BILLING CODE 6450–01–C

A parenthetical reference at the end of a comment quotation or paraphrase provides the location of the item in the public record.[17] To the extent that interested parties have provided written comments that are substantively consistent with any oral comments provided during the February 1, 2023, public meeting, DOE cites the written comments throughout this final rule. Any oral comments provided during the webinar that are not substantively addressed by written comments are summarized and cited separately throughout this final rule.

[17] The parenthetical reference provides a reference for information located in the docket of DOE's rulemaking to develop energy conservation standards for GSLs. (Docket No. EERE–2022–BT–STD–0022, which is maintained at *www.regulations.gov.*) The references are arranged as follows: (commenter name, comment docket ID number, page of that document).

III. General Discussion

DOE developed this final rule after considering oral and written comments, data, and information from interested parties that represent a variety of interests. The following discussion addresses issues raised by these commenters.

A. General Comments

This section summarizes and discusses general comments received from interested parties. As specified in section I, the adopted standards in this final rule are expressed as lumens per watt (''lm/W'') of a lamp or lamp efficacy. In this document the terms efficacy and efficiency both refer to lm/W of the lamp.

NEMA supported DOE's statements in the January 2023 NOPR regarding EPCA's preemption provisions to state regulation. NEMA stated that in the final rule, DOE clearly specified the preemptive effect on all covered products that meet the Federal definition of a GSL in accordance with E.O. 13132 as well as the timing of the effect in accordance with E.O. 12988. NEMA stated that this clarification will prevent confusion that may otherwise arise due to a patchwork of differing State regulations that had previously been implemented prior to May 9, 2022, when DOE published the May 2022 Backstop Final Rule. (NEMA, No. 183 at p. 21)

Regarding comments received on Federal preemption, in the January 2023 NOPR (88 FR 1638, 1644) and in this final rule (*see* section II.A of this

document), DOE specifies that Federal energy efficiency requirements for covered products established under EPCA generally supersede State laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297(a)–(c)) DOE may, however, grant waivers of Federal preemption for particular State laws or regulations, in accordance with the procedures and other provisions set forth under EPCA (*see* 42 U.S.C. 6297(d)). For the first cycle of the GSL rulemaking, EPCA provided California and Nevada with certain preemption allowances (*see* 42 U.S.C. 6295(i)(6)(A)(vi)). However, these allowances do not apply to this second cycle of GSL rulemaking (*see* 42 U.S.C. 6295(i)(6)(B)).

CLASP recommended that DOE, in partnership with the U.S. Environmental Protection Agency (''EPA'') and the Consumer Product Safety Commission (''CPSC''), implement a national policy banning fluorescent lighting on the basis of toxicity due to the mercury content contained in all fluorescent lamps, which is already adopted in California and Vermont and is under consideration in several other States. CLASP commented that such a national regulation would help to accelerate market shift to LED lamps and promote even more cost-effective energy savings in the United States. CLASP recommended that DOE prioritize an advanced schedule for the phase-out of fluorescent lighting at increased rates of efficacy, as it would yield several benefits across various DOE objectives. CLASP stated that replacing fluorescent bulbs with retrofittable LED bulbs (*i.e.,* plug-and-play, drop-in replacements that require no rewiring) will eliminate mercury and cut lighting-related power consumption in half and will reduce CO_2 and Hg emissions from power stations. CLASP also noted that LED bulbs last 2–3 times longer than fluorescent bulbs, reducing the volume of municipal waste generated. CLASP further stated that LCC studies had shown LED bulbs to have the lowest associated energy utilization and lowest environmental impact compared to other lighting technologies. (CLASP, No. 177 at pp. 4–5)

CLASP also recommended that DOE work with EPA to update ENERGY STAR requirements for lamp efficacy levels to at least double the current level of 80 lm/W in an effort to further support this GSL regulation by creating a market 'pull' for higher efficacy lamps. CLASP stated that an update to ENERGY STAR is necessary to discontinue the inclusion of CFLs in the program, as seven fluorescent lamps are currently recognized by ENERGY STAR while Africa, Europe, and India are phasing out fluorescent lighting. (CLASP, No. 177 at p. 5) NEMA noted EPA's intention to sunset all ENERGY STAR lighting programs except for a new program for recessed lighting, recognizing its significant energy savings. NEMA supported the more focused continuation of this ENERGY STAR program to maintain minimum levels of quality and performance. (NEMA, No. 183 at p. 19)

The scope of this rule is to evaluate energy conservation standards for GSLs (*see* section II.A of this document) which does not include general service fluorescent lamps or other fluorescent lamps (*see* definition of GSLs at 10 CFR 430.2). DOE considers out-of-scope lamps such as fluorescent lamps in the shipment and NIA analyses (*see* respectively, sections IV.G and IV.H of this document). Additionally, the scope of this rule does not include updating requirements set by EPA's ENERGY STAR program. Note that on March 13, 2023, EPA announced it will be sunsetting ENERGY STAR specifications for lamps and luminaires effective December 31, 2024, with the exception of recessed downlights, which would be covered by a new specification.[18]

As noted in section II.A of this document and in the January 2023 NOPR per 42 U.S.C. 6295(i)(6)(B)(iv)(I)–(II), the Secretary shall consider phased-in effective dates after considering certain manufacturer and retailer impacts. In the January 2023 NOPR, DOE requested comments on whether phased-in effective dates were necessary for the proposed GSL standards. 88 FR 1638, 1656. Westinghouse stated its preference for a single effective date for the standard, as phased-in effective dates would make things more complicated. (Westinghouse, Public Meeting Transcript, No. 27 at p. 13). NEMA stated its support for the implementation of one effective date versus phased-in effective dates. (NEMA, No. 183 at p. 5) DOE did not receive any requests for a phased-in effective date approach. Regarding the standards being adopted in this final rule, DOE does not find any particular reason(s) that phased-in effective dates would be of value for manufacturers or retailers and thus has determined the adopted standards will become effective on one date. Specifically, DOE reviewed the market and did not find impacts on manufacturers and retailers would differ by product class.

Several comments from private citizens stated that free-market forces should direct the lighting market instead of government regulation and that there should be less government interference with consumer choices. Additionally, EEI commented that if the proposed standard is not revised, many consumers will realize direct economic losses, and that by setting the standard at near maximum TSLs, DOE will make it very difficult for electric companies to justify investments in future lighting efficiency rebate programs. EEI stated that according to a recent EEI report, electric companies spent nearly $7 billion on efficiency programs in 2021, saving 237 billion kWh of electricity—enough to power 33 million U.S. homes for one year. Citing a meta-analysis by the Lawerence Berkeley National Laboratory, from 2010 through 2018, EEI stated that residential lighting programs were responsible for 48 percent of all residential program savings (*i.e.,* 14.8 percent of all market sectors). EEI added that the levelized cost to save a kWh of electricity through residential lighting programs is extremely cost-effective at just over 1 cent per kWh. (EEI, No. 181 at pp. 2–3)

When evaluating energy conservation standards for products, DOE determines whether a standard is economically justified based on several factors, including consumer impacts and lessening of the utility or the performance likely to result from the imposition of the standard, as it did in this rulemaking. 42 U.S.C. 6295(o)(2)(B)(i). Therefore, DOE's analysis accounts for the impacts on consumers. Additionally, E.O. 12866 directs DOE to assess potentially effective and reasonably feasible alternatives to the planned regulation, and an explanation why the planned regulatory action is preferable to the identified potential alternatives (*see* chapter 16 of the final rule TSD).

In response to the January 2023 NOPR, DOE received several comments in support of the proposed rule including the proposed TSL. 88 FR 1638, 1706–1708. CLASP stated that it agreed with DOE's finding that setting new energy conservation standards for GSLs would benefit the United States by delivering significant, cost-effective energy savings that are both technologically feasible and economically justified. (CLASP, No. 177 at p. 1) Earthjustice commented that the January 2023 NOPR demonstrates that even with DOE's recent implementation of the EPCA statutory backstop

[18] ENERGY STAR Lighting Sunset—March 13, 2023. Available at: *www.energystar.gov/sites/default/files/asset/document/ENERGY%20STAR%20Lighting%20Sunset%20Memo.pdf.*

standard, GSLs continue to hold significant potential for additional cost-effective energy savings and air pollutant emissions reductions. (Earthjustice, No. 179 at p. 1) The CA IOUs stated that after DOE ends its enforcement discretion of the 45 lm/W backstop standard, all GSLs on the market will be light-emitting diode (''LED'') lamps or compact fluorescent lamps (''CFLs''), with LED GSLs offering many efficacies. The CA IOUs encouraged DOE to finalize this rule before June 2024 to ensure the legal durability of this and future GSL standards. (CA IOUs, No. 167 at p. 2) The CEC also stated its general support for DOE's efforts to improve the minimum efficacy for GSLs, which they stated will move the market to high-efficacy LED lighting. The CEC commented that California has been able to provide a test market as the world's fourth-largest economy for high-quality and high-efficacy LEDs since January 1, 2018. The CEC commented that the success of California's standards demonstrates the technological feasibility and economic justification of pursuing minimum efficacy standards for GSLs. (CEC, No. 176 at pp. 1–2)

NYSERDA stated its support for TSL 6 as proposed in the NOPR, as this TSL represents all product categories at their maximum technologically feasible (''max-tech'') standard efficiencies. (NYSERDA, No. 166 at pp. 1–2) NEMA stated that with the exception of the new product classes it had suggested, for all other product classes DOE should adopt TSL 5, because TSL 5 represents the maximum NPV and maintains design flexibility for lamps of varying lengths to produce sufficient light while meeting various application requirements. Specifically, NEMA stated that TSL 6 would require max-tech performance for linear LED lamps designed to replace fluorescent tubes. NEMA stated that linear LED lamps provide lower lumens, which may hinder manufacturers from producing lamps able to provide the appropriate amount of light to meet the max-tech performance standard of efficiency or efficacy level (''EL'') 7 (*see* section IV.D.1.d of this document for full comment and response). Finally, NEMA stated that because TSL 5 and TSL 6 save energy, have similar payback periods, and represent the maximum NPV, NEMA members believe DOE should adopt TSL 5 to best balance consumer cost and benefit. (NEMA, No. 183 at p. 20) ASAP *et al.* commented that DOE should not adopt TSL 5 as an alternative to TSL 6, as DOE should adopt the standard that represents the maximum improvement in energy efficiency that is technically feasible and economically justified, which is TSL 6. ASAP *et al.* commented that adopting a lower level would not fulfill DOE's statutory obligations and would needlessly result in additional energy waste and greenhouse gas and other emissions. (ASAP *et al.,* No. 174 at p. 5)

In this final rule DOE is adopting TSL 6 as proposed in the January 2023 NOPR. 88 FR 1638, 1708. DOE discusses the benefits and burdens of each TSL considered and DOE's conclusion in section V.C of this document. As discussed in that section, TSL 6 represents the maximum energy savings that are technically feasible and economically justified, as required by EPCA. Regarding requiring the max-tech level for linear LED lamps at TSL 6, all max-tech efficiency levels in this analysis are based on existing products available on the market.

B. Scope of Coverage

This rulemaking covers all consumer products that meet the definition of ''general service lamp'' as codified at 10 CFR 430.2. While all GSLs are subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd), not all GSLs are subject to the amended standards adopted in this final rule, though DOE may consider amended standards for them in a future rulemaking (*see* section IV.A.3 of this document).

C. Test Procedure

EPCA sets forth generally applicable criteria and procedures for DOE's adoption and amendment of test procedures. (42 U.S.C. 6293) Manufacturers of covered products must use these test procedures to certify to DOE that their product complies with energy conservation standards and to quantify the efficiency of their product. DOE's current energy conservation standards for GSLs are expressed in terms of lumens per watt (''lm/W''). GSILs and certain IRLs, CFLs, and LED lamps are GSLs. DOE's test procedures for GSILs and IRLs are set forth at 10 CFR part 430, subpart B, appendix R. DOE's test procedure for CFLs is set forth at 10 CFR part 430, subpart B, appendix W. DOE's test procedure for integrated LED lamps is set forth at 10 CFR part 430, subpart B, appendix BB. DOE's test procedure for GSLs that are not GSILs, IRLs, CFLs, or integrated LED lamps is set forth at 10 CFR part 430, subpart B, appendix DD.

D. Technological Feasibility

1. General

In each energy conservation standards rulemaking, DOE conducts a screening analysis based on information gathered on all current technology options and prototype designs that could improve the efficiency of the products or equipment that are the subject of the rulemaking. As the first step in such an analysis, DOE develops a list of technology options for consideration in consultation with manufacturers, design engineers, and other interested parties. DOE then determines which of those means for improving efficiency are technologically feasible. DOE considers technologies incorporated in commercially available products or in working prototypes to be technologically feasible. *See* sections 6(b)(3)(i) and 7(b)(1) of appendix A to 10 CFR part 430, subpart C (''Process Rule'').

After DOE has determined that particular technology options are technologically feasible, it further evaluates each technology option in light of the following additional screening criteria: (1) practicability to manufacture, install, and service; (2) adverse impacts on product utility or availability; (3) adverse impacts on health or safety; and (4) unique-pathway proprietary technologies. *See* section 7(b)(2)–(5) of the Process Rule. Section IV.C of this document discusses the results of the screening analysis for GSLs, particularly the designs DOE considered, those it screened out, and those that are the basis for the standards considered in this rulemaking. For further details on the screening analysis for this rulemaking, *see* chapter 4 of the final rule technical support document (''TSD'').

2. Maximum Technologically Feasible Levels

When DOE proposes to adopt a new or amended standard for a type or class of covered product, it must determine the maximum improvement in energy efficiency or maximum reduction in energy use that is technologically feasible for such product. (42 U.S.C. 6295(p)(1)) Accordingly, in the engineering analysis, DOE determined the maximum technologically feasible (''max-tech'') improvements in energy efficiency for GSLs, using the design parameters for the most efficient products available on the market or in working prototypes. The max-tech levels that DOE determined for this rulemaking are described in section IV.D.1.c of this final rule and in chapter 5 of the final rule TSD.

E. Energy Savings

1. Determination of Savings

For each trial standard level (''TSL''), DOE projected energy savings from application of the TSL to GSLs purchased in the 30-year period that begins in the first full year of compliance with the amended standards (2029–2058).[19] The savings are measured over the entire lifetime of GSLs purchased in the 30-year analysis period, *i.e.,* including savings until the longest-lifetime GSL purchased in 2058 is retired from service in 2091. DOE quantified the energy savings attributable to each TSL as the difference in energy consumption between each standards case and the no-new-standards case. The no-new-standards case represents a projection of energy consumption that reflects how the market for a product would likely evolve in the absence of amended energy conservation standards.

DOE used its national impact analysis (''NIA'') spreadsheet models to estimate national energy savings (''NES'') from potential amended standards for GSLs. The NIA model (described in section IV.H of this document) calculates energy savings in terms of site energy, which is the energy directly consumed by products at the locations where they are used. For electricity, DOE reports national energy savings in terms of primary energy savings, which is the savings in the energy that is used to generate and transmit the site electricity. For natural gas, the primary energy savings are considered to be equal to the site energy savings. DOE also calculates NES in terms of FFC energy savings. The FFC metric includes the energy consumed in extracting, processing, and transporting primary fuels (*i.e.,* coal, natural gas, petroleum fuels), and thus presents a more complete picture of the impacts of energy conservation standards.[20] DOE's approach is based on the calculation of an FFC multiplier for each of the energy types used by covered products or equipment. For more information on FFC energy savings, *see* section IV.H.1 of this document.

2. Significance of Savings

To adopt any new or amended standards for a covered product, DOE must determine that such action would result in significant energy savings. (42 U.S.C. 6295(o)(3)(B)).

The significance of energy savings offered by a new or amended energy conservation standard cannot be determined without knowledge of the specific circumstances surrounding a given rulemaking.[21] For example, some covered products and equipment have most of their energy consumption occur during periods of peak energy demand. The impacts of these products on the energy infrastructure can be more pronounced than products with relatively constant demand. Accordingly, DOE evaluates the significance of energy savings on a case-by-case basis, taking into account the significance of cumulative FFC national energy savings, the cumulative FFC emissions reductions, and the need to confront the global climate crisis, among other factors.

As stated, the standard levels adopted in this final rule are projected to result in national energy savings of 4.0 quad, the equivalent of the primary annual energy use of 261 million homes. Based on the amount of FFC savings, the corresponding reduction in emissions, and the need to confront the global climate crisis, DOE has determined the energy savings from the standard levels adopted in this final rule are ''significant'' within the meaning of 42 U.S.C. 6295(o)(3)(B).

F. Economic Justification

1. Specific Criteria

As noted previously, EPCA provides seven factors to be evaluated in determining whether a potential energy conservation standard is economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(I)–(VII)) The following sections discuss how DOE has addressed each of those seven factors in this rulemaking.

a. Economic Impact on Manufacturers and Consumers

In determining the impacts of potential new or amended standards on manufacturers, DOE conducts an MIA, as discussed in section IV.J of this document. DOE first uses an annual cash-flow approach to determine the quantitative impacts. This step includes both a short-term assessment—based on the cost and capital requirements during the period between when a regulation is issued and when entities must comply with the regulation—and a long-term assessment over a 30-year period. The industry-wide impacts analyzed include (1) INPV, which values the industry on the basis of expected future cash flows; (2) cash flows by year; (3) changes in revenue and income; and (4) other measures of impact, as appropriate. Second, DOE analyzes and reports the impacts on different types of manufacturers, including impacts on small manufacturers. Third, DOE considers the impact of standards on domestic manufacturer employment and manufacturing capacity, as well as the potential for standards to result in plant closures and loss of capital investment. Finally, DOE takes into account cumulative impacts of various DOE regulations and other regulatory requirements on manufacturers.

For individual consumers, measures of economic impact include the changes in LCC and payback period (''PBP'') associated with new or amended standards. These measures are discussed further in the following section. For consumers in the aggregate, DOE also calculates the national net present value of the consumer costs and benefits expected to result from particular standards. DOE also evaluates the impacts of potential standards on identifiable subgroups of consumers that may be affected disproportionately by a standard.

b. Savings in Operating Costs Compared To Increase in Price (Life-Cycle Cost (''LCC'') and Payback Period Analysis (''PBP''))

EPCA requires DOE to consider the savings in operating costs throughout the estimated average life of the covered product in the type (or class) compared to any increase in the price of, or in the initial charges for, or maintenance expenses of, the covered product that are likely to result from a standard. (42 U.S.C. 6295(o)(2)(B)(i)(II)) DOE conducts this comparison in its LCC and PBP analysis.

The LCC is the sum of the purchase price of a product (including its installation) and the operating cost (including energy, maintenance, and repair expenditures) discounted over the lifetime of the product. The LCC analysis requires a variety of inputs, such as product prices, product energy consumption, energy prices, maintenance and repair costs, product lifetime, and discount rates appropriate for consumers. To account for uncertainty and variability in specific inputs, such as product lifetime and discount rate, DOE uses a distribution of values, with probabilities attached to each value.

The PBP is the estimated amount of time (in years) it takes consumers to

[19] DOE also presents a sensitivity analysis that considers impacts for products shipped in a 9-year period.

[20] The FFC metric is discussed in DOE's statement of policy and notice of policy amendment. 76 FR 51282 (Aug. 18, 2011), as amended at 77 FR 49701 (Aug. 17, 2012).

[21] The numeric threshold for determining the significance of energy savings established in a final rule published on February 14, 2020 (85 FR 8626, 8670), was subsequently eliminated in a final rule published on Dec. 13, 2021 (86 FR 70892).

recover the increased purchase cost (including installation) of a more efficient product through lower operating costs. DOE calculates the PBP by dividing the change in purchase cost due to a more stringent standard by the change in annual operating cost for the year that standards are assumed to take effect.

For its LCC and PBP analysis, DOE assumes that consumers will purchase the covered products in the first full year of compliance with new or amended standards. The LCC savings for the considered efficiency levels are calculated relative to the case that reflects projected market trends in the absence of new or amended standards. DOE's LCC and PBP analysis is discussed in further detail in section IV.F of this document.

c. Energy Savings

Although significant conservation of energy is a separate statutory requirement for adopting an energy conservation standard, EPCA requires DOE, in determining the economic justification of a standard, to consider the total projected energy savings that are expected to result directly from the standard. (42 U.S.C. 6295(o)(2)(B)(i)(III)) As discussed in section IV.H of this document, DOE uses the NIA spreadsheet models to project national energy savings.

d. Lessening of Utility or Performance of Products

In establishing product classes, and in evaluating design options and the impact of potential standard levels, DOE evaluates potential standards that would not lessen the utility or performance of the considered products. (42 U.S.C. 6295(o)(2)(B)(i)(IV)) Based on data available to DOE, the standards adopted in this document would not reduce the utility or performance of the products under consideration in this rulemaking.

e. Impact of Any Lessening of Competition

EPCA directs DOE to consider the impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from a standard. (42 U.S.C. 6295(o)(2)(B)(i)(V)) It also directs the Attorney General to determine the impact, if any, of any lessening of competition likely to result from a standard and to transmit such determination to the Secretary within 60 days of the publication of a proposed rule, together with an analysis of the nature and extent of the impact. (42 U.S.C. 6295(o)(2)(B)(ii)) To assist the Department of Justice (''DOJ'') in making such a determination, DOE transmitted copies of its proposed rule and the NOPR TSD to the Attorney General for review, with a request that the DOJ provide its determination on this issue. In its assessment letter responding to DOE, DOJ concluded that it does not have evidence that the new proposed energy conservation standards for GSLs are substantially likely to adversely impact competition. DOE is publishing the Attorney General's assessment at the end of this final rule.

f. Need for National Energy Conservation

DOE also considers the need for national energy and water conservation in determining whether a new or amended standard is economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(VI)) The energy savings from the adopted standards are likely to provide improvements to the security and reliability of the Nation's energy system. Reductions in the demand for electricity also may result in reduced costs for maintaining the reliability of the Nation's electricity system. DOE conducts a utility impact analysis to estimate how standards may affect the Nation's needed power generation capacity, as discussed in section IV.M of this document.

DOE maintains that environmental and public health benefits associated with the more efficient use of energy are important to take into account when considering the need for national energy conservation. The adopted standards are likely to result in environmental benefits in the form of reduced emissions of air pollutants and greenhouse gases (''GHGs'') associated with energy production and use. DOE conducts an emissions analysis to estimate how potential standards may affect these emissions, as discussed in section IV.K of this document; the estimated emissions impacts are reported in section V.B.6 of this document. DOE also estimates the economic value of emissions reductions resulting from the considered TSLs, as discussed in section IV.L of this document.

g. Other Factors

In determining whether an energy conservation standard is economically justified, DOE may consider any other factors that the Secretary deems to be relevant. (42 U.S.C. 6295(o)(2)(B)(i)(VII)) To the extent DOE identifies any relevant information regarding economic justification that does not fit into the other categories described previously, DOE could consider such information under ''other factors.''

2. Rebuttable Presumption

As set forth in 42 U.S.C. 6295(o)(2)(B)(iii), EPCA creates a rebuttable presumption that an energy conservation standard is economically justified if the additional cost to the consumer of a product that meets the standard is less than three times the value of the first year's energy savings resulting from the standard, as calculated under the applicable DOE test procedure. DOE's LCC and PBP analyses generate values used to calculate the effect potential amended energy conservation standards would have on the payback period for consumers. These analyses include, but are not limited to, the 3-year payback period contemplated under the rebuttable-presumption test. In addition, DOE routinely conducts an economic analysis that considers the full range of impacts to consumers, manufacturers, the Nation, and the environment, as required under 42 U.S.C. 6295(o)(2)(B)(i). The results of this analysis serve as the basis for DOE's evaluation of the economic justification for a potential standard level (thereby supporting or rebutting the results of any preliminary determination of economic justification). The rebuttable presumption payback calculation is discussed in section IV.F of this final rule.

IV. Methodology and Discussion of Related Comments

This section addresses the analyses DOE has performed for this rulemaking with regard to GSLs. Separate subsections address each component of DOE's analyses.

DOE used several analytical tools to estimate the impact of the standards considered in this document. The first tool is a spreadsheet that calculates the LCC savings and PBP of potential amended or new energy conservation standards. The national impact analysis uses a second spreadsheet set that provides shipments projections and calculates national energy savings and net present value of total consumer costs and savings expected to result from potential energy conservation standards. DOE uses the third spreadsheet tool, the Government Regulatory Impact Model (GRIM), to assess manufacturer impacts of potential standards. These three spreadsheet tools are available on the DOE website for this rulemaking: *www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=4.* Additionally, DOE used output from the latest version of the Energy Information Administration's (''EIA's'') *Annual*

Energy Outlook (''*AEO*'') for the emissions and utility impact analyses.

A. Scope of Coverage

This rulemaking covers all consumer products that meet the definition of ''general service lamps'' as codified at 10 CFR 430.2. While all GSLs are subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd), DOE is not adopting amended energy conservation standards in this final rule for all GSLs, though DOE may consider amended standards for them in a future rulemaking. In this rulemaking, DOE is analyzing and adopting amended standards for CFLs and general service LED lamps that have a lumen output within the range of 310–3,300 lumens; have an input voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between 220 to 240 volts, or of 277 volts for integrated lamps, or are able to operate at any voltage for non-integrated lamps; and do not fall into any exclusion from the GSL definition at 10 CFR 430.2. In this rulemaking as specified in § 430.32(dd)(1)(iv)(C), DOE is not analyzing and adopting amended standards for general service organic LED lamps and any GSL that (1) is a non-integrated lamp that is capable of operating in standby mode and is sold in packages of two lamps or less; (2) is designed and marketed as a lamp that has at least one setting that allows the user to change the lamp's CCT and has no setting in which the lamp meets the definition of a colored lamp (as defined in 10 CFR 430.2); and is sold in packages of two lamps or less; (3) is designed and marketed as a lamp that has at least one setting in which the lamp meets the definition of a colored lamp (as defined in 10 CFR 430.2) and at least one other setting in which it does not meet the definition of colored lamp (as defined in 10 CFR 430.2) and is sold in packages of two lamps or less; or (4) is designed and marketed as a lamp that has one or more component(s) offering a completely different functionality (*e.g.,* a speaker, a camera, an air purifier, etc.) where each component is integrated into the lamp but does not affect the light output of the lamp (*e.g.,* does not turn the light on/off, dim the light, change the color of the light, etc.), is capable of operating in standby mode, and is sold in packages of two lamps or less. *See* section IV.A.3 of this document for further details. 42 U.S.C. 6295(i)(6)(B)(ii) of EPCA provides that this rulemaking's scope shall not be limited to incandescent technologies. In accordance with this provision, the scope of this rulemaking encompasses other GSLs in addition to GSILs.

General service lamp means a lamp that has an American National Standards Institute (''ANSI'') base; is able to operate at a voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between 220 to 240 volts, or at 277 volts for integrated lamps, or is able to operate at any voltage for non-integrated lamps; has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 3,300 lumens; is not a light fixture; is not an LED downlight retrofit kit; and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light emitting diode lamps. General service lamps do not include: (1) Appliance lamps; (2) Black light lamps; (3) Bug lamps; (4) Colored lamps; (5) G shape lamps with a diameter of 5 inches or more as defined in ANSI C79.1–2002; (6) General service fluorescent lamps; (7) High intensity discharge lamps; (8) Infrared lamps; (9) J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases; (10) Lamps that have a wedge base or prefocus base; (11) Left-hand thread lamps; (12) Marine lamps; (13) Marine signal service lamps; (14) Mine service lamps; (15) MR shape lamps that have a first number symbol equal to 16 (diameter equal to 2 inches) as defined in ANSI C79.1–2002, operate at 12 volts, and have a lumen output greater than or equal to 800; (16) Other fluorescent lamps; (17) Plant light lamps; (18) R20 short lamps; (19) Reflector lamps that have a first number symbol less than 16 (diameter less than 2 inches) as defined in ANSI C79.1–2002 and that do not have E26/E24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases; (20) S shape or G shape lamps that have a first number symbol less than or equal to 12.5 (diameter less than or equal to 1.5625 inches) as defined in ANSI C79.1–2002; (21) Sign service lamps; (22) Silver bowl lamps; (23) Showcase lamps; (24) Specialty MR lamps; (25) T shape lamps that have a first number symbol less than or equal to 8 (diameter less than or equal to 1 inch) as defined in ANSI C79.1–2002, nominal overall length less than 12 inches, and that are not compact fluorescent lamps; and (26) Traffic signal lamps. 10 CFR 430.2.

The definitions for compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light emitting diode lamps, and other terms used in the GSL definition are also specified in 10 CFR 430.2.

Additionally, 42 U.S.C. 6295(i)(6)(B)(i)(II) directs DOE to consider whether the exemptions for certain incandescent lamps should be maintained or discontinued. In the January 2023 NOPR, DOE reviewed the regulatory definitions of GSL, GSIL, and supporting definitions adopted in the May 2022 Definition Final Rule and determined that no amendments are needed with regards to the maintenance or discontinuation of exemptions for certain incandescent lamps. 88 FR 1638, 1651. DOE received no comments regarding this assessment. DOE maintains this assessment in this final rule.

1. Supporting Definitions

In the January 2023 NOPR, DOE proposed minor updates to clarify certain supplemental definitions adopted in the May 2022 Definition Final Rule. In the January 2023 NOPR, DOE proposed to amend the existing definition of LED downlight retrofit kit to specify that it must be a retrofit kit classified or certified to Underwriters Laboratories (''UL'') 1598C–2014.[22] 88 FR 1638, 1652.

NEMA requested that DOE reference UL 1598C generally, without reference to a specific publication year. NEMA noted that American National Standards publications (*e.g.,* ANSI/UL 1598C) are dynamic with revisions continuously evaluated, refined, voted upon, published, and implemented by subject matter experts seeking to improve the utility of these publications in the market. NEMA stated that by specifying a publication year, DOE would be unnecessarily forgoing the benefit of revisions to this important consumer safety standard and working against the standards' adoption in the broader market. (NEMA, No. 183 at p. 3).

The GSL definition states that a GSL is not an LED downlight retrofit kit. 10 CFR 430.2. Therefore, the definition of LED downlight retrofit kit informs what is or is not a GSL. DOE reviewed UL 1598C–2014 before proposing that a LED downlight retrofit kit be classified or certified to the standard. 88 FR 1638, 1652. DOE would need to review updates in any new version of the standard to assess any impacts on the LED downlight retrofit kit definition and subsequently on the GSL definition. If DOE does not specify the version of the UL 1598C standard, it may result in

[22] UL, UL1598C Standard for Safety Light-Emitting Diode (LED) Retrofit Luminaire Conversion Kits. Approved November 17, 2016.

changes to these definitions that have not been reviewed by DOE and/or put forth for public comment. Therefore, in this final rule, DOE is adopting the definition for LED downlight retrofit kit with reference to UL 1598C–2014 as proposed in the January 2023 NOPR. Further, note that the edition of UL 1598C DOE reviewed and proposed for incorporation in the January 2023 NOPR was the first edition dated January 16, 2014, including revisions through November 17, 2016. To ensure the appropriate version is being referenced and to align with the referencing of industry standards in other definitions, DOE is specifying the year when referencing UL 1598C in the LED downlight retrofit kit definition as UL 1598C–2016 in this final rule.

In the January 2023 NOPR, DOE also proposed to update the industry standards referenced in the definitions of ''Reflector lamp'' and ''Showcase lamp.'' Specifically, DOE proposed to remove the reference to ANSI C78.20–2003 [23] from the definitions of ''Showcase lamp'' and ''Reflector lamp.'' ANSI C78.20–2003 is an industry standard for A, G, PS, and similar shapes with E26 bases and therefore is not relevant to these lamp types. Further, ANSI has replaced another industry standard, ANSI C79.1–2002,[24] with ANSI C78.79–2014 (R2020).[25] Accordingly, DOE proposed to update the following supporting definitions that currently reference ANSI C79.1–2002 to reference ANSI C78.79–2014 (R2020): (1) ''Specialty MR lamp'' definition; (2) ''Reflector lamp'' definition; (3) ''General service incandescent lamp'' definition with respect to a G shape lamp with a diameter of 5 inches or more; and (4) ''General service lamp'' definition with respect to G shape lamps with a diameter of 5 inches or more; MR shape lamps that have a first number symbol equal to 16; Reflector lamps that have a first number symbol less than 16; S shape or G shape lamps that have a first number symbol less than or equal to 12.5; T shape lamps that have a first number symbol less than or equal to 8. 88 FR 1638, 1652. DOE received no comments on this proposal. Therefore, in this final rule, DOE adopts the updates to industry standards referenced in these supporting definitions as proposed in the January 2023 NOPR.

DOE received a comment regarding the term ''general service.'' Seasonal Specialties commented that there does not seem to be a definition for ''general service'', and it is unclear what ''general service'' includes and excludes. (Seasonal Specialties, Public Meeting Transcript, No. 27 at pp. 18–19)

As noted previously in section IV.A of this document, the definition of GSL in 10 CFR 430.2 specifies a GSL must have an ANSI base, operate in certain voltage ranges, and have lumens in certain lumens ranges. It also identifies lamp types that are GSLs as well as 26 lamp types that are exempt from the GSL definition. Hence, DOE finds that the GSL definition in 10 CFR 430.2 clearly specifies what is or is not a GSL and no other definitions are necessary.

Additionally, DOE received comments on the definition of standby power. NEMA recommended that DOE revise the definition of ''Standby mode,'' because the current definition focuses only on the energy consumption of a lamp's standby mode condition and not the reason that it operates on standby (*i.e.,* a lamp's functional capabilities). NEMA stated that the definition of ''Standby mode'' in the January 2023 NOPR TSD could become problematic and restrictive as the category more fully develops. NEMA recommended that DOE instead replace the term ''Standby mode'' with ''Lamp capable of operating in standby mode'' and to denote it as an ''an energy-using product.'' (NEMA, No. 183 at p. 9) Lutron commented that it supports NEMA's revisions to the January 2023 NOPR definition of ''standby mode.'' (Lutron, No. 182 at p. 8)

The definition of ''standby mode'' is a statutory definition specified in 42 U.S.C. 6295(gg)(1)(iii). In appendix A of the January 2023 NOPR TSD, DOE repeated this definition as it appears in 42 U.S.C. 6295(gg)(1)(iii) and is codified in 10 CFR 430.2. This definition specifies that standby mode means the condition in which an energy-using product is connected to a main power source; and offers certain user-oriented or protective functions. (*see* 42 U.S.C. 6295(gg)(1)(iii), 10 CFR 430.2)

NEMA's suggested changes would add language that states, ''Lamps capable of operating in standby mode.'' However, this definition applies to all covered products, not only lamps. Further, in the January 2023 NOPR, DOE proposed a table to codify the proposed GSL standards in the CFR. This table included the column ''Standby Mode Operation'' indicating the lamps that are capable of standby mode operation and those that are not and the standards to which they would be subject. 88 FR 1638, 1718. Therefore, proposed GSL standards and those adopted in this rulemaking would clearly indicate the difference between lamps capable of operating in standby mode and those that are not. NEMA also suggested adding language that specifies the product in standby mode as ''an energy-using product.'' This language is already present in the existing definition. Finally, NEMA's concern that the definition does not focus on the lamp's functional capabilities that require it to operate in standby mode is addressed in paragraph 2 of the definition, which describes the additional user-oriented or protective functions the product offers. Hence, because it is a statutory definition and changing it would not have a substantive impact on clarity or accuracy, DOE is not amending the definition of ''Standby mode'' in this final rule.

2. Definition of Circadian-Friendly Integrated Light-Emitting Diode (''LED'') Lamp

In the January 2023 NOPR, DOE proposed a definition for ''circadian-friendly integrated LED lamp'' and proposed that lamps meeting that definition be excluded from the GSL definition. DOE identified commercially available integrated LED lamps that are marketed as aiding in the human sleep-wake (*i.e.,* circadian) cycle by changing the light spectrum and also observed that their efficacies ranged from 47.8 lm/W to 85.7 lm/W. Specifically, DOE proposed to define ''circadian-friendly integrated LED lamp'' as an integrated LED lamp that (1) is designed and marketed for use in the human sleep-wake (circadian) cycle; (2) is designed and marketed as an equivalent replacement for a 40 W or 60 W incandescent lamp; (3) has at least one setting that decreases or removes standard spectrum radiation emission in the 440 nm to 490 nm wavelength range; and (4) is sold in packages of two lamps or less. 88 FR 1638, 1652. In addition, based on the potential utility they offer and DOE's tentative findings that such lamps did not have high efficacy values, DOE proposed to exclude them from meeting the definition of GSLs.

DOE received several comments regarding the proposed definition and exemption of the circadian-friendly integrated LED lamp, including

[23] American National Standards Institute, ANSI C78.20–2003 American National Standard for Electric Lamps—A, G, PS, and Similar Shapes with E26 Medium Screw Bases. Approved Oct. 30, 2003.

[24] American National Standards Institute, ANSI C79.1–2002 American National Standard For Electric Lamps—Nomenclature for Glass Bulbs Intended for Use with Electric Lamps. Approved Sept. 16, 2002.

[25] American National Standards Institute, ANSI C 78.79–2014 (R2020) American National Standard for Electric Lamps—Nomenclature for Envelope Shapes Intended for Use with Electric Lamps. Approved Jan. 17, 2020.

comments questioning DOE's authority to exempt them from the GSL definition.

Earthjustice and ASAP *et al.* stated that DOE lacks the legal authority to exempt these lamps and doing so would violate the anti-backsliding provision. (Earthjustice, No. 179 at pp. 1–3; ASAP *et al.,* No. 174 at pp. 1–2) Earthjustice commented that the proposed GSL exemption for circadian-friendly LED lamps would mean that these lamps would no longer be subject to the 45 lm/W backstop standard level or any standard, an action EPCA's anti-backsliding provision explicitly forbids. Regarding authority, Earthjustice commented that the January 2023 NOPR cited no EPCA provision for excluding circadian-friendly integrated LED lamps from the GSL definition, indicating that such authority does not exist. Earthjustice commented that EPCA grants DOE explicit authority to enlarge the scope of GSLs to encompass any lamps ''used to satisfy lighting applications traditionally served by general service incandescent lamps'' but offers limited authority to grant exemptions. Further, Earthjustice stated that the requirement per EPCA that DOE complete a rulemaking to consider whether ''the exemptions for certain incandescent lamps should be maintained or discontinued'' (*see* 42 U.S.C. 6295(i)(6)(A)(i)(II)) is not applicable in this case. Earthjustice stated that EPCA authorizes DOE to exclude: (1) from the term ''medium base compact fluorescent lamp'' any lamp that is ''designed for special applications'' and ''unlikely to be used in general purpose applications'' (*see* 42 U.S.C. 6291(30)(S)(ii)(II)); and (2) from the terms ''fluorescent lamp'' and ''incandescent lamp'' any lamp to which DOE makes ''a determination that standards for such lamp would not result in significant energy savings because such lamp is designed for special applications or has special characteristics not available in reasonably substitutable lamp types'' (*see* 42 U.S.C. 6291(30)(E)). Earthjustice stated that neither of these two provisions authorizes DOE to exclude products from the definition of GSLs because GSLs need not meet the definitions of MBCFL, fluorescent lamp, or incandescent lamp to be covered as GSLs. Earthjustice concluded by stating that because the proposed action for circadian-friendly LED lamps does not fit into one of the categories of exemptions DOE is statutorily authorized to create, the proposed action is unlawful, and that where a statute confers authority on an agency to create specific exemptions, broader authority to create other types of exemptions cannot be inferred. (Earthjustice, No. 179 at pp. 1–3)

NEMA stated that the proposed circadian-friendly integrated LED lamp exemption could lead to standards being set at the State level, resulting in a patchwork of product regulations. NEMA recommended that DOE finalize a rule that creates no exemptions and sets minimum ELs for all GSLs, regardless of product claims. NEMA recommended that DOE work with stakeholders to develop better, more useful definitions, and to set minimum ELs for energy conservation standards that will allow the market to develop and mature. (NEMA, No. 183 at p. 4).

Based on the comment received, DOE does not have sufficient information to establish a separate product class for circadian-friendly integrated LED lamps. (See 42 U.S.C. 6295(q)) Therefore, DOE is not exempting circadian-friendly integrated LED lamps from the GSL definition in this final rule. As a result, these lamps will be subject to the standards for GSLs.

With regards to the specific definition of circadian-friendly lamps, CLASP, NYSERDA, and the CEC commented that DOE's proposed definition of circadian-friendly integrated LED lamps is too broad and recommended that DOE include more specific requirements. (CEC, No. 176 at p. 3; NYSERDA, No. 166 at pp. 2–3; CLASP, No. 177 at pp. 3–4) Specifically, NYSERDA stated that the proposed definition called only for a ''decrease'' in blue light without providing more strict specific guidance (*i.e.,* ''decreasing by 90 percent'') or requiring removal of blue light. NYSERDA commented that the definition could be met by minimal design modifications targeting blue wavelengths, with the result that inefficient LED lamps in popular form factors could continue to be available without producing positive health outcomes. (NYSERDA, No. 166 at pp. 2–3) CLASP also recommended that DOE not include language like ''one setting that decreases or removes standard spectrum radiation'' and rather specify that such lamps should only—and always—operate in this modified mode. CLASP offered the example of DOE subjecting ''modified-spectrum'' GSLs which had a neodymium coating on the glass to an adjusted efficacy level because of the modified-spectrum feature. (CLASP, No. 177 at pp. 3–4) NYSERDA also stated that the other criteria in DOE's proposed definition (*i.e.,* marketing, replacement wattage, and packaging) could also be easily adjusted to meet the definition through minimal manufacturer changes. (NYSERDA, No. 166 at pp. 2–3) EEI stated that it was unclear how efficiency connected to DOE's proposed criteria that circadian-friendly integrated LED lamps be sold in packages of two lamps or less. Regarding the criteria that the lamp be designed and marketed as an equivalent replacement for a 40 W or 60 W incandescent lamp, EEI stated that there could be replacements for other wattage equivalents such as 100 W incandescent or 72 W halogen. (EEI, Public Meeting Transcript, No. 27 at pp. 19–20)

DOE believes at this time that circadian friendly integrated LED lamps do not possess unique attributes compared to other GSLs. There is no consensus on specific lamp attributes that meaningfully impact the human circadian cycle. The human circadian system's response curves are not yet fully understood and the proper dosing of light to achieve circadian effects has not been standardized. Therefore, DOE finds that an accurate definition of a circadian-friendly integrated LED lamp is not possible and the claim that these lamps provide unique utility is not accurate at this time. Accordingly, DOE is declining to adopt a definition of circadian-friendly integrated LED lamp at this time, which is consistent with comments on the proposed rule. As noted above, DOE is not exempting circadian-friendly integrated LED lamps from the GSL definition in this final rule and as a result, these lamps will be subject to the standards for GSLs.

3. Scope of Standards

In the January 2023 NOPR, DOE stated that it was not assessing standards for general service organic light-emitting diode (''OLED'') lamps, a type of GSL, in this rulemaking. 88 FR 1638, 1653. Due to the lack of commercially available GSLs that use OLED technology, in the January 2023 NOPR DOE determined that it is unclear whether the efficacy of these products can be increased. DOE tentatively determined that standards for these lamps would not be technologically feasible and did not evaluate them in the January 2023 NOPR. DOE did not receive any comments on this proposal. In this final rule, DOE continues to not evaluate standards for general service OLED lamps for the reasons stated previously.

DOE received comments that it should create separate product classes and thereby standards for each of the following lamp types: (1) lamps that change the lamp's correlated color temperature (''CCT''); (2) lamps that change the lamp to be a colored lamp; (3) lamps that are capable of operating

in standby mode and have at least one additional feature that does not control light output; and (4) lamps that are non-integrated and capable of operating in standby mode. In this rulemaking, DOE did not analyze amended standards for these lamp categories because DOE lacks sufficient information about the performance of these lamps given the rapidly evolving market. DOE has carefully reviewed the lamp categories and determined that because the markets for these lamps are rapidly developing, DOE is unable to make a clear and accurate determination regarding the consumer utility, how various technology options would affect the efficiency, and the maximum technologically feasible efficiency of these lamps, which prevents DOE from determining whether a specific standard for these lamps would be economically justified at this time. Accordingly, DOE did not consider standards for these lamps in this rulemaking. DOE may evaluate amended standards for these lamps in a future rulemaking. DOE notes that these lamps are still subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd). For a full discussion of these comments and DOE's responses, *see* section IV.B.2 of this document.

In the January 2023 NOPR, DOE proposed to exempt circadian-friendly integrated LED lamp (see section IV.A.2 of this document) from amended standards because these lamps offered a utility to consumers in the form of aiding in the human sleep-wake (*i.e.,* circadian) cycle and also these lamps did not have high efficacies. 88 FR 1638, 1652. DOE received several comments citing concerns regarding potential loopholes resulting from such an exemption from standards. ASAP *et al.,* CLASP, NYSERDA, and the CEC commented that DOE's proposal to exclude circadian-friendly integrated LED lamps from GSL regulation would risk creating a loophole and allow inefficient lamps on the market. (CEC, No. 176 at p. 3; NYSERDA, No. 166 at pp. 2–3; CLASP, No. 177 at pp. 3–4; ASAP *et al.,* No. 174 at pp. 1–2) NEMA stated that the circadian-friendly integrated lamp definition and exemption could provide manufacturers an opportunity to evade regulations. (NEMA, No. 183 at p. 4) DOE also received comments on the utility of circadian-friendly integrated LED lamps. NYSERDA commented that these lamps provide general illumination and found no clear evidence of a utility that justified exempting the lamps. (NYSERDA, No. 166 at p. 2) NEMA stated that the human circadian system's response curves are not yet fully understood and the proper dosing of light to achieve circadian effects has not been standardized. NEMA noted that IES RP–46 Recommended Practice: Supporting the Physiological and Behavioral Effects of Lighting in Interior Daytime Environments is still in development. NEMA commented some spectrally tunable lamps are marketed with ''circadian features'' entrainment but there are reasons to dismiss such claims because the ability to affect circadian entrainment is not a product attribute but a matter of proper lighting product application (*i.e.,* attention to timing, intensity, spectrum and duration of the applied light). Further NEMA commented that the two circadian-friendly integrated LED lamps cited in the January 2023 NOPR could be applied in such a way as to not produce the claimed circadian effects and offer a limited representation of the circadian entrainment potential as they only decrease or remove blue light to promote better sleep while other products can be programmed to provide more or less blue light by time of day. (NEMA, No. 183 at pp. 3–4)

DOE also received comments addressing DOE's observed lower efficacy of the circadian-friendly integrated LED lamps and suggestions to establish appropriate standards for these lamps instead of exempting them from standards. ASAP *et al.* commented that DOE's proposal to exempt circadian-friendly integrated LED lamps because it had observed an efficacy range of 47.8 lm/W to 85.7 lm/W suggested DOE assumed that the lower efficacy is representative of this technology. ASAP *et al.* stated that this may not be the case, as many common integrated omnidirectional short lamps on the market today have efficacies of 80–90 lm/W, which is similar to those of some of the circadian-friendly lamps identified by DOE. (ASAP *et al.,* No. 174 at pp. 1–2) CLASP and ASAP *et al.* commented that circadian-friendly lamps are based on the same design principles as other LED lamps (*e.g.,* improved drivers and LED chips) and therefore can be made more efficient in the same way. CLASP and ASAP *et al.* commented that, rather than exempting the lamps, DOE should determine the technologically justified efficacy adjustment for these lamps. (ASAP *et al.,* No. 174 at pp. 1–2; CLASP, No. 177 at pp. 3–4)

Similarly, NYSERDA, the CEC, and the CA IOUs recommended that DOE consider establishing a separate product class targeting circadian-friendly products at a level slightly lower than currently proposed for most product classes of GSLs. (NYSERDA, No. 166 at pp. 2–3; CA IOUs, No. 167 at p. 3; CEC, No. 176 at p. 3–4) NYSERDA commented that such a product class should include a clear definition and serve a specific health utility. (NYSERDA, No. 166 at pp. 2–3) The CEC also stated that the definition should include specific and objective features, such as color shifting, that can provide a basis for determining the additional power required to efficiently provide one or more specific circadian benefits. (CEC, No. 176 at p. 3–4) NYSERDA and the CEC stated that the product class approach based on a well-defined lamp type would achieve DOE's intent to preserve the circadian-friendly integrated LED lamps while limiting a loophole that would result in inefficient LED lamps on the market. (NYSERDA, No. 166 at pp. 2–3; CEC, No. 176 at p. 3–4) The CA IOUs commented that circadian-friendly integrated LED lamps are in early stages of development and there is no industry-wide definition of ''circadian-friendly'' lighting. The CA IOUs recommended that circadian-friendly integrated LED lamps be defined as proposed in the January 2023 NOPR but be subjected to a reasonable minimum luminous efficacy requirement. Additionally, the CA IOUs recommended that DOE require manufacturers to report shipments of circadian-friendly integrated LED lamps and issue public reports on shipment growth. The CA IOUs added that DOE could then make informed adjustments to the definition and standards as necessary for circadian-friendly integrated LED lamps in a future GSL rulemaking. (CA IOUs, No. 167 at p. 3)

Based on the comments received, there is no clear consensus on specific lamp attributes that meaningfully impact the human circadian cycle. The human circadian system's response curves are not yet fully understood and the proper dosing of light to achieve circadian effects has not been standardized. Further, as pointed out by the commenters, there are circadian-friendly integrated LED lamps with comparable efficacies to other GSLs. As a result, DOE does not have sufficient information to establish a separate product class for circadian-friendly integrated LED lamps. (See 42 U.S.C. 6295(q)) And as Earthjustice noted, DOE agrees that the proposed GSL exemption for circadian-friendly LED lamps would mean that these lamps would no longer be subject to the 45 lm/W backstop standard level or any standard, an action EPCA's anti-backsliding provision explicitly forbids. Consistent with these and the above comments, DOE is including circadian-friendly

integrated LED lamps within the scope of amended standards. DOE notes, however, that it could decide not to amend existing standards for circadian-friendly integrated LED lamps in a future rulemaking if so warranted by a product class designation.

Relatedly, while all GSLs are subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd), not all GSLs are subject to the amended standards adopted in this final rule, though DOE may consider amended standards for them in a future rulemaking. In this rulemaking, DOE is analyzing and adopting amended standards for CFLs and general service LED lamps that have a lumen output within the range of 310–3,300 lumens; have an input voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between 220 to 240 volts, or of 277 volts for integrated lamps, or are able to operate at any voltage for non-integrated lamps; and do not fall into any exclusion from the GSL definition at 10 CFR 430.2. In this rulemaking as specified in § 430.32(dd)(1)(iv)(C), DOE is not analyzing and adopting amended standards for general service organic LED lamps and any GSL that:

(1) Is a non-integrated lamp that is capable of operating in standby mode and is sold in packages of two lamps or less;

(2) Is designed and marketed as a lamp that has at least one setting that allows the user to change the lamp's CCT and has no setting in which the lamp meets the definition of a colored lamp (as defined in 10 CFR 430.2); and is sold in packages of two lamps or less;

(3) Is designed and marketed as a lamp that has at least one setting in which the lamp meets the definition of a colored lamp (as defined in 10 CFR 430.2) and at least one other setting in which it does not meet the definition of colored lamp (as defined in 10 CFR 430.2) and is sold in packages of two lamps or less; or

(4) Is designed and marketed as a lamp that has one or more component(s) offering a completely different functionality (*e.g.,* a speaker, a camera, an air purifier, etc.) where each component is integrated into the lamp but does not affect the light output of the lamp (*e.g.,* does not turn the light on/off, dim the light, change the color of the light, etc.), is capable of operating in standby mode, and is sold in packages of two lamps or less. Lamps that would not meet these criteria and therefore would not be exempt from standards would be lamps that have integrated motion sensors that affect light output, lamps with internal battery backup used for light output, and lamps designed and marketed as dusk to dawn lamps.

Please note that DOE is not exempting circadian-friendly integrated LED lamps from the GSL definition or the scope of standards in this final rule. As a result, these lamps will be subject to the standards for GSLs.

4. Scope of Metrics

As stated in section II.A, this rulemaking is being conducted pursuant to 42 U.S.C. 6295(i)(6)(B) and (m). Under 42 U.S.C. 6295(i)(6)(B)(i)(I), DOE is required to determine whether standards in effect for GSILs should be amended to reflect lumen ranges with more stringent maximum wattage than the standards specified in paragraph (1)(A) (*i.e.,* standards enacted by section 321(a)(3)(A)(ii) of EISA [26]). The scope of this analysis is not limited to incandescent lamp technologies and thus encompasses all GSLs. In the January 2023 NOPR, DOE explained that the May 2022 Backstop Final Rule codified the statutory backstop requirement in 42 U.S.C. 6295(i)(6)(A)(v) prohibiting sales of GSLs that do not meet a 45 lm/W efficacy standard. Because incandescent and halogen GSLs would not be able to meet the 45 lm/W requirement, they are not considered in the analysis for this rulemaking. In the January 2023 NOPR, DOE discussed its decision to use minimum lumens per watt as the metric for measuring lamp efficiency for GSLs rather than maximum wattage of a lamp. 88 FR 1638, 1653. DOE did not receive comments on this decision. In this final rule, DOE continues to use minimum lumens per watt as the metric for measuring lamp efficiency for GSLs.

In the January 2023 NOPR, DOE also discussed proposed updates to existing metrics and the proposed addition of new metrics for GSLs. These included updating the existing lumen maintenance at 1,000 hours and at 40 percent of lifetime, rapid cycle stress test, lifetime requirements, and adding a power factor and start time requirement for MBCFLs. DOE also proposed adding a power factor requirement for integrated LED lamps. Finally, DOE proposed codifying color rendering index (''CRI'') requirements for lamps that are intended for a general service or general illumination application (whether incandescent or not); have a medium screw base or any other screw base not defined in ANSI C81.61–2006 [27]; are capable of being operated at a voltage at least partially within the range of 110 to 130 volts; and are manufactured or imported after December 31, 2011 as specified in section 321(a) of EISA. 88 FR 1638, 1653. The following sections discuss the comments received on these proposals.

a. Lifetime

NYSERDA commented that it supports DOE's proposed increase to a 10,000-hour lifetime for MBCFLs and recommended DOE consider adding a 10,000-hour-minimum requirement for LED lamps to ensure consumer needs are met. (NYSERDA, No. 166 at p. 3)

DOE only has authority to amend the lifetime requirement for MBCFLs, not LED lamps. The Energy Policy Act of 2005 (''EPAct 2005'') amended EPCA by establishing energy conservation standards for MBCFLs, which were codified by DOE in an October 2005 final rule. 70 FR 60413. Performance requirements were specified for five metrics: (1) minimum initial efficacy; (2) lumen maintenance at 1,000 hours; (3) lumen maintenance at 40 percent of lifetime; (4) rapid cycle stress; and (5) lamp life. (42 U.S.C. 6295(bb)(1)) In addition to revising the existing requirements for MBCFLs, DOE has the authority to establish requirements for additional metrics including CRI, power factor, operating frequency, and maximum allowable start time based on the requirements prescribed by the August 9, 2001 ENERGY STAR® Program Requirements for CFLs Version 2.0, or establish other requirements after considering energy savings, cost effectiveness, and consumer satisfaction. (42 U.S.C. 6295(bb)(2)–(3)) Based on this authority, in the January 2023 NOPR, DOE proposed to update the existing lifetime requirement for MBCFLs. The only metric that DOE proposed for LED lamps was a minimum power factor for integrated LED lamps. DOE finds that it has the authority to set this metric because power factor impacts energy use. A low power factor product is inefficient and

[26] This provision was to be codified as an amendment to 42 U.S.C. 6295(i)(1)(A). But because of an apparent conflict with section 322(b) of EISA, which purported to ''strik[e] paragraph (1)'' of section 6295(i) and replace it with a new paragraph (1), neither this provision nor other provisions of section 321(a)(3)(A)(ii) of EISA that were to be codified in 42 U.S.C. 6295(i)(1) were ever codified in the U.S. Code. *Compare* EISA, section 321(a)(3)(A)(ii), *with* 42 U.S.C. 6295(i)(1). It appears, however, that Congress's intention in section 322(b) of EISA was to replace the existing paragraph (1), not paragraph (1) as amended in section 321(a)(3). Indeed, there is no reason to believe that Congress intended to strike these new standards for GSILs. DOE has thus issued regulations implementing these uncodified provisions. *See, e.g.,* 10 CFR 430.32(x) (implementing standards for GSILs, as set forth in section 321(a)(3)(A)(ii) of EISA).

[27] American National Standards, ''for electrical lamp bases—Specifications for Bases (Caps) for Electric Lamps,'' approved August 25, 2006.

requires an increase in an electric utility's generation and transmission capacity. (*See* further details on the power factor requirement for integrated LED lamps in section IV.A.4.c of this document.)

b. Color Rendering Index (''CRI'')

NYSERDA stated its support for the inclusion of a minimum of 80 CRI for non-modified-spectrum GSLs, noting that an 80 CRI or above has been demonstrated to ensure sufficient visual acuity for general illumination situations. (NYSERDA, No. 166 at p. 3) EEI stated that while a CRI of 80 was adequate, a higher CRI is always better and a CRI of 90 would be preferable, if possible. (EEI, Public Meeting Transcript, No. 27 at pp. 24–26) NEMA stated its support for DOE's proposal to codify a minimum CRI of 80 but requested the requirement apply to all GSLs within the scope of the rulemaking rather than only to those with medium screw bases or any other screw base not defined in ANSI C81.61–2006, as specified in the January 2023 NOPR. NEMA stated that the proposed CRI requirement excludes many lamps in the scope of this regulation that are already normalized at a minimum CRI of 80 due to consumer preference and therefore their inclusion in the requirement would pose no regulatory burden for manufacturers. Further, NEMA stated its concern that as an offset to the new efficacy and performance requirements, the removal of a consistent regulated threshold will incentivize market introduction of lower CRI products. Additionally, NEMA stated that to its knowledge, there are no modified-spectrum incandescent lamps in the U.S. market today and recommended that all mentions of ''modified spectrum'' be excluded from the final rule. In the event that regulatory requirements for this product category must be maintained, NEMA recommended that all requirements for modified spectrum lamps be made identical to those of the non-modified spectrum lamps. (NEMA, No. 183 at p. 5)

These CRI requirements are from section 321(a) of EISA, which amended 42 U.S.C. 6295(i)(1). But because of an apparent conflict with section 322(b) of EISA, which purported to strike paragraph (1) of 42 U.S.C. 6295(i) and replace it with a new paragraph (1), neither this provision nor other provisions of section 321(a)(3)(A)(ii) of EISA that were to be codified in 42 U.S.C. 6295(i)(1) were ever codified in the U.S. Code. It has been DOE's position that Congress's intention in section 322(b) of EISA was to replace the existing paragraph (1), not the newly amended paragraph (1). There is no reason to believe that Congress intended to amend 42 U.S.C. 6295(i) to include requirements for CRI only to delete those the requirements in the same Act. *See* 88 FR 1638, 1653. In the January 2023 NOPR, DOE proposed to codify the CRI requirements in section 321(a) of EISA and mistakenly included a 2028 compliance date for CRI requirements. 88 FR 1638, 1654, 1719. However, section 321(a)(3)(A)(ii) of EISA and 42 U.S.C. 6295(i)(1) specify that these CRI requirements apply to lamps manufactured or imported after December 31, 2011. Because DOE lacks the legal authority to change the compliance date of CRI requirements established in EISA, DOE is declining to codify the CRI requirements in this rulemaking and will, instead, conduct a separate rulemaking to codify these requirements.

c. Power Factor

In the January 2023 NOPR, DOE proposed a minimum power factor requirement of 0.5 for MBCFLs and 0.7 for integrated LED lamps. 88 FR 1638, 1654. The CEC stated its support for DOE's proposal to include a minimum power factor for MBCFLs and integrated LED lamps. The CEC stated that as the number of LED lamps increases, harmonic waves sent over the power grid can cause issues, requiring expensive equipment to correct such issues and if uncorrected, harmonic waves will reduce the quality of power delivered to all electrical loads, including lamps, and the grid will experience avoidable losses. (CEC, No. 176 at pp. 4–5) NYSERDA stated its support for a power factor requirement of 0.7 for integrated LED lamps as established by ENERGY STAR. (NYSERDA, No. 166 at p. 3)

Hawaii State Energy Office (''HSEO'') stated that it supported a minimum power factor of 0.9 with certain exemptions for specialty lamps. HSEO further stated that regarding lamps of less than 5 W, given the efficacy of CFLs and LED lamps, 0.7 would be an appropriate minimum power factor. (HSEO, Public Meeting Transcript, No. 27 at p. 36) EEI also stated that both CFLs and LED lamps should have power factors over 0.9 as low power factors are not good for the grid and there are commercial customers that face financial penalties if their power factors go below 0.9. (EEI, Public Meeting Transcript, No. 27 at pp. 24–26)

NEMA recommended that DOE specify minimum power factors by wattage rather than setting a minimum power factor for all integrated LED lamps. NEMA stated that DOE should adopt the power factor requirements set forth in ANSI C82.77–10 without modification. Specifically, in its comment NEMA provides a table from ANSI C82.77–10 with the following power factor requirements: no minimum power factor for lamps less than or equal to 5 W, a minimum power factor of 0.57 for lamps 5 W to 25 W inclusive, and a minimum power factor of 0.86 for lamps greater than 25W. (*Note:* The table also specifies requirements for the minimum displacement factor, but it is not clear from NEMA's statements whether it is recommending DOE should require this additional requirement.) NEMA also noted that ENERGY STAR requirements are similarly less strict for low power lamps—*i.e.,* no minimum power factor for lamps less than or equal to 5 W, a minimum power factor of 0.6 for lamps greater than 5W to less than or equal to 10 W, and a minimum power factor of 0.7 for lamps greater than 10W. (NEMA, No. 183 at pp. 4–5, 40–41)

NEMA provided several reasons for using the wattage-tiered approach to power factor requirements specified in ANSI C82.77–10. NEMA stated that these requirements align with the International Electrotechnical Commission (''IEC'') standard and Global Lighting Association recommendations. NEMA stated that any reduction of imaginary current (which causes electrical losses in the equipment of the power company) from the proposed increase in power factor will be minimal compared to that due to the proposed increases in efficacy. NEMA stated that a single higher power factor requirement for products of all wattages will increase the amount of electronics in lamps and thereby the size of the lamps, especially posing a problem for small, low power lamps, and increasing the manufacturing burden to achieve the regulated efficacies. NEMA also stated that additional electronics required to achieve the higher power factor causes a small, unavoidable decrease in efficacy. Further, NEMA stated that there is a correlation between low power lamps and low power factor. (NEMA, No. 183 at pp. 4–5)

Regarding data available for determining an appropriate power factor requirement, Signify and Westinghouse stated that databases from sources such as ENERGY STAR contain a limited number of products that are not always representative of the entire market and DOE should be cautious of using them to develop requirements that apply to all lamps on the market. (Signify, Public Meeting Transcript, No. 27 at p. 29;

Westinghouse, Public Meeting Transcript, No. 27 at pp. 30–31)

In the January 2023 NOPR and in this final rule, DOE considered ENERGY STAR Lamps Specification V2.1 requirements,[28] industry standards, and characteristics of lamps in the current market when selecting power factor requirements for MBCFL and integrated LED lamps. 88 FR 1638, 1654. The assessment of lamps in the current market was based on the lamps database developed for the NOPR analysis and this final rule analysis (*see* section IV.D of this document). This lamps database is a comprehensive accounting of lamps on the market as it includes data from manufacturer catalogs, DOE's compliance certification database, retailer websites, and the ENERGY STAR Certified Light Bulbs database. Hence, DOE considered power factor requirements based on data that is representative of all lamps on the market.

Passive and active technologies that can correct power factors in lamps are commercially available and the circuitry used in power factor correction is made to be very efficient, while consuming small amounts of power. DOE reviewed the current U.S. market via its lamps database used in this analysis (*see* section IV.D of this document) and found that about 98 percent of integrated LED lamps have power factors of 0.7 or greater. DOE also found numerous low-wattage LED lamps from 2 to 5 W, on the market, that are within the covered lumen range of GSLs, have a power factor of 0.7 or greater, and meet the max tech levels for integrated LED lamps. Hence, DOE finds that a power factor requirement of 0.7 for integrated LED lamps is achievable for lamps across all wattages and does not prevent these lamps from meeting or exceeding the max-tech levels across the full lumen range. Therefore, in this final rule, DOE is adopting the power factor requirements as proposed in the January 2023 NOPR for MBCFLs and integrated LED lamps.

d. Summary of Metrics

Table IV.1 summarizes the non-efficacy metrics being adopted in this rulemaking (efficacy metrics are discussed in the engineering analysis; *see* section IV.D of this document). For MBCFLs, performance requirements were specified for five metrics: (1) minimum initial efficacy; (2) lumen maintenance at 1,000 hours; (3) lumen maintenance at 40 percent of lifetime; (4) rapid cycle stress; and (5) lamp life. (42 U.S.C. 6295(bb)(1)) In addition to revising the existing requirements for MBCFLs, DOE has the authority to establish requirements for additional metrics including CRI, power factor, operating frequency, and maximum allowable start time based on the requirements prescribed by the August 9, 2001 ENERGY STAR® Program Requirements for CFLs Version 2.0, or establish other requirements after considering energy savings, cost effectiveness, and consumer satisfaction. (42 U.S.C. 6295(bb)(2)–(3)) DOE is also establishing a minimum power factor for integrated LED lamps. DOE finds that it has the authority to set this metric because power factor impacts energy use. (42 U.S.C. 6295(bb)(3)(B)) A low power factor product is inefficient and requires an increase in an electric utility's generation and transmission capacity. DOE has determined that these new metrics for MBCFLs and integrated LED lamps will provide consumers with increased energy savings and/or consumer satisfaction for those products capable of achieving the adopted standard levels. DOE has existing test procedures for the metrics being proposed. (*See* sections III.C and IV.A.5 of this document for more information on test procedures for GSLs.) Further, DOE has concluded that the new metrics being adopted in this rule will not result in substantial testing burden, as many manufacturers already test their products according to these metrics.

[28] ENERGY STAR Lamps Specification V2.1, ENERGY STAR Program Requirements for Lamps (Light Bulbs), January 2, 2017. Available at: *www.energystar.gov/sites/default/files/ENERGY%20STAR%20Lamps%20V2.1%20Final%20Specification.pdf.*

Table IV.1 Non-Efficacy Metrics for Certain GSLs

Lamp Type	Metric	Minimum Standard Considered
MBCFLs	Lumen maintenance at 1,000 hours	90 percent of initial lumen output at 1,000 hours
	Lumen maintenance at 40 percent of lifetime*	80 percent of initial lumen output at 40 percent of lifetime
	Rapid cycle stress	MBCFL with start time >100 ms: survive one cycle per hour of lifetime* or a maximum of 15,000 cycles. MBCFLs with a start time of ≤ 100 ms: survive one cycle per every two hours of lifetime*.
	Lifetime*	10,000 hours
	Power factor	0.5
	CRI	80
	Start time	The time needed for a MBCFL to remain continuously illuminated must be within: (1) one second of application of electrical power for lamp with standby mode power (2) 750 milliseconds of application of electrical power for lamp without standby mode power.
Integrated LED Lamps	Power factor	0.7
* Lifetime refers to lifetime of a CFLs as defined in 10 CFR 430.2.		

5. Test Procedure

As noted in section III.C of this document, GSILs and certain IRLs, CFLs, and LED lamps are GSLs. DOE's test procedures for GSILs and IRLs are set forth at 10 CFR part 430, subpart B, appendix R. DOE's test procedure for CFLs is set forth at 10 CFR part 430, subpart B, appendix W. DOE's test procedure for integrated LED lamps is set forth at 10 CFR part 430, subpart B, appendix BB. DOE's test procedure for GSLs that are not GSILs, IRLs, CFLs, or integrated LED lamps is set forth at 10 CFR part 430, subpart B, appendix DD.

DOE received comments on some of DOE's test procedures applicable to GSLs. NEMA stated that section 3.1.4 in appendix BB and section 3.5 in appendix DD specifies testing be done at the ''maximum input power'' and for a color-tunable (multi-primary) lamp this will typically occur when all LED packages within are driven at 100-percent output. NEMA stated that when all primary color sources (*e.g.,* R, G, B, and W) are at full output, the chromaticity coordinates of the whole lamp may not be on or even close to the blackbody locus, about which white light chromaticities are standardized. Further, NEMA stated that depending on the exact parameters of the LED packages within, the chromaticity coordinates for this operating condition may not be in the range for which the color-rendering index, as defined in International Commission on Illumination 13.3, is a valid metric. NEMA stated that at the maximum input power condition, the lamp may not be operating as a GSL, but as a colored lamp. NEMA further commented that section 5.1 of the ENERGY STAR lamps V2.1 specification states that testing is to be done at the most consumptive white light setting covered by the specification. NEMA stated that this approach guarantees a tested lamp will operate in the GSL region with a chromaticity defined by ANSI C78.377 and accepted as ''white'' light. NEMA stated that DOE should amend its test procedures to require testing for color-tunable lamps at the highest input power nominal white chromaticity as defined in ANSI C78.377. (NEMA, No. 183 at pp. 21–22)

NEMA further stated that lamps with four or more primary colors exhibit a wider gamut area and will be able to produce a consumer-selected chromaticity with many different settings of those primaries. NEMA commented that, for example, a lamp may have one mode to maximize light output and another to maximize color rendering, and that the input power is likely to differ among modes. NEMA recommended that where the same chromaticity can be achieved with multiple primary settings, DOE should allow the manufacturer to determine the test conditions and provide instruction for how to repeat the condition for the highest input power white light chromaticity as per ANSI C78.377. (NEMA, No. 183 at pp. 21–22)

DOE is exempting from standards adopted in this final rule lamps that allow consumers to change the lamp from a non-colored lamp to a colored lamp (as defined in 10 CFR 430.2), which is referred to in NEMA's comment as a color tunable lamp. DOE appreciates NEMA's comments on how the test procedure might be amended to better address these products and encourages NEMA to submit them during an active rulemaking to amend the test procedure for integrated LED lamps and other GSLs. DOE is not amending any test procedure in this final rule.

NEMA stated that section 3.4 of appendix DD states to operate non-integrated LED lamps at the

manufacturer declared input voltage and current, which only provides a partial description of the testing conditions and does not represent a repeatable test condition for Type A or Type C linear LED lamps (''TLEDs''). NEMA stated it is repeating the point made in the 2016 GSL test procedure rulemaking that frequency and waveform are important parameters that vary among LED lamps. NEMA stated that DOE should amend the test procedure to allow testing with a manufacturer-designated commercial ballast in alignment with ANSI C78.53, and DOE should accept ANSI C78.53 testing for compliance with this rule. NEMA stated that manufacturers would specify performance ratings, indicate a ballast factor associated with those ratings, and identify the compatible ballast type and model. (NEMA, No. 183 at p. 21)

In the January 2023 NOPR, DOE did not propose amendments to the GSL test procedures. DOE cannot amend a test procedure without allowing opportunity for comment on proposed changes. DOE notes that it received similar comments regarding testing non-integrated LED lamps in response to the test procedure rulemaking for GSLs that culminated in a final rule published on October 20, 2016 (''October 2016 TP Final Rule''). 81 FR 72493. In that final rule, DOE concluded that requiring manufacturers to specify input voltage and current and operate the lamp at full light output resulted in a repeatable test procedure that allows for performance to be more fairly compared. 81 FR 72493, 72496. DOE will consider the comments including new information regarding testing of non-integrated LED lamps provided in this rulemaking in a future test procedure rulemaking.

B. Market and Technology Assessment

DOE develops information in the market and technology assessment that provides an overall picture of the market for the products concerned, including the purpose of the products, the industry structure, manufacturers, market characteristics, and technologies used in the products. This activity includes both quantitative and qualitative assessments, based primarily on publicly available information. The subjects addressed in the market and technology assessment for this rulemaking include (1) a determination of the scope of the rulemaking and product classes, (2) manufacturers and industry structure, (3) existing efficiency programs, (4) shipments information, (5) market and industry trends, and (6) technologies or design options that could improve the energy efficiency of GSLs. The key findings of DOE's market assessment are summarized in the following sections. *See* chapter 3 of the final rule TSD for further discussion of the market and technology assessment.

1. Concerns Regarding LED Lamp Technology

DOE received 158 comments from private citizens.[29] The comments, along with those from Soft Lights and Friends of Merrymeeting Bay, focused on various concerns regarding LED lamp technology including health impacts, lamp attributes, application, consumer costs, and manufacturer impacts. In this rulemaking, LED lamp technology is considered as a means for improving the energy efficiency of GSLs (*see* section IV.C of this document) and will be needed to achieve the standards being adopted in this final rule (*see* section V.C of this document). DOE has reviewed the concerns expressed in comments from private citizens and continues to consider LED lamp technology as a means for improving energy efficiency of GSLs in this rulemaking. The sections below provide a general summary of the comments received from private citizens and DOE responses.

a. Health Impacts

DOE received comments from private citizens that LED lamps can lead to adverse health effects (*e.g.,* headaches, eye strain, sleep issues, seizures). Commenters stated that this was due to the blue light that LED lamps emit and their overall brightness, which are issues that do not occur with incandescent or halogen lamps. In the May 2022 Backstop Final Rule and May 2022 Definition Final Rule DOE also received comments on potential adverse health effects of LED lamps. In the May 2022 Backstop Rule, DOE responded to these comments, stating that DOE researched studies and other publications to ascertain any known impacts of LED lamps on human health and has not found any evidence concluding that LED lighting used for general lighting applications directly results in adverse health effects. 87 FR 27439, 27457. In the May 2022 Definition Final Rule, DOE also stated it had considered the comments. DOE further stated it had considered the potential for health benefits of emissions reductions from reducing energy use by the covered products. In that rule, DOE maintained that the final rule's definitional changes appropriately promote EPCA's goals for increasing the energy efficiency of covered products through the establishment and amendment of energy conservation standards and promoting conservation measures when feasible. 42 U.S.C. 6291 *et seq.,* as amended. 87 FR 27461, 27468. (*See* May 2022 Backstop Final Rule and May 2022 Definition Final Rule for full comments and responses.) Additionally, Soft Lights filed a petition requesting DOE withdraw the May 2022 Backstop Final Rule and May 2022 Definition Final Rule. Soft Lights' petition asserted that LED lamps do not provide uniform illumination, do not emit light that disperses following the inverse square law, and are not regulated with regards to comfort, health or safety by the U.S. Food and Drug Administration (''FDA''). DOE denied the petition stating that granting Soft Light's request would be inconsistent with statutory law. Further, DOE declined to comment on Soft Light's assertion that the FDA has failed to publish comfort, health, or safety regulations for LEDs, stating these arguments are not for consideration by DOE. DOE also stated it is not aware of any prohibition on the use of LED lighting that would have impacted its rulemakings. 88 FR 16869, 16870. DOE notes that the FDA has authority to regulate certain aspects of LED products as radiation-emitting devices and has issued performance standards for certain types of light-emitting products.[30] Currently, there are no FDA performance standard for LED products in part 1040. DOE is not currently aware or any prohibition on the use of LED lighting that would impact this rulemaking.

In this final rule, DOE maintains its responses in previous rulemakings and petition denials regarding potential adverse health impacts of LED lamps.

DOE also received comments that LED lamps have adverse health effects on animal and plant life. Commenters stated that LED lamps contain toxic waste, plastic waste, and substances that pollute the land and water. DOE has not found any information or data indicating LED lamps contain toxic waste. In reviewing general guidelines for disposing of LED lamps, DOE found that either there is no guidance, or the guidance is to recycle them as electronic products. Hence DOE finds that LED lamps are similar in terms of the waste

[29] Comments submitted in response to the January 2023 NOPR, including comments from private citizens can be found in the docket of DOE's rulemaking to develop energy conservation standards for GSLs at *www.regulations.gov/docket/EERE–2022–BT–STD–0022/comments.*

[30] *See,* the Federal Food, Drug and Cosmetic Act section 531 *et seq.;* 21 U.S.C. 360KK; and 21 CFR part 1040.

produced by any other electronic products. Given LED lamp lifetime, most LED lamps will last longer and therefore not need to be replaced as frequently as other lamp technologies, leading to less waste. Further, DOE's research found no sources indicating that LED lamps covered under the GSL definition have adverse impacts on animal or plant life.

Based on the previous assessments, DOE continues to consider LED lamp technology as a means for improving energy efficiency of GSLs in this rulemaking (*see* section IV.C of this document).

b. Lamp Attributes

DOE received comments that LED lamps are failing prematurely (*e.g.,* burning out or changing color) before their marketed lifetime (*e.g.,* failure at 6 months, at 10 percent of marketed lifetime). Commenters attributed this to overheating of components. DOE reviewed the latest industry articles, journals, and research reports on this topic. DOE's research indicates that premature LED lamp failure can be attributable to factors including poorly designed lamps, power surges, or incompatible fixtures, among others. However, DOE has not found data or reports indicating that premature LED lamp failure is a significant problem with lamps offered on the market.

Flicker in LED lamps was also cited as an issue by commenters. Commenters stated that this could be due to installing LED lamps on existing dimmers. DOE reviewed the latest industry articles, journals, and research reports on this topic. While flicker was an issue in the early stages of LED lamp technology development, DOE's research has indicated no evidence that it remains a prevalent issue with lamps currently on the market. Flicker in LED lamps can occur due to use with an incompatible dimmer switch. Not all incandescent/halogen dimmers (*i.e.,* phase-cut control dimmers) are incompatible with LED technology. NEMA's Solid State Lighting (''SSL'') 7A, which provides basic requirements for phase-cut dimming of LED light sources, includes a list of forward phase-cut dimmers and scenarios in which they can be compatible with LED technology (*e.g.,* up to 125 W LED load). Further, in response to the May 2022 Definition Final Rule, NEMA had estimated 520 million out of 665 million decorative lamps on mostly switch-controlled sockets have already been converted to LED technology. DOE finds that NEMA's comment indicates that almost 80 percent of decorative lamps on switch-controlled sockets have already been converted to LED technology without a significant negative market reaction. 87 FR 27461, 27468. Further, manufacturers such as Signify, Green Creative, and Waveform Lighting are developing LED lamps that are compatible with a wider range of dimmer switches.

DOE also received comments that LED lamps emit unnatural blueish light that is too bright for regular use making them an inadequate replacement for incandescent and halogen lamps which emit light that mimics natural sunlight more closely. However, LED lamps are sold in a variety of color temperatures including the traditional 2700 K warm white CCT typically found in incandescent lamps. DOE's review of the market, including offerings at major retailers, indicates that these LED lamps are widely available on the market.

DOE received comments that LED lamps should be labeled with their peak luminance and this metric should be regulated. Commenters stated that the correct metric for measuring LED visible radiation is luminance (candela per square meter). Commenters further stated that the metric of lumens per watts can eliminate innovation with ultraviolet (''UV'') and infrared (''IR'') wavelengths that are used for color rendering and health benefits. Regarding labeling, the Federal Trade Commission specifies labeling requirements for products including GSLs (*see* 16 CFR 305.5(c)). As noted in section IV.A.4, this rulemaking uses lumens per watt as the metric to measure efficiency of GSLs. Lumens do include the measure of candela as they are the luminous flux emitted within a unit solid angle (one steradian) by a point source having a uniform luminous intensity of one candela.[31] Additionally, lumens are the measure by which lamp manufacturers specify light output on lamp specification sheets.

DOE also received comments that the owner's manuals for garage door openers state that they are designed for incandescent lamps and LED lamps can cause interference with the remote door openers. DOE reviewed the websites of manufacturers of the garage door openers mentioned in these comments. The websites cite universal LED lamps that can be used with garage door openers and would not cause interference. Further, Lighting Supply, a distributor of lamps for garages, states on its website that interference is primarily an issue with LED lamps from unknown manufacturers as most known brands are certified by the Federal Communications Commission, which requires lamps to have shielding within them to mitigate any radio frequency interference.

Additionally, DOE received comments that the use of LEDs in vehicle lights makes these lights bright and strenuous to eyes, creating hazardous driving conditions. In the analysis for the January 2017 Definition Final Rules, DOE determined that certain voltages and/or base types are typical for specialty lighting applications and excluded them from the GSL definition. 82 FR 7267, 7306, 7310. Typical specialty lighting applications include lamps used in vehicles.

Finally, DOE received comments that LED streetlights are too bright and when they degrade, the lights turn purple, flash on and off, and eventually burn out after a couple of years. DOE also received comments that LED lamps contribute to light pollution in the night sky. In response to similar comments received, in the May 2022 Backstop Final Rule DOE noted that the GSL definition excludes lamps with lumens greater than 3,300 and stated that streetlamps and lighting for construction applications are generally 5,000 lumens or greater. 87 FR 27439, 27457. Further, DOE's research of street lighting products shows that most products are sold as complete fixtures rather than as individual lamps and, therefore, would not fall within the GSL definition. As such, the lamps relevant to these comments are generally not covered as GSLs and therefore, not within the scope of the rulemaking.

Based on the above assessments, DOE does not find that there are issues with the lamp attributes of GSL LED lamps and continues to consider LED lamp technology as a means for improving the energy efficiency of GSLs (*see* section IV.C of this document).

c. Application

DOE received comments that LED lamps are too large to replace incandescent lamps in preexisting fixtures. Some commenters provided specifics—*i.e.,* B10 shape, E12 base LED lamps are 4 to 4.8 inches in length and 1.4 to 1.6 inches in width whereas their incandescent counterparts measure 3.8 inches in length and 1.25 inches in width. DOE reviewed several major manufacturer catalog and retailer websites and compared the specifications of the incandescent and LED version of B10 shape, E12 base lamps and found that the difference in width ranges from 0 to 0.05 inches and the difference in length ranges is 0.0 to 0.1 inches. DOE finds that these

[31] Illuminating Engineering Society, ''Lumens.'' Available at *www.ies.org/definitions/lumen/.*

differences in width and length are not as large as cited by the commenters and therefore, would likely not affect the usability of these lamps within existing fixtures. Hence, DOE does not find the size of LED lamps to be prohibitive of being used in existing fixtures.

DOE also received comments that LED lamps are inaccurately marketed to be used in enclosed fixtures and the comments further stated that LED lamp components are more sensitive to overheating so they are prone to premature failure due to the increased heat inside enclosed fixtures. DOE reviewed the latest industry articles, journals, and research reports on this topic. DOE's research found no evidence that lamps specifically rated for use in an enclosed fixture are failing due to use in an enclosed fixture; nor has it found this to be a reported issue within the lighting industry.

DOE received comments that the CRI of LED lamps is worse than incandescent lamps and high-CRI and red-rendering (R9) LED lamps cannot meet the proposed standards and would eliminate innovation of better color rendering LED lamps. DOE's analysis ensures that a range of lamp characteristics such as lumens, CCT, and CRI are available at the highest levels of efficacy. This includes products with high CRIs (*i.e.,* 90 or above). (*See* section IV.D.1.d of this document for more details.)

For the concerns noted above by commentators DOE did a thorough assessment of products and reviewed the latest industry articles, journals, and research reports on these topics. DOE was unable to find data or evidence showing that these concerns are being cited as prevalent and/or significant issues in the lamp market. Based on the assessments above, DOE does not find that there are issues with the use and application of GSL LED lamps and therefore continues to consider LED lamp technology as a means for improving the energy efficiency of GSLs (*see* section IV.C of this document).

d. Consumer Costs and Manufacturer Impacts

DOE received comments that LED lamps are not as cost efficient compared to incandescent and halogen lamps. Commenters stated that incandescent lamps are 100-percent energy efficient and pay for themselves when the outside temperature is below room temperature by reducing the need for heat systems. Commenters also stated that due to the cost of the LED lamps as well as the cost of upgrading to an appropriate dimmer, the final costs end up being more than the projected savings. Commenters stated DOE's estimate that switching to LED lamps could save $3 billion per year equates to around $2 per month per household, which should not be considered significant. DOE also received comments that the best way to conserve energy is to use lights less often regardless of lamp technology. DOE notes that May 2022 Backstop Final Rule codified a 45 lm/W requirement that incandescent and halogen lamps are unable to meet. Therefore, incandescent and halogen lamps were not analyzed as options available to consumers during the analysis period for this final rule. DOE does not anticipate that consumers will need to upgrade their dimmer under a standard compared to the dimmers that would be used with CFLs and LED lamps available in the no-new-standards case. With respect to the significance of savings, DOE notes that most households own a significant number of GSLs (the 2015 U.S. Lighting Market Characterization report estimates an average of over 50 lamps per household [32]). The household-level savings will be significantly higher than the savings associated with a single purchase. For details on consumer cost savings from these standards being adopted in this final rule, *see* sections V.B.1 and V.B.3.b. of this document. DOE agrees that energy savings can be had from a reduction in operating hours but notes this is also the case under a standard, and DOE does not estimate a change in operating hours under a standard. (See section IV.H.1 of this document for discussion.)

2. Product Classes

When evaluating and establishing energy conservation standards, DOE may establish separate standards for a group of covered products (*i.e.,* establish a separate product class) if DOE determines that separate standards are justified based on the type of energy used, or if DOE determines that a product's capacity or other performance-related feature justifies a different standard. (42 U.S.C. 6295(q)) In making a determination whether a performance-related feature justifies a different standard, DOE must consider such factors as the utility of the feature to the consumer and other factors DOE determines are appropriate. (*Id.*)

In the January 2023 NOPR, DOE proposed product class divisions based on lamp component location (*i.e.,* location of ballast/driver); capability of operating in standby mode; directionality (*i.e.,* omnidirectional versus directional); and lamp length (*i.e.,* 45 inches or longer [''long''] or less than 45 inches [''short'']) as product class setting factors. 88 FR 1638, 1656. In chapter 3 of the final rule TSD, DOE discusses factors it ultimately determined were not performance-related features that justify different standard levels; including lamp technology, lumen package, lamp cover, dimmability, base type, lamp spectrum, CRI, and CCT. *See* chapter 3 of the final rule TSD for further discussion.

DOE received several comments on product class setting factors including lamp cover, lamp length, tunability, and non-illumination features. These comments are discussed in the following sections.

a. Lamp Cover

In the January 2023 NOPR, DOE considered lamp cover as a performance-related feature that justified a different standard level but determined that it was not such a feature (*see* chapter 3 of the January 2023 NOPR TSD). NEMA stated that when visible, frosted lamps reduce glare, although they are slightly less efficient. While max-tech performance may be achievable with clear lamps, they represent only a portion of the GSL market. (NEMA, No. 183 at p. 20)

In the January 2023 NOPR, DOE considered the impact of a lamp cover (*e.g.,* added glass, silicone coating) over the main light source, which can reduce the lumen output of the lamp. The lamp cover adds a white finish to these lamps, and they are sometimes referred to as frosted lamps. By contrast, lamps without a cover are sometimes referred to as bare or clear. In some cases, covered lamps may offer utility to consumers as they more closely resemble traditional lighting technologies and are frequently utilized where a lamp is visible (*e.g.,* without a lamp shade). DOE examined the difference in efficacies of lamps that have a cover versus those that do not. DOE found that while a cover could generally decrease efficacy, it could also increase it, such as when a phosphor coating transforms light emitted from LEDs into visible light. DOE also determined that many LED lamps that have covers have high efficacies. GSLs without a cover (*i.e.,* clear, bare) are mainly in the Integrated Omnidirectional Short product class. This product class also has lamps with covers (*i.e.,* frosted lamps). DOE's analysis shows that both the frosted and

[32] Navigant Consulting, Inc. *2015 U.S. Lighting Market Characterization.* 2017. U.S. Department of Energy: Washington, DC Report No. DOE/EE–1719. (Last accessed August 10, 2023.) *www.energy.gov/eere/ssl/downloads/2015-us-lighting-market-characterization.*

clear lamps in this product class can meet the max-tech EL identified in the January 2023 GSL NOPR and in this analysis. Hence, for the reasons provided in the January 2023 NOPR and above, DOE is not creating a product class for covered versus bare products in this final rule.

b. Lamp Dimensions

In the January 2023 NOPR, DOE stated it observed that pin base LED lamp replacements with 2G11 bases and lengths close to 2 feet are less efficacious than 2-foot linear LED lamps. To further understand this observation on lamp length, DOE requested comments on, assuming all other attributes are the same, how the efficacy of pin base LED lamp replacements compares to that of linear LED lamps. 88 FR 1638, 1657. NEMA commented that DOE should avoid assuming that pin base LED retrofit lamps and linear LED retrofit lamps have similar luminous efficacy because they differ in shape, size, directionality, and operating environments. NEMA stated that pin base retrofit lamps and linear LED retrofit lamps differ in the following ways: (1) pin base LED lamps designed to replace legacy CFLs either do not have the same single straight tube shape or are designed to take advantage of LED package directionality to provide more directional illumination; (2) pin base LED lamps must fit within a much smaller, shorter, and narrower luminaire type and application than linear LED retrofit lamps and are designed to direct light output either horizontally or vertically, depending on the luminaire type and application; and (3) typically, the thermal environment differs greatly between these applications, resulting in different efficiency expectations. NEMA stated that only in limited cases when the lamps have the same shape and directionality of light output is the luminous efficacy of a pin base LED retrofit lamp and linear LED retrofit lamp directly comparable. (NEMA, No. 183 at p. 6)

In the January 2023 NOPR, DOE requested comment on the observed lower pin base LED lamps with 2G11 base and close to 2-feet length (typically used as replacements for pin base CFLs) having a lower efficacy than linear LED lamps 2 feet in length (88 FR 1638, 1657), as DOE expected them to achieve similar levels of efficacy due to similarity in length. DOE appreciates NEMA's comments, which help inform the differences between these two lamp configurations and potential impacts on efficacy. Because they are both less than 45 inches in length, DOE groups them in the same product class (*i.e.,* either the Integrated Omnidirectional Short product class or the Non-integrated Omnidirectional Short product class) (*see* table IV.2 for product class division summary). In the January 2023 NOPR and in this final rule, DOE did not observe that the difference in efficacy between these two lamp configurations is substantial enough to result in a loss of the consumer utility provided by each lamp. DOE's analysis indicates that both pin base LED lamps with a 2G11 base close to 2 feet in length and linear LED lamps that are 2 feet can meet the max-tech ELs considered for the Non-integrated Omnidirectional Short product class (*see* section IV.D.1.d of this document). Therefore, DOE does not find that adjustments to product class setting factors are necessary.

In the January 2023 NOPR, DOE observed that 4-foot T5 and 8-foot T8 linear LED lamps were not reaching the same efficacies as 4-foot T8 linear LED lamps. DOE tentatively concluded that this is not due to a technical constraint due to diameter but rather lack of product development of 4-foot T5 and 8-foot T8 linear LED lamps. DOE requested comments and data on the impact of diameter on efficacy for linear LED lamps. 88 FR 1638, 1656–1657.

Westinghouse stated that for linear fluorescent tubes a smaller diameter means higher efficacy, for LED lamps it is the inverse as a smaller diameter means less space for electronics and thermal management. (Westinghouse, Public Meeting Transcript, No. 27 at pp. 42–43) DOE appreciates Westinghouse's comments, which help inform the impact of diameter on linear LED lamps. Linear LED lamps of both T5 and T8 diameters are grouped in the Integrated Omnidirectional Long product class (*see* table IV.2 for product class division summary) and both can meet the max-tech ELs. Hence, adjustments to product class setting factors are not necessary.

c. Non-Integrated Standby Operation

NEMA commented that none of DOE's proposed product classes included LED smart and connected lamps that are also non-integrated. To account for these products, NEMA recommended the following product classes: (1) Non-integrated Omnidirectional short (with standby) capturing the low voltage LED retrofit lamps less than 45 inches in length, (2) Non-integrated Omnidirectional long (with standby) capturing lamps operating on non-building mains 45 inches or more in length, and (3) Non-integrated Directional (with standby) capturing LED lamps designed to replace legacy CFLs. NEMA specified that all of these lamps would require operating on a remote driver or legacy fluorescent or high-intensity discharge (''HID'') ballast. (NEMA, No. 183 at p. 6)

In the January 2023 NOPR, DOE proposed only standby mode operation as a product class setting factor for integrated lamps. At the time of the January 2023 NOPR analysis, DOE did not observe non-integrated GSLs with standby mode power consumption. 88 FR 1638, 1657, 1667. Based on a review of the market for this final rule analysis, DOE identified non-integrated LED lamps that have standby mode power operation capability allowing the lamp to have dimming controls. For example, DOE identified a linear LED lamp that is designed to operate on fluorescent lamp ballast (*i.e.,* Type B), to have additional circuitry contained within the lamp that interprets the signal from the ballast and changes the light output accordingly. Hence, because the standby mode operation of this lamp is not solely external to the lamp (*i.e.,* in the ballast or driver) but also part of the lamp itself, DOE considers it as having standby mode operation capability and therefore standby mode power consumption.

Because the market for these non-integrated LED lamps that have standby mode power operation capability is rapidly developing, DOE is unable to make a clear and accurate determination regarding the consumer utility, how various technology options would affect the efficiency, and maximum technologically feasible efficiency of these lamps, which prevents DOE from determining whether a specific standard for these lamps would be economically justified at this time. Accordingly, DOE did not consider amended standards for these lamps in this rulemaking. DOE may evaluate amended standards for these products in a future rulemaking. DOE notes that these lamps are still subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd). The criteria that non-integrated GSLs with standby mode power operation capability must meet to be exempt from amended standards adopted in this final rule is specified in section IV.A.3 of this document.

d. Tunability

NEMA and Lutron stated that DOE incorrectly assumed that all lamps capable of operating in standby mode are fundamentally the same as lamps without standby functionality but with the addition of wireless communication components. NEMA and Lutron stated that because of this assumption, DOE did not create product classes for tunable white lamps and color tunable lamps. (NEMA, No. 183 at p. 8; Lutron,

No. 182 at p. 2) NEMA stated that including these additional categories will allow for a thorough analysis of lamps capable of operating in standby mode by the next rulemaking in 2028—which may result in the need for separate categories, different efficacy curves, and amended test procedures—and will allow DOE to set efficacy levels without restricting innovation in the coming years. (NEMA, No. 183 at pp. 13–14) Lutron stated that the product classes and scaling approach for standby mode proposed in the January 2023 NOPR would limit innovation and potentially regulate out of the market many lamps capable of dynamic color tuning and dynamic spectral tuning. (Lutron, No. 182 at pp. 2–3)

NEMA and Lutron stated that for these lamps DOE should set separate product classes and adopt ELs proposed in the January 2023 NOPR as follows: (1) Tunable white integrated omnidirectional lamps capable of operating in standby mode subject to EL 6; (2) Tunable white integrated directional lamps capable of operating in standby mode subject to EL 4; (3) Full-color tunable integrated omnidirectional lamps capable of operating in standby mode subject to EL 4; and (4) Full-color tunable integrated directional lamps capable of operating in standby mode subject to EL 4. (NEMA, No. 183 at p. 8; Lutron, No. 182 at p. 3)

NEMA and Lutron defined ''tunable white'' as a feature allowing the end user to adjust the light output to create different colors of white light; in which tuning must be capable of altering the color appearance along the black body curve from two or more LED colors, where each LED color is inside one of those defined by ANSI-defined (ANSI C78.377) white correlated color temperature ranges (*i.e.,* between 2700 K and 6500 K) inside of the seven-step MacAdam ellipse or the ANSI quadrangles. NEMA and Lutron defined ''full color tunable'' as a feature allowing the end user to adjust the light output to create white or colored white; in which tuning must include white light that can alter the color appearance along the black body curve by dynamically tuning color from three of more colors of LEDs where at least one LED extends to colors beyond the ANSI-defined (ANSI C78.377) white correlated color temperature ranges (*i.e.,* between 2700 K and 6500 K) outside of the seven-step MacAdam ellipse or the ANSI quadrangles. (NEMA, No. 183 at p. 14; Lutron, No. 182 at p. 2)

Lutron and NEMA provided comments on the impact on efficacy due to the tunable features of these lamps. Lutron commented that tunable lamps are less efficacious than a single-chromaticity lamp [33] because tunable lamps require: (1) effective LED color mixing on a small light-emitting surface, which leads to higher LED current densities; (2) a control system to vary intensity of each LED color; and (3) optics to mix LED colors into the appropriate beam pattern. Lutron estimated a 10-percent efficacy loss independent from the power consumed in standby mode. (Lutron, No. 182 at p. 6)

Lutron stated it is possible for static white lamps to meet the proposed EL requirement by employing highly efficacious white LEDs in efficient configurations. Lutron stated, in contrast, tunable white lamps employ a second color LED close to the blackbody locus at a different CCT and color tunable lamps employ three or more colors of LEDs where at least one LED is far from the blackbody locus. Lutron stated that these additional color LEDs are less efficacious because the human eye is insensitive to light radiated from LEDs at colors far from green (555 nm), such as red (620 nm) or blue (470 nm). (Lutron, No. 182 at pp. 4–5, 6) NEMA provided the example that having the functionality of selecting ''warm white'' (*i.e.,* a setting corresponding to nominally 2700 K on the blackbody locus) may require both white LEDs and lower efficacy LEDs, such as red and blue, to achieve the precise color point. NEMA stated primary color LEDs are placed farther out in the color space, expanding the gamut area, which represents the number of colors, including shades of white, the lamp can produce. NEMA stated that the result is a loss in efficacy compared to a single chromaticity lamp containing only 2700 K LEDs and that this loss is in addition to the efficacy reduction caused by the lamp's standby power functionality. (NEMA, No. 183 at p. 10)

Lutron also stated that, compared to tunable white lamps, full-color-tunable lamps introduce at least one color far from the blackbody locus to achieve the desired utility, and because the human eye is less sensitive to wavelengths far from green, there is an impact on efficacy beyond the impacts described for white tunable lamps. As an example, Lutron stated that 1400 K or lower, which is a setting that may provide more consumer comfort, can't be achieved without a higher intensity of red LEDs. Lutron commented that greater control of color variation and accuracy, color quality, beam angle, and other aspects can require higher-end LEDs, more sophisticated designs, and innovative constructions that prevent the lamps from achieving high efficacy levels. (Lutron, No. 182 at p. 5–6)

Lutron and NEMA also provided comments on the utility of tunable lamps. Lutron and NEMA stated that tunable white lamps and color tunable lamps are a growing sector of the market. (Lutron, No. 182 at pp. 7–8; NEMA, No. 183 at p. 10) Lutron stated that tunable lamps offer capabilities such as dimming, scene selection, geo-fencing, event scheduling, programmability and demand response to further achieve energy savings. (Lutron, No. 182 at p. 7) Lutron and NEMA stated that sectors such as retail, hospitality, restaurants, bars, entertainment, museums, theme parks, and architectural use lighting with deep dimming, warm dimming, CCT control, and color saturation to create unique consumer experiences. (Lutron, No. 182 at p. 7; NEMA, No. 183 at p. 10)

Lutron cited DOE's web page on ''Understanding LED Color-Tunable Products'' as noting that offices using white light during work hours could shift to evening get-togethers with saturated mood-setting colors without using additional color lamps that are exempted from DOE standards and therefore may not be efficacious. (Lutron, No. 182 at pp. 6–7) Lutron stated that one of the key benefits of all color tunable lamps is the ability to control colors and match chromaticity and also manipulate light and color intensities to affect moods and create effects. Lutron commented that tunable white lamps offer users multiple similar benefits as color tunable lamps, such as simulating daylight or candlelight to set a mood without the use of additional lighting or to match existing light to provide light consistency in a space. Lutron also stated that the ability to change the intensity and color of white light has been incorporated into green building and healthy building standards, particularly the WELL standard, operated by the International WELL Building Institute. (Lutron, No. 182 at p. 7)

NEMA also raised concerns regarding the DOE test procedure and its applicability for color tunable GSLs. Specifically, NEMA stated that DOE's test procedure for GSLs requires testing at maximum input power at which setting a color tunable lamp may not be operating as a GSL, but as a colored lamp. NEMA further noted that a lamp may have one mode to maximize light output and another to maximize color

[33] Commenters use ''static'' white lamps and single chromaticity lamps interchangeably and DOE assumes these terms identify lamps that are non-tunable.

rendering, and that the input power is likely to differ among modes. (NEMA, No. 183 at pp. 21–22) (*See* further discussion of these comments in section IV.A.5 of this document).

Because the market for these tunable lamps is rapidly developing, DOE is unable to make a clear and accurate determination regarding the consumer utility, how various technology options would affect the efficiency, and maximum technologically feasible efficiency of these lamps, which prevents DOE from determining whether a specific standard for these lamps would be economically justified at this time. Accordingly, DOE did not consider amended standards for these lamps in this rulemaking. DOE may evaluate amended standards for these products in a future rulemaking. DOE notes that these lamps are still subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd). The criteria that tunable white GSLs and color tunable GSLs must meet to be exempt from amended standards adopted in this final rule is specified in section IV.A.3 of this document.

e. Non-Illumination Features

NEMA stated that there are multi-functional lighting products without wireless communication components that include power-consuming non-lighting features when the product is not generating light. NEMA gave examples of outdoor lamps with motion sensors for home security, outdoor dusk-to-dawn lamps with ambient light sensors, and indoor lamps with an internal battery backup to be used as a flashlight for use during a power outage. NEMA stated that the January 2023 NOPR did not accommodate these products and elimination of their security/safety features would be a mistake and impede further innovation and development for future generations of similar products. NEMA stated that for these lamps, DOE's approach of determining ELs for lamps with standby mode power by adding 0.5 W to ELs for similar non-standby mode lamps, assuming all else being equal, was not correct. NEMA stated that for these lamps DOE should set separate product classes and adopt ELs proposed in the January 2023 NOPR as follows: (1) Omnidirectional lamps capable of operating on standby mode, incorporating energy-consuming non-illumination feature(s) subject to EL 4 and (2) Directional lamps capable of operating on standby mode, incorporating energy-consuming non-illumination feature(s) subject to EL 4. (NEMA, No. 183 at pp. 13–14)

NEMA provided comments on the impact on efficacy due to the non-illumination features of these lamps. As an example, NEMA stated that a lamp with a speaker has unavoidably lower efficacy than lamps with no additional features. NEMA stated that a lamp with Bluetooth speaker functionality would be roughly 30 percent lower in efficacy compared to the equivalent light output single-chromaticity lamp without integrated speakers. NEMA stated that these lamps provide desirable features for consumers, who will often purchase and install several of the lamps in a room. (NEMA, No. 183 at pp. 11–12) Additionally, NEMA stated that unless a lamp offers a physical switch or an app-based method for disabling the power from non-illumination features, the only way to measure the lamp's luminous efficacy independent of the non-illumination features is to disassemble the product and identify the appropriate solder traces to cut. (NEMA, No. 183 at p. 12)

NEMA stated that many smart lamps offer additional functionality and added consumer benefit while providing energy-saving features such as dimming, scheduling, high end trim, and demand response via digital programming or manual setting of these features. NEMA stated the International Energy Agency (''IEA'') SSL Annex Task 7, notes a large market potential for internet-connected lighting systems in the residential sector, including illumination and non-illumination functionality such as: on/off control; changing CCT; dimming; motion detection; daylight sensing to trigger automated lighting changes; temperature and humidity sensing to control heating and air conditioning; Wi-Fi signal boosting; smoke detection; security systems including cameras; security-initiated lighting response; integrated audio; baby monitoring; and energy consumption monitoring. NEMA, however, disagreed with the assumption in the IEA report that smart lamp penetration is limited to the residential sector and cited applications in retail and hospitals. NEMA gave the example of the usefulness of circadian entrainment smart lamp features in nursing homes, congregate care, and independent living facilities, etc. (NEMA, No. 183 at pp. 9, 12–13)

The CA IOUs commented that DOE's proposal may inadvertently restrict the development of new types of lighting products that offer additional capabilities that consumers desire, such as light sensors, Wi-Fi or Bluetooth, speakers, cameras, or LAN links. The CA IOUs commented these additional features often require standby energy consumption that is higher than would be allowed in DOE's proposed standards and to not eliminate them recommended DOE consider different luminous efficacy requirements for GSLs with only lighting-related features and for combination GSLs with non-lighting-related features. (CA IOUs, No. 167 at p. 2)

Because the market for lamps with non-illumination features (*i.e.,* features that do not control light output) is rapidly developing, DOE is unable to make a clear and accurate determination regarding the consumer utility, how various technology options would affect the efficiency, and maximum technologically feasible efficiency of these lamps, which prevents DOE from determining whether a specific standard for these lamps would be economically justified. Accordingly, DOE did not consider amended standards for these lamps in this rulemaking. DOE may evaluate amended standards for these products in a future rulemaking. DOE notes that these lamps are still subject to the 45 lm/W sales prohibition at 10 CFR 430.32(dd) The criteria that GSLs with a non-illumination feature and standby mode power operation capability must meet to be exempt from amended standards adopted in this final rule is specified in section IV.A.3 of this document.

f. Product Class Summary

In summary, in this final rule analysis, DOE is considering the same product class setting factors as those considered in the January 2023 NOPR, as shown in table IV.2. To avoid any confusion as to what lamp types are included in these product classes and therefore subject to the amended standards being adopted in this final rule, DOE is adding two clarifications to the GSL standards table being codified in the CFR by this final rule. Firstly, for all Directional product classes, DOE is specifying in the GSL standards table in the CFR that a directional lamp is a lamp that meets the definition of reflector lamp as defined in 10 CFR 430.2. Secondly, for the Non-integrated Omnidirectional Short product class, DOE is specifying in the GSL standards table in the CFR that this product class comprises, but is not limited to, lamps that are pin base CFLs and pin base LED lamps designed and marketed as replacements of pin base CFLs.

Table IV.2 GSL Product Classes

Lamp component location	Directionality	Lamp length	Standby mode operation
Integrated	Omnidirectional	Short (<45 inches)	Non-Standby
			Standby
		Long (≥45 inches)	Non-Standby
	Directional	All Lengths	Non-Standby
			Standby
Non-Integrated	Omnidirectional	Short (<45 inches)	N/A
		Long (≥45 inches)	
	Directional	All Lengths	

3. Technology Options

In the technology assessment, DOE identifies technology options that are feasible means of improving lamp efficacy. This assessment provides the technical background and structure on which DOE bases its screening and engineering analyses. To develop a list of technology options, DOE reviewed manufacturer catalogs, recent trade publications and technical journals, and consulted with technical experts. In the January 2023 NOPR, DOE identified 21 technology options that would be expected to improve GSL efficacy, as measured by the applicable DOE test procedure. The technology options were differentiated by those that improve the efficacy of CFLs versus those that improve the efficacy of LED lamps. 88 FR 1638, 1657.

With regards to the technology option of improved secondary optics for LED lamp technology, NEMA stated it is important to note that frosted bulbs, while slightly reducing light output, mitigate glare in LED lamp designs and in doing so provide consumer-desired utility. (NEMA, No. 183 at p. 7) DOE reviewed the utility and efficacy of frosted lamps when evaluating lamp cover as a potential product class setting factor (*see* IV.B.2.a of this document for the detailed discussion). Additionally, NEMA requested that DOE adopt the standardized terminology from ANSI/IES LS–1–22 [34] to ensure clarity in rulemaking discussions. NEMA noted that the term ''LED chip,'' as used in the January 2023 NOPR, is a non-standardized term with ample room for interpretation. (NEMA, No. 183 at p. 7). DOE appreciates NEMA's comment. In chapter 3 of the January 2023 NOPR TSD DOE had specified that the LED die, along with its electrode contacts and any optional additional layers, is referred to as the ''LED chip.'' This description of the LED chip aligns with the definition of LED package [35] specified in ANSI/IES LS–1–22. For further clarity and consistency with industry definitions (*i.e.,* ANSI/IES LS–1–22), DOE has replaced references to ''LED chip'' with ''LED package'' in this final rule notice and TSD. Additionally, in review of the nomenclature used in the January 2023 NOPR and TSD to describe the technology option of reduced current density, DOE stated that the LED package is driven at lower currents. 88 FR 1638, 1657–1658 (*see* chapter 3 of January 2023 NOPR TSD). Because ANSI/IES LS–1–22 defines LED array or module [36] as an assembly of LED packages intended to be connected to the LED driver, DOE finds that it is more appropriate to phrase this technology option as the LED array or module being driven at lower currents.

In this final rule as in the January 2023 NOPR, DOE is considering the technology options as shown in table IV.3.

BILLING CODE 6450–01–P

[34] American National Standards Institute/Illuminating Engineering Society, ANSI/IES LS–1–22, ''Lighting Science: Nomenclature and Definitions for Illuminating Engineering.'' Approved Nov. 2, 2021.

[35] ANSI/IES LS–1–22 defines ''LED package'' as an assembly of one or more light emitting diode (LED) dies that includes wire bond or other type of electrical connections, possibly with an optical element and thermal, mechanical, and electrical interfaces. Power source and ANSI standardized base are not incorporated into the device. The device cannot be connected directly to the branch circuit. Available at *www.ies.org/definitions/led-package/.*

[36] ANSI/IES LS–1–22 defines ''LED array or module'' as an assembly of light emitting diode (LED) packages (components), or dies on a printed circuit board or substrate, possibly with optical elements and additional thermal, mechanical, and electrical interfaces that are intended to connect to the load side of an LED driver. Power source and ANSI standard base are not incorporated into the device. The device cannot be connected directly to the branch circuit. Available at *www.ies.org/definitions/led-array-or-module/.*

Table IV.3 GSL Technology Options

Lamp Type	Name of Technology Option	Description
CFL	Highly Emissive Electrode Coatings	Improved electrode coatings allow electrons to be more easily removed from electrodes, reducing lamp power and increasing overall efficacy.
	Higher Efficiency Lamp Fill Gas Composition	Fill gas compositions improve cathode thermionic emission or increase mobility of ions and electrons in the lamp plasma.
	Higher Efficiency Phosphors	Use of higher efficiency phosphors to increase the conversion of ultraviolet ("UV") light into visible light.
	Glass Coatings	Coatings on inside of bulb reflect UV radiation passing through the phosphor back onto the phosphor, allowing a greater portion of UV to be absorbed, and thereby emit more visible light.
	Multi-Photon Phosphors	Emitting more than one visible photon for each incident UV photon absorbed.
	Cold Spot Optimization	Improve cold spot design to maintain optimal temperature and improve light output.
	Improved Ballast Components	Use of higher-grade components to improve efficiency of integrated ballasts.
	Improved Ballast Circuit Design	Better circuit design to improve efficiency of integrated ballasts.
	Higher Efficiency Reflector Coatings	Alternative reflector coatings such as silver, with higher reflectivity to increase the amount of directed light.
	Change to LEDs	Replace CFL with LED technology.

Lamp Type	Name of Technology Option	Description
LED	Efficient Down Converters	New wavelength conversion materials, such as novel phosphor composition and quantum dots, have the potential for creating warm-white LEDs with improved spectral efficiency, high color quality, and improved thermal stability.
	Improved Package Architectures	Arrangements of color mixing and phosphor coating LEDs on the LED array that improve package efficacy.
	Improved Emitter Materials	The development of efficient red, green, or amber LED emitters that allow for optimization of spectral efficiency with high color quality over a range of CCT and which also exhibit color and efficiency stability with respect to operating temperature.
	Alternative Substrate Materials	Emerging alternative substrates that enable high-quality epitaxy for improved device quality and efficacy.
	Improved Thermal Interface Materials ("TIMs")	TIMs enable high efficiency thermal transfer to reduce efficacy loss from rises in junction temperature and optimize for long-term reliability of the device.
	Improved LED Device Architectures	Novel architectures for integrating LED package(s) into a lamp, such as surface mount device and chip-on-board that improve efficacy.
	Optimized Heat Sink Design	Heat sink design to improve thermal conductivity and heat dissipation from the LED package, thus reducing efficacy loss from rises in junction temperature.
	Active Thermal Management Systems	Devices such as internal fans and vibrating membranes to improve thermal dissipation from the LED package.
	Improved Primary Optics	Enhancements to the primary optics of the LED package, such as surface etching, novel encapsulant formulations, and flip chip design that improve light extraction from the LED package and reduce losses due to light absorption at interfaces.
	Improved Secondary Optics	Reduce or eliminate optical losses from the lamp housing, diffusion, beam shaping, and other secondary optics to increase efficacy using mechanisms such as reflective coatings and improved diffusive coatings.
	Improved Driver Design	Novel and intelligent circuit design to increase driver efficiency.
	Alternating Current ("AC") LEDs	LEDs that operate on AC voltage, eliminating the requirement for and efficiency losses from the driver.

Lamp Type	Name of Technology Option	Description
	Reduced Current Density	Driving LED array or module at lower currents while maintaining light output, and thereby reducing the efficiency losses associated with efficacy droop.

BILLING CODE 6450–01–C

C. Screening Analysis

DOE uses the following four screening criteria to determine which technology options are suitable for further consideration in an energy conservation standards rulemaking:

(1) *Technological feasibility.* Technologies that are not incorporated in commercial products or in commercially viable, existing prototypes will not be considered further.

(2) *Practicability to manufacture, install, and service.* If it is determined that mass production of a technology in commercial products and reliable installation and servicing of the technology could not be achieved on the scale necessary to serve the relevant market at the time of the projected compliance date of the standard, then that technology will not be considered further.

(3) *Impacts on product utility.* If a technology is determined to have a significant adverse impact on the utility of the product to subgroups of consumers, or result in the unavailability of any covered product type with performance characteristics (including reliability), features, sizes, capacities, and volumes that are substantially the same as products generally available in the United States at the time, it will not be considered further.

(4) *Safety of technologies.* If it is determined that a technology would have significant adverse impacts on health or safety, it will not be considered further.

(5) *Unique-pathway proprietary technologies.* If a technology has proprietary protection and represents a unique pathway to achieving a given efficiency level, it will not be considered further, due to the potential for monopolistic concerns.

10 CFR part 430, subpart C, appendix A, sections 6(b)(3) and 7(b).

In sum, if DOE determines that a technology, or a combination of technologies, fails to meet one or more of the listed five criteria, it will be excluded from further consideration in the engineering analysis. The reasons for eliminating any technology are discussed in the following sections.

The subsequent sections include comments from interested parties pertinent to the screening criteria, DOE's evaluation of each technology option against the screening analysis criteria, and whether DOE determined that a technology option should be excluded (''screened out'') based on the screening criteria.

1. Screened-Out Technologies

In the January 2023 NOPR, DOE proposed to screen out multi-photon phosphors for CFLs, and quantum dots and improved emitter materials for LED lamps based on the first criterion on technological feasibility. DOE did not find evidence that multi-photon phosphors, quantum dots, or improved emitter materials are being used in commercially available products or prototypes. DOE also proposed to screen out AC LEDs based on the second and third criteria: respectively, practicability to manufacture, install, and service and adverse impacts on product utility or product. The only commercially available AC LED lamps that DOE found were G-shapes between 330 and 360 lumens or candle shapes between 220 and 400 lumens. Therefore, it is unclear whether the technology could be made for a wide range of products on a commercial scale and in particular for those being considered in this document. 88 FR 1638, 1658.

NEMA stated that it agrees with DOE's proposal to screen out AC LEDs as well as quantum dots and improved emitter materials for LED lamps. (NEMA, No. 183 at p. 7)

In this final rule as in the January 2023 NOPR, for reasons stated above, DOE continues to screen out the technologies of multi-photon phosphors for CFLs and quantum dots, improved emitter materials, and AC LEDs for LED lamps.

2. Remaining Technologies

In the January 2023 NOPR, DOE considered active thermal management for LED lamp technology as a design option, among others. 88 FR 1638, 1658. NEMA commented that active thermal management is not typically required or beneficial for products included in the GSL definition and therefore should not be factored in when providing a deviation from the GSL requirements without standby power. NEMA stated that products outside the scope of the GSL definition, namely small size devices with a lumen output of greater than 3,300 lumens, can be dependent upon and benefit from active thermal management, but that this should not be taken into consideration for this rulemaking. NEMA added that manufacturers should not be constrained from utilizing their design freedom to add active thermal management to a product covered by the scope of this rule if the final product meets the requirements and includes the full impacts of the thermal management. (NEMA, No. 183 at pp. 7–8) DOE has not found evidence that the design option of active thermal management is limited to lamps with lumen outputs greater than 3,300 lumens. Additionally, DOE identifies all possible technology options and subsequently design options that manufacturers can utilize to increase the efficacy of their lamps. DOE is not specifying the design options manufacturers must or must not use to achieve higher efficacies for their lamps. Therefore, in this final rule, DOE continues to consider active thermal management as a valid design option.

Through a review of each technology, DOE concludes that all of the other identified technologies listed in section IV.B.3 of this document met all five screening criteria to be examined further as design options in DOE's final rule analysis. In summary, DOE did not screen out the following technology options:

CFL Design Options

- Highly Emissive Electrode Coatings
- Higher Efficiency Lamp Fill Gas Composition
- Higher Efficiency Phosphors
- Glass Coatings
- Cold Spot Optimization
- Improved Ballast Components
- Improved Ballast Circuit Design
- Higher Efficiency Reflector Coatings
- Change to LEDs

LED Design Options

- Efficient Down Converters (with the exception of quantum dot technologies)
- Improved Package Architectures
- Alternative Substrate Materials
- Improved Thermal Interface Materials

- Improved LED Device Architectures
- Optimized Heat Sink Design
- Active Thermal Management Systems
- Improved Primary Optics
- Improved Secondary Optics
- Improved Driver Design
- Reduced Current Density

DOE determined that these technology options are technologically feasible because they are being used or have previously been used in commercially available products or working prototypes. DOE also finds that all of the remaining technology options meet the other screening criteria (*i.e.,* practicable to manufacture, install, and service and do not result in adverse impacts on consumer utility, product availability, health, or safety). For additional details, *see* chapter 4 of the final rule TSD.

D. Engineering Analysis

The purpose of the engineering analysis is to establish the relationship between the efficiency and cost of GSLs. There are two elements to consider in the engineering analysis: the selection of efficiency levels to analyze (*i.e.,* the ''efficiency analysis'') and the determination of product cost at each efficiency level (*i.e.,* the ''cost analysis''). In determining the performance of higher-efficiency products, DOE considers technologies and design option combinations not eliminated by the screening analysis. For each product class, DOE estimates the baseline cost, as well as the incremental cost for the product at efficiency levels above the baseline. The output of the engineering analysis is a set of cost-efficiency ''curves'' that are used in downstream analyses (*i.e.,* the LCC and PBP analyses and the NIA).

1. Efficiency Analysis

DOE typically uses one of two approaches to develop energy efficiency levels for the engineering analysis: (1) relying on observed efficiency levels in the market (*i.e.,* the efficiency-level approach), or (2) determining the incremental efficiency improvements associated with incorporating specific design options to a baseline model (*i.e.,* the design-option approach). Using the efficiency-level approach, the efficiency levels established for the analysis are determined based on the market distribution of existing products (in other words, based on the range of efficiencies and efficiency level ''clusters'' that already exist on the market). Using the design option approach, the efficiency levels established for the analysis are determined through detailed engineering calculations and/or computer simulations of the efficiency improvements from implementing specific design options that have been identified in the technology assessment. DOE may also rely on a combination of these two approaches. For example, the efficiency-level approach (based on actual products on the market) may be extended using the design option approach to interpolate to define ''gap fill'' levels (to bridge large gaps between other identified efficiency levels) and/or to extrapolate to the ''max-tech'' level (particularly in cases where the ''max-tech'' level exceeds the maximum efficiency level currently available on the market).

In this rulemaking, DOE applied an efficiency-level approach. For GSLs, ELs are determined as lumens per watt which is also referred to as the lamp's efficacy (*see* section IV.A.4 of this document). DOE derives ELs in the engineering analysis and end-user prices in the cost analysis. DOE estimates the end-user price of GSLs directly because reverse-engineering a lamp is impractical as the lamps are not easily disassembled. By combining the results of the engineering analysis and the cost analysis, DOE derives typical inputs for use in the LCC and NIA. Section IV.D.2 of this document discusses the cost analysis (*see* chapter 5 of the final rule TSD for further details).

The engineering analysis is generally based on commercially available lamps that incorporate the design options identified in the technology assessment and screening analysis. *See* chapters 3 and 4 of the final rule TSD for further information on technology and design options. For the January 2023 NOPR engineering analysis, DOE developed a lamps database using data from manufacturer catalogs, ENERGY STAR Certified Light Bulbs database,[37] DOE's compliance certification database,[38] and retailer websites. DOE used performance data of lamps from these sources in the following general order of priority: DOE's compliance certification database, manufacturer catalog, ENERGY STAR database, and retailer websites. In addition, DOE reviewed applicable lamps in the CEC's Appliance Efficiency Database.[39] 88 FR 1638, 1659. For this final rule analysis, DOE updated this database in mid-2022 with the most recent data available from these data sources.

