days written notice prior to the effective date of the change.

15.2 Billings and Payments. Billings and payments shall be sent to the addresses set out in Appendix F.

15.3 Alternative Forms of Notice. Any notice or request required or permitted to be given by a Party to the other and not required by this Agreement to be given in writing may be so given by telephone, facsimile or email to the telephone numbers and email addresses set out in Appendix F.

15.4 Operations and Maintenance Notice. Each Party shall notify the other Party in writing of the identity of the person(s) that it designates as the point(s) of contact with respect to the implementation of Articles 9 and 10.

Article 16. Force Majeure

16.1 Force Majeure.

16.1.1 Economic hardship is not considered a Force Majeure event.

16.1.2 Neither Party shall be considered to be in Default with respect to any obligation hereunder, (including obligations under Article 4), other than the obligation to pay money when due, if prevented from fulfilling such obligation by Force Majeure. A Party unable to fulfill any obligation hereunder (other than an obligation to pay money when due) by reason of Force Majeure shall give notice and the full particulars of such Force Majeure to the other Party in writing or by telephone as soon as reasonably possible after the occurrence of the cause relied upon. Telephone notices given pursuant to this article shall be confirmed in writing as soon as reasonably possible and shall specifically state full particulars of the Force Majeure, the time and date when the Force Majeure occurred and when the Force Majeure is reasonably expected to cease. The Party affected shall exercise due diligence to remove such disability with reasonable dispatch, but shall not be required to accede or agree to any provision not satisfactory to it in order to settle and terminate a strike or other labor disturbance.

Article 17. Default

17.1 Default

17.1.1 General. No Default shall exist where such failure to discharge an obligation (other than the payment of money) is the result of Force Majeure as defined in this LGIA or the result of an act of omission of the other Party. Upon a Breach, the non-breaching Party shall give written notice of such Breach to the breaching Party. Except as provided in Article 17.1.2, the breaching Party shall have thirty (30) Calendar Days from receipt of the Default notice within which to cure such Breach; provided however, if such Breach is not capable of cure within thirty (30) Calendar Days, the breaching Party shall commence such cure within thirty (30) Calendar Days after notice and continuously and diligently complete such cure within ninety (90) Calendar Days from receipt of the Default notice; and, if cured within such time, the Breach specified in such notice shall cease to exist.

17.1.2 Right to Terminate. If a Breach is not cured as provided in this article, or if a Breach is not capable of being cured within the period provided for herein, the non-breaching Party shall have the right to declare a Default and terminate this LGIA by written notice at any time until cure occurs, and be relieved of any further obligation hereunder and, whether or not that Party terminates this LGIA, to recover from the breaching Party all amounts due hereunder, plus all other damages and remedies to which it is entitled at law or in equity. The provisions of this article will survive termination of this LGIA.

17.2 Violation of Operating Assumptions for Generating Facilities. If Transmission Provider requires Interconnection Customer to memorialize the operating assumptions for the charging behavior of a Generating Facility that includes at least one electric storage resource in Appendix H of this LGIA, Transmission Provider may consider Interconnection Customer to be in Breach of the LGIA if Interconnection Customer fails to operate the Generating Facility in accordance with those operating assumptions for charging behavior. However, if Interconnection Customer operates contrary to the operating assumptions for charging behavior specified in Appendix H of this LGIA at the direction of Transmission Provider, Transmission Provider shall not consider Interconnection Customer in Breach of this LGIA.

Article 18. Indemnity, Consequential Damages and Insurance

18.1 Indemnity. The Parties shall at all times indemnify, defend, and hold the other Party harmless from, any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's action or inactions of its obligations under this LGIA on behalf of the Indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the indemnified Party.

18.1.1 Indemnified Person. If an Indemnified Person is entitled to indemnification under this Article 18 as a result of a claim by a third party, and the Indemnifying Party fails, after notice and reasonable opportunity to proceed under Article 18.1, to assume the defense of such claim, such Indemnified Person may at the expense of the Indemnifying Party contest, settle or consent to the entry of any judgment with respect to, or pay in full, such claim.

18.1.2 Indemnifying Party. If an Indemnifying Party is obligated to indemnify and hold any Indemnified Person harmless under this Article 18, the amount owing to the Indemnified Person shall be the amount of such Indemnified Person's actual Loss, net of any insurance or other recovery.

18.1.3 Indemnity Procedures. Promptly after receipt by an Indemnified Person of any claim or notice of the commencement of any action or administrative or legal proceeding or investigation as to which the indemnity provided for in Article 18.1 may apply, the Indemnified Person shall notify the Indemnifying Party of such fact. Any failure of or delay in such notification shall not affect a Party's indemnification obligation unless such failure or delay is materially prejudicial to the Indemnifying Party.

The Indemnifying Party shall have the right to assume the defense thereof with

counsel designated by such Indemnifying Party and reasonably satisfactory to the Indemnified Person. If the defendants in any such action include one or more Indemnified Persons and the Indemnifying Party and if the Indemnified Person reasonably concludes that there may be legal defenses available to it and/or other Indemnified Persons which are different from or additional to those available to the Indemnifying Party, the Indemnified Person shall have the right to select separate counsel to assert such legal defenses and to otherwise participate in the defense of such action on its own behalf. In such instances, the Indemnifying Party shall only be required to pay the fees and expenses of one additional attorney to represent an Indemnified Person or Indemnified Persons having such differing or additional legal defenses.

The Indemnified Person shall be entitled, at its expense, to participate in any such action, suit or proceeding, the defense of which has been assumed by the Indemnifying Party. Notwithstanding the foregoing, the Indemnifying Party (i) shall not be entitled to assume and control the defense of any such action, suit or proceedings if and to the extent that, in the opinion of the Indemnified Person and its counsel, such action, suit or proceeding involves the potential imposition of criminal liability on the Indemnified Person, or there exists a conflict or adversity of interest between the Indemnified Person and the Indemnifying Party, in such event the Indemnifying Party shall pay the reasonable expenses of the Indemnified Person, and (ii) shall not settle or consent to the entry of any judgment in any action, suit or proceeding without the consent of the Indemnified Person, which shall not be reasonably withheld, conditioned or delayed.

18.2 Consequential Damages. Other than the Liquidated Damages heretofore described, in no event shall either Party be liable under any provision of this LGIA for any losses, damages, costs or expenses for any special, indirect, incidental, consequential, or punitive damages, including but not limited to loss of profit or revenue, loss of the use of equipment, cost of capital, cost of temporary equipment or services, whether based in whole or in part in contract, in tort, including negligence, strict liability, or any other theory of liability; provided, however, that damages for which a Party may be liable to the other Party under another agreement will not be considered to be special, indirect, incidental, or consequential damages hereunder.

18.3 Insurance. Each party shall, at its own expense, maintain in force throughout the period of this LGIA, and until released by the other Party, the following minimum insurance coverages, with insurers authorized to do business in the state where the Point of Interconnection is located:

18.3.1 Employers' Liability and Workers' Compensation Insurance providing statutory benefits in accordance with the laws and regulations of the state in which the Point of Interconnection is located.

18.3.2 Commercial General Liability Insurance including premises and operations, personal injury, broad form property damage, broad form blanket contractual liability coverage (including coverage for the contractual indemnification) products and completed operations coverage, coverage for explosion, collapse and underground hazards, independent contractors coverage, coverage for pollution to the extent normally available and punitive damages to the extent normally available and a cross liability endorsement, with minimum limits of One Million Dollars ($1,000,000) per occurrence/ One Million Dollars ($1,000,000) aggregate combined single limit for personal injury, bodily injury, including death and property damage.

18.3.3 Comprehensive Automobile Liability Insurance for coverage of owned and non-owned and hired vehicles, trailers or semi-trailers designed for travel on public roads, with a minimum, combined single limit of One Million Dollars ($1,000,000) per occurrence for bodily injury, including death, and property damage.

18.3.4 Excess Public Liability Insurance over and above the Employers' Liability Commercial General Liability and Comprehensive Automobile Liability Insurance coverage, with a minimum combined single limit of Twenty Million Dollars ($20,000,000) per occurrence/Twenty Million Dollars ($20,000,000) aggregate.

18.3.5 The Commercial General Liability Insurance, Comprehensive Automobile Insurance and Excess Public Liability Insurance policies shall name the other Party, its parent, associated and Affiliate companies and their respective directors, officers, agents, servants and employees (''Other Party Group'') as additional insured. All policies shall contain provisions whereby the insurers waive all rights of subrogation in accordance with the provisions of this LGIA against the Other Party Group and provide thirty (30) Calendar Days advance written notice to the Other Party Group prior to anniversary date of cancellation or any material change in coverage or condition.

18.3.6 The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance and Excess Public Liability Insurance policies shall contain provisions that specify that the policies are primary and shall apply to such extent without consideration for other policies separately carried and shall state that each insured is provided coverage as though a separate policy had been issued to each, except the insurer's liability shall not be increased beyond the amount for which the insurer would have been liable had only one insured been covered. Each Party shall be responsible for its respective deductibles or retentions.

18.3.7 The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance and Excess Public Liability Insurance policies, if written on a Claims First Made Basis, shall be maintained in full force and effect for two (2) years after termination of this LGIA, which coverage may be in the form of tail coverage or extended reporting period coverage if agreed by the Parties.

18.3.8 The requirements contained herein as to the types and limits of all insurance to be maintained by the Parties are not intended to and shall not in any manner, limit or qualify the liabilities and obligations assumed by the Parties under this LGIA.

18.3.9 Within ten (10) *Business* [d]*D*ays following execution of this LGIA, and as soon as practicable after the end of each fiscal year or at the renewal of the insurance policy and in any event within ninety (90) *Calendar* [d]*D*ays thereafter, each Party shall provide certification of all insurance required in this LGIA, executed by each insurer or by an authorized representative of each insurer.

18.3.10 Notwithstanding the foregoing, each Party may self-insure to meet the minimum insurance requirements of Articles 18.3.2 through 18.3.8 to the extent it maintains a self-insurance program; provided that, such Party's senior secured debt is rated at investment grade or better by Standard & Poor's and that its self-insurance program meets the minimum insurance requirements of Articles 18.3.2 through 18.3.8. For any period of time that a Party's senior secured debt is unrated by Standard & Poor's or is rated at less than investment grade by Standard & Poor's, such Party shall comply with the insurance requirements applicable to it under Articles 18.3.2 through 18.3.9. In the event that a Party is permitted to self-insure pursuant to this article, it shall notify the other Party that it meets the requirements to self-insure and that its self-insurance program meets the minimum insurance requirements in a manner consistent with that specified in Article 18.3.9.

18.3.11 The Parties agree to report to each other in writing as soon as practical all accidents or occurrences resulting in injuries to any person, including death, and any property damage arising out of this LGIA.

Article 19. Assignment

19.1 Assignment. This LGIA may be assigned by either Party only with the written consent of the other; provided that either Party may assign this LGIA without the consent of the other Party to any Affiliate of the assigning Party with an equal or greater credit rating and with the legal authority and operational ability to satisfy the obligations of the assigning Party under this LGIA; and provided further that Interconnection Customer shall have the right to assign this LGIA, without the consent of Transmission Provider, for collateral security purposes to aid in providing financing for the Large Generating Facility, provided that Interconnection Customer will promptly notify Transmission Provider of any such assignment. Any financing arrangement entered into by Interconnection Customer pursuant to this article will provide that prior to or upon the exercise of the secured party's, trustee's or mortgagee's assignment rights pursuant to said arrangement, the secured creditor, the trustee or mortgagee will notify Transmission Provider of the date and particulars of any such exercise of assignment right(s), including providing [the] Transmission Provider with proof that it meets the requirements of Articles 11.5 and 18.3. Any attempted assignment that violates this article is void and ineffective. Any assignment under this LGIA shall not relieve a Party of its obligations, nor shall a Party's obligations be enlarged, in whole or in part,

by reason thereof. Where required, consent to assignment will not be unreasonably withheld, conditioned or delayed.

Article 20. Severability

20.1 Severability. If any provision in this LGIA is finally determined to be invalid, void or unenforceable by any court or other Governmental Authority having jurisdiction, such determination shall not invalidate, void or make unenforceable any other provision, agreement or covenant of this LGIA; provided that if Interconnection Customer (or any third party, but only if such third party is not acting at the direction of Transmission Provider) seeks and obtains such a final determination with respect to any provision of the Alternate Option (Article 5.1.2), or the Negotiated Option (Article 5.1.4), then none of these provisions shall thereafter have any force or effect and the Parties' rights and obligations shall be governed solely by the Standard Option (Article 5.1.1).

Article 21. Comparability

21.1 Comparability. The Parties will comply with all applicable comparability and code of conduct laws, rules and regulations, as amended from time to time.

Article 22. Confidentiality

22.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied by either of the Parties to the other prior to the execution of this LGIA.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential.

If requested by either Party, the other Party shall provide in writing, the basis for asserting that the information referred to in this Article 22 warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

22.1.1 Term. During the term of this LGIA, and for a period of three (3) years after the expiration or termination of this LGIA, except as otherwise provided in this Article 22, each Party shall hold in confidence and shall not disclose to any person Confidential Information.

22.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a third party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this LGIA; or (6) is required, in accordance with Article 22.1.7 of the LGIA, Order of Disclosure, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under this LGIA. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the other Party that it no longer is confidential.

22.1.3 Release of Confidential Information. Neither Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, consultants, or to parties who may be or considering providing financing to or equity participation with Interconnection Customer, or to potential purchasers or assignees of Interconnection Customer, on a need-to-know basis in connection with this LGIA, unless such person has first been advised of the confidentiality provisions of this Article 22 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Article 22.

22.1.4 Rights. Each Party retains all rights, title, and interest in the Confidential Information that each Party discloses to the other Party. The disclosure by each Party to the other Party of Confidential Information shall not be deemed a waiver by either Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

22.1.5 No Warranties. By providing Confidential Information, neither Party makes any warranties or representations as to its accuracy or completeness. In addition, by supplying Confidential Information, neither Party obligates itself to provide any particular information or Confidential Information to the other Party nor to enter into any further agreements or proceed with any other relationship or joint venture.

22.1.6 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under this LGIA or its regulatory requirements.

22.1.7 Order of Disclosure. If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires either Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the other Party with prompt notice of such request(s) or requirement(s) so that the other Party may seek an appropriate protective order or waive compliance with the terms of this LGIA. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

22.1.8 Termination of Agreement. Upon termination of this LGIA for any reason, each Party shall, within ten (10) Calendar Days of receipt of a written request from the other Party, use Reasonable Efforts to destroy, erase, or delete (with such destruction, erasure, and deletion certified in writing to the other Party) or return to the other Party, without retaining copies thereof, any and all written or electronic Confidential Information received from the other Party.

22.1.9 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for the other Party's Breach of its obligations under this Article 22. Each Party accordingly agrees that the other Party shall be entitled to equitable relief, by way of injunction or otherwise, if the first Party Breaches or threatens to Breach its obligations under this Article 22, which equitable relief shall be granted without bond or proof of damages, and the receiving Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 22, but shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 22.

22.1.10 Disclosure to FERC, its Staff, or a State. Notwithstanding anything in this Article 22 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from one of the Parties that is otherwise required to be maintained in confidence pursuant to this LGIA, the Party shall provide the requested information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party to this LGIA prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Party to the LGIA when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a

confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

22.1.11 Subject to the exception in Article 22.1.10, any information that a Party claims is competitively sensitive, commercial or financial information under this LGIA (''Confidential Information'') shall not be disclosed by the other Party to any person not employed or retained by the other Party, except to the extent disclosure is (i) required by law; (ii) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (iii) otherwise permitted by consent of the other Party, such consent not to be unreasonably withheld; or (iv) necessary to fulfill its obligations under this LGIA or as a transmission service provider or a Balancing Authority Area operator including disclosing the Confidential Information to an RTO or ISO or to a regional or national reliability organization. The Party asserting confidentiality shall notify the other Party in writing of the information it claims is confidential. Prior to any disclosures of the other Party's Confidential Information under this subparagraph, or if any third party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the disclosing Party agrees to promptly notify the other Party in writing and agrees to assert confidentiality and cooperate with the other Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order or other reasonable measures.

Article 23. Environmental Releases

23.1 Each Party shall notify the other Party, first orally and then in writing, of the release of any Hazardous Substances, any asbestos or lead abatement activities, or any type of remediation activities related to the Large Generating Facility or the Interconnection Facilities, each of which may reasonably be expected to affect the other Party. The notifying Party shall: (i) provide the notice as soon as practicable, provided such Party makes a good faith effort to provide the notice no later than twenty-four hours after such Party becomes aware of the occurrence; and (ii) promptly furnish to the other Party copies of any publicly available reports filed with any Governmental Authorities addressing such events.

Article 24. Information Requirements

24.1 Information Acquisition. Transmission Provider and Interconnection Customer shall submit specific information regarding the electrical characteristics of their respective facilities to each other as described below and in accordance with Applicable Reliability Standards.

24.2 Information Submission by Transmission Provider. The initial information submission by Transmission Provider shall occur no later than one hundred eighty (180) Calendar Days prior to Trial Operation and shall include Transmission System information necessary to allow Interconnection Customer to select equipment and meet any system protection and stability requirements, unless otherwise agreed to by the Parties. On a monthly basis Transmission Provider shall provide Interconnection Customer a status report on the construction and installation of Transmission Provider's Interconnection Facilities and Network Upgrades, including, but not limited to, the following information: (1) progress to date; (2) a description of the activities since the last report (3) a description of the action items for the next period; and (4) the delivery status of equipment ordered.

24.3 Updated Information Submission by Interconnection Customer. The updated information submission by Interconnection Customer, including manufacturer information, shall occur no later than one hundred eighty (180) Calendar Days prior to the Trial Operation. Interconnection Customer shall submit a completed copy of the Large Generating Facility data requirements contained in Appendix 1 to the LGIP. It shall also include any additional information provided to Transmission Provider for the Cluster Study and Facilities Study. Information in this submission shall be the most current Large Generating Facility design or expected performance data. Information submitted for stability models shall be compatible with Transmission Provider standard models. If there is no compatible model, Interconnection Customer will work with a consultant mutually agreed to by the Parties to develop and supply a standard model and associated information.

If Interconnection Customer's data is materially different from what was originally provided to Transmission Provider pursuant to the Interconnection Study Agreement between Transmission Provider and Interconnection Customer, then Transmission Provider will conduct appropriate studies to determine the impact on Transmission Provider Transmission System based on the actual data submitted pursuant to this Article 24.3. Interconnection Customer shall not begin Trial Operation until such studies are completed.

24.4 Information Supplementation. Prior to the Operation Date, the Parties shall supplement their information submissions described above in this Article 24 with any and all ''as-built'' Large Generating Facility information or ''as-tested'' performance information that differs from the initial submissions or, alternatively, written confirmation that no such differences exist. [The] Interconnection Customer shall conduct tests on the Large Generating Facility as required by Good Utility Practice such as an open circuit ''step voltage'' test on the Large Generating Facility to verify proper operation of the Large Generating Facility's automatic voltage regulator.

Unless otherwise agreed, the test conditions shall include: (1) Large Generating Facility at synchronous speed; (2) automatic voltage regulator on and in voltage control mode; and (3) a five percent change in Large Generating Facility terminal voltage initiated by a change in the voltage regulators reference voltage. Interconnection Customer shall provide validated test recordings showing the responses of Large Generating Facility terminal and field voltages. In the event that direct recordings of these voltages is impractical, recordings of other voltages or currents that mirror the response of the Large Generating Facility's terminal or field voltage are acceptable if information necessary to translate these alternate quantities to actual Large Generating Facility terminal or field voltages is provided. Large Generating Facility testing shall be conducted and results provided to Transmission Provider for each individual generating unit in a station.

Subsequent to the Operation Date, Interconnection Customer shall provide Transmission Provider any information changes due to equipment replacement, repair, or adjustment. Transmission Provider shall provide Interconnection Customer any information changes due to equipment replacement, repair or adjustment in the directly connected substation or any adjacent Transmission Provider-owned substation that may affect Interconnection Customer's Interconnection Facilities equipment ratings, protection or operating requirements. The Parties shall provide such information no later than thirty (30) Calendar Days after the date of the equipment replacement, repair or adjustment.

Article 25. Information Access and Audit Rights

25.1 Information Access. Each Party (the ''disclosing Party'') shall make available to the other Party information that is in the possession of the disclosing Party and is necessary in order for the other Party to: (i) verify the costs incurred by the disclosing Party for which the other Party is responsible under this LGIA; and

(ii) carry out its obligations and responsibilities under this LGIA. The Parties shall not use such information for purposes other than those set forth in this Article 25.1 and to enforce their rights under this LGIA.

25.2 Reporting of Non-Force Majeure Events. Each Party (the ''notifying Party'') shall notify the other Party when the notifying Party becomes aware of its inability to comply with the provisions of this LGIA for a reason other than a Force Majeure event. The Parties agree to cooperate with each other and provide necessary information regarding such inability to comply, including the date, duration, reason for the inability to comply, and corrective actions taken or planned to be taken with respect to such inability to comply. Notwithstanding the foregoing, notification, cooperation or information provided under this article shall not entitle the Party receiving such notification to allege a cause for anticipatory breach of this LGIA.

25.3 Audit Rights. Subject to the requirements of confidentiality under Article 22 of this LGIA, each Party shall have the right, during normal business hours, and upon prior reasonable notice to the other Party, to audit at its own expense the other Party's accounts and records pertaining to either Party's performance or either Party's satisfaction of obligations under this LGIA. Such audit rights shall include audits of the other Party's costs, calculation of invoiced amounts, Transmission Provider's efforts to allocate responsibility for the provision of

reactive support to the Transmission System, Transmission Provider's efforts to allocate responsibility for interruption or reduction of generation on the Transmission System, and each Party's actions in an Emergency Condition. Any audit authorized by this article shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to each Party's performance and satisfaction of obligations under this LGIA. Each Party shall keep such accounts and records for a period equivalent to the audit rights periods described in Article 25.4.

25.4 Audit Rights Periods.

25.4.1 Audit Rights Period for Construction-Related Accounts and Records. Accounts and records related to the design, engineering, procurement, and construction of Transmission Provider's Interconnection Facilities and Network Upgrades shall be subject to audit for a period of twenty-four months following Transmission Provider's issuance of a final invoice in accordance with Article 12.2.

25.4.2 Audit Rights Period for All Other Accounts and Records. Accounts and records related to either Party's performance or satisfaction of all obligations under this LGIA other than those described in Article 25.4.1 shall be subject to audit as follows: (i) for an audit relating to cost obligations, the applicable audit rights period shall be twenty-four months after the auditing Party's receipt of an invoice giving rise to such cost obligations; and (ii) for an audit relating to all other obligations, the applicable audit rights period shall be twenty-four months after the event for which the audit is sought.

25.5 Audit Results. If an audit by a Party determines that an overpayment or an underpayment has occurred, a notice of such overpayment or underpayment shall be given to the other Party together with those records from the audit which support such determination.

Article 26. Subcontractors

26.1 General. Nothing in this LGIA shall prevent a Party from utilizing the services of any subcontractor as it deems appropriate to perform its obligations under this LGIA; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this LGIA in providing such services and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

26.2 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this LGIA. The hiring Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor the hiring Party hires as if no subcontract had been made; provided, however, that in no event shall Transmission Provider be liable for the actions or inactions of Interconnection Customer or its subcontractors with respect to obligations of Interconnection Customer under Article 5 of this LGIA. Any applicable obligation imposed by this LGIA upon the hiring Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

26.3 No Limitation by Insurance. The obligations under this Article 26 will not be limited in any way by any limitation of subcontractor's insurance.

Article 27. Disputes

27.1 Submission. In the event either Party has a dispute, or asserts a claim, that arises out of or in connection with this LGIA or its performance, such Party (the ''disputing Party'') shall provide the other Party with written notice of the dispute or claim (''Notice of Dispute''). Such disp ute or claim shall be referred to a designated senior representative of each Party for resolution on an informal basis as promptly as practicable after receipt of the Notice of Dispute by the other Party. In the event the designated representatives are unable to resolve the claim or dispute through unassisted or assisted negotiations within thirty (30) Calendar Days of the other Party's receipt of the Notice of Dispute, such claim or dispute may, upon mutual agreement of the Parties, be submitted to arbitration and resolved in accordance with the arbitration procedures set forth below. In the event the Parties do not agree to submit such claim or dispute to arbitration, each Party may exercise whatever rights and remedies it may have in equity or at law consistent with the terms of this LGIA.

27.2 External Arbitration Procedures. Any arbitration initiated under this LGIA shall be conducted before a single neutral arbitrator appointed by the Parties. If the Parties fail to agree upon a single arbitrator within ten (10) Calendar Days of the submission of the dispute to arbitration, each Party shall choose one arbitrator who shall sit on a three-member arbitration panel. The two arbitrators so chosen shall within twenty (20) Calendar Days select a third arbitrator to chair the arbitration panel. In either case, the arbitrators shall be knowledgeable in electric utility matters, including electric transmission and bulk power issues, and shall not have any current or past substantial business or financial relationships with any party to the arbitration (except prior arbitration). The arbitrator(s) shall provide each of the Parties an opportunity to be heard and, except as otherwise provided herein, shall conduct the arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association (''Arbitration Rules'') and any applicable FERC regulations or RTO rules; provided, however, in the event of a conflict between the Arbitration Rules and the terms of this Article 27, the terms of this Article 27 shall prevail.

27.3 Arbitration Decisions. Unless otherwise agreed by the Parties, the arbitrator(s) shall render a decision within ninety (90) Calendar Days of appointment and shall notify the Parties in writing of such decision and the reasons therefor. The arbitrator(s) shall be authorized only to interpret and apply the provisions of this LGIA and shall have no power to modify or change any provision of this Agreement in any manner. The decision of the arbitrator(s) shall be final and binding upon the Parties, and judgment on the award may be entered in any court having jurisdiction. The decision of the arbitrator(s) may be appealed solely on the grounds that the conduct of the arbitrator(s), or the decision itself, violated the standards set forth in the Federal Arbitration Act or the Administrative Dispute Resolution Act. The final decision of the arbitrator must also be filed with FERC if it affects jurisdictional rates, terms and conditions of service, Interconnection Facilities, or Network Upgrades.

27.4 Costs. Each Party shall be responsible for its own costs incurred during the arbitration process and for the following costs, if applicable: (1) the cost of the arbitrator chosen by the Party to sit on the three member panel and one half of the cost of the third arbitrator chosen; or (2) one half the cost of the single arbitrator jointly chosen by the Parties.

Article 28. Representations, Warranties, and Covenants

28.1 General. Each Party makes the following representations, warranties and covenants:

28.1.1 Good Standing. Such Party is duly organized, validly existing and in good standing under the laws of the state in which it is organized, formed, or incorporated, as applicable; that it is qualified to do business in the state or states in which the Large Generating Facility, Interconnection Facilities and Network Upgrades owned by such Party, as applicable, are located; and that it has the corporate power and authority to own its properties, to carry on its business as now being conducted and to enter into this LGIA and carry out the transactions contemplated hereby and perform and carry out all covenants and obligations on its part to be performed under and pursuant to this LGIA.

28.1.2 Authority. Such Party has the right, power and authority to enter into this LGIA, to become a Party hereto and to perform its obligations hereunder. This LGIA is a legal, valid and binding obligation of such Party, enforceable against such Party in accordance with its terms, except as the enforceability thereof may be limited by applicable bankruptcy, insolvency, reorganization or other similar laws affecting creditors' rights generally and by general equitable principles (regardless of whether enforceability is sought in a proceeding in equity or at law).

28.1.3 No Conflict. The execution, delivery and performance of this LGIA does not violate or conflict with the organizational or formation documents, or bylaws or operating agreement, of such Party, or any judgment, license, permit, order, material agreement or instrument applicable to or binding upon such Party or any of its assets.

28.1.4 Consent and Approval. Such Party has sought or obtained, or, in accordance with this LGIA will seek or obtain, each consent, approval, authorization, order, or acceptance by any Governmental Authority in connection with the execution, delivery and performance of this LGIA, and it will provide to any Governmental Authority notice of any actions under this LGIA that are required by Applicable Laws and Regulations.

Article 29. Joint Operating Committee

29.1 Joint Operating Committee. Except in the case of ISOs and RTOs, Transmission Provider shall constitute a Joint Operating Committee to coordinate operating and technical considerations of Interconnection Service. At least six (6) months prior to the expected Initial Synchronization Date, Interconnection Customer and Transmission Provider shall each appoint one representative and one alternate to the Joint Operating Committee. Each Interconnection Customer shall notify Transmission Provider of its appointment in writing. Such appointments may be changed at any time by similar notice. The Joint Operating Committee shall meet as necessary, but not less than once each calendar year, to carry out the duties set forth herein. The Joint Operating Committee shall hold a meeting at the request of either Party, at a time and place agreed upon by the representatives. The Joint Operating Committee shall perform all of its duties consistent with the provisions of this LGIA. Each Party shall cooperate in providing to the Joint Operating Committee all information required in the performance of the Joint Operating Committee's duties. All decisions and agreements, if any, made by the Joint Operating Committee, shall be evidenced in writing. The duties of the Joint Operating Committee shall include the following:

29.1.1 Establish data requirements and operating record requirements.

29.1.2 Review the requirements, standards, and procedures for data acquisition equipment, protective equipment, and any other equipment or software.

29.1.3 Annually review the one (1) year forecast of maintenance and planned outage schedules of Transmission Provider's and Interconnection Customer's facilities at the Point of Interconnection.

29.1.4 Coordinate the scheduling of maintenance and planned outages on the Interconnection Facilities, the Large Generating Facility and other facilities that impact the normal operation of the interconnection of the Large Generating Facility to the Transmission System.

29.1.5 Ensure that information is being provided by each Party regarding equipment availability.

29.1.6 Perform such other duties as may be conferred upon it by mutual agreement of the Parties.

Article 30. Miscellaneous

30.1 Binding Effect. This LGIA and the rights and obligations hereof, shall be binding upon and shall inure to the benefit of the successors and assigns of the Parties hereto.

30.2 Conflicts. In the event of a conflict between the body of this LGIA and any attachment, appendices or exhibits hereto, the terms and provisions of the body of this LGIA shall prevail and be deemed the final intent of the Parties.

30.3 Rules of Interpretation. This LGIA, unless a clear contrary intention appears, shall be construed and interpreted as follows: (1) the singular number includes the plural number and vice versa; (2) reference to any person includes such person's successors and assigns but, in the case of a Party, only if such successors and assigns are permitted by this LGIA, and reference to a person in a particular capacity excludes such person in any other capacity or individually; (3) reference to any agreement (including this LGIA), document, instrument or tariff means such agreement, document, instrument, or tariff as amended or modified and in effect from time to time in accordance with the terms thereof and, if applicable, the terms hereof; (4) reference to any Applicable Laws and Regulations means such Applicable Laws and Regulations as amended, modified, codified, or reenacted, in whole or in part, and in effect from time to time, including, if applicable, rules and regulations promulgated thereunder; (5) unless expressly stated otherwise, reference to any Article, Section or Appendix means such Article of this LGIA or such Appendix to this LGIA, or such Section to the LGIP or such Appendix to the LGIP, as the case may be; (6) ''hereunder'', ''hereof'', ''herein'', ''hereto'' and words of similar import shall be deemed references to this LGIA as a whole and not to any particular Article or other provision hereof or thereof; (7) ''including'' (and with correlative meaning ''include'') means including without limiting the generality of any description preceding such term; and (8) relative to the determination of any period of time, ''from'' means ''from and including,'' ''to'' means ''to but excluding'' and ''through'' means ''through and including.''

30.4 Entire Agreement. This LGIA, including all Appendices and Schedules attached hereto, constitutes the entire agreement between the Parties with reference to the subject matter hereof, and supersedes all prior and contemporaneous understandings or agreements, oral or written, between the Parties with respect to the subject matter of this LGIA. There are no other agreements, representations, warranties, or covenants which constitute any part of the consideration for, or any condition to, either Party's compliance with its obligations under this LGIA.

30.5 No Third Party Beneficiaries. This LGIA is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and, where permitted, their assigns.

30.6 Waiver. The failure of a Party to this LGIA to insist, on any occasion, upon strict performance of any provision of this LGIA will not be considered a waiver of any obligation, right, or duty of, or imposed upon, such Party.

Any waiver at any time by either Party of its rights with respect to this LGIA shall not be deemed a continuing waiver or a waiver with respect to any other failure to comply with any other obligation, right, duty of this LGIA. Termination or Default of this LGIA for any reason by Interconnection Customer shall not constitute a waiver of Interconnection Customer's legal rights to obtain an interconnection from Transmission Provider. Any waiver of this LGIA shall, if requested, be provided in writing.

30.7 Headings. The descriptive headings of the various Articles of this LGIA have been inserted for convenience of reference only and are of no significance in the interpretation or construction of this LGIA.

30.8 Multiple Counterparts. This LGIA may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

30.9 Amendment. The Parties may by mutual agreement amend this LGIA by a written instrument duly executed by the Parties.

30.10 Modification by the Parties. The Parties may by mutual agreement amend the Appendices to this LGIA by a written instrument duly executed by the Parties. Such amendment shall become effective and a part of this LGIA upon satisfaction of all Applicable Laws and Regulations.

30.11 Reservation of Rights. Transmission Provider shall have the right to make a unilateral filing with FERC to modify this LGIA with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this LGIA pursuant to section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this LGIA shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations thereunder, except to the extent that the Parties otherwise mutually agree as provided herein.

30.12 No Partnership. This LGIA shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability upon either Party. Neither Party shall have any right, power, or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

In witness whereof, the Parties have executed this LGIA in duplicate originals, each of which shall constitute and be an original effective Agreement between the Parties.

Interconnection Details

Appendix D to LGIA

Security Arrangements Details

Infrastructure security of Transmission System equipment and operations and control hardware and software is essential to ensure day-to-day Transmission System reliability and operational security. FERC will expect all Transmission Providers, market participants, and Interconnection Customers interconnected to the Transmission System to comply with the recommendations offered by the President's Critical Infrastructure Protection Board and, eventually, best practice recommendations from the electric reliability authority. All public utilities will be expected to meet basic standards for system infrastructure and operational security, including physical, operational, and cyber-security practices.

Appendix G

Interconnection Requirements for a Wind Generating Plant

Appendix G sets forth requirements and provisions specific to a wind generating plant *or a Generating Facility that contains a wind generating plant.* All other requirements of this LGIA continue to apply to wind generating plant interconnections.

A. Technical Standards Applicable to a Wind Generating Plant

i. Low Voltage Ride-Through (LVRT) Capability

A wind generating plant shall be able to remain online during voltage disturbances up to the time periods and associated voltage levels set forth in the standard below. The LVRT standard provides for a transition period standard and a post-transition period standard.

Transition Period LVRT Standard

The transition period standard applies to wind generating plants subject to FERC Order 661 that have either: (i) interconnection agreements signed and filed with the Commission, filed with the Commission in unexecuted form, or filed with the Commission as non-conforming agreements between January 1, 2006 and December 31, 2006, with a scheduled in-service date no later than December 31, 2007, or (ii) wind generating turbines subject to a wind turbine procurement contract executed prior to December 31, 2005, for delivery through 2007.

1. Wind generating plants are required to remain in-service during three-phase faults with normal clearing (which is a time period of approximately 4–9 cycles) and single line to ground faults with delayed clearing, and subsequent post-fault voltage recovery to prefault voltage unless clearing the fault effectively disconnects the generator from the system. The clearing time requirement for a three-phase fault will be specific to the wind generating plant substation location, as determined by and documented by [the] transmission provider. The maximum clearing time the wind generating plant shall be required to withstand for a three-phase fault shall be 9 cycles at a voltage as low as 0.15 p.u., as measured at the high side of the wind generating plant step-up transformer (*i.e.* the transformer that steps the voltage up to the transmission interconnection voltage or ''GSU''), after which, if the fault remains following the location-specific normal clearing time for three-phase faults, the wind generating plant may disconnect from the transmission system.

2. This requirement does not apply to faults that would occur between the wind generator terminals and the high side of the GSU or to faults that would result in a voltage lower than 0.15 per unit on the high side of the GSU serving the facility.

3. Wind generating plants may be tripped after the fault period if this action is intended as part of a special protection system.

4. Wind generating plants may meet the LVRT requirements of this standard by the performance of the generators or by installing additional equipment (*e.g.,* Static VAr Compensator, etc.) within the wind generating plant or by a combination of generator performance and additional equipment.

5. Existing individual generator units that are, or have been, interconnected to the network at the same location at the effective date of the Appendix G LVRT

Standard are exempt from meeting the Appendix G LVRT Standard for the remaining life of the existing generation equipment. Existing individual generator units that are replaced are required to meet the Appendix G LVRT Standard.

Post-Transition Period LVRT Standard

All wind generating plants subject to FERC Order No. 661 and not covered by the transition period described above must meet the following requirements:

1. Wind generating plants are required to remain in-service during three-phase faults with normal clearing (which is a time period of approximately 4–9 cycles) and single line to ground faults with delayed clearing, and subsequent post-fault voltage recovery to prefault voltage unless clearing the fault effectively disconnects the generator from the system. The clearing time requirement for a three-phase fault will be specific to the wind generating plant substation location, as determined by and documented by [the] transmission provider. The maximum clearing time the wind generating plant shall be required to withstand for a three-phase fault shall be 9 cycles after which, if the fault remains following the location-specific normal clearing time for three-phase faults, the wind generating plant may disconnect from the transmission system. A wind generating plant shall remain interconnected during such a fault on the transmission system for a voltage level as low as zero volts, as measured at the high voltage side of the wind GSU.

2. This requirement does not apply to faults that would occur between the wind generator terminals and the high side of the GSU.

3. Wind generating plants may be tripped after the fault period if this action is intended as part of a special protection system.

4. Wind generating plants may meet the LVRT requirements of this standard by the performance of the generators or by installing

additional equipment (*e.g.,* Static VAR Compensator) within the wind generating plant or by a combination of generator performance and additional equipment.

Existing individual generator units that are, or have been, interconnected to the network at the same location at the effective date of the Appendix G LVRT Standard are exempt from meeting the Appendix G LVRT Standard for the remaining life of the existing generation equipment. Existing individual generator units that are replaced are required to meet the Appendix G LVRT Standard.

ii. Power Factor Design Criteria (Reactive Power)

The following reactive power requirements apply only to a newly interconnecting wind generating plant that has executed a Facilities Study Agreement as of the effective date of the Final Rule establishing the reactive power requirements for non-synchronous generators in [Section]*article* 9.6.1 of this LGIA (Order No. 827). A wind generating plant to which this provision applies shall maintain a power factor within the range of 0.95 leading to 0.95 lagging, measured at the Point of Interconnection as defined in this LGIA, if [the] Transmission Provider's Cluster Study shows that such a requirement is necessary to ensure safety or reliability. The power factor range standard can be met by using, for example, power electronics designed to supply this level of reactive capability [606] (taking into account any limitations due to voltage level, real power output, etc.) or fixed and switched capacitors if agreed to by [the] Transmission Provider, or a combination of the two. [The] Interconnection Customer shall not disable power factor equipment while the wind plant is in operation. Wind plants shall also be able to provide sufficient dynamic voltage support in lieu of the power system stabilizer and automatic voltage regulation at the generator excitation system if the [System Impact] *Cluster* Study shows this to be required for system safety or reliability.

iii. Supervisory Control and Data Acquisition (SCADA) Capability

The wind plant shall provide SCADA capability to transmit data and receive instructions from [the] Transmission Provider to protect system reliability. [The] Transmission Provider and the wind plant Interconnection Customer shall determine what SCADA information is essential for the proposed wind plant, taking into account the size of the plant and its characteristics, location, and importance in maintaining generation resource adequacy and transmission system reliability in its area.

Appendix E: Changes to *Pro Forma* SGIP

Small Generator Interconnection Procedures (SGIP)

(For Generating Facilities No Larger Than 20 MW)

Table of Contents

Section 1. Application

1.1 Applicability

1.1.1 A request to interconnect a certified Small Generating Facility (See Attachments 3 and 4 for description of certification criteria) to [the] Transmission Provider's Distribution System shall be evaluated under the section 2 Fast Track Process if the eligibility requirements of section 2.1 are met. A request to interconnect a certified inverter-based Small Generating Facility no larger than 10 kilowatts (kW) shall be evaluated under the Attachment 5 10 kW Inverter Process. A request to interconnect a Small Generating Facility no larger than 20 megawatts (MW) that does not meet the eligibility requirements of section 2.1, or does not pass the Fast Track Process or the 10 kW Inverter Process, shall be evaluated under the section 3 Study Process. If [the] Interconnection Customer wishes to interconnect its Small Generating Facility using Network Resource Interconnection Service, it must do so under the Standard Large Generator Interconnection Procedures and execute the Standard Large Generator Interconnection Agreement.

1.1.2 Capitalized terms used herein shall have the meanings specified in the Glossary of Terms in Attachment 1 or the body of these procedures.

1.1.3 Neither these procedures nor the requirements included hereunder apply to Small Generating Facilities interconnected or approved for interconnection prior to *sixty (*60*)* Business Days after the effective date of these procedures.

1.1.4 Prior to submitting its Interconnection Request (Attachment 2), [the] Interconnection Customer may ask [the] Transmission Provider's interconnection contact employee or office whether the proposed interconnection is subject to these procedures. [The] Transmission Provider shall respond within *fifteen (*15*)* Business Days.

1.1.5 Infrastructure security of electric system equipment and operations and control hardware and software is essential to ensure day-to-day reliability and operational security. The Federal Energy Regulatory Commission expects all Transmission Providers, market participants, and Interconnection Customers interconnected with electric systems to comply with the recommendations offered by the President's Critical Infrastructure Protection Board and best practice recommendations from the electric reliability authority. All public utilities are expected to meet basic standards for electric system infrastructure and operational security, including physical, operational, and cyber-security practices.

1.1.6 References in these procedures to interconnection agreement are to the Small Generator Interconnection Agreement (SGIA).

1.2 Pre-Application

1.2.1 [The] Transmission Provider shall designate an employee or office from which information on the application process and on an Affected System can be obtained through informal requests from [the] Interconnection Customer presenting a proposed project for a specific site. The name, telephone number, and email address of such contact employee or office shall be made available on [the] Transmission Provider's internet website. Electric system information provided to [the] Interconnection Customer should include relevant system studies, interconnection studies, and other materials useful to an understanding of an interconnection at a particular point on [the] Transmission Provider's Transmission System, to the extent such provision does not violate confidentiality provisions of prior agreements or critical infrastructure requirements. [The] Transmission Provider shall comply with reasonable requests for such information.

1.2.2 In addition to the information described in section 1.2.1, which may be

provided in response to an informal request, an Interconnection Customer may submit a formal written request form along with a non-refundable fee of $300 for a pre-application report on a proposed project at a specific site. [The] Transmission Provider shall provide the pre-application data described in section 1.2.3 to [the] Interconnection Customer within *twenty (*20*)* Business Days of receipt of the completed request form and payment of the $300 fee. The pre-application report produced by [the] Transmission Provider is non-binding, does not confer any rights, and [the] Interconnection Customer must still successfully apply to interconnect to [the] Transmission Provider's system. The written pre-application report request form shall include the information in sections 1.2.2.1 through 1.2.2.8 below to clearly and sufficiently identify the location of the proposed Point of Interconnection.

1.2.2.1 Project contact information, including name, address, phone number, and email address.

1.2.2.2 Project location (street address with nearby cross streets and town)

1.2.2.3 Meter number, pole number, or other equivalent information identifying proposed Point of Interconnection, if available.

1.2.2.4 Generator Type (*e.g.,* solar, wind, combined heat and power, etc.)

1.2.2.5 Size (alternating current kW)

1.2.2.6 Single or three phase generator configuration

1.2.2.7 Stand-alone generator (no onsite load, not including station service—Yes or No?)

1.2.2.8 Is new service requested? Yes or No? If there is existing service, include the customer account number, site minimum and maximum current or proposed electric loads in kW (if available) and specify if the load is expected to change.

1.2.3 Using the information provided in the pre-application report request form in section 1.2.2, [the] Transmission Provider will identify the substation/area bus, bank or circuit likely to serve the proposed Point of Interconnection. This selection by [the] Transmission Provider does not necessarily indicate, after application of the screens and/or study, that this would be the circuit the project ultimately connects to. [The] Interconnection Customer must request additional pre-application reports if information about multiple Points of Interconnection is requested. Subject to section 1.2.4, the pre-application report will include the following information:

1.2.3.1 Total capacity (in MW) of substation/area bus, bank or circuit based on normal or operating ratings likely to serve the proposed Point of Interconnection.

1.2.3.2 Existing aggregate generation capacity (in MW) interconnected to a substation/area bus, bank or circuit (*i.e.,* amount of generation online) likely to serve the proposed Point of Interconnection.

1.2.3.3 Aggregate queued generation capacity (in MW) for a substation/area bus, bank or circuit (*i.e.,* amount of generation in the queue) likely to serve the proposed Point of Interconnection.

1.2.3.4 Available capacity (in MW) of substation/area bus or bank and circuit likely to serve the proposed Point of Interconnection (*i.e.,* total capacity less the sum of existing aggregate generation capacity and aggregate queued generation capacity).

1.2.3.5 Substation nominal distribution voltage and/or transmission nominal voltage if applicable.

1.2.3.6 Nominal distribution circuit voltage at the proposed Point of Interconnection.

1.2.3.7 Approximate circuit distance between the proposed Point of Interconnection and the substation.

1.2.3.8 Relevant line section(s) actual or estimated peak load and minimum load data, including daytime minimum load as described in section 2.4.4.1.1 below and absolute minimum load, when available.

1.2.3.9 Number and rating of protective devices and number and type (standard, bi-directional) of voltage regulating devices between the proposed Point of Interconnection and the substation/area. Identify whether the substation has a load tap changer.

1.2.3.10 Number of phases available at the proposed Point of Interconnection. If a single phase, distance from the three-phase circuit.

1.2.3.11 Limiting conductor ratings from the proposed Point of Interconnection to the distribution substation.

1.2.3.12 Whether the Point of Interconnection is located on a spot network, grid network, or radial supply.

1.2.3.13 Based on the proposed Point of Interconnection, existing or known constraints such as, but not limited to, electrical dependencies at that location, short circuit interrupting capacity issues, power quality or stability issues on the circuit, capacity constraints, or secondary networks.

1.2.4 The pre-application report need only include existing data. A pre-application report request does not obligate [the] Transmission Provider to conduct a study or other analysis of the proposed generator in the event that data is not readily available. If [the] Transmission Provider cannot complete all or some of a pre-application report due to lack of available data, the Transmission Provider shall provide [the] Interconnection Customer with a pre-application report that includes the data that is available. The provision of information on ''available capacity'' pursuant to section 1.2.3.4 does not imply that an interconnection up to this level may be completed without impacts since there are many variables studied as part of the interconnection review process, and data provided in the pre-application report may become outdated at the time of the submission of the complete Interconnection Request. Notwithstanding any of the provisions of this section, [the] Transmission Provider shall, in good faith, include data in the pre-application report that represents the best available information at the time of reporting.

1.3 Interconnection Request

[The] Interconnection Customer shall submit its Interconnection Request to [the] Transmission Provider, together with the processing fee or deposit specified in the Interconnection Request. The Interconnection Request shall be date- and time-stamped upon receipt. The original date- and time-stamp applied to the Interconnection Request at the time of its original submission shall be accepted as the qualifying date- and time-stamp for the purposes of any timetable in these procedures. [The] Interconnection Customer shall be notified of receipt by [the] Transmission Provider within three *(3)* Business Days of receiving the Interconnection Request. [The] Transmission Provider shall notify [the] Interconnection Customer within ten *(10)* Business Days of the receipt of the Interconnection Request as to whether the Interconnection Request is complete or incomplete. If the Interconnection Request is incomplete, [the] Transmission Provider shall provide along with the notice that the Interconnection Request is incomplete, a written list detailing all information that must be provided to complete the Interconnection Request. [The] Interconnection Customer will have ten *(10)* Business Days after receipt of the notice to submit the listed information or to request an extension of time to provide such information. If [the] Interconnection Customer does not provide the listed information or a request for an extension of time within the deadline, the Interconnection Request will be deemed withdrawn. An Interconnection Request will be deemed complete upon submission of the listed information to [the] Transmission Provider.

1.4 Modification of the Interconnection Request

Any modification to machine data or equipment configuration or to the interconnection site of the Small Generating Facility not agreed to in writing by [the] Transmission Provider and [the] Interconnection Customer may be deemed a withdrawal of the Interconnection Request and may require submission of a new Interconnection Request, unless proper notification of each Party by the other and a reasonable time to cure the problems created by the changes are undertaken. Any such modification of the Interconnection Request must be accompanied by any resulting updates to the models described in Attachment 2 of this SGIP.

1.5 Site Control

Documentation of site control must be submitted with the Interconnection Request. Site control may be demonstrated through:

1.5.1 Ownership of, a leasehold interest in, or a right to develop a site for the purpose of constructing the Small Generating Facility;

1.5.2 An option to purchase or acquire a leasehold site for such purpose; or

1.5.3 An exclusivity or other business relationship between [the] Interconnection Customer and the entity having the right to sell, lease, or grant [the] Interconnection Customer the right to possess or occupy a site for such purpose.

1.6 Queue Position

[The] Transmission Provider shall assign a Queue Position based upon the date- and time-stamp of the Interconnection Request. The Queue Position of each Interconnection Request will be used to determine the cost responsibility for the Upgrades necessary to accommodate the interconnection. [The]

Transmission Provider shall maintain a single queue per geographic region. At [the] Transmission Provider's option, Interconnection Requests may be studied serially or in clusters for the purpose of the system impact study.

1.7 Interconnection Requests Submitted Prior to the Effective Date of the SGIP

Nothing in this SGIP affects an Interconnection Customer's Queue Position assigned before the effective date of this SGIP. The Parties agree to complete work on any interconnection study agreement executed prior the effective date of this SGIP in accordance with the terms and conditions of that interconnection study agreement. Any new studies or other additional work will be completed pursuant to this SGIP.

Section 2. Fast Track Process

2.1 Applicability

The Fast Track Process is available to an Interconnection Customer proposing to interconnect its Small Generating Facility with [the] Transmission Provider's Distribution System if the Small Generating Facility's capacity does not exceed the size limits identified in the table below. Small Generating Facilities below these limits are eligible for Fast Track review. However, Fast Track eligibility is distinct from the Fast Track Process itself, and eligibility does not imply or indicate that a Small Generating Facility will pass the Fast Track screens in section 2.2.1 below or the Supplemental Review screens in section 2.4.4 below.

Fast Track eligibility is determined based upon the generator type, the size of the generator, voltage of the line and the location of and the type of line at the Point of Interconnection. All Small Generating Facilities connecting to lines greater than 69 kilovolt (kV) are ineligible for the Fast Track Process regardless of size. All synchronous and induction machines must be no larger than 2 MW to be eligible for the Fast Track Process, regardless of location. For certified inverter-based systems, the size limit varies according to the voltage of the line at the proposed Point of Interconnection. Certified inverter-based Small Generating Facilities located within 2.5 electrical circuit miles of a substation and on a mainline (as defined in the table below) are eligible for the Fast Track Process under the higher thresholds according to the table below. In addition to the size threshold, [the] Interconnection Customer's proposed Small Generating Facility must meet the codes, standards, and certification requirements of Attachments 3 and 4 of these procedures, or [the] Transmission Provider has to have reviewed the design or tested the proposed Small Generating Facility and is satisfied that it is safe to operate.

FAST TRACK ELIGIBILITY FOR INVERTER-BASED SYSTEMS

Line voltage	Fast track eligibility regardless of location	Fast track eligibility on a mainline [1] and ≤2.5 electrical circuit miles from substation [2]
<5 kV	≤500 kW	≤500 kW
≥5 kV and <15 kV	≤2 MW	≤3 MW
≥15 kV and <30 kV	≤3 MW	≤4 MW
≥30 kV and ≤69 kV	≤4 MW	≤5 MW

2.2 Initial Review

Within *fifteen (15)* Business Days after [the] Transmission Provider notifies [the] Interconnection Customer it has received a complete Interconnection Request, [the] Transmission Provider shall perform an initial review using the screens set forth below, shall notify [the] Interconnection Customer of the results, and include with the notification copies of the analysis and data underlying [the] Transmission Provider's determinations under the screens.

2.2.1 Screens

2.2.1.1 The proposed Small Generating Facility's Point of Interconnection must be on a portion of [the] Transmission Provider's Distribution System that is subject to the Tariff.

2.2.1.2 For interconnection of a proposed Small Generating Facility to a radial distribution circuit, the aggregated generation, including the proposed Small Generating Facility, on the circuit shall not exceed 15% of the line section annual peak load as most recently measured at the substation. A line section is that portion of a Transmission Provider's electric system connected to a customer bounded by automatic sectionalizing devices or the end of the distribution line.

2.2.1.3 For interconnection of a proposed Small Generating Facility to the load side of spot network protectors, the proposed Small Generating Facility must utilize an inverter-based equipment package and, together with the aggregated other inverter-based generation, shall not exceed the smaller of 5% of a spot network's maximum load or 50 kW.[3]

2.2.1.4 The proposed Small Generating Facility, in aggregation with other generation on the distribution circuit, shall not contribute more than 10% to the distribution circuit's maximum fault current at the point on the high voltage (primary) level nearest the proposed point of change of ownership.

2.2.1.5 The proposed Small Generating Facility, in aggregate with other generation on the distribution circuit, shall not cause any distribution protective devices and equipment (including, but not limited to, substation breakers, fuse cutouts, and line reclosers), or Interconnection Customer equipment on the system to exceed 87.5% of the short circuit interrupting capability; nor shall the interconnection be proposed for a circuit that already exceeds 87.5% of the short circuit interrupting capability.

2.2.1.6 Using the table below, determine the type of interconnection to a primary distribution line. This screen includes a review of the type of electrical service provided to the Interconnecting Customer, including line configuration and the transformer connection to limit the potential for creating over-voltages on [the] Transmission Provider's electric power system due to a loss of ground during the operating time of any anti-islanding function.

Primary distribution line type	Type of interconnection to primary distribution line	Result/criteria
Three-phase, three wire	3-phase or single phase, phase-to-phase	Pass screen.
Three-phase, four wire	Effectively-grounded 3 phase or Single-phase, line-to-neutral	Pass screen.

[1] For purposes of this table, a mainline is the three-phase backbone of a circuit. It will typically constitute lines with wire sizes of 4/0 American wire gauge, 336.4 kcmil, 397.5 kcmil, 477 kcmil and 795 kcmil.

[2] An Interconnection Customer can determine this information about its proposed interconnection location in advance by requesting a pre-application report pursuant to section 1.2.

[3] A spot network is a type of distribution system found within modern commercial buildings to provide high reliability of service to a single customer. (Standard Handbook for Electrical Engineers, 11th edition, Donald Fink, McGraw Hill Book Company).

2.2.1.7 If the proposed Small Generating Facility is to be interconnected on single-phase shared secondary, the aggregate generation capacity on the shared secondary, including the proposed Small Generating Facility, shall not exceed 20 kW.

2.2.1.8 If the proposed Small Generating Facility is single-phase and is to be interconnected on a center tap neutral of a 240 volt service, its addition shall not create an imbalance between the two sides of the 240 volt service of more than 20% of the nameplate rating of the service transformer.

2.2.1.9 The Small Generating Facility, in aggregate with other generation interconnected to the transmission side of a substation transformer feeding the circuit where the Small Generating Facility proposes to interconnect shall not exceed 10 MW in an area where there are known, or posted, transient stability limitations to generating units located in the general electrical vicinity (*e.g.,* three or four transmission busses from the point of interconnection).

2.2.1.10 No construction of facilities by [the] Transmission Provider on its own system shall be required to accommodate the Small Generating Facility.

2.2.2 If the proposed interconnection passes the screens, the Interconnection Request shall be approved and [the] Transmission Provider will provide [the] Interconnection Customer an executable interconnection agreement within five *(5)* Business Days after the determination.

2.2.3 If the proposed interconnection fails the screens, but [the] Transmission Provider determines that the Small Generating Facility may nevertheless be interconnected consistent with safety, reliability, and power quality standards, [the] Transmission Provider shall provide [the] Interconnection Customer an executable interconnection agreement within five *(5)* Business Days after the determination.

2.2.4 If the proposed interconnection fails the screens, and [the] Transmission Provider does not or cannot determine from the initial review that the Small Generating Facility may nevertheless be interconnected consistent with safety, reliability, and power quality standards unless [the] Interconnection Customer is willing to consider minor modifications or further study, [the] Transmission Provider shall provide [the] Interconnection Customer with the opportunity to attend a customer options meeting.

2.3 Customer Options Meeting

If [the] Transmission Provider determines the Interconnection Request cannot be approved without (1) minor modifications at minimal cost, (2) a supplemental study or other additional studies or actions, or (3) incurring significant cost to address safety, reliability, or power quality problems, [the] Transmission Provider shall notify [the] Interconnection Customer of that determination within five *(5)* Business Days after the determination and provide copies of all data and analyses underlying its conclusion. Within ten *(10)* Business Days of [the] Transmission Provider's determination, [the] Transmission Provider shall offer to convene a customer options meeting with [the] Transmission Provider to review possible Interconnection Customer facility modifications or the screen analysis and related results, to determine what further steps are needed to permit the Small Generating Facility to be connected safely and reliably. At the time of notification of [the] Transmission Provider's determination, or at the customer options meeting, [the] Transmission Provider shall:

2.3.1 Offer to perform facility modifications or minor modifications to [the] Transmission Provider's electric system (*e.g.,* changing meters, fuses, relay settings) and provide a non-binding good faith estimate of the limited cost to make such modifications to [the] Transmission Provider's electric system. If [the] Interconnection Customer agrees to pay for the modifications to the Transmission Provider's electric system, [the] Transmission Provider will provide [the] Interconnection Customer with an executable interconnection agreement within ten *(10)* Business Days of the customer options meeting; or

2.3.2 Offer to perform a supplemental review in accordance with section 2.4 and provide a non-binding good faith estimate of the costs of such review; or

2.3.3 Obtain [the] Interconnection Customer's agreement to continue evaluating the Interconnection Request under the section 3 Study Process.

2.4 Supplemental Review

2.4.1 To accept the offer of a supplemental review, [the] Interconnection Customer shall agree in writing and submit a deposit for the estimated costs of the supplemental review in the amount of [the] Transmission Provider's good faith estimate of the costs of such review, both within *fifteen (*15*)* Business Days of the offer. If the written agreement and deposit have not been received by [the] Transmission Provider within that timeframe, the Interconnection Request shall continue to be evaluated under the section 3 Study Process unless it is withdrawn by [the] Interconnection Customer.

2.4.2 [The] Interconnection Customer may specify the order in which [the] Transmission Provider will complete the screens in section 2.4.4.

2.4.3 [The] Interconnection Customer shall be responsible for [the] Transmission Provider's actual costs for conducting the supplemental review. [The] Interconnection Customer must pay any review costs that exceed the deposit within *twenty (*20*)* Business Days of receipt of the invoice or resolution of any dispute. If the deposit exceeds the invoiced costs, [the] Transmission Provider will return such excess within *twenty (*20*)* Business Days of the invoice without interest.

2.4.4 Within *thirty (*30*)* Business Days following receipt of the deposit for a supplemental review, [the] Transmission Provider shall (1) perform a supplemental review using the screens set forth below; (2) notify in writing [the] Interconnection Customer of the results; and (3) include with the notification copies of the analysis and data underlying [the] Transmission Provider's determinations under the screens. Unless [the] Interconnection Customer provided instructions for how to respond to the failure of any of the supplemental review screens below at the time [the] Interconnection Customer accepted the offer of supplemental review, [the] Transmission Provider shall notify [the] Interconnection Customer following the failure of any of the screens, or if it is unable to perform the screen in section 2.4.4.1, within two *(2)* Business Days of making such determination to obtain [the] Interconnection Customer's permission to: (1) continue evaluating the proposed interconnection under this section 2.4.4; (2) terminate the supplemental review and continue evaluating the Small Generating Facility under section 3; or (3) terminate the supplemental review upon withdrawal of the Interconnection Request by [the] Interconnection Customer.

2.4.4.1 Minimum Load Screen: Where 12 months of line section minimum load data (including onsite load but not station service load served by the proposed Small Generating Facility) are available, can be calculated, can be estimated from existing data, or determined from a power flow model, the aggregate Generating Facility capacity on the line section is less than 100% of the minimum load for all line sections bounded by automatic sectionalizing devices upstream of the proposed Small Generating Facility. If minimum load data is not available, or cannot be calculated, estimated or determined, [the] Transmission Provider shall include the reason(s) that it is unable to calculate, estimate or determine minimum load in its supplemental review results notification under section 2.4.4.

2.4.4.1.1 The type of generation used by the proposed Small Generating Facility will be taken into account when calculating, estimating, or determining circuit or line section minimum load relevant for the application of screen 2.4.4.1. Solar photovoltaic (PV) generation systems with no battery storage use daytime minimum load (*i.e.,* 10 a.m. to 4 p.m. for fixed panel systems and 8 a.m. to 6 p.m. for PV systems utilizing tracking systems), while all other generation uses absolute minimum load.

2.4. 4.1.2 When this screen is being applied to a Small Generating Facility that serves some station service load, only the net injection into [the] Transmission Provider's electric system will be considered as part of the aggregate generation.

2.4. 4.1.3 Transmission Provider will not consider as part of the aggregate generation for purposes of this screen generating facility capacity known to be already reflected in the minimum load data.

2.4.4.2 Voltage and Power Quality Screen: In aggregate with existing generation on the line section: (1) the voltage regulation on the line section can be maintained in compliance with relevant requirements under all system conditions; (2) the voltage fluctuation is within acceptable limits as defined by Institute of Electrical and Electronics Engineers (IEEE) Standard 1453, or utility practice similar to IEEE Standard 1453; and (3) the harmonic levels meet IEEE Standard 519 limits.

2.4.4.3 Safety and Reliability Screen: The location of the proposed Small Generating Facility and the aggregate generation capacity on the line section do not create impacts to

safety or reliability that cannot be adequately addressed without application of the Study Process. [The] Transmission Provider shall give due consideration to the following and other factors in determining potential impacts to safety and reliability in applying this screen.

2.4.4.3.1 Whether the line section has significant minimum loading levels dominated by a small number of customers (*e.g.,* several large commercial customers).

2.4.4.3.2 Whether the loading along the line section is uniform or even.

2.4.4.3.3 Whether the proposed Small Generating Facility is located in close proximity to the substation (*i.e.,* less than 2.5 electrical circuit miles), and whether the line section from the substation to the Point of Interconnection is a Mainline rated for normal and emergency ampacity.

2.4.4.3.4 Whether the proposed Small Generating Facility incorporates a time delay function to prevent reconnection of the generator to the system until system voltage and frequency are within normal limits for a prescribed time.

2.4.4.3.5 Whether operational flexibility is reduced by the proposed Small Generating Facility, such that transfer of the line section(s) of the Small Generating Facility to a neighboring distribution circuit/substation may trigger overloads or voltage issues.

2.4.4.3.6 Whether the proposed Small Generating Facility employs equipment or systems certified by a recognized standards organization to address technical issues such as, but not limited to, islanding, reverse power flow, or voltage quality.

2.4.5 If the proposed interconnection passes the supplemental screens in sections 2.4.4.1, 2.4.4.2, and 2.4.4.3 above, the Interconnection Request shall be approved and [the] Transmission Provider will provide [the] Interconnection Customer with an executable interconnection agreement within the timeframes established in sections 2.4.5.1 and 2.4.5.2 below. If the proposed interconnection fails any of the supplemental review screens and [the] Interconnection Customer does not withdraw its Interconnection Request, it shall continue to be evaluated under the section 3 Study Process consistent with section 2.4.5.3 below.

2.4.5.1 If the proposed interconnection passes the supplemental screens in sections 2.4.4.1, 2.4.4.2, and 2.4.4.3 above and does not require construction of facilities by [the] Transmission Provider on its own system, the interconnection agreement shall be provided within ten *(10)* Business Days after the notification of the supplemental review results.

2.4.5.2 If interconnection facilities or minor modifications to [the] Transmission Provider's system are required for the proposed interconnection to pass the supplemental screens in sections 2.4.4.1, 2.4.4.2, and 2.4.4.3 above, and [the] Interconnection Customer agrees to pay for the modifications to [the] Transmission Provider's electric system, the interconnection agreement, along with a non-binding good faith estimate for the interconnection facilities and/or minor modifications, shall be provided to [the] Interconnection Customer within *fifteen (*15*)* Business Days after receiving written notification of the supplemental review results.

2.4.5.3 If the proposed interconnection would require more than interconnection facilities or minor modifications to [the] Transmission Provider's system to pass the supplemental screens in sections 2.4.4.1, 2.4.4.2, and 2.4.4.3 above, [the] Transmission Provider shall notify [the] Interconnection Customer, at the same time it notifies [the] Interconnection Customer with the supplemental review results, that the Interconnection Request shall be evaluated under the section 3 Study Process unless [the] Interconnection Customer withdraws its Small Generating Facility.

Section 3. Study Process

3.1 Applicability

The Study Process shall be used by an Interconnection Customer proposing to interconnect its Small Generating Facility with [the] Transmission Provider's Transmission System or Distribution System if the Small Generating Facility (1) is larger than 2 MW but no larger than 20 MW, (2) is not certified, or (3) is certified but did not pass the Fast Track Process or the 10 kW Inverter Process.

3.2 Scoping Meeting

3.2.1 A scoping meeting will be held within ten *(10)* Business Days after the Interconnection Request is deemed complete, or as otherwise mutually agreed to by the Parties. [The] Transmission Provider and [the] Interconnection Customer will bring to the meeting personnel, including system engineers and other resources as may be reasonably required to accomplish the purpose of the meeting.

3.2.2 The purpose of the scoping meeting is to discuss the Interconnection Request and review existing studies relevant to the Interconnection Request. The Parties shall further discuss whether [the] Transmission Provider should perform a feasibility study or proceed directly to a system impact study, or a facilities study, or an interconnection agreement. If the Parties agree that a feasibility study should be performed, [the] Transmission Provider shall provide [the] Interconnection Customer, as soon as possible, but not later than five *(5)* Business Days after the scoping meeting, a feasibility study agreement (Attachment 6) including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study.

3.2.3 The scoping meeting may be omitted by mutual agreement. In order to remain in consideration for interconnection, an Interconnection Customer who has requested a feasibility study must return the executed feasibility study agreement within *fifteen (*15*)* Business Days. If the Parties agree not to perform a feasibility study, [the] Transmission Provider shall provide [the] Interconnection Customer, no later than five *(5)* Business Days after the scoping meeting, a system impact study agreement (Attachment 7) including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study.

3.3 Feasibility Study

3.3.1 The feasibility study shall identify any potential adverse system impacts that would result from the interconnection of the Small Generating Facility.

3.3.2 A deposit of the lesser of 50 percent of the good faith estimated feasibility study costs or earnest money of $1,000 may be required from [the] Interconnection Customer.

3.3.3 The scope of and cost responsibilities for the feasibility study are described in the attached feasibility study agreement (Attachment 6).

3.3.4 If the feasibility study shows no potential for adverse system impacts, [the] Transmission Provider shall send [the] Interconnection Customer a facilities study agreement, including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study. If no additional facilities are required, [the] Transmission Provider shall send [the] Interconnection Customer an executable interconnection agreement within five *(5)* Business Days.

3.3.5 If the feasibility study shows the potential for adverse system impacts, the review process shall proceed to the appropriate system impact study(s).

3.3.6 The feasibility study shall evaluate static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. Transmission Provider shall evaluate each identified alternative transmission technology and determine whether it should be used, consistent with Good Utility Practice, *Applicable Reliability Standards,* and *Applicable Laws and Regulations* [other applicable regulatory requirements]. Transmission Provider shall include an explanation of the results of Transmission Provider's evaluation for each technology in the feasibility study report.

3.4 System Impact Study

3.4.1 A system impact study shall identify and detail the electric system impacts that would result if the proposed Small Generating Facility were interconnected without project modifications or electric system modifications, focusing on the adverse system impacts identified in the feasibility study, or to study potential impacts, including but not limited to those identified in the scoping meeting. A system impact study shall evaluate the impact of the proposed interconnection on the reliability of the electric system.

3.4.2 If no transmission system impact study is required, but potential electric power Distribution System adverse system impacts are identified in the scoping meeting or shown in the feasibility study, a distribution system impact study must be performed. [The] Transmission Provider shall send [the] Interconnection Customer a distribution system impact study agreement within *fifteen (*15*)* Business Days of transmittal of the feasibility study report, including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study, or following the scoping meeting if no feasibility study is to be performed.

3.4.3 In instances where the feasibility study or the distribution system impact study shows potential for transmission system adverse system impacts, within five *(5)* Business Days following transmittal of the feasibility study report, [the] Transmission Provider shall send [the] Interconnection Customer a transmission system impact study agreement, including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study, if such a study is required.

3.4.4 If a transmission system impact study is not required, but electric power Distribution System adverse system impacts are shown by the feasibility study to be possible and no distribution system impact study has been conducted, Transmission Provider shall send Interconnection Customer a distribution system impact study agreement.

3.4.5 If the feasibility study shows no potential for transmission system or Distribution System adverse system impacts, [the] Transmission Provider shall send [the] Interconnection Customer either a facilities study agreement (Attachment 8), including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study, or an executable interconnection agreement, as applicable.

3.4.6 In order to remain under consideration for interconnection, [the] Interconnection Customer must return executed system impact study agreements, if applicable, within *thirty (*30*)* Business Days.

3.4.7 A deposit of the good faith estimated costs for each system impact study may be required from [the] Interconnection Customer.

3.4.8 The scope of and cost responsibilities for a system impact study are described in the attached system impact study agreement.

3.4.9 Where transmission systems and Distribution Systems have separate owners, such as is the case with transmission-dependent utilities (''TDUs'')—whether investor-owned or not—[the] Interconnection Customer may apply to the nearest Transmission Provider (Transmission Owner, Regional Transmission Operator, or Independent Transmission Provider) providing transmission service to the TDU to request project coordination. Affected Systems shall participate in the study and provide all information necessary to prepare the study.

3.4.10 The system impact study shall evaluate static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. Transmission Provider shall evaluate each identified alternative transmission technology and determine whether it should be used, consistent with Good Utility Practice, *Applicable Reliability Standards,* and *Applicable Laws and Regulations* [other applicable regulatory requirements]. Transmission Provider shall include an explanation of the results of Transmission Provider's evaluation for each technology in the system impact study report.

3.5 Facilities Study

3.5.1 Once the required system impact study(s) is completed, a system impact study report shall be prepared and transmitted to [the] Interconnection Customer along with a facilities study agreement within five *(5)* Business Days, including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the facilities study. In the case where one or both impact studies are determined to be unnecessary, a notice of the fact shall be transmitted to [the] Interconnection Customer within the same timeframe.

3.5.2 In order to remain under consideration for interconnection, or, as appropriate, in [the] Transmission Provider's interconnection queue, [the] Interconnection Customer must return the executed facilities study agreement or a request for an extension of time within *thirty (*30*)* Business Days.

3.5.3 The facilities study shall specify and estimate the cost of the equipment, engineering, procurement and construction work (including overheads) needed to implement the conclusions of the system impact study(s).

3.5.4 Design for any required Interconnection Facilities and/or Upgrades shall be performed under the facilities study agreement. [The] Transmission Provider may contract with consultants to perform activities required under the facilities study agreement. [The] Interconnection Customer and [the] Transmission Provider may agree to allow [the] Interconnection Customer to separately arrange for the design of some of the Interconnection Facilities. In such cases, facilities design will be reviewed and/or modified prior to acceptance by [the] Transmission Provider, under the provisions of the facilities study agreement. If the Parties agree to separately arrange for design and construction, and provided security and confidentiality requirements can be met, [the] Transmission Provider shall make sufficient information available to [the] Interconnection Customer in accordance with confidentiality and critical infrastructure requirements to permit [the] Interconnection Customer to obtain an independent design and cost estimate for any necessary facilities.

3.5.5 A deposit of the good faith estimated costs for the facilities study may be required from [the] Interconnection Customer.

3.5.6 The scope of and cost responsibilities for the facilities study are described in the attached facilities study agreement.

3.5.7 Upon completion of the facilities study, and with the agreement of [the] Interconnection Customer to pay for Interconnection Facilities and Upgrades identified in the facilities study, [the] Transmission Provider shall provide [the] Interconnection Customer an executable interconnection agreement within five *(5)* Business Days.

Section 4. Provisions That Apply to All Interconnection Requests

4.1 Reasonable Efforts

[The] Transmission Provider shall make reasonable efforts to meet all time frames provided in these procedures unless [the] Transmission Provider and [the] Interconnection Customer agree to a different schedule. If [the] Transmission Provider cannot meet a deadline provided herein, it shall notify [the] Interconnection Customer, explain the reason for the failure to meet the deadline, and provide an estimated time by which it will complete the applicable interconnection procedure in the process.

4.2 Disputes

4.2.1 The Parties agree to attempt to resolve all disputes arising out of the interconnection process according to the provisions of this article.

4.2.2 In the event of a dispute, either Party shall provide the other Party with a written Notice of Dispute. Such Notice shall describe in detail the nature of the dispute.

4.2.3 If the dispute has not been resolved within two *(2)* Business Days after receipt of the Notice, either Party may contact FERC's Dispute Resolution Service (DRS) for assistance in resolving the dispute.

4.2.4 The DRS will assist the Parties in either resolving their dispute or in selecting an appropriate dispute resolution venue (*e.g.,* mediation, settlement judge, early neutral evaluation, or technical expert) to assist the Parties in resolving their dispute. DRS can be reached at 1–877–337–2237 or via the internet at *http://www.ferc.gov/legal/adr.asp.*

4.2.5 Each Party agrees to conduct all negotiations in good faith and will be responsible for one-half of any costs paid to neutral third-parties.

4.2.6 If neither Party elects to seek assistance from the DRS, or if the attempted dispute resolution fails, then either Party may exercise whatever rights and remedies it may have in equity or law consistent with the terms of these procedures.

4.3 Interconnection Metering

Any metering necessitated by the use of the Small Generating Facility shall be installed at [the] Interconnection Customer's expense in accordance with Federal Energy Regulatory Commission, state, or local regulatory requirements or [the] Transmission Provider's specifications.

4.4 Commissioning

Commissioning tests of [the] Interconnection Customer's installed equipment shall be performed pursuant to applicable codes and standards. [The] Transmission Provider must be given at least five *(5)* Business Days written notice, or as otherwise mutually agreed to by the Parties, of the tests and may be present to witness the commissioning tests.

4.5. Confidentiality

4.5.1 Confidential information shall mean any confidential and/or proprietary information provided by one Party to the other Party that is clearly marked or otherwise designated ''Confidential.'' For purposes of these procedures all design, operating specifications, and metering data provided by [the] Interconnection Customer shall be deemed confidential information regardless of whether it is clearly marked or otherwise designated as such.

4.5.2 Confidential Information does not include information previously in the public domain, required to be publicly submitted or divulged by Governmental Authorities (after notice to the other Party and after exhausting any opportunity to oppose such publication

or release), or necessary to be divulged in an action to enforce these procedures. Each Party receiving Confidential Information shall hold such information in confidence and shall not disclose it to any third party nor to the public without the prior written authorization from the Party providing that information, except to fulfill obligations under these procedures, or to fulfill legal or regulatory requirements.

4.5.2.1 Each Party shall employ at least the same standard of care to protect Confidential Information obtained from the other Party as it employs to protect its own Confidential Information.

4.5.2.2 Each Party is entitled to equitable relief, by injunction or otherwise, to enforce its rights under this provision to prevent the release of Confidential Information without bond or proof of damages, and may seek other remedies available at law or in equity for breach of this provision.

4.5.3 Notwithstanding anything in this article to the contrary, and pursuant to 18 CFR 1b.20, if FERC, during the course of an investigation or otherwise, requests information from one of the Parties that is otherwise required to be maintained in confidence pursuant to these procedures, the Party shall provide the requested information to FERC, within the time provided for in the request for information. In providing the information to FERC, the Party may, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party prior to the release of the Confidential Information to FERC. The Party shall notify the other Party when it is notified by FERC that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

4.6 Comparability

[The] Transmission Provider shall receive, process and analyze all Interconnection Requests in a timely manner as set forth in this document. [The] Transmission Provider shall use the same reasonable efforts in processing and analyzing Interconnection Requests from all Interconnection Customers, whether the Small Generating Facility is owned or operated by [the] Transmission Provider, its subsidiaries or affiliates, or others.

4.7 Record Retention

[The] Transmission Provider shall maintain for three years records, subject to audit, of all Interconnection Requests received under these procedures, the times required to complete Interconnection Request approvals and disapprovals, and justification for the actions taken on the Interconnection Requests.

4.8 Interconnection Agreement

After receiving an interconnection agreement from [the] Transmission Provider, [the] Interconnection Customer shall have *thirty (*30*)* Business Days or another mutually agreeable timeframe to sign and return the interconnection agreement or request that [the] Transmission Provider file an unexecuted interconnection agreement with the Federal Energy Regulatory Commission. If [the] Interconnection Customer does not sign the interconnection agreement, or ask that it be filed unexecuted by [the] Transmission Provider within *thirty (*30*)* Business Days, the Interconnection Request shall be deemed withdrawn. After the interconnection agreement is signed by the Parties, the interconnection of the Small Generating Facility shall proceed under the provisions of the interconnection agreement.

4.9 Coordination with Affected Systems

[The] Transmission Provider shall coordinate the conduct of any studies required to determine the impact of the Interconnection Request on Affected Systems with Affected System operators and, if possible, include those results (if available) in its applicable interconnection study within the time frame specified in these procedures. [The] Transmission Provider will include such Affected System operators in all meetings held with [the] Interconnection Customer as required by these procedures. [The] Interconnection Customer will cooperate with [the] Transmission Provider in all matters related to the conduct of studies and the determination of modifications to Affected Systems. A Transmission Provider which may be an Affected System shall cooperate with [the] Transmission Provider with whom interconnection has been requested in all matters related to the conduct of studies and the determination of modifications to Affected Systems.

4.10 Capacity of the Small Generating Facility

4.10.1 If the Interconnection Request is for an increase in capacity for an existing Small Generating Facility, the Interconnection Request shall be evaluated on the basis of the new total capacity of the Small Generating Facility.

4.10.2 If the Interconnection Request is for a Small Generating Facility that includes multiple energy production devices at a site for which [the] Interconnection Customer seeks a single Point of Interconnection, the Interconnection Request shall be evaluated on the basis of the aggregate capacity of the multiple devices.

4.10.3 The Interconnection Request shall be evaluated using the maximum capacity that the Small Generating Facility is capable of injecting into [the] Transmission Provider's electric system. However, if the maximum capacity that the Small Generating Facility is capable of injecting into [the] Transmission Provider's electric system is limited (*e.g.,* through use of a control system, power relay(s), or other similar device settings or adjustments), then [the] Interconnection Customer must obtain [the] Transmission Provider's agreement, with such agreement not to be unreasonably withheld, that the manner in which [the] Interconnection Customer proposes to implement such a limit will not adversely affect the safety and reliability of [the] Transmission Provider's system. If [the] Transmission Provider does not so agree, then the Interconnection Request must be withdrawn or revised to specify the maximum capacity that the Small Generating Facility is capable of injecting into [the] Transmission Provider's electric system without such limitations. Furthermore, nothing in this section shall prevent a Transmission Provider from considering an output higher than the limited output, if appropriate, when evaluating system protection impacts.

Attachment 1

Glossary of Terms

10 kW Inverter Process—The procedure for evaluating an Interconnection Request for a certified inverter-based Small Generating Facility no larger than 10 kW that uses the section 2 screens. The application process uses an all-in-one document that includes a simplified Interconnection Request, simplified procedures, and a brief set of terms and conditions. See SGIP Attachment 5.

Affected System—An electric system other than [the] Transmission Provider's Transmission System that may be affected by the proposed interconnection.

Applicable Reliability Standards—The requirements and guidelines of the Electric Reliability Organization and the Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.

Applicable Laws and Regulations—All duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

Business Day—Monday through Friday, excluding Federal Holidays.

Distribution System—[The] Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which Distribution Systems operate differ among areas.

Distribution Upgrades—The additions, modifications, and upgrades to [the] Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Small Generating Facility and render the transmission service necessary to effect [the] Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Fast Track Process—The procedure for evaluating an Interconnection Request for a certified Small Generating Facility that meets the eligibility requirements of section 2.1 and includes the section 2 screens, customer options meeting, and optional supplemental review.

Good Utility Practice—Any of the practices, methods and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods and act which, in the exercise of reasonable

judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Interconnection Customer—Any entity, including [the] Transmission Provider, the Transmission Owner or any of the affiliates or subsidiaries of either, that proposes to interconnect its Small Generating Facility with [the] Transmission Provider's Transmission System.

Interconnection Facilities—[The] Transmission Provider's Interconnection Facilities and [the] Interconnection Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Small Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Small Generating Facility to [the] Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades or Network Upgrades.

Interconnection Request—[The] Interconnection Customer's request, in accordance with the Tariff, to interconnect a new Small Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics of, an existing Small Generating Facility that is interconnected with [the] Transmission Provider's Transmission System.

Material Modification—A modification that has a material impact on the cost or timing of any Interconnection Request with a later queue priority date.

Network Resource—Any designated generating resource owned, purchased, or leased by a Network Customer under the Network Integration Transmission Service Tariff. Network Resources do not include any resource, or any portion thereof, that is committed for sale to third parties or otherwise cannot be called upon to meet the Network Customer's Network Load on a non-interruptible basis.

Network Resource Interconnection Service—An Interconnection Service that allows [the] Interconnection Customer to integrate its Generating Facility with [the] Transmission Provider's System (1) in a manner comparable to that in which [the] Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an RTO or ISO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service in and of itself does not convey transmission service.

Network Upgrades—Additions, modifications, and upgrades to [the] Transmission Provider's Transmission System required at or beyond the point at which the Small Generating Facility interconnects with [the] Transmission Provider's Transmission System to accommodate the interconnection with the Small Generating Facility to [the] Transmission Provider's Transmission System. Network Upgrades do not include Distribution Upgrades.

Party or Parties—[The] Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Point of Interconnection—The point where the Interconnection Facilities connect with [the] Transmission Provider's Transmission System.

Queue Position—The order of a valid Interconnection Request, relative to all other pending valid Interconnection Requests, that is established based upon the date and time of receipt of the valid Interconnection Request by [the] Transmission Provider.

Small Generating Facility—[The] Interconnection Customer's device for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include [the] Interconnection Customer's Interconnection Facilities.

Study Process—The procedure for evaluating an Interconnection Request that includes the section 3 scoping meeting, feasibility study, system impact study, and facilities study.

Transmission Owner—The entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Small Generator Interconnection Agreement to the extent necessary.

Transmission Provider—The public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from [the] Transmission Provider.

Transmission System—The facilities owned, controlled or operated by [the] Transmission Provider or the Transmission Owner that are used to provide transmission service under the Tariff.

Upgrades—The required additions and modifications to [the] Transmission Provider's Transmission System at or beyond the Point of Interconnection. Upgrades may be Network Upgrades or Distribution Upgrades. Upgrades do not include Interconnection Facilities.

SMALL GENERATOR INTERCONNECTION REQUEST

(Application Form)

Transmission Provider: _____

Designated Contact Person: _____

Address: _____

Telephone Number: _____

Fax: _____

E-Mail Address: _____

An Interconnection Request is considered complete when it provides all applicable and correct information required below. Per SGIP section 1.5, documentation of site control must be submitted with the Interconnection Request.

Preamble and Instructions

An Interconnection Customer who requests a Federal Energy Regulatory Commission jurisdictional interconnection must submit this Interconnection Request by hand delivery, mail, e-mail, or fax to [the] Transmission Provider.

Processing Fee or Deposit:

If the Interconnection Request is submitted under the Fast Track Process, the non-refundable processing fee is $500.

If the Interconnection Request is submitted under the Study Process, whether a new submission or an Interconnection Request that did not pass the Fast Track Process, [the] Interconnection Customer shall submit to [the] Transmission Provider a deposit not to exceed $1,000 towards the cost of the feasibility study.

Interconnection Customer Information

Legal Name of [the] Interconnection Customer (or, if an individual, individual's name)

Name: _____

Contact Person: _____

Mailing Address:

_____

City: _____ State:_____ Zip:_____

Facility Location (if different from above):

_____

_____

Telephone (Day): _____ Telephone (Evening): _____

Fax:_____ E-Mail Address: _____

Alternative Contact Information (if different from [the] Interconnection Customer)

Contact Name: _____

Title: _____

Address:_____

_____

Telephone (Day): _____ Telephone (Evening):_____

Fax: _____ E-Mail Address: _____

Application is for: _____New Small Generating Facility

_____Capacity addition to Existing Small Generating Facility

If capacity addition to existing facility, please describe: _____

_____

Will the Small Generating Facility be used for any of the following?

Net Metering? Yes ___ No ___

To Supply Power to [the] Interconnection Customer? Yes ___No ___

To Supply Power to Others? Yes ____ No ____

For installations at locations with existing electric service to which the proposed Small Generating Facility will interconnect, provide:

_____ _____

(Local Electric Service Provider*) (Existing Account Number*)

{*To be provided by [the] Interconnection Customer if the local electric service provider is different from [the] Transmission Provider}

Contact Name:

_____

Title:

_____

Address:

BILLING CODE 6717–01–C

Excitation and Governor System Data for Synchronous Generators Only

Provide appropriate IEEE model block diagram of excitation system, governor system and power system stabilizer (PSS) in accordance with the regional reliability council criteria. A PSS may be determined to be required by applicable studies. A copy of the manufacturer's block diagram may not be substituted.

Models for Non-Synchronous Small Generating Facilities

For a non-synchronous Small Generating Facility, Interconnection Customer shall provide (1) a validated user-defined root mean squared (RMS) positive sequence dynamics model; (2) an appropriately parameterized generic library RMS positive sequence dynamics model, including model block diagram of the inverter control and plant control systems, as defined by the selection in Table 1 or a model otherwise approved by the Western Electricity Coordinating Council, that corresponds to Interconnection Customer's Small Generating Facility; and (3) if applicable, a validated electromagnetic transient model if Transmission Provider performs an electromagnetic transient study as part of the interconnection study process. A user-defined model is a set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly software based and represents the entities' control strategies but does not necessarily correspond to any generic library model. Interconnection Customer must also demonstrate that the model is validated by providing evidence that the equipment behavior is consistent with the model behavior (*e.g.,* an attestation from Interconnection Customer that the model accurately represents the entire Small Generating Facility; attestations from each equipment manufacturer that the user defined model accurately represents the component of the Small Generating Facility; or test data).

TABLE 1—ACCEPTABLE GENERIC LIBRARY RMS POSITIVE SEQUENCE DYNAMICS MODELS

General Information

Enclose copy of site electrical one-line diagram showing the configuration of all Small Generating Facility equipment, current and potential circuits, and protection and control schemes. This one-line diagram must be signed and stamped by a licensed Professional Engineer if the Small Generating Facility is larger than 50 kW. Is One-Line Diagram Enclosed? ____Yes ____No

Enclose copy of any site documentation that indicates the precise physical location of the proposed Small Generating Facility (e.g., USGS topographic map or other diagram or documentation).

Proposed location of protective interface equipment on property (include address if different from [the] Interconnection Customer's address)_____

Enclose copy of any site documentation that describes and details the operation of the protection and control schemes. Is Available Documentation Enclosed? ___Yes ____No

Enclose copies of schematic drawings for all protection and control circuits, relay current circuits, relay potential circuits, and alarm/monitoring circuits (if applicable).

Are Schematic Drawings Enclosed? ___Yes ____No

Applicant Signature

I hereby certify that, to the best of my knowledge, all the information provided in this Interconnection Request is true and correct.

Attachment 4

Certification of Small Generator Equipment Packages

1.0 Small Generating Facility equipment proposed for use separately or packaged with other equipment in an interconnection system shall be considered certified for interconnected operation if (1) it has been tested in accordance with industry standards for continuous utility interactive operation in compliance with the appropriate codes and standards referenced below by any Nationally Recognized Testing Laboratory (NRTL) recognized by the United States Occupational Safety and Health Administration to test and certify interconnection equipment pursuant to the relevant codes and standards listed in SGIP Attachment 3, (2) it has been labeled and is publicly listed by such NRTL at the time of the interconnection application, and (3) such NRTL makes readily available for verification all test standards and procedures it utilized in performing such equipment certification, and, with consumer approval, the test data itself. The NRTL may make such information available on its website and by encouraging such information to be included in the manufacturer's literature accompanying the equipment.

2.0 [The] Interconnection Customer must verify that the intended use of the equipment falls within the use or uses for which the equipment was tested, labeled, and listed by the NRTL.

3.0 Certified equipment shall not require further type-test review, testing, or additional equipment to meet the requirements of this interconnection procedure; however, nothing herein shall preclude the need for an on-site commissioning test by the parties to the interconnection nor follow-up production testing by the NRTL.

4.0 If the certified equipment package includes only interface components (switchgear, inverters, or other interface devices), then an Interconnection Customer must show that the generator or other electric source being utilized with the equipment package is compatible with the equipment package and is consistent with the testing and listing specified for this type of interconnection equipment.

5.0 Provided the generator or electric source, when combined with the equipment package, is within the range of capabilities for which it was tested by the NRTL, and does not violate the interface components' labeling and listing performed by the NRTL, no further design review, testing or additional equipment on the customer side of the point of common coupling shall be required to meet the requirements of this interconnection procedure.

6.0 An equipment package does not include equipment provided by the utility.

7.0 Any equipment package approved and listed in a state by that state's regulatory body for interconnected operation in that state prior to the effective date of these small generator interconnection procedures shall be considered certified under these procedures for use in that state.

Attachment 5

Application, Procedures, and Terms and Conditions for Interconnecting a Certified Inverter-Based Small Generating Facility No Larger Than 10 kW (''10 kW Inverter Process'')

1.0 [The] Interconnection Customer (''Customer'') completes the Interconnection Request (''Application'') and submits it to [the] Transmission Provider (''Company'').

2.0 The Company acknowledges to the Customer receipt of the Application within three *(3)* Business Days of receipt.

3.0 The Company evaluates the Application for completeness and notifies the Customer within ten *(10)* Business Days of receipt that the Application is or is not complete and, if not, advises what material is missing.

4.0 The Company verifies that the Small Generating Facility can be interconnected safely and reliably using the screens contained in the Fast Track Process in the Small Generator Interconnection Procedures (SGIP). The Company has *fifteen (*15*)* Business Days to complete this process. Unless the Company determines and demonstrates that the Small Generating Facility cannot be interconnected safely and reliably, the Company approves the Application and returns it to the Customer. Note to Customer: Please check with the Company before submitting the Application if disconnection equipment is required.

5.0 After installation, the Customer returns the Certificate of Completion to the Company. Prior to parallel operation, the Company may inspect the Small Generating Facility for compliance with standards which may include a witness test, and may schedule appropriate metering replacement, if necessary.

6.0 The Company notifies the Customer in writing that interconnection of the Small Generating Facility is authorized. If the witness test is not satisfactory, the Company has the right to disconnect the Small Generating Facility. The Customer has no right to operate in parallel until a witness test has been performed, or previously waived on the Application. The Company is obligated to complete this witness test within ten *(10)* Business Days of the receipt of the Certificate of Completion. If the Company does not inspect within ten *(10)* Business Days or by mutual agreement of the Parties, the witness test is deemed waived.

7.0 Contact Information—The Customer must provide the contact information for the legal applicant (*i.e.,* [the] Interconnection Customer). If another entity is responsible for interfacing with the Company, that contact information must be provided on the Application.

8.0 Ownership Information—Enter the legal names of the owner(s) of the Small Generating Facility. Include the percentage ownership (if any) by any utility or public utility holding company, or by any entity owned by either.

9.0 UL1741 Listed—This standard (''Inverters, Converters, and Controllers for Use in Independent Power Systems'') addresses the electrical interconnection design of various forms of generating equipment. Many manufacturers submit their equipment to a Nationally Recognized Testing Laboratory (NRTL) that verifies compliance with UL1741. This ''listing'' is then marked on the equipment and supporting documentation.

BILLING CODE 6717–01–P

Application for Interconnecting a Certified Inverter-Based Small Generating Facility No Larger than 10kW

This Application is considered complete when it provides all applicable and correct information required below. Per SGIP section 1.5, documentation of site control must be submitted with the Interconnection Request. Additional information to evaluate the Application may be required.

Processing Fee

A non-refundable processing fee of $100 must accompany this Application.

Interconnection Customer

Terms and Conditions for Interconnecting an Inverter-Based Small Generating Facility No Larger Than 10kW

1.0 Construction of the Facility

[The] Interconnection Customer (the ''Customer'') may proceed to construct (including operational testing not to exceed two hours) the Small Generating Facility when [the] Transmission Provider (the ''Company'') approves the Interconnection Request (the ''Application'') and returns it to the Customer.

2.0 Interconnection and Operation

The Customer may operate Small Generating Facility and interconnect with the Company's electric system once all of the following have occurred:

2.1 Upon completing construction, the Customer will cause the Small Generating Facility to be inspected or otherwise certified by the appropriate local electrical wiring inspector with jurisdiction, and

2.2 The Customer returns the Certificate of Completion to the Company, and

2.3 The Company has either:

2.3.1 Completed its inspection of the Small Generating Facility to ensure that all equipment has been appropriately installed and that all electrical connections have been made in accordance with applicable codes. All inspections must be conducted by the Company, at its own expense, within ten *(10)* Business Days after receipt of the Certificate of Completion and shall take place at a time agreeable to the Parties. The Company shall provide a written statement that the Small Generating Facility has passed inspection or shall notify the Customer of what steps it must take to pass inspection as soon as practicable after the inspection takes place; or

2.3.2 If the Company does not schedule an inspection of the Small Generating Facility within ten *(10)* [b]*B*usiness [d]*D*ays after receiving the Certificate of Completion, the witness test is deemed waived (unless the Parties agree otherwise); or

2.3.3 The Company waives the right to inspect the Small Generating Facility.

2.4 The Company has the right to disconnect the Small Generating Facility in the event of improper installation or failure to return the Certificate of Completion.

2.5 Revenue quality metering equipment must be installed and tested in accordance with applicable ANSI standards.

3.0 Safe Operations and Maintenance

The Customer shall be fully responsible to operate, maintain, and repair the Small Generating Facility as required to ensure that it complies at all times with the interconnection standards to which it has been certified.

4.0 Access

The Company shall have access to the disconnect switch (if the disconnect switch is required) and metering equipment of the Small Generating Facility at all times. The Company shall provide reasonable notice to the Customer when possible prior to using its right of access.

5.0 Disconnection

The Company may temporarily disconnect the Small Generating Facility upon the following conditions:

5.1 For scheduled outages upon reasonable notice.

5.2 For unscheduled outages or emergency conditions.

5.3 If the Small Generating Facility does not operate in the manner consistent with these Terms and Conditions.

5.4 The Company shall inform the Customer in advance of any scheduled disconnection, or as is reasonable after an unscheduled disconnection.

6.0 Indemnification

The Parties shall at all times indemnify, defend, and save the other Party harmless from, any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's action or inactions of its obligations under this agreement on behalf of the indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the indemnified Party.

7.0 Insurance

The Parties agree to follow all applicable insurance requirements imposed by the state in which the Point of Interconnection is located. All insurance policies must be maintained with insurers authorized to do business in that state.

8.0 Limitation of Liability

Each party's liability to the other party for any loss, cost, claim, injury, liability, or expense, including reasonable attorney's fees, relating to or arising from any act or omission in its performance of this Agreement, shall be limited to the amount of direct damage actually incurred. In no event shall either party be liable to the other party for any indirect, incidental, special, consequential, or punitive damages of any kind whatsoever, except as allowed under paragraph 6.0.

9.0 Termination

The agreement to operate in parallel may be terminated under the following conditions:

9.1 By the Customer

By providing written notice to the Company.

9.2 By the Company

If the Small Generating Facility fails to operate for any consecutive 12 month period or the Customer fails to remedy a violation of these Terms and Conditions.

9.3 Permanent Disconnection

In the event this Agreement is terminated, the Company shall have the right to disconnect its facilities or direct the Customer to disconnect its Small Generating Facility.

9.4 Survival Rights

This Agreement shall continue in effect after termination to the extent necessary to allow or require either Party to fulfill rights or obligations that arose under the Agreement.

10.0 Assignment/Transfer of Ownership of the Facility

This Agreement shall survive the transfer of ownership of the Small Generating Facility to a new owner when the new owner agrees in writing to comply with the terms of this Agreement and so notifies the Company.

Attachment 6

Feasibility Study Agreement

This Agreement is made and entered into this____ day of _____ 20____ by and between _____, a _____ organized and existing under the laws of the State of _____, (''Interconnection Customer,'') and _____, a _____ *organized and* existing under the laws of the State of _____, (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, Interconnection Customer is proposing to develop a Small Generating Facility or generating capacity addition to an existing Small Generating Facility consistent with the Interconnection Request completed by Interconnection Customer on _____; and

Whereas, Interconnection Customer desires to interconnect the Small Generating Facility with [the] Transmission Provider's Transmission System; and

Whereas, Interconnection Customer has requested [the] Transmission Provider to perform a feasibility study to assess the feasibility of interconnecting the proposed Small Generating Facility with [the] Transmission Provider's Transmission System, and of any Affected Systems;

Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated or the meanings specified in the standard Small Generator Interconnection Procedures.

2.0 [The] Interconnection Customer elects and [the] Transmission Provider shall cause to be performed an interconnection feasibility study consistent the standard Small Generator Interconnection Procedures in accordance with the Open Access Transmission Tariff.

3.0 The scope of the feasibility study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The feasibility study shall be based on the technical information provided by [the] Interconnection Customer in the Interconnection Request, as may be modified as the result of the scoping meeting. [The] Transmission Provider reserves the right to request additional technical information from [the] Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the feasibility study and as designated in accordance with the standard Small Generator Interconnection Procedures. If [the] Interconnection Customer modifies its Interconnection Request, the time to complete the feasibility study may be extended by agreement of the Parties.

5.0 In performing the study, [the] Transmission Provider shall rely, to the extent reasonably practicable, on existing studies of recent vintage. [The] Interconnection Customer shall not be charged for such existing studies; however, [the] Interconnection Customer shall be

responsible for charges associated with any new study or modifications to existing studies that are reasonably necessary to perform the feasibility study.

6.0 The feasibility study report shall provide the following analyses for the purpose of identifying any potential adverse system impacts that would result from the interconnection of the Small Generating Facility as proposed:

6.1 Initial identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;

6.2 Initial identification of any thermal overload or voltage limit violations resulting from the interconnection;

6.3 Initial review of grounding requirements and electric system protection; and

6.4 Description and non-binding estimated cost of facilities required to interconnect the proposed Small Generating Facility and to address the identified short circuit and power flow issues.

7.0 The feasibility study shall model the impact of the Small Generating Facility regardless of purpose in order to avoid the further expense and interruption of operation for reexamination of feasibility and impacts if [the] Interconnection Customer later changes the purpose for which the Small Generating Facility is being installed.

8.0 The study shall include the feasibility of any interconnection at a proposed project site where there could be multiple potential Points of Interconnection, as requested by [the] Interconnection Customer and at [the] Interconnection Customer's cost.

9.0 A deposit of the lesser of 50 percent of good faith estimated feasibility study costs or earnest money of $1,000 may be required from [the] Interconnection Customer.

10.0 Once the feasibility study is completed, a feasibility study report shall be prepared and transmitted to [the] Interconnection Customer. Barring unusual circumstances, the feasibility study must be completed and the feasibility study report transmitted within *thirty (*30*)* Business Days of [the] Interconnection Customer's agreement to conduct a feasibility study.

11.0 Any study fees shall be based on [the] Transmission Provider's actual costs and will be invoiced to [the] Interconnection Customer after the study is completed and delivered and will include a summary of professional time.

12.0 [The] Interconnection Customer must pay any study costs that exceed the deposit without interest within *thirty (*30*)* [c]*C*alendar [d]*D*ays on receipt of the invoice or resolution of any dispute. If the deposit exceeds the invoiced fees, [the] Transmission Provider shall refund such excess within *thirty (*30*)* [c]*C*alendar [d]*D*ays of the invoice without interest.

13.0 Governing Law, Regulatory Authority, and Rules

The validity, interpretation and enforcement of this Agreement and each of its provisions shall be governed by the laws of the state of _____(where the Point of Interconnection is located), without regard to its conflicts of law principles. This Agreement is subject to all Applicable Laws and Regulations. Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, or regulations of a Governmental Authority.

14.0 Amendment

The Parties may amend this Agreement by a written instrument duly executed by both Parties.

15.0 No Third-Party Beneficiaries

This Agreement is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and where permitted, their assigns.

16.0 Waiver

16.1 The failure of a Party to this Agreement to insist, on any occasion, upon strict performance of any provision of this Agreement will not be considered a waiver of any obligation, right, or duty of, or imposed upon, such Party.

16.2 Any waiver at any time by either Party of its rights with respect to this Agreement shall not be deemed a continuing waiver or a waiver with respect to any other failure to comply with any other obligation, right, duty of this Agreement. Termination or default of this Agreement for any reason by Interconnection Customer shall not constitute a waiver of [the] Interconnection Customer's legal rights to obtain an interconnection from [the] Transmission Provider. Any waiver of this Agreement shall, if requested, be provided in writing.

17.0 Multiple Counterparts

This Agreement may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

18.0 No Partnership

This Agreement shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability upon either Party. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

19.0 Severability

If any provision or portion of this Agreement shall for any reason be held or adjudged to be invalid or illegal or unenforceable by any court of competent jurisdiction or other Governmental Authority, (1) such portion or provision shall be deemed separate and independent, (2) the Parties shall negotiate in good faith to restore insofar as practicable the benefits to each Party that were affected by such ruling, and (3) the remainder of this Agreement shall remain in full force and effect.

20.0 Subcontractors

Nothing in this Agreement shall prevent a Party from utilizing the services of any subcontractor as it deems appropriate to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

20.1 The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. The hiring Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor the hiring Party hires as if no subcontract had been made; provided, however, that in no event shall [the] Transmission Provider be liable for the actions or inactions of [the] Interconnection Customer or its subcontractors with respect to obligations of [the] Interconnection Customer under this Agreement. Any applicable obligation imposed by this Agreement upon the hiring Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

20.2 The obligations under this article will not be limited in any way by any limitation of subcontractor's insurance.

21.0 Reservation of Rights

[The] Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and [the] Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this Agreement under any applicable provision of the Federal Power Act and FERC's rules and regulations; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations, except to the extent that the Parties otherwise agree as provided herein.

In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to

Feasibility Study Agreement

Assumptions Used in Conducting the Feasibility Study

The feasibility study will be based upon the information set forth in the Interconnection Request and agreed upon in the scoping meeting held on _____:

(1) Designation of Point of Interconnection and configuration to be studied.

(2) Designation of alternative Points of Interconnection and configuration.

(1) and (2) are to be completed by the Interconnection Customer. Other assumptions (listed below) are to be provided by [the] Interconnection Customer and [the] Transmission Provider.

Attachment 7

System Impact Study Agreement

This agreement is made and entered into this ____ day of_____ 20____ by and between_____, a_____ organized and existing under the laws of the State of _____, (''Interconnection Customer,'') and _____, a _____ *organized and* existing under the laws of the State of _____, (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, [the] Interconnection Customer is proposing to develop a Small Generating Facility or generating capacity addition to an existing Small Generating Facility consistent with the Interconnection Request completed by [the] Interconnection Customer on _____; and

Whereas, [the] Interconnection Customer desires to interconnect the Small Generating Facility with [the] Transmission Provider's Transmission System;

Whereas, [the] Transmission Provider has completed a feasibility study and provided the results of said study to [the] Interconnection Customer (This recital to be omitted if the Parties have agreed to forego the feasibility study.); and

Whereas, [the] Interconnection Customer has requested [the] Transmission Provider to perform a system impact study(s) to assess the impact of interconnecting the Small Generating Facility with [the] Transmission Provider's Transmission System, and of any Affected Systems;

Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated or the meanings specified in the standard Small Generator Interconnection Procedures.

2.0 [The] Interconnection Customer elects and [the] Transmission Provider shall cause to be performed a system impact study(s) consistent with the standard Small Generator Interconnection Procedures in accordance with the Open Access Transmission Tariff.

3.0 The scope of a system impact study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 A system impact study will be based upon the results of the feasibility study and the technical information provided by Interconnection Customer in the Interconnection Request. [The] Transmission Provider reserves the right to request additional technical information from [the] Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the system impact study. If [the] Interconnection Customer modifies its designated Point of Interconnection, Interconnection Request, or the technical information provided therein is modified, the time to complete the system impact study may be extended.

5.0 A system impact study shall consist of a short circuit analysis, a stability analysis, a power flow analysis, voltage drop and flicker studies, protection and set point coordination studies, and grounding reviews, as necessary. A system impact study shall state the assumptions upon which it is based, state the results of the analyses, and provide the requirement or potential impediments to providing the requested interconnection service, including a preliminary indication of the cost and length of time that would be necessary to correct any problems identified in those analyses and implement the interconnection. A system impact study shall provide a list of facilities that are required as a result of the Interconnection Request and non-binding good faith estimates of cost responsibility and time to construct.

6.0 A distribution system impact study shall incorporate a distribution load flow study, an analysis of equipment interrupting ratings, protection coordination study, voltage drop and flicker studies, protection and set point coordination studies, grounding reviews, and the impact on electric system operation, as necessary.

7.0 Affected Systems may participate in the preparation of a system impact study, with a division of costs among such entities as they may agree. All Affected Systems shall be afforded an opportunity to review and comment upon a system impact study that covers potential adverse system impacts on their electric systems, and [the] Transmission Provider has *twenty (*20*)* additional Business Days to complete a system impact study requiring review by Affected Systems.

8.0 If [the] Transmission Provider uses a queuing procedure for sorting or prioritizing projects and their associated cost responsibilities for any required Network Upgrades, the system impact study shall consider all generating facilities (and with respect to paragraph 8.3 below, any identified Upgrades associated with such higher queued interconnection) that, on the date the system impact study is commenced—

8.1 Are directly interconnected with [the] Transmission Provider's electric system; or

8.2 Are interconnected with Affected Systems and may have an impact on the proposed interconnection; and

8.3 Have a pending higher queued Interconnection Request to interconnect with [the] Transmission Provider's electric system.

9.0 A distribution system impact study, if required, shall be completed and the results transmitted to [the] Interconnection Customer within *thirty (*30*)* Business Days after this Agreement is signed by the Parties. A transmission system impact study, if required, shall be completed and the results transmitted to [the] Interconnection Customer within *forty-five (*45*)* Business Days after this Agreement is signed by the Parties, or in accordance with [the] Transmission Provider's queuing procedures.

10.0 A deposit of the equivalent of the good faith estimated cost of a distribution system impact study and the one half the good faith estimated cost of a transmission system impact study may be required from [the] Interconnection Customer.

11.0 Any study fees shall be based on [the] Transmission Provider's actual costs and will be invoiced to [the] Interconnection Customer after the study is completed and delivered and will include a summary of professional time.

12.0 [The] Interconnection Customer must pay any study costs that exceed the deposit without interest within *thirty (*30*)* [c]*C*alendar [d]*D*ays on receipt of the invoice or resolution of any dispute. If the deposit exceeds the invoiced fees, [the] Transmission Provider shall refund such excess within *thirty (*30*)* [c]*C*alendar [d]*D*ays of the invoice without interest.

13.0 Governing Law, Regulatory Authority, and Rules

The validity, interpretation and enforcement of this Agreement and each of its provisions shall be governed by the laws of the state of _____ (where the Point of Interconnection is located), without regard to its conflicts of law principles. This Agreement is subject to all Applicable Laws and Regulations. Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, or regulations of a Governmental Authority.

14.0 Amendment

The Parties may amend this Agreement by a written instrument duly executed by both Parties.

15.0 No Third-Party Beneficiaries

This Agreement is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and where permitted, their assigns.

16.0 Waiver

16.1 The failure of a Party to this Agreement to insist, on any occasion, upon strict performance of any provision of this Agreement will not be considered a waiver of any obligation, right, or duty of, or imposed upon, such Party.

16.2 Any waiver at any time by either Party of its rights with respect to this Agreement shall not be deemed a continuing waiver or a waiver with respect to any other failure to comply with any other obligation, right, duty of this Agreement. Termination or default of this Agreement for any reason by Interconnection Customer shall not constitute a waiver of [the] Interconnection Customer's legal rights to obtain an interconnection from [the] Transmission Provider. Any waiver of this Agreement shall, if requested, be provided in writing.

17.0 Multiple Counterparts

This Agreement may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

18.0 No Partnership

This Agreement shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability

upon either Party. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

19.0 Severability

If any provision or portion of this Agreement shall for any reason be held or adjudged to be invalid or illegal or unenforceable by any court of competent jurisdiction or other Governmental Authority, (1) such portion or provision shall be deemed separate and independent, (2) the Parties shall negotiate in good faith to restore insofar as practicable the benefits to each Party that were affected by such ruling, and (3) the remainder of this Agreement shall remain in full force and effect.

20.0 Subcontractors

Nothing in this Agreement shall prevent a Party from utilizing the services of any subcontractor as it deems appropriate to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

20.1 The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. The hiring Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor the hiring Party hires as if no subcontract had been made; provided, however, that in no event shall [the] Transmission Provider be liable for the actions or inactions of [the] Interconnection Customer or its subcontractors with respect to obligations of [the] Interconnection Customer under this Agreement. Any applicable obligation imposed by this Agreement upon the hiring Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

20.2 The obligations under this article will not be limited in any way by any limitation of subcontractor's insurance.

21.0 Reservation of Rights

[The] Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and [the] Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this Agreement under any applicable provision of the Federal Power Act and FERC's rules and regulations; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations, except to the extent that the Parties otherwise agree as provided herein.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to System

Impact Study Agreement Assumptions Used in Conducting the System Impact Study

The system impact study shall be based upon the results of the feasibility study, subject to any modifications in accordance with the standard Small Generator Interconnection Procedures, and the following assumptions:

(1) Designation of Point of Interconnection and configuration to be studied.

(2) Designation of alternative Points of Interconnection and configuration.

(1) and (2) are to be completed by [the] Interconnection Customer. Other assumptions (listed below) are to be provided by [the] Interconnection Customer and [the] Transmission Provider.

Attachment 8

Facilities Study Agreement

This agreement is made and entered into this ____ day of _____ 20____ by and between _____, a _____ organized and existing under the laws of the State of _____, (''Interconnection Customer,'') and _____, a _____ *organized and* existing under the laws of the State of _____, (''Transmission Provider''). Interconnection Customer and Transmission Provider each may be referred to as a ''Party,'' or collectively as the ''Parties.''

Recitals

Whereas, [the] Interconnection Customer is proposing to develop a Small Generating Facility or generating capacity addition to an existing Small Generating Facility consistent with the Interconnection Request completed by [the] Interconnection Customer on _____; and

Whereas, [the] Interconnection Customer desires to interconnect the Small Generating Facility with [the] Transmission Provider's Transmission System;

Whereas, [the] Transmission Provider has completed a system impact study and provided the results of said study to [the] Interconnection Customer; and

Whereas, [the] Interconnection Customer has requested [the] Transmission Provider to perform a facilities study to specify and estimate the cost of the equipment, engineering, procurement and construction work needed to implement the conclusions of the system impact study in accordance with Good Utility Practice to physically and electrically connect the Small Generating Facility with [the] Transmission Provider's Transmission System.

Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated or the meanings specified in the standard Small Generator Interconnection Procedures.

2.0 [The] Interconnection Customer elects and [the] Transmission Provider shall cause a facilities study consistent with the standard Small Generator Interconnection Procedures to be performed in accordance with the Open Access Transmission Tariff.

3.0 The scope of the facilities study shall be subject to data provided in Attachment A to this Agreement.

4.0 The facilities study shall specify and estimate the cost of the equipment, engineering, procurement and construction work (including overheads) needed to implement the conclusions of the system impact study(s). The facilities study shall also identify (1) the electrical switching configuration of the equipment, including, without limitation, transformer, switchgear, meters, and other station equipment, (2) the nature and estimated cost of [the] Transmission Provider's Interconnection Facilities and Upgrades necessary to accomplish the interconnection, and (3) an estimate of the time required to complete the construction and installation of such facilities.

5.0 [The] Transmission Provider may propose to group facilities required for more than one Interconnection Customer in order to minimize facilities costs through economies of scale, but any Interconnection Customer may require the installation of facilities required for its own Small Generating Facility if it is willing to pay the costs of those facilities.

6.0 A deposit of the good faith estimated facilities study costs may be required from [the] Interconnection Customer.

7.0 In cases where Upgrades are required, the facilities study must be completed within *forty-five (*45*)* Business Days of the receipt of this Agreement. In cases where no Upgrades are necessary, and the required facilities are limited to Interconnection Facilities, the facilities study must be completed within *thirty (*30*)* Business Days.

8.0 Once the facilities study is completed, a ''*draft*'' facilities study report shall be prepared and transmitted to [the] Interconnection Customer. Barring unusual circumstances, the facilities study must be completed and the ''*draft*'' facilities study report transmitted within *thirty (*30*)* Business Days of [the] Interconnection Customer's agreement to conduct a facilities study.

9.0 Interconnection Customer may, within *thirty (*30*)* Calendar Days after receipt of the draft report, provide written comments to Transmission Provider, which Transmission Provider shall include in the final report. Transmission Provider shall issue the final Interconnection Facilities Study report within *fifteen (*15*)* Business Days of receiving Interconnection Customer's comments or promptly upon receiving Interconnection Customer's statement that it

will not provide comments. Transmission Provider may reasonably extend such fifteen-day period upon notice to Interconnection Customer if Interconnection Customer's comments require Transmission Provider to perform additional analyses or make other significant modifications prior to the issuance of the final Interconnection Facilities Report. Upon request, Transmission Provider shall provide Interconnection Customer supporting documentation, workpapers, and databases or data developed in the preparation of the Interconnection Facilities Study, subject to confidentiality arrangements consistent with Section 4.5 of the standard Small Generator Interconnection Procedures.

10.0 Within ten *(10)* Business Days of providing a draft Interconnection Facilities Study report to Interconnection Customer, Transmission Provider and Interconnection Customer shall meet to discuss the results of the Interconnection Facilities Study.

11.0 Any study fees shall be based on [the] Transmission Provider's actual costs and will be invoiced to [the] Interconnection Customer after the study is completed and delivered and will include a summary of professional time.

12.0 [The] Interconnection Customer must pay any study costs that exceed the deposit without interest within *thirty (*30*)* [c]*C*alendar [d]*D*ays on receipt of the invoice or resolution of any dispute. If the deposit exceeds the invoiced fees, [the] Transmission Provider shall refund such excess within *thirty (*30*)* [c]*C*alendar [d]*D*ays of the invoice without interest.

13.0 *Governing Law, Regulatory Authority, and Rules*

The validity, interpretation and enforcement of this Agreement and each of its provisions shall be governed by the laws of the state of _____ (where the Point of Interconnection is located), without regard to its conflicts of law principles. This Agreement is subject to all Applicable Laws and Regulations. Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, or regulations of a Governmental Authority.

14.0 *Amendment*

The Parties may amend this Agreement by a written instrument duly executed by both Parties.

15.0 *No Third-Party Beneficiaries*

This Agreement is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and where permitted, their assigns.

16.0 Waiver

16.1 The failure of a Party to this Agreement to insist, on any occasion, upon strict performance of any provision of this Agreement will not be considered a waiver of any obligation, right, or duty of, or imposed upon, such Party.

16.2 Any waiver at any time by either Party of its rights with respect to this Agreement shall not be deemed a continuing waiver or a waiver with respect to any other failure to comply with any other obligation, right, duty of this Agreement. Termination or default of this Agreement for any reason by Interconnection Customer shall not constitute a waiver of [the] Interconnection Customer's legal rights to obtain an interconnection from [the] Transmission Provider. Any waiver of this Agreement shall, if requested, be provided in writing.

17.0 Multiple Counterparts

This Agreement may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

18.0 No Partnership

This Agreement shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability upon either Party. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

19.0 Severability

If any provision or portion of this Agreement shall for any reason be held or adjudged to be invalid or illegal or unenforceable by any court of competent jurisdiction or other Governmental Authority, (1) such portion or provision shall be deemed separate and independent, (2) the Parties shall negotiate in good faith to restore insofar as practicable the benefits to each Party that were affected by such ruling, and (3) the remainder of this Agreement shall remain in full force and effect.

20.0 Subcontractors

Nothing in this Agreement shall prevent a Party from utilizing the services of any subcontractor as it deems appropriate to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

20.1 The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. The hiring Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor the hiring Party hires as if no subcontract had been made; provided, however, that in no event shall [the] Transmission Provider be liable for the actions or inactions of [the] Interconnection Customer or its subcontractors with respect to obligations of [the] Interconnection Customer under this Agreement. Any applicable obligation imposed by this Agreement upon the hiring Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

20.2 The obligations under this article will not be limited in any way by any limitation of subcontractor's insurance.

21.0 Reservation of Rights

[The] Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and [the] Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this Agreement under any applicable provision of the Federal Power Act and FERC's rules and regulations; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations, except to the extent that the Parties otherwise agree as provided herein.

In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to

Facilities Study Agreement

Data to Be Provided by [the] Interconnection Customer

with the Facilities Study Agreement

Provide location plan and simplified one-line diagram of the plant and station facilities. For staged projects, please indicate future generation, transmission circuits, etc.

On the one-line diagram, indicate the generation capacity attached at each metering location. (Maximum load on CT/PT)

On the one-line diagram, indicate the location of auxiliary power. (Minimum load on CT/PT) Amps

One set of metering is required for each generation connection to the new ring bus or existing Transmission Provider station. Number of generation connections:

_____

Will an alternate source of auxiliary power be available during CT/PT maintenance?

Yes ____ No ____

Will a transfer bus on the generation side of the metering require that each meter set be designed for the total plant generation? Yes ____ No ____

(Please indicate on the one-line diagram).

What type of control system or PLC will be located at the Small Generating Facility?

_____

_____

_____

_____

What protocol does the control system or PLC use?

_____

_____

_____

_____

Please provide a 7.5-minute quadrangle map of the site. Indicate the plant, station, transmission line, and property lines.

Physical dimensions of the proposed interconnection station:

_____

_____Bus length from generation to interconnection station:

_____

_____Line length from interconnection station to Transmission Provider's Transmission System.

_____

_____Tower number observed in the field. (Painted on tower leg)*:

_____

_____Number of third party easements required for transmission lines*:

_____

_____ * To be completed in coordination with Transmission Provider.

Is the Small Generating Facility located in Transmission Provider's service area?

Yes _____ No _____ If No, please provide name of local provider:

_____

_____

Please provide the following proposed schedule dates:

Begin Construction Date: _____

Generator step-up transformers receive back feed power Date: _____

Generation Testing Date: _____

Commercial Operation Date: _____

Interconnection Customer Application No: _____

In consideration of the mutual covenants set forth herein, the Parties agree as follows:

Article 1. Scope and Limitations of Agreement

1.1 *Applicability*

This Agreement shall be used for all Interconnection Requests submitted under the Small Generator Interconnection Procedures (SGIP) except for those submitted under the 10 kW Inverter Process contained in SGIP Attachment 5.

1.2 *Purpose*

This Agreement governs the terms and conditions under which [the] Interconnection Customer's Small Generating Facility will interconnect with, and operate in parallel with, [the] Transmission Provider's Transmission System.

1.3 *No Agreement to Purchase or Deliver Power*

This Agreement does not constitute an agreement to purchase or deliver [the] Interconnection Customer's power. The purchase or delivery of power and other services that [the] Interconnection Customer may require will be covered under separate agreements, if any. [The] Interconnection Customer will be responsible for separately making all necessary arrangements (including scheduling) for delivery of electricity with the applicable Transmission Provider.

1.4 *Limitations*

Nothing in this Agreement is intended to affect any other agreement between [the] Transmission Provider and [the] Interconnection Customer.

1.5 Responsibilities of the Parties

1.5.1 The Parties shall perform all obligations of this Agreement in accordance with all Applicable Laws and Regulations, Operating Requirements, and Good Utility Practice.

1.5.2 [The] Interconnection Customer shall construct, interconnect, operate and maintain its Small Generating Facility and construct, operate, and maintain its Interconnection Facilities in accordance with the applicable manufacturer's recommended maintenance schedule, and in accordance with this Agreement, and with Good Utility Practice.

1.5.3 [The] Transmission Provider shall construct, operate, and maintain its Transmission System and Interconnection Facilities in accordance with this Agreement, and with Good Utility Practice.

1.5.4 [The] Interconnection Customer agrees to construct its facilities or systems in accordance with applicable specifications that meet or exceed those provided by the National Electrical Safety Code, the American National Standards Institute, IEEE, Underwriter's Laboratory, and Operating Requirements in effect at the time of construction and other applicable national and state codes and standards. [The] Interconnection Customer agrees to design, install, maintain, and operate its Small Generating Facility so as to reasonably minimize the likelihood of a disturbance adversely affecting or impairing the system or equipment of [the] Transmission Provider and any Affected Systems.

1.5.5 Each Party shall operate, maintain, repair, and inspect, and shall be fully responsible for the facilities that it now or subsequently may own unless otherwise specified in the Attachments to this Agreement. Each Party shall be responsible for the safe installation, maintenance, repair and condition of their respective lines and appurtenances on their respective sides of the point of change of ownership. [The] Transmission Provider and [the] Interconnection Customer, as appropriate, shall provide Interconnection Facilities that

adequately protect [the] Transmission Provider's Transmission System, personnel, and other persons from damage and injury. The allocation of responsibility for the design, installation, operation, maintenance and ownership of Interconnection Facilities shall be delineated in the Attachments to this Agreement.

1.5.6 [The] Transmission Provider shall coordinate with all Affected Systems to support the interconnection.

1.5.7 [The] Interconnection Customer shall ensure ''frequency ride through'' capability and ''voltage ride through'' capability of its Small Generating Facility. [The] Interconnection Customer shall enable these capabilities such that its Small Generating Facility shall not disconnect automatically or instantaneously from the system or equipment of [the] Transmission Provider and any Affected Systems for a defined under-frequency or over-frequency condition, or an under-voltage or over-voltage condition, as tested pursuant to Section 2.1 of this agreement. The defined conditions shall be in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. The Small Generating Facility's protective equipment settings shall comply with [the] Transmission Provider's automatic load-shed program. [The] Transmission Provider shall review the protective equipment settings to confirm compliance with the automatic load-shed program. The term ''ride through'' as used herein shall mean the ability of a Small Generating Facility to stay connected to and synchronized with the system or equipment of [the] Transmission Provider and any Affected Systems during system disturbances within a range of conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority *Area* on a comparable basis. The term ''frequency ride through'' as used herein shall mean the ability of a Small Generating Facility to stay connected to and synchronized with the system or equipment of [the] Transmission Provider and any Affected Systems during system disturbances within a range of under-frequency and over-frequency conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. The term ''voltage ride through'' as used herein shall mean the ability of a Small Generating Facility to stay connected to and synchronized with the system or equipment of [the] Transmission Provider and any Affected Systems during system disturbances within a range of under-voltage and over-voltage conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. For abnormal frequency conditions and voltage conditions within the ''no trip zone'' defined by Reliability Standard PRC–024–3 or successor mandatory ride through Applicable Reliability Standards, the non-synchronous Small Generating Facility must ensure that, within any physical limitations of the Small Generating Facility, its control and protection settings are configured or set to (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels *unless reactive power priority mode is enabled or* unless providing primary frequency response or fast frequency response; (2) minimize reductions in active power and remain within dynamic voltage and current limits, if reactive power priority mode is enabled, unless providing primary frequency response or fast frequency response; (3) not artificially limit dynamic reactive power capability during disturbances; and (4) return to pre-disturbance active power levels without artificial ramp rate limits if active power is reduced, unless providing primary frequency response or fast frequency response.

1.6 Parallel Operation Obligations

Once the Small Generating Facility has been authorized to commence parallel operation, [the] Interconnection Customer shall abide by all rules and procedures pertaining to the parallel operation of the Small Generating Facility in the applicable Balancing Authority Area, including, but not limited to; (1) the rules and procedures concerning the operation of generation set forth in the Tariff or by the applicable system operator(s) for [the] Transmission Provider's Transmission System and; (2) the Operating Requirements set forth in Attachment 5 of this Agreement.

1.7 Metering

[The] Interconnection Customer shall be responsible for [the] Transmission Provider's reasonable and necessary cost for the purchase, installation, operation, maintenance, testing, repair, and replacement of metering and data acquisition equipment specified in Attachments 2 and 3 of this Agreement. [The] Interconnection Customer's metering (and data acquisition, as required) equipment shall conform to applicable industry rules and Operating Requirements.

1.8 Reactive Power and Primary Frequency Response

1.8.1 Power Factor Design Criteria

1.8.1.1 Synchronous Generation. [The] Interconnection Customer shall design its Small Generating Facility to maintain a composite power delivery at continuous rated power output at the Point of Interconnection at a power factor within the range of 0.95 leading to 0.95 lagging, unless [the] Transmission Provider has established different requirements that apply to all similarly situated synchronous generators in the Balancing Authority Area on a comparable basis.

1.8.1.2 Non-Synchronous Generation. [The] Interconnection Customer shall design its Small Generating Facility to maintain a composite power delivery at continuous rated power output at the high-side of the generator substation at a power factor within the range of 0.95 leading to 0.95 lagging, unless [the] Transmission Provider has established a different power factor range that applies to all similarly situated non-synchronous generators in the Balancing Authority Area on a comparable basis. This power factor range standard shall be dynamic and can be met using, for example, power electronics designed to supply this level of reactive capability (taking into account any limitations due to voltage level, real power output, etc.) or fixed and switched capacitors, or a combination of the two. This requirement shall only apply to newly interconnecting non-synchronous generators that have not yet executed a Facilities Study Agreement as of the effective date of the Final Rule establishing this requirement (Order No. 827).

1.8.2 [The] Transmission Provider is required to pay [the] Interconnection Customer for reactive power that [the] Interconnection Customer provides or absorbs from the Small Generating Facility when [the] Transmission Provider requests [the] Interconnection Customer to operate its Small Generating Facility outside the range specified in Article 1.8.1. In addition, if [the] Transmission Provider pays its own or affiliated generators for reactive power service within the specified range, it must also pay [the] Interconnection Customer.

1.8.3 Payments shall be in accordance with [the] Interconnection Customer's applicable rate schedule then in effect unless the provision of such service(s) is subject to a regional transmission organization or independent system operator FERC-approved rate schedule. To the extent that no rate schedule is in effect at the time [the] Interconnection Customer is required to provide or absorb reactive power under this Agreement, the Parties agree to expeditiously file such rate schedule and agree to support any request for waiver of the Commission's prior notice requirement in order to compensate [the] Interconnection Customer from the time service commenced.

1.8.4 Primary Frequency Response. Interconnection Customer shall ensure the primary frequency response capability of its Small Generating Facility by installing, maintaining, and operating a functioning governor or equivalent controls. The term ''functioning governor or equivalent controls'' as used herein shall mean the required hardware and/or software that provides frequency responsive real power control with the ability to sense changes in system frequency and autonomously adjust the Small Generating Facility's real power output in accordance with the droop and deadband parameters and in the direction needed to correct frequency deviations. Interconnection Customer is required to install a governor or equivalent controls with the capability of operating: (1) with a maximum 5 percent droop and ±0.036 Hz deadband; or (2) in accordance with the relevant droop, deadband, and timely and sustained response settings from an approved Electric Reliability Organization reliability standard providing for equivalent or more stringent parameters. The droop characteristic shall be: (1) based on the nameplate capacity of the Small Generating Facility, and shall be linear in the range of frequencies between 59 to 61 Hz that are outside of the deadband parameter; or (2) based *on* an approved Electric Reliability Organization reliability standard providing for an equivalent or more stringent parameter. The deadband parameter shall be:

the range of frequencies above and below nominal (60 Hz) in which the governor or equivalent controls is not expected to adjust the Small Generating Facility's real power output in response to frequency deviations. The deadband shall be implemented: (1) without a step to the droop curve, that is, once the frequency deviation exceeds the deadband parameter, the expected change in the Small Generating Facility's real power output in response to frequency deviations shall start from zero and then increase (for under-frequency deviations) or decrease (for over-frequency deviations) linearly in proportion to the magnitude of the frequency deviation; or (2) in accordance with an approved Electric Reliability Organization reliability standard providing for an equivalent or more stringent parameter. Interconnection Customer shall notify Transmission Provider that the primary frequency response capability of the Small Generating Facility has been tested and confirmed during commissioning. Once Interconnection Customer has synchronized the Small Generating Facility with the Transmission System, Interconnection Customer shall operate the Small Generating Facility consistent with the provisions specified in Sections 1.8.4.1 and 1.8.4.2 of this Agreement. The primary frequency response requirements contained herein shall apply to both synchronous and non-synchronous Small Generating Facilities.

1.8.4.1 Governor or Equivalent Controls. Whenever the Small Generating Facility is operated in parallel with the Transmission System, Interconnection Customer shall operate the Small Generating Facility with its governor or equivalent controls in service and responsive to frequency. Interconnection Customer shall: (1) in coordination with Transmission Provider and/or the relevant Balancing Authority, set the deadband parameter to: (1) a maximum of ±0.036 Hz and set the droop parameter to a maximum of 5 percent; or (2) implement the relevant droop and deadband settings from an approved Electric Reliability Organization reliability standard that provides for equivalent or more stringent parameters. Interconnection Customer shall be required to provide the status and settings of the governor or equivalent controls to Transmission Provider and/or the relevant Balancing Authority upon request. If Interconnection Customer needs to operate the Small Generating Facility with its governor or equivalent controls not in service, Interconnection Customer shall immediately notify Transmission Provider and the relevant Balancing Authority, and provide both with the following information: (1) the operating status of the governor or equivalent controls (*i.e.,* whether it is currently out of service or when it will be taken out of service); (2) the reasons for removing the governor or equivalent controls from service; and (3) a reasonable estimate of when the governor or equivalent controls will be returned to service. Interconnection Customer shall make Reasonable Efforts to return its governor or equivalent controls into service as soon as practicable. Interconnection Customer shall make Reasonable Efforts to keep outages of the Small Generating Facility's governor or equivalent controls to a minimum whenever the Small Generating Facility is operated in parallel with the Transmission System.

1.8.4.2 Timely and Sustained Response. Interconnection Customer shall ensure that the Small Generating Facility's real power response to sustained frequency deviations outside of the deadband setting is automatically provided and shall begin immediately after frequency deviates outside of the deadband, and to the extent the Small Generating Facility has operating capability in the direction needed to correct the frequency deviation. Interconnection Customer shall not block or otherwise inhibit the ability of the governor or equivalent controls to respond and shall ensure that the response is not inhibited, except under certain operational constraints including, but not limited to, ambient temperature limitations, physical energy limitations, outages of mechanical equipment, or regulatory requirements. The Small Generating Facility shall sustain the real power response at least until system frequency returns to a value within the deadband setting of the governor or equivalent controls. A Commission-approved Reliability Standard with equivalent or more stringent requirements shall supersede the above requirements.

1.8.4.3 Exemptions. Small Generating Facilities that are regulated by the United States Nuclear Regulatory Commission shall be exempt from Sections 1.8.4, 1.8.4.1, and 1.8.4.2 of this Agreement. Small Generating Facilities that are behind the meter generation that is sized-to-load (*i.e.,* the thermal load and the generation are near-balanced in real-time operation and the generation is primarily controlled to maintain the unique thermal, chemical, or mechanical output necessary for the operating requirements of its host facility) shall be required to install primary frequency response capability in accordance with the droop and deadband capability requirements specified in Section 1.8.4, but shall be otherwise exempt from the operating requirements in Sections 1.8.4, 1.8.4.1, 1.8.4.2, and 1.8.4.4 of this Agreement.

1.8.4.4 Electric Storage Resources. Interconnection Customer interconnecting an electric storage resource shall establish an operating range in Attachment 5 of its SGIA that specifies a minimum state of charge and a maximum state of charge between which the electric storage resource will be required to provide primary frequency response consistent with the conditions set forth in Sections 1.8.4, 1.8.4.1, 1.8.4.2 and 1.8.4.3 of this Agreement. Attachment 5 shall specify whether the operating range is static or dynamic, and shall consider: (1) the expected magnitude of frequency deviations in the interconnection; (2) the expected duration that system frequency will remain outside of the deadband parameter in the interconnection; (3) the expected incidence of frequency deviations outside of the deadband parameter in the interconnection; (4) the physical capabilities of the electric storage resource; (5) operational limitations of the electric storage resource due to manufacturer specifications; and (6) any other relevant factors agreed to by Transmission Provider and Interconnection Customer, and in consultation with the relevant transmission owner or Balancing Authority as appropriate. If the operating range is dynamic, then Attachment 5 must establish how frequently the operating range will be reevaluated and the factors that may be considered during its reevaluation.

Interconnection Customer's electric storage resource is required to provide timely and sustained primary frequency response consistent with Section 1.8.4.2 of this Agreement when it is online and dispatched to inject electricity to the Transmission System and/or receive electricity from the Transmission System. This excludes circumstances when the electric storage resource is not dispatched to inject electricity to the Transmission System and/or dispatched to receive electricity from the Transmission System. If Interconnection Customer's electric storage resource is charging at the time of a frequency deviation outside of its deadband parameter, it is to increase (for over-frequency deviations) or decrease (for under-frequency deviations) the rate at which it is charging in accordance with its droop parameter. Interconnection Customer's electric storage resource is not required to change from charging to discharging, or vice versa, unless the response necessitated by the droop and deadband settings requires it to do so and it is technically capable of making such a transition.

1.9 Capitalized terms used herein shall have the meanings specified in the Glossary of Terms in Attachment 1 or the body of this Agreement.

Article 2. Inspection, Testing, Authorization, and Right of Access

2.1 Equipment Testing and Inspection

2.1.1 [The] Interconnection Customer shall test and inspect its Small Generating Facility and Interconnection Facilities prior to interconnection. [The] Interconnection Customer shall notify [the] Transmission Provider of such activities no fewer than five *(5)* Business Days (or as may be agreed to by the Parties) prior to such testing and inspection. Testing and inspection shall occur on a Business Day. [The] Transmission Provider may, at its own expense, send qualified personnel to the Small Generating Facility site to inspect the interconnection and observe the testing. [The] Interconnection Customer shall provide [the] Transmission Provider a written test report when such testing and inspection is completed.

2.1.2 [The] Transmission Provider shall provide [the] Interconnection Customer written acknowledgment that it has received [the] Interconnection Customer's written test report. Such written acknowledgment shall not be deemed to be or construed as any representation, assurance, guarantee, or warranty by [the] Transmission Provider of the safety, durability, suitability, or reliability of the Small Generating Facility or any associated control, protective, and safety devices owned or controlled by [the] Interconnection Customer or the quality of power produced by the Small Generating Facility.

2.2 Authorization Required Prior to Parallel Operation

2.2.1 [The] Transmission Provider shall use Reasonable Efforts to list applicable parallel operation requirements in Attachment 5 of this Agreement. Additionally, [the] Transmission Provider shall notify [the] Interconnection Customer of any changes to these requirements as soon as they are known. [The] Transmission Provider shall make Reasonable Efforts to cooperate with [the] Interconnection Customer in meeting requirements necessary for [the] Interconnection Customer to commence parallel operations by the in-service date.

2.2.2 [The] Interconnection Customer shall not operate its Small Generating Facility in parallel with [the] Transmission Provider's Transmission System without prior written authorization of [the] Transmission Provider. [The] Transmission Provider will provide such authorization once [the] Transmission Provider receives notification that [the] Interconnection Customer has complied with all applicable parallel operation requirements. Such authorization shall not be unreasonably withheld, conditioned, or delayed.

2.3 Right of Access

2.3.1 Upon reasonable notice, [the] Transmission Provider may send a qualified person to the premises of [the] Interconnection Customer at or immediately before the time the Small Generating Facility first produces energy to inspect the interconnection, and observe the commissioning of the Small Generating Facility (including any required testing), startup, and operation for a period of up to three *(3)* Business Days after initial start-up of the unit. In addition, [the] Interconnection Customer shall notify [the] Transmission Provider at least five *(5)* Business Days prior to conducting any on-site verification testing of the Small Generating Facility.

2.3.2 Following the initial inspection process described above, at reasonable hours, and upon reasonable notice, or at any time without notice in the event of an emergency or hazardous condition, [the] Transmission Provider shall have access to [the] Interconnection Customer's premises for any reasonable purpose in connection with the performance of the obligations imposed on it by this Agreement or if necessary to meet its legal obligation to provide service to its customers.

2.3.3 Each Party shall be responsible for its own costs associated with following this article.

Article 3. Effective Date, Term, Termination, and Disconnection

3.1 Effective Date

This Agreement shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by the FERC. [The] Transmission Provider shall promptly file this Agreement with the FERC upon execution, if required.

3.2 Term of Agreement

This Agreement shall become effective on the Effective Date and shall remain in effect for a period of ten years from the Effective Date or such other longer period as [the] Interconnection Customer may request and shall be automatically renewed for each successive one-year period thereafter, unless terminated earlier in accordance with article 3.3 of this Agreement.

3.3 Termination

No termination shall become effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination, including the filing with FERC of a notice of termination of this Agreement (if required), which notice has been accepted for filing by FERC.

3.3.1 [The] Interconnection Customer may terminate this Agreement at any time by giving [the] Transmission Provider *twenty (*20*)* Business Days written notice.

3.3.2 Either Party may terminate this Agreement after Default pursuant to article 7.6.

3.3.3 Upon termination of this Agreement, the Small Generating Facility will be disconnected from [the] Transmission Provider's Transmission System. All costs required to effectuate such disconnection shall be borne by the terminating Party, unless such termination resulted from the non-terminating Party's Default of this SGIA or such non-terminating Party otherwise is responsible for these costs under this SGIA.

3.3.4 The termination of this Agreement shall not relieve either Party of its liabilities and obligations, owed or continuing at the time of the termination.

3.3.5 The provisions of this article shall survive termination or expiration of this Agreement.

3.4 Temporary Disconnection

Temporary disconnection shall continue only for so long as reasonably necessary under Good Utility Practice.

3.4.1 Emergency Conditions—''Emergency Condition'' shall mean a condition or situation: (1) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (2) that, in the case of [the] Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to the Transmission System, [the] Transmission Provider's Interconnection Facilities or the Transmission Systems of others to which the Transmission System is directly connected; or (3) that, in the case of [the] Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Small Generating Facility or [the] Interconnection Customer's Interconnection Facilities. Under Emergency Conditions, [the] Transmission Provider may immediately suspend interconnection service and temporarily disconnect the Small Generating Facility. [The] Transmission Provider shall notify [the] Interconnection Customer promptly when it becomes aware of an Emergency Condition that may reasonably be expected to affect [the] Interconnection Customer's operation of the Small Generating Facility. [The] Interconnection Customer shall notify [the] Transmission Provider promptly when it becomes aware of an Emergency Condition that may reasonably be expected to affect [the] Transmission Provider's Transmission System or any Affected Systems. To the extent information is known, the notification shall describe the Emergency Condition, the extent of the damage or deficiency, the expected effect on the operation of both Parties' facilities and operations, its anticipated duration, and the necessary corrective action.

3.4.2 Routine Maintenance, Construction, and Repair

[The] Transmission Provider may interrupt interconnection service or curtail the output of the Small Generating Facility and temporarily disconnect the Small Generating Facility from [the] Transmission Provider's Transmission System when necessary for routine maintenance, construction, and repairs on [the] Transmission Provider's Transmission System. [The] Transmission Provider shall provide [the] Interconnection Customer with five *(5)* Business Days notice prior to such interruption. [The] Transmission Provider shall use Reasonable Efforts to coordinate such reduction or temporary disconnection with [the] Interconnection Customer.

3.4.3 Forced Outages

During any forced outage, [the] Transmission Provider may suspend interconnection service to effect immediate repairs on [the] Transmission Provider's Transmission System. [The] Transmission Provider shall use Reasonable Efforts to provide [the] Interconnection Customer with prior notice. If prior notice is not given, [the] Transmission Provider shall, upon request, provide [the] Interconnection Customer written documentation after the fact explaining the circumstances of the disconnection.

3.4.4 Adverse Operating Effects

[The] Transmission Provider shall notify [the] Interconnection Customer as soon as practicable if, based on Good Utility Practice, operation of the Small Generating Facility may cause disruption or deterioration of service to other customers served from the same electric system, or if operating the Small Generating Facility could cause damage to [the] Transmission Provider's Transmission System or Affected Systems. Supporting documentation used to reach the decision to disconnect shall be provided to [the] Interconnection Customer upon request. If, after notice, [the] Interconnection Customer fails to remedy the adverse operating effect within a reasonable time, [the] Transmission Provider may disconnect the Small Generating Facility. [The] Transmission Provider shall provide [the] Interconnection Customer with five Business Day notice of such disconnection, unless the provisions of article 3.4.1 apply.

3.4.5 Modification of the Small Generating Facility

[The] Interconnection Customer must receive written authorization from [the] Transmission Provider before making any change to the Small Generating Facility that may have a material impact on the safety or reliability of the Transmission System. Such authorization shall not be unreasonably withheld. Modifications shall be done in accordance with Good Utility Practice. If [the] Interconnection Customer makes such

modification without [the] Transmission Provider's prior written authorization, the latter shall have the right to temporarily disconnect the Small Generating Facility.

3.4.6 Reconnection

The Parties shall cooperate with each other to restore the Small Generating Facility, Interconnection Facilities, and [the] Transmission Provider's Transmission System to their normal operating state as soon as reasonably practicable following a temporary disconnection.

Article 4. Cost Responsibility for Interconnection Facilities and Distribution Upgrades

4.1 Interconnection Facilities

4.1.1 [The] Interconnection Customer shall pay for the cost of the Interconnection Facilities itemized in Attachment 2 of this Agreement. [The] Transmission Provider shall provide a best estimate cost, including overheads, for the purchase and construction of its Interconnection Facilities and provide a detailed itemization of such costs. Costs associated with Interconnection Facilities may be shared with other entities that may benefit from such facilities by agreement of [the] Interconnection Customer, such other entities, and [the] Transmission Provider.

4.1.2 [The] Interconnection Customer shall be responsible for its share of all reasonable expenses, including overheads, associated with (1) owning, operating, maintaining, repairing, and replacing its own Interconnection Facilities, and (2) operating, maintaining, repairing, and replacing [the] Transmission Provider's Interconnection Facilities.

4.2 Distribution Upgrades

[The] Transmission Provider shall design, procure, construct, install, and own the Distribution Upgrades described in Attachment 6 of this Agreement. If [the] Transmission Provider and [the] Interconnection Customer agree, [the] Interconnection Customer may construct Distribution Upgrades that are located on land owned by [the] Interconnection Customer. The actual cost of the Distribution Upgrades, including overheads, shall be directly assigned to [the] Interconnection Customer.

Article 5. Cost Responsibility for Network Upgrades

5.1 Applicability

No portion of this article 5 shall apply unless the interconnection of the Small Generating Facility requires Network Upgrades.

5.2 Network Upgrades

[The] Transmission Provider or the Transmission Owner shall design, procure, construct, install, and own the Network Upgrades described in Attachment 6 of this Agreement. If [the] Transmission Provider and [the] Interconnection Customer agree, [the] Interconnection Customer may construct Network Upgrades that are located on land owned by [the] Interconnection Customer. Unless [the] Transmission Provider elects to pay for Network Upgrades, the actual cost of the Network Upgrades, including overheads, shall be borne initially by [the] Interconnection Customer.

5.2.1 Repayment of Amounts Advanced for Network Upgrades

[The] Interconnection Customer shall be entitled to a cash repayment, equal to the total amount paid to [the] Transmission Provider and Affected System operator, if any, for Network Upgrades, including any tax gross-up or other tax-related payments associated with the Network Upgrades, and not otherwise refunded to [the] Interconnection Customer, to be paid to [the] Interconnection Customer on a dollar-for-dollar basis for the non-usage sensitive portion of transmission charges, as payments are made under [the] Transmission Provider's Tariff and Affected System's Tariff for transmission services with respect to the Small Generating Facility. Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19a(a)(2)(iii) from the date of any payment for Network Upgrades through the date on which [the] Interconnection Customer receives a repayment of such payment pursuant to this subparagraph. [The] Interconnection Customer may assign such repayment rights to any person.

5.2.1.1 Notwithstanding the foregoing, [the] Interconnection Customer, [the] Transmission Provider, and any applicable Affected System operators may adopt any alternative payment schedule that is mutually agreeable so long as [the] Transmission Provider and said Affected System operators take one of the following actions no later than five years from the Commercial Operation Date: (1) return to [the] Interconnection Customer any amounts advanced for Network Upgrades not previously repaid, or (2) declare in writing that [the] Transmission Provider or any applicable Affected System operators will continue to provide payments to [the] Interconnection Customer on a dollar-for-dollar basis for the non-usage sensitive portion of transmission charges, or develop an alternative schedule that is mutually agreeable and provides for the return of all amounts advanced for Network Upgrades not previously repaid; however, full reimbursement shall not extend beyond twenty (20) years from the commercial operation date.

5.2.1.2 If the Small Generating Facility fails to achieve commercial operation, but it or another generating facility is later constructed and requires use of the Network Upgrades, [the] Transmission Provider and Affected System operator shall at that time reimburse [the] Interconnection Customer for the amounts advanced for the Network Upgrades. Before any such reimbursement can occur, [the] Interconnection Customer, or the entity that ultimately constructs the generating facility, if different, is responsible for identifying the entity to which reimbursement must be made.

5.3 Special Provisions for Affected Systems

Unless [the] Transmission Provider provides, under this Agreement, for the repayment of amounts advanced to any applicable Affected System operators for Network Upgrades, [the] Interconnection Customer and Affected System operator shall enter into an agreement that provides for such repayment. The agreement shall specify the terms governing payments to be made by [the] Interconnection Customer to Affected System operator as well as the repayment by Affected System operator.

5.4 Rights Under Other Agreements

Notwithstanding any other provision of this Agreement, nothing herein shall be construed as relinquishing or foreclosing any rights, including but not limited to firm transmission rights, capacity rights, transmission congestion rights, or transmission credits, that [the] Interconnection Customer shall be entitled to, now or in the future, under any other agreement or tariff as a result of, or otherwise associated with, the transmission capacity, if any, created by the Network Upgrades, including the right to obtain cash reimbursements or transmission credits for transmission service that is not associated with the Small Generating Facility.

Article 6. Billing, Payment, Milestones, and Financial Security

6.1 Billing and Payment Procedures and Final Accounting

6.1.1 [The] Transmission Provider shall bill [the] Interconnection Customer for the design, engineering, construction, and procurement costs of Interconnection Facilities and Upgrades contemplated by this Agreement on a monthly basis, or as otherwise agreed by the Parties. [The] Interconnection Customer shall pay each bill within *thirty (*30*)* [c]*C*alendar [d]*D*ays of receipt, or as otherwise agreed to by the Parties.

6.1.2 Within three months of completing the construction and installation of [the] Transmission Provider's Interconnection Facilities and/or Upgrades described in the Attachments to this Agreement, [the] Transmission Provider shall provide [the] Interconnection Customer with a final accounting report of any difference between (1) [the] Interconnection Customer's cost responsibility for the actual cost of such facilities or Upgrades, and (2) [the] Interconnection Customer's previous aggregate payments to [the] Transmission Provider for such facilities or Upgrades. If [the] Interconnection Customer's cost responsibility exceeds its previous aggregate payments, [the] Transmission Provider shall invoice [the] Interconnection Customer for the amount due and [the] Interconnection Customer shall make payment to [the] Transmission Provider within *thirty (*30*)* [c]*C*alendar [d]*D*ays. If [the] Interconnection Customer's previous aggregate payments exceed its cost responsibility under this Agreement, [the] Transmission Provider shall refund to [the] Interconnection Customer an amount equal to the difference within *thirty (*30*)* [c]*C*alendar [d]*D*ays of the final accounting report.

6.2 Milestones

The Parties shall agree on milestones for which each Party is responsible and list them in Attachment 4 of this Agreement. A Party's obligations under this provision may be extended by agreement. If a Party anticipates that it will be unable to meet a milestone for any reason other than a Force Majeure Event,

it shall immediately notify the other Party of the reason(s) for not meeting the milestone and (1) propose the earliest reasonable alternate date by which it can attain this and future milestones, and (2) requesting appropriate amendments to Attachment 4. The Party affected by the failure to meet a milestone shall not unreasonably withhold agreement to such an amendment unless it will suffer significant uncompensated economic or operational harm from the delay, (2) attainment of the same milestone has previously been delayed, or (3) it has reason to believe that the delay in meeting the milestone is intentional or unwarranted notwithstanding the circumstances explained by the Party proposing the amendment.

6.3 Financial Security Arrangements

At least *twenty (*20*)* Business Days prior to the commencement of the design, procurement, installation, or construction of a discrete portion of [the] Transmission Provider's Interconnection Facilities and Upgrades, [the] Interconnection Customer shall provide [the] Transmission Provider, at [the] Interconnection Customer's option, a guarantee, a surety bond, letter of credit or other form of security that is reasonably acceptable to [the] Transmission Provider and is consistent with the Uniform Commercial Code of the jurisdiction where the Point of Interconnection is located. Such security for payment shall be in an amount sufficient to cover the costs for constructing, designing, procuring, and installing the applicable portion of [the] Transmission Provider's Interconnection Facilities and Upgrades and shall be reduced on a dollar-for-dollar basis for payments made to [the] Transmission Provider under this Agreement during its term. In addition:

6.3.1 The guarantee must be made by an entity that meets the creditworthiness requirements of [the] Transmission Provider, and contain terms and conditions that guarantee payment of any amount that may be due from [the] Interconnection Customer, up to an agreed-to maximum amount.

6.3.2 The letter of credit or surety bond must be issued by a financial institution or insurer reasonably acceptable to [the] Transmission Provider and must specify a reasonable expiration date.

Article 7. Assignment, Liability, Indemnity, Force Majeure, Consequential Damages, and Default

7.1 Assignment

This Agreement may be assigned by either Party upon *fifteen (*15*)* Business Days prior written notice and opportunity to object by the other Party; provided that:

7.1.1 Either Party may assign this Agreement without the consent of the other Party to any affiliate of the assigning Party with an equal or greater credit rating and with the legal authority and operational ability to satisfy the obligations of the assigning Party under this Agreement, provided that [the] Interconnection Customer promptly notifies [the] Transmission Provider of any such assignment;

7.1.2 [The] Interconnection Customer shall have the right to assign this Agreement, without the consent of [the] Transmission Provider, for collateral security purposes to aid in providing financing for the Small Generating Facility, provided that [the] Interconnection Customer will promptly notify [the] Transmission Provider of any such assignment.

7.1.3 Any attempted assignment that violates this article is void and ineffective. Assignment shall not relieve a Party of its obligations, nor shall a Party's obligations be enlarged, in whole or in part, by reason thereof. An assignee is responsible for meeting the same financial, credit, and insurance obligations as [the] Interconnection Customer. Where required, consent to assignment will not be unreasonably withheld, conditioned or delayed.

7.2 Limitation of Liability

Each Party's liability to the other Party for any loss, cost, claim, injury, liability, or expense, including reasonable attorney's fees, relating to or arising from any act or omission in its performance of this Agreement, shall be limited to the amount of direct damage actually incurred. In no event shall either Party be liable to the other Party for any indirect, special, consequential, or punitive damages, except as authorized by this Agreement.

7.3 Indemnity

7.3.1 This provision protects each Party from liability incurred to third parties as a result of carrying out the provisions of this Agreement. Liability under this provision is exempt from the general limitations on liability found in article 7.2.

7.3.2 The Parties shall at all times indemnify, defend, and hold the other Party harmless from, any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's action or failure to meet its obligations under this Agreement on behalf of the indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the indemnified Party.

7.3.3 If an indemnified person is entitled to indemnification under this article as a result of a claim by a third party, and the indemnifying Party fails, after notice and reasonable opportunity to proceed under this article, to assume the defense of such claim, such indemnified person may at the expense of the indemnifying Party contest, settle or consent to the entry of any judgment with respect to, or pay in full, such claim.

7.3.4 If an indemnifying party is obligated to indemnify and hold any indemnified person harmless under this article, the amount owing to the indemnified person shall be the amount of such indemnified person's actual loss, net of any insurance or other recovery.

7.3.5 Promptly after receipt by an indemnified person of any claim or notice of the commencement of any action or administrative or legal proceeding or investigation as to which the indemnity provided for in this article may apply, the indemnified person shall notify the indemnifying party of such fact. Any failure of or delay in such notification shall not affect a Party's indemnification obligation unless such failure or delay is materially prejudicial to the indemnifying party.

7.4 Consequential Damages

Other than as expressly provided for in this Agreement, neither Party shall be liable under any provision of this Agreement for any losses, damages, costs or expenses for any special, indirect, incidental, consequential, or punitive damages, including but not limited to loss of profit or revenue, loss of the use of equipment, cost of capital, cost of temporary equipment or services, whether based in whole or in part in contract, in tort, including negligence, strict liability, or any other theory of liability; provided, however, that damages for which a Party may be liable to the other Party under another agreement will not be considered to be special, indirect, incidental, or consequential damages hereunder.

7.5 Force Majeure

7.5.1 As used in this article, a Force Majeure Event shall mean ''any act of God, labor disturbance, act of the public enemy, war, insurrection, riot, fire, storm or flood, explosion, breakage or accident to machinery or equipment, any order, regulation or restriction imposed by governmental, military or lawfully established civilian authorities, or any other cause beyond a Party's control. A Force Majeure Event does not include an act of negligence or intentional wrongdoing.''

7.5.2 If a Force Majeure Event prevents a Party from fulfilling any obligations under this Agreement, the Party affected by the Force Majeure Event (Affected Party) shall promptly notify the other Party, either in writing or via the telephone, of the existence of the Force Majeure Event. The notification must specify in reasonable detail the circumstances of the Force Majeure Event, its expected duration, and the steps that the Affected Party is taking to mitigate the effects of the event on its performance. The Affected Party shall keep the other Party informed on a continuing basis of developments relating to the Force Majeure Event until the event ends. The Affected Party will be entitled to suspend or modify its performance of obligations under this Agreement (other than the obligation to make payments) only to the extent that the effect of the Force Majeure Event cannot be mitigated by the use of Reasonable Efforts. The Affected Party will use Reasonable Efforts to resume its performance as soon as possible.

7.6 Default

7.6.1 No Default shall exist where such failure to discharge an obligation (other than the payment of money) is the result of a Force Majeure Event as defined in this Agreement or the result of an act or omission of the other Party. Upon a Default, the non-defaulting Party shall give written notice of such Default to the defaulting Party. Except as provided in article 7.6.2, the defaulting Party shall have *sixty (*60*)* [c]*C*alendar [d]*D*ays from receipt of the Default notice within which to cure such Default; provided however, if such Default is not capable of cure within *sixty (*60*)* [c]*C*alendar [d]*D*ays, the defaulting Party shall commence such cure within *twenty (*20*)* [c]*C*alendar [d]*D*ays after notice and continuously and diligently complete such cure within six months from

receipt of the Default notice; and, if cured within such time, the Default specified in such notice shall cease to exist.

7.6.2 If a Default is not cured as provided in this article, or if a Default is not capable of being cured within the period provided for herein, the non-defaulting Party shall have the right to terminate this Agreement by written notice at any time until cure occurs, and be relieved of any further obligation hereunder and, whether or not that Party terminates this Agreement, to recover from the defaulting Party all amounts due hereunder, plus all other damages and remedies to which it is entitled at law or in equity. The provisions of this article will survive termination of this Agreement.

Article 8. Insurance

8.1 [The] Interconnection Customer shall, at its own expense, maintain in force general liability insurance without any exclusion for liabilities related to the interconnection undertaken pursuant to this Agreement. The amount of such insurance shall be sufficient to insure against all reasonably foreseeable direct liabilities given the size and nature of the generating equipment being interconnected, the interconnection itself, and the characteristics of the system to which the interconnection is made. [The] Interconnection Customer shall obtain additional insurance only if necessary as a function of owning and operating a generating facility. Such insurance shall be obtained from an insurance provider authorized to do business in the State where the interconnection is located. Certification that such insurance is in effect shall be provided upon request of [the] Transmission Provider, except that [the] Interconnection Customer shall show proof of insurance to [the] Transmission Provider no later than ten *(10)* Business Days prior to the anticipated commercial operation date. An Interconnection Customer of sufficient credit-worthiness may propose to self-insure for such liabilities, and such a proposal shall not be unreasonably rejected.

8.2 [The] Transmission Provider agrees to maintain general liability insurance or self-insurance consistent with [the] Transmission Provider's commercial practice. Such insurance or self-insurance shall not exclude coverage for [the] Transmission Provider's liabilities undertaken pursuant to this Agreement.

8.3 The Parties further agree to notify each other whenever an accident or incident occurs resulting in any injuries or damages that are included within the scope of coverage of such insurance, whether or not such coverage is sought.

Article 9. Confidentiality

9.1 Confidential Information shall mean any confidential and/or proprietary information provided by one Party to the other Party that is clearly marked or otherwise designated ''Confidential.'' For purposes of this Agreement all design, operating specifications, and metering data provided by [the] Interconnection Customer shall be deemed Confidential Information regardless of whether it is clearly marked or otherwise designated as such.

9.2 Confidential Information does not include information previously in the public domain, required to be publicly submitted or divulged by Governmental Authorities (after notice to the other Party and after exhausting any opportunity to oppose such publication or release), or necessary to be divulged in an action to enforce this Agreement. Each Party receiving Confidential Information shall hold such information in confidence and shall not disclose it to any third party nor to the public without the prior written authorization from the Party providing that information, except to fulfill obligations under this Agreement, or to fulfill legal or regulatory requirements.

9.2.1 Each Party shall employ at least the same standard of care to protect Confidential Information obtained from the other Party as it employs to protect its own Confidential Information.

9.2.2 Each Party is entitled to equitable relief, by injunction or otherwise, to enforce its rights under this provision to prevent the release of Confidential Information without bond or proof of damages, and may seek other remedies available at law or in equity for breach of this provision.

9.3 Notwithstanding anything in this article to the contrary, and pursuant to 18 CFR 1b.20, if FERC, during the course of an investigation or otherwise, requests information from one of the Parties that is otherwise required to be maintained in confidence pursuant to this Agreement, the Party shall provide the requested information to FERC, within the time provided for in the request for information. In providing the information to FERC, the Party may, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party to this Agreement prior to the release of the Confidential Information to FERC. The Party shall notify the other Party to this Agreement when it is notified by FERC that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

Article 10. Disputes

10.1 The Parties agree to attempt to resolve all disputes arising out of the interconnection process according to the provisions of this article.

10.2 In the event of a dispute, either Party shall provide the other Party with a written Notice of Dispute. Such Notice shall describe in detail the nature of the dispute.

10.3 If the dispute has not been resolved within two *(2)* Business Days after receipt of the Notice, either Party may contact FERC's Dispute Resolution Service (DRS) for assistance in resolving the dispute.

10.4 The DRS will assist the Parties in either resolving their dispute or in selecting an appropriate dispute resolution venue (*e.g.,* mediation, settlement judge, early neutral evaluation, or technical expert) to assist the Parties in resolving their dispute. DRS can be reached at 1–877–337–2237 or via the internet at *http://www.ferc.gov/legal/adr.asp.*

10.5 Each Party agrees to conduct all negotiations in good faith and will be responsible for one-half of any costs paid to neutral third-parties.

10.6 If neither Party elects to seek assistance from the DRS, or if the attempted dispute resolution fails, then either Party may exercise whatever rights and remedies it may have in equity or law consistent with the terms of this Agreement.

Article 11. Taxes

11.1 The Parties agree to follow all applicable tax laws and regulations, consistent with FERC policy and Internal Revenue Service requirements.

11.2 Each Party shall cooperate with the other to maintain the other Party's tax status. Nothing in this Agreement is intended to adversely affect [the] Transmission Provider's tax exempt status with respect to the issuance of bonds including, but not limited to, local furnishing bonds.

Article 12. Miscellaneous

12.1 Governing Law, Regulatory Authority, and Rules

The validity, interpretation and enforcement of this Agreement and each of its provisions shall be governed by the laws of the state of _____ (where the Point of Interconnection is located), without regard to its conflicts of law principles. This Agreement is subject to all Applicable Laws and Regulations. Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, or regulations of a Governmental Authority.

12.2 Amendment

The Parties may amend this Agreement by a written instrument duly executed by both Parties, or under article 12.12 of this Agreement.

12.3 No Third-Party Beneficiaries

This Agreement is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and where permitted, their assigns.

12.4 Waiver

12.4.1 The failure of a Party to this Agreement to insist, on any occasion, upon strict performance of any provision of this Agreement will not be considered a waiver of any obligation, right, or duty of, or imposed upon, such Party.

12.4.2 Any waiver at any time by either Party of its rights with respect to this Agreement shall not be deemed a continuing waiver or a waiver with respect to any other failure to comply with any other obligation, right, duty of this Agreement. Termination or default of this Agreement for any reason by Interconnection Customer shall not constitute a waiver of [the] Interconnection Customer's legal rights to obtain an interconnection from [the] Transmission Provider. Any waiver of this Agreement shall, if requested, be provided in writing.