The methodology consists of the following steps: (1) selecting representative product classes, (2) selecting baseline lamps, (3) identifying more efficacious substitutes, and (4) developing efficiency levels by directly analyzing representative product classes and then scaling those efficiency levels to non-representative product classes. The details of the engineering analysis are discussed in chapter 5 of the final rule TSD.

a. Representative Product Classes

In the case where a covered product has multiple product classes, DOE identifies and selects certain product classes as ''representative'' and concentrates its analytical effort on those classes. DOE chooses product classes as representative primarily because of their high market volumes and/or unique characteristics. DOE then scales its analytical findings for those representative product classes to other product classes that are not directly analyzed.

In the January 2023 NOPR, DOE proposed to establish eight product classes: (1) Integrated Omnidirectional Short Standby Mode, (2) Integrated Omnidirectional Short Non-standby Mode, (3) Integrated Directional Standby Mode, (4) Integrated Directional Non-standby Mode, (5) Integrated Omnidirectional Long, (6) Non-integrated Omnidirectional Short, (7) Non-integrated Omnidirectional Long, and (8) Non-integrated Directional. Because of the distinctive difference in design, the Directional and Omnidirectional product classes cannot be scaled from each other and were directly analyzed. For the same reasons, Long (45 inches or longer) and Short (shorter than 45 inches) product classes as well as Integrated (all components within lamp) and Non-integrated (ballast/driver external to lamp) were directly analyzed. The exception was that DOE scaled the Non-integrated Omnidirectional Long product class from the Integrated Omnidirectional Long product class. DOE determined that lamps in both these product classes are same in shape and size, and tentatively concluded the internal versus external components would not preclude them from being scaled from or to one another. 88 FR 1638, 1659–1660.

DOE did not receive any comments on the product classes chosen to be representative. In this final rule, DOE continues to directly analyze (*i.e.,* consider as representative) the product

[37] The most recent ENERGY STAR Certified Light Bulbs database can be found at *www.energystar.gov/productfinder/product/certified-light-bulbs/results* (last accessed June 17, 2020).

[38] DOE's compliance certification database can be found at *www.regulations.doe.gov/certification-data/#q=Product_Group_s%3A** (last accessed June 17, 2020).

[39] The most recent CEC Appliance Efficiency Database can be found at *www.energy.ca.gov/appliances/* (last accessed June 17, 2020).

classes in the January 2023 NOPR and shown in grey shading in table IV.4. *See* details in chapter 5 of this final rule TSD.

Table IV.4 GSL Representative Product Classes

Lumen Package	Directionality	Lamp Length	Standby Mode Operation
Integrated	Omnidirectional	Short (< 45 inches)	Non-Standby
			Standby
		Long (≥ 45 inches)	Non-Standby
	Directional (reflector lamps)	All Lengths	Non-Standby
			Standby
Non-Integrated	Omnidirectional	Short (< 45 inches)	N/A
		Long (≥ 45 inches)	
	Directional (reflector lamps)	All Lengths	

b. Baseline Efficiency

For each product class, DOE generally selects a baseline model as a reference point for each class, and measures changes resulting from potential energy conservation standards against the baseline. The baseline model in each product class represents the characteristics of a product typical of that class (*e.g.,* capacity, physical size). Generally, a baseline model is one that just meets current energy conservation standards, or, if no standards are in place, the baseline is typically the most common or least efficient unit on the market.

Because certain products within the scope of this rulemaking have existing standards, GSLs that fall within the same product class as these lamps must meet the existing standard in order to prevent backsliding of current standards in violation of EPCA. (*See* 42 U.S.C. 6295(o)(1)) Specifically, the Integrated Omnidirectional Short product class consists of MBCFLs for which there are existing DOE standards. The other product classes do not have existing DOE standards but are subject to the statutory backstop requirement of 45 lm/W. In the January 2023 NOPR, DOE selected baseline lamps that are the most common, least efficacious lamps that meet existing energy conservation standards. Specific lamp characteristics were used to characterize the most common lamps purchased by consumers (*e.g.,* wattage, CCT, CRI, and lumen output). 88 FR 1638, 1660–1661. Because incandescent and halogen lamps cannot meet the 45 lm/W backstop requirement for GSLs, DOE did not analyze these lamps at the baseline or at higher ELs in the January 2023 NOPR.

NEMA stated that its member companies have noted for years that DOE's analyses do not account for the ongoing importation of non-compliant outlawed lamps that NEMA members will not manufacture. NEMA commented that, by its estimation, there are hundreds of GSL manufacturers globally who do not follow DOE regulations and instead circumvent legal challenges by closing and reopening their businesses under a variety of names. NEMA stated that it would be much closer to agreeing with DOE's baseline lamp selections if the selections reflected the market impact of these illicit offerings. (NEMA, No. 183 at p. 8)

DOE does not find that the baseline lamp characteristics identified in the January 2023 NOPR are invalid. DOE's analyses for rulemakings assume compliance with current applicable standards. DOE's Office of Enforcement leads DOE's efforts to ensure manufacturers deliver products that meet energy conservation standards.[40] DOE also provides information on its website on how to report on any regulation violations (*see www.energy.gov/gc/report-appliance-regulation-violation*). DOE would welcome any information that NEMA may have on potentially non-compliant manufacturers.

In this final rule, DOE continues to analyze the baseline lamps identified in the January 2023 NOPR as shown in table IV.5. *See* chapter 5 of this final rule TSD for further details.

Table IV.5 GSL Baseline Lamps

Representative Product Class	Lamp Shape	Base Type	Lamp Type	Nominal Wattage	Initial Lumens	Rated Efficacy	Lifetime	CCT	CRI
				W	*lm*	*lm/W*	*hr*	*K*	
Integrated Omnidirectional Short	Spiral	E26	CFL	15	900	60.0	10,000	2,700	82
Integrated Omnidirectional Long	Linear (T8, 4-foot)	Medium Bipin	LED	15	1,800	120.0	50,000	4,000	80
Integrated Directional	PAR38	E26	CFL	23	1,100	47.8	10,000	2,700	82
Non-Integrated Omnidirectional Short	G24q-3	Double Tube	CFL	26.0	1,700	65.4	10,000	4,100	82
Non-Integrated Directional	GU5.3	MR16	LED	8.0	500	62.5	25,000	2,700	80

c. More Efficacious Substitutes

In the January 2023 NOPR, DOE selected more-efficacious replacements for the baseline lamps considered within each representative product class. DOE considered only technologies that met all five criteria in the screening analysis. These selections were made such that the more efficacious substitute lamp saved energy and had light output within 10 percent of the baseline lamp's light output, when possible. DOE also sought to keep characteristics of substitute lamps, such as CCT, CRI, and lifetime, as similar as possible to the baseline lamps. DOE selected more efficacious substitutes with the same base type as the baseline lamp since replacing a lamp with a lamp of a different base type would potentially require a fixture or socket change and thus is considered an unlikely replacement. In identifying the more efficacious substitutes, DOE utilized the lamps database of commercially available GSLs it developed for this analysis (*see* section IV.D.1 of this document). 88 FR 1638, 1662. As noted, non-integrated lamps are operated on an external ballast or driver. Hence for the Non-integrated Omnidirectional Short product class, DOE compiled catalog data of non-integrated CFL ballasts in order to estimate the system power ratings and initial lumen outputs of the representative lamp-and-ballast systems in this class. A lamp-and-ballast system input power depends on the total lamp arc power operated by the ballast and the ballast's efficiency, or BLE. 88 FR 1638, 1664.

DOE received comments regarding the Non-integrated Omnidirectional Short product class. Westinghouse stated that the G24q base lamp identified for the Non-integrated Omnidirectional Short product class is likely not omnidirectional and therefore, may not be the best lamp to analyze. Westinghouse stated that LED lamps designed to replace pin base CFLs are not actually omnidirectional but directional lamps designed to be used in specific luminaires based on the direction the consumer desires light to flow, and therefore, possibly not the right lamp type to use. (Westinghouse, Public Meeting Transcript, No. 27 at p. 54)

In DOE's analysis of the LED replacements for pin base CFLs, DOE reviewed marketing information and lamp specification sheets and spoke to manufacturers' product support. Based on this review, it is clear that the more efficacious LED lamps identified for the Non-integrated Omnidirectional Short product class are designed and marketed to be replacements for pin base CFLs. These LED lamps have shapes and base types designed to fit in existing fixtures that employ pin base CFLs. Additionally, as noted in the January 2023 NOPR, DOE learned that because the LED lamp replacements for pin base CFLs identified are designed to emit light in one direction, they emit fewer lumens than their CFL counterparts which are designed to emit light in all directions (*i.e.,* omnidirectional). Therefore, in a fixture the 26 W CFL and its equivalent LED lamp emit similar lumen outputs, as some of the CFL omnidirectional light is lost within the fixture. 88 FR 1638, 1663. Hence, DOE groups pin base CFLs and their replacement pin base LED lamps in the Non-integrated Omnidirectional Short product class. To minimize any confusion, in the table that will codify in the CFR standards adopted in this final rule, DOE is specifying that the Non-integrated Omnidirectional Short product class includes pin base LED lamps designed and marketed to replace pin base CFLs (*see* section IV.B.2.f of this document).

In this final rule, DOE maintains the more efficacious substitutes selected in the January 2023 NOPR as shown in table IV.6 through table IV.10. (In these tables the A-value is a variable in the equation form (a curve) that specifies the minimum efficacy standard for GSLs. The A-value specifies the height of the equation form and thereby indicates the level of efficacy (see section IV.D.1.d of this document)). DOE also continues to use the methodology used in the January 2023 NOPR to calculate the lamp-and-ballast system input power of the more efficacious substitutes in Non-integrated Omnidirectional Short product class. *See* chapter 5 of this final rule TSD for further details.

BILLING CODE 6450–01–C

d. Higher Efficiency Levels

As part of DOE's analysis, the maximum available efficiency level is the highest efficiency unit currently available on the market. DOE also defines a ''max-tech'' efficiency level to represent the maximum possible efficiency for a given product.

In the January 2023 NOPR, using the more efficacious substitutes identified, DOE developed ELs for each representative product class based on the consideration of several factors, including: (1) the design options associated with the specific lamps being studied (*e.g.,* grades of phosphor for CFLs, improved package architecture for LED lamps); (2) the ability of lamps across the applicable lumen range to comply with the standard level of a given product class; and (3) the max-tech level. Additionally, in the January 2023 NOPR, using the lamps database of commercially available GSLs, DOE conducted regression analyses to identify the equation form that best fits the GSL data. DOE determined a sigmoid equation is the best fit equation form to capture the relationship between wattage and lumens across all ranges for GSLs. The equation determines the minimum efficacy based on the measured lumen output of the lamp. The A-value in the equations is a value that can be changed to move the equation curve up or down and thereby change the minimum required efficacy. 88 FR 1638, 1665. DOE did not receive comments on the equation form used to set ELs in the January 2023 NOPR. In this final rule, DOE is continuing to use the same equation form as it is shown in table IV.11.

Table IV.11 GSL Equations

Representative Product Class	Equation*
Integrated Omnidirectional Short	$Efficacy = \frac{123}{1.2 + e^{-0.005(Lumens-200)}} + A$
Integrated Omnidirectional Long	$Efficacy = \frac{123}{1.2 + e^{-0.005(Lumens-200)}} + A$
Integrated Directional	$Efficacy = \frac{73}{0.5 + e^{-0.0021(Lumens+1000)}} - A$
Non-integrated Omnidirectional Short	$Efficacy = \frac{122}{0.55 + e^{-0.003(Lumens+250)}} - A$
Non-integrated Directional	$Efficacy = \frac{67}{0.45 + e^{-0.00176(Lumens+1310)}} - A$

* *Efficacy* = minimum efficacy requirement, *Lumens* = measured lumen output, and *A* = an adjustment variable (the "A-value").

DOE received comments on higher efficiency levels considered in the January 2023 NOPR that are detailed in the following sections.

Max-Tech

ASAP *et al.* stated DOE should reevaluate max-tech ELs presented in the January 2023 NOPR because DOE's analysis was based on lamp models available in June 2020 and lamps with higher efficacies appear to be currently available. Specifically, ASAP *et al.* stated that ENERGY STAR listed a 5.9 W, 800 lumen integrated omnidirectional short lamp with an efficacy of 135.6 lm/W while DOE had presented the max-tech lamp at 124.6 lm/W for the same lamp type at the same lumens. ASAP *et al.* and NYSERDA stated that integrated omnidirectional short lamps available in Europe have efficacies as high as 200 lm/W. (ASAP *et al.,* No. 174 at p. 2; NYSERDA, No. 166 at pp. 1–2)

CLASP also expressed concern that the LED lamp data on which DOE based its analysis is from mid-2020 and therefore, does not reflect products on the market today. CLASP stated that as a result, DOE's proposal uses efficacy levels that are too low and prices for LED lamps that are too high. CLASP commented that LED products are continuing to improve by around 5 percent per annum as projected by DOE's own SSL R&D program, and therefore, using older lamps means ELs are about 15 percent too low. (CLASP, No. 177 at p. 1) NYSERDA commented that the proposed max-tech levels are significantly below the technical potential across LED products and, as shown by DOE's Solid State Lighting research efforts, LEDs have the potential to reach 200 lm/W or higher. (NYSERDA, No. 166 at pp. 1–2)

In the January 2023 NOPR, DOE developed a lamps database using data from manufacturer catalogs, ENERGY STAR Certified Light Bulbs database, DOE's compliance certification database, and retailer websites. In addition, DOE reviewed applicable lamps in the CEC's Appliance Efficiency Database. This data was collected in June 2020 (*see* footnoted citations in January 2023 NOPR). 88 FR 1638, 1659. For this final rule analysis, DOE updated the lamps database with data collected mid-2022. Using this updated data, DOE reviewed the max-tech levels and determined that no changes are necessary from what was proposed in the January 2023 NOPR.

Regarding the 5.9 W integrated omnidirectional short lamp at 135.6 lm/W cited by ASAP *et al.,* this lamp has a CRI in the 90s. As stated in section IV.D.1.b of this document, DOE's analysis ensures that the baseline lamp just meet standards and has characteristics similar to the most common lamps purchased by consumers in the respective product classes (*e.g.,* wattage, CCT, CRI, and lumen output). Because the baseline lamp for the Integrated Omnidirectional Short product class has a CRI in the 80s, DOE did not consider lamps with CRIs in the 90s as appropriate substitutes. Hence, DOE did not identify the 5.9 W lamp at 135.6 lm/W as a more efficacious substitute representative of an EL. (*See* table IV.5 and January 2023 NOPR (88 FR 1638, 1661)). Regarding projections of LED efficacy increases by DOE's SSL R&D, as noted in section IV.C of this document, design options used to establish ELs must meet five screen criteria, including practicability to manufacture, install, and service. Hence, DOE bases its analysis on lamps that use design options that are incorporated in commercially available products or working prototypes, and not projected efficacies.

NEMA stated the max-tech level proposed in the January 2023 NOPR for linear LED lamps should not be considered. NEMA stated that linear LED lamps are designed to provide the same illumination levels as fluorescent tubes but with lower lumens by utilizing internal luminaire optics to redirect light where it is needed while fluorescent tubes emit light in all directions. NEMA added that because LED tubes are intended to produce the same delivered lumen output to a target area, considering more efficacious substitute lamps that provide lower lumens may hinder manufacturers from producing lamps able to provide the appropriate amount of light to meet the max-tech performance standard of EL 7. (NEMA, No. 183 at p. 20)

The Integrated Omnidirectional Long product class consists of linear tubular LED lamps 45 inches or longer that are Type B or Type A/B (*i.e.,* have an internal driver and connect to the main line voltage). In the January 2023 NOPR for this product class, DOE identified a 15 W 4-foot T8 linear LED lamp with a medium bipin base, 1,800 lumens, lifetime of 50,000 hours, CRI of 80, and CCT of 4,000 K as the baseline lamp (*see* table IV.5). 88 FR 1638, 1661. In its engineering analysis, DOE identifies more efficacious substitutes that save energy, have light output within 10 percent of baseline lamp, and have characteristics similar to this baseline lamp. Lumen output is kept constant within the 10 percent tolerance to ensure consumer utility of more efficacious substitutes. Hence for the Integrated Omnidirectional Long product class lumen outputs of more efficacious substitutes at each EL including at the max-tech level were within 10 percent of the baseline lamp lumens (*see* table IV.7). 88 FR 1638, 1663. Further, as noted in section IV.D.1, in the January 2023 NOPR, and in this final rule, DOE used a database of commercially available lamps to identify baseline lamps and more efficacious substitutes. Hence, the max-tech level for this product class is based on commercially available linear LED lamps and therefore is technologically feasible.

Quality Metrics

The CEC acknowledged that DOE stated in the January 2023 NOPR that there is value in ensuring a range of lamp characteristics such as lumens, CRI, and CCT are available at max-tech levels. The CEC stated, however, that when evaluating technological feasibility of max-tech or minimum lumen-per-watt requirements DOE should, in addition to raising minimum efficacy levels, consider other lamp quality characteristics such as color fidelity, noise, flicker, and rated life. (CEC, No. 176 at pp. 2–3) The CEC commented that California has shown that high-efficacy, high-quality LEDs are both economically justified and technologically feasible, and DOE should establish minimum energy conservation standards that encourage innovation and provide consumers with the best options for general illumination. The CEC added that such standards will ensure a robust lamp market that saves consumers money, reduce the unnecessary consumption of energy, and address climate change by avoiding the release of unnecessary GHGs. (CEC, No. 176 at p. 5)

Further, the CEC stated its concern that not considering quality characteristics in the development of efficiency levels would result in a race to the bottom (*e.g.,* a driverless lamp that achieves a slightly higher lm/W by avoiding AC to DC-conversion at the cost of flickering). The CEC stated that inclusion of quality characteristics in DOE's analysis would ensure that lamps with higher quality emitters and drivers are not excluded from or disadvantaged in the U.S. market. Further, the CEC commented that DOE's consideration of quality characteristics would provide the opportunity for California to align its existing and future minimum efficiency levels for GSLs more closely with Federal levels. The CEC stated that it is not recommending the creation of a separate product class for high-quality lighting because a single standard that

recognizes quality as an essential element of max-tech would be preferable. The CEC stated that it does, however, see establishing a separate product class based on specific quality criteria as an alternative for balancing quality and energy performance concerns, as well as ensuring a compliance path for high-performing products without lowering energy efficiency standards for baseline products. (CEC, No. 176 at pp. 2–3)

Additionally, the CEC requested that DOE consider the lumen disadvantage of providing good color rendering, in particular of red light. The CEC stated that lumens factor in the eye's perception of brightness according to a particular wavelength resulting in a disincentive to use red light in the lamp's spectrum as 1 unit of green light is worth 10 units of red light at the same power. The CEC stated this creates a conflict between costs, consumer preferences, and the lm/W standard, and is particularly impactful for consumers that prefer light at 2700 K, which has more red light. (CEC, No. 176 at pp. 2–3)

In its comment the CEC names color fidelity, noise, flicker and rated life as parameters to consider when evaluating minimum efficiency levels. In this analysis, DOE takes into account lamp characteristics provided in manufacturer's lamp specification sheets. Parameters specific to noise and flicker are not typically provided as part of lamp specifications and therefore DOE was unable to consider them. DOE's analysis does not focus only on whether a lamp has a higher efficacy. As mentioned in the CEC's comment DOE confirms that a range of lamp characteristics such as lumens, lifetime, CCT, and CRI are available at the highest levels of ELs considered, including lamps that offer good color rendering such as lamps with CRI in the 90s and high lifetimes such as lamps with 50,000 hours.

Further as stated in sections IV.D.1.b and IV.D.1.d of this document, DOE identifies baseline lamps that have characteristics typical of the product class such as CCT, CRI, and lifetime, and selects more efficacious substitutes that have similar characteristics. Hence DOE ensures that characteristics common for lamps on the market are not sacrificed at higher ELs. A lamp able to both achieve a set of characteristics common in the market and a higher efficacy is indicative of a product that meets consumer preferences as well as energy efficiency. Hence, DOE finds that DOE's analysis accounts for quality of lamps.

Anti-Backsliding Provision

In the January 2023 NOPR, because the Integrated Omnidirectional Short product class consists of MBCFLs which have existing standards, DOE assessed whether the initial ELs are equal to or more stringent than the existing standards (*i.e.,* that backsliding would not occur if the proposed ELs were adopted) and ensured that the proposed ELs did not result in less stringent standards than existing ones in violation of EPCA's anti-backsliding provision. DOE determined that for products with lumens less than 424, the initial EL 1 equation would result in an efficacy requirement less than the 45 lm/W MBCFL standard. Similarly, for products with lumens less than 371, the initial EL 2 equation would result in an efficacy requirement less than the 45 lm/W MBCFL standard. Hence, DOE proposed at EL 1 and EL 2 products with respectively, lumens less than 424 and lumens less than 371 must meet a minimum efficacy requirement of 45 lm/W and for all other lumen ranges meet the minimum efficacy requirement based on the equation line of EL 1 or EL 2, as applicable. 88 FR 1638, 1655–1656. DOE did not propose lumen ranges at which the minimum efficacy requirement must be the 45 lm/W standard and not the equation line for any other product classes.

Westinghouse stated the proposed EL 1 and EL 2 for the Non-integrated Omnidirectional Short (no standby mode) product class may also require minimums to prevent falling below the current standard. Specifically, Westinghouse stated at 310 to about 400 lumens, products fall below 45 lm/W. (Westinghouse, Public Meeting Transcript, No. 27 at pp. 64–65)

In this final rule, DOE reviewed potential backsliding resulting from ELs under consideration for all product classes, as all product classes are subject to the 45 lm/W backstop requirement. Based on this analysis, for the Integrated Omnidirectional Short (not capable of operating on standby mode) product class, DOE identified an error in its calculation of the lumen range that would result in an efficacy requirement less than the 45 lm/W. DOE is correcting that error in this final rule. For the Integrated Omnidirectional Short product class (not capable of operating on standby mode) for products with lumens less than 425 (rather than 424 as specified in the January 2023 NOPR), the initial EL 1 equation would result in an efficacy requirement less than the 45 lm/W standard. Similarly, for products with lumens less than 372 (rather than 371 as specified in the January 2023 NOPR), the initial EL 2 equation would result in an efficacy requirement less than the 45 lm/W standard. Hence, at EL 1 and EL 2, products with, respectively, lumens less than 425 and lumens less than 372 must meet a minimum efficacy requirement of 45 lm/W. Regarding other lumen ranges, at EL 1, products with lumens equal to 425 and less than or equal to 3,300 meet the minimum efficacy requirement based on the equation line of EL 1; and at EL 2, products with lumens equal to 372 and less than or equal to 3,300 lumens meet the minimum efficacy requirement based on the equation line of EL 2.

Further, DOE determined that for the Non-Integrated Omnidirectional Short product class for products with lumens less than 637, the initial EL 1 equation would result in an efficacy requirement less than the 45 lm/W standard. Similarly, for products with lumens less than 332, the initial EL 2 equation, would result in an efficacy requirement less than the 45 lm/W standard. Therefore, at EL 1 and EL 2 products with respectively, lumens less than 637 and lumens less than 332 must meet a minimum efficacy requirement of 45 lm/W. Regarding other lumen ranges, at EL 1, products with lumens equal to 637 and less than or equal to 3300 meet the minimum efficacy requirement based on the equation line of EL 1; and at EL 2 products with lumens equal to 332 and less than or equal to 3,300 lumens meet the minimum efficacy requirement based on the equation line of EL 2.

e. Scaling of Non-Representative Product Classes

In this January 2023 NOPR, DOE scaled the Non-integrated Omnidirectional Long product class from the representative Integrated Omnidirectional Long product class because the lamps in these product classes are the same in shape and size, and therefore could be scaled from or to one another. Because the linear shapes are substantively more prevalent than the U-shape lamps, DOE compared efficacies of linear tubular LED lamp pairs that had the same manufacturer, initial lumen output, length, CCT, lifetime, CRI range in the 80s and differed only in being integrated (Type B [41]) or non-integrated (Type A). Based

[41] Type A lamps have an internal driver and connect to the existing fluorescent lamp ballast; (2) Type B lamps have an internal driver and connect to the main line voltage; and (3) Type C lamps connect to an external, remote driver. In this analysis, DOE considers Type A and Type C lamps as non-integrated lamps because they require an external component to operate, whereas Type B and Type A/B lamps are integrated lamps as they can be directly connected to the main line voltage.

on this analysis, DOE applied a 10.7 percent efficacy increase to the efficacy at each EL of the Integrated Omnidirectional Long product class to calculate the efficacies of ELs for the Non-integrated Omnidirectional Long product class. The scaled efficacies of the ELs were then used to calculate the corresponding A-values. 88 FR 1638, 1667. DOE received no comments on the scaling of the Non-integrated Omnidirectional Long product class. In this final rule, DOE continues to use the methodology and results of this approach.

In the January 2023 NOPR, DOE scaled standby product classes from similar non-standby product classes. Based on test data, DOE found that standby power consumption was 0.5 W or less for the vast majority of lamps available. Therefore, DOE assumed a typical wattage constant for standby mode power consumption of 0.5 W and added this wattage to the rated wattage of the non-standby mode representative units to calculate the expected efficacy of lamps with the addition of standby mode functionality. DOE then used the expected efficacy of the lamps with the addition of standby mode functionality at each efficiency level to calculate the corresponding A-value. DOE assumed the lumens for a lamp with the addition of standby mode functionality were the same as for the non-standby mode representative units. 88 FR 1638, 1667.

DOE received comments on its approach of scaling standby mode product classes. ASAP *et al.* stated that DOE should set a separate standard for standby mode rather than the proposed integrated efficacy metric that combines standby mode and active mode power. ASAP *et al.* stated that a seemingly small tradeoff between active and standby mode wattage would result in a large percent increase in annual energy consumed due to the significantly greater number of operating hours in standby mode compared to active mode. ASAP *et al.* commented that, given DOE's estimates that 50 percent of lamps will include standby power by the end of the analysis period, failing to incorporate standby power in a way that captures its contribution to total energy use could have significant implications for national energy consumption associated with GSLs. ASAP *et al.* stated that if DOE decides not to set a separate standby standard, it should use a standby value of 0.2 W in setting the efficacy levels for lamps with standby power. ASAP *et al.* stated that, in the January 2023 NOPR, DOE stated that it used 0.2 W in the calculation of lamp unit energy consumption for all lamps with standby power because California requires state-regulated LED lamps to have standby power less than 0.2 W and it is likely that manufacturers sell the same lamp model across the United States. ASAP *et al.* stated that, when determining the standards for products with standby power, DOE instead used 0.5 W as a conservative estimate of standby power. ASAP *et al.* further stated that, while it acknowledges DOE performed standby mode power testing, there are also nearly 2,400 models of GSLs in California's compliance database meeting the 0.2 W standby power minimum. (ASAP *et al.,* No. 174 at pp. 3–5) The CEC also recommended that DOE set a separate standard limiting standby mode power consumption to 0.2 W in alignment with California's standards, rather than a power that varies with a lamp's lumen output. The CEC provided the example that based on DOE's current proposal for integrated omnidirectional short lamps, the standby power is about 0.5 W for 800 lumen lamps and would be 1.9 W for 3,300 lumen lamps. It noted that over 700 connected lamp models certified to the CEC database meet the 0.2 W standby mode power consumption requirement. (CEC, No. 176 at p. 4)

In the January 2023 NOPR, DOE tentatively determined that an integrated metric for active mode and standby mode was the most appropriate approach for establishing ELs for standby mode product classes. Hence, in the January 2023 NOPR, for GSLs with standby mode functionality, the energy efficiency standards set an assumed power consumption attributable to standby mode. It is possible for a lamp with standby mode power consumption greater than the assumed value to comply with the applicable energy efficiency standard, but only if the decreased efficiency of standby mode was offset by an increased efficiency in active mode. This ability for manufacturers to trade off efficiency between active mode efficiency and standby mode efficiency is a function of integrating the efficiencies into a single standard and is consistent with EPCA. EPCA directs DOE to incorporate, if feasible, standby mode and active mode into a single standard. (42 U.S.C. 6295(gg)(3)(A)) The integration of efficacies of multiple modes into a single standard allows for this type of trade-off. The combined energy consumption of a GSL in active mode and standby mode must result in an efficiency that is equal to or less than the applicable standard. 88 FR 1639, 1667.

Because an integrated metric provides flexibility in lamp design and a balance of active mode and standby mode efficiency in a lamp, DOE continues to use this approach in this final rule for determining the ELs for standby mode product classes. Regarding the use of 0.2 W instead of 0.5 W, as stated in the January 2023 NOPR, DOE found that standby power consumption was 0.5 W or less for the vast majority of lamps available. 88 FR 1638, 1667. (*See* appendix 5A of the final rule TSD for more information on the test results.) The purpose of the energy use analysis is to estimate representative values of actual energy consumption. The significant number of lamps available that consume 0.2 W or less in standby power and the requirement that lamps with standby power sold in California (a significant fraction of the GSL market) consume less than 0.2 W continues to suggest that 0.2 W is a reasonable estimate of representative standby energy consumption (*see* section IV.E of this document for further details on the energy use analysis). In this final rule, DOE is continuing to take a conservative approach because this is still a developing market and using 0.5 W as it did in the January 2023 NOPR to scale the ELs for standby mode product classes from the ELs of similar non-standby mode power classes.

f. Summary of All Efficacy Levels

Table IV.12 displays the efficacy requirements for each level analyzed by product class. The non-standby and standby Integrated Omnidirectional Short and Non-Integrated Omnidirectional product classes EL 1 and EL 2 have different requirements for lower and higher lumens. This is to ensure that lamps in the Integrated Omnidirectional Short product classes already subject to an existing standard are not subject to a less stringent standard (*i.e.,* that backsliding in violation of 42 U.S.C. 6295(o)(1) is not occurring) (*see* section IV.D.1.d of this document for further information). The representative product classes are shown in grey, and all others are scaled product classes. (*Note:* In the January 2023 NOPR, for the Integrated Omnidirectional Long product class DOE had decided to lower the A-value of EL 6 (max tech level) from 74.1 to 71.7. 88 FR 1638, 1666. However, in table VI.15, ''Proposed Efficacy Levels of GSLs'' and table VII.30, ''Proposed Amended Energy Conservation Standards for GSLs'' in the January 2023 NOPR, the A-value appeared as 74.1 instead of 71.7. 88 FR 1638, 1668, 1708. This has been corrected in the table below and all relevant tables in this final rule.)

BILLING CODE 6450–01–P

Table IV.12 GSL Efficacy Levels

Representative Product Class	Efficacy Level	Efficacy
		lm/W
Integrated Omnidirectional Short (Not Capable of Operating in Standby Mode)	EL 1	45 (for lumens less than 425) $123/(1.2+e^{-0.005*(Lumens-200)})$ – 35.7 (for lumens 425-3,300)
	EL 2	45 (for lumens less than 372) $123/(1.2+e^{-0.005*(Lumens-200)})$ – 30.8 (for lumens 372-3,300)
	EL 3	$123/(1.2+e^{-0.005*(Lumens-200)})$ – 18.5
	EL 4	$123/(1.2+e^{-0.005*(Lumens-200)})$ – 9.6
	EL 5	$123/(1.2+e^{-0.005*(Lumens-200)})$ + 1.5
	EL 6	$123/(1.2+e^{-0.005*(Lumens-200)})$ + 15.8
	EL 7	$123/(1.2+e^{-0.005*(Lumens-200)})$ + 25.9
Integrated Omnidirectional Long (Not Capable of Operating in Standby Mode)	EL 1	$123/(1.2+e^{(-0.005*(Lumens-200))})$ + 26.1
	EL 2	$123/(1.2+e^{(-0.005*(Lumens-200))})$ + 37.5
	EL 3	$123/(1.2+e^{(-0.005*(Lumens-200))})$ + 47.5
	EL 4	$123/(1.2+e^{(-0.005*(Lumens-200))})$ + 54.0
	EL 5	$123/(1.2+e^{(-0.005*(Lumens-200))})$ + 59.4
	EL 6	$123/(1.2+e^{(-0.005*(Lumens-200))})$ + 71.7
Integrated Directional (Not Capable of Operating in Standby Mode)	EL 1	$73/(0.5+e^{(-0.0021*(Lumens+1000))})$ – 72.6
	EL 2	$73/(0.5+e^{(-0.0021*(Lumens+1000))})$ – 68.2
	EL 3	$73/(0.5+e^{(-0.0021*(Lumens+1000))})$ – 63.2
	EL 4	$73/(0.5+e^{(-0.0021*(Lumens+1000))})$ – 57.5
	EL 5	$73/(0.5+e^{(-0.0021*(Lumens+1000))})$ – 47.2
Non-integrated Omnidirectional Short (Not Capable of Operating in Standby Mode)	EL 1	45 (for lumens less than 637) $122/(0.55+e^{(-0.003*(Lumens+250))})$ – 151.8 (for lumens 637-3300)

	EL 2	45 (for lumens less than 332) $122/(0.55+e^{(-0.003*(Lumens+250))}) - 123.4$ (for lumens 332-3300)
	EL 3	$122/(0.55+e^{(-0.003*(Lumens+250))}) - 83.4$
Non-integrated Directional (Not Capable of Operating in Standby Mode)	EL 1	$67/(0.45+e^{(-0.00176*(Lumens+1310))}) - 65.0$
	EL 2	$67/(0.45+e^{(-0.00176*(Lumens+1310))}) - 59.5$
	EL 3	$67/(0.45+e^{(-0.00176*(Lumens+1310))}) - 53.1$
Integrated Omnidirectional Short (Capable of Operating in Standby Mode)	EL 1	45 (for lumens less than 452) $123/(1.2+e^{(-0.005*(Lumens-200))}) - 37.9$ (for lumens 452-3,300)
	EL 2	45 (for lumens less than 399) $123/(1.2+e^{(-0.005*(Lumens-200))}) - 33.3$ (for lumens 399-3,300)
	EL 3	$123/(1.2+e^{(-0.005*(Lumens-200))}) - 22.2$
	EL 4	$123/(1.2+e^{(-0.005*(Lumens-200))}) - 14.2$
	EL 5	$123/(1.2+e^{(-0.005*(Lumens-200))}) - 4.3$
	EL 6	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 8.2$
	EL 7	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 17.1$
Integrated Directional (Capable of Operating in Standby Mode)	EL 1	$73/(0.5+e^{(-0.0021*(Lumens+1000))}) - 74.6$
	EL 2	$73/(0.5+e^{(-0.0021*(Lumens+1000))}) - 70.5$
	EL 3	$73/(0.5+e^{(-0.0021*(Lumens+1000))}) - 65.8$
	EL 4	$73/(0.5+e^{(-0.0021*(Lumens+1000))}) - 60.4$
	EL 5	$73/(0.5+e^{(-0.0021*(Lumens+1000))}) - 50.9$
Non-integrated Omnidirectional Long (Not Capable of Operating in Standby Mode)	EL 1	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 39.8$
	EL 2	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 52.4$
	EL 3	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 63.5$
	EL 4	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 70.7$
	EL 5	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 76.6$
	EL 6	$123/(1.2+e^{(-0.005*(Lumens-200))}) + 93.0$

BILLING CODE 6450–01–C

2. Cost Analysis

The cost analysis portion of the engineering analysis is conducted using one or a combination of cost approaches. The selection of cost approach depends on a suite of factors, including the availability and reliability of public information, characteristics of the regulated product, the availability and timeliness of purchasing the GSLs on the market. The cost approaches are summarized as follows physical teardowns:

Under this approach, DOE physically dismantles a commercially available product, component-by-component, to develop a detailed bill of materials for the product.

- *Catalog teardowns:* In lieu of physically deconstructing a product, DOE identifies each component using parts diagrams (available from manufacturer websites or appliance repair websites, for example) to develop the bill of materials for the product.
- *Price surveys:* If neither a physical nor catalog teardown is feasible (for example, for tightly integrated products such as fluorescent lamps, which are infeasible to disassemble and for which parts diagrams are unavailable) or cost-prohibitive and otherwise impractical (*e.g.* large commercial boilers), DOE conducts price surveys using publicly available pricing data published on major online retailer websites and/or by soliciting prices from distributors and other commercial channels.

In the present case, DOE conducted the analysis using a price survey approach. Typically, DOE develops manufacturing selling prices (''MSPs'') for covered products and applies markups to create end-user prices to use as inputs to the LCC analysis and NIA. Because GSLs are difficult to reverse-engineer (*i.e.,* not easily disassembled), DOE directly derives end-user prices for the lamps covered in this rulemaking. The end-user price refers to the product price a consumer pays before tax and installation. Because non-integrated CFLs operate with a ballast in practice, DOE also developed prices for ballasts that operate those lamps.

In the January 2023 NOPR, DOE reviewed and used publicly available retail prices to develop end-user prices for GSLs. DOE observed a range of end-user prices paid for a lamp, depending on the distribution channel through which the lamp was purchased. DOE identified the following four main distribution channels: Small Consumer-Based Distributors (*i.e.,* internet

retailers); Large Consumer-Based Distributors: (*i.e.,* home centers, mass merchants, and hardware stores); Electrical Distributors; and State Procurement. For each distribution channel, DOE calculated an aggregate price for the representative lamp unit at each EL using the average prices for the representative lamp unit and similar lamp models. DOE ensured there was sufficient data to determine average prices and employed the interquartile range (IQR) calculation, a common statistical rule used to identify outliers in a dataset. When sufficient data were not available at a specific distribution channel to develop a representative unit price at an EL, DOE extrapolated pricing from lamps in the product class as similar as possible to the representative unit and with available pricing data. DOE employed price trends observed from the larger dataset of GSL prices as well as scaling factors. Because the lamps included in the calculation were equivalent to the representative lamp unit in terms of performance and utility (*i.e.,* had similar wattage, CCT, shape, base type, CRI), DOE considered the pricing of these lamps to be representative of the technology of the EL. DOE developed average end-user prices for the representative lamp units sold in each of the four main distribution channels analyzed. DOE then calculated an average weighted end-user price using estimated shipments through each distribution channel. For shipment weightings, DOE used one set of shipment percentages reflecting commercial products for the Non-integrated Omnidirectional Short, Non-integrated Directional, and Integrated Omnidirectional Long product classes and another set of shipment percentages reflecting residential products for the Integrated Omnidirectional Short and Integrated Directional product classes. DOE grouped the Integrated Omnidirectional Long product class in the commercial product categories as these are mainly linear tubular LED lamps used as replacements for linear fluorescents in commercial spaces. DOE also determined prices for CFL ballasts by comparing the blue book prices of CFL ballasts with comparable fluorescent lamp ballasts and developing a scaling factor to apply to the end-user prices of the fluorescent lamp ballasts developed for the final rule that was published on November 14, 2011. 76 FR 70548. 88 FR 1638, 1669.

NEMA stated that it could not comment on end-user pricing and referred DOE to individual manufacturer interviews. (NEMA, No. 183 at p. 1) The CA IOUs stated their interest in whether DOE accounted for the impact of mid and upstream energy efficiency program incentives on its retail prices. The CA IOUs stated that DOE's collected retail prices may reflect, depending on the geographic region and rebate program, significant rebates that are applied further up the distribution channel stream and not reflected in manufacturer costs. (CA IOUs, Public Meeting Transcript, No. 27 at pp. 74–75)

When collecting retail prices, DOE recorded the regular prices rather than any discounted or sale prices specified by the retailer. DOE made no adjustment to retail prices for rebate programs. Rebate programs can vary in terms of geography, rebate amount as well as to the extent they are utilized, among other things. Hence it is difficult for DOE to determine the impact of mid or upstream rebate programs on retail price, if any, that is consistently applicable at a national level. The cost analysis in this rulemaking employs a consistent methodology in developing the final consumer prices that are used in the LCC analysis and development of MPC and MSP. Further, EPA's ENERGY STAR Lighting Program has noted that in recent years utility programs have been declining in anticipation of Federal standards, which would result in a new baseline that would make it difficult for utilities to justify their rebates.[42]

Hence, in this final rule, DOE continues to use the methodology and results of the cost analysis as determined in the January 2023 NOPR. The end-user prices are detailed in chapter 5 of the final rule TSD. These end-user prices are used to determine an MSP using a distribution chain markup. DOE developed an average distribution chain markup by examining the annual Securities and Exchange Commission (''SEC'') 10–K reports filed by publicly traded retail stores that sell GSLs. *See* section IV.J.2.a of this document for further details.

E. Energy Use Analysis

The purpose of the energy use analysis is to determine the annual energy consumption of GSLs at different efficiencies in representative U.S. single-family homes, multi-family residences, and commercial buildings, and to assess the energy savings potential of increased GSL efficacy. The energy use analysis estimates the range of energy use of GSLs in the field (*i.e.,* as they are actually used by consumers). The energy use analysis provides the basis for other analyses DOE performed, particularly assessments of the energy savings and the savings in consumer operating costs that could result from adoption of amended or new standards. To develop annual energy use estimates, DOE multiplied GSL input power by the number of hours of use (''HOU'') per year and a factor representing the impact of controls.

DOE analyzed energy use in the residential and commercial sectors separately but did not explicitly analyze GSLs installed in the industrial sector. This is because far fewer GSLs are installed in that sector compared to the commercial sector, and the average operating hours for GSLs in the two sectors were assumed to be approximately equal. In the energy use and subsequent analyses, DOE analyzed these sectors together (using data specific to the commercial sector) and refers to the combined sector as the commercial sector.

1. Operating Hours

a. Residential Sector

To determine the average HOU of Integrated Omnidirectional Short GSLs in the residential sector, DOE collected data from a number of sources. Consistent with the approach taken in the January 2023 NOPR, DOE used data from various regional field-metering studies of GSL operating hours conducted across the United States. (88 FR 1669–1670) DOE determined the regional variation in average HOU using average HOU data from the regional metering studies, which are listed in the energy use chapter (chapter 6 of the final rule TSD). Specifically, DOE determined the average HOU for each of the reportable domains (*i.e.,* state, or group of states) used in the EIA 2009 Residential Energy Consumption Survey (''RECS'').[43] For regions without HOU metered data, DOE used data from adjacent regions. DOE estimated the national weighted-average HOU of Integrated Omnidirectional Short GSLs in the residential sector to be 2.3 hours per day.

For lamps in the other GSL product classes, DOE estimated average HOU by scaling the average HOU from the Integrated Omnidirectional Short product class. Scaling factors were developed based on the distribution of room types that particular lamp types

[42] EPA ENERGY STAR Lighting Program, ''ENERGY STAR Lighting Sunset Proposal Memo.'' Available at: *www.energystar.gov/sites/default/files/asset/document/ENERGY%20STAR%20Lighting%20Sunset%20Proposal%20Memo.pdf* (last accessed Aug. 22, 2023).

[43] U.S. Department of Energy–Energy Information Administration. 2009 RECS Survey Data. Available at *www.eia.gov/consumption/residential/data/2009/*(last accessed Aug. 1, 2023).

(*e.g.,* reflector or linear) are typically installed in, and the associated HOU for those room types. Room-specific average HOU data came from NEEA's ''2014 Residential Building Stock Assessment Metering Study'' (''RBSAM'') [44] and room distribution data by lamp type came from a 2010 KEMA report.[45] *See* chapter 6 of this final rule TSD for more detail. DOE notes that its approach assumes that the ratio of average HOU for reflector or linear lamps to A-line lamps will be approximately the same across the United States, even if the average HOU varies by geographic location. DOE estimated the national weighted-average HOU of Integrated Directional and Non-integrated Directional GSLs to be 2.9 hours per day and Integrated Omnidirectional Long GSLs to be 2.1 hours per day in the residential sector.

DOE assumes that operating hours do not vary by light source technology. Although some metering studies observed higher hours of operation for CFL GSLs compared to all GSLs—such as NMR Group, Inc.'s ''Northeast Residential Lighting Hours-of-Use Study'' [46] and the ''Residential Lighting End-Use Consumption Study'' (''RLEUCS'') [47]—DOE assumes that the higher HOU found for CFL GSLs were based on those lamps disproportionately filling sockets with higher HOU at the time of the studies. This would not be the case during the analysis period, when CFL and LED GSLs are expected to fill all GSL sockets. DOE assumes that it is appropriate to apply the HOU estimate for all GSLs to CFLs and LEDs, as only CFLs and LEDs will be available during the analysis period, consistent with DOE's approach in the January 2023 NOPR. This assumption is equivalent to assuming no rebound in operating hours as a result of more efficacious technologies filling sockets currently filled by less efficacious technologies.

The operating hours of lamps in actual use are known to vary significantly based on the room type in which the lamp is located; therefore, DOE estimated this variability by developing HOU distributions for each room type using data from NEEA's 2014 RBSAM, a metering study of 101 single-family houses in the Northwest. DOE assumed that the shape of the HOU distribution for a particular room type would be the same across the U.S., even if the average HOU for that room type varied by geographic location. To determine the distribution of GSLs by room type, DOE used data from NEEA's 2016–2017 RBSAM for single-family homes,[48] which included GSL room-distribution data for more than 700 single-family homes throughout the Northwest.

In response to the January 2023 NOPR, NEMA agreed with the data and methodology DOE used to estimate residential HOU. (NEMA, No. 183 at p. 15)

b. Commercial Sector

For each commercial building type presented in the ''2015 U.S. Lighting Market Characterization'' (''LMC''), DOE determined average HOU based on the fraction of installed lamps utilizing each of the light source technologies typically used in GSLs and the HOU for each of these light source technologies for integrated omnidirectional short, integrated directional, non-integrated directional, and non-integrated omnidirectional GSLs.[49] For integrated omnidirectional long GSLs, DOE used the data from the 2015 LMC pertaining to linear fluorescent lamps. DOE estimated the national-average HOU for the commercial sector by mapping the LMC building types to the building types used in Commercial Buildings Energy Consumption Survey (''CBECS'') 2012,[50] and then weighting the building-specific HOU for GSLs by the relative floor space of each building type as reported in the 2015 LMC. The national weighted-average HOU for integrated omnidirectional short, integrated directional, non-integrated directional, and non-integrated omnidirectional GSLs in the commercial sector were estimated at 11.5 hours per day. The national weighted-average HOU for integrated omnidirectional long GSLs in the commercial sector were estimated at 8.1 hours per day.

To capture the variability in HOU for individual consumers in the commercial sector, DOE used data from NEEA's ''2019 Commercial Building Stock Assessment'' (''CBSA'').[51] Similar to the residential sector, DOE assumed that the shape of the HOU distribution from the CBSA was similar for the U.S. as a whole.

In response to the January 2023 NOPR, NEMA agreed with the data and methodology DOE used to estimate commercial HOU. (NEMA, No. 183 at p. 15)

2. Input Power

The input power used in the energy use analysis is the input power presented in the engineering analysis (section IV.D.1.c of this document) for the representative lamps considered in this rulemaking.

3. Lighting Controls

For GSLs that operate with controls, DOE assumed an average energy reduction of 30 percent, which is based on a meta-analysis of field measurements of energy savings from commercial lighting controls by Williams, *et al.*[52] Because field measurements of energy savings from controls in the residential sector are very limited, DOE assumed that controls would have the same impact as in the commercial sector.

In response to the January 2023 NOPR, NEMA commented that the results of the meta-analysis DOE relied on to estimate 30 percent energy savings are not accurate because LED technology was not in general use at that time. NEMA suggested—based on a DesignLights Consortium report [53]

showing average savings of 49 percent for networked lighting controls—that DOE use a range of 30–49 percent energy savings from controls. (NEMA, No. 183 at p. 15) DOE appreciates NEMA identifying this report; however, because the meta-analysis DOE has relied on incorporates a variety of control strategies, DOE believes the meta-analysis is likely more representative of potential savings than the results of a study looking only at networked lighting controls. DOE has thus continued to use 30 percent energy savings for controls in its reference scenario. However, due to the inherent uncertainty in estimating energy savings from controls, DOE also analyzed a scenario in which controls are assumed to result in a 49 percent reduction in energy use. The results of this analysis can be found in appendix 7B of the final rule TSD.

For this final rule, DOE assumed that the controls penetration of 9 percent reported in the 2015 LMC is representative of integrated omnidirectional short GSLs. DOE estimated different controls penetrations for integrated omnidirectional long and integrated and non-integrated directional GSLs. The 2015 LMC reports a controls penetration of 0 percent for linear fluorescent lamps in the residential sector; therefore, DOE assumed that no residential integrated omnidirectional long lamps are operated on controls. To estimate controls penetrations for integrated directional and non-integrated directional GSLs, DOE scaled the controls penetration for integrated omnidirectional short GSLs based on the distribution of room types that reflector lamps are typically installed in relative to A-type GSLs, and the controls penetration by room type from the 2010 KEMA report. Based on this analysis, DOE estimated the controls penetrations for integrated directional and non-integrated directional GSLs at 10 percent.

In response to the January 2023 NOPR, NEMA recommended that DOE use a controls penetration of 1 percent or 2 percent for integrated omnidirectional long lamps. NEMA also commented that DOE should not rely on the 2015 LMC to estimate controls penetration due to the 2015 LMC being outdated and also showing less controls penetration than the previous 2010 LMC report. NEMA estimated that approximately 20 percent of residential lamps are connected to lighting controls and provided multiple explanations for the increased controls penetration. (NEMA, No. 183 at pp. 15–17) DOE has continued to use the 2015 LMC to estimate controls penetration in this final rule because the 2015 LMC estimates are the best nationally representative estimates that DOE has for integrated omnidirectional long lamps, assuming a 2 percent controls penetration for those lamps (as opposed to 0 percent) would have very minor impacts on the energy use and LCC results. For the other lamp types, DOE agrees that there is more uncertainty with the estimated controls penetration. As a result, DOE has analyzed a scenario in which the controls penetration is assumed to be 20 percent for all product classes other than integrated omnidirectional long. The results of this analysis can be found in appendix 7B of the final rule TSD.

For this final rule, DOE maintains its assumption in the January 2023 NOPR that the fraction of CFLs and LED lamps on controls is the same. By maintaining the same controls fraction for both technologies derived from estimates for all GSLs, DOE's estimates of energy savings may be slightly conservative compared to a scenario where fewer CFLs are on dimmers. Additionally, DOE's shipments model projects that only 2.3 percent of residential shipments in the integrated omnidirectional short product class and 0.3 percent of residential shipments in the integrated directional product class will be CFLs by 2029, indicating that the control fraction for CFLs will not significantly impact the overall results of DOE's analysis.

In the reference scenario, DOE assumed the fraction of residential GSLs on external controls remain fixed throughout the analysis period at 9 percent for integrated omnidirectional short GSLs, 10 percent for integrated directional and non-integrated directional GSLs, and 0 percent for integrated omnidirectional long GSLs. The national impact analysis does, however, assume an increasing fraction of residential LED GSLs that operate with controls in the form of smart lamps, as discussed in section IV.H.1.a of this document.

DOE assumed that building codes would drive an increase in floor space utilizing controls in the commercial sector in this final rule, similar to its assumption in the January 2023 NOPR (*see* appendix 9C of this final rule TSD). By the assumed first full year of compliance (2029), DOE estimated 36 percent of commercial GSLs in all product classes will operate on controls. In response to the January 2023 NOPR, NEMA commented that an estimated 50 percent of commercial GSLs operate on controls. (NEMA, No. 183 at p. 17) Without data to corroborate a different value, DOE has continued to assume 36 percent of commercial GSLs operate on controls in its reference scenario because DOE believes the data sources it used and the analysis it conducted to estimate commercial controls penetration in the compliance year provide a nationally representative estimate. However, based on NEMA's input, DOE has analyzed a scenario in which 50 percent of commercial GSLs operate on controls. The results of this analysis can be found in appendix 7B of the final rule TSD.

Chapter 6 of the final rule TSD provides details on DOE's energy use analysis for GSLs.

F. Life-Cycle Cost and Payback Period Analysis

DOE conducted LCC and PBP analyses to evaluate the economic impacts on individual consumers of potential energy conservation standards for GSLs. The effect of new or amended energy conservation standards on individual consumers usually involves a reduction in operating cost and an increase in purchase cost. DOE used the following two metrics to measure consumer impacts:

- The LCC is the total consumer expense of an appliance or product over the life of that product, consisting of total installed cost (manufacturer selling price, distribution chain markups, sales tax, and installation costs) plus operating costs (expenses for energy use, maintenance, and repair). To compute the operating costs, DOE discounts future operating costs to the time of purchase and sums them over the lifetime of the product.
- The PBP is the estimated amount of time (in years) it takes consumers to recover the increased purchase cost (including installation) of a more-efficient product through lower operating costs. DOE calculates the PBP by dividing the change in purchase cost at higher efficiency levels by the change in annual operating cost for the year that amended or new standards are assumed to take effect.

For a GSL standard case (*i.e.,* case where a standard would be in place at a particular TSL), DOE measured the LCC savings resulting from the estimated efficacy distribution under the considered standard relative to the estimated efficacy distribution in the no-new-standards case. The efficacy distributions include market trends that can result in some lamps with efficacies

from Networked Lighting Control (NLC) Systems with and without LLLC. 2020. Energy Solutions: Oakland, CA. Available at: *www.designlights.org/resources/reports/report-energy-savings-from-networked-lighting-control-nlc-systems-with-and-without-lllc/* (last accessed Aug. 10, 2023).

that exceed the minimum efficacy associated with the standard under consideration. In contrast, the PBP only considers the average time required to recover any increased first cost associated with a purchase at a particular EL relative to the baseline product.

For each considered efficiency level in each product class, DOE calculated the LCC and PBP for a nationally representative set of potential residential consumers and commercial customers. Separate calculations were conducted for the residential and commercial sectors. DOE developed consumer samples based on the 2020 RECS [54] and the 2018 CBECS [55] for the residential and commercial sectors, respectively. For each consumer in the sample, DOE determined the energy consumption for the lamp purchased and the appropriate electricity price. By developing representative consumer samples, the analysis captured the variability in energy consumption and energy prices associated with the use of GSLs.

DOE added sales tax, which varied by state, and installation cost (for the commercial sector) to the cost of the product developed in the product price determination to determine the total installed cost. Inputs to the calculation of operating expenses include annual energy consumption, energy prices and price projections, lamp lifetimes, and discount rates. DOE created distributions of values for lamp lifetimes, discount rates, and sales taxes, with probabilities attached to each value, to account for their uncertainty and variability.

The computer model DOE uses to calculate the LCC relies on a Monte Carlo simulation to incorporate uncertainty and variability into the analysis. The Monte Carlo simulations randomly sample input values from the probability distributions and GSL consumer samples. The model calculated the LCC and PBP for a sample of 10,000 consumers per simulation run. The analytical results include a distribution of 10,000 data points showing the range of LCC savings. In performing an iteration of the Monte Carlo simulation for a given consumer, product efficiency is chosen based on its probability. If the chosen product efficiency is greater than or equal to the efficiency of the standard level under consideration, the LCC calculation reveals that a consumer is not impacted by the standard level. By accounting for consumers who already purchase more-efficient products, DOE avoids overstating the potential benefits from increasing product efficiency. DOE calculated the LCC and PBP for consumers of GSLs as if each were to purchase a new product in the expected first full year of required compliance with amended standards. As discussed in section II of this document, since compliance with the statutory backstop requirement for GSLs commenced on July 25, 2022, DOE would set a 6-year compliance date of July 25, 2028, for consistency with requirements in 42 U.S.C. 6295(m)(4)(B) and 42 U.S.C. 6295(i)(6)(B)(iii). Therefore, because the compliance date would be in the second half of 2028, for purposes of its analysis, DOE used 2029 as the first full year of compliance with any amended standards for GSLs.

Table IV.13 summarizes the approach and data DOE used to derive inputs to the LCC and PBP calculations. The subsections that follow provide further discussion. Details of the spreadsheet model, and of all the inputs to the LCC and PBP analyses, are contained in chapter 7 of the final rule TSD and its appendices.

BILLING CODE 6450–01–P

[54] U.S. Department of Energy—Energy Information Administration. *2020 Residential Energy Consumption Survey (RECS).* 2020. *www.eia.gov/consumption/residential/data/2020/.* Last accessed August 10, 2023.

[55] U.S. Department of Energy—Energy Information Administration. *2018 Commercial Buildings Energy Consumption Survey (CBECS).* 2021. Available at *www.eia.gov/consumption/commercial/data/2018/* (last accessed Aug. 10, 2023).

Table IV.13 Summary of Inputs and Methods for the LCC and PBP Analysis*

Inputs	Source/Method
Product Cost	Weighted-average end-user price determined in the product price determination. To project the price of the LED lamps in the first full year of compliance, DOE used a price-learning analysis.
Sales Tax	Derived 2029 population-weighted-average tax values for each state based on Census population projections and sales tax data from Sales Tax Clearinghouse.
Installation Costs	Used RSMeans and U.S. Bureau of Labor Statistics data to estimate an installation cost of $1.73 per installed GSL for the commercial sector.
Disposal Cost	Assumed 35 percent of commercial CFLs are disposed of at a cost of $0.70 per CFL. Assumptions based on industry expert feedback and a Massachusetts Department of Environmental Protection mercury lamp recycling rate report.
Annual Energy Use	Derived in the energy use analysis. Varies by geographic location and room type in the residential sector and by building type in the commercial sector.
Energy Prices	Based on 2022 average and marginal electricity price data from the Edison Electric Institute. Electricity prices vary by season and U.S. region.
Energy Price Trends	Based on *AEO2023* price forecasts.
Product Lifetime	A Weibull survival function is used to provide the survival probability as a function of GSL age, based on the GSL's rated lifetime and sector-specific HOU. On-time cycle length effects are included for residential CFLs.
Residual Value	Represents the value of surviving lamps at the end of the LCC analysis period. DOE discounts the residual value to the start of the analysis period and calculates it based on the remaining lamp's lifetime and price at the end of the LCC analysis period.
Discount Rates	Approach involves identifying all possible debt or asset classes that might be used to purchase the considered appliances or might be affected indirectly. Primary data source was the Federal Reserve Board's Survey of Consumer Finances.
Efficacy Distribution	Estimated by the market-share module of shipments model. *See* chapter 8 of the final rule TSD for details.
First Full Year of Compliance	2029

* References for the data sources mentioned in this table are provided in the sections following the table or in chapter 7 of the final rule TSD.

BILLING CODE 6450–01–C

1. Product Cost

To calculate consumer product costs, DOE typically multiplies the manufacturer production costs (''MPCs'') developed in the engineering analysis by the markups along with sales taxes. For GSLs, the engineering analysis determined end-user prices for 2020 directly; therefore, for the LCC analysis, the only adjustment was to adjust the prices to 2022$ using the implicit price deflator for gross domestic product (''GDP'') from the Bureau of Economic Analysis [56] and add sales taxes, which were assigned to each household or building in the LCC sample based on its location.

DOE also used a price-learning analysis to account for changes in LED lamp prices that are expected to occur between the time for which DOE has data for lamp prices (2020) and the assumed first full year of compliance of the rulemaking (2029). For details on the price-learning analysis, *see* section IV.G.1.b of this document.

2. Installation Cost

Installation cost includes labor, overhead, and any miscellaneous materials and parts needed to install the product. DOE assumed an installation cost of $1.73 per installed commercial GSL—based on an estimated lamp installation time of 5 minutes from RSMeans [57] and hourly wage data from the U.S. Bureau of Labor Statistics [58]—but zero installation cost for residential GSLs.

3. Annual Energy Consumption

For each sampled household or commercial building, DOE determined the energy consumption for a GSL at different efficiency levels using the

[56] *www.bea.gov/data/prices-inflation/gdp-price-deflator* (last accessed March 5, 2024).

[57] RSMeans. Facilities Maintenance & Repair Cost Data 2013. 2012. RSMeans: Kingston, MA.

[58] U.S. Department of Labor–Bureau of Labor Statistics. ''Occupational Employment and Wages, May 2021: 49–9071 Maintenance and Repair Workers, General.'' Available at: *www.bls.gov/oes/2021/may/oes499071.htm* (last accessed April 13, 2022).

approach described previously in section IV.E of this document.

4. Energy Prices

Because marginal electricity price more accurately captures the incremental savings associated with a change in energy use from higher efficiency, it provides a better representation of incremental change in consumer costs than average electricity prices. DOE generally applies average electricity prices for the energy use of the product purchased in the no-new-standards case, and marginal electricity prices for the incremental change in energy use associated with the other efficiency levels considered.

In this final rule, consistent with the January 2023 NOPR, DOE used marginal electricity prices to estimate electricity costs for both the incremental change in energy use and the energy use in the no-new-standards case due to the calculated annual electricity cost for some regions and efficiency levels being negative when using average electricity prices for the energy use of the product purchased in the no-new-standards case. Negative costs can occur in instances where the marginal electricity cost for the region and the energy savings relative to the baseline for the given efficiency level are large enough that the incremental cost savings exceed the baseline cost.

DOE derived electricity prices in 2022 using data from the EEI Typical Bills and Average Rates reports. Based upon comprehensive, industry-wide surveys, this semi-annual report presents typical monthly electric bills and average kilowatt-hour costs to the customer as charged by investor-owned utilities. For the residential sector, DOE calculated electricity prices using the methodology described in Coughlin and Beraki (2018).[59] For the commercial sector, DOE calculated electricity prices using the methodology described in Coughlin and Beraki (2019).[60]

DOE's methodology allows electricity prices to vary by sector, region, and season. In the analysis, variability in electricity prices is chosen to be consistent with the way the consumer economic and energy use characteristics are defined in the LCC analysis. DOE assigned marginal prices to each household in the LCC sample based on its location. DOE also assigned marginal prices to each commercial building in the LCC sample based on its location and annual energy consumption. For a detailed discussion of the development of electricity prices, see chapter 7 of the Final Rule TSD.

To estimate energy prices in future years, DOE multiplied the 2022 energy prices by the projection of annual average price changes for each of the nine census divisions from the Reference case in the *Annual Energy Outlook 2023* (*AEO2023),* which has an end year of 2050.[61] To estimate price trends after 2050, DOE assumed that the regional prices would remain at the 2050 value.

DOE used the electricity price trends associated with the AEO Reference case, which is a business-as-usual estimate, given known market, demographic, and technological trends. DOE also included AEO High Economic Growth and AEO Low Economic Growth scenarios in the analysis. The high- and low-growth cases show the projected effects of alternative economic growth assumptions on energy prices, and the results can be found in appendix 9D of the final rule TSD.

5. Product Lifetime

In this final rule, DOE considered the GSL lifetime to be the service lifetime (*i.e.,* the age at which the lamp is retired from service). For the representative lamps in this analysis, DOE used the same lifetime methodology as in the January 2023 NOPR. This methodology uses Weibull survival models to calculate the probability of survival as a function of lamp age. In the analysis, DOE considered the lamp's rated lifetime (taken from the engineering analysis), sector- and product class-specific HOU distributions, typical renovation timelines, and effects of on-time cycle length, which DOE assumed only applied to residential CFL GSLs.

For a detailed discussion of the development of lamp lifetimes, see appendix 7C of the final rule TSD.

6. Residual Value

The residual value represents the remaining dollar value of surviving lamps at the end of the LCC analysis period (the lifetime of the shortest-lived GSL in each product class), discounted to the first full year of compliance. To account for the value of any lamps with remaining life to the consumer, the LCC model applies this residual value as a ''credit'' at the end of the LCC analysis period. Because DOE estimates that LED GSLs undergo price learning, the residual value of these lamps is calculated based on the lamp price at the end of the LCC analysis period.

7. Disposal Cost

Disposal cost is the cost a consumer pays to dispose of their retired GSLs. DOE assumed that 35 percent of CFLs are recycled (this fraction remains constant over the analysis period), and that the disposal cost is $0.70 per lamp for commercial consumers. Disposal costs were not applied to residential consumers. Because LED lamps do not contain mercury, DOE assumes no disposal costs for LED lamps in both the residential and commercial sectors.

8. Discount Rates

In the calculation of LCC, DOE applies discount rates appropriate to residential and commercial consumers to estimate the present value of future operating cost savings. The subsections below provide information on the derivation of the discount rates by sector. *See* chapter 7 of the final rule TSD for further details on the development of discount rates.

a. Residential

DOE estimated a distribution of residential discount rates for GSLs based on the opportunity cost of consumer funds. DOE applies weighted average discount rates calculated from consumer debt and asset data, rather than marginal or implicit discount rates.[62] The LCC analysis estimates net present value over the lifetime of the product, so the appropriate discount rate will reflect the general opportunity cost of household funds, taking this time scale into account. Given the long time horizon modeled in the LCC, the application of a marginal interest rate associated with an initial source of funds is inaccurate. Regardless of the method of purchase, consumers are expected to continue to rebalance their debt and asset holdings over the LCC analysis period, based on the

[59] Coughlin, K. and B. Beraki. 2018. Residential Electricity Prices: A Review of Data Sources and Estimation Methods. Lawrence Berkeley National Lab. Berkeley, CA. Report No. LBNL–2001169. *ees.lbl.gov/publications/residential-electricity-prices-review.*

[60] Coughlin, K. and B. Beraki. 2019. Non-residential Electricity Prices: A Review of Data Sources and Estimation Methods. Lawrence Berkeley National Lab. Berkeley, CA. Report No. LBNL–2001203. *ees.lbl.gov/publications/non-residential-electricity-prices.*

[61] EIA. *Annual Energy Outlook 2023.* Available at: *www.eia.gov/outlooks/aeo/* (last accessed Aug. 10, 2023).

[62] The implicit discount rate is inferred from a consumer purchase decision between two otherwise identical goods with different first cost and operating cost. It is the interest rate that equates the increment of first cost to the difference in net present value of lifetime operating cost, incorporating the influence of several factors: transaction costs; risk premiums and response to uncertainty; time preferences; interest rates at which a consumer is able to borrow or lend. The implicit discount rate is not appropriate for the LCC analysis because it reflects a range of factors that influence consumer purchase decisions, rather than the opportunity cost of the funds that are used in purchases.

restrictions consumers face in their debt payment requirements and the relative size of the interest rates available on debts and assets. DOE estimates the aggregate impact of this rebalancing using the historical distribution of debts and assets.

To establish residential discount rates for the LCC analysis, DOE identified all relevant household debt or asset classes in order to approximate a consumer's opportunity cost of funds related to appliance energy cost savings. It estimated the average percentage shares of the various types of debt and equity by household income group using data from the Federal Reserve Board's triennial Survey of Consumer Finances [63] (''SCF'') starting in 1995 and ending in 2019. Using the SCF and other sources, DOE developed a distribution of rates for each type of debt and asset by income group to represent the rates that may apply in the year in which amended standards would take effect. DOE assigned each sample household a specific discount rate drawn from one of the distributions. The average rate across all types of household debt and equity and income groups, weighted by the shares of each type, is 4.2 percent.

b. Commercial

For commercial consumers, DOE used the cost of capital to estimate the present value of cash flows to be derived from a typical company project or investment. Most companies use both debt and equity capital to fund investments, so the cost of capital is the weighted-average cost to the firm of equity and debt financing. This corporate finance approach is referred to as the weighted-average cost of capital. DOE used currently available economic data in developing commercial discount rates, with Damadoran Online being the primary data source.[64] The average discount rate across the commercial building types is 6.8 percent.

9. Efficacy Distribution in the No-New-Standards Case

To accurately estimate the share of consumers that would be affected by a potential energy conservation standard at a particular TSL, DOE's LCC analysis considered the projected distribution (market shares) of product efficacies under the no-new-standards case (*i.e.,* the case without amended or new energy conservation standards) and each of the standard cases (*i.e.,* the cases where a standard would be set at each TSL) in the assumed first full year of compliance.

To estimate the efficacy distribution of GSLs for 2029, DOE used a consumer-choice model based on consumer sensitivity to lamp price, lifetime, energy savings, and mercury content, as measured in a market study, as well as on consumer preferences for lighting technology as revealed in historical shipments data. DOE also included consumer sensitivity to dimmability in the market-share model for non-linear lamps to capture the better dimming performance of LED lamps relative to CFLs. Dimmability was excluded as a parameter in the market-share model for linear lamps because DOE assumed that this feature was equivalently available among lamp options in the consumer-choice model. Consumer-choice parameters were derived from consumer surveys of the residential sector. DOE was unable to obtain appropriate data to directly calibrate parameters for consumers in the commercial sector. Due to a lack of data to support an alternative set of parameters, DOE assumed the same parameters in the commercial sector. For further information on the derivation of the market efficacy distributions, *see* section IV.G of this document and chapter 8 of the final rule TSD.

The estimated market shares for the no-new-standards case and each standards case for GSLs are determined by the shipments analysis and are shown in table IV.14 through table IV.18. A description of each of the TSLs is located in section V.A of this document.

BILLING CODE 6450–01–C

10. LCC Savings Calculation

In the reference scenario, DOE calculated the LCC savings at each TSL based on the change in average LCC for each standards case compared to the no-new-standards case, considering the efficacy distribution of products derived by the shipments analysis. This approach allows consumers to choose products that are more efficient than the standard level and is intended to more accurately reflect the impact of a potential standard on consumers.

DOE used the consumer-choice model in the shipments analysis to determine the fraction of consumers that purchase each lamp option under a standard, but the model is unable to track the purchasing decision for individual consumers in the LCC sample. However, DOE must track any difference in purchasing decision for each consumer in the sample in order to determine the fraction of consumers who experience a net cost. Therefore, DOE assumed that the rank order of consumers, in terms of the efficacy of the product they purchase, is the same in the no-new-standards case as in the standards cases. In other words, DOE assumed that the consumers who purchased the most-efficacious products in the no-new-standards case would continue to do so in standards cases, and similarly, those consumers who purchased the least efficacious products in the no-new-standards case would continue to do so in standards cases. This assumption is only relevant in determining the fraction of consumers who experience a net cost in the LCC savings calculation and has no effect on the estimated national impact of a potential standard.

11. Payback Period Analysis

The payback period is the amount of time (expressed in years) it takes the consumer to recover the additional installed cost of more-efficient products, compared to baseline products, through energy cost savings. Payback periods that exceed the life of the product mean that the increased total installed cost is not recovered in reduced operating expenses.

The inputs to the PBP calculation for each efficiency level are the change in total installed cost of the product and the change in the first-year annual operating expenditures relative to the baseline. DOE refers to this as a ''simple PBP'' because it does not consider changes over time in operating cost savings. The PBP calculation uses the same inputs as the LCC analysis when deriving first-year operating costs.

As noted previously, EPCA establishes a rebuttable presumption that a standard is economically justified if the Secretary finds that the additional cost to the consumer of purchasing a product complying with an energy conservation standard level will be less than three times the value of the first year's energy savings resulting from the standard, as calculated under the applicable test procedure. (42 U.S.C. 6295(o)(2)(B)(iii)) For each considered efficiency level, DOE determined the value of the first year's energy savings by calculating the energy savings in accordance with the applicable DOE test procedure and multiplying those savings by the average energy price projection for the year in which compliance with the amended standards would be required.

G. Shipments Analysis

DOE uses projections of annual product shipments to calculate the national impacts of potential amended or new energy conservation standards on energy use, NPV, and future manufacturer cash flows.[65] The shipments model takes an accounting approach, tracking market shares of each product class and the vintage of units in the stock. Stock accounting uses product shipments as inputs to estimate the age distribution of in-service product stocks for all years. The age distribution of in-service product stocks is a key input to calculations of both the NES and NPV, because operating costs for any year depend on the age distribution of the stock.

1. Shipments Model

The shipments model projects shipments of GSLs over a thirty-year analysis period for the no-new-standards case and for all standards cases. Consistent with the May 2022 Backstop Final Rule, DOE developed a shipments model that implements the 45 lm/W minimum efficiency requirement for GSLs in 2022 in the no-new-standards case and all standards cases. Accurate modeling of GSL shipments also requires modeling, in the years prior to 2022, the demand and market shares of those lamps that are eliminated by the implementation of the 45 lm/W minimum efficiency requirement, as well as general service fluorescent lamps (''GSFLs''), because replacements of these lamps are a source of demand for in-scope products.

Separate shipments projections are calculated for the residential sector and for the commercial sector. The shipments model used to estimate GSL lamp shipments for this rulemaking has three main interacting elements: (1) a lamp demand module that estimates the demand for GSL lighting for each year of the analysis period; (2) a price-learning module that projects future prices based on historic price trends; and (3) a market-share module that assigns shipments to the available lamp options.

a. Lamp Demand Module

The lamp demand module first estimates the national demand for GSLs in each year. The demand calculation assumes that sector-specific lighting capacity (maximum lumen output of installed lamps) remains fixed per square foot of floor space over the analysis period, and total floor space changes over the analysis period according to the EIA's *AEO2023* projections of U.S. residential and commercial floor space.[66] For linear lamps, DOE assumed that there is no new demand from floorspace growth due to the increasing prevalence of integral LED luminaires in new commercial construction.

A lamp turnover calculation estimates demand for new lamps in each year based on the growth of floor space in each year, the expected demand for replacement lamps, and sector-specific assumptions about the distribution of per-lamp lumen output desired by consumers. The demand for replacements is computed based on the historical shipments of lamps and the probability of lamp failure as a function of age. DOE used rated lamp lifetimes (in hours) and expected usage patterns in order to derive these probability distributions (*see* section IV.F.5 of this document for further details on the derivation of lamp lifetime distributions).

The lamp demand module also accounts for the reduction in GSL demand due to the adoption of integral LED luminaires into lighting applications traditionally served by GSLs, both prior to and during the analysis period. For non-linear lamps in each year, an increasing portion of demand capped at 15 percent is assumed to be met by integral LED luminaires modeled as a Bass diffusion

[65] DOE uses data on manufacturer shipments as a proxy for national sales, as aggregate data on sales are lacking. In general, one would expect a close correspondence between shipments and sales.

[66] U.S. Department of Energy—Energy Information Administration. Annual Energy Outlook 2023 with projections to 2050. Washington, DC Report No. AEO2023. U.S. Department of Energy—Energy Information Administration. Annual Energy Outlook 2023 with projections to 2050. Washington, DC. Report No. AEO2023. Available at: *www.eia.gov/outlooks/aeo/* (last accessed Aug. 21, 2023).

curve [67] as in the January 2023 NOPR. For linear lamps, DOE assumes that 8.2 percent of stock is replaced each year with integrated LED fixtures in order to account for retrofits and renovations, and that demand comes from replacement of failures in the remaining stock. This annual rate of stock replacement is based on a projection of commercial lighting stock composition through 2050 produced for *AEO2023*.[68] Further details on the assumptions used to model these market transitions are presented in chapter 8 of the final rule TSD.

NEMA commented that it does not believe the current conversion rate of linear lamp stock to integrated fixtures is likely to be maintained in the long term. (NEMA, No. 183 at p. 18) In addition, NEMA commented that sustainability goals for new construction are likely to support the linear lamp market of the future. (NEMA, No. 183 at p. 18) DOE acknowledges that there is uncertainty in the rate at which integrated fixtures will replace linear lamps fixtures, as well as uncertainty in the persistence of demand for linear lamps in applications that were not explicitly analyzed. In order to account for the possibility that shipments remain higher than those projected in this Final Rule analysis, DOE modeled a scenario where a smaller percentage of stock is removed each year. This lower attrition rate is based on estimates made in DOE's 2019 Forecast of Solid-State Lighting in General Illumination Applications,[69] and results in a more gradual reduction in the size of the linear lamp market. The national impacts of this shipments scenario are presented in appendix 9D of the final rule TSD.

For this final rule, DOE assumed the implementation of a 45 lm/W minimum efficiency requirement for GSLs in 2022, consistent with the May 2022 Backstop Final Rule. DOE notes that CFL and LEDs make up 79 percent of A-line lamp sales in 2021 based on data collected from NEMA A-line lamp indices, indicating that the market has moved rapidly towards increasing production capacity for CFL and LED technologies.[70]

As in the January 2023 NOPR, for the integrated omnidirectional short product class, DOE developed separate shipments projections for A-line lamps and for non-A-line lamps (candelabra, intermediate and medium-screw base lamps including, B, BA, C, CA, F, G and T-shape lamps) to capture the different market drivers between the two types of lamps. Based on an analysis of online product offerings, DOE assumed that the prices of lamp options at each EL would be approximately the same for A-line and non-A-line integrated omnidirectional short lamps, but scaled the power consumption of non-A-line lamps to be representative of a 450 lumen lamp. Although modelled separately, results for A-line and non-A-line lamps are aggregated into the integrated omnidirectional short product class throughout this final rule analysis.

b. Price-Learning Module

The price-learning module estimates lamp prices in each year of the analysis period using a standard price-learning model,[71] which relates the price of a given technology to its cumulative production, as represented by total cumulative shipments. Cumulative shipments are determined for each GSL lighting technology under consideration in this analysis (CFL and LED) at the start of the analysis period and are augmented in each subsequent year of the analysis based on the shipments determined for the prior year. New prices for each lighting technology are calculated from the updated cumulative shipments according to the learning (or experience) curve for each technology. The current year's shipments, in turn, affect the subsequent year's prices. Because LED lamps are a relatively young technology, their cumulative shipments increase relatively rapidly and hence they undergo a substantial price decline during the shipments analysis period. For simplicity, shipments of integrated omnidirectional long lamps were not included in the cumulative shipments total used to determine the price learning rate for LED GSLs, as shipments of those lamps would not contribute significantly to the total cumulative LED shipments or the resulting LED GSL learning rate, but integrated omnidirectional long GSLs were assumed to experience the same rate of price decline as all LED GSLs. DOE assumed that CFLs and GSFLs undergo no price learning in the analysis period due to the long history of these lamps in the market.

c. Market-Share Module

The market-share module apportions the lamp shipments in each year among the different lamp options developed in the engineering analysis. DOE used a consumer-choice model based on consumer sensitivity to lamp price, lifetime, energy savings, and mercury content, as measured in a market study, as well as on consumer preferences for lighting technology as revealed in historical shipments data. DOE also included consumer sensitivity to dimmability in the market-share model for non-linear lamps to capture the better dimming performance of LED lamps relative to CFLs. Dimmability was excluded as a parameter in the market-share model for linear lamps because DOE assumed that this feature was equivalently available among lamp options in the consumer-choice model. GSFL substitute lamp options were included in the consumer-choice model for integrated omnidirectional long lamps, as such GSFLs can serve as substitutes for linear LED lamps. Specifically, the 4-foot T8 lamp options described in the 2023 GSFL Final Determination analysis (see 88 FR 9118–9136) were included as lamp options to more accurately estimate the impact of any potential standard on costs and energy use in the broader linear lamp market.

The market-share module assumes that, when replacing a lamp, consumers will choose among all of the available lamp options. Substitution matrices were developed to specify the product choices available to consumers. The available options depend on the case under consideration; in each of the standards cases corresponding to the different TSLs, only those lamp options at or above the particular standard level, and relevant alternative lamps, are considered to be available. The market-share module also incorporates a limit on the diffusion of LED technology into the market using the widely accepted

Bass adoption model,[72] the parameters of which are based on data on the market penetration of LED lamps published by NEMA,[73] as discussed previously. In this way, the module assigns market shares to available lamp options, based on observations of consumer preferences. DOE also used a Bass adoption model to estimate the diffusion of LED lamp technologies into the non-integrated product class and assumes that non-integrated LED lamp options became available starting in 2015.

In response to the January 2023 NOPR, EEI commented that, as proposed, the efficacy requirement of 120 lm/W for most types of lighting would eliminate 98 percent of the highest-efficiency light bulbs currently available to consumers. (EEI, No. 181 at pp. 2–3) NYSERDA commented that findings from its December 2020 study of sales and shipments of GSLs in New York underscores the feasibility of the NOPR's updated standards as LEDs made up 73 percent of all GSLs sold in New York in 2020 and that rate continues to grow. (NYSERDA, No. 166 at p. 3) The CA IOUs cited CEC's MAEDbS, which lists 15,313 integrated, single-ended LED lamps with lighting outputs between 800 and 1100 lumens, all complying with the light quality criteria in California's Appliance Efficiency Regulations. The CA IOUs noted that 14 percent of these lamps claim an efficacy of 120 lm/W or higher and would likely meet DOE's proposed standard, and the CA IOUs commented they anticipate a larger share of marketable GSLs will exceed the efficacy requirements when the new standard becomes effective. (CA IOUs, No. 167 at p. 2).

For the shipments model, DOE included the impact of historically observed trends in LED efficacy based on the 2019 DOE Solid State Lighting report,[74] which projects that the average efficacy of the non-linear LED GSLs will likely exceed the efficacy of the most efficacious (max-tech) lamp options considered in the engineering analysis in future years. As detailed in section IV.F.9 of this document, DOE projects that in the no-new-standards case by 2029, the fraction of GSLs at or above max-tech is at least 13 precent for all product classes, and considerably higher for some. More information on the efficacy trend data can be found in chapter 8 of the final rule TSD. Additionally, DOE does not anticipate a decrease in manufacturing capacity of products that will be able to meet the proposed standard by the compliance date (*see* section V.B.2 of this document for details).

H. National Impact Analysis

The NIA assesses the national energy savings (''NES'') and the NPV from a national perspective of total consumer costs and savings that would be expected to result from new or amended standards at specific efficiency levels.[75] (''Consumer'' in this context refers to consumers of the product being regulated.) DOE calculates the NES and NPV for the potential standard levels considered based on projections of annual product shipments, along with the annual energy consumption and total installed cost data from the energy use and LCC analyses. For the present analysis, DOE projected the energy savings, operating cost savings, product costs, and NPV of consumer benefits over the lifetime of GSLs sold from 2029 through 2058.

DOE evaluates the impacts of new or amended standards by comparing a case without such standards with standards-case projections. The no-new-standards case characterizes energy use and consumer costs for each product class in the absence of new or amended energy conservation standards. For this projection, DOE considers historical trends in efficiency and various forces that are likely to affect the mix of efficiencies over time. DOE compares the no-new-standards case with projections characterizing the market for each product class if DOE adopted new or amended standards at specific energy efficiency levels (*i.e.,* the TSLs or standards cases) for that class. For the standards cases, DOE considers how a given standard would likely affect the market shares of products with efficiencies greater than the standard and, in the case of integrated omnidirectional long lamps, out-of-scope alternatives such as GSFLs.

DOE takes analytical results from the shipments model and calculates the energy savings and the national consumer costs and savings from each TSL. Analytical results and inputs to the model are presented in the form of a spreadsheet. Interested parties can review DOE's analyses by changing various input quantities within the spreadsheet. The NIA uses typical values (as opposed to probability distributions) as inputs.

Table IV.19 summarizes the inputs and methods DOE used for the NIA analysis for the final rule. Discussion of these inputs and methods follows the table. *See* chapter 9 of the final rule TSD for further details.

Table IV.19 Summary of Inputs and Methods for the National Impact Analysis

Inputs	Method
Shipments	Annual shipments for each lamp option from shipments model for the no-new standards case and each TSL analyzed
First Full Year of Compliance	2029
Efficiency Trends	Both No-New-Standards Case and Standards-case efficiency distributions are estimated by the market-share module of the shipments analysis.
Annual Energy Consumption per Unit	Calculated for each lamp option based on inputs from the Energy Use Analysis
Total Installed Cost per Unit	Uses lamp prices, and for the commercial sector only, installation costs from the LCC analysis. Incorporates projection of future product prices based on historical data.
Annual Energy Cost per Unit	Calculated for each lamp option using the energy use per unit, and electricity prices and trends
Energy Price Trends	*AEO2023* projections (to 2050) and held fixed to 2050 value thereafter.
Energy Site-to-Primary and FFC Conversion	A time-series conversion factor based on *AEO2023*
Discount Rate	3 and 7 percent.
Present Year	2024

BILLING CODE 6450–01–C

1. National Energy Savings

The national energy savings analysis involves a comparison of national energy consumption of the considered products between each potential standards case (''TSL'') and the case with no new or amended energy conservation standards. DOE calculated the national energy consumption by multiplying the number of units (stock) of each product (by vintage or age) by the unit energy consumption (also by vintage). DOE calculated annual NES based on the difference in national energy consumption for the no-new-standards case and for each higher efficiency standard case. DOE estimated energy consumption and savings based on site energy and converted the electricity consumption and savings to primary energy (*i.e.,* the energy consumed by power plants to generate site electricity) using annual conversion factors derived from *AEO2023.* Cumulative energy savings are the sum of the NES for each year over the timeframe of the analysis.

Use of higher-efficiency products is sometimes associated with a direct rebound effect, which refers to an increase in utilization of the product due to the increase in efficiency. In the case of lighting, the rebound effect could be manifested in increased HOU or in increased lighting density (lamps per square foot). In the January 2023 NOPR, DOE assumed no rebound effect in both the residential and commercial sectors for consumers switching from CFLs to LED lamps or from less efficacious LED lamps to more efficacious LED lamps. This is due to the relatively small incremental increase in efficacy between CFLs and LED GSLs or less efficacious LED lamps and more efficacious LED lamps, as well as an examination of DOE's 2001, 2010, and 2015 U.S. LMC studies, which indicates that there has been a reduction in total lamp operating hours in the residential sector concomitant with increases in lighting efficiency. Consistent with the residential sector, DOE does not expect there to be any rebound effect associated with the commercial sector. Therefore, DOE assumed no rebound effect in all final rule scenarios for both the residential and commercial sectors.

In 2011, in response to the recommendations of a committee on ''Point-of-Use and Full-Fuel-Cycle Measurement Approaches to Energy Efficiency Standards'' appointed by the National Academy of Sciences, DOE announced its intention to use FFC measures of energy use and greenhouse gas and other emissions in the national impact analyses and emissions analyses included in future energy conservation standards rulemakings. 76 FR 51281 (Aug. 18, 2011). After evaluating the approaches discussed in the August 18, 2011 notice, DOE published a statement of amended policy in which DOE explained its determination that EIA's National Energy Modeling System (''NEMS'') is the most appropriate tool for its FFC analysis and its intention to use NEMS for that purpose. 77 FR 49701 (Aug. 17, 2012). NEMS is a public domain, multi-sector, partial equilibrium model of the U.S. energy sector [76] that EIA uses to prepare its *Annual Energy Outlook.* The FFC factors incorporate losses in production and delivery in the case of natural gas (including fugitive emissions) and additional energy used to produce and deliver the various fuels used by power plants. The approach used for deriving FFC measures of energy use and emissions is described in appendix 9B of the final rule TSD.

EEI commented that DOE's utilization of a fossil fuel equivalent marginal heat rate for electricity generated from

[76] For more information on NEMS, refer to *The National Energy Modeling System: An Overview 2009,* DOE/EIA–0581 (2009), October 2009. Available at *www.eia.gov/forecasts/aeo/index.cfm* (last accessed April 21, 2022).

renewable sources is inconsistent with prior DOE recommendations for all appliance standards rulemakings. EEI commented that by assigning a fossil heat rate to renewable energy as if that energy has an emissions impact (when in fact no carbon emissions are associated with the electricity generated), DOE's analysis does not accurately capture the emissions profile of clean energy resources deployed by the sector at large scale. EEI commented that DOE should use a more appropriate methodology for this rulemaking to accurately capture the ongoing clean energy transition, such as the ''captured energy'' approach. Otherwise, EEI commented, DOE's use of fossil-fuel marginal heat rates results in at least a 3x overstatement of the amount of primary energy that would be saved if new efficiency standards for consumer light bulbs are promulgated. (EEI, No. 181 at pp. 2–3)

As previously mentioned, DOE converts electricity consumption and savings to primary energy using annual conversion factors derived from the AEO. Traditionally, EIA has used the fossil fuel equivalency approach to report noncombustible renewables' contribution to total primary energy. The fossil fuel equivalency approach applies an annualized weighted-average heat rate for fossil fuel power plants to the electricity generated (in kWh) from noncombustible renewables. EIA recognizes that using captured energy (the net energy available for direct consumption after transformation of a noncombustible renewable energy into electricity) or incident energy (the mechanical, radiation, or thermal energy that is measurable as the ''input'' to the device) are possible approaches for converting renewable electricity to a common measure of primary energy, but it continues to use the fossil fuel equivalency approach in the AEO and other reporting of energy statistics. DOE contends that it is important for it to maintain consistency with EIA in DOE's accounting of primary energy savings from energy efficiency standards. This method for calculating primary energy savings has no effect on the estimation of impacts of standards on emissions, which uses a different approach (*see* chapter 9 of the final rule TSD).

a. Smart Lamps

Integrated GSLs with standby functionality, henceforth referred to as smart lamps, were not explicitly analyzed in the shipments analysis for this final rule. To account for the additional standby energy consumption from smart lamps in the NIA, DOE assumed that smart lamps would make up an increasing fraction of Integrated Omnidirectional Short, Integrated Directional, Non-integrated Directional, and Non-integrated Omnidirectional lamps in the residential sector following a Bass adoption curve. DOE assumes for this final rule that smart lamp penetration is limited to the residential sector.

In response to the January 2023 NOPR, NEMA objected to DOE's assumption that integrated lamps with standby functionality are fundamentally similar to lamps without standby functionality but with the addition of wireless communication components and the associated consumption of power in standby mode. NEMA noted that the variety of features that lamps capable of operating on standby power may offer has greatly expanded in recent years and includes functionality such as dimming, scheduling, high end trim, and demand response. (NEMA, No. 183 at p. 9–10) DOE notes that the representative lamps without standby power consumption that were used as the basis for scaling are also capable of dimming. DOE is not aware of data indicating how scheduling, high end trim and demand response functionality impact the energy consumption of smart GSLs with these features, but assumed that smart GSLs offer similar fractional energy savings (30 percent) from controls as representative GSLs used with dimming controls.

NEMA commented on the growing popularity of smart LED lamps, noting that nearly 10 million households use smart speakers to control lighting, based on data from EIA and RECS. (NEMA, No. 183 at p. 10) However, NEMA commented that it could not predict the market share for smart lamps by the end of the analysis period, noting how much the lighting market has changed in the last 35 years. (NEMA, No. 183 at p. 18) For this final rule, DOE continued to assume that there was an increase in the fraction of LED lamps that are smart lamps over the shipments analysis period. In the absence of information to support an alternative projection, DOE continued to assume that the market penetration of smart lamps in the residential sector reached 50 percent by the end of the analysis period.

DOE assumed a standby power of 0.2 W per smart lamp in alignment with standby requirements in California Code of Regulations—Title 20, as it is assumed that manufacturers would typically sell the same smart lamp models in California as in the rest of the U.S.[77] DOE further assumed that the majority of smart lamps would be standalone and not require the need of a hub.

More details on the incorporation of smart lamps in DOE's analysis can be found in chapter 9 of the TSD.

b. Unit Energy Consumption Adjustment To Account for GSL Lumen Distribution for the Integrated Omnidirectional Short Product Class

The engineering analysis provides representative units within the lumen range of 750–1,049 lumens for the integrated omnidirectional short product class. For the NIA, DOE adjusted the energy use of the representative units for the integrated omnidirectional short product class to account for the full distribution of GSL lumen outputs (*i.e.,* 310–2,600 lumens).

Using the lumen range distribution for integrated omnidirectional short A-line lamps developed originally for the March 2016 NOPR and used in the January 2023 NOPR, DOE calculated unit energy consumption (''UEC'') scaling factors to apply to the energy use of the integrated omnidirectional short representative lamp options by taking the ratio of the stock-weighted wattage equivalence of the full GSL lumen distribution to the wattage equivalent of the representative lamp bin (750–1,049 lumens). DOE applied a UEC scaling factor of 1.15 for the residential sector and 1.21 for the commercial sector for integrated omnidirectional short A-line lamps.

c. Unit Energy Consumption Adjustment To Account for Type A Integrated Omnidirectional Long Lamps

The representative units in the engineering analysis for the integrated omnidirectional long product class represent Type B lamp options. To account for Type A lamps that were not explicitly modeled, DOE scaled the energy consumption values of Type B integrated omnidirectional long lamp options based on the relative energy consumption of equivalent Type A lamps. DOE assumed a 60/40 market share of Type B and Type A linear LED lamps, respectively, based on product offerings in the Design Lights Consortium database, which was held constant throughout the analysis period.

2. Net Present Value Analysis

The inputs for determining the NPV of the total costs and benefits experienced by consumers are (1) total

[77] California Energy Commission. California Code of Regulations: Title 20—Public Utilities and Energy. May 2018.

annual installed cost, (2) total annual operating costs (energy costs and repair and maintenance costs), and (3) a discount factor to calculate the present value of costs and savings. DOE calculates net savings each year as the difference between the no-new-standards case and each standards case in terms of total savings in operating costs versus total increases in installed costs. DOE calculates operating cost savings over the lifetime of each product shipped during the projection period.

As discussed in section IV.G.1.b of this document, DOE developed LED lamp prices using a price-learning module incorporated in the shipments analysis. By 2058, which is the end date of the forecast period, the average LED GSL price is projected to drop 33 percent relative to 2022 in the no-new-standards case. DOE's projection of product prices as described in chapter 8 of the final rule TSD.

To evaluate the effect of uncertainty regarding the price trend estimates, DOE investigated the impact of different product price projections on the consumer NPV for the considered TSLs for GSLs. In addition to the default price trend, DOE considered two product price sensitivity cases: (1) a high price decline case based on a higher price learning rate and (2) a low price decline case based on a lower price learning rate. The derivation of these price trends and the results of these sensitivity cases are described in appendix 9D of the final rule TSD.

The operating cost savings are primarily energy cost savings, which are calculated using the estimated energy savings in each year and the projected price of the appropriate form of energy. To estimate energy prices in future years, DOE multiplied the average regional energy prices by the projection of annual national-average residential energy price changes in the Reference case from *AEO2023,* which has an end year of 2050. For years after 2050, DOE maintained the 2050 electricity price. As part of the NIA, DOE also analyzed scenarios that used inputs from variants of the *AEO2023* Reference case that have lower and higher economic growth. Those cases have lower and higher energy price trends compared to the Reference case. NIA results based on these cases are presented in appendix 9D of the final rule TSD.

In calculating the NPV, DOE multiplies the net savings in future years by a discount factor to determine their present value. For this final rule, DOE estimated the NPV of consumer benefits using both a 3-percent and a 7-percent real discount rate. DOE uses these discount rates in accordance with guidance provided by the Office of Management and Budget (''OMB'') to Federal agencies on the development of regulatory analysis.[78] The discount rates for the determination of NPV are in contrast to the discount rates used in the LCC analysis, which are designed to reflect a consumer's perspective. The 7-percent real value is an estimate of the average before-tax rate of return to private capital in the U.S. economy. The 3-percent real value represents the ''social rate of time preference,'' which is the rate at which society discounts future consumption flows to their present value.

I. Consumer Subgroup Analysis

In analyzing the potential impact of new or amended energy conservation standards on consumers, DOE evaluates the impact on identifiable subgroups of consumers that may be disproportionately affected by a new or amended national standard. The purpose of a subgroup analysis is to determine the extent of any such disproportional impacts. DOE evaluates impacts on particular subgroups of consumers by analyzing the LCC impacts and PBP for those particular consumers from alternative standard levels. For this final rule, DOE analyzed the impacts of the considered standard levels on two subgroups: (1) low-income households and (2) small businesses. The residential low-income household analysis used a subset of the RECS 2020 sample composed of households that are at or below the poverty line. DOE analyzed only the low-income households that are responsible for paying their electricity bill in this analysis. RECS 2020 indicates that approximately 15% of low-income renters are not responsible for paying their electricity bills. Such consumers may incur a net cost (depending on if they purchase their own GSLs or not). DOE notes that this is only relevant for the integrated omnidirectional short GSL product class, as low-income households that purchase integrated directional GSLs would still experience a net benefit even if they are not responsible for paying their electricity bill and low-income households are assumed not to purchase lamps in other GSL product classes, which are uncommon in the residential sector.

The analysis of commercial small businesses uses the CBECS 2018 sample (as in the full-sample LCC analysis) but applies discount rates specific to small businesses. DOE used the analytical framework and inputs described in section IV.F of this document.

Chapter 10 in the final rule TSD describes the consumer subgroup analysis.

J. Manufacturer Impact Analysis

1. Overview

DOE performed an MIA to estimate the financial impacts of new and amended energy conservation standards on manufacturers of GSLs and to estimate the potential impacts of such standards on employment and manufacturing capacity. The MIA has both quantitative and qualitative aspects and includes analyses of projected industry cash flows, the INPV, investments in research and development (''R&D'') and manufacturing capital, and domestic manufacturing employment. Additionally, the MIA seeks to determine how new and amended energy conservation standards might affect manufacturing employment, capacity, and competition, as well as how standards contribute to overall regulatory burden. Finally, the MIA serves to identify any disproportionate impacts on manufacturer subgroups, including small business manufacturers.

The quantitative part of the MIA primarily relies on the Government Regulatory Impact Model (''GRIM''), an industry cash flow model with inputs specific to this rulemaking. The key GRIM inputs include data on the industry cost structure, unit production costs, product shipments, manufacturer markups, and investments in R&D and manufacturing capital required to produce compliant products. The key GRIM outputs are the INPV, which is the sum of industry annual cash flows over the analysis period, discounted using the industry-weighted average cost of capital, and the impact to domestic manufacturing employment. The model uses standard accounting principles to estimate the impacts of more-stringent energy conservation standards on a given industry by comparing changes in INPV and domestic manufacturing employment between a no-new-standards case and the various standards cases (*i.e.,* TSLs). To capture the uncertainty relating to manufacturer pricing strategies following new and amended standards, the GRIM estimates a range of possible impacts under different manufacturer markup scenarios.

The qualitative part of the MIA addresses manufacturer characteristics

[78] U.S. Office of Management and Budget. *Circular A–4: Regulatory Analysis.* Available at *www.whitehouse.gov/omb/information-for-agencies/circulars* (last accessed March 22, 2024). DOE used the prior version of Circular A–4 (September 17, 2003) in accordance with the effective date of the November 9, 2023 version.

and market trends. Specifically, the MIA considers such factors as a potential standard's impact on manufacturing capacity, competition within the industry, the cumulative impact of other DOE and non-DOE regulations and impacts on manufacturer subgroups. The complete MIA is outlined in chapter 11 of the final rule TSD.

2. Government Regulatory Impact Model and Key Inputs

DOE uses the GRIM to quantify the changes in cash flow due to new and amended standards that result in a higher or lower industry value. The GRIM uses a standard, annual discounted cash-flow analysis that incorporates manufacturer costs, manufacturer markups, shipments, and industry financial information as inputs. The GRIM models changes in costs, distribution of shipments, investments, and manufacturer margins that could result from new and amended energy conservation standards. The GRIM spreadsheet uses the inputs to arrive at a series of annual cash flows, beginning in 2024 (the base year of the analysis) and continuing to 2058. DOE calculated INPVs by summing the stream of annual discounted cash flows during this period. For manufacturers of GSLs, DOE used a real discount rate of 6.1 percent, which was derived from industry financials.

The GRIM calculates cash flows using standard accounting principles and compares changes in INPV between the no-new-standards case and each standards case. The difference in INPV between the no-new-standards case and a standards case represents the financial impact of new and amended energy conservation standards on GSL manufacturers. As discussed previously, DOE developed critical GRIM inputs using a number of sources, including publicly available data, results of the engineering analysis, and information gathered from industry stakeholders during previous rulemaking public comments. The GRIM results are presented in section V.B.2 of this document. Additional details about the GRIM, the discount rate, and other financial parameters can be found in chapter 11 of the final rule TSD.

a. Manufacturer Production Costs

Manufacturing more efficient products is typically more expensive than manufacturing baseline products due to the use of more complex components, which are typically more costly than baseline components. The changes in the MPCs of covered products can affect the revenues, gross margins, and cash flow of the industry. Typically, DOE develops MPCs for the covered products using reverse-engineering. These costs are used as an input to the LCC analysis and NIA. However, because lamps are difficult to reverse-engineer, DOE directly derived end-user prices and then used those prices in conjunction with average distribution chain markups and manufacturer markups to calculate the MPCs of GSLs.

To determine MPCs of GSLs from the end-user prices, DOE divided the end-user price by the average distribution chain markup and then again by the average manufacturer markup of the representative GSLs at each EL. In the January 2023 NOPR, DOE used the SEC 10-Ks of publicly traded GSL manufacturers to estimate the manufacturer markup of 1.55 for all GSLs in this rulemaking. DOE used the SEC 10-Ks of the major publicly traded lighting retailers to estimate the distribution chain markup of 1.52 for all GSLs. DOE asked for comment on the use of these values and NEMA stated that it cannot comment on the average distribution chain markup and referred DOE to individual manufacturer interviews for this information. (NEMA, No. 183 at p. 19) The estimated manufacturer markup and the estimated average distribution chain markup values that were used in the January 2023 SNOPR were based on information provided during manufacturer interviews. Therefore, DOE continues to use the same values in this final rule analysis that were used in the January 2023 NOPR.

For a complete description of end-user prices, see the cost analysis in section IV.D.2 of this document.

b. Shipments Projections

The GRIM estimates manufacturer revenues based on total unit shipment projections and the distribution of those shipments by efficiency level. Changes in sales volumes and efficiency mix over time can significantly affect manufacturer finances. For this analysis, DOE developed a consumer-choice-based model to estimate shipments of GSLs. The model projects consumer purchases (and hence shipments) based on sector-specific consumer sensitivities to first cost, energy savings, lamp lifetime, and lamp mercury content. The shipments analysis projects shipments from 2024 (the base year) to 2058 (the end year of the analysis period). *See* chapter 8 of the final rule TSD for additional details.

c. Product and Capital Conversion Costs

New and amended energy conservation standards could cause manufacturers to incur conversion costs to bring their production facilities and product designs into compliance. DOE evaluated the level of conversion-related expenditures that would be needed to comply with each considered efficiency level in each product class. For the MIA, DOE classified these conversion costs into two major groups: (1) product conversion costs; and (2) capital conversion costs. Product conversion costs are investments in research, development, testing, marketing, and other non-capitalized costs necessary to make product designs comply with new and amended energy conservation standards. Capital conversion costs are investments in property, plant, and equipment necessary to adapt or change existing production facilities such that new compliant product designs can be fabricated and assembled.

In the January 2023 NOPR, DOE conducted a bottom-up analysis to calculate the product conversion costs for GSL manufacturers for each product class at each EL. To conduct this bottom-up analysis, DOE used manufacturer input from manufacturer interviews regarding the average amount of engineering time to design a new product or remodel an existing model. DOE then estimated the number of GSL models that would need to be re-modeled or introduced into the market for each product class at each EL using DOE's database of existing GSL models and the distribution of shipments from the shipments analysis (*see* section IV.G of this document).

DOE assumed GSL manufacturers would not re-model non-compliant CFL models into compliant CFL models, even if it is possible for the remodeled CFLs to meet the analyzed energy conservation standards. Additionally, DOE assumed that GSL manufacturers would not need to introduce any new LED lamp models due to CFL models not being able to meet the analyzed energy conservation standards.[79] However, DOE assumed that all non-compliant LED lamp models would be remodeled to meet the analyzed energy conservation standards.

Based on feedback in manufacturer interviews, DOE assumed that most LED lamp models would be remodeled between the estimated publication of this rulemaking's final rule and the estimated date by which energy conservation standards are required, even in the absence of DOE energy conservation standards for GSLs.

[79] Based on the Shipment Analysis, LED lamp sales exceed 95 percent of the total GSL sales for every analyzed product class by 2029 (the first full year of compliance). DOE assumed there are replacement LED lamps for all CFL models.

Additionally, DOE estimated that remodeling a non-compliant LED lamp model that would already be scheduled to be remodeled into a compliant one would require an additional month of engineering time per LED lamp model.[80]

DOE assumed that capital conversion costs would only be necessary if GSL manufacturers would need to increase the production volume of LED lamps in the standards case compared to the no-new-standards case and if existing LED lamp production capacity did not already exist to meet this additional market demand for LED lamps. Based on the shipments analysis, the volume of LED lamp sales in the years leading up to 2029 exceeds the volume of LED lamp sales in 2029 (the first full year of compliance) for every product class at all TSLs. Therefore, DOE assumed no capital conversion costs as GSL manufacturers would not need to make any additional investments in production equipment to maintain, or reduce, their LED lamp production volumes from the previous year.

DOE asked for comment on the methodology used to calculate product and capital conversion costs for GSLs in January 2023 NOPR. DOE did not receive any comments on this methodology. Therefore, DOE continued to use this methodology for this final rule analyses. DOE updated all engineering labor costs from 2021 dollars that were used in the January 2023 NOPR to 2022 dollars for this final rule analysis.

In general, DOE assumes all conversion-related investments occur between the publication of this final rule and the year by which manufacturers must comply with the new and amended standards. The conversion cost figures used in the GRIM can be found in section V.B.2.a of this document. For additional information on the estimated capital and product conversion costs, *see* chapter 11 of the final rule TSD.

d. Manufacturer Markup Scenarios

MSPs include direct manufacturing production costs (*i.e.,* labor, materials, and overhead estimated in DOE's MPCs) and all non-production costs (*i.e.,* SG&A, R&D, and interest), along with profit. To calculate the MSPs in the GRIM, DOE applied non-production cost markups to the MPCs estimated in the engineering analysis for each product class and efficiency level. Modifying these markups in the standards case yields different sets of impacts on manufacturers. For the MIA, DOE modeled two standards-case markup scenarios to represent uncertainty regarding the potential impacts on prices and profitability for manufacturers following the implementation of amended energy conservation standards: (1) a preservation of gross margin scenario; and (2) a preservation of operating profit scenario. These scenarios lead to different markup values that, when applied to the MPCs, result in varying revenue and cash flow impacts.

Under the preservation of gross margin percentage scenario, DOE applied a single uniform ''gross margin percentage'' across all efficiency levels, which assumes that manufacturers would be able to maintain the same amount of profit as a percentage of revenues at all efficiency levels within a product class. DOE continued to use a manufacturer markup of 1.55 for all GSLs, which corresponds to a gross margin of 35.5 percent, and the same manufacturer markup that was used in the January 2023 NOPR. This manufacturer markup scenario represents the upper bound to industry profitability under new and amended energy conservation standards and is the manufacturer markup scenario that is used in all consumer analyses (*e.g.,* LCC, NIA).

Under the preservation of operating profit scenario, DOE modeled a situation in which manufacturers are not able to increase per-unit operating profit in proportion to increases in manufacturer production costs. Under this scenario, as the MPCs increase, manufacturers reduce their margins (on a percentage basis) to a level that maintains the no-new-standards case operating profit (in absolute dollars). The implicit assumption behind this scenario is that the industry can only maintain its operating profit in absolute dollars after compliance with new and amended standards. Therefore, operating profit in percentage terms is reduced between the no-new-standards case and the analyzed standards cases. DOE adjusted the margins in the GRIM at each TSL to yield approximately the same earnings before interest and taxes in the standards cases in the year after the first full year of compliance of the new and amended standards as in the no-new-standards case. This scenario represents the lower bound to industry profitability under new and amended energy conservation standards.

A comparison of industry financial impacts under the two markup scenarios is presented in section V.B.2.a of this document.

K. Emissions Analysis

The emissions analysis consists of two components. The first component estimates the effect of potential energy conservation standards on power sector and site (where applicable) combustion emissions of CO_2, NO_X, SO_2, and Hg. The second component estimates the impacts of potential standards on emissions of two additional greenhouse gases, CH_4 and N_2O, as well as the reductions in emissions of other gases due to ''upstream'' activities in the fuel production chain. These upstream activities comprise extraction, processing, and transporting fuels to the site of combustion.

The analysis of electric power sector emissions of CO_2, NO_X, SO_2, and Hg uses emissions intended to represent the marginal impacts of the change in electricity consumption associated with amended or new standards. The methodology is based on results published for the AEO, including a set of side cases that implement a variety of efficiency-related policies. The methodology is described in appendix 12A in the final rule TSD. The analysis presented in this final rule uses projections from *AEO2023.* Power sector emissions of CH_4 and N_2O from fuel combustion are estimated using Emission Factors for Greenhouse Gas Inventories published by the Environmental Protection Agency (''EPA'').[81]

FFC upstream emissions, which include emissions from fuel combustion during extraction, processing, and transportation of fuels, and ''fugitive'' emissions (direct leakage to the atmosphere) of CH_4 and CO_2, are estimated based on the methodology described in chapter 12 of the final rule TSD.

The emissions intensity factors are expressed in terms of physical units per MWh or MMBtu of site energy savings. For power sector emissions, specific emissions intensity factors are calculated by sector and end use. Total emissions reductions are estimated using the energy savings calculated in the national impact analysis.

[80] Based on feedback from manufacturers, DOE estimates that most LED lamp models are remodeled approximately every 2 to 3 years and it takes manufacturers approximately 6 months of engineering time to remodel one LED lamp model. DOE is therefore estimating that it would take manufacturers approximately 7 months (one additional month) to remodel a non-compliant LED lamp model into a compliant LED lamp model, due to the extra efficacy and any other requirement induced by DOE's standards.

1. Air Quality Regulations Incorporated in DOE's Analysis

DOE's no-new-standards case for the electric power sector reflects the AEO, which incorporates the projected impacts of existing air quality regulations on emissions. *AEO2023* reflects, to the extent possible, laws and regulations adopted through mid-November 2022, including the emissions control programs discussed in the following paragraphs the emissions control programs discussed in the following paragraphs, and the Inflation Reduction Act.[82]

SO_2 emissions from affected electric generating units (''EGUs'') are subject to nationwide and regional emissions cap-and-trade programs. Title IV of the Clean Air Act sets an annual emissions cap on SO_2 for affected EGUs in the 48 contiguous States and the District of Columbia (''DC''). (42 U.S.C. 7651 *et seq.*) SO_2 emissions from numerous States in the eastern half of the United States are also limited under the Cross-State Air Pollution Rule (''CSAPR''). 76 FR 48208 (Aug. 8, 2011). CSAPR requires these States to reduce certain emissions, including annual SO_2 emissions, and went into effect as of January 1, 2015.[83] The *AEO2023* incorporates implementation of CSAPR, including the update to the CSAPR ozone season program emission budgets and target dates issued in 2016. 81 FR 74504 (Oct. 26, 2016). Compliance with CSAPR is flexible among EGUs and is enforced through the use of tradable emissions allowances. Under existing EPA regulations, for states subject to SO_2 emissions limits under CSAPR, any excess SO_2 emissions allowances resulting from the lower electricity demand caused by the adoption of an efficiency standard could be used to permit offsetting increases in SO_2 emissions by another regulated EGU.

However, beginning in 2016, SO_2 emissions began to fall as a result of the Mercury and Air Toxics Standards (''MATS'') for power plants.[84] 77 FR 9304 (Feb. 16, 2012). The final rule establishes power plant emission standards for mercury, acid gases, and non-mercury metallic toxic pollutants. Because of the emissions reductions under the MATS, it is unlikely that excess SO_2 emissions allowances resulting from the lower electricity demand would be needed or used to permit offsetting increases in SO_2 emissions by another regulated EGU. Therefore, energy conservation standards that decrease electricity generation will generally reduce SO_2 emissions. DOE estimated SO_2 emissions reduction using emissions factors based on *AEO2023.*

CSAPR also established limits on NO_X emissions for numerous States in the eastern half of the United States. Energy conservation standards would have little effect on NO_X emissions in those States covered by CSAPR emissions limits if excess NO_X emissions allowances resulting from the lower electricity demand could be used to permit offsetting increases in NO_X emissions from other EGUs. In such case, NO_X emissions would remain near the limit even if electricity generation goes down. Depending on the configuration of the power sector in the different regions and the need for allowances, however, NO_X emissions might not remain at the limit in the case of lower electricity demand. That would mean that standards might reduce NO_X emissions in covered States. Despite this possibility, DOE has chosen to be conservative in its analysis and has maintained the assumption that standards will not reduce NO_X emissions in States covered by CSAPR. Standards would be expected to reduce NO_X emissions in the States not covered by CSAPR. DOE used *AEO2023* data to derive NO_X emissions factors for the group of States not covered by CSAPR.

The MATS limit mercury emissions from power plants, but they do not include emissions caps and, as such, DOE's energy conservation standards would be expected to slightly reduce Hg emissions. DOE estimated mercury emissions reduction using emissions factors based on *AEO2023,* which incorporates the MATS.

L. Monetizing Emissions Impacts

As part of the development of this final rule, for the purpose of complying with the requirements of Executive Order 12866, DOE considered the estimated monetary benefits from the reduced emissions of CO_2, CH_4, N_2O, NO_X, and SO_2 that are expected to result from each of the TSLs considered. In order to make this calculation analogous to the calculation of the NPV of consumer benefit, DOE considered the reduced emissions expected to result over the lifetime of products shipped in the projection period for each TSL. This section summarizes the basis for the values used for monetizing the emissions benefits and presents the values considered in this final rule.

To monetize the benefits of reducing GHG emissions, this analysis uses the interim estimates presented in the *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates Under Executive Order 13990* published in February 2021 by the IWG.

1. Monetization of Greenhouse Gas Emissions

DOE estimates the monetized benefits of the reductions in emissions of CO_2, CH_4, and N_2O by using a measure of the SC of each pollutant (*e.g.,* SC–CO_2). These estimates represent the monetary value of the net harm to society associated with a marginal increase in emissions of these pollutants in a given year, or the benefit of avoiding that increase. These estimates are intended to include (but are not limited to) climate-change-related changes in net agricultural productivity, human health, property damages from increased flood risk, disruption of energy systems, risk of conflict, environmental migration, and the value of ecosystem services.

DOE exercises its own judgment in presenting monetized climate benefits as recommended by applicable Executive orders, and DOE would reach the same conclusion presented in this rulemaking in the absence of the social cost of greenhouse gases. That is, the social costs of greenhouse gases, whether measured using the February 2021 interim estimates presented by the Interagency Working Group on the Social Cost of Greenhouse Gases or by another means, did not affect the rule ultimately adopted by DOE.

DOE estimated the global social benefits of CO_2, CH_4, and N_2O reductions using SC–GHG values that were based on the interim values presented in the *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim*

[82] For further information, see the Assumptions to *AEO2023* report that sets forth the major assumptions used to generate the projections in the Annual Energy Outlook. Available at: *www.eia.gov/outlooks/aeo/assumptions/* (last accessed August 21, 2023).

[83] CSAPR requires states to address annual emissions of SO_2 and NO_X, precursors to the formation of fine particulate matter (''$PM_{2.5}$'') pollution, in order to address the interstate transport of pollution with respect to the 1997 and 2006 $PM_{2.5}$ National Ambient Air Quality Standards (''NAAQS''). CSAPR also requires certain states to address the ozone season (May-September) emissions of NO_X, a precursor to the formation of ozone pollution, in order to address the interstate transport of ozone pollution with respect to the 1997 ozone NAAQS. 76 FR 48208 (Aug. 8, 2011). EPA subsequently issued a supplemental rule that included an additional five states in the CSAPR ozone season program; 76 FR 80760 (Dec. 27, 2011) (Supplemental Rule), and EPA issued the CSAPR Update for the 2008 ozone NAAQS. 81 FR 74504 (Oct. 26, 2016).

[84] In order to continue operating, coal power plants must have either flue gas desulfurization or dry sorbent injection systems installed. Both technologies, which are used to reduce acid gas emissions, also reduce SO_2 emissions.

Estimates under Executive Order 13990, published in February 2021 by the IWG (''February 2021 SC–GHG TSD''). The SC–GHG is the monetary value of the net harm to society associated with a marginal increase in emissions in a given year, or the benefit of avoiding that increase. In principle, the SC–GHG includes the value of all climate change impacts, including (but not limited to) changes in net agricultural productivity, human health effects, property damage from increased flood risk and natural disasters, disruption of energy systems, risk of conflict, environmental migration, and the value of ecosystem services. The SC–GHG therefore, reflects the societal value of reducing emissions of the gas in question by one metric ton. The SC–GHG is the theoretically appropriate value to use in conducting benefit-cost analyses of policies that affect CO_2, N_2O and CH4 emissions. As a member of the IWG involved in the development of the February 2021 SC–GHG TSD, DOE agrees that the interim SC–GHG estimates represent the most appropriate estimate of the SC–GHG until revised estimates have been developed reflecting the latest, peer-reviewed science. DOE continues to evaluate recent developments in the scientific literature, including the updated SC–GHG estimates published by the EPA in December 2023 within their rulemaking on oil and natural gas sector sources.[85] For this rulemaking, DOE used these updated SC–GHG values to conduct a sensitivity analysis of the value of GHG emissions reductions associated with alternative standards for GSLs (see section IV.L.1.c of this document).

The SC–GHG estimates presented here were developed over many years, using peer-reviewed methodologies, transparent process, the best science available at the time of that process, and with input from the public. Specifically, in 2009, the IWG, that included the DOE and other executive branch agencies and offices was established to ensure that agencies were using the best available science and to promote consistency in the social cost of carbon ($SC–CO_2$) values used across agencies. The IWG published $SC–CO_2$ estimates in 2010 that were developed from an ensemble of three widely cited integrated assessment models (IAMs) that estimate global climate damages using highly aggregated representations of climate processes and the global economy combined into a single modeling framework. The three IAMs were run using a common set of input assumptions in each model for future population, economic, and CO_2 emissions growth, as well as equilibrium climate sensitivity—a measure of the globally averaged temperature response to increased atmospheric CO_2 concentrations. These estimates were updated in 2013 based on new versions of each IAM. In August 2016 the IWG published estimates of the social cost of methane ($SC–CH_4$) and nitrous oxide ($SC–N_2O$) using methodologies that are consistent with the methodology underlying the $SC–CO_2$ estimates. The modeling approach that extends the IWG $SC–CO_2$ methodology to non-CO_2 GHGs has undergone multiple stages of peer review. The $SC–CH_4$ and $SC–N_2O$ estimates were developed by Marten *et al.*[86] and underwent a standard double-blind peer review process prior to journal publication. In 2015, as part of the response to public comments received to a 2013 solicitation for comments on the $SC–CO_2$ estimates, the IWG announced a National Academies of Sciences, Engineering, and Medicine review of the $SC–CO_2$ estimates to offer advice on how to approach future updates to ensure that the estimates continue to reflect the best available science and methodologies. In January 2017, the National Academies released their final report, Valuing Climate Damages: Updating Estimation of the Social Cost of Carbon Dioxide, and recommended specific criteria for future updates to the $SC–CO_2$ estimates, a modeling framework to satisfy the specified criteria, and both near-term updates and longer-term research needs pertaining to various components of the estimation process.[87] Shortly thereafter, in March 2017, President Trump issued Executive Order 13783, which disbanded the IWG, withdrew the previous TSDs, and directed agencies to ensure $SC–CO_2$ estimates used in regulatory analyses are consistent with the guidance contained in OMB's Circular A–4, ''including with respect to the consideration of domestic versus international impacts and the consideration of appropriate discount rates'' (E.O. 13783, section 5(c)). Benefit-cost analyses following E.O. 13783 used SC–GHG estimates that attempted to focus on the U.S.-specific share of climate change damages as estimated by the models and were calculated using two discount rates recommended by Circular A–4, 3 percent and 7 percent. All other methodological decisions and model versions used in SC–GHG calculations remained the same as those used by the IWG in 2010 and 2013, respectively.

On January 20, 2021, President Biden issued Executive Order 13990, which re-established the IWG and directed it to ensure that the U.S. Government's estimates of the social cost of carbon and other greenhouse gases reflect the best available science and the recommendations in the National Academies 2017 report. The IWG was tasked with first reviewing the SC–GHG estimates currently used in Federal analyses and publishing interim estimates within 30 days of the E.O. that reflect the full impact of GHG emissions, including by taking global damages into account. The interim SC–GHG estimates published in February 2021 are used here to estimate the climate benefits for this rulemaking. The E.O. instructs the IWG to undertake a fuller update of the SC–GHG estimates that takes into consideration the advice in the National Academies 2017 report and other recent scientific literature. The February 2021 SC–GHG TSD provides a complete discussion of the IWG's initial review conducted under E.O.13990. In particular, the IWG found that the SC–GHG estimates used under E.O. 13783 fail to reflect the full impact of GHG emissions in multiple ways.