12.5 Entire Agreement

This Agreement, including all Attachments, constitutes the entire agreement between the Parties with reference to the subject matter hereof, and supersedes all prior and contemporaneous understandings or agreements, oral or written, between the Parties with respect to the subject matter of this Agreement. There are no other agreements, representations, warranties, or covenants which constitute any part of the consideration for, or any condition to, either Party's compliance with its obligations under this Agreement.

12.6 Multiple Counterparts

This Agreement may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

12.7 No Partnership

This Agreement shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability upon either Party. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

12.8 Severability

If any provision or portion of this Agreement shall for any reason be held or adjudged to be invalid or illegal or unenforceable by any court of competent jurisdiction or other Governmental Authority, (1) such portion or provision shall be deemed separate and independent, (2) the Parties shall negotiate in good faith to restore insofar as practicable the benefits to each Party that were affected by such ruling, and (3) the remainder of this Agreement shall remain in full force and effect.

12.9 Security Arrangements

Infrastructure security of electric system equipment and operations and control hardware and software is essential to ensure day-to-day reliability and operational security. FERC expects all Transmission Providers, market participants, and Interconnection Customers interconnected to electric systems to comply with the recommendations offered by the President's Critical Infrastructure Protection Board and, eventually, best practice recommendations from the electric reliability authority. All public utilities are expected to meet basic standards for system infrastructure and operational security, including physical, operational, and cyber-security practices.

12.10 Environmental Releases

Each Party shall notify the other Party, first orally and then in writing, of the release of any hazardous substances, any asbestos or lead abatement activities, or any type of remediation activities related to the Small Generating Facility or the Interconnection Facilities, each of which may reasonably be expected to affect the other Party. The notifying Party shall (1) provide the notice as soon as practicable, provided such Party makes a good faith effort to provide the notice no later than 24 hours after such Party becomes aware of the occurrence, and (2) promptly furnish to the other Party copies of any publicly available reports filed with any governmental authorities addressing such events.

12.11 Subcontractors

Nothing in this Agreement shall prevent a Party from utilizing the services of any subcontractor as it deems appropriate to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

12.11.1 The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. The hiring Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor the hiring Party hires as if no subcontract had been made; provided, however, that in no event shall [the] Transmission Provider be liable for the actions or inactions of [the] Interconnection Customer or its subcontractors with respect to obligations of [the] Interconnection Customer under this Agreement. Any applicable obligation imposed by this Agreement upon the hiring Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

12.11.2 The obligations under this article will not be limited in any way by any limitation of subcontractor's insurance.

12.12 Reservation of Rights

[The] Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and [the] Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this Agreement under any applicable provision of the Federal Power Act and FERC's rules and regulations; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations, except to the extent that the Parties otherwise agree as provided herein.

Article 13. Notices

13.1 General

Unless otherwise provided in this Agreement, any written notice, demand, or request required or authorized in connection with this Agreement (''Notice'') shall be deemed properly given if delivered in person, delivered by recognized national currier service, or sent by first class mail, postage prepaid, to the person specified below:

If to [the] Interconnection Customer:

Interconnection Customer: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____
Phone: _____
Fax: _____

If to [the] Transmission Provider:

Transmission Provider: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____
Phone: _____
Fax: _____

13.2 Billing and Payment

Billings and payments shall be sent to the addresses set out below:

Interconnection Customer: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____

Transmission Provider: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____

13.3 Alternative Forms of Notice

Any notice or request required or permitted to be given by either Party to the other and not required by this Agreement to be given in writing may be so given by telephone, facsimile or email to the telephone numbers and email addresses set out below:

If to [the] Interconnection Customer:

Interconnection Customer: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____
Phone: _____
Fax: _____

If to [the] Transmission Provider:

Transmission Provider: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____
Phone: _____
Fax: _____

13.4 Designated Operating Representative

The Parties may also designate operating representatives to conduct the communications which may be necessary or convenient for the administration of this Agreement. This person will also serve as the point of contact with respect to operations and maintenance of the Party's facilities.

Interconnection Customer's Operating Representative:

Interconnection Customer: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____
Phone: _____
Fax: _____

Transmission Provider's Operating Representative:

Transmission Provider: _____
Attention: _____
Address: _____
City: _____
State: _____
Zip: _____
Phone: _____
Fax: _____

13.5 Changes to the Notice Information

Either Party may change this information by giving five *(5)* Business Days written notice prior to the effective date of the change.

Article 14. Signatures

In witness whereof, the Parties have caused this Agreement to be executed by their respective duly authorized representatives.

For [the] Transmission Provider

Attachment 1

Glossary of Terms

Affected System—An electric system other than [the] Transmission Provider's Transmission System that may be affected by the proposed interconnection.

Applicable Laws and Regulations—All duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

Applicable Reliability Standards—The requirements and guidelines of the Electric Reliability Organization and the Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.

Balancing Authority [shall mean]—[a]*A*n entity that integrates resource plans ahead of time, maintains demand and resource balance within a Balancing Authority Area, and supports interconnection frequency in real time.

Balancing Authority Area [shall mean]—[t]*T*he collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.

Business Day—Monday through Friday, excluding Federal Holidays.

Default—The failure of a breaching Party to cure its breach under the Small Generator Interconnection Agreement.

Distribution System—[The] Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which Distribution Systems operate differ among areas.

Distribution Upgrades—The additions, modifications, and upgrades to [the] Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Small Generating Facility and render the transmission service necessary to effect [the] Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Good Utility Practice—Any of the practices, methods and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods and acts which, in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Governmental Authority—Any federal, state, local or other governmental regulatory or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, police, or taxing authority or power; provided, however, that such term does not include [the] Interconnection Customer, the Interconnection Provider, or any Affiliate thereof.

Interconnection Customer—Any entity, including [the] Transmission Provider, the Transmission Owner or any of the affiliates or subsidiaries of either, that proposes to interconnect its Small Generating Facility with [the] Transmission Provider's Transmission System.

Interconnection Facilities—[The] Transmission Provider's Interconnection Facilities and [the] Interconnection Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Small Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Small Generating Facility to [the] Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades or Network Upgrades.

Interconnection Request—[The] Interconnection Customer's request, in accordance with the Tariff, to interconnect a new Small Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics of, an existing Small Generating Facility that is interconnected with [the] Transmission Provider's Transmission System.

Material Modification—A modification that has a material impact on the cost or timing of any Interconnection Request with a later queue priority date.

Network Upgrades—Additions, modifications, and upgrades to [the] Transmission Provider's Transmission System required at or beyond the point at which the Small Generating Facility interconnects with [the] Transmission Provider's Transmission System to accommodate the interconnection of the Small Generating Facility with [the] Transmission Provider's Transmission System. Network Upgrades do not include Distribution Upgrades.

Operating Requirements—Any operating and technical requirements that may be applicable due to Regional Transmission Organization, Independent System Operator, Balancing Authority Area, or Transmission Provider's requirements, including those set forth in the Small Generator Interconnection Agreement.

Party or Parties—[The] Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Point of Interconnection—The point where the Interconnection Facilities connect with [the] Transmission Provider's Transmission System.

Reasonable Efforts—With respect to an action required to be attempted or taken by a Party under the Small Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.

Small Generating Facility—[The] Interconnection Customer's device for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include [the] Interconnection Customer's Interconnection Facilities.

Tariff—[The] Transmission Provider or Affected System's Tariff through which open access transmission service and Interconnection Service are offered, as filed with the FERC, and as amended or supplemented from time to time, or any successor tariff.

Transmission Owner—The entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Small Generator Interconnection Agreement to the extent necessary.

Transmission Provider—The public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from [the] Transmission Provider.

Transmission System—The facilities owned, controlled or operated by [the] Transmission Provider or the Transmission Owner that are used to provide transmission service under the Tariff.

Upgrades—The required additions and modifications to [the] Transmission Provider's Transmission System at or beyond the Point of Interconnection. Upgrades may

be Network Upgrades or Distribution Upgrades. Upgrades do not include Interconnection Facilities.

Attachment 2

Description and Costs of the Small Generating Facility, Interconnection Facilities, and Metering Equipment

Equipment, including the Small Generating Facility, Interconnection Facilities, and metering equipment shall be itemized and identified as being owned by [the] Interconnection Customer, [the] Transmission Provider, or the Transmission Owner. [The] Transmission Provider will provide a best estimate itemized cost, including overheads, of its Interconnection Facilities and metering equipment, and a best estimate itemized cost of the annual operation and maintenance expenses associated with its Interconnection Facilities and metering equipment.

Attachment 3

One-Line Diagram Depicting the Small Generating Facility, Interconnection Facilities, Metering Equipment, and Upgrades

Attachment 5

Additional Operating Requirements for [the] Transmission Provider's Transmission System and Affected Systems Needed To Support [the] Interconnection Customer's Needs

[The] Transmission Provider shall also provide requirements that must be met by [the] Interconnection Customer prior to initiating parallel operation with [the] Transmission Provider's Transmission System.

Attachment 6

Transmission Provider's Description of Its Upgrades and Best Estimate of Upgrade Costs

[The] Transmission Provider shall describe Upgrades and provide an itemized best estimate of the cost, including overheads, of the Upgrades and annual operation and maintenance expenses associated with such Upgrades. [The] Transmission Provider shall functionalize Upgrade costs and annual expenses as either transmission or distribution related.

UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Improvements to Generator Interconnection Procedures and Agreements

Docket No. RM22–14–001

(Issued March 21, 2024)

CHRISTIE, Commissioner, *concurring:*

1. I concur with Order No. 2023–A,[1] which largely sustains the findings and determinations of its predecessor, Order No. 2023. I write separately to highlight two issues in the order, which I previously discussed in my concurrence to Order No. 2023.[2]

I. Enumerated Alternative Transmission Technologies (Section II.E.2.a.iii)

2. Order No. 2023–A sustains the determination in Order No. 2023 that transmission providers have the sole discretion in determining whether to use an alternative transmission technology, or grid-enhancing technology (GET), in the interconnection process. As I explained in my concurrence to Order No. 2023:

A GET may hold the potential of squeezing more juice—literally—out of the existing transmission grid. By increasing the capacity of the existing grid, a GET could reduce or even eliminate the need for the future construction of new transmission assets. So the potential for cost-savings from the use of GETs is too important to ignore.[3]

I emphasized, however, that GETs are *operational* applications, which should be deployed *when and where their efficacy can be proven,* and should not be mandated as planning assumptions or as potential substitutes for network upgrades caused by interconnection requests.[4] I also noted the different financial incentives at play: transmission owners will typically favor the construction of costly new transmission assets over deploying GETs, whereas companies who sell GETs and generation developers—particularly those in RTOs/ISOs that use participant funding to pay for the costs of network upgrades caused by the interconnecting customers—want GETs to be mandated.[5] Therefore, it was crucial to strike the right balance in the order.[6]

3. And Order No. 2023 did just that. Order No. 2023 required the evaluation of certain listed GETs in the interconnection studies process but did not require that a GET must be deployed as an alternative to a necessary network upgrade.[7] Further, and most importantly, Order No. 2023 made clear that the determination in each case was to be made at the *sole* discretion of the transmission provider (*i.e.,* RTO/ISOs or non-RTO transmission providers).[8] This is crucial because transmission providers are responsible for resolving the reliability issues caused by a particular interconnection, and there is a risk that a GET could fail, prompting a later, potentially more costly, network upgrade.[9] And, of course, for that subsequent reliability upgrade, consumers would likely get stuck with the bill, not the generation developer.

4. Order No. 2023–A rightly sustains the discretion that Order No. 2023 affords transmission providers in determining whether to use a GET. This level of discretion continues to be justified because:

(1) the transmission provider is responsible for determining whether using any of the enumerated alternative transmission technologies is an appropriate and reliable network upgrade that allows the interconnection customer to flow the output of its generating facility onto the transmission provider's transmission system

[8] *Id.* P 10.

[9] *Id.* P 11.

in a safe and reliable manner; (2) the requirement to make such a determination before allowing for the use of the enumerated alternative transmission technologies addresses concerns that their use may impinge on reliability, delay network upgrades instead of reducing the need for them or obviating the need for them altogether, or fail to address all transmission system issues that a traditional network upgrade would address; and (3) there is a need to avoid time-consuming delays and costly disputes or litigation over interconnection costs that could arise as a result of this reform.[10]

Order No. 2023–A also clarifies that transmission providers must explain their evaluation of GETs for feasibility, cost, and time savings as an alternative to a traditional network upgrade in their applicable study report(s), and their use determinations must be consistent with good utility practice, applicable reliability standards, and applicable laws and regulations.[11] Thus, as I observed, Order No. 2023 ''strikes the appropriate balance between requiring the evaluation of GETs, but not mandating the use of a GET in specific cases unless the transmission provider—and *only the transmission provider*—determines it would work from a real-world applicability standpoint.'' [12] And Order No. 2023–A preserves that balance.

II. Inappropriate Allocation of Certain Costs to Consumers

5. I remain concerned that study delay penalties on RTOs/ISOs and the costs of transmission provider heatmaps used as a tool for interconnection customers will be inappropriately allocated to consumers even though they both appear to provide much more of a benefit to generation developers than consumers.[13] I address each in turn.

A. Study Delay Penalties on RTO/ISOs (Section II.D.1.c.iii)

6. Order No. 2023–A sustains the imposition of penalties on transmission providers who miss study deadlines. As I expressed in my Order No. 2023 Concurrence, I have concerns about assessing study penalties on RTOs/ISOs, which are not-for-profit entities with no stockholders.[14]

7. Order No. 2023 left open the question of how RTOs/ISOs will recover those study delay penalties that are not automatically imposed on a transmission-owning member by explaining that RTOs/ISOs may submit an FPA section 205 filing to propose a cost recovery scheme for these penalties.[15] Unfortunately, Order No. 2023–A continues to punt this question, stating that it will address any future RTO/ISO section 205 proposal to recover the costs of study delay penalties on case-by-case basis.[16] I urge that any such RTO/ISO filing make protections to consumers paramount. In any scenario, the costs of penalties should not be imposed on retail customers, for the obvious reason they are not the cause of the penalties. I would add that the fact that Order No. 2023–A still fails to answer the fundamental question of ''who pays?'' illustrates the legal and policy flaws in the penalty scheme as applied to RTOs/ISOs. No doubt we will continue to hear more about this issue.

B. Cost of Heatmap (Section II.C.1.c)

8. In addition, although I support the heatmap requirement, I remain concerned over its potential funding through transmission rates.[17] Order No. 2023–A sustains the determination that transmission providers must bear the costs associated with their heatmaps or recover them through transmission rates to the extent they are recoverable consistent with Commission accounting and ratemaking policy, finding that interconnection customers are not the sole or primary beneficiaries of the heatmap requirement.[18]

9. I agree with this rationale only with respect to those regions in which transmission providers which do not use participant funding—*i.e.,* in those regions where the transmission provider's load ultimately reimburses (or more accurately, subsidizes) interconnection customers for their interconnection costs. As heatmaps serve to identify viable points of interconnection and improve queue efficiency, they help to reduce interconnection costs. Thus, *ceteris paribus,* heatmaps will indirectly reduce the magnitude of the reimbursements of interconnection costs paid by load to interconnection customers.

10. On the other hand, in regions in which the transmission provider uses participant funding—such as in PJM and MISO—I fail to see how interconnection customers are not the sole or primary beneficiaries of the heatmap requirement. In those regions, as interconnection customers are ultimately responsible for interconnection costs—with the exception of MISO's (questionable, in my opinion) assignment to load of 10% of the cost of network upgrades 345 kV and above—the savings that heatmaps provide would inure to generation developers. I question, therefore, whether the recovery of the cost of heatmaps from load in those regions would be just and reasonable. As I stated in my Order No. 2023 Concurrence:

Commission policy may dictate that interconnection queue efficiency benefits transmission customers; however, that should not result in the costs of a requirement that best benefits interconnection customers, and really *prospective* interconnection customers that may ultimately not seek to interconnect, being recovered from *consumers* through transmission rates *carte blanche.*[19]

For these reasons, I concur.

Mark C. Christie
Commissioner.

Part III

Consumer Product Safety Commission

16 CFR Parts 1112 and 1218

Safety Standard for Bassinets and Cradles; Proposed Rule

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Parts 1112 and 1218

[CPSC Docket No. CPSC–2010–0028]

Safety Standard for Bassinets and Cradles

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: In 2013, the United States Consumer Product Safety Commission (Commission or CPSC) published a safety standard for bassinets and cradles (bassinets/cradles). By statute, after promulgating a mandatory rule, the Commission must periodically review and revise rules for durable infant or toddler products to ensure that they provide the highest level of safety for such products that is feasible. Accordingly, this proposed rule (NPR) would revise the existing rule for bassinets/cradles to ensure that it addresses identified hazards and that these sleep products for young infants provide the highest level of safety feasible.

DATES: Submit comments by June 17, 2024.

ADDRESSES: Comments related to the Paperwork Reduction Act aspects of the marking, labeling, and instructional literature requirements of the NPR should be directed to the Office of Information and Regulatory Affairs, the Office of Management and Budget, Attn: CPSC Desk Officer, FAX: 202–395–6974, or emailed to: *oira_submission@omb.eop.gov.*

Submit all other comments, identified by Docket No. CPSC–2010–0028, by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at: *https://www.regulations.gov.* Follow the instructions for submitting comments. CPSC typically does not accept comments submitted by email, except through *www.regulations.gov.* CPSC encourages you to submit electronic comments by using the Federal eRulemaking Portal, as described above.

Mail/Hand Delivery/Courier/Confidential Written Submissions: Submit comments by mail, hand delivery, or courier to: Office of the Secretary, Consumer Product Safety Commission, 4330 East-West Highway, Bethesda, MD 20814; (301) 504–7479. If you wish to submit confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public, you may submit such comments by mail, hand delivery, or courier, or you may email them to: *cpsc-os@cpsc.gov.*

Instructions: All submissions must include the agency name and docket number. CPSC may post all comments without change, including any personal identifiers, contact information, or other personal information provided, to *https://www.regulations.gov.* Do not submit through this website: Confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If you wish to submit such information, please submit it according to the instructions for mail/hand delivery/courier/confidential written submissions.

Docket: For access to the docket to read background documents or comments received, go to: *https://www.regulations.gov,* and insert the docket number, CPSC–2010–0028, into the ''Search'' box, and follow the prompts.

FOR FURTHER INFORMATION CONTACT: Celestine T. Kish, Project Manager, Division of Human Factors, Directorate for Engineering Sciences, Consumer Product Safety Commission, 5 Research Place, Rockville, MD 20850; 301–987–2547; *ckish@cpsc.gov.*

SUPPLEMENTARY INFORMATION:

I. Background and Statutory Authority

Section 104(b) of the Consumer Product Safety Improvement Act of 2008 (CPSIA), 15 U.S.C. 2056a(b), requires the Commission to promulgate standards for durable infant or toddler products that are ''substantially the same as'' any applicable voluntary standards, or more stringent than the voluntary standards, if the Commission determines that more stringent requirements would further reduce the risk of injury associated with the product. 15 U.S.C. 2056a(b)(1)(B). Pursuant to section 104(b)(1) of the CPSIA, the Commission promulgated the current mandatory standard for bassinets and cradles (bassinets/cradles) in October 2013, *Safety Standard for Bassinets and Cradles,* codified at 16 CFR part 1218 (part 1218). 78 FR 63019 (Oct. 23, 2013).

The current bassinet/cradle rule found in part 1218 incorporates by reference the 2013 version of the bassinets/cradles voluntary standard, ASTM F2194–13, *Standard Consumer Safety Specification for Bassinets and Cradles* (ASTM F2194–13), with modifications to make the standard more stringent, to further reduce the risk of injury associated with bassinets/cradles.[1] Part 1218 modifies ASTM F2194–13 by: clarifying the scope of rule, exempting from the flatness requirement bassinets with seams less than 15 inches long, requiring a more stringent stability test, and requiring a smaller CAMI dummy [2] for testing. After issuing the mandatory standard in 2013, ASTM International (ASTM) published several revisions to ASTM F2194, including ASTM F2194–2013a, –2016, and –2016$^{\varepsilon 1}$. ASTM did not notify CPSC of these revisions, so the mandatory rule has not been updated since 2013. However, ASTM F2194–2016$^{\varepsilon 1}$ is substantially the same as the existing mandatory rule for bassinets/cradles codified in part 1218. 86 FR 33022, 33034–35 (June 3, 2021).

In June 2021, also pursuant to section 104 of the CPSIA, the Commission promulgated a *Safety Standard for Infant Sleep Products* (ISP Rule), codified at 16 CFR part 1236. 86 FR 33022 (June 23, 2021). The ISP Rule applies to products that are marketed or intended to provide a sleeping accommodation for infants up to five months of age that do not already meet the requirements of one of the following CPSC sleep standards: full-size cribs, non-full-size cribs, play yards, bedside sleepers, or bassinets/cradles. The ISP Rule requires that such infant sleep products, at a minimum, have a head-to-toe sleep surface angle of 10 degrees or less from horizontal, and meet the mandatory rule for bassinets/cradles, including the definition of a bassinet/cradle, which means that products must have a stand. Because of the ISP Rule, the bassinets/cradles rule provides a safe sleep baseline for infant sleep products.[3] The intent of the ISP Rule was to ensure that infants are placed to sleep on a firm, flat sleep surface and that caregivers are discouraged from

[1] Bassinets/cradles are durable infant or toddler products that, since 2013, require product registration cards and certificates based on testing by a CPSC-accepted third party laboratory. Section 104(f)(2)(L) of the CPSIA specifically identifies bassinets/cradles as durable infant or toddler products. The NPR proposes to add testing and labeling requirements that will not change the existing requirements for product registration cards and third party testing and certification. Additionally, although ASTM F2194–22$^{\varepsilon 1}$ is copyrighted, by permission of ASTM the voluntary standard can be viewed as a read-only document during the comment period at: *http://www.astm.org/cpsc.htm.*

[2] Designated ASTM testing device. CAMI (Civil Aeromedical Institute) dummies are based on child anthropometric data and come in multiple sizes. The CPSC mandatory safety standard for bassinets and cradles specifies the newborn size CAMI.

[3] After challenge, the United States Court of Appeals for the District of Columbia Circuit held that CPSC did not exceed its authority in promulgating the ISP Rule. *Finnbin, LLC* v. *CPSC,* 45 F.4th 127 (D.C. Cir. Aug. 2, 2022).

placing infant sleep products, including those bassinets that were lightweight and low to the ground, on unsafe surfaces, such as beds, couches, tables, and countertops.

In 2022, ASTM approved and published another revised voluntary standard for bassinets/cradles—ASTM F2194–22ε1—and notified CPSC of the revision on July 18, 2022. Revised ASTM F2194–22ε1 added a new product category—compact bassinets/cradles—and new requirements for these products, including stability requirements and marking and labeling requirements. Among its other provisions, ASTM F2194–22ε1 eliminated stands for compact bassinets/cradles, but also included new requirements for battery compartments, warnings, and instructional literature. CPSC issued a notice of availability (NOA) requesting comment on the revised ASTM standard. 87 FR 45303 (July 28, 2022).

Pursuant to the procedure outlined for revised voluntary standards in section 104(b)(4) of the CPSIA, 15 U.S.C. 2056a(b)(4), CPSC had 90 days from receiving notice of ASTM's 2022 revision to either allow the revised ASTM F2194 to become the new mandatory standard for bassinets/cradles, or to notify ASTM that the Commission determined that the revised ASTM standard did not improve the safety of bassinets/cradles and that CPSC was retaining the existing mandatory standard. On September 14, 2022, CPSC staff provided to the Commission a Staff Briefing Package: ASTM's Notice of a Revised Voluntary Standard for Bassinets and Cradles (2022 Bassinet Rejection Staff Briefing Package) which reviewed the comments from the NOA and assessed ASTM F2194–2ε1. Staff recommended that the Commission reject ASTM F2194–22ε1.[4]

In the 2022 Bassinet Rejection Staff Briefing Package, staff advised that the requirements for compact bassinets/cradles in ASTM F2194–22ε1 were less stringent than the requirements for traditional bassinets/cradles in the existing bassinets/cradles rule (part 1218), in part because ASTM F2194–22ε1 did not require that compact bassinets/cradles have a stand. Moreover, because the ISP Rule, part 1236, makes the bassinet rule, part 1218, the baseline for safe sleep requirements, amending part 1218 to allow compact bassinets that are low to the ground, as specified in ASTM F2194–22ε1, would also allow infant sleep products that were less stable and could be placed on unsafe surfaces, such as elevated and soft surfaces. Staff explained in the 2022 Bassinet Rejection Staff Briefing Package that consumers are likely to place smaller, lighter, and more portable compact bassinets in unsafe locations, such as elevated and soft surfaces (tables, counters, couches, and beds), and that CPSC's data demonstrate that infants have suffered serious head injuries and death when using these products in unsafe locations.[5] Additionally, staff advised that ASTM F2194–22ε1 added a new stability test that applies only to compact bassinets/cradles, and that this new stability test is less stringent than the stability test for regular-sized bassinets/cradles. Staff advised that infant sleep products without a stand present a risk of injury from falls that may lead to suffocation, head injuries, and/or death.

On September 23, 2022, the Commission voted 5–0 to determine that ASTM F2194–22ε1 did not improve the safety of bassinets and cradles or infant sleep products.[6] Staff notified ASTM of the Commission's rejection of ASTM F2194–22ε1 by letter on October 6, 2022.[7] Subsequent to the Commission's rejection of ASTM F2194–22ε1, staff continued to work with the ASTM F15.18 Bassinets and Cradles Subcommittee and the ASTM F15.18 Bassinet Elevated Surface and Data Task Group to revise the performance requirements for bassinets/cradles to set acceptable baseline safe sleep requirements for bassinets/cradles and for infant sleep products.

The Commission is now proposing to revise the existing rule for bassinets/cradles to address the hazards identified in this NPR and ensure that the mandatory bassinet/cradle regulation in part 1218 provides the highest level of safety feasible.[8] The Commission is authorized to issue this NPR pursuant section 104(b)(2) of the CPSIA, 15 U.S.C. 2056a(b)(2), which requires that after the Commission issues mandatory safety standards for durable infant or toddler products, the Commission shall periodically review and revise the standards to ensure that such standards provide the highest level of safety for such products that is feasible. Building on staff's continued work with ASTM on safe sleep requirements, the Commission is issuing this NPR to adopt ASTM F2194–22ε1 with modifications. The proposed modifications remove the compact bassinet category and address five hazard patterns associated with young infants placed in or on:

- Non-level bassinets/cradles (suffocation hazard);
- Bassinets/cradles on elevated and soft surfaces such as beds, couches, tables, and countertops (falls, suffocation, skull fractures, and asphyxia hazards);
- Mattresses that are non-flat, too thick, too soft, ill-fitting, or unattached to the bassinet/cradle (suffocation hazard);
- Bassinets/cradles with design issues, such as low to the ground or unstable, or with loose sidewalls and/or non-mesh sidewalls (containment, tipping, gap entrapment, and suffocation hazards); and
- Products with electrical problems such as smoke, shock, and battery leakage (shock and burn).

The Commission is also proposing to align the rule's warnings with ASTM F2194–22ε1 but not to include warnings related solely to compact bassinets. The NPR proposes to require warnings on all bassinets within the scope of the rule.

Staff provided a February 28, 2024, Memorandum, Staff's Draft Proposed Rule to Revise the Safety Standard for Bassinets and Cradles in support of the NPR, which is available at: *https://www.cpsc.gov/s3fs-public/Briefing-Package-Draft-Notice-of-Proposed-Rulemaking-Safety-Standard-for-Bassinets-and-Cradles.pdf?VersionId=l37iJVSjn32WnUTBDV27L6c37uJC4Iis.* This NPR contains an overview of staff's assessment and analysis, and the Commission's basis for issuing this NPR, which is also based on the 2022 Bassinet Rejection Staff Briefing Package. Based on the information and analysis in this NPR and the above staff packages, the Commission preliminarily determines that the proposed requirements are more stringent than the requirements in ASTM F2194–22ε1, would further reduce the risk of injury associated with products within the scope of the NPR, and would provide the highest level of safety that is feasible for such products. The Commission specifically seeks

[8] On March 20, 2024, the Commission voted (4–0) to publish this NPR, available at: *https://www.cpsc.gov/s3fs-public/Commission-Meeting-Minutes-NPR-Safety-Standard-for-Bassinets-and-Cradles.pdf?VersionId=GwpmKZ4S9sRrEiBmDFaEWn1fBre6eZ2r.*

comment on the feasibility of each proposed requirement, including technical feasibility.

II. The Product

A. Definition of Bassinet/Cradle

The existing mandatory standard defines a ''bassinet/cradle'' based on the incorporated section 3.1.1 of ASTM F2194–13, as a ''small bed designed primarily to provide sleeping accommodations for infants, supported by free standing legs, a stationary frame/stand, a wheeled base, a rocking base, or which can swing relative to a stationary base.'' The definition also requires that while a bassinet/cradle is in a resting, non-rocking, or swinging position, ''a bassinet/cradle is intended to have a sleep surface less than or equal to 10° from horizontal.''

ASTM F2194–22$^{\varepsilon 1}$ introduced a new ''compact bassinet'' product category, defined as ''a bassinet/cradle having a distance of less than 6.0 inches (152.4 mm) between the lowest point of the underside of the sleep surface support and the product support surface (floor).'' In the 2022 Bassinet Rejection Staff Briefing Package, staff assessed the compact bassinet category and advised the Commission that including compact bassinets/cradles within the scope of the voluntary standard, which contain product characteristics that the Commission specifically stated in the ISP Rule were not safe for infant sleep, and allowing a less-stringent stability test for these products, contradicts the Commission's safe sleep goals in part 1218 and in the ISP Rule.

The Commission now proposes to amend part 1218 to incorporate ASTM F2194–22$^{\varepsilon 1}$ by reference, but with modifications that exclude from the mandatory rule ''compact bassinets'' and associated requirements. As described in section V of this preamble, the modifications in the NPR further clarify the products within the scope of the rule and seek to enhance the safety requirements in part 1218, and thus also the minimum safe sleep requirements in the ISP Rule.

B. Scope of Products Within the NPR

The NPR would apply to: (1) bassinets and cradles; (2) combination products in bassinet or cradle mode, including play yards, bedside sleepers, strollers, and cradle swings that have a bassinet or cradle mode; (3) play yard and stroller bassinet accessories, when used separately from the play yard or stroller; (4) small bassinets, sometimes marketed as ''travel bassinets'' or ''floor bassinets,'' including both items with rigid frames and with soft sides; (5) Moses baskets, sold with or without a stand; (6) travel bassinets, outdoor bassinets, and ''play pens'' that do not meet the side height requirements of the mandatory play yard standard and are marketed for sleep; and (7) after-market bassinet mattresses.[9]

Commonly, bassinets have multiple-use modes and therefore fall within the scope of multiple CPSC regulations, particularly the standard for hand-held infant carriers in 16 CFR part 1225, and/or the standard for infant sleep products in 16 CFR part 1236. Combination products must meet the bassinet standard when in the bassinet mode. All multi-mode products, as sold, including stroller bassinets, play yard bassinets, and Moses baskets, would need to meet the requirements of a revised rule, regardless of whether the product is sold with or without a stand. This means that stroller and play yard bassinets marketed for use without the stand, or that can be foreseeably used without the stand, would need to meet the requirements of a final rule.

Part 1218 requires bassinets to be sold with a mattress and includes requirements for these mattresses and original equipment manufacturer (OEM) replacements that are equivalent in dimensions and specifications to the mattress provided with the original product. This NPR proposes also to include after-market bassinet mattresses within the scope of the rule. After-market bassinet mattresses are sold separately from the bassinet and are typically small oval or rectangular mattresses marketed to fit a bassinet, including products marketed to fit a bassinet accessory product to a play yard or stroller. OEM replacement mattresses are, and have always been, included in part 1218 and are not considered after-market mattresses. The NPR also includes products marketed as ''mattress toppers'' as a type of after-market bassinet mattress.

[9] Several related products are out of scope of this NPR. A few products marketed as ''bassinets'' have relatively high side rails, rigid sides, and a distance between the top rail and the sleep surface of at least 22 inches. Some of these products are marketed as compliant with the mandatory safety standard for non-full-size cribs and play yards. These products may be within the scope of the mandatory standard for non-full-size cribs and play yards specified in 16 CFR part 1220, rather than this rule, but the performance requirements of the two standards are very similar. Moreover, hospital bassinets are medical devices regulated by the Food and Drug Administration (FDA) and are not within the scope of this rule. See 21 CFR 880.5145 ''Medical bassinet.'' Finally, thin mattress protectors and covers, such as waterproof mattress covers, that cannot be used as a standalone mattress, are not within the scope of this proposed rule.

C. Market Description

As discussed in section VIII of this preamble, staff estimates the annual sales of new bassinets/cradles, including items with a bassinet mode or attachment, to be approximately 3.1 million units per year in the United States. Staff estimates the annual U.S. sales of used bassinets/cradles to be 500,000 units per year, and the annual sales of new after-market bassinet mattresses to be 680,000 units per year.

Prices for traditional bassinets range from under $50 to more than $1,500, with most products in the $50 to $125 range. Prices for cradles range from $100 to more than $1,000, with most products in the $100 to $200 range. Solid hardwood cradles are available for more than $1,000. Combination bedside sleeper/bassinets typically sell for $75 to more than $600, with most products in the $125 to $200 range. Bassinet attachments to play yards are usually not priced or sold separately. Some stroller bassinet attachments are sold separately, with most such products in the $100 to $200 range. Play yard and stroller bassinet attachments are designed to attach to a specific model or set of models from one manufacturer, and/or to a stand sold separately by that manufacturer. The stands typically sell for $125 to $175. Prices for after-market bassinet mattresses range from $20 to $180, with most products in the $30 to $40 range.

Bassinets do not have a single, best-selling size, price range, or set of features. The wide range of prices and features reflect that parents and other caregivers buy bassinets for different purposes, including but not limited to as primary sleep space or for occasional use, and as a permanent piece of nursery furniture or an easily portable sleep space. With approximately 3.1 million new bassinets sold per year, including items such as bedside sleepers, play yards, and strollers with a bassinet mode, at an average price of approximately $100 per unit, the total U.S. bassinet market is approximately $310 million dollars in sales per year. This total does not include the market for used items. At an estimated used price of $40, based on observed prices of used bassinets on Ebay and Mercari as a percentage of original retail prices, the used market represents approximately $20 million dollars in sales per year. Staff estimates annual unit sales of new after-market bassinet mattresses to be 680,000 units, with a market of $23.8 million per year.

Many manufacturers and importers, as well as foreign direct shippers, supply bassinets and cradles to the U.S. market. In March 2023, CPSC staff identified more than 120 suppliers, including suppliers that sell play yards or strollers with bassinet attachments. The Juvenile Product Manufacturers Association (JPMA) currently has 22 member companies that are certified for bassinets/cradles. Bassinets and cradles are available from online general retail sites, online baby product sites, and brick and mortar general retail stores, including ''big box'' stores. Additionally, hundreds of suppliers, including importers and U.S. based hand crafters, supply after-market bassinet mattresses, which are sold almost exclusively online.

III. Incident Data and Hazard Patterns

Staff searched two CPSC-maintained databases to identify incidents and hazard patterns addressed in this NPR that are associated with bassinets and cradles: the Consumer Product Safety Risk Management System (CPSRMS) [10] [11] and the National Electronic Injury Surveillance System (NEISS).[12] From these sources, for this NPR staff identified seven fatalities and 13 injuries related to bassinets/cradles from January 1, 2017, through December 31, 2022. CPSC staff is also aware of 182 non-injury incidents from January 1, 2021, through December 31, 2022. Staff identified the following hazard patterns from this data.

A. Products Not Sitting Level

Two deaths, three non-emergency department (ED)-treated injury, and 95 of the 182 non-injury product-related incident reports describe a bassinet or cradle not sitting level. The narratives describe the products as non-level, leaning forward or to one side, and having legs or sides with uneven heights. A bassinet not sitting level creates a hazardous situation where an infant is more likely to roll into a compromising position as described below, whether the infant is developmentally capable of rolling or not, thereby posing a risk of asphyxia/suffocation. The fatal incidents involve infants rolling to the side, often into the mesh/siding of the bassinet:

- In CPSC In-Depth Investigation (IDI) [13] 200211HCC3248, a 2-month-old male was found unresponsive in his bassinet after moving into a compromising position where his nose was positioned adjacent to a crease on the right side of the bassinet. The bassinet was not level, and the edge of an adult bed was protruding into the mesh right sidewall of the bassinet.
- In IDI 190610CCC3431, a 1-month-old male was found unresponsive in his bassinet after a non-level sleep surface allowed the victim to roll into a compromising position in the presence of excess bedding.

According to the American Academy of Pediatrics (AAP), infants should be placed to sleep in a supine position (on their back) on a firm, flat, level surface without soft bedding in the sleep setting.[14] [15] Positional asphyxia is a type of asphyxia associated with abnormal body position, where the position of the subject compromises adequate breathing.[16] [17] [18] Infants under 12 months of age are considered at risk of positional asphyxia, but infants 2 to 6 months of age, premature infants, and infants who are born as a set of multiples are particularly vulnerable and at highest risk because they may be developmentally capable of moving around in the sleep environment and moving into a vulnerable situation but do not yet have the physical capability to extricate themselves from a hazardous situation.[19] [20] [21] [22] [23] [24]

An infant can suffocate/asphyxiate against anything that partially or fully obstructs the nose and mouth and prevents breathing.[25] Once an infant's airflow is compromised, decreased levels of oxygen in the blood can further impair the infant's ability to respond to the situation. If an infant cannot respond, a feedback loop of decreased heart and respiration rate develops that can eventually lead to cessation of

[10] CPSRMS includes data primarily from three groups of sources: incident reports, death certificates, and in-depth follow-up investigation reports. A large portion of CPSRMS consists of incident reports from consumer complaints, media reports, medical examiner or coroner reports, retailer or manufacturer reports (incident reports received from a retailer or manufacturer involving a product they sell or make), safety advocacy groups, law firms, and Federal, State, or local authorities, among others. It also contains death certificates that CPSC purchases from all 50 states, based on selected external cause of death codes (ICD–10). The third major component of CPSRMS is the collection of in-depth follow-up investigation reports. Based on the incident reports, death certificates, or National Electronic Injury Surveillance System (NEISS) injury reports, CPSC Field staff conduct in-depth investigations (on-site, telephone, or online) of incidents, deaths, and injuries, which are then stored in CPSRMS.

[11] Staff searched all data coded under product code 1537 (Bassinets or Cradles). In addition, staff extracted data coded under 1513 (Playpens and Play Yards), 1529 (Portable Cribs), 1542 (Baby Mattresses or Pads), 1505/1522 (Baby Carriages/Strollers), 1519/1548 (Car Seats/Baby Carriers), 1502 (Baby Changing Tables), 1558 (Baby Bouncer Seats), and 1553 (Portable Baby Swings). Staff further screened data searched from this wide range of products using keywords to identify the potentially in-scope bassinet accessories or multi-mode products that may have been used as a bassinet at the time of the incident. Staff extracted data on January 13, 2023, and restricted age to 12 months and younger. Upon careful joint review with CPSC's Directorates for Engineering Sciences, Health Sciences, and Economics, staff considered many cases out-of-scope for the purposes of this NPR. For example, staff excluded from this analysis cases with Sudden Unexpected Infant Death (SUID) or other pre-existing medical conditions as official cause of death and no additional circumstantial information available.

[12] NEISS is the source of the injury estimates; it is a statistically valid injury surveillance system. NEISS injury data are gathered from EDs of about 100 hospitals, with 24-hour EDs and at least six beds, selected as a probability sample of all U.S. hospitals. The surveillance data gathered from the sample hospitals enable staff to make timely national estimates of the number of injuries associated with specific consumer products.

[13] IDIs are CPSC-generated investigation summaries of events surrounding product-related injuries or incidents. Based on victim/witness interviews, the reports provide details about incident sequence, human behavior, and product involvement.

breathing and may become fatal if uninterrupted.[26] [27] [28] [29] [30] The prognosis for hypoxic (experiencing a state of low levels of oxygen in body tissues) victims due to smothering depends primarily on the extent of oxygen deprivation, the duration of unconsciousness, and the speed at which cardiopulmonary resuscitation (CPR) is attempted relative to the timing of cardiac arrest. Rapid reversal of the hypoxic state is essential to prevent or limit the development of pulmonary and cerebral edema that can lead to serious injury or death. Thus, victims who are oxygen deprived for short durations or quickly receive cardiopulmonary resuscitation to reestablish air flow have the most favorable clinical outcomes.

Because the brain is the organ in the body most sensitive to oxygen deprivation, a period of oxygen deprivation of as short as three minutes can lead to a wide range of serious injuries. The severity of oxygen deprivation ultimately governs the infant's chance for survival and the degree of neurological damage. The extent of injury is directly related to the duration and magnitude of hypoxia. Inadequate supply of oxygen to the brain can lead to loss of consciousness, cardiac arrest, and death. Victims who are rescued from oxygen deprivation of less than four minutes can still suffer a wide range of serious injuries and lasting neurological issues, including delays to reach milestones, paralysis, sensory disturbances, seizures, cognitive and memory deficits, and neuropsychological problems.[31] [32] [33]

Patients who survive cardiac arrest can remain in a coma for various periods and some may remain in a persistent vegetative state. Patients who survive prolonged anoxic episodes require a multidisciplinary rehabilitation that may include speech therapy, physical therapy, and/or prolonged specialized care inside or outside of the home, with the level of care dependent on the severity of the injury.

B. Bassinet Mattresses and Mattress Supports

Mattresses that are not flat (*e.g.,* bent, warped, sagging, with bumps, bulges, or dips) or not well-fitting, or mattress boards that are bent, warped, pop out of place, or provide little or no support, or that have bars (that support the mattress boards) that are broken or not staying in place, can lead to an uneven sleep surface, putting the infant at risk of asphyxia/suffocation. Staff illustratively identified two deaths, one ED visit, one non-ED injury, and 75 of the 182 non-injury product-related incidents that demonstrate this hazard. These non-injury incidents could have resulted in asphyxiation/suffocation if someone had not intervened to rescue the occupant. One death associated with a bassinet mattress involved a depression in the middle of the mattress, while the other death involved poor fit of the mattress, which allowed enough space for the infant to get wedged between the mattress and the sidewall of the bassinet.

- In IDI 220804HCC1109, a 3-month-old male was found unresponsive in a concave depression in the center of a bassinet.
- In IDI 210824HCC1792, a 3-month-old female was found prone wedged in a gap between the bassinet mattress and bassinet frame under a pillow.

Any object that obstructs an infant's airway, including an overly soft mattress, can lead to serious injury or death. This category includes a bassinet that was subject to a CPSC safety recall because the mattress support was disengaging, posing fall and entrapment hazards.[34]

C. Structural Integrity/Quality

Products with insufficient structural robustness (including components of the bassinet/cradle that reportedly break or crack; hardware coming loose; and stitching coming undone) can also increase the potential for infants to get into a compromising position, increasing the risk of asphyxiation/suffocation. Staff identified one reported hospitalization (laceration injury), one reported ED visit (broken metal piece injured infant), and seven of the 182 non-injury product-related incidents that demonstrate this hazard pattern.

[34] DaVinci Recalls Bassinets Due to Fall and Entrapment Hazards (Recall Alert) | *CPSC.gov*.

D. Product Design

Product design can lead to safety concerns, including products being unstable (increasing risk of rolling into a compromising position and suffocating), products sitting too low to the ground (allowing easier access by older siblings and creating suffocation hazards), and products having non-mesh sidewalls that create a suffocation hazard. Staff identified two deaths, one non-ED injury, and three of the 182 non-injury product-related incident reports that demonstrate this hazard. One product reportedly was unstable, while another reported that the non-mesh sidewall was a suffocation hazard. The two deaths involved play yard accessories that were reportedly very low to the ground, allowing access by older siblings.

- In IDI 210929HCC1229, a 1-month-old female was found unresponsive in a bassinet placed on the floor with her 2-year-old sibling partially resting on top of her.
- In IDI 200713HCC2638, a 5-month-old female was found unresponsive in a bassinet placed on the floor with her 15-month-old sibling asleep on top of the victim.

E. Electrical Problems

Some bassinets contain battery-operated or plug-in powered features including sounds, lights, vibrations, and motorized rocking movements. Electrical problems with bassinets can result in smoke, shock, or battery leakage. Staff identified one hospitalization, one non-ED-treated injury, and two of the 182 non-injury product-related incident reports demonstrating this hazard pattern.

F. Falls From Elevated Heights

In the 2022 Bassinet Rejection Staff Briefing Package, staff of CPSC's Division of Human Factors, Directorate for Engineering Sciences (HF staff), examined the revisions made to ASTM F2194—22$^{\varepsilon 1}$ and expressed concern regarding the inclusion of ''compact bassinets/cradles'' and products with a ''compact bassinet/cradle mode'' within the scope of the voluntary standard. Specifically, HF staff concluded that products covered by the definition of a ''compact bassinets/cradle'' are significantly more likely to be placed onto a soft and/or elevated surface, such

as a table, sofa, countertop, or bed, and that the less stringent stability requirements for compact products make them more prone to tipping over.

In the same briefing package, staff identified one fatality and three injuries related to infants falling out of compact bassinets, where the product was placed on an elevated or soft surface, such as an adult bed, countertop, and couch. Of these three incidents, one incident (IDI 200940506) involved placement on a countertop, one (IDI 201234191) involved placement on a couch, and one (IDI 210246657) involved placement on a chair. The incidents involving placement on a countertop and couch resulted in head injuries. Staff is also aware of several additional incidents in which bassinets were placed on soft/elevated surfaces resulting in one fatal incident (IDI 2101050001), when a bassinet was placed on top of an adult bed, leaning against a nearby wall. Staff is also aware of an incident (IDI 211207687) in which an infant climbed out of a bassinet placed on an adult bed and fell off the bed. Further, customer reviews of various compact bassinets indicate use in/on mattresses, sofas, tables, and countertops.

G. National Estimates From NEISS

Based on NEISS data, staff estimates 3,500 injuries (sample size=160, coefficient of variation=0.23) related to bassinets and cradles were treated in U.S. hospital emergency departments over a five-year period from 2017 through 2021. Of the 160 sample cases, four incidents were fatal. About 59 percent of the injuries involved infants 5 months of age or younger and about 89 percent involved infants 8 months or younger. Forty-one percent of the injured infants were male, while 59 percent were female. The most commonly occurring ED-treated injuries related to bassinets and cradles were falls and interaction with other children.

- Falls (52 percent): the majority of reports did not specify the manner or cause of the fall. An additional 5 percent indicated that the infant had been dropped, and another 2 percent indicated that the infant had climbed out of the bassinet/cradle and fallen.
- Interaction with other children (24 percent): many of the reports involved siblings or other young children pulling/tipping the bassinet over, tripping on the bassinet and tipping it over, attempting to pull/lift an infant out of the bassinet, or climbing into the bassinet to be with the infant. These incidents are usually associated with infants falling out of the product. A few scenarios described infants sustaining contusions/lacerations from older children striking/biting them.

Sixty-nine percent of reported injuries were to the infant's head, while 9 percent were to the infant's face. Seven percent of reported injuries did not state the injury location. Injury types include internal organs (58 percent) and fractures (10 percent), among others. Regarding patient disposition, 82 percent were treated and released, 14 percent were admitted to the hospital or transferred to another hospital, and 2 percent died from their injuries.

H. Availability of Incident Data

Upon publication of this NPR in the **Federal Register,** CPSC will make available for review and comment the CPSRMS and NEISS incident reports relied upon and discussed in this NPR, to the extent allowed by applicable law, along with the associated IDIs. The data will be made available by submitting a request at: *https://forms.office.com/g/Pvn3yPePPf.* You will then receive a website link to access the data at the email address you provided.

I. Bassinet/Cradle Recalls

From June 2012 through March 2023, the Office of Compliance and Field Operations conducted 10 recalls of bassinets, cradles, and related products as described in Table 1, including recalls of bassinets, cradles, and multi-modal products where the recall involved the bassinet mode. This summary includes recalls of Infant Sleep Products with flat sleep surfaces that must, pursuant to the ISP Rule, comply with 16 CFR part 1218, Safety Standard for Bassinets and Cradles, because such products are not subject to another mandatory safety standard for a sleep product. Not included in this recall summary are recalls of inclined infant sleep products and multi-modal products where the recall did not involve the bassinet mode, or after-market bassinet mattresses. The recalls involved products with risks of suffocation, entrapment, fall, and choking hazards and involved one reported death, two reported injuries, and 132 reported other incidents. Recalls affected approximately 396,500 units.

TABLE 1—SUMMARY OF BASSINET AND CRADLE RECALLS

Press release date	Firm	Hazard	Approximate number of recalled units/ product type [35]	Number of incidents (injuries & deaths) reported [35]	Press release No.
October 23, 2012	Dorel Juvenile Group	Suffocation	97,000 Bassinet	17 incidents (2 injuries, 0 deaths).	[36] 13–017
November 16, 2012	KidCo, Inc	Suffocation and Entrapment	220,000 Baby tent	6 incidents (0 injuries, 1 death).	[37] 13–043
January 15, 2013	Bugaboo Americas	Fall and choking	46,300 Carriage/stroller with removable carrycot bassinet.	58 incidents (0 injuries, 0 deaths).	[38] 13–092
March 27, 2013	Bugaboo Americas	Fall	9,200 Carriage/stroller with removable carrycot bassinet.	16 incidents (0 injuries, 0 deaths).	[39] 13–153
November 13, 2013	Dream on Me Inc	Fall	700 Cradle	2 incidents (0 injuries, 0 deaths).	[40] 14–019
March 3, 2015	Dream on Me Inc	Fall	13,000 Bassinet	1 incident (0 injuries, 0 deaths).	[41] 15–088
September 2, 2015	Sleeping Partners International Inc.	Fall	5,500 baskets and 800 stands Hand-held infant carrier and Bassinet.	0 incidents (0 injuries, 0 deaths).	[42] 15–230
January 18, 2018	Multipro Limited	Fall and Entrapment	1,000 Cradle	0 incidents (0 injuries, 0 deaths).	[43] 18–716
December 5, 2019	Bexco Enterprises, D/B/A DaVinci.	Fall	3,000 Bassinet	19 incidents (0 injuries, 0 deaths).	[44] 20–711
July 9, 2020	Bexco Enterprises, D/B/A DaVinci.	Fall and Entrapment	3,000 Bassinet	13 incidents (0 injuries, 0 deaths).	[45] 20–762

TABLE 1—SUMMARY OF BASSINET AND CRADLE RECALLS—Continued

Press release date	Firm	Hazard	Approximate number of recalled units/ product type [35]	Number of incidents (injuries & deaths) reported [35]	Press release No.
Total			[46] 396,500	132 incidents (2 injuries, 1 death).	10

[35] When the recall press release delineates the approximate number of recalled units, number of incidents, or number of injuries by country, this summary only includes the reported United States values.

[46] The Bexco Enterprises D/B/A DaVinci December 5, 2019 and July 9, 2020 recalls involve different hazards with the same products, and so the approximate number of recalled units are not counted twice in the total.

IV. Voluntary Standard Development

A. Description and Assessment of ASTM F2194–22ε1

ASTM F2194–22ε1 is the voluntary standard for bassinets/cradles, which includes the general requirements present in most durable infant or toddler product standards, such as restrictions related to lead in paint, small parts, hazardous sharp edges and points, wood parts, scissoring, shearing, or pinching, as well as performance and labeling requirements specific to bassinets/cradles, such as performance tests for static load and segmented mattresses. Compared to previous versions of the F2194 standard, ASTM F2194–22ε1 contains revisions to the scope, terminology, performance requirements, test methods, marking and labeling requirements, and instructional literature requirements for bassinets/cradles. Many of these changes relate to the introduction of compact bassinets/cradles. Tabs A and C of the 2022 Bassinet Rejection Staff Briefing Package provide staff's full description of ASTM F2194–22ε1 and detailed human factors and engineering assessments of the revised voluntary standard.

Based on staff's recommendation in the 2022 Bassinet Rejection Staff Briefing Package that elements of the revised standard decreased safety, the Commission voted to reject ASTM F2194–22ε1 and retain the existing mandatory standard in part 1218. The primary reason the Commission stated for rejecting ASTM F2194–22ε1 involved the addition of compact bassinets/cradles with legs shorter than six inches,[47] because caregivers are likely to place smaller and more portable compact bassinets in unsafe locations, such as elevated and soft surfaces (tables, counters, couches, and beds). CPSC's data demonstrate that infants have suffered serious head injuries and death when using small, portable products in unsafe locations. Moreover, ASTM F2194–22ε1 added a new stability test that applied only to compact bassinets/cradles that is less stringent than the stability test for regular bassinets/cradles. The Commission determined that, taken together, these additions decrease the safety of bassinets/cradles, as well as other infant sleep products subject to the bassinet standard.

B. Voluntary Standards Development Since September 2022

The ASTM subcommittee formed the F15.18 Bassinets Elevated Surface and Data Task Group (Task Group) to work with CPSC staff to develop performance requirements to address the hazards of consumers placing bassinets/cradles on elevated and/or soft surfaces. The Task Group met three times between November 2022 and February 2023 [48] [49] [50] to develop a proposal that all bassinets/cradles must meet either one of the following requirements:

1. The bassinet/cradle only fully supports infants and functions when the top rail is 16 inches or greater above the external floor with a minimum internal side height of 7.5 inches. Examples of ways to meet this requirement include:

(a) Bassinet collapses/fails when removed from the stand, so that it cannot be used when removed from the stand.

(b) Bassinet does not have a removable stand.

2. The smallest lateral dimension shall be equal to or greater than 24 inches, with a minimum internal side height of 7.5 inches.

CPSC staff assessed these proposed requirements developed by the ASTM task group, as follows:

Minimum 16-inch external side height requirement: CPSC staff assesses that a 16-inch external product side height is likely to be too low to the ground and to require the caregiver to squat or bend significantly to attend to the infant (Figure 1, first two images on the top left). For a variety of reasons, including to improve their posture while interacting with the baby, caregivers may choose to move the bassinet onto an elevated surface as shown in Figure 1, such as a countertop, dining table, coffee table, sofa, chair, or adult bed, despite this putting the infant at risk.

Figure 1 demonstrates a 16-inch-tall bassinet positioned on elevated surfaces. Even a 50th percentile female (height 64 inches [51]) would have to bend over considerably to access the child on the ground and thus staff assesses that caregivers are likely to use the bassinet in combination with a raised surface. Because of this likelihood, staff assesses that the minimum height of 16 inches may not be sufficient to discourage caregivers from using the bassinet on elevated surfaces.

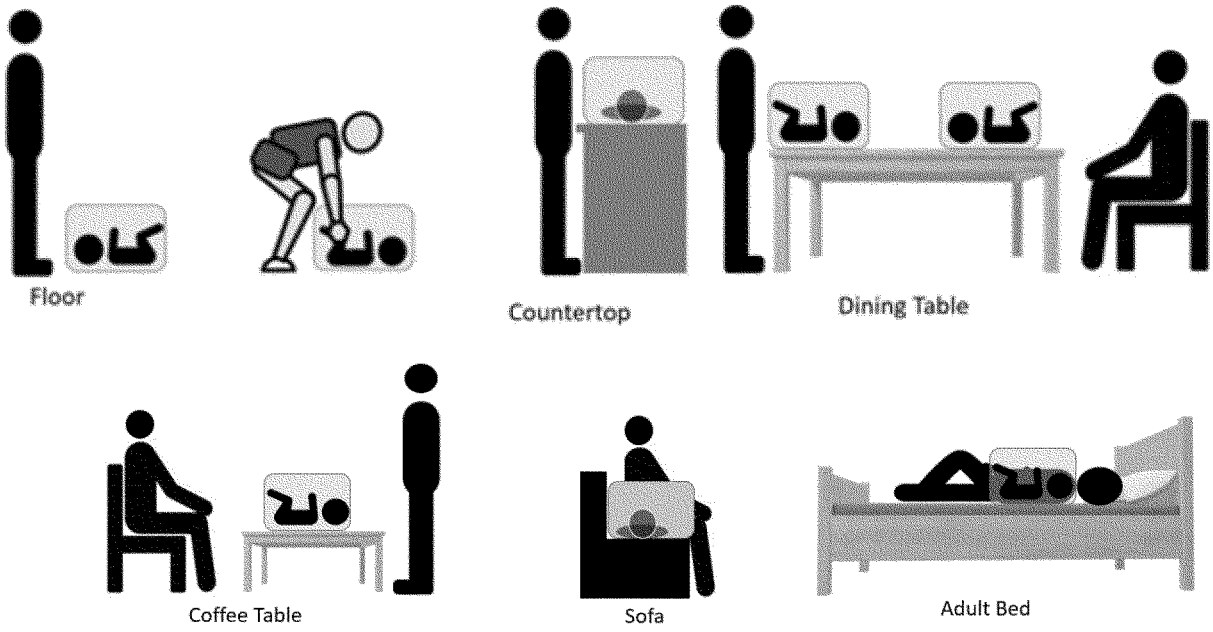

Figure 1: A 50th percentile female in relation to a 16-inch-tall bassinet on various surfaces.

Minimum 24-inch lateral dimension requirement: CPSC staff and the ASTM Bassinets Subcommittee also discussed a 24-inch lateral dimension as a means of deterring use of bassinets on soft and/or elevated surfaces. This dimension represents the upper end of typical sofa seat depth range (*i.e.,* distance from a typical couch seat bight to edge).[52] Based on discussions with the ASTM Bassinets Subcommittee, CPSC staff assesses that ''wide footprint'' bassinets/cradles are likely to somewhat visually discourage caregivers from placing bassinets/cradles on soft/elevated surfaces. Specifically, the ''wide footprint'' requirement (*i.e.,* all lateral dimensions greater than 24 inches) could reduce consumers' ability and likelihood to place products onto soft and/or elevated surfaces to a limited degree, as those products will be less portable and will either no longer fit onto soft/elevated surfaces or will take up enough space that caregivers may not wish to place the product onto said surfaces.

Figure 2 shows three bassinets of varying lateral dimensions on a sofa with a seat depth of approximately 20.25 inches. Staff assesses that the two bassinets with a lateral dimension greater than or equal to 24 inches (bottom two photos) are less likely to be placed on a narrow sofa because they hang partially off of the edge of the sofa, whereas the bassinet with a smaller lateral dimension (top photo) is more likely to be placed on a sofa, as it fits entirely on the sofa. However, sofas with a larger seat depth, such as ''deep-seated'' sofa depths which can extend to 36 inches, can accommodate placement of a wide bassinet.[53]

[52] The typical sofa seat depth is 21 inches to 24 inches. *https://blog.roomstogo.com/what-do-i-need-to-know-about-couch-depth/#:~:text=Outside%20depth%20ranges%20from%2031,sit%20with%20an%20upright%20posture.*

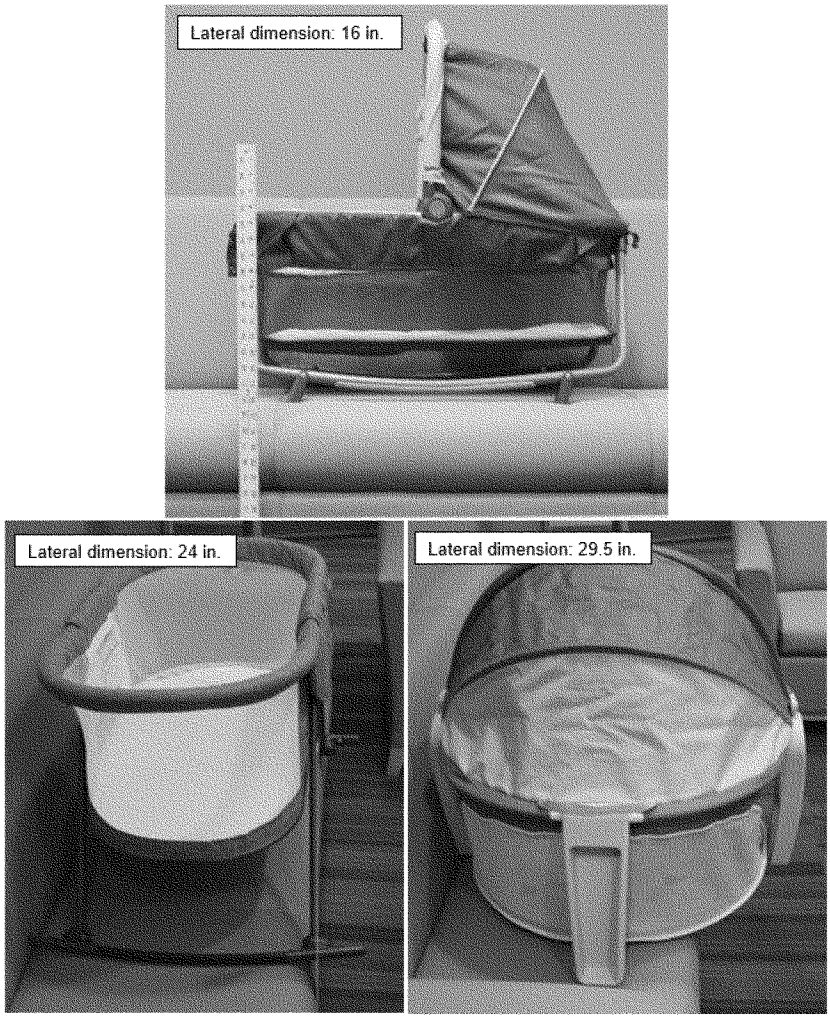

Figure 2: Comparison of overhang for three bassinets with different lateral dimensions on a sofa with a seat depth of approximately 20.25 inches Note that sofa depths can range to 26 inches.

Staff also analyzed the ability to place a wide footprint bassinet on traditional mattress sizes. Staff assesses that a full size mattress, a queen size mattress, and a king size mattress can accommodate a single adult caregiver and a 24-inch-wide bassinet. For two-caregiver households, a 24-inch footprint would take up too much space to allow for two adult occupants in a full size bed. For queen size beds, the bassinet would take up a significant amount of space but would still allow for two adult occupants. For king size beds, two parents can comfortably fit a 24-inch bassinet on the bed. Overall, staff assesses that a bassinet with a 24-inch-wide footprint is still likely to be used on full, queen, and king size adult beds with one or two caregivers (Figure 3). For this reason, staff assesses that the 24-inch footprint does not adequately address the hazard of bassinets being used on adult beds. Additionally, based on typical countertop, dining table, and coffee table dimensions, staff assesses that the 24-inch footprint alone does not deter consumers from placing bassinets on these elevated surfaces, because a bassinet with a 24-inch-wide footprint will likely fit onto many of these surfaces, and consumers would easily be able to reach into the product to place/retrieve the infant.[54]

[54] Standard countertop depth is 25.5 inches. Dining tables are generally 36″ wide at minimum. Coffee tables often exceed 24″ in length and width.

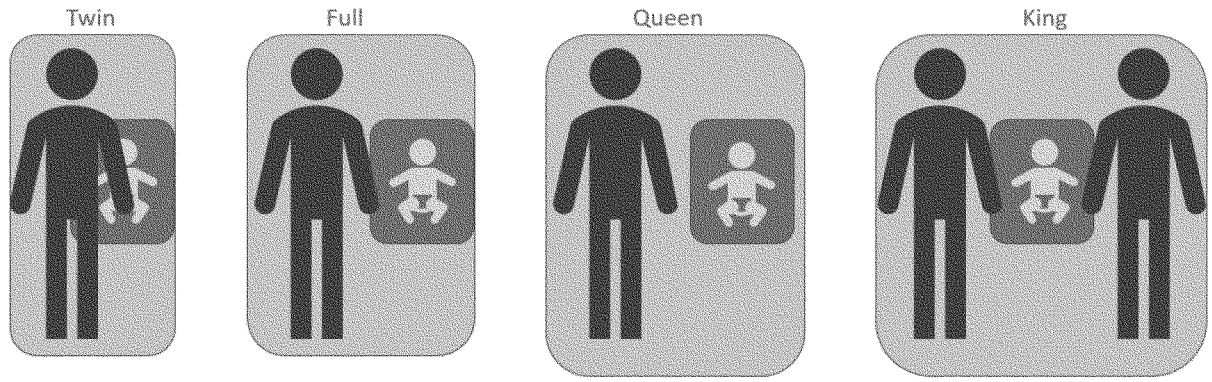

Figure 3: Scaled illustrations of a 24-inch-wide bassinet and a 50th percentile adult male (stature & shoulder breadth) on a twin (38"x75"), full (53"x75"), queen (60"x80"), and king (76"x80") size mattress.[55]

V. NPR Description and Explanation

A. ASTM Approaches Not Requiring Modification

The Commission preliminarily determines that three particular aspects of the current part 1218 rule, which are not proposed for revision in ASTM F2194–22$^{\varepsilon 1}$, remain adequate to address associated hazards and do not require modification: locking/latching mechanism (section 5.6 of ASTM F2194–22$^{\varepsilon 1}$, product finish-related requirements (sections 5.2 and 5.4 of ASTM F2194–22$^{\varepsilon 1}$), and the static load requirement to address mattress support issues (section 7.3 of ASTM F2194–22$^{\varepsilon 1}$).

ASTM developed locking/latching requirements for bassinets/cradles to address incidents associated with collapse of the product. After reviewing the reported incidents potentially implicating these requirements, none of which included evidence of injury, staff advises that the existing requirements address the hazard of the product collapsing or folding. Therefore, the Commission preliminarily concludes that the existing performance requirements address the hazard and do not require modification.

Currently, no provisions in part 1218 address rough product surfaces. Incidents regarding product finish, such as rough mesh surfaces and labels with sharp edges (addressed in Sections 5.2 and 5.4 of ASTM F2194—22$^{\varepsilon 1}$) were not widespread in the incident data; all but one infant in this type of reported incident received only non-medical treatment. The Commission will continue to monitor these incidents and, in particular, invites comment on how to address the rough mesh surface hazard.

Finally, the static load requirement in the existing part 1218, requiring the product to support up to three times the heaviest intended infant, adequately verifies that the bassinet/cradle sleep area is designed to hold and not break or create a hazardous condition when subject to the weight of a child. The NPR does not modify this test and proposes to apply it to all bassinets within the scope of the standard.

B. Mechanical and Electrical Hazards Addressed in the NPR

Based on incident data (described in section III of this preamble) and staff's engineering and human factors assessments, the NPR proposes revisions and additions to some of the performance and labeling requirements in ASTM F2194–22$^{\varepsilon 1}$ that would better address known hazards and provide the highest level of safety feasible for bassinets/cradles.

1. Requirements To Discourage Product Use on Unsafe Surfaces

To reduce the likelihood of consumers placing bassinets/cradles onto elevated and/or soft surfaces, the NPR proposes both of the following performance requirements and test methods.

a. The bassinet/cradle only fully supports infants and functions when the lowest portion of the top side/rail is 27 inches or greater above the product support surface (*i.e.,* floor) with a minimum internal side height of 7.5 inches. Examples that would meet this requirement include:

(1) Products with a removeable stand that collapses or fails when removed.

(2) Products that do not have a removeable stand.

b. The occupant support surface (*i.e.,* mattress) shall be at least 15 inches from the product support surface (*i.e.,* floor).

As shown in Figure 4, with these modifications caregivers can comfortably reach and attend to the infant in a 27-inch-tall bassinet located on the floor and will not need to elevate the bassinet. In fact, elevating a 27-inch-tall bassinet into a hazardous position makes it more difficult and inconvenient to reach the baby. Figure 4 demonstrates a 50th percentile female in relation to a bassinet with the proposed requirements on various elevated surfaces. These elevated surfaces are unlikely to be utilized due to caregivers' difficulty to reach the baby compared to their reach when the bassinet is located on the floor (Figure 4, first two images on the top left).

[55] The 50th percentile adult male (18–64) height is 69.64 inches and shoulder breadth is 19 inches (PeopleSize, Pro v 2.02)

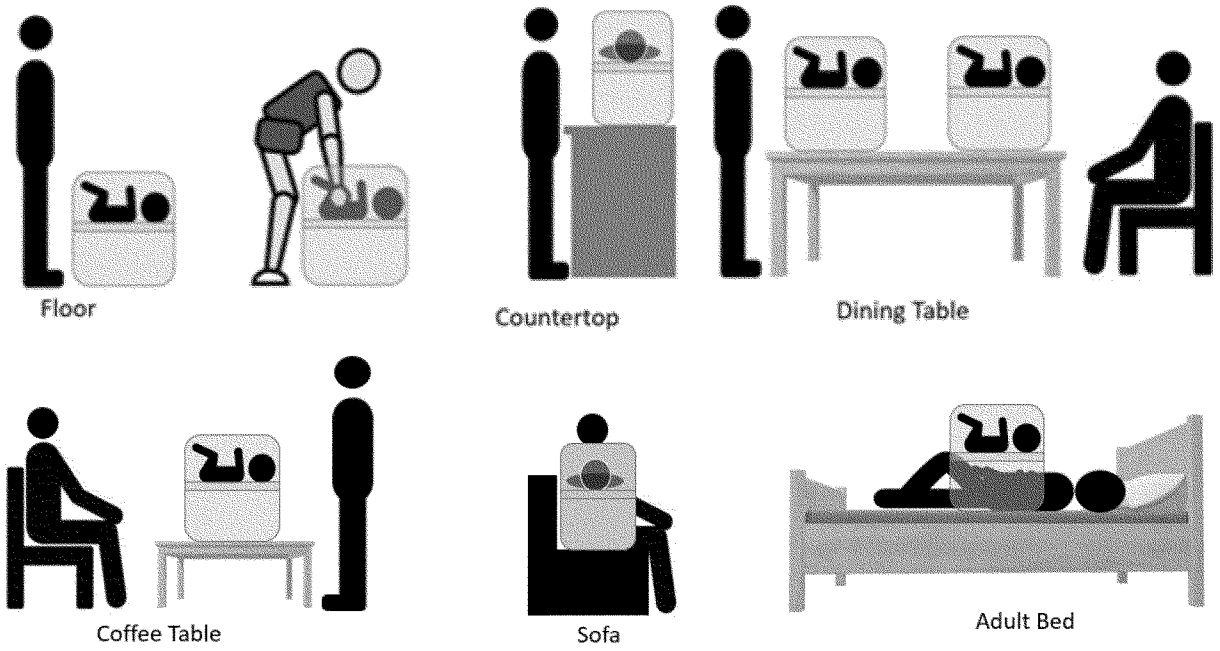

Figure 4: A 50th percentile female in relation to a bassinet with the proposed requirements on various surfaces.

While caregivers can easily reach into a 27-inch-tall bassinet when it is on the floor, they may have difficulty reaching their infant if the mattress is positioned too low to the ground (Figure 5); therefore, the combination of the two proposed dimensions would improve the safety of the bassinet by discouraging its use on elevated surfaces while making it more comfortable and convenient to use on the floor.

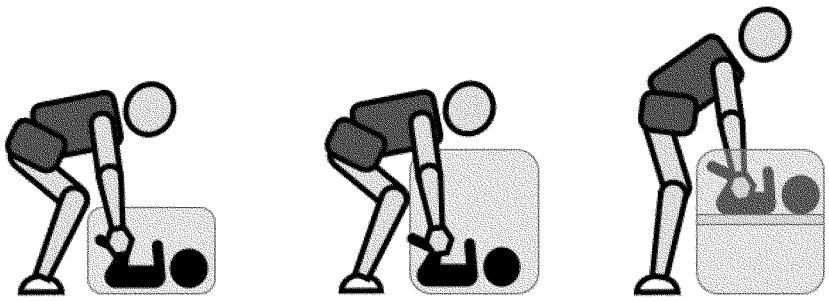

Figure 5: A 50th percentile female's reach to an infant positioned (a) 16-inch bassinet on the floor, (b) 27-inch bassinet on the floor, (c) 27-inch bassinet on the floor with a sleep surface 15-inch off the floor.

In the 2022 Bassinet Rejection Staff Briefing Package, staff expressed concern about ASTM's removal from the voluntary standard of the requirement for a bassinet to have a stand or base and the Commission rejected the revised standard that included ''compact bassinets.'' The requirements proposed in this NPR address CPSC's concerns regarding bedsharing and unsafe placement by requiring specific occupant sleep surface and side rail height requirements, while still subjecting products to the same stability requirements as bassinets with a traditional stand.

CPSC staff reviewed a variety of products (see Figure 6 for two examples) and determined that some products available to consumers already meet the 27-inch top rail height and 15-inch mattress height requirement. Therefore, implementation of this NPR requirement is feasible.

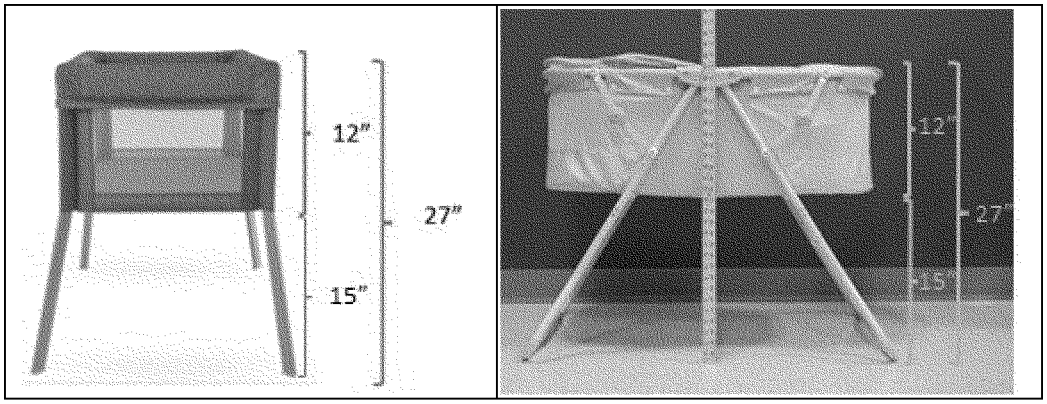

Figure 6. Example of bassinets that meet the proposed requirements

Regarding hazards associated with other children attempting to climb into the bassinet, staff advises that given children's propensity for climbing (*see* Staff Briefing Package for Clothing Storage Units [56]), a 27-inch side height is unlikely to dissuade children from attempting to climb into the product. However, setting a minimum side height taller than 27 inches would likely result in products being significantly less stable in the event of a child climbing them, and would not prevent children from climbing.[57] [58] [59] [60] [61] Incidents demonstrate toddlers' ability to climb on raised surfaces including cribs, showing that increasing the bassinet exterior side height to more than 27 inches would not effectively address sibling's access to the product.

Caregivers depend on infant sleep products to be safe places in which to leave an infant for sleep; accordingly, these products must be safe for infant sleep as sold. While these modifications, as written, would not necessarily require bassinets/cradles to have a stand, they would ensure that bassinets and cradles, including small portable products, are raised off the ground to discourage caregivers from placing them on elevated and soft surfaces such as beds and couches. The proposed requirements would thus work toward achieving the highest level of safety feasible for sleeping infants left to sleep unattended while in the product.

2. Requirements for Sidewall Rigidity

The current mandatory rule in part 1218 does not have a sidewall rigidity requirement. Many bassinets/cradles on the market have sidewalls constructed of fabric, foam, fiberfill, mesh, or cardboard, which can deflect downward, inward, and/or outward when subjected to a load. CPSC is concerned that bassinets with non-rigid sidewalls may permanently deform or collapse and not contain the infant if an external force is applied to the sidewall, such as when a sibling pulls on the sidewall of an occupied bassinet.

CPSC engineering staff considered whether the existing bassinet stability test, which simulates a 2-year-old pulling on the bassinet sidewall, could also be used to test adequate sidewall rigidity to contain an infant. To test this concept, staff conducted the stability test in ASTM F2194–13 on three non-rigid sided bassinets as shown in Figures 7–9.[62] Staff applied a 23-pound downward force and a five-pound outward force on the bassinets as specified in the stability test. The cardboard box bassinets bowed outward 3–5 inches (Figure 7b, 8b) during stability testing. The soft sided compact bassinet was not able to support the 23-pound load and collapsed more than 8 inches outward (Figure 9b). These tests demonstrate that bassinets with non-rigid sidewalls may permanently deform or collapse and not contain the infant if an external force is applied to the sidewall of an occupied bassinet, for instance by a sibling pulling on it.

[56] *https://www.cpsc.gov/s3fs-public/Final-Rule-Safety-Standrd-for-Clothing-Storage-Units.pdf?VersionId=X2prG3G0cqqngUwZh3rk01mkmFB40Gjf.*

[57] The incident data reported in section III of this preamble contains two climbing-associated deaths: an older sibling (15 months and two years old) climbed into the bassinet and laid on top of the infant inside, suffocating them. Older 1-year-olds are known to be capable of climbing on and off furniture without assistance.[57] Gross motor play and the use of climbers are dominant, starting at about 1½ years of age.[58] Two-year-old children especially enjoy climbing, and can climb steps, short ladders, and jungle gyms.[59] [60] Moreover, incident data reported to CPSC include numerous cases involving children climbing on furniture as well as cribs. For example, in an incident reported through NEISS (IDI 210108288), a two-year-old male climbed up on a nightstand and was climbing into baby crib. In another NEISS incident (IDI 200740286), a 22-month-old female climbed into her brother's crib. In another NEISS incident (IDI 200130999), the two-year-old girl climbed into a portable play yard or crib and bit her 15-month-old sister. In a fatal incident (IDI X19C0292A), a one-year-old male was put down for a nap in a room with his toddler brother. The toddler climbed into the crib with him with a pillow and a blanket.

[62] The laser line used to determine deflection is enhanced for visibility.

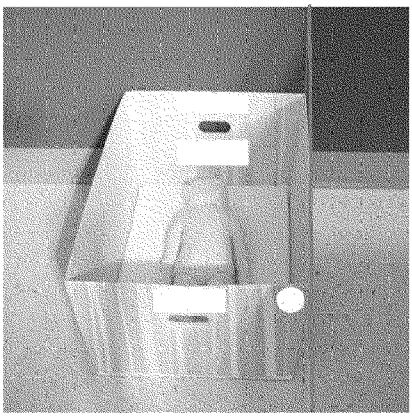

Figure 7a. **Cardboard compact bassinet unloaded**

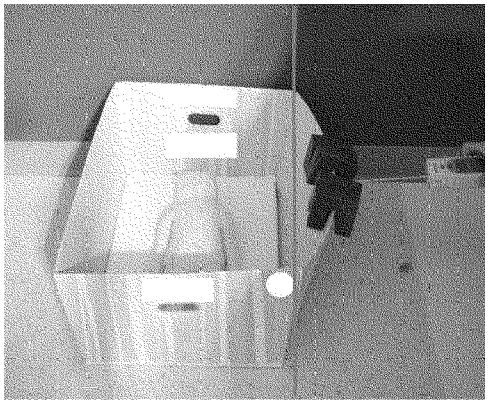

Deflection ~ 5 inches

Figure 7b. **Cardboard compact bassinet with 23 lb. downward load and 5 lb. horizontal force**

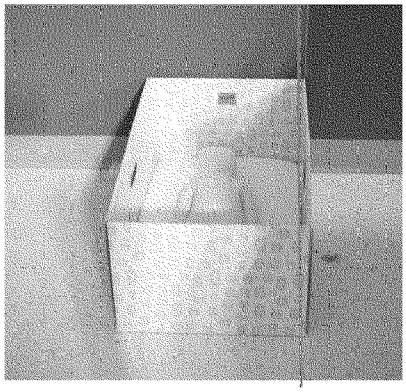

Figure 8a. **Cardboard compact bassinet unloaded**

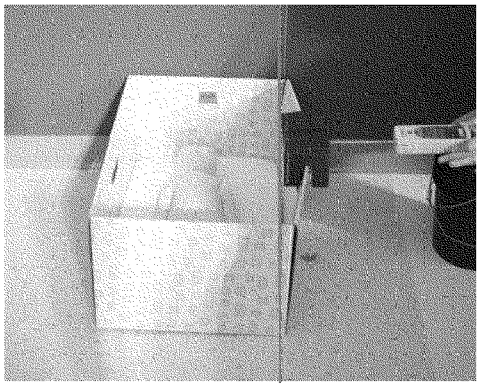

Deflection ~ 3 inches

Figure 8b. **Cardboard compact bassinet with 23 lb. downward load and 5 lb. horizontal force**

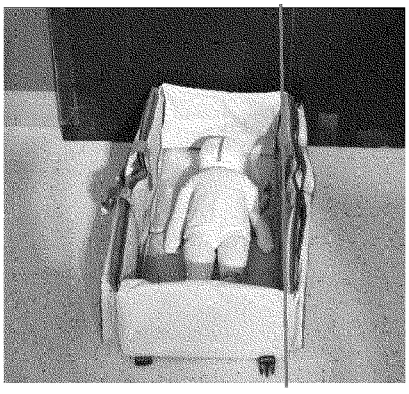

Figure 9a. **Soft sided compact bassinet unloaded**

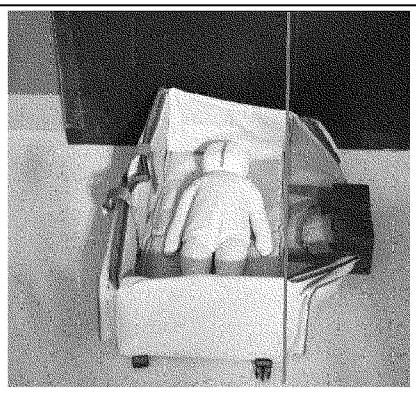

Deflection > 8 inches

Figure 9b. **Soft sided compact bassinet with 23 lb. on the sidewall.**

Staff next conducted this same stability test on rigid-sided bassinets, which did not deflect or deform during testing. Staff advises that 0.5 inch of deflection in any direction during the stability test allows for reasonable movement of rigid sidewalls to account for minor movements in fasteners in the construction of the product. Based on this testing, the NPR proposes two requirements. First, unlike ASTM F2194–22$^{\varepsilon 1}$, the NPR proposes to subject all bassinets/cradles to the stability requirement.[63] Second, the NPR proposes that during this stability test, sidewall deflection can also be measured, requiring that the sidewall shall not deflect in any direction more than 0.5 inches. These proposed modifications ensure bassinet/cradle stability and containment of the infant.

3. Requirements for Mattresses and Mattress Supports

a. Requirements for Sleep Surface Deflection/Firmness

The NPR proposes mattress firmness requirements consistent with the mandatory crib mattress requirements in 16 CFR part 1241 to address incidents of infant's face/head conforming to the sleep surface. The mandatory crib mattress rule requires a firmness test intended to prevent the hazard of positional asphyxia involving infants suffocating when face down in a soft mattress that can conform to an infant's face. The firmness test involves placing a test fixture, as shown below in Figure 10, level on the sleep surface of the mattress. The mattress must be sufficiently firm and flat to support the weight of the test fixture (approximately 11.5 lb.) so that the feeler arm does not make any contact with the surface of the mattress.

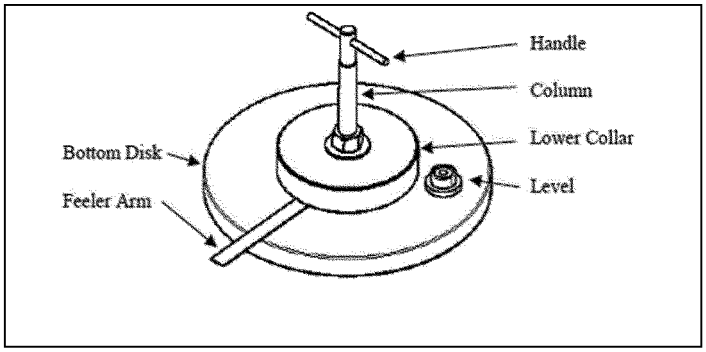

Figure 10. Mattress Firmness Test Fixture. Disc diameter = 203+/-1mm, thickness = 15+/-0.2 mm. Total weight of test fixture = 5200+/-20 g.

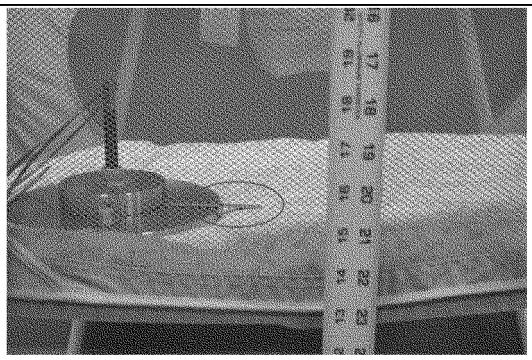
Staff tested two samples using the mattress firmness test fixture. Figure 11 shows the mattress firmness test fixture feeler arm touching the surface of the mattress, indicating that the mattress is too soft and fails the draft firmness requirement. Test results showed that some products failed the firmness test (feeler arm contacting the surface of the mattress) because the mattress was too soft (Figure 11).



FAILS

Figure 11. Firmness test on a soft mattress (FAIL)

[63] As explained in section I of this preamble, the ASTM F2194–22$^{\varepsilon 1}$ that the Commission has rejected created a new category of ''compact bassinets'' and subjected this category to a new, less stringent, stability test.

Accordingly, to verify that the bassinet sleep surface (mattress and/or support) is not too soft and does not form a concavity that can pose a positional asphyxia hazard to infants, the NPR proposes to include in part 1218 the same mattress firmness test as is found in the crib mattress rule.

b. Requirements for Structural Integrity of Bassinet Mattresses and Mattress Supports

Part 1218 currently specifies a static load requirement for the sleep enclosure of the product. Section 6.3 of ASTM F2194–13, Static Load, specifies that the product shall support the static load without causing any hazardous conditions as identified within Section 5 (General Requirements). The static load test (Section 7.3) consists of placing a 54-pound load or three times the manufacturer's recommended weight (whichever is greater) within 5 seconds on an aluminum block and maintain for 60 seconds. For play yard bassinets, the test is conducted in all four corners of the product.

The static load test verifies that the bassinet/cradle sleep area is designed to hold and not break or create a hazardous condition upon the weight of a child by requiring the product to support up to three times the heaviest intended occupant (95th percentile 5-month-old male (19.8 lb.)). Although staff advises that the static load requirement is adequate to address some of the mattress and/or support issues, the mattress firmness test (discussed in section V.B of this preamble) is an added verification of the flatness of the sleep surface (mattress and/or support), to further address these mattress/supports issues.

c. Requirements for After-Market Mattresses for Bassinets/Cradles

The crib mattress rule (part 1241) includes performance requirements for after-market mattresses but does not specifically identify bassinet/cradle mattresses as being included in the regulation. Instead, part 1218 establishes requirements for mattresses sold with bassinets/cradles (generally known as OEM mattresses.) CPSC is aware, however, of incidents that have arisen from consumer use of ill-fitting after-market mattresses. Based on the prominent availability and use of after-market bassinet/cradle mattresses, and the use of bassinets/cradles for infant sleep, the NPR proposes performance requirements for after-market bassinet mattresses to ensure the same level of safety as OEM bassinet/cradles mattresses and after-market mattresses for other infant sleep products.

Crib mattresses and bassinet/cradle mattresses, including after-market bassinet/cradle mattresses, share common hazard patterns associated with poorly fitting and overly soft mattresses. The mandatory crib mattress rule in part 1241 addresses similar hazards found in after-market play yard mattresses and non-full-size crib mattresses. Part 1241 requires such mattresses to meet the same performance requirements as the OEM mattress sold with the product, when tested with the product for which the after-market mattress is intended. In particular, these mattresses must have a minimum level of firmness (section V.B.3 of this preamble). Part 1241 already requires after-market mattresses intended for use in the bassinet attachment of a play yard to meet the provisions in the existing bassinet rule, part 1218, when tested with each bassinet/cradle brand and model in which the mattress is intended to be used. 16 CFR 1241.2(b)(5)(iv). Additionally, the crib mattress rule requires that after-market mattresses must be at least the same size as the OEM mattress or larger and must lay flat, must include a floor support structure that is at least as thick as the OEM mattress, and must include equivalent storage accommodations (such as a pouch for the product instruction manual). 16 CFR 1241.2(b)(4).

To reduce the risk of injury caused by poorly fitting and overly soft mattresses associated with after-market mattresses for bassinets/cradles, the NPR proposes to adopt the after-market requirements from the crib mattress rule into the bassinet/cradle mandatory standard.

4. Requirements for Bassinet Sleep Surface Angles

Minimum safe sleep requirements for young infants, particularly those 5 months old and younger, require that infants be placed to sleep on their backs on a firm, flat, sleep surface. As described in section III of the preamble, this avoids the hazard created by bassinets that are non-level—for example leaning forward or to one side, or with legs or sides with uneven heights—which could cause the infants to roll to the side, often into the mesh/siding of the bassinet/cradle before the infant is developmentally capable of rolling.

a. Requirement for Head-To-Toe Incline Angle

The definition of bassinet in part 1218 (based on ASTM F2194–13) states that ''[w]hile in a rest (non-rocking or swinging) position, a bassinet/cradle is intended to have a sleep surface less than or equal to 10° from horizontal.'' 16 CFR 1218.2(b)(1)(i) citing section 1.3 of ASTM F2194–13. The angle limitation in the definition is intended to ensure that the bassinet provides a safe, flat sleep surface. However, neither ASTM F2194—13 nor the revised ASTM F2194–22$^{\varepsilon 1}$ contain a test to measure the sleep surface incline to ensure that the sleep surface does not exceed 10 degrees from horizontal. The Commission's ISP Rule in part 1236 contains a test to measure the head-to-toe sleep surface angle. This test consists of placing a Hinged Weight Gauge–Infant (17.5 lb.) on the product and measuring the lengthwise incline angle along the upper torso/head area. This 10-degree head-to-toe safe sleep angle is supported in a report by Erin M. Mannen, Ph.D., the Biomechanical Analysis of Inclined Sleep Products—Final Report September 18, 2019.[64] Dr. Mannen's testing showed that angles greater than 20 degrees present a hazard that infants may move into a compromising position in the product from which they cannot self-rescue. Based on the results of Dr. Mannen's biomechanical study, ''fewer differences in muscle activity or lying posture were revealed at a 10-degree mattress incline compared to the zero-incline surface. Ten degrees is likely a safe incline for sleep on a crib mattress type of surface.'' The NPR proposes to remove the head-to-toe sleep surface angle statement from the definition of a bassinet, and instead to add a performance and test requirement for the 10-degree head-to-toe sleep surface angle limit, using the same incline test from the ISP Rule. This is an improvement to safety because it will ensure consistent and repeatable testing across test labs for all bassinets/cradles.

b. Side-to-Side Tilt Angle

Part 1218 specifies a side-to-side tilt angle of no more than 7 degrees for rocking bassinets/cradles when they are at rest (section 6.9.2 of ASTM F2194–13), but does not specify side-to-side tilt requirements for bassinets/cradles without a rocking function. On December 7, 2021, CPSC staff sent a letter[65] to the ASTM subcommittee

[64] The 10 degree incline angle requirement in the Infant Sleep Product Final Rule, available at: *https://www.cpsc.gov/s3fs-public/Final-Rule-Safety-Standard-for-Infant-Sleep-Products.pdf*, is based on findings in the 2019, Biomechanical Analysis of Inclined Sleep Products—Final Report 09.18.2019 by Erin M Mannen Ph.D., available at: *https://www.cpsc.gov/s3fs-public/Dr-Mannen-Study-FINAL-Report-09-18-2019_Redacted.corrected_0.pdf?g.Jao0IN_zU.TjiX4FeSUM3SPc3Zt_25.*

[65] Staff letter to Mr. Lewis, chair of ASTM F15.18 on Bassinets and Cradles, dated December 7, 2021. *https://www.cpsc.gov/s3fs-public/*

chair for bassinets/cradles regarding four fatal incidents (occurring from 2019 through 2021) involving bassinets with a cantilever design in which infants reportedly rolled into the side of the bassinet, or into a prone position. The cantilever design supports the bassinet by a leg/frame on one side of the product so that the suspended side without a support can be positioned over an adult bed. In the December 7, 2021 letter, CPSC staff stated concern with the then-current ASTM F2194–16$^{\varepsilon 1}$ allowance of a side-to-side 7-degree maximum tilt angle, because minimum safe sleep guidance requires infants be placed to sleep on a firm, flat surface.[66]

However, on February 14, 2023, ASTM proposed side-to-side tilt requirements in the voluntary standard for non-rocking bassinets/cradles stating that the bassinet sleep surface shall not exceed a side-to-side tilt angle of 7 degrees. This angle limit is based on the existing rocking bassinet/cradle rest angle requirement in section 6.9.2 of ASTM F2194–13. The test consists of two parts: simulating a five-month-old infant located against each side of the sleep surface, and then simulating a low weight newborn infant located against each side and the center of the sleep surface. The current side-to-side tilt angle for at rest rocking bassinets/cradles cannot exceed 7 degrees in either test. Based on this, ASTM's proposed modified test requirements for non-rocking bassinets/cradles provides the following:

(i) *Five-month-old infant.*—The Hinged Weight Gauge-Infant (17.4 lb.) is placed parallel to and contacting one of the lateral sidewalls of the bassinet/cradle, equidistant between both head and toe ends of the sleep surface. The side-to-side angle is measured on top of the Hinged Weight Gauge-Infant. The angle measurement is taken three times and then averaged. The test then is repeated on the other side of the sleep surface.

(ii) *Newborn infant.*—A 6 by 4 by 0.5-inch nominal thickness steel block weighing 3.3 lb. is placed parallel to and contacting one of the lateral sidewalls of the bassinet/cradle, equidistant between both head and toe ends of the sleep surface. The side-to-side angle is measured on top of the steel block. The angle measurement is taken three times and then averaged. The test then is repeated on the other side and in the geometrical center of the sleep surface.

CPSC staff has assessed ASTM's proposal. Based on incident data, cantilevered designed bassinets that have 7 degree or less side-to-side tilt angle[67] can still facilitate infants rolling before they are developmentally capable of rolling and present the potential for a suffocation hazard. CPSC staff conducted testing on 10 products with cantilevered designs (see Table 2 below), using the NPR proposed test. Four products, A, B, D, H, were associated with incidents that involved the infant rolling over into a compromising position. Fortunately, the caregiver was able to intervene in these cases before suffocation ensued. However, in one case, Product B, involved a fatality incident (IDI 200211HCC3248). Product H had the largest tilt angle (7.1 degrees) and product D had the smallest tilt angle (1.2 degrees) of models associated with incidents.

TABLE 2—BASSINET TILT TESTING RESULTS

Product ID	Height setting (note 1)	Max side-to-side tilt angle [degrees]
A (Note 2)	Lowest (mattress upper position)	5.6
	Highest (mattress upper position)	6.3
	Lowest (mattress lower position)	6.1
	Highest (mattress lower position)	5.7
B	Lowest	3.3
	Highest	1.8
C	Lowest	3.9
	Highest	4.4
D	Lowest	1.8
	Highest	1.2
E	Lowest	2.2
	Highest	2.5
F	Lowest	3.9
	Highest	3.5
G	Lowest	2.7
	Highest	2.7
H	Lowest	6.0
	Highest	7.1
I	Lowest	1.4
	Highest	1.0
J	Lowest	2.5
	Highest	3.0

Notes:
(1) All products had several height settings. Staff tested each sample on the highest and lowest height setting.
(2) Product A has several height settings as well as two mattress positioning settings. Staff tested on the highest and lowest height setting for each of the two mattress positioning settings.

BassinetwcantileverltrAttachedSpreadsheet-120821.pdf?VersionId=fyFz2Ac9HFDyp0yWa83WphujK.KJHEVS.

[66] After staff's further review of bassinet-related data, the tilt hazard pattern is evidenced in the 2 deaths, 3 injuries, and 95 non-injury incidents summarized in section III of this preamble.

[67] CPSC proposes that bassinets/cradles have two different tilt angle requirements for head-to-toe and side-to-side, based on how the suffocation hazard manifests. The hazard associated with a head-to-toe tilt greater than 10 degrees occurs when an infant unexpectedly rolls (either side-to-side or into a chin-to-chest position) and the infant cannot self-rescue when on an incline and can suffocate. However, when a bassinet/cradle has a side-to-side tilt, even if the tilt is less than 7 degrees, incident data and sample analysis suggest that this tilt can facilitate rolling before an infant is developmentally capable of rolling and cannot self-rescue. A suffocation hazard presents when the infant's nose and mouth become occluded in the side or mattress.

Based on review of incidents and testing, staff determined that the current ASTM side-to-side tilt restriction of 7 degrees does not adequately address the rolling and suffocation hazard. Staff testing showed that cantilevered bassinets with tilt angles of 1.2–7.1 degrees were associated with rollover incidents. Accordingly, to address the potential for infants to roll into unsafe sleep positions and to provide the highest level of safety that is feasible, the NPR proposes to add the side-to-side tilt angle test requirements from ASTM's February 14, 2023, proposal, with two modifications: (1) decrease the allowed tilt angle to 0 ±1 degree, which means a maximum angle not to exceed one degree from horizontal, and (2) apply this requirement to both rocking bassinets at rest and non-rocking bassinets. The NPR also proposes that for bassinets with adjustable heights, the side-to-side tilt test be performed on both the highest and lowest height settings. The Commission requests comment on a side-to-side tilt angle limit (including the proposed 0-degree angle) and an appropriate manufacturing tolerance (including the proposed 1-degree maximum variation) that is as consistently close to flat as is feasible.

5. Requirements for Electrical Systems

Section III of the preamble describes hazards associated with electrical systems, including smoke, shock, and battery leakage. While part 1218 does not address electrical hazards, other Commission rules for durable infant or toddler products, such as the infant swings rule, 16 CFR part 1223, incorporating ASTM F2088–22, *Standard Consumer Safety Specification for Infant and Cradle Swings,* include adequate requirements to address electrical hazards, such as the conditions that can lead to battery leakage. To address bassinet/cradle incidents associated with defective electrical systems, the NPR proposes to include the battery compartment requirements from part 1223 in part 1218.

6. Requirements for Multi-Use Products

Regarding multi-use products, section 5.14 of ASTM F2194–22$^{\varepsilon 1}$ states that if ''converted into another product for which a consumer safety specification exits, the product shall comply with the applicable requirements of that standard when in that use mode.'' Because the Commission's mandatory standard and ASTM's ''consumer safety specifications'' can diverge and are not always the same, the NPR proposes that multi-use products comply with the applicable mandatory CPSC consumer product safety standard when in each use mode, rather than the applicable voluntary standard. This modification clarifies CPSC's expectation and creates certainty for test labs.

C. Revised Requirements for Marking, Warning, Labeling, and Instructional Literature

Tab A of Staff's 2022 Bassinet Rejection Staff Briefing Package provides a detailed description of the marking and warning requirements in ASTM F2194–22$^{\varepsilon 1}$ and an analysis of whether the revised labeling requirements improve the safety of bassinets and cradles. Modifications in ASTM F2194–22 $^{\varepsilon 1}$ include additional language or changes addressing battery-related hazards, product warnings, compact bassinets and compact bassinets made of cardboard, and the warning language currently incorporated by reference in part 1218.

After considering literature, incident data, and consumer feedback, the Commission preliminarily finds that the marking, warning, labeling, and instructional literature requirements specified in ASTM F2194–22 $^{\varepsilon 1}$ are largely adequate but require several modifications to provide the highest level of safety feasible.

Battery Compartment Warnings—ASTM revised section 8 of ASTM F2194–22$^{\varepsilon 1}$ to include specific marking requirements for battery-operated products (Section 8.4–Battery-Operated Product Marking). The ASTM standard now requires that, for battery-operated products, the product's battery compartment, battery compartment door/cover, or area immediately adjacent to the battery compartment must be marked or labeled permanently and legibly to show the correct battery polarity, size, and voltage. ASTM F2194–22$^{\varepsilon 1}$ exempts products using one or more non-replaceable batteries, except when they are accessible with the use of a coin, screwdriver, or other common household tool, in which case they must be marked or labeled permanently and legibly with a statement that the batteries are not replaceable. If marking or labeling the product is not practicable, then this statement shall be included in the instructions. The bassinet subcommittee adopted these marking/labeling requirements from ASTM's Ad Hoc Language Task Group [68] and the requirements are consistent with other juvenile product standards.

Staff advises that these requirements are adequate and necessary to address hazards associated with battery-operated products that are not currently addressed in part 1218. Accordingly, the NPR proposes to incorporate Section 8.4 of ASTM F2194—22$^{\varepsilon 1}$ without modification.

Alignment with Ad Hoc Warnings—Section 8 of ASTM F2194–$^{\varepsilon}$22^{1} also contains multiple revisions intended to align with current recommendations from ASTM's Ad Hoc Language Task Group. ASTM F2194–22$^{\varepsilon 1}$ now specifies that warnings shall be in English at minimum, states that any additional markings or labels shall not contradict or confuse the required information or mislead the consumer, and sets formatting requirements for warnings (*e.g.,* font size, text alignment, safety alert symbol, bullet points for cautionary statements).

Per Ad Hoc Recommendations, the standard uses ANSI Z535.4–2011, *Product Safety Signs and Labels,* as a reference for its warning formatting requirements. ANSI Z535.4 is the primary United States voluntary consensus standard for product safety signs and labels. For example, CPSC staff consistently uses this standard when developing or assessing the adequacy of warning labels. Literature on the design and evaluation of on-product warnings frequently cites ANSI Z535.4 as the minimum set of requirements governing products sold in the United States containing such labels, and human factors experts generally consider the ANSI Z535 series of requirements the benchmark and state of the art standards against which warning labels should be evaluated for adequacy. The NPR proposes to adopt all warnings that align with ANSI Z535.4 formatting requirements.

Suffocation Hazard Warnings—Section 8 of ASTM F2194–22$^{\varepsilon 1}$ also contains multiple revisions to the warning statements incorporated in part 1218, specifically to the language for suffocation hazards. ASTM F2194–22$^{\varepsilon 1}$ specifies that the statement ''Failure to follow these warnings and the instructions could result in death or serious injury'' shall be the first warning to appear in a message panel, followed immediately by a suffocation hazard warning addressing the following:

[68] ASTM Ad Hoc Language Task Group (Ad Hoc TG) consists of members of various durable nursery product voluntary standards committees, including CPSC staff. The Ad Hoc TG's purpose is to harmonize the wording of common sections (*e.g.,* introduction, scope, protective components) and warning label requirements across durable infant and toddler product voluntary standards.

SUFFOCATION HAZARD
Babies have suffocated:
• on pillows, comforters, and extra padding
• in gaps between a wrong-size mattress, or extra padding and product sides
• **NEVER** add soft bedding or padding.
• Use **ONLY** mattress provided by manufacturer.

ASTM F2194–22$^{\varepsilon 1}$ also requires that warnings address the following statement:

Always place baby on back to sleep to reduce the risk of SIDS and suffocation.

ASTM F2194–22$^{\varepsilon 1}$ requires compact bassinets to address the following:

Product can roll over on soft surfaces and suffocate child. NEVER place product on beds, sofas or other soft surfaces.

The Commission rejected the inclusion of compact bassinets into the mandatory standard for bassinets and cradles in 2022. However, staff advises that this warning language addresses hazards associated with all bassinets/cradles and recommends that this language be required for all products within the scope of the standard. Accordingly, the NPR proposes to require this warning for all bassinets/cradles within the scope of the rule.

Fall Hazard Warnings—ASTM F2194–22$^{\varepsilon 1}$ does not change the existing warning language related to fall hazards. However, in the voluntary standard, fall hazard statements are now required to appear after the suffocation hazard warning statements. Additionally, the warning language, ''FALL HAZARD,'' required for products where the bassinet bed is removeable from the base/stand without the use of tools and contains a lock/latch mechanism that secures the bassinet bed to the base/stand, is no longer required, as the message is instead required to be located in the fall hazard section of the warning, making the inclusion of a second ''FALL HAZARD'' statement redundant. However, ASTM F2194–22$^{\varepsilon 1}$ requires that compact products address the following statements in the ''FALL HAZARD'' section:

(1) Always use product on the floor. Never use on an unintended elevated surface.
(2) Do not carry baby in the [*manufacturer to insert type of product*]. [Exception: A product that is intended to carry a baby is exempt from this requirement].
(3) Compact bassinet/cradles constructed of cardboard shall also address: Do not reuse [*manufacturer to insert type of product*] for second child.

Like the suffocation warnings for compact bassinets, staff advises that these fall hazard warnings will address fall hazards that are associated with all bassinets/cradles, not just compact bassinets. Accordingly, the NPR proposes that these fall hazard warnings be required for all products within the scope of the standard with two modifications. Specifically, the NPR proposes that the phrase ''an unintended elevated surface'' in warnings statement (1) be changed to ''any elevated surface,'' as any elevated surface presents a potential fall hazard. Additionally, for warning statement (3), the NPR proposes that the reference to ''compact'' bassinets be removed consistent with the Commission's rejection of this product category.

The fall hazard warning language in ASTM F2194–22$^{\varepsilon 1}$; also contains requirements for products where the bassinet bed uses a lock/latch mechanism to secure the bassinet bed to the base/stand, so that the bassinet bed is removable without the use of tools. ASTM F2194–22$^{\varepsilon 1}$; requires the following warning language for these products:

Always check that the bassinet is securely locked on the base/stand by pulling upwards on the bassinet bed.

Lastly, ASTM added three example warnings to the standard: one for bassinet/cradle products, one for compact bassinet/cradles, and one for compact bassinet/cradles made of cardboard. Shown below is an example warning that complies with part 1218 (Figure 12), as well as the example warnings shown in ASTM F2194–22$^{\varepsilon 1}$ (Figures 13–14). While the warnings shown in Figure 14 are intended for compact products, and the NPR proposes to remove references to ''compact'' bassinets from the mandatory standard, the text included in the warnings meets proposed NPR requirements and does not make a specific reference to ''compact'' bassinets, other than the title of the figures. The warnings in Figure 14 contain a statement warning against use on ''unintended'' elevated surfaces. Fall hazards, however, can occur with non-compact products and on *any* elevated surface. Additionally, the warning in Figure 13, which is intended for ''standard' bassinets/cradles, does not contain language warning consumers against using the product on soft or hard elevated surfaces or carrying infants in the product. Therefore, this NPR proposes that the warning shown in Figure 13 (Fig. 29 in ASTM F2194–22$^{\varepsilon 1}$) be removed, and that the warnings shown in Figure 14 (Fig. 30–31 in ASTM F2194–22$^{\varepsilon 1}$;) be renumbered and renamed to remove the reference to ''compact'' products and revised so that the statement warning against use on ''an unintended elevated surface'' instead warns against use on ''any elevated surface.''

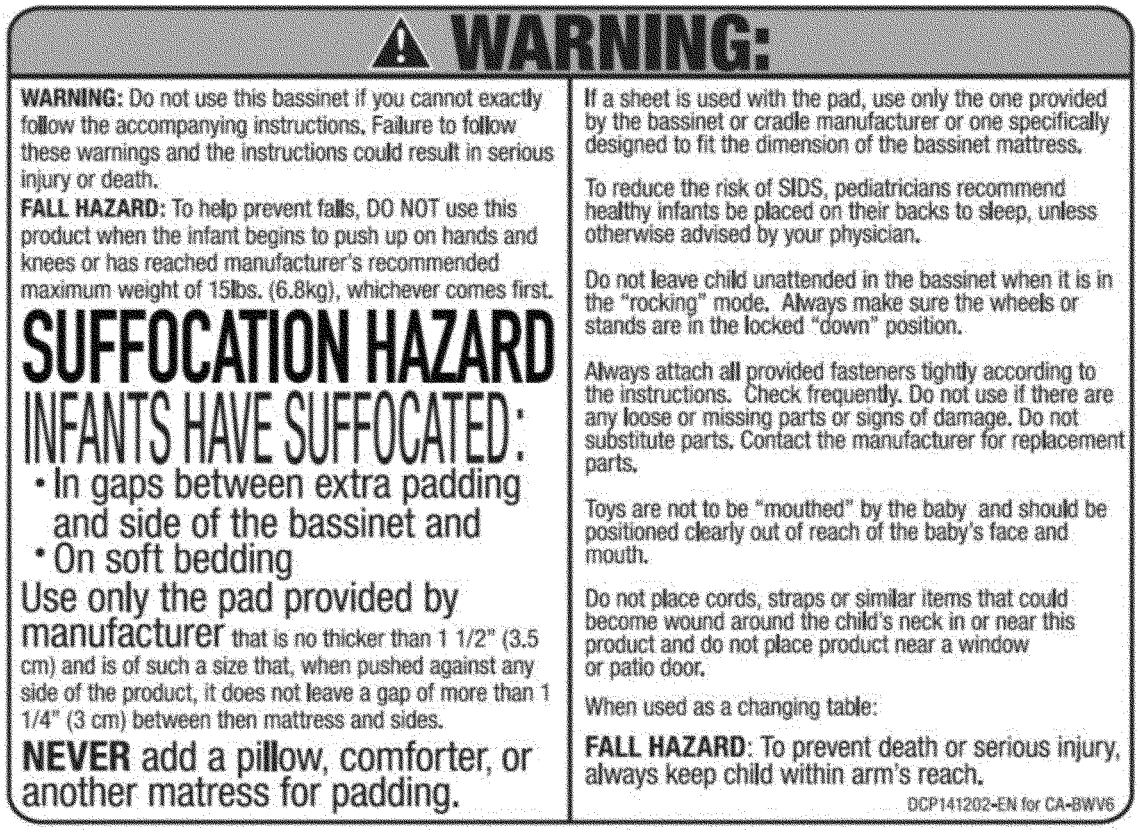


Figure 12: Example of a warning label compliant with part 1218

Figure 13: ASTM F2194 – 22$^{\varepsilon 1}$ warning label for Bassinets/Cradles*[69]

Figure 14: ASTM F2194 – 22$^{\varepsilon 1}$ warning label for Compact Bassinets/Cradles* (left) and ASTM F2194 – 22$^{\varepsilon 1}$ warning label for Cardboard Compact Bassinets/Cradles* (right)

After-Market Bassinet/Cradle Mattresses Warnings—Included in this final rule are warning requirements for after-market mattresses. As discussed above in section V.B.3.c of this preamble, the safety standard for crib mattresses (part 1241) includes performance requirements for after-market mattresses but does not specifically identify bassinet/cradle mattresses as being included in the regulation. However, given the existence of after-market bassinet/cradle mattresses, as well as the similar manners of sleep use between bassinets/cradles, cribs, and play yards, staff advises that similar warning requirements for after-market bassinet/cradle mattresses are appropriate and necessary. Accordingly, the NPR proposes that the warning shown in Figure 15, which is identical to the warning used in part 1241 for after-market mattresses, be required for after-market bassinet/cradle mattresses.

Additionally, the NPR proposes that the statement ''Use ONLY mattress provided by manufacturer,'' appearing in the warnings for bassinets/cradles in part 1218 and in ASTM F2194–22$^{\varepsilon 1}$, be replaced with the statement ''USE ONLY one mattress at a time.'' This revision communicates to consumers to only use a single mattress in the bassinet/cradle; when combined with other warning statements, the revision signals that the use of after-market bassinet/cradle mattresses is acceptable when the mattress has the appropriate fit for the bassinet/cradle; and will ensure that the warnings on bassinets/cradles are consistent with the warnings on after-market mattresses. This also addresses the potential hazard presented by after-market mattresses marketed as ''mattress toppers.''

[69] All figures with ''*'' denotation are reprinted, with permission, from ASTM F2194–22$^{\varepsilon 1}$ Standard Consumer Safety Specification for Bassinets and Cradles, copyright ASTM International, 100 Barr Harbor Drive, West Conshohocken, PA 19428. A copy of the complete standard may be obtained from ASTM International, *www.astm.org.*

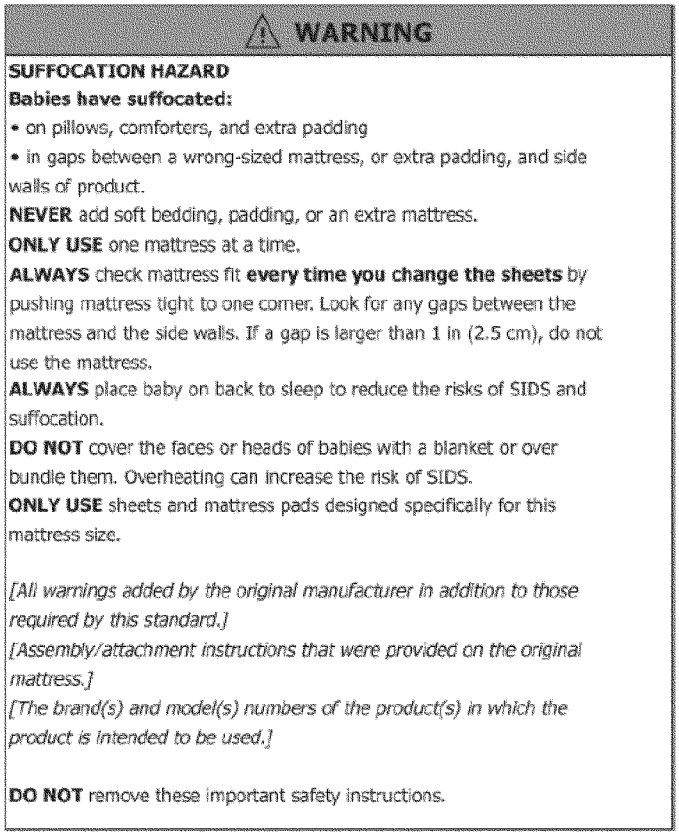

Figure 15: Warning label for After-Market Bassinet/Cradle Mattresses

Instructional Literature Warnings—The instructional literature requirements in ASTM F2194–22$^{\varepsilon 1}$ contain multiple revisions. Many revisions are intended to ensure consistency with on-product markings and warnings and current recommendations from ASTM's Ad Hoc Language Task Group. ASTM F2194–22$^{\varepsilon 1}$ now specifies that instructions shall be in English at minimum, state that any additional instructions shall not contradict or confuse the required information or mislead the consumer, and sets formatting requirements for warnings (*e.g.,* font size, text alignment, safety alert symbol, bullet points for cautionary statements). Per the Ad Hoc Language Task Group's recommendations, the ASTM F2194–22$^{\varepsilon 1}$ standard uses ANSI Z535.4–2011 as reference for its warning formatting requirements.

Additionally, ASTM F2194–22$^{\varepsilon 1}$ requires that instructions for battery-operated products address the following:

⚠ CAUTION
To prevent battery leaks, which can burn skin and eyes:
• Remove batteries when storing product for a long time.
• Dispose of used batteries immediately.

ASTM F2194–22$^{\varepsilon 1}$ provides that instructions for products that use more than one battery in any one circuit shall also address the following under the same CAUTION header:

- Always replace the entire set of batteries at one time.
- Never mix old and new batteries, or batteries of different brands or types.

Additionally, ASTM F2194–22$^{\varepsilon 1}$ states that instructions are now required to address the following statements:

Do not use if any part of the (manufacturer to insert type of product) is broken, torn, or missing.

Additionally, ASTM F2194–22$^{\varepsilon 1}$ requires that the instructions for products constructed of cardboard must now address the following statements:

Use only on a flat, dry floor.

Do not place the (manufacturer to insert type of product) near a space heater, open fire or other source of strong heat.

Lastly, ASTM F2194–22$^{\varepsilon 1}$ contains two example instructional literature warnings, one for bassinet/cradle products, and one for battery-powered bassinets. Figure 16 provides these two example warnings:

Figure 16: Example Instruction Warnings; ASTM F2194 – 22$^{\varepsilon 1}$ warning label for Bassinets/Cradles* (left) and ASTM F2194 – 22$^{\varepsilon 1}$ warning label for Bassinets/Cradles with Batteries* (right)

The Commission preliminarily determines that the instructional literature requirements in ASTM F2194–22$^{\varepsilon 1}$ are adequate and proposes to adopt these warnings provisions into the mandatory standard.

VI. Incorporation by Reference

The Commission proposes incorporating ASTM F2194–22$^{\varepsilon 1}$ by reference into the mandatory standard for bassinets/cradles codified in part 1218, with modifications to reduce the risk of injury associated with these products and to ensure the standard provides the highest level of safety that is feasible. The Office of the Federal Register (OFR) has regulations concerning incorporation by reference. 1 CFR part 51. For a proposed rule, agencies must discuss in the preamble of the NPR ways that the materials that the agency proposes to incorporate by reference are reasonably available to interested persons, and how interested parties can obtain the materials. Additionally, the preamble to the rule must summarize the material. 1 CFR 51.5(b).

In accordance with the OFR's requirements, section IV.A of this preamble summarizes the provisions of ASTM F2194–22$^{\varepsilon 1}$ that the Commission proposes to incorporate by reference. ASTM F2194–22$^{\varepsilon 1}$ is copyrighted. By permission of ASTM, the standard can be viewed as a read-only document during the comment period on this NPR, at *http://www.astm.org/cpsc.htm.* To download or print the standard, interested persons may purchase a copy of ASTM F2194–22$^{\varepsilon 1}$ from ASTM through its website (*http://www.astm.org*), or by mail from ASTM International, 100 Bar Harbor Drive, P.O. Box 0700, West Conshohocken, PA 19428. Alternatively, interested parties may inspect a copy of the standard at CPSC's Office of the Secretary by contacting Alberta E. Mills, Secretary, U.S. Consumer Product Safety Commission, 4330 East-West Highway, Bethesda, MD 20814; telephone: 301–504–7479; email: *cpsc-os@cpsc.gov.*

VII. Effective Date

The Administrative Procedure Act (APA) generally requires that the effective date of a rule be at least 30 days after publication of the final rule. 5 U.S.C. 553(d). The Commission proposes a 180-day effective date for this rule. The rule would apply to all bassinets/cradles and after-market bassinet mattresses manufactured after the effective date. 15 U.S.C. 2058(g)(1). This amount of time is typical for durable infant or toddler rules promulgated under section 104 of the CPSIA.[70] Six months is also the period that the JPMA typically allows for products in their certification program to shift to a new standard once a new standard is published. Therefore, juvenile product manufacturers are accustomed to adjusting to new standards within this timeframe.

Moreover, although the NPR proposes to add requirements, the test methods and test equipment are not unique, in that other CPSC rules also use the same methods and equipment. For example, 41 third party laboratories are CPSC-accepted to test to part 1218. Eleven of 12 laboratories accepted to test to the crib mattress rule are also accredited for testing to the bassinet standard. Accordingly, the CPSC expects that these laboratories are competent to conduct the required testing and can have their International Organization for Standardization (ISO) accreditation and CPSC-acceptance updated in the normal course. The Commission invites comments, particularly from small businesses, regarding the proposed additional testing and the amount of time needed to come into compliance with a final rule.

VIII. Regulatory Flexibility Act (RFA)

The RFA requires that agencies review a proposed rule for the rule's potential economic impact on small entities, including small businesses. Section 603 of the RFA generally requires that agencies prepare an initial regulatory flexibility analysis (IRFA)

[70] *See, e.g.,* Safety Standard for Infant Swings, 77 FR 66713 (Nov. 7, 2012); Safety Standard for Crib Mattresses, 87 FR 8640 (Feb. 15, 2022).

and make the analysis available to the public for comment when the agency publishes an NPR. 5 U.S.C. 603. The IRFA must describe the impact of the proposed rule on small entities and identify significant alternatives that accomplish the statutory objectives and minimize any significant economic impact of the proposed rule on small entities.

This proposed rule would have a significant economic impact on a substantial number of small U.S. entities, primarily from redesign costs in the first year that the final rule would be effective. A significant impact would occur for small companies whose products do not meet the proposed revised requirements, particularly suppliers of small bassinets and bassinet accessory products for strollers and play yards, as well as suppliers of cantilever style bassinets and after-market bassinet mattresses. Third party testing costs should not be a new significant cost for most small firms, given that bassinet suppliers should already be testing to the current mandatory standard in part 1218. However, for after-market bassinet mattress suppliers, the third party testing costs to comply with the final rule would be new, although these firms already incur costs for testing to establish compliance with other relevant CPSC regulations, including those for lead and phthalate content.

A. Reason for Agency Action, NPR Objectives, Product Description, and Market Description

Section I of this preamble explains why CPSC proposes to update the mandatory rule for bassinets/cradles and provides a statement of the objectives of, and legal basis for, the proposed rule. Section II of this preamble describes the types of products within the scope of the NPR, the market for bassinets/cradles, and the use of bassinets/cradles in the U.S. The requirements in the NPR are more stringent than the ASTM voluntary standard for bassinets/cradles, as described in sections IV and V of this preamble. The NPR addresses known hazards, discussed in section III of this preamble, that the current rule does not adequately address, as well as products on the market that were not common when the current rule was promulgated, such as products that resemble short play yards with canopies marketed for outdoor infant sleep.

The scope of this proposed rule also includes after-market bassinet mattresses, which are not in scope of the current regulation in part 1218 or the crib mattress regulation in 16 CFR part 1241. Accordingly, the registration card already required for bassinets/cradles under section 14 of the CPSA (15 U.S.C. 2056a(d)) will now be required for after-market mattresses as well. Registration cards are exempt from PRA or RFA analysis, per section 104(d)(1) of the CPSIA. 15 U.S.C. 2056a(d)(1).

B. Small Entities to Which the NPR Would Apply

Section II of this preamble describes the products within the scope of the rule and an overview of the markets for bassinets/cradles and for after-market bassinet mattresses. This section XIII.B of the preamble provides additional detail on the market for products within the scope of the rule.

Annual Units Sold: CPSC estimates the annual U.S. sales of new bassinets, including items with a bassinet mode or attachment, to be—rounded for the purposes of further analysis—3.1 million units per year. CPSC made this estimate using Centers for Disease Control (CDC) data on the number of newborns,[71] State Department data on adoptions from foreign countries,[72] and a survey by Statista [73] in 2017 on the estimated ownership of bassinets, play yards, and strollers, also taking into account the market for used items.

Specifically, CPSC estimates the total sales of new bassinets in the U.S. as the total of the sales of traditional bassinets and cradles, plus play yard bassinets, plus stroller bassinets, plus bedside sleepers with a bassinet mode, which is 3,080,942, rounded for the purposes of analysis to 3.1 million (see Table 3). While this may seem high (corresponding to roughly 80 percent of the number of newborns in the U.S. each year), it is consistent with the prevalence of multi-mode products with a bassinet mode or attachment.

CPSC estimates the annual sales of used bassinets and products with bassinet mode to be 500,000 units per year, rounded for the purpose of analysis. Table 3 below displays the calculations, providing the sources in footnotes, for CPSC's estimation of sales for new and used bassinets and cradles.

TABLE 3—ESTIMATED SALES FOR NEW AND USED BASSINETS/CRADLES

Product [74]	Number of newborns	Families/caregivers who own this item [75] (percent)	. . . and bought it new or received it new as a gift [76] [77]	Percentage of these items that include a bassinet (percent)	Estimated annual unit new sales in scope of this rule	Estimated annual unit used sales in scope of this rule
	(a)	(b)	(c)	(d)	(e) = (a) × (b) × (c) × (d)	(f) = (a) × (b) × (1 − c) × (d)
Bassinet/cradle	3,666,077	38	86 percent	100	1,198,074	195,035
Play yard		66		[78] 35	728,303	118,561
Stroller		96		[79] 17	514,541	83,763
Bedside sleeper/bassinet		29		[80] 70	640,024	104,190
Total					3,080,942	501,549

[71] *https://www.cdc.gov/nchs/nvss/births.htm.*

[72] *https://travel.state.gov/content/travel/en/Intercountry-Adoption/adopt_ref/AnnualReports.html.*

[73] *https://www.statista.com/forecasts/987681/ownership-of-baby-furniture-in-the-us.* This data from 2017 is consistent with the Durable Nursery Products Exposure Survey that a contractor conducted for CPSC in 2013, which found that about 30% of families with children under age 6 owned a bassinet, cradle, or infant hammock.

[74] The number of newborns is from CDC data on births and State Department data on adoptions from other countries; the data on product ownership is from the Statista survey.

[75] *https://www.statista.com/study/49911/baby-products-in-the-us/?locale=en.* A survey by Statista in 2017 of parents with children under the age of 4.

[76] *https://www.statista.com/forecasts/987072/ownership-of-a-rocking-crib-amongst-parents-in-the-us.*

[77] A Statista report from the same survey group in 2017 found that 14 percent of parents bought a ''rocking crib'' second hand. CPSC assumes that the secondary market is similar for bassinets. If 14 percent of bassinet or cradle owners are used, then 86 percent are bought new.

[78] Based on internet search in January 2023, seven of the top 20 best-selling play yards came with a bassinet attachment. Thus, approximately 35 percent.

[79] The Statista survey also found that 17 percent of parents reported that their stroller had a ''removable carrycot'' feature (''bassinet'' feature was not a survey item).

[80] Based on a popular online general retail site in March 2023, fourteen of the top 20 best-selling beside sleepers came with a bassinet mode. Thus, approximately 70 percent.

Some families might have more than one newborn, some parents with a newborn might have separate residences, and non-parent caregivers also buy these items, so sales could be higher. However, because the expected product life and warranty for these items is typically several years, while the recommended use per infant is only five months, parents may use the same bassinet for subsequent children or obtain a used one through gift or purchase.

CPSC estimates the size of the used market for all bassinet products, including products with bassinet attachments, at 501,549 units, rounded to 500,000 for the purposes of the cost analysis. CPSC assumes that at least a majority of consumers in the secondary market would choose to dispose of the used mattress and purchase a new after-market mattress. For this analysis, CPSC conservatively assumes that 75 percent of parents purchasing a used bassinet will buy a new after-market mattress. CPSC also assumes that roughly 10 percent of parents who buy a bassinet or product with bassinet attachment new will also purchase a new after-market mattress for use by a subsequent sibling, or for the same infant due to heavy soiling. Therefore, CPSC estimates the total annual market for after-market mattresses at 75 percent of the used sales (75% × 501,549 = 376,162) plus 10 percent of new sales (10% × 3,080,942 = 308,094), for a total of 684,256 units, rounded to 680,00 for the purpose of the cost analysis.

The availability of hundreds of after-market bassinet mattresses online confirms that there is substantial demand for after-market mattresses, as well as a substantial volume of sales. The top seller by volume on Amazon currently sells more than 1,800 after-market bassinet mattresses per month. The Commission requests comments from the public on the estimated annual sales volume, including any information that would validate a different estimate on the rate of after-market mattress sales (number of units sold per year).

While other possible outlets for bassinet and after-market bassinet mattress sales exist that are not included in this estimate (specifically, sales to hotels, daycares, and hospitals), they are likely to be minimal. Hotels generally provide a sleep space that can accommodate larger children, typically cribs or play yards without a bassinet. Similarly, daycare centers typically purchase cribs and play yards rather than traditional bassinets; and major daycare and hospitality child furniture suppliers do not sell bassinets or cradles, although daycares may use consumer grade play yards with bassinet attachments. Hospital ownership of bassinets is small, reported as only 55,085 units in 2019,[81] and hospital bassinets are medical devices regulated by the Food and Drug Administration (FDA), and thus out of scope of this NPR.

Prices and Features: Prices for traditional bassinets range from under $50 to more than $1,500, with most products in the $50 to $125 range. The least expensive products tend to be under 30 inches high and come with legs rather than a stand or base. The more expensive products tend to be larger and come with features that include canopies, motorized sounds or vibrations, attached toy bars, and pouches or shelves for storing diapers and bottles. Prices for cradles range from $100 to more than $1,000, with most products in the $100 to $200 range. Solid hardwood cradles are available for more than $1,000. Some products advertised as ''rocking bassinets'' are physically identical to cradles, with a curved rocker base. Combination bedside sleeper/bassinets typically sell from $75 to more than $600, with most products in the $125 to $200 range. Attachments to play yards are usually not priced or sold separately. Some stroller bassinet attachments are sold separately, with most such products in the $100 to $200 range. Play yard and stroller bassinet attachments are designed to attach to a specific model or set of models from one manufacturer, and/or to a stand sold separately by that manufacturer. The stands typically sell for $125 to $175.

The wide range of prices and features reflect that parents and other caregivers buy bassinets for different purposes. Some people buy a large bassinet with a non-folding stand as a primary sleep space for the nursery, while others buy small portable items for travel, napping, or occasional care by a non-parent. No one best-selling size, price range, or set of features exists for bassinets. For example, the ten best-selling bassinets on Amazon in February 2023 ranged in price from $42 to $200 and included two small traditional bassinets that fold for transport, five bassinet/bedside sleeper combination products, two large cantilever bassinets, and an ''infant lounger'' with a rigid frame. Prices and features on Walmart.com had a similar variety, with prices of the ten best-selling bassinets ranging from $50 to $150. The best-selling products there included small portable bassinets, traditional bassinets on a stand that do not fold for transport, a combination bassinet/play yard, and several combination bassinet/bedside sleepers.

With approximately 3.1 million new bassinets sold per year, including items with a bassinet mode, at an average price of approximately $100 per unit, CPSC estimates the total U.S. bassinet market is approximately $310 million in sales per year. This total does not include the market for used items. Based on this IRFA's estimate of approximately 500,000 used units per year (see previous section), and an estimated used price of $40 based on observed prices of used bassinets on Ebay and Mercari as a percentage of original retail prices, the used market would represent approximately $20 million dollars in sales per year.

Prices for after-market bassinet mattresses range from $20 to $180, with most products in the $30 to $40 range, which is also the price range for replacement mattresses from the original bassinet supplier. The high end of the price range for after-market mattresses are hand-crafted items with a specialty fill and/or cover, such as natural rubber or organic fiber. Most after-market mattresses are sold online by small importers and foreign direct shippers. Several hundred U.S.-based crafters sell after-market mattresses that appear to have been hand-cut from upholstery foam. With a typical price of $35 and annual sales of 680,000 units per year, the after-market bassinet mattress market is approximately $23.8 million per year.

Bassinet and Bassinet Mattress Suppliers: Many manufacturers and importers, as well as foreign direct shippers, supply bassinets and cradles. CPSC identified more than 120 suppliers in March of 2023, including suppliers that sell play yards or strollers with bassinet attachments. Most companies that supply bassinets also supply a variety of other infant and children's products; bassinets are typically not their only or main product line. JPMA currently has 22 member companies that are certified for bassinet/cradles,[82] including companies that manufacture or import stroller bassinets and play yard bassinet attachments, although one of the 22 does not appear to currently have any products on the U.S. market.

Bassinets and cradles are available from online general retail sites, online baby product sites, and brick and mortar general retail stores, including ''big box''

[81] *https://www.statista.com/statistics/824751/total-hospital-bassinet-numbers-in-the-us/.*

[82] JPMA runs a certification program for members, which includes third party testing to current ASTM and CPSC standards. See *https://www.jpma.org/page/certification.*

stores. Two brick and mortar specialty chain stores for infants and children sell bassinets. Multiple online furniture stores associated with religious communities sell traditional solid hardwood cradles made in the U.S. A few woodworkers from foreign countries sell carved wooden cradles on a prominent online site for hand-crafted items.

Hundreds of suppliers, including importers and U.S.-based hand crafters, supply after-market bassinet mattresses. These products are sold almost exclusively online, although a few are available to pick up in local big box stores after ordering online. While replacement mattresses from the original supplier are also sold primarily online, a few are similarly available for pick up in a big box or children's specialty store after ordering online.

Small Entities to Which the Proposed Rule Would Apply: Currently, over 120 firms supply more than 250 models of bassinets to the U.S. market. Large U.S. business and foreign businesses of all sizes constitute the majority of the suppliers of the available models. Most of the U.S.-based manufacturers and importers are small companies based on Small Business Administration (SBA) size standards. Of the identified 50 U.S-based suppliers to the U.S. market, 43 are small importers or small manufacturers, five are large U.S. manufacturers, and two are large U.S. importers. The rest of the market is foreign direct shippers [83] and foreign manufacturers. Eight foreign manufacturers have U.S. distribution/warehouse operations that would meet the SBA size standard for a small importer if considered separately.[84]

The total number of suppliers estimated here is approximate because online third party sellers (primarily small importers and foreign direct shippers) sell a wide variety of products, and can enter and exit the market quickly. In addition, as noted, multiple online furniture stores associated with religious communities sell wooden bassinets and cradles manufactured in the U.S.; CPSC was unable to estimate how many individual small manufacturers each of these furniture distributors might represent. The SBA size standards for small entities are based on the number of employees or the annual revenue of the firm, and there is a specific size standard for each 6-digit North American Industry Classification Series (NAICS) category.[85] The U.S. Census Bureau conducts an annual survey of small businesses in the U.S. and counts how many large and small businesses are in each NAICS category.[86]

A NAICS category specifically for bassinet manufacturing or importing does not exist. Companies that manufacture bassinets may be categorized as furniture, textile product, toy and game, or apparel manufacturers. Importers are generally considered a type of merchant wholesaler, as are furniture wholesale distributors. Other NAICS categories may apply to companies that manufacture or import bassinets, but for whom bassinets are not their main product line. As seen in the table below of applicable NAICS categories, the SBA small entity threshold for manufacturers is generally 500 to 1000 employees, while it is generally 100 to 150 employees for importers and wholesalers.

Companies that manufacture or import bassinets would fit into the NAICS categories shown in Table 4. As shown in Table 4, the majority of the U.S. businesses in the applicable categories for manufacturing and importing bassinets are small businesses, and there are thousands of such small businesses.

TABLE 4—NAICS CATEGORIES FOR MANUFACTURERS AND IMPORTERS OF BASSINETS/CRADLES

NAICS series No.	NAICS series description	SBA size standard for small business (employees)	Number of businesses in series	Number of small businesses in series	Percentage of businesses that are small (%)
314999 ..	All Other Miscellaneous Textile Product Mills	500	2,415	2,396	99
315240 ..	Women's, Girls', and Infants' Cut and Sew Apparel Manufacturing	750	888	888	100
337122 ..	Non-upholstered Wood Household Furniture Manufacturing	750	1,992	1,982	99
337124 ..	Metal Household Furniture Manufacturing	750	258	252	98
337125 ..	Household Furniture (except Wood and Metal) Manufacturing	750	151	151	100
337910 ..	Mattress Manufacturing	1,000	324	315	97
339930 ..	Doll, Toy, and Game Manufacturing	500	507	503	99
423220 ..	Home Furnishing Merchant Wholesalers	100	5,784	5,511	95
423920 ..	Toy and Hobby Goods and Supplies Merchant Wholesalers	150	1904	1859	98
424330 ..	Women's, Children's, and Infants' Clothing and Accessories Merchant Wholesalers	100	6,669	6,458	97
Total			20,892	20,315	97

The applicable NAICS category for after-market mattress manufacturers is 337910 ''Mattress manufacturing,'' for which the SBA size standard for a small business is 1,000 employees. For after-market mattress importers, the applicable NAICS category is 423210 ''Furniture Merchant Wholesalers,'' for which the SBA size standard for a small business is 100 employees. In the 2019 Census data, 324 businesses manufactured mattresses and 4,824 businesses were furniture merchant wholesalers. More than 95 percent of

[83] CPSC uses this term to refer to sellers who ship directly to the consumer from an address in a foreign country.

[84] The SBA regulations in 13 CFR 121.105 specify that a U.S. small business for the purposes of SBA program eligibility is ''a business entity organized for profit, with a place of business located in the United States, and which operates primarily within the United States or which makes a significant contribution to the U.S. economy through payment of taxes or use of American products, materials or labor.'' Consistent with this definition, CPSC considered a company to be a U.S. manufacturer if they have a headquarters and design products in the U.S., and market products with their own brand name, although production may take place overseas. Similarly, we considered a U.S. company affiliated with a foreign company, such as a licensed distributor, to be a U.S. importer if they ship from a U.S. address, because shipping from a U.S. address would require ''use of American products, materials or labor.''

[85] The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy. For more information, see *https://www.census.gov/naics/.* Some programs use 6-digit NAICS codes, which provide more specific information than programs that use more general 3- or 4-digit NAICS codes.

[86] *https://www.census.gov/programs-surveys/susb/data/tables.html.*

these suppliers were small businesses using the SBA size standards.

The proposed rule would not impose any requirements or direct impacts on retailers of any size, unless they themselves manufacture or import bassinets or after-market mattresses, because the rule would not prevent the sale of products manufactured or imported before the effective date. Indirect impacts could occur if the rule were to reduce consumer demand for bassinets or after-market mattresses, but it is unlikely that impact would be significant (more than one percent of annual revenue) for any retailer.

C. Compliance, Reporting, Paperwork, and Recordkeeping Requirements of the Proposed Rule

The proposed rule would require suppliers (manufacturers and importers) of bassinets to meet performance, warning label, and user instruction requirements, and to conduct third party testing to demonstrate compliance. This section discusses the reporting and paperwork requirements; compliance costs are analyzed in detail in section VIII.E of this preamble.

Suppliers must demonstrate that they have met the performance requirements of the rule by providing a children's product certificate. As specified in 16 CFR part 1109, suppliers who are not the original manufacturer, such as importers, may rely on the testing or certification suppliers provide, as long as the requirements in part 1109 are met. Manufacturers and importers are required to furnish certificates to retailers and distributors (section 14(g)(3) of the CPSA); retailers are not required to third party test the children's products that they sell unless they are also the manufacturer or importer. Suppliers must also provide product registration cards. The recordkeeping and compliance documentation does not require specialized expertise, nor does it include new requirements. CPSC's public website provides instructions and examples for how to develop the children's product certificates and product registration cards.[87]

The proposed reporting and recordkeeping requirements are the same as those in the current mandatory bassinet standard. The proposed rule does not require additional packaging or instructions beyond what the current standard requires. While the proposed rule revises the warning label to match the current ASTM standard, with modifications, the cost to implement the requirement should be the same as under the existing part 1218 requirement. All children's products under OMB Control Number 3041–0159 require Certificates of Conformance. However, CPSC is seeking a new OMB control number for bassinets/cradles and after-market bassinet mattresses. When the Children's Product Testing and Certification OMB Control Number 3041–0159 is next updated, the Information Collection burden estimates for the products within the scope of this rule will be updated to reflect current estimates of the number of suppliers and to add the requirement for warning labels on after-market bassinet mattresses. Registration cards are exempt from PRA burden analysis under section 104(d)(1) of the CPSIA.

D. Federal and State Rules That May Overlap With This NPR

CPSC has not identified any other Federal rules that duplicate, overlap, or conflict with the proposed rule. Some products marketed as ''bassinets'' may be within the scope of CPSC's mandatory standards for infant sleep products, hand-held infant carriers, or non-full-size cribs. The FDA regulates medical bassinets, so those products are not within scope of this rule and thus there is no overlap with FDA regulations. Combination products, such as bedside sleepers with a bassinet mode, must meet the requirements of both standards. Also, the rules for after-market bassinet mattresses and crib mattresses do not overlap, as after-market bassinet mattresses are not within scope of the Safety Standard for Crib Mattresses, codified at 16 CFR part 1241.

If finalized, the proposed rule will impact infant sleep product suppliers that are compliant with the current ISP Rule but do not meet the requirements of this NPR because the ISP Rule references part 1218. Therefore, all infant sleep products within the scope of the ISP Rule must comply with the updated bassinet performance requirements.

E. Potential Impact on Small Entities

Some products currently on the market would likely meet the proposed requirements without physical modifications, particularly larger traditional bassinets and cradles, many combination bedside sleeper/bassinets, and mesh attachments to play yards that meet the current standard. However, small bassinets, floor bassinets, in-bed sleepers, Moses baskets, and stroller and play yard bassinets that are shorter than 27 inches at the top side/rail, or do not have a sleep surface 15 inches above the floor, would need to be modified to meet the standard or taken off the market. Bassinets and cradles that are not flat may not meet the new, more stringent requirement for resting angle. Products with soft mattresses or other types of non-rigid floors may not meet the new mattress firmness requirement. Products with soft sides may not meet the new side rigidity requirement. Some multi-mode products with adjustable heights have settings lower than 15 inches, which will require modification to achieve compliance. After-market mattresses that are thicker than the required maximum thickness, do not meet the firmness requirements, or have a larger than allowable gap between the mattress and the side of the intended product would require modification. All after-market mattresses will require warning labels and registration cards.

Based on staff's review of products currently on the market, the majority of the bassinet products that appear to be too short to meet the proposed height requirements are sold by foreign companies, including foreign direct shippers. However, at least 19 small U.S. manufacturers and nine small U.S. importers may be significantly impacted by this proposed rule because they would have to modify or discontinue some or all of their products. This represents slightly more than half of the 43 small U.S. firms identified as bassinet manufacturers or importers. CPSC considers a cost impact of greater than or equal to one percent of annual revenue to be a ''significant'' economic impact, consistent with other Federal Government agencies.

1. Products That Would Require Modification, Cost of Modifying Product

Products on the market that would need to be redesigned to meet the new standard, particularly the side/rail height requirement, include:

- Small rigid-framed conventional bassinets, sometimes marketed as portable, travel, or compact bassinets, with a top side/rail height of less than 27 inches, and short feet or legs.[88]
- Small soft-sided bassinets, sometimes marketed as in-bed sleepers or compact bassinets, with a top rail

[87] See, for example: *https://www.cpsc.gov/Testing-Certification/Childrens-Product-Certificate-CPC* and *https://www.cpsc.gov/Business--Manufacturing/Business-Education/Durable-Infant-or-Toddler-Products/FAQs-Durable-Infant-or-Toddler-Product-Consumer-Registration.*

[88] Small bassinets under 27 inches high with short feet or legs may be compliant with the current bassinet standard, and the ISP standard, in part because they have feet or legs. But they will not meet the requirements of this NPR if they are under 27 inches high at the side/rail or have less than 15 inches of ''ground clearance'' between the sleep surface and the floor.

height of less than 27 inches, and short feet or legs.

- Bassinets of any size or type that do not meet the requirements for sidewall structural integrity or mattress firmness.
- Rocking bassinets or cradles, cantilever products, and any other bassinet that does not meet the new, more stringent requirement for resting angle.
- Moses baskets sold without a stand.
- Travel and outdoor bassinets, sometimes marketed as ''play pens,'' that are shorter than 27 inches high at the top side/rail and have very short or no legs.
- Combination bedside sleeper/bassinets with adjustable heights where at least some of the height settings have the sleep surface less than 15 inches from the floor.
- Play yard and stroller attachments that are sold separately, and are below 27 inches in height at the top side/rail and have short or no legs.
- Play yard and stroller attachments sold with the play yard or stroller that are below 27 inches in height, have short or no legs, and can be used as a bassinet separately from the play yard or stroller.
- After-market mattresses that are marketed for use with unspecified brands/models of bassinet, cradle, or bassinet accessory, because it would not be possible to verify that such mattress meets the gap requirement.
- After-market mattresses that do not meet the thickness, firmness, or gap requirements in the rule.

Bassinets and Cradles: Some manufacturers would need to redesign their bassinet products, at a cost of approximately $80,000 per model (calculation explained in the next paragraph) or remove the products from the market. The cost of modifying the product to meet the standard could be significant for small entities whose products do not meet the performance requirements in the NPR.

Based on level of effort, CPSC estimates a one-time redesign at 400 hours of professional staff time per model, including in-house testing of the prototypes.[89] Using Bureau of Labor Statistics (BLS) Employer Costs of Employee Compensation,[90] the estimated cost per supplier for labor, at a current cost for professional labor of $62.65 per hour, is $25,060 (which can be rounded to $25,000 for the purpose of this cost estimate). Given that many bassinets have metal or molded plastic parts, new molds or metal templates may be required. These materials costs for prototyping are estimated to be up to $10,000, with up to $100,000 for new molds or templates for the eventual final design if those are required. Therefore, CPSC estimates the total cost of redesign is approximately $35,000 to $125,000 per model, with a midpoint estimate of $80,000.

In many cases, the redesign cost would not be significant. For example, redesigning mesh sides or making a mattress firmer would not require significant expenses or new templates or molds. Also, changing a resting side angle tilt from 7 degrees to 1 degree may be a minor redesign for models without motorized movements. Making a short rigid bassinet that otherwise meets all the stability and structural requirements a few inches taller may also not require a significant redesign. Modifying a bedside sleeper/bassinet combination product to remove the lowest height settings below 15 inches would not require a significant redesign. Some companies may offer a wide selection of fabric coverings and attachments such as canopies and toy bars on structurally similar models where the cost of redesign per model could be less for structurally similar models from the same supplier. In some cases, the redesign of a stroller bassinet or Moses basket to achieve compliance could involve requiring it to be sold only with the stroller or stand, which might require redesigning the packaging. Many bassinet designs are physically similar, so it is possible that smaller manufacturers will be able to learn from innovative redesign solutions by other manufacturers. Redesigning a mattress to be a compliant thickness and shape to fit a specific bassinet product should not require iterative prototyping or changes in production inputs. If a thick mattress is redesigned in a way that uses less material, the cost of production might be less in the long term. In most cases, redesigning an after-market mattress will also require redesigning the marketing and packaging to specify which bassinet product it fits with the required maximum ''gap.''

Many manufacturers have outsourced production to Asia, but design their products in North America, thus reflecting U.S. labor and materials costs for prototype designs. Manufacturers with a range of physically similar products may be able to reduce the design cost per model. However, smaller manufacturers would be less likely to be able to benefit from such economies of scale. For example, a large manufacturer may have several dozen play yard models with bassinet inserts or attachments, while a smaller manufacturer may have only one or two such models. While importers would not directly pay for the cost of redesign, the cost of redesign by others would almost certainly be reflected in the wholesale price. Small importers are less likely than large importers to have the market power to negotiate wholesale prices.

CPSC considers one percent of revenue to be a ''significant'' economic impact, consistent with other federal government agencies. Eighty thousand dollars would be one percent of revenue for a firm with $8 million in revenue, which would represent sales of about 80,000 units at a retail price of $100. Given that there are more than 250 models in this market, with annual sales for the whole industry estimated at 3.1 million units per year, the average number of sales per model is estimated at less than 12,500 units. Thus, the cost could be significant for small U.S. firms with limited sales volume whose products are not compliant with the new requirements. However, no small firms appear to have bassinets as their only product, so the cost of bassinet redesign could be less significant when the revenues from other products are considered. CPSC estimates that 19 small U.S. manufacturers and nine U.S. importers supplying about 70 different models may need to redesign some or all of their products or remove them from the market. CPSC also estimates that the cost could be significant for some of those small firms, depending on their revenue from other products and on how much redesign is required.

With an estimated 70 bassinet models from 28 small U.S. businesses that need to be redesigned, at $80,000 per model, the total cost for all small U.S. entities is estimated at about $5.6 million for redesign only in the first year after that the proposed rule would be published. While cosmetic redesigns each year are typical in this industry, the structural redesigns required by this proposed rule would not have occurred in the status quo. Therefore, they should properly be considered a cost of the rule, and not routine costs. The ongoing cost of compliance after the first year that the final rule is in effect is expected to be minimal for materials and labor, as the redesigned products would likely use the same types of materials and production methods as current products. There may be additional,

[89] This reflects an estimate of 10 weeks of professional engineering, design, and testing staff time per model. While a redesign of one product could take less effort, this estimate reflects that an iterative process with multiple attempts to meet the NPR requirements may be required. This estimate also reflects time to design the molds or templates to scale up for commercial production.

[90] *https://www.bls.gov/news.release/archives/ecec_03172023.pdf.* These costs reflect the employers' cost for salaries, wages, and benefits for civilian workers in December 2022.

indirect costs as a result of this proposed rule, such as redesigning packaging to accommodate different physical designs, or increased shipping costs for larger products. As noted earlier, there may be additional costs for suppliers of infant sleep products that are compliant with the current ISP rule but will require modification to comply with the final rule that will follow this NPR. CPSC analysis indicates that there will likely not be a substantial number of impacted small ISP suppliers, as many short, small products in scope of the ISP regulation (that are not bassinets) have been recalled or voluntarily removed from the market since the ISP rule was published.

In addition to these estimates of the cost to small businesses, the estimated total cost to the bassinet industry for compliance with the proposed rule in the first year is approximately $10.25 million. This estimate is based on $80,000 in redesign costs per model, times 125 models (about half the existing models), which is $10 million, plus another $1000 per model for testing, times 250 models, which is $250,000. This amount is the *incremental* cost for bassinets/cradles to comply with the proposed rule, above the cost of complying with the current rule. Therefore, this estimate does not include packaging, shipping, labeling, or marketing costs, because those would be costs suppliers would already be incurring to comply with the existing part 1218.

After-Market Bassinet Mattresses: The majority of after-market bassinet mattress on the market appear to be not compliant with this rule because the mattress is thicker than specified in this NPR, and/or the mattress is not marketed to be used with a specific product for which the fit has been verified. No after-market mattresses currently on the market have the required warning label. There are hundreds of suppliers, many of which appear to be small U.S.-based importers and handcrafters. The cost of modifying an after-market mattress design is expected to take 200 hours of time at an estimated hourly rate of $62.65 according to BLS Employer Costs of Compensation for professional labor, which equates to approximately $12,500 per model. For crafters, the redesign may be as simple as purchasing different filling and cutting to the appropriate size, and adding a warning label, in which case the cost of redesign could be less than $12,500. If a thick mattress is redesigned in a way that uses less material, the cost of production might decrease in the long term.

For after-market mattresses suppliers, $12,500 would be one percent of revenue for a firm with $1.25 million in revenue, which would represent sales of about 41,667 units. Given that there are hundreds of models in this market, with annual sales for the whole industry estimated at 680,000 units per year, the average number of sales per model is far less than 41,667 units. Thus, the cost for a one-time redesign could be significant for small U.S. manufacturing firms, particularly hand crafters, with limited sales of after-market mattresses. However, if crafters can make their product compliant by simply using thinner foam, their cost of redesign might be less than $12,500. Small mattress manufacturers would likely not have bassinet mattresses as their only product, so the cost of redesign could be less than one percent of their total revenue from all products combined. For importers, foreign manufacturers will likely spread the redesign cost across a large number of units so that the impact on importers is not significant. In addition, most importers do not have bassinet mattresses as their only product.

For after-market mattress suppliers, the cost to U.S.-based importers could be minimal, if their foreign suppliers spread the cost of redesign across many units. For example, if a foreign manufacturer redesigns a model at a cost of $12,500, and sells 10,000 units to U.S. importers, the cost per model of the redesign is $1.25. It would not be a significant cost for the importer if their supplier raises the price by just over one dollar on an item that retails for $35. It is also likely that importer would be able to raise the retail price by $1.25 without reducing demand for the product. Similarly, if crafters can source a thinner foam material easily, their cost of redesign may be minimal. As noted earlier, the cost of a warning label is expected to be less than $1 per unit. Assuming that 50 small manufacturers have to redesign their product at a cost of $12,500, the total cost to U.S. small manufacturers for redesign would be about $625,000 in the first year that the rule is effective. This cost may not be significant for some small manufacturers, particularly if they manufacture and/or import other products, which is common, and therefore they can cover at least some of the cost of redesign with revenue from other products.

In addition to these estimates of the cost to small businesses, the estimated total cost to the after-market bassinet mattress industry for compliance with the proposed rule in the first year is approximately $4.05 million, comprised of $12,500 per model in redesign costs, times 300 models (nearly all the existing models), which is $3.75 million, plus another $1000 per model for testing, times 300 models, which is $300,000. This amount is the *total* cost for after-market to comply with the proposed rule, above the cost of complying with any other applicable CPSC regulations such as those for lead and phthalate content.

2. Products That May Be Removed From the Market, Cost of Discontinuing Products

The cost estimate in the previous sections assumes that all non-compliant products supplied by small U.S. entities would be redesigned. A similarly significant impact could occur for small firms if products are instead removed from the market, causing small companies to lose sales revenue from those products. For in-bed sleepers, the performance requirements are intended to discourage use on an elevated or soft surface, and it is likely that all in-bed sleepers would be removed from the market rather than redesigned. Two small U.S. manufacturers and two U.S. importers (included in the count above of 28 impacted U.S. small businesses) currently sell such products that are less than 27 inches tall, as well as more than a dozen foreign direct shippers.

Stroller bassinets could be redesigned to meet the requirements of the standard, because some soft-sided stroller bassinets already collapse/fold so they cannot be used off the stroller as a bassinet. Some are already sold only with the stroller, so that the stroller itself provides the compliant side/rail height, or so they could be re-packaged to be sold only with the stroller. However, some non-compliant rigid stroller bassinets may be removed from the market rather than redesigned to be 27 inches tall, sold only with the stroller, or designed to collapse/fold when not on the stroller. Three small U.S. manufacturers and five small importers currently sell such products, as well as more than a dozen foreign direct shippers and foreign companies with U.S. distributors.

Outdoor bassinets or ''play pens'' that are too short to meet the play yard mandatory standard and have short legs or no legs could be redesigned to meet the requirements of either this standard or the play yard standard. However, they may be removed from the market instead, as redesigning them to meet either standard would involve making them 10 to 16 inches taller. Two small U.S. manufacturers currently sell such product, as well as multiple large and foreign companies.

Compliant after-market mattresses will serve the same consumer need as non-compliant mattresses. Therefore, it is unlikely that they will be removed from the market rather than redesigned, except for a few handcrafter firms for which the redesign cost could be significant. Even a very small manufacturer with limited sales may be able to raise the retail price to partially cover the one-time cost of redesign. However, after-market mattresses suppliers will no longer be able to market their products for use with a generic bassinet because of the gap requirement (which requires a close fit between the bassinet and mattress). The demand for mattresses of a specific bassinet product may be lower than the demand for mattresses for generic/universal fit, therefore the rule could contribute to an overall decrease in demand for after-market mattresses and result in some firms exiting the market.

3. Third Party Testing Costs

This NPR would require manufacturers and importers of bassinets to comply with its performance requirements and demonstrate that compliance through third party testing. As specified in 16 CFR part 1109, entities that are not manufacturers of children's products, such as importers, may rely on the certificate of compliance provided by others. Manufacturers and importers of after-market bassinet mattresses would also be required to demonstrate compliance through third party testing.

While this proposed rule would require all manufacturers and importers of bassinets to arrange and pay for third party testing, this should not be a new cost for any supplier because they are already required to conduct third party testing on their products to comply with the current version of the CPSC mandatory safety standard as specified in part 1218. In addition, 22 of the suppliers are members of the JPMA certification testing program, which provides discounted third party testing to CPSC and ASTM standards. JPMA currently has 22 member companies that are certified specifically for bassinet/cradles, including companies that manufacture or import stroller bassinets and play yard bassinet attachments. JPMA's program requires annual testing, as well as more frequent testing when the product design has been updated or the underlying standard has been revised.

Third party testing will be a new requirement for suppliers of after-market mattresses. Based on testing costs for other consumer products, testing could be $500 to $1000 per model, for the relatively simple tests to confirm thickness and fit. Given that mattresses may already require testing for compliance with other CPSC requirements for lead and phthalates content, the incremental cost of testing to this rule may be less as part of a bundled testing price.

The NPR would require new tests for sidewall integrity, mattress firmness, side-to-side tilt, and sleep surface incline for bassinets, and would require the use of new equipment during testing, including a metal plate to measure side tilt and a tool to test mattress firmness. The NPR proposes an effective date 180 days after publication of the final rule, giving suppliers limited time to test to the new standard. Annual testing costs for bassinets may rise by $100 to $200 per model, to pay for one to two hours of additional laboratory personnel time to test and document the testing results per model. Given the 180-day proposed effective date of the rule, it is possible that companies would be able to replace their annual testing for the current standard with the testing required for this standard without having to conduct an extra testing cycle.

F. Efforts To Minimize Impact, Alternatives Considered

The RFA specifies that the IRFA should describe alternatives to the proposed rule which accomplish the rule's objective but minimize the economic impact to small entities. Exempting small entities from this rule or parts of this rule would not be consistent with the applicable statutes, because this is a safety rule for durable infant or toddler products. 15 U.S.C. 2063(d)(4)(C). The statute allows CPSC to provide ''small batch'' exemptions to testing requirements or alternative requirements for small providers of certain products, but not durable infant or toddler products. The proposed rule does not have design requirements, so CPSC has already provided performance requirements rather than a design standard. CPSC considered several alternatives to this rule to minimize the impact on small entities, including:

- Not revising the mandatory standard;
- Incorporating the ASTM 2022$^{\varepsilon 1}$ standard by reference without modifications; and
- A later effective date.

Not revising the mandatory standard: Part 1218 currently incorporates the 2013 version of the ASTM standard by reference, with some additional requirements. Section 104(b)(2) of the CPSIA requires CPSC to ''periodically review and revise the standards set forth under this subsection to ensure that such standards provide the highest level of safety for such products that is feasible.'' Given CPSC's statutory mandate, and continuing incidents associated with bassinets/cradles as described in section III of this preamble, the Commission has decided to prioritize the safety of infant sleep products ensuring that infant sleep products provide a firm, flat, sleep surface and that caregivers are discouraged from using bassinets/cradles on unsafe elevated and soft surfaces.

The current bassinet standard only specifies that a product must have legs, a base, or a stand, without specifying any specific height for the bassinet, which has led to a proliferation of ''compact'' or ''floor'' bassinets that can foreseeably be misused on elevated and soft surfaces. In addition, this means some in-bed sleepers and ''travel beds'' with very short legs and soft sides may be compliant with the current bassinet standard and the ISP rule. If CPSC does not revise the mandatory bassinet standard, suppliers could offer in-bed sleepers with one inch tall ''feet'' and meet the standard with a product shorter than 10 inches at the top rail. In addition, the current regulation does not include after-market bassinet mattresses in scope, nor are those products included in the scope of the crib mattress regulation. Therefore, if CPSC did not revise the mandatory standard, suppliers could continue to offer thick, soft after-market mattresses marketed to fit an unspecified (generic) bassinet or cradle, with an unknown gap between the mattress and the sidewall.

While not revising the mandatory standard would have no impact on U.S. small businesses, it would not address the known hazards. Most of the small bassinets and in-bed sleepers currently on the market are not supplied by small U.S. businesses, but rather by foreign businesses and particularly foreign direct shippers, so the impact of this rule on small U.S. businesses is limited.

Incorporating the ASTM 2022$^{\varepsilon 1}$ standard by reference without modifications, or waiting for ASTM to make additional modifications: The Commission considered incorporating the ASTM 2022$^{\varepsilon 1}$ standard by reference, and unanimously voted against doing so. The Commission reached this decision after considering staff's analysis that the requirements for ''compact bassinets'' in the 2022 version of the standard are less stringent and less safe than the current standard. Since the Commission's decision, ASTM has continued to meet to consider additional revisions to the standard to address the Commission's

concerns. However, to date, ASTM has not issued a ballot to revise the voluntary standard. CPSC is unsure whether such a ballot would include revisions consistent with this NPR. Based on this uncertainty, the Commission is choosing to move forward with rulemaking. While waiting for ASTM would delay the impact on small businesses, it would not necessarily reduce the impact, depending on the stringency of ASTM's revisions.

A later effective date: The recommended effective date for the final rule is 180 days after publication in the **Federal Register**. This is consistent with other CPSIA section 104 rules, and with JPMA's certification program, which generally allows manufacturers 180 days to comply with a newly published standard. A longer effective date period of one year after publication would reduce the burden on entities of all sizes by allowing more time to redesign and test products. Several hundred products from more than 100 companies would need to test to this standard, and there are currently 41 test labs accredited to the current bassinet standard. In addition, test labs will need to become accredited to the new standard before any product can be tested to this standard. Smaller companies are less likely to have the resources to quickly redesign products than larger ones, and some of the small U.S. companies that have products in scope of this proposed rule have multiple products that do not appear to meet the new performance requirements. However, given that many products already meet the proposed requirements, many labs are already accepted to test the existing bassinet standard and after-market mattresses, and providing a longer effective date would allow the hazards of current bassinets/cradles to continue for a longer period of time, the Commission proposes a 180-day effective date for the final rule.

G. Impact on Testing Labs

In accordance with section 14 of the CPSA, all children's products that are subject to a children's product safety rule must be tested for compliance by a third-party conformity assessment body that has been accredited by CPSC. Testing laboratories that conduct this testing must meet the Notice of Requirements (NOR) for third party conformity testing. CPSC has codified NORs in 16 CFR part 1112.

If finalized, the rule should not have an adverse impact on testing laboratories. CPSC is not proposing to amend part 1112 because bassinets/cradles are already part of that rule. Also, third party labs will not require new testing equipment for the modifications described in the NPR, other than a mattress firmness testing device and a metal plate to measure resting side tilt. The instrument for measuring mattress firmness is the same one specified in the regulation for crib mattresses. No laboratory is required to provide testing services. The only laboratories that would be expected to provide such services are laboratories that anticipate receiving sufficient revenue from the mandated testing to justify procuring the testing equipment and obtaining accreditation. However, CPSC expects that most of the existing 41 labs accredited to test bassinets would request updated accreditation because they are already accredited and have met the NOR for the current standard. Also, most laboratories are not small U.S. businesses; more than 30 of those labs are in Asia or Europe.

IX. Environmental Consideration

The Commission's regulations address whether the agency is required to prepare an environmental assessment or an environmental impact statement. Under these regulations, certain categories of CPSC actions normally have ''little or no potential for affecting the human environment,'' and therefore do not require an environmental assessment or an environmental impact statement. Safety standards providing performance and labeling requirements for consumer products come under this categorical exclusion. 16 CFR 1021.5(c)(1). The NPR falls within the categorical exclusion.