First, the IWG found that the SC–GHG estimates used under E.O. 13783 fail to fully capture many climate impacts that affect the welfare of U.S. citizens and residents, and those impacts are better reflected by global measures of the SC–GHG. Examples of omitted effects from the E.O. 13783 estimates include direct effects on U.S. citizens, assets, and investments located abroad, supply chains, U.S. military assets and interests abroad, and tourism, and spillover pathways such as economic and political destabilization and global migration that can lead to adverse impacts on U.S. national security, public health, and humanitarian concerns. In addition, assessing the benefits of U.S. GHG mitigation activities requires consideration of how those actions may affect mitigation

activities by other countries, as those international mitigation actions will provide a benefit to U.S. citizens and residents by mitigating climate impacts that affect U.S. citizens and residents. A wide range of scientific and economic experts have emphasized the issue of reciprocity as support for considering global damages of GHG emissions. If the United States does not consider impacts on other countries, it is difficult to convince other countries to consider the impacts of their emissions on the United States. The only way to achieve an efficient allocation of resources for emissions reduction on a global basis—and so benefit the U.S. and its citizens—is for all countries to base their policies on global estimates of damages. As a member of the IWG involved in the development of the February 2021 SC–GHG TSD, DOE agrees with this assessment and, therefore, in this final rule DOE centers attention on a global measure of SC–GHG. This approach is the same as that taken in DOE regulatory analyses from 2012 through 2016. A robust estimate of climate damages that accrue only to U.S. citizens and residents does not currently exist in the literature. As explained in the February 2021 SC–GHG TSD, existing estimates are both incomplete and an underestimate of total damages that accrue to the citizens and residents of the U.S. because they do not fully capture the regional interactions and spillovers previously discussed, nor do they include all of the important physical, ecological, and economic impacts of climate change recognized in the climate change literature. As noted in the February 2021 SC–GHG TSD, the IWG will continue to review developments in the literature, including more robust methodologies for estimating a U.S.-specific SC–GHG value, and explore ways to better inform the public of the full range of carbon impacts. As a member of the IWG, DOE will continue to follow developments in the literature pertaining to this issue.

Second, the IWG found that the use of the social rate of return on capital (estimated to be 7 percent under OMB's 2003 Circular A–4 guidance) to discount the future benefits of reducing GHG emissions inappropriately underestimates the impacts of climate change for the purposes of estimating the SC–GHG. Consistent with the findings of the National Academies and the economic literature, the IWG continued to conclude that the consumption rate of interest is the theoretically appropriate discount rate in an intergenerational context,[88] and recommended that discount rate uncertainty and relevant aspects of intergenerational ethical considerations be accounted for in selecting future discount rates.

Furthermore, the damage estimates developed for use in the SC–GHG are estimated in consumption-equivalent terms, and so an application of OMB Circular A–4's guidance for regulatory analysis would then use the consumption discount rate to calculate the SC–GHG. DOE agrees with this assessment and will continue to follow developments in the literature pertaining to this issue. DOE also notes that while OMB's 2003 Circular A–4 recommends using 3% and 7% discount rates as ''default'' values, Circular A–4 also reminds agencies that ''different regulations may call for different emphases in the analysis, depending on the nature and complexity of the regulatory issues and the sensitivity of the benefit and cost estimates to the key assumptions.'' On discounting, Circular A–4 recognizes that ''special ethical considerations arise when comparing benefits and costs across generations,'' and Circular A–4 acknowledges that analyses may appropriately ''discount future costs and consumption benefits . . . at a lower rate than for intragenerational analysis.'' In the 2015 Response to Comments on the Social Cost of Carbon for Regulatory Impact Analysis, OMB, DOE, and the other IWG members recognized that ''Circular A–4 is a living document'' and ''the use of 7 percent is not considered appropriate for intergenerational discounting. There is wide support for this view in the academic literature, and it is recognized in Circular A–4 itself.'' Thus, DOE concludes that a 7% discount rate is not appropriate to apply to value the social cost of greenhouse gases in the analysis presented in this analysis.

To calculate the present and annualized values of climate benefits, DOE uses the same discount rate as the rate used to discount the value of damages from future GHG emissions, for internal consistency. That approach to discounting follows the same approach that the February 2021 SC–GHG TSD recommends ''to ensure internal consistency—*i.e.,* future damages from climate change using the SC–GHG at 2.5 percent should be discounted to the base year of the analysis using the same 2.5 percent rate.'' DOE has also consulted the National Academies' 2017 recommendations on how SC–GHG estimates can ''be combined in RIAs with other cost and benefits estimates that may use different discount rates.'' The National Academies reviewed several options, including ''presenting all discount rate combinations of other costs and benefits with [SC–GHG] estimates.''

As a member of the IWG involved in the development of the February 2021 SC–GHG TSD, DOE agrees with the above assessment and will continue to follow developments in the literature pertaining to this issue. While the IWG works to assess how best to incorporate the latest, peer reviewed science to develop an updated set of SC–GHG estimates, it set the interim estimates to be the most recent estimates developed by the IWG prior to the group being disbanded in 2017. The estimates rely on the same models and harmonized inputs and are calculated using a range of discount rates. As explained in the February 2021 SC–GHG TSD, the IWG has recommended that agencies revert to the same set of four values drawn from the SC–GHG distributions based on three discount rates as were used in regulatory analyses between 2010 and 2016 and were subject to public comment. For each discount rate, the IWG combined the distributions across models and socioeconomic emissions scenarios (applying equal weight to each) and then selected a set of four values recommended for use in benefit-cost analyses: an average value resulting from the model runs for each of three discount rates (2.5 percent, 3 percent, and 5 percent), plus a fourth value, selected as the 95th percentile of estimates based on a 3 percent discount rate. The fourth value was included to provide information on potentially higher-than-expected economic impacts

from climate change. As explained in the February 2021 SC–GHG TSD, and DOE agrees, this update reflects the immediate need to have an operational SC–GHG for use in regulatory benefit-cost analyses and other applications that was developed using a transparent process, peer-reviewed methodologies, and the science available at the time of that process. Those estimates were subject to public comment in the context of dozens of proposed rulemakings as well as in a dedicated public comment period in 2013.

IPI commented that even though the proposed rule's costs would exceed its benefits without considering climate effects, DOE appropriately applies the social cost estimates developed by the Interagency Working Group on the Social Cost of Greenhouse Gases to its analysis of climate benefits. IPI commented that DOE should consider applying sensitivity analysis using EPA's draft climate-damage estimates released in November 2022, as EPA's work faithfully implements the roadmap laid out in 2017 by the National Academies of Sciences and applies recent advances in the science and economics on the costs of climate change. (IPI, No. 175 at pp. 1–3)

DOE typically does not conduct analyses using draft inputs that are still under review. DOE notes that because the EPA's draft estimates are considerably higher than the IWG's interim SC–GHG values applied for this final rule, an analysis that used the draft values would result in significantly greater climate-related benefits. However, such results would not affect DOE's decision in this final rule.

There are a number of limitations and uncertainties associated with the SC–GHG estimates. First, the current scientific and economic understanding of discounting approaches suggests discount rates appropriate for intergenerational analysis in the context of climate change are likely to be less than 3 percent, near 2 percent or lower.[89] Second, the IAMs used to produce these interim estimates do not include all of the important physical, ecological, and economic impacts of climate change recognized in the climate change literature and the science underlying their ''damage functions''—*i.e.,* the core parts of the IAMs that map global mean temperature changes and other physical impacts of climate change into economic (both market and nonmarket) damages—lags behind the most recent research. For example, limitations include the incomplete treatment of catastrophic and non-catastrophic impacts in the integrated assessment models, their incomplete treatment of adaptation and technological change, the incomplete way in which inter-regional and intersectoral linkages are modeled, uncertainty in the extrapolation of damages to high temperatures, and inadequate representation of the relationship between the discount rate and uncertainty in economic growth over long time horizons. Likewise, the socioeconomic and emissions scenarios used as inputs to the models do not reflect new information from the last decade of scenario generation or the full range of projections. The modeling limitations do not all work in the same direction in terms of their influence on the SC–CO_2 estimates. However, as discussed in the February 2021 SC–GHG TSD, the IWG has recommended that, taken together, the limitations suggest that the interim SC–GHG estimates used in this final rule likely underestimate the damages from GHG emissions. DOE concurs with this assessment.

DOE's derivations of the SC–CO_2, SC–N_2O, and SC–CH_4 values used for this NOPR are discussed in the following sections, and the results of DOE's analyses estimating the benefits of the reductions in emissions of these GHGs are presented in section V.B.6 of this document.

a. Social Cost of Carbon

The SC–CO_2 values used for this final rule were based on the values developed for the IWG's February 2021 TSD, which are shown in table IV.20 in five-year increments from 2020 to 2050. The set of annual values that DOE used, which was adapted from estimates published by EPA,[90] is presented in appendix 13A of the final rule TSD. These estimates are based on methods, assumptions, and parameters identical to the estimates published by the IWG (which were based on EPA modeling), and include values for 2051 to 2070. DOE expects additional climate benefits to accrue for products still operating after 2070, but a lack of available SC–CO_2 estimates for emissions years beyond 2070 prevents DOE from monetizing these potential benefits in this analysis.

Table IV.20. Annual SC-CO_2 Values from 2021 Interagency Update, 2020–2050 (2020$ per Metric Ton CO_2)

Year	Discount Rate and Statistic			
	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile
2020	14	51	76	152
2025	17	56	83	169
2030	19	62	89	187
2035	22	67	96	206
2040	25	73	103	225
2045	28	79	110	242
2050	32	85	116	260

February. United States Government. Available at *www.whitehouse.gov/briefing-room/blog/2021/02/26/a-return-to-science-evidence-based-estimates-of-the-benefits-of-reducing-climate-pollution/.*

[90] See EPA, Revised 2023 and Later Model Year Light-Duty Vehicle GHG Emissions Standards: Regulatory Impact Analysis, Washington, DC, December 2021. Available at *nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=P1013ORN.pdf* (last accessed Feb. 21, 2023).

NYSERDA commented that the assumption used by DOE in the NOPR regarding SC–CO_2 based on current Federal guidance is significantly lower than that established by the New York Department of Environmental Conservation, and DOE may be underestimating the climate benefits from this proposed standard. (NYSERDA, No. 166 at p. 3)

The IWG is preparing new SC–GHG values that reflect the current state of science related to climate change and its impacts. Until such values have been finalized, DOE continues to use the interim values in the February 2021 TSD. DOE agrees that the climate benefits from the proposed standard may be underestimated in the NOPR, but such underestimation has no bearing on DOE's decision in the NOPR or in this final rule.

DOE multiplied the CO_2 emissions reduction estimated for each year by the SC–CO_2 value for that year in each of the four cases. DOE adjusted the values to 2022$ using the implicit price deflator for gross domestic product (''GDP'') from the Bureau of Economic Analysis. To calculate a present value of the stream of monetary values, DOE discounted the values in each of the four cases using the specific discount rate that had been used to obtain the SC–CO_2 values in each case.

b. Social Cost of Methane and Nitrous Oxide

The SC–CH_4 and SC–N_2O values used for this final rule were based on the values developed for the February 2021 SC–GHG TSD. Table IV.21 shows the updated sets of SC–CH_4 and SC–N_2O estimates from the latest interagency update in 5-year increments from 2020 to 2050. The full set of annual values used is presented in Appendix 13–A of the final rule TSD. To capture the uncertainties involved in regulatory impact analysis, DOE has determined it is appropriate to include all four sets of SC–CH_4 and SC–N_2O values, as recommended by the IWG. DOE derived values after 2050 using the approach described above for the SC–CO_2.

Table IV.21. Annual SC-CH_4 and SC-N_2O Values from 2021 Interagency Update, 2020–2050 (2020$ per Metric Ton)

Year	SC-CH_4				SC-N_2O			
	Discount Rate and Statistic				Discount Rate and Statistic			
	5%	3%	2.5%	3%	5%	3%	2.5 %	3%
	Average	Average	Average	95th percentile	Average	Average	Average	95th percentile
2020	670	1500	2000	3900	5800	18000	27000	48000
2025	800	1700	2200	4500	6800	21000	30000	54000
2030	940	2000	2500	5200	7800	23000	33000	60000
2035	1100	2200	2800	6000	9000	25000	36000	67000
2040	1300	2500	3100	6700	10000	28000	39000	74000
2045	1500	2800	3500	7500	12000	30000	42000	81000
2050	1700	3100	3800	8200	13000	33000	45000	88000

DOE multiplied the CH_4 and N_2O emissions reduction estimated for each year by the SC–CH_4 and SC–N_2O estimates for that year in each of the cases. DOE adjusted the values to 2022$ using the implicit price deflator for gross domestic product (''GDP'') from the Bureau of Economic Analysis. To calculate a present value of the stream of monetary values, DOE discounted the values in each of the cases using the specific discount rate that had been used to obtain the SC–CH_4 and SC–N_2O estimates in each case.

c. Sensitivity Analysis Using EPA's New SC–GHG Estimates

In the regulatory impact analysis of EPA's December 2023 Final Rulemaking, ''Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review,'' EPA estimated climate benefits using a new set of Social Cost of Greenhouse Gas (SC–GHG) estimates. These estimates incorporate recent research addressing recommendations of the National Academies (2017), responses to public comments on an earlier sensitivity analysis using draft SC–GHG estimates, and comments from a 2023 external peer review of the accompanying technical report.[91]

The full set of annual values is presented in appendix 13C of the direct final rule TSD. Although DOE continues

[91] For further information about the methodology used to develop these values, public comments, and information pertaining to the peer review, see *https://www.epa.gov/environmental-economics/scghg.*

to review EPA's estimates, for this rulemaking, DOE used these new SC–GHG values to conduct a sensitivity analysis of the value of GHG emissions reductions associated with alternative standards for GSLs. This sensitivity analysis provides an expanded range of potential climate benefits associated with amended standards. The final year of EPA's new estimates is 2080; therefore, DOE did not monetize the climate benefits of GHG emissions reductions occurring after 2080.

The results of the sensitivity analysis are presented in appendix 13C of the final rule TSD. The overall climate benefits are larger when using EPA's higher SC–GHG estimates, compared to the climate benefits using the more conservative IWG SC–GHG estimates. However, DOE's conclusion that the standards are economically justified remains the same regardless of which SC–GHG estimates are used.

2. Monetization of Other Emissions Impacts

For the final rule, DOE estimated the monetized value of NO_X and SO_2 emissions reductions from electricity generation using benefit per ton estimates for that sector from EPA's Benefits Mapping and Analysis Program.[92] DOE used EPA's values for $PM_{2.5}$-related benefits associated with NO_X and SO_2 and for ozone-related benefits associated with NO_X for 2025 and 2030, and 2040, calculated with discount rates of 3 percent and 7 percent. DOE used linear interpolation to define values for the years not given in the 2025 to 2040 period; for years beyond 2040, the values are held constant. DOE combined the EPA regional benefit-per-ton estimates with regional information on electricity consumption and emissions from *AEO2023* to define weighted-average national values for NO_X and SO_2 (see appendix 13B of the final rule TSD).

DOE multiplied the site emissions reduction (in tons) in each year by the associated $/ton values, and then discounted each series using discount rates of 3 percent and 7 percent as appropriate.

M. Utility Impact Analysis

The utility impact analysis estimates the changes in installed electrical capacity and generation projected to result for each considered TSL. The analysis is based on published output from the NEMS associated with *AEO2023.* NEMS produces the AEO Reference case, as well as a number of side cases that estimate the economy-wide impacts of changes to energy supply and demand. For the current analysis, impacts are quantified by comparing the levels of electricity sector generation, installed capacity, fuel consumption, and emissions in the *AEO2023* Reference case and various side cases. Details of the methodology are provided in the appendices to chapter 14 of the final rule TSD.

The output of this analysis is a set of time-dependent coefficients that capture the change in electricity generation, primary fuel consumption, installed capacity, and power sector emissions due to a unit reduction in demand for a given end use. These coefficients are multiplied by the stream of electricity savings calculated in the NIA to provide estimates of selected utility impacts of potential new or amended energy conservation standards.

N. Employment Impact Analysis

DOE considers employment impacts in the domestic economy as one factor in selecting a standard. Employment impacts from new or amended energy conservation standards include both direct and indirect impacts. Direct employment impacts are any changes in the number of employees of manufacturers of the products subject to standards, their suppliers, and related service firms. The MIA addresses those impacts. Indirect employment impacts are changes in national employment that occur due to the shift in expenditures and capital investment caused by the purchase and operation of more-efficient appliances. Indirect employment impacts from standards consist of the net jobs created or eliminated in the national economy, other than in the manufacturing sector being regulated, caused by (1) reduced spending by consumers on energy, (2) reduced spending on new energy supply by the utility industry, (3) increased consumer spending on the products to which the new standards apply and other goods and services, and (4) the effects of those three factors throughout the economy.

One method for assessing the possible effects on the demand for labor of such shifts in economic activity is to compare sector employment statistics developed by the Labor Department's Bureau of Labor Statistics (''BLS''). BLS regularly publishes its estimates of the number of jobs per million dollars of economic activity in different sectors of the economy, as well as the jobs created elsewhere in the economy by this same economic activity. Data from BLS indicate that expenditures in the utility sector generally create fewer jobs (both directly and indirectly) than expenditures in other sectors of the economy.[93] There are many reasons for these differences, including wage differences and the fact that the utility sector is more capital-intensive and less labor-intensive than other sectors. Energy conservation standards have the effect of reducing consumer utility bills. Because reduced consumer expenditures for energy likely lead to increased expenditures in other sectors of the economy, the general effect of efficiency standards is to shift economic activity from a less labor-intensive sector (*i.e.,* the utility sector) to more labor-intensive sectors (*e.g.,* the retail and service sectors). Thus, the BLS data suggest that net national employment may increase due to shifts in economic activity resulting from energy conservation standards.

DOE estimated indirect national employment impacts for the standard levels considered in this final rule using an input/output model of the U.S. economy called Impact of Sector Energy Technologies version 4 (''ImSET'').[94] ImSET is a special-purpose version of the ''U.S. Benchmark National Input-Output'' (''I–O'') model, which was designed to estimate the national employment and income effects of energy-saving technologies. The ImSET software includes a computer-based I–O model having structural coefficients that characterize economic flows among 187 sectors most relevant to industrial, commercial, and residential building energy use.

DOE notes that ImSET is not a general equilibrium forecasting model, and that the uncertainties involved in projecting employment impacts, especially changes in the later years of the analysis. Because ImSET does not incorporate price changes, the employment effects predicted by ImSET may over-estimate actual job impacts over the long run for this rule. Therefore, DOE used ImSET only to generate results for near-term timeframes (2029), where these uncertainties are reduced. For more

V. Analytical Results and Conclusions

The following section addresses the results from DOE's analyses with respect to the considered energy conservation standards for GSLs. It addresses the TSLs examined by DOE, the projected impacts of each of these levels if adopted as energy conservation standards for GSLs, and the standards levels that DOE is adopting in this final rule. Additional details regarding DOE's analyses are contained in the final rule TSD supporting this document.

A. Trial Standard Levels

In general, DOE typically evaluates potential new or amended standards for products and equipment by grouping individual efficiency levels for each class into TSLs. Use of TSLs allows DOE to identify and consider manufacturer cost interactions between the product classes, to the extent that there are such interactions, and price elasticity of consumer purchasing decisions that may change when different standard levels are set.

In the analysis conducted for this final rule, DOE analyzed the benefits and burdens of six TSLs for GSLs. DOE developed TSLs that combine efficiency levels for each analyzed product class. These TSLs were developed by combining specific efficiency levels for each of the GSL product classes analyzed by DOE. TSL 1 represents a modest increase in efficiency, with CFL technology retained as an option for product classes that include fluorescent lamps, including the Integrated Omnidirectional Short and Non-integrated Omnidirectional product classes. TSL 2 represents a moderate standard level that can only be met by LED options for all product classes. TSL 3 increases the stringency for the Integrated Omnidirectional Short, Integrated Omnidirectional Long and Integrated Directional product classes, and represents a significant increase in NES compared to TSLs 1 and 2. TSL 4 increases the standard level for the Integrated Omnidirectional Short product class, as well as the expected NES. TSL 5 represents the maximum NPV. TSL 6 represents max-tech. DOE presents the results for the TSLs in this document, while the results for all efficiency levels that DOE analyzed are in the final rule TSD.

Table V.1 presents the TSLs and the corresponding efficiency levels that DOE has identified for potential amended energy conservation standards for GSLs.

Table V.1 Trial Standard Levels for General Service Lamps

TSL	Representative Product Class				
	Integrated Omnidirectional Short	Integrated Omnidirectional Long	Integrated Directional	Non-Integrated Omnidirectional	Non-Integrated Directional
1	EL 2	EL 1	EL 1	EL 1	EL 1
2	EL 3	EL 3	EL 3	EL 3	EL 1
3	EL 5	EL 5	EL 5	EL 3	EL 1
4	EL 6	EL 5	EL 5	EL 3	EL 1
5	EL 7	EL 5	EL 5	EL 3	EL 3
6	EL 7	EL 6	EL 5	EL 3	EL 3

DOE constructed the TSLs for this final rule to include ELs representative of ELs with similar characteristics (*i.e.,* using similar technologies and/or efficiencies, and having roughly comparable equipment availability) or representing significant increases in efficiency and energy savings. The use of representative ELs provided for greater distinction between the TSLs. While representative ELs were included in the TSLs, DOE considered all efficiency levels as part of its analysis.[95]

B. Economic Justification and Energy Savings

1. Economic Impacts on Individual Consumers

DOE analyzed the economic impacts on GSL consumers by looking at the effects that potential amended standards at each TSL would have on the LCC and PBP. DOE also examined the impacts of potential standards on selected consumer subgroups. These analyses are discussed in the following sections.

a. Life-Cycle Cost and Payback Period

In general, higher-efficiency products affect consumers in two ways: (1) purchase price increases and (2) annual operating costs decrease. Inputs used for calculating the LCC and PBP include total installed costs (*i.e.,* product price plus installation costs), and operating costs (*i.e.,* annual energy use, energy prices, energy price trends, repair costs, and maintenance costs). The LCC calculation also uses product lifetime and a discount rate. Chapter 7 of the final rule TSD provides detailed information on the LCC and PBP analyses.

Table V.2 through table V.11 show the LCC and PBP results for the TSLs considered for each product class. In the first of each pair of tables, the simple payback is measured relative to the baseline product. In the second table, the impacts are measured based on the changes in the efficacy distribution under a standard relative to the efficacy distribution in the no-new-standards case in the first full year of compliance (*see* section IV.F.9 of this document). Because some consumers purchase products with higher efficiency than the minimum allowed under a standard in the no-new-standards case, the average savings can differ from the difference between the average LCC of the baseline product and the average LCC at each TSL. The savings refer only to consumers who are affected by a standard at a given TSL. Those who already purchase a product with efficiency at or above a given TSL are not affected. Consumers for whom the

[95] Efficiency levels that were analyzed for this final rule are discussed in section 0 of this document. Results by efficiency level are presented in TSD chapter 8.

LCC increases at a given TSL experience a net cost.

b. Consumer Subgroup Analysis

In the consumer subgroup analysis, DOE estimated the impact of the considered TSLs on low-income households and small businesses. Table V.12 and table V.13 compare the average LCC savings and PBP at each efficiency level for the consumer subgroups with similar metrics for the entire consumer sample for GSLs. In most cases, the average LCC savings and PBP for low-income households and small businesses at the considered efficiency levels are not substantially different from the average for all consumers. Chapter 10 of the final rule TSD presents the complete LCC and PBP results for the subgroups.

Table V.12 Comparison of LCC Savings for Consumer Subgroups and All Consumers

Non-integrated Directional				
1 - 4	0.31	0.36	0.35	0.45
5 - 6	0.21	0.27	0.29	0.45

* The savings represent the average LCC for affected consumers.

** Approximately 95% of Integrated Omnidirectional Long GSLs are shipped to the commercial sector. Moreover, for those low-income consumers who are renters (a subset of the residential consumer subgroup), DOE anticipates that the landlord, rather than the tenant, would typically purchase the lamps because Integrated Omnidirectional Long GSLs are not typical screw-in bulbs. For these reasons, DOE provides results for this product class ("PC") only for the commercial sector.

Table V.13 Comparison of PBP for Consumer Subgroups and All Consumers

Lamp Option	Simple Payback Period* years

2	4.4	4.3	3.0	3.0
3	4.8	4.6	3.2	3.2

* A reported PBP of "Never" indicates that the increased purchase cost will never be recouped by operating cost savings.

** Approximately 95% of Integrated Omnidirectional Long GSLs are shipped to the commercial sector. Moreover, for those low-income consumers who are renters (a subset of the residential consumer subgroup), DOE anticipates that the landlord, rather than the tenant, would typically purchase the lamps because Integrated Omnidirectional Long GSLs are not typical screw-in bulbs. For these reasons, DOE provides results for this PC only for the commercial sector.

c. Rebuttable Presumption Payback

As discussed in section IV.F.11 of this document, EPCA establishes a rebuttable presumption that an energy conservation standard is economically justified if the increased purchase cost for a product that meets the standard is less than three times the value of the first-year energy savings resulting from the standard. In calculating a rebuttable presumption payback period for each of the considered TSLs, DOE used discrete values, and as required by EPCA, based the energy use calculation on the DOE test procedures for GSLs. In contrast, the PBPs presented in section V.B.1.a of this document were calculated using

distributions that reflect the range of energy use in the field.

Table V.14 presents the rebuttable-presumption payback periods for the considered TSLs for GSLs. While DOE examined the rebuttable-presumption criterion, it considered whether the standard levels considered for this rule are economically justified through a more detailed analysis of the economic impacts of those levels, pursuant to 42 U.S.C. 6295(o)(2)(B)(i), that considers the full range of impacts to the consumer, manufacturer, Nation, and environment. The results of that analysis serve as the basis for DOE to definitively evaluate the economic justification for a potential standard level, thereby supporting or rebutting the results of any preliminary determination of economic justification.

Table V.14 Rebuttable-Presumption Payback Periods

Lamp Option	Rebuttable PBP* years

9	0.5				

* A reported PBP of "Never" indicates that the increased purchase cost will never be recouped by operating cost savings.

2. Economic Impacts on Manufacturers

DOE performed an MIA to estimate the impact of new and amended energy conservation standards on manufacturers of GSLs. The next section describes the expected impacts on manufacturers at each considered TSL. Chapter 11 of the final rule TSD explains the analysis in further detail.

a. Industry Cash Flow Analysis Results

In this section, DOE provides GRIM results from the analysis, which examines changes in the industry that would result from a standard. The following tables summarize the estimated financial impacts (represented by changes in INPV) of potential new and amended energy conservation standards on manufacturers of GSLs, as well as the conversion costs that DOE estimates manufacturers of GSLs would incur at each TSL. To evaluate the range

of cash flow impacts on the GSL industry, DOE modeled two manufacturer markup scenarios using different assumptions that correspond to the range of anticipated market responses to new and amended energy conservation standards: (1) the preservation of gross margin scenario and (2) the preservation of operating profit scenario, as previously described in section IV.J.2.d of this document.

Each of the modeled scenarios results in a unique set of cash flows and corresponding industry values at each TSL for GSL manufacturers. In the following discussion, the INPV results refer to the difference in industry value between the no-new-standards case and each standards case (*i.e.,* TSLs) resulting from the sum of discounted cash flows from 2024 through 2058. To provide perspective on the short-run cash flow impact, DOE includes in the discussion of results a comparison of free cash flow between the no-new-standards case and the standards case at each TSL in the year before new and amended standards are required.

DOE presents the range in INPV for GSL manufacturers in table V.15 and table V.16. DOE presents the impacts to industry cash flows and the conversion costs in table V.17.

Table V.15 Industry Net Present Value for General Service Lamps - Preservation of Gross Margin Scenario

	Units	No-New-Standards Case	Trial Standard Level*					
			1	2	3	4	5	6
INPV	*2022$ millions*	2,108	2,053	1,941	1,946	1,955	1,951	1,950
Change in INPV	*2022$ millions*	-	(54)	(166)	(159)	(149)	(154)	(155)
	%	-	(2.6)	(7.9)	(7.5)	(7.1)	(7.3)	(7.3)

* Numbers in parentheses indicate a negative number. Some numbers may not sum exactly due to rounding.

Table V.16 Industry Net Present Value for General Service Lamps - Preservation of Operating Profit Scenario

	Units	No-New-Standards Case	Trial Standard Level*					
			1	2	3	4	5	6
INPV	*2022$ millions*	2,108	2,047	1,947	1,904	1,886	1,789	1,783

* Numbers in parentheses indicate a negative number. Some numbers may not sum exactly due to rounding.

BILLING CODE 6450–01–C

At TSL 6, DOE estimates the change in INPV will range from −$322 million to −$155 million, which represents a change in INPV of −15.3 percent to −7.3 percent, respectively. At TSL 6, industry free cash flow decreases to −$49 million, which represents a decrease of approximately 141 percent, compared to the no-new-standards case value of $119 million in 2028, the year before the first full year of compliance.

TSL 6 sets the efficacy level at EL 7 for the Integrated Omnidirectional Short product class, which is max-tech; at EL 6 for the Integrated Omnidirectional Long product class, which is max-tech; at EL 5 for the Integrated Directional product class, which is max-tech; and at EL 3 for the Non-Integrated Omnidirectional Short and Non-Integrated Directional product classes, which is max-tech for those product classes. DOE estimates that

approximately 17 percent of the Integrated Omnidirectional Short product class shipments; approximately 14 percent of the Integrated Omnidirectional Long product class shipments; approximately 35 percent of the Integrated Directional product class shipments; approximately 54 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 26 percent of the Non-Integrated Directional product class shipments will meet the ELs required at TSL 6 in 2029, the first full year of compliance of new and amended standards.

DOE does not expect manufacturers to incur any capital conversion costs at TSL 6. At TSL 6, additional LED lamp production capacity is not expected to be needed to meet the expected volume of LED lamp shipments, as GSL manufacturers are expected to produce more LED lamps for every product class in the years leading up to 2029 than in 2029, the first full year of compliance of new and amended standards. DOE estimates approximately $430 million in product conversion costs as most LED lamps may need to be re-modeled to meet ELs required at TSL 6. DOE does not estimate any conversion costs for CFL models as GSL manufacturers are expected to discontinue all CFLs for any standard level beyond TSL 1.

At TSL 6, the shipment weighted-average MPC increases moderately by approximately 12.9 percent relative to the no-new-standards case MPC. In the preservation of gross margin scenario, this increase in MPC causes an increase in manufacturer free cash flow. However, the $430 million in conversion costs estimated at TSL 6, ultimately results in a moderately negative change in INPV at TSL 6 under the preservation of gross margin scenario.

Under the preservation of operating profit scenario, the moderate increase in the shipment weighted-average MPC results in a slightly lower average manufacturer markup of 1.53 (compared to the 1.55 manufacturer markup used in the no-new-standards case). This slightly lower average manufacturer markup and the $430 million in conversion costs result in a moderately negative change in INPV at TSL 6 under the preservation of operating profit scenario.

At TSL 5, DOE estimates the change in INPV will range from −$316 million to −$154 million, which represents a change in INPV of −15.0 percent to −7.3 percent, respectively. At TSL 5, industry free cash flow decreases to −$47 million, which represents a decrease of approximately 140 percent, compared to the no-new-standards case value of $119 million in 2028, the year before the first full year of compliance.

TSL 5 sets the efficacy level at EL 7 for the Integrated Omnidirectional Short product class, which is max-tech; at EL 5 for the Integrated Omnidirectional Long product class; at EL 5 for the Integrated Directional product class, which is max-tech; and at EL 3 for the Non-Integrated Omnidirectional Short and Non-Integrated Directional product classes, which is max-tech for those product classes. DOE estimates that approximately 17 percent of the Integrated Omnidirectional Short product class shipments; approximately 28 percent of the Integrated Omnidirectional Long product class shipments; approximately 35 percent of the Integrated Directional product class shipments; approximately 54 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 26 percent of the Non-Integrated Directional product class shipments will meet or exceed the ELs required at TSL 5 in 2029, the first full year of compliance of new and amended standards.

DOE does not expect manufacturers to incur any capital conversion costs at TSL 5. At TSL 5, additional LED lamp production capacity is not expected to be needed to meet the expected volume of LED lamp shipments, as GSL manufacturers are expected to produce more LED lamps for every product class in the years leading up to 2029 than in 2029, the first full year of compliance of new and amended standards. DOE estimates approximately $426 million in product conversion costs as most LED lamps may need to be re-modeled to meet ELs required at TSL 5. DOE does not estimate any conversion costs for CFL models as GSL manufacturers are expected to discontinue all CFLs for any standard level beyond TSL 1.

At TSL 5, the shipment weighted-average MPC increases moderately by approximately 12.8 percent relative to the no-new-standards case MPC. In the preservation of gross margin scenario, this increase in MPC causes an increase in manufacturer free cash flow. However, the $429 million in conversion costs estimated at TSL 5, ultimately results in a moderately negative change in INPV at TSL 5 under the preservation of gross margin scenario.

Under the preservation of operating profit scenario, the moderate increase in the shipment weighted-average MPC results in a slightly lower average manufacturer markup of 1.53 (compared to the 1.55 manufacturer markup used in the no-new-standards case). This slightly lower average manufacturer markup and the $429 million in conversion costs result in a moderately negative change in INPV at TSL 5 under the preservation of operating profit scenario.

At TSL 4, DOE estimates the change in INPV will range from −$219 million to −$149 million, which represents a change in INPV of −10.4 percent to −7.1 percent, respectively. At TSL 4, industry free cash flow decreases to −$33 million, which represents a decrease of approximately 127 percent, compared to the no-new-standards case value of $119 million in 2028, the year before the first full year of compliance.

TSL 4 sets the efficacy level at EL 6 for the Integrated Omnidirectional Short product class; at EL 5 for the Integrated Omnidirectional Long product class; at EL 5 for the Integrated Directional product class, which is max-tech; at EL 3 for the Non-Integrated Omnidirectional Short product class, which is max-tech; and at EL 1 for the Non-Integrated Directional product class. DOE estimates that approximately 31 percent of the Integrated Omnidirectional Short product class shipments; approximately 28 percent of the Integrated Omnidirectional Long product class shipments; approximately 35 percent of the Integrated Directional product class shipments; approximately 54 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 74 percent of the Non-Integrated Directional product class shipments will meet or exceed the ELs required at TSL 4 in 2029, the first full year of compliance of new and amended standards.

DOE does not expect manufacturers to incur any capital conversion costs at TSL 4. At TSL 4, additional LED lamp production capacity is not expected to be needed to meet the expected volume of LED lamp shipments, as GSL manufacturers are expected to produce more LED lamps for every product class in the years leading up to 2029 than in 2029, the first full year of compliance of new and amended standards. DOE estimates approximately $394 million in product conversion costs as many LED lamps may need to be re-modeled to meet ELs required at TSL 4. DOE does not estimate any conversion costs for CFL models as GSL manufacturers are expected to discontinue all CFLs for any standard level beyond TSL 1.

At TSL 4, the shipment weighted-average MPC increases moderately by approximately 10.4 percent relative to the no-new-standards case MPC. In the preservation of gross margin scenario, this increase in MPC causes an increase

in manufacturer free cash flow. However, the $394 million in conversion costs estimated at TSL 4, ultimately results in a moderately negative change in INPV at TSL 4 under the preservation of gross margin scenario.

Under the preservation of operating profit scenario, the moderate increase in the shipment weighted-average MPC results in a slightly lower average manufacturer markup of 1.54 (compared to the 1.55 manufacturer markup used in the no-new-standards case). This slightly lower average manufacturer markup and the $394 million in conversion costs result in a moderately negative change in INPV at TSL 4 under the preservation of operating profit scenario.

At TSL 3, DOE estimates the change in INPV will range from −$200 million to −$159 million, which represents a change in INPV of −9.5 percent to −7.5 percent, respectively. At TSL 3, industry free cash flow decreases to −$16 million, which represents a decrease of approximately 113 percent, compared to the no-new-standards case value of $119 million in 2028, the year before the first full year of compliance.

TSL 3 sets the efficacy level at EL 5 for the Integrated Omnidirectional Short product class; at EL 5 for the Integrated Omnidirectional Long product class; at EL 5 for the Integrated Directional product class, which is max-tech; at EL 3 for the Non-Integrated Omnidirectional Short product class, which is max-tech; and at EL 1 for the Non-Integrated Directional product class. DOE estimates that approximately 45 percent of the Integrated Omnidirectional Short product class shipments; approximately 28 percent of the Integrated Omnidirectional Long product class shipments; approximately 35 percent of the Integrated Directional product class shipments; approximately 54 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 74 percent of the Non-Integrated Directional product class shipments will meet or exceed the ELs required at TSL 3 in 2029, the first full year of compliance of new and amended standards.

DOE does not expect manufacturers to incur any capital conversion costs at TSL 3. At TSL 3, additional LED lamp production capacity is not expected to be needed to meet the expected volume of LED lamp shipments, as GSL manufacturers are expected to produce more LED lamps for every product class in the years leading up to 2029 than in 2029, the first full year of compliance of new and amended standards. DOE estimates approximately $356 million in product conversion costs as many LED lamps may need to be re-modeled to meet ELs required at TSL 3. DOE does not estimate any conversion costs for CFL models as GSL manufacturers are expected to discontinue all CFLs for any standard level beyond TSL 1.

At TSL 3, the shipment weighted-average MPC increases by approximately 6.7 percent relative to the no-new-standards case MPC. In the preservation of gross margin scenario, this increase in MPC causes an increase in manufacturer free cash flow. However, the $356 million in conversion costs estimated at TSL 3, ultimately results in a moderately negative change in INPV at TSL 3 under the preservation of gross margin scenario.

Under the preservation of operating profit scenario, the increase in the shipment weighted-average MPC results in a slightly lower average manufacturer markup. This slightly lower average manufacturer markup and the $356 million in conversion costs result in a moderately negative change in INPV at TSL 3 under the preservation of operating profit scenario.

At TSL 2, DOE estimates the change in INPV will range from −$166 million to −$159 million, which represents a change in INPV of −7.9 percent to −7.6 percent, respectively. At TSL 2, industry free cash flow decreases to $37 million, which represents a decrease of approximately 69 percent, compared to the no-new-standards case value of $119 million in 2028, the year before the first full year of compliance.

TSL 2 sets the efficacy level at EL 3 for the Integrated Omnidirectional Short product class; at EL 3 for the Integrated Omnidirectional Long product class; at EL 3 for the Integrated Directional product class; at EL 3 for the Non-Integrated Omnidirectional Short product class, which is max-tech; and at EL 1 for the Non-Integrated Directional product class. DOE estimates that approximately 98 percent of the Integrated Omnidirectional Short product class shipments; approximately 57 percent of the Integrated Omnidirectional Long product class shipments; approximately 73 percent of the Integrated Directional product class shipments; approximately 54 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 74 percent of the Non-Integrated Directional product class shipments will meet or exceed the ELs required at TSL 2 in 2029, the first full year of compliance of new and amended standards.

DOE does not expect manufacturers to incur any capital conversion costs at TSL 2. At TSL 2, additional LED lamp production capacity is not expected to be needed to meet the expected volume of LED lamp shipments, as GSL manufacturers are expected to produce more LED lamps for every product class in the years leading up to 2029 than in 2029, the first full year of compliance of new and amended standards. DOE estimates approximately $233 million in product conversion costs as some LED lamps may need to be re-modeled to meet ELs required at TSL 2. DOE does not estimate any conversion costs for CFL models as GSL manufacturers are expected to discontinue all CFLs for any standard level beyond TSL 1.

At TSL 2, the shipment weighted-average MPC slightly increases by approximately 0.2 percent relative to the no-new-standards case MPC. In the preservation of gross margin scenario, this slight increase in MPC causes a marginal increase in manufacturer free cash flow. However, the $233 million in conversion costs estimated at TSL 2, ultimately results in a moderately negative change in INPV at TSL 2 under the preservation of gross margin scenario.

Under the preservation of operating profit scenario, the slight increase in the shipment weighted-average MPC results in a slightly lower average manufacturer markup. This slightly lower average manufacturer markup and the $233 million in conversion costs result in a moderately negative change in INPV at TSL 2 under the preservation of operating profit scenario.

At TSL 1, DOE estimates the change in INPV will range from −$60 million to −$54 million, which represents a change in INPV of −2.8 percent to −2.6 percent, respectively. At TSL 1, industry free cash flow decreases to $88 million, which represents a decrease of approximately 26 percent, compared to the no-new-standards case value of $119 million in 2028, the year before the first full year of compliance.

TSL 1 sets the efficacy level at EL 2 for the Integrated Omnidirectional Short product class; at EL 1 for the Integrated Omnidirectional Long product class; at EL 1 for the Integrated Directional product class; at EL 1 for the Non-Integrated Omnidirectional Short product class; and at EL 1 for the Non-Integrated Directional product class. DOE estimates that approximately 99 percent of the Integrated Omnidirectional Short product class shipments; approximately 86 percent of the Integrated Omnidirectional Long product class shipments; approximately 99 percent of the Integrated Directional

product class shipments; approximately 97 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 74 percent of the Non-Integrated Directional product class shipments will meet or exceed the ELs required at TSL 1 in 2029, the first full year of compliance of new and amended standards.

DOE does not expect manufacturers to incur any capital conversion costs at TSL 1. At TSL 1, additional LED lamp production capacity is not expected to be needed to meet the expected volume of LED lamp shipments, as GSL manufacturers are expected to produce more LED lamps for every product class in the years leading up to 2029 than in 2029, the first full year of compliance of new and amended standards. DOE estimates approximately $87 million in product conversion costs. Most, but not all, LED lamps would meet the ELs required at TSL 1, and therefore would not need to be re-modeled.

At TSL 1, the shipment weighted-average MPC slightly increases by approximately 0.9 percent relative to the no-new-standards case MPC. In the preservation of gross margin scenario, this slight increase in MPC causes a marginal increase in manufacturer free cash flow. However, the $87 million in conversion costs estimated at TSL 1, ultimately results in a slightly negative change in INPV at TSL 1 under the preservation of gross margin scenario.

Under the preservation of operating profit scenario, the slight increase in the shipment weighted-average MPC results in a slightly lower average manufacturer markup. This slightly lower average manufacturer markup and the $87 million in conversion costs result in a slightly negative change in INPV at TSL 1 under the preservation of operating profit scenario.

b. Direct Impacts on Employment

Based on previous manufacturer interviews and public comments from GSL rulemaking documents previously published, DOE determined that there are no GSL manufacturers that manufacture CFLs in the United States, as all CFLs sold in the United States are manufactured abroad. Some of these CFL manufacturing facilities are owned by the GSL manufacturer and others outsource their CFL production to original equipment manufacturers located primarily in Asia. However, several GSL manufacturers that sell CFLs in the United States have domestic employees responsible for the R&D, marketing, sales, and distribution of CFLs.

In the January 2023 NOPR, DOE estimated that in the no-new-standards case there could be approximately 30 domestic employees dedicated to the non-production aspects of CFLs in 2029, the first full year of compliance for GSL standards. DOE estimates GSL manufacturers selling CFLs in the U.S. could reduce or eliminate up to 30 domestic non-production employees if CFLs are not able to meet the adopted new and amended standards. DOE predicts that CFLs would not be able to meet energy conservation standards set at TSL 2 or higher.

While most LED lamp manufacturing is done abroad, there is a limited number of LED lamps and LED lamp components covered by this rulemaking that are manufactured domestically. EEI recalled that domestic light bulb factories shut down due to Federal action around 2010–2011, and that with other products, manufacturers have moved production overseas to lower costs. EEI inquired whether the employment analysis accounted for the percentage of GSLs manufactured in the United States versus overseas. (EEI, Public Meeting Transcript, No. 27 at p. 119–121)

Additionally, DOE received comments from private citizens [96] that stated heavy regulation of lamps has forced many American-based factories to shut down, removing a number of jobs for American manufacturers. Commenters stated that DOE should be trying to keep these manufacturers in the United States instead of relying on subpar products from overseas.

DOE estimated that over 90 percent of GSLs sold in the United States are manufactured abroad. The previous lamp factory shutdowns referenced by the interested parties were specifically caused by changes in lighting technologies being manufactured. All GSL manufacturing that occurs domestically that is covered by this rulemaking uses LED technology. DOE assumes that all GSL manufacturers manufacturing LED lamps in the U.S. would continue to manufacture LED lamps in the U.S. after compliance with standards and therefore would not reduce or eliminate any domestic production or non-production employees involved in manufacturing or selling of LED lamps.

DOE did not estimate a potential increase in domestic production employment due to energy conservation standards, as existing domestic LED lamp manufacturing represents a small portion of LED lamp manufacturing overall and would not necessarily increase as LED lamp sales increase. Therefore, DOE estimates that GSL manufacturers could reduce or eliminate up to 30 domestic non-production employees (that are associated with the non-production of CFLs) for all TSLs higher than TSL 2 (*i.e.,* at TSLs 3–6).

c. Impacts on Manufacturing Capacity

Based on the final rule shipments analysis, the quantity of LED lamps sold for all product classes reaches approximately 566 million in 2024 and then declines to approximately 400 million by 2029, the first full year of compliance for GSL standards, in the no-new-standards case. This represents a decrease of approximately 30 percent from 2024 to 2029. Based on the final rule shipments analysis, while all TSLs project an increase in number of LED lamps sold in 2029 (in the standards cases) compared to the no-new standards case, the number of LED lamps sold in 2029 (for all TSLs), is smaller than the number of LED lamps sold in the years leading up to 2029. Therefore, DOE assumed that GSL manufacturers would be able to maintain their 2028 LED lamp production capacity in 2029 and manufactures would be able to meet the LED lamp production capacity for all TSLs in 2029.

DOE does not anticipate that manufacturing the same, or slightly fewer, quantity of LED lamps that are more efficacious would impact the production capacity for LED manufacturers.

d. Impacts on Subgroups of Manufacturers

Using average cost assumptions to develop an industry cash-flow estimate may not be adequate for assessing differential impacts among manufacturer subgroups. Small manufacturers, niche manufacturers, and manufacturers exhibiting a cost structure substantially different from the industry average could be affected disproportionately. DOE used the results of the industry characterization to group manufacturers exhibiting similar characteristics. Consequently, DOE identified small business manufacturers as a subgroup for a separate impact analysis.

For the small business subgroup analysis, DOE applied the small business size standards published by the Small Business Administration (''SBA'') to determine whether a

[96] Comments submitted in response to the January 2023 NOPR, including comments from private citizens can be found in the docket of DOE's rulemaking to develop energy conservation standards for GSLs at *www.regulations.gov/docket/EERE-2022-BT-STD-0022/comments.*

company is considered a small business. The size standards are codified at 13 CFR part 121. To be categorized as a small business under North American Industry Classification System (''NAICS'') code 335139, ''electric lamp bulb and other lighting equipment manufacturing'' a GSL manufacturer and its affiliates may employ a maximum of 1,250 employees. The 1,250-employee threshold includes all employees in a business's parent company and any other subsidiaries. DOE identified more than 300 GSL manufacturers that qualify as small businesses.

The small business subgroup analysis is discussed in more detail in section VI.B and in chapter 11 of the final rule TSD.

e. Cumulative Regulatory Burden

One aspect of assessing manufacturer burden involves looking at the cumulative impact of multiple DOE standards and the regulatory actions of other Federal agencies and States that affect the manufacturers of a covered product or equipment. While any one regulation may not impose a significant burden on manufacturers, the combined effects of several existing or impending regulations may have serious consequences for some manufacturers, groups of manufacturers, or an entire industry. Multiple regulations affecting the same manufacturer can strain profits and lead companies to abandon product lines or markets with lower expected future returns than competing products. For these reasons, DOE conducts an analysis of cumulative regulatory burden as part of its rulemakings pertaining to appliance efficiency.

DOE evaluates product-specific regulations that will take effect approximately 3 years before or after the first full year of compliance (*i.e.,* 2029) of the new and amended energy conservation standards for GSLs. This information is presented in table V.18.

Table V.18 Compliance Dates and Expected Conversion Expenses of Federal Energy Conservation Standards Affecting General Service Lamp Manufacturers

Federal Energy Conservation Standard	Number of Mfrs.*	Number of Manufacturers Affected from this Rule**	Approx. Standards Year	Industry Conversion Costs (millions)	Industry Conversion Costs / Product Revenue***
Ceiling Fans 88 FR 40932 (Jun. 22, 2023)†	91	2	2028	107.2 (2022$)	1.9%

* This column presents the total number of manufacturers identified in the energy conservation standard rule contributing to cumulative regulatory burden.

** This column presents the number of manufacturers producing GSLs that are also listed as manufacturers in the listed energy conservation standard contributing to cumulative regulatory burden.

*** This column presents industry conversion costs as a percentage of product revenue during the conversion period. Industry conversion costs are the upfront investments manufacturers must make to sell compliant products/equipment. The revenue used for this calculation is the revenue from just the covered product/equipment associated with each row. The conversion period is the time frame over which conversion costs are made and lasts from the publication year of the final rule to the compliance year of the energy conservation standard. The conversion period typically ranges from 3 to 5 years, depending on the rulemaking.

† Indicates a NOPR publication. Values may change on publication of a final rule.

3. National Impact Analysis

This section presents DOE's estimates of the national energy savings and the NPV of consumer benefits that would result from each of the TSLs considered as potential amended standards.

a. Significance of Energy Savings

To estimate the energy savings attributable to potential amended standards for GSLs, DOE compared their energy consumption under the no-new-standards case to their anticipated energy consumption under each TSL. The savings are measured over the entire lifetime of products purchased in the 30-year period that begins in the first full year of anticipated compliance with amended standards (2029–2058). Table V.19 presents DOE's projections of the national energy savings for each TSL considered for GSLs. The savings were calculated using the approach described in section IV.H of this document.

BILLING CODE 6450–01–P

OMB Circular A–4 [97] requires agencies to present analytical results, including separate schedules of the monetized benefits and costs that show the type and timing of benefits and costs. Circular A–4 also directs agencies to consider the variability of key elements underlying the estimates of benefits and costs. For this rulemaking, DOE undertook a sensitivity analysis using 9 years, rather than 30 years, of product shipments. The choice of a 9-year period is a proxy for the timeline in EPCA for the review of certain energy conservation standards and potential revision of and compliance with such revised standards.[98] The review timeframe established in EPCA is generally not synchronized with the product lifetime, product manufacturing cycles, or other factors specific to GSLs. Thus, such results are presented for informational purposes only and are not indicative of any change in DOE's

[97] U.S. Office of Management and Budget. *Circular A–4: Regulatory Analysis.* September 17, 2003. *obamawhitehouse.archives.gov/omb/circulars_a004_a-4* (last accessed Aug. 21, 2023).

[98] EPCA requires DOE to review its standards at least once every 6 years, and requires, for certain products, a 3-year period after any new standard is promulgated before compliance is required, except that in no case may any new standards be required within 6 years of the compliance date of the previous standards. (42 U.S.C. 6295(m)). While adding a 6-year review to the 3-year compliance period adds up to 9 years, DOE notes that it may undertake reviews at any time within the 6-year period and that the 3-year compliance date may yield to the 6-year backstop. A 9-year analysis period may not be appropriate given the variability that occurs in the timing of standards reviews and the fact that for some products, the compliance period is 5 years rather than 3 years.

analytical methodology. The NES sensitivity analysis results based on a 9-year analytical period are presented in table V.20. The impacts are counted over the lifetime of GSLs purchased during the period 2029–2037.

Table V.20 Cumulative National Energy Savings for GSLs; 9 Years of Shipments (2029-2037)

	Product Class	Trial Standard Level

b. Net Present Value of Consumer Costs and Benefits

DOE estimated the cumulative NPV of the total costs and savings for consumers that would result from the TSLs considered for GSLs. In accordance with OMB's guidelines on regulatory analysis,[99] DOE calculated NPV using both a 7-percent and a 3-percent real discount rate. Table V.21 shows the consumer NPV results with impacts counted over the lifetime of products purchased during the period 2029–2058.

[99] U.S. Office of Management and Budget. *Circular A–4: Regulatory Analysis.* September 17, 2003. *obamawhitehouse.archives.gov/omb/circulars_a004_a-4* (last accessed March 25, 2022).

Table V.21 Cumulative Net Present Value of Consumer Benefits for GSLs; 30 Years of Shipments (2029-2058)

Discount Rate	Product Class	Trial Standard Level					
		1	2	3	4	5	6
		Billion 2022$					
3 percent	Integrated Omnidirectional Short	0.80	1.17	12.74	15.31	16.59	16.59

BILLING CODE 6450–01–C

The previous results reflect the use of a default trend to estimate the change in price for GSLs over the analysis period (*see* sections IV.G and IV.H of this document). As part of the NIA, DOE also analyzed high and low benefits scenarios that use inputs from variants of the *AEO2023* Reference case. For the high benefits scenario, DOE uses the *AEO2023* High Economic Growth scenario, which has a higher energy price trend relative to the Reference case, as well as a lower price learning rate. The lower learning rate in this scenario slows the adoption of more efficacious lamp options in the no-new-standards case, increasing the available energy savings attributable to a standard. For the low benefits scenario, DOE uses the *AEO2023* Low Economic Growth scenario, which has a lower energy price trend relative to the Reference case, as well as a higher price learning rate. The higher learning rate in this scenario accelerates the adoption of more efficacious lamp options in the no-new-standards case (relative to the Reference scenario) decreasing the available energy savings attributable to a standard. NIA results based on these cases are presented in appendix 9D of the final rule TSD.

c. Indirect Impacts on Employment

DOE estimates that amended energy conservation standards for GSLs will reduce energy expenditures for consumers of those products, with the resulting net savings being redirected to other forms of economic activity. These expected shifts in spending and economic activity could affect the demand for labor. As described in section IV.N of this document, DOE used an input/output model of the U.S. economy to estimate indirect employment impacts of the TSLs that DOE considered. There are uncertainties involved in projecting employment impacts, especially changes in the later

years of the analysis. Therefore, DOE generated results for near-term timeframes (2029–2032), where these uncertainties are reduced.

The results suggest that the adopted standards are likely to have a negligible impact on the net demand for labor in the economy. The net change in jobs is so small that it would be imperceptible in national labor statistics and might be offset by other, unanticipated effects on employment. Chapter 15 of the final rule TSD presents detailed results regarding anticipated indirect employment impacts.

4. Impact on Utility or Performance of Products

As discussed in section IV.C.1.b of this document, DOE has concluded that the standards adopted in this final rule will not lessen the utility or performance of the GSLs under consideration in this rulemaking. Manufacturers of these products currently offer units that meet or exceed the adopted standards.

5. Impact of Any Lessening of Competition

DOE considered any lessening of competition that would be likely to result from new or amended standards. As discussed in section III.F.1.e of this document, EPCA directs the Attorney General of the United States (''Attorney General'') to determine the impact, if any, of any lessening of competition likely to result from a proposed standard and to transmit such determination in writing to the Secretary within 60 days of the publication of a proposed rule, together with an analysis of the nature and extent of the impact. To assist the Attorney General in making this determination, DOE provided the Department of Justice (''DOJ'') with copies of the NOPR and the TSD for review. In its assessment letter responding to DOE, DOJ concluded that the proposed energy conservation standards for GSLs are unlikely to have a significant adverse impact on competition. DOE is publishing the Attorney General's assessment at the end of this final rule.

6. Need of the Nation To Conserve Energy

Enhanced energy efficiency, where economically justified, improves the Nation's energy security, strengthens the economy, and reduces the environmental impacts (costs) of energy production. Reduced electricity demand due to energy conservation standards is also likely to reduce the cost of maintaining the reliability of the electricity system, particularly during peak-load periods. Chapter 14 in the final rule TSD presents the estimated impacts on electricity generating capacity, relative to the no-new-standards case, for the TSLs that DOE considered in this rulemaking.

Energy conservation resulting from potential energy conservation standards for GSLs is additionally expected to yield environmental benefits in the form of reduced emissions of certain air pollutants and greenhouse gases. Table V.23 provides DOE's estimate of cumulative emissions reductions expected to result from the TSLs considered in this rulemaking. The emissions were calculated using the multipliers discussed in section IV.K of this document. DOE reports annual emissions reductions for each TSL in chapter 12 of the final rule TSD.

BILLING CODE 6450–01–P

BILLING CODE 6450–01–C

As part of the analysis for this rule, DOE estimated monetary benefits likely to result from the reduced emissions of CO_2 that DOE estimated for each of the considered TSLs for GSLs. Section IV.L.1.a of this document discusses the estimated SC–CO_2 values that DOE used. Table V.24 presents the value of CO_2 emissions reduction at each TSL for each of the SC–CO_2 cases. The time-series of annual values is presented for the selected TSL in chapter 14 of the final rule TSD.

Table V.24 Present Value of CO_2 Emissions Reduction for GSLs Shipped During the Period 2029-2058

DOE is well aware that scientific and economic knowledge about the contribution of CO_2 and other GHG emissions to changes in the future global climate and the potential resulting damages to the global and U.S. economy continues to evolve rapidly. DOE, together with other Federal agencies, will continue to review methodologies for estimating the monetary value of reductions in CO_2 and other GHG emissions. This ongoing review will consider the comments on this subject that are part of the public record for this and other rulemakings, as

well as other methodological assumptions and issues. DOE notes that the adopted standards would be economically justified even without inclusion of monetized benefits of reduced GHG emissions.

DOE also estimated the monetary value of the economic benefits associated with NO_X and SO_2 emissions reductions anticipated to result from the considered TSLs for GSLs. The dollar-per-ton values that DOE used are discussed in section IV.L of this document. Table V.27 presents the present value for NO_X emissions reduction for each TSL calculated using 7-percent and 3-percent discount rates, and table V.28 presents similar results for SO_2 emissions reductions. The results in these tables reflect application of EPA's low dollar-per-ton values, which DOE used to be conservative. The time-series of annual values is presented for the selected TSL in chapter 13 of the final rule TSD.

Table V.27 Present Value of NO_X Emissions Reduction for GSLs Shipped During the Period 2029-2058

TSL	3% Discount Rate	7% Discount Rate
	million 2022$	
1	277.22	117.22
2	810.97	325.22
3	4,776.79	1,818.87
4	5,633.35	2,154.03
5	6,077.28	2,332.11
6	6,089.81	2,325.81

Table V.28 Present Value of SO_2 Emissions Reduction for GSLs Shipped During the Period 2029-2058

TSL	3% Discount Rate	7% Discount Rate
	million 2022$	
1	62.82	26.79
2	185.41	74.86
3	1,106.42	424.74
4	1,307.27	504.02
5	1,411.35	546.15
6	1,412.69	544.16

Not all the public health and environmental benefits from the reduction of greenhouse gases, NO_X, and SO_2 are captured in the values above, and additional unquantified benefits from the reductions of those pollutants as well as from the reduction of direct PM and other co-pollutants may be significant. DOE has not included monetary benefits of the reduction of Hg emissions because the amount of reduction is very small.

DOE emphasizes that the emissions analysis, including the SC–GHG analysis, presented in this final rule and TSD was performed in support of the cost-benefit analyses required by Executive Order 12866, and is provided to inform the public of the impacts of emissions reductions resulting from each TSL considered.

7. Other Factors

The Secretary of Energy, in determining whether a standard is economically justified, may consider any other factors that the Secretary deems to be relevant. (42 U.S.C. 6295(o)(2)(B)(i)(VII)) No other factors were considered in this analysis.

8. Summary of Economic Impacts

Table V.29 presents the NPV values that result from adding the estimates of the economic benefits resulting from reduced GHG and NO_X and SO_2 emissions to the NPV of consumer benefits calculated for each TSL considered in this rulemaking. The consumer benefits are domestic U.S. monetary savings that occur as a result of purchasing the covered GSLs, and are measured for the lifetime of products shipped during the period 2029–2058. The climate benefits associated with reduced GHG emissions resulting from the adopted standards are global benefits, and are also calculated based on the lifetime of GSLs shipped during the period 2029–2058.

Table V.29 Consumer NPV Combined with Present Value of Climate Benefits and Health Benefits

Category	TSL 1	TSL 2	TSL 3	TSL 4	TSL 5	TSL 6
Using 3% discount rate for Consumer NPV and Health Benefits (billion 2022$)						
5% Average SC-GHG case	1.47	5.09	25.05	28.82	30.75	30.63
3% Average SC-GHG case	1.60	5.46	27.27	31.44	33.56	33.45

3% 95th percentile SC-GHG case	1.12	3.61	18.22	21.11	22.61	22.50

C. Conclusion

When considering new or amended energy conservation standards, the standards that DOE adopts for any type (or class) of covered product must be designed to achieve the maximum improvement in energy efficiency that the Secretary determines is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A)) In determining whether a standard is economically justified, the Secretary must determine whether the benefits of the standard exceed its burdens by, to the greatest extent practicable, considering the seven statutory factors discussed previously. (42 U.S.C. 6295(o)(2)(B)(i)) The new or amended standard must also result in significant conservation of energy. (42 U.S.C. 6295(o)(3)(B)).

For this final rule, DOE considered the impacts of amended standards for GSLs at each TSL, beginning with the maximum technologically feasible level, to determine whether that level was economically justified. Where the max-tech level was not justified, DOE then considered the next most efficient level and undertook the same evaluation until it reached the highest efficiency level that is both technologically feasible and economically justified and saves a significant amount of energy.

To aid the reader as DOE discusses the benefits and/or burdens of each TSL, tables in this section present a summary of the results of DOE's quantitative analysis for each TSL. In addition to the quantitative results presented in the tables, DOE also considers other burdens and benefits that affect economic justification. These include the impacts on identifiable subgroups of consumers who may be disproportionately affected by a national standard and impacts on employment.

DOE also notes that the economics literature provides a wide-ranging discussion of how consumers trade off upfront costs and energy savings in the absence of government intervention. Much of this literature attempts to explain why consumers appear to undervalue energy efficiency improvements. There is evidence that consumers undervalue future energy savings as a result of (1) a lack of information; (2) a lack of sufficient salience of the long-term or aggregate benefits; (3) a lack of sufficient savings to warrant delaying or altering purchases; (4) excessive focus on the short term, in the form of inconsistent weighting of future energy cost savings relative to available returns on other investments; (5) computational or other difficulties associated with the evaluation of relevant tradeoffs; and (6) a divergence in incentives (for example, between renters and owners, or builders and purchasers). Having less than perfect foresight and a high degree of uncertainty about the future, consumers may trade off these types of investments at a higher-than-expected rate between current consumption and uncertain future energy cost savings.

Consumers value a variety of attributes in general service lamps. These attributes can factor into consumer purchasing decisions along with initial purchase and operating costs. For example, DOE analyzed consumer preferences for lifetime, presence of mercury, and dimmability in its modeling of consumer purchasing decisions for GSLs. Non-efficiency preferences such as consumer loyalty to a particular brand is not captured by DOE's model. DOE also does not explicitly model shape or color temperature as the former is typically a function of a fixture and DOE assumes the latter does not typically impact price or efficiency; though both could theoretically factor into consumer decisions. General considerations for consumer welfare and preferences, consumer choice decision modeling, and discrete choice estimation are areas DOE plans to explore further in a forthcoming rulemaking action related to the agency's updates to its overall analytic framework.

In DOE's current regulatory analysis, potential changes in the benefits and costs of a regulation due to changes in consumer purchase decisions are included in two ways. First, if consumers forego the purchase of a product in the standards case, this decreases sales for product manufacturers, and the impact on manufacturers attributed to lost revenue is included in the MIA. Second, DOE accounts for energy savings attributable only to products actually used by consumers in the standards case; if a standard decreases the number of products purchased by consumers, this decreases the potential energy savings from an energy conservation standard. DOE provides estimates of shipments and changes in the volume of product purchases in chapter 8 of the final rule TSD. However, DOE's current analysis does not explicitly control for heterogeneity in consumer preferences, preferences across subcategories of products or specific features, or consumer price sensitivity variation according to household income.[100]

While DOE is not prepared at present to provide a fuller quantifiable framework for estimating the benefits and costs of changes in consumer

[100] P.C. Reiss and M.W. White. Household Electricity Demand, Revisited. *Review of Economic Studies.* 2005. 72(3): pp. 853–883. doi: *10.1111/0034–6527.00354.*

purchase decisions due to an energy conservation standard, DOE is committed to developing a framework that can support empirical quantitative tools for improved assessment of the consumer welfare impacts of appliance standards. DOE has posted a paper that discusses the issue of consumer welfare impacts of appliance energy conservation standards, and potential enhancements to the methodology by which these impacts are defined and estimated in the regulatory process.[101] DOE welcomes comments on how to more fully assess the potential impact of energy conservation standards on consumer choice and how to quantify this impact in its regulatory analysis in future rulemakings.

1. Benefits and Burdens of TSLs Considered for GSL Standards

Table V.30 and table V.31 summarize the quantitative impacts estimated for each TSL for GSLs. The national impacts are measured over the lifetime of GSLs purchased in the 30-year period that begins in the anticipated first full year of compliance with amended standards (2029–2058). The energy savings, emissions reductions, and value of emissions reductions refer to full-fuel-cycle results. DOE is presenting monetized benefits of GHG emissions reductions in accordance with the applicable Executive Orders and DOE would reach the same conclusion presented in this document in the absence of the social cost of greenhouse gases, including the Interim Estimates presented by the Interagency Working Group. The efficiency levels contained in each TSL are described in section V.A of this document.

Consumer Incremental Product Costs‡	0.04	-0.23	1.60	2.35	2.76	2.85
Consumer Net Benefits	0.47	1.73	7.20	8.10	8.57	8.45
Total Net Benefits	0.79	2.63	12.42	14.27	15.23	15.11

Note: This table presents the costs and benefits associated with GSLs shipped during the period 2029−2058. These results include benefits to consumers which accrue after 2058 from the products shipped during the period 2029−2058.

* Climate benefits are calculated using four different estimates of the SC-CO_2, SC-CH_4 and SC-N_2O. Together, these represent the global SC-GHG. For presentational purposes of this table, the climate benefits associated with the average SC-GHG at a 3percent discount rate are shown; however, DOE emphasizes the importance and value of considering the benefits calculated using all four sets of SC-GHG estimates. To monetize the benefits of reducing GHG emissions, this analysis uses the interim estimates presented in the *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates Under Executive Order 13990* published in February 2021 by the IWG.

** Health benefits are calculated using benefit-per-ton values for NO_X and SO_2. DOE is currently only monetizing (for NO_X and SO_2) $PM_{2.5}$ precursor health benefits and (for NO_X) ozone precursor health benefits, but will continue to assess the ability to monetize other effects such as health benefits from reductions in direct $PM_{2.5}$ emissions. The health benefits are presented at real discount rates of 3 and 7 percent. *See* section IV.L of this document for more details.

† Total and net benefits include consumer, climate, and health benefits. For presentation purposes, total and net benefits for both the 3-percent and 7-percent cases are presented using the average SC-GHG with 3-percent discount rate.

‡ Costs include incremental equipment costs as well as installation costs. Negative incremental cost increases reflect a lower total first cost under a particular standard for GSLs shipped in 2029-2058. Several factors contribute to this, including that certain lamp option at higher ELs are less expensive than certain lamp options at lower ELs that would be eliminated under a particular standard level, the relative decrease in price of LED lamp options compared to less efficient CFL options due to price learning, and the longer lifetime of LED lamp options resulting in fewer purchases over the analysis period.

Table V.31 Summary of Analytical Results for GSL TSLs: Manufacturer and Consumer Impacts

Category	TSL 1	TSL 2	TSL 3	TSL 4	TSL 5	TSL 6
Manufacturer Impacts						
Industry NPV (million 2022$) (No-new-standards case INPV = 2,108)	2,047 - 2,053	1,941 - 1,947	1,904 - 1,946	1,886 - 1,955	1,789 - 1,951	1,783 - 1,950

BILLING CODE 6450–01–C

DOE first considered TSL 6, which represents the max-tech efficiency levels. TSL 6 would save an estimated 4.03 quads of energy, an amount DOE considers significant. Under TSL 6, the NPV of consumer benefit would be $8.45 billion using a discount rate of 7 percent, and $22.16 billion using a discount rate of 3 percent.

In the alternative analysis scenario discussed in section IV.G.1.a of this document wherein the market for linear lamps declines at a lower rate than in the reference scenario, energy savings at TSL 6 would be higher by 0.57 quads, while the total NPV of consumer benefit would increase by $0.55 billion using a discount rate of 7 percent, and $1.75 billion using a discount rate of 3 percent. See Appendix 9D of the final rule TSD for details.

The cumulative emissions reductions at TSL 6 are 70 Mt of CO_2, 22 thousand tons of SO_2, 133 thousand tons of NO_X, 0.15 tons of Hg, 608 thousand tons of CH_4, and 0.70 thousand tons of N_2O. The estimated monetary value of the climate benefits from reduced GHG emissions (associated with the average SC–GHG at a 3-percent discount rate) at TSL 6 is $3.79 billion. The estimated monetary value of the health benefits from reduced SO_2 and NO_X emissions at TSL 6 is $2.87 billion using a 7-percent discount rate and $7.50 billion using a 3-percent discount rate.

Using a 7-percent discount rate for consumer benefits and costs, health benefits from reduced SO_2 and NO_X emissions, and the 3-percent discount rate case for climate benefits from reduced GHG emissions, the estimated total NPV at TSL 6 is $15.11 billion. Using a 3-percent discount rate for all benefits and costs, the estimated total NPV at TSL 6 is $33.45 billion.

At TSL 6 in the residential sector, the largest product classes are Integrated Omnidirectional Short GSLs, including traditional pear-shaped, candle-shaped, and globe-shaped GSLs, and Integrated Directional GSLs, including reflector lamps commonly used in recessed cans, which together account for 92 percent of annual shipments. The average LCC impact is a savings of $0.55 and $3.17 and a simple payback period of 0.9 years and 0.0 years, respectively, for those product classes. The fraction of purchases associated with a net LCC cost is 24.0 percent and 0.0 percent, respectively. In the commercial sector, the largest product classes are Integrated Omnidirectional Short GSLs and Integrated Omnidirectional Long GSLs, including tubular LED GSLs often referred to as TLEDs, which together account for 81 percent of annual shipments. The average LCC impact is a savings of $0.94 and $4.16 and a simple payback period of 0.6 years and 3.3 years, respectively, for those product classes. The fraction of purchases associated with a net LCC cost is 10.8 and 2.9 percent, respectively. Overall, 18.0 percent of GSL purchases are associated with a net cost and the average LCC savings are positive for all product classes.

At TSL 6, an estimated 23.9 percent of purchases of Integrated Omnidirectional Short GSLs and 0.0 percent of purchases of Integrated Directional GSLs by low-income households are associated with a net cost. While 23.9 percent of purchases of Integrated Omnidirectional Short GSLs by low-income households would be associated with a net cost, DOE notes that a third of those purchases have a net cost of no more than $0.25 and nearly 75 percent of those purchases have a net cost of no more than $1.00. Moreover, DOE notes that the typical low-income household has multiple Integrated Omnidirectional Short GSLs. Based on the average total number of lamps in a low-income household (23, based on RECS) and the average fraction of lamps in the residential sector that are Integrated Omnidirectional Short GSLs (78 percent, based on DOE's

shipments analysis), DOE estimates that low-income households would have approximately 19 Integrated Omnidirectional Short GSLs, on average. An analysis accounting for multiple lamp purchases would show that significantly fewer low-income consumers experience a net cost at the household level than on a per-purchase basis. For example, assuming low-income households purchase two lamps per year over a period of 7 years (corresponding to the average service life of the baseline Integrated Omnidirectional Short lamp), DOE estimates that only 9.0 percent of low-income households would experience a net cost and 91.0 percent would experience a net benefit.

At TSL 6, the projected change in INPV ranges from a decrease of $322 million to a decrease of $155 million, which corresponds to decreases of 15.3 percent and 7.3 percent, respectively. DOE estimates that approximately 83 percent of the Integrated Omnidirectional Short product class shipments; approximately 86 percent of the Integrated Omnidirectional Long product class shipments; approximately 65 percent of the Integrated Directional product class shipments; approximately 46 percent of the Non-Integrated Omnidirectional Short product class shipments; and approximately 74 percent of the Non-Integrated Directional product class shipments will not meet the ELs required at TSL 6 in 2029, the first full year of compliance of new and amended standards. DOE estimates that industry must invest $430 million to redesign these non-compliant models into compliant models in order to meet the ELs analyzed at TSL 6. DOE assumed that most, if not all, LED lamp models would be remodeled between the publication of this final rule and the compliance date, even in the absence of DOE energy conservation standards for GSLs. Therefore, GSL energy conservation standards set at TSL 6 would require GSL manufacturers to remodel their GSL models to a higher efficacy level during their regularly scheduled remodel cycle, due to energy conservation standards. GSL manufacturers would incur additional engineering costs to redesign their LED lamps to meet this higher efficacy requirement. DOE did not estimate that GSL manufacturers would incur any capital conversion costs as the volume of LED lamps manufactured in 2029 (the first full year of compliance) would be fewer than the volume of LED lamps manufactured in the previous year, 2028, even at TSL 6. Additionally, DOE did not estimate that manufacturing more efficacious LED lamps would require additional or different capital equipment or tooling.

After considering the analysis and weighing the benefits and burdens, the Secretary has concluded that at a standard set at TSL 6 for GSLs is economically justified. At this TSL, the average LCC savings for all product classes is positive. An estimated 18.0 percent of all GSL purchases are associated with a net cost. While 23.9 percent of purchases of Integrated Omnidirectional Short GSLs by low-income households would be associated with a net cost, a third of those purchases have a net cost of no more than $0.25 and nearly 75 percent of those purchases have a net cost of no more than $1.00. And significantly fewer low-income consumers experience a net cost at the household level after accounting for multiple lamp purchases. The FFC national energy savings are significant and the NPV of consumer benefits is positive using both a 3-percent and 7-percent discount rate. Notably, the benefits to consumers vastly outweigh the cost to manufacturers. At TSL 6, the NPV of consumer benefits, even measured at the more conservative discount rate of 7 percent is over 26 times higher than the maximum estimated manufacturers' loss in INPV. The standard levels at TSL 6 are economically justified even without weighing the estimated monetary value of emissions reductions. When those emissions reductions are included—representing $3.79 billion in climate benefits (associated with the average SC–GHG at a 3-percent discount rate), and $7.50 billion (using a 3-percent discount rate) or $2.87 billion (using a 7-percent discount rate) in health benefits—the rationale becomes stronger still.

As stated, DOE conducts the walk-down analysis to determine the TSL that represents the maximum improvement in energy efficiency that is technologically feasible and economically justified as required under EPCA. 86 FR 70892, 70908. Although DOE has not conducted a comparative analysis to select the amended energy conservation standards, DOE notes that the selected standard level represents the maximum improvement in energy efficiency for all product classes and is only $0.1 billion less than the maximum consumer NPV, represented by TSL 5, at both 3 and 7 percent discount rates. Additionally, compared to TSL 5, Integrated Omnidirectional Long purchases are 0.2 percent more likely to be associated with a net cost at TSL 6, but NES is an additional 0.02 quads in the reference scenario and an additional 0.2 quads in the scenario where the linear lamp market persists longer. Compared to TSL 4, Integrated Omnidirectional Short purchases at TSL 6 are approximately 1 percent more likely to be associated with a net cost, but NES is an additional 0.3 quads and NPV is an additional $1.2 billion at 3 percent discount rate and $0.3 billion at 7 percent discount rate. Compared to TSL 1 or 2, while 22 percent of Integrated Omnidirectional Short purchases at TSL 6 are associated with a net cost, compared to 1 percent at TSL 1 or 2, NES is more than 3 quads larger at TSL 6 and NPV is greater by more than $18 billion at 3 percent discount rate and more than $6 billion at 7 percent discount rate. These additional savings and benefits at TSL 6 are significant. DOE considers the impacts to be, as a whole, economically justified at TSL 6.

Although DOE considered proposed amended standard levels for GSLs by grouping the efficiency levels for each product class into TSLs, DOE evaluates all analyzed efficiency levels in its analysis. DOE notes that among all possible combinations of ELs, the proposed standard level represents the maximum NES and differs from the maximum consumer NPV by only $0.1 billion.

Therefore, based on the previous considerations, DOE adopts the energy conservation standards for GSLs at TSL 6. The amended energy conservation standards for GSLs, which are expressed as lm/W, are shown in table V.32.

Table V.32 Amended Energy Conservation Standards for GSLs

Product Class	Efficacy Equation (lm/W)
Integrated Omnidirectional Short GSLs, No Standby Power	$\text{Efficacy} = \frac{123}{1.2 + e^{-0.005(\text{Lumens}-200)}} + 25.9$
Integrated Omnidirectional Short GSLs, With Standby Power	$\text{Efficacy} = \frac{123}{1.2 + e^{-0.005(\text{Lumens}-200)}} + 17.1$
Integrated Directional GSLs, No Standby Power	$\text{Efficacy} = \frac{73}{0.5 + e^{-0.0021(\text{Lumens}+1000)}} - 47.2$
Integrated Directional GSLs, With Standby Power	$\text{Efficacy} = \frac{73}{0.5 + e^{-0.0021(\text{Lumens}+1000)}} - 50.9$
Integrated Omnidirectional Long GSLs, No Standby Power	$\text{Efficacy} = \frac{123}{1.2 + e^{-0.005(\text{Lumens}-200)}} + 71.7$
Non-integrated Omnidirectional Long GSLs, No Standby Power	$\text{Efficacy} = \frac{123}{1.2 + e^{-0.005(\text{Lumens}-200)}} + 93.0$
Non-integrated Omnidirectional Short GSLs, No Standby Power	$\text{Efficacy} = \frac{122}{0.55 + e^{-0.003(\text{Lumens}+250)}} - 83.4$
Non-integrated Directional GSLs, No Standby Power	$\text{Efficacy} = \frac{67}{0.45 + e^{-0.00176(\text{Lumens}+1310)}} - 53.1$

2. Annualized Benefits and Costs of the Adopted Standards

The benefits and costs of the adopted standards can also be expressed in terms of annualized values. The annualized net benefit is (1) the annualized national economic value (expressed in 2022$) of the benefits from operating products that meet the adopted standards (consisting primarily of operating cost savings from using less energy), minus increases in product purchase costs, and (2) the annualized monetary value of the climate and health benefits.

Table V.33 shows the annualized values for GSLs under TSL 6, expressed in 2022$. The results under the primary estimate are as follows:

Using a 7-percent discount rate for consumer benefits and costs and NO_X and SO_2 reductions, and the 3-percent discount rate case for GHG social costs, the estimated cost of the adopted standards for GSLs is $301.4 million per year in increased equipment installed costs, while the estimated annual benefits are $1,193.6 million from reduced equipment operating costs, $217.7 million in GHG reductions, and $303.2 million from reduced NO_X and SO_2 emissions. In this case, the net benefit amounts to $1,413.1 million per year.

Using a 3-percent discount rate for all benefits and costs, the estimated cost of the adopted standards for GSLs is $292.2 million per year in increased equipment costs, while the estimated annual benefits are $1,564.6 million in reduced operating costs, $217.7 million from GHG reductions, and $430.8 million from reduced NO_X and SO_2 emissions. In this case, the net benefit amounts to $1,920.9 million per year.

BILLING CODE 6450–01–P

Table V.33 Annualized Benefits and Costs of Adopted Standards (TSL 6) for GSLs

	Million 2022$/year		
	Primary Estimate	**Low Net Benefits Estimate**	**High Net Benefits Estimate**
3% discount rate			
Consumer Operating Cost Savings	1,564.6	1,473.8	1,639.9
Climate Benefits*	217.7	213.0	220.6
Health Benefits**	430.8	421.6	436.3
Total Benefits†	2,213.1	2,108.4	2,296.8

	Million 2022$/year		
	Primary Estimate	Low Net Benefits Estimate	High Net Benefits Estimate
Consumer Incremental Product Costs‡	292.2	279.0	304.4
Net Benefits	1,920.9	1,829.5	1,992.4
Change in Producer Cashflow (INPV‡‡)	(22.5) – (10.8)	(22.5) – (10.8)	(22.5) – (10.8)
7% discount rate			
Consumer Operating Cost Savings	1,193.6	1,129.5	1,248.5
Climate Benefits* (3% discount rate)	217.7	213.0	220.6
Health Benefits**	303.2	297.4	306.7
Total Benefits†	1,714.5	1,639.9	1,775.8
Consumer Incremental Product Costs‡	301.4	288.9	312.8
Net Benefits	1,413.1	1,351.0	1,463.0
Change in Producer Cashflow (INPV‡‡)	(22.5) – (10.8)	(22.5) – (10.8)	(22.5) – (10.8)

Note: This table presents the costs and benefits associated with GSLs shipped during the period 2029−2058. These results include consumer, climate, and health benefits that accrue after 2058 from the products shipped during the period 2029−2058. The Primary, Low Net Benefits, and High Net Benefits Estimates utilize projections of energy prices from the *AEO2023* Reference case, Low Economic Growth case, and High Economic Growth case, respectively. In addition, LED lamp prices reflect a higher price learning rate in the Low Net Benefits Estimate, and a lower price learning rate in the High Net Benefits Estimate. See section V.B.3.b of this document for discussion. The methods used to derive projected price trends are explained in section IV.G.1.b of this document. Note that the Benefits and Costs may not sum to the Net Benefits due to rounding.

* Climate benefits are calculated using four different estimates of the global SC-GHG (*see* section IV.L of this document). For presentational purposes of this table, the climate benefits associated with the average SC-GHG at a 3-percent discount rate are shown; however, DOE emphasizes the importance and value of considering the benefits calculated using all four sets of SC-GHG estimates. To monetize the benefits of reducing GHG emissions, this analysis uses the interim estimates presented in the *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates Under Executive Order 13990* published in February 2021 by the IWG.

** Health benefits are calculated using benefit-per-ton values for NO_X and SO_2. DOE is currently only monetizing (for SO_2 and NO_X) $PM_{2.5}$ precursor health benefits and (for NO_X) ozone precursor health benefits, but will continue to assess the ability to monetize other effects such as health benefits from reductions in direct $PM_{2.5}$ emissions. *See* section IV.L of this document for more details.

† Total benefits for both the 3-percent and 7-percent cases are presented using the average SC-GHG with 3-percent discount rate.

‡ Costs include incremental equipment costs as well as installation costs.

‡‡ Operating cost savings are calculated based on the life cycle costs analysis and national impact analysis as discussed in detail below. *See* sections IV.F and IV.H of this document. DOE's national impact analysis includes all impacts (both costs and benefits) along the distribution chain beginning with the increased costs to the manufacturer to manufacture the product and ending with the increase in price experienced by the consumer. DOE also separately conducts a detailed analysis on the impacts on manufacturers (*i.e.*, manufacturer impact analysis, or "MIA"). *See* section IV.J of this document. In the detailed MIA, DOE models manufacturers' pricing decisions based on assumptions regarding investments, conversion costs, cashflow, and margins. The MIA produces a range of impacts, which is the rule's expected impact on the INPV. The change in INPV is the present value of all changes in industry cash flow, including changes in production costs, capital expenditures, and manufacturer profit margins. The annualized change in INPV is calculated using the industry weighted average cost of capital value of 6.1 percent that is estimated in the MIA (*see* chapter 11 of the final rule TSD for a complete description of the industry weighted average cost

of capital). For GSLs, the annualized change in INPV ranges from -$22.5 million to -$10.8 million. DOE accounts for that range of likely impacts in analyzing whether a trial standard level is economically justified. *See* section V.C of this document. DOE is presenting the range of impacts to the INPV under two markup scenarios: the Preservation of Gross Margin scenario, which is the manufacturer markup scenario used in the calculation of Consumer Operating Cost Savings in this table; and the Preservation of Operating Profit scenario, where DOE assumed manufacturers would not be able to increase per-unit operating profit in proportion to increases in manufacturer production costs. DOE includes the range of estimated annualized change in INPV in the above table, drawing on the MIA explained further in section IV.J of this document to provide additional context for assessing the estimated impacts of this final rule to society, including potential changes in production and consumption, which is consistent with OMB's Circular A-4 and E.O. 12866. If DOE were to include the change in INPV into the annualized net benefit calculation for this final rule, the net benefits would range from $1,898.4 million to $1,910.1 million at a 3-percent discount rate and would range from $1,390.6 million to $1,402.3 million at a 7-percent discount rate. Parentheses () indicate negative values.

BILLING CODE 6450–01–C

VI. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and amended by E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (''OIRA'') in the Office of Management and Budget (''OMB'') has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in the preamble, this final regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 also requires agencies to submit ''significant regulatory actions'' to OIRA for review. OIRA has determined that this final regulatory action constitutes a ''significant regulatory action'' within the scope of section 3(f)(1) of E.O. 12866, as amended by E.O. 14094. Accordingly, pursuant to section 6(a)(3)(C) of E.O. 12866, DOE has provided to OIRA an assessment, including the underlying analysis, of benefits and costs anticipated from the final regulatory action, together with, to the extent feasible, a quantification of those costs; and an assessment, including the underlying analysis, of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation, and an explanation why the planned regulatory action is preferable to the identified potential alternatives. These assessments are summarized in this preamble and further detail can be found in the technical support document for this rulemaking.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (''IRFA'') and a final regulatory flexibility analysis (''FRFA'') for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. As required by E.O. 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (Aug. 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website (*www.energy.gov/gc/office-general-counsel*). DOE has prepared the following FRFA for the products that are the subject of this rulemaking.

For manufacturers of GSLs, the SBA has set a size threshold, which defines those entities classified as ''small businesses'' for the purposes of the statute. DOE used the SBA's small business size standards to determine whether any small entities would be subject to the requirements of the rule. (*See* 13 CFR part 121.) The size standards are listed by North American Industry Classification System (''NAICS'') code and industry description and are available at *www.sba.gov/document/support-table-size-standards.* Manufacturing of GSLs is classified under NAICS 335139, ''electric lamp bulb and other lighting equipment manufacturing.'' The SBA sets a threshold of 1,250 employees or fewer for an entity to be considered as a small business for this category.

1. Need for, and Objectives of, Rule

EPCA directs DOE to conduct two rulemaking cycles to evaluate energy conservation standards for GSLs. (42 U.S.C. 6295(i)(6)(A)–(B)) If DOE failed to complete the first rulemaking in accordance with 42 U.S.C. 6295(i)(6)(A)(i)–(iv), or if a final rule from the first rulemaking cycle did not produce savings greater than or equal to the savings from a minimum efficacy standard of 45 lm/W, the statute provides a ''backstop'' under which DOE was required to prohibit sales of

GSLs that do not meet a minimum 45 lm/W standard. (42 U.S.C. 6295(i)(6)(A)(v)). As a result of DOE's failure to complete a rulemaking in accordance with the statutory criteria, DOE codified this backstop requirement in the May 2022 Backstop Final Rule. 87 FR 27439.

EPCA further directs DOE to initiate a second rulemaking cycle by January 1, 2020, to determine whether standards in effect for GSILs (which are a subset of GSLs) should be amended with more stringent maximum wattage requirements than EPCA specifies, and whether the exemptions for certain incandescent lamps should be maintained or discontinued. (42 U.S.C. 6295(i)(6)(B)(i)) As in the first rulemaking cycle, the scope of the second rulemaking is not limited to incandescent lamp technologies. (42 U.S.C. 6295(i)(6)(B)(ii)) DOE is publishing this final rule pursuant to this second cycle of rulemaking, as well as section (m) of 42 U.S.C. 6295.

2. Significant Issues Raised by Public Comments in Response to the Initial Regulatory Flexibility Analysis (''IRFA'')

DOE did not receive any substantive comments on the IRFA that was published in the January 2023 NOPR.

3. Description and Estimated Number of Small Entities Affected

For manufacturers of GSLs, the SBA has set a size threshold, which defines those entities classified as ''small businesses'' for the purposes of the statute. The SBA sets a threshold of 1,250 employees or less for an entity to be considered as a small business for this category.

DOE created a database of GSLs covered by this rulemaking using publicly available information. DOE's research involved information from DOE's compliance certification database,[102] EPA's ENERGY STAR Certified Light Bulbs Database,[103] manufacturers' websites, and retailer websites. DOE found over 800 companies that sell GSLs covered in this rulemaking. Using information from D&B Hoovers, DOE screened out companies that have more than 1,250 employees, are completely foreign owned and operated, or do not manufacture GSLs in the United States. Based on the results of this analysis, DOE estimates there are approximately 261 small businesses that assemble GSLs covered by this rulemaking. Even though these small entities do not manufacture the main technological components that comprise the GSL and instead import the LEDs, LED packages, and LED drivers for inclusion in the GSLs, DOE is identifying them because they are doing some type of assembling in the United States. In the January 2023 NOPR, DOE included several small businesses that sell CFLs in the IRFA. However, as previously stated in section V.B.2.b of this document, there are no CFLs that are manufactured in the United States. The 21 companies identified in the January 2023 NOPR IRFA that sell CFLs do not manufacture any covered GSLs in the United States and therefore, do not meet the definition of a small business manufacturer. Based on DOE's updated analysis, DOE identified approximately 261 small businesses that assemble covered GSLs in the United States and do not manufacture the LEDs, LED packages, or LED drivers that are used in the LED lamps that they assemble. Instead, all of these small businesses purchase LEDs, LED packages, and LED drivers as components from component manufacturers abroad and then assemble these purchased components into the LED lamps that they sell.

4. Description of Reporting, Recordkeeping, and Other Compliance Requirements

For the 261 small businesses that assemble GSLs covered by this rulemaking, these small businesses will be required to remodel many of the LED lamps they assemble due to the adopted energy conservation standards. However, since the primary driver of efficacy is the LEDs, LED packages, and LED drivers, these GSL assemblers are believed to be minimally impacted by the adopted energy conservation standards. Small businesses assembling GSLs could be required to spend additional engineering time to integrate the more efficacious components that they purchase from component manufacturers to be able to meet the adopted energy conservation standards for any LED lamp models that do not meet the adopted energy conservation standards. DOE anticipates that most small businesses will be able to meet the adopted energy conservation standards by using more efficacious components such as LEDs, LED packages, and/or LED drivers in the LED lamp models that they assemble. DOE was not able to identify any small businesses that manufacturer their own LEDs, LED packages, or LED drivers that are used in the LED lamps that they assemble. Therefore, small businesses would most likely be able to meet the adopted energy conservation standards by purchasing more efficacious LEDs, LED packages, and/or LED drivers as a purchased part to their LED lamps. Additionally, the process of assembling LED lamps is not likely to require any additionally production equipment or tooling in the assembly process, or any significant changes to the assembly process when using more efficacious LEDs, LED packages, or LED drivers in their LED lamps.

The methodology DOE used to estimate product conversion costs for this final rule analysis is described in section IV.J.2.c of this document. At the adopted standards, TSL 6, DOE estimates that all manufacturers would incur approximately $430 million in product conversion costs. These estimated product conversion costs, at TSL 6, represent approximately 4.1 percent of annual revenue over the compliance period.[104] While small manufacturers are likely to have lower per-model sales volumes than larger manufacturers, DOE was not able to identify any small business that manufacturers the LEDs, LED packages, or LED drivers used in their LED lamps—which is the primary technology driving the conversion expenses. Therefore, small businesses that assemble GSLs would most likely spend less engineering resources compared to GSL manufacturers that do manufacture their own LEDs, LED packages and/or LED drivers. Additionally, GSL manufacturer revenue from LED lamps is estimated to be approximately $1,735 million in 2029, the first full year of compliance, at TSL 6 compared to $1,547 million in the no-new-standards case. This represents an increase of approximately 12 percent in annual revenue generated from the sales of LED lamps, since LED lamps will be the only technology capable of meeting the adopted standards. DOE conservatively estimates that small GSL manufacturers exclusively selling LED lamps would incur no more than 4.1 percent of their annual revenue over the compliance period to redesign non-compliant LED lamps into compliant LED lamps that will meet the adopted standards (*i.e.,* TSL 6).

[102] *www.regulations.doe.gov/certification-data.*

[103] ENERGY STAR Qualified Lamps Product List, *www.energystar.gov/productfinder/product/certified-light-bulbs/results* (last accessed May 2, 2022).

[104] The total estimated revenue between 2024, the final rule publication year, and 2028, the compliance year, is approximately, $10,465 million. $430 (million) ÷ $10,465 (million) = 4.1%.

5. Significant Alternatives Considered and Steps Taken To Minimize Significant Economic Impacts on Small Entities

The discussion in the previous section analyzes impacts on small businesses that would result from the adopted standards, represented by TSL 6. In reviewing alternatives to the adopted standards, DOE examined energy conservation standards set at lower efficiency levels. While TSL 1 through TSL 5 would reduce the impacts on small business manufacturers, it would come at the expense of a reduction in energy savings. TSL 1 achieves 96 percent lower energy savings compared to the energy savings at TSL 6. TSL 2 achieves 87 percent lower energy savings compared to the energy savings at TSL 6. TSL 3 achieves 21 percent lower energy savings compared to the energy savings at TSL 6. TSL 4 achieves 7 percent lower energy savings compared to the energy savings at TSL 6. TSL 5 achieves 0.4 percent lower energy savings compared to the energy savings at TSL 6.

Establishing standards at TSL 6 balances the benefits of the energy savings at TSL 6 with the potential burdens placed on GSL manufacturers, including small business manufacturers. Accordingly, DOE is not adopting one of the other TSLs considered in the analysis, or the other policy alternatives examined as part of the regulatory impact analysis and included in chapter 16 of the final rule TSD.

Additional compliance flexibilities may be available through other means. EPCA provides that a manufacturer whose annual gross revenue from all of its operations does not exceed $8 million may apply for an exemption from all or part of an energy conservation standard for a period not longer than 24 months after the effective date of a final rule establishing the standard. (42 U.S.C. 6295(t)) Additionally, manufacturers subject to DOE's energy efficiency standards may apply to DOE's Office of Hearings and Appeals for exception relief under certain circumstances. Manufacturers should refer to 10 CFR part 430, subpart E, and 10 CFR part 1003 for additional details.

C. Review Under the Paperwork Reduction Act

Manufacturers of GSLs must certify to DOE that their products comply with any applicable energy conservation standards. In certifying compliance, manufacturers must test their products according to the DOE test procedures for GSLs, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment, including GSLs. (*See* generally 10 CFR part 429). The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (''PRA''). This requirement has been approved by OMB under OMB control number 1910–1400. Public reporting burden for the certification is estimated to average 35 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

Pursuant to the National Environmental Policy Act of 1969 (''NEPA''), DOE has analyzed this proposed action rule in accordance with NEPA and DOE's NEPA implementing regulations (10 CFR part 1021). DOE has determined that this rule qualifies for categorical exclusion under 10 CFR part 1021, subpart D, appendix B5.1 because it is a rulemaking that establishes energy conservation standards for consumer products or industrial equipment, none of the exceptions identified in B5.1(b) apply, no extraordinary circumstances exist that require further environmental analysis, and it meets the requirements for application of a categorical exclusion. *See* 10 CFR 1021.410. Therefore, DOE has determined that promulgation of this rule is not a major Federal action significantly affecting the quality of the human environment within the meaning of NEPA, and does not require an environmental assessment or an environmental impact statement.

E. Review Under Executive Order 13132

E.O. 13132, ''Federalism,'' 64 FR 43255 (Aug. 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE has examined this rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the products that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297) Therefore, no further action is required by E.O. 13132.

F. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, ''Civil Justice Reform,'' imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation (1) clearly specifies the preemptive effect, if any, (2) clearly specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of E.O. 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to

the extent permitted by law, this final rule meets the relevant standards of E.O. 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (''UMRA'') requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a ''significant intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. DOE's policy statement is also available at *www.energy.gov/sites/prod/files/gcprod/documents/umra_97.pdf.*

DOE has concluded that this final rule may require expenditures of $100 million or more in any one year by the private sector. Such expenditures may include (1) investment in research and development and in capital expenditures by GSLs manufacturers in the years between the final rule and the compliance date for the new standards and (2) incremental additional expenditures by consumers to purchase higher-efficiency GSLs, starting at the compliance date for the applicable standard.

Section 202 of UMRA authorizes a Federal agency to respond to the content requirements of UMRA in any other statement or analysis that accompanies the final rule. (2 U.S.C. 1532(c)) The content requirements of section 202(b) of UMRA relevant to a private sector mandate substantially overlap the economic analysis requirements that apply under section 325(o) of EPCA and Executive Order 12866. This **SUPPLEMENTARY INFORMATION** section and the TSD for this final rule respond to those requirements.

Under section 205 of UMRA, DOE is obligated to identify and consider a reasonable number of regulatory alternatives before promulgating a rule for which a written statement under section 202 is required. (2 U.S.C. 1535(a)) DOE is required to select from those alternatives the most cost-effective and least burdensome alternative that achieves the objectives of the rule unless DOE publishes an explanation for doing otherwise, or the selection of such an alternative is inconsistent with law. As required by 42 U.S.C. 6295(i)(6)(A)–(B)), this final rule establishes amended energy conservation standards for GSLs that are designed to achieve the maximum improvement in energy efficiency that DOE has determined to be both technologically feasible and economically justified, as required by 6295(o)(2)(A) and 6295(o)(3)(B). A full discussion of the alternatives considered by DOE is presented in chapter 16 of the TSD for this final rule.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights,'' 53 FR 8859 (March 18, 1988), DOE has determined that this rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). Pursuant to OMB Memorandum M–19–15, Improving Implementation of the Information Quality Act (April 24, 2019), DOE published updated guidelines which are available at *www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf.* DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

E.O. 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that (1) is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

DOE has concluded that this regulatory action, which sets forth amended energy conservation standards for GSLs, is not a significant energy action because the standards are not likely to have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as such by the Administrator at OIRA. Accordingly, DOE has not prepared a Statement of Energy Effects on this final rule.

L. Information Quality

On December 16, 2004, OMB, in consultation with the Office of Science and Technology Policy (''OSTP''), issued its Final Information Quality Bulletin for Peer Review (''the Bulletin''). 70 FR 2664 (Jan. 14, 2005). The Bulletin establishes that certain scientific information shall be peer reviewed by qualified specialists before it is disseminated by the Federal Government, including influential scientific information related to agency

regulatory actions. The purpose of the Bulletin is to enhance the quality and credibility of the Government's scientific information. Under the Bulletin, the energy conservation standards rulemaking analyses are ''influential scientific information,'' which the Bulletin defines as ''scientific information the agency reasonably can determine will have, or does have, a clear and substantial impact on important public policies or private sector decisions.'' 70 FR 2664, 2667.

In response to OMB's Bulletin, DOE conducted formal peer reviews of the energy conservation standards development process and the analyses that are typically used and prepared a report describing that peer review.[105] Generation of this report involved a rigorous, formal, and documented evaluation using objective criteria and qualified and independent reviewers to make a judgment as to the technical/scientific/business merit, the actual or anticipated results, and the productivity and management effectiveness of programs and/or projects. Because available data, models, and technological understanding have changed since 2007, DOE has engaged with the National Academy of Sciences to review DOE's analytical methodologies to ascertain whether modifications are needed to improve DOE's analyses. DOE is in the process of evaluating the resulting report.[106]

M. Description of Materials Incorporated by Reference

UL 1598C–2016 is an industry accepted test standard that provides requirements for LED downlight retrofit kits. To clarify the scope of the standards adopted in this final rule, DOE is updating the definition for ''LED Downlight Retrofit Kit'' to reference UL 1598C–2016 in the definition. UL 1598C–2016 is reasonably available on UL's website at *www.shopulstandards.com/Default.aspx.*

ANSI C78.79–2014 (R2020) (''ANSI C78.79–2020'') is referenced in the amendatory text of this document but has already been approved for the sections where it appears. No changes are being made to the IBR material.

[105] The 2007 ''Energy Conservation Standards Rulemaking Peer Review Report'' is available at: *energy.gov/eere/buildings/downloads/energy-conservation-standards-rulemaking-peer-review-report-0* (last accessed March 24, 2022).

[106] The report is available at *www.nationalacademies.org/our-work/review-of-methods-for-setting-building-and-equipment-performance-standards.*

N. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that the Office of Information and Regulatory Affairs has determined that the rule meets the criteria set forth in 5 U.S.C. 804(2).

VII. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements, Small businesses.

Signing Authority

This document of the Department of Energy was signed on April 9, 2024, by Jeffrey M. Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 9, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons set forth in the preamble, DOE amends part 430 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations, as set forth below:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 2. Amend § 430.2 by:
■ a. Revising the definitions for ''General service incandescent lamp'' and ''General service lamp'';
■ b. Removing the definition ''LED Downlight Retrofit Kit'' and adding the definition ''LED downlight retrofit kit'' in its place;
■ c. Revising the definitions of ''Reflector lamp'', ''Showcase lamp'', and ''Specialty MR lamp''.

The revisions and addition read as follows:

§ 430.2 Definitions.

* * * * *

General service incandescent lamp means a standard incandescent or halogen type lamp that is intended for general service applications; has a medium screw base; has a lumen range of not less than 310 lumens and not more than 2,600 lumens or, in the case of a modified spectrum lamp, not less than 232 lumens and not more than 1,950 lumens; and is capable of being operated at a voltage range at least partially within 110 and 130 volts; however, this definition does not apply to the following incandescent lamps—

(1) An appliance lamp;
(2) A black light lamp;
(3) A bug lamp;
(4) A colored lamp;
(5) A G shape lamp with a diameter of 5 inches or more as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3);
(6) An infrared lamp;
(7) A left-hand thread lamp;
(8) A marine lamp;
(9) A marine signal service lamp;
(10) A mine service lamp;
(11) A plant light lamp;
(12) An R20 short lamp;
(13) A sign service lamp;
(14) A silver bowl lamp;
(15) A showcase lamp; and
(16) A traffic signal lamp.

General service lamp means a lamp that has an ANSI base; is able to operate at a voltage of 12 volts or 24 volts, at or between 100 to 130 volts, at or between 220 to 240 volts, or of 277 volts for integrated lamps (as set out in this definition), or is able to operate at any voltage for non-integrated lamps (as set out in this definition); has an initial lumen output of greater than or equal to 310 lumens (or 232 lumens for modified spectrum general service incandescent lamps) and less than or equal to 3,300 lumens; is not a light fixture; is not an LED downlight retrofit kit; and is used in general lighting applications. General service lamps include, but are not limited to, general service incandescent lamps, compact fluorescent lamps, general service light-emitting diode lamps, and general service organic light emitting diode lamps. General service lamps do not include:

(1) Appliance lamps;

(2) Black light lamps;
(3) Bug lamps;
(4) Colored lamps;
(5) G shape lamps with a diameter of 5 inches or more as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3);
(6) General service fluorescent lamps;
(7) High intensity discharge lamps;
(8) Infrared lamps;
(9) J, JC, JCD, JCS, JCV, JCX, JD, JS, and JT shape lamps that do not have Edison screw bases;
(10) Lamps that have a wedge base or prefocus base;
(11) Left-hand thread lamps;
(12) Marine lamps;
(13) Marine signal service lamps;
(14) Mine service lamps;
(15) MR shape lamps that have a first number symbol equal to 16 (diameter equal to 2 inches) as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3), operate at 12 volts, and have a lumen output greater than or equal to 800;
(16) Other fluorescent lamps;
(17) Plant light lamps;
(18) R20 short lamps;
(19) Reflector lamps (as set out in this definition) that have a first number symbol less than 16 (diameter less than 2 inches) as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3) and that do not have E26/E24, E26d, E26/50x39, E26/53x39, E29/28, E29/53x39, E39, E39d, EP39, or EX39 bases;
(20) S shape or G shape lamps that have a first number symbol less than or equal to 12.5 (diameter less than or equal to 1.5625 inches) as defined in ANSI C78.79–2014 (R2020) (incorporated by reference; see § 430.3);
(21) Sign service lamps;
(22) Silver bowl lamps;
(23) Showcase lamps;
(24) Specialty MR lamps;
(25) T shape lamps that have a first number symbol less than or equal to 8 (diameter less than or equal to 1 inch) as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3), nominal overall length less than 12 inches, and that are not compact fluorescent lamps (as set out in this definition);
(26) Traffic signal lamps.
* * * * *

LED downlight retrofit kit means a product designed and marketed to install into an existing downlight, replacing the existing light source and related electrical components, typically employing an ANSI standard lamp base, either integrated or connected to the downlight retrofit by wire leads, and is a retrofit kit classified or certified to UL 1598C–2016 (incorporated by reference; see § 430.3). LED downlight retrofit kit does not include integrated lamps or non-integrated lamps.
* * * * *

Reflector lamp means a lamp that has an R, PAR, BPAR, BR, ER, MR, or similar bulb shape as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3) and is used to provide directional light.
* * * * *

Showcase lamp means a lamp that has a T shape as specified in ANSI C78.79–2020 (incorporated by reference; see § 430.3), is designed and marketed as a showcase lamp, and has a maximum rated wattage of 75 watts.
* * * * *

Specialty MR lamp means a lamp that has an MR shape as defined in ANSI C78.79–2020 (incorporated by reference; see § 430.3), a diameter of less than or equal to 2.25 inches, a lifetime of less than or equal to 300 hours, and that is designed and marketed for a specialty application.
* * * * *

■ 3. Amend § 430.3 by adding paragraph (y)(4) to read as follows:

§ 430.3 Materials incorporated by reference.

* * * * *

(y) * * *

(4) UL 1598C (''UL 1598C–2016''), *Standard for Safety for Light-Emitting Diode (LED) Retrofit Luminaire Conversion Kits,* First edition, dated January 16, 2014 (including revisions through November 17, 2016); IBR approved for § 430.2.

■ 4. Amend § 430.32 by:
■ a. Removing and reserving paragraph (u); and
■ b. Revising paragraphs (x) and (dd).

The revisions read as follows:

§ 430.32 Energy and water conservation standards and their compliance dates.

* * * * *

(x) *Intermediate base incandescent lamps and candelabra base incandescent lamps.* (1) Subject to the sales prohibition in paragraph (dd) of this section, each candelabra base incandescent lamp shall not exceed 60 rated watts.

(2) Subject to the sales prohibition in paragraph (dd) of this section, each intermediate base incandescent lamp shall not exceed 40 rated watts.
* * * * *

(dd) *General service lamps.* Beginning July 25, 2022, the sale of any general service lamp that does not meet a minimum efficacy standard of 45 lumens per watt is prohibited.

(1) Energy conservation standards for general service lamps:

(i) General service incandescent lamps manufactured after the dates specified in the following tables, except as described in paragraph (dd)(1)(ii) of this section, shall have a color rendering index greater than or equal to 80 and shall have a rated wattage no greater than, and a lifetime no less than the values shown in the table as follows:

GENERAL SERVICE INCANDESCENT LAMPS

Rated lumen ranges	Minimum lifetime * (hrs)	Maximum rate wattage	Compliance date
(A) 1490–2600	1,000	72	1/1/2012
(B) 1050–1489	1,000	53	1/1/2013
(C) 750–1049	1,000	43	1/1/2014
(D) 310–749	1,000	29	1/1/2014

* Use lifetime determined in accordance with § 429.66 of this chapter to determine compliance with this standard.

(ii) Modified spectrum general service incandescent lamps manufactured after the dates specified in the following table shall have a color rendering index greater than or equal to 75 and shall have a rated wattage no greater than, and a lifetime no less than the values shown in the table as follows:

MODIFIED SPECTRUM GENERAL SERVICE INCANDESCENT LAMPS

Rated lumen ranges	Minimum lifetime [1] (hrs)	Maximum rate wattage	Compliance date
(A) 1118–1950	1,000	72	1/1/2012
(B) 788–1117	1,000	53	1/1/2013
(C) 563–787	1,000	43	1/1/2014
(D) 232–562	1,000	29	1/1/2014

[1] Use lifetime determined in accordance with § 429.66 of this chapter to determine compliance with this standard.

(iii) A bare or covered (no reflector) medium base compact fluorescent lamp manufactured on or after January 1, 2006, must meet or exceed the following requirements:

Factor		Requirements
Configuration [1]	Labeled wattage (watts)	Minimum initial lamp efficacy (lumens per watt) must be at least:
(A) *Bare Lamp:*		
	(*1*) Labeled Wattage <15	45.0
	(*2*) Labeled Wattage ≥15	60.0
(B) *Covered Lamp (no reflector):*		
	(*1*) Labeled Wattage <15	40.0
	(*2*) 15≤ Labeled Wattage <19	48.0
	(*3*) 19≤ Labeled Wattage <25	50.0
	(*4*) Labeled Wattage ≥25	55.0

[1] Use labeled wattage to determine the appropriate efficacy requirements in this table; do not use measured wattage for this purpose.

(iv) Each general service lamp manufactured on or after July 25, 2028 must have:

(A) A power factor greater than or equal to 0.7 for integrated LED lamps (as defined in § 430.2) and 0.5 for medium base compact fluorescent lamps (as defined in § 430.2); and

(B) A lamp efficacy greater than or equal to the values shown in the table as follows:

Lamp type	Length	Standby mode operation [3]	Efficacy (lm/W)
(*1*) Integrated Omnidirectional.	Short (<45 inches)	No Standby Mode Operation.	$123/(1.2+e^{-0.005*(\text{Lumens } 200)})$ + 25.9
(*2*) Integrated Omnidirectional.	Long (≥45 inches)	No Standby Mode Operation.	$123/(1.2+e^{-0.005*(\text{Lumens } 200)})$ + 71.7
(*3*) [1] Integrated Directional	All Lengths	No Standby Mode Operation.	$73/(0.5+e^{-0.0021*(\text{Lumens}+1000)})$ − 47.2
(*4*) [2] Non-integrated Omnidirectional.	Short (<45 inches)	No Standby Mode Operation.	$122/(0.55+e^{-0.003*(\text{Lumens}+250)})$ − 83.4
(*5*) [1] Non-integrated Directional.	All Lengths	No Standby Mode Operation.	$67/(0.45+e^{-0.00176*(\text{Lumens}+1310)})$ − 53.1
(*6*) Integrated Omnidirectional.	Short (<45 inches)	Standby Mode Operation	$123/(1.2+e^{-0.005*(\text{Lumens } 200)})$ + 17.1
(*7*) [1] Integrated Directional	All Lengths	Standby Mode Operation	$73/(0.5+e^{-0.0021*(\text{Lumens}+1000)})$ − 50.9
(*8*) Non-integrated Omnidirectional.	Long (≥45 inches)	No Standby Mode Operation.	$123/(1.2+e^{-0.005*(\text{Lumens } 200)})$ + 93.0

[1] This lamp type comprises of directional lamps. A directional lamp is a lamp that meets the definition of reflector lamp as defined in § 430.2.
[2] This lamp type comprises of, but is not limited to, lamps that are pin base compact fluorescent lamps ("CFLs") and pin base light-emitting diode ("LED") lamps designed and marketed as replacements of pin base CFLs.
[3] Indicates whether or not lamps are capable of operating in standby mode operation.

(C) The standards described in paragraph (dd)(1)(iv) of this section do not apply to a general service lamp that:

(*1*) Is a general service organic light-emitting diode (OLED) lamps (as defined in § 430.2);

(*2*) Is a non-integrated lamp that is capable of operating in standby mode and is sold in packages of two lamps or less;

(*3*) Is designed and marketed as a lamp that has at least one setting that allows the user to change the lamp's correlated color temperature (CCT) and has no setting in which the lamp meets the definition of a colored lamp (as defined in § 430.2); and is sold in packages of two lamps or less;

(*4*) Is designed and marketed as a lamp that has at least one setting in which the lamp meets the definition of a colored lamp (as defined in § 430.2) and at least one other setting in which it does not meet the definition of colored lamp (as defined in § 430.2) and is sold in packages of two lamps or less; or

(*5*) Is designed and marketed as a lamp that has one or more component(s) offering a completely different functionality (*e.g.,* a speaker, a camera, an air purifier, etc.) where each component is integrated into the lamp but does not affect the light output of the lamp (*e.g.,* does not turn the light on/off, dim the light, change the color of the light, etc.), is capable of operating in standby mode, and is sold in packages of two lamps or less.

(2) Medium base CFLs (as defined in § 430.2) manufactured on or after the dates specified in the following table shall meet or exceed the following standards:

Metrics	Requirements for MBCFLs manufactured on or after January 1, 2006	Requirements for MBCFLs manufactured on or after July 25, 2028
(i) Lumen Maintenance at 1,000 Hours ..	≥90.0%	≥90.0%.
(ii) Lumen Maintenance at 40 Percent of Lifetime[1].	≥80.0%	≥80.0%.
(iii) Rapid Cycle Stress Test	At least 5 lamps must meet or exceed the minimum number of cycles. All MBCFLs: Cycle once per every two hours of lifetime [1].	At least 5 lamps must meet or exceed the minimum number of cycles. MBCFLs with start time >100 ms: Cycle once per hour of lifetime [1] or a maximum of 15,000 cycles. MBCFLs with a start time of ≤100 ms: Cycle once per every two hours of lifetime.[1]
(iv) Lifetime [1]	≥6,000 hours	≥10,000 hours.
(v) Start time	No requirement	The time needed for a MBCFL to remain continuously illuminated must be within: {1} one second of application of electrical power for lamp with standby mode power {2} 750 milliseconds of application of electrical power for lamp without standby mode power.

[1] Lifetime refers to lifetime of a compact fluorescent lamp as defined in § 430.2.

Note: The following appendix will not appear in the Code of Federal Regulations.

Appendix A—Letter From Department of Justice to the Department of Energy

U.S. Department of Justice
Antitrust Division
RFK Main Justice Building
950 Pennsylvania Avenue NW
Washington, DC 20530–0001

March 13, 2023

Ami Grace-Tardy
Assistant General Counsel for Legislation, Regulation and Energy Efficiency
U.S. Department of Energy
1000 Independence Avenue SW
Washington, DC 20585

Dear Assistant General Counsel Grace-Tardy:

I am responding to your January 11, 2023 letter seeking the views of the Attorney General about the potential impact on competition of proposed energy conservation standards for general service lamps.

Your request was submitted under Section 325(o)(2)(B)(i)(V) of the Energy Policy and Conservation Act, as amended (ECPA), 42 U.S.C. 6295(o)(2)(B)(i)(V), which requires the Attorney General to make a determination of the impact of any lessening of competition that is likely to result from the imposition of proposed energy conservation standards. The Attorney General's responsibility for responding to requests from other departments about the effect of a program on competition has been delegated to the Assistant Attorney General for the Antitrust Division in 28 CFR 0.40(g). The Assistant Attorney General for the Antitrust Division has authorized me, as the Policy Director for the Antitrust Division, to provide the Antitrust Division's views regarding the potential impact on competition of proposed energy conservation standards on his behalf.

In conducting its analysis, the Antitrust Division examines whether a proposed standard may lessen competition, for example, by substantially limiting consumer choice or increasing industry concentration. A lessening of competition could result in higher prices to manufacturers and consumers.

We have studied in detail the Notice of Proposed Rulemaking (NOPR) regarding energy conservation standards for general service lamps, as well as the Technical Support Document (TSD) that accompanied it, both of which you transmitted to us under cover of your January 11 letter. We also attended via Webinar the February 1, 2023 Public Meeting held by the Department of Energy on the general service lamps NOPR and reviewed the related public comments.

The Division previously reviewed a related standard, contained in a Notice of Proposed Rulemaking published at 81 FR 14,528, on Mar. 17, 2016. Subsequently, the Division advised that it did not have evidentiary basis to conclude that that proposed standard for general service lamps was likely to adversely impact competition. The Division also advised that its conclusion was subject to significant uncertainty due to substantial marketplace changes that the standard would likely cause. Similarly, based on our review of the new standard, the Division does not have evidence that the new proposed standard for general service lamps are substantially likely to adversely impact competition.

Sincerely,

David G.B. Lawrence,

Policy Director.

Vol. 89 Friday,

No. 77 April 19, 2024

Part III

Department of Justice

Bureau of Alcohol, Tobacco, Firearms, and Explosives

27 CFR Part 478

Definition of ''Engaged in the Business'' as a Dealer in Firearms; Final Rule

DEPARTMENT OF JUSTICE

Bureau of Alcohol, Tobacco, Firearms, and Explosives

27 CFR Part 478

[Docket No. ATF 2022R–17; AG Order No. 5920–2024]

RIN 1140–AA58

Definition of ''Engaged in the Business'' as a Dealer in Firearms

AGENCY: Bureau of Alcohol, Tobacco, Firearms, and Explosives, Department of Justice.

ACTION: Final rule.

SUMMARY: The Department of Justice (''Department'') is amending Bureau of Alcohol, Tobacco, Firearms, and Explosives (''ATF'') regulations to implement the provisions of the Bipartisan Safer Communities Act that broaden the definition of when a person is considered ''engaged in the business'' (''EIB'') as a dealer in firearms other than a gunsmith or pawnbroker. This final rule incorporates the BSCA's definitions of ''predominantly earn a profit'' (''PEP'') and ''terrorism,'' and amends the regulatory definitions of ''principal objective of livelihood and profit'' and ''engaged in the business'' to ensure each conforms with the BSCA's statutory changes and can be relied upon by the public. The rule also clarifies what it means for a person to be ''engaged in the business'' of dealing in firearms and to have the intent to ''predominantly earn a profit'' from the sale or disposition of firearms. In addition, it clarifies the term ''dealer'' and defines the term ''responsible person.'' These clarifications and definitions assist persons in understanding when they are required to have a license to deal in firearms. Consistent with the Gun Control Act (''GCA'') and existing regulations, the rule also defines the term ''personal collection'' to clarify when persons are not ''engaged in the business'' because they make only occasional sales to enhance a personal collection or for a hobby, or if the firearms they sell are all or part of a personal collection. This rule further addresses the procedures that former licensees, and responsible persons acting on behalf of such licensees, must follow when they liquidate business inventory upon revocation or other termination of their license. Finally, the rule clarifies that a licensee transferring a firearm to another licensee must do so by following the verification and recordkeeping procedures in the regulations, rather than by using a Firearms Transaction Record, ATF Form 4473.

DATES: This rule is effective May 20, 2024.

FOR FURTHER INFORMATION CONTACT: Helen Koppe, Office of Regulatory Affairs, Enforcement Programs and Services, Bureau of Alcohol, Tobacco, Firearms, and Explosives, U.S. Department of Justice, 99 New York Ave. NE, Washington DC 20226; telephone: (202) 648–7070 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Executive Summary

This rulemaking finalizes the proposed rule implementing the provisions of the Bipartisan Safer Communities Act, Public Law 117–159, sec. 12002, 136 Stat. 1313, 1324 (2022) (''BSCA''), that amended the definition of ''engaged in the business'' in the GCA at 18 U.S.C. 921(a)(21)(C), as well as the Department's plan in response to Executive Order 14092 of March 14, 2023 (Reducing Gun Violence and Making Our Communities Safer), 88 FR 16527 (Mar. 17, 2023). Section 12002 of the BSCA broadened the definition of ''engaged in the business'' under 18 U.S.C. 921(a)(21)(C) by eliminating the requirement that a person's ''principal objective'' of purchasing and reselling firearms must include both ''livelihood and profit'' and replacing it with a requirement that the person must intend ''to predominantly earn a profit.'' The BSCA therefore removed the requirement to consider income for ''livelihood'' when determining that a person is ''engaged in the business'' of dealing in firearms at wholesale or retail. The definition of ''to predominantly earn a profit'' now focuses only on whether the intent underlying the sale or disposition of firearms is predominantly one of obtaining pecuniary gain. These regulations implement this statutory change and provide clarity to persons who remain unsure of whether they are engaged in the business as a dealer in firearms with the predominant intent of obtaining pecuniary gain. This rulemaking will result in more persons who are already engaged in the business of dealing in firearms becoming licensed and deter others from engaging in the business of dealing in firearms without a license. As more persons become licensed under this rule, those licensees will conduct more background checks to prevent prohibited persons from purchasing or receiving firearms, consistent with the longstanding requirements of the GCA for persons who are engaged in the business of dealing in firearms. Those additional licensees will also respond to trace requests when those firearms are later found at a crime scene. At the same time, neither the BSCA nor this rule purports to require every private sale of a firearm to be processed through a licensed dealer. Individuals may continue to engage in intrastate private sales without a license, provided that such individuals are not ''engaged in the business'' and the transactions are otherwise compliant with law.

This final rule accomplishes these important public safety goals of the GCA, as amended by the BSCA, in several ways. First, the rule finalizes an amendment to the regulatory definition of ''dealer'' to clarify that firearms dealing may occur wherever, or through whatever medium, qualifying domestic or international activities are conducted.

Second, the rule finalizes an amendment to the regulatory definition of ''engaged in the business'' to define the terms ''purchase'' and ''sale'' as they apply to dealers to include any method of payment or medium of exchange for a firearm, including services or illicit forms of payment (*e.g.,* controlled substances). For further clarity, this final rule defines the term ''resale'' to mean ''selling a firearm, including a stolen firearm, after it was previously sold by the original manufacturer or any other person.'' This change aligns the regulatory text with the intent element in 18 U.S.C. 921(a)(21)(C) and makes clear that the term ''resale'' refers to the sale of a firearm, including a stolen firearm, any time after any prior sale has occurred.

Third, because performing services can also be a medium of exchange for firearms, the rule finalizes an amendment to existing regulations that codifies ATF's historical exclusion for auctioneers who provide only auction services on commission to assist in liquidating firearms at an ''estate-type'' auction.

Fourth, the rule clarifies who is required to be licensed as a wholesale or retail firearms dealer by finalizing a list of specific activities demonstrating when an unlicensed person's buying and reselling of firearms presumptively rises to the level of being ''engaged in the business'' as a dealer. It also finalizes a separate set of presumptions indicating when a person has the intent ''to predominantly earn a profit''

through the repetitive purchase and resale of firearms. The activities described in these presumptions are not an exclusive list of activities that may indicate that someone is ''engaged in the business'' or intends ''to predominantly earn a profit.'' These presumptions will provide clarification and guidance to persons who are potentially subject to the license requirement and will apply in administrative and civil proceedings. The presumptions will be used, for example, to help a fact finder determine in civil asset forfeiture proceedings whether seized firearms should be forfeited to the Government and in administrative licensing proceedings to determine whether to deny or revoke a Federal firearms license. These presumptions do not apply in any criminal proceedings but may be useful to judges in such proceedings when, for example, they decide how to instruct juries regarding permissible inferences.

At the same time, the final rule expressly recognizes that individuals who purchase firearms for the enhancement of a personal collection or a legitimate hobby are permitted by the GCA to occasionally buy and sell firearms for those purposes, or occasionally resell to a licensee or to a family member for lawful purposes, without the need to obtain a license. It also makes clear that persons may liquidate all or part of a personal collection, liquidate firearms that are inherited, or liquidate pursuant to a court order, without the need to obtain a license. Evidence of these activities may also be used to rebut the presumptions discussed above in a civil or administrative proceeding. Relatedly, the rule finalizes the proposed definition of the term ''personal collection'' (or ''personal collection of firearms'' or ''personal firearms collection'') to reflect common definitions of the terms ''collection'' and ''hobby.'' While firearms accumulated primarily for personal protection are not included in the definition of ''personal collection,'' the final rule makes clear that nothing in this rule shall be construed as precluding a person from lawfully acquiring a firearm for self-protection or other lawful personal use.

Finally, to help address the problem of licensees who improperly liquidate their business inventory of firearms without performing required background checks or maintaining required records after their license is terminated (*e.g.,* revocation, denial of renewal, expiration, or voluntary surrender), the rule finalizes the proposed regulations on discontinuing business. These regulations clarify the statutory requirements under 18 U.S.C. 923(c) regarding ''former licensee inventory''—a new term defined to mean those firearms that remain in the possession of a former licensee (or a ''responsible person'' of the former licensee, as also defined in the rule) at the time the license is terminated. The rule also finalizes an amendment to the regulations that makes clear that a licensee who transfers a firearm to another licensee is required to do so by following the licensee verification and recordkeeping procedures in the regulations, rather than by using a Firearms Transaction Record, ATF Form 4473 (''Form 4473'').

II. Background

Subsections in Section II

The Attorney General is responsible for enforcing the GCA. This responsibility includes the authority to promulgate regulations necessary to enforce the provisions of the GCA. *See* 18 U.S.C. 926(a). Congress and the Attorney General have delegated the responsibility for administering and enforcing the GCA to the Director of ATF (''Director''), subject to the direction of the Attorney General and the Deputy Attorney General. *See* 28 U.S.C. 599A(b)(1), (c)(1); 28 CFR 0.130(a)(1)–(2); Treasury Department Order No. 221, sec. (1), (2)(d), 37 FR 11696, 11696–97 (June 10, 1972). Accordingly, the Department and ATF have promulgated regulations necessary to implement the GCA. *See* 27 CFR part 478.

The GCA, at 18 U.S.C. 922(a)(1)(A), makes it unlawful for any person, except a licensed dealer, to ''engage in the business'' of dealing in firearms.[1] The GCA further provides that no person shall engage in the business of dealing in firearms until the person has filed an application with ATF and received a license to do so. 18 U.S.C. 923(a). The required application must contain information necessary to determine eligibility for licensing and must include a photograph, fingerprints of the applicant, and a license fee for each place in which the applicant is to do business. 18 U.S.C. 923(a). The fee for dealers in firearms other than destructive devices is currently set by the GCA at $200 for the first three-year period and $90 for a renewal period of three years. 18 U.S.C. 923(a)(3)(B); 27 CFR 478.42(c)(2). Among other items, the Application for Federal Firearms License, ATF Form 7 (5310.12)/7CR (5310.16) (''Form 7''), requires the applicant to include a completed Federal Bureau of Investigation (''FBI'') Form FD–258 (''Fingerprint Card'') and a photograph for all responsible persons, including sole proprietors. *See* ATF Form 7, Instruction 6.

Significantly, under the GCA since 1998, once licensed, firearms dealers have been required to conduct background checks on prospective firearm recipients through the FBI's National Instant Criminal Background Check System (''NICS'') to prevent prohibited persons from receiving firearms. *See* 18 U.S.C. 922(t). They have also been required to maintain firearms transaction records for crime gun tracing purposes. *See* 18 U.S.C. 922(b)(5); 923(g)(1)(A). Persons who willfully engage in the business of dealing in firearms without a license are subject to a term of imprisonment of up to five years, a fine of up to $250,000, or both. 18 U.S.C. 922(a)(1)(A); 924(a)(1)(D); 3571(b)(3). Any firearms involved or used in any such willful violation may be subject to administrative or civil seizure and forfeiture. *See* 18 U.S.C. 924(d)(1). In addition, ATF may deny license applications submitted by persons who have willfully engaged in the business of dealing in firearms without a license, 18 U.S.C. 923(d)(1)(C), and ATF may revoke or deny renewal of a license if a licensee has aided and abetted others in willfully engaging in the business of dealing in firearms without a license, 18 U.S.C. 923(e)–(f).

A. Advance Notice of Proposed Rulemaking (1979)

The term ''dealer'' is defined by the GCA, 18 U.S.C. 921(a)(11)(A), and 27 CFR 478.11, and includes ''any person engaged in the business of selling firearms at wholesale or retail.'' However, as originally enacted, Congress did not define the term ''engaged in the business'' in the GCA.[2] Nor did ATF define the term ''engaged in the business'' in the original GCA implementing regulations.[3] ATF published an Advance Notice of Proposed Rulemaking (''ANPRM'') in

[1] Persons who engage in the business of manufacturing or importing firearms must also be licensed. 18 U.S.C. 922(a)(1)(A), 923(a). Once licensed, importers and manufacturers may also engage in the business of dealing, but only at their licensed premises and only in the same type of firearms their license authorizes them to import or manufacture. *See* 27 CFR 478.41(b).

[2] *See generally* Public Law 90–618, 82 Stat. 1213 (1968).

[3] 33 FR 18555 (Dec. 14, 1968).

the **Federal Register** in 1979 in an effort to ''develop a workable, commonly understood definition of ['engaged in the business'].'' *See* 44 FR 75186, 75186–87 (Dec. 19, 1979) (''1979 ANPRM''); 45 FR 20930 (Mar. 31, 1980) (extending the comment period for 30 more days). The ANPRM specifically referenced the lack of a common understanding of ''engaged in the business'' by the courts and requested comments from the public and industry on how the term should be defined and the feasibility and desirability of defining it. 1979 ANPRM at 75186–87.

ATF received 844 comments in response, of which approximately 551, or 65.3 percent, were in favor of ATF defining ''engaged in the business.'' [4] This included approximately 324 firearms dealers in favor of defining the term. However, at the time, ATF believed that none of the suggested definitions appeared ''to be broad enough to cover all possible circumstances and still be narrow enough to be of real benefit in any particular case.'' [5] One possible definition ATF considered would have established a threshold number of firearms sales per year to serve as a baseline for when a person would qualify as a dealer. The suggested threshold numbers ranged from ''more than one'' to ''more than 100'' per year. ATF did not adopt a numerical threshold because it would have potentially interfered with tracing firearms by persons who avoided obtaining a license (and therefore kept no records) by selling firearms under the minimum threshold.[6] Ultimately, ATF decided not to proceed further with rulemaking at that time. Congress also had not yet acted on then-proposed legislation—the McClure-Volkmer bill (discussed below)—which, among other provisions, would have defined ''engaged in the business.'' [7] For additional reasons why the Department has not adopted a minimum number of sales, see Section III.D of this preamble.

B. Firearms Owners' Protection Act of 1986

Approximately six years later, the McClure-Volkmer bill was enacted as part of the Firearms Owners' Protection Act (''FOPA''), Public Law 99–308, 100 Stat. 449 (1986). FOPA added a statutory definition of ''engaged in the business'' to the GCA. As applied to a person selling firearms at wholesale or retail, it defined the term ''engaged in the business'' in 18 U.S.C. 921(a)(21)(C) as ''a person who devotes time, attention, and labor to dealing in firearms as a regular course of trade or business with the principal objective of livelihood and profit through the repetitive purchase and resale of firearms.'' [8] The term excluded ''a person who makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of his personal collection of firearms.'' [9] FOPA further defined the term ''with the principal objective of livelihood and profit'' to mean ''that the intent underlying the sale or disposition of firearms is predominantly one of obtaining livelihood and pecuniary gain, as opposed to other intents, such as improving or liquidating a personal firearms collection.'' [10] Congress amended FOPA's definition of ''with the principal objective of livelihood and profit'' a few months later, clarifying that ''proof of profit shall not be required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism.'' [11]

The legislative history of FOPA reflects that the statutory definitions' purposes were to clarify that individuals who make only occasional firearms sales for a hobby to enhance their personal collection are not required to obtain a license and to benefit law enforcement ''by establishing clearer standards for investigative officers and assisting in the prosecution of persons truly intending to flout the law.'' [12] The legislative history also reveals that Congress did not intend to limit the licensing requirement only to persons for whom selling or disposing of firearms is a principal source of income or a principal business activity. The Committee Report stated that ''this provision would not remove the necessity for licensing from part-time businesses or individuals whose principal income comes from sources other than firearms, but whose main objective with regard to firearm transfers is profit, rather than hobby.'' [13] Thus, for example, ''[a] sporting goods or retail store which derived only a part of its income from firearm sales, but handled such sales for the 'principal objective of livelihood and profit,' would still require a license.'' [14]

Two years after its enactment, FOPA's definition of ''engaged in the business'' was incorporated into ATF's implementing regulations at 27 CFR 178.11 (now § 478.11) in defining the term ''Dealer in firearms other than a gunsmith or a pawnbroker.'' [15] At the same time, consistent with the statutory text and legislative history, ATF amended the regulatory definition of ''dealer'' to clarify that the term includes ''any person who engages in such business or occupation on a part-time basis.'' [16]

With respect to ''personal collections,'' FOPA included a provision, codified at 18 U.S.C. 923(c), that expressly authorized licensees to maintain and dispose of private firearms collections separately from their business operations. However, under FOPA, as amended, the ''personal collection'' provision was and remains subject to three limitations.

First, if a licensee records the disposition (*i.e.,* transfer) of any firearm from their business inventory into a personal collection, that firearm legally remains part of the licensee's business inventory until one year has elapsed after the transfer date. Should the licensee wish to sell or otherwise dispose of any such ''personal'' firearm during that one-year period, the licensee must re-transfer the applicable firearm back into the business inventory.[17] A subsequent transfer from the business inventory would then be subject to the recordkeeping and background check requirements of the GCA applicable to all other firearms in the business inventory. *See* 27 CFR 478.125(e); 478.102(a).

Second, if a licensee acquires a firearm for, or disposes of any firearm from, a personal collection for the purpose of willfully evading the restrictions placed upon licensees under the GCA, that firearm is deemed part of the business inventory. Thus, as explained in FOPA's legislative history, ''circuitous transfers are not exempt from otherwise applicable licensee requirements.'' [18]

Third, even when a licensee has made a bona fide transfer of a firearm from their personal collection, section 923(c) requires the licensee to record the description of the firearm in a bound volume along with the name, place of residence, and date of birth of an individual transferee, or if a corporation or other business entity, the transferee's identity and principal and local places of business.[19] ATF incorporated these statutory provisions into its FOPA implementing regulations in 1988.[20]

As explained in the NPRM, courts interpreting the FOPA definition of ''engaged in the business'' found a number of factors relevant to assessing whether a person met that definition. 88 FR 61995. For example, in one leading case, the U.S. Court of Appeals for the Third Circuit listed the following nonexclusive factors for consideration to determine whether the defendant's principal objective was livelihood and profit (*i.e.,* economic): (1) quantity and frequency of the sales; (2) location of the sales; (3) conditions under which the sales occurred; (4) defendant's behavior before, during, and after the sales; (5) price charged for the weapons and the characteristics of the firearms sold; and (6) intent of the seller at the time of the sales. *United States* v. *Tyson,* 653 F.3d 192, 200–01 (3d Cir. 2011). In a separate case, the Third Circuit stated, ''[a]lthough the definition explicitly refers to economic interests as the principal purpose, and repetitiveness as the *modus operandi,* it does not establish a specific quantity or frequency requirement. In determining whether one is engaged in the business of dealing in firearms, the finder of fact must examine the intent of the actor and all circumstances surrounding the acts alleged to constitute engaging in business. This inquiry is not limited to the number of weapons sold or the timing of the sales.'' *United States* v. *Palmieri,* 21 F.3d 1265, 1268 (3d Cir.), *vacated on other grounds,* 513 U.S. 957 (1994).[21]

C. Executive Action To Reduce Gun Violence (2016)

On January 4, 2016, President Obama announced several executive actions to reduce gun violence and to make communities across the United States safer. Those actions included two clarifications by ATF of ''principles'' relating to licensees, consistent with relevant court rulings: (1) that a person can be engaged in the business of dealing in firearms regardless of the location in which firearm transactions are conducted, and (2) that there is no specific threshold number of firearms purchased or sold that triggers the licensure requirement.[22]

To provide this clarification, ATF published in 2016, and updated in 2023, a guidance document entitled *Do I Need a License to Buy and Sell Firearms?,* ATF Publication 5310.2.[23] The guidance assists unlicensed persons in understanding whether they will likely need to obtain a license as a dealer in firearms. Since its original publication in 2016, the guidance has explained that ''there is no specific threshold number of firearms purchased or sold that triggers the licensure requirement.'' [24] ATF intends to further update the guidance once it issues this final rule.

D. Bipartisan Safer Communities Act (2022)

Over 35 years after FOPA's enactment, and 29 years after passage of the Brady Handgun Violence Protection Act of 1993 (Brady Act),[25] on June 25, 2022, President Biden signed into law the BSCA. Section 12002 of the BSCA broadened the definition of ''engaged in the business'' under 18 U.S.C. 921(a)(21)(C) by eliminating the requirement that a person's ''principal objective'' of purchasing and reselling firearms must include both ''livelihood and profit'' and replacing it with a requirement that the person must deal in firearms ''to predominantly earn a profit.'' The GCA now provides that, as applied to a wholesale or retail dealer in firearms, the term ''engaged in the business'' means ''a person who devotes time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.'' However, the BSCA definition did not alter the longstanding FOPA exclusions for ''a person who makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of his personal collection of firearms.'' 18 U.S.C. 921(a)(21)(C).

These BSCA amendments were enacted after tragic mass shootings at a grocery store in Buffalo, New York; at an elementary school in Uvalde, Texas; and between Midland and Odessa, Texas.[26] In the third incident, the perpetrator had previously been adjudicated by a court as a mental defective and was prohibited from possessing firearms under 18 U.S.C. 922(g)(4).[27] After being denied a firearm from a licensed sporting goods store, he circumvented the NICS background check process by purchasing the AR–15 variant rifle he used in the shooting from an unlicensed individual without having to undergo a

background check.[28] The private seller later pled guilty to dealing in firearms without a license and to filing a false tax return due to his failure to report that major source of income.[29]

According to the Congressional Research Service (''CRS''), the BSCA's sponsors believed that ''there was confusion about the GCA's definition of 'engaged in the business,' as it pertained to individuals who bought and resold firearms repetitively for profit, but possibly not as the principal source of their livelihood.'' [30] CRS has explained that the sponsors ''maintain[ed] that [the BSCA's] changes clarify who should be licensed, eliminating a 'gray' area in the law, ensuring that one aspect of firearms commerce is more adequately regulated.'' [31]

As now defined by the BSCA, the term ''to predominantly earn a profit'' means that ''the intent underlying the sale or disposition of firearms is predominantly one of obtaining pecuniary gain, as opposed to other intents, such as improving or liquidating a personal firearms collection.'' 18 U.S.C. 921(a)(22). The statutory definition further provides that ''proof of profit shall not be required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism.'' *Id.* In the BSCA, Congress amended ''engaged in the business'' only with respect to dealers in firearms; it did not amend the various definitions of ''engaged in the business'' in 18 U.S.C. 921(a)(21) with respect to licensed gunsmiths, manufacturers, or importers.[32]

E. Executive Order 14092 (2023)

On March 14, 2023, President Biden issued Executive Order 14092, ''Reducing Gun Violence and Making Our Communities Safer.'' That order requires the Attorney General to submit a report to the President describing actions taken to implement the BSCA and to ''develop and implement a plan to: (i) clarify the definition of who is engaged in the business of dealing in firearms, and thus required to become Federal firearms licensees (FFLs), in order to increase compliance with the Federal background check requirement for firearm sales, including by considering a rulemaking, as appropriate and consistent with applicable law; [and] (ii) prevent former FFLs whose licenses have been revoked or surrendered from continuing to engage in the business of dealing in firearms.'' [33]

III. Notice of Proposed Rulemaking

Subsections in Section III

A. Definition of ''Dealer''
B. Definition of ''Engaged in the Business''—''Purchase'' and ''Sale''
C. Definition of ''Engaged in the Business'' as Applied to Auctioneers
D. Presumptions That a Person is ''Engaged in the Business''
E. Definition of ''Personal Collection,'' ''Personal Collection of Firearms,'' and ''Personal Firearms Collection''
F. Definition of ''Responsible Person''
G. Definition of ''Predominantly Earn a Profit''
H. Disposition of Business Inventory After Termination of License
I. Transfer of Firearms Between FFLs and Form 4473

On September 8, 2023, the Department published in the **Federal Register** a notice of proposed rulemaking (''NPRM'') entitled ''Definition of 'Engaged in the Business' as a Dealer in Firearms,'' 88 FR 61993, proposing changes to various regulations in 27 CFR part 478. The comment period for the proposed rule concluded on December 7, 2023.

To implement the new statutory language in the BSCA, the NPRM proposed to amend paragraph (c) of the regulatory definition of ''engaged in the business,'' 27 CFR 478.11 (now paragraph (3) of § 478.11 and cross-referenced definition in § 478.13), pertaining to a ''dealer in firearms other than a gunsmith or pawnbroker,'' to conform with 18 U.S.C. 921(a)(21)(C) by removing the phrase ''with the principal objective of livelihood and profit'' and replacing it with the phrase ''to predominantly earn a profit.'' The rule also proposed to amend § 478.11 to conform with new 18 U.S.C. 921(a)(22) by adding the statutory definition of ''predominantly earn a profit'' as a new regulatory definition. Additionally, the rule proposed to move the regulatory definition of ''terrorism,'' which currently exists in the regulations under the definition of ''principal objective of livelihood and profit,'' to a new location. This is because the statutory definitions of ''to predominantly earn a profit'' (18 U.S.C. 921(a)(22)) and ''with the principal objective of livelihood and profit'' (18 U.S.C. 921(a)(23)) both provide that ''proof of profit shall not be required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism'' and include identical definitions of ''terrorism.''

To further implement the BSCA's changes to the GCA, the rule proposed to clarify when a person is ''engaged in the business'' as a dealer in firearms at wholesale or retail by: (a) clarifying the definition of ''dealer''; (b) defining the terms ''purchase'' and ''sale'' as they apply to dealers; (c) clarifying when a person would not be engaged in the business of dealing in firearms as an auctioneer; (d) clarifying when a person is purchasing firearms for, and selling firearms from, a personal collection; (e) setting forth conduct that is presumed to constitute ''engaging in the business'' of dealing in firearms and presumed to demonstrate the intent to ''predominantly earn a profit'' from the sale or disposition of firearms, absent reliable evidence to the contrary; (f) adding a single definition for the terms ''personal collection,'' ''personal firearms collection,'' and ''personal collection of firearms''; (g) adding a definition for the term ''responsible person''; (h) clarifying that the intent to

[31] *Id.; see also* 168 Cong. Rec. H5906 (daily ed. June 24, 2022) (statement of Rep. Jackson Lee) (''[O]ur bill would . . . further strengthen the background check process by clarifying who is engaged in the business of selling firearms and, as a result, is required to run background checks.''); 168 Cong. Rec. S3055 (daily ed. June 22, 2022) (statement of Sen. Murphy) (''We clarify in this bill the definition of a federally licensed gun dealer to make sure that everybody who should be licensed as a gun owner is. In one of the mass shootings in Texas, the individual who carried out the crime was mentally ill. He was a prohibited purchaser. He shouldn't have been able to buy a gun. He was actually denied a sale when he went to a bricks-and-mortar gun store, but he found a way around the background check system because he went online and found a seller there who would transfer a gun to him without a background check. It turned out that seller was, in fact, engaged in the business, but didn't believe the definition applied to him because the definition is admittedly confusing. So we simplified that definition and hope that will result—and I believe it will result—in more of these frequent online gun sellers registering, as they should, as federally licensed gun dealers which then requires them to perform background checks.''); Letter for Director, ATF, et al., from Sens. John Cornyn and Thom Tillis at 2–3 (Nov. 1, 2022) (''Cornyn/Tillis Letter'') (''The BSCA provides more clarity to the industry for when someone must obtain a federal firearms dealers license. In Midland and Odessa, Texas, for example, the shooter—who at the time was prohibited from possessing or owning a firearm under federal law—purchased a firearm from an unlicensed firearms dealer.''); Comments on the Rule from 17 U.S. Senators and 149 Representatives, p.4 (Nov. 30 and Dec. 1, 2023).

[32] The BSCA retained the existing term ''with the principal objective of livelihood and profit,'' which still applies to persons engaged in the business as manufacturers, gunsmiths, and importers. That definition became 18 U.S.C. 921(a)(23), and Congress renumbered other definitions in section 921 accordingly.

[33] *Reducing Gun Violence and Making Our Communities Safer,* E.O. 14092, secs. 2, 3(a)(i)–(ii), 88 FR 16527, 16527–28 (Mar. 14, 2023).

''predominantly earn a profit'' does not require the person to have received pecuniary gain, and that intent does not have to be shown when a person purchases or sells a firearm for criminal or terrorism purposes; (i) addressing how former licensees, and responsible persons acting on behalf of former licensees, must lawfully liquidate business inventory upon revocation or other termination of their license; and (j) clarifying that licensees must follow the verification and recordkeeping procedures in 27 CFR 478.94 and subpart H of 27 CFR part 478, rather than using a Form 4473 when firearms are transferred to other licensees, including transfers by a licensed sole proprietor to that person's personal collection.

A. Definition of ''Dealer''

The NPRM noted that, in enacting the BSCA, Congress expanded the definition of ''engaged in the business'' ''as applied to a dealer in firearms,'' as noted above. 18 U.S.C. 921(a)(21)(C). Consistent with the text and purpose of the GCA, ATF regulations have long defined the term ''dealer'' to include persons engaged in the business of selling firearms at wholesale or retail, or as a gunsmith or pawnbroker, on a part-time basis. 27 CFR 478.11 (definition of ''dealer''). The NPRM explained that, due to the BSCA amendments, as well as continual confusion and non-compliance before and after the BSCA was passed, the Department has further considered what it means to be a ''dealer'' engaged in the firearms business in light of new technologies, mediums of exchange, and forums in which firearms are bought and sold with the predominant intent of obtaining pecuniary gain.

The NPRM further stated that, since 1968, advancements in manufacturing (*e.g.,* 3D printing) and distribution technology (*e.g.,* internet sales) and changes in the marketplace for firearms and related products (*e.g.,* large-scale gun shows) have changed the various ways individuals shop for firearms, and therefore have created a need for further clarity in the regulatory definition of ''dealer.'' [34] The proliferation of new communications technologies and e-commerce has made it simple for persons intending to make a profit to advertise and sell firearms to a large potential market at minimal cost and with minimal effort, using a variety of means, and often as a part-time activity. The proliferation of sales at larger-scale gun shows, flea markets, similar events, and online has also altered the marketplace since the GCA was enacted in 1968.

Therefore, in light of the BSCA's changes to the GCA and to provide additional guidance on what it means to be engaged in the business as a ''dealer'' within the diverse modern marketplace for firearms, the NPRM proposed to amend the regulatory definition of ''dealer'' in 27 CFR 478.11 to clarify that firearms dealing may occur wherever, or through whatever medium, qualifying activities are conducted. This includes at any domestic or international public or private marketplace or premises. The proposed definition would provide nonexclusive examples of such existing marketplaces: a gun show [35] or event,[36] flea market,[37] auction house,[38] or gun range or club; at one's home; by mail order; [39] over the internet; [40] through the use of other electronic means (*e.g.,* an online broker,[41] online auction,[42] text messaging service,[43] social media

[41] A broker who actually purchases the firearms from the manufacturer, importer, or distributor, accepts payment for the firearms from the buyer, and has them shipped to the buyer from a licensee, must be licensed as a dealer because they are repetitively purchasing and reselling their firearms to predominantly earn a profit. Although individual dealers may sell firearms through online services sometimes called ''brokers,'' like a magazine or catalog company that only advertises firearms listed by known sellers and processes orders for them for direct shipment from the distributor to their buyers, these ''brokers'' are not themselves considered ''dealers.'' This is because these online ''brokers'' do not purchase the firearms for consideration, but only collect a commission or fee for providing contracted services to market and process the transaction for the seller. *See* ATF, *FFL Newsletter: Federal Firearms Licensee Information Service* 3 (Sept. 2016), *https://www.atf.gov/firearms/docs/newsletter/ffl-newsletter-september-2016/download;* ATF, 2 *FFL Newsletter: Federal Firearms Licensee Information Service* 6–7 (Mar. 2013), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensees-newsletter-march-2013-volume-2/download; see also Fulkerson* v. *Lynch,* 261 F. Supp. 3d 779, 783–86, 788–89 (W.D. Ky. 2017) (denying summary judgment to applicant whose license was denied by ATF for previously willfully engaging in the business of dealing without a license as an online broker and granting summary judgement to the Government).

raffle,[44] or website [45]); or at any other domestic or international public or private marketplace or premises. Many of these examples were referenced by courts, even before the BSCA expansion, as well as in ATF regulatory materials and common, publicly available sources. These examples in the NPRM were designed to clarify that firearms dealing requires a license in whatever place or through whatever medium the firearms are purchased and sold, including the internet and locations other than a traditional brick and mortar store.[46] However, regardless of the medium through or location at which a dealer buys and sells firearms, to obtain a license under the GCA, the dealer must still have a fixed premises in a State from which to conduct business subject to the license and comply with all applicable State and local laws regarding the conduct of such business.[47] 18 U.S.C. 922(b)(2); 923(d)(1)(E)–(F).

[44] *See* ATF, *FFL Newsletter: Federal Firearms Licensee Information Service* 9 (June 2021), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensee-ffl-newsletter-june-2021/download* (''Social media gun raffles are gaining popularity on the internet. In most instances, the sponsor of the event is not a Federal firearms licensee, but will enlist the aid of a licensee to facilitate the transfer of the firearm to the raffle winner. Often, the sponsoring organization arranges to have the firearm shipped from a distributor to a licensed third party and never takes physical possession of the firearm. If the organization's practice of raffling firearms rises to the level of being engaged in the business of dealing in firearms, the organization must obtain a Federal firearms license.'').

ATF will issue a license to persons who intend to conduct their business primarily at gun shows, over the internet, or by mail order, so long as they otherwise meet the eligibility criteria established by law. This includes the requirement that they maintain a business premises at which ATF can inspect their records and inventory, and that otherwise complies with local zoning restrictions.''); Letter for Dan Coats, U.S. Senator, from Deputy Director, ATF, at 1–2 (Aug. 22, 1990) (an FFL cannot be issued at a table or booth at a temporary flea market); ATF Internal Memorandum #23264 (June 15, 1983) (same).

[47] *See Abramski* v. *United States,* 573 U.S. 169, 172 (2014) (''The statute establishes a detailed scheme to enable the dealer to verify, at the point of sale, whether a potential buyer may lawfully own a gun. Section 922(c) brings the would-be purchaser onto the dealer's 'business premises' by prohibiting, except in limited circumstances, the sale of a firearm 'to a person who does not appear in person' at that location.''); *National Rifle Ass'n,* 914 F. 2d at 480 (explaining that FOPA did not eliminate the requirement that a licensee have a business premises from which to conduct business ''which exists so that regulatory authorities will know where the inventory and records of a licensee can be found''); *Meester* v. *Bowers,* No. 12CV86, 2013 WL 3872946 (D. Neb. July 25, 2013) (upholding ATF's denial of license in part because the applicant failed to ''have 'premises from which he conducts business subject to license,''' in violation of 18 U.S.C. 923(d)(1)(E)).

The NPRM explained that, even though an applicant must have a business premises in a particular State to obtain a license, under the GCA, firearms purchases or sales requiring a license in the United States may involve conduct outside of the United States. Specifically, 18 U.S.C. 922(a)(1)(A) has long prohibited any person without a license from shipping, transporting, or receiving any firearm in foreign commerce while in the course of being engaged in the business of dealing in firearms,[48] and 18 U.S.C. 924(n) prohibits travelling from a foreign country to a State in furtherance of conduct that constitutes a violation of section 922(a)(1)(A).

The NPRM further noted that, as recently amended by the BSCA, the GCA now expressly prohibits a person from smuggling or knowingly taking a firearm out of the United States with intent to engage in conduct that would constitute a felony for which the person may be prosecuted in a court in the United States if the conduct had occurred within the United States. 18 U.S.C. 924(k)(2). Willfully engaging in the business of dealing in firearms without a license is an offense punishable by more than one year in prison, *see* 18 U.S.C. 924(a)(1)(D), and constitutes a felony. Therefore, unlicensed persons who purchase firearms in the United States and smuggle or take them out of the United States (or conspire or attempt to do so) for resale in another country are now engaging in conduct that is unlawful under the GCA. Consistent with the BSCA's new prohibition, 18 U.S.C. 924(k)(2), and the longstanding prohibition on ''ship[ping], transport[ing], or receiv[ing] any firearm in interstate or foreign commerce'' without a license, 18 U.S.C. 922(a)(1)(A), the rule proposed to clarify in the definition of ''dealer'' that purchases or sales of firearms as a wholesale or retail dealer may occur either domestically or internationally.

[48] *See, e.g., United States* v. *Baptiste,* 607 F. App'x 950, 953 (11th Cir. 2015) (upholding section 922(a)(1) conviction where firearms purchased in the United States were to be resold in Haiti); *United States* v. *Murphy,* 852 F.2d 1, 7–8 (1st Cir. 1988) (same with firearms to be resold in Ireland); *United States* v. *Hernandez,* 662 F.2d 289, 291 (5th Cir. 1981) (same with firearms to be resold in Mexico). *But see United States* v. *Mowad,* 641 F.2d 1067 (2d Cir. 1981) (reversing conviction for purchasing firearms for resale in Lebanon on the basis that there was no mention of exporting firearms in the GCA or any suggestion of congressional concern about firearm violence in other countries).

B. Definition of Engaged in the Business—''Purchase'' and ''Sale''

To further clarify the regulatory definition of a dealer ''engaged in the business'' with the predominant intent of earning a profit through the repetitive purchase and resale of firearms in 27 CFR 478.11, the NPRM also proposed to define, based on common dictionary definitions and relevant case law, the terms ''purchase'' and ''sale'' (and derivative terms thereof, such as ''purchases,'' ''purchasing,'' ''purchased,'' and ''sells,'' ''selling,'' or ''sold''). Specifically, the rule proposed to define ''purchase'' (and derivative terms thereof) as ''the act of obtaining a firearm in exchange for something of value,'' [49] and the term ''sale'' (and derivative terms thereof, including ''resale'') as ''the act of providing a firearm in exchange for something of value.'' [50] The term ''something of value'' was proposed to include money, credit, personal property (*e.g.,* another firearm [51] or ammunition [52]), a service,[53] a controlled substance,[54] or any other

[49] This definition is consistent with the common meaning of ''purchase,'' which is ''to obtain (as merchandise) by paying money or its equivalent.'' Webster's Third New International Dictionary 1844 (1971); *see also Purchase,* Black's Law Dictionary 1491 (11th ed. 2019) (''Webster's Third'') (''The acquisition of an interest in real or personal property by sale, discount, negotiation, mortgage, pledge, lien, issue, reissue, gift, or any other voluntary transaction.'').

[50] This definition is consistent with the common meaning of ''sale,'' which is ''a contract transferring the absolute or general ownership of property from one person or corporate body to another for a price (as a sum of money or any other consideration).'' Webster's Third at 2003. The related term ''resale'' means ''the act of selling again.'' *Id.* at 1929.

[51] *See, e.g., United States* v. *Brenner,* 481 F. App'x, 125–26 (5th Cir. 2012) (defendant unlicensed dealer sold a stolen firearm traded to him for another firearm); *United States* v. *Gross,* 451 F.2d 1355, 1356, 1360 (7th Cir. 1971) (defendant ''had traded firearms [for other firearms] with the object of profit in mind'').

[52] *See, e.g., United States* v. *Huffman,* 518 F.2d 80, 81 (4th Cir. 1975) (defendant traded large quantities of ammunition in exchange for firearms).

[53] *See, e.g., United States* v. *57 Miscellaneous Firearms,* 422 F. Supp. 1066, 1070–71 (W.D. Mo. 1976) (defendant obtained the firearms he sold or offered for sale in exchange for carpentry work he performed).

[54] *See, e.g., United States* v. *Schaal,* 340 F.3d 196, 197 (4th Cir. 2003) (defendants traded many of their stolen firearms for drugs); *Johnson* v. *Johns,* No. 10–CV–904(SJF), 2013 WL 504446, at *1 (E.D.N.Y. Feb. 5, 2013) (on at least one occasion, petitioner, who was engaged in the unlicensed dealing in firearms

medium of exchange [55] or valuable consideration.[56]

Defining these terms to include any method of payment for a firearm would clarify that persons cannot avoid the licensing requirement by, for instance, bartering or providing or receiving services in exchange for firearms with the predominant intent to earn pecuniary gain even where no money is exchanged. It would also clarify that a person must have a license to engage in the business of dealing in firearms even when the medium of payment or consideration is unlawful, such as exchanging illicit drugs or performing illegal acts for firearms, and that it is a distinct crime to do so without a license.

C. Definition of Engaged in the Business as Applied to Auctioneers

Because the definitions of ''purchase'' and ''sale'' broadly include services provided in exchange for firearms, both as defined by common dictionaries and as proposed in the NPRM, the Department further proposed to make clear that certain persons who provide auctioneer services are not required to be licensed as dealers. ATF has long interpreted the statutory definition of ''engaged in the business'' as excluding auctioneers who provide only auction services on commission by assisting in liquidating firearms at an ''estate-type'' auction.[57] The new definition in the BSCA does not alter that interpretation. The Department proposed to incorporate this longstanding interpretation into the regulations while otherwise clarifying the regulatory definition of ''engaged in the business.''

As the NPRM explained, in this context, the auctioneer is generally providing services only as an agent of the owner or individual executor of an estate who is liquidating a personal collection. The firearms are within the estate's control and the sales are made on the estate's behalf. This limited exclusion from the definition of ''engaged in the business'' as a dealer is conditioned on the auctioneer not purchasing the firearms or taking them on consignment such that the auctioneer has the exclusive right and authority to sell the firearms at a location, time, and date to be selected by the auctioneer. If the auctioneer were to regularly engage in any of that conduct, the auctioneer would need to have a dealer's license because that person would be engaged in the business of purchasing and reselling firearms to earn a profit. An ''estate-type'' auction as described above differs from liquidating firearms by means of a ''consignment-type'' auction, in which the auctioneer is paid to accept firearms into a business inventory and then resells them in lots or over a period of time. In this ''consignment-type'' auction, the auctioneer generally inventories, evaluates, and tags the firearms for identification.[58] Therefore, under ''consignment-type'' auctions, an auctioneer would need to be licensed.

D. Presumptions That a Person Is Engaged in the Business

The NPRM pointed out that the Department has observed through its enforcement efforts, regulatory functions, knowledge of existing case law, and subject-matter expertise that persons who are engaged in certain firearms purchase-and-sale activities are more likely than not to be ''engaged in the business'' of dealing in firearms at wholesale or retail. These activities have been observed through a variety of criminal, civil, and administrative enforcement actions and proceedings brought by the Department, including: (1) ATF inspections of prospective and existing wholesale and retail dealers of firearms who are, or intend to be, engaged in the business; [59] (2) criminal investigations and the resulting prosecutions (*i.e.,* cases) of persons who engaged in the business of dealing in firearms without a license; [60] (3) civil and administrative actions under 18 U.S.C. 924(d) to seize and forfeit firearms intended to be sold by persons engaged in the business without a license; [61] (4) ATF cease and desist letters issued to prevent section 922(a)(1)(A) violations; [62] and (5) ATF administrative proceedings under 18 U.S.C. 923 to deny licenses to persons who willfully engaged in the business of dealing in firearms without a license, or to revoke or deny renewal of existing licenses held by licensees who aided and abetted that misconduct.[63] In addition, numerous courts have identified certain activities or factors that are relevant to determining whether a person is ''engaged in the business''.[64] The rule, therefore, proposed to establish rebuttable presumptions in

through straw purchasers, compensated a straw purchaser with cocaine base).

[55] *See, e.g., Focia,* 869 F.3d at 1274 (defendant sold pistol online to undercover ATF agent for 15 bitcoins).

[56] The term ''medium of exchange'' generally means ''something commonly accepted in exchange for goods and services and recognized as representing a standard of value,'' Webster's Third at 1403, and ''valuable consideration'' is ''an equivalent or compensation having value that is given for something (as money, marriage, services) acquired or promised and that may consist either in some right, interest, profit, or benefit accruing to one party or some responsibility, forbearance, detriment, or loss exercised by or falling upon the other party,'' *id.* at 2530. *See, e.g., United States* v. *Berry,* 644 F.2d 1034, 1036 (5th Cir. 1981) (defendant sold firearms in exchange for large industrial batteries to operate his demolition business); *United States* v. *Reminga,* 493 F. Supp. 1351, 1357 (W.D. Mich. 1980) (defendant traded his car for three guns that he later sold or traded).

[57] *See* ATF, *Does an Auctioneer Who Is Involved in Firearms Sales Need a Dealer's License?, https://www.atf.gov/firearms/qa/does-auctioneer-who-involved-firearms-sales-need-dealer-license* (last reviewed July 10, 2020); ATF, *ATF Federal Firearms Regulations Reference Guide,* ATF Publication 5300.4, Q&A L1, at 207–08 (2014), *https://www.atf.gov/firearms/docs/guide/federal-firearms-regulations-reference-guide-2014-edition-atf-p-53004/download;* ATF, *FFL Newsletter* 3 (May 2001), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensees-newsletter-may-2001/download;* ATF Ruling 96–2, *Engaging in the Business of Dealing in Firearms (Auctioneers)* (Sept. 1996), *https://www.atf.gov/file/55456/download;* ATF, *FFL Newsletter* 7 (1990), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensees-newsletter-1990-volume-1/download;* Letter for Editor, CarPac Publishing Company, from Acting Assistant Director (Regulatory Enforcement), ATF, at 1–2 (July 26, 1979).

[58] ATF Rul. 96–2 at 1.

[59] In Fiscal Year 2022, for example, ATF conducted 11,156 qualification inspections of new applicants for a license, and 6,979 compliance inspections of active licensees. *See* ATF, *Fact Sheet- Facts and Figures for Fiscal Year 2022* (Jan. 2023), *https://www.atf.gov/resource-center/fact-sheet/fact-sheet-facts-and-figures-fiscal-year-2022.*

[60] *See* footnotes 67 through 80 and 82 through 83, *infra.* The Department reviewed criminal cases from FY18 to FY23 that it investigated (closed), or is currently investigating (open/pending), involving violations of 18 U.S.C. 922(a)(1)(A) and 923(a).

[61] *See, e.g., United States* v. *Four Hundred Seventy Seven (477) Firearms,* 698 F. Supp. 2d 890, 890–91 (E.D. Mich. 2010) (civil forfeiture of firearms intended to be sold from an unlicensed gun store); *United States* v. *One Bushmaster, Model XM15–E2 Rifle,* No. 06–CV–156 (WDO), 2006 WL 3497899, at *1 (M.D. Ga. Dec. 5, 2006) (civil forfeiture of firearms intended to be sold by an unlicensed person who acquired an unusually large amount of firearms quickly for the purpose of selling or trading them); *United States* v. *Twenty Seven (27) Assorted Firearms,* No. SA–05–CA–407–XR, 2005 WL 2645010, at *1 (W.D. Tex. Oct. 13, 2005) (civil forfeiture of firearms intended to be sold at gun shows without a license).

[62] Over the years, ATF has issued numerous letters warning unlicensed persons not to continue to engage in the business of dealing in firearms without a license, also called ''cease and desist'' letters. *See, e.g., United States* v. *Kubowski,* 85 F. App'x 686, 687 (10th Cir. 2003) (defendant served cease and desist letter after selling five handguns and one rifle to undercover ATF agents).

[63] *See, e.g., In the Matter of Scott,* Application Nos. 9–93–019–01–PA–05780 and 05781 (Seattle Field Division, Apr. 3, 2018) (denied applicant for license to person who purchased and sold numerous handguns within one month); *In the Matter of SEL.L. Antiques,* Application No. 9–87–035–01–PA–00725 (Phoenix Field Division, July 14, 2006) (denied applicant who repetitively sold modern firearms from unlicensed storefront).

[64] *See* footnote 21, *supra,* and accompanying text. These cases—like the investigations, administrative actions, letters, and other examples cited in this paragraph—predate the BSCA's enactment but continue to be relevant to determining whether a person is ''engaged in the business'' because the BSCA expanded the definition of that term to cover additional conduct.

certain contexts to help unlicensed persons, industry operations personnel, and others determine when a person is likely ''engaged in the business'' requiring a dealer's license.[65]

These rebuttable presumptions would not shift the burden of persuasion in any proceeding from the Government. In addition, while the criteria set forth in the proposed rule may be useful to a court in a criminal proceeding—for example, to inform appropriate jury instructions regarding permissible inferences [66]—the proposed regulatory text made clear that the presumptions do not apply to criminal proceedings.

The Department considered, but did not propose in the NPRM, an alternative that would have set a minimum numerical threshold of firearms sold by a person within a certain period. That approach was not proposed for several reasons. First, while selling large numbers of firearms or engaging or offering to engage in frequent transactions may be highly indicative of business activity, neither the courts nor the Department have recognized a set minimum number of firearms purchased or resold that triggers the licensing requirement. Similarly, there is no minimum number of transactions that determines whether a person is ''engaged in the business'' of dealing in firearms. Even a single firearm transaction, or offer to engage in a transaction, when combined with other evidence, may be sufficient to require a license. For example, even under the previous statutory definition, courts have upheld convictions for dealing without a license when few firearms, if any, were actually sold, when other factors were also present, such as the person representing to others a willingness and ability to repetitively purchase firearms for resale. *See, e.g., United States* v. *King,* 735 F.3d 1098, 1107 n.8 (9th Cir. 2013) (upholding conviction where defendant attempted to sell one firearm and represented that he could purchase more for resale and noting that ''Section 922(a)(1)(A) does not require an actual sale of firearms'').[67] On the other hand, courts have stated that an isolated firearm transaction would not require a license when other factors were not present.[68] Second, in addition to the tracing concerns expressed by ATF in response to comments on the 1979 ANPRM, a person could structure their transactions to avoid a minimum threshold by spreading out their sales over time. Finally, the Department does not believe there is currently a sufficient evidentiary basis, without consideration of additional factors, to support a specific minimum number of firearms bought or sold for a person to be considered ''engaged in the business.''

Rather than establishing a minimum threshold number of firearms purchased or sold, the NPRM proposed to clarify that, absent reliable evidence to the contrary, a person would be presumed to be engaged in the business of dealing in firearms when the person: (1) sells or offers for sale firearms, and also represents to potential buyers or otherwise demonstrates a willingness and ability to purchase and sell additional firearms; (2) spends more money or its equivalent on purchases of firearms for the purpose of resale than the person's reported taxable gross income during the applicable period of time; (3) repetitively purchases for the purpose of resale, or sells or offers for sale firearms—(A) through straw or sham businesses, or individual straw purchasers or sellers; or (B) that cannot lawfully be purchased or possessed, including: (i) stolen firearms (18 U.S.C. 922(j)); (ii) firearms with the licensee's serial number removed, obliterated, or altered (18 U.S.C. 922(k); 26 U.S.C. 5861(i)); (iii) firearms imported in violation of law (18 U.S.C. 922(l), 22 U.S.C. 2778, or 26 U.S.C. 5844, 5861(k)); or (iv) machineguns or other weapons defined as firearms under 26 U.S.C. 5845(a) that were not properly registered in the National Firearms Registration and Transfer Record (18 U.S.C. 922(o); 26 U.S.C. 5861(d)); (4) repetitively sells or offers for sale firearms—(A) within 30 days after they were purchased; (B) that are new, or like

[65] The GCA and implementing regulations already incorporate rebuttable presumptions in other contexts. *See* 18 U.S.C. 922(b)(3) (A ''licensed manufacturer, importer or dealer shall be presumed, for purposes of [selling to out of state residents], in the absence of evidence to the contrary, to have had actual knowledge of the States laws and published ordinances of both States''); 27 CFR 478.96(c)(2) (same); *see also* 27 CFR 478.12(d) (''The modular subpart(s) identified in accordance with 478.92 with an importer's or manufacturer's serial number shall be presumed, absent an official determination by the Director or other reliable evidence to the contrary, to be part of the frame or receiver of a weapon or device.''); 478.12(f)(1) (''Any such part [previously classified by the Director] that is identified with an importer's or manufacturer's serial number shall be presumed, absent an official determination by the Director or other reliable evidence to the contrary, to be the frame or receiver of the weapon.''); 478.92(a)(1)(vi) (''firearms awaiting materials, parts, or equipment repair to be completed are presumed, absent reliable evidence to the contrary, to be in the manufacturing process'').

[66] Courts determine which jury instructions are appropriate in the criminal cases before them. While rebuttable presumptions may not be presented to a jury in a criminal case, jury instructions may include, for example, reasonable permissive inferences. *See Francis* v. *Franklin,* 471 U.S. 307, 314 (1985) (''A permissive inference suggests to the jury a possible conclusion to be drawn if the [Government] proves predicate facts, but does not require the jury to draw that conclusion.''); *County Court of Ulster County* v. *Allen,* 442 U.S. 140, 166–67 (1979) (upholding jury instruction that gave rise to a permissive inference available only in certain circumstances, rather than a mandatory conclusion); *Baghdad* v. *Att'y Gen. of the U.S.,* 50 F.4th 386, 390 (3d Cir. 2022) (''Unlike mandatory presumptions, permissive inferences . . . do not shift the burden of proof or require any outcome. They are just an 'evidentiary device . . . [that] allows—but *does not require*—the trier of fact to infer' that an element of a crime is met once basic facts have been proven beyond a reasonable doubt.''); *Patton* v. *Mullin,* 425 F.3d 788, 803–07 (10th Cir. 2005) (upholding jury instruction that created a permissive inference rather than a rebuttable presumption); *United States* v. *Warren,* 25 F.3d 890, 897 (9th Cir. 1994) (same); *United States* v. *Washington,* 819 F.2d 221, 225–26 (9th Cir. 1987) (same); *Lannon* v. *Hogan,* 719 F.2d 518, 520–25 (1st Cir. 1983) (same); *United States* v. *Gaines,* 690 F.2d 849 (11th Cir. 1982) (same); *cf., e.g., United States* v. *Antonoff,* 424 F. App'x 846, 848 (11th Cir. 2011) (recognizing the permissive inference of current drug use in ATF's definition of ''unlawful user'' in 27 CFR 478.11 as support for affirming the district court's finding that the defendant's drug use was ''contemporaneous and ongoing'' for sentencing purposes); *United States* v. *McCowan,* 469 F.3d 386, 392 (5th Cir. 2006) (upholding application of a sentencing enhancement based on the permissive inference of current drug use in 27 CFR 478.11); *United States* v. *Stanford,* No. 11–10211–01–EFM, 2012 WL 1313503 (D. Kan. Apr. 16, 2012) (holding that evidence of defendant's arrest was admissible by relying, in part, on the definition of ''unlawful user'' in 27 CFR 478.11).

[67] *See also* ATF Publication 5310.2, *Do I Need a License to Buy and Sell Firearms?, https://www.govinfo.gov/content/pkg/GOVPUB-J38-PURL-gpo125446/pdf/GOVPUB-J38-PURL-gpo125446.pdf* (Jan. 2016), *https://www.govinfo.gov/content/pkg/GOVPUB-J38-PURL-gpo125446/pdf/GOVPUB-J38-PURL-gpo125446.pdf; Nadirashvili,* 655 F.3d at 120–21 (holding that, despite defendants' knowledge of only a single firearms transaction, there was sufficient evidence to prove they had aided and abetted unlawfully dealing in firearms without a license because they knew that their co-defendant ''held himself 'out generally as a source of firearms' and was ready to procure them for his customer''); *United States* v. *Kevin Shan,* 361 F. App'x 182, 183 (2d Cir. 2010) (holding that evidence that defendant sold two firearms within roughly a month and acknowledged he had a source of supply for other weapons was sufficient to affirm conviction for dealing firearms without a license); *United States* v. *Zheng Jian Shan,* 80 F. App'x 31 (9th Cir. 2003) (holding that evidence of sale of weapons in one transaction where the defendant was willing and able to find more weapons for resale was sufficient to affirm conviction); *Murphy,* 852 F.2d at 8 (''[T]his single transaction was sufficiently large in quantity, price and length of negotiation to constitute dealing in firearms.'').

[68] *United States* v. *Carter,* 203 F.3d 187, 191 (2d Cir. 2000) (''A conviction under 18 U.S.C. 922(a) ordinarily contemplates more than one isolated gun sale.''); *United States* v. *Swinton,* 521 F.2d 1255, 1259 (10th Cir. 1975) (''Swinton's sale [of one firearm] to Agent Knopp, standing alone, without more, would not have been sufficient to establish a violation of Section 922(a)(1). That sale, however, when considered in conjunction with other facts and circumstances related herein, established that Swinton was engaged in the business of dealing in firearms. The unrebutted evidence of the Government established not only that Swinton considered himself to be and held himself out as a dealer, but that, most importantly, he was actively engaged in the business of dealing in guns.'' (internal citation omitted)).

new in their original packaging; or (C) that are of the same or similar kind (*i.e.,* make/manufacturer, model, caliber/gauge, and action) and type (*i.e.,* the classification of a firearm as a rifle, shotgun, revolver, pistol, frame, receiver, machinegun, silencer, destructive device, or other firearm); (5) as a former licensee (or responsible person acting on behalf of the former licensee), sells or offers for sale firearms that were in the business inventory of such licensee at the time the license was terminated (*i.e.,* license revocation, denial of license renewal, license expiration, or surrender of license), and were not transferred to a personal collection in accordance with 18 U.S.C. 923(c) and 27 CFR 478.125a; or (6) as a former licensee (or responsible person acting on behalf of a former licensee), sells or offers for sale firearms that were transferred to a personal collection of such former licensee or responsible person prior to the time the license was terminated, unless: (A) the firearms were received and transferred without any intent to willfully evade the restrictions placed on licensees by chapter 44, title 18, of the United States Code; and (B) one year has passed from the date of transfer to the personal collection.

The proposed rule provided that any one circumstance or a combination of the circumstances set forth above would give rise to a rebuttable presumption that the person is engaged in the business of dealing in firearms and would need to be licensed under the GCA. The activities set forth in these proposed rebuttable presumptions would not be exhaustive of the conduct that may show that, or be considered in determining whether, a person is engaged in the business of dealing in firearms. Further, as previously noted, while the criteria may be useful to courts in criminal prosecutions when instructing juries regarding permissible inferences, the presumptions outlined above would not be applicable to such criminal cases.

At the same time, the Department recognized in the NPRM that certain transactions were not likely to be sufficient to support a presumption that a person is engaging in the business of dealing in firearms. For this reason, the proposed rule also included examples of when a person would not be presumed to be engaged in the business of dealing in firearms. Specifically, under the proposed rule, a person would not be presumed to be engaged in the business when the person transfers firearms only as bona fide gifts [69] or occasionally [70] sells firearms only to obtain more valuable, desirable, or useful firearms for their personal collection or hobby—unless their conduct also demonstrates a predominant intent to earn a profit.

The NPRM noted that the rebuttable presumptions are supported by the Department's investigative, regulatory, and enforcement experience,[71] as well as conduct that the courts have found to require a license even before the BSCA expanded the definition of ''engaged in the business.'' Moreover, these proposed presumptions are consistent with the case-by-case analytical framework long applied by the courts in determining whether a person has violated 18 U.S.C. 922(a)(1)(A) and 923(a) by engaging in the business of dealing in firearms without a license. The Department observed in the NPRM that the fundamental purposes of the GCA would be severely undermined if persons were allowed to repetitively purchase and resell firearms to predominantly earn a profit without conducting background checks, keeping records, and otherwise complying with the license requirements of the GCA. The Department therefore proposed criteria for when a person is presumed to be ''engaged in the business'' to strike an appropriate balance that captures persons who should be licensed under the GCA, as amended, without limiting or regulating activity that is truly a hobby or enhancement of a personal collection.

The first proposed presumption—that a person would be presumed to be engaged in the business when the person sells or offers for sale firearms, and also represents to potential buyers or otherwise demonstrates a willingness and ability to purchase and sell additional firearms—reflects that the definition of ''engaged in the business'' in 18 U.S.C. 921(a)(21)(C) does not require that a firearm actually be sold by a person so long as the person is holding themself out as a dealer. This is because the relevant definition of ''engaged in the business,'' 18 U.S.C. 921(a)(21)(C), defines the phrase by reference to the intent ''to predominantly earn a profit through the repetitive purchase and resale of firearms'' even if those firearms are not actually repetitively purchased and resold.[72]

The second presumption proposed—that a person is engaged in the business when spending more money or its equivalent on purchases of firearms for the purpose of resale than the person's reported taxable gross income during the applicable period of time—reflects that persons who spend more money or its equivalent on purchases of firearms for resale than their reported gross income are likely to be primarily earning their income from those sales, which is even stronger evidence of an intent to profit than merely supplementing one's income.[73] Alternatively, such persons may be using funds derived from criminal

[69] The Department interprets the term ''bona fide gift'' to mean a firearm given in good faith to another person without expecting any item, service, or anything of value in return. *See* Form 4473, at 4, Instructions to Question 21.a. (Actual Transferee/Buyer) (''A gift is not bona fide if another person offered or gave the person . . . money, service(s), or item(s) of value to acquire the firearm for him/her, or if the other person is prohibited by law from receiving or possessing the firearm.''); ATF, *FFL Newsletter: Federal Firearms Licensee Information Service* 2 (June 2021), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensee-ffl-newsletter-june-2021/download* (same).

[70] While the GCA does not define the term ''occasional,'' that term is commonly understood to mean ''of irregular occurrence; happening now and then, infrequent.'' *Occasional,* Collins English Dictionary, *https://www.collinsdictionary.com/us/dictionary/english/occasional* (last visited Apr. 4, 2024) (defining ''occasional'' in ''American English'').

App'x 651, 652 (9th Cir. 2018) (''[section] 922(a)(1)(A) reaches those who hold themselves out as sources of firearms.''); *United States* v. *Mulholland,* 702 F. App'x 7, 12 (2d Cir. 2017) (''The definition does not extend to a person who makes occasional sales for a personal collection or hobby, *id.,* and the government need only prove that a person was 'ready and able to procure [firearms] for the purpose of selling them from time to time.'' (quoting *Nadirashvili,* 655 F.3d at 199)); *King,* 735 F.3d at 1107 (defendant attempted to sell one of the 19 firearms he had ordered, and represented to the buyer that he was buying, selling, and trading in firearms and could procure any item in a gun publication at a cheaper price); *Shan,* 361 F. App'x at 183 (''[D]efendant sold two firearms within roughly one month and . . . Shan acknowledged on tape that he had a source of supply for other weapons.''); *Shan,* 80 F. App'x at 32 (''[T]he evidence leaves little doubt as to Shan's ability to seek and find weapons for resale''); *Carter,* 801 F.2d at 82 (''[T]he statute reaches 'those who hold themselves out as a source of firearms.' '' (quoting *United States* v. *Wilmoth,* 636 F.2d 123, 125 (5th Cir. 1981)).

[73] *See, e.g., Focia,* 869 F.3d at 1282 (''And finally, despite efforts to obtain Focia's tax returns and Social Security information, agents found no evidence that Focia enjoyed any source of income other than his firearms sales. This evidence overwhelmingly demonstrates that Focia's sales of firearms were no more a hobby than working at Burger King for a living could be described that way.''); *United States* v. *Valdes,* 681 F. App'x 874, 879 (11th Cir. 2017) (defendant who engaged in the business of dealing in firearms without a license did not report income on tax returns from firearms sales online and at gun shows); Press Release, DOJ, *Man Who Sold Midland/Odessa Shooter AR–15 Used in Massacre Sentenced for Unlicensed Firearms Dealing* (Jan. 7, 2021), *https://www.justice.gov/usao-ndtx/pr/man-who-sold-midlandodessa-shooter-ar-15-used-massacre-sentenced-unlicensed-firearms* (defendant convicted of filing a false tax return that concealed his income from firearms sales).

activities to purchase firearms, for example, including funds provided by a co-conspirator to repetitively purchase and resell the firearms without a license or for other criminal purposes, or funds that were laundered from past illicit firearms transactions. Such illicit and repetitive firearm purchase and sale activities do not require proof of profit for the Government to prove the requisite intent under 18 U.S.C. 921(a)(22), which states that proof of profit is not required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism.

The first presumption proposed within the third category listed above—that a person would be presumed to be engaged in the business when repetitively purchasing, reselling, or offering to sell firearms through straw or sham businesses or individual straw purchasers or sellers—reflects that persons who conceal their transactions by setting up straw or sham businesses or hiring ''middlemen'' to conduct transactions on their behalf are often engaged in the business of dealing in firearms without a license.[74]

The second presumption proposed under the third category—that a person would be presumed to be engaged in the business when repetitively purchasing, reselling, or offering to sell firearms that cannot lawfully be possessed—reflects that such firearms are actively sought by criminals and earn higher profits for the illicit dealer. The dealer is therefore taking on additional labor and risk with the intent of increasing profits. Such dealers will often buy and sell stolen firearms[75] and firearms with obliterated serial numbers[76] because such firearms are preferred by both sellers and buyers to avoid background checks and crime gun tracing.[77] They sometimes sell unregistered National Firearms Act (''NFA'') weapons[78] and unlawfully imported firearms because those firearms are more difficult to obtain, cannot be traced through the National Firearms Registration and Transfer Record, and may sell for a substantial profit.[79] Although these presumptions addressing repetitive straw purchase transactions and contraband firearms sales are intended to establish when persons are most likely to have the requisite intent to ''predominantly earn a profit'' under 18 U.S.C. 921(a)(21)(C), such cases are also supported by 18 U.S.C. 921(a)(22), which does not require the Government to prove an intent to profit where a person repetitively purchases and disposes of firearms for criminal purposes. These presumptions are also implicitly supported by 18 U.S.C. 923(c), which deems any firearm acquired or disposed of with the purpose of willfully evading the restrictions placed on licensed dealers under the GCA to be business inventory, not part of a personal collection. Indeed, concealing the identity of the seller or buyer of a firearm, or the identification of the firearm, undermines the requirements imposed on legitimate dealers to conduct background checks on actual purchasers (18 U.S.C. 922(t)) and maintain transaction records (18 U.S.C. 923(g)(1)–(2)) through which firearms involved in crime can be traced.

The first presumption proposed under the fourth category listed above—repetitive sales or offers for sale of firearms within 30 days from purchase—reflects that firearms for a personal collection are not likely to be repetitively sold within such a short period of time from purchase.[80] That

[74] *See Abramski,* 573 U.S. at 180 (''[C]onsider what happens in a typical straw purchase. A felon or other person who cannot buy or own a gun still wants to obtain one. (Or, alternatively, a person who could legally buy a firearm wants to conceal his purchase, maybe so he can use the gun for criminal purposes without fear that police officers will later trace it to him.''); *Bryan* v. *United* States, 524 U.S. 184, 189 (1998) (defendant used straw purchasers to buy pistols in Ohio for resale in New York); *Ochoa,* 726 F. App'x at 652 (''[W]hile the evidence demonstrated that Ochoa did not purchase and sell the firearms himself, it was sufficient to demonstrate that he had the princip[al] objective of making a profit through the repetitive purchase and sale of firearms, even if those purchases and sales were carried out by others.''); *United States* v. *Hosford,* 843 F.3d 161, 163 (4th Cir. 2016) (defendant purchased firearms through a straw purchaser who bought them at gun shows); *MEW Sporting Goods, LLC.* v. *Johansen,* 992 F. conduct is more consistent with treatment as business inventory.[81] Likewise, under the second and third presumptions proposed under this category, the Department has observed through its investigative and regulatory experience that persons who repetitively sell firearms in new condition or in like-new condition in their original packaging,[82] or firearms of the same or similar kind and type,[83] are not as likely to be repetitively selling such firearms from a personal collection. In contrast with sales from a personal collection, persons engaged in the business who are selling from a business inventory can earn the greatest profit by selling firearms in the best (*i.e.,* in a new) condition, or by selling the particular makes and models of firearms that their customers most want.

The presumption proposed under the fifth category listed above—that a former licensee, or responsible person acting on behalf of such former licensee, is engaged in the business when they sell or offer for sale firearms that were in business inventory upon license termination—recognizes that the licensee likely intended to predominantly earn a profit from the repetitive purchase and resale of those firearms, not to acquire the firearms as a ''personal collection'' or otherwise as a personal firearm. Consistent with the GCA's plain language under section 921(a)(21)(C), this presumption recognizes that former licensees who thereafter intend to predominantly earn a profit from selling firearms that they had previously purchased for resale can still be ''engaging in the business'' after termination of their license. The GCA does not authorize former licensees to continue to be ''engaged in the business'' without a license even if the firearms were purchased while the person had a license.

The final presumption proposed—that a former licensee (or responsible person acting on behalf of the former licensee) is engaged in the business when they sell or offer for sale firearms that were transferred to the personal inventory of such former licensee or responsible person prior to the time the license was terminated, unless the firearms were received and transferred without any intent to willfully evade the restrictions placed on licensees by chapter 44 of title 18 and one year has passed since the transfer—is consistent with 18 U.S.C. 923(c) of the GCA, which deems firearms transferred from a licensee's business inventory to their personal collection or otherwise as a personal firearm as business inventory until one year after the transfer.[84] This provision indicates a congressional determination that one year is a sufficient period for a former licensee to wait before a firearm that is purchased for personal use can be considered part of a personal collection or otherwise as a personal firearm, as opposed to business inventory being resold for profit.

In the NPRM, the Department noted that these presumptions may be rebutted in an administrative or civil proceeding with reliable evidence demonstrating that a person is not ''engaged in the business'' of dealing in firearms.[85] If, for example, there is reliable evidence that an individual purchased a few collectible firearms from a licensed dealer where ''all sales are final'' and then resold those firearms back to the licensee within 30 days because the purchaser was not satisfied, the presumption that the unlicensed reseller is engaged in the business (arising from the evidence of repetitive sales or offers for sale of firearms within 30 days from purchase) may be rebutted.

219008, at *3 (E.D. Mich. Jan. 20, 2011) (some of the weapons defendant sold at gun shows were purchased ''a short time earlier''); *United States* v. *One Assortment of 89 Firearms,* 511 F. Supp. 133, 137 (D.S.C. 1980) (''That several sales of firearms occur in a reasonably short space of time is evidence of dealing in firearms.'').

[81] Further support for this 30-day presumption comes from the fact that, while many retailers do not allow firearm returns, some retailers and manufacturers do allow a 30-day period within which a customer who is dissatisfied with a firearm purchased for a personal collection or hobby can return or exchange the firearm. Dissatisfied personal collectors and hobbyists—persons not intending to engage in the business—are more likely to return new firearms rather than to incur the time, effort, and expense to resell them within that period of time. *See, e.g.,* Learn about the 30 Day Money Back Guarantee*: How to Return Your Firearm,* Walther Arms, *https://waltherarms.com/connect/guarantee#* (last visited Apr. 4, 2024); *Retail Policies,* Center Target Sports, *https://centertargetsports.com/retail-range/* (last visited Feb. 29, 2024) (''When you purchase any gun from Center Target Sports, we guarantee your satisfaction. [82] *See, e.g., Carter,* 203 F.3d at 189 & n.1 (defendant admitted to willfully shipping and transporting 11 handguns in the course of engaging in the business of dealing in firearms without a license that were contained in their original boxes); *Brenner,* 481 F. App'x at 127 (defendant frequently referred to firearms as ''coming in'' and ''brand new''); *United States* v. *Van Buren,* 593 F.2d 125, 126 (9th Cir. 1979) (defendant's ''gun displays were atypical of those of a collector because he exhibited many new weapons, some in the manufacturers' boxes''); *United States* v. *Powell,* 513 F.2d 1249, 1250 (8th Cir. 1975) (defendant acquired and sold six ''new'' or ''like new'' shotguns over several months); *United States* v. *Posey,* 501 F.2d 998, 1002 (6th Cir. 1974) (defendant offered firearms for sale, some of them in their original boxes); *United States* v. *Day,* 476 F.2d 562, 564, 567 (6th Cir. 1973) (60 of the 96 guns to be sold by defendant were new handguns still in the manufacturer's original packages).

[83] *See, e.g.,* Press Release, DOJ, *FFL Sentenced for Selling Guns to Unlicensed Dealers* (May 27, 2022), *https://www.justice.gov/usao-ndtx/pr/ffl-sentenced-selling-guns-unlicensed-dealers* (defendant regularly sold large quantities of identical firearms to unlicensed associates who sold them without a license); *Shipley,* 546 F. App'x at 453 (defendant sold mass-produced firearms of similar make and model that were ''not likely to be part of a personal collection'').

[84] Even if one year has passed from the date of transfer, business inventory transferred to a personal collection or otherwise as a personal firearm of a former licensee (or responsible person acting on behalf of that licensee) prior to termination of the license cannot be treated as part of a personal collection or as a personal firearm if the licensee received or transferred those firearms with the intent to willfully evade the restrictions placed upon licensees by the GCA (*e.g.,* willful violations as cited in a notice of license revocation or denial of renewal). This is because, under section 923(c), any firearm acquired or disposed of with intent to willfully evade the restrictions placed upon licensees by the GCA is automatically business inventory. Therefore, because the firearms are statutorily deemed to be business inventory under either of these circumstances, a former licensee (or responsible person acting on behalf of such licensee) who sells such firearms is presumed to be engaged in the business, requiring a license.

[85] An example of an administrative proceeding where rebuttable evidence might be introduced would be where ATF denied a firearms license application, pursuant to 18 U.S.C. 923(d)(1)(C) and (f)(2), on the basis that the applicant was presumed under this rule to have willfully engaged in the business of dealing in firearms without a license. An example of a civil case would be an asset forfeiture proceeding, brought in a district court pursuant to 18 U.S.C. 924(d)(1), on the basis that the seized firearms were intended to be involved in willful conduct presumed to be engaging in the business without a license under this rule.

Similarly, the presumption that a person who repetitively resells firearms of the same make and model within one year of their purchase is ''engaged in the business'' could be rebutted based on evidence that the person is a collector who occasionally sells one specific kind and type of curio or relic firearm to buy another one in better condition to ''trade-up'' or enhance the seller's personal collection.[86] Another example in which evidence may rebut the presumption would be the occasional sale, loan, or trade of an almost-new firearm in its original packaging to a family member for lawful purposes, such as for their use in hunting, without the intent to earn a profit or to circumvent the requirements placed on licensees.[87]

E. Definition of ''Personal Collection,'' ''Personal Collection of Firearms,'' and ''Personal Firearms Collection''

The NPRM explained that the statutory definition of ''engaged in the business'' excludes ''a person who makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of his personal collection of firearms.'' 18 U.S.C. 921(a)(21)(C). To clarify this definitional exclusion, the proposed rule would: (1) add a single definition for the terms ''personal collection,'' ''personal collection of firearms,'' and ''personal firearms collection''; (2) explain how those terms apply to licensees; and (3) make clear that licensees must follow the verification and recordkeeping procedures in 27 CFR 478.94 and subpart H, rather than using ATF Form 4473, when they acquire firearms from other licensees, including a sole proprietor who transfers a firearm to their personal collection or otherwise as a personal firearm in accordance with 27 CFR 478.125a.

Specifically, the NPRM proposed to define ''personal collection,'' ''personal collection of firearms,'' and ''personal firearms collection'' as ''personal firearms that a person accumulates for study, comparison, exhibition, or for a hobby (*e.g.,* noncommercial, recreational activities for personal enjoyment such as hunting, or skeet, target, or competition shooting).'' This reflects a common definition of the terms ''collection'' and ''hobby.'' [88] The phrase ''or for a hobby'' was adopted from 18 U.S.C. 921(a)(21)(C), which excludes from the definition of ''engaged in the business'' firearms acquired ''for'' a hobby. The NPRM also expressly excluded from the definition of ''personal collection'' ''any firearm purchased for resale or made with the predominant intent to earn a profit.'' 18 U.S.C. 921(a)(21)(C).

The NPRM further explained that, under the GCA, 18 U.S.C. 923(c), and its implementing regulations, 27 CFR 478.125(e) and 478.125a, a licensee who acquires firearms for a personal collection is subject to certain additional requirements before the firearms can become part of a ''personal collection.'' [89] Accordingly, the proposed rule further explained how that term would apply to firearms acquired by a licensee (*i.e.,* a person engaged in the business as a licensed manufacturer, licensed importer, or licensed dealer under the GCA), by defining ''personal collection,'' ''personal collection of firearms,'' or ''personal firearms collection,'' when applied to licensees, to include only firearms that were: (1) acquired or transferred without the intent to willfully evade the restrictions placed upon licensees by chapter 44, title 18, United States Code; [90] (2) recorded by the licensee as an acquisition in the licensee's acquisition and disposition record in accordance with 27 CFR 478.122(a), 478.123(a), or 478.125(e) (unless acquired prior to licensure and not intended for sale); [91] (3) recorded as a disposition from the licensee's business inventory to their personal collection in accordance with 27 CFR 478.122(a), 478.123(a), or 478.125(e); (4) stored separately from, and not commingled with the business inventory, and appropriately identified as ''not for sale'' (*e.g.,* by attaching a tag), if on the business premises; [92] and (5) maintained in such personal collection (whether on or off the business premises) for at least one year from the date the firearm was so transferred, in accordance with 18 U.S.C. 923(c) and 27 CFR 478.125a.[93] These proposed parameters to define the term ''personal collection'' as applied to licensees reflect the statutory and regulatory requirements for personal collections in 18 U.S.C. 923(c) and 27

[86] *See Palmieri,* 21 F.3d at 1269 (''The fact finder must determine whether the transactions constitute hobby-related sales or engagement in the business of dealing from the nature of the sales and in light of their circumstances.'').

[87] *See, e.g., Clark* v. *Scouffas,* No. 99–C–4863, 2000 WL 91411, at *3 (N.D. Ill. Jan. 19, 2000) (license applicant was not a ''dealer'' who was ''engaged in the business'' as defined under section 921(a)(21)(C) where he only sold a total of three .38 Special pistols—two to himself, and one to his wife—without any intent to profit).

[88] *See* Webster's Third at 444, 1075, 1686 (defining the term ''personal'' to include ''of or relating to a particular person,'' ''collection'' to include ''an assembly of objects or specimens for the purposes of education, research, or interest'', and ''hobby'' as ''a specialized pursuit . . . that is outside one's regular occupation and that one finds particularly interesting and enjoys doing''); *Personal,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/personal* (last visited Mar. 1, 2024) (defining the term ''personal'' to include ''of, relating to, or affecting a particular person''); *Collection,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/collection* (last visited Mar. 1, 2024) (defining ''collection'' to include ''an accumulation of objects gathered for study, comparison, or exhibition or as a hobby''); *Hobby,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/hobby* (last visited Mar. 1, 2024) (defining ''hobby'' as a ''pursuit outside one's regular occupation engaged in especially for relaxation''); *see also Idarecis,* 164 F.3d 620, 1998 WL 716568, at *4 (''There is no case authority to suggest that there is a distinction between the definition of a collector and of a [personal] collection in the statute.'').

[89] The GCA, 18 U.S.C. 923(c), and its implementing regulations, also require that all firearms ''disposed of'' from a licensee's personal collection, including firearms acquired before the licensee became licensed, that are held for at least one year and that are sold or otherwise disposed of, must be recorded as a disposition in a personal bound book. *See* 18 U.S.C. 923(c); 27 CFR 478.125a(a)(4).

[93] *See* ATF, *May a Licensee Maintain a Personal Collection of Firearms? How Can They Do So?, https://www.atf.gov/firearms/qa/may-licensee-maintain-personal-collection-firearms-how-can-they-do-so* (last reviewed July 15, 2020).

CFR 478.122(a), 478.123(a), 478.125(e), and 478.125a.[94] To implement these changes, the rule also proposed to make conforming changes by adding references in 27 CFR 478.125a to the provisions that relate to the acquisition and disposition recordkeeping requirements for importers and manufacturers.

F. Definition of ''Responsible Person''

The NPRM also proposed to add a regulatory definition of the term ''responsible person'' in 27 CFR 478.11, to mean ''[a]ny individual possessing, directly or indirectly, the power to direct or cause the direction of the management and policies of a sole proprietorship, corporation, company, partnership, or association, insofar as they pertain to firearms.'' This definition comes from 18 U.S.C. 923(d)(1)(B) and has long been reflected on the application for license (Form 7) and other ATF publications since enactment of a similar definition in the Safe Explosives Act in 2002.[95] This definition would exclude, for example, store clerks or cashiers who cannot make management or policy decisions with respect to firearms (*e.g.,* what company or store-wide policies and controls to adopt, which firearms are bought and sold by the business, and who is hired to buy and sell the firearms), even if their duties include buying or selling firearms for the business.

G. Definition of ''Predominantly Earn a Profit''

The NPRM also explained that the BSCA broadened the definition of ''engaged in the business'' as a dealer by substituting ''to predominantly earn a profit'' for ''with the principal objective of livelihood or profit.'' 18 U.S.C. 921(a)(21)(C). It also defined the term ''to predominantly earn a profit.'' 18 U.S.C. 921(a)(22). The NPRM proposed to incorporate those statutory changes, as discussed above.

The NPRM proposed to further implement the BSCA's amendments by: (1) clarifying that the ''proof of profit'' proviso—*i.e.,* the BSCA's provision that ''proof of profit shall not be required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism''—also excludes intent to profit, thus making clear that it is not necessary for the Federal Government to prove that a person intended to make a profit if the person was dealing in firearms for criminal purposes or terrorism; (2) clarifying that a person may have the predominant intent to profit even if the person does not actually obtain pecuniary gain from selling or disposing of firearms; and (3) establishing a presumption in civil and administrative proceedings that certain conduct demonstrates the requisite intent to ''predominantly earn a profit,'' absent reliable evidence to the contrary.

These proposed regulatory amendments are consistent with the plain language of the GCA. Neither the pre-BSCA definition of ''with the principal objective of livelihood and profit'' nor the post-BSCA definition of ''to predominantly earn a profit'' requires the Government to prove that the defendant actually profited from firearms transactions. *See* 18 U.S.C. 921(a)(22), (a)(23) (referring to ''the intent underlying the sale or disposition of firearms''); *Focia,* 869 F.3d at 1282 (''The exact percentage of income obtained through the sales is not the test; rather, . . . the statute focuses on the defendant's motivation in engaging in the sales.'').[96]

ATF's experience also establishes that certain conduct related to the sale or disposition of firearms presumptively demonstrates a primary motivation to earn a profit. In addition to conducting criminal investigations of unlicensed firearms businesses under 18 U.S.C. 922(a)(1)(A), ATF has for many decades observed through qualification and compliance inspections how dealers who sell or dispose of firearms demonstrate a predominant intent to obtain pecuniary gain, as opposed to other intents, such as improving or liquidating a personal collection.

Based on this decades-long body of experience, the proposed rule provided that, absent reliable evidence to the contrary, a person would be presumed to have the intent to ''predominantly earn a profit'' when the person: (1) advertises, markets, or otherwise promotes a firearms business (*e.g.,* advertises or posts firearms for sale, including on any website; establishes a website for selling or offering for sale their firearms; makes available business cards; or tags firearms with sales prices), regardless of whether the person incurs expenses or only promotes the business informally; [97] (2) purchases, rents, or otherwise secures or sets aside permanent or temporary physical space to display or store firearms they offer for sale, including part or all of a business premises, table or space at a gun show, or display case; [98] (3) makes or maintains records, in any form, to document, track, or calculate profits and losses from firearms purchases and sales; [99] (4) purchases or otherwise secures merchant services as a business (*e.g.,* credit card transaction services, digital wallet for business) through

[94] The existing regulations, 27 CFR 478.125(e) and 478.125a—which require licensees to record the purchase of all firearms in their business bound books, record the transfer of firearms to their personal collection, and demonstrate that personal firearms obtained before licensing have been held at least one year prior to their disposition as personal firearms—were upheld by the Fourth Circuit in *National Rifle Ass'n,* 914 F.2d at 482–83.

[95] *See* 18 U.S.C. 841(s); *Application for Federal Firearms License,* ATF Form 7, Definition 3 (5300.12) (Oct. 2020); *Gilbert* v. *ATF,* 306 F. Supp. 3d 776, 781 (D. [98] *See, e.g., United States* v. *Wilkening,* 485 F.2d 234, 235 (8th Cir. 1973) (defendant set up a glass display case and displayed for sale numerous ordinary long guns and handguns that were not curios or relics); *United States* v. *Jackson,* 352 F. Supp. 672, 676 (S.D. Ohio 1972), *aff'd,* 480 F.2d 927 (6th Cir. 1973) (defendant set up glass display case, displaying numerous long guns and handguns for sale that were not curios or relics); Press Release, DOJ, *Asheville Man Sentenced for Dealing Firearms Without a License* (Jan. 20, 2017), *https://www.justice.gov/usao-wdnc/pr/asheville-man-sentenced-dealing-firearms-without-license-0* (defendant sold firearms without a license from his military surplus store).

[99] *See, e.g., United States* v. *White,* 175 F. App'x 941, 942 (9th Cir. 2006) (''Appellant also created a list of all the firearms he remembers selling and the person to whom he sold the firearm.''); *Dettra,* 2000 WL 1872046, at *2 (''Dettra carefully recorded the cost of each firearm he acquired, enabling him to later determine the amount needed to sell the item in a profitable manner.''); *United States* v. *Angelini,* 607 F.2d 1305, 1307 (9th Cir. 1979) (defendant kept sales slips or invoices).

which the person makes or offers to make payments for firearms transactions; [100] (5) formally or informally purchases, hires, or otherwise secures business security services (*e.g.,* a central station-monitored security system registered to a business [101] or guards for security [102]) to protect business assets or transactions that include firearms; (6) formally or informally establishes a business entity, trade name, or online business account, including an account using a business name on a social media or other website, through which the person makes or offers to make firearms transactions; [103] (7) secures or applies for a State or local business license to purchase for resale or to sell merchandise that includes firearms; or (8) purchases a business insurance policy, including any riders that cover firearms inventory.[104] Any of these firearms-business-related activities justifies a rebuttable presumption that the person has the requisite intent to predominantly earn a profit from reselling or disposing of firearms.

The NPRM noted that these rebuttable presumptions concerning an intent ''to predominantly earn a profit'' are independent of the set of presumptions described above regarding conduct that presumptively shows a person is ''engaged in the business.'' This second set of presumptions that addresses only intent ''to predominantly earn a profit'' would be used to independently establish the requisite intent to profit in a particular proceeding. As with the ''engaged in the business'' presumptions, the activities set forth in these intent presumptions would not be exhaustive of the conduct that may show that, or be considered in determining whether, a person actually has the requisite intent ''to predominantly earn a profit.'' There are many other fact patterns that would not fall within the specific conduct that presumptively requires a license under this rule but that reveal one or more preparatory steps that presumptively demonstrate an intent to predominantly earn a profit from firearms transactions. Again, none of these presumptions would apply to criminal prosecutions, but could be useful to courts in criminal cases, for example, to inform appropriate jury instructions regarding permissible inferences. These presumptions would be supported by the Department's investigative and regulatory efforts and experience as well as conduct that the courts have relied upon in determining whether a person was required to be licensed as a dealer in firearms even before the BSCA expanded the definition.

H. Disposition of Business Inventory After Termination of License

The NPRM next explained that one public safety issue that ATF has encountered over the years relates to former licensees who have liquidated their business inventory of firearms without performing background checks or maintaining required records after their license was revoked, denied renewal, or otherwise terminated (*e.g.,* license expiration or surrender of license). Some former licensees have transferred their business inventory of firearms to a ''personal collection'' and then sold them without performing background checks or recordkeeping.[105] Sometimes former licensees even continue to acquire more firearms for resale (''restocking'') after license termination. These activities have resulted in numerous firearms being sold without background checks by former licensees (including those whose licenses have been revoked or denied due to willful violations of the GCA) to potentially prohibited persons without any ability to trace those firearms if later used in crime.[106]

The NPRM proposed to revise the regulation's sections on discontinuing business, 27 CFR 478.57 and 478.78, to clarify how the prohibitions on engaging in the business of dealing in firearms without a license in 18 U.S.C 922(a)(1)(A) and 923(a) apply with respect to the sale of firearms that remain in the possession of a former licensee (or a responsible person of the former licensee) as business inventory at the time the license is terminated. Firearms that were in the business inventory of a former licensee at the time the license was terminated (*i.e.,* license revocation, denial of license renewal, license expiration, or surrender of license) and that remain in the possession of the licensee (or a responsible person acting on behalf of the former licensee) are not part of a ''personal collection.'' While 18 U.S.C. 921(a)(21)(C) allows an unlicensed person to ''sell all or part of his personal collection'' without being considered ''engaged in the business,'' in this context, these firearms were purchased

[100] *See, e.g., King,* 735 F.3d at 1106–07 (defendant ''incorporated and funded a firearms business 'on behalf' of a friend whose American citizenship enabled business to obtain Federal firearms license'' and then ''misappropriated company's business account, using falsified documentation to set up credit accounts and order firearms from manufacturers and wholesalers''); *Dettra,* 2000 WL 1872046, at *2 (''Dettra's . . . acceptance of credit payment provide[s] further reason to infer that he was conducting his firearms activity as a profitable trade or business, and not merely as a hobby.'').

[101] Numerous jurisdictions require all persons with alarms or security systems designed to seek a police response to be registered with or obtain a permit from local police and pay the requisite fee. *See, e.g.,* Albemarle County (Virginia) Code sec. 12–102(A); Arlington County (Virginia) Code sec. 33–10(A); Cincinnati (Ohio) City Ord. Ch. 807–1–A4 (2); City of Coronado (California) Code sec. 40.42.050; Irvine (California) Code sec. 4–19–105; Kansas City (Missouri) Code sec. 50–333(a); Larimer County (Colorado) Security Alarm Ord. 09142010O001 sec. 3(A); Lincoln (Nebraska) Mun. Code sec. 5.56.030(a); Los Angeles (California) Mun. Code sec. 103.206(b); Loudoun County (Virginia) Code sec. 655.03(a); Mobile (Alabama) Code sec. 39–62(g)(1); Montgomery County (Maryland) Code sec. 3A–3; Prince William County (Virginia) Code sec. 2.5.25(a); Rio Rancho (New Mexico) Mun. Code sec. 97.04(A); Scottsdale (Arizona) Code sec. 3–10(a); Tempe (Arizona) Code sec. 22–76(a); Washington County (Oregon) Code sec. 8.12.040; West Palm Beach (Florida) Code sec. 46–32(a); Wilmington (Delaware) Code sec. 10–38(c); Woburn (Massachusetts) Code sec. 8–31. Due to the value of the inventory and assets they protect, for-profit businesses are more likely to maintain, register, and pay for these types of alarms rather than individuals seeking to protect personal property.

[102] *See, e.g., United States* v. *De La Paz-Rentas,* 613 F.3d 18, 22–23 (1st Cir. 2010) (defendant was hired as bodyguard for protection in an unlawful firearms transaction).

[103] *See, e.g., United States* v. *Gray,* 470 F. App'x at 469 (defendant sold firearms through his sporting goods store, advertised his business using signs and flyers, and displayed guns for sale, some with tags).

[104] *See, e.g., United States* v. *Kish,* 424 F. App'x 398, 404 (6th Cir. 2011) (defendant could only have 200 firearms on display because of insurance policy limitations).

[105] *See, e.g.,* Annie Linskey, *Closed Store Is a Source of Guns,* Baltimore Sun (Apr. 15, 2008), *https://www.baltimoresun.com/news/bs-xpm-2008-04-15-0804150118-story.html* (after revocation of license, a dealer transferred around 700 guns to his ''personal collection'' and continued to sell them without recordkeeping). The problem of licensees liquidating their business inventory of firearms as firearms from their ''personal collections'' without background checks or recordkeeping has been referred to by some advocacy groups and Members of Congress as the ''fire-sale loophole.'' *See* Dan McCue, *Booker Bill Takes Aim at Gun Fire Sale Loophole,* The Well News (Sept. 9, 2022), *https://www.thewellnews.com/guns/booker-bill-takes-aim-at-gun-fire-sale-loophole/;* Shira Toeplitz, *Ackerman Proposes Gun-Control Bill to Close 'Firesale Loophole',* Politico: On Congress Blog (Jan. 12, 2011), *https://www.politico.com/blogs/on-congress/2011/01/ackerman-proposes-gun-control-bill-to-close-firesale-loophole-032289.*

[106] *See, e.g., Dettra,* 2000 WL 1872046, at *2 (defendant continued to deal in firearms after license revocation); Press Release, DOJ, *Gunsmoke Gun Shop Owner and Former Discovery Channel Star Indicted and Arrested for Conspiracy, Dealing in Firearms without a License and Tax Related Charges* (Feb. 11, 2016), *https://www.justice.gov/opa/pr/gunsmoke-gun-shop-owner-and-former-discovery-channel-star-indicted-and-arrested-conspiracy* (defendant continued to deal in firearms at a different address after he surrendered his FFL due to his violations of the Federal firearms laws and regulations); *Kish,* 424 F. App'x at 405 (defendant continued to sell firearms after revocation of license); *Gilbert* v. *Bangs,* 813 F. Supp. 2d 669, 672 (D. Md. 2011), *aff'd* 481 F. App'x 52 (4th Cir. 2012) (license denied to applicant who willfully engaged in the business after license revocation); ATF Letter to AUSA (Mar. 13, 1998) (advising that seized firearms offered for sale were not deemed to be part of a ''personal collection'' after surrender of license).

by the former licensee as business inventory and were not accumulated by that person for study, comparison, exhibition, or for a hobby. Accordingly, a former licensee who sells business inventory after their license is terminated could be unlawfully engaging in the business of dealing in firearms without a license.

Under the proposals to revise 27 CFR 478.57 (discontinuance of business) and 478.78 (operations by licensee after notice), once a license has been terminated (*i.e.,* license revocation, denial of license renewal, license expiration, or surrender of license), the former licensee would have 30 days, or such additional period designated by the Director for good cause, to either: (1) liquidate any remaining business inventory by selling or otherwise disposing of the firearms to a licensed importer, licensed manufacturer, or licensed dealer for sale, auction, or pawn redemption in accordance with part 478 of the regulations; [107] or (2) transfer the remaining business inventory to the ''personal inventory of the former licensee'' (or a responsible person of the former licensee) provided the recipient is not prohibited by law from receiving or possessing firearms. The term ''personal inventory of the former licensee'' was proposed to clarify that such firearms are not part of a ''personal collection'' within the meaning of 18 U.S.C. 921(a)(21)(C). Except for the sale of remaining inventory to a licensee within the 30-day period (or designated additional period), a former licensee (or responsible person of such licensee) who resells any such inventory, including business inventory transferred to ''personal inventory,'' would be subject to the same presumptions in 27 CFR 478.11 (definition of ''engaged in the business'' as a dealer other than a gunsmith or pawnbroker) that apply to a person who repetitively purchased those firearms for the purpose of resale.

The 30-day period from license termination for a former licensee to transfer the firearms either to another licensee or to a personal collection parallels the period of time for record disposition after license termination in the GCA, 18 U.S.C. 923(g)(4), and is a reasonable period for that person to wind down operations after discontinuance of business without acquiring new firearms.[108] That period of liquidation was proposed to be extendable by the Director for good cause, such as to allow pawn redemptions if required by State, local, or Tribal law.

Also, the NPRM proposed to make clear in the definition of ''personal collection'' in 27 CFR 478.11 that firearms transferred by a former licensee to a personal collection prior to the license termination would not be considered part of a personal collection unless one year had passed from the date the firearm was transferred into the personal collection before the license was terminated. This proposal would give effect to 18 U.S.C. 923(c), which requires that all firearms acquired by a licensee be maintained as part of a personal collection for a period of at least one year before they lose their status as business inventory. Former licensees (or responsible persons) who sell business inventory within one year after transfer to a personal collection would be presumed to be engaging in the business of dealing in those firearms because the firearms are not yet considered part of a ''personal collection.'' *See* § 478.13(b)(5).

Moreover, under the proposed rule, a former licensee would not be permitted to continue to engage in the business of importing, manufacturing, or dealing in firearms by importing or manufacturing additional firearms for purposes of sale or distribution, or purchasing additional firearms for resale (*i.e.,* ''restocking'') without a license. Therefore, a former licensee (or responsible person) would be subject to the same presumptions in 27 CFR 478.11 (definition of ''engaged in the business'' as a dealer other than a gunsmith or pawnbroker) that apply to persons who sell firearms that were repetitively purchased with the predominant intent to earn a profit and any sales by such a person will be closely scrutinized by the Department on a case-by-case basis.

I. Transfer of Firearms Between FFLs and Form 4473

Finally, to ensure the traceability of all firearms acquired by licensees from other licensees, the NPRM proposed to make clear that licensees cannot satisfy their obligations under 18 U.S.C. 923(g)(1)(A) by completing a Form 4473 when selling or otherwise disposing of firearms to another licensed importer, licensed manufacturer, or licensed dealer, or disposing of a curio or relic to a licensed collector, including a sole proprietor licensee who transfers the firearm to their personal collection or otherwise as a personal firearm in accordance with 27 CFR 478.125a.[109] Form 4473 was not intended for use by licensees when transferring firearms to other licensees or by a sole proprietor transferring to their personal collection or otherwise as a personal firearm.

Pursuant to 18 U.S.C. 926(a)(1) and 27 CFR 478.94, 478.122(b), 478.123(b), and 478.125(e), when a licensee transfers a firearm to another licensee, the transferor must first verify the recipient's identity and license status by examining a certified copy of the recipient's license and recording the transfer as a disposition to that licensee in the bound book record. In turn, the recipient licensee would record the receipt as an acquisition in their bound book record. *See* 27 CFR part 478, subpart H. The NPRM explained that if a recipient licensee were to complete a Form 4473 for the purchase of a firearm, but not record that receipt in their bound book record, asserting it is a ''personal firearm,'' then tracing efforts pursuant to the GCA could be hampered if the firearm was later used in a crime.

However, this clarification that FFLs may not satisfy their obligations by completing a Form 4473 to transfer firearms between themselves would not include dispositions by a licensed legal entity such as a corporation, company (to include a limited liability company), or partnership, to the personal collection of a responsible person of such an entity. This is because, when a responsible person acquires a firearm for their personal collection from the business entity holding the license, they are not acting on behalf of the licensee, even if the entity in which they are employed holds a Federal firearms license.[110] Such an entity, including a

[107] Consistent with its dictionary definition, the term ''liquidate'' in this context means to sell or otherwise dispose of a firearms inventory without acquiring additional firearms for the inventory (*i.e.,* ''restocking''). *See Liquidate,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/liquidate* (last visited Mar. 4, 2024) (defining ''liquidate'' as ''to convert (assets) into cash''); *see also, e.g., Brenner,* 481 F. App'x at 127 (defendant former licensee was not liquidating a personal collection where all of the indictment-charged firearms were acquired after his license had not been renewed).

[108] *See also* 27 CFR 478.57 (requiring the owner of a discontinued or succeeded business to notify ATF of such discontinuance or succession within 30 days); 27 CFR 478.127 (requiring discontinued businesses to turn in records within 30 days).

[109] *See* ATF, *FFL Newsletter: Federal Firearms Licensee Information Service* 7 (Mar. 2006), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensees-newsletter-march-2006/download* (''A dealer who purchases a firearm from another licensee should advise the transferor licensee of his or her licensed status so the transferor licensee's records may accurately reflect that this is a transaction between licensees. An ATF Form 4473 should not be completed for such a transaction, because this form is used only for a disposition to a nonlicensee.'').

[110] *See* ATF Ruling 2010–1, *Temporary Assignment of a Firearm by an FFL to an Unlicensed Employee* (May 20, 2010), *https://www.atf.gov/firearms/docs/ruling/2010-1-temporary-assignment-firearm-ffl-unlicensed-employee/download* (permanently assigning a

Continued

corporation, company, or partnership, would therefore have to use a Form 4473, NICS check, and disposition record entry when transferring a firearm to one of its individual officers (or partners, in the case of a partnership, or members, in the case of a limited liability company) for their personal use.[111]

IV. Analysis of Comments and Department Responses

Subsections in Section IV

A. Issues Raised in Support of the Rule
B. Issues Raised in Opposition to the Rule
C. Concerns With Specific Proposed Provisions
D. Concerns With the Economic Analysis

In response to the NPRM, ATF received nearly 388,000 comments. Of these, there were nearly 258,000 comments that expressed support for the proposed rule, or approximately two thirds of the total number of comments. Of these, over 252,000 (or approximately 98 percent) were submitted by individuals as form letters, *i.e.,* identical text that is often supplied by organizations or found online and recommended to be submitted to the agency as a comment.[112] There were nearly 99,000 comments opposed to the rule, or approximately 26 percent of the total number of comments, of which over 80,000 (or approximately 81 percent) were submitted as form letters.[113] The commenters' grounds for support and opposition, along with specific concerns and suggestions, are discussed below.

ATF also received some comments and recommendations on issues that are outside the scope of this rulemaking, such as comments asking ATF to implement provisions of the BSCA other than the definition of ''engaged in the business,'' [114] and comments not addressing issues presented in the proposed rule. Comments and recommendations that were outside the scope of this rulemaking, or received after the comment period deadline, are not addressed in this final rule.[115]

A. Issues Raised in Support of the Rule

As noted, nearly 258,000 commenters expressed support for the NPRM, including through form letters submitted as part of mass mail campaigns. The majority provided specific reasons why they supported the proposed rule. ATF received supporting comments from a wide variety of individuals and organizations, such as multiple city and State officials, including almost half of the States' attorneys general; Members of Congress; [116] teachers and teacher organizations; doctors, national medical organizations, and hospitals; victim advocate organizations; clergy and religious organizations; firearm owners; student and parent organizations; military veterans and active duty members; persons with law enforcement backgrounds; and various firearm control advocacy organizations, among many others. As discussed below, numerous commenters raised particular reasons they consider the rule necessary, as well as suggestions regarding the Department's proposed amendments to ATF regulations.

1. General Support for the Rule

Comments Received

Commenters supported the rule for a wide variety of reasons. The vast majority of supportive commenters expressed overall relief that this rule was forthcoming, were in support of the provisions as at least a beginning toward needed increases in public safety, and indicated that the rule was well designed. For example, one commenter stated, ''I wholeheartedly support the proposed amendments,'' while another added, ''I am thrilled that the ATF is taking action to tighten background checks.'' Another commenter said, ''[w]ow. What a well thought out and thorough set of rules . . . . I support the rules set out as written.'' A fourth commenter, an organization, said, ''[i]t is important to note that the various parts of the Proposed Rule are carefully integrated and work together to bring clarity, balance, and enforceability to the GCA's implementing regulations after BSCA amended the GCA—and we urge ATF to preserve each and every provision through to final publication.''

Those who commented about their public safety concerns added that this rule would help reduce gun violence, prevent prohibited persons from obtaining firearms, make communities safer, and save lives of both private citizens and police personnel, all of which they considered essential. The overall sentiment, as succinctly summed up in one of the form letters submitted by many thousands in support of the regulation, was, ''we must do what we can to stop gun violence.'' One commenter stated that moving beyond guidance to rulemaking is ''absolutely essential'' to ensure those selling firearms for profit are conducting background checks that are essential for public safety. One veteran and gun owner stated, ''I have great respect for the challenging but important role the [ATF] plays to ensure firearms are properly sold to and remain in the hands of owners who can both *legally and safely* own a firearm. Public Safety is paramount for me and will always supersede any perceived infringement on my Second Amendment Rights.'' Another commenter stated that numerous avenues must be taken to help protect Americans and emphasized that the number of mass shootings, suicides by gun, domestic violence deaths by firearms, and all the other shooting deaths ''are out of control, and appalling.'' Many other commenters also expressed their concern for public safety, for keeping prohibited persons from having firearms, and the resulting need for this rule, stating for example,

---

firearm to a specific employee for personal use is considered a ''transfer'' that would trigger the recordkeeping and NICS background check requirements).

[111] *See* ATF, *Does an Officer or Employee of an Entity That Holds a Federal Firearms License, Such as a Corporation, Have to Undergo a NICS Check When Acquiring a Firearm for Their Own Personal Collection?, https://www.atf.gov/firearms/qa/does-officer-or-employee-entity-holds-federal-firearms-license-such-corporation-have* (last reviewed May 22, 2020); ATF, 2 *FFL Newsletter: Federal Firearms Licensee Information Service* 4 (Sept. 2013), *https://www.atf.gov/firearms/docs/newsletter/federal-firearms-licensees-newsletter-september-2013-volume-2/download.*

[112] There were four form letter campaigns in support of the rule and five form letter campaigns in opposition to the rule. Altogether, form letters totaled 332,000 comments, or about 86 percent. The vast majority of these form letter submissions included the name and city/state of the commenter. However, thousands also included personal stories, information, and concerns in addition to the form letter text. For example, at least one of these form letters had more than 1,000 variations (identified by a text analytics program and subsequent manual review) due to commenter additions and changes.

[113] In addition to the number of comments in support or in opposition to the rule, for about 1,000 comments, the commenters' positions could not be determined. Another nearly 30,000 comments were identified by a text analytics program as duplicate submissions, some in support and some in opposition to the rulemaking.

[114] The Department is incorporating other firearm provisions of the BSCA into ATF regulations through a separate rulemaking, a direct final rule entitled ''Bipartisan Safer Communities Act Conforming Regulations.''

[115] *See Thompson* v. *Clark,* 741 F.2d 401, 408 (D.C. Cir. 1984) (''[The Administrative Procedure Act] has never been interpreted to require the agency to respond to every comment, or to analyze every issue or alternative raised by the comments, no matter how insubstantial.''); *cf. Home Box Off., Inc.* v. *FCC,* 567 F.2d 9, 35 n.58 (D.C. Cir. 1977) (''[O]nly comments which, if true, raise points relevant to the agency's decision and which, if adopted, would require a change in an agency's proposed rule cast doubt on the reasonableness of a position taken by the agency.'').

[116] ATF received two letters from Members of the United States House of Representatives in support of the rule, one dated December 1, 2023, with 149 signatories, and another dated December 7, 2023, with seven signatories. ATF received one letter in support from Members of the United States Senate, dated November 30, 2023, with 17 signatories.

''[a]lthough no single action will eliminate gun violence, this rule, which will have an especial impact on reducing gun access to those who are most interested in using it for ill, is essential to saving lives in our country.''

Many of the commenters believed that the proposed rule would increase public safety. One commenter stated, for example, that ''broadening the language [as Congress did in the statute] and strengthening this particular regulation will help to serve as a strong foundation for potential reforms in the future.'' Numerous other commenters stated that they considered the rule's provisions to be necessary, but only modest or starting steps toward much-needed public safety measures. For example, one commenter stated, ''[t]he standards in the proposed [rule] are such a modest beginning to the action needed to eliminate gun violence in our society.'' A further commenter added, ''if [the rule] could save even one life, wouldn't that be worth it? Please do not let another opportunity pass to do something to make our country safer!''

Military veteran groups in support of gun safety stressed that veterans' unique and valuable understanding of guns comes from the three basic pillars of military gun culture: (1) training, (2) safety, and (3) accountability—concepts they said are often lacking in civilian gun culture and laws. They added that this rule will keep guns out of the hands of dangerous individuals by ensuring that those prohibited by Federal law from purchasing firearms cannot use gun shows or internet sites to avoid our nation's background check laws—people who could be a danger not just to others, but to themselves. Additionally, these veteran groups pointed out that veterans are 2.3 times more likely to die by suicide, and 71 percent of veteran suicides are by gun (compared to about half of nonveteran suicides). Furthermore, they said, guns are 90 percent effective in causing a death by suicide, while all other lethal means combined are less than 5 percent effective. They concluded, ''[t]his rule will save veterans lives; but it must be done now.''

Healthcare and physicians' organizations called gun violence a public health epidemic and urged that ATF issue the rule because it would reduce or prevent firearm-related injuries and death. Several teacher organizations and religious organizations of different denominations expressed similar views, as did multiple parent and student-led organizations. One commenter stated, ''Gun violence is among our nation's most significant public health problems. Indeed, gun violence is the leading cause of death of children and teens. The impact of gun violence is not only death and injury, but also the long-term psychological toll that gun-related incidents inflict on those who survive shootings, as well as on the friends and family members of the injured, killed or impacted.'' They added that the proposed rule is vital and must be finalized. One commenter summarized, ''[t]his ruling can help to address the horrific epidemic of gun violence in this country.'' Another commenter agreed, observing that ''[g]un violence needs to be treated as the public health issue that it is. We owe our children a safe environment in schools as well as places of worship, stores and other public spaces.''

Department Response

The Department acknowledges the commenters' support and agrees that the final rule will increase public safety, as further explained below. *See* Section IV.A.6 and Department Response in Section IV.B.2 of this preamble.

2. Changes Are Consistent With Law

Comments Received

A number of commenters believed the proposed rule's approach was fair and consistent with current law. For example, one commenter stated that the ''proposed rule balances regulatory oversight and individual rights'' and ''ensures that responsible gun enthusiasts can engage in legal sales without unnecessary burdens while addressing concerns related to unlicensed firearms dealing.'' Several other commenters stated that promulgating this rule would not be forcing new law onto people and that the rule falls in line with the new gun laws that have already been established. As another commenter added, under the proposed rule, gun sellers will be no more exposed to criminal liability than they are currently for engaging in unlicensed business dealings; ''they will just have a much clearer sense of what conduct does and does not fall within that prohibition.''

Some commenters said the current process for acquiring firearms from licensed dealers is working, is not burdensome, and should be applied more broadly. For example, one gun owner commented that she could ''attest to how fast a background check can take after completing an online sale and then going to pick up the gun through a local dealer'' and that ''[n]o one is being inconvenienced by doing a [background] check.'' A sport trap shooter agreed, commenting that, ''I don't understand why there is something wrong with [this] process in the eyes of the [National Rifle Association] and others.'' Another commenter added that this rule still easily allows law-abiding people to obtain a gun if they go through the appropriate process. Some State attorneys general agreed, specifically mentioning that ATF's ''predominantly earn a profit'' presumptions are consistent with commercial, for-profit enterprises and are inconsistent with ''other intents, such as improving or liquidating a personal firearms collection,'' that Congress intended to exempt.

Department Response

The Department acknowledges commenters' support for the proposed rule and agrees that the rule is fully consistent with the GCA. The presumptions in the rule are based on the text and structure of the GCA as well as decades of post-FOPA case law interpreting the GCA. Additionally, the presumptions in the rule are consistent with the purpose of the GCA, as amended by the BSCA.

3. Changes Are Consistent With Statutory Authority

Comments Received

Other comments in support of the proposed rule emphasized that the proposed rule, which clarifies who must be licensed as a dealer and perform background checks, is fully within the Department's and ATF's statutory authority. Two sets of congressional commenters from both the House and Senate explained that ATF has interpreted the BSCA amendments to the GCA ''pursuant to the authority that Congress has long and consistently delegated to the Department of Justice and ATF to enforce our federal firearms laws—including the Gun Control Act of 1968 and now BSCA.'' The commenters added, ''[t]he proposed rule is appropriately based on investigative efforts and regulatory action that ATF has undertaken for decades and Congress' recognition that ATF can, and must, address the modern firearms marketplace, including the conditions under which guns are bought and sold. Claims that ATF has overstepped or even usurped Congress' legislative powers are inapposite. ATF has, time and again, implemented the laws that Congress has passed, including those related to licensing requirements and procedures, as well as background checks. ATF's proposed rule is no different.''

Another set of commenters (some State attorneys general) added, ''[t]he proposed rule is an exercise of ATF's inherent authority to amend its own regulations to implement the broadened definition of 'engaged in the business' promulgated by Congress in the BSCA. It is a function explicitly authorized by 18 U.S.C. 926(a), as clarifying a definition within the rule is a 'rule[ ] [or] regulation necessary to carry out the provisions' of the [GCA]. ATF's regulatory authority under the GCA plays a critical role in protecting the public from gun violence and has been repeatedly reaffirmed by federal courts in the decades since the GCA's passage.'' In support, the commenters cited cases in which courts have recognized ATF's expertise and authority to promulgate regulations.

Additional commenters noted that the proposed regulatory changes are fully within ATF's lawful authority and that the proposed rule is, as stated by one commenter, ''in fact necessary for ATF to be able to implement and enforce the new law that Congress has put on the books.'' Citing multiple ATF firearms regulations, this commenter also pointed out that ATF has for decades exercised its authority to promulgate and revise regulations implementing and enforcing the GCA, including by issuing and updating detailed regulatory definitions.

Department Response

The Department acknowledges commenters' support for the proposed rule and agrees that the rule is fully consistent with the Department's and ATF's statutory authority.

4. Enhances Public Safety by Expanding Background Checks

Comments Received

Many commenters opined that the proposed rule would improve public safety by expanding background checks for firearms purchasers. One commenter declared that, ''[a]s a US citizen, I would like to feel safer knowing at least the steps of background checks through the FBI database were done before a person could obtain a weapon.'' Another commented that the danger from unlicensed dealers is great because, according to several recent studies cited by the commenter: (1) over one million ads for firearms are posted each year that would not legally require the seller to conduct a background check for the purchase to be completed; (2) 80 percent of firearms purchased for criminal purposes come from sellers without a license; (3) firearms sold at gun shows are used disproportionately to commit crimes; and (4) 96 percent of inmates convicted of gun offenses were prohibited from having a firearm when they acquired one from an unlicensed seller. Another commenter summed up the current societal situation in their comment using information from a Centers for Disease Control and Prevention (''CDC'') database: ''[e]very day, an average of around 120 people in the United States are killed by gunfire and more than 200 are shot and wounded. Firearms are now the leading cause of death for American children and teens.''

Most supporters thought that the rule provided a fair approach that would increase safety. One commenter declared that the proposal ''is the very minimum our federal government can do to not only protect innocent victims from gun violence but also to protect law abiding gun owners from being tarred with the same brush as irresponsible gun owners.'' A self-described firearm owner commented, ''I whole heartedly support the rule to expand background checks'' because ''this will make our communities that much safer.''

Other commenters believed that the proposed rule was a step in the right direction. One commenter stated, ''[m]others everywhere are begging you to support background checks.'' They added that background checks certainly will not be the only solution to the multifaceted problem of gun violence, but said they are a step in ensuring people have the right accountability to keep guns away from those who mean to do harm. Another commenter said there is no downside to background checks that help prevent troubled and misguided persons from acquiring over-powered guns.

Many commenters expressed frustration with the current state of affairs and expressed support for expanding background checks and compliance with the law. One commenter stated that it should not be easier to buy a high-speed rifle than get a driver's license. Another commenter explained, ''I manage volunteer programs and people have to complete a background check before they can help a child learn to read or assist an older adult. We should require this same level of scrutiny for anyone looking to purchase a weapon.'' Another commenter stated, ''[g]uns are too serious to be privy to simple loopholes . . . . we can't just turn a blind eye to gaps in our legal system.'' Several other commenters expressed that there was never a valid policy reason for what the commenters called ''the gun-show loopholes.'' The commenters used this term to refer to a pre-BSCA interpretation of the definition of ''engaged in the business'' that many unlicensed dealers believe allows them to make unlicensed sales online and at gun shows. (See the Department Response at Section IV.C.16 of this preamble for explanation of the GCA provisions on this subject). The commenters stated that these ''loopholes'' are shameful, there is no downside to strict background checks, and people should do the right thing by requiring more background checks. Another commenter emphasized, ''[i]t really is beyond time that we consider the rights of non gun-toting citizens, too.''

Another commenter said that the regulation goes directly to the ''loopholes'' people have been trying to close for years, referring to guns offered for sale online or at gun shows. Similarly, a commenter said that, while background checks might be imperfect, they are certainly safer than not performing them. One commenter simply stated that background checks are excellent and that, ''[a]nyone who doesn't want one, should likely not be car[ry]ing a gun.'' Another commenter highlighted the public's opinion on the issue and referred to a recent Fox News poll showing that 87 percent of Americans support requiring criminal background checks on all gun buyers. A health research organization commented on the danger from not doing background checks, saying that experts estimate that nearly one in nine people who seek out firearms online would not pass a background check.

Most commenters cited safety concerns as a basis for their support of the BSCA's changes narrowing the background check gap, as implemented through the rule. One professional physicians' organization commented that private firearm sales conducted at gun shows or over the internet should be subject to the same background check requirements as firearm sales by federally licensed firearms dealers. They added that this would make children, their families, and their communities safer. Another commenter stated that reducing impulsive purchases and requiring time necessary to conduct background checks can save lives and spare family members grief.

One commenter provided a real-world example of what is currently happening without background checks for sales at gun shows, describing an experience they had at a recent gun show: ''[a]s he was filling out the paperwork someone approached him and told him [they] had the same gun [for sale] and a background check would not be

required [to buy it]—he could walk out with it that day.'' Another commenter stated, ''[h]onest, law abiding, gun owners are NOT afraid of accountability and pro-active requirements.''

Department Response

The Department acknowledges the commenters' support for the proposed rule. The GCA and these implementing regulations are designed to improve public safety by helping to prevent persons who are prohibited from possessing firearms under Federal law from acquiring firearms and allowing law enforcement officers to trace firearms involved in crime. By clarifying the circumstances in which persons are engaged in the business of dealing in firearms under the GCA and required to become a Federal firearms licensee, this regulation will result in more NICS background checks being run on prospective firearms purchasers. Not only will fewer prohibited persons obtain firearms from FFLs, but notifications that NICS denied a firearm transfer will be made by NICS to State, local, and Tribal law enforcement agencies within 24 hours to help them prevent gun crime.[117] In sum, the rule will help implement the provisions and goals of the GCA, as amended by the BSCA. At the same time, as explained more below, the rule does not require or implement universal background checks for private firearm sales between individuals. The rule affects only persons engaged in the business of dealing in firearms, including manufacturers and importers who deal in the firearms they manufacture or import.

5. Creates Universal Background Checks

Comments Received

Many commenters indicated a belief that the proposed rule created a universal background check requirement or expressed support for such a development. For example, one commenter stated, ''[b]ackground checks have been shown to stop some who should not have firearms from acquiring them,'' adding that, in ''order to make [background checks] more effective, they must be systematically and carefully applied nationwide.'' Likewise, another commenter said that instituting universal background checks ''is a no-brainer'' and should have been done long ago. Similarly, commenters said the current situation ''is madness'' and ''[u]niversal backgrounds checks are the very least and most obvious of interventions.'' Several other commenters stated that they fully support making background checks mandatory for gun buyers, that they support not just expanded background firearms checks, but indeed universal background checks, and that background checks should be required for all gun purchasers, every time, and similar variations. Many commenters expressed support for requiring background checks for all sales/transfers of firearms, including sales between private citizens.

Some commenters wanted to see a stronger, quicker approach to resolving the issue. One commenter said, ''[g]un laws as they stand are incredibly too relaxed and need to be amended,'' and ''I strongly feel that universal background checks are critical and need to be done now.'' Other commenters agreed that it is long overdue to pass universal background checks for gun ownership and they should be instituted now as the least that we should be doing. Likewise, a commenter requested that, hopefully, Congress would eventually move to a universal background check on all gun sales in the near future. Another commenter added that, since gun sales by legal dealers have required background checks for decades, these same requirements should apply to all gun sales.

A few commenters thought that implementing universal background checks was a minimally intrusive method of implementing change. For example, one commenter stated, ''[u]niversal background checks make sense. It doesn't take away a responsible gun owner's right but it provides a means to track those that should not own guns.''

A few commenters suggested additional actions that could be implemented. For example, one suggested regular checks at multi-year intervals in addition to universal background checks for all purchasers. Another commenter suggested adding mandatory waiting periods for every gun sale. And another suggested universal background checks for ammunition sales, as well.

Department Response

The Department acknowledges the commenters' support for the proposed rule and agrees that the BSCA expands the definition of ''engaged in the business.'' As a result, the rule's implementation of that expansion will increase the number of background checks to prevent prohibited persons from obtaining firearms under the provisions of the GCA, as amended by the BSCA. However, the Department disagrees with commenters who believe this rule will result in ''universal background checks.'' The concept of ''universal background checks'' is not defined in Federal law, but is commonly understood to require persons to run background checks whenever a private, unlicensed person transfers a firearm to another, and some States have imposed this requirement.[118] Congress has not passed a law to require universal background checks, and this rule does not require unlicensed individuals who are not engaged in the business of manufacturing, importing, or dealing in firearms to run background checks for private firearm sales between individuals. Congress decided that only persons engaged in the business of manufacturing, importing, or dealing in firearms must obtain a license and run NICS background checks on firearm transferees. Nonetheless, by clarifying the meaning of ''engaged in the business,'' the rule will make clear that licensees must run NICS background checks when they transfer firearms at gun shows, over the internet, and by other means.

6. Enhances Public Safety by Allowing More Crime Guns To Be Traced

Comments Received

Several commenters believed that the current state of affairs, in which unlicensed dealers are selling firearms without making records, has a negative impact on crime gun tracing. One commenter opined that the rule can provide law enforcement with better tools to track and trace firearms used in crimes, aiding in their efforts to protect our communities. A law enforcement organization commented that the proposed rule would ''enable law enforcement to investigate guns recovered at crime scenes. With more gun sellers required to become licensed dealers, more information will be available to law enforcement aiding in completing the investigations. Law enforcement will be better equipped to identify and follow leads in criminal investigations and solve more crimes.'' Another commenter said, ''the absence of background checks means no sales records, hampering crime gun tracing.'' Finally, one group commented that aggregate firearm trace data can help identify patterns and trends that are valuable for understanding and combatting the trafficking of firearms into criminal hands, and more comprehensive transaction recordkeeping, like the rule will require,

[117] 18 U.S.C. 925B.

[118] Michael Martinez, *'Universal Background Check:' What Does It Mean?,* CNN (Jan. 28, 2013), *https://www.cnn.com/2013/01/14/us/universal-background-checks/index.html.*

would help increase the aggregate amount of information available for tracing.

Department Response

The Department acknowledges commenters' support for the proposed rule and agrees that the rule will help Federal, State, local, and Tribal law enforcement solve crimes involving firearms through crime gun tracing. Under the GCA, ''dealers must store, and law enforcement officers may obtain, information about a gun buyer's identity. That information helps to fight serious crime. When police officers retrieve a gun at a crime scene, they can trace it to the buyer and consider him as a suspect.'' *Abramski,* 573 U.S. at 182 (internal citations omitted). As more persons become licensed, the transaction records maintained by those dealers will allow law enforcement to trace more firearms involved in crime [119] and to apprehend more violent offenders who misuse firearms.

7. Prevents Unlicensed Dealers From Exploiting Loopholes

Comments Received

Thousands of commenters in support of the rule expressed their desire to close gaps in the clarity of ''engaged in the business'' that, in their view, had been enabling people to deal in firearms without a license or prohibited persons to acquire firearms from unlicensed dealers. One set of commenters said that the rule ''will help close loopholes in our background check system that have, for decades, been exploited by bad actors like gun traffickers, straw purchasers, and other prohibited persons, including domestic abusers and convicted felons.'' Another commenter said, ''I can't think of any reasonable argument for continuing to allow loopholes that allow individuals to acquire guns outside the well-established, affordable, and reasonable process that applies to all other purchases.'' One of the form letters submitted by many commenters stated that, ''[a]nyone offering guns for sale online or at a gun show is presumed to be trying to make a profit and should therefore be licensed and run a background check on their customers.'' Other commenters simply stated that we need to be closing the loopholes in the system and do so once and for all.

Another commenter shared this example: ''[i]t was as easy as going to a flea market or pawn shop. Fifteen minutes or less and he had another gun for his collection.'' A third commenter observed that ''[g]uns sold without background checks in all cases are like the old days of the Wild West'' and that gun shows ''are a huge source for gun traffickers and people looking to avoid scrutiny.''

Some commenters were concerned that the current state of affairs is unjust. One commenter stated that they believe the proposed rule is necessary in fairness to the brick-and-mortar businesses and the up-front online retailers. Similarly, another commenter said that ''[c]losing loopholes so that commercial transactions that have previously evaded background checks [can no longer do so] is simply consistency; this is a very good idea, and I wholeheartedly support it.'' Additionally, a commenter thought that ''[t]here shouldn't be venues where background checks can be skirted. If a firearm changes hands, it benefits society to ensure that the hands accepting that firearm are going to handle it safely.''

Several commenters highlighted the fact that dealing as a licensee had integral advantages. For example, one commenter said the proposed rule expands the range of people required to have a license to sell a firearm, which makes neighborhoods safer because citizens know the firearms are being sold by a trusted merchant. Another commenter expressed that people should be happier to see firearms coming from a reputable source, rather than some ''flipper'' who might not have safety-checked the item. A dealer will stand behind an item and can be held accountable if there is an issue, they added.

Some commenters appreciated the Department's balanced approach. One commenter stated, ''[o]f course anyone selling firearms should be licensed & appropriately conducting background checks! Most responsible gun-owners agree on this point. Thank you for seeking to make our communities safer!'' One group commented that, by clarifying who is not considered to be ''engaged in the business,'' ATF has protected the ability of genuine hobbyists and collectors to transact firearms without fear of breaking the law. Another commenter added, ''I support this idea because this does not infringe on any rights, in my opinion, but rather stops back yard or home-based individuals from buying firearms then selling these items for a profit within a quick time frame.''

Department Response

The Department acknowledges the commenters' support for the proposed rule and agrees that the rule will result in more persons who are engaged in the business of dealing in firearms, regardless of location, becoming licensed as required under the GCA, as amended by the BSCA. Once licensed, those persons will be required to abide by the recordkeeping and background check requirements of the GCA. The Department also agrees that promoting compliance with the licensing requirements of the GCA, as passed by Congress, is another benefit of the rule. As more persons dealing in firearms become licensed under this rule, there will be more fairness in the firearms marketplace. Licensed dealers are at a competitive disadvantage when, for example, similar firearms are being sold at a nearby table at a gun show by a seller who is engaged in the business of dealing in firearms but is not following the requirements that licensed dealers must follow. However, the Department disagrees with the comment that offering guns for sale online or at a gun show necessarily means the person must be licensed. This rule also recognizes that persons may, for example, occasionally offer firearms for sale to enhance or liquidate their personal collections even if a profit is sought from those sales.

8. Closes the Gun Show/Online Loophole

Comments Received

Several commenters voiced support for closing what they referred to as the ''gun show loophole,'' by which commenters meant a situation in which many sellers dealing in firearms offer them for sale at gun shows without becoming licensed or subjecting purchasers to background checks. For example, one commenter simply requested that the government please stop criminals from easily buying guns at gun shows without a background check. Another commenter expressed that Americans cannot allow individuals with violent histories to purchase a gun at a gun show or online without their background being investigated. A mother and gun owner added that she is relieved to hear that ATF is moving forward on closing the gun show loopholes. As a final example, one commenter stated that the ''only reason this loophole exists is to create a method for criminals & people with histories of violence to procure guns, there are no other reasons.''