X. Paperwork Reduction Act

This proposed rule for bassinets and cradles contains information collection requirements that are subject to public comment and review by the Office of Management and Budget (''OMB'') under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). In this document, pursuant to 44 U.S.C. 3507(a)(1)(D), we set forth a:

- Title for the collection of information;
- Summary of the collection of information;
- Brief description of the need for the information and the proposed use of the information;
- Description of the likely respondents and proposed frequency of response to the collection of information;
- Estimate of the burden that shall result from the collection of information; and
- Notice that comments may be submitted to the OMB.

Title: Safety Standard for Bassinets and Cradles

Description: As described in section V.C of this preamble, the proposed rule would update the existing labeling and instruction requirements for bassinets and cradles, which has an OMB control number (3041–0159). This NPR would also add after-market bassinet mattresses to the scope of the rule and require new labeling. CPSC will seek a new OMB control number for this update and then move the revised estimate into control number 3041–0159 in the next PRA update for Children's Products. The NPR proposes that bassinets and cradles meet the requirements of ASTM F2194—22^{e1}, *Standard Consumer Safety Specification for Bassinets and Cradles,* with the proposed additional requirements and modifications summarized in section V of this preamble. Sections 8 and 9 of ASTM F2194—22^{e1} contain requirements for marking, labeling, and instructional literature. These requirements fall within the definition of ''collection of information,'' as defined in 44 U.S.C. 3502(3).

Description of Respondents: Persons who manufacture or import bassinets, cradles, and after-market mattresses for bassinets/cradles. Over 120 firms supply more than 250 models of bassinets to the U.S. market. Based on an evaluation of suppliers, most of the U.S.-based manufacturers and importers are small companies, using SBA size standards. In addition, hundreds of firms supply after-market bassinet mattresses to the U.S. market, including many small importers and hand-crafters in the U.S., as well as foreign direct shippers.

Estimated Burden: The estimated burden of this collection of information is as follows:

TABLE 5—ESTIMATED ANNUAL REPORTING BURDEN

Burden type	Number of respondents	Frequency of responses	Total annual responses	Hours per response	Total burden hours
Labeling and instructions	220	2	440	2	880

This estimate is based on the following: CPSC estimates there are 220 suppliers that would respond to this collection annually, and that the majority of these entities would be considered small businesses. CPSC assumes that on average each firm that reports annually would respond twice, as product models for bassinets and cradles are brought to market and new labeling and instruction materials are created, for a total of 440 responses annually (220 respondents × 2 responses per year). CPSC assumes that on average it will take one hour for each respondent to create the required label and one hour for them to create the required instructions, for an average response burden of two hours per response. Therefore, the total burden hours for the collection is estimated to be 880 hours annually (440 responses × 2 hours per response = 880 total burden hours).

CPSC uses $37.87 [91] from BLS as the hourly compensation for the time required to create and update labeling and instructions. Therefore, the estimated annual cost of the burden requirements is $33,326 ($37.87 per hour x 880 hours = $33,325.60). No operating, maintenance, or capital costs are associated with the collection. Based on this analysis, the proposed revisions to the standard would impose a burden to industry of 880 hours at a cost of $33,326 annually.

In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), we have submitted the information collection requirements of this rule to the OMB for review. Interested persons are requested to submit comments regarding information collection by June 17, 2024, to the Office of Information and Regulatory Affairs, OMB (see the **ADDRESSES** section at the beginning of this proposed rule).

Pursuant to 44 U.S.C. 3506(c)(2)(A), we invite comments on:

- Whether the collection of information is necessary for the proper performance of the CPSC's functions, including whether the information will have practical utility;
- The accuracy of the CPSC's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Ways to enhance the quality, utility, and clarity of the information to be collected;
- Ways to reduce the burden of the collection of information on respondents, including the use of automated collection techniques, when appropriate, and other forms of information technology; and
- The estimated burden hours associated with label modification, including any alternative estimates.

XI. Preemption

Section 26(a) of the CPSA, 15 U.S.C. 2075(a), states that when a consumer product safety standard is in effect and applies to a product, no state or political subdivision of a state may either establish or continue in effect a standard or regulation that prescribes requirements for the performance, composition, contents, design, finish, construction, packaging, or labeling of such product dealing with the same risk of injury unless the state requirement is identical to the Federal standard. Section 104(b) of the CPSIA refers to the rules to be issued as ''consumer product safety rules.'' Therefore, the preemption provision of section 26(a) of the CPSA would apply to a revised rule for bassinets and cradles.

XII. Certification and Notice of Requirements

Section 14(a) of the CPSA imposes the requirement that products subject to a consumer product safety rule under the CPSA, or to a similar rule, ban, standard, or regulation under any other act enforced by the Commission, must be certified as complying with all applicable CPSC-enforced requirements. 15 U.S.C. 2063(a). Section 14(a)(2) of the CPSA requires that certification of children's products subject to a children's product safety rule be based on testing conducted by a CPSC-accepted third party conformity assessment body. Section 14(a)(3) of the CPSA requires the Commission to publish an NOR for the accreditation of third-party conformity assessment bodies (or laboratories) to assess conformity with a children's product safety rule to which a children's product is subject. The Commission already issued an NOR for bassinets/cradles in 2013 when the existing rule was promulgated.

Test laboratories applying for acceptance as a CPSC-accepted third party conformity assessment body to test to the revised standard for bassinets/cradles would be required to meet the third-party conformity assessment body accreditation requirements in part 1112. Testing laboratories should not be adversely impacted as a result of this rule. Approximately 41 third party testing laboratories are CPSC-accepted to test compliance with part 1218. Staff expects that these labs will become accredited and CPSC-accepted to test to a revised bassinet standard in the normal course of business. No new testing equipment is required for the modifications described in the NPR, other than a mattress firmness testing device, and a metal plate to measure resting side tilt. The instrument for measuring mattress firmness is the same as specified in the regulation for crib mattresses; 11 of 12 laboratories that are CPSC-accepted to conduct crib mattress testing are also accredited to test requirements for bassinets/cradles. CPSC expects that these laboratories will be able to test to a new rule in a short time period. Furthermore, no laboratory is required to provide testing services. The only laboratories that are expected to provide such services are those that anticipate receiving sufficient revenue from the mandated testing to justify procuring the testing equipment and obtaining accreditation.

XIII. Request for Comments

[91] U.S. Bureau of Labor Statistics, ''Employer Costs for Employee Compensation,'' September 2023, Table 4, total compensation for all sales and office workers in goods-producing private industries: *https://www.bls.gov/news.release/archives/ecec_12152023.pdf.*

This proposed rule is part of a rulemaking proceeding under section 104(b)(2) of the CPSIA to revise the consumer product safety standard for bassinets and cradles to ensure that this standard provides the highest level of safety that is feasible. The Commission requests comments on the proposal to incorporate by reference ASTM F2194–22$^{\varepsilon 1}$, with the modifications discussed in sections IV and V of this preamble. The Commission also requests comments on the proposed effective date, and any aspect of this proposal. During the comment period, ASTM F2194–22$^{\varepsilon 1}$ is available as a read-only document at: *http://www.astm.org/cpsc.htm*. Comments should be submitted in accordance with the instructions in the **ADDRESSES** section at the beginning of this document.

Specifically, CPSC requests comment on the following topics:

A. Proposed Side Height Requirements

1. Is the proposed requirement for a minimum 27-inch external side/rail height feasible? Please provide any rationale, data, tests, and/or scientific studies to support your comment.

2. Will the 27-inch proposed external side/rail height requirement address the hazard of using the bassinet on an elevated surface such as a bed or sofa? Is there a different height that can better address the same hazard?

3. Does the 27-inch proposed external side/rail height requirement cause a reduced utility, such as reduced portability, and would this impact safety in a negative manner?

4. Will the 27-inch proposed external side/rail height requirement impact bedside sleepers that are designed to fit lower to the ground adult beds?

5. Should an exemption to the 27-inch proposed external side/rail height requirement be included for bedside sleepers because they are designed to be used next to the adult bed and not on top of the adult bed?

6. Are there studies, surveys or anecdotal consumer feedback that show the 16-inch external side/rail height set by ASTM F2194–22 $^{\varepsilon 1}$ will discourage use on elevated surfaces including an adult bed?

7. Are there other potential requirements, such as leg designs, to address the hazard of using the bassinet on an elevated surface?

8. Should a defined ''stand'' be required to discourage use on an elevated surface?

B. Proposed Requirements For a Minimum 15-Inch Occupant Sleep Surface Height

1. Will the proposed minimum 15-inch occupant sleep surface height requirement address the hazard of using the bassinet on an elevated surface such as a bed or sofa? If not, is there a more adequate occupant sleep surface height and why?

2. Are there any other performance requirements needed for bassinets that have a 27-inch external side/rail height and 15-inch occupant sleep surface height?

C. Proposed Side Wall Rigidity Requirements

1. Are the proposed side wall rigidity requirements adequate to address the risks of suffocation and falls from products?

2. Are there any other performance requirements CPSC should consider to address the risks of suffocation and falls?

D. Proposed Mattress Firmness Requirements

1. Are the proposed mattress firmness requirements adequate to address the risk of suffocation?

2. Are there any other performance requirements CPSC should consider to address the risk of suffocation?

E. Firmness Requirements for Soft Sided Bassinets

1. Should CPSC propose side firmness requirements to address infants rolling their face into the side of a bassinet?

2. If side firmness testing is necessary, what test method would adequately evaluate side firmness?

F. Proposed Tilt and Incline Limitation Requirements

1. Is a 0-degree limitation on the side-to-side tilt of a bassinet, with a maximum tilt angle limit not to exceed one degree (a tolerance limit) for each direction independently ($0 \pm 1°$) feasible? If not, what angle/tolerance is feasible, please provide data.

2. Is the maximum 10-degree head to toe angle limitation adequate to address chin to chest incidents and any other hazard patterns?

3. The proposed test method would require that the side-to-side tilt test be conducted on all sides of the bassinet, if the unit is circular, square, or has no obvious lateral sides. Would it improve safety to require that bassinets wide enough to allow an infant to sleep sideways be tested for side-to-side tilt in each position that a baby could be placed? If so, what would be the appropriate width for such a consideration?

G. Inclusion of After-Market Bassinet/Cradle Mattresses Within the Scope of the NPR

1. Is the proposed warning label for after-market bassinet mattresses appropriate?

2. Is the estimated annual sales volume in the IRFA (section VIII of this preamble) accurate? If not, please provide any information that would validate a different estimate on the rate of after-market mattress sales (number of units sold per year).

H. Proposed Warning Label Requirements for Bassinets/Cradles

1. Are the proposed warnings adequate to address the hazards associated with bassinets/cradles and after-market bassinet mattresses? Should CPSC consider additional warnings?

2. Section 8.6.2.6 of ASTM F2194–22$^{\varepsilon 1}$ requires a specific statement warning consumers not to carry infants in bassinets/cradles constructed of cardboard; should all bassinets have this statement except those that meet 16 CFR part 1225, Safety Standard for Hand-Held Infant Carriers?

I. Initial Regulatory Flexibility Analysis and Other Topics

1. *Significant impact.* Is CPSC's estimated cost of redesign to achieve compliance accurate? If not, please provide additional information and support for your proposed correction. Also, do the estimated costs represent more than one percent of annual revenue for individual small U.S. manufacturers and importers?

2. *Testing costs.* Will third party testing costs for bassinets increase as a result of the requirements in this NPR, and if so, by how much?

3. *Testing costs.* Is CPSC's estimated third party testing costs for after-market mattresses accurate? If not, please provide supporting data, and the extent to which this cost will impact small businesses.

4. *Effective date of 6 months.* How much time is required to come into compliance with a final rule (including product compliance and third party testing)? Please provide supporting data with your comment, particularly from small businesses.

5. *Alternatives to reduce the impact on small businesses.* Are there any alternatives to the rule that could reduce the impact on small businesses without reducing safety? Please provide supporting data with your comment, particularly addressing small businesses.

J. Feasibility

1. Are the proposed requirements in this NPR feasible, both technically and economically?

2. What would be the total cost to industry of implementing this rule? Please be specific about labor and/or materials costs to redesign products, and costs of third party testing.

3. Will complying with this rule increase the costs of production or the retail price of bassinets? Why? By how much?

4. Will complying with this rule permanently increase the costs of production or the retail price of after-market bassinet mattresses? Why? By how much?

List of Subjects in 16 CFR Part 1218

Consumer protection, Imports, Incorporation by reference, Infants and children, Labeling, Law enforcement, Toys.

For the reasons discussed in the preamble, the Commission proposes to amend title 16 of the Code of Federal Regulations as follows:

PART 1218—SAFETY STANDARD FOR BASSINETS AND CRADLES

■ 1. Revise the authority citation for part 1218 to read as follows:

Authority: 15 U.S.C. 2056a.

■ 2. Revise § 1218.2 to read as follows:

§ 1218.2 Requirements for bassinets and cradles.

(a) Except as provided in paragraph (b) of this section, each bassinet and cradle must comply with all applicable provisions of ASTM F2194–22$^{\varepsilon 1}$, *Standard Consumer Safety Specification for Bassinets and Cradles* (approved on July 15, 2022). The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. This material is available for inspection at the U.S. Consumer Product Safety Commission and at the National Archives and Records Administration (NARA). Contact the U.S. Consumer Product Safety Commission at: the Office of the Secretary, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814, telephone (301) 504–7479, email: *cpsc-os@cpsc.gov.* For information on the availability of this material at NARA, email *fr.inspection@nara.gov,* or go to: *www.archives.gov/federal-register/cfr/ibr-locations.html.* A free, read-only copy of the standard is available for viewing on the ASTM website at *https://www.astm.org/READINGLIBRARY/.* You may also obtain a copy from ASTM International, 100 Barr Harbor Drive, PO Box C700, West Conshohocken, PA 19428–2959; phone: (610) 832–9585; *www.astm.org.*

(b) Comply with the ASTM F2194–22F2194—22$^{\varepsilon 1}$ standard with the following additions or exclusions:

(1) Instead of complying with section 1.3.1 through 1.3.1.5 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 1.3.1 Examples of Products under the Scope.

(ii) 1.3.1.1 Bassinets, cradles, and after-market mattresses for bassinets and cradles.

(iii) 1.3.1.2 Cradle swings with an incline less than or equal to 10° from horizontal while in the rest (non-rocking) position.

(iv) 1.3.1.3 Multi-use products when they are in the bassinet/cradle use mode as defined in 3.1.1.

(v) 1.3.1.4 Bassinet/cradle accessories to products when removed from the product and used in the bassinet/cradle mode. See 3.1.2 for an example.

(vi) 1.3.1.5 Bassinet/cradle features for carriage/stroller when removed from the carriage/stroller and used in the bassinet/cradle mode.

(2) Do not comply with sections 1.3.2 through 1.3.2.3 of ASTM F2194–22$^{\varepsilon 1}$.

(3) Renumber sections 3.1.1, 3.1.1.1, 3.1.1.2, 3.1.1.3, and 3.1.1.4 of ASTM F2194–22$^{\varepsilon 1}$ to sections 3.1.2, 3.1.2.1, 3.1.2.2, 3.1.2.3, and 3.1.2.4.

(4) Insert a new section 3.1.1 and 3.1.1.1 of ASTM F2194–22$^{\varepsilon 1}$:

(i) 3.1.1 After-market mattress, n—a mattress sold or distributed for a bassinet or cradle.

(ii) 3.1.1.1 Discussion—This does not include a replacement mattress provided or sold by an original equipment manufacturer (OEM) if, and only if, it is equivalent with respect to dimensions, and specifications to the mattress that was provided with the original product.

(5) Instead of complying with the newly designated section 3.1.2 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 3.1.2 bassinet/cradle, n—small bed that provides sleeping accommodations for infants, supported by free standing legs, a stationary base/stand/frame, a wheeled base, a rocking base, or a base which can swing relative to a stationary base.

(ii) Note to paragraph (b)(5)(i) of this section—Rationale—the definition was modified to clarify that bassinets can have a variety of bases. The 10-degree sleep surface was moved into the performance requirement section.

(6) Instead of complying with section 3.1.3 and 3.1.3.1 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 3.1.3 bassinet/cradle accessory, n—a supported sleep surface that attaches to a crib or play yard designed to convert the product into a bassinet/cradle.

(ii) [Reserved]

(7) Instead of complying with section 5.14 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 5.14 If the bassinet/cradle product can be converted into another product for which a mandatory consumer product safety standard exists, the product shall comply with the applicable requirements of the consumer product safety standard when in that use mode.

(ii) [Reserved]

(8) Instead of complying with section 6.4.1 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 6.4.1 Stability—Bassinet/cradle—A product in all manufacturer's recommended use positions, including positions where the locks are engaged for preventing rocking/swinging motion of the sleeping surface, shall not tip over and shall retain the CAMI dummy when tested in accordance with 7.4.1.

(ii) [Reserved]

(9) Remove section 6.4.2 of ASTM F2194–22$^{\varepsilon 1}$.

(10) Instead of complying with section 6.10.2 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 6.10.2 The arithmetic mean of the rest angle measurements shall not exceed 1 degree when calculated for each rock/swing direction independently, when tested in accordance with 7.10.

(ii) [Reserved]

(11) Add section 6.12 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.12 Product and Bassinet/Mattress Support Height.

(ii) 6.12.1 The lowest top side/rail shall be at minimum 27 inches from the floor.

(iii) 6.12.2 The mattress support height shall be at least 15 inches from the floor to the bottom of the mattress support surface.

(iv) 6.12.3 *Removable Bassinet Beds* can only fully support infant and function when top rail is 27 inches or greater above the external floor with a minimum internal side height of 7.5 inches. (Example: Bassinet collapses/fails or is otherwise unusable when removed from the stand.)

(12) Add section 6.13 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.13 Sidewall Rigidity.

(ii) 6.13.1 Sidewall being tested during the stability test (section 7.4) shall not deflect in any direction more than 0.5 in.

(13) Add section 6.14 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.14 Sleep Surface Deflection/Firmness.

(ii) 6.14.1 All products within the scope of this standard, when tested in accordance with 7.13, shall not allow the feeler arm of the test fixture to contact the sleep surface of the product.

(14) Add section 6.15 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.15 Maximum Sleep Surface Head-to-Toe Angle.

(ii) 6.15.1 The angle of the sleep surface along the occupant's head-to-toe axis relative to the horizontal shall not exceed 10 degrees when tested in accordance with 7.14.

(15) Add section 6.16 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.16 Maximum Side-to-Side Tilt Angle for Non-Rocking Bassinets.

(ii) 6.16.1 The unit shall meet 6.16.1.1 and 6.16.1.2.

(iii) 6.16.1.1 The lateral angles of the weighted occupant sleep surface shall not be greater than 1 degree for each direction independently when tested in accordance with 7.15.1.

(iv) 6.16.1.2 The lateral angles low-weight occupant sleep surface shall not be greater than 1 degree for each direction independently when tested in accordance with 7.15.2.

(16) Add section 6.17 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.17 *Electrically Powered Bassinets/Cradles (remote control devices are exempt from the requirements in 6.17).*

(ii) 6.17.1 Each battery compartment shall provide a means to contain the electrolytic material in the event of a battery leakage. This containment means shall not be accessible to the occupant.

(iii) 6.17.2 Positive protection from the possibility of charging any primary (non-rechargeable) battery shall be achieved either through physical design of the battery compartment or through the use of appropriate electrical circuit design. This applies to situations in which a battery may be installed incorrectly (reversed), and in which a battery charger may be applied to a product containing primary batteries. This section does not apply to a circuit having one or two batteries as the only source of power.

(iv) 6.17.3 The surfaces of any accessible electrical component, including batteries, shall not achieve temperatures exceeding 160 °F (71 °C) when tested in accordance with 7.16. At the conclusion of the test, there shall be no battery leakage, explosion, or fire, to any electrical component. This test shall be performed prior to conducting any other testing within the performance requirements section.

(v) 6.17.4 AC adapters supplied with the product must denote compliance with the appropriate current national safety standard for AC adapters from a Nationally Recognized Testing Laboratory (NRTL). AC adapters must have a nominal output voltage less than 30 VDC (42.4 VAC (peak)) and must not be capable of delivering more than 8 amps into a variable resistive load for one minute.

(17) Add section 6.18 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 6.18 *After-market Mattress.*

(ii) 6.18.1 After-market mattresses shall meet the requirements of 6.5.2, 6.5.3, 6.6, 6.8, and 6.14 when tested with each brand and model for which it is intended to be used.

(iii) 6.18.2 The after-market mattress must be at least the same size as the original equipment mattress or larger and lay flat on the floor of the product, in contact with the mattress support structure or floor.

(iv) 6.18.3 If the original equipment mattress includes a floor support structure, the after-market mattress must include a floor support structure that is at least as thick as the original equipment mattress floor support structure.

(v) 6.18.4 If the original equipment mattress includes storage accommodations for the product instruction manual, the after-market mattress shall provide equivalent storage accommodations for the product instruction manual.

(18) In section 7.4 of ASTM F2194–22$^{\varepsilon 1}$, replace the word ''Stability'' with the words ''Stability and Sidewall Rigidity.''

(19) Renumber sections 7.4.1.3, 7.4.1.4, and 7.4.1.5 of ASTM F2194–22$^{\varepsilon 1}$ to sections 7.4.1.4, 7.4.1.5, and 7.4.1.6.

(20) In the newly designated section 7.4.1.4, replace ''7.4.1.4'' in the last sentence with ''7.4.1.5.''

(21) Add a new section 7.4.1.3 to ASTM F2194–22$^{\varepsilon 1}$ as follows:

(i) 7.4.1.3 Establish a reference line along the length of the upper side rail/wall being tested.

(ii) [Reserved]

(22) Add new sections 7.4.1.7, 7.4.1.8, and 7.4.1.9 to ASTM F2194–22$^{\varepsilon 1}$ as follows:

(i) 7.4.1.7 Measure the displacement of the upper side rail/wall being tested from the reference line to the new position.

(ii) 7.4.1.8 If necessary, hold the unit to prevent it from tipping over while taking the displacement measurement. Release the product to continue with the stability test.

(iii) 7.4.1.9 Test the unit in all manufacturer's recommended use positions.

(23) Do not comply with sections 7.4.2 through 7.4.2.6 of ASTM F2194–22$^{\varepsilon 1}$.

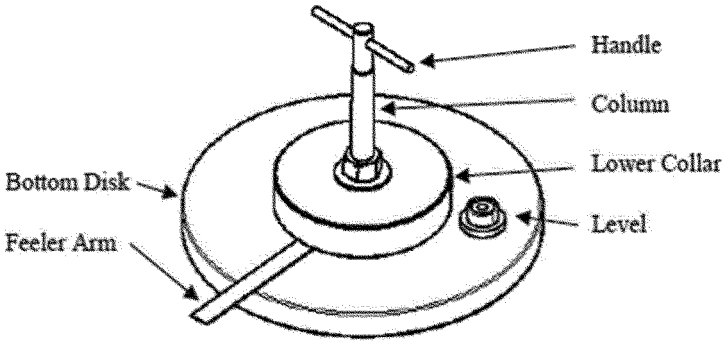
(24) Add section 7.13 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 7.13 *Sleep Surface Deflection/Firmness Test.*

(ii) 7.13.1 Test Fixture.

(iii) 7.13.1.1 The fixture, as shown in figure 1 to this paragraph (b)(24)(iii), shall be a rigid, robust object with a round footprint of diameter 7.99 in. ± 0.039 in. (203 mm ± 1 mm), and an overall mass of 11.46 lb. ± 0.045 lb. (5200 g ± 20 g). The lower edge of the fixture shall have a radius not larger than 0.039 in. (1 mm.) Overhanging the footprint by 1.57 in. ± 0.079 (40 mm ± 2 mm) shall be a flexible, flat bar of width 0.47 in. ± 0.008 (12 mm ± 0.2 mm) with square-cut ends. This bar may be fashioned from a shortened hacksaw blade. The bar shall rest parallel to the bottom surface of the fixture and shall be positioned at a height of 0.59 in. ± 0.008 in. (15 mm ± 0.2 mm) above the bottom surface of the fixture. The bar shall lay directly over a radial axis of the footprint (*i.e.,* such that a longitudinal centerline of the bar would pass over the center of the footprint).

Figure 1 to Paragraph (b)(24)(iii)—Mattress Firmness Test Fixture



(iv) 7.13.1.2 Included on the fixture, but not overhanging the footprint, shall be a linear level that is positioned on a plane parallel to the bar, and in a direction parallel to the bar.

(v) 7.13.1.3 Other parts of the fixture, including any handle arrangement and any clamping arrangement for the bar, shall not comprise more that 30 percent of the total mass of the fixture, and shall be mounted as concentric and as low as possible.

(vi) 7.13.2 Test Method.

(vii) 7.13.2.1 Assemble bassinet/cradle in accordance with manufacturer's instructions.

(viii) 7.13.2.2 Shake and/or agitate the mattress in order to fully aerate and distribute all internal components evenly.

(ix) 7.13.2.3 Place the mattress inside the product in the manufacturer's recommended used position and let the mattress rest for at least 5 minutes.

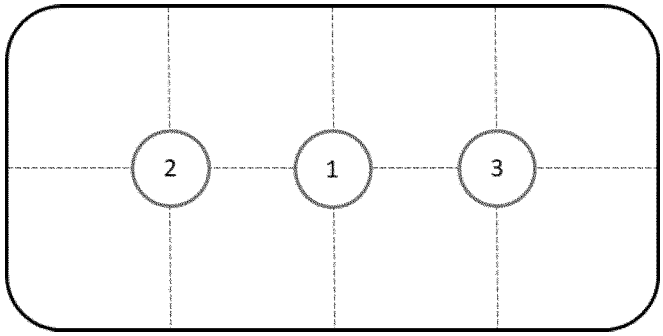
(x) 7.13.2.3.1 Where a user of a mattress could possibly position either side face up, even if not an intended use, then both sides of the mattress shall be tested.

(xi) 7.13.2.4 Place the bassinet/cradle on the floor.

(xii) 7.13.2.5 Test the unit in all manufacturer's recommended use positions that could affect the sleeping surface's deflection/firmness.

(xiii) 7.13.2.6 Mark a longitudinal centerline on the mattress surface and divide this line in half. This point will be the first test location. Then further divide the two lines on either side of the first test location into halves as shown in figure 2 to this paragraph (b)(24)(xiii). These will be the second and third test locations.

Figure 2 to Paragraph (b)(24)(xiii)—Mattress Firmness Test Points



(xiv) 7.13.2.7 Position the test fixture on each of the test locations, with the footprint of the fixture centered on the location, with the bar extending over the centerline and always pointing at the same end of the mattress sleep surface.

(xv) 7.13.2.7.1 At each test location in turn, rotate the bar to point in the required direction, and gently set the fixture down on the mattress sleep surface, ensuring that the footprint of the fixture does not extend beyond the edge of the mattress. The fixture shall be placed as horizontal as possible, using the level to verify. If the bar makes contact with the top of the mattress sleep surface, even slightly, the mattress is considered to have failed the test.

(xvi) 7.13.2.7.2 Repeat Step 7.13.2.7.1 at the remaining locations identified in 7.13.2.6.

(xvii) 7.13.2.7.3 Repeat Step 7.13.2.7.1 at a location away from the centerline most likely to fail (*e.g.,* a very soft spot on the sleep surface or at a raised portion of the sleep surface). In the case of testing a raised portion of a sleep surface, position center of the fixture such that the bar is over the raised portion, to simulate the position of an infant's nose.

(xviii) 7.13.2.7.4 In the event that the fixture is not resting in a nearly horizontal orientation, repeat the test procedure at that location by beginning again from Step 7.13.2.7.1. However, if the test produces a failure even with the device tilted back away from the bar so as to raise it, then a failure can be recorded.

(25) Add section 7.14 to ASTM F2194–22$^{\varepsilon 1}$:

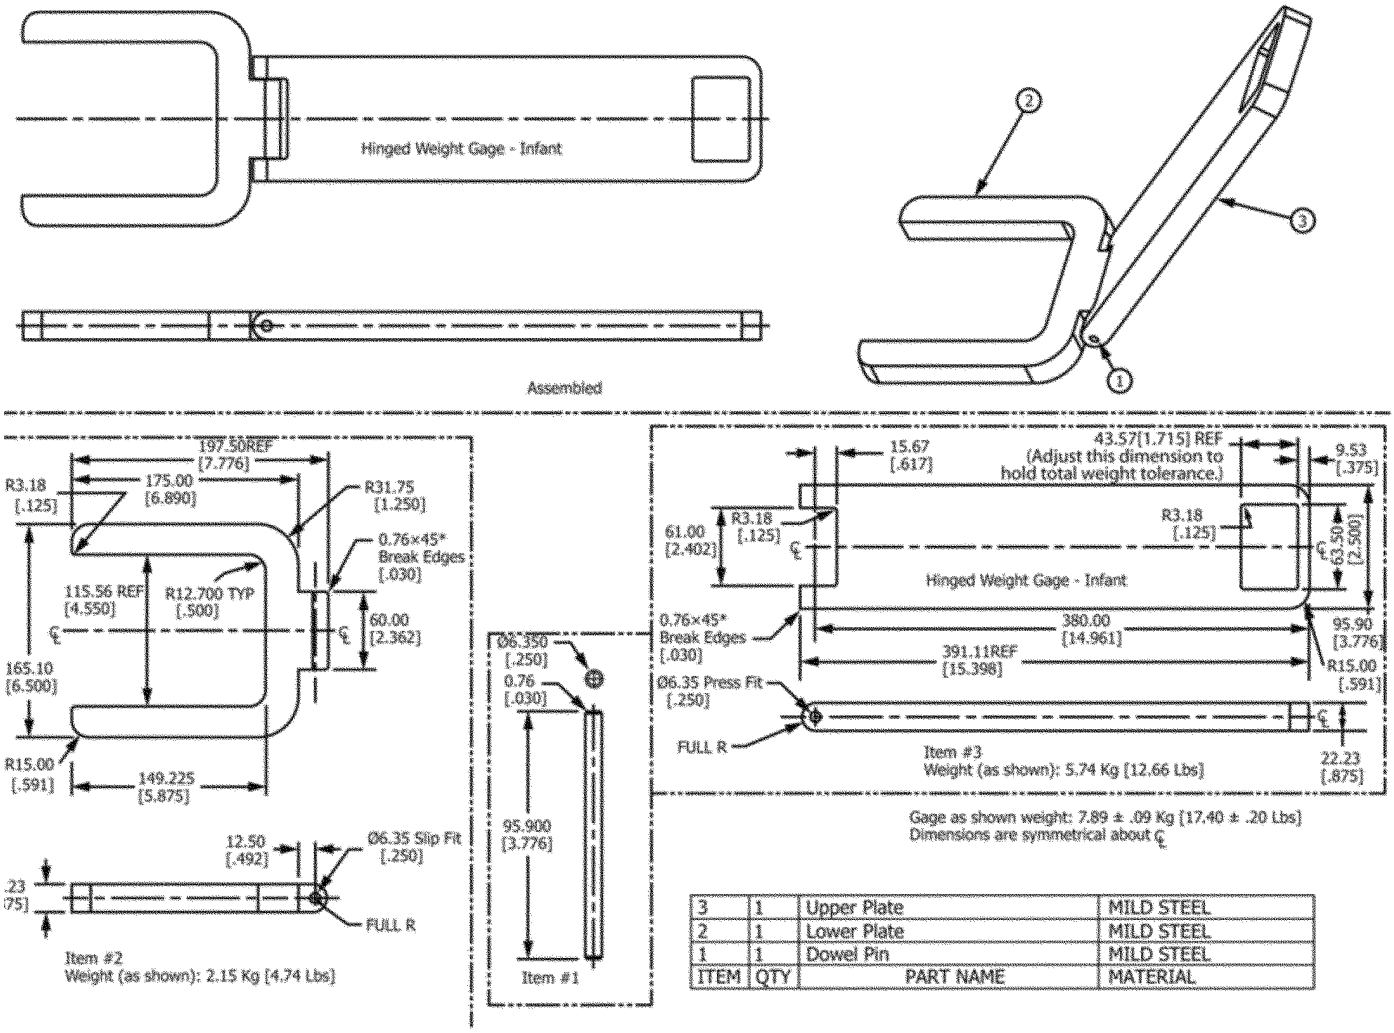
(i) 7.14 *Maximum Sleep Surface Head-to-Toe Angle Test.*

(ii) 7.14.1 Equipment.

(iii) 7.14.1.1 Digital Protractor.

(iv) 7.14.1.2 Hinged Weight Gauge–Infant (figure 3 to this paragraph (b)(25)(iv)).

Figure 3 to Paragraph (b)(25)(iv)—Hinged Weight Gauge–Infant [1]



ITEM	QTY	PART NAME	MATERIAL
3	1	Upper Plate	MILD STEEL
2	1	Lower Plate	MILD STEEL
1	1	Dowel Pin	MILD STEEL

(v) 7.14.2 Test Method.

(vi) 7.14.2.1 Assemble bassinet/cradle in accordance with manufacturer's instructions.

(vii) 7.14.2.2 Place the unit and the inclinometer on a flat level horizontal plane (0 ± 0.5°) to establish a test plane. Zero the inclinometer.

(viii) 7.14.2.3 Place the Hinged Weight Gauge–Infant (figure 3 to paragraph (b)(25)(iv) of this section) in the product equidistant between both head and toe ends and in the geometrical lateral center of the sleep surface. If the unit is circular, square or has no obvious lateral sides, test four perpendicular sides.

(ix) 7.14.2.4 Place a digital protractor on the upper torso/head area lengthwise.

(26) Add section 7.15 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 7.15 *Maximum Side-to-Side Tilt Angle.*

(ii) 7.15.1 Determination of the weighted, lateral angle.

(iii) 7.15.1.1 Assemble the unit in accordance with manufacturer's instructions. If applicable, the unit shall be in the lowest height setting with the mattress pad in place.

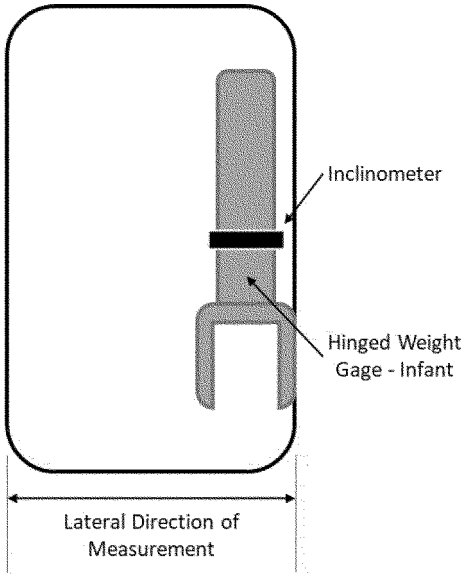
(iv) 7.15.1.2 Place the unit and the inclinometer on a flat level horizontal plane (0 ± 0.5°) to establish a test plane. Zero the inclinometer.

(v) 7.15.1.3 Place the Hinged Weight Gauge—Infant (figure 3 to paragraph (b)(25)(iv) of this section) on the occupant sleep surface with the left side of the gauge parallel to and contacting one lateral, sidewall of the unit and equidistant between both ends of the sleep surface.

(vi) 7.15.1.4 Place the inclinometer on the center of the Upper Plate of the Infant Hinged Weight Gauge and record the lateral angle (figure 4 to this paragraph (b)(26)(vi)).

[1] Reprinted, with permission, from ASTM F3118–17a Standard Consumer Safety Specification for Infant Inclined Sleep Products (withdrawn 2022), copyright ASTM International, 100 Barr Harbor Drive, West Conshohocken, PA 19428. A copy of the complete standard may be obtained from ASTM International, *www.astm.org.*

Figure 4 to Paragraph (b)(26)(vi)—Weighted, Lateral Angle Measurement



(vii) 7.15.1.5 Remove the Hinged Weight Gauge—Infant (figure 3 to paragraph (b)(25)(iv) of this section). Remove, agitate and replace the mattress (if applicable) to normalize the occupant sleep surface.

(viii) 7.15.1.6 Repeat 7.15.1.3—7.15.1.5 twice for a total of three measurements. Average the measurements to establish a weighted, lateral angle.

(ix) 7.15.1.7 Repeat the steps in 7.15.1.3–7.15.1.6 except place the Hinged Weight Gauge—Infant (figure 3 to paragraph (b)(25)(iv) of this section) so that its right side is touching the opposite sidewall in the bassinet/cradle. If the unit is circular, square or has no obvious lateral sides, test four perpendicular sides.

(x) 7.15.1.8 Repeat the steps 7.15.1.1–7.15.1.7 at the highest height setting, if applicable.

(xi) 7.15.2 Determination of the low-weight, lateral angle.

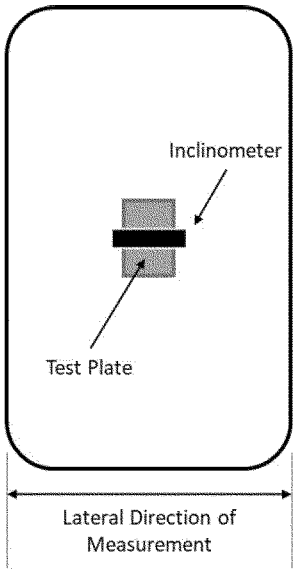
(xii) 7.15.2.1 Assemble the unit in accordance with manufacturer's instructions. If applicable, the unit shall be in the lowest height setting with the mattress pad in place.

(xiii) 7.15.2.2 Place the unit and the inclinometer on a flat level horizontal plane (0 ± 0.5 degrees) to establish a test plane. Zero the inclinometer.

(xiv) 7.15.2.3 Place a test plate [6 by 4 by 0.5 in. (152 by 101.6 by 12.7 mm) nominal thickness steel block weighing 3.3 ± 0.2 lb.] on the center of the unit's occupant sleep surface with the long sides parallel to the long sides of the unit. If the unit is circular, square or has no obvious lateral sides, determine the most onerous orientation of the test plate.

(xv) 7.15.2.4 Place the inclinometer on the center of the test plate and record the lateral angle (*see* figure 5 to this paragraph (b)(26)(xv)).

Figure 5 to Paragraph (b)(26)(xv)—Low-Weight, Lateral Angle Measurement



(xvi) 7.15.2.5 Remove the test plate. Remove, agitate and replace the mattress (if applicable) to normalize the occupant sleep surface.

(xvii) 7.15.2.6 Repeat 7.15.2.3–7.15.2.5 twice for a total of three measurements. Average the measurements to establish the center, lateral angle.

(xviii) 7.15.2.7 Repeat the steps in 7.15.2.3–7.15.2.6 with the test plate on the occupant sleep surface with the left side of the plate parallel to and contacting one lateral, sidewall of the unit and equidistant between both ends of the sleep surface.

(xix) 7.15.2.8 Repeat the steps in 7.15.2.3–7.15.2.6 with the test plate on the occupant sleep surface with the right side of the plate parallel to and contacting one lateral, sidewall of the unit and equidistant between both ends of the sleep surface.

(xx) 7.15.2.9 Repeat the steps 7.15.2.1–7.15.2.7 at the highest height setting, if applicable.

(27) Add section 7.16 to ASTM F2194–22$^{\varepsilon 1}$:

(i) 7.16 The bassinet/cradle shall be tested using fresh alkaline batteries or an AC power source. If the bassinet/cradle can be operated using both, then both batteries and AC power must be tested separately. If another battery chemistry is specifically recommended for use in the bassinet/cradle by the manufacturer, repeat the test using the batteries specified by the manufacturer. If the bassinet/cradle will not operate using alkaline batteries, then test with the type of battery recommended by the manufacturer at the specified voltage. The test is to be carried out in a draft-free location, at an ambient temperature of 68 °F ± 9 °F (20 °C ± 5 °C).

(ii) 7.16.1 Secure the bassinet/cradle so that the sleep surface cannot move during the test. Operate the bassinet/cradle at the maximum speed. Do not disable any mechanical or electrical protective device, such as clutches or fuses. Operate the bassinet/cradle continuously, and record peak temperature. The test shall be discontinued 60 min after the peak temperature is recorded. If the bassinet/cradle shuts off automatically or must be kept ''on'' by hand or foot, monitor temperatures for 30 seconds, resetting the bassinet/cradle as many times as necessary to complete the 30 seconds of operation. If the bassinet/cradle shuts off automatically after an operating time of greater than 30 seconds, continue the test until the bassinet/cradle shuts off.

(28) Instead of complying with section 8.6.2.3, 8.6.2.6, 8.6.5, and 8.6.6 of ASTM F2194–22$^{\varepsilon 1}$, comply with the following:

(i) 8.6.2.3 Product can roll over on soft surfaces and suffocate child. NEVER place product on beds, sofas or other soft surfaces.

(ii) 8.6.2.6 Products shall also address the following:

(A) Always use product on the floor. Never use on any elevated surface.

(B) Do not carry baby in the [*manufacturer to insert type of product*]. [Exception: A product that is intended to carry a baby is exempt from this requirement].

(C) Bassinets/cradles constructed of cardboard shall also address:

(*1*) Do not reuse [*manufacturer to insert type of product*] for second child.

(*2*) [Reserved]

(iii) 8.6.4 See figure 6 to this paragraph (b)(28)(iii) for example warnings for bassinets/cradles.

Figure 6 to Paragraph (b)(28)(iii)—Example Product Warning for Bassinet/Cradle Products

(iv) 8.6.5 See figure 7 to this paragraph (b)(28)(iv) for example warnings for bassinets/cradles made of cardboard.

Figure 7 to Paragraph (b)(28)(iv)—Example Product Warning for Bassinet/Cradle Products Made of Cardboard

⚠ WARNING

Failure to follow these warnings and the instructions could result in death or serious injury.

SUFFOCATION HAZARD

Babies have suffocated:

- on pillows, comforters, and extra padding
- in gaps between a wrong-size mattress, or extra padding and product sides
- **NEVER** add soft bedding or padding.
- Use **ONLY** one mattress at a time.
- Always place baby on back to sleep to reduce the risk of SIDS and suffocation.
- Product can roll over on soft surfaces and suffocate child. NEVER place product on beds, sofas or other soft surfaces.

FALL HAZARD - To help prevent falls:

- Do not use this product when the infant begins to push up on hands and knees or has reached [insert manufacturer's recommended maximum weight], whichever comes first.
- Always use product on the floor. Never use on any elevated surface.
- Do not carry baby in the [manufacturer to insert type of product].
- Do not reuse [manufacturer to insert type of product] for second child.

(v) 9.7 See figure 8 to this paragraph (b)(28)(v) for example of instruction warnings for bassinet/cradle products.

Figure 8 to Paragraph (b)(28)(v)—Example Product Instruction Warnings for Bassinet/Cradle Products

⚠WARNING

Failure to follow these warnings and the instructions could result in death or serious injury.

SUFFOCATION HAZARD

Babies have suffocated:

- on pillows, comforters, and extra padding
- in gaps between a wrong-size mattress, or extra padding and product sides
- **NEVER** add soft bedding or padding.
- Use **ONLY** one mattress at a time.
- Always place baby on back to sleep to reduce the risk of SIDS and suffocation.
- Product can roll over on soft surfaces and suffocate child. NEVER place product on beds, sofas or other soft surfaces.

FALL HAZARD - To help prevent falls:

- Do not use this product when the infant begins to push up on hands and knees or has reached [insert manufacturer's recommended maximum weight], whichever comes first.
- Always use product on the floor. Never use on any elevated surface.
- Do not carry baby in the [manufacturer to insert type of product].
- Strings can cause strangulation! Do not place items with a string around a child's neck, such as hood strings or pacifier cords. Do not suspend strings over a product or attach strings to toys.
- Do not use if any part of the (manufacturer to insert type of product) is broken, torn, or missing.

(vi) 9.8 See figure 9 to this paragraph (b)(28)(vi) for example of instruction warnings for bassinet/cradle products with batteries.

Figure 9 to Paragraph (b)(28)(vi)—Example Product Instruction Warnings for Bassinet/Cradle Products With Batteries

⚠WARNING

Failure to follow these warnings and the instructions could result in death or serious injury.

SUFFOCATION HAZARD

Babies have suffocated:

- on pillows, comforters, and extra padding
- in gaps between a wrong-size mattress, or extra padding and product sides
- **NEVER** add soft bedding or padding.
- Use **ONLY** one mattress at a time.
- Always place baby on back to sleep to reduce the risk of SIDS and suffocation.
- Product can roll over on soft surfaces and suffocate child. NEVER place product on beds, sofas or other soft surfaces.

FALL HAZARD - To help prevent falls:

- Do not use this product when the infant begins to push up on hands and knees or has reached [insert manufacturer's recommended maximum weight], whichever comes first.
- Always use product on the floor. Never use on any elevated surface.
- Do not carry baby in the [manufacturer to insert type of product].
- Strings can cause strangulation! Do not place items with a string around a child's neck, such as hood strings or pacifier cords. Do not suspend strings over a product or attach strings to toys.
- Do not use if any part of the (manufacturer to insert type of product) is broken, torn, or missing.

⚠ CAUTION

To prevent battery leaks, which can burn skin and eyes:

- Remove batteries when storing product for a long time.
- Dispose of used batteries immediately.
- Always replace the entire set of batteries at one time.
- Never mix old and new batteries, or batteries of different brands or types.

(29) Do not comply with section X1.3 from the Appendix X1 RATIONALE of ASTM F2194–22$^{\varepsilon 1}$.

(30) Add sections X1.5, X1.6, and X1.7 to the Appendix X1 RATIONALE of ASTM F2194–22$^{\varepsilon 1}$:

(i) X1.5 *Rationale for 6.12.1* A 27-inch height will likely discourage bed sharing because the baby is not accessible to the caregiver sleeping next to the bassinet. Use on table is unlikely because the bassinet in front of the sitting caregiver is cumbersome.

(ii) X1.6 *Rationale for 6.12.2* A 15-inch mattress support height places the baby at a comfortable height for a 50-percentile female to lean over and pick up the baby. The height should promote use of the bassinet on the floor rather than placing it on an elevated surface.

(iii) X1.7 *Rationale for 6.12.3* A *removable bassinet bed* must not function as a bassinet absent of the stand. This requirement is intended to prevent use of the bassinet bed on an unsafe elevated surface or soft surface such as an adult bed.

Alberta E. Mills,

Secretary, Consumer Product Safety Commission.

Environmental Protection Agency

40 CFR Part 136
Clean Water Act Methods Update Rule for the Analysis of Effluent; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 136

[EPA–HQ–OW–2022–0901; FRL 9346–02–OW]

RIN 2040–AG25

Clean Water Act Methods Update Rule for the Analysis of Effluent

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is finalizing changes to its test procedures required to be used by industries and municipalities when analyzing the chemical, physical, and biological properties of wastewater and other samples for reporting under the EPA's National Pollutant Discharge Elimination System permit program. The Clean Water Act requires the EPA to promulgate these test procedures (analytical methods) for analysis of pollutants. The EPA anticipates that these changes will provide increased flexibility for the regulated community in meeting monitoring requirements while improving data quality. In addition, this update to the CWA methods will incorporate technological advances in analytical technology and make a series of minor changes and corrections to existing approved methods. As such, the EPA expects that these changes will not result in any negative economic impacts.

DATES: This final rule is effective on June 17, 2024. The incorporation by reference of certain material listed in this rule and is approved by the Director of the Federal Register as of June 17, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–OW–HQ–2022–0901. All documents in the docket are listed on the *http://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Tracy Bone, Engineering and Analysis Division, Office of Water (4303T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460–0001; telephone number: 202–564–5257; email address: *bone.tracy@epa.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. General Information

This preamble describes the abbreviations and acronyms; reasons for the rule; and a summary of the changes and clarifications; the legal authority for the rule; methods incorporated by reference; and a summary of the changes and clarifications.

A. Does this action apply to me?

Entities potentially affected by the requirements of this action include:

Category	Examples of potentially affected entities
State, Territorial, and Indian Tribal Governments.	States authorized to administer the National Pollutant Discharge Elimination System permitting program; states, territories, and Tribes providing certification under CWA section 401; state, territorial, and Tribal-owned facilities that must conduct monitoring to comply with NPDES permits.
Industry	Facilities that must conduct monitoring to comply with NPDES permits; the environmental monitoring industry.
Municipalities	Publicly Owned Treatment Works or other municipality-owned facilities that must conduct monitoring to comply with NPDES permits.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. This table lists types of entities that the EPA is now aware of that could potentially be affected by this action. Other types of entities not listed in the table could also be affected. To determine whether your facility is affected by this action, you should carefully examine the applicability language at 40 CFR 122.1 (NPDES purpose and scope), 40 CFR 136.1 (NPDES permits and CWA) and 40 CFR 403.1 (pretreatment standards purpose and applicability). If you have questions regarding the applicability of this action to a particular entity, consult the appropriate person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

B. What action is the Agency taking?

Periodically, the EPA updates the approved methods in 40 CFR part 136. In general, the changes in this action fall into four categories. The first category is updated versions of EPA methods currently approved in 40 CFR part 136. The second category is new or revised methods published by a voluntary consensus standard body that are similar to methods previously adopted as EPA-approved methods in 40 CFR part 136. The third category is methods the EPA has reviewed under the agency's national Alternate Test Procedure program and preliminarily concluded are appropriate for nationwide use. The fourth category is corrections or amendments to the text and tables of 40 CFR part 136. The EPA is finalizing these revisions to improve data quality, update methods to keep current with technology advances, and provide the regulated community with greater flexibility. The following paragraphs provide details on the revisions.

C. What is the Agency's authority for taking this action?

The EPA is promulgating this regulation under the authorities of sections 301(a), 304(h), and 501(a) of the CWA; 33 U.S.C. 1251, 1311(a), 1314(h) and 1361(a). Section 301(a) of the CWA prohibits the discharge of any pollutant into navigable waters unless the discharge complies with, among other provisions, an NPDES permit issued under section 402 of the CWA. Section 304(h) of the CWA requires the EPA Administrator to ''. . . promulgate guidelines establishing test procedures for the analysis of pollutants that shall include the factors which must be provided in any certification pursuant to [section 401 of the CWA] or permit application pursuant to [section 402 of the CWA].'' Section 501(a) of the CWA authorizes the Administrator to ''. . . prescribe such regulations as are necessary to carry out this function under [the CWA].'' The EPA generally

has codified its test procedure regulations (including analysis and sampling requirements) for CWA programs at 40 CFR part 136, though some requirements are codified in other parts (*e.g.,* 40 CFR Chapter I, Subchapters N and O).

II. Background

Abbreviations and Acronyms Used in the Preamble

ASTM: ASTM International [1]
ATP: Alternate Test Procedure
BHI: Brain heart infusion
CATC: Cyanide Amenable to Chlorination
CFR: Code of Federal Regulations
CNCl: Cyanogen Chloride
CWA: Clean Water Act
EC–MUG: EC broth with 4-methylumbelliferyl-β-D-glucuronide
EDTA: Ethylenediaminetetraacetic acid
EPA: the U.S. Environmental Protection Agency
DO: Dissolved Oxygen
GC: Gas Chromatography
GC/MS/MS: Gas Chromatography-Tandem Mass Spectrometry
GC/HRMS: Gas Chromatography-High Resolution Mass Spectrometry
IBR: Incorporation by Reference
ICP/AES: Inductively Coupled Plasma-Atomic Emission Spectroscopy
NED: *N*-(1-naphthyl)-ethylenediamine dihydrochloride
NPDES: National Pollutant Discharge Elimination System
m/z: Mass to Charge Ratio
MF: Membrane Filtration
MPN: Most Probable Number
nm: Nanometer
NTTAA: National Technology Transfer and Advancement Act
POTW: Publicly Owned Treatment Works
QC: Quality Control
TKN: Total Kjeldahl Nitrogen
USGS: United States Geological Survey
VCSB: Voluntary Consensus Standards Body

NPDES permits must include conditions designed to ensure compliance with the technology-based and water quality-based requirements of the CWA, including in many cases, restrictions on the quantity of specific pollutants that can be discharged as well as pollutant measurement and reporting requirements. Often, entities have a choice in deciding which approved test procedure they will use for a specific pollutant because the EPA has approved the use of more than one method.[2]

The procedures for the analysis of pollutants required by CWA section 304(h) are a central element of the NPDES permit program. Examples of where these EPA-approved analytical methods must be used include the following: (1) applications for NPDES permits, (2) sampling or other reports required under NPDES permits, (3) other requests for quantitative or qualitative effluent data under the NPDES regulations, (4) state CWA 401 certifications, and (5) sampling and analysis required under the EPA's General Pretreatment Regulations for Existing and New Sources of Pollution, 40 CFR 136.1 and 40 CFR 403.12(b)(5)(v).

On February 21, 2023, the EPA proposed to update the approved methods in 40 CFR part 136. The EPA received 20 comments on the proposed rulemaking (February 21, 2023, 88 FR 10724) from laboratory associations, state environmental agencies, trade associations and citizens. All commenters supported finalizing this rule and approving each proposed method.

There were some specific comments that are outside the scope of this rulemaking. As stated in the proposed rule (88 FR 10725, February 21, 2023,), the EPA only considered new or revised methods that were submitted to the EPA. Method withdrawals, methods for new parameters, methods based on new technologies (except methods approved through the alternate test procedure program) and VCSB methods not submitted from VCSBs were not considered for this routine update. Commenters requesting changes to VCSB, or vender methods should work through the method owner to revise the method and submit any supporting data to the EPA for consideration.

Commenters noted that there was a format error in the proposed rulemaking language on Table IC, footnotes 15, 16 and 17, (88 FR 10763, February 21, 2023). The new footnote 16 was inadvertently added to the end of footnote 15. The information in the new footnotes is correctly described in the preamble (88 FR 10738, February 21, 2023). This typographical error of the order and numbering of the footnotes has been corrected in the final rule. In addition, the following parameters were missing from the preamble discussions of the revision of Standard Methods method 6410B–2020: 2,2′-oxybis(1-chloropropane) (also referred to as bis[2-Chloro-1-methylethyl] ether); hexachloroethane; and N-nitrosodimethylamine. The revised 6410B–2020 discussion in Section IV.C.35 of this preamble is correct.

III. Corrections or Amendments to the Text and Tables of 40 CFR Part 136

In addition to the method revision incorporated by reference as discussed in Section IV of this preamble, Standard Methods has revised a few of their general quality control sections (2020, 3020, 4020 and 5020). The EPA is updating the year of the current references to these sections in 136.3 Table IB footnote 85. The EPA is also adding a reference to an additional Standard Methods Quality Control section: Part 6000 Individual Organic Compounds, 6020. These Quality Control Standards are available for download at *www.standardmethods.org* at no charge. The EPA is correcting several minor errors or inconsistencies in the tables of approved methods. The EPA is making the following changes to 40 CFR 136.3, Tables IA, IB, IC, ID or IH:

1. Table IA. Removing the units of ''number per 100 mL'' under parameter 1. Coliform (fecal), because parameter 1 is specifically for biosolids that are reported as ''number per gram dry weight''.

2. Table IA. Moving United States Geologic Survey Method ''B–0050–85'' from parameter 1. Coliform (fecal) number per gram dry weight to parameter 2. Coliform (fecal) number per 100 mL, to address an error from the previous rulemaking when Parameter 1 Coliform (fecal) was split into two parameters to eliminate confusion as to which methods were approved for biosolids.

3. Table IA parameter 3 and IH parameter 2. Moving the phrase ''two-step'' in the ''Method'' column from the second to the third line which returns the phrase to the proper line after having been inadvertently moved.

4. Table IB. Revising footnote 85 to remove bullet formatting.

5. Table IB. Adding footnote 86 to Method 419D. Method 419D is listed as an approved method for of determination nitrate using Colorimetric (Brucine sulfate) methodology. This addition corrects a long-standing typographical error regarding the appropriate footnote for this method in Table IB.

6. Table IB. Correcting an inadvertent error to footnote 57. The reference number was incorrectly changed to 335.4–1. The correct number is 335.4.

7. Tables IC and ID. Adding footnote 15 to the Standard Methods column header and adding footnote 15 to refer to Quality Control Section: Part 6000 Individual Organic Compounds, 6020 (2019).

8. Table IC. Changing parameter 39, dichlorodifluoromethane, to refer to Method 6200 B rather than 6200 C for the GC/MS method.

9. Table IC. Adding footnote 10 to parameters 66–72, 95, 96 and 97 which

[1] Formerly known as the American Society for Testing and Materials (ASTM).

[2] NPDES permit regulations also specify that the approved method needs to be sufficiently sensitive. See 40 CFR 122.21(e)(3).

were inadvertently dropped in an earlier rulemaking. Footnote 10 to table IC applies to all of the 17 dioxin and furan congeners.

10. Table IH parameter 2. Moving method B–0025–85 down one row because it was inadvertently moved in an earlier rulemaking. This method is a single step membrane filtration method rather than a most probable number method.

11. Table II. Revising footnote 5 for the preservation and holding time requirements for cyanide to add the year (2015) of the ASTM method D7365–09a (15).

The recommended sampling and preservation procedures in the ASTM method have not changed since 2009, but the change to footnote 5 simplifies identification of the current method that is available from ASTM International. The 2015 reapproval date was already updated in footnote 6 to Table II in the 2021 methods update rule; however, adding the reapproval date was overlooked in the incorporated by reference section and in footnote 5 to Table II.

IV. Incorporation by Reference

Currently, hundreds of methods and ATPs are incorporated by reference within 40 CFR part 136. In most cases, 40 CFR part 136 contains multiple approved methods for a single parameter (or pollutant) and regulated entities often have a choice in selecting a method. The rule contains revisions to VCSB methods that are currently incorporated by reference, (see Sections IV.B, IV.C, and IV.E of this preamble). Two VCSBs have made such revisions: Standard Methods and ASTM. The VCSB methods are consistent with the requirements of the National Technology Transfer and Advancement Act, under which Federal agencies use technical standards developed or adopted by the VCSBs if compliance would not be inconsistent with applicable law or otherwise impracticable. This rule also includes two vendor ATPs (see Section IV.D of this preamble) and four revised EPA methods (see Section IV.A of this preamble) which the EPA is incorporating by reference.

The rule incorporates by reference the methods added in an earlier Methods Update Rule (86 FR 27226, May 19, 2021). The EPA inadvertently failed to complete the incorporation by reference review process for that final rule. The EPA proposed 68 methods for incorporation by reference into 40 CFR 136.3 (84 FR 56590, October 22, 2019). Other than ASTM D7365–09a (Reapproved 2015) and the EPA Method 1623.1, the methods are described in the 2019 proposal as well as the 2021 final rule. ASTM D7365–09a (Reapproved 2015) and Method 1623.1 are summarized in this preamble.

The EPA is also incorporating by reference an errata sheet in Table IA, footnotes 25, 26, 27. The U.S. EPA Whole Effluent Toxicity (WET) Methods Errata Sheet, EPA 821–R–02–012–ES, corrects and clarifies the WET methods referenced in those footnotes. The errata sheet was described and promulgated as part of the 2017 Clean Water Act Methods Update Rule for the Analysis of Effluent (see 82 FR 40841, August 28, 2017; docket number EPA–HQ–OW–2014–0797). The EPA inadvertently failed to incorporate by reference the errata sheet in the 2017 final rule.

The following paragraphs provide details on the methods incorporated by reference.

A. Changes to 40 CFR 136.3 To Include New Versions of Previously Approved EPA Methods

The EPA is adding revised versions of the EPA membrane filtration methods 1103.2, 1106.2, 1600.1, and 1603.1 found in Tables IA and IH. These methods were approved from 2002 to 2014. The EPA is also summarizing method 1623.1 that was added in the earlier rule (86 FR 27226, May 19, 2021) but not summarized. The revisions include standardizing language between the related methods, updating to reflect current lab practices and clarifying edits.

These methods each describe a membrane filter procedure for the detection and enumeration of either enterococci or *Escherichia coli* bacteria by their growth after incubation on selective media. These methods provide a direct count of bacteria in water samples based on the development of colonies on the surface of the membrane filter.

1. *E. coli.* Method 1103.2 describes a MF procedure for the detection and enumeration of *Escherichia coli* bacteria in ambient (fresh) water and is currently approved in Table IH. This is a two-step method which requires transferring the membrane filter after incubation on membrane-Thermotolerant Escherichia coli Agar (mTEC) to a pad saturated with urea substrate.

2. Enterococci. Method 1106.2 describes a MF procedure for the detection and enumeration of enterococci bacteria in ambient water and is currently approved in Table IH. This is a two-step method which requires transferring the membrane filter after incubation on membrane-Enterococcus (mE) agar to Esculin Iron Agar (EIA) medium.

3. Enterococci. Method 1600.1 describes a MF procedure for the detection and enumeration of enterococci bacteria in ambient (fresh and marine) water and wastewater and is currently approved in Tables IA and IH. This is a single-step method that is a modification of EPA Method 1106.1 (mE–EIA). The membrane filter containing the bacterial cells is placed on membrane-Enterococcus Indoxyl-β-D-Glucoside Agar (mEI).

4. *E. coli.* Method 1603.1 describes a MF procedure for the detection and enumeration of thermotolerant *Escherichia coli* bacteria in ambient (fresh) waters and wastewaters using Modified membrane-Thermotolerant Escherichia coli Agar (modified mTEC) and is currently approved in Table IA and IH.

5. *Cryptosporidium and Giardia.* Method 1623.1 describes a method for the detection of *Cryptosporidium* and *Giardia* in ambient water by concentration immunomagnetic separation (IMS), and immunofluorescence assay (FA) microscopy. A water sample is filtered and the oocysts, cysts, and extraneous materials are retained on the filter. EPA Method 1623.1 includes updated acceptance criteria for IPR, OPR, and MS/MSD, and clarifications and revisions based on the use of EPA Method.

The EPA methods are available free of charge on our websites (*epa.gov/cwa-methods/approved-cwa-microbiological-test-methods*), therefore the EPA methods incorporated by reference are reasonably available.

B. Changes to 40 CFR 136.3 To Include New Versions of Approved ASTM Methods

The EPA is adding new versions of ASTM methods previously approved in 40 CFR part 136. These changes to currently approved ASTM methods in 40 CFR part 136 include minor clarifications and editorial changes. As an example, ASTM added text to the appropriate method scope sections to indicate that the method was developed in accordance with the ''Decision on Principles for the Development of International Standards, Guides and Recommendations'' issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee. None of these changes will affect the performance of the method. The following describes the changes to current ASTM methods that the EPA is including in 40 CFR part 136. Each entry contains (in the following order):

the parameter, the ASTM method number (the last two digits in the method number represent the year ASTM published the method), a brief description of the analytical technique, and a brief description of any minor procedural changes (if there are any) in this revision from the last approved version of the method. Method revisions that are only formatting in nature will have no description of the changes. The methods listed below are organized according to the table at 40 CFR part 136 in the order in which they appear.

ASTM methods can be purchased from *astm.org.* The price of ASTM standards is not fixed. The price generally ranges between $50 and $100 per method. ASTM also offers memberships or subscriptions that allow unlimited access to their methods. The ASTM methods incorporated by reference are reasonably available.

The EPA is adding the following ASTM methods found in Table IB, and Table II at 40 CFR part 136:

1. Dissolved Oxygen. D888–18 (A, B, C), Dissolved Oxygen, Winkler, Electrode, Luminescent-based Sensor. Standard D888–18A measures dissolved oxygen using the Winkler iodometric titration procedure. The volume of titrant used is proportional to the concentration of DO in the sample. Standard D888–18B measures DO in the sample with an electrochemical probe that produces an electrical potential which is logarithmically proportional to the concentration of DO in the sample. Standard D888–18C measures DO with a luminescence-based sensor probe that employs frequency domain lifetime-based luminescence quenching and signal processing.

2. Hydrogen Ion (pH). In D1293–18 (A, B), pH, Electrometric. The activity of hydrogen ion (H+) in the sample is determined electrometrically with an ion-selective electrode in comparison to at least two standard reference buffers and pH is reported as the negative log of that activity.

3. Metals Series. In D1976–20, Elements in Water by Inductively-Coupled Plasma Atomic Emission Spectroscopy for determination of aluminum, antimony, arsenic, beryllium, boron, cadmium, chromium, cobalt, copper, iron, lead, magnesium, manganese, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc. The sample is acid digested and analyzed by ICP/AES for the simultaneous or sequential determination of 29 elements. The changes include changing the initial instrument calibration from using four standards as the first option to using only one standard and a calibration blank.

4. Surfactants. In D2330–20, Methylene Blue Active Substances, the sample is mixed with an acidic aqueous solution of methylene blue reagent, which forms a blue-colored ion pair with any anionic surfactants which is subsequently extracted with chloroform and washed with an acidic solution to remove interferences. The intensity of the blue color is measured using a photometer at 650 nanometers. The concentration of methylene blue active substances is determined in comparison to a standard curve.

5. Residue, filterable and nonfilterable. In D5907–18 (A and B), Filterable Matter (Total Dissolved Solids) and Nonfilterable Matter (Total Suspended Solids) under Test Method A, an aliquot of the sample is filtered through a glass fiber filter and the solids trapped on the filter are dried at 105 °C and weighed to determine the nonfilterable material (total suspended solids) by difference. Under Test Method B, the filtrate from Test Method A, or a separate filtrate, is evaporated to dryness at 180 °C and the residue weighed to determine the total dissolved solids.

6. Cyanide—Free. In D7237–18, Free Cyanide, Flow Injection, followed by Gas Diffusion Amperometry an aliquot of the sample is introduced into a flow injection analysis instrument, where it mixes with a phosphate buffer to release hydrogen cyanide which diffuses through a hydrophobic gas diffusion membrane into an alkaline solution and is detected amperometrically with a silver electrode. This version also added new information about sulfide interferences and potential mitigation strategies that the EPA anticipates will improve data quality. There are no other procedural changes.

7. Cyanide—Total. In D7284–20, Total Cyanide, Manual Distillation with $MgCl_2$ followed by Flow Injection, Gas Diffusion Amperometry, the sample is distilled with acid and a magnesium chloride catalyst to release cyanide to a sodium hydroxide solution. An aliquot of the sodium hydroxide solution is introduced into a flow injection analysis instrument, where it is acidified, and the hydrogen cyanide diffuses through a hydrophobic gas diffusion membrane into an alkaline solution and is detected amperometrically with a silver electrode.

8. Cyanide. D7365–09a (Reapproved 2015) is applicable for the collection and preservation of water samples for the analysis of cyanide. Samples are collected in appropriate containers and mitigated for known interferences either in the field during sample collection or in the laboratory prior to analysis. The sampling, preservation and mitigation of interference procedures described in this practice are recommended for the analysis of total cyanide, available cyanide, weak acid dissociable cyanide, and free cyanide by ASTM Methods D2036, D4282, D4374, D6888, D6994, D7237, D7284, and D7511.

9. Organic Carbon. In D7573–18a^{e1}, Total Organic Carbon, Combustion, the sample is sparged with an inert gas to remove dissolved inorganic carbon, acidified, and then combusted at high temperature to convert organic carbon to carbon dioxide. The carbon dioxide is measured with an infra-red detector. This version also adds data from an interlaboratory method validation study and new method detection limit values, but there are no procedural changes.

C. Changes to 40 CFR 136.3 To Include New Versions of Approved ''Standard Methods'' Methods

The EPA is approving new versions of methods developed by the Standard Methods Committee that were previously approved in 40 CFR part 136. Standard Methods has reviewed many of their methods in preparation for releasing the next edition of ''Standard Methods for the Examination of Water & Wastewater.'' The newer versions provide clarifications and make editorial corrections. These edits include removal of referents to specific brand names and trademarks, incorporation of footnotes into the text, a reformatting of figures, tables and reference lists, removal of bibliographical references that are no longer available, small editorial changes based on current style guides and changes to scientific publishing standards, and minor clarifications to procedures based on input from users. For example, the revisions replace distilled water with reagent water in all methods.

Each entry contains the Standard Method number and date, the parameter, and a brief description of the analytical method. The EPA lists only one version of a method. The date indicates the specific version approved for use under the CWA. The methods listed below are organized according to the table at 40 CFR part 136 in the order in which they appear.

Methods approved under Standard Methods can be purchased from *standardmethods.org.* The price generally ranges between from $60 to $80 per method. Standard Methods also offers memberships or subscriptions that allow unlimited access to their

methods. The methods incorporated by reference are reasonably available.

The EPA is adding the following methods to Tables IB, IC, and ID at 40 CFR part 136 for the following parameters:

1. Color. 2120 B–2021, Visual Comparison Method, is a platinum-cobalt method of measuring color, the unit of color being that produced by one mg platinum per liter in the form of the chloroplatinate ion. The 1:2 ratio of cobalt to platinum resulting from the preparation of the standard platinum-cobalt solution matches the color of natural waters.

2120 F–2021, American Dye Manufacturers Institute (ADMI) Weighted-Ordinate Spectrophotometric Method. This method calculates single-number color difference values (*i.e.,* uniform color differences) in accordance with the Adams-Nickerson chromatic value formula. Values are independent of chroma and hue. Transmittance of light is measured spectrophotometrically at multiple wavelengths and converted to a set of abstract numbers, which then are converted to a single number that indicates color value. This number is expressed on a scale used by the ADMI.

2. Turbidity. 2130 B–2020, Nephelometric Method is based on a comparison of the intensity of light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. The higher the intensity of scattered light, the higher the turbidity. Formazin polymer is used as the primary standard reference suspension.

3. Acidity. 2310 B–2020, Titration Method measures the hydrogen ions present in a sample as a result of dissociation or hydrolysis of solutes that react with additions of standard alkali. Acidity thus depends on the endpoint pH or indicator used. The construction of a titration curve by recording a sample's pH after successive small, measured additions of titrant permits identification of inflection points and buffering capacity, if any, and allows the acidity to be determined with respect to any pH of interest. Samples of industrial wastes, acid mine drainage, or other solutions that contain appreciable amounts of hydrolyzable metal ions such as iron, aluminum, or manganese are treated with hydrogen peroxide to ensure the oxidation of any reduced forms of polyvalent cations and are boiled to hasten hydrolysis. Acidity results may be highly variable if this procedure is not followed exactly.

4. Alkalinity. 2320 B–2021 Titration Method, measures the hydroxyl ions present in a sample resulting from dissociation or hydrolysis of solutes that react with additions of standard acid. Alkalinity thus depends on the endpoint pH used. For samples of low alkalinity (less than 20 mg/L $CaCO_3$) an extrapolation technique based on the near proportionality of concentration of hydrogen ions to excess of titrant beyond the equivalence point is used. The amount of standard acid required to reduce the pH exactly 0.30 pH unit is measured carefully. Because this change in pH corresponds to an exact doubling of the hydrogen ion concentration, a simple extrapolation can be made to the equivalence point.

5. Hardness.

a. In 2340 B–2021, Hardness by Calculation is the preferred method for determining hardness by calculating it from the results of separate determinations of calcium and magnesium by any approved method provided that the sum of the lowest point of quantitation for Ca and Mg is below the NPDES permit requirement for hardness.

b. In 2340 C–2021, Ethylenediaminetetraacetic acid Titrimetric Method, EDTA forms a chelated soluble complex when added to a solution of certain metal cations. If a small amount of a dye such as eriochrome black T or calmagite is added to an aqueous solution containing calcium and magnesium ions at a pH of 10.0 ± 0.1, the color of the solution becomes wine red. If EDTA is added as a titrant, the calcium and magnesium will be complexed, and when all of the magnesium and calcium has been complexed, the solution turns from wine red to blue, marking the endpoint of the titration. The volume of titrant used is proportional to hardness in the sample. Magnesium ion must be present to yield a satisfactory endpoint. To ensure this, a small amount of complexometrically neutral magnesium salt of EDTA is added to the buffer; this automatically introduces sufficient magnesium and obviates the need for a blank correction.

6. Specific Conductance. 2510 B–2021 measures conductance (or resistance) in the laboratory using a standard potassium chloride solution and from the corresponding conductivity, a cell constant is calculated. Most conductivity meters do not display the actual solution conductance, or resistance, rather, they generally have a dial that permits the user to adjust the internal cell constant to match the conductivity of a standard. Once the cell constant has been determined, or set, the conductivity of an unknown solution is displayed by the meter.

7. Residue-Total.

a. In 2540 B–2020 an aliquot of a well-mixed sample is evaporated in a pre-weighed evaporating dish at 103–105 °C to constant weight in a 103 to 105 °C oven. The increase compared to the empty pre-weighed dish weight represents total solids.

b. In 2540 C–2020, Total Dissolved Solids Dried at 180 °C (Residue—filterable in Table IB) a measured volume of a well-mixed sample is filtered through a glass fiber filter with applied vacuum. The entire exposed surface of the filter is washed with at least three successive volumes of reagent-grade water with continued suction until all traces of water are removed. The total filtrate (with washings) is then transferred to a pre-weighed dish and evaporated to dryness. Successive volumes of sample are added to the same dish after evaporation if necessary to yield between 2.5 and 200 mg of dried residue. The evaporated residue is then dried for one hour or more in an oven at 180 °C, cooled in a desiccator to ambient temperature, and weighed until the weight change is less than 0.5 mg.

c. In 2540 D–2020, Total Suspended Solids Dried from 103 to 105 °C (Residue—non-filterable total suspended solids (TSS) in Table IB) a well-mixed sample is filtered through a pre-weighed standard glass-fiber filter. The filter and the retained residue are then dried to a constant weight in a 103 to 105 °C oven. The increase in filter weight represents TSS.

d. In 2540 E–2020, Fixed and Volatile Solids Ignited at 550 °C (Residue—volatile in Table IB) the residue obtained from the determination of total (Method 2540 B), filterable (Method 2540 C), or non-filterable residue (Method 2540 D) is ignited at 550 ± 50 °C in a muffle furnace, cooled in a desiccator to ambient temperature and weighed. Repeated successive cycles of drying, cooling, desiccating, and weighing are performed until the weight change is less than 0.5 mg. The remaining solids are fixed total, dissolved, or suspended solids, while those lost to ignition are volatile total, dissolved, or suspended solids.

e. In 2540 F–2020, Settleable Solids (aka, Residue—settleable in Table IB), a well-mixed sample is used to fill an Imhoff cone or graduated cylinder to the one liter mark. The sample is allowed to settle for 45 minutes, then gently agitated near the sides of the cone (or graduated cylinder) with a rod or by spinning. The sample is then allowed to settle for another 15 minutes and the volume of settleable solids in the cone (or graduated cylinder) is recorded as

mL/L. When applicable, the recorded volume is corrected for interference from pockets of liquid volume.

8. Multiple metals by flame atomic absorption spectrometry.

a. 3111 B–2019, Direct Air-Acetylene Flame Method. The method is approved in Table IB for determination of antimony, cadmium, calcium, chromium, cobalt, copper, gold, iridium, iron, lead, magnesium, manganese, nickel, palladium, platinum, potassium, rhodium, ruthenium, silver, sodium, thallium, tin, and zinc. A sample is aspirated into a flame and the metals are atomized. A light beam is directed through the flame, into a monochromator, and onto a detector that measures the amount of light absorbed by the atomized metal in the flame. Because each metal has its own characteristic absorption wavelength, a source lamp composed of that element is used. The amount of energy at the characteristic wavelength absorbed in the flame is proportional to the concentration of the element in the sample over a limited concentration range.

b. 3111 C–2019, Extraction and Air-Acetylene Flame Method consists of chelation with ammonium pyrrolidine dithiocarbamate (APDC) and extraction into methyl isobutyl ketone (MIBK), followed by aspiration into an air-acetylene flame and is suitable for the determination of low concentrations of cadmium, chromium, cobalt, copper, iron, lead, manganese, nickel, silver, and zinc. The method is approved in Table IB for determination of cadmium, chromium, cobalt, copper, iron, lead, nickel, silver, and zinc. The EPA is also approving method 3111 C for manganese. This parameter was inadvertently left off in an earlier rulemaking approving method 3111 C.

c. 3111 D–2019, Direct Nitrous Oxide-Acetylene Flame Method. A sample is aspirated into a flame produced using a mixture of nitrous oxide and acetylene and the metals are atomized. A light beam is directed through the flame, into a monochromator, and onto a detector that measures the amount of light absorbed by the atomized metal in the flame. The method is approved in Table IB for determination of aluminum, barium, beryllium, molybdenum, osmium, titanium, and vanadium. In addition, the EPA is approving method 3111 D for calcium. This parameter was inadvertently left off in an earlier rulemaking approving method 3111 D.

d. 3111 E–2019, Extraction and Nitrous Oxide-Acetylene Flame Method. The method consists of chelation with 8-hydroxyquinoline, extraction with MIBK, and aspiration into a nitrous oxide-acetylene flame and is suitable for the determination of aluminum at concentrations less than 900 µg/L and beryllium at concentrations less than 30 µg/L. The method is approved in Table IB for determination of aluminum, and beryllium.

9. Mercury—Total. 3112 B–2020, Metals by Cold-Vapor Atomic Absorption Spectrometric Method is a flameless AA procedure based on the absorption of radiation at 253.7 nm by mercury vapor. The mercury in a sample is reduced to the elemental state and aerated from solution in a closed system. The mercury vapor passes through a cell positioned in the light path of an atomic absorption spectrophotometer. Absorbance is measured as a function of mercury concentration. The method is approved in Table IB for determination of mercury.

10. Metals by AA Furnace. In 3113 B–2020, Electrothermal Atomic Absorption Spectrometric Method, a discrete sample volume is dispensed into the graphite sample tube (or cup). Typically, determinations are made by heating the sample in three or more stages. First, a low current heats the tube to dry the sample. The second, or charring, stage destroys organic matter and volatilizes other matrix components at an intermediate temperature. Finally, a high current heats the tube to incandescence and, in an inert atmosphere, atomizes the element being determined. Additional stages frequently are added to aid in drying and charring, and to clean and cool the tube between samples. The resultant ground-state atomic vapor absorbs monochromatic radiation from the source. A photoelectric detector measures the intensity of transmitted radiation. The inverse of the transmittance is related logarithmically to the absorbance, which is directly proportional to the number density of vaporized ground-state atoms (the Beer-Lambert law) over a limited concentration range. The method is approved in Table IB for determination of aluminum, antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, iron, lead, manganese, molybdenum, nickel, selenium, silver, and tin. Although not specifically listed as target analytes in 3113 B, the 2010 version of the method is also approved in Table IB for determination of gold, thallium, and vanadium, as these elements may also be determined using the method.

11. Arsenic and Selenium by AA Gaseous Hydride.

a. 3114 B–2020, Manual Hydride Generation/Atomic Absorption Spectrometric Method is a manual hydride generation method that is applicable to the determination of arsenic and selenium by conversion to their hydrides by sodium borohydride reagent and transport into an atomic absorption atomizer. The method is approved in Table IB for determination of arsenic and selenium.

b. 3114 C–2020, Continuous Hydride Generation/Atomic Absorption Spectrometric Method is a continuous-flow hydride generation method that is applicable to the determination of arsenic and selenium by conversion to their hydrides by sodium borohydride reagent and transport into an atomic absorption atomizer. The continuous hydride generator offers the advantages of simplicity in operation, excellent reproducibility, low detection limits, and high sample volume throughput for selenium analysis following preparations as described in 3500-Se B or 3114 B.4c and d. The method is approved in Table IB for determination of arsenic and selenium.

12. Multiple Metals by ICP/AES (Plasma Emission Spectroscopy). In 3120 B–2020, an Inductively Coupled Plasma source consists of a flowing stream of argon gas ionized by an applied radio frequency field typically oscillating at 27.1 MHz. This field is inductively coupled to the ionized gas by a water-cooled coil surrounding a quartz torch that supports and confines the plasma. A sample aerosol is generated in an appropriate nebulizer and spray chamber and is carried into the plasma through an injector tube located within the torch. The sample aerosol is injected directly into the ICP, subjecting the constituent atoms to temperatures of about 6000 to 8000 °K. Because this results in almost complete dissociation of molecules, significant reduction in chemical interferences is achieved. The high temperature of the plasma excites atomic emission efficiently. Ionization of a high percentage of atoms produces ionic emission spectra. The ICP provides an optically thin source that is not subject to self-absorption except at very high concentrations. Total metals are determined after appropriate digestion. The method is approved in Table IB for determination of aluminum, antimony, arsenic, barium, beryllium, boron, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, molybdenum, nickel, potassium, selenium, silica, silver, sodium, thallium, vanadium, and zinc. Although not specifically listed as a target analyte in method 3120 B, the 2011 version of the method is also approved in Table IB for determination

of phosphorus because this element may also be determined using the method.