Many supporters of the rule believed that it would resolve a long-standing inequity. As one commenter stated, ''[f]or decades, gun sellers have exploited loopholes in federal law that

[119] *See Definition of* ''*Frame or Receiver*'' *and Identification of Firearms,* 87 FR 24652, 24659 (Apr. 26, 2022).

let them sell guns online and at gun shows without conducting background checks. It's a recipe for disaster that worsens our country's gun violence crisis.'' Another commenter made the following comparison: ''[a]llowing unlicensed sellers to operate alongside licensed dealers at gun shows is akin to allowing some airline passengers to board without going through security—it's inconsistent and unsafe.'' Another commenter said that it shouldn't be as easy to purchase a gun online or at a gun show as it is to purchase a pair of shoes. Other commenters stated that our current reality is one in which firearms can be too easily acquired without background checks, notably through online platforms and at gun shows, and that the loophole that allows legal purchase of firearms at gun shows is a tragedy. A licensee commented with the following example from his 20 years of selling firearms: ''[t]here are 100s of guns sold at every gun show with no background check whatsoever. I see the same dealers at every show with tables full of guns selling to anyone with cash. I have had people who were denied in the NICS background check [I had conducted,] only to see them walk out with a gun. I beg of you to change the law to where EVERYONE at gun shows has to do background checks.''

Some commenters believed the rule presented a balanced approach. One commenter stated that closing the gun show loophole is a ''common-sense measure'' and doesn't infringe on the rights of responsible gun owners; rather, it ensures that background checks are conducted for all firearm purchases, regardless of where they take place. Additionally, a commenter said that the ''proposal laid out does not appear overly cumbersome for currently licensed dealers or citizens looking to liquidate guns from their personal collection'' and that ''[c]losing the 'gun show loophole' and requiring a record of firearms sold limits the possibility of nefarious characters obtaining weapons while increasing and promoting responsible gun ownership.'' Another commenter agreed, describing the rule as a modest, common-sense measure to close some of the huge loopholes that buyers and sellers use to get around our necessary and otherwise effective system of background checks.

Another commenter, while supporting this aspect of the rule, also recommended that ATF provide popular online marketplaces, such as Armslist and GunBroker, with materials and guidance once the rule is finalized to ensure their users understand their obligations to obtain Federal firearms licenses and conduct background checks before dealing in firearms.

Department Response

The Department acknowledges the commenters' support for the proposed rule and agrees that, as a result of this rule, there will be greater compliance with the law and more individuals who engage in the business of dealing in firearms at gun shows and online will become licensed under the GCA and therefore run background checks. ATF has updated its guidance in light of the BSCA and intends to further update the guidance to ensure that persons who operate at gun shows and online understand the relevant licensing obligations. *See* Section II.C of this preamble. The Department also notes that the term ''gun show loophole'' is a misnomer in that there is no statutory exemption under the GCA for unlicensed persons to engage in the business of dealing in firearms at a gun show, or at any other venue. As this rule clarifies, all persons who engage in the business of dealing in firearms must be licensed (and, once licensed, conduct background checks), regardless of location.

9. Reduces Firearms Trafficking

Comments Received

Some commenters thought the proposed rule could have a positive impact on reducing illegal firearms trafficking. One commenter said that firearm transfers must be regulated to prevent criminals from obtaining weapons and unscrupulous arms dealers from trafficking weapons that fuel violence here and in Mexico. Another commenter thought the rule would cause a reduction in trafficking because gun traffickers are ''masquerading as hobbyists or collectors.'' Other commenters stated that firearm rules or legislation may be very different between neighboring States, thus enabling trafficking. For example, one commenter, relying on a news story, stated that, ''[b]ecause Massachusetts has universal background checks and Maine does not, Maine is a top 'source state' for crime guns in Massachusetts'' and that ''[c]riminals come to Maine to get the guns in private sales that they cannot get in Massachusetts or in other states with universal background checks.'' Another commenter stated that creating additional regulations on how firearms are sold will reduce the number of firearms that are trafficked and that the rule will decrease the number of guns trafficked between State lines. Commenters who participated in one of the form letter campaigns stated that guns purchased in unlicensed sales often end up trafficked across State lines, recovered at crime scenes in major cities, and used against police officers, which contributes to the gun violence epidemic plaguing our country. Such commenters also added that guns sold without background checks—both online and at gun shows—are a huge source for gun traffickers and people trying to avoid such checks.

Department Response

The Department acknowledges the commenters' support for the proposed rule and agrees that the rule will help reduce firearms trafficking. Many ATF criminal gun trafficking investigations reveal that guns used in crimes involve close-to-retail diversions of guns from legal firearms commerce into the hands of criminals, including straw purchases from FFLs, trafficking by FFLs, and illegal transfers by unlicensed sellers.[120] As more persons become licensed as a result of the BSCA's amendments to the meaning of ''engaged in the business,'' the multiple sales forms, out-of-business records, demand letter records, theft and loss reports, and trace responses provided to ATF by those dealers during criminal investigations will provide law enforcement with additional crucial crime gun intelligence. Law enforcement can use this information to better target limited resources to pursue illicit firearms traffickers nationally and internationally.[121]

10. Closes Liquidation Loophole for Former Licensees

Comments Received

Some commenters supported the proposed rule's clarification as to how the GCA applies to firearm sales and former dealers. For example, one commenter stated that dealers who have lost their licenses should never be allowed to sell guns again. Similarly, another commenter said that they support the rule because it ''goes a step beyond [previous liquidation provisions] and does not allow any dealers who had their licenses revoked to sell, trade, or distribute firearms to the public.''

[120] ATF, *National Firearms Commerce and Trafficking Assessment (NFCTA): Crime Gun Intelligence and Analysis, Volume Two, Part III: Crime Guns Recovered and Traced Within the United States and Its Territories* 41 (Mar. 27, 2024), *https://www.atf.gov/firearms/docs/report/nfcta-volume-ii-part-iii-crime-guns-recovered-and-traced-us/download.*

[121] *See* 18 U.S.C. 923(g)(3)–(7); ATF Form 3310.4 (Dec. 2021) (multiple handgun sales); ATF Form 3310.11 (Oct. 2020) (theft-loss report); ATF Form 3310.12 (Feb. 2024) (multiple sales of certain rifles).

Department Response

The Department acknowledges the commenters' support for the proposed rule and agrees that the rule will reduce the number of firearms in the business inventory of a former licensee that are sold improperly, *i.e.,* without background checks and associated recordkeeping. However, the Department is not adopting the suggestion to bar former dealers from ever selling guns again. Rather, former dealers are prohibited from engaging in the business of dealing in firearms, unless they once again become licensed.

11. Establishes Better Standards for Who Should Become Licensed

Comments Received

Several commenters appreciated the transparency established by the proposed rule. For example, one commenter stated, ''I strongly support this proposed regulation because it sets a clear, common-sense standard for when gun sellers must become licensed dealers and run background checks'' and builds on the BSCA passed by Congress. Multiple commenters and those associated with certain form letters said that they believe that anyone offering guns for sale online or at a gun show is trying to make a profit and should therefore be licensed, adding that they supported the rule's clarifying provisions. One group of parents whose children were victims of a mass shooting stated that they recognized that ''the intent of the proposed rule is not to be punitive.'' They added, ''[w]e support ATF maintaining an evaluation of the totality of the circumstances when determining if one is 'engaged in the business' rather than establishing a minimum standard of how many firearms bought or sold constitutes a licensure.'' Other commenters supported the clarifying provisions because they do more to ensure that sellers engaged in the business are treated alike. For example, one commenter stated that it ''simply makes no sense for some gun dealers/sellers to be exempt from the same standards that apply to licensed dealers.''

Department Response

The Department acknowledges commenters' support for the proposed rule and agrees that the rule will provide needed clarity to persons who are unsure whether they must become licensed under the GCA based on their firearms purchase and resale activities. Although this rule does not set forth a presumption that any person offering guns for sale online or at a gun show is engaged in the business, it does set forth several actions that give rise to a presumption that persons engaging in those activities, including online or at gun shows, are engaged in the business.

12. Consistent With Second Amendment Rights

Comments Received

Many supporters recognized that the proposal did not conflict with an individual's Second Amendment rights. One commenter stated that the rule is an important clarification in how gun laws are enforced in the United States, and it does not infringe upon the rights of citizens to ''keep and bear arms'' because ''[a]nyone wanting to transfer a firearm can still do so under this rule by using an existing federally-licensed firearms dealer.'' In another commenter's opinion, the ''right to bear arms is still alive and well even with reasonable rules set in place.'' Another commenter stated that gun advocates will argue that taking away these loopholes endangers their Second Amendment rights and that this is a false argument. This commenter added that, ''[a]ny American citizen who wants to purchase a firearm online for self-protection or hunting and who has a clean mental health and criminal record has nothing to fear from common sense restrictions to online gun sales.'' Other commenters stated that this rule will make all citizens of the United States safer without disrupting or infringing upon Second Amendment rights.

Many commenters thought that firearm ownership comes with certain responsibilities and that this rule helps ensure that those who are not able to be responsible are less able to get firearms. Several commenters stated that the rule would not limit Second Amendment rights but would increase safety. For example, one commenter stated that the proposed rule ''in no way infringes on our rights for gun ownership but instead makes it safer for all of us to own and purchase guns responsibly.'' Another commenter stated, ''[g]un ownership is a protected right but it is also a privilege reserved for those who can handle the responsibility.'' Other firearm owners commented that they are firm believers in their Second Amendment rights and feel strongly that those rights were conferred on individuals with responsible gun ownership in mind, and that they grew up being taught respect for guns.

Department Response

The Department agrees that this rule is fully consistent with the Second Amendment. This rule implements the provisions of the GCA, as amended by the BSCA, that require persons who are engaged in the business of dealing in firearms to be licensed. The Supreme Court has emphasized that its recent Second Amendment opinions ''should not be taken to cast doubt on laws imposing conditions and qualifications on the commercial sale of arms.'' *District of Columbia* v. *Heller,* 554 U.S. 570, 626–27 & n.26 (2008); *see also Bruen* v. *N.Y. State Rifle & Pistol Ass'n,* 597 U.S. 1, 80–81 (2022) (Kavanaugh, J., concurring, joined by Roberts, C.J.) (same). *See* Section IV.B.8.c of this preamble for more discussion on this topic.

B. Issues Raised in Opposition to the Rule

As noted, nearly 99,000 commenters expressed opposition to the NPRM, including through form letters submitted as part of mass mail campaigns. ATF received comments from a variety of interested parties, including FFL retailers and manufacturers; legal organizations that represent licensees; firearm sporting organizations; gun owner and gun collector organizations; more than half of States' attorneys general; Members of Congress; [122] firearm owners; active-duty military members and veterans; various firearm advocacy organizations; gun enthusiasts; and people with law enforcement backgrounds. As discussed below, numerous commenters raised various concerns about the Department's proposed amendments to ATF regulations. The topics included constitutional and statutory authority concerns, issues with the clarity and effect of the proposed definitions, presumptions, changes to procedures upon discontinuation of business, and concerns about the public safety goals of the Department in promulgating this rule.

1. Lack of Clarity

Comments Received

Many commenters opposed the rule on the grounds that it was vague or lacked clarity. Most of these commenters made statements to that effect without providing an explanation or examples. Some explained that they found the entire rule to be confusing, stating, ''[t]he language and grammar of

[122] ATF received two letters from Members of the United States House of Representatives in opposition to the rule, one dated October 12, 2023, with four signatories, and another received on December 7, 2023, with nine signatories. ATF received three letters in opposition from Members of the United States Senate, one dated September 21, 2023, with seven signatories, and two received December 7, 2023, one with two signatories and one with one signatory.

the entire preamble is intentionally misleading and confusing unless the reader is an attorney,'' ''the regulations are exceedingly confusing to me, and I consider myself to be a learned man,'' and ''this rule is so vague that people trying to be right will never know exactly what would make them need to be a dealer.''

Some commenters, however, were more specific. Some of these commenters gave examples of particular parts of the rule they found vague, for example: ''the proposed definitions are replete with the use of the term 'may' with respect to being engaged in the business as a dealer in firearms''; the rule ''leaves the interpretation of 'occasional' subjective in nature''; the word ''repetitively'' used in the fourth EIB presumption is ambiguous and could be interpreted as ''selling any number of firearms that is more than one''; ''it states 'even a single firearm transaction, or offer to engage in a transaction, when combined with other evidence, may be sufficient to require a license.' No examples are provided''; the rule ''creates confusion by attempting to clarify the term 'dealer' and how it applies to auctioneers''; and the presumption that a person is a dealer when that person '''sells or offers for sale firearms, and also represents to potential buyers or otherwise demonstrate a willingness and ability to purchase and sell additional firearms' is vague and would likely include even harmless banter between buyer and seller of a single firearm regarding additional purchases these individuals with to make some time in the future.'' One commenter argued that, ''[t]he apparent fines and jail time are draconian relative to the vagueness of the application of the proposed rule.'' At least one commenter asked that the Department qualify ''repetitively'' with a time limit so that a firearms owner who is likely to sell a firearm more than once in their lifetime or even over a five-year period would not be inadvertently captured under the presumptions. And, at least one commenter took the position that ''of course, repetition means more than once.''

Some other commenters focused on the impacts of the provisions they stated were vague. One commenter said it appears that the ''intent of this law is to force all sales through an FFL as you otherwise are never sure the sale is lawful.'' A couple of commenters mentioned that ''four times in the proposed rule the ATF provide[d] a list of 'rebuttable presumption[s]' or other factors and then conclude[d] by noting that the list is 'not exhaustive' '' and that the proposed rule is ''unlikely'' to cover selling one's gun to an immediate family member—but leaves open the possibility that ATF could change its mind. ''This makes compliance both difficult and inconsistent,'' one of these commenters added. ''When definitions are vague in this manner, it leaves far too much opportunity for unlawful or unjust 'interpretation' or inconsistent implementation and enforcement,'' they concluded. The commenter further explained that the proposed rule's lack of clarity ''places citizens who wish to abide by laws . . . in the unreasonable position of having their lawfulness in a gray area. In this way, an unelected official of ATF seems to have discretion to arrest persons, seize property, or take other 'enforcement actions' somewhat arbitrarily. Additionally, even if courts later overturn that ATF officer's decision, the hardship faced by the law[-]abiding citizens due to those circumstances (lost wages, attorney fees, reputational damage, emotional stress and trauma, etc.) are unreasonable.''

Other commenters were concerned about what they described as the ambiguity of the statutory definitions, which ATF proposed to include verbatim in the regulation. One commenter stated, ''[t]he new definitions, such as 'predominantly earn a profit' and 'terrorism,' may lead to differing interpretations and legal challenges.'' Another stated, ''[t]he proposed rule is riddled with ambiguous and imprecise terms such as 'predominantly earn a profit' and 'principal objective of livelihood and profit.' This lack of clarity is unacceptable and can lead to arbitrary enforcement and interpretation, jeopardizing the rights of law-abiding citizens.''

One commenter suggested that additional education will be necessary because the rule is hard to understand. ''While I appreciate the intention to assist individuals in understanding when they are required to have a license to deal in firearms, the proposed changes, as they currently stand, create more questions than answers. The need for comprehensive education and outreach efforts to inform the public about these changes is evident.''

Department Response

The Department disagrees that the rule is vague or lacks clarity. The rule implements the BSCA by setting forth specific conduct that is presumed to be ''engag[ing] in the business'' of dealing in firearms or acting with a predominant intent to earn a profit under the GCA. This rule provides persons who may be unclear how the statute applies to them with greater clarity as to what conduct implicates the statute, even though the rule does not purport to include every possible scenario. Many thousands of commenters stated that they believe this rulemaking provides much needed clarity to help ensure that persons who are prohibited from receiving or possessing firearms do not receive them.

The Department acknowledges commenters' concerns that the presumptions are not exhaustive of all of the conduct that may show that, or be considered in determining whether, a person is engaged in the business of dealing in firearms or has a predominant intent to earn a profit. However, there are numerous and various fact patterns that could fall within the statutory definition of being ''engaged in the business'' of dealing in firearms under 18 U.S.C. 921(a)(21)(C). This rule cannot possibly describe every potential scenario. It is important to note the presumptions are designed to improve clarity and consistency, though, as presumptions, they are not conclusive findings and may be rebutted. The conduct that presumptively falls within the definition of ''engaged in the business'' represents common fact patterns that the Department has seen during numerous criminal investigations, regulatory enforcement actions, and criminal prosecutions, and which the Federal courts have recognized as strong indicators of engaging in the business of dealing in firearms even prior to the BSCA's expanded definition. In other words, these presumptions represent situations that have been observed and tested repeatedly over decades as conduct that is indicative of whether a person is engaged in the business or has a predominant intent to earn pecuniary gain from the sale or disposition of firearms. The Department therefore disagrees that the rule, which provides additional clarification about what the statute requires, is vague or will result in inconsistent or unfair implementation and enforcement.

The Department also disagrees that the rule is confusing or overly complex. The Department acknowledges that the preamble to the proposed rule was long and included significant discussions and legal case citations in support of the Department's proposed regulatory changes. However, the rule changes the regulatory definition of what it means to be ''engaged in the business'' as a dealer in firearms to match the statutory definition as amended by the BSCA and provides additional detail to aid persons in understanding what conduct is likely to meet that definition. This includes addressing particular contexts, such as

auctioneers, and licensees who cease to be licensed. The rule does this by defining certain terms and describing specific, identifiable conduct in specific rebuttable presumptions. These definitions are based on statutory language, standard dictionary definitions, and Federal court opinions.

Based on concerns identified in the public comments, this final rule has further refined some definitions and presumptions to help collectors and hobbyists better understand when they are enhancing or liquidating a personal collection without the need for a license. For example, in response to one of the specific comments on the first EIB presumption, the Department has added a parenthetical after ''represents to potential buyers or otherwise demonstrates a willingness and ability to purchase and resell additional firearms'' to explain that it means ''(*i.e.,* to be a source of additional firearms for resale).'' This presumption, like the others, is based on ATF's criminal and regulatory enforcement experience and the case law cited in both the proposed rule and this final rule.

The Department does not agree with commenters that the rule's use of the term ''may'' in the regulatory definition of ''engaged in the business'' does not provide firearms sellers with sufficient clarity as to who is required to be licensed. While the presumptions in the rule are intended to provide clarity to persons who resell firearms, the Department cannot establish bright-line rules that address every conceivable scenario. For example, while the regulatory text states that ''[s]elling large numbers of firearms . . . may be highly indicative of business activity,'' that will not always be the case, depending on the circumstances. This is why the regulatory text uses the word ''may'' at times and expressly states that activities set forth in the rebuttable presumptions are not exhaustive of the evidence or conduct that may be considered in determining whether a person is engaged in the business of dealing in firearms or in determining the more limited question of whether a person has the intent to predominantly earn a profit through the repetitive purchase and resale of firearms.

The Department does not agree with commenters that the undefined terms in the rule are vague. In the absence of specific definitions, readers should use the ordinary meaning of these statutory terms and other words in the regulatory text. This includes the definition of the term ''occasional,'' which means ''infrequent,'' or ''of irregular occurrence,'' [123] and the term ''repetitively'' as it applies to a person engaged in the business as a dealer, which means that a person intends to or actually does purchase and resell firearms again. With regard to the comment that the term ''repetitive'' should be limited to a period of time, again, this term, like the term ''occasional,'' should be read consistently with its ordinary meaning.[124] Consistent with that ordinary meaning, a person is less likely to be understood as ''repetitively'' selling firearms if they do so twice over five years than if they do so several times over a short period. With regard to statutory terms, such as ''to predominantly earn a profit'' and ''terrorism,'' those definitions were added to the GCA by the BSCA. The Department is now adding them into ATF regulations so that the regulatory text conforms to the statute.

The Department disagrees that no examples were provided in the proposed rule to explain the statement, ''even a single firearm transaction or offer to engage in a transaction, when combined with other evidence, (*e.g.,* where a person represents to others a willingness to acquire more firearms for resale or offers more firearms for sale) may require a license.'' 88 FR 62021. That regulatory text itself included an example: ''(*e.g.,* where a person represents to others a willingness to acquire more firearms for resale or offers more firearms for sale).'' *Id.* This distinguishes a person engaged in the business of dealing in firearms from a person who makes only a single isolated firearm transaction without such other evidence, and who would not ordinarily require a license, as the case law demonstrates.[125] To further clarify this example, the Department has added the following clause to the regulatory text, ''whereas, a single isolated firearm transaction without such evidence would not require a license.'' § 478.13(b).

The Department disagrees that ATF's enforcement of the rule would be arbitrary. The rule clarifies the meaning of statutory terms and identifies common scenarios under which persons are presumptively engaged in the business, allowing for uniform application and understanding.

The Department also disagrees that the rule creates confusion as to how the term ''dealer'' applies to auctioneers. As described in Section III.C of this preamble, the proposed and final regulatory text explains that firearms dealing may occur anywhere, including by online auction, and establishes by regulation ATF's longstanding interpretations that distinguish between estate-type and consignment-type auctions.

The Department agrees with commenters that undertaking additional outreach efforts would be beneficial to further explain the amendments made to the GCA by the BSCA and how this rule implements those changes. The Department plans to do so. As one example, in response to the BSCA, ATF already updated its guidance entitled *Do I Need a License to Buy and Sell Firearms?* [126] and intends to further update the guidance to include additional details that conform with this final rule.

2. Does Not Enhance Public Safety

Comments Received

Other commenters opposed the rule on the grounds that it will not enhance public safety. The majority of comments on this topic argued that criminals are the people putting public safety at risk, and that they are not going to abide by the BSCA and the proposed regulation or purchase firearms through FFLs. As a result, they stated, the proposed rule will do nothing to affect public safety, while imposing a burden on law-abiding citizens. One commenter stated, ''[p]rivate firearm sales and transfers happen among law-abiding people and are not in any way part of the unreasonable public safety risk that gun prohibition advocates claim. Therefore, this rule does nothing to address the unlawful acts of the criminals that pose a true and actual threat to public safety.'' Another stated, ''there is very little public safety i[f] this rule is enacted. The criminal element in society simply will ignore it, and the lawful gun owners will be greatly affected with the burden of complying

[125] *See* footnote 72; *cf.* S. Rep. No. 98–583, at 8 (1984) (The statute does ''not require that the sale or disposition of firearms be or be intended as, a principal source of income or a principal business activity. Nor does it apply to isolated sales, unless of course, such sales are part of a regular course of business with the principal objective of livelihood and profit.'').

[126] ATF Publication 5310.2, *Do I Need a License to Buy and Sell Firearms*? (Aug. 2023), *https://www.atf.gov/file/100871/download.*

with the rule. Time and effort[ ] and money will have to be expended by gun owners for no appreciable benefit.'' A third commenter stated there is no evidence to support a correlation with public safety, asserting, ''[t]he proposed rule change lacks empirical evidence to substantiate its assumed benefit of improved public safety. Numerous studies, including those published in peer-reviewed journals [citing a journal article], have found that the correlation between gun control measures and reduction in gun violence is negligible. This suggests that the rule change is a reactive measure rather than a well-considered evidence-based policy.'' Another commenter said that, if ATF wants to do something to promote gun safety, it should be actively involved with industry experts to develop standards in education and safe ownership instead of issuing the rule.

Other commenters suggested that issuing the regulation will ''only serve to create a black market in firearms sales, while doing nothing to actually stop crime,'' asked ''how this helps with cartels and organized crime, when most of those people are already under a class that shouldn't have guns anyway (*i.e.* illegal),'' and argued that the rule ''will create criminals out of lawful gun owners, while dangerous criminals like drug dealers and gang members could not care less.'' They added that the rule will make the public less safe because law-abiding gun owners will face more hurdles while criminals will keep doing what they are doing. Another commenter stated that, ''[o]n the whole[,] gun owners are more law abiding[,] not less. We purposely avoid breaking any law that may affect our ability to own firearms, even laws we may not agree with. So this affects a population that is less likely to be a problem and does nothing to discourage the criminal population.''

Several commenters stated that criminals receive their firearms from sources other than FFLs. For example, one commenter said: ''Federal studies have repeatedly found that persons imprisoned for firearm crimes get their firearms mostly through theft, the black market, or family members or friends.'' They stated, ''less than one percent get guns at gun shows [citing a report].'' Another commenter said that a study conducted by ATF, which reportedly concludes that less than 1 percent of guns used in crimes were acquired by other means (*i.e.,* through private sales), indicates that this rule would not be effective in preventing criminals from obtaining firearms. And a couple of commenters stated that the source of danger comes from outside the country, asserting, for example, ''This rule will not make anyone safer. America has enemies across the globe. Who will do everything they can to attack us. When [our] border is wide open, America is significantly less safe because our border is open. Guns that will come from across the border will not be known to the ATF. Close the border to truly secure our nation.'' Another commenter said the rule will only encourage more back-alley deals and the proliferation of unsafe, hand-made, and 3D-printed firearms to evade the regulatory provisions.

Department Response

The Department disagrees that this rule will not enhance public safety or lacks empirical evidence to support it. In enacting the BSCA, Congress determined that there were persons who were engaged in the business of dealing in firearms at wholesale or retail who should have been licensed under existing law.[127] Congress therefore amended the GCA to clarify that those persons must be licensed. This rule implements that amendment to the GCA. The result will be that more persons who are engaged in the business of dealing in firearms will become licensed, run NICS background checks, and maintain transaction records through which firearms involved in crime can be traced. *See* Section VI.A.2 of this preamble. One empirical indication of support for this anticipated increase is that after the original publication of the guidance *Do I Need a License to Buy and Sell Firearms?,* ATF Publication 5310.2, in January 2016, there was a modest increase of approximately 567 license applications (based on Federal Firearms Licensing Center (''FFLC'') records). In addition, around 242,000 commenters stated that they believe this rulemaking will increase public safety and provided data on that point. Additional empirical evidence that public safety will be enhanced includes the following:

More Background Checks: As explained previously, the amended regulations will increase the number of background checks performed because more dealers will become licensed and run background checks on their customers. With additional background checks being run by licensed dealers, more prohibited persons will be denied firearms, consistent with the plain language and intent of the GCA, as amended by the Brady Act and the BSCA. Since the inception of NICS in 1998, the FBI has denied at least 2,172,372 transfers due to background checks, and in 2022 alone, it denied 131,865.[128] From among the transfers denied in 2022, 60,470 potential transferees were convicted of a crime punishable by imprisonment for a term exceeding one year;[129] 12,867 were under indictment or information for such a crime; 8,851 were fugitives from justice; and 10,756 had been convicted of a misdemeanor crime of domestic violence.[130]

These NICS denials prevented the receipt and possible misuse of a firearm by a prohibited person. Additionally, since the passage of the BSCA's provision on enhanced background checks for juveniles, 18 U.S.C. 922(t)(1)(C)(iii), the FBI has conducted more than 200,000 enhanced checks, resulting in at least 527 potentially dangerous juveniles being denied firearms as of the first week of January 2024.[131] And, as a result of the NICS Denial Notification Act, codified at 18 U.S.C. 925B, these denials will be reported within 24 hours directly to State, local, and Tribal law enforcement authorities, which can then take appropriate action. Because more persons will become licensed under the BSCA and this rule, more enhanced juvenile checks will be conducted and more denials will be reported to State, local, and Tribal law enforcement, resulting in fewer firearms being transferred to prohibited persons and faster investigation of denials and recovery of transferred firearms as appropriate.

More Crime Gun Traces: With more licensed dealers, law enforcement will have increased ability to trace firearms involved in crime through required records, including out-of-business records. Between 2017 and 2021, law enforcement agencies nationally and internationally submitted a total of 1,922,577 crime guns to ATF for tracing, with 460,024 submitted in 2021. During that period, the number of traces increased each year, resulting in a 36 percent rise over the five years from

2017 to 2021.[132] ATF was able to determine the first retail purchaser in 77 percent of those requests, providing law enforcement with crucial leads and an increasing capability to solve gun crimes in their respective jurisdictions throughout the United States and abroad.[133]

In response to the comment alleging that few criminals (1 percent) acquire firearms at gun shows, the most recent ATF report on firearms commerce—the National Firearms Commerce and Trafficking Assessment, Volume Two, Part III—reveals that, between 2017 and 2021, 41,810 crime guns were traced to licensees at gun shows, reflecting a 19 percent increase during that time.[134] While the figure from 2021 represents only 3 percent of the total number of crime guns traced, ''this figure does not represent the total percentage of recovered crime guns that were sold at a gun show during the study period as private citizens and unlicensed dealers sell firearms at gun show venues.'' ATF has no ability to trace crime guns to the numerous unlicensed dealers at gun shows, and therefore, ''[n]ational data . . . [is] not available on unregulated firearms transfers at gun shows.'' [135] The low figure, therefore, does not suggest that few crime guns are sold at gun shows—to the contrary, it demonstrates law enforcement agencies' limited ability to trace crime guns that are purchased at those venues. As more unlicensed gun show dealers become licensed, law enforcement will be able to trace more firearms subsequently involved in crime that were sold at gun shows to help solve those crimes.

Better Crime Gun Intelligence: All licensed dealers are required to report multiple sales of handguns occurring within five consecutive business days, report thefts or losses of firearms from their inventory or collection, and respond to trace requests.[136] Certain dealers are required to report multiple sales of certain rifles to ATF occurring within five consecutive business days, and respond to demand letters with records that report transactions where there is a short ''time-to-crime.'' [137] From this information, ATF is able to provide law enforcement agencies throughout the United States with key crime gun intelligence showing firearm trafficking patterns.[138] In addition to crucial intelligence provided directly to law enforcement in their respective jurisdictions, comprehensive data gathered from licensee sources was used to compile the *National Firearms Commerce and Trafficking Assessment, Volume II,* regarding the criminal use of firearms that have been diverted from lawful commerce. This assessment allows law enforcement to better focus their limited resources on dangerous criminals and enhances policymakers' ability to create strategies to better stem the flow of crime guns to their jurisdictions.[139] For example, stolen firearms play an indirect role in trafficking and diversion to the underground firearm markets used by prohibited persons, juveniles, and other individuals seeking to buy firearms without going through a background check. From 2017 to 2021, licensees reported being the victims of 3,103 larcenies, 2,154 burglaries, and 138 robberies.[140] This data was further broken down over time by license type, business premises type, State, quantity of firearms stolen, weapon type, caliber, time-to-crime, time-to-recovery, recovery location, and age and gender of ultimate possessor.[141] This information will help reduce thefts from licensees and, therefore, reduce firearms trafficking.[142] ATF does not receive the same detailed information about thefts from non-licensee dealers who do not submit FFL Theft/Loss Reports (ATF Form 3310.11) to ATF, but ATF is aware that thefts from non-licensees constitute a significantly higher number of thefts and thus are a larger contributor to firearms trafficking.[143] Increasing the number of dealers who are licensed will help reduce firearms trafficking by providing more of this kind of detailed information as well.

The Department acknowledges that there are criminals who are currently engaged in the business of trafficking in firearms for profit who will not become licensed, notwithstanding the requirements in the GCA (as amended by the BSCA) and this rule. But the fact that some persons purposely violate Federal law is appropriately addressed through enforcement, and it is not a reason to refrain from providing further clarity to increase compliance among those dealing in firearms. The penalties for engaging in the business of dealing in firearms without a license have long been set forth in the GCA, and this rulemaking does not purport to change them. The illicit market in firearms already exists, and nothing in this rule furthers that market. By providing further clarity about who is required to become licensed, this rule will help law-abiding persons comply with the law and will also help ATF in its ability to enforce the law. It will reduce the number of persons who are currently engaged in certain purchases and sales of firearms without a license so that their activities do not perpetuate firearms trafficking.

[143] ATF, *National Firearms Commerce and Trafficking Assessment (NFCTA): Crime Gun Intelligence and Analysis, Volume Two, Part V: Firearm Thefts* 2 (Jan. 11, 2023), *https://www.atf.gov/firearms/docs/report/nfcta-volume-ii-part-v-firearm-thefts/download* (''[F]irearm thefts from private citizens greatly outnumber firearms stolen from FFLs. As reflected in Figure BRL–01, firearms stolen from private citizens accounted for most stolen crime guns known to LEAs. From 2017 to 2021, there were 1,074,022 firearms reported stolen. About 3% (34,339) were stolen in FFL thefts, 1% (13,145) were stolen in interstate shipments, and almost 96% (1,026,538) were stolen in thefts from private citizens.'').

Moreover, as noted previously, prohibited persons continue to seek to purchase firearms through licensed dealers—there were over 130,000 attempts in 2022 alone. By helping sellers better understand when they must be licensed pursuant to the BSCA, and thus increasing the number of licensees, this rule will result in more prohibited persons being denied firearms at the point of sale before they can be used in a violent crime. And, to the extent criminals purchase firearms through licensed dealers, the firearms they use will be able to be traced through the dealers' transaction records when they are later found at a crime scene or otherwise linked to a violent crime. Unlicensed sellers are not required to run background checks or maintain transaction records through which crime guns can be traced. As to the proliferation of more hand-made and 3D-printed firearms, other rules address the licensing requirements for persons engaged in the business of manufacturing firearms.[144] Nonetheless, when dealers who become licensed under this rule accept hand-made, 3D-printed, and privately made firearms into inventory, they are already required to serialize and record such firearms for crime gun tracing purposes and run background checks on subsequent purchasers.[145]

3. Punishes Law-Abiding Citizens

Comments Received

Thousands of commenters stated that the proposed rule is an attack on the entire population of law-abiding firearm owners through unlawful infringement of their rights. To that end, many commenters claimed they will lose the ability to protect themselves and their families because they believe the proposed rule was designed to make it difficult for law-abiding Americans to acquire firearms.

Many commenters opined that they would be prevented—potentially criminally—from passing firearms to family, friends, or others when trading up, retiring from their gun collecting hobby, or otherwise wishing to purge firearms from their collections. Many commenters believed that a certain number of firearms sold, such as more than three per year, would make them a felon. One commenter was concerned with how the rule affects him as a WWII re-enactor when members seek to sell firearms to new members and stated that it would be difficult for this group to continue their hobby under the proposed rule without going through an FFL.

In that vein, many commenters stated that the proposed rule is threatening, puts law-abiding citizens in a burdensome defensive position of proving to an ''over-zealous'' Government that they are not required to be licensed as a firearms dealer, and could entrap them. Some opined that the goal of the proposed rule is to use complex and confusing language to criminalize the activities of countless average individuals who wish to sell or otherwise liquidate their firearms as they naturally gain in value over time, especially during periods of inflation. One commenter stated that ''[t]his proposal is a transparent attempt to strong-arm internet service providers, gun shows, technology platforms, and other facilitators to abandon any involvement in private gun sales with vague threats of 'administrative action' for non-compliance.'' Another commenter suggested that the proposed rule was intended to ''make every American gun owner live in fear of buying or selling a gun at any point in their lives.''

A few commenters raised concerns that, if they inadvertently deal in firearms without a license, and are therefore determined to be in violation of the rule by ATF, they would not be able to then become a legal dealer. ''One footnote in this proposed rule suggests the ATF might prevent a person from obtaining a license to even engage in future firearm transactions because they were presumed to have 'willfully engaged in the business of dealing in firearms without a license,' '' a commenter said. ''Therefore, the agency might warn that individual of their purportedly unlawful behavior,'' the commenter continued, and ''[s]uch an individual, wishing to complete a future firearm transaction without ATF harassment, might submit an application to obtain a license to deal in firearms. But ATF's footnote suggests the law-abiding individual might be denied the license simply because their previous conduct was presumptively unlawful,'' they concluded.

Department Response

The Department disagrees with the assertions that this rule is intended to or will make felons of law-abiding citizens when they wish to pass firearms to family or friends, or to sell all or a part of a personal collection of firearms. This rule effectuates the BSCA and helps protect innocent and law-abiding citizens from violent crime. This rule does not place additional restrictions on law-abiding citizens who occasionally acquire or sell personal firearms to enhance a personal collection or for a hobby. Instead, the rule provides clarity to persons on when they are engaged in the business as a dealer in firearms with the predominant intent to profit. It articulates what it means to be engaged in the business, as well as other relevant statutory terms, to identify those persons whose conduct requires that they obtain a license—as distinguished from persons who make occasional purchases and sales in private transactions not motivated predominantly by profit.

This rule does not prevent law-abiding persons from purchasing or possessing firearms, from selling inherited firearms, or from using their personal firearms for lawful purposes such as self-defense, historical re-enactments, or hunting. The rule includes a non-exhaustive list of conduct that does not support a presumption that a person is engaging in the business and that may also be used to rebut the presumptions. Additionally, this rule does not impose any new restrictions in the application process to become an FFL. Further, nothing in this rule imposes licensing requirements on internet service providers, gun show promotors, or technology platforms that are operating in conformity with applicable legal requirements. And finally, this rule does not inhibit law-abiding citizens from acquiring firearms. In fact, this rule will likely increase the number of licensed dealers available to sell firearms to consumers. Nonetheless, a small percentage of unlicensed persons who are engaged in the business under the BSCA amendments, and therefore must become licensed to continue dealing in firearms, might choose to leave the firearm sales market rather than become licensed, for a variety of reasons. *See* Sections IV.D.5 and VI.A of this preamble for further discussion of this potential outcome.

In this rule, despite several commenters advocating for a strict numerical threshold, the Department did not establish a numerical threshold for what would constitute being ''engaged in the business.'' Any number would be both overinclusive and underinclusive. It would be overinclusive in that a collector who does not sell firearms to predominantly earn a profit might sell a significant number of firearms to liquidate a personal collection (and thus cross the numerical threshold), even though the GCA provides that sales to liquidate a personal collection are not made to

[144] For more information on who must be licensed as a manufacturer, *see Definition of* ''*Frame or Receiver*'' *and Identification of Firearms,* 87 FR 24652 (Apr. 26, 2022).

[145] *See* 27 CFR 478.92(a)(2); 478.125(i).

predominantly earn a profit. *See* 18 U.S.C. 921(a)(22). And it would be underinclusive in that someone might devote time, attention, and labor to dealing in firearms with the intent to profit (and would thus qualify as being engaged in the business under the statute), but might not meet some hypothetical number of sales and thus elect not to get, or purposefully evade getting, a license. As stated above, the courts have indicated that a license may be required even when there is a single firearms transaction or offer to engage in a transaction where persons also hold themselves out as sources of additional weapons. *See* Section III.D of this preamble. At the same time, however, Congress specifically exempted from the definition of ''engaged in the business'' as a dealer in firearms ''a person who makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of his personal collection of firearms,'' 18 U.S.C. 921(a)(21)(C), so a person who makes multiple sales will not always be engaged in the business.

The Department disagrees with the commenters who said that persons who inadvertently deal without a license in violation of the rule would be ''caught in a trap'' of not being able to become a licensed dealer. Even if a person is presumed to be engaged in the business of dealing in firearms under one of the EIB presumptions in the rule, ATF would need to have evidence that the person ''willfully'' engaged in that business without a license to deny the application for license. *See* 18 U.S.C. 923(d)(1)(C). Consistent with the way the courts have long interpreted this term in this administrative firearms licensing context, the term ''willfully'' means that the license applicant ''knew of his legal obligation [to become licensed] and purposefully disregarded or was plainly indifferent to'' that requirement. *Article II Gun Shop, Inc.* v. *Gonzales,* 441 F.3d 492, 497 (7th Cir. 2006) (quoting *Stein's, Inc.* v. *Blumenthal,* 649 F.2d 463, 467 (7th Cir. 1980)).[146] So, only an applicant who purposefully disregarded or was plainly indifferent to the licensing requirement would be denied a license on those grounds.

The Department disagrees that WWII re-enactors will be unable to sell firearms to fellow hobbyists under this rule without going through a licensed dealer. While Federal law already generally prevents persons from selling firearms to a person in another State without going through a licensed dealer,[147] neither existing law nor this rule prevents persons residing in the same State from occasionally purchasing and reselling firearms to enhance their personal collections or for a hobby without going through a licensee. Nonetheless, to further address these concerns, the Department has amended the definition of ''personal collection'' in this rule to include, as an example, personal firearms that a person accumulates for ''historical re-enactment.''

4. Adverse Impact on Underserved and Minority Communities

Comments Received

Certain commenters opined that the proposed rule could somehow have an adverse effect on persons with limited economic means who would be forced to ''choose between living expenses and protecting themselves and love[d] ones.'' Comments included scenarios such as economically disadvantaged persons being unable to sell a personally owned firearm to make ends meet because of, for example, prohibitive costs and hurdles to becoming licensed; families needing to liquidate assets, including personally owned firearms, to care for loved ones, pay for food, rent, or other obligations; disadvantaged persons having to choose between selling a firearm at a loss or being prosecuted as an ''illegal gun dealer''; and low-income individuals being financially unable to acquire a firearm to provide protection for themselves or families as a result of the rule. One commenter stated that the requirement for individuals to rebut presumptions in administrative or civil proceedings poses a considerable financial burden, particularly for those with lower incomes, and specifically persons of color.

Several commenters expressed concern that the proposed rule would unfairly target minority communities. Some commenters opined that the proposed rule is classist and racist: ''only rich [White] people'' can afford to legally obtain guns because licensed firearms dealers are disproportionately distributed in white neighborhoods; minority populations experience disproportionately higher rates of arrest versus non-minority populations; and minority communities will have the greatest struggle to obtain a firearm for protection where self-defense needs may be most acute. Another commenter opined that Black and brown communities, LGBTQI+ people, and transgender people will be disproportionately affected by the final rule. Others suggested that the FFL licensing costs should be reduced by this rule, suggesting a $10 limited FFL license for a personal collector.

Department Response

The Department disagrees that this rule will prevent persons with limited income from lawfully acquiring or liquidating firearms. Specifically, under this rule, a person will not be presumed to be engaged in the business of dealing in firearms when reliable evidence shows that the person is only reselling or otherwise transferring firearms occasionally as bona fide gifts, to obtain more valuable, desirable, or useful firearms for the person's personal collection; occasionally to a licensee or to a family member for lawful purposes; to liquidate all or part of a personal collection; to liquidate firearms they have inherited; or to liquidate firearms pursuant to a court order. *See* 27 CFR 478.13(e). With respect to the cost of a dealer license and the comment suggesting that ATF reduce the FFL licensing cost, this rule must effectuate the laws of Congress and that amount is set by 18 U.S.C. 923(a)(3)(B) ($200 for three years, and $90 renewal for three years). With respect to commenters' asserted limited access to licensed dealers in minority communities, neither the GCA nor this rule distinguishes between communities. All persons who engage in the business of dealing in firearms must be licensed at fixed business premises within a State, *see* 18 U.S.C. 923(d)(1)(E), and this rule implements the licensing requirements wherever that dealing may occur.

The Department further disagrees that this rule will disproportionately affect lower-income individuals or certain minority groups. This final rule implements the GCA, as amended by the BSCA, which regulates commerce in firearms. The GCA requires that all persons who meet the definition of engaged in the business of dealing in firearms must become licensed without regard to their socioeconomic status, where they live, or to which identity groups they belong. The GCA does not distinguish between minority groups and other groups, and its licensing provisions are not targeted at reducing

[146] *See also CEW Properties, Inc.* v. *ATF,* 979 F.3d 1271, 1273 (10th Cir. 2020); *Shawano Gun & Loan, LLC* v. *Hughes,* 650 F.3d 1070, 1077–78 (7th Cir. 2011) (quoting *Gonzales,* 441 F.3d at 497); *Armalite, Inc.* v. *Lambert,* 544 F.3d 644, 647–49 (6th Cir. 2008); *On Target Sporting Goods, Inc.* v. *Attorney General of U.S.,* 472 F.3d 572, 575 (8th Cir. 2007); *RSM, Inc.* v. *Herbert,* 466 F.3d 316, 321–22 (4th Cir. 2006); *Willingham Sports, Inc.* v. *ATF,* 415 F.3d 1274, 1277 (11th Cir. 2005); *Perri* v. *ATF,* 637 F.2d 1332, 1336 (9th Cir. 1981).

[147] *See* 18 U.S.C. 922(a)(5).

the number of locations where lower income residents can lawfully purchase firearms. And, according to several commenters, including a civil rights organization, minority communities are disproportionately hurt by gun violence, including hate crimes (often by prohibited persons who would not pass a background check), and this rule will help minority communities by reducing gun violence.

Under the GCA and this rule, a person who ''makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of the person's personal collection of firearms'' is not ''engaged in the business'' of dealing firearms. § 478.13(a). In addition, nothing in the GCA or this rule precludes a person from lawfully purchasing firearms for self-protection or other lawful personal use, or making isolated sales of such firearms without devoting time, attention, and labor to dealing in firearms as a regular course of trade or business. A single or isolated sale of a firearm that generates pecuniary gain to help make ends meet, care for loved ones, or pay for food, rent or other obligations would not alone be sufficient to qualify as being engaged in the business; instead, there would need to be additional conduct indicative of firearms dealing within the meaning of the GCA. Similarly, persons who liquidate (without restocking) all or part of their personal collection are not considered to be engaged in the business and may use the proceeds for lawful purposes, including those mentioned above. However, a person could still be engaged in the business even when they are using proceeds to make ends meet, care for loved ones, or pay for food, rent, or other obligations if they were to engage in additional conduct that is indicative of firearms dealing within the meaning of the GCA.

5. More Important Priorities and Efficiencies

Comments Received

Many of the commenters opined that there are more important ways that ATF should address firearm violence and crime instead of promulgating the rule. Thousands of commenters suggested considering alternative solutions that address the root causes of gun violence, such as community-based violence prevention programs, mental health reform, or improved access to mental health services, including allocating money for such services. Others suggested implementing weapon safety courses in schools. Specifically, a commenter said, ''[a]ccording to the government's own statistics [citing to the CDC website], the majority of gun deaths are due to suicides. And the next highest category of deaths by firearms is inner city peer on peer murders of young men[.]'' If the Government wants to try to fix these sources of firearm-related deaths, the commenter added, it should look at the evidence and address the root causes.

Many commenters suggested increasing support for law enforcement agencies, such as funding and equipment, while many more suggested enforcing current laws, such as targeting stolen firearms or felons possessing firearms, instead of creating new laws and regulations. Others suggested targeting straw purchases, criminals who sell firearms to minors, unlawful internet sales such as Glock switches, and individuals who lie on the ATF Form 4473.

Some suggested focusing enforcement efforts based on geography, such as focusing on the southern border to address firearm, drug, and human trafficking whereas others suggested focusing on gangs or criminals known to operate in certain cities or other areas and creating gang task forces. Along those lines, some suggested enforcing existing Federal law against prohibited persons possessing firearms in communities where local officials downplay Federal prohibitions for political reasons. In addition to enforcing current laws, some suggested other measures, such as harsher prison sentences for violent criminals, eliminating ''no bail'' policies, constructing more prisons, and ending a ''revolving door'' justice system that they said fails to hold violent felons accountable.

Other commenters expressed concern about the firearm background check system. Some commenters suggested improving firearm background check response times for currently licensed FFLs before implementing a rule that would increase the number of licensees. Some suggested focusing on comprehensive background checks and closing legal loopholes that allow firearms to fall into the wrong hands.

Department Response

The Department acknowledges comments about treating mental health and drug addiction, securing schools and workplaces, improving records available to the NICS, properly funding law enforcement, and various other national policy issues, such as the root causes of gun violence, border control, gangs, drug and human trafficking, penal facilities and laws, and how State and local officials implement laws. The Department agrees that these are important issues; however, they are not addressed in the GCA or the BSCA's provisions relating to persons engaged in the business of dealing in firearms, and therefore are outside the scope of this rule.

To the extent that commenters raised issues within ATF's jurisdiction—such as by suggesting that ATF focus on firearms trafficking, felons possessing firearms, stolen firearms, targeting straw purchases, criminals who sell firearms to minors, unlawful internet sales of weapons such as Glock switches, and individuals who lie on ATF Form 4473—the Department agrees that these are, and should be, among the Department's most important concerns. At their core, they are all related to keeping firearms out of the hands of prohibited persons and others who may commit crimes with firearms. In addition to ATF's other enforcement efforts, the Department considers this rulemaking necessary to implement the GCA and address those concerns.[148] Clarifying who qualifies as a dealer in firearms and must be licensed will not only increase the number of FFLs, but also provide ATF with a better ability to: (1) curb prohibited sales to minors, felons, and others; (2) better identify and target those engaging in straw purchases and firearms trafficking (which can indirectly aid in capturing people who engage in drug and human trafficking); and (3) identify unlawful internet sales and false statements on ATF Forms 4473, among other benefits. These issues are precisely what this rule targets.

6. Concerns With Effect on ATF

Comments Received

A number of commenters expressed views that the proposed rule would cause such an increase in the number of dealer applicants and licensees that ATF would not have the resources to handle the corresponding increased workload. One commenter stated, ''Legal sales of firearms by individuals take place every day over trading websites and gun shows, creating thousands of transactions; estimates in the proposed rule indicate as many as 300,000 individuals would need to obtain an FFL which would overburden the ATF and result in long delays and high expense for the government, likely

[148] Although these other matters may fall within the scope of ATF's authority, ''an agency has broad discretion to choose how best to marshal its limited resources and personnel to carry out its delegated responsibilities.'' *Massachusetts* v. *E.P.A.,* 549 U.S. 497, 527 (2007).

much greater than the estimates.'' Another stated, ''[t]he true cost is likely to be far greater when factoring in the ATF's expanded responsibilities, increased workload, and the potential need for additional personnel and resources to manage the influx of license applications and compliance checks. This could result in unforeseen financial and logistical challenges for both the ATF and the individuals seeking licenses.'' Another commenter stated that the NPRM would increase the number of inspections ATF would have to conduct, including just for one or two firearms sold.

In addition to costs to ATF and potential licensees, another commenter suggested that the proposed rule raises concerns relating to the NICS. By exponentially increasing the number of transactions requiring background checks, the proposal risks overburdening the NICS, leading to delays or even erroneous outcomes, they said, adding, ''This rule would exacerbate existing problems, thereby undermining its effectiveness as a tool for ensuring public safety.''

Other commenters suggested that all this extra cost and work would provide little benefit because nearly all of these current exchange activities are innocent and legal, having no criminal intent, the ''mountains of applications [would be] for what will be temporary FFL licenses,'' and the increase would, ironically, ''hinder'' ATF's ability to solve crime. As one commenter stated, ''After all, licensed dealers can directly order firearms from distributors or manufacturers, and the more licensed dealers, the harder it is to ensure all those dealers are complying with all applicable laws and regulations (fixed number of agents available for compliance inspections, more license holders, lower rate of inspections per license holder).'' Although acknowledging that the licensing fee is set by statute, several of these commenters nonetheless suggested an increase in the fees to help ATF. The application fee for dealers in firearms is currently set by the GCA at $200 for the first three-year period, stated one of these commenters. They continued by comparing this to the amount people spend in State fees for hunting licenses, as well as the scope of ATF's work: ''In the area of firearms alone ATF not only assists thousands of law enforcement agencies nationally and internationally in firearm tracing but also further contributes to public safety through permitting and monitoring with follow up compliance checks of 11 different types of [FFLs]. Your agency needs additional staff and funding support. I recommend increasing the FFL application fee to $600 to help facilitate carrying out your public safety mission. If an out of state person went on an elk hunting trip to Oregon, Wyoming, Montana, or Colorado they would be paying over $700 just for the license/tags!'' (emphasis removed)

Department Response

In response to comments saying that ATF does not have resources necessary to process additional licenses and increasing workload, the Department acknowledges that the BSCA amended the GCA to broaden the scope of persons who are required to be licensed as dealers under the GCA. The Department anticipates that, soon after this final rule is published, there will be an initial influx of applicants, which will then level off as licenses are processed and issued. The Department will reallocate resources as necessary to handle the estimated initial increase in the number of license applicants and anticipates being able to do so without taking away from other enforcement priorities.

The Department acknowledges commenters' desire to increase dealer license fees; however, those fees are set by statute, not by regulation. *See* 18 U.S.C. 923(a)(3). As such, those comments are beyond the scope of this rule.

7. Concerns With the Comment Process

Comments Received

One commenter stated that ATF required all commenters to include their name and address to comment and added that this requirement violates the First Amendment, adding that courts have consistently held that restrictions on anonymous speech are subject to ''exacting scrutiny.'' They also stated that asking for commenter identity ''severely limit[s] both the degree and amount of public participation.'' The commenter further stated that this ''is predictably likely to chill the gun owning public from weighing in and exercising their right to participate.'' Finally, the commenter pointed out that many government agencies accept anonymous comments in identical circumstances and that the Administrative Procedure Act (''APA'') does not require agencies to authenticate comments. As a result, the commenter requested that ATF re-open the comment period. At least one commenter who submitted a comment later in the comment period expressed skepticism about the large number of comments already posted in favor of the rule and thought they could have been produced by automated bots. Further, at least two commenters were under the impression that ATF refused to accept boxes of petitions submitted by a firearms advocacy organization.

Department Response

The Department disagrees that ATF's request for self-identification in its instructions ''severely limit[ed] the degree and amount of public participation,'' or discouraged the public from commenting, as evidenced by the thousands of electronic comments that ATF received that were either submitted anonymously or under an obvious pseudonym. Moreover, among the tens of thousands of submitted comments opposing the rule were many comments in which commenters expressly declared that they would not comply with any regulation or simply made disparaging or profane statements about the proposed rule, DOJ, or ATF, which undermines the comment's suggestion that commenters who have a negative view of ATF were deterred from submitting comments. ATF accepted, posted, and considered the anonymous and pseudonymous comments and those with negative views.

The commenter's statement that restrictions on anonymous speech are subject to ''exacting scrutiny'' under the First Amendment is irrelevant here because ATF did not restrict anonymous speech. Rather, ATF required commenters to include their first and last name and contact information when submitting comments, and noted that ''ATF may not consider, or respond to, comments that do not meet these requirements.'' 88 FR 62019. Thus, individuals could submit anonymous comments at will, but ATF indicated that it might not respond. ATF is not constitutionally required to respond to all comments, as ''[n]othing in the First Amendment or in [the Supreme Court's] case law interpreting it suggests that the rights to speak, associate, and petition require government policymakers to listen or respond to individuals' communications on public issues.'' *Minn. State Bd. for Cmty. Colleges* v. *Knight,* 465 U.S. 271, 285 (1984). Nonetheless, ATF did consider the submitted comments, anonymous or not, and is responding in this preamble to the issues raised, even though not to every individual comment.

The NPRM instructions under ''Public Participation,'' requiring that commenters include their first and last name and contact information (88 FR 62019), were for mail-in comments. ATF generally requires that persons provide such information on mailed comments in case of illegible handwriting in the

comment or in case the agency would like to follow up on a comment to gain further information or perspective from the commenter. In addition, ATF also generally requests such information on any comment submitted by electronic means or mail for the latter reason. Commenters are encouraged to include such information when submitting an electronic comment; however, the NPRM made clear that if commenters were submitting via the Federal eRulemaking portal, they should follow instructions on the portal. 88 FR 61993, 62019. On the Federal eRulemaking portal, the Department permits individuals to submit comments anonymously or even use aliases to mask their identity.

The significant majority of comments were submitted through the eRulemaking portal and were not required to include identifying information. As discussed above, thousands of commenters submitted electronic form letters opposing the rule, and those commenters, though they could have submitted anonymously, typically provided a name as part of those mass-mail campaigns. Accordingly, the Department disagrees that commenters opposing the rule were discouraged from participating and also disagrees with the suggestion that ATF should re-open the comment period.

Additionally, the developers of the Federal eRulemaking portal have in place measures to prevent comments from automated bots [149] and did not inform ATF that there were any system irregularities during the comment period.

And finally, the commenters who believed that ATF denied acceptance of boxes of petitions were mistaken. ATF received, accepted, scanned, posted, and considered the petitions from the firearms advocacy organization on behalf of their constituency, which were timely mailed before the close of the comment period in accordance with the NPRM instructions. Those petitions, which expressed objections to the proposed rule, totaled over 17,000 comments and were processed and considered.

[149] According to *regulations.gov*, the system employs reCAPTCHA ''to support the integrity of the rulemaking process and manage the role of software-generated comments.'' *See Frequently Asked Questions, Regulations.gov*, *https://www.regulations.gov/faq* (last visited Mar. 7, 2024).

8. Constitutional Concerns

a. Violates the Ex Post Facto Clause

Comments Received

A few commenters stated that the NPRM directly violates clause 3 of Article I, Section 9, of the United States Constitution, which prohibits ex post facto laws. These commenters' opposition comes from their belief that, once the final rule goes into effect, sales of firearms that are currently lawful will no longer be legal, and that the new prohibition would constitute an ex post facto law. The commenters who provided reasons for their assertion that this rule constitutes an ex post facto law primarily focused on their belief that the rule would be an ''infringement on firearms ownership and property rights'' and would create a backdoor firearms registry, that the rule is ''criminalizing and restricting transactions and expanding the scope of scrutiny'' of the ''engaged in the business'' as a dealer definition to ''those who the original law had not intended,'' and that the rule is an attempt to tax and punish Americans that have not committed a crime. One commenter stated that the EIB presumption that applies when a person repetitively sells firearms of the same or similar kind or type ''reads like a trap ready to spring on an unsuspecting collector who[se conduct] would previously be perfectly legal'' if, for example, they had exchanged a bolt-action Mosin-Nagant rifle in 7.62x54r for a Star Model B pistol in 0x18. According to the commenter, ''the concern here is taking an activity which was entirely acceptable prior to this rule, then moving the goalposts to make it illegal. It is concerning that this would appear to be an ex-post facto change.'' Another commenter asked whether it was legal ''to pass a law in 2022, then redefine what that law says?''

Department Response

The Department disagrees that the proposed rule violates the Ex Post Facto Clause. As an initial matter, the rule does not itself impose any new liability. Rather, the rule implements the BSCA, which amended the GCA, a statute passed by Congress. A law ''violates the Ex Post Facto Clause if it applies to events occurring before its enactment and alters the definition of criminal conduct or increases the punishment for a crime.'' *United States* v. *Pfeifer,* 371 F.3d 430, 436 (8th Cir. 2004) (citing *Lynce* v. *Mathis,* 519 U.S. 433, 441 (1997)). But a law does not violate the Ex Post Facto Clause just because it applies to conduct that ''began prior to, but continued after'' its effective date. *United States* v. *Brady,* 26 F.3d 282, 291 (2d Cir. 1994) (internal quotation marks omitted). For example, in the context of firearm possession, courts have consistently recognized that regulating the continued or future possession of a firearm that was acquired before the regulation took effect does not implicate the Ex Post Facto Clause because such a regulation does not criminalize past conduct. *See, e.g., United States* v. *Pfeifer,* 371 F.3d 430, 436–37 (8th Cir. 2004); *United States* v. *Mitchell,* 209 F.3d 319, 322–23 (4th Cir. 2000); *United States* v. *Brady,* 26 F.3d 282, 290–91 (2d Cir. 1994); *United States* v. *Gillies,* 851 F.2d 492, 495–96 (1st Cir. 1988); *United States* v. *D'Angelo,* 819 F.2d 1062, 1065–66 (11th Cir. 1987); *cf. Samuels* v. *McCurdy,* 267 U.S. 188, 193 (1925) (rejecting Ex Post Facto Clause challenge to statute that prohibited the post-enactment possession of intoxicating liquor, even when the liquor was lawfully acquired before the statute's enactment).

Here, the rule does not impose any civil or criminal penalties and nothing in this rule requires that the statute be applied in a manner that violates the Ex Post Facto Clause. Nor does this rule regulate ''firearm ownership'' in a vacuum—it addresses dealing in firearms. This rule describes the proper application of the terms Congress used in various provisions of the GCA, as modified by the BSCA, to define what constitutes being engaged in the business as a dealer—and, thus, when persons must obtain a dealer's license before selling firearms. As stated above, this rule does not impose liability independent of the pre-existing requirements of those statutes.

The Department disagrees that this rule ''redefine[s] what that law says.'' It simply explains and further clarifies the terms of the BSCA. The Department further disagrees that substantive rules that interpret an earlier statute—such as the 2022 changes the BSCA made to the GCA—through a congressional grant of legislative rulemaking authority are ex post facto laws merely because they interpret or clarify those laws. The proposed rule is exclusively prospective and does not penalize prior conduct; it is not an ex post facto law. *See Lynce,* 519 U.S. at 441. For these reasons, the Department disagrees with commenters' assertions that the rule violates the Ex Post Facto Clause.

b. Violates the First Amendment

Comments Received

A few commenters raised concerns that the proposed definitions violate the First Amendment. These commenters

stated that, ''One is not required by the Constitution to be vetted and permitted in order to claim protection under the First Amendment Right to Free Speech,'' which the commenters stated includes the right to ''procure and sell firearms as a citizen.'' In addition, at least one commenter stated that the ''promotion'' presumption under the definition of ''predominantly earn a profit'' violates the First Amendment by infringing on a private citizen's ability to promote their brand by conflating intent to sell with promotion of a brand. Another commenter stated that, when an agency can charge a crime against a person solely because they utter an offer to sell a firearm, ATF is enforcing thought crimes. The commenter added that this goes beyond existing law structures and does not meet the standard of calling ''Fire!'' in a theater.

Some commenters expressed First Amendment concerns specifically regarding the definition of terrorism included in the regulation. While some commenters voiced approval of including the definition of terrorism because they believe it allows the Government address potential threats effectively, other commenters objected, with some stating it is unnecessary and possibly infringes on freedom of speech and expression because the Government might inadvertently stifle protected political activism or dissent. They urged that the definition needs to be more precise to avoid unintended consequences and to ensure that legitimate firearms activities are not penalized.

Department Response

The Department disagrees with the commenters' First Amendment objections. As an initial matter, this rule does not regulate speech at all, nor is the right to ''procure and sell firearms as a citizen'' protected speech under the First Amendment. Although the Supreme Court has held that the First Amendment protects ''expressive conduct,'' it is not implicated by the enforcement of a regulation of general application not targeted at expressive activity. *Arcara* v. *Cloud Books, Inc.,* 478 U.S. 697, 702, 706–07 (1986). (First Amendment scrutiny ''has no relevance to a statute directed at . . . non-expressive activity,'' but applies ''where it was conduct with a significant expressive element that drew the legal remedy in the first place.''); *see also Wright* v. *City of St. Petersburg,* 833 F.3d 1291, 1298 (11th Cir. 2016) (''First Amendment scrutiny 'ha[d] no relevance to [a trespass ordinance] directed at imposing sanctions on nonexpressive activity' ''); *cf. Talk of the Town* v. *Dep't of Fin. & Bus. Servs. ex rel. Las Vegas,* 343 F.3d 1063, 1069 (9th Cir. 2003) (section of Las Vegas Code barring consumption of alcohol in places that lack valid liquor licenses ''in no way can be said to regulate conduct containing an element of protected expression''). Conduct may be expressive where ''[a]n intent to convey a particularized message [is] present, and . . . the likelihood [is] great that the message would be understood by those who viewed it.'' *Texas* v. *Johnson,* 491 U.S. 397, 404 (1989) (quoting *Spence* v. *Washington,* 418 U.S. 405, 410–11 (1974)). This final rule does not regulate expressive conduct of any kind, and the commenters have not offered any valid reason to believe that selling firearms constitutes expressive conduct. As such, the First Amendment is not implicated by this rule.

Even if certain aspects of procuring and selling a firearm could be considered expressive conduct, ''a sufficiently important governmental interest in regulating the nonspeech element'' of conduct that also includes an expressive element ''can justify incidental limitations on First Amendment freedoms.'' *United States* v. *O'Brien,* 391 U.S. 367, 376 (1968). Under an *O'Brien* analysis—

> a government regulation is sufficiently justified [1] if it is within the constitutional power of the Government; [2] if it furthers an important or substantial governmental interest; [3] if the governmental interest is unrelated to the suppression of free expression; and [4] if the incidental restriction on alleged First Amendment freedoms is no greater than is essential to the furtherance of that interest.

Id. at 377.

Addressing these elements, first, ''the Government may constitutionally regulate the sale and possession of firearms.'' *Wilson* v. *Lynch,* 835 F.3d 1083, 1096 (9th Cir. 2016). Second, courts have repeatedly held that public safety and preventing crime are not only substantial, but compelling, governmental interests. *See, e.g., United States* v. *Salerno,* 481 U.S. 739, 750 (1987); *Mai* v. *United States,* 952 F.3d 1106, 1116 (9th Cir. 2020); *Worman* v. *Healey,* 922 F.3d 26, 39 (1st Cir. 2019); *Kolbe* v. *Hogan,* 849 F.3d 114, 139 (4th Cir. 2017); *N.Y. State Rifle & Pistol Ass'n* v. *Cuomo,* 804 F.3d 242, 261 (2d Cir. 2015); *Horsley* v. *Trame,* 808 F.3d 1126, 1132 (7th Cir. 2015). Third, ''the Government's efforts to reduce gun violence'' are not directed at any hypothetical expressive conduct and cannot be construed to be related to the suppression of free expression in any way. *Wilson,* 835 F.3d at 1096–97. Fourth, the regulation's definitions and rebuttable presumptions do not ban ownership, purchase, or sale of firearms, nor do they restrict purchases and sales for enhancement of personal firearms collections. The regulation merely clarifies that recurring sales or purchases for resale, with the predominant intent to earn a profit, constitute being engaged in the business as a dealer. It does not ban these sales; it just requires that dealers comply with existing statutory licensing requirements. Therefore, any burden is ''incidental'' and ''minimal.'' *Id.* Because the regulation ''satisfies each of the *O'Brien* conditions,'' it would ''survive[ ] intermediate scrutiny.'' *Id.* at 1097 (finding ATF's Open Letter to Federal Firearms Licensees, informing them that they would have cause to deny a firearm sale as violating 18 U.S.C. 922(d)(3) if a purported purchaser presented their medical marijuana registry card, did not violate the First Amendment even if having the card was considered expression). Thus, even if the *O'Brien* standard applies, the regulation does not violate the First Amendment.

Moreover, this rule does not establish that an individual will be charged with a crime ''solely'' because they ''utter'' an offer to sell a firearm. As noted above, the presumptions set forth in this rule do not apply to criminal proceedings. Further, the application of a rebuttable presumption based on a seller's speech does not restrict speech in any way—it means only that, in a proceeding to determine whether a seller of firearms is ''engaged in the business'' of dealing in firearms, the Department may be able to make an initial evidentiary showing based on the seller's speech, and the evidentiary burden then shifts to the seller. The Supreme Court has held that the First Amendment ''does not prohibit the evidentiary use of speech to establish'' a claim ''or to prove motive or intent.'' *Wisconsin* v. *Mitchell,* 508 U.S. 476, 489 (1993). Consistent with this principle, courts have rejected First Amendment challenges to rebuttable presumptions that are triggered by speech evidence. *See Cook* v. *Gates,* 528 F.3d 42, 63–64 (1st Cir. 2008); *cf. Village of Hoffman Estates* v. *Flipside, Hoffman Estates, Inc.,* 455 U.S. 489, 495–96 (1982) (rejecting claim that a village had unlawfully restricted speech through a drug paraphernalia licensing ordinance just because guidelines for enforcing the ordinance ''treat[ed] the proximity of drug-related literature as indicium that paraphernalia are 'marketed for use with illegal cannabis or drugs' ''). Ultimately, the subject of this final rule is a seller's conduct and not his speech, and the

rule does not impose any burdens on speech.

To the extent commenters are alleging this rule impermissibly inhibits commercial speech, it does no such thing. Repetitively or continuously advertising the sale of firearms can result in a person being presumed to be engaging in the business, but a presumption may be rebutted. At any rate, even if unrebutted, the implication of the presumption is simply that the person must have a license to deal in firearms—that person is not precluded from advertising the sale of firearms. Assuming the presumption does burden commercial speech, courts have routinely recognized that ''[t]he Constitution accords a lesser protection to commercial speech than to other constitutionally guaranteed expression.'' *Cent. Hudson Gas & Elec. Corp.* v. *Pub. Serv. Comm'n of New York,* 447 U.S. 557, 562–63 (1980) (internal quotation marks omitted). If the content of the commercial speech is not illegal or misleading, the Government must first ''assert a substantial interest in support of its regulation; second, the government must demonstrate that the restriction on commercial speech directly and materially advances that interest; and third, the regulation must be 'narrowly drawn.''' *Fla. Bar* v. *Went For It, Inc.,* 515 U.S. 618, 624 (1995). As stated above, ''the Government may constitutionally regulate the sale and possession of firearms,'' *Wilson,* 835 F.3d at 1096, and public safety is a compelling governmental interest. Requiring those who are engaged in the business of dealing in firearms to be licensed—and thus to keep records and conduct background checks on potential purchasers to deny transfers to those who are prohibited from possessing firearms—materially advances public safety. Moreover, this requirement is narrowly drawn because it pertains to only those ''who devote[ ] time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.'' *It does not apply to every sale.*

The Department also disagrees that the rule's definition of ''terrorism'' is unnecessary or infringes upon protected speech. The definition mirrors the statutory definition of ''terrorism'' that Congress enacted and codified in 18 U.S.C. 921(a)(22) and (a)(23), with only a minor addition at the beginning to state the definitions to which it applies. It is also necessary to explain the congressionally enacted proviso that proof of profit shall not be required when a person engages in the regular and repetitive purchase and disposition of firearms in support of terrorism. The definition does not constitute a governmental restriction on speech or expressive conduct, and so it does not violate the First Amendment.

Again, it bears emphasizing that this statutory definition of ''terrorism'' existed in the definition of ''principal objective of livelihood and profit'' before the BSCA was passed, and still remains there verbatim. The BSCA added that same definition to the new ''predominantly earn a profit'' definition. This rule merely moves that definition within the regulations to be a standalone definition so that it applies to both the term ''predominantly earn a profit'' and ''principal objective of livelihood and profit'' (in the sections governing importers, manufacturers, and gunsmiths)—consistent with the statute—without repeating it in two places, and makes a slight edit at the beginning to state that it applies to both definitions. This rule does not further interpret or define that term, and comments in that regard are beyond the scope of the rule.

c. Violates the Second Amendment

Comments Received

Of those who objected to the NPRM, a majority argued that any changes to the definitions, or creating new requirements and rebuttable presumptions, are inconsistent with the Second Amendment and are therefore unconstitutional. Commenters stated that the right to have—and thus purchase and sell—firearms dates back to the Founding and that requiring licenses for any aspect of firearm sales is an unconstitutional infringement of Second Amendment rights. Many commenters stated that the rule is ''reclassifying all sales (even private) to require a 'licensed dealer' (FFL) . . . thusly preventing law abiding United States citizens from obtaining firearms. If a citizen cannot obtain a firearm, a citizen cannot keep or bear a firearm violating the Second Amendment,'' and similar statements. Some of these commenters stated that the rule violates the Second Amendment by creating universal background checks, making it difficult and costly for citizens to sell personal firearms, and that it deprives people of the inherent right to dispose of, trade, or do what they wish with their own property.

Some stated they understand the importance of balancing public safety and regulation of illegal firearms activity with firearm ownership, but expressed concerns that the correct balance point has not been determined yet or that the proposed regulation might ''inadvertently classify individuals who engage in the lawful and occasional transfer of personal firearms to friends or family members as arms dealers,'' raising concerns about overreach and undue burden.

Several commenters tied these concerns to *District of Columbia* v. *Heller,* 554 U.S. 570 (2008), stating that expanding the definition of who is engaged in the business of dealing in firearms may criminalize law-abiding citizens engaging in their Second Amendment rights, which the commenters stated were ''unequivocally affirm[ed]'' by *Heller.* One commenter stated that the *Heller* decision ''emphasized that any restrictions placed on the Second Amendment must be closely tailored to avoid unnecessary infringement on individual rights. The proposed rule, by including casual sellers under the umbrella of those 'engaged in the business,' stretches this definition beyond its historical and legal boundaries. This is not a close tailoring of restrictions but an undue burden on average citizens who may occasionally sell firearms without falling under any standard commercial definition of a firearms dealer.''

Many other commenters stated that the regulation violates *New York State Rifle & Pistol Ass'n,* v. *Bruen,* 597 U.S. 1 (2022), because, the commenters argued, there is no analogous historical law from either the Founding era—when the Second Amendment was ratified—or the Reconstruction period—when the Fourteenth Amendment's Due Process Clause incorporated the Second Amendment's protections and rendered them applicable to the States—that defined a ''dealer'' in firearms or required background checks, dealer licensing, recordkeeping, or gun registration. Others stated that the regulation violates *Bruen* because, they stated, *Bruen* precludes the Government from using means-end scrutiny to justify its firearms laws. Accordingly, the commenters argued, the proposed rule's use of public safety as a basis for purportedly banning firearms from average citizens renders it unconstitutional under *Bruen.* These commenters further argued the proposed rule is unconstitutional under *Bruen* because it serves no public interest.

A few other commenters directly stated that the BSCA, GCA, and NFA all violate the Second Amendment. Some added that the ATF regulation is misinterpreting the BSCA, which did not intend to change the definition of ''engaged in the business'' or any other definition, and the proposed rule is thus

an effort to work around the Second Amendment.

Department Response

The Department disagrees with commenters that the GCA, the BSCA amendments, or this rule implementing these statutes violate the Second Amendment. Those statutes and this final rule are consistent with the Supreme Court's Second Amendment decisions. In *Heller,* the Court emphasized that ''the right secured by the Second Amendment is not unlimited'' and ''nothing in our opinion should be taken to cast doubt'' on certain laws, including those ''imposing conditions and qualifications on the commercial sale of arms.'' 554 U.S. at 626–27. The Court repeated the same statement in *McDonald* v. *City of Chicago,* 561 U.S. 742, 786 (2010), and Justice Kavanaugh, joined by the Chief Justice, reiterated the point in his concurring opinion in *Bruen,* 597 U.S. at 81 (Kavanaugh, J.).

Those precedents confirm that this rule raises no constitutional concern under the Second Amendment. The rule addresses the commercial sale of firearms. This rule does not prevent individuals who are permitted to possess firearms under Federal law from possessing or acquiring firearms; individuals remain free to purchase firearms from an FFL or in a private sale from a non-licensee who is not engaged in the business of dealing in firearms. Nor does this rule require a dealer's license for all sales. By its terms, this rule applies only to those who ''devote[ ] time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.'' 18 U.S.C. 921(a)(21)(C). And because this rule does not mandate a license for all sales, it does not mandate a background check for all sales. Likewise, this rule does not prevent those who own firearms from lawfully selling, acquiring, or keeping this property. This rule does not prevent law-abiding citizens from making occasional sales or purchases of firearms for the enhancement of a personal collection or for a hobby—it concerns only those ''engaged in the business'' of firearms dealing. Firearm owners would only need a license in the event that they are devoting time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.

At least one circuit court has rejected a facial Second Amendment challenge to the licensing requirement in 18 U.S.C. 923(a) on the ground that it ''imposes a mere condition or qualification. Though framed as a prohibition against unlicensed firearm dealing, the law is in fact a requirement that those who engage in the [business of selling] firearms obtain a license.'' *United States* v. *Hosford,* 843 F.3d 161, 166 (4th Cir. 2016). The licensing requirement, which is implemented by this rule, is ''a crucial part of the federal firearm regulatory scheme.'' *Id.* at 168; *see also Focia,* 869 F.3d at 1286 (prohibiting transfers between unlicensed individuals in different states ''does not operate to completely prohibit [the defendant] or anyone else, for that matter, from selling or buying firearms''; instead, it ''merely'' imposes ''conditions and qualifications on the commercial sale of arms'' (internal quotation marks omitted)); *United States* v. *Nowka,* No. 11–CR–00474, 2012 WL 2862061, at *6 (N.D. Ala. May 10, 2012) (''[Plaintiff's] right to buy or sell a firearm is not abridged. It is regulated.''). This rule implements a definitional change that Congress made in the BSCA, which will expand the number of firearms sellers affected by the licensing requirement in 18 U.S.C. 923(a).

Additionally, the final rule is consistent with the Supreme Court's more recent decision in *Bruen.* That case clarified the standard for resolving Second Amendment claims ''[i]n keeping with *Heller,*'' 597 U.S. at 17, and the Court did not draw into question *Heller*'s explanation that regulations of commercial sales of firearms are presumptively lawful. *See id.* at 81 (Kavanaugh, J., concurring); *see also id.* at 79 (noting that the Second Amendment does not prohibit the imposition of objective ''licensing requirements'' commonly associated with firearms ownership); *id.* at 72 (Alito, J., concurring) (noting that nothing in that opinion decided anything about ''the requirements that must be met to buy a gun''). Under *Bruen,* to establish a Second Amendment violation, a challenger must first show that the final rule implicates ''the Second Amendment's plain text.'' *Id.* at 17 (majority opinion). Only if that threshold requirement is met is the Government then required to ''demonstrate that the [final rule] is consistent with this Nation's historical tradition of firearm regulation.'' *Id.* Here, the final rule does not implicate the Second Amendment's ''plain text,'' which addresses the right to ''keep and bear Arms'' and is silent as to the commercial sale of firearms. U.S. Const. amend. II. Both before and after *Bruen,* courts have agreed that the Second Amendment does not ''protect a proprietor's right to sell firearms.'' *Teixeira* v. *County of Alameda,* 873 F.3d 670, 690 (9th Cir. 2017); *see also United States* v. *Kazmende,* No. 22–CR–236, 2023 WL 3872209, at *5 (N.D. Ga. May 17, 2023) (rejecting a Second Amendment challenge to 18 U.S.C. 922(a)(1)'s prohibition on willfully engaging in the business of dealing in firearms without a license on the ground that the ''Second Amendment . . . simply does not cover the *commercial* dealing in firearms.''), *report and recommendation adopted,* 2023 WL 3867792 (N.D. Ga. June 7, 2023); *United States* v. *Flores,* 652 F. Supp. 3d. 796, 799–802 (S.D. Tex. 2023) (holding that ''commercial firearm dealing is not covered by the Second Amendment's plain text''); *United States* v. *King,* 646 F. Supp. 3d. 603, 607 (E.D. Pa. 2022) (holding that ''the Second Amendment does not protect the *commercial* dealing of firearms''); *United States* v. *Tilotta,* 2022 WL 3924282, at *5 (S.D. Cal. Aug. 30, 2022) (concluding that the plain text of the Second Amendment does not cover the commercial sale and transfer of firearms).

Even if, contrary to law, the scope of the Second Amendment's protection extended to commercial dealing in firearms, there is a robust historical tradition supporting the Government's authority to require licenses and inspection of firearms sellers. Where a regulation implicates the Second Amendment, the Government may justify it ''by demonstrating that it is consistent with the Nation's historical tradition of firearm regulation,'' including, for example, by pointing to ''a well-established and representative historical *analogue.*'' *Id.* at 24, 30. To be analogous, historical and modern firearms regulations need only be ''relevantly similar''; a ''historical *twin*'' is not required. *Id.* at 29–30. In fact, from colonial times, State and local governments have routinely exercised their authority to regulate the sale of firearms, through licensing, inspection, and similar requirements.

For instance, the third U.S. Congress made it unlawful for a limited period ''to export from the United States any cannon, muskets, pistols, bayonets, swords, cutlasses, musket balls, lead, bombs, grenades, gunpowder, sulpher, or saltpetre,'' Act of May 22, 1794, 1 Stat. 369, ch. 33, sec. 1 (''An Act prohibiting for a limited time the Exportation of Arms and Ammunition, and encouraging the Importation of the same''), demonstrating a clear understanding that the Constitution permitted regulation of firearms sellers.

Further, as the en banc Ninth Circuit recounted in detail, as early as the 1600s, ''colonial governments substantially controlled the firearms trade,'' including through ''restrictions on the commercial sale of firearms.'' *Teixeira,* 873 F.3d at 685 (further explaining, as examples, that ''Connecticut banned the sale of firearms by its residents outside the colony,'' and Virginia law made it unlawful for any individual to travel more than three miles from a plantation with ''arms or ammunition above and beyond what he would need for personal use'').

Measures regulating firearms sellers, similar to the inspection and licensing regime of today, have been commonplace throughout history. To take one example, in 1805, Massachusetts required that all musket and pistol barrels manufactured in the State and offered for sale be ''proved'' (inspected and marked by designated individuals) upon payment of a fee, to ensure their safe condition, and Maine enacted similar requirements in 1821.[150] Further, multiple States, such as Massachusetts (1651, 1809), Connecticut (1775), New Jersey (1776), and New Hampshire (1820), required licenses or inspection to export or sell gunpowder (akin to modern ammunition).[151] *See also United States* v. *El Libertad,*—F. Supp. 3d—,No. 22–CR–644, 2023 WL 4378863, at *7 (S.D.N.Y. July 7, 2023) (finding that historical laws showed ''expansive authority exercised by colonial and early state legislatures as well as early congresses over the transfer of firearms between individuals and across borders,'' including through ''licensing requirements [and] registration requirements''). Similar licensing and taxation requirements for the sale of gunpowder and certain arms were enacted through the antebellum and Reconstruction eras.[152]

That modern laws regarding the commercial sale of firearms may not be identical to laws from the Founding era is not dispositive. There are many reasons other than constitutional limitations that historical regulations are not a ''dead ringer'' for modern regulations. *Bruen,* 597 U.S. at 30. For example, during the Founding era, guns in America were ''produced laboriously, one at a time,'' Pamela Haag, *The Gunning of America* 9 (2016), and communities were ''close-knit,'' where ''[e]veryone knew everyone else,'' *Range* v. *Att'y Gen.,* 69 F.4th 96, 117 (3d Cir. 2023) (en banc) (Krause, J., dissenting) (quoting Stephanos Bibas, *The Machinery of Criminal Justice* 2 (2012)). That is substantially different from today, where guns may be mass-produced quickly and are widely available for purchase at ubiquitous retailers through modern technology and more plentiful and far-reaching channels of national and international commerce, where sellers are unlikely to know their customers. But from the Founding and before, the principle remains the same. The Government has been allowed to—and has enacted measures to—regulate the commercial sale of firearms to prevent their sale to persons the Government deemed dangerous. Thus, assuming for the sake of argument that the regulation implicates Second Amendment rights, it would pass muster under *Bruen.*

In response to commenters stating that the Department should not use the *Heller* two-step process, the Department acknowledges that *Bruen* abrogated the ''two-step'' framework of *Heller,* as ''one step too many,'' and rejected the application of means-end scrutiny at the second step. *Bruen,* 597 U.S. at 19. Although the Department believes this rule does promote public safety, the Department is not relying on this benefit in conducting the historical analysis required by *Bruen* (assuming again for the sake of argument that it applies).

Therefore, to the extent that commenters argued the rule or the underlying statute violates the Second Amendment, the Department disagrees for all of the reasons stated above.

d. Violates the Fourth or Fifth Amendment Right to Privacy

Comments Received

Several commenters claimed the proposed rule violates their right to privacy under the Fourth Amendment and the Fifth Amendment's Due Process Clause. These commenters believe that the proposed rule creates a de facto firearms registry by requiring that people who engage in recurring purchases and sales with the predominant intent to earn a profit must obtain a dealer's license. Other commenters stated that enforcement of the proposed rule would lead to a violation of their constitutional right to privacy by requiring them to be registered dealers subject to privacy-invading and warrantless inspections without breaking a law—even for a single firearms transaction. They raised particular concerns in this regard for those who operate from home. And other commenters asserted a Fourth Amendment violation in regard to their property if the Government knows what firearms or how many weapons each individual owns. One commenter focused on the rule's inclusion of electronic marketplaces as a violation of privacy, stating that including online brokers, auctions, text messaging services, and similar electronic means of transacting purchases and sales would cause people to ''forfeit their privacy to the ATF in these matters.''

Department Response

The Department disagrees that the rule violates the Fourth Amendment or any constitutional right to privacy. Under both the statute and the proposed and final rules, there are no recordkeeping or background check requirements for personal firearms that

[150] *See* 3 Laws of the Commonwealth of Massachusetts, from November 28, 1780, to February 28, 1807, at 259–61 (1807); 1 Laws of the State of Maine 546 (1830).

[151] *See* Colonial Laws of Massachusetts Reprinted from the Edition of 1672, at 126, Powder (1890) (1651 statute requiring license to export gunpowder); 2 General Laws of Massachusetts from the Adoption of the Constitution to February, 1822, at 198–200, ch. 52, An Act Providing for the Appointment of Inspectors, and Regulating the Manufactory of Gun-Powder, secs. 1, 8 (1823) (1809 statute providing for the appointment of an ''inspector of gunpowder for every public powder magazine, and at every manufactory of gunpowder,'' and imposing penalties for any sale or export of gunpowder ''before the same has been inspected and marked''); 15 The Public Records of the Colony of Connecticut, from May, 1775, to June, 1776, Inclusive 191, An Act for Encouraging the Manufactures of Salt Petre and Gun Powder (1890) (1775 Connecticut law establishing, among other things, that no gunpowder manufactured in the colony ''shall be exported out'' of the colony ''without [an applicable] licence''); Acts of the General Assembly of the State of New-Jersey, at a Session Begun at Princeton on the 27th Day of August 1776, and Continued by Adjournments 6, ch. 6, An Act for the Inspection of Gun-Powder, sec. 1 (1877) (No person shall offer any gunpowder for sale ''without being previously inspected and marked as is herein after directed.''); Laws of the State of New Hampshire; With the Constitutions of the United States and of the State Prefixed 276–78, An Act to Provide for the Appointment of Inspectors and Regulating the Manufactory of Gunpowder, secs. 1, 8 (1830) (authorizing ''inspector of gunpowder for every public powder magazine, and at every manufactory of gunpowder in this state'' and imposing penalties for any sale or disposition of gunpowder ''before the same has been inspected and marked'').

[152] The Revised Charter and Ordinances of the City of Chicago: To Which are Added the Constitutions of the United States and State of Illinois 123–24, ch. 16, Regulating the Keeping and Conveying Gun Powder and Gun Cotton, secs. 1, 6 (1851) (1851 city law barring the sale of gunpowder ''in any quantity'' without government permission, and barring ''retailer[s] of intoxicating liquors'' and ''intemperate person[s]'' from such permits); The Charter and Ordinances of the City of Saint Paul, to August 1st, 1863, Inclusive 166, Gunpowder, ch. 21, sec. 1 (1863) (similar 1858 city law requiring permission to sell gunpowder,); Acts of the General Assembly of Alabama: Passed at the Session of 1874–75, at 41, An Act to Establish Revenue Laws for the State of Alabama, Act No. 1, sec. 102(27) (1875) (imposed $25 license fee on dealers of pistols and certain knives); Acts of the General Assembly of Alabama, Passed at the Session of 1878–9, at 436–37, Act of Feb. 13, 1879, Act No. 314, sec. 14 (authorized town to ''license dealers in pistols, bowie-knives and dirk-knives'').

are occasionally bought and sold as part of enhancing a personal collection, such as for sporting purposes. As to the recordkeeping and background check requirements for the licensees engaged in the business of dealing in firearms, those records are not maintained in the custody of the government but are retained by the licensee until they discontinue their business. *See* 18 U.S.C. 923(g)(4); 27 CFR 478.129. Moreover, even when these records are in ATF's possession after the licensee discontinues their business, due to statutory and permanent appropriations restrictions, they are not searchable by a transferee's name or any personal identification code. *See* 18 U.S.C. 926(a);[153] Consolidated and Further Continuing Appropriations Act, 2012, Public Law 112–55, 125 Stat. 552, 609–10 (2011) (''That, hereafter, no funds made available by this or any other Act may be used to electronically retrieve information gathered pursuant to 18 U.S.C. 923(g)(4) by name or any personal identification code . . .''). This rule does not create or modify requirements with respect to retaining and searching records.

The Department also does not agree that this rule will violate a constitutional right to privacy with regard to commenters' property. This rule does not require individuals to provide any information with regard to their possession of firearms. It applies only to those engaged in the business of dealing in firearms. ''Property used for commercial purposes is treated differently for Fourth Amendment purposes from residential property. 'An expectation of privacy in commercial premises . . . is different from, and indeed less than, a similar expectation in an individual's home.''' *Minnesota* v. *Carter,* 525 U.S. 83, 90 (1998) (quoting *New York* v. *Burger,* 482 U.S. 691, 700 (1987)). Moreover, every applicant for a license is made aware of ATF's right of entry into their premises and examination of their records, *see* 27 CFR 478.23; thus there can be no reasonable expectation of privacy in the information contained in those records. *Cf. United States* v. *Marchant,* 55 F.3d 509, 516 (10th Cir. 1995) (finding no reasonable expectation of privacy in the information contained in ATF Form 4473 and further noting that ''Form 4473 did not advise Defendant that the information elicited was private, or that it would remain confidential''). Additionally, while the proposed rule in no way establishes a registry of firearms, and Congress has specifically prohibited such a registry, it is worth noting that the nearly century-old requirement for the actual registration of privately held firearms has never once been found to violate a Fourth Amendment right to privacy.

Some courts have recognized a privacy interest in avoiding disclosure of certain personal matters under the Due Process Clauses of the Fifth and Fourteenth Amendments. *See Doe No. 1* v. *Putnam County,* 344 F. Supp. 3d 518, 540 (S.D.N.Y. 2018). Even under these court decisions, however, ''not all disclosures of private information will trigger constitutional protection.'' *Id.* (internal quotation marks omitted). In at least one circuit, the right to privacy in one's personal information under the Due Process Clauses is ''limited [to a] set of factual circumstances involving one's personal financial or medical information.'' *Id.* ''[T]he question is not whether individuals regard [particular] information about themselves as private, for they surely do, but whether the Constitution protects such information.'' *DM* v. *Louisa County Dep't of Human Services,* 194 F. Supp. 3d 504, 508–09 (W.D. Va. 2016) (internal quotation marks omitted) (finding no right to privacy with respect to the nature and location of an individual's counseling sessions). Basic information regarding firearms ownership or possession is of neither the medical nor financial variety, and no court has found this information to be constitutionally protected. *See Doe 1,* 344 F. Supp. 3d at 541 (''Disclosure of one's name, address, and status as a firearms license [holder] is not one of the 'very limited circumstances' in which'' a right to privacy exists).

e. Violates the Fifth Amendment—Unconstitutionally Vague

Comments Received

Some commenters objected to the rule on the ground that it is so vague that it violates the Due Process Clause of the Fifth Amendment. Most commenters merely stated that the rule violates the Fifth Amendment because it is unconstitutionally vague, without providing further details. Of those few commenters that elaborated their vagueness concern, the primary concern was that the rule does not define a threshold number of firearms that must be sold to qualify a person as a dealer in firearms, and that they felt this is unconstitutionally vague. A couple of other commenters stated that the rule was unconstitutionally vague and arbitrary in setting some of the rebuttable presumptions, and focused particularly on the presumption that a resale within 30 days after purchase could qualify a person as a dealer in firearms. These commenters believed that the time period included in this provision was arbitrary and so vague that routine actions that commonly arise in personal firearms contexts could trigger the presumption without people realizing it, thus entrapping people or exposing law-abiding citizens to a criminal prosecution. One commenter stated that ''[p]hrases like 'time, attention, and labor' or 'predominantly earn a profit' are nebulous and subject to interpretation,'' and stated that this vagueness conflicts with the principles established in *Grayned* v. *City of Rockford,* 408 U.S. 104 (1972).

One commenter argued that the proposed rule is unconstitutional, relying on *Johnson* v. *United States,* 576 U.S. 591 (2015), for the proposition that a criminal statute is unconstitutionally vague in violation of due process for either of two reasons: first, if ''it fails to give ordinary people fair notice'' of what is proscribed; and, second, if it is ''so standardless that it invites arbitrary enforcement.'' *Johnson,* 576 U.S. at 595. The commenter added that ''[o]ther case law expounding the 'void for vagueness' doctrine'' includes *Grayned.* According to the commenter, ''[u]nder *Grayned,* due process required that a law provide fair warning and provide 'persons of reasonable intelligence a reasonable opportunity to know what is prohibited so he may act accordingly.''' Another commenter cited to *Cargill* v. *Garland,* 57 F.4th 447, 469 (5th Cir.) (en banc), *cert. granted* 144 S. Ct. 374 (2023) (mem.), and stated, '''ambiguity concerning the ambit of criminal statutes should be resolved in favor of lenity.''' Relying on *Cargill,* the commenter said, ''[a] statute is ambiguous if, after a court has 'availed [itself] of all traditional tools of statutory construction,' the court is left to 'guess at its definitive meaning' among several options. *Id.* (cleaned up).'' This commenter continued, ''In those circumstances involving ambiguous criminal statutes, the court is 'bound to apply the rule of lenity.' *Id.* at 471. So even if a court were to find that the statutory definition of 'engaged in the business' is ambiguous enough to allow

[153] ''No such rule or regulation prescribed after the date of the enactment of the Firearm Owners' Protection Act may require that records required to be maintained under this chapter or any portion of the contents of such records, be recorded at or transferred to a facility owned, managed, or controlled by the United States or any State or any political subdivision thereof, nor that any system of registration of firearms, firearms owners, or firearms transactions or dispositions be established. Nothing in this section expands or restricts the [Attorney General's] authority to inquire into the disposition of any firearm in the course of a criminal investigation.''

for presumptions of guilt based on a single transaction, that is far from the most obvious reading of the statute, which interpretation would thus be resolved in favor of lenity.'' Some congressional commenters stated, ''The proposed rule raises serious vagueness concerns in light of the severe penalties. Will someone face a civil investigation for handing out business cards to sell his personal collection? What about if someone decides to sell a firearm in its original packaging?''

Department Response

The Department disagrees with commenters that this regulation, terms within it, or the rebuttable presumptions established by it are unconstitutionally vague. To begin, many of the comments are critical of the specific language Congress included in the statute (which is being added to the regulation). The Department cannot change the terms in the statute or their effect on sellers' legal rights and obligations. However, these comments illustrate the benefits of a rule that provides additional clarification to the public. The rule explains the Department's understanding of the statutory terms at issue and describes how those terms apply to particular circumstances, thus providing greater clarity to the public.

In any event, however, the terms employed in the statute and rule are not unconstitutionally vague. ''It is a basic principle of due process that an enactment is void for vagueness if its prohibitions are not clearly defined.'' *Grayned,* 408 U.S. at 108. A law is impermissibly vague if it ''fails to provide a person of ordinary intelligence fair notice of what is prohibited, or is so standardless that it authorizes or encourages discriminatory enforcement.'' *FCC* v. *Fox Television Stations, Inc.,* 567 U.S. 239, 253 (2012) (internal quotation marks omitted). However, ''[c]ondemned to the use of words, we can never expect mathematical certainty from our language.'' *Grayned,* 408 U.S. at 110. The definitions in this rule use the terms with their ordinary meanings and in context, *see United States* v. *TRW Rifle,* 447 F.3d 686, 689, 690 (9th Cir. 2006), and are sufficiently clear to '''give the person of ordinary intelligence a reasonable opportunity to know what is prohibited,''' *Village of Hoffman Estates,* 455 U.S. at 498 (quoting *Grayned,* 408 U.S. at 108). Absolute certainty is not required. *See Hosford,* 843 F.3d at 171 (explaining that laws ''necessarily have some ambiguity, as no standard can be distilled to a purely objective, completely predictable standard''); *Draper* v. *Healey,* 827 F.3d 1, 4 (1st Cir. 2016) ([I]f due process demanded [a] how-to guide, swaths of the United States Code, to say nothing of state statute books, would be vulnerable.''); *United States* v. *Lachman,* 387 F.3d 42, 56 (1st Cir. 2004) (''The mere fact that a statute or regulation requires interpretation does not render it unconstitutionally vague.''); *Kolbe* v. *O'Malley,* 42 F. Supp. 3d 768, 800 (D. Md. 2014) (A ''statute is not impermissibly vague simply because it does not spell out every possible factual scenario with celestial precision.'' (internal quotation marks omitted)). The many objective examples and detailed explanations in the rule, all supported by a thorough administrative record, provide clarification and assist people in complying with the statute. This rule is therefore not unconstitutionally vague.

The Department further disagrees that this rule violates the rule of lenity. The rule of lenity does not apply whenever a law or rule may contain some ambiguity. ''The simple existence of some statutory ambiguity . . . is not sufficient to warrant application of that rule, for most statutes are ambiguous to some degree.'' *Muscarello* v. *United States,* 524 U.S. 125, 138 (1998). To invoke the rule of lenity, a court ''must conclude that there is a 'grievous ambiguity or uncertainty' in the statute.'' *Id.* at 138–39 (quoting *Staples* v. *United States,* 511 U.S. 600, 619 n.17 (1994)). A grievous ambiguity or uncertainty is present '''only if, after seizing everything from which aid can be derived, [a] [c]ourt 'can make no more than a guess as to what Congress intended.''' *Ocasio* v. *United States,* 578 U.S. 282, 297 n.8 (2016) (quoting *Muscarello,* 524 U.S. at 138–39). This rule does not require ''a guess'' as to what conduct satisfies being ''engaged in the business''; it adopts the plain, statutory or dictionary meaning of terms and provides rebuttable presumptions and examples for additional clarity.

The rule's rebuttable presumptions are also not unconstitutionally vague; indeed, such presumptions are common in the law. Courts frequently rely on them because they provide an approach that is particularized to certain circumstances. The presumptions in this rule are specific and tailored to particular situations. The fact that they may be overcome by rebuttal evidence does not render them vague. Although the presumptions do not address all circumstances in which a person might be engaged in the business, they do take into account common fact patterns that have been found to be appropriate indicators.

While a bright line numerical approach might provide greater clarity, the Department has rejected such an approach for the reasons identified in Section IV.B.3 of this preamble, as well as in the NPRM. The Department has also chosen to use presumptions in this rule rather than another approach,[154] because these presumptions are consistent with the analytical framework long applied by the courts in determining whether a person has violated 18 U.S.C. 922(a)(1)(A) and 923(a) by engaging in the business of dealing in firearms without a license even under the pre-BSCA definition.

f. Violates the Fifth Amendment—Unconstitutional Taking

Comments Received

A few commenters opposed the rule as an unconstitutional taking under the Fifth Amendment. The primary concerns raised by these commenters were that, by requiring people who currently sell firearms without a license to acquire a license, the rule creates a backdoor registry, enabling the Government to identify what weapons, and how many, each person has, so that the Government can then enter private property without a warrant and seize them. One commenter spelled out the concern more fully, stating, ''Moreover, the rights to self-defense and to keep and bear arms are, in no small measure, property rights. The Fifth Amendment's Takings Clause provides additional protection to these rights. This clause ensures that private property cannot be taken for public use without just compensation. Arms, as personal property acquired lawfully, fall under this protection. Therefore, any regulation that effectively deprives an individual of their arms, or the utility thereof, intersects with property rights and demands rigorous scrutiny under the Takings Clause.''

Department Response

The Department disagrees that the proposed regulation constitutes a taking, and further disagrees that it results in a compensable taking. As an initial matter, no property is being taken. This rule does not require individuals who currently own firearms that they might sell or who might buy firearms in the future to surrender or destroy any personal property in order to engage in those activities. Further, even if they predominantly intend to earn a profit through repetitive purchases or resales, and thus must obtain a dealer license, they still do not have to surrender or

[154] For the reasons why the Department did not adopt a factor-based approach, see Section IV.C.3.

destroy any personal property to comply with this rule.

Furthermore, even where the application of Federal firearms laws results in the forfeiture of firearms, that is not a compensable taking. The Federal Circuit has recognized that, under Supreme Court precedent, there are certain exercises ''of the police power that ha[ve] repeatedly been treated as legitimate even in the absence of compensation to the owners of the . . . property.'' *Acadia Tech. Inc.* v. *United States,* 458 F.3d 1327, 1332–33 (Fed. Cir. 2006). As the Supreme Court articulated the doctrine, ''[a] prohibition simply upon the use of property for purposes that are declared, by valid legislation, to be injurious to the health, morals, or safety of the community, cannot, in any just sense, be deemed a taking or an appropriation of property for the public benefit.'' *Mugler* v. *Kansas,* 123 U.S. 623, 668–69 (1887); *see Acadia Tech., Inc.,* 458 F.3d at 1333. The Federal Circuit and the Court of Federal Claims have also made clear that these principles apply with full force in analyzing the impact of firearms regulations. *See Mitchell Arms, Inc.* v. *United States,* 7 F.3d 212 (Fed. Cir. 1993); *Akins* v. *United States,* 82 Fed. Cl. 619 (2008).

Even if a takings analysis would be appropriate, a takings claim would likely be analyzed under *Penn Central Transportation Co.* v. *City of New York,* 438 U.S. 104, 124 (1978), and the result would be the same. Under *Penn Central,* a court considers: (1) the character of the Government's actions, (2) the property holder's investment-backed expectations, and (3) the economic impact on the property holder. *Id.*

No taking exists under the *Penn Central* test. A restriction ''directed at the protection of public health and safety . . . is the type of regulation in which the private interest has traditionally been most confined and governments are given the greatest leeway to act without the need to compensate those affected by their actions.'' *Rose Acre Farms, Inc.* v. *United States,* 559 F.3d 1260, 1281 (Fed. Cir. 2009). A plaintiff's ''reasonable investment-backed expectations are greatly reduced in a highly regulated field,'' *Branch* v. *United States,* 69 F.3d 1571, 1581 (Fed. Cir. 1995), such as the firearms industry. And as the Supreme Court has made clear, an owner of personal property ''ought to be aware of the possibility that new regulation might even render his property economically worthless.'' *See Lucas* v. *South Carolina Coastal Council,* 505 U.S. 1003, 1027–28 (1992). At the same time, with respect to economic impact, the Court has observed that even when a regulation ''prevent[s] the most profitable use of [a person's] property,'' a ''reduction in the value of property is not necessarily equated with a taking.'' *Andrus* v. *Allard,* 444 U.S. 51, 67 (1979); *see also Jacob Ruppert, Inc.* v. *Caffey,* 251 U.S. 264, 303 (1920) (upholding a Federal law banning nonintoxicating alcoholic beverages on the ground that ''there was no appropriation of private property, but merely a lessening of value due to a permissible restriction imposed upon its use''). Therefore, even under a takings analysis, this rule does not constitute a taking under the Fifth Amendment.

The Department disagrees that the proposed rule will enable ATF to create a national firearms registry that can be used to seize firearms. Since Fiscal Year 1979, Congress has prohibited ATF from using any Federal funds to create a national gun registry. Treasury, Postal Service, and General Government Appropriations Act, 1979, Public Law 95–429, 92 Stat. 1001, 1002 (1978). ATF complies with that statutory prohibition, and this proposed rule does not change either the prohibition or ATF's compliance. Nor does the rule permit ATF to create a backdoor national firearms registry, and it is not doing so. Any records that licensed dealers are legally required to keep remain with the dealer as long as the business continues, and information from those records is requested only if a particular firearm becomes part of a criminal investigation by a law enforcement entity. *See* 18 U.S.C. 923(g). ATF does not keep or receive records until the licensee ceases operations. And, although ATF may receive some records from discontinued businesses, they are not searchable by name or other personally identifiable information. This rule does not change that.

g. Violates the Fifth Amendment—Equal Protection Clause

Comments Received

A few commenters claimed that the proposed rule violates what they characterize as the Fifth Amendment's Equal Protection Clause by enabling uneven application of the law; uneven enforcement; seizing personal property; and creating a chilling effect on owners, buyers, and sellers of firearms.

Department Response

The Department disagrees that the proposed rule violates the equal protection component of the Fifth Amendment's Due Process Clause. Under certain circumstances, the equal protection component prohibits the Federal Government from treating similarly situated persons differently. *See Bolling* v. *Sharpe,* 347 U.S. 497, 498 (1954). However, like the Fourteenth Amendment Equal Protection Clause, the equal protection component of the Fifth Amendment ''must coexist with the practical necessity that most legislation classifies for one purpose or another, with resulting disadvantage to various groups or persons.'' *Romer* v. *Evans,* 517 U.S. 620, 631 (1996). If a ''classification 'impermissibly interferes with the exercise of a fundamental right or operates to the peculiar advantage of a suspect class,' [a court will] subject the classification to strict scrutiny. Otherwise, [courts] will uphold the classification if it is 'rationally related to a legitimate state interest.''' *Mance* v. *Sessions,* 896 F.3d 699, 711 (5th Cir. 2018) (footnote omitted) (quoting *Nat'l Rifle Ass'n* v. *ATF,* 700 F.3d 185, 211–12 (5th Cir. 2012)). There is no fundamental right to be engaged in the business of dealing in firearms or in selling firearms without a license. *See Kazmende,* 2023 WL 3872209, at *5. Nor are firearms dealers a ''suspect class,'' meaning a class that is ''saddled with such disabilities, or subjected to such a history of purposeful unequal treatment, or relegated to such a position of political powerlessness as to command extraordinary protection from the majoritarian political process.'' *Massachusetts Bd. of Retirement* v. *Murgia,* 427 U.S. 307, 313 (1976) (internal quotation marks omitted).

Rational basis review thus applies here. Rational basis review requires a ''rational relationship'' between the classification and ''some legitimate governmental purpose.'' *See Heller* v. *Doe,* 509 U.S. 312, 320 (1993). Under rational basis review, a classification ''is accorded a strong presumption of validity,'' *id.* at 319, and will be upheld if ''there is some rational basis for the statutory distinctions made . . . or [those distinctions] have some relevance to the purpose for which the classification is made.'' *Lewis* v. *United States,* 445 U.S. 55, 65 (1980) (internal quotation marks omitted) (rejecting an equal protection challenge to a ''firearm regulatory scheme'' that prohibits a felon from possessing a firearm).

There is clearly a rational basis for requiring those engaged in the business of dealing in firearms to be licensed according to the classifications and other requirements set forth in this rule. The ''principal purpose'' of the GCA is ''to curb crime by keeping firearms out of the hands of those not legally entitled to possess them.'' *Huddleston* v. *United States,* 415 U.S. 814, 824 (1974)

(internal quotation marks omitted). As a result, ''[c]ommerce in firearms is channeled through federally licensed importers, manufacturers, and dealers in an attempt to halt mail-order and interstate consumer traffic in these weapons.'' *Id.; see also United States* v. *Biswell,* 406 U.S. 311, 315 (1972) (''[C]lose scrutiny'' of ''interstate traffic in firearms'' is ''undeniably of central importance to federal efforts to prevent violent crime and to assist the States in regulating the firearms traffic within their borders''); *id.* at 315–16 (''Federal regulation'' of the traffic in firearms ''assures that weapons are distributed through regular channels and in a traceable manner''); *United States* v. *Hosford,* 82 F. Supp. 3d 660, 667 (D. Md. 2015) (prohibiting engaging in the business of firearms without a license ''ensures that significant commercial traffic in firearms will be conducted only by parties licensed by the federal government'' (internal quotation marks omitted)); *id.* (''Nor is the licensing requirement onerous.''). As discussed throughout this preamble, the regulatory changes in this final rule are essential to implementing Congress's changes to the GCA and furthering the Government's interest in having people who are engaged in the business of selling firearms be licensed as FFLs.

h. Violates the Fifth Amendment—Due Process Clause

Comments Received

A few commenters claimed that the proposed rule violates the Fifth Amendment's Due Process Clause and the concept of ''innocent until proven guilty'' by creating rebuttable presumptions. The Due Process Clause states, ''No person shall be . . . deprived of life, liberty, or property, without due process of law . . . .'' U.S. Const. amend. V. Some of these commenters asserted that the presumptions reduce the scrutiny that would be required under the Due Process Clause before charging a person with a crime or removing their property, or cause a person to inadvertently commit a crime without knowing it would be seen that way under a presumption.

Others interpreted the presumptions as causing people to be presumed guilty, and then having to prove their innocence, thereby undermining the concept of ''innocent until proven guilty.'' Two U.S. senators stated, ''If the proposed rule goes into effect, innocent people will have to prove to the ATF that they are not firearms dealers when they, for example, try to resell firearms that are in the original packaging or represent that they can sell additional firearms to their friends. These types of activities do not make someone a licensed firearms dealer. Nothing in current law, including as amended by the BSCA, empowers the ATF to shift the burden to an innocent person to prove that keeping a firearm in its original packaging or discussing the sale of firearms to friends or family makes him a licensed firearms dealer.''

Other commenters asserted that the statutory provision saying that it is not necessary for the Government to prove intent to profit if the person was dealing in firearms for criminal purposes or terrorism runs contrary to the axiom that one is innocent until proven guilty and raises due process concerns under the Fifth Amendment. Others were concerned that the process of defending oneself during administrative processes to rebut a presumption would require people to set themselves up for self-incrimination during a subsequent criminal process. One commenter explained that using rebuttable presumptions shifts the burden of proof from the Government to the subject of the investigation, and runs counter to the Fifth Amendment, which they explained precludes using ''forced testimony'' against a person in a criminal trial unless waived. The commenter argued that if an accusation that a person is engaged in the business of dealing in firearms without a license is based upon a rebuttable presumption, then the person is unfairly and unconstitutionally placed in legal jeopardy. The person will lose the civil or administrative action against them, the commenter said, if they do not present facts to rebut the presumption, but then the information shared with the Government will be available for use against them in a criminal case. (The commenter cited *Allen* v. *Illinois*, 478 U.S. 364 (1986), *Minnesota* v. *Murphy,* 465 U.S. 420, 435 & n.7 (1984), and other cases.) In other words, the commenter added, the person is penalized for not responding to the inquiry or allegation based upon a presumption. (The commenter cited *Marchetti* v. *United States,* 390 U.S. 39 (1968).)

Department Response

The Department disagrees that the rebuttable presumptions in this rule violate the Due Process Clause of the Fifth Amendment. First, the rebuttable presumptions apply only to shift the burden of production, not the burden of persuasion. Although the presumptions expressly do not apply in criminal proceedings, even in that context, presumptions that shift only the burden of production do not violate due process. *See Ruan* v. *United States,* 597 U.S. 450, 463–64 (2022). Second, ''[t]he law is well established'' that presumptions shifting the burden of production ''may be established by administrative agencies, as long as there is a rational nexus between the proven facts and the presumed facts.'' *Cablevision Sys. Corp.* v. *F.C.C.,* 649 F.3d 695, 716 (D.C. Cir. 2011); *see also Cole* v. *U.S. Dep't of Agric.,* 33 F.3d 1263, 1267 (11th Cir. 1994); *Atchison, Topeka & Santa Fe R.R.* v. *Interstate Com. Comm'n,* 580 F.2d 623, 629 (D.C. Cir. 1978). The BSCA broadened the scope of persons who are required to be licensed under the GCA, and the implementing presumptions in this rule are necessary to provide persons with a greater understanding as to who is likely to be ''engaged in the business'' as a ''dealer'' under that new standard. The presumptions are narrowly tailored and based on specific firearms purchase and sale activities to effectuate that purpose. As a result, there is a rational connection between the facts to be proven—for example, frequent and multiple purchases and resales, accepting credit cards as a method of payment, advertising, etc.—and the presumed facts—being engaged in the business or having the requisite intent to profit. *See USX Corp.* v. *Barnhart,* 395 F.3d 161, 172 (3d Cir. 2004) (finding agency's ''rebuttable presumption [was] entirely reasonable'' and noting that the ''presumption is rebuttable and therefore avoids problematic mechanical operation'').

Contrary to commenters' assertions, the rebuttable presumptions in this rule, even when applied in a civil or administrative proceeding, do not alleviate the burden of persuasion on the Government to prove that a person is willfully engaged in the business without a license under the applicable evidentiary standard. They neither limit nor prescribe the manner in which a party can rebut such a presumption. Agencies may adopt evidentiary presumptions provided that the presumptions shift the burden of production, not the burden of persuasion (also sometimes referred to as the burden of proof). *Cablevision,* 649 F.3d at 716.[155] That is the case here. Because the rebuttable presumptions are merely evidentiary tools to assist the trier of fact in determining whether the Government has met its burden of production in a given proceeding and

[155] *See also Chem. Mfrs. Ass'n.* v. *Dep't of Transp.,* 105 F.3d 702, 706 (D.C. Cir. 2007); *U.S. Steel Corp.* v. *Astrue,* 495 F.3d 1272, 1284 (11th Cir. 2007) (internal quotation marks omitted)).

do not shift the burden of persuasion, this rule does not violate due process.[156] In the NPRM, the Department stated that a person ''shall not be presumed to be engaged in the business of dealing in firearms'' when the person engaged in certain types of conduct (*e.g.,* clearly a person is not presumed to be engaged in the business when that person's conduct is limited to activity the statute specifically excludes). However, to alleviate commenter concerns, the regulatory text of this final rule now makes clear that evidence of such conduct may also be presented as rebuttal evidence (*e.g.,* gifts, certain occasional sales, etc.), and further makes clear that additional types of reliable rebuttal evidence could be offered beyond those examples.

The Department acknowledges the commenters' concerns about the possibility of self-incrimination if they provide rebuttal evidence in an administrative or civil proceeding that could be used against them in a criminal proceeding. The Fifth Amendment privilege against compulsory self-incrimination, however, can be asserted ''in any proceeding, civil or criminal, administrative or judicial, investigatory or adjudicatory,'' and it ''protects against disclosures which the witness reasonably believes could be used in a criminal prosecution or could lead to other evidence that might be so used.'' *Kastigar* v. *United States,* 406 U.S. 441, 444–45 (1972). The Fifth Amendment's protection against self-incrimination not only protects the individual against being involuntarily called as a witness against himself in a criminal prosecution, but it also affords protection against having compelled responses provided in civil or administrative proceedings used against him in a later criminal prosecution. *Lefkowitz* v. *Turley,* 414 U.S. 70, 77 (1973). Moreover, it is not uncommon for individuals to have to balance the implications of providing testimony in a civil or administrative case against the potential that such testimony may be used in a future criminal proceeding. For instance, this circumstance can occur whenever a statute has criminal, civil, and administrative implications. *See, e.g.,* 15 U.S.C. 1825(a), (b) (civil and criminal penalties for violations relating to sales or exhibitions of horses that are sore); 18 U.S.C. 670(c), (d) (civil and criminal penalties for theft of medical products); 22 U.S.C. 2778(c), (e) (civil and criminal penalties for unlawful exportation of defense articles); 30 U.S.C. 820(a), (b), (d) (civil and criminal penalties for violations of mine health and safety standards); and 33 U.S.C. 533(a), (b) (civil and criminal penalties for failing to comply with lawful orders of the Coast Guard).

The statutory definition of ''terrorism'' existed in the GCA's definition of ''principal objective of livelihood and profit'' before the BSCA was passed, *see* 18 U.S.C. 921(a)(22) (2020), and remains there verbatim. The BSCA added that same definition to the new definition of ''to predominantly earn a profit'' in the GCA, as well. This rule merely: (1) moves that definition within the regulations to be a standalone definition so that it applies to both the term ''predominantly earn a profit'' and ''principal objective of livelihood and profit'' without repeating it in two places; and (2) makes a minor revision to identify the provisions to which the definition applies. This rule does not further interpret or define that term, and comments in that regard are beyond the scope of the rule.

i. Violates the Tenth Amendment

Comments Received

Some commenters opposed the proposed rule on the grounds that it violates the Tenth Amendment, which provides: ''The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.'' U.S. Const. amend. X. Some of these commenters referred to the rule as a violation of the separation of powers or federalism. The majority of these commenters stated that the rule ''will override the authority of the states with overburdensome federal regulations and strip state's rights.'' One commenter suggested that this rule will ''intrud[e] [upon] states' responsibilities.'' Several commenters stated that the power to regulate commerce in firearms is not a power delegated to the Federal Government. Others stated that, although the Federal Government has the power to regulate interstate commerce in firearms, it has not been delegated authority to regulate commerce between people within a given state, or in intrastate commerce. One commenter stated that, ''as long as the transaction doesn't cross state lines, it cannot be regulated by the Federal government.'' A couple of commenters cited *McDonald* v. *City of Chicago,* 561 U.S. 742 (2010), for the proposition that each state has its own body of laws that reflect its unique needs, culture, and opinions of its residents, and has the autonomy to tailor public safety measures to these unique situations. These commenters stated that the proposed rule disregards this principle.

Department Response

The Department disagrees that the rule violates the Tenth Amendment. Commenters seemingly argued that the powers exercised by the Department in issuing the rule were ''powers not delegated to the United States by the Constitution, nor prohibited by it to the States.'' U.S. Const. amend. X. However, if Congress has acted within its power under the Commerce Clause, ''the Tenth Amendment expressly disclaims any reservation of that power to the States.'' *See New York* v. *United States,* 505 U.S. 144, 156 (1992). Simply put, a valid exercise of Congress' power is not a violation of the Tenth Amendment. Multiple courts have repeatedly and consistently upheld the GCA as a valid exercise of Congress' Commerce Clause power, *see, e.g., United States* v. *Hosford,* 843 F.3d 161, 163 (4th Cir. 2016); *United States* v. *Rose,* 522 F.3d 710, 716–19 (6th Cir. 2008); *Navegar, Inc.* v. *United States,* 192 F.3d 1050, 1054–1065 (D.C. Cir. 1999), and rejected challenges to the statute on Tenth Amendment grounds, *see, e.g., Bezet* v. *United States,* 714 F. App'x 336, 342–43 (5th Cir. 2017) (''[E]ach provision [of the GCA] that Bezet has standing to challenge was validly enacted under the commerce power or the taxing power. Therefore, the district court was correct to reject Bezet's claims under the Tenth Amendment.'').

As for commenters who argued Congress does not have authority to regulate any intrastate firearms transactions, regardless of its connection to interstate commerce, Congress may ''regulate purely local activities that are part of an economic 'class of activities' that have a substantial effect on interstate commerce.'' *Gonzales* v. *Raich,* 545 U.S. 1, 17 (2005). *Raich* held that one situation in which ''Congress can regulate purely intrastate activity'' even if that activity is not itself commercial, is ''if it concludes that failure to regulate that class of activity would undercut the regulation of the interstate market in that commodity.'' *Id.* at 18. When there is a ''comprehensive framework for regulating the production, distribution, and possession'' of a commodity, the fact that the regulatory scheme

[156] *See Ruan* v. *United States,* 597 U.S. 450, 463–64 (2022) (Statute providing ''a presumptive device, akin to others we have recognized in a criminal context, which merely shift[s] the burden of production to the defendant, following the satisfaction of which the ultimate burden of persuasion returns to the prosecution'' did not violate due process); *Alabama By-Products Corp.* v. *Killingsworth,* 733 F.2d 1511, 1517 (11th Cir. 1984) (regulatory presumption under 20 CFR 727.203(a)(1) that miner is presumed to be disabled with an X-ray showing of pneumoconiosis did not violate due process).

''ensnares some purely intrastate activity is of no moment.'' *Id.* at 22, 24. This analysis has been specifically applied to firearms. *See Montana Shooting Sports Ass'n* v. *Holder,* No. CV–09–147, 2010 WL 3926029, at *17 (D. Mont. Aug. 31, 2010) (''As *Raich* instructs, the fact that Federal firearms laws 'ensnare some purely intrastate activity,' such as . . . manufacturing and sales activity . . . , 'is of no moment.' Under *Raich,* the National Firearms Act and Gun Control Act constitute a valid exercise of federal commerce power, even as applied to the purely intrastate manufacture and sale of firearms . . . .'') (quoting *Raich,* 545 U.S. at 22), *aff'd,* 727 F.3d 975 (9th Cir. 2013); *see also United States* v. *Stewart,* 451 F.3d 1071, 1078 (9th Cir. 2006); *Hollis* v. *Lynch,* 121 F. Supp. 3d 617, 640 (N.D. Tex. 2015) (citing *Raich,* 545 U.S. at 22), *aff'd,* 827 F.3d 436 (5th Cir. 2016); *Rose,* 522 F.3d at 717–18.

j. Violates Other Constitutional Provisions

Comments Received

A small number of commenters stated that the NPRM violates the Eighth Amendment's prohibition against excessive fines and cruel and unusual punishments; the Ninth Amendment (which states, ''[t]he enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people,'' U.S. Const. amend. IX); and the Equal Protection and Due Process Clauses of the Fourteenth Amendment. These commenters did not explain how they thought the proposed rule violated these constitutional provisions. One commenter stated that the proposed rule constitutes restricted zoning that will deprive people of their rights and is therefore unconstitutional. Numerous other commenters stated that the NPRM is unconstitutional and deprives people of their rights, but did not provide detailed arguments, although some of these commenters based their statement on a belief that the rule requires anyone who sells a firearm to be licensed as a dealer or that it creates a universal background check. Several commenters stated that the Constitution does not grant the Federal Government, including Congress, the authority to regulate firearms or the trade in firearms, and any law or regulation that does so is unconstitutional. Some of these commenters specifically stated that the BSCA, and even the NFA and GCA, are unconstitutional laws.

Department Response

The Department disagrees that the proposed rule violates the Eighth Amendment's protection against excessive fines and cruel and unusual punishments. Criminal and civil penalties, including forfeiture, can be considered fines under the Eighth Amendment if they are punishments for an offense and, thus, must not be excessive. *Austin* v. *United States,* 509 U.S. 602, 619 (1993); *Disc. Inn, Inc.* v. *City of Chicago,* 72 F. Supp. 3d 930, 934 (N.D. Ill. 2014), *aff'd,* 803 F.3d 317 (7th Cir. 2015). Under the Eighth Amendment, a ''fine'' is ''excessive'' if it is ''grossly disproportional to the gravity of [the] offense.'' *United States* v. *Bajakajian,* 524 U.S. 321, 334 (1998). Here, the penalties for dealing firearms without a license are up to five years' imprisonment, a $250,000 fine, or both. *See* 18 U.S.C. 922(a)(1)(A), 923(a), 924(a)(1)(D), 3571(b)(3). The GCA does not require a minimum penalty, and the penalty in any particular case will vary according to circumstances, so the Department disagrees that the penalties associated with unlawfully dealing in firearms (which could be very low or none) are facially ''excessive.'' The Department may also seek forfeiture of the property involved in criminal activity. Courts have repeatedly found on a case-by-case basis that these are not excessive penalties, *see, e.g., United States* v. *Approximately 627 Firearms, More or Less,* 589 F. Supp. 2d 1129, 1135–37 (S.D. Iowa 2008), and the proposed rule does not increase the penalties for noncompliance with the GCA, which are set by statute.[157]

The Department also disagrees that the rule violates the commenters' rights under the Ninth Amendment. The BSCA amendments to the statutory definition of ''engaged in the business'' and this rule implementing those amendments constitute only a modest congressional expansion of the previous FFL licensing requirements, and do not infringe upon any constitutional rights. The commenters discussed an implied right to self-defense and a right to ''transfer nonliving personal property without government hindrance or supervision.'' This rule does not prevent any individuals from exercising self-defense, and no court has ever recognized a categorical right to transfer personal property free of government regulation. The Ninth Amendment ''does not confer substantive rights in addition to those conferred by other portions of our governing law.'' *Gibson* v. *Matthews,* 926 F.2d 532, 537 (6th Cir. 1991).

It is unclear how the commenters believe that the rule would violate the Equal Protection or Due Process Clauses of the Fourteenth Amendment. First, the Fourteenth Amendment applies to the States and State actors, not Federal agencies. *See Shell* v. *United States Dep't of Housing & Urban Dev.,* 355 Fed. App'x 300, 307 (11th Cir. 2009). Second, the rule, like the statute, applies to all persons and does not burden one suspect class or group of people more than others. Instead, the rule helps to identify persons who are engaged in the business of dealing in firearms or have the predominant intent to earn a profit through certain firearms purchase and resale activities. Nor is the Government engaging in intentional disparate treatment of a suspect class or group of people regarding a fundamental right. This final rule has also complied with the requirements of the APA, including public notice and comment, of which the commenters availed themselves during the proposed rule stage. *See* 5 U.S.C. 553. With respect to a rulemaking of general and prospective applicability, the Due Process Clause does not require additional procedural safeguards. *See Bi-Metallic Inv. Co.* v. *State Bd. of Equalization,* 239 U.S. 441, 445 (1915); *see also General Category Scallop Fishermen* v. *Sec'y of U.S. Dept. of Commerce,* 720 F. Supp. 2d 564, 576 (D.N.J. 2010) (explaining that publication in the **Federal Register** satisfies notice requirements under the Due Process Clause).

The Department disagrees that this rule amounts to restricted zoning and is therefore unconstitutional. The commenter seems to suggest that because the BSCA and this rule will result in more firearms sellers being deemed to be ''engaged in the business'' within the meaning of 18 U.S.C. 921, those sellers will no longer be permitted to make firearms sales from their homes and will instead have to comply with State and local commercial zoning laws. However, State and local governments determine zoning classes and requirements pursuant to their police powers. *Carter* v. *City of Salina,* 773 F.2d 251, 254 (10th Cir. 1985) (''It is the general rule that zoning ordinances are in derogation of common-law property rights and find their authority through the state police power.''). Nothing in this rule purports to alter State and local zoning laws or dictate how those laws should treat firearms sellers who are ''engaged in the business'' of dealing in firearms under Federal law. Nor does the commenter point to any particular

[157] To the extent commenters argue that the fees required to be a Federal firearms licensee violate the Eighth Amendment, they are (1) not a fine, and (2) not excessive.

zoning restrictions that might apply to an individual firearms seller who would be ''engaged in the business'' of dealing in firearms under this rule. At bottom, this rule does not create additional zoning restrictions. Such restrictions, if they exist at all, are created and managed on the State, local, and Tribal levels.

9. Statutory Authority Concerns

a. Lack of Delegated Authority To Promulgate the Rule

Comments Received

A majority of the commenters opposed to the rule argued that ATF is exceeding its authority by promulgating the rule, and that it is the job of Congress to change the laws and the job of Federal agencies to enforce them. A majority of these commenters stated that they considered the proposed regulation to be a method of changing the law without passing new legislation and stated that Congress has given ATF no additional authority to ''re-define'' ''details'' in the law. One commenter stated that ''No federal agency has the right to interpret laws, amendments, or constitutions. That's what [C]ongress is for.'' A few others made similar statements. Other commenters stated that the NPRM is an executive order or a law itself, and ATF has no authority to change law via an executive order or by issuing new laws.

One commenter, instead of saying that ATF has no authority to promulgate regulations, stated that ATF has no authority to ''devise its own definitions.'' They further argued that the only exception to this is the term ''collector,'' because the statute specifically delegates authority to the Attorney General to further define that term. The commenter concluded that when Congress includes explicit authorization to define one term, it negates any implied regulatory power to expand definitions for other terms, quoting the *expressio unius est exclusio alterius* principle described in *Bittmer* v. *United States,* 598 U.S. 85, 94 (2023). A second commenter, in a similar but narrower vein, pointed to the ''specific definitions provided by Congress for both 'engaged in the business' and 'predominantly earn a profit.' '' These definitions, the commenter argued, ''should entirely foreclose any attempt by ATF to redefine those terms.'' The commenter quoted *Royce* v. *Hahn,* 151 F.3d 116, 123 (3d Cir. 1998), for the proposition that ''[s]uch an explicit reference to a statutory definition demonstrates a Congressional intent to forestall interpretation of the term by an administrative agency and acts as a limitation on the agency's authority.''

Some commenters stated that the proposed definition of ''engaged in the business'' is contrary to or an overreach of the BSCA or the FOPA. One commenter asked ''[w]here in the text of the FOPA does the ATF believe Congress expressly grants it the authority to redefine 'engaged in the business' as Congress has clearly defined it through several amendments made to the FOPA by Congressional legislative action?'' Another commenter, citing 18 U.S.C. 926(a) and section 106 of FOPA, 100 Stat. at 459, stated that the FOPA reduced ATF's regulatory authority under the GCA by changing the original phrase '' 'such rules and regulations as he deems reasonably necessary' '' to '' 'only such rules and regulations as are necessary.' '' The commenter asserted that this change means that ATF has the authority to enact only regulations that are ''necessary [for enforcement of the Act] as a matter of fact, not merely reasonably necessary as a matter of judgment.'' Another commenter, characterizing the BSCA, stated that ''[t]he essence of the change was simply that illegal firearm sales need not amount to a person's 'livelihood' for that activity to be criminally actionable. It was never intended to give the administration a blank check to comprehensively rewrite settled law or understandings about private firearms sales for lawful purposes or for the enhancement or liquidation of personal firearm collections.'' One commenter cited the legislative record for the GCA, contending that Congress declined to adopt a provision that would have made it a crime to violate any regulation promulgated pursuant to the GCA due to asserted concerns that the provision would delegate to ATF the authority to determine what constitutes a crime. The commenter concluded that the proposed rule ''would do exactly what Congress rejected when it enacted the GCA in 1968. It would redefine and expand GCA definitions, with the consequence that unlawful acts would be expanded by regulation. ATF has no such authority.''

A few commenters argued that the regulation exceeds ATF's authority because it criminalizes behavior or deprives people of something. As a result, these commenters assert that the alleged penal provisions must be clearly stated in the statute itself. One commenter stated that the regulation, ''with a stroke of a pen creates violations that may lead to fines, confiscation of assets and possibly jail time.'' Another added that, because the proposed rule involves criminal penalties, it must ''not criminalize any action that is either not clearly prohibited by the law or that is specifically prohibited by the law.'' ''Removing rights,'' added another commenter, ''should be a matter take[n] up before the full body of Congress and U.S. Citizens, not an un-elected group of individuals.'' An additional commenter couched the issue in terms of deference, citing cases like *United States* v. *Apel,* 571 U.S. 359, 369 (2014), for the proposition that because the GCA is a criminal statute, ATF's reading is not entitled to any deference.

Department Response

As an initial matter, the Department disagrees that this rule ''comprehensively rewrite[s]'' or otherwise alters ''settled law'' in a manner inconsistent with Congress's enactments. Most recently, Congress passed the BSCA in 2022, and this rule implements the GCA, as amended by the BSCA. The Department and ATF have the legal authority to promulgate regulations and rules that are necessary to implement, administer, and enforce the GCA, as amended by the FOPA and the BSCA, including its definition of ''engaged in the business'' as a dealer. *See* 18 U.S.C. 926(a); 28 U.S.C. 599A(b)(1), (c)(1); 28 CFR 0.130(a)(1)–(2); Treas. Order No. 221(1), (2)(d), 37 FR 11696–97 (June 10, 1972). This rule—which updates ATF's regulations in accordance with the BSCA's new statutory definition of when a person is considered to be ''engaged in the business'' and makes other related changes—is a valid exercise of that statutory authority. *See Nat'l Rifle Ass'n* v. *Brady,* 914 F.2d 475, 479 (4th Cir. 1990) (''Because § 926 authorizes the [Attorney General] to promulgate those regulations which are 'necessary,' it almost inevitably confers some measure of discretion to determine what regulations are in fact 'necessary.' '')

The rule is also consistent with ATF's historical experience implementing the GCA. In the original GCA implementing regulations in 1968, ATF's predecessor agency provided regulatory definitions of terms that Congress did not define in the statute. 33 FR 18555 (Dec. 14, 1968). Since that time, ATF has promulgated additional regulatory definitions to implement amendments to the GCA, including FOPA and the Brady Act. *See, e.g.,* Commerce in Firearms and Ammunition, 53 FR 10480 (Mar. 31, 1988) (providing definitions for, among other terms, ''dealer'' and ''engaged in the business''); Definitions for the Categories of Persons Prohibited from Receiving Firearms, 62 FR 34634 (June

27, 1997). Now that Congress has passed further legislation to amend the statutory definition of certain terms, it is logical and appropriate for ATF—consistent with its statutory authority and experience in administering the relevant statutory provisions—to review existing rules and promulgate new ones if necessary to properly implement that statutory change.

This rule is necessary to assist people, such as unlicensed persons seeking to comply with the law and fact finders in certain proceedings, to determine when firearms sellers are required to be licensed as wholesale or retail dealers under the expanded statutory definition of ''engaged in the business,'' and for ATF to effectively regulate the firearms industry. Indeed, numerous commenters stated that because the BSCA redefined ''engaged in the business'' to focus on a person's intent ''to predominantly earn a profit,'' regulatory updates were necessary to clarify when a license was needed and how ATF would consider and enforce certain aspects of firearms and sales that are relevant to the intent-to-profit analysis in the current marketplace.[158]

The Department also disagrees with commenters that the rule or its presumptions are inconsistent with the text or legislative history of FOPA,[159] or with the structure of the GCA. The GCA includes delegations of rulemaking authority that are both general and specific,[160] and its express grants of statutory authority to define particular terms do not negate the broader authority that Congress has granted to the Department to issue regulations that define additional statutory terms as necessary to carry out the GCA. Indeed, as congressional commenters have noted, the GCA as amended by FOPA and the BSCA authorizes the Department to utilize its expertise gained from decades of enforcement experience to further define terms or to issue other rules that are necessary to implement the GCA. In light of that delegation, the fact that Congress generally defined the term ''engaged in the business'' does not mean that the Department lacks the authority to further define that term.[161] In enacting the BSCA, Congress found it necessary to broaden the term ''engaged in the business,'' but did not provide guidance on how to apply that new definition to specific firearms transaction activities. This rule provides that necessary clarification in accordance with the Department's delegated authority.

The Department disagrees that the rule criminalizes behavior or imposes criminal penalties. Congress long ago both enacted the statutory requirement that persons who engage in the business of dealing in firearms must obtain a license and imposed criminal penalties for noncompliance with that statutory requirement. This rule, on the other hand, merely implements Congress's latest amendment to the definition of ''engaged in the business.'' Nothing in the rule criminalizes behavior or prohibits persons from engaging in the business of dealing in firearms; it merely implements the statutory requirement, as amended by the BSCA, that requires persons to become licensed if they wish to engage in that business.

b. Lack of Authority To Promulgate Presumptions

Comments Received

In addition to the concerns raised under Section IV.B.8.g of this preamble about the efficacy of the rule given that the presumptions will not be required in any criminal proceeding, several commenters argued that creating such presumptions is unlawful and problematic. Some commenters argued that nowhere in the rule did the Department cite any authority authorizing it to adopt or create presumptions applicable to statutory terms. Another commenter stated that ''ATF's recently proposed rule now aims to create several presumptions when a person is 'engaged in the business,' despite the [BSCA] definition that contains no such presumptions. It is clearly not the intent of Congress to include those presumptions in this proposed rule.'' A third commenter objected on the grounds that ''many of [the presumptions] concern common and entirely innocent conduct related to firearms transactions.''

Additionally, at least one commenter stated that the legislative history of the GCA clearly demonstrates that ATF cannot make the violation of a regulation a crime. As originally proposed, the commenter stated, the bill that became the GCA provided, ''[w]hoever violates any provision of this chapter *or any rule or regulation promulgated thereunder . . .* shall be fined not more than $5,000 or imprisoned not more than five years, or both.'' Prior to passage, however, Congress deleted the provision making it an offense to violate ''any rule or regulation promulgated thereunder.'' 114 Cong. Rec. 14,792, 14,793 (1968). The commenter concluded that, with the redefined and expanded GCA definitions in the proposed rule, unlawful acts would be expanded by regulation, which is contrary to the fact that all GCA offenses are defined in terms of violations of ''this chapter'' of the statute.

Moreover, commenters asserted, as a practical matter, that even with the disclaimer that the presumptions are only required in administrative and civil proceedings, it does not change the fact that 18 U.S.C. 924(a)(1)(D), which makes it a criminal act to engage in the business of dealing in firearms without a license, exists and carries prison time and high fines. One commenter questioned how ATF could say it would not use the presumptions in a criminal case if the agency intends for courts to be in a position to rely on the presumptions to create permissive inferences in jury instructions. Another commenter stated that the Department did not adequately explain how any presumption would be ''useful'' or in any way appropriate to a criminal proceeding, whether considered by the judge or jury, and that there is no

[158] *See, e.g.,* ATF–2023–0002–319816 (Dec. 7, 2023); ATF–2023–0002–362368 (Dec. 6, 2023); ATF–2023–0002–317174 (Dec. 5, 2023); ATF–2023–0002–281792 (Nov. 29, 2023); ATF–2023–0002–333284 (Nov. 26, 2023); ATF–2023–0002–262638 (Nov. 2, 2023); ATF–2023–0002–246750 (Oct. 25, 2023); ATF–2023–0002–171793 (Oct. 18, 2023); ATF–2023–0002–218598 (Oct. 17, 2023); ATF–2023–0002–84981 (Oct. 5, 2023); ATF–2023–0002–65889 (Sep. 19, 2023); ATF–2023–0002–43184 (Sep. 14, 2023); ATF–2023–0002–0538 (Sep. 10, 2023).

[159] The Fourth Circuit has explained that the FOPA amendments did not change ATF's authority to promulgate regulations necessary to implement the GCA. *See Nat'l Rifle Ass'n,* 914 F.2d at 478–79 (rejecting argument that FOPA requires courts to ''strike down [ATF] regulations if we do not find them strictly necessary and the least restrictive means of accomplishing the purposes of the [GCA]'').

[160] *Compare, e.g.,* 18 U.S.C. 926(a) (''The Attorney General may prescribe only such rules and regulations as are necessary to carry out the provisions of this chapter . . . .''); H.R. Rep. No. 90–1577, at 18 (1968) (''Section 926. Rules and regulations. This section grants rulemaking authority to the Secretary . . . .''); S. Rep. No. 90–1501, at 39 (1968) (similar), *with, e.g.,* 18 U.S.C. 921(a)(13) (''The term 'collector' means any person who acquires, holds, or disposes of firearms as curios or relics, as the Attorney General shall by regulation define . . . .''); *id.* 923(g)(1)(A) (''Each licensed importer, licensed manufacturer, and licensed dealer shall maintain such records of importation, production, shipment, receipt, sale, or other disposition of firearms at his place of business for such period, and in such form, as the Attorney General may by regulations prescribe.''); *id.* 923(g)(2) (''Each licensed collector shall maintain in a bound volume the nature of which the Attorney General may by regulations prescribe, records of the receipt, sale, or other disposition of firearms.''); *id.* 923(i) (''Licensed importers and licensed manufacturers shall identify by means of a serial number engraved or cast on the receiver or frame of the weapon, in such manner as the Attorney General shall by regulations prescribe, each firearm imported or manufactured by such importer or manufacturer.'').

[161] *See, e.g., Guedes* v. *ATF,* 45 F.4th 306, 314–19 (D.C. Cir. 2022) (upholding ATF regulation interpreting the statutory term ''machine gun''); *cf. Nat'l Rifle Ass'n,* 914 F.2d at 480–81 (ATF had the legal authority to define the statutory terms ''business premises'' and ''gun show or event'').

explanation as to how these presumptions become permissive inferences.

At least one commenter pointed out that jury instructions are written based on statutory language and applicable judicial decisions that interpret the law. As the GCA is a criminal statute, the commenter stated, ATF cannot expand it, and because the GCA definitions are the same in criminal and civil contexts, ATF cannot have rebuttable presumptions regarding the definitions that are different in a civil or administrative context. According to another commenter, this would violate the ''chameleon cannon'' in which courts have said statutory terms ''are not chameleons, acquiring different meanings when presented in different contexts.'' *Maryland* v. *EPA,* 958 F.3d 1185, 1202 (D.C. Cir. 2020); *see also Clark* v. *Martinez,* 543 U.S. 371, 382 (2005) (similar). Other commenters similarly cited *Leocal* v. *Ashcroft,* 543 U.S. 1 (2004), for the proposition that ATF is legally prohibited from employing a rebuttable presumption of liability in noncriminal proceedings that does not apply in the criminal context. Commenters pointed out that in *Leocal,* the Supreme Court stated that a statute with ''both criminal and noncriminal applications'' must be interpreted ''consistently, whether [courts] encounter its application in a criminal or noncriminal context.'' *Id.* at 11–12 n.8. Commenters also argued that an agency involved in the prosecution of a case does not get to tell the judge how to draft the jury instructions.

Additionally, commenters argued that the Department's use of presumptions in the civil and administrative context, but not the criminal context, runs afoul of the rule of lenity and is contrary to existing case law, specifically the Supreme Court's holding in *United States* v. *Thompson/Center Arms Co.,* 504 U.S. 505 (1992). In *Thompson/Center Arms,* commenters stated that the Court rejected ATF's interpretation of the application of a certain definition in the NFA. The Court concluded that ''although it is a tax statute that we construe now in a civil setting, the NFA has criminal applications that carry no additional requirement of willfulness . . . . It is proper, therefore, to apply the rule of lenity and resolve the ambiguity in Thompson/Center's favor.'' *Id.* at 517–18. Commenters therefore argued that the Department's claim that the rebuttable presumptions are applicable to civil and administrative proceedings, but not criminal ones, is also impermissible.

Commenters also disagreed with the Department's characterization of case law in which the Department described that courts have relied on ATF's regulatory definition to decide whether the defendant was an ''unlawful user of or addicted to any controlled substance'' under the GCA. Specifically, commenters stated that in the cases cited in footnote 60 of the NPRM, 88 FR 62000, the courts relied on ATF's regulation because there was no applicable statutory definition, unlike the terms that are the subject of this rulemaking. Another commenter argued that none of the cases cited by the Department support the use of presumptions in an ''engaged in the business'' analysis in which a single data point would suffice to satisfy what is inherently a multifactor test. The commenter argued that an appropriate and relevant jury instruction would be for the jury to consider all the facts. In this sense, the commenter added, at most the NPRM could have: ''(i) provided a list (as numerous courts have provided in their opinions) of various types of factors that can legitimately play into an 'engaged in the business' determination; (ii) noted that such conduct involves a tremendous amount of gray area that cannot be resolved by unyielding regulation; and (iii) concluded that each case is to be decided on its own unique facts and circumstances.'' Lastly, at least one opposing commenter noted that the Department was also incorrect in referring to forfeitures as a civil or administrative proceeding for which the presumptions could be used because, the commenter said, forfeitures require a showing of intent by ''clear and convincing evidence'' under 18 U.S.C. 924(d)(1), not a presumed violation. Focusing on forfeiture, another commenter stated that ''[f]orfeitures may occur in civil, administrative, or criminal proceedings. ATF's proposed 'rebuttable presumptions,' in addition to being unauthorized by law, are particularly negated by the . . . requirement of clear and convincing evidence in § 922(a)(1) cases involving forfeiture.''

In contrast to the commenters opposed to the presumptions as a matter of law, one commenter in support of the rule suggested including the ''predominantly earn a profit'' presumptions under the EIB presumptions, rather than having them as separate sets of presumptions. The reason for this suggestion is that each of the proposed presumptions under ''predominantly earn a profit'' also demonstrates other elements of the statutory definition. For example, a person who purchases or secures physical space to display firearms not only demonstrates profit motive but also establishes that the seller ''devotes time, attention, and labor to dealing with firearms,'' therefore satisfying all elements of BSCA's revised statutory definition of ''engaged in the business'' as a dealer in firearms. Another commenter in support stated that in the final rule, ''ATF should consider clarifying that the conduct described in the list of rebuttable presumptions, while not creating presumptions in criminal prosecutions, may nonetheless be relevant and important when ATF prioritizes what conduct it focuses on when conducting criminal investigations.''

Department Response

The Department disagrees that it lacks the legal authority to promulgate rebuttable presumptions in ATF regulations. As discussed above, the Attorney General and ATF have the authority and responsibility to promulgate regulations necessary to enforce the provisions of the GCA, and a regulation that clarifies when a license is required is such a regulation. *See* 18 U.S.C. 926(a); *see also* H.R. Rep. No. 90–1577, at 18 (1968); S. Rep. No. 90–1501, at 39 (1968). Because the BSCA broadened the scope of persons who are required to be licensed under the GCA, this rule, including its presumptions, are necessary to implement the BSCA and provide persons with a greater understanding of who is likely to be ''engaged in the business'' as a ''dealer'' under that new standard. *See Nat'l Rifle Ass'n,* 914 F.2d at 479 (''Because § 926 authorizes the [Attorney General] to promulgate those regulations which are 'necessary,' it almost inevitably confers some measure of discretion to determine what regulations are in fact 'necessary.' '').

Further, ''[t]he law is well established that presumptions may be established by administrative agencies, as long as there is a rational nexus between the proven facts and the presumed facts.'' *Cole,* 33 F.3d at 1267.[162] The

[162] *See, e.g.,* 88 FR 31314, 31450 (May 16, 2023) (Department of Homeland Security (''DHS'') rule establishing rebuttable presumption that certain noncitizens are ineligible for asylum); 87 FR 65904, 66069 (Nov. 1, 2022) (Department of Education rule establishing rebuttable presumption that when a higher education institution closes and causes detriment to student loan borrowers, student loan borrowers who suffered that detriment are entitled to relief from loan repayment); 81 FR 34243, 34258 (May 31, 2016) (Small Business Administration (''SBA'') rule establishing rebuttable presumption of affiliation based on an identity of interest); 8 CFR 208.13(b) (DHS regulations creating rebuttable presumption that past persecution of refugee establishes well-founded fear of future persecution); 12 CFR 225.32 (Federal Reserve Board regulations

presumptions that the Department has chosen to promulgate are derived from ATF's extensive regulatory, enforcement, and investigative experience, and they are based on common firearms purchase and sales activities by dealers engaged in the business. As the Department has explained, each of the presumptions describes conduct that, in its experience, indicates that an individual is likely to be engaged in the business of firearms dealing (or, as applicable, acting with a predominant intent to profit). For example, persons who engage in frequent and multiple purchases and resales, accept credit cards as a method of payment, advertise, etc. are likely to be engaged in the business or have the requisite intent to profit. *See also, e.g.,* 88 FR 61999–62003 (NPRM setting forth the rationale underlying each presumption). Accordingly, there is a rational connection between the facts to be proven and the presumed facts. *See Cablevision Systems Corp.* v. *FCC,* 649 F.3d 695, 716 (D.C. Cir. 2011) (noting that a court must ''defer to the agency's judgment'' and uphold an evidentiary presumption so long as ''there is a sound and rational connection between the proved and inferred facts, and when proof of one fact renders the existence of another fact so probable that it is sensible and timesaving to assume the truth of [the inferred] fact . . . until the adversary disproves it'' (citation omitted)). The Department's determination that presumptions are necessary to carry out the GCA here is also informed by its experience in other regulatory contexts where the agency has incorporated presumptions and found them to promote a common understanding of, and consistent compliance with, the laws it implements.[163]

The Department acknowledges, as commenters noted, that failure to comply with the licensing requirement can have criminal implications. It is unlawful under 18 U.S.C. 922(a)(1)(A), 923(a), and 924(a)(1)(D) for any person to willfully engage in the business of dealing in firearms without a license. However, the Department disagrees with commenters' assertions about how the rule would apply in a criminal context. First, the presumptions in the regulatory text do not apply to criminal proceedings. Instead, persons seeking to comply with the licensing requirement should take them into account in determining whether they must obtain a license, and they apply in civil and administrative proceedings. This includes license denial or revocation proceedings for willful violations ''of this chapter or regulations issued thereunder,'' *see* 18 U.S.C. 923(d)(1)(C), 923(e), and civil/administrative asset forfeiture proceedings based on ''willful violation of any other provision of this chapter or any rule or regulation promulgated thereunder,'' *see id.* 924(d)(1).

The Department also disagrees with the commenters' assertion that the rebuttable presumptions are contrary to the clear and convincing evidence standard for forfeiture in ''intended to be used'' violations of 18 U.S.C. 922(a)(1). Section 924(d)(1) provides for seizure and forfeiture of firearms and ammunition involved in the commission of several specified crimes. The statute also authorizes the forfeiture of any firearm and ammunition intended to be used in the commission of offenses set forth in 18 U.S.C. 924(d)(3)—which includes the prohibition against unlicensed dealing in 18 U.S.C. 922(a)(1). When a civil forfeiture action is based on the offenses in 18 U.S.C. 924(d)(3)(C), the Government is required to establish by a preponderance of the evidence (as required by 18 U.S.C. 983(c)(1)) the underlying violation that supports forfeiture (including inchoate offenses) and also, by clear and convincing evidence (as required by 18 U.S.C. 924(d)(1) and (d)(3)(C)) that the firearms and ammunition for which forfeiture is sought were intended to be used in that crime. When a criminal forfeiture action is based on the offenses in 18 U.S.C. 924(d)(3)(C), the Government, having already proven the underlying violation beyond a reasonable doubt, is required to establish by clear and convincing evidence (as required by 18 U.S.C. 924(d)(1) and (d)(3)(C)) that the firearms for which forfeiture is sought were intended to be used in that crime. Thus, the presumptions (or permissive inferences) would apply only to the Government's evidence to prove an individual is ''engaged in the business'' for purposes of the underlying section 922(a)(1) violation, not to the Government's burden of proving that a particular firearm was intended to be used in the section 922(a)(1) violation.

Moreover, the presumptions do not change the burden of proof applicable to forfeitures; they simply shift the burden of producing evidence in the underlying determination of whether a section 922(a)(1) violation occurred. If the Government seeks to seize a firearm on the basis that it was intended to be used in an unlicensed dealing offense by a person presumed to be ''engaged in the business'' under this rule, the Government would still have the burden of proving that intent by clear and convincing evidence (and the underlying offense by a preponderance of the evidence). And in civil forfeiture cases where the firearms to be forfeited were actually offered for sale by a person presumed to be engaged in the business under this rule, rather than simply intended to be used in such violation, the ''preponderance of the evidence'' burden of proof applicable to all civil forfeitures under 18 U.S.C. 983(c)(1) would apply to that forfeiture proceeding. *See* 18 U.S.C. 924(d)(1) (providing for the forfeiture of ''[a]ny firearm or ammunition involved in or used in any . . . willful violation of any other provision of this chapter [including section 922(a)(1)(A)]'').[164]

The rule recognizes the unique constitutional context in which criminal proceedings take place, where defendants are entitled to heightened procedural protections and the Government bears the burden of persuasion beyond a reasonable doubt, and makes clear that its presumptions do not apply in criminal cases. But that does not mean, as some commenters have suggested, that the Department has given the statute a different meaning in the civil and criminal contexts. In any proceeding that requires proof that an

creating rebuttable presumptions that determine when a company controls another company); 13 CFR 124.103(b) (SBA regulations creating rebuttable presumption that individuals who are members of certain groups are socially disadvantaged); 38 CFR 3.307 (Department of Veterans Affairs regulations creating rebuttable presumptions relating to exposure by veterans to certain chemicals or diseases).

[163] *See, e.g.,* 27 CFR 478.12(d) (''The modular subpart(s) identified in accordance with § 478.92 with an importer's or manufacturer's serial number shall be presumed, absent an official determination by the Director or other reliable evidence to the contrary, to be part of the frame or receiver of a weapon or device.''); *id.* § 478.12(f)(1) (''Any such part [previously classified by the Director] that is identified with an importer's or manufacturer's serial number shall be presumed, absent an official determination by the Director or other reliable evidence to the contrary, to be the frame or receiver of the weapon.''); *id.* § 478.92(a)(1)(vi) (''[F]irearms awaiting materials, parts, or equipment repair to be completed are presumed, absent reliable evidence to the contrary, to be in the manufacturing process'').

[164] *See, e.g., United States* v. *133 Firearms With 36 Rounds* of Ammunition, No. 08–cv–1084, 2012 WL 511287, at *3 (S.D. Ohio 2012) (''Where it is alleged that the firearm was 'involved or used in' any of the offenses listed in 18 U.S.C. 924(d)(3), the government's burden of proof is by a preponderance of the evidence.''); *United States* v. *Four Hundred Seventy Seven Firearms,* 698 F. Supp. 2d 890, 893 (E.D. Mich. 2010) (''[T]he statute's requirement of a heightened burden of clear and convincing evidence to prove intent does not apply to a forfeiture action premised on a firearm being actually *involved in or used in* a willful violation of 922(a)(1)(A).'').

individual was ''engaged in the business''—whether criminal, civil, or administrative—the Government has the burden to prove conduct that meets the definition in 18 U.S.C. 921(a)(21)(C), *i.e.,* that the person devoted time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms. This rule further defines that term and sets forth certain activities that are indicative of being engaged in the business to provide clarification and guidance to persons who are potentially subject to the licensing requirement. These activities are indicative of being engaged in the business regardless of the type of proceeding in which the activities may ultimately be offered as proof. But the rule's delineation of evidentiary presumptions for use only in civil and administrative proceedings does not require courts to ''giv[e] the same [statutory] provision a different meaning.'' *Clark* v. *Martinez,* 543 U.S. 371, 380 (2005). As the proposed rule explained, in criminal cases, courts may decide to use the presumptions as permissive inferences, such as when drafting jury instructions, and nothing prevents the Department from requesting that criminal courts consider, or prevents such courts on their own from considering, the conduct underlying the rule's presumptions to determine whether an individual was ''engaged in the business'' (such as when instructing juries regarding permissive inferences).[165]

For example, the Department has concluded that a person who repetitively resells firearms within 30 days from purchase is likely to be ''engaged in the business'' requiring a license. A person potentially subject to the licensing requirement should take that interpretation into account in assessing their need for a license and, in a civil or administrative proceeding, the Government and court will apply that interpretation through rebuttable presumptions. Those presumptions do not apply in criminal proceedings, but that does not change the Department's interpretation that a person who repetitively resells firearms within 30 days from purchase is likely to be ''engaged in the business'' requiring a license, nor does it prevent a court presiding over a criminal proceeding from adopting the Department's interpretation and applying it in a manner consistent with the Constitution and criminal law. In a criminal proceeding, a court may, at its discretion, elect to instruct the jury that it may draw an inference that a person is ''engaged in the business,'' or has the ''predominant intent to earn a profit,'' based on evidence that the person repetitively resold firearms within 30 days from purchase, or engaged in any of the other activities set forth in the rule's presumptions. If the court decided to instruct the jury regarding such a permissive inference, that instruction would be consistent with the Department's interpretation of the statute contained in this rule.

The Department disagrees with commenters who imply that it is improper or unusual for a party, including the Government, to submit or advocate for proposed jury instructions in a case. Under the Federal Rules of Criminal Procedure, any party may request in writing that the court instruct the jury on the law as specified in the request, and any party may object to any portion of the instructions. *See* Fed. R. Crim. P. 30(a), (d). Independent bodies, including those that are private, quasi-judicial, and academic, also prepare form or pattern instructions. While criminal courts are under no obligation to adopt the Department's interpretation of ''engaged in the business,'' and a court's ultimate treatment of the Department's evidence might differ across criminal and civil proceedings, the Department's interpretation of the statutory term is the same across ''both criminal and noncriminal applications.'' *Leocal,* 543 U.S. at 11 n.8.

For similar reasons, the commenters' reference to the Supreme Court's decision in *Thompson/Center Arms* is inapposite. There, the Supreme Court applied the rule of lenity to resolve an ambiguous statutory term, even though it was construing that term in a ''civil setting,'' due to the statute's potential criminal applications. *See Thompson/Center Arms Co.,* 504 U.S. at 517–18. As discussed above, the Department's rule offers one definition of the statutory term ''engaged in the business,'' and its use of presumptions does not require that courts apply the term differently in criminal and noncriminal settings. Further, *Thompson/Center Arms* does not speak to the burden of proof or attendant evidentiary presumptions, and its invocation of the rule of lenity to resolve an ambiguous statutory term imposes no barrier to the Department establishing prospectively by regulation presumptions for persons potentially subject to the licensing requirement to consider and for use in civil and administrative proceedings.

As noted above, it is well established that administrative agencies can create rebuttable presumptions. This is the case even when the statute at issue has both civil and criminal components.[166] In *Chemical Manufacturers Association* v. *Department of Transportation,* for example, the D.C. Circuit did not invoke the rule of lenity or suggest that the Department of Transportation's presumptions would result in inconsistent interpretations, but rather upheld the presumption at issue because the agency ''adequately articulated a reasonable evidentiary basis for [it].'' 105 F.3d 702, 707 (D.C. Cir. 1997). As addressed in Section IV.B.8.g of this preamble, the presumptions in this rule are rationally based on ATF's regulatory, investigative, and law enforcement experience, supported by subject matter expertise and decades of applicable case law applying various presumptions in civil and administrative proceedings.[167]

[165] *See, e.g., United States* v. *Zareck,* Criminal No. 09–168, 2021 WL 4391393, at *68–69 (W.D. Pa. Sept. 24, 2021) (rejecting challenge to jury instructions that included an inference of current drug use based on the regulatory definition of ''unlawful user of a controlled substance'' in 27 CFR 478.11); *United States* v. *South,* No. 19cr43, 2020 WL 3489341 (N.D.W.V. June 26, 2020) (similar); Eighth Circuit Committee on Model Jury Instructions, Manual of Model Criminal Jury Instructions for the District Courts of the Eighth Circuit, 266–68 (incorporating inference of current drug use in 27 CFR 478.11); *United States* v. *Perez,* 5 F.4th 390, 400 (3d Cir. 2021) (finding that application note to Federal sentencing guidelines allowed courts to draw a rebuttable presumption that a firearm is used in connection with a drug-trafficking offense where it is found in close proximity to drugs or drug paraphernalia); *United States* v. *Freeman,* 402 F. Supp. 1080, 1082 (E.D. Wis. 1975) (interpreting Selective Service regulations to create a rebuttable presumption that shifted to the defendant the burden of putting forward evidence showing he did not receive the order requiring him to report for service).

[166] *See* footnotes 162 and 163, *supra; see also, e.g.,* 17 CFR 255.1, 255.3(b)(4) (Securities and Exchange Commission (''SEC'') regulations implementing the Bank Holding Company Act of 1956, which provides for both criminal and civil penalties, *see* 12 U.S.C. 1847, and creating a presumption that the purchase or sale of a financial instrument by a banking entity is not for the trading account of the entity if it is held for 60 days or longer); *id.* § 255.20(g) (SEC regulation from same part establishing rebuttable presumption that a banking entity with limited assets and liabilities is in compliance with regulatory obligations).

[167] *See, e.g., Big Branch Res.* v. *Ogle,* 737 F.3d 1063, 1069 (6th Cir. 2013) (in disability benefits proceeding, claimant's proof of disability shifted the burden to employer's insurer to demonstrate otherwise); *Medina* v. *Cram,* 252 F.3d 1124, 1129 (10th Cir. 2001) (rebuttable presumption of qualified immunity in civil proceeding ''necessarily shifts the burden from the party favored by the presumption to the party rebutting it.''); *Scales* v. *I.N.S.,* 232 F.3d 1159, 1163 (9th Cir. 2000) (in deportation proceedings, evidence of foreign birth shifts burden to the petitioner to prove citizenship); *Garvey* v. *National Transp. Safety Bd.,* 190 F.3d 571, 580 (D.C. Cir. 1999) (''[O]nce the FAA shows that a pilot failed to follow a clear ATC instruction, the burden of production shifts to the pilot to offer an exculpatory explanation.); *Spilman* v. *Mosby-Yearbook, Inc.,* 115 F. Supp. 2d 148, 154 (D. Mass. 2000) (in copyright dispute proceeding, registration of the copyright created a rebuttable presumption

The Department disagrees with the commenters' recommendation to include the set of PEP presumptions under the EIB presumptions. While the Department agrees that the conduct underlying the PEP presumptions may often be found and proven in cases that depend on establishing that an individual ''engaged in the business,'' the EIB presumptions stand on their own because, once proven, they demonstrate a likelihood of devoting time, attention, and labor to dealing in firearms as a regular course of business in addition to the person's intent to predominantly earn a profit through the repetitive purchase and resale of firearms. In contrast, the PEP presumptions, once proven, demonstrate only a likelihood of a predominant intent to earn a profit through the repetitive purchase and resale of firearms, not that the person is presumed to be engaged in the business as a result of their actual repetitive purchasing or reselling of firearms. That the Government is able to produce evidence of intent sufficient to satisfy a PEP presumption does not necessarily mean that the evidence put forward is always sufficient to prove the other EIB statutory elements in a civil or administrative proceeding.

For example, if a person repetitively rents tables at gun shows over the course of several months to display firearms for resale, that conduct would demonstrate a predominant intent to profit from repetitive resales and, therefore, the second PEP presumption (repetitively renting physical space to display firearms for resale). Indeed, a person would not likely continue to rent or continuously purchase space at a cost if the person did not intend to profit from selling at gun shows, even if no firearms were actually sold. The seller is presumed to have a predominant intent to earn a profit through repetitive firearms purchases and resales even though there may not have been any actual purchases or resales that would rise to an EIB presumption. Repetitively renting tables at gun shows over the course of several months is certainly indicative of being engaged in the business; however, by itself, it does not yet demonstrate the other elements of being engaged in the business—devoting time, attention, and labor to dealing in firearms as a regular course of trade or business. Those elements would still have to be proven even if there was evidence sufficient to demonstrate the seller's predominant intent to support a PEP presumption. In contrast, if the seller repetitively rents tables at gun shows over the course of several months to display firearms for sale, and repetitively resells firearms within 30 days after purchasing them, the person's conduct meets both the PEP and EIB presumptions. In addition to the second PEP presumption, the first EIB presumption (offering to sell firearms and demonstrating a willingness and ability to purchase and resell additional firearms) would be met because this conduct demonstrates not only a predominant intent to profit, but also the devotion of time, attention, and labor to dealing in firearms as a regular course of trade or business by actually transacting firearms.

c. Arbitrary or Capricious

Comments Received

Some commenters objected to the NPRM on grounds that it is arbitrary and capricious because, they said, it is nothing more than a politically motivated rulemaking designed to stop all private sales, create universal background checks, or establish a national firearms registry in furtherance of political agendas, rather than developing clear standards that apply over time. Others more specifically argued that the entire rule is arbitrary and capricious under 5 U.S.C. 706(2)(A) of the APA. Some of these commenters argued that the agency relied on factors that Congress did not intend for it to consider when enacting the BSCA. A few contended that the changes being made to the definition of ''engaged in the business'' were unnecessary because the definition as it was pre-BSCA has been in effect and working fine for a long time. Others said that changing the definition oversteps the authority allowed by the BSCA, which did not grant ''additional authority'' to ''re-define'' dealer, or asserted that the Department's definition does not simply clarify the law, which cannot be expanded without a solid basis.

Other commenters stated that the rule is arbitrary because it causes the proposed definition of a dealer ''engaged in the business'' to be less clear and makes it almost impossible to determine when one is in compliance. One of these commenters elaborated that ''[t]he proposed rule outlines a set of extremely complex, subjective, and arbitrary guidelines on how [ATF] will determine if an individual is engaged in the business of 2nd Amendment protected sales.'' Another commenter asserted that the rule was unfair because it changed the definition overnight without notice that most people would be aware of. A third stated the rule ''fails to provide any bright-line rules for individuals to ascertain whether they are actually 'engaged in the business' and instead claims that ATF will conduct a 'fact-specific inquiry' under which 'even a single firearm transaction' may suffice. . . . This is not a rule, nor is it knowable to the average, reasonable person. And yet, this Proposed Rule suggests alterations to Federal regulation that will bear the full force of criminal law. More, the Proposed Rule leaves complete and total discretion in the hands of ATF.''

Several commenters focused on the lack of a threshold number of firearms as an indicator of the arbitrary nature of the rule. One of these commenters explained that ''[t]he rule does not provide any rationale for why selling more than one firearm per calendar year should be considered engaging in the business of dealing in firearms. There is no evidence that this is a meaningful threshold, and there is no reason to believe that it will be effective in preventing straw purchases.'' Related to frequency, another commenter stated that ''the proposed rule negatively affects the public by providing the ATF exceptionally capricious leeway in its definition of 'repetitive'; since no clear definition is given, it is reasonable to assume that the ATF considers offering any of the listed firearms for sale more than once in the citizen's lifetime as repetitive.''

Other commenters stated that the rebuttable presumptions as a whole are ''a compilation of totally arbitrary criteria that just makes it hard for normal citizens to sell weapons to each other under non-business transactions.'' Others focused on specific presumptions as arbitrary or capricious. For example, a couple of commenters asserted that the firearm's condition is an unsupported and arbitrary basis for a rebuttable presumption that one is engaged in the business. One of these commenters elaborated that new buyers may need the manufacturer instructions on care and handling of the firearms, among other information contained on original packaging, as well as special tools, locks, and cases that come with the original packaging. As a result, selling a firearm with original packaging

of validity and shifted the burden to the respondent to prove invalidity of the copyright); *Idaho Mining Ass'n* v. *Browner,* 90 F. Supp. 2d 1078, 1087–98 (D. Idaho 2000) (upholding environmental regulations adopting a rebuttable presumption in favor of fishable/swimmable use designations); *In re The Medicine Shoppe,* 210 B.R. 310, 312 (N.D. Ill. 1997) (in bankruptcy proceeding, a properly filed claim creates a rebuttable presumption of validity and shifts the burden to the objector to produce evidence to overcome the presumption); *Sinatra* v. *Heckler,* 566 F. Supp. 1354, 1358–59 (E.D.N.Y. 1983) (in Social Security benefits proceeding, regulatory presumption served to shift the burden of going forward with evidence of receipt of notice of adverse determination).

may indicate nothing more than passing it on to a new owner. As another example, a commenter raised concerns about the resale of a firearm within 30 days after purchase, stating that ''an arbitrary 30 day rule to define those individuals engaged in firearms sales cannot possibly be based on any data and facts . . . . If it were based on actual data, the days would be 28, or 34, or 67, for example. My point is that 30 days is an arbitrary amount based on nothing other than making it an easy number to remember for policy and enforcement purposes.''

Some other commenters found the concept of ''profit'' to be arbitrary. One commenter stated that ''[s]elling at a profit does not equate to engaging in the business. That is totally absurd. Prices of firearms appreciate, as do any other valuable object.'' Another stated that '''the statutory definition further provides that proof of profit is not required . . .', which in other words means 'here at the ATF will charge you whether or not we have evidence of wrongdoing.' '' Another commenter, an organization that runs gun shows, stated that the application of the concept of profit in the rule not only exceeds the statutory scope, but also does not appropriately account for what constitutes a profit.

And finally, some commenters stated that the rule lends itself to arbitrary and capricious interpretation and enforcement, placing citizens at risk. For example, one commenter stated that ''[u]ltimately, this rule will only impair the rights of the law[-]abiding citizens and potentially create additional felons through what is merely an arbitrary and capricious rule.'' Another stated that ''[t]he rule would give the Attorney General broad discretion to determine who is a gun dealer and who is not, and it would subject gun owners to arbitrary and capricious enforcement actions.''

Department Response

The Department disagrees that the rule is arbitrary or capricious, or otherwise violates the APA. The BSCA amended the GCA, and the Department has invoked its rulemaking authority, *see* 18 U.S.C. 926(a), to promulgate regulations necessary to implement the GCA, as amended. As stated previously, ATF has been delegated the authority to further define statutory terms, such as ''engaged in the business,'' when necessary to administer and enforce the GCA.

While the BSCA broadened the definition of ''engaged in the business'' as it applies to dealers, it did not set forth or explain what specific firearms purchase and sale activities are sufficient for a person to be ''engaged in the business'' of dealing in firearms under the GCA. Many commenters stated that they believe this rulemaking provides much needed clarity about the persons who must obtain a license, thereby increasing the firearms transactions conducted through licensed dealers, helping to ensure that persons who are prohibited from receiving or possessing firearms do not receive them, and creating more licensed dealers who maintain records through which crime guns can be traced.

The Department disagrees that the rule is unclear or overly complex. The rule sets forth definitions of terms that are based on standard dictionary definitions and decades of case law interpreting ''engaged in the business.'' The rebuttable presumptions are based on specific, identifiable conduct and clearly defined in the regulatory text.

The Department explained its reasoning, both in the proposed rule and elsewhere in this final rule, for not adopting a specific numerical threshold of firearms that an individual must sell to be considered ''engaged in the business.'' *See* Department Response in Section IV.B.3 of this preamble. The Department disagrees with commenters who argued that a single sale, standing alone, would presumptively classify the seller as ''engaged in the business'' under this rule. The regulatory text explains that a single sale must be coupled with additional evidence to support a determination that the seller required a license. It is important to note that, in any event, all presumptions in this rule are rebuttable.

The Department disagrees with the comments that the presumptions are arbitrary. As explained previously, and in response to particular comments about specific presumptions, the presumptions are all based on the Department's investigative and regulatory enforcement experience,[168] as well as numerous post-FOPA court and administrative decisions cited in this rule.[169] Indeed, some of the regulatory text that commenters asserted is new or represents a significant change was adopted from ATF's published guidance issued almost eight years ago in 2016.[170] That guidance explained that ''there is no 'magic number' related to the frequency of transactions that indicates whether a person is 'engaged in the business' of dealing in firearms.'' [171]

The Department disagrees with the comments arguing that a firearm's condition—or the fact that a firearm is in, or sold with, original packaging that contains manufacturer instructions and other useful items—is an arbitrary basis for a rebuttable presumption. Persons who are engaged in the business of dealing in firearms often desire firearms that are in either a new condition, or a nearly new condition, accompanied by original packaging so they can command the highest price while quickly attracting buyers in the shortest amount of time. Moreover, purchasers of deadly, explosive-based weapons are more likely to trust the safety and reliability of new, factory-tested firearms, rather than used firearms in a lesser condition. Nonetheless, in response to comments regarding the presumptions that a person is engaged in the business if they repetitively resell or offer for resale new or like-new firearms, or firearms that are of the same or similar kind and type, the Department has revised those presumptions to apply only where the resales or offers for resale occurs within one year from the date of purchase (also referred to in this rule as a ''turnover'' limitation) to reduce the chance that personal collection firearms might fall within either of these presumptions. *See* 27 CFR 478.13(c)(3)(ii). In this regard, the Department agrees with some commenters that collectible firearms could be maintained in a like-new condition months or years after they were originally sold. However, based on the Department's extensive experience investigating and enforcing civil, administrative, and criminal cases against persons who were willfully engaged in the business without a license, it is unlikely that a collector or hobbyist would repetitively resell such firearms within one year after purchase if not to engage in the business of dealing in firearms. Of course, as the rule text states, the determination of whether a person is engaged in the business is a fact-specific inquiry. Thus, a person who intentionally stockpiles and sells new or like-new firearms, or the same make and model or variants thereof, with an intent to evade the one-year turnover limitation may still be considered to be engaged in the business if circumstances warrant that determination.

[168] *See Nat'l Mining Ass'n* v. *United Steel Workers,* 985 F.3d 1309, 1322 (11th Cir. 2021) (''Agencies are permitted to rely on their experience in the regulated field, so long as they explain what their experience is and how that experience informs the agency's conclusion.'').

[169] *See* footnotes 71–83, *supra.*

[170] *See* ATF Publication 5310.2, *Do I Need a License to Buy and Sell Firearms?* 5 (Jan. 2016), *https://www.govinfo.gov/content/pkg/GOVPUB-J38-PURL-gpo125446/pdf/GOVPUB-J38-PURL-gpo125446.pdf.*

[171] *Id.* at 5.

The Department's views have been further confirmed and supported by a survey ATF conducted of special agents who work on ''engaged-in-the-business'' criminal cases. The survey was conducted to better understand the appropriate turnover limitation, as these special agents have encountered bona fide collectors during the course of their work. In that survey, ATF asked how soon after purchase bona fide collectors typically resell a firearm in new or like-new condition with original packaging or firearms of the same make and model. Of the 116 agents who responded, 65 percent reported that, based on their observations, bona fide collectors typically resell a firearm that they purchased for their collection sometime after one year. Of that 65 percent, 13 percent added that many bona fide collectors do not resell for as long as five years after purchase, if ever. Another 15 percent of agents responded that they had observed some collectors resell a firearm sometime after six months. Only 6 percent of agents reported seeing a collector resell a firearm after 90 days, and only 1 percent of agents reported observing a resale within 60 days. The remaining 15 percent of agents did not provide a response because they had not closely observed the behavior of collectors. None of the agents reported collectors reselling firearms within 30 days after purchase. In addition, these results were about single sales of firearms; they did not report on frequency of repetitive sales, or sales involving multiple firearms. Given that 65 percent of agents reported that collectors do not typically resell even one firearm in new or like-new condition with original packaging or firearms of the same make and model within a year after purchase, the likelihood that collectors or hobbyists would engage in repetitive resales of such firearms within one year is low.

It is Congress, not the Department, that identified the predominant intent to profit as a key element of being engaged in the business of dealing in firearms, so commenters' concerns with the concept of profit's role in making EIB determinations are not addressed in this rulemaking. However, the Department agrees with the commenter who stated that actually ''[s]elling at a profit does not equate to engaging in [the] business'' because a showing of actual profit, whether or not expenses or inflation are considered, is not required to be engaged in the business. Rather, it is the predominant intent of obtaining pecuniary gain from sale or disposition of firearms that matters. *See* 18 U.S.C. 921(a)(22). Moreover, because the person's predominant intent to profit is the relevant fact, it does not matter how actual profit is calculated.

Finally, the Department disagrees that the rule lends itself to arbitrary or capricious enforcement of the dealer licensing requirement because the rule sets forth specific, identifiable evidence that is presumed to demonstrate that a person is engaging in the business, or predominantly intends to earn a profit. In any proceedings where such evidence is presented, it may be rebutted by the party alleged to be engaged in the business of firearms dealing to the extent such rebuttal evidence is available. The presumptions are based on purchase and resale activities that, in ATF's experience, are indicators of dealing in firearms, as well as court cases, which greatly reduces the possibility of inconsistent interpretation and enforcement.

d. Violates the Prohibitions Against Creating a Gun Registry

Comments Received

Numerous commenters objected to the regulation as a ploy by the Government to subject law-abiding gun owners who have the right to buy and sell firearms to a rigorous registration requirement. They claimed that the new definition of ''dealer'' would require any person who sells a firearm to obtain a license, and that being licensed requires a person to register all of their firearms, thereby creating a universal backdoor gun registry. A few commenters also stated that ATF already has and maintains ''nearly a billion entries of gun owner's information in a searchable database.''

Department Response

The Department disagrees that this rule creates a registry of firearms. First, the definition of ''engaged in the business'' as a dealer in firearms as implemented in this rule does not result in a requirement, directly or indirectly, that all persons who sell a firearm must be licensed. Under this rule, persons who sell firearms but who are not engaged in the business of dealing in firearms do not need to become licensed. This includes persons who make occasional sales to family members or FFLs, to enhance their personal collection, and to liquidate inherited firearms, among others. Section 478.13(e) of the regulatory text in this rule provides more information on conduct that does not support a presumption of being engaged in the business as a dealer in firearms.

Second, and more fundamentally, the rule does not create a firearms registry. Licensees are required by the GCA, *see* 18 U.S.C. 923(g)(1)(A), (g)(2), to complete and maintain records of production, acquisition, and disposition of all firearms at their licensed business premises for such period, and in such form, as the Attorney General may prescribe by regulations. But licensees are not required to register their firearms with ATF or to otherwise submit a listing of the firearms they own or sell. Although ATF has the authority to inspect a licensee's records under certain conditions, *see* 18 U.S.C. 923(g)(1)(B)–(C), the records belong to and are maintained by the licensees, not the government. Only after a licensee discontinues business do the GCA and implementing regulations require licensees to provide their records to ATF, which allows ATF tracing of crime guns to continue.[172] *See* 18 U.S.C. 923(g)(4); 27 CFR 478.127. In fact, 18 U.S.C. 926(a)(3) expressly provides that ''[n]othing in this section expands or restricts the [Attorney General's] authority to inquire into the disposition of any firearm in the course of a criminal investigation.'' [173] This rule does not in any way alter the longstanding legal requirements preventing ATF from creating a national firearms registry.

e. Violates 18 U.S.C. 242

Comments Received

Out of concern regarding their rights under the Second Amendment to the Constitution, several commenters claimed that by working on this rule, ATF officials are violating 18 U.S.C. 242, which makes it a crime for a person acting under color of any law to willfully deprive a person of a right or privilege protected by the Constitution or laws of the United States. Commenters also claimed that ATF officials and employees are likewise violating their oath of office to support

[172] The out-of-business firearms transaction records are indexed by abbreviated FFL number so that they may be accessed when needed to complete a firearm trace request involving a licensee that is no longer in business. Out-of-business firearms transaction records are not searchable by an individual's name or other personal identifiers. In 2006, ATF transitioned from using microfilm images of records to scanning records into a digital storage system with images that are not searchable through character recognition, consistent with ATF's design and use of its prior Microfilm Retrieval System.

[173] Federal law has long prohibited ATF from consolidating or centralizing licensee records. Since 1979, congressional appropriations have prohibited ATF from using any funds or salaries to consolidate or centralize records of acquisition and disposition of firearms maintained by FFLs. *See* Treasury, Postal Service, and General Government Appropriations Act, 1980, Public Law 96–74, 93 Stat. 559, 560 (1979). This annual restriction became permanent in 2011. *See* Public Law 112–55, sec. 511, 125 Stat. at 632.

and defend the Constitution (particularly the Second Amendment) under the same provision.

Department Response

The Department disagrees that any official involved in promulgating or implementing this rule is violating 18 U.S.C. 242 or any other criminal law. The regulations proposed and finalized herein do not raise constitutional concerns for the reasons given above. *See* Section IV.B.8 of this preamble.

C. Concerns With Specific Proposed Provisions

The Department received thousands of comments from the public concerned about specific provisions in the proposed rule. A majority of those concerns were in opposition to the rule, but ATF also received comments from individuals who generally supported the proposals. These specific comments originated from a variety of interested parties, including advocacy, sporting, and gun owners' organizations; gun safety organizations; lawmakers; gun enthusiasts; members of the general public; and persons with legal backgrounds. The topics included concerns regarding the proposed definitions, issues regarding the presumptions as a general matter, comments on some of the individual EIB and PEP presumptions, and questions about the transfer of firearms between licensees.

1. Definition of ''Dealer''

Comments Received

In commenting on whether the rule's definition of dealer is clear, a number of commenters mentioned that the rule does not include a numerical threshold of firearms or a specified time frame establishing when a person's activities become engaged in the business. As a result, for example, one commenter stated that an average person could not reasonably be expected to understand what activities would require them to get a license, which, the commenter said, essentially means that a single sale of a firearm by a private owner would require a dealer's license unless the seller is either selling to improve their collection or is liquidating their collection.

Other commenters were concerned about the places in which the proposed rule defined firearms purchase and sales activities as dealing. For example, one commenter stated that the reference to an international marketplace in the definition of ''dealer'' could be read to include activities that occur wholly outside the United States, which goes against the legal presumption that Congress ordinarily intends its statutes to have domestic, not extraterritorial, application. The commenter did not think the Department intended to exercise extraterritorial jurisdiction and suggested the definition of ''dealer'' should be revised to make this clear. As another example, one commenter expressed concerns about the rule's clarification that dealing may occur wherever, or through whatever medium, qualifying activities may be conducted, suggesting that instead of clarifying, this is likely to create more confusion because having a license would then prohibit the person from selling in some locations. The commenter said that 27 CFR 478.100 is clear that a dealer can transact sales only at its licensed premises or a ''qualifying'' gun show or event. To be a qualifying gun show or event, the commenter said, it must be sponsored by an organization devoted to collecting, competitive use, or other sporting use of firearms. As an example, the commenter stated, ''it would be difficult to imagine a circumstance where a licensed dealer would be allowed to sell at a flea market, though private sales there might be legal.''

Finally, other commenters expressed concern about whether the rule would include certain persons as dealers. For example, one commenter, a large FFL, stated that it is unclear whether its individual employees must be separately licensed as dealers when working in the employ of an FFL. They stated that a plain reading of the proposed regulatory text suggests its employees would be required to be separately licensed. For example, they noted, an associate working in the commenter's customer service department is responsible for the physical repair of firearms returned for service. The associate is a ''person,'' performs the repair work, and obtains monetary compensation for the repairs via paycheck. The commenter asked if, in this scenario, the associate is a ''dealer'' requiring license as a gunsmith, even if the repairs they perform are made at the direction of the commenter, who itself is a licensee. Similarly, another commenter inquired whether the definition of being engaged in the business as a dealer now includes those who sell only component parts of a weapon, but not the whole weapon itself. Another commenter was also concerned about those who fabricate certain parts, but for a different reason. The commenter, who supported the overall definition of ''dealer'' because they believe it to be consistent with the BSCA and to enhance public safety, said, ''I have concerns about the broad reach concerning persons engaged in the fabrication fitment of barrels, stocks, [and] trigger mechanisms due to these parts being unregulated and not considered firearms under the current frame or receiver rule, as well as the GCA. *See* [Docket No.] 2021R–05F, AG Order No. 5374–2022. Despite this portion of the definition being in the previous definition, I . . . would recommend that this portion be dropped from the definition.''

Department Response

The Department disagrees that the rule does not explain who must be licensed as a ''dealer.'' The definition of ''dealer'' is, in relevant part, ''any person engaged in the business of selling firearms at wholesale or retail'' and was already established in the GCA and ATF regulations prior to the BSCA amendments. *See* 18 U.S.C. 921(a)(11)(A). The rule clarifies within this definition that a person can be considered a dealer regardless of the location or medium through which a person engages in the business. In the definition of ''engaged in the business'' as a wholesale or retail dealer, the rule then sets forth specific and defined conduct that will be presumed to be ''engaged in the business'' requiring a license as a ''dealer,'' as well as conduct that does not support a presumption and may be used as evidence to rebut any such presumption. *See* § 478.13(c), (e), (f).

The Department disagrees that a single sale of a firearm by a private owner, without more, would necessarily require a dealer's license under this rule. To the contrary, a dealer who is engaged in the business ''devotes time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.'' 18 U.S.C. 921(a)(21)(C). To that end, one presumption established by this rule states that a person who sells or offers firearms for sale (even if a firearm is not actually sold) and then also represents to potential buyers or otherwise demonstrates a willingness and ability to purchase and resell additional firearms (*i.e.,* to be a source of additional firearms for resale) is presumptively engaged in the business. Thus, it is clear from the rule's plain language that, to trigger this presumption, additional evidence is required beyond merely a single sale of a firearm.

The Department disagrees that the rule seeks to assert extraterritorial jurisdiction in excess of statutory authority by referencing ''international

marketplaces'' in the definition of ''dealer.'' The statutory prohibition at 18 U.S.C. 922(a)(1)(A) makes it unlawful for unlicensed persons ''to ship, transport, or receive any firearm in interstate or foreign commerce.'' Including ''international'' marketplaces in the definition of ''dealer'' is consistent with Congress's intent to regulate unlicensed sales in ''foreign'' commerce.[174] Additionally, the GCA, as recently amended by the BSCA, now expressly prohibits a person from smuggling or knowingly taking a firearm out of the United States with intent to engage in conduct that would constitute a felony for which the person may be prosecuted in a court in the United States if the conduct had occurred within the United States. *See* 18 U.S.C. 924(k)(2)(B). Willfully engaging in the business of dealing in firearms without a license is an offense punishable by more than one year in prison, *see id.* 924(a)(1)(D), and constitutes a felony. Therefore, unlicensed persons who purchase firearms in the United States and smuggle or take them out of the United States (or conspire or attempt to do so) for sale in another country would be violating 18 U.S.C. 924(k)(2)(B), among other provisions of U.S. law. This is not conduct ''wholly outside the United States,'' as the commenter suggests. Accordingly, this rule now clarifies in the definition of ''dealer'' that purchases or sales of firearms as a wholesale or retail dealer may occur ''at any other domestic or international public or private marketplace or premises.''

The Department disagrees with the commenter who said that the definition of ''dealer'' will cause more confusion because it includes dealing that ''may be conducted'' at a gun show or event, due to, as the commenter stated, some gun shows or events not being qualified under 27 CFR 478.100. Persons who want to engage in the business of dealing in firearms at a gun show or event must first apply for and receive a license at a business premises in the same State as the gun show or event, regardless of whether the gun show or event is qualified. During the application process, ATF advises the applicant during an application inspection concerning their responsibilities as a dealer, to include dealing only at qualified gun shows or events within the same State as their licensed business premises. To the extent that the definition's use of the phrase ''may be conducted'' causes some persons to incorrectly believe they may lawfully deal in firearms at gun shows or events that are not qualified, the phrase ''may be conducted'' has been replaced with ''are conducted'' in the final definition of ''dealer.''

With regard to the commenter's question whether an employee of a gunsmith who performs repair work, or fitment of barrels, stocks, and trigger mechanisms to firearms, is a ''dealer'' who must be licensed, the rule does not address who is ''engaged in the business'' as a dealer-gunsmith under 18 U.S.C. 921(a)(21)(D), and therefore must be licensed under 18 U.S.C. 921(a)(11)(B).[175] This rule addresses only who is engaged in the business as a dealer under 18 U.S.C. 921(a)(11)(A). Also, this rule does not require employees of dealers to be licensed separately. Firearms businesses carry out their operations through their employees.[176] Employees of dealers therefore do not require a separate license, provided the employees are acting within the scope of their duties on behalf of the licensee.[177]

Lastly, in response to the question whether the rule applies to persons who deal in component parts of a complete weapon, this rule applies to persons who engage in the business of dealing in ''firearms,'' as that term is defined by 18 U.S.C. 921(a)(3). This includes weapons that will, are designed to, or may readily be converted to expel a projectile under 18 U.S.C. 921(a)(3)(A), and the frames or receivers of any such weapons under 18 U.S.C. 921(a)(3)(B). Persons who engage in the business of dealing in any such firearms under the GCA must be licensed.

2. Definitions of ''Purchase'' and ''Sale''

Comments Received

In the NPRM, the Department proposed to define the terms ''purchase'' and ''sale'' as they pertain to the term ''engaged in the business'' of dealing in firearms. While some commenters agreed with including definitions for ''purchase'' and ''sale'' so persons cannot evade licensing through the barter or exchange of non-monetary items, other commenters believed the proposed definitions went too far. One commenter opined that the definition is so focused on barter, profit, and trade that it will allow ATF to find any nexus such that the agency would be able to detain, investigate, and refer for prosecution an honest series of sales, trades, or bartering that are not in any way executed as part of a business scheme. Other commenters opined that the definitions offered for these terms ''deviate from historical practices that allowed for the transfer and trade of firearms among private citizens with minimal government interference.'' Another considered the definitions to be generally consistent with the plain meaning of those terms.

Several commenters also offered suggestions to the regulatory text. One commenter stated that the definition of ''sale'' is too broad and includes ''Christmas gifts, because [the proposed definition does] not require[ ] for the firearm's delivery to be 'bargained-for in exchange,' [which is] the core of contract that distinguishes contract from gift.'' The commenter stated that ATF's definition of ''sale'' runs counter to the dictionary definition that is quoted in footnote 45 of the NPRM, 88 FR 61999. The commenter quoted this definition of ''sale,'' emphasizing that it references ''a *contract* transferring the absolute or general ownership of property from one person or corporate body to another for a price (as a sum of money or any other consideration).'' (Emphasis added by commenter) The commenter noted that ATF's regulatory definition does not include the term ''contract'' and therefore ignores that there must be consideration for a sale to have occurred. In a similar vein, a couple of other commenters emphasized that sales, trades, or exchanges of firearms occur on the basis of agreements or agreed exchanges between the parties and should therefore be permitted.

Another commenter raised a concern that ''the [proposed] definition of 'sale' could potentially include non-dispositional transfers. . . . Rather than use the term 'providing,' which could include many temporary transfers, the more statutorily consistent term would be 'disposing of.' The GCA uses the terms 'disposition' or 'dispose' in connection with the words 'sale' or 'sell' seven times in section 922. 18 U.S.C. 922(a)(6), 922(b)(2), 922(d), 922(d)(10),

[174] *See* footnote 48, *supra.*

[175] For more information on who must be licensed as a gunsmith, see *Definition of* ''*Frame or Receiver*'' *and Identification of Firearms,* 87 FR 24652 (Apr. 26, 2022).

[176] *See* ATF Ruling 2010–1, *Temporary Assignment of a Firearm by an FFL to an Unlicensed Employee,* at 2–3 (May 20, 2010), *https://www.atf.gov/firearms/docs/ruling/2010-1-temporary-assignment-firearm-ffl-unlicensed-employee/download.*

[177] *See United States* v. *Webber,* No. 2:14–cr–00443, 2017 WL 149963, at *8 (D. Utah Jan. 13, 2017) (''[A]n employee of Cabela's is not engaged in the business of dealing in firearms because Cabela's has the profit motive and Cabela's is the party engaged in the repetitive purchase and resale of firearms. However, let us assume that the employee, who did not have his own FFL, began buying hundreds of guns from Cabela's and reselling them out of his home for personal profit. Cabela's maintains the A&D book, but the employee is not paid for his extracurricular activities. Under those facts, the Gun Control Act would prohibit the employee's conduct. The employee would not be permitted to circumvent the Gun Control Act's licensing requirement by engaging in the business of dealing in firearms with Cabela's FFL.'').

922(d)(11), 922(j).'' Therefore, the commenter suggested it would be more statutorily consistent to define the term as ''disposing of a firearm in exchange for something of value'' instead of ''providing a firearm in exchange for something of value.''

Department Response

The Department disagrees that the definitions of ''purchase'' and ''sale'' are overbroad and should not include bartering or trading firearms. As the rule points out, even before the BSCA, courts upheld criminal convictions where payment was made in exchange for firearms in the form of goods or services, rather than cash. Non-cash methods of payment may include contraband, such as drugs. A non-cash method of payment may also be used to conceal illicit firearms dealing, to include avoiding reporting requirements associated with transfers of cash.[178] Moreover, while the Department agrees with the commenters that one definition of ''purchase'' can include acquiring something of value by contract (*i.e.,* a ''bargained for'' exchange), the common definition of ''purchase'' is more generally defined to mean ''to obtain by paying money or its equivalent.'' [179] Nonetheless, to ensure that acquiring the firearm is understood to be intentional, the Department has added the words ''an agreed'' before ''exchange,'' as used in other comments that view an exchange more broadly than by contract. This includes an agreement to exchange something of value indirectly, such as payment of the seller's debt owed to a third party in exchange for a firearm.

Regarding the definition of ''sale,'' the Department disagrees that the proposed definition of that term is inconsistent with common dictionary definitions.[180] Moreover, giving bona fide gifts [181] continues to be excluded from conduct presumed to be engaged in the business, and evidence of such gifts can be used to rebut the presumptions that a person is engaged in the business. *See* § 478.13(e)(1), (f). Furthermore, the Department agrees that it is more consistent with the GCA to use the phrase ''disposing of a firearm'' rather than ''providing a firearm,'' in the definition of ''sale,'' and that change has accordingly been made.[182]

3. Definition of Engaged in the Business Generally

Comments Received

Numerous commenters did not agree with the Department's assertion in the proposed rule that a single firearms transaction or no sale at all may require a license. They believed that this runs counter to statutory language that emphasizes ''regular'' and ''repetitive'' manufacture and sale or purchase and resale of firearms. Commenters stated that ''repetitive'' cannot be proven by ''a single firearm transaction''; that the statute clearly requires a course of conduct of purchasing and reselling firearms repetitively. One commenter stated that the required repetitive purchase and resale of firearms means that ''[the] firearms must be purchased 'and' resold. If firearms are not purchased with the intention of resale at time of purchase, [they] fall[ ] under the exception.'' Otherwise, the commenter argued, simple purchases and sales are something any gun owner might do; that is why Congress carefully chose the word ''resale''—meaning ''the act of selling something again.'' Along this vein, at least one commenter suggested that the Department amend all the presumptions for engaged in the business to use the word ''resale'' or ''reselling'' rather than ''sale'' or ''selling'' to be consistent with the phrase ''repetitive purchase and resale of firearms'' in the GCA definition of dealer.

Another commenter also rejected the Department's position that ''there is no minimum number of transactions that determines whether a person is 'engaged in the business' of dealing in firearms,'' and that ''even a single firearm transaction, or offer to engage in a transaction [without any actual transaction], when combined with other evidence, may be sufficient to require a license.'' The organization identified six indicators in the GCA that they argued demonstrate that more is required, including: (1) use of ''firearms'' in the plural; (2) ''regular course,'' contemplating a series of events; (3) ''repetitive,'' meaning more than once; (4) requiring actual ''purchase and *re*sale,'' which (5) provides a contemporaneous conjunctive requirement; and (6) exempting ''sales, exchanges, or purchases,'' in the plural. The commenter concluded that these indicators require ATF to reverse its position.

Another organization emphasized that a person who makes occasional sales, exchanges, or purchases for enhancement of a personal collection or for a hobby, or to sell all or part of their personal firearms collection, is not engaged in the business as a dealer even if the person sells the firearms to ''predominantly earn a profit.'' ''Profit motive,'' they stated, ''is not relevant to activities that fit within the carve-out because it is an exception to the general 'engaged in the business' rule. This construction of the statute is extremely important because it covers common behavior for law-abiding gun owners.''

Some congressional commenters focused specifically on the presumptions in this light and stated that ''the civil and administrative presumptions ignore the occasional seller and hobbyist protections under the law. . . . Occasional sellers may keep firearms in their original packaging or discuss the purchase and resale of firearms with friends. Occasional sellers—because they are occasional sellers—may represent that they are able to get firearms. And occasional sellers may collect or even sell firearms of the same make and model. The proposed rule paints a broad brush to attempt to regulate conduct that is protected under the law for occasional sellers of firearms.'' An additional commenter stated that the statute's use of the plural form of ''occasional sales, exchanges, or purchases'' clearly indicates that multiple sales, exchanges, or purchases can be made by gun owners without rising to the level of dealing.

Indeed, at least one commenter in support of the presumptions suggested that the rule could be clearer about what constitutes an occasional sale. ''[W]hile it is not necessary for the final rule to establish a numerical ceiling for what constitutes 'occasional' sales or exchanges under 18 U.S.C. 921(a)(21)(C) (given the NPRM's general preference for a fact-specific inquiry),'' they said, it

''should at minimum clarify that 'occasional' sales conduct should not be construed to include sales conduct that is consistently ongoing or that is regularly scheduled in a consistent or periodic fashion.''

One commenter stated that ATF has created a nebulous moving target without including a numerical threshold to determine when one is a dealer in firearms. Indeed, two commenters otherwise in support of the rule proposed adding a rebuttable presumption that the sale or transfer of five or fewer firearms is presumed to be selling or transferring firearms occasionally, whereas another commenter suggested 8–10 firearm sales as the appropriate number. One of the commenters cited to similar provisions in California (which the commenter stated has five firearms per year as its threshold) and other States to support the proposition that it is possible to set a number, while not necessarily agreeing that five is the reasonable threshold. These commenters stated that by adding this threshold, the public and law enforcement would have a clearer idea of when one is subject to, or exempt from, becoming licensed. Similarly, another commenter suggested a threshold number of five firearms per month would be reasonable because the vast majority of individual hobbyists and collectors would not even approach half of the limit. This commenter specifically stated, ''[t]his would leave no room for guessing and would send a strong message from the ATF that persons who may touch the limit would need to go ahead and obtain their FFL.'' Another commenter suggested that, rather than trying to define what ''engaged in the business'' means, it would be better to explain how a citizen may sell a firearm so as not to be considered a firearms dealer needing a license. Defining it from that direction, they added, would make any conduct outside that ''non-dealer'' definition presumptively conduct that requires a license.

An additional commenter suggested that, to alleviate the ''occasional seller exemption'' issue, ATF should treat the presumptions as permissive inferences in civil/administrative contexts as well as in criminal ones. ''This is a much more lenient standard for those who have not even repetitively sold or purchased a firearm,'' they stated, because permissive inferences are not mandatory, do not shift the burden of proof, and do not require a specific outcome. Similarly, a final commenter suggested that the first EIB presumption should instead be a permissive inference (dealing in firearms when the person sells or offers for sale firearms, and also represents to potential buyers or otherwise demonstrates a willingness and ability to purchase and sell additional firearms). The commenter stated that, as a mandatory presumption, this presumption is too inflexible to be fairly applied, even on a case-by-case basis, but also that it does not allow for the case-by-case analysis the commenter said ATF purports to want. There is a tension between the presumptions that indicate a person is ''engaged in the business,'' the commenter added, and the exclusion from being engaged in the business for those who make only occasional sales. By its plain language, the commenter continued, the presumption includes anyone who intends to purchase or sell any number of firearms, regardless of whether they intend to do so for pecuniary gain or to enhance or liquidate a personal collection. ''This linguistic imprecision undercuts ATF's stated exemption of persons who only make occasional purchases, sales, or trades for the enhancement or liquidation of a personal collection,'' they concluded.

Department Response

The Department agrees with commenters that the GCA's definition of ''engaged in the business'' contemplates a person's devotion of time, attention, and labor to a regular trade or business of buying and selling more than one firearm, but disagrees that the statute requires any minimum number of firearms to actually be sold to be ''engaged in the business'' under the GCA, or that the EIB presumptions are contrary to the statutory language. While some commenters reference particular words or phrases in the statute, the statutory language must be considered as a whole. To be ''engaged in the business'' as a wholesale or retail dealer under 18 U.S.C. 921(a)(11)(A), a person must ''devote[ ] time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.'' 18 U.S.C. 921(a)(21)(C).

A person may ''devote[ ] time, attention, and labor to dealing in firearms as a regular course of trade or business,'' for example, by spending time, effort, and money each day purchasing, storing, and securing firearms inventory, and advertising or displaying those firearms for sale. The specific resale activities identified in each presumption reflect this devotion of time, attention, and labor to dealing in firearms as well as the element of intent. But it is only the intent element of the statute—to predominantly earn a profit—that mentions ''repetitive purchase and resale of firearms.'' There is no statutory requirement that firearms actually be sold; indeed, a dealer may routinely (*i.e.,* ''regularly'') devote time and resources working toward that goal as a course of trade or business, but never find a buyer or consummate any sales due to insufficient demand or poor sales practices. This is because the phrase ''repetitive purchase and resale of firearms'' refers to the method, or modus operandi, by which a person intends to engage in the firearms business.[183] Thus, under the statutory text and judicial interpretations of it, no actual sales are required if the intent element is met and the person's conduct demonstrates their devotion of time, attention, and labor to dealing in firearms as a regular course of trade or business.[184]

Intent may be inferred from a person's words or conduct.[185] Unlike a

[183] *See Palmieri,* 21 F.3d at 1268 (''Although the definition [of engaged in the business] explicitly refers to economic interests as the principal purpose, and repetitiveness as the *modus operandi,* it does not establish a specific quantity or frequency requirement.'' (footnote omitted)); *Focia,* 869 F.3d at 1281–82 (''[N]othing in the [FOPA] amendments or the rest of the statutory language indicates that a person violates § 922(a)(1)(A) only by selling firearms as his primary means of income. And the word 'hobby'—which [defendant] suggests includes the regular sale of guns for profit and financial gain, so long as it is not the seller's primary source of income—simply cannot bear the weight that [defendant] seeks to put on it. The exact percentage of income obtained through the sales is not the test; rather, we have recognized that the statute focuses on the defendant's motivation in engaging in the sales.'').

[184] *See, e.g., King,* 735 F.3d at 1107 n.8 (upholding conviction where defendant attempted to sell one firearm and represented that he could purchase more for resale and noting that ''Section 922(a)(1)(A) does not require an actual sale of firearms''); *Nadirashvili,* 655 F.3d at 119 (2d Cir. 2011) (''[T]he government need not prove that dealing in firearms was the defendant's primary business. Nor is there a 'magic number' of sales that need be specifically proven. Rather, the statute reaches those who hold themselves out as a source of firearms. Consequently, the government need only prove that the defendant has guns on hand or is ready and able to procure them for the purpose of selling them from [time] to time to such persons as might be accepted as customers.'' (quoting *Carter,* 801 F.2d at 81–82)).

[185] *See Agnew* v. *United States,* 165 U.S. 36, 50 (1897) (referring to a ''presumption that a person intends the natural and probable consequences of acts intentionally done, and that an unlawful act implies an unlawful intent''); *cf. United States* v. *Scrivner,* 680 F.2d 1099, 1100 (5th Cir. 1982) (''[I]ntent may be inferred from words, acts, and other objective facts.''); *United States* v. *Arnold,* 543 F.2d 1224, 1225 (8th Cir. 1976) (''The requisite intent may be inferred from the acts of the defendant.''); *United States* v. *Spinelli,* 443 F.2d 2, 3 (9th Cir. 1971) (''It is clear that the Government need not adduce direct proof of intent. It may be inferred from the defendant's acts.''); *United States* v. *Ledbetter,* 432 F.2d 1223, 1225 (10th Cir. 1970) (''Intent may be inferred from the conduct of the

Continued

numerical threshold number of sales, the rule's EIB presumptions are all activities, based on case law and ATF's experience, that are indicative of the intent to earn a profit through the repetitive purchase and resale of firearms. With respect to the suggestion that there should be a five-firearm sale or transfer threshold for determining whether a person is engaged in the business, the Department's approach will allow it to more effectively enforce the licensing requirement for individuals who are engaged in the business. For example, even before the BSCA broadened the engaged in the business definition, the Department successfully prosecuted, and courts routinely upheld, multiple criminal cases in which the evidence presented would not have met a five-sale threshold, but other evidence made clear the individual was engaged in the business without a license.[186]

The terms ''sale'' and ''resale'' were used interchangeably in the NPRM because any sale after the firearm was produced and previously sold is a ''resale.'' When speaking of a firearm resale in the context of dealing, it is generally understood that it includes any sale of a firearm, including a stolen firearm, any time after any prior sale has occurred. Nonetheless, the Department agrees with the commenters that this was not explicitly stated in the NPRM, that using the term ''resale'' more consistently would be clearer, and that the intent element of the statute contemplates potential repetitive ''resales'' of firearms to be engaged in the business. For these reasons, the Department has revised the regulatory text to change ''sale'' to ''resale'' in various presumptions where that prefix (''re'') was not already used, and defined ''resale'' to mean ''selling a firearm, including a stolen firearm, after it was previously sold by the original manufacturer or any other person.'' This change aligns the regulatory text with the intent element in 18 U.S.C. 921(a)(21)(C), and makes clear that the term ''resale'' refers to any wholesale or retail sale of a firearm any time after it was previously sold by anyone.

In response to comments, the Department has also incorporated, as examples of rebuttal evidence: bona fide gifts, occasional sales to enhance a personal collection, occasional sales to a licensee or to a family member for lawful purposes, liquidation of all or part of a personal collection, and liquidation of firearms that are inherited, or liquidation conducted pursuant to a court order. *See* § 478.13(e), (f). The Department has also added language explicitly stating that, similar to the way the presumptions operate, these are not the only types of evidence that could be presented to rebut a claim of being engaged in the business. *See* § 478.13(g). Additionally, while the term ''occasional'' is not defined in the regulatory text, the Department agrees that the plain and ordinary meaning of that term means ''of irregular occurrence; happening now and then; infrequent.'' [187] The Department also agrees that regular or routine sales, exchanges, or purchases of firearms (even on a part-time basis) for the enhancement of a personal collection or for a hobby would not fall within the definition of ''occasional.''

The Department disagrees with the suggestion to instead define how a citizen may not be considered to be engaged in the business. Because of the myriad circumstances under which a person may sell a firearm, it would be difficult, if not impossible, for the Department to outline all the circumstances in which firearms might lawfully be sold without a license. However, the Department has set forth in the final rule a non-exhaustive list of conduct that does not support a presumption and can be used as evidence to rebut any of the narrowly tailored presumptions indicating that a person is engaged in the business of dealing in firearms. *See* § 478.13(e), (f).

Finally, the Department disagrees with the recommendation to change the rebuttable presumptions to permissive inferences in civil and administrative proceedings to alleviate concerns by occasional sellers of personal collection firearms. The Department believes that the use of rebuttable presumptions in civil or administrative proceedings will be much more effective at achieving compliance with the GCA, as amended by the BSCA, than voluntary permissive inferences or the existing factor-based approach to determining whether a person is engaged in the business. ATF's 2016 guidance, for example, outlined the general factors and some examples of being engaged in the business, but compliance with that guidance document was voluntary and it was not published in the **Federal Register** for broader distribution and attention by the public.[188] As such, it resulted in only a brief increase in the number of persons engaged in the business becoming licensed dealers (around 567).[189] The rule's approach is consistent with Congress's purposes in enacting the BSCA, which included, among other things, addressing significant non-compliance in the firearms market with the engaged in the business licensing requirements. *See* Section II.D of this preamble. Using rebuttable presumptions in this context is also consistent with the use of rebuttable presumptions in the GCA and other ATF regulations. Indeed, the GCA and implementing regulations already incorporate rebuttable presumptions in various other firearms-related contexts.[190]

4. Definition of Engaged in the Business as Applied to Auctioneers

Comments Received

Some commenters asserted that the Department should reconsider or make clearer the definition of ''engaged in the business'' as a dealer in firearms as applied to auctioneers. At least one commenter disagreed with conditioning an auctioneer's need for a license on whether that auctioneer takes possession of the firearm prior to the auction. The commenter stated that an auctioneer may take a deceased person's firearms into possession prior to the auction for purposes of safety and security and indicated that this kind of action does not make one a dealer. Another commenter stated the Department's attempt to distinguish between estate-type versus consignment-type auctions generates confusion because it seems that, under the rule, whether an auctioneer must be licensed depends on who owns the firearm (*i.e.,* an individual other than the auctioneer, versus an estate). In particular, the commenter stated that ATF's statement that an auctioneer would not need a license if acting as an agent of ''the owner or executor of an estate who is liquidating a personal collection,'' is inconsistent with other statements in the NPRM, which suggest that the exemption would apply only to estate sales (*e.g.,* ''[t]he firearms are within the estate's control and the sales made on the estate's behalf''). The commenter stated that it is the method or sale (consignment versus true

defendant and from circumstantial evidence which furnishes a basis for a reasonable inference.'').

[186] *See, e.g., Orum,* 106 F. App'x 972 (sold three guns on two occasions and testimony that defendant frequented flea markets and gun shows where he displayed and sold firearms); *United States* v. *Shah,* 80 F. App'x 31, 32 (9th Cir. 2003) (evidence of one sale and defendant's ''disposition as a person 'ready and able to procure' additional weapons''); *see also Hosford,* 82 F. Supp. 3d 660 (five transactions).

[190] *See* footnote 65, *supra.*

auction) that determines if the auctioneer exemption applies, not the origin of the firearm (estate versus personal collection). Separately, at least one commenter believed that, because auctioneers are exempt from the requirement to have a license under the rule, a family estate, or the heirs, would have difficulty selling their collection through an auction house in the future.

One organization, though not in support of the rule overall, recognized this portion as the Department's attempt to establish by regulation ATF's longstanding guidance for auctioneers. The commenter suggested that the Department further clarify how ''engaged in the business'' applies in various auction contexts. For instance, the commenter said it is not clear whether auction companies, which are commonly engaged by nonprofit organizations, would need to be licensed when assisting nonprofit organizations with their auctions. The commenter questioned whether an auction company that does not take possession of the firearms prior to the auction, or consign the firearms for sale, would be exempt from licensing requirements even though the firearms are not part of the nonprofit organization's ''personal collection'' as defined by the proposed rule. Separately, the same commenter asked whether nonprofit organizations that conduct auctions of donated firearms would need to obtain a license or whether their use of an FFL to facilitate the auction is sufficient. If the nonprofit itself must be an FFL, the commenter asked if it could coordinate with other FFLs out of State to facilitate auctions outside of the State where the nonprofit organization's business premises is located.

At least one commenter that supported the proposed rule overall urged the Department to provide further guidance to auctioneers that, to the extent an auctioneer operates in States that require background checks on private transactions, estate-type auctioneers risk aiding and abetting illegal transactions if they knowingly facilitate sales of guns without background checks. Further, the commenter, while recognizing the Department did not set any numerical thresholds to determine when a person is a dealer in firearms, suggested that it would be appropriate in this context to provide numerical thresholds because estate-type auctions represent a source of guns that can be purchased without background checks. They recommended that the Department clarify that if an estate-type auctioneer facilitates an individual auction involving more than five guns or facilitates auctions involving more than 25 guns in a one-year period, then they must be a licensed as an FFL or risk aiding and abetting liability under Federal law.

Department Response

This rule merely establishes by regulation ATF's longstanding understanding of the GCA's requirements with respect to auctioneers and does not affect the ability of persons to sell firearms through auction houses. Estate-type auctioneers are not required to be licensed because they are not devoting time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms. They are instead providing services as an agent of the owner on commission. These auctioneers are not in the business of dealing in firearms and do not themselves purchase the firearms. The auctioned firearms are within the estate's control and the sales are made on the estate's behalf. The rule uses the term ''estate-type'' auction to indicate that the firearms need not be part of a decedent's estate, but may instead have been acquired through certain other non-commercial means, such as a non-profit organization receiving a donation of firearms that the non-profit then auctions through an estate-type auctioneer who does not take ownership of the firearms or accept the firearms for resale on consignment. *See* § 478.13(a).

The Department agrees with the comment that there may be personal firearms that may be auctioned at an estate-type auction that do not fall within the rule's definition of ''personal collection,'' such as firearms that were acquired by an individual for self-defense. For this reason, the regulatory text in 27 CFR 478.13(a) has been revised to delete the reference to a ''personal collection'' when discussing how the regulation applies to auctioneers. The Department also agrees with commenters' concerns about limiting the auctioneer exception where the estate-type auctioneer takes possession of firearms prior to the auction for reasons other than consignment (*e.g.,* temporary safe storage and return to the estate). The main reason consignment-type auctions require a dealer's license is because the auctioneer has been paid to take firearms into a business inventory for resale at auction in lots, or over a period of time, *i.e.,* consigned for sale. In a ''consignment-type'' auction, the auctioneer generally inventories, evaluates, and tags the firearms for identification, and has the legal authority to determine how and when they are to be sold. Consequently, the auctioneer dealer exception has been revised in § 478.13(a) so that it does not apply where the firearms for sale have been taken into possession on consignment prior to the auction.

The Department agrees that auctioneers must comply with Federal, State, and local laws. The Department therefore agrees with the comment that estate-type auctioneers must abide by State and local laws that require background checks when the auctioneer is assisting private parties in liquidating inventories of firearms on their behalf. However, no changes are being made as a result of that comment because the requirements imposed by State and local jurisdictions to run background checks do not determine whether a person is ''engaged in the business'' as a dealer under Federal law. Further, with regard to those auctioneers who obtain a license, the regulations already provide that a license ''confers no right or privilege to conduct business or activity contrary to State or other law.'' *See* 27 CFR 478.58.

Finally, as stated previously, the Department disagrees that there should be a minimum threshold number of firearms to be considered a dealer, whether through an estate-type auction or otherwise. Bona fide estate-type auctioneers are assisting persons in liquidating firearms inventories, not firearms that were acquired for the purpose of resale, and thus would not incur aiding and abetting liability.

5. General Concerns on Presumptions That a Person is Engaged in the Business

a. Overbreadth and Lack of Foundation

Comments Received

A general sentiment from commenters opposed to the proposed presumptions is that they are overbroad, would capture too many permissible sales by collectors, and are not valid indicators of unlawful activity or activity showing the person is an unlicensed gun dealer. The commenters opined that the presumptions include common, innocent behavior with firearms that firearm owners engage in every day, including the presumption, for example, that arises from evidence of selling firearms within 30 days after a purchase or selling firearms that are new or like-new, have original packaging, or are of the same or similar type of firearms. For example, one commenter stated that the presumptions would apply in a typical situation where a person has improved their financial situation and upgrades

multiple of their firearms from entry-level, inexpensive items to more expensive items that have more features or better reputation for reliability. This commenter argued that such a person's conduct in upgrading their collection would likely touch upon every single presumption. Similarly, another commenter explained how a person's conduct could fall within multiple presumptions without that person necessarily being engaged in the business. For example, the commenter said, a person purchases a 9mm firearm to carry concealed, but then does not like the recoil impulse and subsequently sells it in like-new condition within 30 days and with the original box. Subsequently, the commenter continued, the person purchases a second firearm and also does not like how it operates for concealed carry. If the person sells that second firearm in like-new condition within 30 days with the original box and it is a similar kind to the previously purchased firearm, then, the commenter concluded, that person would have multiple criteria factored against them as engaging in the business even though the person is not in fact engaging in the business of dealing in firearms.

Further, commenters stated the rule contradicts the scheme established by Congress and the new presumptions would apply to collectors in every instance despite the statutory language to specifically exempt from the licensing requirement ''occasional'' gun sales and gun sales from a ''personal collection.'' The presumptions, they stated, fail to recognize this exception. Some congressional commenters opposed to the rule stated: ''We merely struck the 'livelihood' language from the statute. This was done to prevent someone who should register as a firearms dealer from evading licensing requirements because he or she had another job that supported his livelihood. In other words, we wanted to clarify that if a person has a job and also operates a firearms business, he or she must still register as a firearms dealer. This was the law in many different jurisdictions across the country and consistent with the ATF's guidance. . . . In making this incremental clarification, we left in place all of the other language in the statute that needs to be considered by the ATF before deeming someone a firearms dealer. . . . Nothing in the presumptions take into account whether the individual devotes time, attention, and labor to dealing firearms. Similarly, the presumptions do not factor in whether the person repeatedly buys and sells firearms as a regular course of trade or business'' (footnote omitted).

Additionally, some commenters stated the proposed rule did not provide sufficient foundation or actual evidence for how any of the presumptions are linked to or give rise to criminal activity. Even though the Department cited observations and criminal and civil actions, one commenter stated these conclusions are ''based on a censored sample'' and are unreliable because the rule overstates the probative value of the behavior. The commenter argued that ATF would need to survey the likelihood that the circumstances giving rise to the presumption are present within the full class of persons who purchase firearms.

Department Response

The Department disagrees that the presumptions in the rule are overbroad and would capture innocent persons who only occasionally sell firearms from their personal collection without a license. The rebuttable presumptions are narrowly tailored to specific conduct that the Department has found through its investigative and regulatory enforcement experience, as well as numerous post-FOPA court and administrative decisions, to require a license. And crucially, the presumptions are rebuttable, so in the event a civil or administrative proceeding is brought, and a presumption is raised, it can be rebutted with reliable evidence to the contrary. Rebuttable presumptions are just that; they are not established fact, as some of the commenters suggest. And as stated previously, the presumptions shift only the burden of production; they do not change the burden of persuasion. Moreover, consistent with the statutory exclusions, the final rule expressly provides that a person will not be presumed to be engaged in the business of dealing in firearms when reliable evidence shows that the person is only reselling or otherwise transferring firearms: (a) as bona fide gifts; (b) occasionally to obtain more valuable, desirable, or useful firearms for the person's personal collection; (c) occasionally to a licensee or to a family member for lawful purposes; (d) to liquidate (without restocking) all or part of the person's personal collection; or (e) to liquidate firearms that are inherited, or pursuant to a court order. *See* § 478.13(e). Evidence of these situations may be used to rebut any presumption in the rule, and the Department has clarified that this is not an exhaustive list. *See* § 478.13(f), (g). The Department is therefore providing objectively reasonable standards for when a person is presumed to be ''engaged in the business'' to strike an appropriate balance that captures persons who should be licensed because they are engaged in the business of dealing in firearms, without limiting or regulating occasional sales by personal collectors and hobbyists.

The Department disagrees that the proposed rule did not provide sufficient foundation or evidence for how the presumptions are linked to or give rise to criminal activity. First, the presumptions in the rule are based on decades of pre-BSCA criminal case law that continues to be applicable, and the proposed rule cites numerous ATF criminal cases brought against persons who engaged in the business without a license based on evidence cited in each presumption. The presumptions are also based on ATF's significant regulatory enforcement experience,[191] including tens of thousands of compliance inspections of licensed FFLs in the last decade. ATF also reviewed summary information on criminal cases from Fiscal Year 2018 to Fiscal Year 2023 that it investigated, or is currently investigating, involving violations of 18 U.S.C. 922(a)(1)(A) and 923(a), to assess the extent to which the presumptions were consistent with conduct engaged in by persons who are unlawfully dealing in firearms without a license. Hundreds of cases described conduct that would fall under one or more of the EIB or PEP presumptions. Each of the presumptions was supported by the conduct described in these cases, except one. ATF did not find a case that included conduct that would fall under the PEP presumption on business insurance. The Department has therefore removed that presumption in this final rule. *See* § 478.13(d).

The Department disagrees with some commenters that the EIB presumptions do not indicate that a person devotes time, attention, and labor to dealing firearms. Each presumption requires conduct that demonstrates the devotion

[191] To further confirm that the proposed PEP presumptions were grounded in the behaviors of licensees who are engaged in the business or applicants seeking to become licensed, ATF surveyed Industry Operations Investigators (''IOIs'') on their observations of active licensees and applicants during compliance and qualification inspections, respectively, regarding conduct that is described under the PEP presumptions. All PEP conduct had been observed by IOIs based on their experience inspecting various sizes and types of firearms businesses or applicants seeking to become licensed, except for the eighth PEP presumption (business insurance). For the eighth PEP presumption, IOIs indicated that, based on their experience of interacting with existing FFLs and FFL applicants who operate out of a residence, these types of businesses did not have or plan to have a business insurance policy that covered firearms inventory.

of time, attention, and labor to dealing in firearms through specific purchase and sale activities. For example, a person who purchases and resells firearms, and then offers to purchase more firearms for resale to the same person, has devoted time, attention, and labor to dealing in firearms as a regular course of business. The seller has expended time, effort, and money to locate and purchase firearms and locate interested customers, then offered to buy and sell more firearms to customers. The statutory definition of ''engaged in the business'' does not require a seller to have repeatedly purchased and resold firearms; rather, it is the person's intent to predominantly earn a profit through repetitive purchases and resales that must be proven. Each EIB presumption involves activities that tend to show this predominant profitmaking intent.

b. Enforcement of Presumptions

Comments Received

Several commenters stated that the proposed rule did not make clear to whom it would apply or how ATF or other law enforcement entities should consider the presumptions or criteria in an enforcement context. Commenters stated the rule needs to make clear what sales relating to personal collections or hobby are allowed without a license, so the public knows ahead of time if what they are doing requires a license. One commenter stated that there are no safe harbors in the rule that could encourage lawful and responsible behavior. The commenter suggested that it would be simpler to include a presumption that ''[a]ny seller of a firearm who first transfers that firearm to a licensee should be presumed not to be a dealer in firearms regardless of all other indicia.'' According to the commenter, transferring a firearm to a licensee first shows that the seller cares about creating a record of the sale more than simply maximizing profit, and so such sellers should not be considered dealers. Further, this suggested presumption would encourage the conduct of private transactions through FFLs and accomplish the statutory objectives and the Department's and ATF's policy goals. However, the commenter added that this suggested presumption should not be used to imply that a sale that does not occur through an FFL is automatically an unlawful transaction. Another commenter similarly suggested that ATF's chief concern with creating these presumptions is to keep people from avoiding background checks. As a result, they said, ATF should exclude from the presumptions all sales in which background checks are conducted, including sales to a current FFL, private sales facilitated through a current FFL, and sales of NFA firearms.[192]

Another commenter, who supported the rule, suggested that absent guidance from the Department about how the ''criteria'' would be weighted, an atmosphere of ambiguity and uncertainty exists for persons who sell or transfer firearms at gun shows, online, or through other means without an FFL, as well as for law enforcement and regulatory agencies enforcing the rule. The commenter suggested adding language to state that while no single factor is determinative, the Department will assign different weights to each factor depending on the context and circumstances of each case. For example, the commenter suggested that if a person rented a table at a gun show, the Department would consider the person to be engaged in the business if the person has displayed signs or banners with a business name or logo, offered warranties or guarantees for the firearms sold, or transferred firearms to residents of another State. Likewise, if the transaction occurs online, the commenter suggested the Department make clear in the rule that it will consider if the person created a website with a domain name that indicates a business activity, posted advertisements on online platforms that cater to firearm buyers and sellers, accepted payments through online services that charge fees for transactions, and whether the person has shipped firearms to persons who are residents of another State through online sales or transfers.

Another suggestion was that ''ATF should consider clarifying that the initial burden of producing evidence to establish an 'engaged in the business' presumption in a civil or administrative proceeding falls on the government.'' They further suggested the rule should also state that, after a determination that the initial evidentiary burden for a presumption has been met, the burden of producing reliable rebuttal evidence shifts to the other party, and if the other party fails to produce sufficient reliable rebuttal evidence, the presumption will stand. They also suggested that the final rule should clarify whether the examples of conduct in paragraph (c)(4) (now § 478.13(e) and (f)) of the NPRM's definition of ''engaged in the business''—that is not presumed to be ''engaged in the business''—are intended to serve as rebuttable presumptions or as rebuttal evidence. ''It appears,'' the commenter said, ''from their placement outside of (c)(3) that the (c)(4) examples are not designed to be rebuttable presumptions, but the final rule would benefit from clarifying how those examples are to be raised and applied in proceedings.''

Department Response

The Department disagrees that the rule does not make clear to whom it would apply. The rule implements the provisions of the BSCA that amended the definition of ''engaged in the business'' in the GCA as it applies to wholesale and retail dealers of firearms. Thus, the rule is applicable to any person who intends to ''engage in the business'' of dealing in firearms at wholesale or retail, as the rule further defines that term. Such persons must become licensed and abide by the applicable requirements imposed on licensees under the GCA and 27 CFR part 478. And the rule further explains that the rebuttable presumptions are applicable in civil and administrative proceedings (*e.g.,* license issuance and asset forfeiture), not in criminal proceedings, though courts in criminal cases may choose to use them as permissive inferences. *See* § 478.13(c), (h). The Department will exercise its discretion to utilize the presumptions set forth in the rule in civil and administrative cases and may recommend their use as permissive inferences in criminal proceedings, when appropriate.

The Department disagrees that the rule does not make clear what sales relating to personal collections or hobbies are allowed without a license. The proposed rule explicitly recognized the GCA's ''safe harbor'' provision that a person is not engaged in the business if the person makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby. 88 FR 61994, 62001–02. It also stated that a person would not be presumed to be engaged in the business if the person transfers firearms only as bona fide gifts. *Id.* Transfers of firearms for these reasons do not support a presumption that a person is ''engag[ing] in the business,'' and reliable evidence of these purposes may also be used to rebut any presumption and show that a person is not engaged in the business under the statute. *See* § 478.13(e), (f). The final rule also specifies that a person shall not be presumed to be engaging in the business when reliable evidence shows that the person is transferring firearms only to liquidate all or part of a personal collection of firearms. *See id.* In addition, the term ''personal collection'' is defined consistently with dictionary definitions to include firearms acquired

[192] *See* footnote 78.

''for a hobby,'' and explains the circumstances under which firearms transferred to a personal collection by a former licensee prior to license termination may be sold or otherwise disposed.

Nonetheless, to further allay the concerns of commenters who sought further clarification of the ''safe harbors,'' the Department is adding to this rule a list of conduct that does not support a presumption, as previously stated. *See* § 478.13(e). Reliable evidence of such conduct may also be used to rebut the presumptions. *See* § 478.13(f). The Department has also stated in the rule that the list of rebuttal evidence is not exhaustive. *See* § 478.13(g). Additionally, while the Department disagrees with the commenter that the regulatory text in the final rule needs to explain how the rebuttable presumptions shift the burden of production, the Department agrees with the commenter as to how they are to be applied. As an initial matter, a person will not be presumed to be engaged in the business of dealing in firearms when reliable evidence shows that the person only sells or transfers firearms for one of the reasons listed in § 478.13(e). Determining whether a presumption applies is a fact-specific assessment, as is determining whether a person is engaging in conduct that does not support a presumption, such as buying or selling firearms to enhance or liquidate a personal collection. For example, unlicensed individuals selling firearms at a gun show or using an online platform cannot merely display a sign or assert in their advertisement that the firearms offered for sale are from a ''personal collection'' and preclude application of a presumption. Instead, whether a presumption would apply requires an assessment of the totality of the circumstances, including an evaluation of the reliability of any such assertion regarding a ''personal collection.''

Once a proceeding is initiated, the burden of persuasion never shifts from the Government or plaintiff. If evidence sufficient to support a presumption is produced in a civil or administrative proceeding, the responding person has the opportunity to produce reliable rebuttal evidence to refute that presumption. If the responding person produces such reliable evidence, additional evidence may be offered by the Government or plaintiff to further establish that the person has engaged in the business of dealing in firearms, or had the intent to predominantly earn a profit through the repetitive purchase and resale of firearms, depending on which set of presumptions is applied. If the responding person fails to produce evidence to rebut a presumption, however, the finder of fact would presume that the person was ''engaged in the business'' of dealing in firearms, or had a predominant intent to earn a profit from the repetitive sale or disposition of firearms, as the case may be.

The Department agrees that a person should be able to rebut a presumption that they are engaged in the business of dealing in firearms requiring a license if the sales are occasionally only to an FFL or to a family member for lawful purposes. A person who only occasionally sells a firearm to a licensee is not likely to have a predominant intent to earn a profit because a licensee typically will offer less than a non-licensee for the firearm given the licensee's intent to earn a profit through resale.[193] The same reasoning applies to family members because the seller is less likely to have a predominant intent to earn a profit due to their pre-existing close personal relationship (*i.e.,* a less than arms-length transaction). For this reason, the occasional sale of firearms to a licensee or to a family member for lawful purposes has been added to the non-exhaustive list of examples of evidence that may rebut any presumption. § 478.13(e)(3), (f). However, the Department is not excluding from the presumptions a person who engages in private sales that are facilitated by a licensee. Even though such sales are certainly allowed,[194] a private seller likely intends to predominantly earn a profit from those arms-length sales even if the licensee requires a fee for the service of running a background check.

The Department disagrees with the comment that the rebuttable presumptions in the rule should be considered only as criteria that should be weighted and not as rebuttable presumptions. Of course, in the final determination of whether someone is ''engaged in the business,'' all the evidence, for and against, will be weighed by the fact finder. But that does not preclude the use of reasonable and supported rebuttable presumptions as part of that process. In that vein, to best clarify who is presumptively required to be licensed as a dealer, the rule identifies specific conduct that will be presumed to be ''engaging in the business'' with the intent to ''predominantly earn a profit.'' The presumptions are not factors; nor are they weighted according to the various circumstances described in each presumption because any one of them is sufficient to raise the presumption, and any may be rebutted by reliable evidence to the contrary.

c. Exemption From Presumptions

Comments Received

At least one commenter in support of the proposed rule raised concerns about the exception from the presumptions where a person ''would not be presumed to be engaged in the business requiring a license as a dealer when the person transfers firearms only as bona fide gifts or occasionally sells firearms only to obtain more valuable, desirable, or useful firearms for their personal collection or hobby, unless their conduct also demonstrates a predominant intent to earn a profit.'' [195] The commenter stated that, although a bona fide gift should suffice to rebut a presumption, the exclusion of these types of situations ''risks creating a significant loophole whereby firearms traffickers could shift the burden of proof simply by claiming that any suspicious transaction was a gift.'' The commenters cited *United States* v. *Gearheart,* No. 23–cr–00013, 2023 WL 5925541, at *2 n.3 (W.D. Va. Sept. 12, 2023) as an example of when a straw purchaser initially told investigators that she bought the gun as a gift.

By contrast, another commenter not in support of the rule stated that ''Congress affirmatively exempted from licensure *all* sales to expand or liquidate a private collection and occasional transactions—even with some profit motive—to

[193] *See* Enlisted Auctions, *How Do I Sell My Firearms?, https://www.enlistedauctions.com/resources/how-do-i-sell-my-firearms* (last visited Mar. 6, 2024) (''You can take your firearm to a local gun shop. Typically gun shops will buy your firearm from you at a lower price and then try to resell the firearm at a profit. Pros to this method are that you can take the firearm to the store, drop it off, receive your payment and you are done. Downside is that you do not typically receive market value for your firearm. Think of it as trading in a vehicle. When you trade in your car at a dealership, the dealer never pays you what the car is worth on the open market.''); Dunlap Gun Buyers, *How to Sell a Gun in Maryland: A Comprehensive Guide* (Sept. 8, 2023), *https://www.cashmyguns.com/blog/how-to-sell-a-gun-in-maryland* (''Gun owners can sell their firearm to a local dealer. This is a good way to help ensure gun owners are complying with gun laws in Maryland for firearm sales. However, sellers may be leaving money on the table by selling for much less than the gun's actual market value.'').

[195] 88 FR 62001–02.

enhance a collection or for a hobby. But ATF now seeks to presume the opposite for a wide array of transactions.''

Department Response

The Department disagrees that the bona fide gift exception is a ''loophole'' for multiple reasons. First, transferring a firearm as a bona fide gift to another person is not a ''sale'' because there is no ''exchange'' or payment of money, goods, or services for the firearm. Second, a person who is not otherwise engaged in the business as a dealer and truly intends to give a firearm as a gift does not ordinarily devote time, attention, and labor to firearms dealing as a trade or business or show the predominant intent to earn a profit through the repetitive purchase and resale of firearms. The *Gearhart* case cited by one of the commenters is not a case of dealing in firearms without a license; rather, it is a case where a person aided and abetted a straw purchaser to buy a firearm for himself—the actual buyer—not for resale to others. Third, as in all fact-based proceedings, a party must establish through evidence that a claim of fact is reliable in order to use that fact in their favor. That determination is made by the finder of fact, not the proponent of the argument. Fourth, to the extent that gifts are mutually exchanged between both parties, as the commenter recognizes, the transfer of bona fide gifts is evidence that can be used to rebut any presumption. Once the Government proves an exchange, or offer to exchange, firearms for something of value, the responding party may submit evidence to show that the firearms were transferred only as bona fide gifts.

The Department disagrees with the commenter that this rule causes all firearms transactions to be deemed engaged in the business of dealing in firearms, but agrees that the rule should make clear that an occasional sale only to obtain more valuable, desirable, or useful firearms for a personal collection or hobby, or liquidation of all or part of a personal collection, should not be presumed to be engaging in the business. Based on the Department's agreement with this comment, the final rule adds this activity to the list of conduct that does not support a presumption and as evidence that can rebut any presumption should a proceeding be initiated. *See* § 478.13(e)(2) and (4), (f). However, as explained previously, the term ''liquidation'' is inconsistent with a person acquiring additional firearms for their inventory (*i.e.,* ''restocking''), and that has been made clear in a parenthetical in the regulatory text. *See* § 478.13(e)(4).

d. Use of Presumptions in Particular Proceedings

Comments Received

Several commenters expressed concerns about the application of the presumptions in criminal contexts or in administrative or civil contexts. More than one commenter expressed that there was confusion as to whether ATF will use the presumptions (either the engaged in the business presumptions or the intent to predominantly earn a profit presumptions) in criminal proceedings. One of the commenters raised concerns about when and how ATF will use the presumptions in administrative or civil proceedings. The commenter stated that much of ATF's administrative jurisdiction is over existing FFLs, which are already engaged in the business and thus not affected by the rule. The commenter then asked whether ATF intends to apply the presumptions to ''FFLs who transfer firearms for unlicensed individuals that ATF believes are 'engaged in the business?' '' They expressed concerns that this would mean holding FFLs responsible for whether their customers are unlawfully engaging in the business ''under the nebulous standards of the proposed rule,'' which would make it too risky for any FFL to ever facilitate a third-party transfer. The commenter suggested that the only other possibility was to use the presumptions in forfeiture actions, but these were substantially restricted as part of FOPA and were not amended as part of the BSCA.

Department Response

The Department acknowledges commenters' confusion about the application of the presumptions to criminal, civil, and administrative proceedings. This final rule makes clear that the rebuttable presumptions are to be used by persons potentially subject to the licensing requirement to consider whether they must obtain a license, as well as in civil and administrative proceedings, but they do not apply to criminal proceedings. Civil and administrative proceedings include, for example, civil asset forfeiture and administrative licensing proceedings.[196] However, as discussed in Section IV.B.9.b of this preamble, this final rule indicates that a court in a criminal case, in its discretion may, for example, elect to use the presumptions as permissive inferences in jury instructions.[197]

Criminal investigations, prior to formal charging, are covered by separate policies, rules, and legal limitations, and are not within the scope of this rule. The final rule does not suggest the presumptions be used in criminal proceedings to shift the Government's burden of proof to the defendant. In criminal proceedings, the Due Process Clause prohibits the prosecution from using evidentiary presumptions in a jury charge that have the effect of relieving the prosecution of its burden of proving every element of an offense beyond a reasonable doubt.[198] This rule does no such thing.

Regarding civil or administrative proceedings involving existing licensees, the Department disagrees that the standards in the rule are ''nebulous.'' The presumptions identify specific conduct that is presumed to be engaging in the business, and the presumptions are to be applied in all civil and administrative proceedings where there is evidence of such specific conduct. Indeed, licensees have long been prohibited by the GCA from willfully assisting persons they know are engaged in the business of dealing in firearms without a license. *See* 18 U.S.C. 2; 922(a)(1)(A). Moreover, the BSCA's amendment at 18 U.S.C. 922(d)(10) now prohibits licensees or any other person from selling or otherwise disposing of a firearm to a person knowing or having reasonable cause to believe that such person intends to sell or otherwise dispose of the firearm in furtherance of a Federal or State felony, including 18 U.S.C. 922(a)(1). These violations of the GCA may be brought against a licensee, or the licensee's firearms, in a civil forfeiture or administrative licensing proceeding. For example, if a licensed dealer sold firearms to a known member of a violent gang who the dealer knew was repetitively selling the firearms within 30 days from purchase to other gang members, the dealer's license could be revoked under 18 U.S.C. 923(d)(1)(C) for willfully aiding and abetting a violation of section 922(a)(1)(A), and potentially for willfully violating section 922(d)(10). Under these circumstances, the gang member would be presumed to be engaged in the business, and evidence of the gang member's repetitive sales could be put forward in the administrative action to revoke the dealer's license.

However, for the Government to take administrative action on that basis against an existing licensee, or a license applicant, it would still need to prove the person committed the conduct

[196] *See* footnote 85, *supra.*

[197] *See* footnote 66, *supra.*

[198] *See Francis,* 471 U.S. at 313.

willfully. *See* 18 U.S.C. 922(a)(1)(A), 923(d)(1)(C), 923(e). Even if a presumption applied in a given case against a licensee, the Government would still have to prove that a licensee facilitating a private sale knew of an unlicensed dealer's purchase and resale activities without a license, and either purposefully disregarded the unlicensed dealer's lack of a license or was plainly indifferent to it. Thus, a licensed dealer who inadvertently facilitates occasional private sales for an unlicensed person whom the licensee does not know is engaged in the business, and who is not plainly indifferent to the seller's need for a license, would not be liable for the private seller's misconduct.

6. EIB Presumption—Willingness and Ability To Purchase and Sell More Firearms

Comments Received

Generally, commenters opposing this EIB presumption stated it was too broad and provided several examples of typical conduct that would be captured under the presumption requiring a person to obtain an FFL. Gun collectors' associations stated that most people who collect firearms or engage in the sale of firearms for a hobby are willing to buy or willing to sell. A commenter provided additional examples in which the commenter stated that ATF could presume a person is unlawfully engaged in the business, such as a person downsizing a personal collection by a single firearm while expressing a desire to continue downsizing, selling one firearm while offering to buy another, or trading one firearm for another in someone else's collection. Likewise, some commenters believed that any gun owner who discusses sales of firearms with friends or relatives or who makes repetitive offers to sell a firearm in order to secure a reasonable price will need to be licensed because of the first presumption.

Specifically, some commenters argued that this presumption would capture and penalize sellers who make statements as a part of normal interactions, such as ''I need money to settle my divorce. That's why I'm selling this Colt 1911. If you like this one, I also have another with a consecutive serial number. Yeah, I'm losing money on them, but I need the cash.'' This type of statement or innocuous statements such as, ''[M]y wife makes me sell a gun to buy a new one, so I'm always buying and selling guns'' are being wrongfully equated to criminal actors who may say to an undercover officer, ''I can get you whatever you want'' or that he can ''get plenty more of these guns'' and ''in a hurry'' for the right amount of money. Commenters indicated that a huge difference between these two scenarios is the totality of the circumstances. The rule, they argued, is incorrectly crafted to avoid the need for any totality of the circumstances analysis, so that only one firearm, one presumptive circumstance, or ''possibly one overriding circumstance'' is necessary, coupled with the subjective assessment of an agent.

Another commenter suggested that ATF could amend the presumption to correct the issue. ''Presently,'' the commenter said, ''the language is too broad to function as a rebuttable presumption because its plain language meaning places it in conflict with the presumption that an occasional seller is *not* 'engaged in the business.' If ATF amended this presumption to include a frequency element, it would rectify this issue.'' (emphasis added by commenter). The commenter suggested one option could be, ''[a] person will be presumed to be engaged in the business of dealing in firearms when the person, on a recurring basis, sells or offers for sale firearms, and also represents to potential buyers a willingness and ability to purchase and sell additional firearms, or otherwise demonstrates the person's willingness and ability to act as a dealer in firearms on a recurring basis,'' and added that this alternative would add the necessary frequency element and also correct a disjunctive ''or'' included in the original to make the presumption clearer.

Department Response

The Department disagrees with the comments that the first EIB presumption is too broad, or that collectors or hobbyists will be unable to maintain or downsize their personal collections without a license under the first EIB presumption in the rule. A person who makes repetitive offers to sell firearms to downsize or liquidate a personal collection does not fall within the presumption, which requires not only that the person sell or offer for sale firearms, but also demonstrate a willingness and ability to purchase and resell additional firearms that were not already part of their personal collection. This conduct is sometimes referred to as ''restocking.'' [199] Nonetheless, to make this point clear, the following parenthetical has been added in the first EIB presumption: ''(*i.e.,* to be a source of additional firearms for resale).'' § 478.13(c)(1). This presumption, like the others, may be rebutted with reliable evidence to the contrary in any proceeding.

The Department disagrees that the first presumption is too broad to function as a presumption without a time limitation because it conflicts with the statutory exception for occasional sales to enhance a personal collection. Persons who resell (or offer for resale) firearms and hold themselves out to potential buyers or otherwise demonstrate a willingness and ability to purchase and resell additional firearms for resale are engaged in the business, according to well-established case law. For example, in *Carter,* 801 F.2d at 82, the Second Circuit found there was sufficient evidence that the defendant engaged in the business in violation of 18 U.S.C. 922(a)(1) even though he made only two sales four months apart. The Court explained that, ''[a]lthough the terms 'engage in the business of' and 'dealing in' imply that ordinarily there must be proof of more than an isolated transaction in order to establish a violation of this section . . . [the] defendant's conduct was within the intended scope of the statute'' because ''the statute reaches those who hold themselves out as a source of firearms.'' [200] There is no need for a time limitation because such persons are holding themselves out as a source of additional firearms for resale, thereby demonstrating a present intent to engage in repetitive purchases and resales for profit. This presumption merely shifts the burden of production to the responding person to show that those resales occurred only occasionally to enhance a personal collection, liquidate inherited firearms, or were otherwise not sold to engage in the business as a dealer.

7. EIB Presumption—Spending More Money on Firearms Than Reported Income

Comments Received

Numerous commenters stated that this presumption is broad and unclear. A couple of commenters questioned the meaning of ''applicable period of time'' in this presumption, with one commenter claiming that the presumption would ''assume the majority of purchasers of high end collectible firearms [are] 'engaged in the business' off of merely the fact [that]

[199] *See Restock,* Cambridge Online Dictionary, *https://dictionary.cambridge.org/us/dictionary/english/restock* (last visited Mar. 7, 2024) (''to replace goods that have been sold or used with a new supply of them''); *Restock,* The Britannica Online Dictionary, *https://www.britannica.com/dictionary/restock* (last visited Mar. 7, 2024) (''to provide a new supply of something to replace what has been used, sold, taken, etc.'').

[200] 801 F.2d at 81, 82 (internal quotation marks omitted); *see also* footnote 68, *supra.*

they purchased a gun more expensive than their income for some period.'' Other commenters also stated there are many ways people might not have reportable gross income. For example, adult children may not have any gross taxable income, so buying and selling even two firearms in a year could trigger the presumption. Similarly, commenters noted that retired collectors with little or no reportable gross income compared to their assets could be at significant risk of being considered dealers without even offering a gun for sale or for spending as little as $200 to advertise the sale of a firearm on *GunBroker.com* or in a similar publication.

Another commenter provided specific examples of how law-abiding gun owners who should not be considered dealers could easily be dealers under this presumption. For instance, a California peace officer, who suffers career-ending injuries and goes through the appropriate process, would be eligible for ongoing disability payments of 50 percent of base pay, none of which is taxable. Under this pattern of facts, the commenter argued, a law-abiding gun owner with such a disability award and no other income could be presumed to be a dealer if they sold only one firearm of any value. The commenter asserted that many military members are in a similar situation where they may receive disability pay that is not taxable. In all these cases, these people might need post-separation income or to buy and sell firearms without ever desiring to be dealers or making a profit on the sales, but they run the risk of being presumed to be dealers based on this second presumption. An additional commenter similarly stated the ''provision that a person who spends more money than their reported gross taxable income on purchasing firearms for resale, has no basis what-so-ever in 'profit.' Profit is based on a sum in excess of all costs. Not gross income. Further, many retired people have a small gross taxable income compared to their assets.''

One commenter claimed that assorted welfare benefits are excluded from gross income and that, to the extent that those benefits ''benefit disproportionately persons based on race or other classification,'' the second presumption is constitutionally suspect. The commenter said that ATF needs to justify the use of gross income in this presumption, which could have a disproportionate impact on persons on the basis of race. Similarly, at least one commenter in support of the proposed rule also suggested that this presumption could potentially create an ''unreliable'' standard, whereby high-income dealers could sell large amounts of firearms without ever being subject to the presumption, while a single sale could be enough to subject a person with low or fixed income to the presumption of unlawful dealing. The commenter advised that for this specific presumption, the Department adopt a numerical threshold of ten gun sales per year, which would make applying this presumption easier for courts and law enforcement while avoiding the inequities of ATF's income-based approach.

Department Response

In proposing this presumption, the Department noted that the likely intention of a person who expends more funds on the purchase of firearms in an ''applicable period of time'' than the total amount of their reported gross income for that period would be to resell the firearms for a profit. As noted by several commenters, however, there are several situations in which individuals with income that is not reportable as gross taxable income—such as those receiving disability or welfare benefits, retired firearm collectors, retirees drawing on Roth IRAs, and young adult children—could expend that non-reportable income at levels in excess of their gross reported income to purchase firearms, yet not intend to resell those firearms for a profit. Application of a gross income presumption to such individuals, commentors argued, would unfairly require them to disprove that they were engaged in the business when they purchased a firearm or firearms. While such circumstances would seem to be unlikely, the Department acknowledges they could occur. The Department similarly acknowledges that commenters' observations regarding the potential disparate effect of a gross income-based presumption on low-income individuals, while also unlikely, may occur. In light of these considerations, the Department has decided not to include a gross income-based presumption in this final rule and has removed it from the final rule.