13. Multiple Metals by Inductively Coupled Plasma-Mass Spectrometry. In this method, 3125 B–2020, Inductively Coupled Plasma-Mass Spectrometry-Method, a sample is introduced into an argon-based, high-temperature radio-frequency plasma, usually via pneumatic nebulization. As energy transfers from the plasma to the sample stream, the target element undergoes desolvation, atomization, and ionization. The resulting ions are extracted from the plasma through a differential vacuum interface and separated based on their mass-to-charge (m/z) ratio by a mass spectrometer. Typically, either a quadrupole (with or without collision cell technology or dynamic reaction cell) or magnetic sector (high-resolution) mass spectrometer is used. An electron multiplier detector counts the separated ions, and a computer-based data-management system processes the resulting information. The method is approved in Table IB for determination of aluminum, antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, manganese, molybdenum, nickel, potassium, selenium, silver, thallium, vanadium, and zinc. Although not specifically listed as a target analyte in method 3125 B, the 2011 version of the method is also approved in Table IB for determination of boron, calcium, gold, iridium, iron, magnesium, palladium, platinum, potassium, rhodium, ruthenium, silica, sodium, tin, and titanium as these elements may also be determined using the method.

14. 3500 Colorimetric Series for Multiple Metals.

a. Aluminum. In 3500-Al B–2020, Eriochrome Cyanine R Method with Eriochrome cyanine R dye, dilute aluminum solutions buffered to a pH of 6.0 produce a red to pink complex that exhibits maximum absorption at 535 nm. The intensity of the developed color is influenced by the aluminum concentration, reaction time, temperature, pH, alkalinity, and concentration of other ions in the sample. To compensate for color and turbidity, the aluminum in one portion of a sample is complexed with EDTA to provide a blank. The interference of iron and manganese, two elements commonly found in water when aluminum is present, is eliminated by adding ascorbic acid. The method is approved in Table IB for determination of aluminum.

b. Arsenic. In 3500-As B–2020, Silver Diethyldithiocarbamate Method, arsenite, containing trivalent arsenic, is reduced selectively by aqueous sodium borohydride solution to arsine, AsH_3, in an aqueous medium of pH 6. Arsenate, methylarsonic acid, and dimethylarsinic acid are not reduced under these conditions. The generated arsine is swept by a stream of oxygen-free nitrogen from the reduction vessel through a scrubber containing glass wool or cotton impregnated with lead acetate solution into an absorber tube containing silver diethyldithiocarbamate and morpholine dissolved in chloroform. The intensity of the red color that develops is measured at 520 nm. The method is approved in Table IB for determination of arsenic.

c. Calcium. In 3500-Ca B–2020, EDTA Titrimetric Method, EDTA is added to water containing both calcium and magnesium, where it combines first with the calcium. Calcium can be determined directly, with EDTA, when the pH is made sufficiently high that the magnesium is largely precipitated as the hydroxide and an indicator is used that combines with calcium only. Several indicators give a color change when all the calcium has been complexed by the EDTA at a pH of 12 to 13. The method is approved in Table IB for determination of calcium.

d. Chromium. 3500-Cr B–2020, Colorimetric Method measures total chromium and dissolved hexavalent chromium, (chromium VI). For total chromium, an unfiltered sample must first be digested using an approved digestion procedure (see Table IB, footnote 4). For dissolved hexavalent chromium, a sample is filtered, and the hexavalent chromium is determined colorimetrically by reaction with diphenylcarbazide in acid solution. A red-violet colored complex of unknown composition is produced. The method is approved in Table IB for determination of total chromium after digestion of the sample, and for dissolved hexavalent chromium (chromium VI).

In 3500-Cr C–2020, Ion Chromatographic Method. This method is applicable to determination of dissolved hexavalent chromium in drinking water, groundwater, and industrial wastewater effluents. An aqueous sample is filtered, and its pH adjusted to between 9 and 9.5 with a concentrated buffer. This pH adjustment reduces the solubility of trivalent chromium and preserves the hexavalent chromium oxidation state. The sample is introduced into the instrument's eluent stream of ammonium sulfate and ammonium hydroxide. Trivalent chromium in solution is separated from the hexavalent chromium by the column. After separation, hexavalent chromium reacts with an azide dye to produce a chromogen that is measured at 530 or 540 nm. Hexavalent chromium is identified based on retention time. The method is approved in Table IB for determination of dissolved hexavalent chromium (chromium VI).

e. Copper Colorimetric. In 3500-Cu B–2020, Neocuproine Method, the sample is treated with hydroxylamine hydrochloride to reduce any cupric ions (Cu2+) to cuprous ions (Cu+). Sodium citrate is used to complex metallic ions that might precipitate when the pH is raised. The pH is adjusted to between 4 and 6 with ammonium hydroxide (NH_4OH), a solution of neocuproine (2,9-dimethyl-1,10-phenanthroline) in methanol is added, and the resultant complex is extracted into chloroform ($CHCl_3$). After dilution of the $CHCl_3$ to an exact volume with methanol (CH_3OH), the absorbance of the solution is measured at 457 nm. The method is approved in Table IB for determination of copper.

In 3500-Cu C–2020, Bathocuproine Method, cuprous ion forms a water-soluble orange-colored chelate with disodium bathocuproine disulfonate (sodium 4,4′-(2,9-dimethyl-1,10-phenanthroline-4,7-diyl)dibenzenesulfonate). While the color forms over the pH range 3.5 to 11.0, the recommended pH range is between 4 and 5. The sample is buffered at a pH of about 4.3 and reduced with hydroxylamine hydrochloride. The absorbance is measured at 484 nm. The 2011 editorial revision currently is approved in Table IB for determination of copper.

f. Potassium. In 3500-K B–2020, Flame Photometric Method, trace amounts of potassium can be determined in either a direct-reading or internal-standard type of flame photometer at a wavelength of 766.5 nm. The method is approved in Table IB for determination of potassium.

In 3500-K C–2020, Potassium-Selective Electrode Method, potassium ions are measured potentiometrically by using a potassium ion-selective electrode and a double-junction, sleeve-type reference electrode. The analysis is performed with either a pH meter having an expanded millivolt scale capable of being read to the nearest 0.1 mV or a specific-ion meter having a direct concentration scale for potassium. Before measurement, an ionic strength adjustor reagent is added to both standards and samples to maintain a constant ionic strength. The electrode response is measured in standard solutions with potassium concentrations spanning the range of interest using a calibration line derived either by the

instrument meter or manually. The electrode response in sample solutions is measured following the same procedure and potassium concentration determined from the calibration line or instrument direct readout. The 2011 editorial revision currently is approved in Table IB for determination of potassium.

g. Manganese. In 3500-Mn B–2020, Persulfate Method, persulfate oxidation of soluble manganous compounds to form permanganate is carried out in the presence of silver nitrate. The resulting color is stable for at least 24 hours if excess persulfate is present and organic matter is absent. The method is approved in Table IB for determination of manganese.

h. Sodium. In 3500-Na B–2020, Flame Emission Photometric Method, a sample is nebulized into a gas flame under carefully controlled, reproducible excitation conditions. The sodium resonant spectral line at 589 nm is isolated by interference filters or by light-dispersing devices such as prisms or gratings. Emission light intensity is measured by a phototube, photomultiplier, or photodiode. The light intensity at 589 nm is approximately proportional to the sodium concentration. The method is approved in Table IB for determination of sodium.

i. Lead. In 3500-Pb B–2020, Dithizone Method, an acidified sample containing microgram quantities of lead is mixed with ammoniacal citrate-cyanide reducing solution and extracted with dithizone in chloroform ($CHCl_3$) to form a cherry-red lead dithizonate. The color of the mixed color solution is measured photometrically. The method is approved in Table IB for determination of lead.

j. Zinc. 3500-Zn B–2020, Zincon Method. Zinc forms a blue complex with zincon (2-carboxy-2′-hydroxy-5′-sulfoformazyl benzene) in a solution buffered to pH 9.0. Other heavy metals likewise form colored complexes with zincon. Cyanide is added to complex zinc and heavy metals. Cyclohexanone is added to selectively free zinc from its cyanide complex so that it can be complexed with zincon to form a blue color which is measured spectrophotometrically at 620 nm. Sodium ascorbate reduces manganese interference. The developed color is stable except in the presence of copper. The method is approved in Table IB for determination of zinc.

15. 4110 Series, Ion Chromatography.

a. In 4110 B–2020, Ion Chromatography with Chemical Suppression of Eluent Conductivity, a water sample is injected into a stream of eluent and passed through a series of ion exchangers. The anions of interest are separated based on their relative affinities for a low-capacity, strongly basic anion exchanger (guard and analytical columns). The separated anions are directed through a suppressor device that provides continuous suppression of eluent conductivity and enhances analyte response. In the suppressor, the separated anions are converted to their highly conductive acid forms while the conductivity of the eluent is greatly decreased. The separated anions in their acid forms are measured by conductivity. They are identified based on retention time as compared to standards. Quantitation is by measurement of peak area or peak height. The method is approved in Table IB for determination of bromide, chloride, fluoride, nitrate, combined nitrate-nitrite, nitrite, orthophosphate, and sulfate.

b. 4110 C–2020, Single-Column Ion Chromatography with Direct Conductivity Detection. An aqueous sample is injected into an ion chromatograph consisting of an injector port, analytical column, and conductivity detector. The sample merges with the eluent stream and is pumped through the analytical column where the anions are separated based on their affinity for the active sites of the column packing material. Concentrations are determined by direct conductivity detection without chemical suppression. The method is approved in Table IB for determination of bromide, chloride, fluoride, nitrate, combined nitrate-nitrite, nitrite, orthophosphate, and sulfate.

c. 4110 D–2020, Ion Chromatographic Determination of Oxyhalides and Bromide. The sample is analyzed in a manner similar to that in 4110 B–2020. However, bromate has been shown to be subject to positive interferences in some matrices. The interference is noticeable usually as a flattened peak. It often can be eliminated by passing the sample through an H+ off-line solid-phase extraction (SPE) cartridge, by selection of a different column-eluent combination, or by diluting the eluent, which will increase retention times and spread the chromatogram. Additionally, chloride or a nontarget analyte present in unusually high concentration may overlap with a target analyte sufficiently to cause problems in quantitation or may cause retention-time shifts. Dilution of the sample may resolve this problem. The method is approved in Table IB for determination of bromide.

16. Inorganic Anions by CIE/UV (Capillary Ion Electrophoresis). In 4140 B–2020, Capillary Ion Electrophoresis with Indirect UV Detection, the sample is introduced at the cathodic end of the capillary and anions are separated based on their differences in mobility in the electric field as they migrate through the capillary. Cations migrate in the opposite direction and are not detected. Water and neutral organics are not attracted toward the anode. They migrate after the anions and thus do not interfere with anion analysis. Anions are detected as they displace charge-for-charge the UV-absorbing electrolyte anion (chromate), causing a net decrease in UV absorbance in the analyte anion zone compared to the background electrolyte. Detector polarity is reversed to provide positive millivolt response to the data system. As in chromatography, the analytes are identified by their migration time and quantitated by using time-corrected peak area relative to standards. The method is approved in Table IB for determination of bromide, chloride, fluoride, nitrate, combined nitrate-nitrite, nitrite, orthophosphate, and sulfate.

17. 4500 Series, Chloride.

a. 4500-Cl^- B–2021, Titrimetric Method. In a neutral or slightly alkaline solution, potassium chromate can indicate the endpoint of the silver nitrate titration of chloride. Silver chloride is precipitated quantitatively before red silver chromate is formed. In this version of the method approved by the Standard Methods Committee in 2021, additional information regarding removal of interferences caused by sulfide, thiosulfate, and sulfite ions by digestion of the sample with hydrogen peroxide prior to titration has been added to the sample preparation procedures. A tighter pH range of 8 to 10, as opposed to 7 to 10, is specified for adjustment of the pH of the sample prior to titration. A reference has been added for the 2021 Standard Methods Joint Task Group validation report titled: ''Interlaboratory validation study for the use of H_2O_2 with boiling for determining Cl^-.'' The method is approved in Table IB for determination of chloride.

b. 4500-Cl^- C–2021, Mercuric Nitrate Method. Chloride can be titrated with mercuric nitrate, $Hg(NO_3)_2$, because of the formation of soluble, slightly dissociated mercuric chloride. In the pH range 2.3 to 2.8, diphenylcarbazone indicates the titration endpoint by formation of a purple complex with the excess mercuric ions. Xylene cyanol FF serves as a pH indicator and endpoint enhancer. Increasing the strength of the titrant and modifying the indicator mixtures extends the range of measurable chloride concentrations.

The method is approved in Table IB for determination of chloride.

c. 4500-Cl^- D–2021, Potentiometric Method. Chloride is determined by potentiometric titration with silver nitrate solution with a glass and silver-silver chloride electrode system. During titration, an electronic voltmeter is used to detect the change in potential between the two electrodes. The endpoint of the titration is that instrument reading at which the greatest change in voltage has occurred for a small and constant increment of silver nitrate added. The method is approved in Table IB for determination of chloride.

d. 4500-Cl^- E–2021, Automated Ferricyanide Method. Thiocyanate ion is liberated from mercuric thiocyanate by the formation of soluble mercuric chloride. In the presence of ferric ion, free thiocyanate ion forms a highly colored ferric thiocyanate, of which the intensity is proportional to the chloride concentration. The is approved in Table IB for determination of chloride.

18. 4500 Series Cyanide Total or Available.

a. 4500–CN^- B–2021, Manual Distillation (as Preliminary Treatment of Samples). Total cyanides are measured after preliminary treatment of samples for preservation and to remove interferences. The preliminary treatment required depends on which interfering substances the samples contain. Distillation removes many interfering substances, but other pretreatment procedures will be needed for samples containing sulfides, fatty acids, oxidizing agents, nitrites, and nitrates. The method is approved in Table IB for preliminary treatment of samples to be used for determination of cyanide.

b. 4500–CN^- C–2021, Total Cyanide after Distillation. Hydrogen cyanide (HCN) is liberated from an acidified sample by distillation and purging with air, with the HCN gas collected in a NaOH scrubbing solution. The cyanide concentration in the scrubbing solution is determined via titrimetric, colorimetric, or potentiometric procedures. The method is approved in Table IB for preliminary treatment of samples to be used for determination of cyanide.

c. 4500–CN^- D–2021, Titrimetric Method. CN^- in the alkaline distillate from the preliminary treatment procedures (4500–CN^- B and C) is titrated with standard silver nitrate ($AgNO_3$) to form the soluble cyanide complex $Ag(CN)^{2-}$. As soon as all CN^- has been complexed and a small excess of Ag^+ has been added, the silver-sensitive indicator, p-dimethylaminobenzalrhodanine, detects the excess Ag^+ and immediately changes color from yellow to salmon. The method is approved in Table IB for determination of cyanide.

d. 4500–CN^- E–2021, Spectrophotometric Method. Total CN^- in the alkaline distillate from the preliminary treatment procedures (4500–CN^- B and C) is converted to cyanogen chloride (CNCl) by reaction with chloramine-T at pH less than 8 without hydrolyzing to cyanate (CNO^-). After the reaction is complete, adding a pyridine-barbituric acid reagent turns CNCl a red-blue color. Maximum color absorbance in aqueous solution is between 575 and 582 nm. The method is approved in Table IB for determination of cyanide.

e. 4500–CN^- F–2021, Ion Selective Electrode Method. Total CN^- in the alkaline distillate from the preliminary treatment procedures (4500-CN^- B and C) is determined potentiometrically by using a CN^--ion selective electrode. The 2016 version of the method currently is approved in Table IB for determination of cyanide.

f. 4500–CN^- G–2021, Cyanides Amenable to Chlorination after Distillation. Available cyanide, or cyanide amenable to chlorination (CATC), can be determined when a portion of the sample is chlorinated at high pH and cyanide levels in the chlorinated sample are determined after manual distillation followed by titrimetric or spectrophotometric measurement. CATC is calculated by the difference between the results for cyanide in the unchlorinated sample and the results for the chlorinated sample. The method is approved in Table IB for preliminary treatment of samples to be used for determination of available cyanide.

g. 4500–CN^- N–2021, Total Cyanide after Distillation by Flow Injection Analysis. Total cyanides are digested and steam-distilled from the sample (4500–CN^- C). The cyanide in this distillate is converted to CNCl by reaction with chloramine-T at pH less than 8. The CNCl then forms a red-blue dye by reacting with pyridine-barbituric acid reagent. The absorbance of this red dye is measured at 570 nm and is proportional to the total or weak acid dissociable cyanide in the sample. The method is approved in Table IB for determination of cyanide.

19. 4500 Total Fluoride Series.

a. 4500–F^- B–2021, Preliminary Distillation Step. Fluoride is separated from other nonvolatile constituents in water by conversion to hydrofluoric or fluosilicic acid and subsequent distillation. The conversion is accomplished by using a strong, high-boiling acid. To protect against glassware etching, hydrofluoric acid is converted to fluosilicic acid by using soft glass beads. Quantitative fluoride recovery is accomplished by using a relatively large sample. Acid and sulfate carryover are minimized by distilling over a controlled temperature range. The method is approved in Table IB for preliminary treatment of samples to be used for determination of fluoride.

b. 4500–F^- C–2021, Ion-Selective Electrode Method. The fluoride electrode is an ion-selective sensor that measures the ion activity of fluoride in solution rather than concentration. The key element in the fluoride electrode is the laser-type doped lanthanum fluoride crystal across which a potential is established by fluoride solutions of different concentrations. The crystal contacts the sample solution at one face and an internal reference solution at the other. Fluoride ion activity depends on the solution total ionic strength and pH, and on fluoride complexing species. Adding an appropriate buffer provides a nearly uniform ionic strength background, adjusts pH, and breaks up complexes. In effect, the electrode measures concentration. The method is approved in Table IB for determination of fluoride.

c. 4500–F^- D–2021, SPADNS Method. The SPADNS colorimetric method is based on the reaction between fluoride and a ''lake'' of zirconium-dye. Fluoride reacts with the dye lake, dissociating a portion of it into a colorless complex anion (ZrF_6^{2-}) and the dye. As the amount of fluoride increases, the color produced becomes progressively lighter and absorbance is measured colorimetrically at 570 nm. The method is approved in Table IB for determination of fluoride.

d. 4500–F^- E–2021, Complexone Method. The sample is distilled in the automated system, and the distillate is reacted with alizarin fluorine blue-lanthanum reagent to form a blue complex that is measured colorimetrically at 620 nm. method is approved in Table IB for determination of fluoride.

20. 4500 Hydrogen ion (pH). In 4500–H^+ B–2021, Electrometric Method, the basic principle of electrometric pH measurement is determination of the activity of the hydrogen ions by potentiometric measurement using a standard hydrogen electrode and a reference electrode. The hydrogen electrode consists of a platinum electrode across which hydrogen gas is bubbled at a pressure of 101 kilopascal. Because of difficulty in its use and the potential for poisoning the hydrogen electrode, the glass electrode commonly

is used. The electromotive force produced in the glass electrode system varies linearly with pH. This linear relationship is described by plotting the measured emf against the pH of different buffers. A sample's pH is determined by extrapolation. This version of the method adds information to Section 2—Apparatus, regarding equipment that may be used for manual or automatic temperature compensation. The 2011 editorial revision currently is approved in Table IB for determination of pH.

21. 4500 Kjeldahl Nitrogen Total (TKN) Series.

a. 4500–N_{org} B–2021, Macro-Kjeldahl Method. In the presence of sulfuric acid (H_2SO_4), potassium sulfate (K_2SO_4), and a cupric sulfate ($CuSO_4$) catalyst, amino nitrogen of many organic materials is converted to ammonium. Free ammonia also is converted to ammonium. After the addition of base, the ammonia is distilled from an alkaline medium and absorbed in boric or sulfuric acid. The ammonia may be determined colorimetrically, by ammonia-selective electrode, or by titration with a standard mineral acid. The method is approved in Table IB for preliminary treatment of samples to be used for determination of total Kjeldahl nitrogen (TKN).

b. 4500–N_{org} C–2021, Semi-Micro-Kjeldahl Method. This is a reduced-volume version of 4500 N_{org} B that specifies use of Kjeldahl flasks with a capacity of 100 mL in a semi-micro-Kjeldahl digestion apparatus equipped with heating elements to accommodate Kjeldahl flasks and a suction outlet to vent fumes. The method is approved in Table IB for preliminary treatment of samples to be used for determination of total Kjeldahl nitrogen (TKN).

c. 4500–N_{org} D–2021, Block Digestion and Flow Injection Analysis. Samples are digested in a block digestor with sulfuric acid and copper sulfate as a catalyst. The digested sample is injected onto the FIA manifold, where its pH is controlled by raising it to a known, basic pH by neutralization with a concentrated buffer. This in-line neutralization converts the ammonium cation to ammonia, and also prevents undue influence of the sulfuric acid matrix on the pH-sensitive color reaction that follows. The ammonia thus produced is heated with salicylate and hypochlorite to produce a blue color that is proportional to the ammonia concentration. The color is intensified by adding sodium nitroprusside. The presence of EDTA in the buffer prevents the precipitation of calcium and magnesium. The resulting peak's absorbance is measured at 660 nm. The peak area is proportional to the concentration of TKN in the original sample. The method is approved in Table IB for determination of TKN.

22. 4500–NH_3 Nitrogen (Ammonia as nitrogen) Series.

a. 4500–NH_3 B–2021, Preliminary Manual Distillation Step. The sample is buffered at pH 9.5 with a borate buffer to decrease hydrolysis of cyanates and organic nitrogen compounds. It is distilled into a solution of boric acid when titration is to be used, or into H_2SO_4, when the phenate method is used as the determinative step. The ammonia in the distillate can be determined either colorimetrically by the phenate method or titrimetrically with standard H_2SO_4 and a mixed indicator or a pH meter. Ammonia in the distillate also can be determined by the ammonia-selective electrode method, using 0.04 N H_2SO_4 to trap the ammonia. This revision replaces instructions for storage of ammonia-free water with instructions for preparation of ammonia-free water using an ion exchange resin and simply says that if high blank values are produced, the analyst should prepare fresh ammonia-free water. The method is approved in Table IB for preliminary treatment of samples to be used for determination of ammonia.

b. 4500–NH_3 C–2021, Titration Method. The titrimetric method is used only on samples that have been carried through preliminary distillation. Ammonia is titrated with a standardized sulfuric acid titrant using a mixed indicator of methyl red and methylene blue. The method is approved in Table IB for determination of ammonia as well as for determination of TKN after appropriate digestion/distillation of the sample.

c. 4500–NH_3 D–2021, Electrode Method. The ammonia-selective electrode uses a hydrophobic gas-permeable membrane to separate the sample solution from an electrode internal solution of ammonium chloride. Dissolved ammonia ($NH_{3(aq)}$ and NH_4^+) is converted to $NH_{3(aq)}$ by raising the pH to above 11 with a strong base. $NH_{3(aq)}$ diffuses through the membrane and changes the internal solution pH that is sensed by a pH electrode. The fixed level of chloride in the internal solution is sensed by a chloride ion-selective electrode that serves as the reference electrode of the sample. Potentiometric measurements are made with a pH meter having an expanded millivolt scale or with a specific ion meter. The method is approved in Table IB for determination of ammonia, as well as for determination of TKN after appropriate digestion/distillation of the sample.

d. 4500–NH_3 E–2021, Electrode Method. Ammonia is determined using an ammonia-selective electrode. When a linear relationship exists between concentration and response, known addition is convenient for measuring occasional samples because no calibration is needed. Because an accurate measurement requires that the concentration at least double as a result of the addition, sample concentration must be known within a factor of three. The total concentration of ammonia can be measured in the absence of complexing agents down to 0.8 mg/L NH_3-N or in the presence of a large excess (50 to 100 times) of complexing agent. The method is approved in Table IB for determination of ammonia, as well as for determination of TKN after appropriate digestion/distillation of the sample.

e. 4500–NH_3 F–2021, Phenate Method. An intensely blue compound, indophenol, is formed by the reaction of ammonia, hypochlorite, and phenol catalyzed by sodium nitroprusside. The color is measured spectrophotometrically at 640 nm. The method is approved in Table IB for determination of ammonia, as well as for determination of TKN after appropriate digestion/distillation of the sample.

f. 4500–NH_3 G–2021, Semi-Automated Phenate Method. Alkaline phenol and hypochlorite react with ammonia to form indophenol blue that is proportional to the ammonia concentration. The blue color formed is intensified with sodium nitroprusside. The color is measured spectrophotometrically at 630 to 660 nm. The method is approved in Table IB for determination of ammonia, as well as for determination of TKN after appropriate digestion/distillation of the sample.

g. 4500–NH_3 H–2021, Semi-Automated Phenate Method. A water sample containing ammonia or ammonium cation is injected into an FIA carrier stream to which a complexing buffer (alkaline phenol) and hypochlorite are added. This reaction, the Berthelot reaction, produces the blue indophenol dye. The blue color is intensified by the addition of nitroferricyanide. The resulting peak's absorbance is measured at 630 nm. The peak area is proportional to the concentration of ammonia in the original sample. The method is approved in Table IB for determination of ammonia, as well as for determination of TKN after appropriate digestion/distillation of the sample.

23. 4500–NO_2^- Nitrite as Nitrogen. 4500–NO_2^- B–2021,

Spectrophotometric Method. Nitrite ($NO2^-$) in a sample is determined through formation of a reddish-purple azo dye produced at pH 2.0 to 2.5 by coupling diazotized sulfanilamide with N-(1-naphthyl)-ethylenediamine dihydrochloride (NED) and absorbance is measured spectrophotometrically at 543 nm. The method is approved in Table IB for determination of nitrite.

24. 4500–$NO3^-$ Nitrogen (Nitrite/Nitrate as Nitrogen Series).

a. 4500–$NO3^-$ D–2019, Nitrate Electrode Method. Nitrate is measured using an ion-selective electrode that develops a potential across a thin, inert membrane holding in place a water-immiscible liquid ion exchanger. The method is approved in Table IB for determination of nitrate.

b. 4500–NO_3^- E–2019, Cadmium Reduction Method. Nitrate (NO_3^-) is reduced almost quantitatively to nitrite (NO_2^-) in the presence of cadmium (Cd). This method uses commercially available Cd granules treated with copper sulfate ($CuSO_4$) and packed in a glass column. The NO_2^- is then diazotized with sulfanilamide and coupled with NED to form a highly colored azo dye that is measured spectrophotometrically. To correct for any NO_2^- present in the sample before NO_3^- reduction, samples also must be analyzed without the reduction step. The method is approved in Table IB for determination of nitrate (by subtraction), as well as for determination of combined nitrate + nitrite, and for determination of nitrite singly when bypassing the reduction step.

c. 4500–NO_3^- F–2019, Automated Cadmium Reduction Method. This is an automated version of the cadmium reduction method 4500 $NO3^-$ E. Nitrate in a sample is reduced to nitrite using cadmium reduction and then diazotized with sulfanilamide and coupled with NED to form a highly colored azo dye that is measured spectrophotometrically. To correct for any NO_2^- present in the sample before NO_3^- reduction, samples also must be analyzed without the reduction step. The method is approved in Table IB for determination of nitrate (by subtraction), as well as for determination of combined nitrate + nitrite, and for determination of nitrite singly when bypassing the reduction step.

d. 4500–NO_3^- H–2019, Automated Hydrazine Reduction Method. Nitrate in a sample is reduced to nitrite using hydrazine sulfate then diazotized with sulfanilamide and coupled with NED to form a highly colored azo dye that is measured spectrophotometrically. The method is approved in Table IB for determination of combined nitrate and nitrite.

e. 4500–NO_3^- I–2019, Cadmium Reduction Flow Injection Method. A sample is passed through a copperized cadmium column to quantitatively reduce its nitrate content to nitrite. The nitrite is diazotized with sulfanilamide and coupled with NED to yield a water-soluble dye with a magenta color whose absorbance at 540 nm is proportional to the nitrate + nitrite in the sample. Nitrite concentrations may be determined by bypassing the cadmium column and nitrate concentration may be calculated by subtraction of the result for the nitrite concentration from the result for the combined nitrate + nitrite concentration. The method is approved in Table IB for determination of nitrate, as well as for determination of combined nitrate + nitrite, and for determination of nitrite singly by bypassing the reduction step.

25. 4500–O Oxygen (Dissolved) Series.

a. 4500–O B–2021, Iodometric Methods. A divalent manganese solution is added and then a strong alkali is added to a sample in a glass-stoppered bottle and dissolved oxygen (DO) rapidly oxidizes an equivalent amount of the dispersed divalent manganous hydroxide precipitate into higher-valency hydroxides. Oxidized manganese reverts to the divalent state in the presence of iodide ions in an acidic solution, liberating an amount of iodine equivalent to the original DO content. The iodine is then titrated with a standard thiosulfate solution. The method is approved in Table IB for determination of DO.

b. 4500–O C–2021, Azide Modification. The sample is treated with manganous sulfate, potassium hydroxide, and potassium iodide (the latter two reagents combined in one solution) and finally sulfuric acid. The initial precipitate of manganous hydroxide, $Mn(OH)_2$, combines with the DO in the sample to form a brown precipitate, manganic hydroxide, $MnO(OH)_2$. Upon acidification, the manganic hydroxide forms manganic sulfate, which acts as an oxidizing agent to release free iodine from the potassium iodide. The iodine, which is stoichiometrically equivalent to the DO in the sample, is then titrated with sodium thiosulfate or phenylarsine oxide (PAO). The azide modification effectively removes nitrite interference, which is the most common interference in biologically treated effluents and incubated biochemical oxygen demand (BOD) samples. The method is approved in Table IB for determination of DO.

c. 4500–O D–2021, Permanganate Modification. The permanganate modification is used only on samples containing Fe(II) (*e.g.,* acid mine water). Concentrated sulfuric acid, potassium permanganate in solution and potassium fluoride in solution are added to the sample. Enough $KMnO_4$ solution is added to obtain a violet tinge that persists for 5 minutes. 0.5 to 1.0 mL potassium oxalate solution is then added only until permanganate color is removed completely. From this point, the procedure closely parallels that in 4500–O C. The method is approved in Table IB for determination of DO.

d. 4500–O E–2021, Alum Flocculation Modification. Samples high in suspended solids may consume appreciable quantities of iodine in acid solution. The interference due to solids may be removed by alum flocculation. Concentrated ammonium hydroxide and aluminum potassium sulfate solution are added to a sample. The sample is allowed to settle for about 10 min and the clear supernatant is siphoned into a 250- to 300-mL DO bottle until it overflows. From this point, the procedure closely parallels that in 4500–O C. The method is approved in Table IB for determination of DO.

e. 4500–O F–2021, Copper Sulfate-Sulfamic Acid Flocculation Modification. This modification is used for biological flocs (*e.g.,* activated sludge mixtures), which have high oxygen utilization rates. A copper sulfate-sulfamic acid inhibitor solution is added to the sample. The suspended solids are allowed to settle, and the relatively clear supernatant liquor is siphoned into a 250- to 300-mL DO bottle. From this point, the procedure closely parallels that in 4500–O C. The method is approved in Table IB for determination of DO.

f. 4500–O G–2021, Electrode Method. Oxygen-sensitive polarographic or galvanic membrane electrodes are composed of two solid metal electrodes in contact with supporting electrolyte separated from the test solution by a selective membrane. Polyethylene and fluorocarbon membranes are commonly used because they are permeable to molecular oxygen and are relatively rugged. The diffusion current is linearly proportional to the molecular-oxygen concentration. The measured current can be converted easily to concentration units (*e.g.,* mg/L) by a number of calibration procedures. The method is approved in Table IB for determination of DO.

g. 4500–O H–2021, Luminescence-based Method. The optical probe uses luminescence-based oxygen sensors to measure the light-emission

characteristics of a luminescent reaction; oxygen quantitatively quenches the luminescence. The change in the luminescence signal's lifetime correlates to the DO concentration. The method is approved in Table IB for determination of DO.

26. 4500–P Phosphorus Total and Ortho Phosphorus Series.

a. 4500–P B–2021, Digestion Sample Preparation. Because phosphorus may occur in combination with organic matter, a digestion method to determine total phosphorus must be able to oxidize organic matter effectively to release phosphorus as orthophosphate. Three digestion methods are given in 4500–P B.3, 4, and 5. The perchloric acid method in B.5 is the most vigorous and time-consuming method, and is recommended for particularly difficult samples, such as sediments. The nitric acid-sulfuric acid method is recommended for most samples. The simplest digestion method that may be used for determination of total phosphorus is the persulfate oxidation technique in which 50 mL of an unfiltered sample is boiled with sulfuric acid and either ammonium persulfate or potassium persulfate for approximately 30–40 minutes or until a final volume of about 10 mL is reached. The method is approved in Table IB for preliminary treatment of samples to be used for determination of total phosphorus as orthophosphorus using manual or automated versions of the ascorbic acid reduction, colorimetric methods.

b. 4500–P E–2021, Manual Method. Ammonium molybdate and antimony potassium tartrate react in an acid medium with orthophosphate to form phosphomolybdic acid, a heteropoly acid that is reduced to intensely colored molybdenum blue by ascorbic acid and is measured spectrophotometrically. This revision adds that possible interference from silicate should be evaluated when reporting concentrations less than 10 µg/L. The method is approved in Table IB for determination of total phosphorus after digestion of the sample, as well as for determination of orthophosphorus in a filtered, undigested sample.

c. 4500–P F–2021, Automated Ascorbic Acid Reduction Method. Ammonium molybdate and antimony potassium tartrate react with orthophosphate in an acid medium to form an antimony-phosphomolybdate complex, which on reduction with ascorbic acid yields an intense blue color suitable for photometric measurement using continuous flow analytical equipment. The method is approved in Table IB for determination of total phosphorus after digestion of the sample, as well as for determination of orthophosphorus in a filtered, undigested sample.

d. 4500–P G–2021, Automated. Ammonium molybdate and antimony potassium tartrate react with orthophosphate in an acid medium to form an antimony-phosphomolybdate complex, which on reduction with ascorbic acid yields an intense blue color suitable for photometric measurement using flow injection analysis. The method is approved in Table IB for determination of total phosphorus after digestion of the sample, as well as for determination of orthophosphorus in a filtered, undigested sample.

e. 4500–P H–2021, Automated Total Phosphorus. Samples are manually digested using the approved procedure for preliminary treatment of samples to be used for determination of total phosphorus. When the resulting solution is injected onto the manifold, the orthophosphate ion reacts with ammonium molybdate and antimony potassium tartrate under acidic conditions to form a complex. This complex is reduced with ascorbic acid to form a blue complex suitable for photometric measurement using flow injection analysis. The method is approved in Table IB for determination of total phosphorus.

27. 4500–S_2^- Sulfide Series.

a. 4500–S_2^- B–2021, Sample Pretreatment. Dissolved sulfide is measured by first removing insoluble matter. This is done by adding sodium hydroxide and aluminum chloride solutions producing an aluminum hydroxide floc that is settled, leaving a clear supernatant for analysis. The method is approved in Table IB for preliminary treatment of samples to be used for determination of sulfide.

b. 4500–S_2^- C–2021, Sample Pretreatment. Interferences due to sulfite, thiosulfate, iodide, and many other soluble substances, but not ferrocyanide, are eliminated by first precipitating zinc sulfide (ZnS) by addition of sodium hydroxide and zinc acetate solutions, removing the supernatant, and replacing it with reagent water. The same procedure is used even when not needed for removal of interferences, to concentrate sulfide prior to analysis. The method is approved in Table IB for preliminary treatment of samples to be used for determination of sulfide.

c. 4500–S_2^- D–2021, Colorimetric Method. The methylene blue method is based on the reaction of sulfide, ferric chloride, and dimethyl-p-phenylenediamine to produce methylene blue. Ammonium phosphate is added after color development to remove ferric chloride color, which is measured photometrically. The procedure is applicable at sulfide concentrations between 0.1 and 20.0 mg/L. The method is approved in Table IB for determination of sulfide.

d. 4500–S_2^- F–2021, Titrimetric. Iodine oxidizes sulfide in acid solution. A titration based on this reaction is an accurate method for determining sulfide at concentrations above one mg/L if interferences are absent and if loss of H_2S is avoided. The method is approved in Table IB for determination of sulfide.

e. 4500–S_2^- G–2021, Ion-Selective Electrode Method. The potential of a sulfide ion-selective electrode (ISE) is related to the sulfide ion activity. An alkaline antioxidant reagent (AAR) is added to samples and standards to inhibit oxidation of sulfide by oxygen and to provide a constant ionic strength and pH. Use of the AAR allows calibration in terms of total dissolved sulfide concentration. All samples and standards must be at the same temperature. Sulfide concentrations between 0.032 mg/L and 100 mg/L can be measured without preconcentration. For lower concentrations, preconcentration is necessary. The method is approved in Table IB for determination of sulfide.

28. 4500–SiO_2 Silica Series.

a. 4500–SiO_2 C–2021, Colorimetric Method. Ammonium molybdate at pH approximately 1.2 reacts with silica and any phosphate present to produce heteropoly acids. Oxalic acid is added to destroy the molybdophosphoric acid, but not the molybdosilicic acid. Even if phosphate is known to be absent, the addition of oxalic acid is highly desirable and is a mandatory step. The intensity of the yellow color produced is proportional to the concentration of molybdate-reactive silica and is measured photometrically. The method is approved in Table IB for determination of silica.

b. 4500–SiO_2 E–2021, Automated Method for Molybdate-Reactive Silica. Ammonium molybdate at pH approximately 1.2 reacts with silica and any phosphate present to produce heteropoly acids. Oxalic acid is added to destroy the molybdophosphoric acid, but not the molybdosilicic acid. The yellow molybdosilicic acid is reduced by means of amino naphthol sulfonic acid to heteropoly blue. The blue color is more intense than the yellow color of 4500–SiO_2 C and provides increased sensitivity. The method is approved in Table IB for determination of silica.

c. 4500–SiO_2 F–2021, Automated Method for Molybdate-Reactive Silicate. Silicate reacts with molybdate under

acidic conditions to form yellow beta-molybdosilicic acid. This acid is subsequently reduced with stannous chloride to form a heteropoly blue complex that is measured photometrically. Oxalic acid is added to reduce the interference from phosphate. The method is approved in Table IB for determination of silica.

29. 4500–SO_4^{2-} Sulfate Series.

a. 4500–SO_4^{2-} C–2021, Gravimetric Method with Ignition of Residue. Sulfate is precipitated in a hydrochloric acid (HCl) solution as barium sulfate ($BaSO_4$) by the addition of barium chloride ($BaCl_2$). The precipitation is carried out near the boiling temperature, and after a period of digestion, the precipitate is filtered, washed with water until free of Cl^-, ignited at 800 °C for an hour and weighed as $BaSO_4$. The method is approved in Table IB for determination of sulfate.

b. 4500–SO_4^{2-} D–2021, Gravimetric Method with Drying of Residue. Sulfate is precipitated in a hydrochloric acid (HCl) solution as barium sulfate ($BaSO_4$) by the addition of barium chloride ($BaCl_2$). The precipitation is carried out near the boiling temperature, and after a period of digestion the precipitate is filtered, washed with water until free of Cl^-, dried to a constant weight in an oven at 105 °C or higher, and weighed as $BaSO_4$. The method is approved in Table IB for determination of sulfate.

c. 4500–SO_4^{2-} E–2021, Turbidimetric Method. Sulfate ion (SO_4^{2-}) is precipitated in an acetic acid medium with barium chloride ($BaCl_2$) to form barium sulfate ($BaSO_4$) crystals of uniform size. Light absorbance of the $BaSO_4$ suspension is measured by a photometer and the SO_4^{2-} concentration is determined by comparison of the reading with a standard curve. The method is approved in Table IB for determination of sulfate.

d. 4500–SO_4^{2-} F–2021, Automated Colorimetric Method. Barium sulfate is formed by the reaction of the SO_4^{2-} with barium chloride ($BaCl_2$) at a low pH. At high pH, excess barium reacts with methylthymol blue (MTB) to produce a blue chelate. The uncomplexed methylthymol blue is gray. The intensity of gray (uncomplexed methylthymol blue) is measured photometrically and is proportional to concentration of sulfate. The method is approved in Table IB for determination of sulfate.

e. 4500–SO_4^{2-} G–2021, Automated Colorimetric Method. At pH 13.0, barium forms a blue complex with methylthymol blue (MTB). The sample is injected into a low, but known, concentration of sulfate. The sulfate from the sample then reacts with the ethanolic barium-MTB solution and displaces the MTB from the barium to give barium sulfate and uncomplexed MTB. Uncomplexed MTB has a grayish color. The pH is raised with NaOH and the gray color of the uncomplexed MTB is measured photometrically. The intensity of the gray color is proportional to the sulfate concentration. The method is approved in Table IB for determination of sulfate.

30. Sulfite 4500–SO_3^{2-} B–2021, Titrimetric Iodometric Method. An acidified sample containing sulfite (SO_3^{2-}) is titrated with a standardized potassium iodide–iodate titrant. Free iodine, liberated by the iodide–iodate reagent, reacts with SO_3^{2-}. The titration endpoint is signaled by the blue color resulting from the first excess of iodine reacting with a starch indicator. The method is approved in Table IB for determination of sulfite.

31. 5520 Oil and Grease Series.

a. 5520 B–2021, Liquid-Liquid, Partition-Gravimetric Method. Dissolved or emulsified oil and grease is extracted from water by intimate contact with an extracting solvent (n-hexane). The extract is dried over sodium sulfate. The solvent is then distilled from the extract and the hexane extractable material is desiccated and weighed. Some extractables, especially unsaturated fats and fatty acids, oxidize readily; hence, special precautions regarding temperature and solvent vapor displacement are included to minimize this effect. Organic solvents shaken with some samples may form an emulsion that is very difficult to break. This method includes a means for handling such emulsions. Recovery of solvents is discussed. Solvent recovery can reduce both vapor emissions to the atmosphere and costs. The method is approved in Table IB for determination of oil and grease (hexane extractable material or HEM).

b. 5520 F–2021, Hydrocarbons. The oil and grease extracted by 5520 B is used for this test. When only hydrocarbons are of interest, this procedure is introduced before final measurement. When hydrocarbons are to be determined after total oil and grease has been measured, redissolve the extracted oil and grease in n-hexane. Silica gel has the ability to adsorb polar materials. The solution of extracted hydrocarbons and fatty materials in n-hexane is mixed with silica gel, and the fatty acids are removed selectively from solution. The solution is filtered to remove the silica gel, the solvent is distilled, and the silica gel treated hexane extractable material (SGT–HEM) is weighed. The materials not eliminated by silica gel adsorption are designated hydrocarbons by this test. The method is approved in Table IB for determination of oil and grease (hexane extractable material or HEM).

32. 5530 Phenols Series.

a. 5530 B–2021, Manual Distillation. Phenols, defined as hydroxy derivatives of benzene and its condensed nuclei, may occur in domestic and industrial wastewaters, natural waters, and potable water supplies. Phenols are distilled from nonvolatile impurities. Because the volatilization of phenols is gradual, the distillate volume must ultimately equal that of the original sample. The method is approved in Table IB for preliminary treatment of samples to be used for determination of phenols.

b. 5530 D–2021, Colorimetric Method. Steam-distillable phenolic compounds react with 4-aminoantipyrine at pH 7.9 ± 0.1 in the presence of potassium ferricyanide to form a colored antipyrine dye. This dye is kept in aqueous solution and the absorbance is measured photometrically at 500 nm. The method is approved in Table IB for determination of phenol. Note that for regulatory compliance monitoring required under the Clean Water Act, the colorimetric reaction must be performed at a pH of 10.0 ± 0.2 as stated in 40 CFR 136.3, Table IB, footnote 27.

33. 5540 Surfactants. In 5540 C–2021 this colorimetric method comprises three successive extractions from an acid aqueous medium containing excess methylene blue into chloroform ($CHCl_3$), followed by an aqueous backwash and measurement of the blue color in the $CHCl_3$ by spectrophotometry at 652 nm. The method is applicable to methylene blue active substances at concentrations down to about 0.025 mg/L. The method is approved in Table IB for determination of surfactants.

34. 6200 Volatile Organic Compounds Series.

a. 6200 B–2020, Purge and Trap Capillary-Column Gas Chromatographic/Mass Spectrometric (GC/MS) Method. Volatile organic compounds are transferred efficiently from the aqueous to the gaseous phase by bubbling an inert gas (*e.g.,* helium) through a water sample contained in a specially designed purging chamber at ambient temperature. The vapor is swept through a sorbent trap that adsorbs the analytes of interest. After purging is complete, the trap is heated and backflushed with the same inert gas to desorb the compounds onto a gas chromatographic column. The gas chromatograph is temperature-programmed to separate the compounds. The detector is a mass spectrometer. The method is approved in Table IC for determination of

benzene, bromodichloromethane, bromoform, bromomethane, carbon tetrachloride, chlorobenzene, chloroethane, chloroform, chloromethane, dibromochloromethane, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, dichlorodifluoromethane, 1,1-dichloroethane, 1,2-dichloroethane, 1,1-dichloroethene, trans-1,2-dichloroethene, 1,2-dichloropropane, cis-1,3-dichloropropene, trans-1,3-dichloropropene, ethylbenzene, methylene chloride, 1,1,2,2-tetrachloroethane, tetrachloroethene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, trichlorofluoromethane, and vinyl chloride.

b. 6200 C–2020, Purge and Trap Capillary-Column Gas Chromatographic (GC) Method. Volatile organic compounds are transferred efficiently from the aqueous to the gaseous phase by bubbling an inert gas (*e.g.,* helium) through a water sample contained in a specially designed purging chamber at ambient temperature. The vapor is swept through a sorbent trap that adsorbs the analytes of interest. After purging is complete, the trap is heated and backflushed with the same inert gas to desorb the compounds onto a gas chromatographic column. The gas chromatograph is temperature-programmed to separate the compounds and detected using a photoionization detection and an electrolytic conductivity detection in series. The method is approved in Table IC for determination of benzene, bromodichloromethane, bromoform, bromomethane, carbon tetrachloride, chlorobenzene, chloroethane, chloroform, chloromethane, dibromochloromethane, 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,1-dichloroethane, 1,2-dichloroethane, 1,1-dichloroethene, trans-1,2-dichloroethene, 1,2-dichloropropane, cis-1,3-dichloropropene, trans-1,3-dichloropropene, ethylbenzene, methylene chloride, 1,1,2,2-tetrachloroethane, tetrachloroethene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, trichlorofluoromethane, and vinyl chloride.

35. 6410 Extractable Base/Neutrals and Acids 6410 B–2020, Liquid–Liquid Extraction Gas Chromatographic/Mass Spectrometric Method. This method is applicable to the determination of organic compounds that are partitioned into an organic solvent and are amenable to gas chromatography in municipal and industrial discharges. A measured volume of sample is extracted serially with methylene chloride at a pH of approximately 2 and again at pH 11. The extract is dried, concentrated, and analyzed by GC/MS. Qualitative compound identification is based on retention time and relative abundance of three characteristic masses (m/z). Quantitative analysis uses internal-standard techniques with a single characteristic m/z. This revision adds a note that although the method was validated extracting base-neutrals first and then acids, performance may be improved by extracting acids first and then base-neutrals. In addition, the EPA is approving method 6410–B for endrin aldehyde in Table ID. This parameter was inadvertently left off the 2007 MUR rulemaking (72 FR 11200, March 12, 2007). The method is approved in Table IC for determination of acenaphthene, acenaphthylene, anthracene, benzidine, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, butyl benzyl phthalate, bis(2-chloroethoxy) methane, bis(2-chloroethyl) ether, bis(2-ethylhexyl) phthalate, bromodichloromethane, 4-bromophenyl phenyl ether, 4-chloro-3-methyl phenol, 2-chloronaphthalene, 2-chlorophenol, 4-chlorophenyl phenyl ether, chrysene, dibenzo(a,h)anthracene, 3,3′-dichlorobenzidine, 2,4-dichlorophenol, diethyl phthalate, 2,4-dimethylphenol, dimethyl phthalate, di-n-butyl phthalate, di-n-octyl phthalate, 2, 4-dinitrophenol, 2,4-dinitrotoluene, 2,6-dinitrotoluene, fluoranthene, fluorene, hexachlorobenzene, hexachlorobutadiene, hexachlorocyclopentadiene, hexachloroethane, indeno(1,2,3-c,d) pyrene, isophorone, 2-methyl-4,6-dinitrophenol, naphthalene, nitrobenzene, 2-nitrophenol, 4-nitrophenol, N-nitrosodimethylamine, n-nitrosodi-n-propylamine, n-nitrosodiphenylamine, 2,2′-oxybis(1-chloropropane), PCB–1016, PCB–1221, PCB–1232, PCB–1242, PCB–1248, PCB–1254, PCB–1260, pentachlorophenol, phenanthrene, phenol, pyrene, 1,2,4-trichlorobenzene, and 2,4,6-trichlorophenol and in Table ID for determination of aldrin, α-BHC, β-BHC, δ-BHC, γ-BHC (lindane), chlordane, 4,4′-DDD, 4,4′-DDE, 4,4′-DDT, dieldrin, endosulfan I, endosulfan II, endosulfan sulfate, endrin, heptachlor, heptachlor epoxide, and toxaphene.

36. 6420 Phenols. 6420 B–2020, Liquid–Liquid Extraction Gas Chromatographic Method. A measured volume of sample is acidified and extracted with methylene chloride. The extract is dried and exchanged to 2-propanol during concentration. Target analytes in the extract are separated by gas chromatography and are identified by retention time and measured with a flame ionization detector, or derivatized and measured with an electron capture detector. This revision of the method replaces distilled, deionized water with reagent water, adds that the packed columns used for validation of the method are no longer available or recommended, and includes information on alternative capillary columns that may be used. The method is approved in Table IC for determination of 4-chloro-3-methylphenol, 2-chlorophenol, 2,4-dichlorophenol, 2,4-dimethylphenol, 2,4-dinitrophenol, 2-methyl-4,6-dinitrophenol, 2-nitrophenol, 4-nitrophenol, pentachlorophenol, phenol, and 2,4,6-trichlorophenol.

37. 6440 Polynuclear Aromatic Hydrocarbons. 6440 B–2021, Liquid–Liquid Extraction Chromatographic Method. A measured volume of sample is extracted with methylene chloride. The extract is dried, concentrated, and separated by the high-performance liquid chromatographic (HPLC) or gas chromatographic (GC) method. Ultraviolet (UV) and fluorescence detectors are used with HPLC to identify and measure the polynuclear aromatic hydrocarbons. A flame ionization detector is used with GC. The method is approved in Table IC for determination of acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and pyrene.

38. 6630 Organochlorine Pesticides Series.

a. 6630 B–2021, Liquid–Liquid Extraction Gas Chromatographic Method I. In this procedure, the pesticides are extracted with a mixed solvent, diethyl ether–hexane or methylene chloride–hexane, by either liquid–liquid extraction using a separatory funnel or by continuous liquid–liquid extraction. The extract is concentrated by evaporation and, if necessary, is cleaned up by column adsorption chromatography. The individual pesticides then are separated by gas chromatography and the compounds are measured with an electron capture detector (ECD). This revision of the method adds information regarding alternative capillary columns that may be used in place of the packed columns that were used for validation of the method, removes information

regarding preparation of packed columns, replaces information regarding the manual injection technique with use of an autosampler and states that gas chromatography/mass spectrometry (GC/MS) may be used for confirmatory analyses in place of a second column and ECD detection. There are no other procedural changes. The method is approved in Table ID for determination of aldrin, α-BHC, β-BHC, δ-BHC, γ-BHC (lindane), captan, carbophenothion, chlordane, 4,4′-DDD, 4,4′-DDE, 4,4′-DDT, dichloran, dieldrin, endosulfan I, endosulfan II, endrin, heptachlor, heptachlor epoxide, isodrin, malathion, methoxychlor, mirex, parathion methyl, parathion ethyl, PCNB, strobane, toxaphene, and trifluralin.

b. In 6630 C–2021, Liquid–Liquid Extraction Gas Chromatographic Method II. In this procedure, a measured volume of sample is extracted with methylene chloride either by liquid–liquid extraction using separatory funnels or by continuous liquid–liquid extraction. The extract is dried and exchanged to hexane during concentration. The target analytes are separated by gas chromatography and the compounds are measured with an electron capture detector (ECD). This revision of the method adds information regarding alternative capillary columns that may be used in place of the packed columns that were used for validation of the method, and states that gas chromatography/mass spectrometry (GC/MS) may be used for confirmatory analyses in place of a second column and ECD detection. There are no other procedural changes. The method is approved in Table ID for determination of aldrin, α-BHC, β-BHC, δ-BHC, γ-BHC (lindane), chlordane, 4,4´-DDD, 4,4´-DDE, 4,4´-DDT, dieldrin, endosulfan I, endosulfan II, endosulfan sulfate, endrin, endrin aldehyde, heptachlor, heptachlor epoxide, isodrin, methoxychlor, mirex, PCNB, strobane, and toxaphene.

39. 6640 Acidic Herbicide Compounds. 6640 B-2021, Micro Liquid–Liquid Extraction Gas Chromatographic Method. A 40-mL sample is adjusted to pH ≥12 with 4 N sodium hydroxide and is kept for 1 hour at room temperature to hydrolyze derivatives. Because the chlorophenoxy acid herbicides are formulated as a variety of esters and salts, the hydrolysis step is required and may not be skipped. The aqueous sample then is acidified with sulfuric acid to pH ≤1 and extracted with 4 mL of methyl tert-butyl ether (MtBE) that contains the internal standard. The chlorinated acids, which have been partitioned into the MtBE, then are converted to methyl esters by derivatization with diazomethane. The target esters are separated and detected by capillary column gas chromatography using an electron capture detector (GC/ECD). Analytes are quantified using an internal-standard-based calibration curve. The method is approved in Table IC for determination of 2,4–D, 2,4,5–T, and 2,4,5–TP (Silvex).

D. Changes to 40 CFR 136.3 To Include Alternate Test Procedures in Table IC

To promote method innovation, the EPA maintains a program that allows method developers to apply for the EPA review and potential approval of an alternative method to an existing approved method. This alternate test procedure (ATP) program is described for CWA applications at 40 CFR 136.4 and 136.5. The EPA is approving two ATPs for nationwide use. Based on EPA's review, the performance of these ATPs is equally effective as other methods already approved for measurement of 2,3,7,8-substituted tetra- through octa-chlorinated dibenzo-p-dioxins and dibenzofurans (PCDDs/PCDFs) in wastewater. The ATP applicants supplied the EPA with study reports that contain the data from their validation studies. These study reports, the final methods, and the letters documenting EPA's review are included as supporting documents in the docket for this rule.

These new methods are: SGS AXYS Method 16130, ''Determination of 2,3,7,8-Substituted Tetra- through Octa-Chlorinated Dibenzo-p-Dioxins and Dibenzofurans (CDDs/CDFs) Using Waters and Agilent Gas Chromatography- Mass Spectrometry (GC–MS/MS), Revision 1.0'' and Pace Analytical Method PAM–16130–SSI, ''Determination of 2,3,7,8-Substituted Tetra- through Octa-Chlorinated Dibenzo-p-Dioxins and Dibenzofurans (CDDs/CDFs) Using Shimadzu Gas Chromatography Mass Spectrometry (GC–MS/MS), Revision 1.1.'' These ATPs are the results of separate collaborative efforts between SGS AXYS Analytical Services Ltd, and the instrument manufacturers Waters Corporation and Agilent Technologies, and between Pace Analytical Services LLC and the instrument manufacturer Shimadzu Scientific Instruments, Inc. These final methods are heavily adapted from EPA Method 1613B. Neither ATP makes changes to the extraction or cleanup procedures specified in Method 1613B. All required quality control tests (or analogous tests) and associated QC acceptance criteria have been included in both SGS AXYS 16130 and PAM–16130–SSI.

To minimize costs to both the applicants and the Agency where possible, SGS AXYS, Pace Analytical, and the instrument manufacturers who collaborated on these methods worked closely with EPA's CWA ATP Coordinator to design single-laboratory validation studies for these methods. The goal of these validation studies was to demonstrate that all of the performance criteria specified in Method 1613B could be met and that comparable performance could be achieved when using GC–MS/MS instrumentation for determination of PCDDs/PCDFs in extracts from real-world samples.

The ATP methods are available free of charge on their respective websites (sgsaxys.com or pacelabs.com), therefore the ATP methods incorporated by reference are reasonably available.

In these two methods, referred to in the rule as SGS AXYS 16130 and PAM 16130–SSI, each sample is spiked with the same suite of carbon-13 labeled standards prior to extraction and those standards are used for isotope dilution quantitation in the same way as is done in EPA Method 1613B. All of the relevant QC acceptance criteria are the same in the methods as well. The difference between these methods and the approved EPA method (1613B) is the use of an MS/MS detector system that uses Multiple Reaction Monitoring (MRM) in place of a high-resolution mass spectrometer (HRMS) detector system. The GC portions of the methods did not change.

E. Changes to 40 CFR 136.3 To Include New Standard Methods Committee Methods Based on Previously Approved Technologies

The EPA is adding five new methods in furtherance of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, that provides that Federal agencies and departments shall use technical standards developed or adopted by the VCSBs if compliance would not be inconsistent with applicable law or otherwise impracticable. These methods were submitted by Standard Methods and are consistent with other already approved methods. As discussed in Section IV. B and C of this preamble, these methods are reasonably available.

The EPA is adding 4500–CN^- P–2021, 4500–CN^- Q–2021, 4500 CN^- R–2021, and 4500–F^- G–2021 to Table IB for cyanide and fluoride and is adding 5520 G–2021 to Table IB for oil and grease, based on the following reasons:

1. Cyanide. Although method 4500–CN^- P–2021, Total Cyanide by Segmented Flow Injection, UV-

Irradiation with Gas Diffusion, and Amperometric Measurement is new to Standard Methods for the Examination of Water and Wastewater, it is based on ASTM D7511–12(17), which is approved in Table IB for determination of total cyanide and relies on the same underlying chemistry and determinative technique to determine total cyanide. Total cyanide consists of dissolved HCN, sodium cyanide (NaCN), and various metal-cyanide complexes, which a continuous flow analyzer converts to aqueous HCN by mixing it with sulfuric acid, irradiating with UV light, and precipitating potentially interfering sulfides with bismuth ion. The aqueous HCN is captured in a donor stream that is passed across a hydrophobic gas-permeable membrane, which selectively diffuses the gaseous HCN into a parallel acceptor stream of dilute sodium hydroxide forming dissolved CN^-. The cyanide ion in this acceptor stream is measured using an amperometric detector, where the cyanide ion dissolves the silver electrode, resulting in a proportional current.

2. 4500–CN^- Q–2021, Weak and Dissociable Cyanide by Flow Injection, Gas Diffusion, and Amperometric Measurement. Weak and dissociable cyanide consists of dissolved HCN, NaCN, and various metal-cyanide complexes and includes the same forms of cyanide as those measured using other methods approved in Table IB for determination of available cyanide. Analysts pretreat for weak and dissociable cyanide by mixing a sample with ligand reagents. They then inject the sample into a sulfuric acid and bismuth nitrate solution to produce a donor stream containing aqueous dissolved HCN and precipitated sulfide, if sulfide is present. The donor stream is passed across a hydrophobic gas-permeable membrane, which selectively diffuses gaseous HCN into a parallel acceptor stream of dilute sodium hydroxide, forming dissolved CN^-. The cyanide ion in this acceptor stream is measured using an amperometric detector, where the cyanide ion dissolves the silver electrode, resulting in a proportional current. Although this method is new to Standard Methods for the Examination of Water and Wastewater, it is based on ASTM D6888–16, which is approved in Table IB for determination of available cyanide and relies on the same underlying chemistry and determinative technique to determine available cyanide.

3. 4500–CN^- R–2021, Free Cyanide by Flow Injection, Gas Diffusion, and Amperometric Measurement. Free cyanide (FCN) consists of dissolved HCN, NaCN, and the soluble fraction of various metal-cyanide complexes. To determine FCN, analysts pretreat a sample by mixing it with a buffered solution in the pH range of 6 to 8 that simulates the receiving water resulting in a donor stream containing aqueous dissolved HCN in equilibrium with the cyanide anion. The donor stream is passed across a hydrophobic gas-permeable membrane, which selectively diffuses gaseous HCN into a parallel acceptor stream that consists of dilute sodium hydroxide, forming dissolved CN^-. The cyanide ions in this acceptor stream are measured when it is passed through an amperometric detector, where the cyanide ion dissolves the silver electrode, resulting in a proportional current. Although this method is new to Standard Methods for the Examination of Water and Wastewater, it is based on ASTM D7237–15, which is approved in Table IB for determination of free cyanide and relies on the same underlying chemistry and determinative technique to determine free cyanide.

4. Fluoride. 4500–F^- G–2021, Ion-Selective Electrode Flow Injection Analysis is an automated version of method 4500–F^- C and relies on the same underlying chemistry and determinative technique as USGS Method I–4237–85, which currently is approved in Table IB for determination of fluoride. Fluoride is determined potentiometrically by using a combination fluoride ion selective electrode (ISE) in a flow cell. The fluoride electrode consists of a lanthanum fluoride crystal across which a potential is developed by fluoride ions.

5. Oil and Grease. In 5520 G–2021, Solid-Phase, Partition-Gravimetric Method, dissolved or emulsified oil and grease is extracted from water by passing a sample through a solid-phase extraction (SPE) disk where the oil and grease are adsorbed by the disk and subsequently eluted with n-hexane. SPE is a modification allowed under EPA Methods 1664 A and B and relies on the same underlying chemistry and determinative technique as Methods 1664 A and B. Some extractables, especially unsaturated fats and fatty acids, oxidize readily; hence, special precautions regarding temperature and solvent vapor displacement are provided. This method is not applicable to materials that volatilize at temperatures below 85 °C, or crude and heavy fuel oils containing a significant percentage of material not soluble in n-hexane. This method may be a satisfactory alternative to liquid-liquid extraction techniques, especially for samples that tend to form difficult emulsions during the extraction step.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act

This action does not impose an information collection burden under the Paperwork Reduction Act. This rule does not impose any information collection, reporting, or recordkeeping requirements. This rule merely revises or adds alternate CWA test procedures.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities. This action would approve new alternate and revised versions of CWA testing procedures. Generally, these changes would have a positive impact on small entities by increasing method flexibility, thereby allowing entities to reduce costs by choosing more cost-effective methods. In general, the EPA expects the revisions would lead to few, if any, increased costs. The changes clarify or improve the instructions in the method, update the technology used in the method, improve the QC instructions, make editorial corrections, or reflect the most recent approval year of an already approved method. In some cases, the rule adds alternatives to currently approved methods for a particular analyte (*e.g.,* ASTM Method D7511). Because these methods would be alternatives rather than requirements, there are no direct costs associated with the methods approved by the EPA and incorporated by reference. If a permittee elected to use these methods, they could incur a small cost associated with obtaining these methods from the listed sources. See Sections IV. A through D of this preamble.

D. Unfunded Mandates Reform Act

This action does not contain any unfunded mandate as described in the Unfunded Mandates Reform Act, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no

enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This final rule does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This rule would merely approve new alternate and revised versions of test procedures. The EPA has concluded that the final rule would not lead to any costs to any tribal governments, and if incurred, the EPA projects they would be minimal. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order.

Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk. Since this action does not concern human health, EPA's Policy on Children's Health also does not apply.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act of 1995

This action involves technical standards. The EPA is approving the use of technical standards developed and recommended by the Standard Methods Committee and ASTM International for use in compliance monitoring where the EPA determined that those standards meet the needs of CWA programs. As described above, this final rule is consistent with the NTTAA.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this type of action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to potentially disproportionate and adverse effects on communities with environmental justice concerns. This action has no effect on communities because this action will approve new alternate and revised versions of CWA testing procedures. These changes would provide increased flexibility for the regulated community in meeting monitoring requirements while improving data quality. In addition, this update to the CWA methods will incorporate technological advances in analytical technology. Although this action does not concern human health or environmental conditions, the EPA identifies and addresses environmental justice concerns by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color) and low-income populations.

K. Congressional Review Act

This action is subject to the Congressional Review Act and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 136

Environmental protection, Incorporation by reference, Reporting and recordkeeping requirements, Test procedures, Water pollution control.

Michael S. Regan,

Administrator.

For the reasons set forth in the preamble, the EPA amends 40 CFR part 136 as follows:

PART 136—GUIDELINES ESTABLISHING TEST PROCEDURES FOR THE ANALYSIS OF POLLUTANTS

■ 1. The authority citation for part 136 continues to read as follows:

Authority: Secs. 301, 304(h), 307 and 501(a), Pub. L. 95–217, 91 Stat. 1566, *et seq.* (33 U.S.C. 1251, *et seq.*) (the Federal Water Pollution Control Act Amendments of 1972 as amended by the Clean Water Act of 1977).

■ 2. Amend § 136.3 by:

■ a. In paragraph (a), revising tables IA, IB, IC, ID, and IH;

■ b. Revising paragraph (b) introductory text;

■ c. Revising and republishing paragraphs (b)(8), (10), (15), (19), (26), and (27);

■ d. Redesignating paragraphs (b)(33) through (39) as paragraphs (b)(35) through (41);

■ e. Adding new paragraphs (b)(33) and (34);

■ f. Revising the newly redesignated paragraphs (b)(40) introductory text, (b)(40)(ii), (ix), and (xiv); and

■ g. In paragraph (e), table II, revising Footnote ''5''.

The revisions and additions read as follows:

§ 136.3 Identification of test procedures.

(a) * * *

TABLE IA—LIST OF APPROVED BIOLOGICAL METHODS FOR WASTEWATER AND SEWAGE SLUDGE

Parameter and units	Method [1]	EPA	Standard methods	AOAC, ASTM, USGS	Other
Bacteria					
1. Coliform (fecal), number per gram dry weight.	Most Probable Number (MPN), 5 tube, 3 dilution, or.	p. 132,[3] 1680,[11 15] 1681[11 20]	9221 E–2014.		
	Membrane filter (MF),[2 5] single step	p. 124[3]	9222 D–2015.[29]		
2. Coliform (fecal), number per 100 mL	MPN, 5 tube, 3 dilution, or	p. 132[3]	9221 E–2014, 9221 F–2014.[33]		
	Multiple tube/multiple well, or				Colilert-18®.[13 18 28]
	MF,[2 5] single step[5]	p. 124[3]	9222 D–2015[29]	B–0050–85.[4]	
3. Coliform (total), number per 100 mL	MPN, 5 tube, 3 dilution, or	p. 114[3]	9221 B–2014.		
	MF,[2 5] single step or	p. 108[3]	9222 B–2015[30]	B–0025–85.[4]	
	MF,[2 5] two step with enrichment	p. 111[3]	9222 B–2015.[30]		

TABLE IA—LIST OF APPROVED BIOLOGICAL METHODS FOR WASTEWATER AND SEWAGE SLUDGE—Continued

Parameter and units	Method [1]	EPA	Standard methods	AOAC, ASTM, USGS	Other
4. *E. coli,* number per 100 mL	MPN [6 8 16] multiple tube, or		9221 B2014/9221 F–2014.[12 14 33]		
	multiple tube/multiple well, or		9223 B–2016 [13]	991.15 [10]	Colilert®.[13 18] Colilert-18®.[13 17 18]

7. *Salmonella*, number per gram dry weight [11].	MPN multiple tube	1682.[22]			
Aquatic Toxicity					
8. Toxicity, acute, fresh water organisms, LC_{50}, percent effluent.	Water flea, *Cladoceran, Ceriodaphnia dubia* acute.	2002.0.[25]			
	Water flea, *Cladocerans, Daphnia pulex* and *Daphnia magna* acute.	2021.0.[25]			
	Fish, Fathead minnow, *Pimephales promelas,* and Bannerfin shiner, *Cyprinella leedsi,* acute.	2000.0.[25]			
	Fish, Rainbow trout, *Oncorhynchus mykiss,* and brook trout, *Salvelinus fontinalis,* acute.	2019.0.[25]			
9. Toxicity, acute, estuarine and marine organisms of the Atlantic Ocean and Gulf of Mexico, LC_{50}, percent effluent.	Mysid, *Mysidopsis bahia,* acute	2007.0.[25]			
	Fish, Sheepshead minnow, *Cyprinodon variegatus,* acute.	2004.0.[25]			
	Fish, Silverside, *Menidia beryllina, Menidia menidia,* and *Menidia peninsulae,* acute.	2006.0.[25]			
10. Toxicity, chronic, fresh water organisms, NOEC or IC_{25}, percent effluent.	Fish, Fathead minnow, *Pimephales promelas,* larval survival and growth.	1000.0.[26]			
	Fish, Fathead minnow, *Pimephales promelas,* embryo-larval survival and teratogenicity.	1001.0.[26]			
	Water flea, Cladoceran, *Ceriodaphnia dubia,* survival and reproduction.	1002.0.[26]			
	Green alga, *Selenastrum capricornutum,* growth.	1003.0.[26]			
11. Toxicity, chronic, estuarine and marine organisms of the Atlantic Ocean and Gulf of Mexico, NOEC or IC_{25}, percent effluent.	Fish, Sheepshead minnow, *Cyprinodon variegatus,* larval survival and growth..	1004.0.[27]			
	Fish, Sheepshead minnow, *Cyprinodon variegatus,* embryo-larval survival and teratogenicity.	1005.0.[27]			
	Fish, Inland silverside, *Menidia beryllina,* larval survival and growth.	1006.0.[27]			
	Mysid, *Mysidopsis bahia,* survival, growth, and fecundity.	1007.0.[27]			
	Sea urchin, *Arbacia punctulata,* fertilization.	1008.0.[27]			

Table IA notes:

[1] The method must be specified when results are reported.

[2] A 0.45-μm membrane filter (MF) or other pore size certified by the manufacturer to fully retain organisms to be cultivated and to be free of extractables which could interfere with their growth.

[3] Microbiological Methods for Monitoring the Environment, Water and Wastes, EPA/600/8–78/017. 1978. US EPA.

[4] U.S. Geological Survey Techniques of Water-Resource Investigations, Book 5, Laboratory Analysis, Chapter A4, Methods for Collection and Analysis of Aquatic Biological and Microbiological Samples. 1989. USGS.

[5] Because the MF technique usually yields low and variable recovery from chlorinated wastewaters, the Most Probable Number method will be required to resolve any controversies.

[6] Tests must be conducted to provide organism enumeration (density). Select the appropriate configuration of tubes/filtrations and dilutions/volumes to account for the quality, character, consistency, and anticipated organism density of the water sample.

[7] When the MF method has been used previously to test waters with high turbidity, large numbers of noncoliform bacteria, or samples that may contain organisms stressed by chlorine, a parallel test should be conducted with a multiple-tube technique to demonstrate applicability and comparability of results.

[8] To assess the comparability of results obtained with individual methods, it is suggested that side-by-side tests be conducted across seasons of the year with the water samples routinely tested in accordance with the most current *Standard Methods for the Examination of Water and Wastewater* or EPA alternate test procedure (ATP) guidelines.

[9] Annual Book of ASTM Standards—Water and Environmental Technology, Section 11.02. 2000, 1999, 1996. ASTM International.
[10] Official Methods of Analysis of AOAC International. 16th Edition, 4th Revision, 1998. AOAC International.
[11] Recommended for enumeration of target organism in sewage sludge.
[12] The multiple-tube fermentation test is used in 9221B.2–2014. Lactose broth may be used in lieu of lauryl tryptose broth (LTB), if at least 25 parallel tests are conducted between this broth and LTB using the water samples normally tested, and this comparison demonstrates that the false-positive rate and false-negative rate for total coliform using lactose broth is less than 10 percent. No requirement exists to run the completed phase on 10 percent of all total coliform-positive tubes on a seasonal basis.
[13] These tests are collectively known as defined enzyme substrate tests.
[14] After prior enrichment in a presumptive medium for total coliform using 9221B.2–2014, all presumptive tubes or bottles showing any amount of gas, growth or acidity within 48 h ± 3 h of incubation shall be submitted to 9221F–2014. Commercially available EC–MUG media or EC media supplemented in the laboratory with 50 µg/mL of MUG may be used.
[15] Method 1680: Fecal Coliforms in Sewage Sludge (Biosolids) by Multiple-Tube Fermentation Using Lauryl-Tryptose Broth (LTB) and EC Medium, EPA–821–R–14–009. September 2014. U.S. EPA.
[16] Samples shall be enumerated by the multiple-tube or multiple-well procedure. Using multiple-tube procedures, employ an appropriate tube and dilution configuration of the sample as needed and report the Most Probable Number (MPN). Samples tested with Colilert® may be enumerated with the multiple-well procedures, Quanti-Tray® or Quanti-Tray®/2000 and the MPN calculated from the table provided by the manufacturer.
[17] Colilert-18® is an optimized formulation of the Colilert® for the determination of total coliforms and *E. coli* that provides results within 18 h of incubation at 35°C rather than the 24 h required for the Colilert® test and is recommended for marine water samples.
[18] Descriptions of the Colilert®, Colilert-18®, Quanti-Tray®, and Quanti-Tray®/2000 may be obtained from IDEXX Laboratories, Inc.
[19] A description of the mColiBlue24® test is available from Hach Company.
[20] Method 1681: Fecal Coliforms in Sewage Sludge (Biosolids) by Multiple-Tube Fermentation Using A–1 Medium, EPA–821–R–06–013. July 2006. U.S. EPA.
[21] Method 1603.1: *Escherichia coli* (*E. coli*) in Water by Membrane Filtration Using Modified membrane-Thermotolerant *Escherichia coli* Agar (Modified mTEC), EPA–821–R–23–008. September 2023. U.S. EPA.
[22] Method 1682: *Salmonella* in Sewage Sludge (Biosolids) by Modified Semisolid Rappaport-Vassiliadis (MSRV) Medium, EPA–821–R–14–012. September 2014. U.S. EPA.
[23] A description of the Enterolert® test may be obtained from IDEXX Laboratories Inc.
[24] Method 1600.1: Enterococci in Water by Membrane Filtration Using Membrane-Enterococcus Indoxyl-β-D-Glucoside Agar (mEI), EPA–821–R–23–006. September 2023. U.S. EPA.
[25] Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters to Freshwater and Marine Organisms, EPA–821–R–02–012. Fifth Edition, October 2002. U.S. EPA; and U.S. EPA Whole Effluent Toxicity Methods Errata Sheet, EPA 821–R–02–012–ES. December 2016.
[26] Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms, EPA–821–R–02–013. Fourth Edition, October 2002. U.S. EPA; and U.S. EPA Whole Effluent Toxicity Methods Errata Sheet, EPA 821–R–02–012–ES. December 2016.
[27] Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Marine and Estuarine Organisms, EPA–821–R–02–014. Third Edition, October 2002. U.S. EPA; and U.S. EPA Whole Effluent Toxicity Methods Errata Sheet, EPA 821–R–02–012–ES. December 2016.
[28] To use Colilert-18® to assay for fecal coliforms, the incubation temperature is 44.5 ± 0.2 °C, and a water bath incubator is used.
[29] On a monthly basis, at least ten blue colonies from positive samples must be verified using Lauryl Tryptose Broth and EC broth, followed by count adjustment based on these results; and representative non-blue colonies should be verified using Lauryl Tryptose Broth. Where possible, verifications should be done from randomized sample sources.
[30] On a monthly basis, at least ten sheen colonies from positive samples must be verified using lauryl tryptose broth and brilliant green lactose bile broth, followed by count adjustment based on these results; and representative non-sheen colonies should be verified using lauryl tryptose broth. Where possible, verifications should be done from randomized sample sources.
[31] Subject coliform positive samples determined by 9222 B–2015 or other membrane filter procedure to 9222 I–2015 using NA–MUG media.
[32] Verification of colonies by incubation of BHI agar at 10 ± 0.5 °C for 48 ± 3 h is optional. As per the Errata to the 23rd Edition of *Standard Methods for the Examination of Water and Wastewater* ''Growth on a BHI agar plate incubated at 10 ± 0.5 °C for 48 ± 3 h is further verification that the colony belongs to the genus *Enterococcus*.''
[33] 9221F. 2–2014 allows for simultaneous detection of *E. coli* and thermotolerant fecal coliforms by adding inverted vials to EC–MUG; the inverted vials collect gas produced by thermotolerant fecal coliforms.

TABLE IB—LIST OF APPROVED INORGANIC TEST PROCEDURES

Parameter	Methodology [58]	EPA [52]	Standard methods [84]	ASTM	USGS/AOAC/Other
1. Acidity (as $CaCO_3$), mg/L.	Electrometric endpoint or phenolphthalein endpoint.	.....	2310 B–2020	D1067–16	I–1020–85.[2]
2. Alkalinity (as $CaCO_3$), mg/L.	Electrometric or Colorimetric titration to pH 4.5, Manual.	.....	2320 B–2021	D1067–16	973.43,[3] I–1030–85.[2]
	Automatic	310.2 (Rev. 1974) [1] ..	.....	.....	I–2030–85.[2]
3. Aluminum—Total,[4] mg/L.	Digestion,[4] followed by any of the following:				
	AA direct aspiration [36]	.....	3111 D–2019 or 3111 E–2019.	.....	I–3051–85.[2]
	AA furnace	.....	3113 B–2020.		
	STGFAA	200.9 Rev. 2.2 (1994).			
	ICP/AES [36]	200.5 Rev 4.2 (2003),[68] 200.7 Rev. 4.4 (1994).	3120 B–2020	D1976–20	I–4471–97.[50]
	ICP/MS	200.8, Rev. 5.4 (1994).	3125 B–2020	D5673–16	993.14,[3] I–4472–97,[81]
	Direct Current Plasma (DCP) [36]	.....	.....	D4190–15	See footnote.[34]
	Colorimetric (Eriochrome cyanine R)	.....	3500–Al B–2020.		
4. Ammonia (as N), mg/L.	Manual distillation [6] or gas diffusion (pH > 11), followed by any of the following:	350.1 Rev. 2.0 (1993).	4500–NH_3 B–2021 ...	.....	973.49.[3]
	Nesslerization	.....	.....	D1426–15 (A)	973.49,[3] I–3520–85.[2]
	Titration	.....	4500–NH_3 C–2021.		
	Electrode	.....	4500–NH_3 D–2021 or E–2021.	D1426–15 (B)

Table IB Notes:

[1] Methods for Chemical Analysis of Water and Wastes, EPA–600/4–79–020. Revised March 1983 and 1979, where applicable. U.S. EPA.

[2] Methods for Analysis of Inorganic Substances in Water and Fluvial Sediments, Techniques of Water-Resource Investigations of the U.S. Geological Survey, Book 5, Chapter A1., unless otherwise stated. 1989. USGS.

[3] Official Methods of Analysis of the Association of Official Analytical Chemists, Methods Manual, Sixteenth Edition, 4th Revision, 1998. AOAC International.

[4] For the determination of total metals (which are equivalent to total recoverable metals) the sample is not filtered before processing. A digestion procedure is required to solubilize analytes in suspended material and to break down organic-metal complexes (to convert the analyte to a detectable form for colorimetric analysis). For non-platform graphite furnace atomic absorption determinations, a digestion using nitric acid (as specified in Section 4.1.3 of Methods for Chemical Analysis of Water and Wastes) is required prior to analysis. The procedure used should subject the sample to gentle acid refluxing, and at no time should the sample be taken to dryness. For direct aspiration flame atomic absorption (FLAA) determinations, a combination acid (nitric and hydrochloric acids) digestion is preferred, prior to analysis. The approved total recoverable digestion is described as Method 200.2 in Supplement I of ''Methods for the Determination of Metals in Environmental Samples'' EPA/600R–94/111, May 1994, and is reproduced in EPA Methods 200.7, 200.8, and 200.9 from the same Supplement. However, when using the gaseous hydride technique or for the determination of certain elements such as antimony, arsenic, selenium, silver, and tin by non-EPA graphite furnace atomic absorption methods, mercury by cold vapor atomic absorption, the noble metals and titanium by FLAA, a specific or modified sample digestion procedure may be required, and, in all cases the referenced method write-up should be consulted for specific instruction and/or cautions. For analyses using inductively coupled plasma-atomic emission spectrometry (ICP–AES), the direct current plasma (DCP) technique or EPA spectrochemical techniques (platform furnace AA, ICP–AES, and ICP–MS), use EPA Method 200.2 or an approved alternate procedure (*e.g.,* CEM microwave digestion, which may be used with certain analytes as indicated in this table IB); the total recoverable digestion procedures in EPA Methods 200.7, 200.8, and 200.9 may be used for those respective methods. Regardless of the digestion procedure, the results of the analysis after digestion procedure are reported as ''total'' metals.

[5] Copper sulfate or other catalysts that have been found suitable may be used in place of mercuric sulfate.

[6] Manual distillation is not required if comparability data on representative effluent samples are on file to show that this preliminary distillation step is not necessary; however, manual distillation will be required to resolve any controversies. In general, the analytical method should be consulted regarding the need for distillation. If the method is not clear, the laboratory may compare a minimum of 9 different sample matrices to evaluate the need for distillation. For each matrix, a matrix spike and matrix spike duplicate are analyzed both with and without the distillation step (for a total of 36 samples, assuming 9 matrices). If results are comparable, the laboratory may dispense with the distillation step for future analysis. Comparable is defined as <20% RPD for all tested matrices). Alternatively, the two populations of spike recovery percentages may be compared using a recognized statistical test.