Although the Department has determined not to include a gross income-based presumption in this final rule, the Department notes that evidence of expenditures for the purchase of firearms in excess of an individual's reported gross income may nevertheless be relevant to the factual assessment as to whether an individual is engaged in the business. As amended by BSCA, the relevant assessment under the GCA is whether a person's intent in engaging in firearms sales is predominantly one of obtaining pecuniary gain; the financial circumstances of an individual engaged in the repetitive acquisition and sale of firearms is therefore relevant to this assessment.

8. EIB Presumption—Certain Types of Repetitive Transactions

a. Repetitively Transacting Firearms Through Straw Persons/Sham Businesses

Comments Received

With regard to this presumption, at least one commenter questioned why it was needed if straw purchasing is already a felony, while another commenter raised no objection to a presumption that relied on other crimes to establish the presumption. A couple of commenters did not agree with the straw purchaser presumption because it could unfairly capture unlicensed persons, as demonstrated in the following scenarios. For example, they said, collectors purchase firearms on the used firearms market, which is the only place to find vintage firearms, but they could trigger this presumption without being aware they had purchased the firearm through a straw seller. Similarly, an unlicensed person who innocently sells two firearms that he no longer finds suitable for self-defense would be presumed to be engaged in the business if the buyers of the firearms turn out to be straw purchasers.

One commenter suggested that ''[t]he final rule should clarify that while firearm sales involving illicit straw middlemen and contraband firearms are indicative of the seller's criminal purposes, these sales are also indicative of an individual's predominant intent to profit when undertaking the sales. The conduct can indicate both at the same time, and, as the NPRM notes, it is the illicit nature of the middleman activity and firearm types that increases the profitability of the sale. While the criminal purposes involved in such sales obviate ATF's need to prove profit under BSCA's definition of 'to predominantly earn a profit,' it does not obviate the fact that such sales are in fact predominantly motivated by profit.''

The same commenter, who generally supported the rule, had a suggestion for improving this presumption. They stated that, ''[w]hile sensible as currently drafted and deserving of inclusion in the final rule, this presumption would benefit by clarifying whether the word 'repetitively' in the Proposed Rule is intended to apply to the phrase 'sells or offers for sale' in the same way that it clearly applies to 'purchases for the purpose of resale.' ''

Department Response

The Department disagrees that the presumption addressing straw purchasers is not needed because straw purchasing is already a felony. While it is true that straw purchasing is a felony,[201] all persons who engage in the business of dealing in firearms are required to be licensed, even if the means by which those firearms are purchased and sold is unlawful. Moreover, the Department agrees with the comment that firearms purchases and sales through straw individuals and sham businesses are indicative of an individual's predominant intent to profit from those repeated illicit sales. In any event, Federal law provides that the Government is not required to prove profit, including an intent to profit, where a person is engaged in regular and repetitive sales for criminal purposes, pursuant to 18 U.S.C. 921(a)(22). Making repetitive resales through straw individuals or sham businesses for the purpose of engaging in the business without a license is a criminal purpose.[202] The statute itself thereby provides notice to such persons that they may be unlawfully engaging in the business of dealing in firearms.

At the same time, collectors who innocently purchase and sell firearms from or through a straw purchaser without knowing the person was acting for someone else, or purposefully disregarding or being plainly indifferent to that fact, would not incur liability for engaging in the business without a license. The Government must prove willful intent in all relevant licensing and forfeiture proceedings. For example, if the Government were to deny an application for a license because of previous unlawful unlicensed dealing, it must show that the applicant ''willfully violated'' the unlicensed dealing prohibition at 18 U.S.C. 922(a)(1). *See* 18 U.S.C. 923(d)(1)(C).

The Department agrees that the term ''repetitively'' applies to purchases of firearms in the same way as it applies to sales of firearms. Consequently, the Department has added the word ''repetitively'' before ''resells or offers for resale'' with respect to the straw/sham business and unlawfully possessed firearms presumptions. *See* § 478.13(c)(2).

b. Repetitively Purchasing Unlawfully Possessed Firearms

Comments Received

As with the presumption related to straw purchasing or sham businesses, at least one commenter said that the presumption is unnecessary because unlawful possession of certain firearms can already be prosecuted as a stand-alone felony. The commenter also questioned the need for this presumption because no legitimate business would deal in illegal firearms, and so buying and selling such firearms would show that a person is not engaged in the business. The commenter further noted that there is no way for a person to know if the firearm they acquire is stolen because ''[t]here is no database where a would-be purchaser, or seller for that matter, may check if a gun is stolen.'' The commenter similarly questioned how an average person would know if a particular firearm was imported illegally, providing the example of a vintage World War I Luger that could have been brought to the United States legally in 1919 as a souvenir, or smuggled into the country illegally in 1970. Another commenter noted that the NPRM did not explain how possession of certain unlawful firearms (stolen guns, those with serial numbers removed, or those imported in violation of law), in addition to its own separate crime, also constitutes unlawful dealing. The commenter added that the GCA draws no connection between being engaged in the business as a dealer in firearms and the unlawful possession of certain types of firearms.

By contrast, at least one commenter in support of the rule suggested that the Department add ''weapons, the possession of which is prohibited under [S]tate or local laws'' to the list of examples in the presumption of firearms that cannot be lawfully purchased or possessed.

Department Response

The Department disagrees that the presumption addressing buying and selling of prohibited firearms is not needed because possession of such firearms is already a crime. As with dealers who transact through straw individuals, which is also a Federal crime, all persons who engage in the business of dealing in firearms are required to be licensed even if the firearms purchased and sold by the business are also unlawful to possess. Contraband firearms are actively sought by criminals and earn higher profits for the illicit dealer because of the additional labor and risk to acquire them. Illicit dealers will often buy and sell stolen firearms and firearms with obliterated serial numbers because those firearms are preferred by both sellers and buyers to avoid background checks and crime gun tracing. However, bona fide collectors who occasionally purchase and resell firearms from their personal collections without knowing the characteristics of the firearms that make them unlawful to possess would not incur liability for engaging in the business without a license. There is always a requirement for the Government to prove a willful intent to violate the law in any proceeding arising under 18 U.S.C. 922(a)(1), 923(a), 923(d)(1)(C), or 923(e). In addition, each presumption may be refuted with reliable evidence that shows the person was not engaging in the business, such as evidence that they were occasionally reselling to obtain more valuable firearms for their personal collection. *See* § 478.13(f). Moreover, under the BSCA, 28 U.S.C. 534(a)(5), once licensed, dealers who may have innocently purchased unlawful firearms will now have access to the FBI's National Crime Information Center database to verify whether firearms offered for sale have been stolen.

The Department agrees with the comment that it should revise this presumption on repetitive purchases and resales to clarify that it includes firearms unlawfully possessed under State and local law. The fact that profit motive is buttressed by the illicit nature of the product applies equally to firearms that are illegal under State law. One of the primary purposes of the GCA was to enable the States effectively to regulate firearms traffic within their borders. *See* Omnibus Crime Control and Safe Streets Act of 1968, Public Law 90–351, sec. 901(a), 82 Stat. 197, 225–26.[203] And, according to the comment from Attorneys General representing 20 States and the District of Columbia, ''many guns are trafficked across [S]tate lines, exploiting the differences in [S]tate regulations.'' Accordingly, the Department has revised the presumption to make it clear that it includes all firearms that cannot lawfully be purchased, received, or possessed ''under Federal, State, local, or Tribal law,'' and cites the Federal prohibitions only as examples. § 478.13(c)(2)(ii).

[201] *See* 18 U.S.C. 932 (prohibiting straw purchasing of firearms); 922(a)(6) (prohibiting false statements about the identity of the actual purchaser when acquiring firearms); 924(a)(1)(A) (prohibiting false statements made in licensee's required records).

[202] *See* 18 U.S.C. 922(d)(10) (making it unlawful for any person to sell or otherwise dispose of a firearm to any person knowing or having reasonable cause to believe that such person, including as a juvenile, intends to sell or otherwise dispose of the firearm or ammunition in furtherance of a felony, including sec. 922(a)(1)).

[203] *See also* S. Rep. No. 90–1097, at 28 (1968); H.R. Rep. No. 90–1577, at 6 (1968); S. Rep. No. 90–1501, at 1 (1968).

9. EIB Presumption—Repetitively Selling Firearms in a Short Period of Time

a. Repetitively Selling Firearms Within 30 Days After Purchase

Comments Received

Numerous commenters disagreed with the presumption that a person is a dealer if they repetitively sell or offer for sale a firearm within 30 days after originally purchasing the firearm. Commenters noted that this presumption shows ATF's lack of understanding of the firearms community. Commenters stated it is common for people, including collectors and firearm enthusiasts, to find themselves in a situation where they buy a firearm and quickly regret the purchase. They disagreed with the Department basing the presumption on the assertion that stores have a 30-day return period. Some commenters stated that stores frequently have strict no-return policies, and other commenters stated that stores frequently offer a ''non-firing inspection period'' within which a customer can return the firearm. This means that if the customer fires the gun after purchase and does not like it, the person has no choice but to sell the firearm as used. Another commenter provided common scenarios where they claimed a person would be presumed to be a dealer under this presumption. In one example, a non-licensee who buys two firearms that do not work or fulfill their intended role and subsequently sells them within 30 days would be presumed to be engaged in the business because of the ''repetitive'' sales of the firearms within 30 days of purchase. The commenter also suggested that a person who inherits a firearm collection from a parent and chooses to sell those firearms by auction or by other private sale within 30 days would be subject to prosecution under this presumption.

At least one commenter in support of the rule recommended that the period for this presumption be extended from 30 days to 90 days to make it more difficult for people to structure transactions in a way that would evade licensing and background check obligations.

Department Response

The Department disagrees with commenters that it is common for persons to repetitively purchase and resell firearms within 30 days without a predominant intent to profit, such as by selling unsuitable or defective firearms. Common sense and typical business practices dictate that it is more consistent with profit-based business activity than collecting to buy and resell inventory in a short period, and as stated previously, that is true especially when the firearm could be returned yet is resold instead. For one thing, multiple firearms would have to be purchased and resold within that 30-day period of time to trigger the presumption. Thus, even assuming a person could not return a firearm, which is not always the case, it is unlikely that there would be more than one unsuitable or defective firearm that would need to be resold during the 30-day period unless the person is engaged in the business.[204] And, as with the other presumptions, this presumption may be refuted by reliable evidence to the contrary to account for less common circumstances raised by the commenters.

With regard to the suggestion to extend the 30-day period to 90 days, the Department disagrees. The Department believes that the turnover presumption for persons actively engaged in the business of dealing in firearms of varying conditions, kinds, and types is more likely to occur within a relatively short period of time from the date of purchase. While the Department understands that some licensees will not accept returns, 30 days is a reasonable time frame within which ATF can distinguish those who are engaged in the business from those who are not because many licensees, including licensed manufacturers, will accept returns of unsuitable or defective firearms within that period of time. *See* footnote 81, *supra.*

Finally, the Department disagrees that a person who inherits a personal collection and liquidates it within 30 days after inheritance falls within the 30-day turnover presumption. The presumption applies only to persons who repetitively resell firearms within 30 days ''after the person purchased the firearms.'' § 478.13(c)(3)(i). A person who inherits a personal collection does not, in the absence of other factors, ''purchase'' or exchange something of value in order to receive the firearms. To further clarify, the final rule also lists, as rebuttal evidence, the specific example of a person who liquidates inherited firearms. *See* § 478.13(e)(5)(i), (f).

b. Repetitively Selling New or Like-New Firearms

Comments Received

Of the several presumptions, some commenters believed that this presumption hurts collectors, who are not licensees, the most because they value the original condition of firearms and, as such, frequently keep firearms in like-new condition and with their original packaging. Again, commenters stated that including this presumption demonstrates the Department's and ATF's lack of understanding of how the community values firearms. One commenter pointed out, as an example, that ''[t]he National Rifle Association has three collector grades for new or like new modern firearms—'New,' 'Perfect,' and 'Excellent'—which represent the three most coveted and sought-after grades,'' and included a link to an article on how to evaluate firearms. Another commenter noted that it is fairly standard for a person to buy a firearm, shoot it a few times, and then sell it in the original box in a private sale because selling the firearm in its original box contributes to the value of the firearm. This, the commenter noted, should not be considered to be engaging in the business. Numerous commenters noted that owners keep firearms in the original boxes not out of criminality, but for collectability. At times, the packaging may be more valuable than the firearm. Therefore, a gun might appear to be ''like new'' possibly months or years after a transaction and one may be presumed to be engaged in the business under this presumption if the person later sells their like-new firearm with the original packaging. Further, ''like new in original packing firearms are . . . the most sought after of collectible firearms,'' said one commenter. At least one commenter stated that this rule will make firearms less safe if individuals discard the original packaging, which often includes warnings and safety information about the firearm, in order

[204] Further support for a 30-day resale presumption comes from ATF's experience observing persons who sell firearms at gun shows. Because of the frequency of gun shows, unlicensed dealers have a readily available marketplace in which to buy, display, and sell numerous firearms for a substantial profit within one month. According to one study, there were 20,691 guns shows in the United States that were promoted and advertised between 2011 and 2019, with 2,299 gun shows per year. *See* David Pérez Esparza et al., *Examining a Dataset on Gun Shows in the US, 2011–2019,* 4 Journal of Illicit Economies and Development 86, 87 (2022), *https://storage.googleapis.com/jnl-lse-j-jied-files/journals/1/articles/146/submission/proof/146-1-1646-1-10-20220928.pdf;* see also Crossroads of the West, *2024 Gun Show Calendar* 1, *https://www.crossroadsgunshows.com/wp-content/uploads/2024/03/Calendar-2024.pdf* (last updated Mar. 20, 2024) (48 gun shows in Arizona, California, Nevada, and Utah in 2024); Gun Show Trader, *Missouri Gun Shows, https://gunshowtrader.com/gunshows/missouri-gun-shows/* (last visited Mar. 26, 2024) (57 gun shows in Missouri and Arkansas in 2024); Gun Show Trader, *Central Indiana Gun Show Calendar, https://gunshowtrader.com/gunshows/central-indiana/* (last visited Mar. 8, 2024) (54 gun shows in Indiana in 2024).

to avoid being considered a dealer under the presumption when they later want to sell the firearm.

Department Response

The Department does not agree that most persons who repetitively purchase and resell firearms that are in a new condition, or like-new condition in their original packaging, lack a predominant intent to earn a profit. That is too broad an assessment. On the contrary, the Department has found—based on its experience as described above—that this type of behavior is an indicator of being engaged in the business with a predominant intent to earn a profit from dealing in firearms in pristine condition.[205] This is even more likely to be the case when the new or like-new firearms are repetitively purchased and resold within a one-year period of time. However, the Department acknowledges commenters' concerns and agrees that true collectors may hold collectible firearms for a long period of time, and that some collectible firearms may appear to be like-new months or years after purchase. Therefore, to reduce the possibility that these ''new'' or ''like-new'' firearms [206] are part of a personal collection, and to account for the higher likelihood that repetitive resales of such firearms in a relatively short time period are made with an intent predominantly to earn a profit, the Department has incorporated a one-year turnover limitation into the presumption. *See* § 478.13(c)(3)(ii)(A). The Department believes that persons acting with a predominant intent to earn a profit are likely to repetitively turn over firearms they purchase for resale within this period. In addition, ATF's experience [207] is that collectors and hobbyists routinely retain their personal collection firearms for at least one year before resale, so the Department believes this is also a reasonable period that would not pose a burden on collectors and hobbyists.[208] As with the other presumptions, this one may be refuted with reliable evidence to the contrary.

c. Repetitively Selling Same or Similar Kind/Type Firearms

Comments Received

Numerous commenters stated that this presumption targets collectors who often focus on collecting a specific type or kind of firearm (*e.g.,* Colt single action revolvers, over-under shotguns, or World War II-era bolt-action rifles) and would thus be more likely to sell firearms by the same manufacturer or of the same type to enhance their collection. ''Virtually every collector or hobbyist focuses their efforts on specific manufactures and types of firearms. They are for the most part devoted to something,'' said one commenter. The commenters claimed that ''a collector liquidating his collection will almost assuredly be presumed to be engaged in the business, especially if he requires more than one incident to sell his collection,'' but the collector ''is doing exactly that which is explicitly allowed by statute.''

Some commenters strongly disagreed with ATF's description that ''[i]ndividuals who are bona fide collectors are less likely to amass firearms of the same kind and type than amass older, unique, or less common firearms'' because this disregards not only the fact that collectors can purchase and sell common firearms that do not hold antique value, but also what is known in the firearms community as ''pattern collecting.'' According to commenters, some people purchase the same type of pistol or rifle over and over again, in every single iteration imaginable, which can vary due to manufacturing date, manufacturing location, minute changes in the firearms, or any number of reasons. In pattern collecting, a person would have multiple firearms for sale that look exactly the same to a lay person. For instance, one commenter asked if a seller would be subject to this presumption if they sold a small collection of highly valuable 19th century Winchester lever action rifles, which would be of the same kind and type. Similarly, another commenter said that large portions of the modern firearms market can be considered ''of similar kind,'' pointing out that a ''Gen 3 Glock in 9mm Luger is of similar kind to a polymer Walther in 9mm or a Palmetto State Armory Dagger in 9mm. The 9mm polymer pistol market has a lot of variety, but [those firearms] can all be considered 'of similar kind.' '' The commenter noted further that individuals might have numerous 9mm polymer pistols in their personal collection because it makes it easier to acquire ammunition, and if magazines or accessories are interchangeable, it makes it easier to have a variety of configurations at hand at a lower cost. The commenter also noted that many modern sporting rifles would also be considered of ''similar kind'' if they can all be chambered in the same caliber. The commenter stated that it is overbroad for the Department to assume that someone selling modern firearms of the same type is more likely to be a dealer in firearms because collecting is not limited to curio and relic firearms.

One commenter expressed concerns about how firearms of the same or similar kind and type could be ascertained and quoted an example from the proposed rule's discussion about the ''same kind and type'' presumption. As quoted by the commenter, the proposed rule stated that this presumption may be rebutted based on ''evidence that a collector occasionally sells one specific kind and type of curio or relic firearm to buy another one of the same kind and type that is in better condition to 'trade-up' or enhance the seller's personal collection.'' The commenter added, ''using 'same kind and type' is not correct. For instance, a [Curio and Relic] (C&R) [license] holder sells a bolt-action Mosin-Nagant rifle in 7.62x54r, then uses the funds to purchase a Star Model B pistol in 9x18. Are these (Mosin-Nagant & Star Model B) the 'same kind and type' or not? Both are clearly collectable C&R firearms, while one is a bolt-action rifle and the other a pistol.''

Department Response

As with the previous EIB presumption, the Department disagrees that collectors are likely to repetitively purchase and resell firearms that are of the same or similar kind and type without a predominant intent to earn a profit, at least not within a relatively short period of time. If a person is accumulating and repetitively reselling the same or similar kinds and types of firearms as part of a personal collection as defined in this rule, they can use evidence that they are doing so to

[205] *See* footnote 82, *supra.*

[206] For purposes of this rule, the Department interprets the term ''new'' in accordance with its common definition to mean, ''having recently come into existence,'' and the term ''like new'' to mean ''like something that has recently been made.'' *See, e.g., New,* Merriam-Webster Online Dictionary, *https://www.merriam-webster.com/dictionary/new* (last visited Mar. 8, 2024); *Like New,* Merriam-Webster Online Dictionary, *https://www.merriam-webster.com/dictionary/like%20new* (last visited Mar. 8, 2024). The Department understands that collectors commonly grade or rate collectible firearms as a means of determining their appreciated value over time, insurance, collectability, etc. However, this presumption is not aimed at collectible firearms and is not making a distinction based on a firearm's grade or rating in relation to commonly accepted firearms condition standards, such as those contained in the NRA Modern Gun Condition Standards or the Standard Catalog of Smith & Wesson. *See* Jim Supica, *Evaluating Firearms Condition,* NRA Museums, *https://www.nramuseum.org/gun-info-research/evaluating-firearms-condition.aspx* (last visited Mar. 26, 2024).

[207] See the discussion under the Department's response in Section IV.B.9.c of this preamble.

[208] In further support of a one-year time limit, 18 U.S.C. 923(c) provides that after one year, firearms transferred by a licensee from the licensee's business inventory to the licensee's personal collection are no longer deemed business inventory.

enhance or liquidate their personal collection to refute the presumption.

Nonetheless, to substantially reduce the possibility that these ''like-kind'' firearms are part of a personal collection, as stated previously, a one-year turnover limitation has been incorporated into the presumption and, as always, any presumption may be rebutted with reliable evidence to the contrary.[209] *See* § 478.13(c)(3)(ii)(B). It is unlikely that persons who collect the same or similar kinds and types of firearms for study, comparison, exhibition, or for a hobby will repetitively resell them within one year after they were purchased.

Finally, in response to commenters' concerns about determining which firearms would be of the same kind and type, the Department has made some changes. First, as to the comment on whether the Mosin and Star firearms described would be the same kind and type, the Department notes that the Mosin-Nagant rifle in 7.62x54r and the Star Model B pistol in 9x18 are not the same or similar kind and type of firearms. They are of a different manufacturer (Mosin-Nagant v. Star), model (M1891 v. BM), type (rifle v. pistol), caliber (7.62x54R v. 9x18), and action (bolt action v. semiautomatic). They share almost no design features and would thus not be subject to the ''same kind and type'' presumption. Nonetheless, to avoid any confusion about the meaning of ''same kind and type'' of firearms, and to allow for collectors who obtain multiple firearms of the same type, but from different makers and of different models, the Department has substituted the more precise term ''same make and model'' in the final rule. *See* § 478.13(c)(3)(ii)(B).

Further, to clarify the meaning of ''similar'' in this context, the final rule now instead refers to ''variants thereof'' (*i.e.,* variants of the same make and model). *See id.* The term ''variant'' is already defined in 27 CFR 478.12(a)(3) to mean ''a weapon utilizing a similar frame or receiver design, irrespective of new or different model designations or configurations, characteristics, features, components, accessories, or attachments.'' Thus, to identify a ''variant'' of a particular make and model, the design of the frame or receiver of one firearm is compared to the design of the frame or receiver of the other firearm, regardless of newer model designations or configurations other than the frame or receiver.[210] For example, an AK–74M is a rifle variant of the original AK–47 rifle. ''The notable changes in the AK–74M include a 90-degree gas block, a lightened bolt and bolt carrier, a folding polymer stock, a new dust cover designed to resist the recoil of an attached grenade launcher, [and] a reinforced pistol grip.'' Alexander Reville, *What are all the AK Variants?, guns.com* (Jan. 5, 2024), *https://www.guns.com/news/what-are-ak-variants.* But none of the changes found in the AK–74M involve a design modification to the receiver—the housing for the bolt—so that firearm is a rifle variant of the original make and model (AK–47 rifle). *See* 27 CFR 478.12(a)(4)(vii). Likewise, an AR-type firearm with a short stock (*i.e.,* pistol grip) is a pistol variant of an AR–15 rifle because they share the same or a similar receiver design. *See* 27 CFR 478.12(a)(3), (f)(1)(i). Repetitive resales of firearms that are the same make and model, or variants of the same make and model, within a year of purchase, demonstrate that the firearms were likely purchased and resold as commodities (*i.e.,* business inventory), as opposed to collectibles. Thus, to identify a firearm subject to this presumption, the rule now looks to the make and model of a firearm and its ''variants'' (as defined in 27 CFR 478.12(a)(3)) which are generally easy to determine by comparing the design of the frame or receiver—the key structural component of each firearm repetitively sold. As with the other presumptions, this one may be rebutted with reliable evidence to the contrary.

10. EIB Presumption—Selling Business Inventory After License Termination

Comments Received

Commenters raised concern over the impact of this presumption on certain former licensees. Commenters stated that they believe this EIB presumption will hurt recently retired FFLs who might need to sell off firearms due to financial hardship. Some commenters stated that the rule would punish former FFLs, holding them to a different and more onerous standard than persons who were never licensed, and disagreed with ATF's statement in justification of the presumption that a ''licensee likely intended to predominantly earn a profit from the repetitive purchase and resale of those firearms, not to acquire the firearms as a 'personal collection.' '' 88 FR 62003. They stated that ATF offered no citation for this proposition and ignored that a firearm might be acquired first for business inventory and later become a part of a personal collection. They argued that the former FFL should be entitled to sell part or all of that collection under the statute without becoming a dealer. Further, they argued that, unlike the other presumptions affecting former FFLs, there is no time limitation, which in essence means this presumption bars a former FFL from ever selling firearms that were in their business inventory for any purpose without triggering the presumption of again being engaged in the business. This puts former licensees in an untenable position never contemplated by Congress. One commenter suggested that, at a minimum, the rule should grandfather in former FFLs who went out of business prior to this rule becoming effective and allow them to treat those former business-inventory firearms as a personal collection even if all the proposed criteria of that presumption (now § 478.13(c)(4)), such as formal transfer from the A&D book, were not followed.

An additional commenter suggested that ATF should consider supplementing this presumption with an additional presumption that any formerly licensed firearms dealer, or person acting on their behalf, that sells or offers to sell multiple guns that were in the former FFL's business inventory at the time the license was terminated will be presumed to be ''engaged in the business'' unless the firearms are disposed of through a sale to another FFL.

Department Response

The Department disagrees that this EIB presumption is contrary to the GCA, or that firearms that were repetitively purchased for resale by licensees can be considered part of a ''personal collection'' if they were not transferred to a personal collection prior to license termination. The GCA at 18 U.S.C. 923(c) clearly contemplates that any business-inventory firearms transferred while the person is a licensee must be held in a personal collection by the licensee for at least one year before the firearms lose their status as business inventory. However, when a licensee does not transfer business inventory firearms to a personal collection prior to license termination, the firearms remain

[209] Per footnote 208, this time period is also supported by 18 U.S.C. 923(c).

[210] In addition to the fact that the term ''variant'' was incorporated into ATF regulations in 2022, *see* 87 FR 24735, this term is well understood by the firearms industry and owners. *See, e.g.,* Alexander Reville, *What are all the AK Variants?, guns.com* (Jan. 5, 2024), *https://www.guns.com/news/what-are-ak-variants* (''[T]he AK has gone through several revisions over the years, creating more modern variants. In fact, what you find yourself calling an AK–47 might just be something different.''); Aaron Basiliere, *The AR–15 Pistol: The Rise of America's Rifle Variant, catoutdoors.com* (Apr. 19, 2022), *https://catoutdoors.com/ar-15-pistol/.*

business inventory.[211] Such firearms were not acquired for a personal collection, and were not transferred to one, and cannot be said to have lost their status as firearms purchased for resale with a predominant intent to profit simply because the licensee is no longer licensed to sell them. Moreover, allowing former licensees to continue to sell business inventory after license termination without background checks and records through which crime guns can be traced clearly undermines the licensing requirements of the GCA. It also places such former licensees at an unfair competitive advantage over current FFLs, who are continuing to sell firearms while following the rules and procedures of the GCA. Indeed, there would be little point revoking a license for willful violations of the GCA by a non-compliant FFL if the former licensee could simply continue to sell firearms without abiding by the requirements under which they purchased the firearms with the predominant intent to profit, and by which the compliant FFLs abide. As to concerns that a former licensee might need to quickly sell its inventory to stave off financial hardship, the former licensee is still free to sell firearms from this inventory on occasion to a licensee. *See* §§ 478.57(b)(1), (c); 478.78(b)(1), (c).

Under the rule, this presumption operates in conjunction with the new liquidation-of-business-inventory provisions in 27 CFR 478.57 (discontinuance of business) and 478.78 (operations by licensee after notice), which allow former licensees to either liquidate remaining business inventory to a licensee within 30 days after their license is terminated (or occasionally to a licensee thereafter), or transfer what is now defined as ''former licensee inventory'' (firearms that were in the business inventory of a licensee at the time of license termination, as distinguished from a ''personal collection'' or other personal firearms) to a responsible person of the former licensee within that period. Under these new provisions, when firearms in a former licensee inventory are transferred to the responsible person, they remain subject to the presumptions in this rule. Such firearms were repetitively purchased for resale and cannot be considered part of a ''personal collection'' as that term is defined in the rule. Firearms in a former licensee inventory differ from those in a personal collection or other personal firearms in that they were purchased repetitively as part of a business inventory with the predominant intent to earn a profit. Persons who continue to sell those business inventory firearms, including those transferred to a responsible person of the former licensee, other than occasionally to an FFL, will be presumed to be engaged in the business without a license, though the presumption may be refuted with reliable evidence to the contrary.

The Department disagrees with a commenter's suggestion to grandfather in former FFLs who went out of business prior to the effective date of the rule and allow them to treat former business inventory as a personal collection. Prior to the rule, former licensees and their responsible persons were not entitled to sell their business inventories after license termination if their predominant intent was to obtain livelihood and pecuniary gain from those sales. This rule merely establishes by regulation the guidance ATF has provided for at least ten years and of which the FFL community has been aware; that is, ATF has long advised former licensees in written notices of revocation, expiration, and surrender not to engage in the business after license termination by selling the business inventory.[212] Continuing to sell business inventory would undermine the licensing requirements of the GCA.

The Department agrees with a commenter's suggestion to incorporate a presumption that a formerly licensed dealer who sells firearms from the former business inventory is engaging in the business unless the firearms are sold to a licensee. An occasional sale to a licensee generally does not show a predominant intent to profit because a licensed dealer is likely to pay less than fair market value to buy a firearm for resale from an unlicensed person given the licensed dealer's intent to profit. Nor does it present the same public safety concerns associated with unlicensed dealing because the purchasing dealer would record the acquisitions and dispositions and run background checks when they resell the firearms. For these reasons, in addition to allowing liquidation of a business inventory to a licensee within 30 days, this presumption has been amended by the final rule to allow former licensees (or a responsible person acting on their behalf) to occasionally sell ''former licensee inventory'' firearms to an active licensee after the initial 30-day liquidation period in accordance with the discontinuation of business provisions at §§ 478.57(b)(2) and 478.78(b)(2) without triggering the EIB presumptions. However, if the former licensee (or responsible person) sells former licensee inventory more frequently than occasionally to a licensee after the initial 30-day liquidation period, they are subject to the presumptions in this rule.

11. EIB Presumption—Selling Business Inventory Transferred to a Personal Collection Prior to License Termination

Comments Received

Commenters disagreed with inclusion of this last presumption in which a former licensee (or responsible person acting on behalf of the former licensee) is presumed to be a dealer if they sell or offer to sell firearms that were transferred to their personal collection prior to license termination, unless those firearms were transferred to the former licensee's personal collection without intent to willfully evade firearms laws and one year has passed from the date of transfer to the personal collection.

At least one commenter stated that prior unlawful transfers do not necessarily taint a future transfer, nor do they demonstrate that a former FFL continues to be engaged in the business. The commenter stated that there would be no possible way for former FFLs, whose licenses were revoked and who may be prohibited or facing practical circumstances that preclude them from being re-licensed in the future, to liquidate their former inventory that was not transferred to a personal collection to ATF's satisfaction. The commenter also noted that section 923(c) applies only to licensees and that none of the provisions apply to an unlicensed person who happened to formerly have held an FFL. In other words, the commenter seemed to question how the Department could require former FFLs or even responsible persons, who are non-FFLs, to abide by certain restrictions upon license revocation, such as disposing of the former business inventory in a particular manner; as former licensees, the commenter argued, they automatically do not have ''business inventory.'' This is particularly true, the commenter stated, as a former licensee

[211] *See* ATF, *Important Notice: Selling Firearms AFTER Revocation, Expiration, or Surrender of an FFL* 1 (June 3, 2021) (''If a former FFL is disposing of business inventory, the fact that no [firearms] purchases are made after the date of license revocation, expiration, or surrender does not immunize him/her from potential violations of 18 U.S.C. 922(a)(l)(A). Instead, business inventory acquired through repetitive purchases while licensed are attributed to the former FFL when evaluating whether subsequent [firearms] sales constitute engaging in the business of dealing in firearms without a license.''); ATF, *Important Notice: Selling Firearms AFTER Revocation, Expiration, or Surrender of an FFL* 1 (Dec. 1, 2014) (same).

[212] *See* footnote 211, *supra.*

whose license was revoked—and who, by law, may never be able to be a licensee again—may be precluded from ever transferring their firearms under any circumstances (other than by giving them away as free gifts).

Furthermore, a commenter stated, section 923(c) adds that ''nothing in this chapter shall be construed to prohibit a licensed manufacturer, importer, or dealer from maintaining and disposing of a personal collection of firearms, subject only to such restrictions as apply in this chapter to dispositions by a person other than a licensed manufacturer, importer, or dealer.'' The commenter concluded that this means, under the statute, a dealer may acquire a personal collection while they are a dealer or while going out of business and may later dispose of that collection under the same rules as other non-dealers, except as provided in 18 U.S.C. 923(c). The commenter also noted that nothing in either 18 U.S.C. 921(a)(21)(C) or 923 discusses a required intent at the time the firearm is acquired, and ATF provided no citation to support the ''proposition that firearms acquired by an FFL are not (or cannot be) for a 'personal collection.' '' While all can agree that the predominant purpose of the FFL is to earn a profit, the commenter stated the proposed rule ignores the fact that many FFL holders are also firearm collectors or enthusiasts, and that often many of the firearms that are put into the business inventory are for the personal collection of the FFL holder or its responsible persons.

One of the commenters stated that this presumption seems to apply to all firearms transferred to any responsible person of an FFL, even if those guns were transferred to that responsible person via an ATF Form 4473 and a background check was conducted. They stated this presumption overlooks the fact that an FFL may have dozens of responsible persons who may change frequently, and that a former responsible person may have no say in the business dealings once they are gone; in fact, the person may not even know that the business has given up or lost its license. Yet, they said, ATF's presumption now seeks to hold that former responsible person to a burdensome presumption based on their former employer's decision to cease its firearms operations.

The commenter stated that this presumption seems contrary to ATF's existing position that a transfer to a personal collection happens as a matter of law once the license is given up because there is no more business inventory as a result of the firearms business ceasing operations. They cited ATF's National Firearms Act Handbook, ATF E-Publication 5320.8 (Apr. 2009), *https://www.atf.gov/firearms/docs/guide/atf-national-firearms-act-handbook-atf-p-53208/download* (''NFA Handbook''), as an example of the agency's position; they said that, in section 14.2.2 of the NFA Handbook, ATF stated, ''FFLs licensed as corporations, partnerships, or associations, who have been qualified to deal in NFA firearms and who go out of the NFA business, may lawfully retain their inventory of these firearms . . . as long as the entity does not dissolve but continues to exist under State law.'' Further, as a practical matter, the commenter stated that it is not clear how a company going out of business would store the firearms ''separately from, and not commingled with the business inventory'' to meet the definition of ''personal collection'' when the company no longer has a business inventory due to its going out of business. The rule, they argued, provides no clarity for how former FFLs are to treat their business inventory if the former FFL just allowed firearms to come into their collection after their business ceased but did not meet all of the requirements set out by ATF.

Department Response

The Department disagrees that this EIB presumption is contrary to section 923(c) of the GCA. Contrary to the implicit views of the commenters, an FFL that loses or surrenders its license is not thereby immune from the provisions of the GCA. As provided by section 923(c), for licensees to dispose of firearms from a personal collection, they must be transferred from the business inventory to a personal collection and maintained in that collection for at least one year before they lose their status as business inventory. This rule implements section 923(c) by establishing a presumption that resales or offers for resale of such firearms show that the former licensee is engaging in the business. Thus, licensees who know they will be going out of business by reason of license revocation, denial of renewal, surrender, or expiration cannot simply transfer their business inventory to a ''personal collection'' the day before license termination, and two days later, sell off the entire inventory as liquidation of a ''personal collection'' without background checks or transaction records. Such firearms were not personal firearms acquired for ''study, comparison, exhibition . . . or for a hobby.'' However, consistent with section 923(c) and this rule, once the one-year period has passed, the former licensee will no longer be presumed to be engaged in the business without a new license if they later liquidate all or part of the personal collection, assuming the firearms were received and transferred prior to license termination without any intent to willfully evade the restrictions placed on licensees by the GCA. This includes licensees whose licenses were revoked or denied renewal due to willful violations if they transferred business-inventory firearms to their personal collection or otherwise as personal firearms prior to license termination in accordance with the law.

The Department disagrees with the comment that, under the law, prior unlawful transfers do not ''taint a future transfer.'' The GCA at 18 U.S.C. 923(d)(1)(C) authorizes approval of an application for firearms license if the applicant ''has not willfully violated any of the provisions of this chapter or regulations issued thereunder.'' If ATF previously revoked or denied license renewal for willful violations of the GCA or its implementing regulations, then under the law, that former licensee may be denied a firearms license in the future. *See id.* This provision shows that prior unlawful activity is relevant to future dealing in firearms. Moreover, section 923(c) deems firearms to be part of a business inventory if their transfer to a personal collection ''is made for the purpose of willfully evading the restrictions placed upon licensees.'' This demonstrates that Congress was specifically concerned with licensees evading the requirements of the GCA through improper transfers to a personal collection. Therefore, as to the comment that ATF cannot require former licensees (or a responsible person acting on their behalf) to abide by regulations addressing their former business inventory, the Department believes that it has the authority under the GCA to take enforcement action, such as to deny a license or seize firearms for forfeiture, when a former licensee (or a responsible person acting on their behalf) has willfully violated the rules concerning winding down licensed business operations, 27 CFR 478.57 or 478.78 (as applicable). The former licensee (or a responsible person acting on their behalf) is presumed to be engaged in the business without a license if they thereafter sell off that business inventory (unless they transfer it within 30 days after license termination to a former licensee inventory, and thereafter only occasionally sell a firearm from that inventory to a licensee)—inventory that they did not transfer to a personal collection or

otherwise as a personal firearm prior to license termination and then retain for a year, as required.

Regarding responsible persons while they are acting on behalf of such licensees, the Department does not agree that such persons will be unaware of the termination of the license. As set forth in 18 U.S.C. 923(d)(1)(B) and this rule, responsible persons are only those responsible for the management and policies of the firearms business. They are not sales associates, logistics personnel, engineers, or representatives who might have little control over or understanding of the firearms business operations or license status. Responsible persons acting on behalf of a former licensee must therefore be careful not to sell business inventory of the former licensee without a license. Nonetheless, the final rule makes clear that responsible persons of former licensees who (1) after one year from transfer, sell firearms from their personal collection that were transferred from the former licensee's business inventory before license termination, or (2) occasionally sell firearms to a licensee that were properly transferred to a former licensee inventory after license termination, are not presumed to be engaged in the business due to those sales (assuming they did not acquire or dispose of those firearms to willfully evade the restrictions placed on licensees).

Regarding the comment that this presumption applies to all firearms transferred to any responsible person of a licensee, even if those firearms were transferred to that responsible person on an ATF Form 4473 and a background check was conducted, the Department disagrees that the presumption applies. Responsible persons who properly received a firearm from the then-licensee's business inventory on an ATF Form 4473 for their own personal use, in accordance with 27 CFR 478.124, are not subject to the liquidation presumption because they now own the firearm disposed to them by the business. Subsequent termination of the license has no bearing on the responsible person's prior acquisition of a personal firearm. The liquidation presumption does not apply to former responsible persons who are selling what are now their own personal firearms. Any subsequent sale of those personally owned firearms is evaluated the same way as any other firearm transactions by unlicensed persons.

12. Definition of ''Personal Collection (or Personal Collection of Firearms, or Personal Firearms Collection)''

Comments Received

At least one commenter noted that the proposed definition of personal collection, which excludes any firearm purchased for the purpose of resale with the predominant intent to earn a profit, is problematic because collectors buy guns with the purpose of eventual resale when they locate and can afford guns of higher quality and rarity. This sentiment was echoed by several commenters who asserted that the proposed rule negatively affects collectors and hobbyists by requiring them to become licensed dealers simply because they want to sell or trade some firearms from their personal collection. For instance, one commenter stated that a hobbyist may purchase a firearm in degraded condition, or lacking components. This commenter indicated that they should not be considered engaged in the business of dealing even if they made a reasonable profit simply because they refurbished or upgraded the lawfully acquired firearm and sold it for a personal reason.

Another commenter stated the definition of ''personal collection'' was too vague, leaving room for misinterpretation. The commenter stated that, without more clarity, licensees will have difficulty determining whether their occasional sale for personal collection enhancement falls within that scope, and the definition will create further confusion among licensees and law enforcement officials.

Some commenters stated that the definition of ''personal collection,'' and also the examples of what constitutes a hobby, are too narrow. First, they explained that the hobbies mentioned in the statute and the regulation as examples focus heavily on activities that involve shooting firearms (*e.g.,* hunting, skeet, or target shooting) but do not mention non-shooting hobbies, such as curio collecting. Further, they questioned why ''personal collection'' is limited to non-commercial purposes and pointed out that commercial entities that are not engaged in the business of dealing in firearms frequently use firearms for commercial business purposes. They provided examples, including a hunting outfitter that might have a collection of firearms for use in the commercial hunting enterprise, yet the firearms would still be considered part of a personal collection, or an armored car company having firearms for protection that would be in the company's personal collection and not in a business inventory. These businesses are engaged in a business and have firearms, but they are not engaged in the business of dealing in firearms even if they, for example, buy firearms to upgrade ones used by the truck drivers or replace old ones taken on hunting trips by clients. Similarly, at least one commenter noted that firearms acquired as part of teaching and safety instruction activities would not be covered under the proposed definition of personal collection and therefore, according to the commenter, an owner whose firearm ownership grew because of these activities and who then sold some firearms would not be exempt from being engaged in the business even though that person might not have acquired the firearms for purposes of resale with the predominant intent to earn a profit.

Another commenter stated that the definition of personal collection is so narrowly defined it would exclude transfers of firearms to law enforcement and make ''the somewhat common 'Gun Buy-Back' scheme unlawful.'' The commenter suggested the following scenario: ''An estate may include any number of firearms. The inheritor receives what previously may have been considered a personal collection. Whatever the size or value, the new owner has no association with any 'study, comparison, exhibition, or hobby' and would like to be rid of them. Currently, some new owners transfer their firearms to municipal police at a local 'gun buy-back event.' '' But under the new definition, the commenter added, ''[t]ransferring any number of firearms for even limited pecuniary gain (even directly to law enforcement in exchange for marginally valued gift cards) would be a [F]ederal crime. Byrne grants could no longer fund these activities.''

Other commenters also noted that the proposed definition means that firearms acquired by an individual for any other purpose, such as for self-defense, would not be part of a personal collection. Commenters stated that studies show that about two-thirds of Americans report owning firearms primarily for ''defense'' or ''protection.'' Without including firearms acquired for self-defense as part of a personal collection, commenters believed that ATF is trying to create a third classification of owned firearms, *i.e.,* firearms that are owned by non-licensees but are not acquired for ''study, comparison, exhibition, or for a hobby.'' In essence, commenters argued that the definition is incorrectly limited to firearms that are for noncommercial, recreational enjoyment.

Some commenters, including some gun collectors' associations, argued that the proposed definition erodes statutory protections for nonbusiness conduct by conflating ''sales, exchanges, or purchases of firearms for the enhancement of a personal collection'' and ''for a hobby.'' In other words, the proposed definition includes ''hobby'' within ''personal collection'' rather than it being its own safe harbor. Commenters stated that the ''for a hobby'' provision and the ''for a personal collection'' provision are two separate and distinct items, meaning that a person who purchases or sells firearms occasionally as a collector or for a hobby is not a firearms dealer and not required to be licensed, and that ''personal collection'' and ''hobby'' must have distinct meanings.

Commenters provided suggestions on how the term ''hobby'' could be defined. One commenter suggested the definition be broader to mean ''a group [of] firearms that a person accumulates for any reason, other than firearms currently in the business inventory of a current licensee.'' One commenter, while supporting ATF in considering the ''totality of the circumstances when determining if one is 'engaged in the business,' '' suggested the rule ''could benefit from specific examples that help collectors and hobbyists understand when they may incite the need for licensure and to help confirm the intent of the rule.''

In a similar vein, another commenter in support of the rule provided a suggested clarification of when a gun sale would be part of a hobby. They said the rule parenthetically describes ''hobby'' in the definition of ''personal collection'' as follows: ''(*e.g.,* noncommercial, recreational activities for personal enjoyment, such as hunting, or skeet, target, or competition shooting).'' As a result, the commenter suggested the rule ''could clarify that, to be covered by the exception, a hobbyist may only engage in gun sales to serve an interest in such 'noncommercial, recreational activities for personal enjoyment, such as hunting, or skeet, target, or competition shooting.' '' The same commenter also suggested that the rule ''should clarify that the hobby exception to the 'engaged in the business' definition does not cover an individual whose hobby is gun selling to generate profit.''

A different commenter in support of the rule proposed other clarifying language to create a rebuttable presumption for when a sale or transfer of a firearm is presumed to be part of a hobby. The proposed addition would specify that a person who meets all of the following criteria will be presumed to be selling or transferring firearms as part of a hobby: when the collection (A) has been appraised by an expert who is qualified to evaluate firearms; (B) has been documented by photographs that show each firearm and its serial number; (C) has been catalogued by serial numbers and other identifying features; (D) has been insured by an insurance company that covers firearms; (E) has been displayed in a secure location that is not accessible to unauthorized persons; and (F) has not been used for hunting, sporting, or self-defense purposes. The commenter proposed that this presumption would help infrequent sellers or those who transfer firearms for personal reasons distinguish between regular commercial sales and ''occasional'' or ''hobby'' sales.

The same commenter also suggested adding a similar rebuttable presumption providing that a person is presumed to be selling or transferring firearms for hunting, sporting, or self-defense purposes when the person sells or transfers a firearm that is suitable for hunting certain game animals, participating in certain shooting competitions, or providing protection against certain threats. The commenter also suggested a presumption based on a threshold number of sales per year as an additional way to help distinguish infrequent sellers. This suggested presumption would read, ''a person who sells or transfers five or fewer firearms per calendar year shall be presumed to be selling or transferring firearms occasionally. This presumption may be rebutted by evidence that shows that the person is engaged in the business of dealing in firearms. A person who sells or transfers more than five firearms per calendar year shall be presumed to be engaged in the business of dealing in firearms. This presumption may be rebutted by evidence that shows that the person is not engaged in the business of dealing in firearms.''

Other commenters stated that the portion of the definition of ''personal collection'' stating that licensees can only consider firearms as a part of their personal collection if they are stored separately from and not comingled with business inventory and appropriately tagged as ''not for sale'' would be difficult to operationalize and would make things complicated not only for the business but also for the employees of that business. These commenters stated that the rule does not allow for licensed (or otherwise lawfully permitted) concealed carry activities. For instance, a business could be cited for a violation if an employee carries their personal firearm to work on their person if the employee temporarily puts it in desk drawer or work bench. Additionally, to avoid potential liability, they opined that the employee would have to tag their personal firearm as not for sale. These commenters argued that ATF should either remove the requirement for FFLs to store personal collections separately from business inventory or clearly exclude firearms owned by persons and carried on or about the person for self-defense.

Another commenter stated that the rule inappropriately requires FFLs going out of business to ''dispose'' of the firearms in their business inventory to themselves in order for such firearms to be considered part of their personal collection. They added that such a transfer to a personal collection happens as a matter of law once the license is given up, because there is no more business inventory, because the firearms business has ceased.

Department Response

The Department agrees that collectors who purchase firearms for a personal collection are permitted under the GCA, as amended, to occasionally sell them to enhance their collection or liquidate them without being required to obtain a license. However, firearms that are purchased by collectors or hobbyists for the purpose of resale with the intent to predominantly earn a profit cannot be said to primarily have been accumulated for study, comparison, exhibition, or for a hobby.[213] They are considered commercial firearms or firearms obtained for financial gain, not part of a personal collection. Many of the criticisms of the definition of ''personal collection'' have one misconception in common: that any person who amasses multiple firearms without a license and without criminal purpose has, by definition, a ''personal collection,'' or is a ''collector'' under the statute.[214] But that is not correct. This

[213] *See The Federal Firearms Owner Protection Act: Hearing on S. 914 Before the S. Comm. on the Judiciary,* 98th Cong. 50–51 (1983) (response of Robert E. Powis, Deputy Assistant Secretary, Dep't of the Treasury, to questions submitted by Sen. Hatch) (''The proposed definition states that the term [''with the principal objective of livelihood and profit''] means that the intent underlying the sale or disposition of firearms is predominantly one of obtaining livelihood and necessary gain, as opposed to other intentions such as improving or liquidating a personal firearms collection. It does not require that the sale or disposition of firearms is, or be intended as, a principal source income or a principal business activity. This provision would make it clear that the licensing requirement does not exclude part-time firearms businesses as well as those firearms collectors or hobbyists who also engage in a firearms dealing business.'').

[214] Under the GCA, 18 U.S.C. 921(a)(13), the term ''collector'' means ''any person who acquires, holds,

Continued

assertion is akin to saying that any person who walks around with change in their pockets for daily use has a coin collection or is a coin collector.

The Department has revised the definition of ''personal collection'' in the final rule to make it clear that firearms a person obtains predominantly for a commercial purpose or for financial gain are not within that definition. This distinguishes such firearms from personal firearms a person accumulates for study, comparison, exhibition, or for a hobby, which are included in the definition of ''personal collection,'' but which the person may also intend to increase in value. Nonetheless, the Department agrees that collecting ''curios or relics'' (as defined in 27 CFR 478.11), ''collecting unique firearms to exhibit at gun club events,'' ''historical re-enactment,'' and ''noncommercial firearms safety instruction'' should be added to the specific examples of firearms acquired for a ''personal collection,'' and has added them to this final rule.

The Department disagrees that the definition of ''personal collection'' is so narrowly defined that it would preclude personal firearms that are inherited from being sold under a common government ''gun-buy-back'' program. First, the occasional sale of inherited firearms to a government agency is not conduct that would likely fall within any presumption or otherwise rise to the level of being engaged in the business of dealing in firearms. Second, sales of inherited firearms, whether or not they are part of a personal collection, are generally not made by a person who is devoting time, attention, and labor to dealing in firearms with a predominant intent to profit. To make this clear, the Department has added liquidation transfers or sales of inherited firearms as conduct that does not support a presumption of being engaged in the business. The Department also included reliable evidence that a person was liquidating inherited firearms in the types of evidence that can be used to rebut any presumption. *See* § 478.13(e)(5)(i), (f). For these reasons, a person would not be presumptively engaged in the business if they only sold inherited firearms to a government agency as part of a ''gun-buy-back'' program, regardless of whether the firearms fell within the definition of ''personal collection.''

The Department disagrees with commenters who said that the definition of ''personal collection'' is too vague and acknowledges that the definition does not include firearms owned by commercial entities and used for commercial business purposes. The definition is from standard dictionary definitions, and firearms acquired by commercial entities are not ''personal'' or a ''collection,'' and cannot be said to be part of ''personal collection.'' [215] That, however, does not necessarily mean commercial entities that own firearms are engaged in the business of dealing in firearms under the statute or this rule. When a company, such as an armored car company or hunting outfitter, purchases firearms for a business inventory, their predominant intent is not likely to be earning a profit by repetitively purchasing and reselling firearms. While the operations of each company must be examined on a case-by-case basis to determine, for example, if they are engaged in the business of dealing in firearms on a part-time basis, such companies generally do not need to be licensed.

The Department also disagrees with commenters who indicated that ''personal collection'' is too narrow because it does not include firearms purchased for self-defense. The dictionary definition of ''collection'' means ''an accumulation of objects gathered for study, comparison, or exhibition or as a hobby.'' [216] This common definition is consistent with how the GCA views a ''collection.'' The GCA, 18 U.S.C. 921(a)(13), defines the term ''collector'' as ''any person who acquires, holds, or disposes of firearms as curios or relics, as the Attorney General shall by regulation define.'' The regulations have long further defined the term ''curios or relics'' as ''[f]irearms which are of special interest to collectors by reason of some quality other than is associated with firearms intended . . . as offensive or defensive weapons.'' For this reason, the definition of ''personal collection'' in this rule does not include firearms that have no special interest to the collector or hobbyist other than as weapons for self-defense or defense of others, as has been clarified in the final rule.[217] At the same time, the Department recognizes that 18 U.S.C. 921(a)(21)(C) allows persons to make occasional sales, exchanges, or purchases of firearms ''for a hobby.'' For this reason, the Department has defined the term ''personal collection'' more broadly than just a collection of curios or relics, and has included firearms for ''noncommercial, recreational activities for personal enjoyment, such as hunting, skeet, target, or competition shooting, historical re-enactment, or noncommercial firearms safety instruction.''

Moreover, by definition, all firearms are ''weapons'' that will, are designed to, or may readily be converted to expel a projectile, and are therefore instruments of offensive or defensive combat.[218] 18 U.S.C. 921(a)(3)(A). Some firearms that can be used for personal defense may also be collectibles or purchased for a hobby, while others may not. Additionally, including all firearms usable for self-defense in the definition of ''personal collection'' is inconsistent with the statutory scheme

or disposes of firearms as curios or relics.'' A firearm is a ''curio'' or ''relic'' when it: (1) is ''of special interest to collectors by reason of some quality other than is associated with firearms intended for sporting use or as offensive or defensive weapons''; and (2) either (a) was manufactured at least 50 years prior to the current date, (b) was certified by a museum curator to be a curio or relic of museum interest, or (c) derives a substantial part of its monetary value from the fact that it is novel, rare, bizarre, or because of its association with some historical figure, period, or event. 27 CFR 478.11.

[217] *See, e.g., Tyson,* 653 F.3d at 202–03 (''Tyson called himself a firearms 'collector,' which, if true, would also have shielded him from criminal trafficking liability. See 18 U.S.C. 921(a)(21)(C) (stating that one who 'makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of his personal collection of firearms' is not a 'dealer in firearms'). These were lies designed to game the system. After all, none of the firearms purchased by Tyson were antiques and his behavior was decidedly inconsistent with that of a collector.''); *Idarecis,* 164 F.3d 620, 1998 WL 716568, at *3 (unpublished table decision) (''[Defendant] nevertheless argues that the definition of a gun 'collection' in § 921(a)(21)(c) should be read more broadly than the definition of a gun 'collector' in order to encompass the guns [Defendant] owned and sold. We cannot say that the district court's failure to instruct the jury on the collection exemption pursuant to § 921(a)(21)(C) was plain error. There is no case authority to suggest that there is a distinction between the definition of a collector and of a collection in the statute.''); *Palmieri,* 21 F.3d at 1269 (''[A] 'collector' is defined as 'any person who acquires, holds, or disposes of firearms as curios or relics . . . . ' *Id.* sec. 921(a)(13). Section 922(a) requires inquiry into both the defendant's conduct and status. If the conduct constituted engaging in the business of dealing in firearms, then it is illegal unless the defendant is a licensed dealer. On the other hand, sales by a licensed or unlicensed collector from a personal collection in furtherance of a hobby are not illegal. Once the conduct is deemed equivalent to the business of dealing, however, collector status will not shield a defendant from liability under § 922(a).'').

[218] *See Lunde Arms Corp.* v. *Stanford,* 107 F. Supp. 450, 452 (S.D. Cal. 1952), *aff'd,* 211 F.2d 464 (9th Cir. 1954) (''To be a firearm an implement must be a weapon. . . . A weapon is defined in Webster's New International Dictionary, 2nd edition, as: 'An instrument of offensive or defensive combat[.]' '').

of the GCA. The GCA places restrictions on dealing in firearms, but permits individuals to make ''occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby'' or sell all or part of a personal collection. 18 U.S.C. 921(a)(21)(C). Including all firearms usable for self-defense in the definition of ''personal collection'' would allow the limited definitional exclusions for enhancing and liquidating a personal collection to swallow the rule that dealers in firearms must be licensed, because one could nearly always claim that a firearm was purchased or sold to improve or liquidate the firearms one keeps for self-defense. That assertion is not consistent with the common definitions of ''collection'' or ''hobby.'' In addition, it would potentially create similar problems with the GCA provision that places limitations on the disposition of firearms transferred by licensees to their ''personal collection.'' 18 U.S.C. 923(c). It could also create a conflict with the provision of the United States Sentencing Guidelines that allows persons convicted of certain firearms violations in some situations to receive a reduction in their sentencing offense level if they possessed firearms ''solely for lawful sporting purposes or collection.'' [219] U.S.S.G. 2K2.1(b)(2).

Whether a firearm is part of a personal collection or for a hobby depends on the kind and type of firearms,[220] and courts have also looked to the nature and purpose for which they are accumulated.[221] This is not to say individuals or companies cannot buy or sell firearms that are primarily for self-defense or protection of others under this rule. It just means that those other personal firearms are not necessarily part of a ''personal collection,'' and persons who buy or sell such firearms cannot avail themselves of the statutory exception for personal collections in 18 U.S.C. 921(a)(21)(C) unless the firearms are of a type and purpose to qualify as personal collection firearms. To make this point clear, the definition of ''personal collection'' has been revised to state that ''[i]n addition, the term shall not include firearms accumulated primarily for personal protection: *Provided,* that nothing in this definition shall be construed as precluding a person from lawfully acquiring firearms for self-protection or other lawful personal use.'' § 478.11.

The Department has made it explicit in this final rule that firearms acquired for a hobby—including noncommercial, recreational activities for personal enjoyment, such as hunting, or skeet, target, or competition shooting, or historical re-enactments—may be part of a ''personal collection.'' Therefore, reliable evidence of occasional sales of such firearms only to obtain more valuable, desirable, or useful firearms for the person's personal collection would not support a presumption and may be used to rebut any EIB presumption.[222] *See* § 478.13(e)(2), (f). However, as stated previously, the Department will not set a minimum threshold number of firearms to determine when a person is engaged in the business or occasionally selling firearms to enhance a personal collection. While not included in the regulatory text, the plain and ordinary meaning of the term ''occasional'' should be read to mean ''infrequent or irregular occurrence,'' [223] and to exclude firearm sales, exchanges, or purchases that are routinely or regularly made (even on a part-time basis).

The Department agrees with the comment that the phrase ''or for a hobby'' in 18 U.S.C. 921(a)(21)(C) has a meaning independent of the term ''collection.'' The rule therefore incorporates that phrase into the definition of ''personal collection,'' and expressly recognizes that firearms that may not be considered ''collectibles'' are also included in the definition of ''personal collection.'' Under this combined definition, firearms acquired ''for a hobby'' are, for example, those acquired for ''noncommercial, recreational activities for personal enjoyment, such as hunting, skeet, target, or competition shooting, historical re-enactment, or noncommercial firearms safety instruction.''

The Department agrees with commenters that the requirement, in the definition of ''personal collection of a licensee,'' that licensees must segregate business inventory from personal firearms in the proposed rule was not

[219] *See United States* v. *Miller,* 547 F.3d 718, 721 (7th Cir. 2008) (''Miller concedes that he kept the shotgun for security against intruders, rather than as part of a collection. It follows that § 2K2.1(b)(2) does not reduce Miller's offense level.''); *United States* v. *Bertling,* 510 F.3d 804, 807, 811 (8th Cir. 2007) (defendant was not entitled to sentencing guidelines calculation reduction for sporting purposes or collection where he possessed a handgun for personal protection); *United States* v. *Halpin,* 139 F.3d 310, 310–11 (2d Cir. 1996) (possession or use of a gun for purposes of personal protection, or protection of others, does not qualify a defendant for a sentence reduction for sporting purposes or collection); *United States* v. *Dudley,* 62 F.3d 1275, 1277 (10th Cir. 1995) (same); *United States* v. *Gresso,* 24 F.3d 879, 881–82 (7th Cir. 1994) (''[T]he Sentencing Commission allows a reduction in *penalty* for certain types of possession; these favored uses [of sporting purposes or collection] do not include self-protection. It is easy to understand why self-protection is not included. Attempting to distinguish as a practical matter between defensive and potentially offensive purposes might be next to impossible.''); *United States* v. *Cousens,* 942 F.2d 800, 803–04 (1st Cir. 1991) (same).

[220] *Cf. United States* v. *Hanson,* 534 F.3d 1315, 1319 (10th Cir. 2008) (''[T]he type of gun here, which is most commonly used for self-protection, weighs against Mr. Hanson's claim that he purchased it entirely for a sporting purpose.''); *United States* v. *Wilder,* 12 F. App'x 297, 299 (6th Cir. 2001) (some of the defendant's firearms were not suited for hunting or target practice, and so the U.S.S.G. 2K2.1(b)(2) sentence reduction did not apply); *United States* v. *Lewitzke,* 176 F.3d 1022, 1028 (7th Cir. 1999) (affirming the district court's finding that defendant's guns were not of the type normally used for target shooting and therefore weighed against granting the reduction); *United States* v. *Hause,* 26 F. App'x 153, 154 (4th Cir. 2001) (same with inexpensive handgun that was not the sort of firearm that would be considered collectible).

[221] *See United States* v. *Fifty-Two Firearms,* 362 F. Supp. 2d 1308, 1314–15 (M.D. Fla. 2005) (''[Defendant] did not merely make occasional sales or exchanges of firearms to enhance his personal collection or for a hobby. Rather, he possessed a significant number of inexpensive shotguns, rifles, and handguns for resale.''); *Hannah*' 2005 WL 1532534, at *3 (rejecting a defendant's argument that purchases and sales of firearms were made for the enhancement of his personal collection or for a hobby where ''[n]one of the firearms had any historical value''); *cf. United States* v. *Baker,* 501 F.3d 627, 629 (6th Cir. 2007) (affirming the district court's decision not to apply sentencing guideline 2K2.1(b)(2) because ''the gun was not 'stored in a manner showing that it was valued or treasured,' nor was it 'polished and treated as one would treat something that was part of a collection' ''); *United States* v. *Denis,* 297 F.3d 25, 33–34 (1st Cir. 2002) (same where a rifle was stored loaded and near cash to protect marijuana sales, rather than kept for sporting purposes as alleged); *United States* v. *Clingan,* 254 F.3d 624, 626 (6th Cir. 2001) (upholding denial of the collection sentence reduction, and noting that ''[n]one of the weapons were antiques or of other special value''); *United States* v. *Miller,* 224 F.3d 247, 251 (3d Cir. 2000) (affirming the district court's denial of the 2K2.1(b)(2) sentence reduction to the defendant's sentence for dealing in firearms without a license under 18 U.S.C. 922(a)(1)(A) because the firearms sold were not ''solely for sporting purposes or collection'' where the defendant was convicted for firearms trafficking); *United States* v. *Zakaria,* 110 F.3d 62, 1997 WL 139856, at *3 (4th Cir. 1997) (unpublished table decision) (''In the present case, there was substantial evidence showing that Zakaria purchased the firearms with the sole intent of selling them to his cousin for illegal export to Pakistan; not for placing them in his private collection.''); *United States* v. *Andrews,* 45 F.3d 428, 1994 WL 717589, at *3 (4th Cir. 1994) (unpublished table decision) (denying sentence reduction, saying ''[a]lthough Andrews possessed a large number of guns that were unloaded and on display in his den, they generally were common shotguns and rifles typically not 'collected' in the narrow sense of being 'collectors' items'''); *United States* v. *Gonzales,* 12 F.3d 298, 301 (1st Cir. 1993) (same with respect to accumulation by a felon of ''a small arsenal of handguns'' allegedly for sporting purposes or collection).

[222] *See, e.g., Approximately 627 Firearms,* 589 F. Supp. 2d at 1135 (''[Claimant] offered credible testimony that he was an avid hunter, and that 'maybe 20 to 25' of the firearms at issue were his personal guns. The firearms which [Claimant] held for personal use are not subject to forfeiture simply because the vast majority of seized firearms were 'involved in' [dealing without a license].'' (citation omitted)).

[223] *See* footnote 123, *supra.*

meant to apply to personal firearms ordinarily carried by the licensee. It was meant to apply only to personal firearms that are stored or displayed on the licensee's business premises, which should not be commingled with business inventory. For this reason, the applicable language in this final rule's definition of ''personal collection of licensee'' has been revised to clarify that it applies only to personal firearms ''when stored or displayed'' on the business premises.

The Department disagrees that transfer of firearms in a business inventory to a personal collection (or otherwise as a personal firearm) by an FFL ''happens as a matter of law'' when the FFL goes out of business. Under the GCA, 18 U.S.C. 923(c), a business inventory of firearms held by a licensee only becomes part of a ''personal collection'' (or otherwise a personal firearm) if the firearms were transferred from the licensee's ''business inventory into such licensee's personal collection'' (or other personal firearms) while the person is licensed, and one year has passed from the time of transfer. Additionally, such disposition or any other acquisition cannot have been made by the licensee for the purpose of willfully evading the restrictions placed on licensees. Under this rule, the licensee must take affirmative steps to accomplish this task.[224] It does not occur automatically by operation of law, and it would frustrate the operation of the GCA for such restrictions to apply to a licensee one day before discontinuance of business but not one day after.

13. Definition of ''Responsible Person''

Comments Received

Some commenters generally agreed with the Department's proposed definition of ''responsible person,'' stating it is important for accountability and oversight. Other commenters stated that the definition of ''responsible person'' needed more clarity because, without it, there may be unintended consequences for individuals engaged in legitimate firearms transactions, further complicating what they referred to as an already complex regulatory landscape. For instance, one commenter, a large FFL with thousands of employees, stated the definition of ''responsible person'' is overbroad and could capture hundreds of employees in its company. As examples, they listed logistics and shipping associates; marketing and sales associates; value stream managers; group and team leads; associates responsible for establishing and disseminating standard work and job instructions as they pertain to firearms manufacture, destruction, transfer, and testing; customer service associates; engineers; and product and project managers involved in firearms design and manufacture. The commenter added that, were all these employees to be considered responsible persons, it would become extremely burdensome to add them to their license as well as timely update the license as people join or leave the company. The commenter, therefore, suggested that the designation of a responsible person should be based on (1) the person's responsibilities, and (2) the licensee's designation of the person as a responsible person.

Another commenter stated that the proposed regulatory definition of ''responsible person'' is contrary to the statute at 18 U.S.C. 923(d)(1)(B), which they said describes an applicant for a license to include, ''in the case of a corporation . . . any individual possessing, directly or indirectly, the power to direct or cause the direction of the management and policies of the corporation, partnership, or association.'' The commenter stated that the proposed regulatory definition adds words that are not in section 923(d)(1)(B), specifically ''*business practices* of a corporation, partnership, or association *insofar as they pertain to firearms.*'' The commenter argued that ''practice'' is the ''actual performance'' of something or even ''a repeated customary action,'' regardless of whether the action is permitted by or contrary to the organization's management or policies. Despite the Department's explanation that store clerks or cashiers cannot make management or policy decisions with respect to firearms and are unlikely to be considered a ''responsible person,'' the commenter asked whether gun store clerks who direct ''business practices'' each time they perform their job duties could be captured under the regulatory definition. The commenter asserted that the Department was trying to capture more people as responsible persons than Congress intended by adding those emphasized phrases, which the commenter characterized as amorphous and unexplained.

Another commenter also stated the definition is too broad on grounds that the words ''indirectly'' and ''cause the direction'' are unclear terms. The commenter suggested the Department adopt the definition of ''responsible person'' from the explosives context, where it is defined in 18 U.S.C. 841(s) as ''an individual who has the power to direct the management and policies of the applicant pertaining to explosive materials.''

Department Response

The Department disagrees that the definition of ''responsible person'' is overbroad; it merely establishes by regulation the longstanding definition used on ATF Form 7/7CR, Application for Federal Firearms License, based on statutory language in 18 U.S.C. 923(d)(1)(B). The Department declines to fully adopt the definition set forth in the Federal explosives laws at 18 U.S.C. 841(s), because, although it is similar, it does not include persons who indirectly possess the power to direct or cause the direction of the management and policies of an entity, as identified in section 923(d)(1)(B). The Department does not intend, by means of this rule, to change how persons apply the current definition of ''responsible person'' on ATF Form 7/7CR. Nonetheless, the Department agrees with commenters that the term ''responsible person'' would benefit from some additional clarity, as follows. First, to help ensure that persons do not interpret the term ''business practices'' to cover sales associates, logistics personnel, human resources personnel, engineers, and other employees who cannot make management or policy decisions on behalf of the licensee with respect to the firearms business, the Department has removed the term ''business practices'' from the definition of ''responsible person'' in the final rule and intends to remove the term ''business practices'' from ATF Form 7/7CR in the future. Second, to ensure that persons understand the term ''applicant'' in 18 U.S.C. 923(d)(1)(B) to include as ''responsible persons'' sole proprietors and individuals with authority to make management or policy decisions with respect to firearms for companies (including limited liability companies) the definition in this final rule includes sole proprietorships and companies. This will make it clear that all licensees (including sole proprietors and limited liability companies) must

[224] 27 CFR 478.11 (definition of ''personal collection'' requires that for a firearm to be in a ''personal collection,'' the acquisition of the firearm must be recorded in the licensee's acquisition book, recorded as a disposition from the licensee's inventory to a personal collection, maintained and stored separately for one year, and not have been acquired or transferred with the intent to willfully evade the GCA); *cf. Zakaria,* 110 F.3d 62, 1997 WL 139856, at *2 (holding that licensee's sale to his cousin was from his business inventory as a matter of law, saying ''[w]e find that the district court reasonably interpreted 18 U.S.C. 923(c) (1994) and 27 CFR 178.125a (1996) to contain a default provision which provides that the sale of firearms held for less than one year which are not properly recorded pursuant to 27 CFR 178.125a(a), regardless of how acquired, are to be considered to be from the licensee's business inventory.'').

inform ATF of responsible persons who have the authority to make management or policy decisions with respect to firearms, and ensure they undergo a background check. At the same time, the Department does not intend to include in the definition of responsible persons those employees who have no authority to make management or policy decisions that impact the firearms portion of a licensed business.

14. Definition of ''Predominantly Earn a Profit''

a. Overbreadth

Comments Received

Numerous commenters expressed concern over the scope of the term ''predominantly earn a profit.'' Some commenters raised questions regarding ''intent to earn a profit,'' noting that it is only logical for a person selling a good, like a firearm, to want to earn a profit and that it would be ridiculous to expect any private seller to sell a firearm for less than its expected value. For instance, one commenter stated they had a small gun collection of primarily curio and relic firearms and would set a sales price based on their perception of the firearm's market value. This person stated that while they might make some money, their motivation is not to make a profit (noting that their last sale was to pay a medical bill) but they believe they would be required to get an FFL under the rule.

In a similar vein, some commenters opined that they would have to sell their firearms at a loss to avoid generating a ''profit'' and that the proposed rule would prevent an owner from receiving fair market value for their firearms. Similarly, other commenters pointed out how a person might avoid the ''intent'' requirement. One commenter asked if a person who states that their primary goal is not to earn a profit and acts as a nonprofit organization can, as a result, sell as many guns as they like without becoming licensed. Another commenter noted that under IRS rules of ''income,'' an even exchange of goods means there is no income or profit, and that if there is no profit, there is no business activity. This commenter believed that, if the buyer and seller determine the value of the items and make an even exchange, then the buyer should not be captured under the definition of ''predominantly earn a profit.'' Other commenters questioned who would determine who made a ''profit'' where a trade involved no cash, but a person instead traded a gun and a laser sight for a different gun.

Another commenter critiqued the definition, stating that it has been expanded to include any pecuniary gain, which they stated is overbroad. The commenter argued that the definition fails to recognize that all sales have some motive of pecuniary gain; otherwise a seller would give away or destroy their firearm. They stated that not only does the GCA expressly allow non-licensees to make occasional sales, but nothing in the GCA prohibits non-licensees from attempting to derive pecuniary gain from their occasional sales. One organization argued that the definition would apply even when a person is selling a firearm on consignment because, if a person consigned their firearm to an FFL, that person would be reselling with the intent to predominantly earn a profit and therefore would need to be licensed, even though the transaction is facilitated by an FFL.

Department Response

The Department disagrees that the rule's definition of ''predominantly earn a profit'' is overbroad. The definition merely implements the statutory definition ''to predominantly earn a profit'' in 18 U.S.C. 921(a)(22), which defines that term, in relevant part, to mean that ''the intent underlying the sale or disposition of firearms is predominantly one of obtaining pecuniary gain, as opposed to other intents, such as improving or liquidating a personal firearms collection.'' The Department agrees that some persons who sell firearms do not have the predominant intent to profit through repetitive purchase and resale even if they do intend to obtain pecuniary gain from firearms sales (*e.g.,* where the intent to obtain such gain is a secondary motive). However, even if a person has a predominant intent to earn a profit, it does not automatically follow that they are always engaged in the business. A predominant intent to profit through repetitive resale of firearms is only one element of being engaged in the business.

Under the BSCA, a person's intended use for the income they receive from the sale or disposition of firearms is not relevant to the question of whether they intended to predominantly obtain pecuniary gain. If a person must sell their previously acquired firearms to generate income for subsistence, such as to pay medical or tuition bills, they are still subject to the same considerations as persons who intend to sell their firearms to go on a vacation, increase their savings, or buy a sports car. If persons repetitively resell firearms and actually obtain pecuniary gain, whether or not it was for support or subsistence, that gain is evidence demonstrating the intent element of being engaged in the business. However, the Department emphasizes that a single or isolated sale of firearms that generates pecuniary gain would not alone be sufficient to qualify as being engaged in the business without additional conduct indicative of firearms dealing. For example, a person who bought a firearm 40 years ago and now sells it for a substantial profit to augment income during retirement is not engaged in the business because the person's intent was not to earn that pecuniary gain through repetitive purchases and resales of firearms.

With regard to the comment about nonprofit organizations, they can also have the predominant intent to earn a profit from the sale or disposition of firearms. They just do not distribute their profits to private owners (although their employees can receive compensation).[225] In response to commenters who questioned whether a like-kind exchange would result in a profit, or whether the IRS would consider it ''profit,'' the Department reiterates that the relevant standard is not whether an actual profit is earned under the definition of ''engaged in the business.'' The standard is whether the person who exchanged the firearms for money, goods, or services had the predominant intent to earn a profit—meaning to obtain pecuniary gain—through repetitive firearms purchases and resales.

The Department disagrees with some commenters who said that a person always has a *predominant* intent to earn a profit when selling or disposing of a firearm. For example, a person may wish to get rid of unsuitable or damaged firearms quickly, so the person intends to sell them at a loss for less than fair market value. In that case, there is only an intent to minimize a pecuniary loss, not obtain a pecuniary gain. Likewise, a person who only transfers firearms: as bona fide gifts; occasionally to obtain more valuable, desirable, or useful firearms for the person's personal collection; occasionally to a licensee or to a family member for lawful purposes; to liquidate (without restocking) all or part of a personal collection; or to liquidate firearms that are inherited, or

[225] *See Myths About Nonprofits,* Nat'l Council of Nonprofits, *https://www.councilofnonprofits.org/about-americas-nonprofits/myths-about-nonprofits* (last visited Mar. 7, 2024) (''The term 'nonprofit' is a bit of a misnomer. Nonprofits can make a profit (and should try to have some level of positive revenue to build a reserve fund to ensure sustainability.) The key difference between nonprofits and for-profits is that a nonprofit organization cannot distribute its profits to any private individual (although nonprofits may pay reasonable compensation to those providing services).'').

pursuant to court order, does not usually have a predominant intent to earn a profit from those activities. This is true even if the seller has a secondary motive to obtain pecuniary gain from those sales. To make this clear, the final rule now expressly states that any such evidence may be used to rebut the presumptions. *See* § 478.13(e), (f).

The Department agrees with commenters who suggested that a person who consigns firearms for sale (consignor) may have a predominant intent to earn a profit from the sale of the firearms; however, that does not end the inquiry because that person is often not devoting time, attention, and labor to dealing in firearms as a regular course of trade or business. The person engaged in the business is the seller who accepts the firearms on consignment (consignee), is paid to take the firearms into a business inventory for resale, and determines the manner in which to market and resell them on the consignor's behalf.[226] Like consignment-type auctioneers, firearms consignment businesses must be licensed because they are devoting time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms.

b. Government Proof of Intent To Profit Through Repetitive Purchase and Resale

Comments Received

Other commenters raised concerns that the proposed definition of ''predominantly earn a profit'' does not require a person to have actually obtained pecuniary gain. Some congressional commenters stated, ''under the proposed rule, the ATF would require someone to prove he or she is not a firearms dealer in instances where no firearms are actually exchanged or sold'' and opined that that situation was not consistent with the statute.

Some commenters stated that even though the proposed rule incorporates to ''predominantly earn a profit'' from the BSCA, the proposed definition includes language that directly contradicts the statute and legislative history of the GCA. They stated that Congress made clear that it is not necessary for the Government to prove profit in cases involving the repetitive purchase and disposition of firearms for criminal purposes or terrorism, meaning that it is necessary for the Government to prove profit in all other cases. Thus, they argued that the added phrase ''[f]or purposes of this definition, a person may have the intent to profit even if the person does not actually obtain pecuniary gain from the sale or disposition of firearms'' and explanation from ATF that one can be a dealer without ever making a purchase or sale are both contrary to the statute. Commenters stated that ATF may not relieve itself of the congressionally imposed burden to prove profit. Another commenter pointed out that eliminating the need for profit is in tension with the concept of being in a business; if a business does not make a profit, then they cease to exist.

Moreover, at least one commenter disagreed with all the cases that were cited in support of the claim that the Government does not need to prove that the defendant actually profited. The commenter claimed that three of the cases cited—*United States* v. *Wilmoth,* 636 F.2d 123 (5th Cir. Unit A Feb. 1981), *United States* v. *Mastro,* 570 F. Supp. 1388 (E.D. Pa. 1983), and *United States* v. *Shirling,* 572 F.2d 532 (5th Cir. 1978)—were decided before there was any statutory mention of ''profit'' as it relates to dealing. They noted that two other cases—*Focia,* 869 F.3d 1269 and *United States* v. *Allah,* 130 F.3d 33 (2d Cir. 1997)—were not on point because in both cases the Government had shown that defendants profited.

Department Response

The Department disagrees with commenters who said that the GCA requires that a person actually obtain pecuniary gain. The only ''profit'' element in the GCA—both before and after the BSCA was enacted—is the intent to profit through the repetitive purchase and resale of firearms. This is because the statutory terms ''to predominantly earn a profit'' through the repetitive purchase and resale of firearms in 18 U.S.C. 921(a)(22), and ''with the principal objective of livelihood and profit'' in 18 U.S.C. 921(a)(23), are both defined to mean ''the intent underlying the sale or disposition of firearms is predominantly one of obtaining . . . pecuniary gain.'' One does not need to realize a profit to have the intent to profit.

The Department does not agree with commenters who argued that the proviso concerning the disposition of firearms for criminal purposes demonstrates otherwise. The statement that ''proof of profit shall not be required'' in that proviso requires neither proof of profit nor proof of intent to profit for persons who engage in the regular or repetitive purchases and dispositions of firearms for criminal purposes or terrorism. *See United States* v. *Fifty-Two Firearms,* 362 F. Supp. 2d 1308, 1324 (M.D. Fla.), *adopted by* 362 F. Supp. 2d 1323 (M.D. Fla. 2005) (''[P]roof of profit motive is not required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism.'' (citing 18 U.S.C. 922(a)(22) and Eleventh Circuit Pattern Jury Instruction No. 34.1). Reading that proviso to, by negative implication, require proof of profit—and intent to profit—with respect to other forms of engaging in the business would be contrary to the plain text of the definition of ''to predominantly earn a profit,'' which refers to the ''intent underlying the sale or disposition of firearms.'' 18 U.S.C. 921(a)(22); *see also id.* 921(a)(23) (definition of ''with the principal objective of livelihood and profit,'' similar). It would also be contrary to decades of Federal case law on 18 U.S.C. 922(a)(1).[227]

Some commenters asserted that, because some of the criminal cases cited in the proposed rule referenced the fact that the defendant actually profited from firearms sales, the cases support their conclusion that actual profit must be proven in an engaged in the business case. The Department disagrees. Of course, proof of actual profit may be presented in a case, but that does not mean it is required. Proof of actual profit is merely cited by courts in cases, such as *Focia,* 869 F.3d at 1282 (defendant ''immediately turned around and sold them at a steep profit''), and *Allah,* 130 F.3d at 44 (defendant ''had several people bring him 'dough' from selling guns for him 'in the streets' ''), as evidence that supported findings that the defendant had the requisite intent to profit. But evidence of actual profit is not necessary where the totality of the facts otherwise demonstrates the predominant intent to profit. For example, if the defendant admitted to an undercover officer that he wanted ''to make a whole lot of money'' from reselling the firearms to the officer, that evidence would likely be sufficient to prove a predominant intent to earn a profit from those sales. Moreover, where a person engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism, no proof of profit, including, as explained above, the intent to profit, is required at all in an engaged in the business case. *See* 18 U.S.C. 921(a)(22).

[226] *See, e.g., United States* v. *Strunk,* 551 F. App'x 245, 246 (5th Cir. 2014) (Defendant ''without being licensed, sold firearms entrusted to him by others for the purpose of sale. Such conduct is unquestionably prohibited by the legislation's text.'').

[227] *See* footnote 96, *supra.*

c. Suggestions on Meaning of Profit

Comments Received

Numerous commenters stated that the definition of ''predominantly earn a profit'' with its presumptions will capture practically all firearms owners who wish to sell their personal or inherited firearms because the value of firearms typically increases over time and will thus always result in a profit. Several commenters stated that profit should be defined to avoid misinterpretation while others asked how profit should be calculated or made suggestions. For example, one commenter asked if the labor to customize a firearm or any additional parts that are added should be included in a calculation of profit.

Similarly, numerous commenters pointed out that determining profit does not account for inflation and indicated that it should. Commenters provided examples of how they would not earn a profit, or would make a minimal profit, from the sale of a firearm due to inflation. For example, one commenter posited that if a person purchased a firearm for $600 ten years ago and sold it in the present for $750, this could be viewed as making a profit, but it would actually be a loss in real terms because the purchasing power of $600 was greater ten years ago than the purchasing power of $750 is today due to inflation. At least one commenter asserted that ATF's proposed definition of ''profit'' is problematic under the U.S. tax code, as inflation is not allowed to be accounted for in the ATF definition, even though it is an adopted measure of the price of all goods.

Gun collectors' associations said the definition does not take into account any other expense or time value of money associated with the sale of the firearm, which is a part of any normal calculation of ''profit'' and hence is beyond proper basis of an interpretive regulation. Additionally, they stated that the costs gun collectors incur to attend events should be factored into any reasonable definition of ''profit.''

Similarly, to account for the change in time in the fair market value of goods, another commenter proposed adding language providing that ''[i]f a private individual sells a firearm that they have purchased for more than the original purchase price, they are not considered to be selling the firearm for the purpose of primarily making a profit if the fair market price of the firearm has increased since the original date of purchase.''

Department Response

The Department agrees that a person who liquidates inherited firearms from a personal collection at fair market value, absent additional circumstances indicating otherwise, typically does not have a predominant intent to profit from those sales. While the person may have an intent to receive pecuniary gain when they sell these firearms and may or may not have a predominant intent to profit, the person would not be ''engaged in the business'' because liquidating this one set of inherited firearms does not constitute dealing as a regular course of trade or business. Nevertheless, because the Department believes that persons in such a scenario typically do not have a predominant intent to profit, the Department has incorporated, as conduct that does not support a presumption, and as rebuttal evidence, a person who only ''liquidate[s] firearms [t]hat are inherited.'' § 478.13(e)(5)(i), (f).

In response to commenters who said that any profit should account for inflation, or expenses incurred, again, the statute does not require proof of actual profit. The statute's and rule's focus is on the person's predominant intent to profit, not on whether a person actually profits. Because the focus is on a person's intent, it makes no difference whether the costs or inflation mentioned by the commenters are included in the sales price or in assessing actual profit.

The Department disagrees with the commenter who suggested that a private individual automatically does not have an intent to profit if they sell a firearm that was purchased for more than the original purchase price if the fair market price of the firearm has increased since the original date of purchase. The Department declines to make this a blanket exception or rebuttal evidence to the current presumptions because the fair market value of the firearm may have increased substantially more than the original purchase price. The details of any particular situation may vary, and those facts may impact the determination of intent. Based on these facts, the seller may or may not have had a predominant intent to earn a profit from that sale.

d. Other Suggestions Related to Definition of ''Predominantly Earn a Profit''

Comments Received

Many commenters proposed various changes to the definition of the term ''predominantly earn a profit'' that they felt would narrow the scope of when a person has intent to predominantly earn a profit such that they are ''engaged in the business'' of dealing in firearms. Proposed exceptions included excluding when a person earns less than $5,000 per year or when they sell fewer than ten guns a month. One commenter suggested that certain scenarios be excluded because while there may be monetary gain there is no desire to increase the collection or buy firearms. These scenarios include liquidation at fair market value of inherited firearms or firearms passed down through a family member, liquidation of firearms at fair market value due to financial hardship or disability, and liquidation of firearms at fair market value due to loss of interest or change in a hobby.

Similarly, one commenter pointed out that ''predominantly'' under 26 U.S.C. 118(c)(3) means ''80 percent or more'' and argued that ATF's proposed definition should be consistent with this statutory provision in the Internal Revenue Code. Therefore, the commenter suggested that ATF's definition of dealer should be amended to someone who engages in selling or disposing of firearms ''where the intent is to obtain a pecuniary gain in 80 or more of the total transactions involving firearms as defined by'' 18 U.S.C. 921.

Another commenter suggested that the term be revised to be clear that a collector can liquidate all or part of their collection by having a table at a gun show without requiring them to become a Type 01 FFL. Still another commenter suggested that the text should make clear the sources or methods used to acquire the firearm that is subsequently resold to ''predominantly earn a profit.''

Department Response

The Department disagrees that the scope of the PEP presumptions should be limited to when a person earns less than $5,000 per year from selling firearms, or when they sell fewer than ten guns per month. The amount of money a person makes when intending to earn a profit through repetitively purchasing and reselling firearms may be relevant in determining whether a person is engaged in the business. The fact that a person earns a large amount of profit from repetitively reselling firearms may be evidence that a person had a predominant intent to profit from those sales. However, there is no statutory requirement that a person make a certain amount of money (or any money at all) to have a predominant intent to profit. Persons who operate a part-time firearms business that earns less than $5,000 per year, or even a firearms business that loses money due to poor salesmanship or lack of demand, would still be engaged in the business

if they devote time, attention, and labor to dealing with the predominant intent to profit through repetitive purchases and resales of firearms. As stated previously, it is the seller's intent to predominantly earn a profit that determines whether a person needs a license, not the number of sales or amount of profit.

The Department disagrees that the sale of firearms at fair market value due to financial hardship or disability is evidence sufficient to exclude a person from being considered engaged in the business, or to rebut the presumptions. The statute's definition of ''engaged in the business'' does not create an exception for people who intend to engage in firearms dealing to earn income for support or subsistence; the definition as amended by the BSCA focuses only on a person's devotion of time, attention, and labor to that business and intent to earn a profit, not the uses to which they put any resulting profit or income. As a result, providing evidence that a person is engaging in the business of firearms dealing for livelihood reasons does not rebut any of the elements that constitute being engaged in the business.

As to the suggestion that the term ''predominantly'' be defined consistently with 26 U.S.C. 118(c)(3) as ''80 percent or more,'' such that 80 percent of the transactions must be for pecuniary gain, the Department declines to do this. First, 26 U.S.C. 118(c)(3) is a definition of ''predominantly'' that is used to determine whether a regulated public utility that provides water or sewage disposal services may exclude certain amounts expended on those services from their gross income. This calculation has no connection or similarity to intent, let alone the context of firearms sales. Second, the GCA contains no such limitation. A person may have the predominant intent to profit from the sale or offer to sell a single firearm, even if the person has no such intent with respect to other firearms being sold.[228]

In response to a commenter who suggested that the regulations be changed to make it clear that a collector can liquidate all or part of their collection by having a table at a gun show without a license, the Department has revised the final rule to state that reliable evidence that the person resells firearms only occasionally to obtain more valuable, desirable, or useful firearms for their personal collection, or to liquidate a personal collection, does not support a presumption and can be used to rebut any presumption. § 478.13(e)(2) and (4), (f).

15. Presumptions That a Person Intends to Predominantly Earn a Profit

Comments Received

Commenters stated that none of the individual presumptions that a person has the intent to predominantly earn a profit are supported by the Federal statute and raised concerns that they generally penalize entirely innocent and natural conduct of non-licensee sellers. Commenters stated these criteria are overbroad and fail to differentiate between genuine business activity and casual or incidental actions related to firearms. They stated that it is unfair for ATF to presume an intent to profit in scenarios where no such intent exists and that these presumptions make it effectively impossible for an unlicensed person to sell their firearm without running afoul of the rule. Indeed, one commenter stated that all avenues to make a personal sale were cut off and that he ''cannot fathom how [he is] supposed to sell ANY firearm without being presumed to be engaged in the business under these rules. This rule says that [he] can sell part of [his] collection, but [he] cannot see a way to do so without being presumed to be engaged in the business under this rule.'' At least one commenter stated that all the presumptions ignore the statutory requirement that the intent ''underlying the sale or disposition of firearms is predominantly one of obtaining pecuniary gain.''

Similarly, one commenter noted that determining when someone acts to ''predominantly earn a profit'' requires not determining that a profit was made, but rather, the underlying motivating factor for that person's actions. The commenter disagreed that any of the presumptions listed are indicators of such motivation; rather, they said, these presumptions reflect efficient and timely ways to sell a firearm and do not speak at all to the person's motivation when buying the firearm initially. For instance, they said, a person who wants to sell their car will take all actions possible to get the best price for it, such as advertising, providing maintenance records, renting space to list it online or a visible place to park it. A person wanting to sell their firearm would take similar steps, but these actions that trigger the presumptions do not shed light on the motivation for the purchase or transaction.

A few other commenters were concerned about the fact that they have owned firearms for a long time and are reaching an advanced age at which they will need to sell them. One such commenter stated, ''The idea of a profit is to sell something for more than it was purchased for. In my collection I have firearms that were obtained over 40 years ago. Inflation has raised their value so that any sale will make a profit. This means I am a dealer.'' Another explained that he is not a collector per se, but is a firearms competitor who thus has a number of firearms that ''one day I must dispose of due to my advancing age. This would eliminate me from making private sales from my own holdings. The sale of which would generate a 'profit' since all were bought years ago when prices were much lower. The only choice this would leave me would be to sell on concession through a dealer . . . if I could find one willing to take the goods.''

Commenters stated that many businesses have a large inventory of firearms for business purposes but are not licensed; these include armored car services, security companies, farmers, ranchers, and commercial hunting operations. If ''predominantly earn a profit'' is separate from ''engaged in the business'' as a set of presumptions, the commenters added, then a security company keeping track of its firearm inventory and the cost of obtaining those firearms for tax or other reasons would be captured under any of the presumptions listed under ''predominantly earn a profit.'' Or a hunting outfitter with a large inventory of firearms for client use would easily be captured under a ''predominately-earn-a-profit'' presumption if they have security services like monitored alarms or cameras. The commenters concluded that the rule might therefore have the unintended consequence of reducing public safety if some people avoid certain security measures, such as monitored alarms, to avoid being presumed to be engaged in the business because they qualified for one of the ''predominantly earn a profit'' presumptions.

One comment noted that ''while this set of presumptions is separate from the presumptions that establish that a person meets the definition of 'engaged in the business,' evidence of the conduct described in this set of presumptions can serve to rebut evidence of conduct that, under paragraph (c)(4) (now § 478.13(e)) of the Proposed Rule's definition of 'engaged

[228] The term ''predominant'' is commonly defined as ''more noticeable or important, or larger in number, than others.'' *Predominant,* Cambridge Online Dictionary, *https://dictionary.cambridge.org/us/dictionary/english/predominant* (last visited Mar. 17, 2024); *see also Predominant,* Oxford English Dictionary, *https://www.oed.com/dictionary/predominant_adj?tab=meaning_and_use#28860543* (last visited Mar. 17, 2024) (''Having ascendancy, supremacy, or prevailing influence over others; superior, predominating.'').

in the business,' is presumed not to be engaged in the business.'' They suggested that ATF further clarify this.

Department Response

The Department disagrees that the presumptions that separately address the BSCA's new intent element—''to predominantly earn a profit'' through the repetitive purchase and resale of firearms—penalize innocent and natural conduct of sellers who are not engaged in the business. Nothing in this rule creates any new penalties. The PEP presumptions serve only to establish the intent element. Even when that element is satisfied, a person would not be engaged in the business unless the other statutory requirements are present, including the requirements that the person ''devote[ ] time, attention, and labor to dealing in firearms as a regular course of trade or business'' and that the person is engaging, or intends to engage, in ''the repetitive purchase and resale of firearms.'' 18 U.S.C. 921(a)(21)(C).

As the preamble and regulatory text explain, the EIB presumptions are not exhaustive of the conduct that may show that, or be considered in determining whether, a person is engaged in the business of dealing in firearms. *See* § 478.13(g). There are many other fact patterns that could support a finding that a person is engaged in the business requiring a license. The presumptions are tools that assist persons, including firearms sellers, investigators, and fact finders, to understand a set of common situations that have been found over the course of decades to indicate that a person is engaged in the business. Similarly, these PEP presumptions are not the only fact patterns that could support a finding that a person has a predominant intent to earn a profit, but they are tools to assist in assessing the element of intent. At the same time, there are other fact patterns, such as where a person advertises a valuable collectible firearm for sale from a personal collection that could generate a substantial profit, that would not require a license. The fact that the collector, or even a company, intends to earn a profit from the sale or disposition of a firearm is not, by itself, dispositive as to whether that person is engaged in the business of dealing in firearms requiring a license. These presumptions apply only to an individual's or entity's predominant motivation in selling the firearm, and like other presumptions, they may be refuted with reliable evidence to the contrary.

The Department disagrees that these presumptions do not address a person's motivation. First, as stated previously, actual profit is not a requirement of the statute—it is only the predominant intent to earn a profit through the repetitive purchase and resale of firearms that is required. Indeed, a person may repeatedly advertise and display firearms for sale, and therefore demonstrate a predominant intent to earn a profit from repeatedly reselling the firearms purchased, but never actually find a buyer. Second, as stated previously, intent appropriately may be inferred from a person's words or conduct demonstrating such intent.[229] The motivation to predominantly obtain pecuniary gain from the repetitive sale or disposition of firearms can be demonstrated when a person takes certain preliminary steps to earn a profit, such as those reflected in the PEP presumptions. Generally, persons who do not intend to profit from firearms sales are not going to expend time, attention, labor, and money to repetitively advertise, secure display space, maintain profit documentation, hire security, set up business accounts, or apply for business licenses. And even if they do expend such time, attention, and labor without a predominant intent to earn a profit, the person can bring forward reliable rebuttal evidence to refute the presumed intent.

The Department disagrees with the commenter who stated that a collector who holds firearms in a personal collection for many years would always show a profit due to inflation when they are sold, and would therefore automatically be considered a dealer. As stated previously, a showing of actual profit is not dispositive as to whether a person is engaged in the business. Rather, it is the predominant intent of obtaining pecuniary gain from the repetitive purchase and resale or disposition of firearms that matters. *See* 18 U.S.C. 921(a)(22). However, a person who is occasionally selling firearms from a personal collection to enhance it, or who liquidates it, typically does not have that intent, which is why this final rule states that reliable evidence of those activities and intent does not support a presumption and may be used to rebut any presumption. *See* § 478.13(e), (f).

The Department agrees that security companies, farmers, ranchers, and hunting outfitters that do not purchase firearms primarily for resale would be unlikely to have a predominant intent to earn a profit from liquidating their businesses' firearms, particularly since these firearms have likely lost their value over time due to constant use and handling. Non-firearms-dealing businesses may simply want to quickly sell them in bulk to a licensee for less than fair market value, in order to purchase new firearms. However, even if such businesses were to resell their firearms with a predominant intent to profit, that would not automatically mean that they were engaged in the business of dealing in firearms. The intent to profit is only one element of being engaged in the business; the other elements of dealing would also have to be established. Therefore, if these businesses engaged in conduct that falls under one of the PEP presumptions and are presumed to have a predominant intent to profit, that does not mean they are also necessarily presumed to be engaged in the business of dealing in firearms.

The PEP presumption on recordkeeping is about keeping records to document, track, or calculate profits and losses from firearms purchases and resales, not about general recordkeeping of a firearms inventory or merely the cost of obtaining the firearms. Nonetheless, to avoid confusion as to when it applies, this PEP presumption has been revised to read, ''[m]akes and maintains records to document, track, or calculate profits and losses from firearms repetitively purchased for resale.'' § 478.13(d)(2)(iii). Therefore, as revised, the presumption is clarified to show that it does not include persons who merely keep track of their firearms or what they spend on them.

The Department does agree that the PEP presumption on securing a business security service to protect inventory is somewhat overbroad as drafted in the NPRM, and has therefore limited it in this final rule to maintaining security for both firearms assets and repetitive firearms transactions. *See* § 478.13(d)(2)(v). While some businesses may purchase firearms, and eventually liquidate them, such activity may be for reasons completely unrelated to any profit motive for the firearms transactions. In contrast, if they secure business security services to protect both their firearms assets and transactions, they are presumed to have a predominant intent to profit from those transactions. The focus of the licensing provisions in the GCA is on firearms transactions, not merely storing or maintaining firearms as assets. So, for example, if a business or other person merely purchases firearms for their own use, but not to enter into transactions involving those firearms, they would not fall under this presumption because it is unlikely they would hire business security to protect firearms transactions.

The Department declines to adopt a commenter's suggestion that evidence of

[229] *See* footnote 186, *supra.*

conduct identified in the PEP presumptions be used to ''rebut'' conduct not presumed to be engaged in the business (listed in paragraph (c)(4) of the NPRM's definition of engaged in the business, and now in § 478.13(e)). Section 478.13(e) is not a list of rebuttable presumptions. Rather, it is a nonexhaustive list of conduct that does not support a presumption of engaging in the business. As such, reliable evidence that a person is or was engaging only in such conduct can be used to rebut any presumption. In addition, the rule has been revised to state that the examples of rebuttal evidence set forth in the rule are not an exhaustive list of evidence a person may present to rebut the presumptions. *See* § 478.13(g).

16. PEP Presumption—Promotion of a Firearms Business

Comments Received

Several commenters disagreed with the inclusion of ''[a]dvertises, markets, or otherwise promotes a firearms business (*e.g.,* advertises or posts firearms for sale, including on any website, establishes a website for offering their firearms for sale, makes available business cards, or tags firearms with sales prices), regardless of whether the person incurs expenses or only promotes the business informally'' as a presumption in determining whether a person has the intent to predominantly earn a profit.

First, commenters noted that Congress explicitly rejected limitations on the private transfers of firearms pursuant to classified ads and gun shows, implying that ATF cannot now include in its rule a presumption that advertising or promoting a firearms business shows predominant intent to profit. Additionally, commenters stated that such advertisements in a classified advertisement hardly qualify someone as having such intent and that this is criminalizing protected behavior. For instance, the commenters said, if a person is liquidating a personally owned NFA weapon because of a move to a State where possession of the item would be unlawful, they believed that the presumption would capture such a person who posts an advertisement on the internet to sell their NFA weapon even if they lose money on the sale. In fact, stated one commenter, the presumption is so broad it could apply to posting even a single firearm for sale on a website, which is a common occurrence where the seller did not purchase the firearm with intent to profit and is most likely losing money on the sale. The commenter stated that there is ''no indicia that a seller who posts on a website is doing so for pecuniary gain'' so ''the presumption lacks any connection to the statutory definition of 'predominantly earn a profit.' ''

Similarly, a couple of gun collectors' associations stated this first presumption essentially limits all sales to word of mouth if a seller does not want to be captured under the presumption. A third association added, ''[m]ost who collect firearms or engage in the sale of firearms for a hobby are willing to buy or willing to sell, but this in and of itself [does] not establish by a preponderance that they are doing so to 'predominately earn a profit'. . . . The changes in the law did not provide that a person could not advertise a firearm for sale, put a price tag on it, place it for sale on the internet, or rent a table at a gun show.'' In another commenter's view, the presumptions also preclude word-of-mouth sales. They stated that the definition of ''engaged in the business'' does not require that a firearm actually be sold, so long as the person holds themselves out as a dealer. So, they added, ''[i]n other words, if I *converse* with another person and *offer* to sell a personal firearm or represent to that person that I have a willingness, and ability, to purchase and/or sell other personal firearms [which occurs regularly if one is a collector], I am a Dealer. I would ask how, exactly, a person who wanted to actively seek out and add firearms to his/her collection would do so if you are not allowed to actually converse about it or negotiate with the owner of that firearm? . . . You can't 'spread the word' among other people as that activity also presumes you are a dealer.'' One company raised a concern over whether certain brand ambassadors that promote company products, or associates that go to trade shows who promote their company, would now be presumed to be engaged in the business of dealing in firearms.

In contrast, another commenter made a suggestion to strengthen this presumption with regard to online sales advertising because they found, through their own research, that the number of online sales advertisements for firearms through sites such as Armslist was overwhelmingly listed by unlicensed sellers rather than licensed dealers. They suggested that ATF should also consider stating that any person who engages in online conduct that falls within this presumption on more than one discrete occasion will qualify for a rebuttable presumption that the person is ''engaged in the business'' of firearms dealing. ''Put differently,'' they explained, ''the [I]nternet is the epicenter of the unregulated firearm sales market—and repeatedly advertising for sales online should be presumptively considered to be holding oneself out as a dealer. Plainly describing such an additional rebuttable presumption . . . would make it much clearer that a person's second or subsequent use of online advertising, marketing, or posting of firearms for sale puts the burden on the seller to provide rebuttal evidence demonstrating that their multiple online advertisements are not engaging in the business of firearms dealing.''

Department Response

The Department disagrees that the presumption that a person demonstrates a predominant intent to profit from selling firearms if the person ''advertises, markets, or otherwise promotes a firearms business'' is unfounded. Advertising or promoting a firearms business has long been recognized as a primary way of increasing sales and profits [230] and nothing in this rule prohibits or criminalizes isolated private transfers of firearms using classified advertisements and at gun shows. The presumption is narrowly tailored based on the Department's regulatory and enforcement experience, court decisions with similar fact patterns, and the investigations and prosecutions it has brought over the years. Because promoting a firearms business requires investing time and money, persons typically do not engage in such activities without intending to profit from resulting sales and recoup potential advertising costs in the process. As a result, advertising or promoting a firearms business is activity that indicates a person has a predominant intent to profit from firearms sales. This presumption does not prevent or hinder individuals from advertising to promote occasional private transactions, as intent to

[230] *See, e.g., The Importance of Marketing for Your Firearms Company,* The Coutts Agency, *https://couttsagency.com/digital-marketing-for-firearms-companies* (last visited Mar. 18, 2024) (''Whether you're an established name in the firearms manufacturing sector or you're a new firearm company looking to find your niche on the national level, marketing is how you'll achieve your goals.''); Joshua Claflin, *Maximizing ROI With Effective Firearms Marketing Tactics (The Complete Guide),* Garrison Everest (Nov. 24, 2023), *https://www.garrisoneverest.com/firearms-marketing/maximizing-roi-with-effective-firearms-marketing-tactics-complete-guide* (''Marketing serves as the bridge between firearms businesses and their target audience. It's not just about promoting products; rather, it's about building firearm brand recognition, establishing trust, and nurturing long-term customer relationships.'').

predominantly earn a profit is just one element of being engaged in the business.

Nonetheless, the Department acknowledges commenters' worries that an advertisement for an isolated firearms sale might cause them to be presumed to have a predominant intent to profit through the repetitive purchase and resale of firearms. Therefore, to increase the likelihood that promoting or advertising a firearms business as covered by this presumption relates to persons who predominantly intend to earn pecuniary gain from the sale of firearms, the presumption has been revised to add the words ''repetitively or continuously'' before ''advertises, markets, or otherwise promotes a firearms business.'' § 478.13(d)(2)(i). Thus, persons who do not repetitively or continuously advertise or otherwise promote a firearms business are excluded from the presumption that they predominantly intend to profit from repetitive sales of firearms. Of course, like the other presumptions, this one may be rebutted with reliable evidence to the contrary.

With regard to employees of licensees who promote a firearms business, such individuals do not need to be licensed because businesses ''carry out operations through their employees,'' and no transfer or disposition of firearms occurs when they are temporarily assigned firearms for business purposes. ATF Ruling 2010–1, *Temporary Assignment of a Firearm by an FFL to an Unlicensed Employee,* at 2 (May 20, 2010), *https://www.atf.gov/firearms/docs/ruling/2010-1-temporary-assignment-firearm-ffl-unlicensed-employee/download.* These employees operate under the license of the business, and the business sells firearms under the requirements of the GCA (*e.g.,* background checks). However, a contractor who is not an employee would demonstrate a predominant intent to earn a profit from firearms sales by promoting another person's firearms business, or posting firearms for sale for someone else, particularly a company. This does not mean that such persons are themselves engaged in the business, but they are promoting a firearms business with the predominant intent to earn a profit from the sale or distribution of those firearms, and thereby assisting another person engaging in the business of dealing in firearms without operating under their license.

The Department also disagrees with the alternative suggestion that any person who advertises firearms online on more than one discrete occasion should qualify for a rebuttable presumption that the person is ''engaged in the business'' of firearms dealing. The presumption relates to advertising a ''business,'' and the Department recognizes that persons who wish to dispose of all or part of a personal collection, or ''trade up'' to enhance their personal collection, for example, are likely to occasionally offer for resale firearms from their personal collection online. To be engaged in the business, the Department believes those offers must be accompanied by additional evidence. That could include repetitive offers for resale within 30 days after the firearms were purchased, or within one year after purchase if the firearms are new or like-new in their original packaging or the same make and model, or a variant thereof. That is not to say that other fact patterns will not demonstrate engaging in the business; however, the Department has carefully considered these issues and narrowly tailored the presumptions in this rule based on its regulatory and enforcement experience, court decisions with similar fact patterns, and the investigations and prosecutions it has brought over the years.

17. PEP Presumption—Purchases or Rents Physical Space

Comments Received

Commenters disagreed with this PEP presumption that purchasing, renting, or otherwise securing or setting aside permanent or temporary physical space to display firearms at gun shows or elsewhere is an indication of intent to profit. Commenters stated this presumption is contrary to the statutory protection for those who wish to sell all or part of a personal collection and contrary to Congress's intent in passing 18 U.S.C. 923(j), which permits licensees to temporarily conduct business at certain gun shows. Citing FOPA's legislative history, S. Rep. No. 98–583 (1984), one commenter stated that Congress's intent in passing section 923(j) was to put licensed dealers at parity with non-licensees, whom Congress assumed could already sell at gun shows. Further, another commenter stated that, ''[t]he act of renting space at a gun show is obviously protected under the BSCA if the person is only making 'occasional sales, exchanges, or purchases' or if the person is using the space to sell 'all or part of his personal collection of firearms.' ''

At least one commenter indicated that collectors or individuals often rent temporary physical space at gun shows to dispose of any excess guns such as World War II firearms, like Mausers, and to complete firearms transactions face-to-face. Likewise, at least one commenter stated that often private persons display firearms at a gun show, and they will have FFLs process the transactions. This does not demonstrate that these private persons are dealers with an intent to profit, they said. At least one commenter said that a space to store firearms is not an indicator of intent to profit or being engaged in the business; rather, that person might simply want to store their firearms safely.

One commenter stated that these criteria are so broad ''that a seller of popcorn who rents a table at a gun show would presumptively be engaged in the business of selling firearms under the proposed rule.'' Another commenter went so far as to state that this presumption ''would turn literally every gun owner who has ever sold a gun into an unlicensed firearms dealer'' because everyone who possesses firearms sets aside physical space to display or store them.

Department Response

The Department agrees with commenters that collectors may secure or set aside physical space in which to store firearms from their personal collections that they offer for resale, including at a gun show. For this reason, the presumption in the final rule deletes the words ''or store,'' and replaces the phrase ''otherwise secures or sets aside'' with ''otherwise exchanges (directly or indirectly) something of value to secure,'' to ensure that merely setting aside space to store or display firearms is not included in the presumption, and that only persons who secure space at a cost in order to profit from firearm sales are included. *See* § 478.13(d)(2)(ii). In this regard, the Department continues to believe that it is appropriate to presume that persons who repetitively or continuously secure permanent or temporary physical space at a cost to display firearms they offer for resale primarily intend to earn a profit from those sales. This is true even if the firearms are sold at a gun show, and nothing in the GCA purports to authorize non-licensees to rent space at a gun show to deal in firearms without a license. The GCA provision addressing guns shows, 18 U.S.C. 923(j), authorizes licensees to conduct operations temporarily at gun shows under certain limited conditions, not non-licensees. Again, this does not mean that a collector who occasionally sells a firearm from a personal collection at a gun show is required to be licensed. The presumption means only that the collector likely has a predominant intent to obtain pecuniary gain from the

sale of that firearm. To be considered a dealer, evidence would be required to show that the collector has devoted time, attention, and labor to dealing in firearms as a regular course of trade or business. And if a proceeding were to be brought against a collector, that person could refute the presumption with reliable evidence to the contrary.

To make this clear, the final rule has been revised to state that certain conduct, including liquidating a personal collection or occasionally reselling firearms to improve a personal collection, is conduct that does not support a presumption that a person is engaged in the business. *See* § 478.13(e)(2) and (4). Additionally, to increase the likelihood that this presumption targets persons who predominantly intend to earn pecuniary gain from the sale of firearms, the Department has revised the presumption to add the words ''repetitively or continuously'' before ''purchases, rents, or otherwise exchanges (directly or indirectly) something of value to secure permanent or temporary physical space to display firearms they offer for resale.'' *See* § 478.13(d)(2)(ii). The word ''continuously'' was added to cover instances where a person buys a single location and occupies it for this purpose over an extended period. This presumption includes nontraditional commercial arrangements to secure display space (such as charging a higher membership or admission fee in exchange for ''free'' display space, or authorizing attendance at a gun show or sales event in exchange for something else). The phrase ''directly or indirectly'' was added to include indirect exchanges and clarify that nontraditional commercial arrangements are included. The presumption excludes persons who do not repetitively or continuously purchase, rent, or otherwise exchange something of value to secure physical space to display firearms they offer for resale. Of course, like the other presumptions, this one may be rebutted with reliable evidence to the contrary. *See* § 478.13(f).

18. PEP Presumption—Records of Profits and Losses

Comments Received

Numerous commenters objected to including records to calculate profits or losses from firearms purchases and sales as a presumption that determines one has intent to earn a profit as a dealer in firearms because it is a common behavior for any firearms owner to keep such records. The commenters stated that the presumption is overbroad based on their belief that a person who keeps any sort of records of firearms, often for insurance purposes just like they would for a car or home, would be considered a dealer. They noted that keeping such records is important not only for insurance purposes but also to help with recovery of a stolen firearm. Some commenters also thought that this presumption could hurt collectors who have a Type 03 license because they are required to keep a collector's bound book where they record their purchases and sales. They noted that, under this presumption, ATF could presume they have the wrong type of license and they would be forced to get a dealer's license. Similarly, some commenters noted that the IRS requires investors or collectors to keep information on purchase history including acquisition date, improvement to the asset and cost of the asset to determine taxable gain upon sale. An additional commenter stated that businesses like a security company would keep track of their firearms inventory and track the cost of obtaining those firearms for tax and other reasons, but the law surely does not presume such a company is a firearms dealer. The commenters appeared to indicate that keeping such documentation for a transaction does not necessarily make the person a dealer. At least one commenter stated this presumption discourages the very behavior (*i.e.,* personal recordkeeping) that ATF should want to encourage while other commenters noted that the Personal Firearms Record, P3312.8, that ATF encourages people to keep for purposes of protecting their property and to aid in recovery of stolen firearms, could now be used against them to make them a dealer. One of these commenters added that even a licensed collector of curios and relics ''would risk liability under this presumption, because they are in fact *required* by ATF to maintain such documentation. However, the NPRM will presume that even *these* FFLs simply have the *wrong* FFL (collector, not dealer).''

Department Response

The Department disagrees that keeping records to calculate profits and losses does not indicate a predominant intent to earn a profit from the sale or disposition of firearms. The point of making or maintaining such a record is to document profits or other pecuniary gain from firearms transactions. However, to further clarify this point, and to address comments regarding businesses that purchase and use firearms for purposes other than resale, the final rule revises this PEP presumption to say that the person ''[m]akes and maintains records to document, track, or calculate profits and losses from firearms repetitively purchased for resale,'' not merely to document profits and losses from firearms purchased for other commercial (or noncommercial) purposes. § 478.13(d)(2)(iii).

The commenter is incorrect that the collector bound book, maintained by Type 03 licensed collectors of curios or relics pursuant to 27 CFR 478.125(f), is a record that documents profits and losses from firearms purchases and sales. The format for that record in § 478.125(f)(2) does not require any information concerning the purchase or sales prices of the curio or relic firearms, or profits and losses from those sales. Another commenter is incorrect that ATF Form 3312.8, Personal Firearms Record (revised Aug. 2013), *https://www.atf.gov/firearms/docs/guide/personal-firearms-record-atf-p-33128/download,* is a record of profits and losses. It does not document profits and losses from the purchase and resale of firearms, nor does it document the sales price—it documents only the cost of the firearm(s) at the time the person acquired them and the person or entity to whom the firearms are transferred, if any. Contrary to commenters' assertions, individuals can certainly make and maintain records of their personal inventories of firearms for insurance purposes without documenting profits and losses from firearms transactions. The presumption requires the latter, which is rebuttable by reliable evidence to the contrary.

Finally, in response to the comment that tracking profits is necessary for tax purposes, the Internal Revenue Code taxes only income from capital gains on personal property, meaning a positive difference between the purchase price and the sales price.[231] Money or other benefits a person receives from sales of depreciated personal firearms would not be reported as income (or treated as a capital gain for tax purposes). Thus, the primary reason for a person to track, for tax purposes, funds a person receives from selling firearms would likely be to account for pecuniary gain they predominantly intend to make from the sales. To the extent that the pecuniary gain is recorded for tax purposes from appreciating collectible or hobby firearms, or to record capital losses on firearms sales, that evidence can be used to rebut the presumption that the pecuniary gain recorded was the

[231] *See Topic No. 409, Capital Gains and Losses,* IRS, *https://www.irs.gov/taxtopics/tc409* (last updated Jan. 30, 2024).

person's predominant intent.[232] But it is inconsistent with the case law and ATF's regulatory and enforcement experience (and common sense) to say that maintaining these types of financial records is not indicative of profit-motivated business activity.

19. PEP Presumptions—Secures Merchant Services for Payments and Business Security Services

Comments Received

Commenters disagreed with, and stated they were confused by, the presumptions that a person is intending to predominantly earn a profit as a dealer in firearms if they use a digital wallet or use the services of a credit card merchant to accept payments, or if they hire business security services, such as a monitored security system or guards for security. At least one commenter argued that the presumption for using third-party services to ''make[ ] or offer[ ] to make payments'' seems to target buyers of firearms who make electronic payments rather than purported dealers who accept electronic payments when they sell the firearms. They noted that one case that the Department cited in footnote 97 of the NPRM, *United States* v. *Dettra,* 238 F.3d 424, 2000 WL 1872046, at *2 (6th Cir. 2000) (unpublished table decision), focuses on a defendant selling firearms, *i.e.,* accepting payments, rather than making payments. The commenter opined that the presumption is overbroad because it could make a dealer out of anyone who makes electronic payments for firearms using a business account. This would capture any business that purchases .22LR rifles for instructional purposes. The commenter said that even if the presumption is meant to target people who accept payments, the language is still overbroad. The commenter offered a particular hypothetical in which, they said, it would seem that ATF would presume a dentist has intent to earn profit as a firearms dealer if the dentist sells a patient a firearm after a visit, tacks it onto the dental bill, and accepts credit card payment for that entire bill. Because the presumption could include a case such as the hypothetical dentist, they argued that it is clear the presumption is overbroad. They claimed every eBay seller must worry about becoming a dealer under this presumption. Another commenter stated that electronic transactions are commonplace even for occasional firearms transactions. The commenter stated that the Department should not focus on a specific method of payment but rather focus on other factors such as the frequency, volume, and commercial nature of sales as well as the person's intent to earn a profit.

Some commenters were of the opinion that having a security service to protect one's firearms is simply a means of responsible firearm ownership and that they are now being penalized for the use of a digital payment app for a single firearms transaction. At least one commenter disagreed with the characterization in footnote 98 of the NPRM where the Department stated, ''for profit business are more likely to maintain, register, and pay for these types of alarms rather than individuals seeking to protect personal property.'' The commenter stated that it is fairly common for individuals to have a personal security system in their home that can cost as little as $100 per year after initial installation, and that such a system is not necessarily an item reserved for business owners alone. Similarly, other commenters stated that the presumption for using security services needs to be clarified because it seems entirely too broad. They argued that a plain reading of the presumption is that intent to predominantly earn a profit exists when the person selling a firearm has an alarm system at their business to protect any business assets. For example, they questioned whether a gas station with a centralized alarm service where the owner keeps a firearm that is the gas station's property is considered a dealer because the station has an intent to predominantly earn a profit for an entirely unrelated transaction (such as selling gas). The commenters also questioned whether a company that keeps its company firearms in a securely monitored warehouse would be considered a dealer if it one day sells its old firearms to a dealer so it can buy new ones for its employees. The commenters argued this could extend even to a sheriff's department with a security system when it trades in old duty guns. One commenter characterized the projected outcomes in these scenarios as nonsensical and overbroad, and questioned whether the security services presumption was instead meant to cover firearms transactions and business assets that include firearms rather than, as the commenter had read the NPRM, security services purchased to secure any business assets.

Department Response

The Department agrees with commenters that the presumption about securing merchant services, such as electronic payment systems, is meant to be directed at firearms sellers, not at individual firearms purchasers. For this reason, the phrase ''makes or offers to make payments'' has been deleted from the presumption, which now applies only to merchant services ''through which the person intends to repetitively accept payments for firearms transactions.'' § 478.13(d)(2)(iv).

The Department disagrees that individual firearms sellers that use online services, such as eBay, purchase or secure ''merchant services as a business.'' These sellers are not securing merchant services as a business, and the online companies often distinguish between the services they provide to merchants and the services they provide to individuals seeking to sell personal items.[233]

Additionally, the manner in which merchants accept payments is a strong indicator of a predominant intent to earn a profit. Private citizens generally do not sign up for credit card processing services. Merchants are persons engaged in a profit-making business, and those services are designed to accept payments on behalf of profit-seeking sellers,[234] though individual firearms sellers may also have an intent to earn a profit when selling online. Again, this does not mean that a person is ''engaged in the business'' requiring a license when they occasionally sell a firearm from a personal collection with the intent to profit. That person must also devote time, attention, and labor to dealing in firearms as a regular course of trade or business. For this reason, the Department does not believe the merchant service PEP presumption is overbroad, especially as revised in this final rule in light of comments received. And, as with the others, the presumption may be refuted with reliable evidence to the contrary (*e.g.,* by the hypothetical dentist).

Some commenters also misunderstood the security service presumption, which applies only to ''business security services . . . to protect business assets or transactions,'' not to personal security services. The Department recognizes that some

[232] This evidence could include, for example, that the 28 percent collectibles capital gains tax was paid on income earned from those sales, as reported on IRS Form 8949.

individuals have a central-station monitoring system, but the regulatory text is clear that it applies only to a central-station monitoring system registered to a business. In addition, what is being protected are business assets that include firearms or transactions that include firearms. Nonetheless, to reduce the concern that a business not engaged in the business of dealing in firearms would be considered to have the predominant intent to earn a profit by securing business security services, the Department has revised the presumption to replace the word ''or'' with ''and'' so the presumption applies only where business security services have been secured to protect both firearms ''business assets'' and firearms ''transactions.'' *See* § 478.13(d)(2)(v). This clarifies the scope of the presumption in response to commenter concerns.

20. PEP Presumptions—Establishes a Business Entity, Trade Name, or Account, or Secures or Applies for a Business License

Comments Received

For these two presumptions under ''predominantly earn a profit,'' commenters argued that they were too broad and that whether a person establishes a business entity or has a business license has nothing to do with intent to predominantly earn a profit. Some commenters asserted that a lot of people have an all-purpose business license that could be for any number of purposes. Some States require multi-use licenses, the commenters said, such as combined resale and use ones. In those cases, a company that simply uses firearms as part of their business operations, rather than dealing in firearms as their business, would have a business license and be presumed to be dealing in firearms. Having one, these commenters argued, does not necessarily mean that a person has intent to earn a profit as a dealer in firearms. One commenter believed that a business that sells gun accessories would be forced to register as a licensee. Another suggested that the presumption would also treat other businesses that have firearms, like a security company, as dealers merely because they have a business license or are established as a business entity in an arena other than firearms sales.