[10] In-Situ Method 1003–8–2009, Biochemical Oxygen Demand (BOD) Measurement by Optical Probe. 2009. In-Situ Incorporated.

[11] The use of normal and differential pulse voltage ramps to increase sensitivity and resolution is acceptable.

[12] Carbonaceous biochemical oxygen demand ($CBOD_5$) must not be confused with the traditional BOD_5 test method which measures ''total 5-day BOD.'' The addition of the nitrification inhibitor is not a procedural option but must be included to report the $CBOD_5$ parameter. A discharger whose permit requires reporting the traditional BOD_5 may not use a nitrification inhibitor in the procedure for reporting the results. Only when a discharger's permit specifically states $CBOD_5$ is required can the permittee report data using a nitrification inhibitor.

[25] Method 8507, Nitrogen, Nitrite-Low Range, Diazotization Method for Water and Wastewater. 1979. Hach Company.
[26] Just prior to distillation, adjust the sulfuric-acid-preserved sample to pH 4 with 1 + 9 NaOH.
[27] The colorimetric reaction must be conducted at a pH of 10.0 ± 0.2.
[28] Addison, R.F., and R.G. Ackman. 1970. Direct Determination of Elemental Phosphorus by Gas-Liquid Chromatography, *Journal of Chromatography*, 47(3):421–426.
[29] Approved methods for the analysis of silver in industrial wastewaters at concentrations of 1 mg/L and above are inadequate where silver exists as an inorganic halide. Silver halides such as the bromide and chloride are relatively insoluble in reagents such as nitric acid but are readily soluble in an aqueous buffer of sodium thiosulfate and sodium hydroxide to pH of 12. Therefore, for levels of silver above 1 mg/L, 20 mL of sample should be diluted to 100 mL by adding 40 mL each of 2 M $Na_2S_2O_3$ and NaOH. Standards should be prepared in the same manner. For levels of silver below 1 mg/L the approved method is satisfactory.
[30] The use of EDTA decreases method sensitivity. Analysts may omit EDTA or replace with another suitable complexing reagent provided that all method-specified quality control acceptance criteria are met.
[31] For samples known or suspected to contain high levels of silver (*e.g.,* in excess of 4 mg/L), cyanogen iodide should be used to keep the silver in solution for analysis. Prepare a cyanogen iodide solution by adding 4.0 mL of concentrated NH_4OH, 6.5 g of KCN, and 5.0 mL of a 1.0 N solution of I_2 to 50 mL of reagent water in a volumetric flask and dilute to 100.0 mL. After digestion of the sample, adjust the pH of the digestate to <7 to prevent the formation of HCN under acidic conditions. Add 1 mL of the cyanogen iodide solution to the sample digestate and adjust the volume to 100 mL with reagent water (NOT acid). If cyanogen iodide is added to sample digestates, then silver standards must be prepared that contain cyanogen iodide as well. Prepare working standards by diluting a small volume of a silver stock solution with water and adjusting the pH≤7 with NH_4OH. Add 1 mL of the cyanogen iodide solution and let stand 1 hour. Transfer to a 100-mL volumetric flask and dilute to volume with water.

[55] Kelada-01, Kelada Automated Test Methods for Total Cyanide, Acid Dissociable Cyanide, and Thiocyanate, EPA 821–B–01–009, Revision 1.2, August 2001. US EPA. Note: A 450–W UV lamp may be used in this method instead of the 550–W lamp specified if it provides performance within the quality control (QC) acceptance criteria of the method in a given instrument. Similarly, modified flow cell configurations and flow conditions may be used in the method, provided that the QC acceptance criteria are met.
[56] QuikChem Method 10–204–00–1–X, Digestion and Distillation of Total Cyanide in Drinking and Wastewaters using MICRO DIST and Determination of Cyanide by Flow Injection Analysis. Revision 2.2, March 2005. Lachat Instruments.
[57] When using sulfide removal test procedures described in EPA Method 335.4, reconstitute particulate that is filtered with the sample prior to distillation.
[58] Unless otherwise stated, if the language of this table specifies a sample digestion and/or distillation ''followed by'' analysis with a method, approved digestion and/or distillation are required prior to analysis.
[59] Samples analyzed for available cyanide using OI Analytical method OIA–1677–09 or ASTM method D6888–16 that contain particulate matter may be filtered only after the ligand exchange reagents have been added to the samples, because the ligand exchange process converts complexes containing available cyanide to free cyanide, which is not removed by filtration. Analysts are further cautioned to limit the time between the addition of the ligand exchange reagents and sample filtration to no more than 30 minutes to preclude settling of materials in samples.
[60] Analysts should be aware that pH optima and chromophore absorption maxima might differ when phenol is replaced by a substituted phenol as the color reagent in Berthelot Reaction (''phenol-hypochlorite reaction'') colorimetric ammonium determination methods. For example, when phenol is used as the color reagent, pH optimum and wavelength of maximum absorbance are about 11.5 and 635 nm, respectively—see, Patton, C.J. and S.R. Crouch. March 1977. *Anal. Chem.* 49:464–469. These reaction parameters increase to pH > 12.6 and 665 nm when salicylate is used as the color reagent—see, Krom, M.D. April 1980. *The Analyst* 105:305–316.
[61] If atomic absorption or ICP instrumentation is not available, the aluminon colorimetric method detailed in the 19th Edition of *Standard Methods for the Examination of Water and Wastewater* may be used. This method has poorer precision and bias than the methods of choice.

[84] Please refer to the following applicable Quality Control Sections: Part 2000 Methods, Physical and Aggregate Properties 2020 (2021); Part 3000 Methods, Metals, 3020 (2021); Part 4000 Methods, Inorganic Nonmetallic Constituents, 4020 (2022); Part 5000 Methods, and Aggregate Organic Constituents, 5020 (2022). These Quality Control Standards are available for download at *www.standardmethods.org* at no charge.
[85] Each laboratory may establish its own control limits by performing at least 25 glucose-glutamic acid (GGA) checks over several weeks or months and calculating the mean and standard deviation. The laboratory may then use the mean ± 3 standard deviations as the control limit for future GGA checks. However, GGA acceptance criteria can be no wider than 198 ± 30.5 mg/L for BOD_5. GGA acceptance criteria for CBOD must be either 198 ± 30.5 mg/L, or the lab may develop control charts under the following conditions: dissolved oxygen uptake from the seed contribution is between 0.6–1.0 mg/L; control charts are performed on at least 25 GGA checks with three standard deviations from the derived mean; the RSD must not exceed 7.5%; and any single GGA value cannot be less than 150 mg/L or higher than 250 mg/L.
[86] The approved method is that cited in *Standard Methods for the Examination of Water and Wastewater,* 14th Edition, 1976.

	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
2. Acenaphthylene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
3. Acrolein	GC	603.			
	GC/MS	624.1 [4], 1624B.			
4. Acrylonitrile	GC	603.			
	GC/MS	624.1 [4], 1624B			O–4127–96.[13]
5. Anthracene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
6. Benzene	GC	602	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
7. Benzidine	Spectro-photometric.				See footnote [3] p.1.
	GC/MS	625.1 [5], 1625B	6410 B–2020.		
	HPLC	605.			
8. Benzo(a)anthracene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
9. Benzo(a)pyrene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
10. Benzo(b)fluoranthene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
11. Benzo(g,h,i)perylene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
12. Benzo(k)fluoranthene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
13. Benzyl chloride	GC				See footnote [3] p. 130.
	GC/MS				See footnote [6] p. S102.
14. Butyl benzyl phthalate	GC	606.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
15. bis(2-Chloroethoxy) methane	GC	611.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
16. bis(2-Chloroethyl) ether	GC	611.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
17. bis(2-Ethylhexyl) phthalate	GC	606.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
18. Bromodichloromethane	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]

TABLE IC—LIST OF APPROVED TEST PROCEDURES FOR NON-PESTICIDE ORGANIC COMPOUNDS—Continued

Parameter [1]	Method	EPA [2 7]	Standard methods [17]	ASTM	Other
19. Bromoform	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
20. Bromomethane	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
21. 4-Bromophenyl phenyl ether	GC	611.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
22. Carbon tetrachloride	GC	601	6200 C–2020		See footnote [3] p. 130.
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
23. 4-Chloro-3-methyl phenol	GC	604	6420 B–2021.		
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
24. Chlorobenzene	GC	601, 602	6200 C–2020		See footnote [3] p. 130.
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13] O–4436–16.[14]
25. Chloroethane	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96.[13]
26. 2-Chloroethylvinyl ether	GC	601.			
	GC/MS	624.1, 1624B.			
27. Chloroform	GC	601	6200 C–2020		See footnote [3] p. 130.
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
28. Chloromethane	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
29. 2-Chloronaphthalene	GC	612.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
30. 2-Chlorophenol	GC	604	6420 B–2021.		
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
31. 4-Chlorophenyl phenyl ether	GC	611.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
32. Chrysene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
33. Dibenzo(a,h)anthracene	GC	610.			
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
	HPLC	610	6440 B–2021	D4657–92 (98).	
34. Dibromochloromethane	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
35. 1,2-Dichlorobenzene	GC	601, 602	6200 C–2020.		
	GC/MS	624.1, 1625B	6200 B–2020		See footnote [9] p. 27, O–4127–96 [13], O–4436–16.[14]
36. 1,3-Dichlorobenzene	GC	601, 602	6200 C–2020.		
	GC/MS	624.1, 1625B	6200 B–2020		See footnote [9] p. 27, O–4127–96.[13]
37. 1,4-Dichlorobenzene	GC	601, 602	6200 C–2020.		
	GC/MS	624.1, 1625B	6200 B–2020		See footnote [9] p. 27, O–4127–96 [13], O–4436–16.[14]

	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
107. 1,2,4-Trichlorobenzene	GC	612			See footnote [3] p. 130.
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27, O–4127–96 [13], O–4436–16.[14]
108. 1,1,1-Trichloroethane	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
109. 1,1,2-Trichloroethane	GC	601	6200 C–2020		See footnote [3] p. 130.
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
110. Trichloroethene	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
111. Trichlorofluoromethane	GC	601	6200 C–2020.		
	GC/MS	624.1	6200 B–2020		O–4127–96.[13]
112. 2,4,6-Trichlorophenol	GC	604	6420 B–2021.		
	GC/MS	625.1, 1625B	6410 B–2020		See footnote [9] p. 27.
113. Vinyl chloride	GC	601	6200 C–2020.		
	GC/MS	624.1, 1624B	6200 B–2020		O–4127–96 [13], O–4436–16.[14]
114. Nonylphenol	GC/MS			D7065–17.	
115. Bisphenol A (BPA)	GC/MS			D7065–17.	
116. *p-tert*-Octylphenol (OP)	GC/MS			D7065–17.	
117. Nonylphenol Monoethoxylate (NP1EO).	GC/MS			D7065–17.	
118. Nonylphenol Diethoxylate (NP2EO).	GC/MS			D7065–17.	
119. Adsorbable Organic Halides (AOX).	Adsorption and Coulometric Titration.	1650.[11]			
120. Chlorinated Phenolics	In Situ Acetylation and GC/MS.	1653.[11]			

Table IC notes:

[1] All parameters are expressed in micrograms per liter (µg/L) except for Method 1613B, in which the parameters are expressed in picograms per liter (pg/L).

[2] The full text of Methods 601–613, 1613B, 1624B, and 1625B are provided at appendix A, Test Procedures for Analysis of Organic Pollutants. The standardized test procedure to be used to determine the method detection limit (MDL) for these test procedures is given at appendix B of this part, Definition and Procedure for the Determination of the Method Detection Limit. These methods are available at: *https://www.epa.gov/cwa-methods* as individual PDF files.

[3] Methods for Benzidine: Chlorinated Organic Compounds, Pentachlorophenol and Pesticides in Water and Wastewater. September 1978. U.S. EPA.

[4] Method 624.1 may be used for quantitative determination of acrolein and acrylonitrile, provided that the laboratory has documentation to substantiate the ability to detect and quantify these analytes at levels necessary to comply with any associated regulations. In addition, the use of sample introduction techniques other than simple purge-and-trap may be required. QC acceptance criteria from Method 603 should be used when analyzing samples for acrolein and acrylonitrile in the absence of such criteria in Method 624.1.

[5] Method 625.1 may be extended to include benzidine, hexachlorocyclopentadiene, N-nitrosodimethylamine, N-nitrosodi-*n*-propylamine, and N-nitrosodiphenylamine. However, when they are known to be present, Methods 605, 607, and 612, or Method 1625B, are preferred methods for these compounds. Method 625.1 may be applied to 2,3,7,8-Tetrachloro-dibenzo-*p*-dioxin for screening purposes only.

[6] Selected Analytical Methods Approved and Cited by the United States Environmental Protection Agency, Supplement to the 15th Edition of *Standard Methods for the Examination of Water and Wastewater.* 1981. American Public Health Association (APHA).

[7] Each analyst must make an initial, one-time demonstration of their ability to generate acceptable precision and accuracy with Methods 601–603, 1624B, and 1625B in accordance with procedures in Section 8.2 of each of these methods. Additionally, each laboratory, on an on-going basis must spike and analyze 10% (5% for Methods 624.1 and 625.1 and 100% for methods 1624B and 1625B) of all samples to monitor and evaluate laboratory data quality in accordance with Sections 8.3 and 8.4 of these methods. When the recovery of any parameter falls outside the quality control (QC) acceptance criteria in the pertinent method, analytical results for that parameter in the unspiked sample are suspect. The results should be reported but cannot be used to demonstrate regulatory compliance. If the method does not contain QC acceptance criteria, control limits of ±three standard deviations around the mean of a minimum of five replicate measurements must be used. These quality control requirements also apply to the Standard Methods, ASTM Methods, and other methods cited.

[8] Organochlorine Pesticides and PCBs in Wastewater Using Empore™ Disk. Revised October 28, 1994. 3M Corporation.

[9] Method O–3116–87 is in Open File Report 93–125, Methods of Analysis by U.S. Geological Survey National Water Quality Laboratory—Determination of Inorganic and Organic Constituents in Water and Fluvial Sediments. 1993. USGS.

[10] Analysts may use Fluid Management Systems, Inc. Power-Prep system in place of manual cleanup provided the analyst meets the requirements of Method 1613B (as specified in Section 9 of the method) and permitting authorities. Method 1613, Revision B, Tetra- through Octa-Chlorinated Dioxins and Furans by Isotope Dilution HRGC/HRMS. Revision B, 1994. U.S. EPA. The full text of this method is provided in appendix A to this part and at *https://www.epa.gov/cwa-methods/approved-cwa-test-methods-organic-compounds.*

[11] Method 1650, Adsorbable Organic Halides by Adsorption and Coulometric Titration. Revision C, 1997 U.S. EPA. Method 1653, Chlorinated Phenolics in Wastewater by In Situ Acetylation and GCMS. Revision A, 1997 U.S. EPA. The full text for both of these methods is provided at appendix A in part 430 of this chapter, The Pulp, Paper, and Paperboard Point Source Category.

[12] The compound was formerly inaccurately labeled as 2,2′-oxybis(2-chloropropane) and bis(2-chloroisopropyl) ether. Some versions of Methods 611, and 1625 inaccurately list the analyte as ''bis(2-chloroisopropyl) ether,'' but use the correct CAS number of 108–60–1.

70. Trifluralin	GC	508, 617, 627, 1656, 608.3.	6630 B–2021		See footnote [3] p. 7, see footnote [9] O–3106–93.
	GC/MS	525.2, 625.1			See footnote [11] O–1126–95.

Table ID notes:

[1] Pesticides are listed in this table by common name for the convenience of the reader. Additional pesticides may be found under table IC of this section, where entries are listed by chemical name.

[2] The standardized test procedure to be used to determine the method detection limit (MDL) for these test procedures is given at appendix B to this part, Definition and Procedure for the Determination of the Method Detection Limit.

[3] Methods for Benzidine, Chlorinated Organic Compounds, Pentachlorophenol and Pesticides in Water and Wastewater. September 1978. U.S. EPA. This EPA publication includes thin-layer chromatography (TLC) methods.
[4] Methods for the Determination of Organic Substances in Water and Fluvial Sediments, Techniques of Water-Resources Investigations of the U.S. Geological Survey, Book 5, Chapter A3. 1987. USGS.
[5] The method may be extended to include α-BHC, γ-BHC, endosulfan I, endosulfan II, and endrin. However, when they are known to exist, Method 608 is the preferred method.
[6] Selected Analytical Methods Approved and Cited by the United States Environmental Protection Agency, Supplement to the 15th Edition of *Standard Methods for the Examination of Water and Wastewater.*1981. American Public Health Association (APHA).
[7] Each analyst must make an initial, one-time, demonstration of their ability to generate acceptable precision and accuracy with Methods 608.3 and 625.1 in accordance with procedures given in Section 8.2 of each of these methods. Additionally, each laboratory, on an on-going basis, must spike and analyze 10% of all samples analyzed with Method 608.3 or 5% of all samples analyzed with Method 625.1 to monitor and evaluate laboratory data quality in accordance with Sections 8.3 and 8.4 of these methods. When the recovery of any parameter falls outside the warning limits, the analytical results for that parameter in the unspiked sample are suspect. The results should be reported, but cannot be used to demonstrate regulatory compliance. These quality control requirements also apply to the Standard Methods, ASTM Methods, and other methods cited.
[8] Organochlorine Pesticides and PCBs in Wastewater Using Empore™ Disk. Revised October 28, 1994. 3M Corporation.
[9] Method O–3106–93 is in Open File Report 94–37, Methods of Analysis by the U.S. Geological Survey National Water Quality Laboratory—Determination of Triazine and Other Nitrogen-Containing Compounds by Gas Chromatography with Nitrogen Phosphorus Detectors. 1994. USGS.
[10] EPA Methods 608.1, 608.2, 614, 614.1, 615, 617, 619, 622, 622.1, 627, and 632 are found in Methods for the Determination of Nonconventional Pesticides in Municipal and Industrial Wastewater, EPA 821–R–92–002, April 1992, U.S. EPA. EPA Methods 505, 507, 508, 525.1, 531.1 and 553 are in Methods for the Determination of Nonconventional Pesticides in Municipal and Industrial Wastewater, Volume II, EPA 821–R–93–010B, 1993, U.S. EPA. EPA Method 525.2 is in Determination of Organic Compounds in Drinking Water by Liquid-Solid Extraction and Capillary Column Gas Chromatography/Mass Spectrometry, Revision 2.0, 1995, U.S. EPA. EPA methods 1656 and 1657 are in Methods for The Determination of Nonconventional Pesticides In Municipal and Industrial Wastewater, Volume I, EPA 821–R–93–010A, 1993, U.S. EPA. Methods 608.3 and 625.1 are available at: cwa-methods/approved-cwa-test-methods-organic-compounds.
[11] Method O–1126–95 is in Open-File Report 95–181, Methods of Analysis by the U.S. Geological Survey National Water Quality Laboratory—Determination of pesticides in water by C–18 solid-phase extraction and capillary-column gas chromatography/mass spectrometry with selected-ion monitoring. 1995. USGS.
[12] Method O–2060–01 is in Water-Resources Investigations Report 01–4134, Methods of Analysis by the U.S. Geological Survey National Water Quality Laboratory—Determination of Pesticides in Water by Graphitized Carbon-Based Solid-Phase Extraction and High-Performance Liquid Chromatography/Mass Spectrometry. 2001. USGS.
[13] Method O–2002–01 is in Water-Resources Investigations Report 01–4098, Methods of Analysis by the U.S. Geological Survey National Water Quality Laboratory—Determination of moderate-use pesticides in water by C–18 solid-phase extraction and capillary-column gas chromatography/mass spectrometry. 2001. USGS.
[14] Method O–1121–91 is in Open-File Report 91–519, Methods of Analysis by the U.S. Geological Survey National Water Quality Laboratory—Determination of organonitrogen herbicides in water by solid-phase extraction and capillary-column gas chromatography/mass spectrometry with selected-ion monitoring. 1992. USGS.

TABLE IH—LIST OF APPROVED MICROBIOLOGICAL METHODS FOR AMBIENT WATER

Parameter and units	Method [1]	EPA	Standard methods	AOAC, ASTM, USGS	Other
		Bacteria			
1. Coliform (fecal), number per 100 mL.	Most Probable Number (MPN), 5 tube, 3 dilution, or.	p. 132 [3]	9221 E–2014, 9221 F–2014. [32]		
	Membrane filter (MF) [2], single step	p. 124 [3]	9222 D–2015 [26]	B–0050–85. [4]	
2. Coliform (total), number per 100 mL.	MPN, 5 tube, 3 dilution, or	p. 114 [3]	9221 B–2014.		
	MF [2], single step or	p. 108 [3]	9222 B–2015 [27]	B–0025–85. [4]	
	MF [2], two step with enrichment	p. 111 [3]	9222 B–2015. [27]		
3. *E. coli,* number per 100 mL.	MPN [5 7 13], multiple tube, or		9221 B.3–2014/9221 F–2014. [10 12 32]		
	Multiple tube/multiple well, or		9223 B–2016 [11]	991.15 [9]	Colilert® [11 15], Colilert-18®. [11 14 15]
	MF [2 5 6 7], two step, or	1103.2 [18]	9222 B–2015/9222 I–2015 [17], 9213 D–2007.	D5392–93. [8]	
	Single step	1603.1 [19], 1604 [20]			m-ColiBlue24® [16], KwikCount™ EC. [28 29]
4. Fecal streptococci, number per 100 mL.	MPN, 5 tube, 3 dilution, or	p. 139 [3]	9230 B–2013.		
	MF [2], or	p. 136 [3]	9230 C–2013 [30]	B–0055–85. [4]	
	Plate count	p. 143. [3]			
5. Enterococci, number per 100 mL.	MPN [5 7], multiple tube/multiple well, or		9230 D–2013	D6503–99 [8]	Enterolert®. [11 21]
	MF [2 5 6 7] two step, or	1106.2 [22]	9230 C–2013 [30]	D5259–92. [8]	
	Single step, or	1600.1 [23]	9230 C–2013. [30]		
	Plate count	p. 143. [3]			
		Protozoa			
6. *Cryptosporidium*	Filtration/IMS/FA	1622 [24], 1623 [25], 1623.1. [25 31]			
7. *Giardia*	Filtration/IMS/FA	1623 [25], 1623.1. [25 31]			

Table 1H notes:
[1] The method must be specified when results are reported.
[2] A 0.45-μm membrane filter (MF) or other pore size certified by the manufacturer to fully retain organisms to be cultivated and to be free of extractables which could interfere with their growth.
[3] Microbiological Methods for Monitoring the Environment, Water and Wastes. EPA/600/8–78/017. 1978. US EPA.
[4] U.S. Geological Survey Techniques of Water-Resource Investigations, Book 5, Laboratory Analysis, Chapter A4, Methods for Collection and Analysis of Aquatic Biological and Microbiological Samples. 1989. USGS.
[5] Tests must be conducted to provide organism enumeration (density). Select the appropriate configuration of tubes/filtrations and dilutions/volumes to account for the quality, character, consistency, and anticipated organism density of the water sample.
[6] When the MF method has not been used previously to test waters with high turbidity, large numbers of noncoliform bacteria, or samples that may contain organisms stressed by chlorine, a parallel test should be conducted with a multiple-tube technique to demonstrate applicability and comparability of results.
[7] To assess the comparability of results obtained with individual methods, it is suggested that side-by-side tests be conducted across seasons of the year with the water samples routinely tested in accordance with the most current *Standard Methods for the Examination of Water and Wastewater* or EPA alternate test procedure (ATP) guidelines.

[8] Annual Book of ASTM Standards—Water and Environmental Technology. Section 11.02. 2000, 1999, 1996. ASTM International.
[9] Official Methods of Analysis of AOAC International, 16th Edition, Volume I, Chapter 17. 1995. AOAC International.
[10] The multiple-tube fermentation test is used in 9221B.3–2014. Lactose broth may be used in lieu of lauryl tryptose broth (LTB), if at least 25 parallel tests are conducted between this broth and LTB using the water samples normally tested, and this comparison demonstrates that the false-positive rate and false-negative rate for total coliform using lactose broth is less than 10 percent. No requirement exists to run the completed phase on 10 percent of all total coliform-positive tubes on a seasonal basis.
[11] These tests are collectively known as defined enzyme substrate tests.
[12] After prior enrichment in a presumptive medium for total coliform using 9221B.3–2014, all presumptive tubes or bottles showing any amount of gas, growth or acidity within 48 h ± 3 h of incubation shall be submitted to 9221F–2014. Commercially available EC–MUG media or EC media supplemented in the laboratory with 50 µg/mL of MUG may be used.
[13] Samples shall be enumerated by the multiple-tube or multiple-well procedure. Using multiple-tube procedures, employ an appropriate tube and dilution configuration of the sample as needed and report the Most Probable Number (MPN). Samples tested with Colilert® may be enumerated with the multiple-well procedures, Quanti-Tray® or Quanti-Tray®/2000, and the MPN calculated from the table provided by the manufacturer.
[14] Colilert-18® is an optimized formulation of the Colilert® for the determination of total coliforms and *E. coli* that provides results within 18 h of incubation at 35 °C, rather than the 24 h required for the Colilert® test and is recommended for marine water samples.
[15] Descriptions of the Colilert®, Colilert-18®, Quanti-Tray supreg;, and Quanti-Tray®/2000 may be obtained from IDEXX Laboratories Inc.
[16] A description of the mColiBlue24® test may be obtained from Hach Company.
[17] Subject coliform positive samples determined by 9222B–2015 or other membrane filter procedure to 9222I–2015 using NA–MUG media.
[18] Method 1103.2: *Escherichia coli* (*E. coli*) in Water by Membrane Filtration Using membrane-Thermotolerant *Escherichia coli* Agar (mTEC), EPA–821–R–23–009. September 2023. US EPA.
[19] Method 1603.1: *Escherichia coli* (*E. coli*) in Water by Membrane Filtration Using Modified membrane-Thermotolerant *Escherichia coli* Agar (Modified mTEC), EPA–821–R–23–008. September 2023 . US EPA.
[20] Method 1604: Total Coliforms and *Escherichia coli* (*E. coli*) in Water by Membrane Filtration by Using a Simultaneous Detection Technique (MI Medium), EPA 821–R–02–024. September 2002. US EPA.
[21] A description of the Enterolert® test may be obtained from IDEXX Laboratories Inc.
[22] Method 1106.2: Enterococci in Water by Membrane Filtration Using membrane-*Enterococcus*-Esculin Iron Agar (mE–EIA), EPA–821–R–23–007. September 2023. US EPA.
[23] Method 1600.1: Enterococci in Water by Membrane Filtration Using membrane-*Enterococcus* Indoxyl-β-D-Glucoside Agar (mEI), EPA–821–R–21–006. September 2023. US EPA.
[24] Method 1622 uses a filtration, concentration, immunomagnetic separation of oocysts from captured material, immunofluorescence assay to determine concentrations, and confirmation through vital dye staining and differential interference contrast microscopy for the detection of *Cryptosporidium.* Method 1622: *Cryptosporidium* in Water by Filtration/IMS/FA, EPA–821–R–05–001. December 2005. US EPA.
[25] Methods 1623 and 1623.1 use a filtration, concentration, immunomagnetic separation of oocysts and cysts from captured material, immunofluorescence assay to determine concentrations, and confirmation through vital dye staining and differential interference contrast microscopy for the simultaneous detection of *Cryptosporidium* and *Giardia* oocysts and cysts. Method 1623: *Cryptosporidium* and *Giardia* in Water by Filtration/IMS/FA. EPA–821–R–05–002. December 2005. US EPA. Method 1623.1: *Cryptosporidium* and *Giardia* in Water by Filtration/IMS/FA. EPA 816–R–12–001. January 2012. US EPA.
[26] On a monthly basis, at least ten blue colonies from positive samples must be verified using Lauryl Tryptose Broth and EC broth, followed by count adjustment based on these results; and representative non-blue colonies should be verified using Lauryl Tryptose Broth. Where possible, verifications should be done from randomized sample sources.
[27] On a monthly basis, at least ten sheen colonies from positive samples must be verified using Lauryl Tryptose Broth and brilliant green lactose bile broth, followed by count adjustment based on these results; and representative non-sheen colonies should be verified using Lauryl Tryptose Broth. Where possible, verifications should be done from randomized sample sources.
[28] A description of KwikCount™ EC may be obtained from Roth Bioscience, LLC.
[29] Approved for the analyses of *E. coli* in freshwater only.
[30] Verification of colonies by incubation of BHI agar at 10 ± 0.5 °C for 48 ± 3 h is optional. As per the Errata to the 23rd Edition of *Standard Methods for the Examination of Water and Wastewater* ''Growth on a BHI agar plate incubated at 10 ± 0.5 °C for 48 ± 3 h is further verification that the colony belongs to the genus Enterococcus.''
[31] Method 1623.1 includes updated acceptance criteria for IPR, OPR, and MS/MSD and clarifications and revisions based on the use of Method 1623 for years and technical support questions.
[32] 9221 F.2–2014 allows for simultaneous detection of *E. coli* and thermotolerant fecal coliforms by adding inverted vials to EC–MUG; the inverted vials collect gas produced by thermotolerant fecal coliforms.

Vol. 89 Tuesday,

No. 74 April 16, 2024

Part V

Postal Service

39 CFR Part 111

New Mailing Standards for Domestic Mailing Services Products; Proposed Rule

POSTAL SERVICE

39 CFR Part 111

New Mailing Standards for Domestic Mailing Services Products

AGENCY: Postal Service™.

ACTION: Proposed rule.

SUMMARY: On April 9, 2024, the Postal Service (USPS®) filed a notice of mailing services price adjustments with the Postal Regulatory Commission (PRC), effective July 14, 2024. This proposed rule contains the revisions to *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM®) that we would adopt to implement the changes coincident with the price adjustments.

DATES: Submit comments on or before May 16, 2024.

ADDRESSES: Mail or deliver written comments to the Manager, Product Classification, U.S. Postal Service, 475 L'Enfant Plaza SW, Room 4446, Washington, DC 20260–5015. If sending comments by email, include the name and address of the commenter and send to *PCFederalRegister@usps.gov,* with a subject line of ''July 2024 Domestic Mailing Services Proposal.'' Faxed comments are not accepted.

You may inspect and photocopy all written comments, by appointment only, at USPS® Headquarters Library, 475 L'Enfant Plaza SW, 11th Floor North, Washington, DC 20260. These records are available for review on Monday through Friday, 9 a.m.–4 p.m., by calling 202–268–2906.

FOR FURTHER INFORMATION CONTACT: Steven Mills at (202) 268–7433 or Doriane Harley at (202) 268–2537.

SUPPLEMENTARY INFORMATION: All submitted comments and attachments are part of the public record and subject to disclosure. Do not enclose any material in your comments that you consider to be confidential or inappropriate for public disclosure.

Proposed prices will be available under Docket No. R2024–2 on the Postal Regulatory Commission's website at *www.prc.gov.*

The Postal Service's proposed rule includes changes to prices, mail classification updates, product simplification efforts, and revisions to the DMM.

Different Additional Ounce Rates for First-Class Mail® Flats

Currently, First-Class Mail® flats incur a first ounce price and a uniform additional ounce price that is applied at each level from the second to the thirteenth ounce.

The Postal Service is proposing a change that will allow the Pricing department to provide a distinct price at each ounce increment.

USPS Marketing Mail Flat-Shaped—Separating Lightweight and Heavyweight Rate Categories

The Postal Service is proposing to divide some USPS Marketing Mail flat-shaped pieces into two distinct pricing categories, lightweight (0 to 4 ounces) and heavyweight (from above 4 ounces up to 16 ounces). Lightweight pieces will continue to have only a piece-price component, with dropship discounts available for different entry points. Heavyweight pieces will have per-piece and per-pound price components, the per-pound components apply to the entire weight of the piece, with per-pound dropship discounts available for different entry points.

Business Reply Mail (BRM) Simplification

The Postal Service is proposing to incentivize Qualified Business Reply Mail (QBRM) customers to enroll in Intelligent Mail Barcode Accounting (IMbA) by waiving annual account maintenance and quarterly fees and by reducing the per-piece fee. Customers who link current QBRM permits to an Enterprise Payment Account (EPA) and successfully complete the onboarding process will have subsequent annual and quarterly fees waived and receive a reduced QBRM IMbA per-piece fee.

Elimination of Simple Samples (Product Samples)

Simple Samples, also referred to as Product Samples, is a type of Marketing Parcel created to allow mailers to distribute sample-size products weighing up to 16 ounces in ''targeted or every door'' areas without the use of outer packaging.

The Postal Service is proposing to eliminate this product offering due to low customer usage. Alternative, economical products are available.

Catalog Price Incentive—Marketing Mail and Bound Printed Matter

The Postal Service is proposing to revise the mailpiece requirements for catalogs and to offer a price incentive to mailers who mail catalogs that meet these revised requirements. The incentive and revisions would apply to all USPS Marketing Mail products except for EDDM-Retail and to Bound Printed Matter flats and parcels.

Enlarge Maximum Size for Plus One

Currently, the maximum size for Plus One mailpieces is 6″x9.5″.

The Postal Service is proposing to increase the maximum size for Plus One mailpieces to 6″x11″.

Adding Optional Preparation Standards to USPS Marketing Mail Carrier Route Automation Letters

The Postal Service is proposing to create an optional tray preparation for High Density and High Density Plus letters. This optional tray preparation would allow mail preparers to combine multiple mail owner's eligible HD and HD+ letters with 5-digit letters in one tray to reduce the volume of residual trays entered in the mailstream.

Matching Nomenclature & Classification Standards to Network Redesign

New Network Future State Nomenclature Mapping—Under Phase 1 of the Postal Service network future state, the Postal Service is revising the DMM to provide site mapping nomenclature for facilities (*e.g.,* NDC/RPDC). Phase 1 will not include site mapping in the Quick Service Guides (QSGs) or revisions to destination entry pricing nomenclature or labeling lists.

In some cases where there is overlapping of nomenclature in the DMM for market dominant and competitive products (*e.g.,* DMM 705.8.0) the site mapping nomenclature will be included in the **Federal Register** Notice for the domestic competitive products price change.

2025 Promotions

The Postal Service has been incenting mailers to integrate mobile technology and use innovative print techniques in commercial mail since 2012. These promotions have become an integral way for industry to try new things and innovate their mail campaigns. A 2025 Promotions Calendar is planned with opportunities for mailers to receive a postage discount by applying treatments or integrating technology in their mail campaigns.

Mail Growth Incentives Continuation in Calendar Year 2025

For calendar year 2024, the Postal Service introduced two new incentives designed to promote the growth of First-Class Mail® (the ''First-Class Mail Growth Incentive'') and USPS Marketing Mail® (the ''Marketing Mail Growth Incentive''). The effective dates of both incentives is January 1, 2024 through December 31, 2024.

The Postal Service is proposing to continue both incentives for calendar year 2025.

These proposed revisions will provide consistency within postal products and add value for customers.

Although exempt from the notice and comment requirements of the Administrative Procedure Act (5 U.S.C. 553(b), (c)) regarding proposed rulemaking by 39 U.S.C. 410(a), the Postal Service invites public comments on the proposed revisions to *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM), incorporated by reference in the Code of Federal Regulations. We will publish an appropriate amendment to 39 CFR part 111 to reflect these changes.

List of Subjects in 39 CFR Part 111

Administrative practice and procedure, Postal Service.

Accordingly, the Postal Service proposes the following changes to Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM), incorporated by reference in the Code of Federal Regulations (see 39 CFR 111.1):

PART 111—[AMENDED]

■ 1. The authority citation for 39 CFR part 111 continues to read as follows:

Authority: 5 U.S.C. 552(a); 13 U.S.C. 301–307; 18 U.S.C. 1692–1737; 39 U.S.C. 101, 401, 403, 404, 414, 416, 3001–3011, 3201–3219, 3403–3406, 3621, 3622, 3626, 3632, 3633, and 5001.

■ 2. Revise the *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM) as follows:

Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM)

* * * * *

100 Retail Mail Letters, Cards, Flats, and Parcels

* * * * *

140 USPS Marketing Mail Flats Every Door Direct Mail-Retail (EDDM-Retail)

* * * * *

145 Mail Preparation

* * * * *

1.0 Preparation of EDDM-Retail Flats

1.1 General Information

[Revise the text of 1.1 to read as follows:]

All pieces mailed as EDDM-Retail mailings must be bundled under 1.3 and presented directly to the correct delivery Post Office or destination delivery unit (DDU)/Sorting & Delivery Center (SDC), or mailed to the DDU/SDC via Priority Mail under 146.

* * * * *

146 Enter and Deposit

* * * * *

1.0 Basic Options

1.1 Entry at Delivery Post Office

[Revise the text of 1.1 to read as follows:]

All EDDM-Retail mailings must be entered directly at the Post Office (or DDU/SDC) responsible for the Post Office Box or carrier route delivery for which the mailing is prepared, or shipped to that Post Office under 1.2.

* * * * *

200 Commercial Mail Letters, Cards, Flats, and Parcels

201 Physical Standards

* * * * *

4.0 Physical Standards for Flats

4.1 General Definition of Flat Size Mail

[Delete item (d) and renumber item (e) as (d):]

* * * * *

[Delete section 201.4.9 titled ''Catalogs'' in its' entirety]

* * * * *

8.0 Additional Physical Standards by Class of Mail

* * * * *

8.4 USPS Marketing Mail Parcels

* * * * *

8.4.2 Marketing Parcels

* * * * *

[Delete item (e) in its' entirety]

* * * * *

203 Basic Postage Statement, Documentation, and Preparation Standards

* * * * *

3.0 Standardized Documentation for First-Class Mail, Periodicals, USPS Marketing Mail, and Flat-Size Bound Printed Matter

* * * * *

3.2 Format and Content

For First-Class Mail, Periodicals, USPS Marketing Mail, and Bound Printed Matter, standardized documentation includes:

* * * * *

d. For bundles on pallets, list these required elements:

* * * * *

[Revise d(4) to read as follows:]

4. Separate columns with the number of pieces for each price reported in the mailing, and a continuous running total of pieces (group information either in ZIP Code order and by sortation level or by sortation level and within each sortation level, by ZIP Code).

Document SCF/LPC, ADC/RPDC, or NDC/RPDC pallets created as a result of bundle reallocation under 705.8.11, 705.8.12, or 705.8.13 by designating the protected pallet with an identifier of ''PSCF'' (for an SCF/LPC pallet), ''PADC'' (for an ADC/RPDC pallet), or ''PBMC'' (for a NDC/RPDC pallet). These identifiers are required to appear only on the USPS Qualification Report; they are not required on pallet labels or on any other documentation.

* * * * *

3.6 Detailed Entry Listing for Periodicals

* * * * *

3.6.3 Entry Abbreviations

Use the price name or the authorized entry abbreviation in the listings in 3.0 and 207.17.4.2:

[Revise the list in 3.6.3 to read as follows:]

Zone abbreviation	Rate equivalent
ICD	In-County, DDU.
IC	In-County, All Others.
DDU/SDC	Outside-County, DDU.
SCF/LPC (letters/flats).	Outside-County, DSCF.
SCF/RPDC (parcels).	Outside-County, DSCF.
ADC/RPDC	Outside-County, DADC.
OC	Outside-County, All Others.

3.7 Bundle and Container Reports for Outside-County Periodicals Mail

* * * * *

3.7.2 Outside-County Container Report

The container report must contain, at a minimum, the following elements:

* * *

[Revise item (d) to read as follows]

d. Container entry level (origin, DDU/SDC, DSCF/LPC (letters/flats), DSCF/RPDC (parcels), DADC/RPDC, or DNDC/RPDC).* * *

* * * * *

4.0 Bundles

* * * * *

4.6 Address Visibility for Flats and Parcels

* * * * *

[Revise item (d) to read as follows:]

d. Bundles of mailpieces at carrier route prices entered at a destination delivery unit (DDU) or Sorting & Delivery Center (SDC).* * *

* * * * *

[Revise the heading of 4.10 to read as follows:]

4.10 Additional Standards for Unsacked/Untrayed Bundles Entered at DDU/SDC Facilities

* * * * *

5.0 Letter and Flat Trays

* * * * *

5.5 Letter Tray Strapping Exception

[Revise the text of 5.5 to read as follows:]

Strapping is not required for any letter tray placed on a 5-digit, 3-digit, or SCF pallet secured with stretchwrap. If the processing and distribution manager gives a written waiver, strapping is not required for any mixed AADC or ADC letter tray of First-Class Mail or for any letter tray that originates and destinates in the same SCF/LPC, ADC, or AADC (mail processing plant) service areas.

5.6 Use of Flat Trays

* * * * *

5.6.2 Preparation for Flats in Flat Trays

All flat tray preparation is subject to these standards: * * *

[Revise 5.6.2(h) to read as follows:]

h. Pieces prepared as automation flats under the tray-based preparation option in 235.8.0 do not have to be grouped by 3-digit ZIP Code prefix in ADC/RPDC trays or by ADC in mixed ADC trays if the mailing is prepared using an MLOCR/barcode sorter and standardized documentation is submitted.

[Revise the first sentence of 5.6.2(i) to read as follows:]

i. When pieces in a Periodicals mailing remain after one or more full trays are prepared for a 5-digit scheme, 5-digit, 3-digit, SCF/LPC, or ADC/RPDC destination, an additional tray to the destination must be prepared if the remaining pieces reach the required volume.* * *

* * * * *

6.0 Sacks

6.1 General Standards

[Revise the introductory text of 6.1 to read as follows:]

Applicable mailings must be prepared in sacks. Containers for Customized MarketMail are specified in 705.1.0. The following additional standards apply: * * *

* * * * *

7.0 Optional Endorsement Lines (OELs)

* * * * *

Exhibit 7.2.5 OEL Labeling Lists

[Revise the text of footnote 2 to read as follows:]

* * * 2. L010 if mail entered by mailer at a destination ASF/RPDC or NDC/RPDC or for mail placed on an ASF/RPDC or NDC/RPDC pallet under 705.8.0.

* * * * *

207 Periodicals

* * * * *

2.0 Price Application and Computation

* * * * *

2.1.4 Applying Pound Price

Apply pound prices to the weight of the pieces in the mailing as follows: * * *

[Revise the text of item (b) to read as follows:]

b. In-County pound prices consist of a DDU/SDC entry price and a non-DDU/SDC entry price for eligible copies delivered to addresses within the county of publication.

* * * * *

2.1.9 Applying Outside-County Container Prices

[Revise the second sentence of 2.1.9 to read as follows:]

* * * The container level is determined by the least-finely presorted bundle that container could contain according to standards (for example, an ''SCF/LPC pallet'' may contain SCF, 3-digit, 5-digit, and carrier route bundles and would always pay the 3-digit/SCF pallet price).* * *

* * * * *

17.0 Documentation

* * * * *

[Revise the title of 17.4 to read as follows:]

17.4 Detailed Entry Listing for Periodicals

17.4.1 Basic Standards

[Revise the first sentence of 17.4.1 to read as follows:]

The publisher must be able to present documentation that supports the number of copies of each edition of an issue, by entry level, at DDU/SDC, DSCF/LPC (letters/flats), DSCF/RPDC (parcels), DADC, All Others, and In-County prices. * * *

17.4.2 Format

Using one of the following formats, report the number of copies mailed to each 3-digit ZIP Code area at entry prices: * * *

[Revise the first sentence of item (b) to read as follows:]

b. Report copies by zone (In-County DDU/SDC, In-County others, Outside-County DDU/SDC, Outside-County DSCF/LPC (letters/flats), Outside-County DSCF/RPDC (parcels), Outside-County DADC and Outside-County All Others) and by 3-digit ZIP Code, in ascending numeric order, for each entry level.* * *

* * * * *

17.4.3 Entry Abbreviations

Use the price name or the authorized entry abbreviation in the listings in 17.3 and 17.4.2.

[Revise the list in 17.4.3 to read as follows:]

Zone abbreviation	Rate equivalent
ICD	In-County, DDU.
IC	In-County, All Others.
DDU/SDC	Outside-County, DDU.
SCF/LPC (letters/flats).	Outside-County, DSCF.
SCF/RPDC (parcels).	Outside-County, DSCF.
ADC	Outside-County, DADC.
OC	Outside-County, All Others.

* * * * *

18.3 Presort Terms

Terms used for presort levels are defined as follows: * * *

[Revise items (o) through (q) to read as follows:]

o. *Origin/entry 3-digit(s):* the ZIP Code in the delivery address on all pieces begins with one of the 3-digit prefixes processed at the sectional center facility (SCF)/local processing center (LPC [letters/flats]) or regional processing distribution center (RPDC [parcels]) in whose service area the mail is verified/entered.

p. *SCF:* the separation includes pieces for two or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC [letters/flats]) or regional processing distribution center (RPDC [parcels]) (see L005).

q. *Origin/entry SCF:* the separation includes bundles for one or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC [letters/flats]) or regional processing distribution center (RPDC [parcels]) (see L002, Column C, or L005) in whose service area the mail is verified/entered.* * *

18.4 Mail Preparation Terms

For purposes of preparing mail: * * *

[Revise items (r) and (s) to read as follows:]

r. An *origin 3-digit* (or *origin 3-digit scheme*) tray/sack contains all mail

(regardless of quantity) for a 3-digit ZIP Code (or 3-digit scheme) area processed by the SCF/LPC (letter/flats)/RPDC (parcels) in whose service area the mail is verified. A separate tray/sack may be prepared for each 3-digit ZIP Code (or 3-digit scheme) area.

s. An *origin/entry SCF flat tray or sack* contains all 5-digit and 3-digit bundles (regardless of quantity) for the SCF/LPC (letter/flats)/RPDC (parcels) in whose service area the mail is verified. At the mailer's option, such a flat tray/sack may be prepared for the SCF/LPC/RPDC area of each entry Post Office. This presort level applies only to nonletter-size Periodicals prepared in flat trays/sacks.* * *

[Revise text of item (v) to read as follows:]

v. *Entry [facility]* (or *origin [facility]*) refers to the USPS mail processing facility (for example, ''entry SCF/LPC/RDPC'') that serves the Post Office at which the mail is entered by the mailer. If the Post Office where the mail is entered is not the one serving the mailer's location (such as for plant-verified drop shipment), the Post Office of entry determines the *entry* facility.* * *

[Revise item aa(1) to read as follows]

aa. *Machinable flats* are:

1. Flat-size pieces meeting the standards in 201.6.0 that are sorted into 5-digit, 3-digit, ADC/RPDC, and mixed ADC bundles. These pieces are compatible with processing on the AFSM 100.* * *

* * * * *

20.0 Sacks and Trays

20.1 Basic Standards

20.1.1 General

[Revise 20.1.1 to read as follows:]

Mailings must be prepared in letter trays (letters), flat trays (flats) under 22.7 and 25.5, or sacks (carrier route, 5-digit scheme cr-rt and 5-digit cr-rt flats, nonpalletized residual 5-digit flats entered at a DDU/SDC along with carrier route flats, nonpalletized carrier route flats entered at the DSCF/LPC (origin), nonpalletized 5-digit flats entered at the DSCF/LPC (origin), and nonpalletized 3-digit/SCF flats entered at the DSCF/LPC (origin), and all periodicals parcels). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. Palletized mail is subject to 705.8.0. See 203.5.0 and 203.6.0 for tray and sack standards.

20.1.2 Origin/Entry 3-Digit/Scheme Trays

[Revise 20.1.2 to read as follows:]

For letter-size Periodicals, after all finer sort levels are prepared, an origin/entry 3-digit (or for barcoded letters, 3-digit scheme) tray must be prepared for any remaining mail for each 3-digit (or 3-digit scheme) area serviced by the SCF/LPC serving the origin Post Office, and may be prepared for each 3-digit (or 3-digit scheme) area served by the SCF/LPC where mail is entered (if different).

20.1.3 Flats and Irregular Parcels—Origin/Entry SCF Sacks

[Revise 20.1.3 to read as follows:]

For flats and irregular parcels, after all finer sort levels are prepared, an origin/entry SCF sack or flat tray (for flats) must be prepared for any remaining bundles for the 3-digit ZIP Code area(s) serviced by the SCF/LPC (letters/flats)/RPDC (parcels) serving the origin Post Office, and may be prepared for the area served by the SCF/LPC/RPDC/plant where mail is entered (if different).

* * * * *

22.0 Preparing Nonbarcoded (Presorted) Periodicals

* * * * *

22.4 Bundles With Fewer Than Six Pieces

Nonletter-size Periodicals may be prepared in 5-digit and 3-digit bundles containing fewer than six pieces at the publisher's option. Pieces in these low-volume bundles must be claimed at the mixed ADC price (Outside-County) or basic price (In-County). Low-volume bundles are permitted only when sacked or prepared on pallets as follows:

[Revise items (a) and (b) to read as follows:]

a. Place bundles in only 5-digit, 3-digit, and SCF/LPC flat trays that contain at least 24 pieces, or in origin/entry SCF/LPC flat trays, as appropriate.

b. Place bundles on only merged 5-digit scheme, 5-digit scheme, merged 5-digit, 5-digit, 3-digit, and SCF/LPC pallets.

* * * * *

22.6 Sack Preparation

[Revise the introductory paragraph of 22.6 to read as follows:]

Sack preparation is allowed only for the following: Parcels; Nonpalletized residual 5-digit flats entered at a DDU/SDC along with carrier route flats; Nonpalletized carrier route flats entered at the DSCF/LPC (origin); Nonpalletized 5-digit flats entered at the DSCF/LPC (origin); and nonpalletized 3-digit/SCF flats entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. For mailing jobs that also contain a barcoded mailing, see 22.1.2. For other mailing jobs, preparation sequence, sack size, and labeling: * * *

[Revise the first sentence of item (c) to read as follows:]

c. *SCF/LPC,* required at 72 pieces, optional at 24 pieces minimum.* * *

[Revise the first sentence of item (d) to read as follows:]

d. Origin/entry SCF/LPC, required for the SCF/LPC of the origin (verification) office, optional for the SCF/LPC of an entry office other than the origin office, (no minimum).* * *

[Revise the first sentence of item (e) to read as follows:]

e. *ADC/RPDC,* required at 72 pieces, optional at 24 pieces minimum.* * *

* * * * *

22.7 Tray Preparation—Flat-Size Nonbarcoded Pieces

[Revise the introductory paragraph of 22.7 to read as follows:]

Mailers must place machinable and nonmachinable (26.0) flat-sized pieces in flat trays (203.5.6) instead of sacks, unless prepared as the following: Direct carrier route; 5-digit scheme carrier route; 5-digit carrier route (23.4.1, 705.9.0 and 705.10.0); Nonpalletized residual 5-digit entered at a DDU/SDC along with carrier-route flats; Nonpalletized 5-digit flats entered at the DSCF/LPC (origin); or nonpalletized 3-digit/SCF entered at the DSCF/LPC (origin). Bundling in flat trays is optional, and any bundles must be trayed and labeled separately from loose flats prepared in flat trays. The trays are subject to a container charge and any bundles are subject to a bundle charge. Tray preparation, sequence, and labeling: * * *

[Revise the first sentence of item (d) to read as follows:]

d. *SCF/LPC,* required at 72 pieces, optional at 24 pieces minimum.* * *

[Revise the first sentence of item (e) to read as follows:]

e. *Origin SCF/LPC* (required) and entry SCF/LPC(s) (optional), no minimum, labeling: * * *

[Revise the first sentence of item (f) to read as follows:]

f. *ADC/RPDC,* required at 72 pieces, optional at 24 pieces minimum.* * *

* * * * *

23.0 Preparing Carrier Route Periodicals

* * * * *

23.4 Preparation—Flat-Size Pieces and Irregular Parcels

* * * * *

23.4.2 Exception to Flat Traying and Sacking

[Revise the first sentence of 23.4.2 to read as follows:]

Sacking or traying is not required for carrier route bundles entered at a DDU/SDC when the mailer unloads bundles under 29.6.5.* * *

* * * * *

23.6 Bundles With Fewer Than Six Pieces

[Revise item 23.6(b) to read as follows:]

b. Place bundles on only merged 5-digit scheme, 5-digit scheme carrier routes, merged 5-digit, 5-digit carrier routes, 3-digit, and SCF/LPC pallets.

* * * * *

25.0 Preparing Flat-Size Barcoded (Automation) Periodicals

25.1 Basic Standards

* * * * *

25.1.7 Exception—Barcoded and Nonbarcoded Flats on Pallets

[Revise the last sentence of 25.1.7(c) to read as follows:]

c. * * * The nonbarcoded price pieces that cannot be placed on ADC/RPDC or finer pallets may be prepared as flats in flat trays and paid for at nonbarcoded prices.

25.1.8 Bundles With Fewer Than Six Pieces

5-digit scheme, 5-digit, 3-digit scheme, and 3-digit bundles may contain fewer than six pieces at the publisher's option. Pieces in these low-volume bundles must be claimed at the applicable mixed ADC price (Outside-County) or basic price (In-County). These low-volume bundles are permitted only when they are sacked or prepared on pallets under these conditions:

[Revise items 25.1.8(a) through (d) to read as follows:]

a. Place 5-digit and 3-digit bundles in only 5-digit scheme, 5-digit, 3-digit, and SCF/LPC flat trays, as appropriate, that contain at least 24 pieces, or in merged 3-digit flat trays that contain at least one 6-piece carrier route bundle, or in origin/entry SCF/LPC flat trays.

b. Place 5-digit and 3-digit bundles on only merged 5-digit scheme, 5-digit scheme, merged 5-digit, 5-digit, 3-digit, and SCF/LPC pallets, as appropriate.

c. Place 5-digit scheme and 3-digit scheme bundles in only 5-digit scheme, 3-digit, and SCF/LPC flat trays, as appropriate, that contain at least 24 pieces, or in merged 3-digit flat trays that contain at least one 6-piece carrier route bundle, or in origin/entry SCF/LPC flat trays.

d. Place 5-digit scheme and 3-digit scheme bundles on only 3-digit and SCF/LPC pallets, as appropriate.

* * * * *

25.4 Sacking and Labeling

[Revise the introductory paragraph of 25.4 to read as follows:]

Sack preparation is allowed only for nonpalletized residual 5-digit flats entered at a DDU/SDC along with carrier route flats, nonpalletized 5-digit flats entered at the DSCF/LPC (origin), and nonpalletized 3-digit/SCF flats entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. For mailing jobs that also contain a machinable nonbarcoded price mailing, see 25.1.9 and 705.9.0. Other mailing jobs are prepared, sacked, and labeled as follows: * * *

[Revise the first sentence of item (c) to read as follows:]

c. *SCF/LPC,* required at 72 pieces, optional at 24 pieces; fewer pieces not permitted; labeling: * * *

[Revise the first sentence of item (d) to read as follows:]

d. *Origin SCF/LPC* (required) and *entry SCF/LPC(s)* (optional), no minimum; labeling: * * *

[Revise the first sentence of item (e) to read as follows:]

a. *ADC/RPDC,* required at 72 pieces, optional at 24 pieces; fewer pieces not permitted; labeling: * * *

* * * * *

25.5 Tray Preparation—Flat-Size Barcoded Pieces

[Revise the introductory paragraph of 25.5 to read as follows:]

Mailers must place machinable flats (under 201.6.0) in flats trays (see 24.0) instead of sacks, unless prepared as the following: Direct carrier route; 5-digit scheme carrier route; 5-digit carrier route; Nonpalletized residual 5-digit and entered at a DDU/SDC along with carrier route flats; Nonpalletized 5-digit flats entered at the DSCF/LPC (origin); or nonpalletized 3-digit/SCF entered at the DSCF/LPC (origin). Mailers must group together all pieces for each 5-digit scheme, 5-digit, 3-digit scheme, 3-digit, SCF/LPC, and ADC/RPDC destination. Bundling in flat trays is optional, and any bundles must be trayed and labeled separately from loose flats prepared in flat trays. The trays are subject to a container charge, and any bundles are subject to a bundle charge. Tray preparation, sequence, and labeling: * * *

[Revise the first sentence of item (d) to read as follows:]

d. *SCF/LPC* (required), 72-piece minimum, optional at 24 pieces, fewer pieces not permitted; labeling: * * *

[Revise the first sentence of item (e) to read as follows:]

e. Origin SCF/LPC (required) and entry SCF/LPC(s) (optional), no minimum, labeling: * * *

[Revise the first sentence of item (f) to read as follows:]

f. *ADC/RPDC* (required), 72-piece minimum, optional at 24 pieces, fewer pieces not permitted, no overflow tray allowed; labeling: * * *

* * * * *

28.0 Enter and Deposit

* * * * *

28.3 Exceptional Dispatch

* * * * *

28.3.2 Intended Use

[Revise the first sentence of 28.3.2 to read as follows:]

The provision for exceptional dispatch is intended for local distribution (In-County and DDU/SDC) of publications with total circulation of no more than 25,000 and is not to be used to circumvent additional entry standards.* * *

* * * * *

29.0 Destination Entry

* * * * *

[Revise the heading of 29.2 to read as follows:]

29.2 Destination Network Distribution Center/Regional Processing Distribution Center

29.2.1 Definition

[Revise item 29.2.1 to read as follows:]

For this standard, destination network distribution center (DNDC)/Regional Processing Distribution Center (RPDC) includes the facilities and ZIP Code ranges as noted in L601 and L602, or a USPS-designated facility.

29.2.2 Price Eligibility

DNDC container prices apply as follows: * * *

[Revise items (a) and (b) to read as follows:]

a. Pieces must be prepared in bundles or in sacks or trays on ADC/RPDC or more finely presorted pallets under 705.8.0.

b. Mailers may claim a DNDC container price if the facility ZIP Code (on Line 1 of the container label) is within the service area of the NDC/RPDC or ASF at which the container is deposited, under L601 and L602.

29.3 Destination Area Distribution Center

* * * * *

29.3.2 Price Eligibility

Determine price eligibility as follows:

[Revise items (a) and (b) to read as follows:]

a. Pound Prices. Outside-County pieces are eligible for DADC pound prices when placed on an ADC/RPDC or more finely presorted container, deposited at an ADC/RPDC (or USPS-designated facility), and addressed for delivery to one of the 3-digit ZIP Codes served by the facility where deposited. Automation pieces in AADC trays placed on optional SCF/LPC pallets under 705.8.10.2 are eligible for DADC prices when the 3-digit ZIP Code on the tray label is within that SCF/LPC/RPDC's service area according to L005.

b. Pieces must be prepared in bundles or in sacks or trays on ADC/RPDC or more finely presorted pallets under 705.8.0.

* * * * *

[Revise the heading of 29.4 to read as follows:]

29.4 Destination Sectional Center Facility/Local Processing Center

29.4.1 Definition

[Revise 29.4.1 to read as follows:]

For this standard, destination sectional center facility (DSCF)/local processing center (LPC [letter/flats])/regional processing distribution center (RPDC [parcels]) includes the facilities listed in L005, or a USPS-designated facility.

29.4.2 Price Eligibility

Determine price eligibility as follows:

[Revise items (a) through (c) to read as follows:]

a. Pound Prices. Outside-County pieces are eligible for DSCF pound prices when placed on an SCF or more finely presorted container, deposited at the DSCF/LPC (letter/flats)/RPDC (parcels) or USPS-designated facility (see also 29.4.2b), and addressed for delivery within the DSCF/LPC/RDPC's service area. Nonletter-size pieces are also eligible when the mailer deposits 5-digit bundles at the destination delivery unit (DDU)/sorting & delivery center (SDC) (the facility where the carrier cases mail for delivery to the addresses on the pieces) and the 5-digit bundles are in or on the following types of containers:

1. A merged 5-digit scheme or merged 5-digit sack/flat tray.

2. A merged 5-digit scheme, merged 5-digit, or 5-digit scheme pallet.

b. Container Prices. Mailers may claim the DSCF container price for SCF and more finely presorted containers that are entered at and destined within the service area of the SCF/LPC/RPDC at which the container is deposited.

c. Nonpalletized carrier route, 5-digit scheme carrier route, 5-digit carrier route, 5-digit, or 3-digit flats may be prepared in sacks when entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container.

[Revise the heading of 29.5 to read as follows:]

29.5 Destination Delivery Unit/Sorting & Delivery Center

29.5.1 Definition

[Revise 29.5.1 to read as follows:]

For this standard, the destination delivery unit (DDU)/sorting & delivery center (SDC) is the facility where the carrier cases mail for delivery to the addresses on the pieces in the mailing.

29.5.2 Price Eligibility

Determine price eligibility as follows:

* * *

[Revise items (c) and (d) to read as follows:]

c. Container Prices. Outside-County mailers may claim a DDU container price for 5-digit scheme and more finely presorted containers that are entered at and destined within the service area of the DDU/SDC at which the container is deposited.

d. Nonpalletized residual 5-digit flats remaining after a carrier route sortation may be prepared in sacks and deposited at the DDU/SDC along with a carrier route mailing.

* * * * *

29.5.4 Deposit Schedule

[Revise 29.5.4 to read as follows:]

The mailer may schedule deposit of DDU/SDC mailings at least 24 hours in advance by contacting the DDU/SDC or through FAST, available at *fast.usps.com.* The mailer must follow the scheduled deposit time. The mailer may request standing appointments for renewable 6-month periods by written application to the DDU/SDC. Mixed loads of Periodicals and other classes of mail require advance appointments for deposit. For mail entered under exceptional dispatch, the application for exceptional dispatch required under 28.3 also serves as a request for standing appointments.

* * * * *

235 Mail Preparation

* * * * *

1.0 General Definition of Terms

* * * * *

1.3 Terms for Presort Levels

1.3.1 Letters and Cards

Terms used for presort levels are defined as follows: * * *

[Revise items (f) and (g) to read as follows:]

f. *Origin/optional entry 3-digit(s):* the ZIP Code in the delivery address on all pieces begins with one of the 3-digit prefixes processed at the sectional center facility (SCF)/local processing center (LPC) in whose service area the mail is verified/entered. Subject to standard, a separation is required for each such 3-digit area regardless of the volume of mail.

g. *Origin/optional entry SCF:* the separation includes bundles for one or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC) (see L002, Column C, or L005) in whose service area the mail is verified/entered. Subject to standard, this separation is required regardless of the volume of mail.* * *

1.3.2 Flats

Terms used for presort levels are defined as follows: * * *

[Revise items (c) through (e) to read as follows:]

c. Origin/optional entry 3-digit(s): the ZIP Code in the delivery address on all pieces begins with one of the 3-digit prefixes processed at the sectional center facility (SCF)/local processing center (LPC) in whose service area the mail is verified/entered. Subject to standard, a separation is required for each such 3-digit area regardless of the volume of mail.

d. ADC: all pieces are addressed for delivery in the service area of the same area distribution center (ADC)/regional processing distribution center (RPDC) (see L004).

e. Mixed ADC: the pieces are for delivery in the service area of more than one ADC/RPDC.

1.4 Preparation Definitions and Instructions

For purposes of preparing mail: * * *

[Revise items (h) and (i) to read as follows:]

h. An *origin 3-digit* (or *origin 3-digit scheme*) tray contains all mail (regardless of quantity) for a 3-digit ZIP Code (or 3-digit scheme) area processed by the SCF/LPC in whose service area the mail is verified. If more than one 3-digit (or 3-digit scheme) area is served, as indicated in L005, a separate tray must be prepared for each. A tray may be prepared for each 3-digit (or 3-digit scheme) area served by the SCF/LPC/plant where mail is entered (if that is different from the SCF/LPC/plant

serving the Post Office where the mail is verified). In all cases, only one less-than-full tray may be prepared for each 3-digit (or 3-digit scheme) area.

i. An *origin AADC* tray contains all mail (regardless of quantity) for an AADC ZIP Code area processed by the AADC or SCF/LPC in whose service area the mail is verified/entered. Only one less-than-full tray may be prepared for each AADC area.* * *

[Revise item (l) to read as follows:]

l. *Entry [facility]* (or *origin [facility]*) refers to the USPS mail processing facility that serves the Post Office at which the mail is entered by the mailer. If the Post Office where the mail is entered is not the one serving the mailer's location, the Post Office of entry determines the *entry* facility. *Entry SCF/LPC* includes both single-3-digit and multi-3-digit SCFs.

* * * * *

8.0 Preparation of Automation Flats

* * * * *

8.6 First-Class Mail Optional Tray-Based Preparation

Tray size, preparation sequence, and Line 1 labeling: * * *

[Revise item (c) to read as follows:]

c. Origin 3-digit: required for each 3-digit ZIP Code served by the SCF/LPC of the origin (verification) office; no minimum; for Line 1, use L002, Column A for 3-digit destinations.

[Revise the first sentence of item (d) to read as follows:]

d. ADC: required (90-piece minimum); one less-than-full or overflow tray allowed; group pieces by 3-digit ZIP Code prefix; for Line 1, use L004 (ZIP Code prefixes in Column A must be combined and labeled to the corresponding ADC/RPDC destination shown in Column B).* * *

* * * * *

240 Commercial Mail USPS Marketing Mail

243 Prices and Eligibility

Overview

[Delete index listing 8.0 and renumber 9.0 as 8.0]

* * * * *

1.0 Prices and Fees

* * * * *

1.2 USPS Marketing Mail Prices

USPS Marketing Mail prices are applied as follows: * * *

[Add an item (e) to read as follows:]

e. Items qualifying as a catalog under 601.10 are eligible for an incentive discount when appropriately identified on the postage statement and/or the eDoc.

* * * * *

2.0 Content Standards for USPS Marketing Mail

2.1 General

* * * * *

[Add a second sentence to read as follows:]

* * * Mailpieces prepared as catalogs must meet the standards in 601.10.

* * * * *

3.0 Basic Eligibility Standards for USPS Marketing Mail

* * * * *

3.4 IMpb Standards

[Revise the first sentence of 3.4 to read as follows:]

All USPS Marketing Mail parcels must bear an Intelligent Mail package barcode (IMpb) prepared under 204.2.0.* * *

* * * * *

4.0 Price Eligibility for USPS Marketing Mail

4.1 General Information

[Revise the text of 4.1 to read as follows:]

All USPS Marketing Mail prices are presorted prices (including all nonprofit prices). These prices apply to mailings meeting the basic standards in 2.0 through 4.0 and the corresponding standards for Presorted prices, Enhanced Carrier Route prices, and automation prices under 5.0 through 8.0, or Customized MarketMail prices under 243.9.0. Except for Customized MarketMail pieces, destination entry discount prices are available under 246.2.0 through 246.6.0. Nonprofit prices may be used only by organizations authorized by the USPS under 703.1.0. Not all processing categories qualify for every price. Pieces are subject to either a single minimum per piece price or a combined piece/pound price, depending on the weight of the individual pieces in the mailing.

4.2 Minimum Per Piece Prices

The minimum per piece prices (the minimum postage that must be paid for each piece) apply as follows: * * *

[Revise the text of item (c) to read as follows:]

c. Individual prices. There are separate minimum per piece prices for each subclass (Regular, Enhanced Carrier Route, Nonprofit, and Nonprofit Enhanced Carrier Route) and within each subclass for the type of mailing and the level of presort within each mailing. DNDC prices are not available for ZIP Code ranges 006–009, 967–969, and 995–999, as indicated in labeling list L601. Except for Customized MarketMail pieces, discounted per piece prices also may be claimed for destination network distribution center (DNDC), destination sectional center facility (DSCF), and destination delivery unit (DDU)) under 246. DDU prices are available only for mail entered at Enhanced Carrier Route or Nonprofit Enhanced Carrier Route prices. There are also separate prices for Marketing parcels, Nonprofit machinable parcels, and Nonprofit irregular parcels. See 1.0 for individual per piece prices.

* * * * *

4.4 Extra Services for USPS Marketing Mail

* * * * *

4.4.2 Ineligible Matter

Extra services (other than certificate of mailing service) may not be used for any of the following types of USPS Marketing Mail: * * *

[Delete item (d) and renumber item (e) as item (d):]

* * * * *

5.0 Additional Eligibility Standards for Nonautomation USPS Marketing Mail Letters, Flats, and Presorted USPS Marketing Mail Parcels

* * * * *

5.3 Price Application

[Revise the text of 5.3 to read as follows:]

Nonautomation prices for Regular and Nonprofit USPS Marketing Mail apply to mailpieces that meet the eligibility standards in 2.0 through 4.0, and the preparation standards in 245 or 705. Prices for Nonprofit parcels not qualifying as Marketing parcels apply separately to machinable parcels and irregular parcels. When parcels are combined under 245.11.0, 705.6.0, or 705.21.0, all pieces are eligible for the applicable prices when the combined total meets the eligibility standards.

* * * * *

5.4.3 AADC USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.4.3 to read as follows:]

The SCF pallet discount applies to AADC-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

5.5.3 5-Digit USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.5.3 to read as follows:]

The SCF pallet discount applies to 5-digit-eligible pieces that are palletized under 705.8.10.3a to 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

5.5.5 3-Digit USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.5.5 to read as follows:]

The SCF pallet discount applies to 3-digit-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

5.5.7 ADC USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.5.7 to read as follows:]

The SCF pallet discount applies to ADC-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

5.6 Nonautomation Price Application—Flats

* * * * *

5.6.2 5-Digit USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.6.2 to read as follows:]

The SCF pallet discount applies to 5-digit-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3d, 705.8.10.3e, and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

5.6.4 3-Digit USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.6.4 to read as follows:]

The SCF pallet discount applies to 3-digit-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

5.6.5 ADC Prices for Flats

ADC prices apply to flat-size pieces:

[Revise item 5.6.5(a) to read as follows:]

a. In a 5-digit/scheme, 3-digit/scheme, or ADC bundle of 10 or more pieces properly placed in an ADC/RPDC flat tray (see 245.1.4).

[Revise item 5.6.5(c) to read as follows:]

c. When palletized under 705.8.0 and 705.10.0 through 705.13.0, in an ADC bundle of 10 or more pieces; properly placed on an ADC/RPDC pallet.

5.6.6 ADC USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 5.6.6 to read as follows:]

The SCF pallet discount applies to ADC-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

5.6.7 Mixed ADC Prices for Flats

[Revise 5.6.7 to read as follows:]

Mixed ADC prices apply to flat-size pieces in bundles that do not qualify for 5-digit, 3-digit, or ADC prices; placed in mixed ADC flat trays or on ASF/NDC/RPDC, or mixed NDC pallets under 705.8.0.

5.7 Prices for Machinable Parcels

5.7.1 5-Digit Price

[Revise the introductory paragraph of 5.7.1 to read as follows:]

The 5-digit price applies to qualifying machinable parcels that are dropshipped to a DNDC/RPDC (or ASF when claiming DNDC prices), DSCF/RPDC, or DDU/SDC and presented:

* * *

[Revise item 5.7.1(c) to read as follows:]

c. As one or more parcels that mailers drop ship to a DDU/SDC under 246.5.2.3. * * *

* * * * *

5.7.2 NDC Price

The NDC price applies to qualifying machinable parcels as follows under either of the following conditions:

[Revise items (a) and (b) to read as follows:]

a. When dropshipped to an ASF/NDC/RPDC and presented:

a. In an ASF/NDC/RPDC sack containing at least 10 pounds of parcels, or

b. On an ASF/NDC/RPDC pallet, according to standards in 705.8.10, or

c. In an NDC/ASF/RPDC container prepared under 705.21.0.

b. When presented at the origin acceptance office on an ASF/NDC/RPDC pallet containing at least 200 pounds of pieces.

5.7.3 Mixed NDC Price

[Revise 5.7.3 to read as follows:]

The mixed NDC price applies to machinable parcels that are not eligible for 5-digit or NDC prices. Place machinable parcels at mixed NDC prices in origin NDC/RPDC sacks or on origin NDC/RPDC pallets, then in mixed NDC sacks or on mixed NDC pallets. See 245.11.3 and 705.8.10.

5.8 Prices for Irregular Parcels and Marketing Parcels

5.8.1 5-Digit Price

[Revise the introductory paragraph of 5.8.1 to read as follows:]

5-digit prices apply to irregular parcels and to Marketing parcels that are dropshipped to a DNDC/RPDC (or ASF when claiming DNDC prices), DSCF/RPDC, or DDU/SDC and presented:

* * *

[Revise item 5.8.1(c) to read as follows:]

c. As one or more parcels that mailers drop ship to a DDU/SDC under 246.5.2.2. * * *

* * * * *

5.8.2 SCF Price

[Revise 5.8.2 to read as follows:]

SCF prices apply to irregular parcels and to Marketing parcels that are dropshipped and presented to a DSCF, DNDC, or RPDC:

a. In an SCF/RPDC sack containing at least 10 pounds of parcels.

b. On an SCF/RPDC pallet, according to 705.8.10.

c. In SCF/RPDC containers prepared under 705.21.0.

5.8.3 NDC Price

NDC prices apply to irregular parcels and to Marketing parcels as follows under either of the following conditions:

[Revise items (a) and (b) to read as follows:]

a. When dropshipped to an ASF/NDC/RPDC and presented:

1. In an ASF/NDC/RPDC sack containing at least 10 pounds of parcels, or

2. On an ASF/NDC/RPDC pallet, according to standards in 705.8.10, or

3. In a NDC/ASF/RPDC container prepared under 705.21.0.

b. When presented at the origin acceptance office on an ASF/NDC/RPDC pallet containing at least 200 pounds of pieces.

5.8.4 Mixed NDC Price

[Revise 5.8.4 to read as follows:]

Mixed NDC prices apply to irregular parcels and to Marketing parcels in origin NDC/RPDC or mixed NDC containers that are not eligible for 5-digit, SCF, or NDC prices. Place parcels at mixed NDC prices in origin NDC/RPDC or mixed NDC sacks under 245.11.4.3 or on origin NDC/RPDC or mixed NDC pallets under 705.8.10.

6.0 Additional Eligibility Standards for Enhanced Carrier Route USPS Marketing Mail Letters and Flats

6.1 General Enhanced Carrier Route Standards

* * * * *

6.1.2 Basic Eligibility Standards

All pieces in an Enhanced Carrier Route or Nonprofit Enhanced Carrier Route USPS Marketing Mail mailing must: * * *

[Add an item (j) to read as follows:]

j. Meet the standards in 245.6.10 for High Density and High Density Plus automation letter mailings prepared using the optional 5-digit tray preparation.

* * * * *

6.3 Basic Price Enhanced Carrier Route Standards

* * * * *

6.3.3 Basic Carrier Route USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.3.3 to read as follows:]

The SCF pallet discount applies to Basic Carrier Route-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3a to 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

6.3.6 Basic Carrier Route USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.3.6 to read as follows:]

The SCF pallet discount applies to Basic Carrier Route-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3d, 705.8.10.3e, and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

6.4 High Density and High Density Plus (Enhanced Carrier Route) Standards—Letters

6.4.1 Additional Eligibility Standards for High Density and High Density Plus Prices

[Revise the first sentence of 6.4.1 to read as follows:]

In addition to the general eligibility standards in 6.1, high density and high density plus letter-size mailpieces must be in a full carrier route tray or in a carrier route bundle of 10 or more pieces placed in a 5-digit carrier routes or 3-digit carrier routes tray unless prepared using the standards in 245.6.10. * * *

* * * * *

6.4.3 High Density and High Density Plus USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.4.3 to read as follows:]

The SCF pallet discount applies to High Density- and High Density Plus-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3a to 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

6.5.3 High Density Carrier Route Bundles on a 5-Digit/Direct Container (High Density-CR Bundles/Container Discount Eligibility)—Flats

[Revise 6.5.3 to read as follows:]

The High Density-CR Bundles/Container discount applies to 125 or more High Density-eligible pieces that are palletized under 705.8.0, 705.10.0, 705.12.0, or 705.13.0 on a 5-digit merged, 5-digit (scheme) merged, 5-digit carrier route, 5-digit carrier routes, or 5-digit scheme carrier route pallet entered at an Origin (None), DNDC/RPDC, DSCF/LPC, or DDU/SDC entry or in a carrier route sack or flat tray under 245.9.7a or 203.5.8 and entered at the DDU/SDC.

6.5.4 High Density Plus Carrier Route Bundles on a 5-Digit/Direct Container (High Density Plus-CR Bundles/Container Discount Eligibility)—Flats

[Revise 6.5.4 to read as follows:]

The High Density Plus-CR Bundles/Container discount applies to 300 or more High Density Plus-eligible pieces that are palletized under 705.8.0, 705.10.0, 705.12.0, or 705.13.0 a 5-digit merged, 5-digit (scheme) merged, 5-digit carrier route, 5-digit carrier routes, or 5-digit scheme carrier route pallet entered at an Origin (None), DNDC/RPDC, DSCF/LPC, or DDU/SDC entry, or in a carrier route sack or tub under 245.9.7a or 203.5.8 and entered at the DDU/SDC.

6.5.5 High Density USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.5.5 to read as follows:]

The SCF pallet discount applies to 125 or more High Density-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3d, 705.8.10.3e, and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

6.5.6 High Density Plus USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.5.6 to read as follows:]

The SCF pallet discount applies to 300 or more High Density Plus-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3d, 705.8.10.3e, and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

6.6 Saturation ECR Standards—Letters

* * * * *

6.6.3 Saturation USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.6.3 to read as follows:]

The SCF pallet discount applies to at least 90 percent or more of the total number of active residential addresses, or 75 percent or more of the total number of active possible delivery addresses, on each carrier route that are palletized under 705.8.10.3a to 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

6.7 Saturation Enhanced Carrier Route Standards—Flats

* * * * *

6.7.3 Saturation—(including EDDM) Carrier Route Bundles on a 5-Digit/Direct Container (Saturation—CR Bundles/Container Discount Eligibility)—Flats

[Revise 6.7.3 to read as follows:]

The Saturation-CR Bundles/Container discount applies to at least 90 percent or more of the total number of active residential addresses or 75 percent or more of the total number of active possible delivery addresses on each carrier route that are palletized under 705.8.0, 705.10.0, 705.12.0, or 705.13.0 on a 5-digit merged, 5-digit (scheme) merged, 5-digit carrier route, 5-digit carrier routes, or 5-digit scheme carrier route pallet entered at an Origin (None), DNDC/RPDC, DSCF/LPC, or DDU/SDC entry, or in a carrier route sack or tub under 245.9.7a or 203.5.8 and entered at the DDU/SDC.

6.7.4 Saturation USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 6.7.4 to read as follows:]

The SCF pallet discount applies to at least 90 percent or more of the total number of active residential addresses, or 75 percent or more of the total number of active possible delivery addresses, on each carrier route that are palletized under 705.8.10.3d, 705.8.10.3e, and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

7.0 Eligibility Standards for Automation USPS Marketing Mail

* * * * *

7.3 Maximum Weight for Automation Letters

* * * * *

7.3.2 5-Digit USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 7.3.2 to read as follows:]

The SCF pallet discount applies to 5-digit-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3a to 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

7.3.3 AADC USPS Marketing Mail Letter-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 7.3.3 to read as follows:]

The SCF pallet discount applies to AADC-eligible USPS Marketing Mail letter-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

7.4 Price Application for Automation Letters

* * * * *

[Revise 7.4.2 to read as follows:]

7.4.2 5-Digit USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

The SCF pallet discount applies to 5-digit-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3d, 705.8.10.3e, and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

7.4.3 3-Digit USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 7.4.3 to read as follows:]

The SCF pallet discount applies to 3-digit-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

7.4.4 ADC USPS Marketing Mail Flat-Shaped Pieces SCF Pallet Discount Eligibility

[Revise 7.4.4 to read as follows:]

The SCF pallet discount applies to ADC-eligible USPS Marketing Mail flat-shaped pieces that are palletized under 705.8.10.3e and 705.8.10.3f and entered at Origin (None), DNDC/RPDC, or DSCF/LPC entry.

* * * * *

[Delete section 243.8.0 in its' entirety and renumber 243.9.0 as 8.0, 8.1, 8.2, and 8.3 respectively]

* * * * *

8.0 Customized MarketMail

8.1 Basic Standards

[Revise the last sentence of renumbered 8.1 to read as follows:]

* * * CMM must be entered at a destination delivery unit (DDU)/sorting & delivery center (SDC).

* * * * *

245 Mail Preparation

Overview

[Delete index listing 12.0 and renumber 13.0 as 12.0]

1.0 General Information for Mail Preparation

* * * * *

1.2 Definition of Mailings

Mailings are defined as: * * *

[Delete items b(5) and b(6) and renumber items b(7) through b(10) as b(5) through b(8) respectively:]

1.3 Terms for Presort Levels

1.3.1 Letters

Terms used for presort levels are defined as follows: * * *

[Revise items (f) through (h) to read as follows:]

f. *Origin/entry 3-digit(s):* the ZIP Code in the delivery address on all pieces begins with one of the 3-digit prefixes processed at the sectional center facility (SCF)/local processing center (LPC) in whose service area the mail is verified/entered. Separation is optional for each such 3-digit area. Mail may be prepared for each 3-digit (or 3-digit scheme) area served by the SCF/LPC/plant where mail is entered (if that is different from the SCF/LPC/plant serving the Post Office where the mail is verified—*e.g.,* a PVDS deposit site). In all cases, only one less-than-full tray may be prepared for each 3-digit (or 3-digit scheme) area.

g. *SCF:* the separation includes pieces for two or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC) (see L005), except that, where required or permitted by standard, mail for a single 3-digit area may be prepared in an SCF separation when no mail for other 3-digit ZIP Code areas is available. For pallets, the SCF sort may include mail for a single 3-digit ZIP Code area.

h. *Origin/optional entry SCF:* the separation includes bundles for one or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC) (see L002, Column C, or L005) in whose service area the mail is verified/entered. Subject to standard, this separation is required regardless of the volume of mail. * * *

[Revise item (j) to read as follows:]

j. *ASF/NDC:* all pieces are addressed for delivery in the service area of the same auxiliary service facility (ASF) or network distribution center (NDC)/regional processing distribution center (RPDC) (see L601, L602, or L605). * * *

1.3.2 Flats

Terms used for presort levels are defined as follows: * * *

[Revise items (j) through (o) to read as follows:]

j. *Origin/entry 3-digit(s):* the ZIP Code in the delivery address on all pieces begins with one of the 3-digit prefixes processed at the sectional center facility (SCF)/local processing center (LPC) in whose service area the mail is verified/entered. Separation is optional for each such 3-digit area.

k. *SCF:* the separation includes pieces for two or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC) (see L005), *except that,* where required or permitted by standard, mail for a single 3-digit area may be prepared in an SCF separation when no mail for other 3-digit ZIP Code areas is available. For pallets, the SCF sort may include mail for a single 3-digit ZIP Code area.

l. *Origin/optional entry SCF:* the separation includes bundles for one or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC) (see L002, Column C, or L005) in whose service area the mail is verified/entered. Subject to standard, this separation is required regardless of the volume of mail.

m. When palletized under 705.8.0 and 705.10.0 through 705.13.0, in an ADC bundle of 10 or more pieces; properly placed on an ADC/RPDC pallet.

n. *ASF/NDC:* all pieces are addressed for delivery in the service area of the same auxiliary service facility (ASF)/network distribution center (NDC)/regional processing distribution center (RPDC) (see L601, L602, or L605).

o. When palletized under 705.8.0 and 705.10.0 through 705.13.0, in an ADC bundle of 10 or more pieces; properly placed on an ADC/RPDC pallet.

* * * * *

1.3.3 Marketing Parcels

Terms used for presort levels are defined as follows:

[Delete item (a) and renumber items (b) through (i) as (a) through (h) respectively:]

[Revise newly renumbered items (d) through (g) to read as follows:]

d. *SCF:* the separation includes pieces for two or more 3-digit areas served by the same sectional center facility (SCF)/regional processing distribution center (RPDC) (see L005), except that, where

required or permitted by standard, mail for a single 3-digit area may be prepared in an SCF separation when no mail for other 3-digit ZIP Code areas is available. For pallets, the SCF sort may include mail for a single 3-digit ZIP Code area.

e. *ASF/NDC:* all pieces are addressed for delivery in the service area of the same auxiliary service facility (ASF)/network distribution center (NDC)/regional processing distribution center (RPDC) (see L601, L602, or L605).

f. *Origin NDC:* this separation includes all pieces addressed for delivery to ZIP Codes within the same NDC/RPDC (see L601) that serves the acceptance office that verifies the mailing. There is no minimum quantity requirement for this separation.

g. *Mixed [NDC, ADC, etc.]:* the pieces are for delivery in the service area of more than one NDC/ADC/RPDC, etc.

* * *

* * * * *

1.4 Preparation Definitions and Instructions

For purposes of preparing mail: * * *

[Revise items (r) and (s) to read as follows:]

r. An *origin 3-digit (or origin 3-digit scheme)* tray for letters and flats contains all mail (regardless of quantity) for a 3-digit ZIP Code (or 3-digit scheme) area processed by the SCF/LPC in whose service area the mail is verified. A separate tray may be prepared for each 3-digit ZIP Code (or 3-digit scheme) area. A tray may be prepared for each 3-digit (or 3-digit scheme) area served by the SCF/LPC/plant where mail is entered (if that is different from the SCF/LPC/plant serving the Post Office where the mail is verified). In all cases, only one less-than-full tray may be prepared for each 3-digit (or 3-digit scheme) area.

s. An *origin AADC* tray contains all mail (regardless of quantity) for an AADC ZIP Code area processed by the AADC or SCF/LPC in whose service area the mail is verified/entered. Only one less-than-full tray may be prepared for each AADC area. * * *

[Revise item (v) to read as follows:]

v. *Entry [facility]* (or *origin [facility]*) refers to the USPS mail processing facility (*e.g.,* ''entry NDC/RPDC'') that serves the Post Office at which the mail is entered by the mailer. If the Post Office where the mail is entered is not the one serving the mailer's location (*e.g.,* for plant-verified drop shipment), the Post Office of entry determines the *entry* facility. *Entry SCF/LPC* (letter and flats) and *Entry SCF/RPDC* (parcels) includes both single-3-digit and multi-3-digit SCFs. *Entry NDC/RPDC* includes subordinate ASFs unless otherwise specified. * * *

[Revise the last sentence of item (y) to read as follows:]

y. * * * For pallets, 2,800 pounds of mail may be destined to an SCF/LPC (letters and flats) or SCF/RPDC (parcels) destination, and these would form the ''logical'' SCF pallet, but the mail is placed on two physical SCF pallets each weighing 1,400 pounds because of the 2,200 pound maximum pallet weight requirement. * * *

* * * * *

2.0 Bundles

* * * * *

2.2 Marketing Parcels

2.2.1 Bundling

[Revise the text of 2.2.1 to read as follows:]

Bundling is not permitted.

[Delete item 2.2.2 in its' entirety]

3.0 Letter Trays, Flat Trays, and Sacks

[Revise the text of 3.0 to read as follows:]

Letter mailings must be prepared in letter trays with sleeves. Flat mailings must be prepared in flat trays or sacks (carrier route, 5-digit scheme carrier route and 5-digit carrier route only) except when permitted to be prepared in letter trays under other applicable standards in this section. Parcel mailings must be prepared in sacks. Containers for Customized MarketMail are specified in 245.13.5. See 203.5.0 and 203.6.0 for tray and sack standards.

* * * * *

5.0 Preparing Nonautomation Letters

* * * * *

5.3 Machinable Preparation

* * * * *

5.3.2 Traying and Labeling

Instead of preparing overflow AADC trays with fewer than 150 pieces, mailers may include these pieces in mixed AADC trays when a tray of 150 or more pieces can be made. Mailers must note these trays on standardized documentation (see 203.3.2). Pieces that are placed in the next tray level must be grouped by destination and placed in the front or back of that tray. Preparation sequence, tray size, and labeling: * * *

[Revise item (c1) to read as follows:]

c. Mixed AADC (required); no minimum; labeling:

1. Line 1: L011, Column B. Use L010, Column B, if entered at an ASF/NDC/RDPC or for mail placed on an ASF/NDC/RPDC, or SCF/LPC pallet under the option in 705.8.10.3. * * *

* * * * *

5.4 Nonmachinable Preparation

* * * * *

5.4.2 Traying and Labeling

When all full trays for a destination have been prepared, mailers may include a group of 10 or more overflow pieces for that destination in a qualified tray at either of the next two tray levels. For example, overflow pieces for a 5-digit destination may be placed into an existing correct 3-digit tray; if a 3-digit tray that includes the 5-digit destination does not exist, the overflow pieces may be placed into the correct existing ADC tray. Bundle the overflow pieces separately with the correct presort bundle label or OEL; the pieces will still qualify for the 5-digit price. Mailers must note these trays on standardized documentation (see 203.3.2). Preparation sequence, tray size, and labeling: * * *

[Revise item (d1) to read as follows:]

d. Mixed ADC (required); no minimum; labeling:

1. Line 1: L011, Column B. Use L010, Column B, if entered at an ASF/NDC/RPDC or for mail placed on an ASF/NDC/RPDC, or SCF/LPC pallet under the option in 705.8.10.3. * * *

* * * * *

6.0 Preparing Enhanced Carrier Route Letters

* * * * *

6.7 Traying and Labeling for Automation-Compatible ECR Letters

[Revise the introductory paragraph of 6.7 to read as follows:]

Mailers must make full carrier route and 5-digit carrier routes trays, when possible, for automation-compatible, delivery-point barcoded ECR letters that weigh up to 3.5 ounces. Except for card-size pieces, pieces must not be bundled. Group pieces together by carrier route in 5-digit and 3-digit carrier routes trays. If pieces for one carrier route do not result in a full tray, mailers must combine pieces from at least two routes to make full 5-digit carrier routes trays, grouping pieces together by carrier route. If pieces for multiple carrier routes do not result in a full 5-digit tray, mailers must combine pieces from at least two 5-digit ZIP Codes to make 3-digit carrier routes trays, grouping pieces together by carrier route. If pieces fill more than one tray but do not fill an additional tray, mailers must place excess pieces in a tray at the next sortation level. (See 6.10 for Optional 5-digit Tray Preparation).

Preparation sequence, tray size, and labeling: * * *

* * * * *

[Add a new section 6.10 to read as follows]

6.10 Optional 5-digit Tray Preparation for High Density and High Density Plus ECR Automation Compatible Letters

6.10.1 Basic Standards

An optional 5-digit tray preparation allows combining multiple mail owners' High Density, High Density Plus, and 5-digit automation compatible letters in a letter tray when meeting the following standards:

a. Each individual mail owner must meet the minimum quantities in 243.6.4.2 for High Density and High Density Plus to claim HD/HD+ prices with a minimum combined 150 pieces of 5-Digit, HD or HD Plus in a 5-Digit tray.

b. The separate requirement of 150 pieces for 5-digit is waived.

c. The minimums must be achieved by a single mail owner defined by their individual MID and/or CRID in the By/For of the eDoc for each carrier route.

d. Walk Sequencing is not required within the letter trays.

e. Bundling and facing slips are not required.

f. Must meet the High Density and High Density Plus marking requirements in 6.2.

g. The Optional Tray Preparation must be used for entire mailing within eDoc.

6.10.2 Traying and Labeling

Mailers must make full 5-digit trays for automation-compatible, delivery-point barcoded letters that weigh up to 3.5 ounces and that meet the standards of 6.10.1. Bundling or facing slips are not required. Preparation sequence, tray size, and labeling:

a. Same Carrier Route to same 5-Digit; full trays only.

1. Line 1: city, state, and 5-digit ZIP Code on mail

2. Line 2: ''STD LTR BC''

b. Multiple Carrier Routes to same 5-Digit; full trays only.

1. Line 1: city, state, and 5-digit ZIP Code on mail

2. STD LTR 5D MXD CR–RTS BC

7.0 Preparing Automation Letters

* * * * *

7.5 Tray Preparation

Instead of preparing overflow trays with fewer than 150 pieces, mailers may include these pieces in an existing qualified tray of at least 150 or more pieces at the next tray level. (For example, if a mailer has 30 overflow 5-digit pieces for ZIP Code 20260, these pieces may be added to an existing qualified AADC tray for the correct destination and the overflow 5-digit pieces will still qualify for the 5-digit price). Mailers must note these trays on standardized documentation (see 203.3.2). Pieces that are placed in the next tray level must be grouped by destination and placed in the front or back of that tray. Mailers may use this option selectively for AADC ZIP Codes. This option does not apply to origin/entry AADC trays. Preparation sequence, tray size, and Line 1 labeling: * * *

[Revise item (c) to read as follows:]

c. Mixed AADC: required (no minimum); group pieces by AADC when overflow pieces from AADC trays are placed in mixed AADC trays. For Line 1 labeling: use L011, Column B. Use L010, Column B if entered at an ASF/NDC/RPDC or for mail placed on an ASF/NDC/RPDC, or SCF/LPC pallet under the option in 705.8.10.3.

8.0 Preparing Nonautomation Flats

* * * * *

8.6 Traying, Sacking, and Labeling

[Revise the introductory paragraph of 8.6 to read as follows:]

Flat trays are allowed for all sortations. Sack preparation is allowed only for the following: Nonpalletized residual 5-digit flats entered at a DDU/SDC along with carrier route flats; Nonpalletized carrier route flats entered at the DSCF/LPC (origin); Nonpalletized 5-digit flats entered at the DSCF/LPC (origin); and nonpalletized 3-digit flats entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. All other sortations require flat tray preparation. Preparation sequence and labeling: * * *

* * * * *

10.4 USPS Marketing Mail Bundle and Flat Tray Preparation

* * * * *

10.4.3 Traying, Sacking, and Labeling

[Revise the introductory paragraph of 10.4.3 to read as follows:]

Sack preparation is allowed only for the following: Nonpalletized residual 5-digit flats entered at a DDU/SDC along with carrier route flats; Nonpalletized carrier route flats entered at the DSCF/LPC (origin); Nonpalletized 5-digit flats entered at the DSCF/LPC (origin); and nonpalletized 3-digit flats entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. All other sortations require flat tray preparation. Preparation sequence and labeling: * * *

11.0 Preparing Presorted Parcels

* * * * *

11.3 Preparing Marketing Parcels (6 Ounces or More) and Machinable Parcels

11.3.1 Sacking

Prepare mailings of Marketing parcels weighing 6 ounces or more and mailings of machinable parcels under 11.3. Prepare 5-digit sacks only for parcels dropshipped to a DNDC/RPDC (or ASF/RPDC when claiming DNDC prices), DSCF/RPDC, or DDU/SDC. Prepare ASF/NDC/RPDC sacks only for parcels dropshipped to a DNDC/RPDC (or ASF when claiming DNDC prices). There is no minimum for parcels in 5-digit/scheme sacks entered at a DDU/SDC. Mailers combining irregular parcels with machinable parcels placed in 5-digit/scheme sacks must prepare those sacks under 11.3.2a. Mailers combining Marketing parcels weighing 6 ounces or more with machinable parcels placed in ASF/NDC/RPDC, or mixed NDC sacks must prepare the sacks under 11.3.2.

11.3.2 Sacking and Labeling

Preparation sequence, sack size, and labeling:

[Revise the introductory text of item (a) to read as follows:]

a. 5-digit/scheme (optional, but required for 5-digit price), see definition in 1.4n.; allowed only for mail deposited at DNDC/RPDC (or ASF when claiming DNDC prices), DSCF/RPDC, or DDU/SDC. Sacks must contain a 10-pound minimum except at DDU/SDC entry which has no minimum; labeling: * * *

[Revise the introductory text of item (b) to read as follows:]

a. ASF (optional), allowed only for mail deposited at an ASF/RPDC to claim DNDC price; 10-pound minimum; labeling: * * *

[Revise the introductory text of item (c) to read as follows:]

c. NDC, allowed only for mail deposited at a DNDC/RPDC to claim the NDC price; 10-pound minimum; labeling: * * *

* * * * *

e. Mixed NDC (required); no minimum; labeling:

[Revise item (e1) to read as follows:]

1. Line 1: ''MXD'' followed by L601, Column B information for NDC/RPDC serving 3-digit ZIP Code prefix of entry Post Office. * * *

11.4 Preparing Marketing Parcels (Less Than 6 Ounces) and Irregular Parcels

11.4.1 Bundling

[Revise the text of 11.4.1 to read as follows:]

Bundling is not permitted.

* * * * *

11.4.2 Sacking

[Revise item 11.4.2 to read as follows:]

Prepare mailings of Marketing parcels weighing less than 6 ounces and mailings of irregular parcels under 11.4. Prepare 5-digit sacks only for parcels dropshipped to a DNDC/RPDC (or ASF/RPDC when claiming DNDC prices), DSCF/RPDC, or DDU/SDC. See 11.4.3 for restrictions on SCF/ASF/NDC/RPDC sacks. Mailers must prepare a sack when the mail for a required presort destination reaches 10 pounds of pieces. There is no minimum for parcels prepared in 5-digit/scheme sacks entered at a DDU/SDC. Mailers combining irregular parcels with machinable parcels and Marketing parcels weighing 6 ounces or more in 5-digit/scheme sacks must prepare those sacks under 11.3.2. Mailers may not prepare sacks containing irregular and machinable parcels to other presort levels. Mailers may combine irregular parcels with Marketing parcels weighing less than 6 ounces in sacks under 11.4.3.

11.4.3 Sacking and Labeling

Preparation sequence, sack size, and labeling:

[Revise the introductory text of item (a) to read as follows:]

a. 5-digit/scheme (optional, but required for 5-digit price), see definition in 1.4n; allowed only for mail deposited at DNDC/RPDC (or ASF/RPDC when claiming DNDC prices), DSCF/RPDC, or DDU/SDC. Sacks must contain a 10-pound minimum except at DDU/SDC entry which has no minimum; labeling: * * *

[Revise the introductory text of item (b) to read as follows:]

b. SCF, allowed only for mail deposited at a DSCF/RPDC or a DNDC/RPDC to claim SCF price; 10-pound minimum; labeling: * * *

[Revise the introductory text of item (c) to read as follows:]

c. ASF (optional), allowed only for mail deposited at an ASF/RPDC to claim DNDC price; 10-pound minimum; labeling: * * *

[Revise the introductory text of item (d) to read as follows:]

d. NDC, allowed only for mail deposited at a DNDC/RPDC to claim the NDC price; 10-pound minimum; labeling: * * *

* * * * *

f. Mixed NDC (required); no minimum; labeling:

[Revise item (f1) to read as follows:]

1. Line 1: ''MXD'' followed by L601, Column B information for NDC/RPDC serving 3-digit ZIP Code prefix of entry Post Office. * * *

* * * * *

[Delete section 12.0 in its' entirety and renumber section 13.0 as 12.0, 12.1, 12.2, 12.3, 12.4,12.5 and 12.6 respectively:]

* * * * *

246 Enter and Deposit

* * * * *

2.0 Destination Entry

* * * * *

2.5 Verification

* * * * *

2.5.3 At NDC

[Revise 2.5.3 to read as follows:]

For a mailing verified at a NDC/RPDC, the Post Office where the mailer's account or license is held must be within the service area of that NDC/RPDC. The Post Office must authorize the NDC/RPDC to act as its agent by sending Form 4410 to the NDC/RPDC.

* * * * *

2.5.5 Volume Standards

Except as permitted for a local mailer under 2.6.13, destination entry mailings are subject to these volume standards:

[Revise item (a) to read as follows:]

a. The pieces for which a destination price is claimed must represent more than 50% of the mail (by weight or pieces, whichever is greater) presented by the same mailer within any 24-hour period. For this standard, *mailer* is the party presenting the mail to the USPS. * * *

* * * * *

2.6 Deposit

* * * * *

2.6.3 Appointments

Appointments must be made for destination entry price mail as follows: * * *

[Revise the first sentence of item (c) to read as follows:]

c. For deposit of DDU/SDC mailings, an appointment must be made by contacting the DDU/SDC or through FAST, available at *fast.usps.com,* at least 24 hours in advance. * * *

* * * * *

2.6.4 Advance Scheduling

[Revise the introductory paragraph of 2.6.4 to read as follows:]

Mailers must schedule appointments for deposit of destination entry price mail under 2.6.3 and the conditions below. When making an appointment, or as soon as available, the mailer must provide the DDU/SDC or FAST with the following information: * * *

[Revise the last sentence of item (b) to read as follows:]

b. * * * For DDU/SDC entries, the mailer also must provide the 5-digit ZIP Code(s) of the mail being deposited.

* * * * *

2.6.5 Adherence to Schedule

[Revise the last sentence of 2.6.5 to read as follows:]

* * * Destination facilities may refuse acceptance or deposit of unscheduled mailings or shipments that arrive more than 2 hours after the scheduled appointment at ASFs, NDCs/RPDCs, or SCFs/LPCs or more than 20 minutes at delivery units.

2.6.6 Redirection by USPS

[Revise the text of 2.6.6 to read as follows:]

A mailer may be directed to transport destination entry price mailings to a facility other than the designated DDU/SDC, SCF/LPC (letter/flats), SCF/RPDC (parcels) or NDC/RPDC due to facility restrictions, building expansions, peak season mail volumes, or emergency constraints.

2.6.7 Redirection at Mailer's Request

[Revise the text of 2.6.6 to read as follows:]

A mailer may ask to transport destination SCF/LPC (letters/flats) or SCF/RPDC (parcels) price mail to a facility other than the designated SCF/LPC/RPDC. In very limited circumstances, this exception may be approved only by the manager, Network Integration Support (see 608.8.0 for address). To qualify for the SCF price in this situation, mail deposited at a facility other than the SCF/LPC/RPDC must destinate for processing within that facility and must not require backhauling to the SCF/LPC/RPDC.

* * * * *

2.6.9 Vehicle Unloading

Unloading of destination entry mailings is subject to these conditions:

[Revise the first sentence of item (a) to read as follows:]

a. Properly prepared containerized loads (*e.g.,* pallets) are unloaded by the USPS at NDCs/RPDCs, ASFs, and SCFs/LPCs. * * *

[Revise the first sentence of item (b) to read as follows:]

b. At NDCs/RPDCs, ASFs, and SCFs/LPCs, the driver must unload bedloaded shipments within 8 hours of arrival.

* * *

[Revise the introductory text of item (c) to read as follows:]

c. At destination delivery units (DDUs)/sorting & delivery centers (SDCs), drivers must unload all mail within 1 hour of arrival. Unloading procedures are as follows: * * *

[Revise the text of item (c4) to reads as follows:]

4. At DDUs/SDCs that cannot handle pallets, drivers must unload any mail from pallets and place it into containers as delivery unit employees specify.

* * *

* * * * *

[Revise the title of 3.0 to read as follows:]

3.0 Destination Network Distribution Center (DNDC)/Regional Processing Distribution Center (RPDC) Entry

3.1 Definition

[Revise the text of 3.1 to read as follows:]

For this standard, *destination network distribution center (DNDC)/regional processing distribution center (RPDC)* includes network distribution centers (NDCs), regional processing distribution centers (RPDCs), and auxiliary service facilities (ASFs) with terms and exceptions as shown and described in labeling lists L601 and L602.

3.2 Eligibility

[Revise the text of 3.2 to read as follows:]

Pieces in a mailing that meets the standards in 2.0 and 3.0 are eligible for DNDC prices when they are deposited at an NDC/RPDC or ASF and meet all of the following conditions:

a. The pieces are addressed for delivery to one of the 3-digit ZIP Codes served by the NDC/ASF/RPDC where deposited (see labeling lists L601 and L602).

b. The pieces are properly placed in a tray, sack, or pallet that is labeled to the NDC/ASF/RPDC where deposited, or labeled to a postal facility within the service area of that NDC/ASF/RPDC.

c. Mail addressed to ZIP Codes served by an ASF/RPDC must be entered at the appropriate ASF per L602, and not entered at an NDC/RPDC.

d. If bundles of flats are reallocated from an ASF pallet to an NDC/RPDC pallet under 705.8.14, mail for the ASF ZIP Codes that is on the NDC/RPDC pallet is not eligible for DNDC prices.

e. Except for machinable parcels addressed to ZIP Codes served by the Buffalo NY ASF, mail addressed to ZIP Codes served by an ASF/RPDC must be entered at the appropriate ASF per L602, and not entered at an NDC/RPDC.

3.3 Eligibility for ADC Mailpieces—Letters

[Revise the text of 3.3 to read as follows:]

All pieces in an ADC sack or tray are eligible for the DNDC discount if the ADC facility ZIP Code (as shown on Line 1 of the corresponding container label) is within the service area of the NDC/RPDC or ASF at which the tray is deposited, as described in labeling lists L601 and L602. All pieces in a palletized ADC bundle are eligible for DNDC prices if the ADC facility destination (determined by the ''Label To'' ZIP Code in Column B of labeling list L004) is within the service area of the NDC/RPDC or ASF at which deposited according to L601 and L602.

3.4 Eligibility for Mixed ADC Bundles, Trays, or Mixed AADC Trays—Letters

[Revise the introductory paragraph of 3.4 to read as follows:]

Mailpieces in a mixed ADC or a mixed AADC tray can qualify for DNDC prices when entered at a NDC/RPDC/ASF or SCF/LPC facility responsible for the processing of those trays (see 705.8.10.3e.), if the following standards are met:

[Revise the text of item 3.4(a) to read as follows:]

a. All pieces in the bundle or tray must destinate within the ASF or NDC/RPDC service area as described in labeling lists L601 and L602. * * *

* * * * *

3.5 Eligibility for ADC Mailpieces—Flats

[Revise text of 3.5 to read as follows:]

All pieces in an ADC sack or tray are eligible for the DNDC discount if the ADC facility ZIP Code (as shown on Line 1 of the corresponding container label) is within the service area of the NDC/RPDC or ASF at which the sack or tray is deposited, as described in labeling lists L601 and L602. All pieces in a palletized ADC bundle are eligible for DNDC prices if the ADC facility destination (determined by the ''Label To'' ZIP Code in Column B of labeling list L004) is within the service area of the NDC/RPDC or ASF at which deposited according to L601 and L602.

3.6 Eligibility for Mixed ADC Bundles, Sacks or Trays—Flats

Mailpieces in a mixed ADC bundle, sack, or tray can qualify for DNDC prices if the following standards are met:

[Revise the text of item 3.5(a) to read as follows:]

a. All pieces in the bundle, sack, or tray must destinate within the ASF/NDC/RPDC service area as described in labeling lists L601 and L602.

* * * * *

3.7 Additional Standards for Machinable Parcels

[Revise the first sentence of 3.7 to read as follows:]

For destination NDC/ASF/RPDC containers, except as provided in labeling lists L601 and L602, sortation of machinable parcels to ASFs is optional but is required for the ASF mail to be eligible for DNDC prices.

* * *

3.8 Vehicles

[Revise the text of 3.8 to read as follows:]

Mailings deposited at a DNDC/RPDC must be presented in vehicles compatible with NDC/RPDC dock and yard operations.

3.9 Form 4410

[Revise the text of 3.9 to read as follows:]

Mailings may be deposited at the DNDC/RPDC only if that facility is authorized (by Form 4410) to act as acceptance agent for the entry Post Office (where the meter license, precanceled stamp permit, or permit imprint authorization is held). Form 4410 is not required for plant-verified drop shipments.

[Revise the title of 4.0 to read as follows:]

4.0 Destination Sectional Center Facility (DSCF)/Local Processing Center (LPC) Entry

4.1 Definition

For this standard, *destination sectional center facility (DSCF)/local processing center (LPC)* refers to the facilities listed in L002, Column C.

4.2 Eligibility

4.2.1 Letters

Pieces in a mailing that meet the standards in 2.0 and 4.0 are eligible for DSCF prices under either 4.2.1a. or 4.2.1b. below:

[Revise text of item 4.2.1(a) to read as follows:]

a. When deposited at a DSCF/LPC or USPS-designated facility, and either:

1. Placed in a tray labeled to a destination within the SCF's/LPC's service area, when all pieces in the tray are addressed for delivery within that SCF's/LPC's service area.

2. Placed in an ADC or AADC tray labeled to a destination within the

SCF's/LPC's service area, regardless of whether all pieces in the tray are addressed for delivery within that SCF's/LPC's service area.

[Revise the introductory text of 4.2.1(b) to read as follows:]

b. When entered and deposited at a DDU/SDC, addressed for delivery within that facility's service area, placed in a tray labeled to that DDU/SDC, and either: * * *

[Revise text of item 4.2.1(b2) to read as follows:]

2. The mailer holds a mailing permit at the DDU/SDC entry office and deposits only one mailing of fewer than 2,500 pieces per day.

4.2.2 Flats

Pieces in a mailing that meets the standards in 2.0 and 4.0 are eligible for the DSCF price, as follows:

[Revise text of items (a) through (c) to read as follows:]

a. When deposited at a DSCF/LPC or USPS-designated facility, addressed for delivery within the DSCF's/LPC's service area, and placed in a flat tray, sack (when applicable), or on a pallet labeled to the DSCF/LPC or to a destination within its service area. This includes flat trays labeled to an ADC facility with the same service area as the DSCF/LPC.

b. When prepared in 5-digit bundles and placed in or on a merged 5-digit scheme or merged 5-digit flat tray, sack (when applicable), or pallet that is deposited at the destination delivery unit/sorting & delivery center as defined in 5.1.

c. When prepared as nonpalletized carrier route, 5-digit scheme carrier route, 5-digit carrier route, 5-digit, or 3-digit flats in sacks entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container.

4.2.3 Parcels

Pieces in a mailing that meets the standards in 2.0 and 4.0 are eligible for the DSCF price, as follows:

[Revise the text of items (a) and (b) to read as follows:]

a. When deposited at a DSCF/RPDC or USPS-designated facility, addressed for delivery within the DSCF's/RPDC's service area, and placed in a sack or on a pallet that is labeled to the DSCF/RPDC or to a destination within its service area.

b. When prepared in 5-digit bundles and placed on a 5-digit pallet or in a 5-digit scheme or 5-digit sack that is deposited at the destination delivery unit/sorting & delivery center as defined in 5.1. * * *

* * * * *

4.3 Vehicles

[Revise the text of 4.3 to read as follows:]

Mailings deposited at a DSCF/LPC (letters/flats) or DSCF/RPDC (parcels) must be presented in vehicles that are compatible with SCF/LPC/RPDC dock and yard operations.

[Revise the title of 5.0 to read as follows:]

5.0 Destination Delivery Unit (DDU)/Sorting & Delivery Center (SDC) Entry

5.1 Definition

[Revise the text of 5.1 to read as follows:]

For this standard, *destination delivery unit (DDU)/sorting & delivery center (SDC)* refers to the facility designated by the USPS district drop shipment coordinator (for automation price USPS Marketing Mail) or the facility (Post Office, branch, station, etc.) where the carrier cases mail for delivery to the addresses on pieces in the mailing (for other USPS Marketing Mail).

5.2 Eligibility

5.2.1 Letters

[Revise the last sentence of the introductory paragraph to read as follows:]

* * * Mailers may deposit letter-size pieces that meet the standards in 2.0 and 5.0 at a DDU/SDC when: * * *

* * * * *

5.2.2 Flats

[Revise the text of 5.2.2 to read as follows:]

Properly prepared Enhanced Carrier Route (ECR) flat-size pieces entered according to standards in 2.0 and 5.0 are eligible for the DDU price when deposited at a DDU/SDC and addressed for delivery within that facility's service area. Mailers must unload mail at DDUs/SDCs according to standards in 2.6.9. Only pieces eligible for and claimed at ECR prices are eligible for the DDU discount. No other prices or discounts are available for pieces receiving the DDU discount. When mailings contain pieces claimed at more than one destination entry price, mailers must separate mail according to standards in 2.5.1. Nonpalletized residual 5-digit flats remaining after a carrier route sortation may be prepared in sacks and deposited at the DDU/SDC along with a carrier route mailing.

5.2.3 Parcels

[Revise text of 5.2.3 to read as follows:]

Pieces in a mailing that meets the standards in 2.0 and 5.0 are eligible for the DDU price when deposited at a DDU/SDC, addressed for delivery within that facility's service area, and prepared as one or more parcels in 5-digit containers.

* * * * *

260 Commercial Mail Bound Printed Matter

263 Prices and Eligibility

1.1 Nonpresorted Bound Printed Matter

* * * * *

[Add item 1.1.3 to read as follows:]

1.1.3 Catalog Incentive Discount

Items qualifying as a catalog under 601.10 are eligible for an incentive discount when appropriately identified on the postage statement and/or the eDoc.

1.2 Presorted and Carrier Route Bound Printed Matter

* * * * *

[Add item 1.2.8 to read as follows:]

1.2.8 Catalog Incentive Discount

Items qualifying as a catalog under 601.10 are eligible for an incentive discount when appropriately identified on the postage statement and/or the eDoc.

* * * * *

2.0 Content Standards for Bound Printed Matter

2.1 Basic Content Standards

Bound Printed Matter (BPM) is a subclass of Package Services and must:

* * *

[Add item (g) to read as follows:]

g. Meet the standards in 601.10 if prepared as a catalog.

* * * * *

4.0 Price Eligibility for Bound Printed Matter

* * * * *

4.2 Destination Entry Price Eligibility

[Revise the text of 4.2 to read as follows:]

BPM destination entry prices apply to BPM mailings prepared as specified in 705.8.0, 705.14.0 and 265, and addressed for delivery within the service area of a destination network distribution center/regional processing distribution center, sectional center facility/local processing center, or delivery unit where they are deposited

by the mailer. For this standard, the following destination facility definitions apply:

a. A destination network distribution center (DNDC)/regional processing distribution center (RPDC) includes all network distribution centers (NDCs)/regional processing distribution centers (RPDCs) and auxiliary service facilities (ASFs) under L601 and L602. DNDC prices are not available for ZIP Code ranges 006–009, 967–969, and 995–999, as indicated in labeling list L601.

b. A destination sectional center facility (DSCF)/local processing center (LPC) includes all facilities in L005.

c. A destination delivery unit (DDU)/sorting & delivery center (SDC) is a facility that delivers to the addresses appearing on the deposited pieces in a destination entry Parcel Select mailing. Refer to the Drop Shipment Product maintained by the National Customer Support Center (NCSC) (see 608.8.1 for address) to determine the location of a 5-digit delivery facility.

* * * * *

265 Mail Preparation

* * * * *

1.0 General Information for Mail Preparation

* * * * *

1.4 Terms for Presort Levels

Terms used for presort levels are defined as follows: * * *

[Revise the text of items (h) through (k) to read as follows:]

h. *SCF:* the separation includes pieces for two or more 3-digit areas served by the same sectional center facility (SCF)/local processing center (LPC) [flats]/regional processing distribution center (RPDC) [parcels] (see L005), *except that,* where required or permitted by standard, mail for a single 3-digit area may be prepared in an SCF separation when no mail for other 3-digit ZIP Code areas is available. For pallets, the SCF sort may include mail for a single 3-digit ZIP Code area.

i. *ADC:* all pieces in the bundle, sack, or tray must destinate within the ASF/NDC/RPDC service area as described in labeling lists L601 and L602.

j. *ASF/NDC:* all pieces are addressed for delivery in the service area of the same auxiliary service facility (ASF)/network distribution center (NDC)/regional processing distribution center (RPDC) (see L601, L602, or L605).

k. *Mixed [NDC, ADC, etc.]:* the pieces are for delivery in the service area of more than one NDC/RPDC/ADC, etc.

1.5 Preparation Definitions and Instructions

For purposes of preparing mail: * * *

[Revise the text of item (h) to read as follows:]

h. *An origin 3-digit (or origin 3-digit scheme)* tray/sack for parcels contains all mail (regardless of quantity) for a 3-digit ZIP Code (or 3-digit scheme) area processed by the SCF/LPC (flats)/RPDC (parcels) in whose service area the mail is verified. If more than one 3-digit (or 3-digit scheme) area is served, as indicated in L005, a separate tray/sack must be prepared for each.

[Revise the text of item (k) to read as follows:]

k. *Entry [facility]* (or *origin [facility]*) refers to the USPS mail processing facility (*e.g.,* ''entry NDC/RPDC'') that serves the Post Office at which the mail is entered by the mailer. If the Post Office where the mail is entered is not the one serving the mailer's location (*e.g.,* for plant-verified drop shipment), the Post Office of entry determines the *entry* facility. *Entry SCF/LPC (flats)/RPDC (parcels)* includes both single-3-digit and multi-3-digit SCFs. *Entry NDC/RPDC* includes subordinate ASFs unless otherwise specified.

[Revise the last sentence of item (n) to read as follows:]

n. * * * For pallets, 2,800 pounds of mail may be destined to an SCF/LPC (flats)/RPDC (parcels) destination, and these would form the ''logical'' SCF pallet, but the mail is placed on two physical SCF pallets each weighing 1,400 pounds because of the 2,200 pound maximum pallet weight requirement.

* * * * *

2.0 Bundles

* * * * *

2.4 Bundle Sizes for Irregular Parcels

[Revise the introductory paragraph of 2.4 to read as follows:]

Mailers must prepare unsacked, nonpalletized bundles of irregular parcels for DDU/SDC entry according to 203.4.10, and as follows: * * *

* * * * *

5.0 Preparing Presorted Flats

* * * * *

5.2 Bundling

5.2.1 Required Bundling

[Revise the fourth sentence of 5.2.1 to read as follows:]

* * * Five-digit bundles placed in 5-digit sacks and unsacked 5-digit bundles prepared for DDU/SDC entry may weigh a maximum of 40 pounds. * * *

* * * * *

8.0 Preparing Presorted Parcels

* * * * *

8.2 Preparing Irregular Parcels Weighing Less Than 10 Pounds

* * * * *

8.2.4 Sacking and Labeling

Preparation sequence and labeling: * * *

e. Mixed ADC (required); labeling:

[Revise item (e1) to read as follows:]

1. Line 1: L009, Column B. If placed on an ASF/NDC/RPDC pallet under option in 705.8.10.3, use L010. * * *

* * * * *

8.3 Preparing Irregular Parcels Weighing 10 Pounds or More

* * * * *

8.3.3 Sacking and Labeling

Preparation sequence and labeling: * * *

e. Mixed ADC (required); labeling:

[Revise item (e1) to read as follows:]

1. Line 1: L009, Column B. If placed on an ASF/NDC/RPDC pallet under option in 705.8.10.3, use L010. * * *

* * * * *

8.4 Preparing Machinable Parcels Not Claiming DNDC Prices

* * * * *

8.4.2 Sacking and Labeling

Preparation sequence and labeling: * * *

c. Mixed NDC (required); labeling:

[Revise item (c1) to read as follows:]

1. Line 1: ''MXD'' followed by the L601, Column B, information for the NDC/RPDC serving the 3-digit ZIP Code prefix of entry Post Office. * * *

8.5 Preparing Machinable Parcels Claiming DNDC Prices

* * * * *

8.5.2 Sacking and Labeling

Preparation sequence and labeling: * * *

d. Mixed NDC (required); labeling:

[Revise item (d1) to read as follows:]

1. Line 1: ''MXD'' followed by the L601, Column B information for the NDC/RPDC serving the 3-digit ZIP Code prefix of entry Post Office. * * *

9.0 Preparing Carrier Route Parcels

9.1 Basic Standards

9.1.1 General Standards for Carrier Route Preparation

All mailings of Carrier Route Bound Printed Matter (BPM) are subject to the standards in 9.2 through 9.4 and to these general standards: * * *

[Revise the last sentence of item (b) to read as follows:]

b. * * * Irregular parcels also are pieces that meet the size and weight standards for a machinable parcel but are not individually boxed or packaged to withstand processing on NDC/RPDC parcel sorters under 601.7.0.

* * * * *

266 Enter and Deposit

* * * * *

2.0 Presenting a Mailing

* * * * *

[Revise the title of 2.3 to read as follows:]

2.3 NDC/RPDC Acceptance

[Revise the text of 2.3 to read as follows:]

A mailer may present Bound Printed Matter at a NDC/RPDC for acceptance if:

a. Permit imprint postage is paid through an advance deposit account at the NDC/RPDC parent Post Office or another Post Office in the NDC/RPDC service area, unless otherwise permitted by standard.

b. The NDC/RPDC is authorized by Form 4410 to act as acceptance agent for the entry Post Office.

* * * * *

3.0 Destination Entry

3.1 General

[Revise the first sentence of 3.1 to read as follows:]

Destination entry prices apply to Presorted and carrier route Bound Printed Matter (BPM) that is deposited at a destination network distribution center (DNDC)/regional processing distribution center (RPDC), destination sectional center facility (DSCF)/local processing center (LPC), or destination delivery unit (DDU)/sorting & delivery center (SDC) as specified below. * * *

* * * * *

3.3 Postage Payment and Mailing Fees

Postage payment for Bound Printed Matter destination price mailings is subject to the same standards that apply generally to Bound Printed Matter and to the following:

[Revise the second sentence of item (a) to read as follows:]

a. * * * Except for plant-verified drop shipments (see 705.17.0) and eVS shipments (see 705.2.9); mailers must have a permit imprint authorization at the parent Post Office for mailings deposited for entry at a DNDC/RPDC, ASF/RPDC, DSCF/LPC (flats)/RPDC (parcels), or DDU/SDC. * * *

* * * * *

3.7 Verification

3.7.1 Mail Separation and Presentation

[Revise the second sentence of the introductory paragraph of 3.7.1 to read as follows:]

* * * Mailers may deposit only PVDS and eVS mailings at a destination delivery unit/sorting & delivery center not co-located with a Post Office or other Postal Service facility with a business mail entry unit. * * *

* * * * *

[Revise the title of 3.7.3 to read as follows:]

3.7.3 At NDC/RPDC

[Revise the text of 3.7.3 to read as follows:]

For a mailing to be verified at a NDC/RPDC, the Post Office where the mailer's account or license is held must be within the service area of that NDC/RPDC. The Post Office must authorize the NDC/RPDC to act as its agent by sending Form 4410 to the NDC/RPDC.

* * * * *

3.8 Deposit

3.8.1 Time and Location of Deposit

[Revise the last sentence of 3.8.1 to read as follows:]

* * * Mailings must be presented in vehicles that are compatible with dock, yard, and DDU/SDC operations, as applicable.

* * * * *

3.8.3 Appointments

Appointments must be made for destination entry price mail as follows:

[Revise the first sentence of item (a) to read as follows:]

a. Except as provided under 3.8.3b, or for a local mailer and mailings of perishable commodities under 3.8.12, appointments for deposit of destination entry price mail at NDCs/RPDCs, ASFs, and SCFs/LPCs must be scheduled through the appropriate drop-shipment appointment control center at least one business day in advance. * * *

[Revise the first sentence of item (c) to read as follows:]

c. For deposit of DDU/SDC mailings, an appointment must be made by contacting the DDU/SDC or through FAST, available at *fast.usps.com,* at least 24 hours in advance. * * *

* * * * *

3.8.4 Advance Scheduling

Mailers must schedule appointments for deposit of destination entry price mail under 3.8.3 and the conditions below. When making an appointment, or as soon as available, the mailer must provide the following information:

* * *

[Revise the last sentence of item (b) to read as follows:]

b. * * * For DDU/SDC entries, the mailer also must provide the 5-digit ZIP Code(s) of the mail being deposited.

* * * * *

3.8.5 Adherence to Schedule

[Revise the last sentence of 3.8.5 to read as follows:]

* * * Destination facilities may refuse acceptance or deposit of unscheduled mailings or shipments that arrive more than 2 hours after the scheduled appointment at ASFs, NDCs/RDPCs, or SCFs/LPCs or more than 20 minutes at delivery units.

3.8.6 Redirection by USPS

[Revise the text of 3.8.6 to read as follows:]

A mailer may be directed to transport destination entry price mailings to a facility other than the designated DDU/SDC, SCF/LPC, or NDC/RPDC due to facility restrictions, building expansions, peak season mail volumes, or emergency constraints.

3.8.7 Redirection at Mailer's Request

[Revise the text of 3.8.7 to read as follows:]

A mailer may ask to transport destination SCF price mail to a facility other than the designated SCF/LPC (flats)/RPDC (parcels). In very limited circumstances, this exception may be approved only by the manager, Network Integration Support (see 608.8.0 for address). To qualify for the SCF price in this situation, mail deposited at a facility other than the SCF/LPC/RPDC must destinate for processing within that facility and must not require backhauling to the SCF/LPC/RPDC.

* * * * *

4.0 Destination Network Distribution Center (DNDC) Entry

4.1 Eligibility

[Revise the introductory paragraph of 4.1 to read as follows:]

Pieces in a mailing meeting the standards in 3.0 and 4.0 that are deposited at a NDC/ASF/RPDC are eligible for the DNDC price when they meet all of the following conditions:

* * *

[Revise items (b) through (e) to read as follows:]

b. The pieces are addressed for delivery to one of the 3-digit ZIP Codes served by the NDC/ASF/RPDC where deposited that are listed, and according to the terms described, in labeling lists L601 and L602.

c. The pieces are placed in a sack or on a pallet labeled to the NDC/ASF/RPDC where deposited, or labeled to a postal facility within that NDCs/ASFs/RPDCs service area, as described in L601 and L602.

d. Except for machinable parcels addressed to ZIP Codes served by the Buffalo NY ASF, mail addressed to ZIP Codes served by an ASF/RPDC must be entered at the appropriate ASF per L602, and not entered at an NDC/RPDC.

e. Are entered at designated SCFs/RPDCs under 4.3.

* * * * *

[Revise the title of 4.3 to read as follows:]

4.3 Acceptance at Designated SCF—Mailer Benefit

[Revise the introductory paragraph of 4.3 to read as follows:]

Mailers may deposit machinable parcels otherwise eligible for the DNDC prices at an SCF/RPDC designated by the USPS for destination ZIP Codes listed in labeling list L607. The following standards apply: * * *

[Revise item (e) to read as follows:]

e. All DNDC price parcels must be for delivery within the service area of the SCF/RPDC where they are deposited by the mailer.

* * * * *

4.4 Presorted Machinable Parcels

[Revise the introductory paragraph of 4.4 to read as follows:]

Presorted machinable parcels in sacks or on pallets at all sort levels may claim DNDC prices. Machinable parcels sacked under 265.8.0, or palletized under 705.8.0 may be sorted to destination NDCs/RPDCs under L601 or to destination NDCs/ASFs/RPDCs under L601 and L602. Except as provided in L602, sortation of machinable parcels to ASFs/RPDCs is optional but is required for the ASF mail to be eligible for DNDC prices. Mailers may opt to sort some or all machinable parcels for ASF/RPDC service area ZIP Codes to ASFs/RPDCs only when the mail will be deposited at the respective ASFs/RPDCs where the DNDC prices are claimed, under applicable volume standards, using L602. Mailers also may opt to sort machinable parcels only to destination NDCs/RPDCs under L601. When machinable parcels are sorted under L601, mail for 3-digit ZIP Codes served by an ASF/RPDC is not eligible for DNDC prices, nor are 3-digit ZIP Codes that appear in footnote 2 in L601. Machinable parcels prepared in mixed NDC sacks or on mixed NDC pallets that are sorted to the origin NDC/RPDC under 265.8.0 or 705.8.0, are eligible for the DNDC prices if both of the following conditions are met:

[Revise item 4.4 (a) to read as follows:]

a. The mixed NDC sack or pallet is entered at the origin NDC/RPDC facility to which it is labeled.

* * * * *

4.5 Presorted Irregular Parcels

[Revise the second sentence of 4.5 to read as follows:]

* * * All pieces in an ADC/RPDC sack or in a palletized ADC/RPDC bundle are eligible for the DNDC price if the ADC/RPDC facility ZIP Code (as shown in Line 1 of the corresponding sack label or the ADC/RPDC facility that is the destination of the palletized ADC/RPDC bundle as would be shown on an ADC/RPDC sack label for that facility using L004, Column B) is within the service area of the NDC/RPDC at which the sack is deposited. * * *

* * * * *

[Revise the title of 5.0 to read as follows:]

5.0 Destination Sectional Center Facility (DSCF)/Local Processing Center (LPC) Entry

5.1 Eligibility

Bound Printed Matter pieces in a mailing meeting the standards in 3.0 are eligible for the DSCF price when they meet all of the following additional conditions: * * *

[Revise items (b) and (c) to read as follows:]

b. Are deposited at a DSCF/LPC (flats)/RPDC (parcels) listed in L005 or a USPS-designated facility and are addressed for delivery within the DSCF's/LPC's/RPDC's service area.

c. Are placed in a sack or on a pallet that is labeled to the DSCF/LPC/RPDC or labeled to a destination within its service area. This includes sacks labeled to an ADC/RPDC facility with the exact same service area as the DSCF/LPC/RPDC.

* * * * *

[Revise the title of 6.0 to read as follows:]

6.0 Destination Delivery Unit (DDU)/Sorting & Delivery Center (SDC) Entry

6.1 Eligibility

Pieces in a mailing meeting the standards in 3.0, and 6.0 are eligible for the DDU price when they meet all of the following conditions: * * *

c. Are deposited:

[Revise items (c1) and (c2) to read as follows:]

1. For Carrier Route flats, at the DDU/SDC where the carrier cases the mail, as shown in the Drop Shipment Product.

2. For Presorted flats, the Drop Shipment Product must be used to determine the correct destination entry facility for the 5-digit sorted flats entered at Presorted prices. If the Drop Shipment Product lists multiple facilities for a single 5-digit ZIP Code, then the mailer must inquire about the correct drop site when contacting the DDU/SDC to schedule an appointment.

[Revise the sixth sentence of item (d) to read as follows:]

d. * * * If a mailer transports mail to a DDU/SDC facility that cannot handle pallets, the driver must unload the pallets into containers as specified by the delivery unit.

* * * * *

270 Commercial Mail Media Mail and Library Mail

273 Prices and Eligibility

* * * * *

7.0 Price Eligibility for Media Mail and Library Mail

* * * * *

7.3.2 Parcels

The price categories for parcels are as follows: * * *

[Revise the last sentence of item (b) to read as follows:]

b. * * * Nonmachinable parcels may qualify for the basic price if prepared to preserve sortation by NDC/RDPC as prescribed by the postmaster of the mailing office.

* * * * *

275 Mail Preparation

* * * * *

1.0 General Information for Mail Preparation

* * * * *

1.3 Terms for Presort Levels

Terms used for presort levels are defined as follows: * * *

[Revise items (f) through (h) to read as follows:]

f. ADC: all pieces are addressed for delivery in the service area of the same area distribution center (ADC)/regional processing distribution center (RPDC) (see L004).

g. ASF/NDC for parcels: all pieces are addressed for delivery in the service area of the same auxiliary service facility (ASF)/network distribution center (NDC)/regional processing distribution center (RPDC) (see L601, L602, or L605).

h. Mixed [NDC, ADC, etc.]: the pieces are for delivery in the service area of more than one NDC/ADC/RPDC, etc.

* * * * *

6.0 Preparing Media Mail and Library Mail Parcels

* * * * *

6.2 Preparing Machinable Parcels

* * * * *

6.2.2 Sacking and Labeling

Preparation sequence and labeling:
* * *

c. Mixed NDC: required (no minimum).

[Revise item (c1) to read as follows:]

1. Line 1: ''MXD'' followed by the L601, Column B information for the NDC/RPDC serving the 3-digit ZIP Code of entry Post Office. * * *

* * * * *

6.3 Preparing Irregular Parcels

* * * * *

6.3.4 Sacking and Labeling

Preparation sequence and labeling:
* * *

d. Mixed ADC: required (no minimum).

[Revise item (d1) to read as follows:]

1. Line 1: ''MXD'' followed by city, state, and ZIP Code of ADC/RPDC serving 3-digit ZIP Code prefix of entry Post Office, as shown in L004. If placed on an ASF/NDC/RPDC pallet under option in 705.8.10.5, use L010. * * *

* * * * *

505 Return Services

1.0 Business Reply Mail (BRM)

1.1 BRM Postage and Fees

* * * * *

1.1.3 Basic Qualified BRM (QBRM)

[Add a sentence at the end of 1.1.3 to read as follows:]

* * * Basic QBRM permits that meet the requirements under 1.6.3 are eligible for waived account maintenance fees and a reduced per-piece fee.

1.1.4 High-Volume Qualified BRM

[Add a sentence at the end of 1.1.4 to read as follows:]

* * * High-Volume QBRM permits meeting the requirements under 1.6.3 are eligible for waived annual account maintenance and quarterly fees, and a reduced per-piece fee.

* * * * *

1.6 Additional Standards for Qualified Business Reply Mail (QBRM)

* * * * *

[Add new section 1.6.3 to read as follows:]

1.6.3 Intelligent Mail Barcode Accounting (IMbA)

Intelligent Mail Barcode Accounting (IMbA) is an automated solution for the counting, rating, invoicing and billing processes of QBRM mailpieces. Participation in IMbA requires that QBRM permits be linked to an Enterprise Payment Account (EPA) for automated invoicing. QBRM permits that have completed the onboarding process and consistently meet the requirements of IMbA are eligible for subsequent annual account maintenance and quarterly fee waivers, if applicable. Once enrolled in IMbA, QBRM permits receive a reduced QBRM IMbA per-piece fee. For more information, see PostalPro at *https://postalpro.usps.com/*.

* * * * *

600 Basic Standards for All Mailing Services

601 Mailability

Overview

[Add a heading titled ''10.0 Catalogs''.]

* * * * *

[Add a section 601.10 to read as follows:]

10.0 Catalogs

A catalog is a bound *(stapled, stitched, glued or fastened together along one edge)* mailpiece with at least 12 pages, providing an organized listing of products or services offered for sale. A catalog mailpiece may be letter-shaped, flat-shaped or parcel-shaped, and is mailed at USPS Marketing Mail or Bound Printed Matter rates.

The product listing must include images, photographs or illustrations of the products or services, descriptive details, fulfillment information and prices or contain an alternate method for the reader to determine prices. Catalogs must contain enough information to allow an order to be placed, *e.g.,* an order form, a phone number, a web address, or the means to access a web address. Catalogs will also enable fulfillment options for the products or services offered for sale.

602 Addressing

* * * * *

3.0 Use of Alternative Addressing

* * * * *

3.2 Simplified Address

3.2.1 Conditions for General Use

The following conditions must be met when using a simplified address on commercial mailpieces: * * *

[Revise the introductory text of item (b) to read as follows:]

b. USPS Marketing Mail, Periodicals, and Bound Printed Matter flat-size mailpieces (including USPS Marketing Mail pieces allowed as flats under 3.2.1c), and Periodicals irregular parcels for distribution to a city route or to Post Office boxes in offices with city carrier service may bear a simplified address, but only when complete distribution is made under the following conditions:

* * *

* * * * *

4.0 Detached Address Labels (DALs) and Detached Marketing Labels (DMLs)

* * * * *

4.2 Eligible Mail

* * * * *

[Delete item 4.2.2 in its' entirety and renumber 4.2.3 as 4.2.2:]

[Newly renumbered 4.2.2]

4.2.2 Bound Printed Matter

Unaddressed pieces of Bound Printed Matter may be mailed with DALs or DMLs when:

[Revise the second sentence of item (a) to read as follows:]

a. * * * The destination delivery unit (DDU)/sorting & delivery center (SDC) is determined using the Drop Shipment Product under the provisions for the DDU price in 266.3.0 through 266.6.0.

* * *

* * * * *

4.4 Mail Preparation

* * * * *

4.4.2 Basic Standards for DALs and DMLs

[Revise the text of 4.4.2 to read as follows:]

The DALs or DMLs must be presorted, counted, and prepared by 5-digit ZIP Code delivery area. Only DALs or DMLs for the same 5-digit area may be placed in the same carton, sack, or tray. DAL or DML mailings claimed at carrier route basic or walk-sequence prices must be further prepared under the corresponding standards. Mailers must prepare DALs or DMLs as bundles in sacks or in cartons, unless prepared in trays under 4.4.6 when mailed with saturation flats. Different size cartons may be used in the same mailing, but each must be filled with dunnage as necessary to ensure that the DALs or DMLs retain their orientation and presort integrity while in transit. Each carton of DALs or DMLs must bear a label showing the information in 4.4.5 unless a mailing identification number is used (see 4.4.1). Multiple containers of DALs or DMLs must be numbered sequentially (''1 of __,'' ''2 of __,'' etc.).

4.4.3 Basic Standards for Items Distributed With DALs and DMLs

[Revise the text of 4.4.3 to read as follows:]

Except for bundles of saturation flats placed directly on pallets under 4.4.7, the items to be distributed with DALs or DMLs must be placed in cartons or prepared in bundles placed in flat trays/sacks, subject to the standards for the price claimed. A label bearing the content description information in 4.4.5 must be affixed to each carton, trayed/sacked bundle, or pallet unless a mailing identification number is used (see 4.4.1). Cartons of items (including those on pallets) may be of different sizes but must be filled with dunnage as necessary to ensure the integrity of the items while in transit. The gross weight of each carton or flat tray/sack must not be more than 40 pounds.

* * * * *

4.4.6 Optional Tray and Bundle Preparation

[Revise the text of 4.4.6 to read as follows:]

Mailers may prepare DALs or DMLs in letter trays according to 245.9.0 when DALs or DMLs are used in mailings of saturation flats. Bundles of saturation flats to be distributed with DALs or DMLs may be prepared on 5-digit pallets under 4.4.7. Do not use pallets when the Drop Shipment Product indicates the delivery unit that serves the 5-digit pallet destination cannot handle pallets. For such delivery units, mail with DALs or DMLs must be prepared in cartons, flat trays, or sacks. The tray(s) of corresponding DALs or DMLs must be placed on top of the accompanying pallet of flats, and the pallet contents must be secured with stretchwrap to avoid separation in transportation and processing. All containers must be labeled according to 4.4.5.

4.4.7 Optional Container Preparation

[Revise the text of 4.4.7 to read as follows:]

Bundles of flats and cartons, flat trays, or sacks of items may be placed on pallets meeting the standards in 705.8.0. Cartons or trays of DALs or DMLs must be placed on pallets with the corresponding items under 4.4 and 705.8.0. The USPS plant manager at whose facility a DAL or DMLS mailing is deposited may authorize other containers for the portion of the mailing to be delivered in that plant's service area.

* * * * *

4.6 Postage

* * * * *

4.6.2 Postage Computation and Payment

Postage is computed based on the combined weight of the item and the accompanying DAL or DML. If the number of DALs/DMLs and items mailed is not identical, the number of pieces used to determine postage is the greater of the two. No postage refund is allowed in these situations. In addition, these methods of postage payment apply: * * *

[Revise the text of item (c) to read as follows:]

c. A surcharge applies to each DAL or DML used in a USPS Marketing Mail flats mailing.

* * * * *

7.0 Carrier Route Accuracy Standard

7.1 Basic Standards

[Revise the introductory text of 7.1 to read as follows:]

The carrier route accuracy standard is a means of ensuring that the carrier route code correctly matches the delivery address information. For the purposes of this standard, address means a specific address associated with a specific carrier route code. Addresses used on pieces claiming any Periodicals carrier route prices, any USPS Marketing Mail Enhanced Carrier Route prices, or any Bound Printed Matter carrier route prices are subject to the carrier route accuracy standard and must meet the following requirements:

* * *

* * * * *

700 Special Standards

703 Nonprofit USPS Marketing Mail and Other Unique Eligibility

* * * * *

9.0 Mixed Classes

* * * * *

9.9 Postage Payment for Enclosure in Periodicals Publication

* * * * *

9.9.8 Computing Permit Imprint Postage

[Revise the third sentence of 9.9.8 to read as follows:]

* * * For example, a USPS Marketing Mail enclosure is eligible for the SCF entry discount if the publication is deposited at the destinating SCF/LPC.

* * *

* * * * *

11.0 Commercial Plus One Mailpieces

11.1 Definition

The commercial mail Plus One product is a bundled offering, including a host mailpiece and a Plus One card. Both the host mailpiece and the Plus One card must meet the applicable basic standards of a USPS Marketing Mail saturation letter as specified in 245.6.0, be entered at a destination sectional center facility, and meet automation standards with a correct mailing address and Intelligent Mail barcode. The Plus One mailpiece (card) must meet the following additional standards: * * *

[Revise item 11.1(d) to read as follows:]

d. Must not exceed 6 inches long by 11 inches high.

* * * * *

705 Advanced Preparation and Special Postage Payment Systems

* * * * *

5.0 First-Class Mail or USPS Marketing Mail Mailings With Different Payment Methods

* * * * *

5.2 Postage

* * * * *

5.2.6 Single-Piece Price Mail

[Revise the text of 5.2.6 to read as follows:]

With USPS approval, trays of single-piece price mail may be placed on the origin SCF/LPC pallet (First-Class Mail), or the mixed NDC pallet (USPS Marketing Mail), after USPS verification is completed.

* * * * *

8.0 Preparing Pallets

* * * * *

8.10.3 USPS Marketing Mail or Parcel Select Lightweight—Bundles, Sacks, or Trays * * *

* * * * *

Mailers must prepare pallets under 8.0 in the sequence listed below and complete each required level before preparing the next optional or required level. For USPS Marketing Mail High Density and High Density Plus flats price eligibility, only 5-digit pallets under 8.10.3a through 8.10.3c are allowed, and the pallets must be entered under None, DNDC, DSCF, or DDU standards. (Use ''HD/HD+ DIRECT'' for one route and ''HD/HD+ CR–RTS'' for multiple routes on the line 2 contents description.) Unless indicated as optional, all sort levels are required. For parcels, use this preparation only for irregular parcels in sacks. Palletize unbundled or unsacked irregular parcels under 8.10.8. Pallets must be labeled according to the Line 1 and Line 2 information listed below and under 8.6. Mailers also may palletize bundles of

USPS Marketing Mail flats under 10.0, 12.0, or 13.0. Preparation sequence and labeling: * * *

[Revise item c(2) to read as follows:]

2. Line 2: For flats only, ''STD FLTS'' or ''STD MKTG,'' as applicable; followed by ''HD/HD+'' for High Density and High Density Plus flats pricing eligibility; followed by ''CARRIER ROUTES'' (or ''CR–RTS''). For letters, ''STD LTRS''; followed by ''CARRIER ROUTES'' (or ''CR–RTS''); followed by ''BC'' if the pallet contains barcoded letters; followed by ''MACH'' if the pallet contains machinable letters; followed by ''MAN'' if the pallet contains nonmachinable letters. * * *

[Revise introductory text of item (d) to read as follows:]

d. *3-digit, optional,* option not available for parcels or for bundles for 3-digit ZIP Code prefixes marked ''N'' in L002. Pallet may contain mail for the same 3-digit ZIP Code or the same 3-digit scheme under L008 (for automation-compatible flats only under 201.3.0. Three-digit scheme bundles are assigned to pallets according to the ''label to'' 3-digit ZIP Code in L008. Labeling: * * *

[Delete the last sentence of item e(2) beginning with ''For Marketing . . .'':]

* * * * *

9.0 Combining Bundles of Automation and Nonautomation Flats in Flat Trays and Sacks

9.1 First-Class Mail

* * * * *

9.1.4 Tray Preparation and Labeling

Presorted price and automation price bundles prepared under 9.1.2 or 9.1.3 must be presorted together into trays (cotrayed) in the sequence listed below. Trays must be labeled using the following information for Lines 1 and 2 and 235.4.0 for other sack label criteria. * * *

[Revise the introductory text of item (c) to read as follows:]

c. *Origin/entry 3-digit,* required for each 3-digit ZIP Code served by the SCF/LPC of the origin (verification) office, optional for each 3-digit ZIP Code served by the SCF/LPC of an entry office other than the origin office, no minimum; labeling: * * *

[Revise the introductory text of item (d) to read as follows:]

d. ADC, required, full trays only (no overflow trays); use L004 to determine ZIP Codes served by each ADC/RPDC; labeling: * * *

9.2 Periodicals

* * * * *

9.2. Bundles With Fewer Than Six Pieces

[Revise the text of 9.2.3 to read as follows:]

5-digit and 3-digit bundles prepared under 207.22.0 and 207.25.0 may contain fewer than six pieces when the publisher determines that such preparation improves service. These low-volume bundles may be placed in 5-digit, 3-digit, and SCF flat trays that contain at least 24 pieces, or on 5-digit, 3-digit, or SCF/LPC pallets. Mailers of pieces in low-volume bundles must claim the applicable mixed ADC price (Outside-County) or basic price (In-County). 207.22.0 and 207.25.0 may contain fewer than six pieces when the publisher determines that such preparation improves service. These low-volume bundles may be placed in 5-digit, 3-digit, and SCF sacks/flat trays that contain at least 24 pieces or on 5-digit, 3-digit, or SCF/LPC pallets. Pieces in low-volume bundles must claim the applicable mixed ADC price (Outside-County) or basic price (In-County).

9.2.4 Optional Sack Preparation and Labeling

[Revise the introductory paragraph of 9.2.4 to read as follows:]

Optional sack preparation and labeling are allowed for nonpalletized residual 5-digit flats entered at the DDU/SDC along with carrier route flats, nonpalletized 5-digit flats entered at the DSCF/LPC (origin) and nonpalletized 3-digit/SCF flats entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. Machinable barcoded price and machinable nonbarcoded price bundles must be presorted together into sacks (cosacked) in the sequence listed below. Sacks must be labeled using the following information for Lines 1 and 2 and 207.21.0 for other sack-label criteria. If, due to the physical size of the mailpieces, the machinable barcoded price pieces are considered flat-size under 201.6.0 and the machinable nonbarcoded price pieces are considered irregular parcels under 201.7.6, the processing category shown on the sack label must show ''FLTS.'' Preparation sequence and labeling: * * *

9.2.5 Flay Tray Preparation—Flat-Size Machinable Pieces

[Revise the introductory paragraph of 9.2.5 to read as follows:]

See 207.20.0 for use of flat trays. For machinable pieces meeting the criteria in 201.6.0, mailers must bundle or group all pieces as specified in 207.25.0 and 207.22.0 for each 5-digit scheme, 5-digit, 3-digit scheme, 3-digit, SCF/LPC, and ADC destination. Bundling in flat trays is optional, and any bundles must be trayed and labeled separately from loose flats prepared in flat trays. The trays are subject to a container charge, and any bundles are subject to a bundle charge. Tray preparation, sequence, and labeling: * * *

* * * * *

9.3 USPS Marketing Mail

* * * * *

9.3.5 Flat Tray/Sack Preparation and Labeling

[Revise the introductory paragraph of 9.3.5 to read as follows:]

Presorted price and automation price bundles prepared under 9.3.2 and 9.3.3 must be presorted together into flat trays (cotrayed) or sacks (when applicable) in the sequence listed below. Flat trays/sacks must be labeled using the following information for Lines 1 and 2, and 245.4.0 for other flat-tray label criteria. Sacks are only allowed for nonpalletized residual 5-digit flats entered at the DDU/SDC along with carrier route flats, nonpalletized 5-digit flats entered at the DSCF/LPC (origin), and nonpalletized 3-digit/SCF flats entered at the DSCF/LPC (origin). DSCF/LPC (origin) 5-digit and 3-digit/SCF sacks must be entered at the BMEU and emptied into a designated container. * * *

[Revise the introductory text of item (c) to read as follows:]

c. *Origin/entry 3-digit,* required for each 3-digit ZIP Code served by the SCF/LPC of the origin (verification) office, optional for each 3-digit ZIP Code served by the SCF/LPC of an entry office other than the origin office, no minimum; labeling: * * *

[Revise the introductory text of item (d) to read as follows:]

d. ADC, required, full tray/125-piece/15-pound minimum; use L004 to determine ZIP Codes served by each ADC/RPDC; labeling: * * *

* * * * *

10.0 Merging Bundles of Flats Using the City State Product

10.1 Periodicals

* * * * *

10.1.3 Bundles With Fewer Than Six Pieces

Carrier route, 5-digit scheme, 5-digit, 3-digit scheme, and 3-digit bundles may contain fewer than six pieces when the publisher determines that such preparation improves service. Pieces in these low-volume bundles must be

claimed at the applicable mixed ADC price (Outside-County) or basic price (In-County). Low-volume bundles are permitted only when they are sacked (as applicable), trayed, or prepared on pallets as follows:

a. Place low-volume carrier route, 5-digit, 3-digit scheme, and 3-digit bundles in only the following containers: * * *

[Revise items (a3) and (a4) to read as follows:]

3. Origin/entry SCF/LPC flat trays.

4. On merged 5-digit scheme, 5-digit scheme carrier routes, 5-digit scheme, merged 5-digit, 5-digit carrier routes, 5-digit, 3-digit, or SCF/LPC pallets, as appropriate.

[Revise item (b) to read as follows:]

b. Place low-volume 5-digit scheme bundles in only 5-digit scheme, 3-digit, and SCF flat trays that contain at least 24 pieces, or in origin/entry SCF/LPC flat trays, or on 3-digit or SCF/LPC pallets, as appropriate.

* * * * *

10.1.5 Pallet Preparation and Labeling

* * * Mailers must label pallets according to the Line 1 and Line 2 information listed below and under 8.6.

* * * * *

[Revise item (g) to read as follows:]

g. *SCF/LPC through mixed ADC,* use 8.10.2h through 8.10.2k, as applicable, to prepare and label SCF/LPC, ADC/RPDC, Origin Mixed ADC (OMX) and mixed ADC pallet levels.

* * * * *

10.2 USPS Marketing Mail

* * * * *

10.2.5 Pallet Preparation and Labeling

* * * Mailers must label pallets according to the Line 1 and Line 2 information listed below and under 8.6.

* * * * *

[Revise the introductory text of item (g) to read as follows:]

g. *SCF/LPC,* required, may contain carrier route price, automation price, and Presorted price bundles. Labeling: * * *

[Revise the introductory text of item (h) to read as follows:]

h. ASF, required, except that an ASF sort may not be required if using bundle reallocation under 8.13.3. May contain carrier route price, automation price, and/or Presorted price bundles. Sort ADC bundles to ASF/RPDC pallets based on the ''label to'' ZIP Code for the ADC/RPDC destination of the bundle in L004. At the mailer's option, sort appropriate mixed ADC bundles to ASF/RPDC pallets based on the ''label to'' ZIP Code for the ADC/RPDC destination of the bundle in L010. All optional mixed ADC bundles on ASF/RPDC pallets must contain only pieces destinating within the ASF/RPDC as shown in 6.3. See 246.3.0 for additional requirements for DNDC price eligibility. Labeling: * * *

[Revise the introductory text of item (i) to read as follows:]

i. *NDC/RPDC,* required, may contain carrier route price, automation price, and/or Presorted price bundles. Sort ADC bundles to NDC/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L004. At the mailer's option, sort appropriate mixed ADC bundles to NDC/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L010. All optional mixed ADC bundles on NDC/RPDC pallets must contain only pieces destinating within the NDC/RPDC as shown in 6.3. See 246.3.0 for additional requirements for DNDC price eligibility. Labeling: * * *

11.0 Combining Automation Price and Nonautomation Price Flats in Bundles

* * * * *

11.2 Periodicals

* * * * *

11.2.3 Bundles With Fewer Than Six Pieces

* * * Low-volume bundles are permitted only when they are trayed or prepared on pallets as follows:

a. Place low-volume 5-digit and 3-digit bundles in only 5-digit scheme, 5-digit, 3-digit, and SCF flat trays that contain at least 24 pieces; or in origin/entry SCF/LPC flat trays; or on the following pallets, as appropriate:

* * * * *

[Revise item (a6) to read as follows:]

6. SCF/LPC

[Revise item (b) to read as follows:]

b. Place low-volume 5-digit scheme and 3-digit scheme bundles in only 5-digit scheme, 3-digit, and SCF flat trays that contain at least 24 pieces, or in origin/entry SCF/LPC flat trays, or on 3-digit or SCF/LPC pallets, as appropriate.

* * * * *

12.0 Merging Bundles of Flats on Pallets Using a 5 Percent Threshold

12.1 Periodicals

* * * * *

12.1.5 Pallet Preparation and Labeling

* * * Prepare and label pallets as follows:

* * * * *

[Revise the text of item 12.1.5(h) to read as follows:]

h. *SCF/LPC through mixed ADC,* use 8.10.2h through 8.10.2k, as applicable, to prepare and label SCF/LPC, ADC/RPDC, Origin Mixed ADC (OMX) and mixed ADC pallet levels.

12.2 USPS Marketing Mail

* * * * *

12.2.3 Pallet Preparation and Labeling

* * * Mailers must label pallets according to the Line 1 and Line 2 information listed below and under 8.6.

* * * * *

[Revise the introductory text of item (g) to read as follows:]

g. *SCF/LPC,* required, may contain carrier route price, automation price, and Presorted price bundles. Labeling: * * *

[Revise the introductory text of item (h) to read as follows:]

h. ASF, required, except that an ASF sort may not be required if using bundle reallocation under 8.13.3. May contain carrier route price, automation price, and/or Presorted price bundles. Sort ADC bundles to ASF/RPDC pallets based on the ''label to'' ZIP Code for the ADC/RPDC destination of the bundle in L004. At the mailer's option, sort appropriate mixed ADC bundles to ASF/RPDC pallets based on the ''label to'' ZIP Code for the ADC/RPDC destination of the bundle in L010. All optional mixed ADC bundles on ASF/RPDC pallets must contain only pieces destinating within the ASF/RPDC as shown in 6.3. See 246.3.0 for additional requirements for DNDC price eligibility. Labeling: * * *

[Revise the introductory text of item (i) to read as follows:]

i. *NDC/RPDC,* required, may contain carrier route price, automation price, and/or Presorted price bundles. Sort ADC bundles to NDC/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L004. At the mailer's option, sort appropriate mixed ADC bundles to NDC/RPDC pallets based on the ''label to'' ZIP Code for the ADC/RPDC destination of the bundle in L010. All optional mixed ADC bundles on NDC/RPDC pallets must contain only pieces destinating within the NDC/RPDC as shown in 6.3. See 246.3.0 for additional requirements for DNDC price eligibility. * * * * *

13.0 Merging Bundles of Flats on Pallets Using the City State Product and a 5 Percent Threshold

13.1 Periodicals

* * * * *

13.1.5 Pallet Preparation and Labeling

* * * Prepare and label pallets as follows:

* * * * *

[Revise item (h) to read as follows:]

h. *SCF/LPC through mixed ADC,* use 8.10.2h through 8.10.2k, as applicable, to prepare and label SCF/LPC, ADC/RPDC, Origin Mixed ADC (OMX) and mixed ADC pallet levels.

13.2 USPS Marketing Mail

* * * * *

13.2.4 Pallet Preparation and Labeling

* * * Mailers must label pallets according to the Line 1 and Line 2 information listed below and under 8.6.

* * * * *

[Revise the introductory text of item (g) to read as follows:]

g. *SCF/LPC,* required, may contain carrier route price, automation price, and Presorted price bundles. Labeling: * * *

[Revise the introductory text of item (h) to read as follows:]

h. ASF, required, except that an ASF sort may not be required if using bundle reallocation under 8.13.3. May contain carrier route price, automation price, and/or Presorted price bundles. Sort ADC bundles to ASF/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L004. At the mailer's option, sort appropriate mixed ADC bundles to ASF/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L010. All optional mixed ADC bundles on ASF/RPDC pallets must contain only pieces destinating within the ASF/RPDC as shown in 6.3. See 246.3.0 for additional requirements for DNDC price eligibility. Labeling: * * *

[Revise the introductory text of item (i) to read as follows:]

i. *NDC/RPDC,* required, may contain carrier route price, automation price, and/or Presorted price bundles. Sort ADC bundles to NDC/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L004. At the mailer's option, sort appropriate mixed ADC bundles to NDC/RPDC pallets based on the ''label to'' ZIP Code for the ADC destination of the bundle in L010. All optional mixed ADC bundles on NDC/RPDC pallets must contain only pieces destinating within the NDC/RPDC as shown in 6.3. See 263.2.0 for additional requirements for DNDC price eligibility. Labeling: * * *

* * * * *

15.0 Combining USPS Marketing Mail Flats, Bound Printed Matter Flats, and Periodicals Flats

15.1 Basic Standards

15.1.1 General

Authorized mailers may combine USPS Marketing Mail flats, Bound Printed Matter flats, and Periodicals flats in a single mailing as follows: * * *

h. Each comailing containing Bound Printed Matter flats must meet the following requirements:

[Revise items (h1) and (h2) to read as follows:]

1. Except under 15.1.1h2, BPM flat-sized pieces must not weigh more than 20 ounces when combined in applicable bundles, and must be entered at a destination sectional center facility (DSCF)/local processing center (LPC) on 5-digit or 3-digit/sectional center facility (SCF) level pallets, or at a destination delivery unit (DDU)/sorting & delivery center (SDC).

2. BPM flat-sized pieces may weigh up to 24 ounces when combined in carrier-route (CR) level bundles on a pallet included in no less than SCF/3D sortation entered at an SCF/LPC. BPM flat-sized pieces must not exceed 20 ounces if prepared in the CR level bundle with certain Periodicals pieces that may weigh more than 20 ounces. The maximum number of BPM pieces weighing more than 20 ounces up to the maximum of 24 ounces must not exceed 50 percent of each mailing.

* * * * *

15.1.10 Other Periodicals Pricing

Other prices for Periodicals flats in a combined mailing of USPS Marketing Mail and Periodicals flats on pallets will be assessed as follows: * * *

[Revise items (a) and (b) to read as follows:]

a. The bundle prices applicable to the ADC/RPDC container level will be applied to the ASF/NDC/RPDC container levels.

b. The container prices applicable to the ADC/RPDC pallet level will apply to the ASF/NDC/RPDC pallet levels. * * *

c. The bundle price applicable to the ADC bundle placed on the ADC/RPDC container level will apply to mixed ADC bundles placed on mixed NDC pallets. * * *

[Revise the title of 15.1.11 to read as follows:]

15.1.11 Bundle Reallocation To Protect the SCF/LPC or NDC/RPDC Pallet

[Revise 15.1.11 to read as follows:]

Mailers may reallocate bundles under 8.11 or 8.13 to protect the SCF/LPC or NDC/RPDC pallet.

* * * * *

15.2 Combining USPS Marketing Mail Flats, Bound Printed Matter Flats, and Periodicals Flats in the Same Bundle

* * * * *

15.2.3 Pallet Presort and Labeling

[Revise the first sentence of 15.2.3 to read as follows:]

Mailers must prepare pallets according to the standards in 8.0 and in the sequence listed below. Merged 5-digit scheme through NDC/RPDC pallets must contain at least 250 pounds of combined USPS Marketing Mail and Periodicals mailpieces, except as allowed under 8.5.3. * * *

* * * * *

15.3 Combining Bundles of USPS Marketing Mail Flats, Bound Printed Matter Flats, and Periodicals Flats on the Same Pallet

* * * * *

15.3.3 Pallet Presort and Labeling

[Revise the first sentence of 15.3.3 to read as follows:]

Mailers must prepare pallets according to the standards in 8.0 and in the sequence listed below. Merged 5-digit scheme through NDC/RPDC pallets must contain at least 250 pounds of combined USPS Marketing Mail and Periodicals, except as allowed under 8.5.3. * * *

* * * * *

15.4 Pallet Preparation

15.4.1 Pallet Preparation, Sequence and Labeling

When combining USPS Marketing Mail, Bound Printed Matter, and Periodicals flats within the same bundle or combining bundles of USPS Marketing Mail flats, Bound Printed Matter flats and bundles of Periodicals flats on pallets, bundles must be placed on pallets. For labeling, ''STD/BPM/PER FLTS'', as applicable' means to label each individual pallet based on the classes of mailpieces on that individual pallet. As an example, in a combined mailing of USPS Marketing Mail, Bound Printed Matter, and Periodicals flats, some pallets may be labeled ''STD/BPM/PER'' while others might properly be labeled ''STD/BPM,'' ''STD/PER,'' ''BPM/PER,'' or even ''STD,'' ''BPM,'' or ''PER.'' Preparation, sequence and labeling: * * *

[Revise the introductory text of item (g) to read as follows:]

g. *SCF/LPC, required.* Pallet may contain carrier route, automation or Presorted mail for the 3-digit ZIP Code groups in L005. Labeling: * * *

[Revise the introductory text of item (i) to read as follows:]

i. *NDC/RPDC, required.* Pallet may contain carrier route, automation or presorted mail for the 3-digit ZIP Code groups in L601. ADC bundles are assigned to pallets according to the ''label to'' ZIP Code in L004 as appropriate. Labeling: * * *

[Revise the introductory text of item (j) to read as follows:]

j. *Mixed NDC, required, 100 pound minimum.* Pallet may contain carrier route, automation or presorted mail. Pallet includes MXD ADC bundles, prepared according to the ''label to'' ZIP in L009, as appropriate. Unless authorized by the processing and distribution manager, pallet must be entered at the NDC/RPDC serving the 3-digit ZIP Code of the entry Post Office. Labeling:

[Revise item (j1) to read as follows:]

1. Line 1: ''MXD'' followed by the information in L601, for the NDC/RPDC serving the 3-digit ZIP Code prefix of the entry Post Office. * * *

* * * * *

23.0 Full-Service Automation Option

* * * * *

23.2 General Eligibility Standards

First-Class Mail (FCM), Periodicals, and USPS Marketing Mail, cards (FCM only), letters (except letters using simplified address format) and flats meeting eligibility requirements for automation or carrier route prices (except for USPS Marketing Mail ECR saturation flats), and Bound Printed Matter presorted or carrier route barcoded flats, are potentially eligible for full-service incentives. Additionally, all pieces entered under full-service pricing must: * * *

[Revise the first sentence of item 23.2 (e) to read as follows:]

a. Be scheduled for an appointment using the Facility Access and Shipment Tracking (FAST) system for dropship mailings (except for mailings entered at a DDU/SDC) or as required in a customer/supplier agreement. * * *

* * * * *

Notice 123 (Price List)

[Revise prices as applicable.]

* * * * *

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List March 26, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__layouts/PG/register.aspx*.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