Another commenter, who identified as a firearm owner, stated that a true FFL is a legal business but that a trade or transaction between two law-abiding citizens does not constitute a reason for one to obtain an FFL. One commenter noted that the case, *United States* v. *Gray,* 470 F. App'x 468, 469–70 (6th Cir. 2012), cited in the NPRM in support of the business entity presumption, involved facts much more indicative of unlicensed dealing than simple use of a business name. The commenter said the circumstances of that case stand in stark contrast to a situation where an owner of an antique store who decides to sell the family's World War I-era firearm at the store and could now be captured as a dealer under this presumption.

Department Response

The Department disagrees that the business entity and business license presumptions have nothing to do with an intent to predominantly earn a profit from its firearm sales or dispositions. Establishing a business entity or account ''through which the person makes or offers to make firearms transactions'' is often a preliminary step to engaging in the business of dealing in firearms with the predominant intent to earn a profit. A separate business entity can potentially provide liability protection, which is particularly advantageous when selling dangerous instruments, like firearms. A business entity or account can make it easier to sell firearms for a profit and may provide certain discounts or benefits when doing so. Likewise, a business license to sell firearms or merchandise that includes firearms is direct evidence of an intent to earn a profit from repeated firearms transactions. Indeed, a firearms business cannot operate lawfully without it.[235] While the Department agrees that there may be businesses that primarily sell merchandise other than firearms, such as an antique store, such businesses are profit-seeking, and are likely to sell any firearms at least on a part-time basis with the predominant intent to earn a profit. As stated previously, even part-time firearms businesses are required to be licensed.[236] Again, intent to predominantly earn a profit is just one element of engaging in the business.

In response to commenters who said that some States may have general business licenses that are required to engage in any business, the presumption would apply only if the license allowed them to sell firearms as part of their business operation. Of course, if they do not resell firearms, then that business would not be presumed to have a predominant intent to profit from firearms purchases and resales. To the extent commenters asserted that there are licensed businesses that may technically be licensed to sell firearms, but primarily buy and use firearms, and do not devote time, attention, and labor to dealing in firearms as a regular course of business, they can offer reliable rebuttal evidence, as with any of the presumptions.

21. PEP Presumption—Purchases a Business Insurance Policy

Comments Received

A few commenters, including an FFL, stated that one cannot presume that a person or company has intent to earn a profit and is engaged in the business of dealing in firearms merely because they have a business insurance policy that covers firearms. They noted that many non-firearms businesses, whether it be a hunting outfitter or an armored security company, have one or more firearms owned by the entity or business. If the business has insurance for its property, which would cover the firearms owned and used by the business, it is not clear why this should result in a presumption that a completely unrelated transaction is an indication of intent to predominantly to earn a profit. The commenters said that these are not the types of entities meant to be FFLs.

Department Response

The Department notes that most firearms businesses purchase business insurance policies that cover their firearms inventory in the event of theft or loss, which, unfortunately, is not uncommon. The Department also agrees with commenters that a business insurance policy may also be purchased by a variety of companies that purchase and use firearms and are not necessarily primarily intending to profit from

[235] *See, e.g.,* State of Maryland, *Obtain Licenses or Permits, https://businessexpress.maryland.gov/start/licenses-and-permits* (last visited Apr. 2, 2024) (''State and local governments require many industries to have permits or licenses to operate. A trader's license is required for buying and re-selling goods.''); State of Colorado, *Do I Need a Business License, https://www.coloradosbdc.org/do-i-need-a-business-license/* (last visited Apr. 2, 2024) (''In Colorado, if you are selling tangible goods, you are required to collect State Sales Tax and will need a Sales Tax License.''); State of Michigan, *Who Needs a Sales Tax License, https://www.michigan.gov/taxes/business-taxes/sales-use-tax/resources/who-needs-a-sales-tax-license* (last visited March 2, 2024) (''[R]etailers must be licensed to collect tax from their customers and remit the sales tax to the State of Michigan''); State of Ohio, *Licenses & Permits, https://ohio.gov/jobs/resources/licenses-and-permits* (last visited Apr. 2, 2024) (''Businesses are required to register with the Ohio Secretary of State to legally conduct business in the state—this is commonly called a business license.'').

[236] *See* 27 CFR 478.11 (definition of ''dealer'' includes those engaged in the business on a part-time basis); *In the Matter of SEL.L. Antiques,* Application No. 9–87–035–01–PA–00725 (Phoenix Field Division, July 14, 2006) (denied applicant for license that repetitively sold modern firearms from unlicensed storefront).

selling or disposing of their business inventory. For example, a firearms business inventory maintained by a security company whose guards use the firearms daily, or a hunting outfitter that rents firearms on its business premises, likely have firearms that have lost their value over time due to constant use and handling. The company may decide to sell these firearms simply to upgrade from old to new firearms without intending to earn a profit. In addition to these considerations, as discussed in detail earlier in this preamble (*see* Section IV.C.5.a (Department Response) of this preamble, *supra*), ATF examined records of cases and investigations it initiated between 2018 and 2023 for examples of fact patterns that align with the rebuttable presumptions in the proposed rule. The agency did not find examples other than the criminal case cited in the NPRM involving business insurance. 88 FR 62006 n.101. For these reasons, the Department has revised the final rule to remove this presumption. *See* § 478.13(d)(2).

22. Concerns With Disposition of Business Inventory After Termination of License

Comments Received

Commenters stated that while they thought it was notable that the Department addressed the disposition of an FFL's business inventory upon license revocation or termination, they did not think that ATF struck the ''right balance'' between law enforcement concerns and business owners so that a licensee can avoid financial ruin after having its license terminated. One commenter said the Department created a ''Catch-22'' situation regarding transfers because, in the commenter's opinion, ''1. Former inventory not transferred to a personal collection may never be transferred; 2. Former inventory that was unlawfully transferred may never be transferred; and 3. Former inventory that was transferred cannot be transferred for one year.'' (Emphasis omitted.) Other commenters stated that the additional requirements that establish how to dispose of remaining inventory are unwarranted burdens that make it more challenging to wind down operations in an efficient manner. They stated that the process should be more streamlined to ensure fairness and flexibility. At least one commenter criticized the 30-day period in which a licensee is expected to liquidate their inventory, stating that it would take a minimum of 90 or 120 days. Similarly, another commenter stated it was completely unreasonable that an FFL who has voluntarily surrendered their license or has had it revoked would have to wait a year before they could start selling their inventory privately.

One commenter said the proposed rule was arbitrary and had conflicting standards within the proposed text regarding disposition of inventory. In this commenter's opinion, ''a person or company no longer having an FFL (and persons acting on their behalf) may transfer their remaining firearms inventory to another third-party current FFL for liquidation under section 478.78, but may not do so under section 478.11. The result is an arbitrary and confusing conflict . . . .'' At least one commenter thought the rule would make it impossible for an FFL who has had their license revoked to keep their inventory while at least one other commenter thought the impact of the rule would mean they could never sell their inventory if a former licensee then needed a license to liquidate the inventory. Another commenter believed this portion of the rule should have more detail and be clearer because without it there is an increased chance of non-compliance and confusion among FFLs. At least one commenter objected to the 30-day time frame the rule would add to §§ 478.57 and 478.78, stating that no such timeline is required by the GCA.

One commenter noted that, if a former FFL transferring their business inventory to another FFL is not considered ''engaged in the business,'' then there would be no reason for ATF to limit the time period for when such transactions can take place. In other words, they indicated that for such a transaction, the former FFL still seems to be ''engaged in the business''; otherwise, there would not be a time limit on when they could act. If that is the case, the commenter stated, the rule does not make clear the effect of a former licensee transferring their firearms to another licensee and questioned whether an FFL could face revocation for facilitating others ''engaging in the business'' without a license.

Finally, another commenter stated that the rule fails to adequately address the potential for exploitation of inventory liquidation by former licensees. ''While it is important to outline lawful ways for former licensees to dispose of their inventory upon license revocation or termination, the rule does not establish sufficient safeguards to prevent the diversion of firearms into the illegal market,'' they wrote. The commenter added that this oversight leaves room for abuse.

Department Response

A license may be terminated for a number of reasons, whether it is a voluntary surrender of license or an involuntary termination due to license revocation or denial upon renewal. The regulations in the past have not clearly addressed lawful methods for disposing of business inventory before or after license termination. In the case of a licensee who does not dispose of its business inventory prior to license termination, both the former licensee and law enforcement are placed in a difficult situation. Because this inventory consists of firearms repetitively purchased for resale with predominant intent to profit, it was clearly purchased as part of a regular course of business or trade. If the former licensee now sells the firearms after termination of the license to dispose of inventory, the former licensee could be engaging in the business of dealing in firearms without a license and violating the law. Particularly in the case of former licensees whose licenses were revoked or denied due to willful violations, such persons would unjustly profit from their illegal actions. Further, allowing such sales would mean that a significant number of firearms would be sold without background checks or the ability to trace them if later used in crimes. This is an outcome the BSCA was intended to reduce by amending the definition of ''engaged in the business'' to increase licensure of persons engaged in the business with a predominant intent to earn a profit. *See* Section II.D of this preamble.

The Department disagrees that licensees face financial ruin if their license is terminated and they cannot sell their inventory. As an initial matter, licensees who voluntarily terminate their firearms license have the option of waiting to surrender their license until after they have liquidated their inventory. The final rule allows former licensees that did not have the opportunity to properly dispose of their business inventory before license termination to do so after termination by either selling their remaining ''former licensee inventory'' to an active licensee within 30 days after license termination, or transferring the former licensee inventory to a responsible person who may lawfully possess those firearms. *See* §§ 478.11 (definition of ''former licensee inventory''), 478.57(b), 478.78(b). The new term ''former licensee inventory'' is necessary to clarify that business inventory transferred to a responsible person after license termination is not a ''personal collection'' within the meaning of 18

U.S.C. 921(a)(21)(C), and accordingly, former licensees or responsible persons who devote time, attention, and labor to selling ''former licensee inventory'' as a regular course of trade or business to predominantly earn a profit will be presumed to be engaged in the business of dealing in firearms. *See* 18 U.S.C. 922(a)(1)(A), 923(a). If a former licensee needs more time in which to sell their business inventory to an active licensee, the Director may authorize an additional period of time for good cause.

The Department acknowledges that some commenters were confused about the relationship between the presumption based on liquidation of business inventory in the definition of ''engaged in the business,'' now in § 478.13(c)(4) of the final rule, and provisions about the discontinuance of business and operations by licensees after notice in §§ 478.57 and 478.78. Those proposed provisions were meant to be read together. Like the two discontinuance provisions at §§ 478.57 and 478.78, the two liquidation-of-business inventory presumptions distinguish between pre-termination and post-termination disposal of business inventory.

If the former licensee disposes of the business inventory properly before license termination, they will have several options for disposing of the firearms, one of which is to transfer firearms from the business inventory to their personal collection or otherwise as a personal firearm so long as they meet two conditions, *i.e.,* that they retain the firearms for at least one year from the date or transfer and they do not transfer the firearms to willfully evade the restrictions placed on licensees. *See* 18 U.S.C. 923(c). The corresponding presumption related to firearms transferred before license termination aligns with these requirements. *See* § 478.13(c)(5). If the former licensee (or responsible person acting on behalf of the former licensee) sells a firearm: (a) after license termination that was transferred to the former licensee's personal collection or otherwise as a personal firearm, but (b) before one year has passed from the date of that transfer, or (c) the sale is other than as an occasional sale to a licensee, that sale would fall under § 478.13(c)(5) and the person would be presumed to be dealing without a license. However, once the year has passed from the transfer date, they may occasionally sell firearms properly transferred to their personal collection or otherwise as personal firearms to anyone without falling under this presumption, unless the transfer was made to willfully evade the restrictions placed on licensees.

If the former licensee did not dispose of business inventory before license termination, it becomes ''former licensee inventory'' (see new definition under § 478.11, below), and the former licensee has two options to dispose of it within 30 days after license termination: liquidate to a licensee, or transfer to a responsible person of the former licensee. Under revised §§ 478.57(c) and 478.78(c), the date, name, and address of this responsible person (which can include a sole proprietor or an individual who is acting on behalf of a business entity) must be recorded as the transferee of such firearms in the licensee's disposition record prior to delivery of the records by the end of the 30 days, in accordance with 18 U.S.C. 923(g)(4) and 27 CFR 478.127.[237] If the recipient responsible person thereafter sells the transferred former licensee inventory, other than as an occasional sale to a licensee, they will fall under § 478.13(c)(4) and be presumed to be dealing without a license.

To make this relationship between the post-termination discontinuance provision and the related presumption more clear, the presumption, which is located in the final rule at § 478.13(c)(4), has been revised to state that it does not apply when the business inventory is being liquidated to a licensee either within 30 days of termination of license, or occasionally thereafter, in accordance with § 478.57 or § 478.78, as the case may be. The presumption now further states that it does not matter whether such firearms were transferred to a responsible person after the license was terminated under 27 CFR 478.57(b)(2) or 478.78(b)(2); the presumption would apply if those transferred firearms are subsequently resold outside the 30-day window other than as an occasional sale to a licensee. The Department has changed the term ''personal inventory'' to ''former licensee inventory'' to make it easier to distinguish between the former licensee's personal collection firearms and other personal firearms, which a former licensee may treat the same way as other non-licensees, and the business inventory transferred to themselves that must be treated differently from personal collection firearms and other personal firearms. *See* §§ 478.57(b)(2), 478.78(b)(2).

The Department disagrees that the limited 30-day period for liquidation to an active licensee is inconsistent with the GCA. While the Department recognizes that such sales may be conducted to predominantly earn a profit, the recipient licensee will be recording them in its business inventory and running NICS background checks when those firearms are further distributed into commerce. The final rule also makes clear that any such transfers of remaining inventory within the 30-day period must appropriately be recorded as dispositions in the licensee's records prior to delivering the records after discontinuing business consistent with 27 CFR 478.127. *See* §§ 478.57(c), 478.78(c). This will ensure that any liquidated/transferred firearms may be traced if they are later used in a crime. The rule is therefore necessary to prevent former licensees from selling off numerous business inventory firearms at retail without abiding by these important requirements of the GCA. It also provides a reasonable ''winding down'' period that is fully consistent with the relinquishment of licensee records requirement under the GCA. *See* 18 U.S.C. 923(g)(4) (records this chapter requires to be kept shall reflect when a firearms or ammunition business is discontinued, and, if succeeded by a new licensee, shall be transferred to that successor; where the discontinuance is absolute, the records shall be transferred within 30 business days to the Attorney General).[238] Licensees who are terminating their license should begin the winding-down process well before the license is terminated. Otherwise, they run the risk of having unsold inventory they cannot easily sell without either engaging in the unlicensed business of dealing in firearms after they terminate their license, or being able to sell only on occasion to a licensee. Selling before license termination also ensures that background checks are run on purchasers, and dispositions are appropriately recorded.

The Department disagrees with the comment that the rule fails to address the potential for exploitation of inventory liquidation by former licensees. The rule addresses the

[237] This is consistent with the requirement for licensees to record the personal information of an individual authorized to receive firearms on behalf of a business entity. *See* ATF Form 4473, at 4 (Aug. 2023), *https://www.atf.gov/firearms/docs/4473-part-1-firearms-transaction-record-over-counter-atf-form-53009/download* (''When the transferee/buyer of a firearm is a corporation, company, association, partnership, or other such business entity, an officer authorized to act on behalf of the business must complete section B of the form with his/her personal information, sign section B, and attach a written statement, executed under penalties of perjury, stating: (A) the firearm is being acquired for the use of and will be the property of that business entity; and (B) the name and address of that business entity.'').

[238] This provision is also consistent with the 30-day winding down period for licensees who incur firearms disabilities under the GCA during the term of their current license. *See* 27 CFR 478.144(i)(1).

potential for diversion in several ways. Consistent with 18 U.S.C. 923(c), it limits the ability of former licensees to liquidate business inventory firearms by establishing two rebuttable presumptions that a person is engaged in the business when those firearms are sold—§ 478.13(c)(4) and (5). With regard to firearms transferred by a licensee to a personal collection prior to license termination, the presumption still applies even if one year has passed from the transfer if the transfer or any other acquisition was made for the purposes of willfully evading the restrictions placed upon licensees. 18 U.S.C. 923(c). Moreover, as provided by amended §§ 478.57 and 478.78, after license termination, former licensees have limited sales options that would avoid the presumption in § 478.13(c)(4), such as sales to an active licensee where the risk of diversion is limited.

23. Concerns With the Procedure To Transfer of Firearms Between FFLs

Comments Received

Some commenters remarked on the requirement that FFLs follow verification and recordkeeping procedures in 27 CFR 478.94 and subpart H of part 478 instead of using ATF Form 4473 for transfers between licensees. At least one commenter thought this provision should be made clearer to avoid interruptions in the transfer of firearms, while another thought the proposed changes were unnecessarily complex and increased the risk for administrative errors. This commenter stated that ''[l]icensees should be allowed to use the existing streamlined form, which is already widely used and understood by both licensees and the ATF.'' At least one commenter stated that a phrase in the proposed amendment to § 478.124—''for the sole purpose of repair or customizing''—should be deleted because it is not part of 18 U.S.C. 922(a)(2)(A). That statutory provision only provides, in relevant part, that ''this paragraph [prohibiting transfer in interstate commerce to a non-licensee] and subsection (b)(3) shall not be held to preclude [an FFL] from returning a firearm or replacement firearm of the same kind and type to a person from whom it was received.''

Department Response

The Department disagrees that the changes proposed to be made to 27 CFR 478.124(a) are unnecessarily complex and increase the chance for administrative errors. To the contrary, licensees know that ATF Form 4473 documents the transfer of a firearm from a licensee to an unlicensed person. It is not intended to be used by a licensee to purchase personal firearms. If a recipient licensee were to complete a Form 4473 for the purchase of a firearm, but not record that receipt in their bound book record asserting it is a ''personal firearm,'' then tracing efforts pursuant to the GCA could be hampered if the firearm was later used in a crime. The well-established procedure for licensees to purchase firearms is through the verification and recordkeeping procedures in 27 CFR 478.94 and subpart H of 27 CFR part 478.

Regarding the comment that the phrase ''for the sole purpose of repair or customizing'' should be stricken from § 478.124(a), that provision allowing a limited exception to the requirement to complete an ATF Form 4473 has long been found in the regulations and this rule does not change that proviso in any manner. Allowing licensees to sell or otherwise dispose of firearms without completion of this form or recording NICS checks on the form would undermine the purposes of the GCA and BSCA. Crime gun traces would not be able to be completed, and there would be no way to verify that the identity of firearms purchasers had been checked, or that background checks had been properly run. The Department therefore disagrees with the comment seeking to remove this phrase.

D. Concerns With the Economic Analysis

1. Need for Rule

Comments Received

One commenter stated that the Department's need for this rulemaking was contrived without the Department providing any facts or persuasive arguments. The commenter specifically challenged the statement in the preamble that ''ATF has observed a significant level of noncompliance with the GCA's licensing requirements even prior to the BSCA,'' and asked for the number of incidents of noncompliance and by what standard that level of noncompliance was determined to be ''significant'' enough to justify rulemaking. The commenter also stated that a rulemaking should not be justified by a presidential executive order, ''which is not now nor has it ever been a reason for rulemaking sufficient for APA purposes.'' The same commenter also stated that the agency has not identified any market failure demonstrating that, in the absence of the rule, the free market will fail to reach the optimal number of gun sales outside of current FFL dealers.

Department Response

The Department disagrees that the need for this regulation was ''contrived without any facts or persuasive arguments.'' The Department has explained the public safety need for this rule and has extensively laid out and discussed the facts and arguments supporting that need in both the NPRM and in this final rule. For reference, those discussions are included in the Background discussion in Section II.D of this preamble, in the Benefits section of the Executive Order 12866 economic analysis in Section VI.A.7 of this preamble, throughout Section III of this preamble (which includes the Department's discussion of proposed revisions from the NPRM), elsewhere in the Department's responses to comments under Section IV of this preamble, and in other portions of this preamble. This rulemaking implements certain statutory changes enacted by Congress in the BSCA, which Congress passed in the interest of public safety after at least one mass shooting in which the perpetrator purchased a firearm from an unlicensed dealer. In addition, this final rule implements the Department's response to Executive Order 14092, which was also issued to implement and enforce the BSCA's statutory changes and public safety goals.

The public safety justifications referenced above include the accounts and analysis of ATF agents and investigators with years of experience enforcing the relevant provisions of the GCA, who reported significant levels of firearms dealing that was not in compliance with pre-BSCA statutory licensing requirements. More specific data or statistics regarding such noncompliance, as requested by the commenter, are not readily available and not needed in light of the Department's experience and the other public safety justifications underlying this rule.

Finally, the Department is not required to identify any market failure demonstrating that, ''in the absence of the rule, the free market will fail to reach the optimal number of gun sales outside of current FFL dealers.'' For example, OMB Circular A–4 (2003) specifically recognizes that ''[c]orrecting market failure'' is ''not the only reason'' for regulation, and allows regulations based on other social purposes.[239] In

[239] Off. of Mgmt. & Budget, Exec. Off. of the President, OMB Circular No. A–4, at 5 (2003) (''OMB Circular A–4''), *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf.* Because the

Continued

addition, Executive Order 12866, Regulatory Planning and Review, 58 FR 51735 (Sept. 30, 1993), permits agencies to promulgate rules that are necessary to interpret the law or are necessary due to compelling need, which includes when private markets are not protecting or improving public health and safety. This rule is necessary on both grounds. As explained throughout this preamble, there is a public safety need for this rulemaking. This position on public safety is supported by the facts and arguments laid out by the Department and affirmed by the hundreds of thousands of public comments ATF received in support of this rulemaking that specifically explained that the rule is needed for public safety (in many cases emphasizing that the rule is the minimum action needed to address public safety). *See* Sections IV.A.1–2, 4–7 of this preamble.

2. Population Accuracy

Comments Received

Various commenters objected to the Department's calculation of the population impacted by this rulemaking. Some of these commenters argued that the Department's high population estimate (328,296, which was derived from the Russell Sage Foundation (''RSF'') survey) should be used as the primary cost estimate, including one commenter who opined that the RSF-derived estimate was more accurate because, they stated, the Department's subject matter expert (''SME'')-derived estimate uses a single, private party firearm sales website as the primary source of unlicensed firearms seller numbers. This same commenter added that the RSF survey considered multiple mediums of firearm sales.

In addition, various commenters opined that the Department's population estimates were not accurate or requested more ''accurate'' numbers. A couple of commenters provided critiques of the methodology used to generate population estimates. These commenters opined that the Department should use standards accepted by scientific, peer-reviewed journals as the basis for estimating the relevant population. Furthermore, they opined that the Department's population estimates should have used statistical calculations such as ''[c]onfidence intervals, [p]-[v]alues, and K-values.'' Primarily, these commenters objected to the Department's SME estimate that Armslist may constitute 50 percent of the market share for online non-FFL sales, contending that this estimate is not supported by data and that using an SME-derived estimate is biased and unsupported. One commenter stated that *Gunbroker.com* is the largest online marketplace where people perform private firearms transactions and suggested that the impacted population would be higher if the Department included individuals conducting private sales on that website. Another commenter went further, stating that ''the number put forth by ATF, an estimation of 24,540 to 328,926 unlicensed persons who could be considered 'engaged in the business' of dealing firearms, is at worst a shot in the dark, and at best, an educated guess.'' This commenter noted that there are ''numerous other venues in which firearms are sold, including *GunBroker.com,* as well as social media platforms such as Facebook, where clever sellers can get around the Facebook Marketplace rules against selling firearms.''

Finally, one commenter opined that this rule will affect all persons who own firearms in the United States and even some portions of the population that have never owned a firearm. None of these commenters provided data recommendations or alternate sources of relevant data except as noted above.

Department Response

The Department does not agree that the SME/online sample and the SME-derived primary estimate it put forth in the NPRM are less viable than the RSF survey-derived estimate it also included for comparison. Each estimate is necessarily imperfect due to the paucity of data on how many unlicensed persons currently sell firearms and how many such persons would need to be licensed under this rule. The estimates from each source the Department used have different limitations, which is why the Department included them both as potential alternatives. The SME-derived estimate is based on historical data and experience with unlicensed sales activities, combined with sampling from an online sales site and ATF's law enforcement and regulatory experience. The Department thus considers its SME-derived estimate to be a more reliable data source for this purpose than the RSF survey. The RSF survey was not limited to capturing sales by unlicensed persons, which is the population potentially impacted by this rule. Rather, the authors sought to establish the total number of citizens who sold their firearms over a given period, not the current number of unlicensed sellers who are engaged in the business of firearms dealing or who are making sales on publicly accessible marketplaces and platforms. As a result, the population set derived from the RSF results is significantly higher and includes people who would not be covered by the rule. The Department thus considers the SME-derived estimate to be more realistic.

It is because the RSF survey used a larger sample that the Department provided the RSF population estimates in the NPRM analysis as an alternative unlicensed seller population set (and continues to do so in this final rule). However, in order to be able to meaningfully compare results from the two starting sets of unlicensed seller population estimates (SME-derived and RSF-derived), the Department applied the same treatment regarding the rule's potential impact to both numbers. This included applying the same SME estimates to both starting populations to determine, for each group, the proportion of unlicensed sellers affected by various provisions of the rule. For example, the Department applied the same SME estimate of the proportion of unlicensed sellers estimated to be engaged in the business without a license under the rulemaking (approximately 25 percent) to each starting population, as well as the same estimate of the proportion of those sellers who are likely to be either unwilling or unable to become licensed as an FFL as a result of the rule (10 percent). Because there is no other source of data on the size of these groups of currently unlicensed dealers likely to be impacted by this rule, the Department used the best estimates from SMEs as the percentages for each, and then applied those estimates to both starting population sets for consistent treatment and comparable outcomes. In the NPRM, the Department explained these estimates, solicited public comment on them, requested alternative data sources and models, and welcomed more accurate data on the number of unlicensed persons selling firearms. However, the Department did not receive any specific information—including any alternative data sources

NPRM was published in September 2023, prior to the November publication of the 2023 version of OMB Circular A–4, the Department based its Executive Order 12866 economic analysis in the NPRM on the 2003 guidance. Although the November 2023 version of OMB Circular A–4 supersedes the version from 2003, OMB allowed agencies to continue following the 2003 version in final rules published prior to January 1, 2025, if their NPRM relied on the 2003 version and was published prior to February 29, 2024. *See* Off. of Mgmt. & Budget, Exec. Off. of the President, OMB Circular No. A–4, at 93 (2023), *https://www.whitehouse.gov/wp-content/uploads/2023/11/CircularA-4.pdf.* Accordingly, the Department is continuing to follow the 2003 version of OMB Circular A–4 in this final rule.

or models—or more accurate numbers in response.

At this time, the Department does not consider any peer-reviewed statistical sample to be possible, much less perfectly accurate. Typically, peer-reviewed journal articles use research data they gather themselves or a database, such as for the U.S. Census, from which to extrapolate a number, such as a covered population. The Department noted, and continues to note, that it is currently not possible for the Department to base population estimates in this rule on a peer-reviewed statistical sample because there is no database that could be used to extrapolate a population as specific as unlicensed individuals who may be selling firearms, let alone one that includes data on factors from which to determine the population of such individuals who may be engaged in the business as a dealer under the definitions included in this rule. The very limited options for source data make it impossible to arrive at a more precise number than is currently reflected in this rule. The Department reiterates, however, that this rule will not impact all individuals who own a firearm, nor will it require everyone who sells a firearm to become a licensed dealer.

While the journal and news articles cited by the commenters may estimate the population of individuals who own a firearm, these numbers are still estimates and are not any more accurate than the Department's estimates (as requested or suggested by these commenters), nor do they pertain more specifically to the situation covered by this rule. Based on the little information available, the Department used a related literature review, and combined professional expertise and an online site sample to provide two estimates on population. OMB Circular A–4 encourages agencies to use the ''best reasonably obtainable scientific, technical, and economic information available,'' including peer-reviewed literature ''where available.'' [240] The Department did so using the two estimates described above: one (the RSF survey) gleaned from a peer-reviewed journal article about survey results that correlated with the data set relevant to this rule more than any other article the Department was able to find; and another gleaned from SME knowledge and experience, and sampling from a website (Armslist) that identifies which sellers are licensed and is recognized as being a popular online site used by the potentially affected population to sell firearms.

As for the comments suggesting that ATF incorporate another online site, GunBroker, into the analysis, the Department concurs that a subset of non-FFL sellers on GunBroker may also be considered ''engaged in the business'' despite already transferring firearms advertised online through an FFL intermediary. However, the Department already accounted for the existence of online platforms other than the one it sampled (Armslist) by assigning a 50 percent share of the market to all other platforms, including GunBroker. Nonetheless, in response to the comments, ATF requested further SME estimates of the relative proportions of Armslist and GunBroker sales as part of the total, as well as social media. Website traffic data for GunBroker and Armslist and additional and more specialized SME opinions were incorporated into the model and informed the Department's assumptions. As a result, the Department has revised its estimate of the portion of unlicensed population making sales through Armslist from the initial 50 percent of the online marketplace to 30 percent, adjusting the estimate of total unlicensed sellers that use non-traditional mediums accordingly. These changes are reflected in Section VI.A.2 of this preamble.

3. Sample Size and Confidence Interval

Comments Received

One commenter stated that the Department did not specify the methodology used to determine and collect the sample size included in the NPRM. In particular, they stated the Department did not specify whether the sampling obtained on Armslist was collected ''randomly, stratified random, [or] non-random.'' Furthermore, this commenter stated that the Department did not include the results of the sampling for public inspection and that the commenter was thus unable to verify the Department's claim that the sample size has a 95 percent confidence interval. Another commenter recognized that the Department used a sample size generator to estimate a sample size but stated that the confidence interval cannot be calculated without knowing the standard deviation of a sample. One commenter questioned how the Department derived its estimate of individuals ''engaged in the business'' from the sample collected from Armslist when Armslist does not indicate whether sellers meet the statutory definition of being ''engaged in the business.'' This commenter stated that not providing the methodology through which the Department made this calculation was a violation of the APA and the Small Business Regulatory Enforcement Fairness Act (''SBREFA'').

Department Response

The Department decided to take a random sample from among the firearms listings on Armslist to use in its survey. A sample-size calculator was then used to determine the statistically valid sample size from those listings, as explained in more detail in both the NPRM and this final rule under the methodology section (Section VI.A.2) of this preamble. A standard deviation was not separately calculated because the Department assumed a normal distribution, which is in accordance with usual practice when there is no reason to anticipate that the data may skew in one direction or another and the sample is used to calculate a population rather than a regression or other statistically driven analysis. Therefore, in accordance with standard practice, to estimate the sample size, the Department assumed the largest standard deviation (0.5 or 50 percent) to obtain the most conservative (largest) sample size. While the sample is one unit of measurement at a single point in time over a several-day period, the Department verified its viability by taking another sample after the comment period closed, to determine that the overall population remained stable over time.

The Department acknowledges that there are inherent limitations to the lower estimate. However, the Department's prior experience helped inform its estimate as well. As explained in the NPRM's Benefits section, the Department previously provided guidance in 2016 to sellers, clarifying the circumstances in which they would need to obtain a license as a dealer under the previous statutory definition, which focused on similar factors to those included in this rule. Thereafter, the Department encountered an increase of only 567 new FFL applications. This and similar historical data support the SME estimates arising from the combined information and Armslist sampling. Furthermore, regardless of the sales or transaction volume of firearms, the number of FFLs has been relatively stable over time.

The Department derived its estimate of unlicensed individuals by extrapolating from Armslist listings. Armslist uses the categories of ''private party'' ''and ''premium vendors.'' When the Department reviewed the entries, it found that the premium vendors were

[240] OMB Circular A–4, at 17, *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf.*

all listed as FFLs. Therefore, the sample did not include entries categorized as premium vendors. Although the ''private party'' sales did not indicate whether they were FFLs or unlicensed sellers, other information included in the listings indicated that ''private party'' sellers were likely to be home-based individuals rather than FFLs with funds to advertise on the website. Nonetheless, the Department could not be certain, so the sample from Armslist (and thus the estimated population of unlicensed sellers) might be larger than the actual number of unlicensed sellers. Because the population estimate was being used to estimate impact and potential cost for purposes of this rulemaking, the Department erred on the side of overinclusiveness (thus generating a potentially larger overall population of unlicensed sellers, higher cost estimates, and potentially more impacted persons) rather than underinclusiveness (by instead trying to remove some of the private party sellers that could potentially be FFLs).

Generally, the Department incorporated a model where the relative size of the total online marketplace was derived from the estimated size and characteristics of Armslist. From there, the Department made estimates regarding the total unlicensed market both online and offline, before filtering for intention and incentives. Again, as there is no definitive source of accurate data from which to generate these numbers and resulting estimates, the Department was forced to use available data, public comments, and internal surveys of SMEs who have specialized, often decade-long experience with the industry to meet its standard of best available information.

4. Russell Sage Foundation Model Calculation

Comments Received

One commenter argued that the population derived from the Russell Sage Foundation (''RSF'') survey data (the NPRM's high estimate) was overcalculated, including transactions that the commenter did not believe required a license, such as ''family, friends, gifts, inheritance, trades, and other.'' This commenter further suggested that the portion of the total unlicensed seller population considered to be engaged in the business in both the RSF and SME-derived models should be less than 10 percent, not the 25 percent estimated by the SMEs. Furthermore, they stated the Department incorrectly used the overall percentage of RSF survey dispositions over the course of five years rather than ''annualizing'' that survey result over the course of five years.

One commenter could not recalculate how the Department used the RSF survey to calculate percentages. Another commenter estimated that the affected population of individuals is 478,000 and that the methodology used by the Department over-estimated the population by a minimum of 45 percent. Overall, this commenter estimated that this rule will have a marginal increase of 150,000 new FFLs. The commenter, however, did not point to or provide a data source for their numbers. One commenter challenged the RSF data, claiming the model is based on a ''small sample size of just 2,072 gun-owning respondents, providing questionable representativeness.'' Moreover, by analyzing ''outdated 2015 survey data,'' the commenter suggested that the study fails to account for increases in the rates of American gun ownership in recent years, and that the Department therefore undercounted the number of sellers this rule would affect. The commenter cited a 2020 Gallup study [241] that estimated that what the commenter described as a ''whopping 32 percent'' of adults own firearms, not 22 percent as estimated in the 2015 RSF survey data.

Department Response

The Department partially agrees with the commenter's suggestion that firearms transfers listed in the RSF survey that involve ''family, friends, gifts, inheritance, trades, and other'' should not be included in the Department's estimate. The RSF survey did not include sufficient information about private transactions between friends and families, as gifts, inheritances, or other similar transfers, from which the Department could assess whether any of those transferors might have been engaged in the business as a dealer. However, the rule specifically excludes these categories of transactions—*e.g.,* transactions between family, as gifts, or due to inheriting firearms—when they are not made repetitively with predominant intent to profit. In the Department's experience, most such transactions have not involved a dealer engaged in the business of dealing in firearms as defined in this rule. Therefore, the Department did not include RSF survey results involving private transactions between friends and families in the NPRM. However, transactions such as trading or bartering, or sales conducted through FFLs, such as wholesale and retail dealers, are more likely to include transactions involving qualifying ''engaged in the business'' dealers, so the Department included them to calculate the RSF survey-generated population estimate it used in the NPRM. The Department explained this in the NPRM and does so again in this final rule under Section VI.A of this preamble.

Although a commenter suggested that ATF's SME-derived estimate that 25 percent of the population of unlicensed sellers would be engaged in the business under this rule was too high, they did not provide a basis for their recommended estimate of 10 percent. The commenter suggested that ATF's estimate of the unlicensed seller population was too high, but even if that were true, it would not affect what percentage of such unlicensed sellers would be determined to be engaged in the business under this rule. In addition, the commenter suggested that the estimate of those engaged in the business under this rule should not include unlicensed sellers who solicit background checks from FFLs, but the Department disagrees with this, as discussed in detail in Section IV.D.10 of this preamble. As a result, the Department continues to use the SME-derived estimate of 25 percent for the population of currently unlicensed sellers who would be deemed engaged in the business under this rule.

The Department concurs with the commenter's understanding that, in the RSF survey, the sales rate of personal firearms was 5 percent over the course of five years rather than 5 percent over one year as initially interpreted by the Department. Accordingly, the Department recalculated its estimate, using a personal sales rate of 5 percent over the course of five years, or 1 percent annually.

The RSF survey contained many percentages and descriptions of different types of firearms transactions. As explained in response to comments under Section IV.D.1–2 of this preamble, the RSF survey and resulting journal article were not designed to capture or address information specifically relevant to this rule. As a result, the data the Department could glean from the RSF survey, while useful in some respects, were not directly on point for purposes of making estimates related to the area affected by this rule. In addition, the RSF survey results are compiled in a way that does not provide accurate data on, or align with, issues related to whether a seller or transaction might be among the total potentially affected population base or might be

[241] *What Percentage of Americans Own Guns?,* Gallup: The Short Answer (Nov. 13, 2020) (summarizing Gallup's crime poll for September 30 to October 15, 2020), *https://news.gallup.com/poll/264932/percentage-americans-own-guns.aspx.*

among the portion that could qualify as engaged in the business under this rule. This is not a flaw in RSF's data but is a result of different focuses between RSF's article and this rule.

Because this rule is focused on dispositions (or ''sales'') of firearms, the Department used only survey results and percentages outlined in the Dispositions portion of the RSF survey journal article on page 51 and made its best effort to include categories that were potentially likely to contain relevant kinds of transactions, while excluding categories that were less likely to contain such transactions. The Department therefore continues to use those NPRM percentages as derived from the RSF survey to determine the high population estimate in this final rule.

The Department acknowledges that the estimated populations are estimates using the best available information and are not perfect. However, the Department disagrees that there will now be 478,000 individuals who must be licensed. The commenter who made that assertion did not provide a source or data to support this estimate. As explained above, there is no definitive source of accurate data from which to generate these numbers and resulting estimates. As a result, the Department used available data combined with public comments and internal surveys of SMEs with specialized, often decades-long experience with the industry, to meet its standard of best available information. Nonetheless, as discussed elsewhere in this preamble and based on comments pointing out calculation errors from using the RSF survey, the Department has reduced the overall high estimated population of the estimated affected individuals. For more information, please see the discussion under Section VI.A.2 (Population) of this preamble.

Finally, the Department concurs that the percentage of individuals owning a firearm in the United States may have changed since 2015 and, as a result, now uses the 32 percent estimate from the more recent Gallup study the commenter cited. Nonetheless, the Department disagrees that the sample size of gun owners in the RSF survey is, as the commenter suggested, ''too small,'' with ''just 2,072 gun-owning respondents.'' The RSF study surveyed 3,949 persons; of that number, 2,072 respondents stated they owned firearms. The RSF sample size of 3,949 is larger than the sample size in the Gallup study of 1,049 survey respondents cited by the commenter. However, while both samples are statistically viable sample sizes, the Department has elected to use the commenter's suggestion of the more recent Gallup study.

5. Inability To Comply

Comments Received

One commenter suggested that the Department did not account for individuals who wish to become an FFL but are not otherwise able to obtain a license due to State or local zoning ordinances, or even restrictions from a Homeowner's Association (''HOA''). This commenter further suggested that the Department should calculate a loss of social welfare due to the indirect reduction of firearm sales resulting from this rule and indirect requirements stemming from local restrictions. One commenter suggested that there may be individuals who, after publication of this final rule, will choose to leave the market of selling firearms altogether so as to avoid coming under scrutiny under this new definition.

Department Response

The Department concurs that there may be individuals who are restricted from engaging in commercial activity from their homes or other spaces by State, county, and local laws or ordinances, or by residential HOAs. Individuals who fall under this category may apply for a zoning permit or variance through their local jurisdictions, or may arrange to conduct sales from a rented business premises or other space that permits commercial activity instead. But some may nonetheless choose not to continue making supplemental income through firearm sales activity from residential spaces. However, the Department notes that these persons, if making commercial sales from such locations, were most likely already prohibited from such sales before this rule was issued, unless they had requested a permit, variance, or other appropriate exception. Zoning ordinances and HOA restrictions on commercial activity often include limitations on foot traffic, number of employees, or the amount of interference with neighbors.[242] Most of these zoning restrictions are not predicated on whether a resident is formally established as a business, whether they sell firearms versus some other product (although there may also be additional ordinances specifically addressing firearms), or whether they are determined by Federal law to be engaged in the business as a firearms dealer. But the Department has no source (and no commenter provided any) from which to gather data on the number of people who might have been permitted to sell firearms under their zoning or HOA requirements before this rule and would now be unable to continue selling firearms for this reason.

However, there may also be other subsets of individuals who are affected by this rule and may choose to leave the firearm sales market for personal reasons. For example, some people may not want to go through the process of getting a license or some may not agree with it on principle and would rather forego firearms sales than comply. The Department acknowledges that there may be individuals who leave the market for a variety of reasons, including zoning ordinances, licensing requirements, or personal philosophy. Although the Department does not have data from which to extrapolate an estimated percentage for each such group, based on past experience with parallel requirements and SME expertise, the Department has combined these groups into a single estimate for individuals who may leave the firearm sales market for personal reasons, which is now accounted for in the economic analyses in Section VI.A of this preamble.

6. Costs of the Rule

a. Accuracy of Costs

Comments Received

Other commenters stated that it was unclear how accurate the costs and time burdens were that ATF calculated for the rule asserted that ATF underestimated costs, or alleged that ATF's estimates were ''random'' or had no ''data to support them.'' Another commenter asked how many of the 30,806 Armslist listings were, for example, selling inherited firearms, whether any of the listings were misclassified as ''private'' when they actually involved a licensed dealer, or whether the 30,806 listings were representative of the typical number of listings at any given time. This commenter also asked whether the average of 2.51 listings per seller was skewed by a minority of extreme outliers. One commenter suggested that the population characteristics derived from Armslist could not be used to generalize the potentially affected population that use non-traditional mediums (such as other online platforms) outside Armslist.

[242] *See* Van Thompson, *Zoning Laws for Home Businesses,* Hous. Chron.: Small Business, *https://smallbusiness.chron.com/zoning-laws-home-businesses-61585.html* (last visited Mar. 7, 2024); A.J. Sidransky, *Home-Based Businesses: Challenges for Today's Co-ops, Condos and HOAs,* New Eng. Condominium (Oct. 2016), *https://newenglandcondo.com/article/home-based-businesses.*

One commenter stated that, based on their calculations, the rule would ''cost private citizens about $338 to obtain a new license, and $35 to $194 annually to maintain the license.'' Additionally, in the commenter's opinion, this new rule would cost the government ''$116 million to process new licenses.'' Another commenter provided their own cost estimate of the rule and estimated that the 10-year annualized cost would be $18,813,987.17 or 14.7 times more expensive than ATF's primary estimate. Another commenter noted that the Department rounded cost estimates, including rounding wages from $16.23 to $16, which they stated could result in a 6 percent difference in total amounts. This commenter argued that costs considered in rulemakings should not be rounded (or should be rounded to the penny) to avoid the rounding errors that, they stated, were present in the Department's analysis.

A few commenters stated that the Department did not include compliance costs such as alarms, cameras, gun safes, secure record storage, and secure doors. One of these commenters further estimated that such security items cost them $1,000, plus monthly monitoring charges of $40. An additional and separate gun safe can range from $1,000 to $3,000, they stated, and a security door would cost between $800 and $1,000. Furthermore, this commenter stated that the Department did not include liability insurance, much less labeling costs. Another commenter suggested that the Department did not include business start-up costs such as attorney drafting of articles of incorporation or other legal advice. One commenter suggested that the rule would increase litigation costs. Another commenter suggested that the Department's estimate of the costs should include the costs of obtaining a State dealer's license and local and State business licenses, because, they said, people who now get licensed at the Federal level to engage in the business of dealing firearms will also have to be licensed as a business and as a dealer at the State level.

Department Response

The Department disagrees that ATF's estimated costs are ''random'' or are not supported by data. They are, however, estimates. Wherever possible, the Department used publicly available information to calculate costs and time burdens. Where relevant, the Department included footnotes and explanations regarding the calculations. Where applicable, the Department provided (and continues to provide) sources and methodologies demonstrating its means of determining the overall cost of the rule. Sources of data included, but were not limited to, fees required by ATF to apply for a license, costs for having photographs or fingerprints commercially taken (as posted by private companies), and similar costs of obtaining a license. However, despite best efforts, the Department acknowledges that not all licensing costs, like time burdens, could be substantiated in the same manner by third-party or publicly available data. In these cases, ATF made estimates based on its experience, such as the time needed to obtain fingerprints or passport photographs.

In the NPRM, the Department welcomed comments as to any assumptions made, and in particular solicited input about any countervailing costs or time estimates that commenters felt the Department could not or did not consider. In this final rule, the Department considered the suggestions it received in response and, where appropriate, updated the overall costs of the rule, including by incorporating new data or updating to a more appropriate source. For example, the final rule uses wage inflation per the Bureau of Labor Statistics (''BLS'') rather than BLS's Consumer Product Index to update household income, based on a commenter's suggestion and further Department assessment.

The Department acknowledges that estimates that round to the penny might differ from estimates that do not. However, the Department disagrees that rounding to the penny provides the public a more accurate total cost of the rule in this context because, as discussed above, there is an inherent lack of precise numbers that arises from estimating a total population or total cost without a comprehensive database, registry, survey, or other source of accurate data. OMB Circular A–4 allows agencies to make predictions and estimates during the rulemaking process and provides guidance for accuracy in making such estimates. It instructs agencies to make their estimates based on the precision of the underlying analysis. For example, OMB Circular A–4, section G (Precision of Estimates) suggests that an estimate of $220 million implies rounding to the nearest $10 million.[243] In accordance with this guidance and to avoid misrepresenting the Department's estimates as a more precise cost value than they are (as rounding to the penny would indicate), the Department continues to choose to round estimates to the dollar.

In response to comments on the Armslist sampling, the agency acknowledges that Armslist does not label vendors based on whether they are engaged in the business of firearms dealing or not. Armslist uses the categories of ''private party'' and ''premium vendors.'' When the Department reviewed the entries, it found that the premium vendors were all listed as FFLs. Therefore, the sample did not include entries categorized as premium vendors. Although the ''private party'' sales did not indicate whether they were by FFLs or unlicensed sellers, other information included in the listings indicated that ''private party'' sellers were likely to be unlicensed individuals rather than FFLs with funds to advertise on the website.

Nonetheless, the Department cannot be certain, so the sample size from Armslist (and thus the estimated population of unlicensed sellers) might be larger than the actual number of unlicensed sellers. However, even if we assume all the private party sellers on Armslist are unlicensed (which we cannot conclusively ascertain), not all unlicensed sellers of firearms will qualify as being ''engaged in the business'' under this rule. Some portion of them will be persons selling without the requisite intent to profit and only occasionally, selling inherited firearms, selling to upgrade a personal collection, selling to exchange for a curio or relic they prefer, selling to acquire a firearm for hobbies like hunting, or other similar situations. Many persons fitting into various of these categories will be unaffected by this rule to the extent that they would potentially not meet the requirements to be engaged in the business as a dealer, depending on the specifics of their operation.

Because of the known existence of such sellers in potentially large numbers, and to account for the uncertainty of the number of individuals sampled who might simply be engaging in activities not affected by this rulemaking, the Department estimated that, of all private sellers of firearms, 25 percent might be deemed to be ''engaged in the business'' and the other 75 percent will not be affected.

In response to the comment asking whether the average of 2.51 listings per seller was skewed by a minority of extreme outliers, the Department used this number as an average per seller in order to estimate the number of sellers in the sample set of listings from Armslist. The number of firearms per seller was otherwise not relevant to the Department's calculations. The sampled

[243] *See* OMB Circular A–4, at 46, *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf.*

sellers on Armslist in the private sales category varied in the number of firearms they had listed for sale, skewed to mostly selling one firearm or to a few selling multiple firearms. This partially informed the Department's estimate that approximately 75 percent of the population of currently unlicensed sellers would not be deemed engaged in the business under this rule and accordingly would not need to obtain a license.

With respect to the comment about whether Armslist could be used as a proxy for other sellers on other online platforms, the Department is unclear how sellers of firearms on Armslist might have significantly different characteristics than those of firearms sellers on other online platforms. Generally, there are two types of sellers on online platforms, licensed (FFLs) and unlicensed persons. While there may be differences in certain terms and conditions on given websites—for example, GunBroker requires that firearm transactions be mediated through a local FFL while Armslist does not—those aspects of online sales are not relevant to determining the affected population or calculating the costs of this rule. The terms and conditions that online platforms offer are also not impacted by this rule and will continue to be set at the discretion of the entities operating such platforms. Sellers on online platforms such as Armslist may continue to perform in-person transactions simply by making a phone call to perform a NICS background check for a buyer and will not be required to use a local FFL to complete a firearms transaction like sellers on GunBroker. These characteristics that may differentiate between online platforms do not affect the costs or the impacts to sellers due to the requirements of this rule.

The Department disagrees that items such as alarms, cameras, gun safes, or other security measures are costs under this rule. Although it recommends FFLs consider purchasing such items for security purposes and theft avoidance, the Department does not require—in this rule or anywhere else—that they purchase such items. Therefore, the Department is not including these costs in this rule. The Department also did not include litigation costs because possible future lawsuits are speculative.

The Department disagrees that the costs of the rule should include costs for all persons who are dealing in firearms to also obtain State dealer's licenses and State and local business licenses. Persons who are purchasing and reselling firearms in a State have always been required to follow State and local laws regarding licensing and business operations. The fact that the statute is now further defining the circumstances in which such individuals will be required to be licensed at the Federal level does not change State licensing requirements.[244] This regulation does not change the GCA statutory definition, as amended by the BSCA, and it does not require any State to adopt any presumptions or other clarifying provisions under Federal law into their State requirements. So, in general, State licensing requirements or costs are not affected by this rule. However, ten States and the District of Columbia tie their dealer licensing requirements to the definition of dealer at 18 U.S.C. 921 or the dealer licensing requirements at 18 U.S.C. 923 (though not to any ATF regulations) or require that a person with a Federal firearms license for dealing must also get a State dealer's license. As a result, in those 11 jurisdictions, firearms sellers who must get a Federal firearms license for dealing due to the changes in the BSCA and, therefore, this rule, will likely also need to obtain State dealer licenses for the same reason. The Department has added those costs in the economic analysis under Section VI.A.3 of this preamble.

b. Derivation of Leisure Wage Rate

Comments Received

Some commenters had questions or concerns about the leisure wage rate. One commenter asked why ATF referred to the Department of Transportation (''DOT'') guidance as a method of determining a leisure wage rate. A few commenters opined that the calculated leisure wage rate was too low. One of these commenters estimated that a $16 leisure wage would not result in a livable household income. Another commenter suggested that an average occupational wage rate of $34 per hour was more realistic since individuals would be considered engaged in the business of dealing in firearms and not engaged in leisure time.

Another commenter stated that the Department underestimated the leisure wage rate, which should have been adjusted from $16 to $19.48 to account for wage inflation between April 2020 and the present (which this commenter calculated to September 2023). This commenter used the BLS's Consumer Price Index (''CPI'') as a means of calculating wage increases over time to $19.48.

Department Response

The Department assumes that currently unlicensed persons who may be affected by this rule are not already engaged in a full-time occupation of selling firearms for their income because, if they were, they would already either be licensed in compliance with the GCA as it existed before the BSCA or working for such a licensee. The Department therefore also assumes these persons are not paying themselves a specific wage from their monetary gain from selling their firearms as, typically, a sideline. In other words, the changes enacted by this rule are not likely to cause individuals to qualify as being engaged in the business based on having a full-time or part-time job, including a job working for an FFL, where they get paid salaries or hourly wages as part of an occupation. Instead, the firearms sales activities that would require unlicensed individuals to obtain a license as a result of this rule likely constitute a supplemental source of income or a side business. Such activities are not correlated to an actual wage because they are typically done on the side and this rule does not require FFLs to pay themselves an occupational wage. The affected dealers typically have another job that generates an occupational wage, receive retirement pay, or receive similar primary income. As a result, ATF used a leisure wage to calculate the cost of their non-work time spent on dealing, rather than an occupational wage.

As such, the BLS does not track or assign a specific wage in this context, as there is no wage involved. Nonetheless, the Department recognizes that the rule imposes an opportunity cost of time on persons who will now need to apply for and maintain a license in order to continue dealing in firearms. In the NPRM, the Department therefore assigned a monetary value to that unpaid, hourly burden, as a comparison in ''cost,'' even though these persons are not likely paying themselves an hourly wage for such duties. As a result, the Department opted to use a ''leisure'' wage rather than a retail wage and continues to do so in this final rule. The Department used DOT's guidance on the value of travel time to calculate a leisure wage rate in the NPRM. During the final rulemaking process, however, the Department determined that the methodology used by the Department of Health and Human Services (''HHS'') to calculate the cost of time that persons use to perform actions that are not part of an official occupation is a more

[244] *See* 27 CFR 478.58 (Federal license confers no right or privilege to conduct business or activity contrary to State or other law, grants no immunity for violations of State or other law, and State or other law grants no immunity under Federal law or regulations.).

accurate measure of the relevant leisure wage rate than the DOT methodology used in the NPRM. As a result, the Department has used HHS's methodology to derive the leisure wage it used for this final rule. Because HHS's methodology relies on BLS data that is updated on a monthly basis, the Department does not need to use an inflation-adjusted wage rate as suggested by the commenter.

Using this methodology, the Department raised the leisure wage rate to $23 an hour, which is higher than the $19 suggested by the commenter. For more discussion on how the new wage of $23 per hour was derived, see Section VI.A.3 of this preamble.

c. Hourly Burden

Comments Received

One commenter suggested that the Department underestimated the hourly burdens to complete a Form 7 application and to undergo a licensing inspection. This commenter estimated that it would take more than one hour to read, understand, and complete a Form 7. In addition, they said, the estimated hourly burdens should include the time needed to closely read and understand hundreds of pages of Federal laws and regulations, which they estimated would take at least 22 hours (100,000 words at 75 words per minute). They also estimated that it would take an additional 5.5 hours to read Form 7 and acknowledge it via signature prior to the license being issued, and 4.5 hours to do a renewal Form. Therefore, this commenter estimated that the per FFL cost should be $1,165, to account for 27.5 hours of work, at an average hourly occupational wage rate of $34 per hour, in addition to the $230 cost of items such as the Form 7 application fee, fingerprints, and photographs.

Department Response

The Department concurs with the commenter that the estimated time for inspections was underestimated and has revised the amount of time needed to perform an inspection. From additional research it conducted based on the comment, ATF found that ATF Industry Operations Investigators (''IOIs'') report an average of 15 hours for an initial inspection and 34 hours for a compliance inspection, as opposed to the three hours for each inspection estimated under the NPRM. These averages account for all sizes of licensee operations, some of which may take far less time to inspect and others of which may take far more time, depending on various factors about the licensee's operations. Accordingly, the Department has revised and updated the hourly burdens for initial and compliance inspections in Section VI.A of this preamble.

However, the Department disagrees with the commenter regarding the hourly burden to complete a Form 7. First, the Form 7 application itself is only four pages long and the questions for the person establishing the license are on only pages 1 and 2. They also primarily pertain to the individual's personal demographics and what type of license the individual is requesting.[245] For ease of access, pages 3 and 4 include the responsible person questionnaire that an applicant can fill out about another person if the applicant is applying for an FFL license to include more than one person. Form 7 also includes instructions and definitions of terms, to make filling out the form easier and faster. They are for reference, as needed, and do not necessitate reading and studying in such a way that would require significant additional time. In addition, the Department's hourly burden calculation does not need to account for a person taking any time to read regulations and laws. Most persons who need to fill out Form 7 are unlikely to need to read regulations or laws in order to do so. Moreover, the Department prepares guidance documents that summarize the relevant regulations, and those guidance documents are freely available online and do not necessitate any reading and studying that would require significant additional time. In addition, if a person did wish to read the regulation, the relevant regulatory text is about five pages long at 12-point font and does not require significant additional time to read. Nonetheless, the Department has added familiarization costs to the costs outlined in Section VI.A.3 of this preamble.

The Department also notes that Form 7 has undergone public review and OMB review through the required Paperwork Reduction Act process, including detailed explanations for the time burden the Form entails. Those vetted and approved numbers form the basis for estimates included in the NPRM and now in the final rule regarding this Form. Therefore, hourly burdens to complete Form 7 and travel times to obtain items such as forms, fingerprints, and photographs have not been modified because Form 7 can be requested by mail or downloaded via the internet. Furthermore, fingerprints and photographs are commercially available throughout the United States for employment or passport purposes. The Department has determined that travel times and mileage costs have been appropriately calculated.

d. Office Hours/Business Operational Costs

Comments Received

One commenter suggested that the Department failed to include business operational costs stemming from maintaining at least one hour of operation or availability every week, as they believe Form 7 requires. This commenter estimated that, based on a wage rate of $34 an hour, maintaining business operations for one hour a week for 52 weeks would cost an individual 52 hours, or $1,768 in wages. They also suggested that the cost of becoming a licensee and maintaining a license to deal in firearms should include hourly burdens of 40 hours a week for 50 weeks, allowing for two weeks of vacation.

Another commenter suggested that this rule did not include expenses or time burden associated with selling a firearm. This commenter further suggested that these expenses should be subtracted from any ''profit'' from a sale. A third commenter suggested that ATF should include the time factor to run a business operation, and another commenter suggested including insurance and retirement as costs to comply with the rule.

Department Response

The Department disagrees with the commenter's analysis regarding operational costs. Neither this rule, nor any existing Federal firearms regulation, requires that a licensed dealer maintain full-time business hours, much less hire staff or provide benefits. As discussed in more detail under Section IV.D.6.b of this preamble, unlicensed sellers who would be affected by this rule would not have been engaging in the business as their full-time occupation; full-time firearms sellers were clearly already covered by the GCA licensing requirements before the BSCA and this rule and are thus not counted in the affected population. Therefore, the unlicensed sellers who would be affected by this rule would not have been earning a wage from such activities or paying staff. This rule does not change that, nor does it require that such sellers begin engaging in such activities as part of obtaining a license to deal in firearms. As a result, the Department is not requiring or anticipating that these individuals will,

[245] *Application for Federal Firearms License,* ATF Form 7 (5300.12)/7CR (5310.16) (revised Oct. 2020), *https://www.atf.gov/file/61506/download.*

as a result of this rule, begin paying themselves an occupational wage with benefits. In addition, the Department acknowledges that Form 7 requires that an applicant list at least one business hour per week during which they are available and may be contacted for information or scheduling purposes in the event the newly licensed individual needs to be inspected. But there is no requirement that the affected individual engage in or maintain actual business operations or otherwise actively sell firearms during this time (or during any other specified time or frequency); that individual would be able to maintain the operational hours and frequency that they had prior to being licensed. Therefore, no additional operational opportunity costs were assessed in this final rule.

The time burden associated with the sale of a firearm or to run a business operation is not included because these actions are not required by this rule and are otherwise considered to be ''sunk'' costs. The same is true for other operational costs, including insurance and retirement benefits. Because the rule does not require that a business operator incur any such costs, it is reasonable to presume that, to the extent such costs are incurred, the business operator was already incurring them before the rule, or will only incur them thereafter on a voluntary basis. This rule only requires individuals that are engaged in the business of dealing in firearms to apply for and maintain a license to be a dealer in firearms. The only costs this rule requires to be incurred are costs to become a licensed dealer and costs to maintain that license. While the Department agrees that an individual may have expenses and time burdens with respect to the actual sale of a firearm or to operate a business, these actions are not required by the Department, are voluntary, and are not considered costs of this rule.

e. Costs to the Government

Comments Received

One commenter calculated the annual Government cost as derived from the RSF survey—the ''high'' population estimate—and estimated that, using the upper population estimate, the Government cost is about 14.7 times higher than the Department's estimated Government cost.

Department Response

The Department agrees that using the population estimates derived from the RSF survey would result in a higher government cost estimate. However, for reasons discussed in Section IV.D.2 of this preamble, the Department included the RSF estimate for comparative purposes so people could see the possible options but believes that the more accurate estimate is the lower SME-based estimate. As mentioned above, the SME-derived estimate is based on real historical data and experience with relevant sales activities, combined with sampling from an online sales site and ATF's law enforcement and regulatory experience. The Department thus considers it to be a more reliable data source for this purpose than the RSF survey and therefore uses the SME-derived estimate as the primary estimate for this rulemaking.

7. Impact on Jobs and Economy

Comments Received

One commenter suggested that requiring additional firearms sellers to become licensed will increase the prices of firearms sold in the marketplace. This commenter further estimated that the total U.S. firearms market was $32.1 billion as of 2022 and that this rule, based on their own estimates, would cause a 0.099 percent increase in firearm prices across the overall firearms market. The commenter used an internal model to compare the cost of the rule to their estimated increase in prices; from that, they estimated that the increased prices they assessed would result in 0.89 percent fewer firearm sales, which would in turn result in fewer jobs, including jobs represented by newly licensing these sellers as FFLs. Based on their internal modeling, this commenter estimated that this rule will indirectly result in a loss of 350 direct retail jobs. The commenter went on to estimate that, including supplier jobs, the rule will indirectly result in over 550 fewer jobs and a total of $26.5 million in lost wages and benefits. Finally, this commenter estimated that the American economy would be $70 million smaller.

Department Response

The Department disagrees with the commenter's assessment of the effect this rule will have on the price of firearms and the effect on the U.S. firearms market and overall economy. The Department has reviewed the literature provided by the commenter and determined that the estimated impacts on the economy, retail jobs, wages, and subsequent taxes detailed by the commenter's internal literature are largely not connected to the market impacted by this rule. The literature cited by this commenter primarily focused on existing licensees, their retail jobs, and their firearms market. The literature does not cover unregulated persons who sell firearms on the secondary market. While there may be some effects due to an increase in the number of licensed FFLs, the new licensees that would be generated by this rule have already been selling, and would continue to sell, firearms on the secondary market, and thus would not impact the primary market. Based on the totality of public comments and the Department's experience and analysis, the Department has no basis to believe that persons obtaining new licenses under the clarifications in this rule would enter the primary firearms market industries of manufacturing firearms, becoming intermediaries, or engaging in retail sales of new firearms. Instead, the majority of the unlicensed sellers who would need to obtain a license pursuant to this rule already obtain firearms through existing retail FFLs and subsequently resell them on the secondary market. Some also acquire firearms through estate sales or other secondary sources. Since this buying and further reselling secondary market has been and will continue to operate, the Department does not estimate a significant impact on the firearms industry as suggested by this commenter.

8. Impact on Existing FFLs

Comments Received

Some commenters suggested that the rule would cause windfall gains to current FFLs under the belief that the rule would require all firearm transactions to be done through an existing FFL. Other commenters claimed that the rule would make it harder to lawfully transfer firearms due to the costs of obtaining and maintaining an FFL. Several individuals claimed that the rule would cause more so-called ''mom-and-pop'' businesses to go out of business.

Department Response

The Department acknowledges that this rule will create more FFLs, which will result in an increase in the amount of licensed competition. However, competition from these new licensees does not equate to an increase in sales competition, nor is the competition new, because those same people who will be required to obtain licenses under the rule are currently selling as unlicensed dealers. And they are operating at an unfair advantage. As one set of commenters pointed out, ''[a]s recognized in the Proposed Rule, these requirements would come at modest cost to most people falling under the

clarified definition. Furthermore, requiring regulatory compliance by dealers operating on the margin of the current scheme would have the equitable effect of subjecting them to the same requirements as current FFLs engaged in substantially similar business activities.'' These sellers would have already existed in the marketplace under the baseline prior to this rule, but they have been operating and competing with FFLs in a largely unregulated state—without being subject to the laws and regulations under which FFLs are required to operate. Rather than adding competition to existing FFLs, clarifying when sellers are likely to be engaged in the business under this rule and would need to become licensed would increase equity in the marketplace by extending costs and obligations incumbent upon all existing FFLs to include currently unlicensed sellers that are acting as dealers in firearms.

There may be additional positive market effects on FFLs as a result of their serving as an intermediary for private party firearm transactions at a greater rate, but the Department finds this effect difficult to estimate based on the lack of existing data sources and subject matter expertise. However, the Department disagrees that this rule will cause more ''mom-and-pop'' businesses to go out of business. The majority of existing licensees are considered to be small businesses and will continue to operate as small businesses. Furthermore, as other commenters have pointed out and as discussed in Sections IV.D.10.c and IV.D.12 of this preamble, many States already require background checks for all private party transactions and any costs associated with such background checks are not due to this rule. Finally, a newly licensed seller who might newly need to undertake background checks may do so under FBI processes by making a simple phone call for free. The Department included these qualitative effects of the rule.

9. License Revocation Costs

Comments Received

One commenter questioned ATF's assumption that, upon revocation of a license, the underlying market value of the revoked FFL's existing inventory of firearms would be unchanged when sold or transferred to another FFL's inventory. This commenter suggested that during a comprehensive sale or transfer of an existing FFL's inventory to another FFL, the selling FFL would need to liquidate their existing inventory at a loss to the purchasing FFL. In other words, the commenter suggested the selling FFL would experience an adverse price when liquidating their existing inventory.

Another commenter suggested that the adverse price response described above would be large. The same commenter also suggested that those who choose to surrender their FFLs must still liquidate their business-owned firearm assets within 30 days, with the same adverse price response of those who have had their license revoked, rather than engage in an ''orderly, lawful liquidation'' as ATF estimates.

Department Response

The Department estimated that the rule would likely have a qualitative impact on FFLs that fail to comply with existing regulations and requirements, mainly due to the rule's clarification of what must occur with their existing inventory when their license is terminated. FFLs that have had their licenses terminated before this rule were already not permitted to engage in unlawful means of disposing of their remaining inventory, but the rule makes the lawful options clearer. However, ATF revokes or denies renewal of FFL licenses very rarely, with a *de minimis* 0.093 percent of all active FFLs being revoked annually as described below in Section VI.A.4 of this preamble. Furthermore, the economic impact of transferring inventory to another FFL is unclear, given the range in volume and value of firearm inventories. Public comment was specifically sought on these topics, but the Department did not receive any data. In addition, the disposal requirements are not expected to have an adverse cost impact on FFLs that choose to cancel or not renew their licenses. Because such FFLs do so voluntarily, they know in advance that they will need to dispose of their inventory and thus do not have the same disruption and urgency that disposition due to a license revocation would potentially carry.

10. Benefits of the Rule

a. Costs Outweigh the Benefits

Comments Received

A couple of commenters opined that the costs of this rule outweigh the benefits. Of those two commenters, one calculated a 188 percent increase in Form 7 applications but stated there would be less than a 0.2 percent increase in background checks resulting from that increase in FFLs. Further, this commenter suggested that the ''actual number of firearm transactions at licensed dealers is likely a good bit higher'' because ''[m]ultiple guns can transfer based off of one background check.''

One commenter asserted that ATF incorrectly included individuals who sell firearms through existing licensees and, therefore, no benefit should accrue from such individuals because these firearm transactions are already subject to the background check process. The commenter further stated that the Department failed to account for sellers that currently undergo background checks for all private transactions, as required by certain States. This commenter estimated that 50 percent of the population lives in States that already require background checks and thus implied that any benefits derived from the rule are not as abundant as stated by the Department.

Department Response

The Department disagrees that the benefits of the rule are outweighed by the costs, as outlined in the economic analysis in Section VI.A.6 of this preamble. The value society places on the qualitative social benefits of the rule cannot be quantitatively represented in a way that would allow them to be compared to the quantitative costs of licensing more people, so the comment's comparison of the two is not accurate or appropriate. People know that society has placed a high positive value on increasing the licensure of sellers who engage in the business of dealing, in aid of public safety, because Congress passed a law to change the definition for that purpose. In addition, hundreds of thousands of commenters on this rule have also expressed that they place a high positive value on increasing licensure for public safety needs. But people cannot place a numerical value on the qualitative benefits flowing from those statutory changes and thus from this rule. However, there are quantitative benefits that relate to the subject indirectly. The Department does not have sufficient data from which to assess these indirect benefits and has thus not included or relied on them as quantitative benefits resulting from this rule. However, the Department is including some quantitative illustrative considerations in response to this comment as they shed some light on the indirect benefits. For example, there are studies that have examined the economic costs of gun violence. Those studies have demonstrated that the annual healthcare and medical costs of firearms violence alone run into the billions.[246] Therefore,

[246] *See, e.g.,* Everytown for Gun Safety, *The Economic Cost of Gun Violence* (July 19, 2022), *https://everytownresearch.org/report/the-economic-*

even a marginal decrease in firearms violence as a result of this rule would constitute a large enough quantitative benefit from the rule to offset the estimated costs of the rule.

The Department further disagrees that there is a marginal decrease in returns with respect to the costs attributed to this rule. This rule is primarily intended to implement the BSCA and to accordingly reduce the means by which a prohibited person can obtain firearms, including those subsequently used in a crime. The ratio between the number of Form 7 applications versus the number of background checks versus how many firearms a buyer can purchase under one background check is not relevant in determining benefits. In other words, benefits stem from having more firearms sellers be licensed, for multiple public safety reasons (as discussed in this section and Section IV.D.10 of this preamble)). These benefits are not solely the result of increasing background checks, so the perceived increase in the number of background checks does not offset the rule's benefits. In addition, even comparing the number of background checks with and without the rule would not be accurate because there are other factors involved. For example, although some prohibited persons do attempt to purchase firearms from FFLs, many currently buy from unlicensed dealers. Imposing a requirement that those dealers now be licensed would likely deter more prohibited persons from trying to purchase firearms, which would decrease the number of background checks. The number of firearms that are being purchased and resold per transaction is also not relevant. Multiple transactions already occur pursuant to a single background check and neither the BSCA nor this rule are directed at reducing firearm transactions. The commenter's comparison of the number of firearms that are purchased and resold per transaction therefore also does not result in an offset of the rule's benefits.

An increase in background checks is not the only benefit accrued from requiring that persons engaged in the business as dealers obtain a license. Increasing the number of licensed dealers also results in an increase in sellers who maintain firearms transaction records, submit multiple sales reports, report theft and losses of firearms, and respond to crime gun trace requests. These activities are directly correlated with an increase in the number of prohibited persons who are denied firearm purchases, law enforcement's ability to investigate and retrieve lost or stolen firearms before they can be used in crimes or trafficked, and law enforcement's ability to trace firearms that have been used in crimes and use them to find the perpetrators, among other benefits. This is particularly beneficial for States that have higher rates of straw purchasing or are otherwise larger sources of firearms trafficking, but it benefits society as a whole because each of these actions help law enforcement reduce criminal activities and opportunities. Furthermore, the Department believes that this rule will increase background checks, primarily in States that have less stringent background check requirements, which reduces the potential sources of firearms trafficking.

The Department concurs with the statement that the economic analysis model failed to account for sellers that currently undergo background checks for all private transactions, as required by certain States, but disagrees that the fact that some States currently require background checks for private firearm transfers reduces the benefits accrued from this rule. While the Department acknowledges that certain States already require background checks, States that currently do not require background checks pose a greater risk to public safety. These States tend to have higher rates of straw purchasing or otherwise are sources of firearms trafficking. Although State requirements that all sales undergo background checks could be relevant in general terms, they do not reduce the benefits accrued from this rule because relatively few States have universal background check requirements, because State background checks differ with respect to their thoroughness and which databases are utilized, and because the benefits of increasing licensees are not solely due to an increase in background checks. Please see Section VI.A.7 of this preamble for more information about States and firearms trafficking.

The Department further disagrees that the benefits derived from the rule should be reduced to account for unlicensed persons who sell firearms or obtain background checks through existing FFLs (either voluntarily or due to State requirements).

As a result of the comments on this topic, the Department has added a discussion of State background checks, tracing, and firearms trafficking to the Benefits discussion in Section VI.A.6 of this preamble to supplement the Department's position that the benefits of this rule outweigh the costs.

b. Lack of Benefits From Licenses

Comments Received

One commenter argued that benefits attributed to this rule ''do not flow from licenses''; rather, the rule's benefits are derived from the act of undergoing background checks and maintaining records. This commenter also stated that the Department failed to use denied background checks and responsiveness to traces as a benefit to the rule, suggesting, according to the commenter, that this rule does not address public safety as stated by the Department.

Department Response

The Department disagrees that the act of obtaining and maintaining a license does not directly contribute to the safety and welfare of the public. Congress chose to make the dealer the ''principal agent of federal enforcement'' in ''restricting [criminals'] access to firearms.'' *Huddleston* v. *United States,* 415 U.S. 814, 824 (1974). As the Supreme Court explained in a later case, *Abramski,* 573 U.S. at 172–73:

> The statute establishes a detailed scheme to enable the dealer to verify, at the point of sale, whether a potential buyer may lawfully own a gun. Section 922(c) brings the would-be purchaser onto the dealer's ''business premises'' by prohibiting, except in limited circumstances, the sale of a firearm ''to a person who does not appear in person'' at that location. Other provisions then require the dealer to check and make use of certain identifying information received from the buyer. Before completing any sale, the dealer must ''verif[y] the identity of the transferee by examining a valid identification document'' bearing a photograph. § 922(t)(1)(C). In addition, the dealer must procure the buyer's ''name, age, and place of residence.'' § 922(b)(5). And finally, the dealer must (with limited exceptions not at issue here) submit that information to the National Instant Background Check System

cost-of-gun-violence/ (estimating $1.57 billion in directly measurable medical costs to taxpayers due to firearms violence, including immediate and long-term medical care, mental health care, and ambulance and patient transport (not including costs to families, survivors, and employers); Nathaniel J. Glasser et al., *Economics and Public Health: Two Perspectives on Firearm Injury Prevention,* 704 Annals Am. Acad. Pol. & Soc. Sci. 44 (''The direct and associated medical care costs of firearm injury are high. In 2019, medical costs associated with firearm fatalities totaled an estimated $233million (CDC 2022). For nonfatal firearm injuries in 2019, the estimated 12-month attributable medical care cost was $24,859 per patient (Peterson et al. 2019; Peterson, Xu, and Florence 2021). While further research is needed to estimate long-term-care costs, the annual direct medical cost of firearm injuries has been conservatively estimated to exceed $2.8 billion (CDC 2022).''); Government Accountability Office, *Firearm Injuries: Health Care Service Needs and Costs* (2021), *https://www.gao.gov/assets/gao-21-515.pdf* (finding that initial inpatient costs from firearms violence in 2016 and 2017 were more than $1 billion, plus another 20 percent for physician costs, and additional first-year costs of $8,000 to 11,000 each for 16 percent of such patients, and stating that there are additional costs thereafter).

(NICS) to determine whether the potential purchaser is for any reason disqualified from owning a firearm. See §§ 922(t)(1)(A)–(B).

The benefits of this rule therefore stem from bringing potential purchasers onto a licensed business premises to prevent prohibited persons from obtaining firearms, channeling the commerce in firearms through licensed dealers so that State and local law enforcement can regulate firearms commerce in their borders, and allowing the tracing of crime guns. Making it harder for prohibited persons to obtain firearms makes it less likely that such persons will use a firearm in a crime. To the extent that a firearm purchased through an FFL is used in a crime, that firearm can then be traced by law enforcement. Furthermore, should firearms be stolen from an FFL, there are requirements that thefts be reported so that ATF and local law enforcement can analyze theft patterns for future reduction purposes. This approach helps to ensure that regulated firearms continue to be used for legal purposes and not criminal activities.

c. Lack of Empirical Data

Comments Received

Some commenters asserted that the proposed rule would not improve public safety, and cited statistics to support their view. One commenter stated that the proposed rule would not hinder criminals or save lives. In support of that view, the commenter stated that the State of Washington's per capita gun murder rate increased by more than 26 percent following its 2014 passage of universal background checks (''UBCs'') versus an unnamed neighboring State that the commenter stated had no such increase and no UBC requirement. Another commentator stated that numerous studies, including in peer-reviewed journals, found that the correlation between gun control measures and reduction in gun violence is negligible. *See* Michael Siegel et al., *The Relationship Between Gun Ownership and Firearm Homicide Rates in the United States, 1981–2010,* 103 Am. J. Pub. Health 2098 (2013) (cited by the commenter as in the *Journal of the American Medical Association* instead). Another commenter stated that the Bureau of Justice Statistics shows that less than 1 percent of individuals obtain firearms at gun shows. Finally, some commenters believed the proposed rule itself is reactive or lacks supporting evidence, analysis, or well-considered evidence to show that it will have a meaningful impact on crime reduction or improve public safety.

Similar to the comments on the population estimates, one commenter stated that the benefits lacked empirical data that would demonstrate the effects on public safety. The commenter referenced a peer-reviewed study that stated that each percentage point increase in gun ownership increased the homicide rate by 0.9 percent. One commenter questioned the lack of quantifiable benefits, including the lack of tracing data.

Many commenters who supported the proposed rule referenced research showing that one in five firearms are sold without a background check [247] and further stated that allowing firearms to be purchased without a background check is a significant threat to public safety. One commenter reinforced this sentiment by citing an article from *Bloomberg.*[248] Some commenters stated that firearms that are purchased without a background check cannot be later be traced. Many public commenters agreed with the rule and suggested that requiring background checks for sales of firearms increases public safety.

Department Response

The Department disagrees that there is no quantitative data to support the analysis in the NPRM and the public safety justification for the provisions of this rule; on the contrary, there is much data in support. Such data include the National Firearms Commerce and Trafficking Assessment (''NFCTA'') referenced by one commenter and released by ATF as a two-volume report in May 2022 and January 2023.[249] That report revealed, for example, that even though only 3 percent (41,810) of crime guns traced between 2017 and 2021 were acquired from licensees at a gun show, the percentage of those traces increased year-over-year by 19 percent. And as ATF noted in the report, ''[i]t is important to recognize that this figure does not represent the total percentage of recovered crime guns that were sold at a gun show during the study period as private citizens and unlicensed dealers sell firearms at gun show venues. National data, however, are not available on unregulated firearm transfers at gun shows.'' [250]

Furthermore, the Department disagrees with the commenter's interpretation of the article in the *American Journal of Public Health.* The commenter argued that the article found that any correlation between gun control measures and reduction in gun violence is negligible. But the article states, ''[g]un ownership was a significant predictor of firearm homicide rates (incidence rate ratio = 1.009; 95% confidence interval = 1.004, 1.014). This model indicated that for each percentage point increase in gun ownership, the firearm homicide rate increased by 0.9%.'' Siegel, Ross, & King, *supra,* at 2098. The Department interprets this article to suggest that for every percent increase in gun ownership, there is almost a comparable (almost 1:1 ratio) increase in firearm homicide, which is not negligible. In other words, for every percent increase in firearms ownership, there was an almost equal percentage increase in firearm homicide.

However, the Department concurs with many of the statistics provided by the commenters and has incorporated those statistics into the economic analysis in Section VI.A of this preamble. Additionally, the Department used information provided by the commenters to illustrate the effectiveness of tracing data to help determine firearms trafficking or straw purchasing patterns. Finally, the Department compared commenters' statistics on States that require background checks for all private firearms transactions to States that have the highest and lowest time-to-crime statistics and determined that States with the least restrictive background check requirements may be larger sources of firearms trafficking and straw purchases. For more details, *see* Section VI.A.7 of this preamble, which discusses the benefits of the rule.

11. Federalism Impact

Comments Received

One commenter estimated that this rule will increase the number of FFL dealers nationwide by 903 percent. Many States will have a subsequent ''massive burden'' due to this increase, the commenter concluded. This commenter also suggested that due to the burden this rule will have on States, the Department should have included a federalism summary impact statement as to how these new licensees will affect State regulatory agencies. This commenter suggested that this rule will have a significant impact on States because many States license FFLs themselves, separately from the Federal licensing scheme. In addition, another commenter stated that the proposed rule presented a potential conflict in which an individual might be engaged in a business operation requiring a license under Federal law but might not be required to obtain a license under State law. The commenter added that this would create potential problems for people who are legally required to hold an FFL, but then are prohibited from operating or possessing such a license under local ordinances. They also stated that ATF is seeking to broadly regulate a field that states have already addressed in different ways.

Another commenter challenged the NPRM's statement that ''[t]his rulemaking would not result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year, and it will not significantly or uniquely affect small governments.'' They claimed that ATF failed to consider the impact of its expansion of mandatory background checks for firearm transactions on State, local, and Tribal government budgets, as those political entities may have to expand their staffing and infrastructure to respond to a greater number of declined background checks.

Department Response

The Department disagrees that a federalism impact statement is needed for this rulemaking under Executive Order 13132. Nothing in this rule changes how State and local authorities conduct background checks or otherwise regulate persons engaged in a firearms business. This rule, which implements the GCA, and the changes made to it by the BSCA, does not preempt State laws or impose a substantive compliance cost on States. Under 18 U.S.C. 927, no provision of the GCA ''shall be construed as indicating an intent on the part of Congress to occupy the field in which such provision operates to the exclusion of the law of any State on the same subject matter, unless there is a direct and positive conflict between such provision and the law of the statute so that the two cannot be reconciled or consistently stand together.'' State and local jurisdictions are therefore free to create their own definitions of terms such as ''engaged in the business'' to be applied for purposes of State or local law within their respective jurisdictions. They are free to mandate their own requirements concerning the licensing of firearms dealers.

State licensing schemes for retail dealers in firearms (or merchandise that includes firearms) stand on their own and are not dependent on Federal law. If persons have been engaged in a firearms business requiring a State or local business license, then they should have acquired the State or local business license regardless of the new rule. In fact, as set forth below, the new rule looks to whether a person ''[s]ecures or applies for a State or local business license to purchase for resale or to sell merchandise that includes firearms'' to help determine whether a person is engaged in the business requiring a license under Federal law, 18 U.S.C. 922(a)(1) and 923(a). *See* 27 CFR 478.13(d)(2)(vii) (definition of ''predominantly earn a profit'') (final rule).

The Department disagrees with the estimate that the rule will significantly or uniquely affect small governments due to increased background checks by local authorities since 22 States already require background checks for private party sales. Of the States that do not currently require background checks for all private sales, only three States (Florida, Tennessee, and Utah) [251] do not rely on Federal law enforcement for their background checks and are ''point of contact'' States in which designated State agencies conduct NICS checks.

12. Regulatory Flexibility Act

Comments Received

Various commenters stated that this rule, by increasing operational and administrative costs, will have a significant and disproportionate impact on, or otherwise destroy, small businesses (some of which have operated for decades) or even destroy a sector of business. One commenter stated that the proposed rule inappropriately did not contain an analysis under the Regulatory Flexibility Act (''RFA''). The same commenter opined that small businesses may not have the resources or infrastructure to comply with enhanced recordkeeping requirements. Another commenter opined that with more people applying for a license, existing FFLs that operate a brick-and-mortar store will go out of business.

One commenter requested various data regarding the analysis performed under the RFA. This commenter stated that ATF may not have properly considered small entities and further asked a series of questions:

1. ATF did not list a cost per business. . . . What is the average additional cost a small business would incur as a result of this rule?

2. Why did the ATF not include [the additional cost] in the published rule?

3. What alternatives [for small businesses] did ATF consider?

a. What would have been [the alternatives'] impact on small entities?

b. Why were these alternatives deemed insufficient?

c. Why did the ATF not explain the alternatives in its original RFA analysis?

4. ATF anticipates that nearly 25,000 new individuals or entities must register as a firearm dealer. Of these entities, how many does the ATF anticipate will stop selling firearms?

5. What impact will this rule have on existing FFL dealers, many of whom are small businesses and how did ATF assess the costs of this rule on large entities, compared to the 25,000 new small businesses it created?

6. What impact does the ATF believe adding 25,000 new FFL dealers will have on the price of firearms?

7. Why did ATF not explain this rule's impact on the 25,000 businesses?

Department Response

The Department disagrees that this rule will destroy a whole sector of business (*i.e.,* the firearms industry). FFL dealers are a subsector of the firearms industry, and the impact on some dealers will not destroy that subsector or the entire firearms industry. The firearms industry is significantly large and robust, and the impact of this rule affects only a small portion of one subsector of it. In any event, as stated above in Section IV.D.8 of this preamble, the Department believes that, rather than adding competition to existing FFLs, requiring sellers engaged in the business under this rule to become licensed adds equity to the marketplace by spreading costs and obligations incumbent upon all existing FFLs to include currently unlicensed sellers that are acting as

[251] FBI, *How We Can Help You: NICS Participation Map* (Feb. 1, 2024), *https://www.fbi.gov/how-we-can-help-you/more-fbi-services-and-information/nics/about-nics.*

dealers in firearms. There may be additional positive market effects on FFLs as a result of them serving as an intermediary for private party firearm transactions at a greater rate, but the Department finds this effect difficult to estimate based on the lack of existing data sources and subject matter expertise. Finally, the Department does not believe the congressionally mandated recordkeeping requirements constitute a significant burden for a small business. Many existing FFLs are small businesses and already comply with the recordkeeping requirements.

Regarding the first and second questions on small business impacts, the Department did not distinguish between the cost of individuals complying with this rule versus small businesses complying with this rule. For the purposes of this rule and Final Regulatory Flexibility Act analysis, the Department assumed individuals becoming licensed will become small businesses and the cost per person (or small business) is outlined in Section VI.A.3 of this preamble, discussing ''Costs for Unlicensed Persons Becoming FFLs.'' The Department did not determine that there were additional costs beyond those individuals (or newly formed businesses) complying with this rule; therefore, no other costs were attributed to small businesses that were not already outlined in Section VI.A.3 of this preamble.

Regarding the third question on consideration of alternatives, the Department considered alternatives in the NPRM (88 FR 62016 and 62017) and discusses them in the final rule in Section VI.A.8 of this preamble. No separate alternative was considered for small business specifically because it was assumed that all individuals complying with this rule will become small businesses. Other alternatives suggested during the comment period and the Department's response to such suggestions are discussed in Section IV.D.13 of this preamble. All alternatives (including the proposed alternative) were considered alternatives for small business compliance. All impacts considered in the alternatives and all impacts under this rule were considered to be alternatives and regulations for small business compliance. Alternatives such as lower fees or guidance were deemed insufficient for various reasons, including that fees are imposed by statutory requirement and guidance alone would result in insufficient compliance. These alternative discussions are outlined below in Section VI.A.8 of this preamble (''Alternatives'') and above in the Department's response to comments received on alternatives in Section IV.D.13 of this preamble. The Department did not discuss alternatives targeted at small businesses separately from alternatives aimed at all affected parties because they were deemed to be one and the same.

Regarding the fourth question, on the estimated number of individuals leaving the market: of the individual or new entities affected by this rule, the Department estimates in this final analysis that 10 percent of affected individuals (or potential entities) may opt to stop selling firearms. Discussions on that are located in Sections IV.D.2 (''Population Accuracy''), IV.D.4 (''Russell Sage Foundation Model Calculation''), and VI.A.2 (''Population'') of this preamble.

Regarding the fifth question, as responded to in Section IV.D.8 (''Impact on Existing FFLs'') of this preamble, there may be some impact on existing FFLs as there will now be more licensed dealers. However, these newly licensed dealers have been selling firearms prior to this rule, and most of them will continue to sell firearms regardless of this rule, so the impact on existing FFLs will not be significant since the overall number of firearm transactions are unlikely to be significantly affected. For a more detailed discussion, please see Section IV.D.8 of this preamble.

Regarding the sixth question, the Department does not anticipate a significant impact on the prices of firearms. The firearm transactions affected by this rule are primarily firearms sold on the secondary market (*i.e.,* previously purchased firearms for resale). Furthermore, sales of these firearms have been and will continue to occur regardless of the implementation of this rule; therefore, no impact on the prices was considered. The Department further notes that this rule is not affecting the manufacture or importation of firearms, so supply is considered to be stable.

Regarding the seventh question, the Department considered the impact of this rule on all unlicensed sellers (or newly created businesses) and addressed cost under Section VI of this preamble. As mentioned above, no distinction was made between small businesses because it was assumed that all unlicensed sellers (or businesses) affected by this rule are small.

13. Alternatives

Comments Received

One commenter opined that only retailers of firearms who own brick-and-mortar stores should be required to have a license. Another commenter suggested using a minimum threshold number and accounting for inflation to define a dealer. One commenter suggested a stricter background check for all firearms transactions. Another suggested that ATF charge a $10 per application fee for a dealer's license, not $200. Two commenters suggested a plethora of alternatives, including education for individuals and local law enforcement. One of those two commenters also suggested revisions to the NFA and GCA for items such as increasing the fees of NFA weapons, and the other commenter suggested that the Department track and report on citizens using firearms to prevent a crime or protect themselves. One commenter suggested that, rather than expanding the Federal licensing requirements, ATF should institute a permitting system where purchasers could use a firearms ID or demarcation on their license to provide proof of ability to purchase firearms.

A commenter recommended leaving the regulations as they are but suggested adding straw purchases because ''ATF has estimated that 50 percent of the illegal firearms market is conducted through straw purchases.'' Another commenter agreed and said that rather than implementing universal background checks, ATF should focus on cracking down on illegal straw purchases.

Department Response

The Department disagrees that only retailers who operate out of brick-and-mortar stores should be required to have licenses. Currently, a portion of ATF's existing FFLs include high-volume sellers of firearms who do not operate in brick-and-mortar store locations; they should not be excluded from licensing requirements simply because they sell from other locations or through other mediums. There are unlicensed sellers who operate out of brick-and-mortar locations and others who do not; the law requires any such sellers who qualify as engaged in the business as a dealer to be licensed. The BSCA does not distinguish on the basis of where the sales occur—and the rule provides details to aid people in understanding that approach. The BSCA was enacted with the intent to increase, not reduce, the population of regulated dealers. Therefore, this alternative has not been included in the analysis.

As explained in detail in the NPRM, the Department considered, but did not propose, a specific number of firearms sales as a threshold for being engaged in the business as a dealer. Although some commenters suggested this alternative again, they did not provide any

information or reasons to overcome or refute the explanations and evidence cited in the NPRM discussion on this topic. As those reasons still hold true, the Department continues to decline to adopt this alternative.

The Department understands that some commenters consider the license fee of $200 and other costs related to obtaining a license too costly for some people transacting in firearms as part of a hobby or to enhance a personal collection. However, the Department does not set the application fee or the costs of obtaining photographs or fingerprints. The application fee is set by statute and the Department cannot change it.[252] The other costs (such as for photographs or fingerprints) are set by private companies and similarly cannot be changed by the Department. Nonetheless, the rule does not require occasional sellers of firearms as part of a hobby or to enhance personal collections to obtain a license, so the costs of complying with this rule would not present a burden to them. Instead, the rule impacts persons who have been engaging in certain repetitive firearms dealing that demonstrates they are engaged in the business as a firearms dealer and should be licensed. For these reasons, the Department declines to pursue alternatives to licensing fees.

The Department previously considered and rejected guidance as an alternative means of implementing the statutory changes to the definition of ''engaged in the business.'' The Department does not believe guidance would be an effective method, based partly on prior experience with guidance on this topic. ATF's 2016 guidance, for example, outlined the general factors and examples of being engaged in the business under the statutory definition of that term in effect at the time,[253] but compliance with that guidance document was voluntary and it was not included in the Code of Federal Regulations for broader distribution to the public. Therefore, the guidance resulted in only a brief increase in the number of persons engaged in the business becoming licensed dealers. Although this increase of 567 additional dealers illustrated that people would try to comply with the licensing requirement when they better understood the requirement, this approach was not effective enough, by itself, to address the problem of unlicensed dealing.

A regulation is much more effective at achieving compliance with the GCA, as amended by the BSCA, than guidance that is both voluntary and distributed by ATF at gun shows or other venues when the agency is present (or found online if people search for it). People recognize that a regulation sets the requirements they must follow and affects all those participating in the topic area; they also know where to look for a regulation. Now that the BSCA has redefined ''engaged in the business,'' there is even more of a need to ensure that unlicensed people who meet the definition of that term understand that they are violating the law if they do not obtain a license. And if the Department does not update its regulations, they would not accurately reflect the statutory text and would thus create confusion.

As a result, the Department did not select the alternative to publish only guidance documents in lieu of this regulation because guidance alone would be insufficient as a means to inform the public in general, rather than solely the currently regulated community. Guidance would not have the same reach and attention as a regulation, and it would not be able to change existing regulatory provisions on the subject of ''engaged in the business'' or impact intersecting regulatory provisions. The Department considers it necessary to use a regulatory means of putting sellers who continuously or repetitively engage in firearm sales on notice regarding the impacts the statute will have on them, and to clarify the parameters of the new definition. For more detail, please refer to Section VI.A.8 of this preamble.

The Department did not consider the remaining alternatives proposed by commenters, such as creating and including educational training, cracking down on straw purchases, or adopting a buyer permitting system, because they are outside the scope of this rulemaking and the Department's NPRM. ATF will provide training and outreach as it routinely does, but such activities are not included in a regulation.

V. Final Rule

Subsections in Section V

A. Definition of ''Dealer''

The rule finalizes, with minor edits, the amendments proposed in the NPRM to the definition of ''dealer'' in 27 CFR part 478, which clarify that this term includes such activities wherever, or through whatever medium, they are conducted. In this regard, the Department replaced the words ''may be conducted'' with ''are conducted'' to help ensure that the definition is not interpreted as authorizing a firearms business to operate at unqualified gun shows, events, or other locations, where such activities could not serve as a proper business premises at which a license could be issued under the GCA.

B. Definition of Engaged in the Business—''Purchase,'' ''Sale,'' and ''Something of Value''

To conform with designation of paragraphs elsewhere in this rule, the final rule redesignates paragraphs (a) through (f) of the ''engaged in the business'' definition in § 478.11 to paragraphs (1) through (6) and continues the numerical designation in new paragraphs thereafter. The rule finalizes the definitions of ''Purchase,'' ''Sale,'' and ''Something of value'' with minor amendments. First, for consistency across those who deal in firearms, the definitions were moved in the definition of ''engaged in the business'' to a new paragraph (7), to apply, not only to the definition of ''dealer in firearms other than a gunsmith or pawnbroker,'' but generally to all persons engaged in the business of dealing in firearms. This includes importers and manufacturers who are authorized by 27 CFR 478.41(b) to engage in business on the licensed premises as a dealer in the same type of firearms authorized by the license to be imported or manufactured. Second, in the definitions of ''purchase'' and ''sale,'' the words ''an agreed'' were inserted before ''exchange for something of value'' to clarify that the transaction must be intentional. Such transactions include indirect exchanges of something of value. Third, the Department revised the term ''sale'' to change ''providing

[252] Application fees for firearms regulated under the GCA are set by 18 U.S.C. 923(a). Rates for the NFA special (occupational) tax (SOT) are established by 26 U.S.C. 5801(a).

[253] *See* ATF Publication 5310.2, *Do I Need a License to Buy and Sell Firearms?* (2016), *https://www.govinfo.gov/content/pkg/GOVPUB-J38-PURL-gpo125446/pdf/GOVPUB-J38-PURL-gpo125446.pdf.*

to'' to ''disposing of'' to be more consistent with the statutory language, and for further clarity, to define the term ''resale'' as ''selling a firearm, including a stolen firearm, after it was previously sold by the original manufacturer or any other person.'' Finally, the phrase ''legal or illegal'' was added at the end of the definition of ''something of value'' to make clear that the item or service exchanged for a firearm could be one that is unlawful to possess or transfer (*e.g.,* a controlled substance).

C. Definition of ''Engaged in the Business as a Dealer in Firearms Other Than a Gunsmith or Pawnbroker''

The rule finalizes the definition of ''engaged in the business'' of wholesale or retail dealing in a new section of the regulation at § 478.13, instead of keeping the definition under the overall definitions section at § 478.11, due to its length. In conjunction with this change, the final rule has also moved the definition of ''predominantly earn a profit'' to § 478.13 because it is an element of the definition of ''engaged in the business as a dealer.'' As a result of consolidating the two definitions into one integrated section, the rule also eliminated duplication of identical paragraphs on rebuttal evidence, the non-exhaustive nature of the listed rebuttal evidence, and applicability to criminal proceedings, which were previously located in each definition. In conjunction with these changes, the final rule has also included cross-references to these definitions in § 478.11.

D. Definition of Engaged in the Business as Applied to Auctioneers

The rule finalizes the definition of ''engaged in the business'' of wholesale or retail dealing with minor edits to make clear that estate-type auctioneers may assist in liquidating all firearms as a service on commission without a license, not merely those in a personal collection (as that term is defined in this rule). Additionally, the final rule addresses the concerns of estate-type auctioneers by limiting the caveat for possession of the firearms prior to the auction of the firearms to those that are ''for sale on consignment.''

E. Presumptions That a Person Is Engaged in the Business

The rule finalizes the presumptions that a person is ''engaged in the business'' of dealing in firearms at wholesale or retail by making the following changes: (1) in the introductory paragraph (a), separating the definition of ''engaged in the business'' in that paragraph from a new paragraph (b), ''fact-specific inquiry,'' which sets forth the factual analysis courts have historically applied to determine whether a person falls within the definition in paragraph (a); including in paragraph (b) the example to compare a single firearm transaction, or offer to engage a transaction, in which a person represents to others ''a willingness and ability'' to purchase more firearms for resale, which may require a license, with ''a single isolated firearm transaction without such evidence'' that would not require a license; and adding the following at the end of the same paragraph (b): ''At all times, the determination of whether a person is engaged in the business of dealing in firearms is based on the totality of the circumstances''; (2) revising the sentence at the beginning of the presumptions to move the phrase ''[i]n civil or administrative proceedings'' to the beginning of the sentence, and adding ''it is shown that'' before ''the person—''; (3) adding the prefix ''re'' before ''sell'' and ''sale'' in the various presumptions to more closely track the statutory definition of ''engaged in the business'' in 18 U.S.C. 921(a)(21)(C); (4) adding to the EIB presumption on willingness and ability to purchase and sell more firearms the parenthetical ''(*i.e.,* to be a source of additional firearms for resale)'' to clarify what it means to represent to potential buyers or otherwise demonstrate a willingness and ability to purchase and resell additional firearms; (5) removing the EIB presumption relating to gross taxable income to address concerns raised by commenters about how it would apply in certain low-income situations; (6) revising the EIB presumption on certain types of repetitive transactions to add the word ''repetitively'' before ''resells or offers for resale'' to more closely track the statutory language in 18 U.S.C. 921(a)(21)(C); (7) revising the same EIB presumption to make it applicable to firearms that cannot lawfully be purchased, received, or possessed under Federal, State, local, and Tribal law, not merely under Federal law (as the citations made it appear to commenters), and to explain that firearms not identified as required under 26 U.S.C. 5842 are among the types of firearms that cannot lawfully be possessed; (8) revising the EIB presumption on repetitively selling firearms in a short period of time to include a time limitation of one year with respect to repetitive resales or offers for resale of firearms that are new or like new, and those that are the same make and model; in addition, revising and limiting the presumption for firearms that were the ''same or similar kind'' to those firearms that are of the ''same make and model, or variants thereof''; (9) revising the EIB presumption on liquidation of business-inventory firearms by a former licensee that were not transferred to a personal collection prior to license termination, to reference the rules pertaining to liquidation of former licensee inventory in §§ 478.57 and 478.78 to ensure that they are read consistently with each other; (10) revising the EIB presumption on liquidation of firearms transferred to a personal collection or otherwise as a personal firearm prior to license termination, to reference the rules pertaining to the sale of such firearms in 18 U.S.C. 923(c) and 27 CFR 478.125a(a) to ensure that they are read consistently with each other; (11) adding explanatory headers for the paragraphs in the regulatory text; (12) clarifying, in a new paragraph, that the list of conduct not supporting a presumption that a person is ''engaged in the business'' is also evidence that may be used to rebut any presumption should an enforcement proceeding be initiated; and (13) expanding the list of conduct that does not support a presumption to not only include firearms resold or otherwise transferred as bona fide gifts and those sold occasionally to obtain more valuable, desirable, or useful firearms for the person's personal collection, but also those sold ''[o]ccasionally to a licensee or to a family member for lawful purposes''; ''[t]o liquidate (without restocking) all or part of the person's personal collection''; ''[t]o liquidate firearms that are inherited'' or ''[p]ursuant to a court order; or ''[t]o assist in liquidating firearms as an auctioneer when providing auction services on commission at an estate-type auction.''

F. Definition of ''Personal Collection (or Personal Collection of Firearms, or Personal Firearms Collection)''

The rule finalizes the definition of ''Personal collection (or personal collection of firearms or personal firearms collection)'' with some additional clarifying edits. First, headers were added to each main paragraph for clarity. Second, a parenthetical was added to clarify that ''collecting curios or relics'' and ''collecting unique firearms to exhibit at gun club events'' are examples of firearms accumulated ''for study, comparison, exhibition,'' and that ''historical re-enactment'' and ''noncommercial firearms safety instruction'' are examples of firearms accumulated ''for a hobby.'' Third, to clarify the nature of the firearms not

included in the definition of ''personal collection'' due to the fact that they were purchased for the purpose of resale with the predominant intent to earn a profit, the following was added to examples in the parenthetical: ''primarily for a commercial purpose or financial gain, as distinguished from personal firearms a person accumulates for study, comparison, exhibition, or for a hobby, but which the person may also intend to increase in value).'' Fourth, to clarify that firearms accumulated primarily for self-protection are not included in the definition of ''personal collection,'' but can be purchased for personal use, the following was added: ''In addition, the term shall not include firearms accumulated primarily for personal protection: *Provided,* that nothing in this definition shall be construed as precluding a person from lawfully acquiring a firearm for self-protection or other lawful personal use.'' Finally, minor edits were made to the definition of personal collection as it pertains to licensees, to explain that licensees may transfer firearms to a personal collection ''or otherwise as a personal firearm,'' and that the separation requirement for personal firearms applies ''[w]hen stored or displayed on the business premises,'' as distinguished from those personal firearms that are being carried by the licensee for self-protection.

G. Definition of ''Responsible Person''

The rule finalizes, with minor changes, the amendments proposed in the NPRM to the definition of ''responsible person'' in 27 CFR part 478. The proposed definition was revised to remove the term ''business practices,'' which term was considered confusing and overbroad to some commenters. It was also changed to explain that sole proprietorships and companies are included in the list of businesses that have responsible persons and to indicate that both the individual sole proprietor and their authorized employees are responsible persons. This change ensures that individual sole proprietors (who are always responsible for the management and policies of their firearms businesses), companies, and their authorized employees will be identified as responsible persons when submitting an Application for License, Form 7/7CR, and undergo the required background check.

H. Definition of ''Predominantly Earn a Profit''

The rule moves the definition of ''predominantly earn a profit'' into a stand-alone section with the definition of ''engaged in the business'' at § 478.13. The rule also breaks down the definition of ''predominantly earn a profit'' into subparagraphs for ease of reference and finalizes that definition with minor edits to the last sentence in the first paragraph. Specifically, the final rule adds the word ''intended'' before ''pecuniary gain,'' consistent with the statutory language. The rule also finalizes the introductory paragraph to the ''Presumptions'' subsection with minor edits. Specifically, the sentence at the beginning of the paragraph was revised to move the phrase ''[i]n civil or administrative proceedings'' to the beginning of the sentence; the phrase ''from the sale or disposition'' of firearms was changed to ''the repetitive purchase and resale'' of firearms, to more closely track the statutory language; and ''it is shown that'' was added before ''the person.'' Additionally, the following clarifying edits were made to the set of presumptions in the definition of ''predominantly earn a profit'': (1) the term ''repetitively'' was added into various presumptions to better focus them on persons who are reselling firearms with the requisite intent under the statute; (2) in the PEP presumption on marketing, the words ''or continuously'' were inserted at the beginning to include advertising that is perpetual, and the phrase ''on any website'' was revised to ''through the internet or other digital means''; (3) the PEP presumption on purchasing or renting space was revised by adding ''repetitively or continuously'' to the beginning to better demonstrate the requisite intent, and by removing the phrases ''or otherwise secures or sets aside'' and ''or store,'' and replacing those phrases with ''or otherwise exchanges (directly or indirectly) something of value to secure,'' to focus the presumption on firearms that are displayed for resale by a person who has paid for that service, and to make clear that the item or service exchanged for a firearm could be either a direct or an indirect form of payment (*e.g.,* payment of cash or an indirect membership or admission fee); (4) the PEP presumption on maintaining records was revised to make clear that ''repetitive'' firearms purchases for resale are being tracked; (5) the PEP presumption on purchasing or otherwise securing merchant services was limited to those through which a person intends to repetitively accept payments for firearms transactions, to focus on the seller as opposed to the purchaser or end user of firearms who makes or offers to make payments for firearms transactions, and to add the word ''repetitive'' before ''firearms transactions'' to further support the intent element of the statute; (6) the PEP presumption on securing business security services was limited to those services intended ''to protect firearms assets and firearms transactions,'' to focus on businesses that conduct transactions involving firearms rather than those that may purchase security services solely to protect or store their business inventory for company use; and (7) the PEP presumption on business insurance policies was removed to address commenter concerns and because information indicated it was not commonly found in ATF cases.

I. Disposition of Business Inventory After Termination of License

Several changes were made to the liquidation provisions on the disposition of business inventory by a former licensee after termination of license, 27 CFR 478.57 and 478.78. Specifically, with respect to business inventory that remains after license termination, the term ''personal inventory'' was replaced with the term ''former licensee inventory'' to better explain the business nature of this inventory. A definition of ''[f]ormer licensee inventory'' was added to 27 CFR 478.11, which includes a sentence to explain that ''[s]uch firearms differ from a personal collection and other personal firearms in that they were purchased repetitively before the license was terminated as part of a licensee's business inventory with the predominant intent to earn a profit.'' The liquidation provisions at 27 CFR 478.57(c) and 478.78(c) now expressly require that transfers of firearms in a former licensee inventory must be appropriately recorded as dispositions in accordance with 27 CFR 478.122(b) (importers), 478.123(b) (manufacturers), or 478.125(e) (dealers) prior to delivering the records after discontinuing business consistent with 27 CFR 478.127. This will allow former licensee inventory to be traced if later used in crime and is consistent with the existing delivery of records requirement in 18 U.S.C. 923(g)(4) and 27 CFR 478.127. The liquidation provisions also expressly state, in §§ 478.57(b)(2) and 478.78(b)(2), that transferring former licensee inventory to a responsible person of the former licensee within 30 days after license termination does not negate the fact that the firearms were repetitively purchased, and were purchased with the predominant intent to earn a profit. Finally, the liquidation provisions now expressly recognize that a responsible person of a former

licensee may occasionally sell a firearm even after the 30-day liquidation period to a licensee without being presumed to be engaged in a firearms business. *See* §§ 478.57(c), 478.78(c).

J. Transfer of Firearms Between FFLs and Form 4473

The rule finalizes the provision on the proper procedure for licensee transfers of firearms to other licensees, 27 CFR 478.124(a), with a minor edit to add the phrase ''or otherwise as a personal firearm'' after ''personal collection.'' The rule makes it clear that Form 4473 may not be used by sole proprietors when they transfer to themselves other personal firearms that are not in a ''personal collection'' as defined in this rule. § 478.124(a).

K. Effect on Prior ATF Rulings

ATF publishes formal rulings and procedures to promote uniform understanding and application of the laws and regulations it administers, and to provide uniform methods for performing operations in compliance with the requirements of the law and regulations. ATF Rulings represent ATF's guidance as to the application of the law and regulations to the entire state of facts involved, and apply retroactively unless otherwise indicated. The following ruling is hereby superseded: ATF Ruling 96–2, *Engaging in the Business of Dealing in Firearms (Auctioneers)* (Sept. 1996), *https://www.atf.gov/file/55456/download.*

L. Severability

Based on the comments received in opposition to this rule, there is a reasonable possibility that this rule will be subject to litigation challenges. The Department has determined that this rule implements and is fully consistent with governing law. However, in the event any provision of this rule, an amendment or revision made by this rule, or the application of such provision or amendment or revision to any person or circumstance, is held to be invalid or unenforceable by its terms, the remainder of this rule, the amendments or revisions made by this rule, and the application of the provisions of such rule to any person or circumstance shall not be affected and shall be construed so as to give them the maximum effect permitted by law. The Supreme Court has explained that where specific provisions of a rule are unlawful, severance is preferred when doing so ''will not impair the function of the [rule] as a whole, and there is no indication that the regulation would not have been passed but for its inclusion.'' *K Mart Corp.* v. *Cartier, Inc.,* 486 U.S. 281, 294 (1988); *see also Sw. Elec. Power Co.* v. *EPA,* 920 F.3d 999, 1033 (5th Cir. 2019) (vacating only challenged portions of a rule). It is the intent of the Department that each and every provision of this regulation be severable from each other provision to the maximum extent allowed by law.

For example, if a court invalidates a particular subpart of § 478.78 of the final rule concerning the liquidation or transfer procedure of former licensees, that invalidation would have no effect on other subparts of § 478.78 or the rest of the final rule and its provisions, which should remain in effect. The Department's intent that sections and provisions of the final rule can function independently similarly applies to the other portions of the rule.

VI. Statutory and Executive Order Review

Subsections in Section VI

A. Executive Orders 12866, 13563, and 14094

Executive Order 12866 (Regulatory Planning and Review) directs agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Executive Order 14094 (Modernizing Regulatory Review) amends section 3(f) of Executive Order 12866.

OMB has determined that this proposed rule is a ''significant regulatory action'' under Executive Order 12866, as amended by Executive Order 14094, though it is not a significant action under section 3(f)(1) of Executive Order 12866. Accordingly, the rule has been reviewed by OMB. While portions of this rule merely incorporate the BSCA's statutory definitions into ATF's regulations, this rule will likely result in additional unlicensed persons becoming FFLs to the extent that currently unlicensed persons intend to regularly purchase and resell firearms to predominantly earn a profit.

1. Need for Federal Regulation

This final rule implements the BSCA by incorporating statutory definitions into ATF's regulations and clarifying the criteria for determining when a person is ''engaged in the business'' requiring a license to deal in firearms. The rulemaking is necessary to implement a new statutory provision that alters the definition of being engaged in the business as a wholesale or retail firearms dealer; to clarify prior regulatory provisions that relate to that topic; and to establish by regulation practices and policies on that issue. In addition to establishing specific, easy-to-follow standards regarding when buying and selling firearms presumptively crosses the threshold into being ''engaged in the business,'' the rule also recognizes that individuals are allowed by law to occasionally buy and sell firearms for the enhancement of a personal collection or a legitimate hobby without the need to obtain a license. As discussed in detail under this rule's Background discussion (Section II.D of this preamble), in the Benefits section of this economic analysis (Section VI.A.7 of this preamble), throughout Section III discussing each revision as it was originally proposed, in the Department's responses to comments under Section IV of this preamble, and in other portions of this rule, the changes in this rule—like the statutory provisions they implement—were designed to address public safety needs. Specifically, this rulemaking implements the statutory changes enacted by Congress in the BSCA, which Congress passed in the interest of public safety after at least one mass shooting in which the perpetrator purchased a firearm from an unlicensed dealer. Congress was also concerned with prohibited persons receiving firearms without background checks and significant increases in straw purchasing and firearms trafficking, all of which increase public risk of gun violence and occur more frequently when persons dealing in firearms are unlicensed. Unlicensed dealers also hinder law enforcement efforts to track and curb these prohibited and endangering activities. Congress deemed those public safety needs compelling enough, and the private market response insufficient, such that it was necessary to pass a law to address them. This rule is necessary to further address those same public safety needs and implement Congress's statutory

response. Executive Order 12866 [254] permits agencies to promulgate rules that are necessary to interpret the law or are necessary due to compelling need, which includes when private markets are not protecting or improving public health and safety. This rule is necessary on both grounds. The Department considered other alternatives to rulemaking and determined they would be insufficient to meet its articulated public safety needs or to fully interpret and implement the law.

2. Population

This rule implements a statutory requirement that affects persons who repetitively purchase and resell firearms, including by bartering, and are required to be, but are not currently, licensed. As described in the preamble of this final rule, these may be persons who purchase, sell, or transfer firearms from places other than traditional brick-and-mortar stores, such as at a gun show or event, flea market, auction house, or gun range or club; at one's home; by mail order, or over the internet (*e.g.,* an online broker, online auction); through the use of other electronic means (*e.g.,* text messaging service or social media raffle); or at any other domestic or international public or private marketplace or premises. A person may be required to have a license to deal in firearms regardless of where, or the medium through which, they purchase or sell (or barter) firearms, including locations other than a traditional brick-and-mortar store.

Furthermore, because those willfully engaged in the business of dealing in firearms without a license are violating Federal law, these individuals often take steps to avoid detection by law enforcement, making it additionally difficult for the Department to precisely estimate the population. Therefore, for purposes of this analysis, the Department used information gleaned from Armslist, an online broker website that facilitates the sales or bartering of firearms, as a means of estimating a population of unlicensed persons selling firearms using online resources.[255] The Department focused its efforts on estimating an affected population using Armslist since that website is considered to be the largest source for unlicensed persons to sell firearms on the internet.[256]

Out of a total listing of 30,806 entries in the ''private party'' category (unlicensed users) on Armslist, the Department viewed a random sample [257] of 379 listings, and found that a given seller on Armslist had an average of three listings per seller.[258] Based on approximately 30,806 ''private party'' (unlicensed) sales listings on Armslist, the Department estimates that there are approximately 12,270 unlicensed persons who sell on that website alone, selling an average of approximately three firearms per user.[259] The Department estimates that Armslist may hold approximately 30 percent of the market share among websites that unlicensed sellers may frequent. This means the 12,270 estimated unlicensed persons on Armslist would be about 30 percent of all such online sellers, and that the estimated number of unlicensed sellers on all such websites would therefore be approximately 40,900 nationwide. The estimate of Armslist's market share is based on ATF Firearms Industry Programs Branch (''FIPB'') expert opinion, news reports,[260] and public web traffic lists.[261] This estimate of the online market share proportion held by Armslist has been revised downward from the initial estimate of 50 percent used in the NPRM, based on public comment and additional data sources that supported attributing a larger share of the unlicensed firearm market to GunBroker than had originally been estimated. GunBroker had been originally included with other smaller platforms within the remaining (non-Armslist) 50 percent of the online market. However, due to the new estimates of GunBroker's proportion of the online market share, the Department has increased its estimated total market share for the non-Armslist platforms (inclusive of GunBroker) to 70 percent of the online marketplace.

To better estimate both online and offline sales, the Department assumes, based on best professional judgment of FIPB SMEs [262] and with limited available information, that the national online marketplace estimate above might represent 40 percent of the total national firearms market, which would also include in-person, local, or other offline transactions like flea markets, State-wide exchanges, or consignments to local FFLs within each of the 50 States. This estimate of the online marketplace has been revised upwards from the 25 percent estimate that was published in the NPRM to 40 percent in the final rule, based on more in-depth SME questioning in the course of reviewing each aspect of the models due to public comments about other parts of the models. Given the lack of data on the question of online avenues for unlicensed firearm sales, and the illicit nature of firearms trafficking, the limited empirical inputs that exist must be contextualized using qualitative and subjective assessments by industry experts. ATF also solicited additional opinions from the public and incorporated those that were found to be credible into the Department's population model.

While the above analysis would bring the total estimated market of unlicensed sellers to approximately 102,250 persons,[263] this figure must be reduced by the estimated subset of this population of persons who occasionally sell their firearms without needing to obtain a license (*e.g.,* as part of their hobby or enhancement of their personal collection). The Department assumes this subset of unlicensed sellers constitutes the majority of the unlicensed seller market, based on estimates from FIPB SMEs. Based on limited available information, the best assessment from FIPB SMEs is that, based on their long-time experience with the firearms industry, at least 25 percent of the estimated total number of

[254] *See also* OMB Circular A–4 at 5, *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf.*

[255] *See www.armslist.com.*

[256] Colin Lecher & Sean Campbell, *The Craigslist of Guns: Inside Armslist, the online 'gun show that never ends,'* The Verge (Jan. 16, 2020). *https://www.theverge.com/2020/1/16/21067793/guns-online-armslist-marketplace-craigslist-sales-buy-crime-investigation* (''Over the years, [Armslist] has become a major destination for firearm buyers and sellers.''); Tasneem Raja, *Semi-Automatic Weapons Without a Background Check Can Be Just A Click Away,* National Public Radio (June 17, 2016), *https://www.npr.org/sections/alltechconsidered/2016/06/17/482483537/semi-automatic-weapons-without-a-background-check-can-be-just-a-click-away* (''Armslist isn't the only site of its kind, though it is considered to be the biggest and most popular.'').

[257] In accordance with standard practice, to estimate the sample size, the Department assumed the largest standard deviation (0.5 or 50 percent) to obtain the most conservative (largest) sample size.

[258] Using an online sample size calculator, the Department determined that a statistical sample for a universe of 30,806 listings would require a sample size of 379, using a 95 percent confidence level and a confidence interval of five. A random sample of 379 was gathered between March 1 and 2, 2023. *Sample Size Calculator,* Calculator.net (last accessed April 8, 2024), *https://www.calculator.net/sample-size-calculator.html.*

[259] 12,270 unlicensed individuals = 30,806 ''private party'' unlicensed listings on Armslist/2.51 average listings per user.

[260] *See* footnote 256, *supra.*

[261] Such lists are available at *https://www.similarweb.com/website/armslist.com/#overview.*

[262] Experts were identified within ATF and interviewed in a group setting to reach a consensus. These conclusions were validated based on best professional estimates by additional ATF personnel, who are familiar with the field and with the industry, until a reasonable estimate was accepted by all of them. *See* OMB Circular A–4 at 41.

[263] The Department's online estimate of 40,900 individuals is equal to at least 40 percent of the national firearms market. Thus, 100 percent of that estimated firearms market would be 40,900/.4 = 102,250.

unlicensed sellers may be considered ''engaged in the business'' under this rule and would subsequently need to become an FFL in order to continue repetitively selling firearms. The actual number may be higher or lower, and the Department does not have data to support a higher number, but FIPB SMEs do expect their estimate to be conservative and closer to the lower end of a possible range. Using the information gleaned from Armslist and multiplying it according to these estimated percentages, the Department estimates that 25,563 unlicensed persons may be classified as engaged in the business of firearms dealing and thus affected by this rule, an upward revision from the 24,540 estimate included in the NPRM.

Finally, the Department has introduced an additional assumption into its revised model: the proportion of unlicensed persons who would be considered ''engaged in the business'' under this rule but who are unwilling or unable to become FFLs and will instead choose to cease their dealing in firearms altogether. These persons may choose this option due to the new requirements, other disincentives such as costs or discomfort with inspections, prohibitions or restrictions in their respective State or local laws, ordinances or HOA rules, or other reasons. Based on the public's responses to previously published firearms rules and regulations, Department SMEs estimate that this group constitutes approximately 10 percent of all currently unlicensed sellers who would be required to obtain a license under this rule. Removing this segment from the total population of 25,563 persons affected by this rule results in an estimated 23,006 unlicensed persons engaged in the business of firearms dealing who would, under the rule, apply for licenses in order to continue repetitively selling firearms.

Because there is no definitive data on this topic, the actual number of unlicensed sellers may be higher. Therefore, the Department also calculated a second possible estimate using information published by RSF based on a survey it conducted regarding a similar, but differently sourced, estimated population of private sellers of firearms.[264] This survey showed that 22 percent of the U.S. adult population owned at least one firearm (56.84 million adults).[265] In the NPRM, the Department used this 22 percent figure, applied to the U.S. Census as a basis for the population, to calculate this second population estimate of individuals owning firearms. However, one public commenter suggested the Department use a more recent survey (Gallup Survey, published in 2020), which showed that the number of U.S. adults owning firearms was 32 percent.[266] The Department concurred and has updated the estimated population of individuals owning a firearm from 22 to 32 percent (82.7 million individuals) in this second model.[267] However, the Department continues to use the RSF survey data for the remaining estimates, such as number of transactions, because the Department still considers that survey to provide the best available data, and no other sources were provided by public commenters.

The RSF survey found that 5 percent of the total population transferred firearms in some manner over the course of five years, or an annualized total of 1 percent of owners (826,699 individuals).[268] Of the owners that transferred a firearm, 71 percent did so by selling (586,956 individuals). Of those that sold a firearm, 51 percent (299,348 individuals) sold through various mediums (*e.g.,* online, pawnshop, gun shop) other than through or to a family member or friend (which likely would not be affected by this rule).[269] Of the owners that transferred a firearm, an additional 10 percent (82,670) did so by trading or bartering rather than selling. Thus, taking the 299,348 that sold and the 82,670 that traded or bartered according to these survey results, the total number of unlicensed persons that might transfer a firearm through a manner that could be affected by this rule is 382,018. Of the 382,018 unlicensed persons selling, trading, or bartering firearms under this RSF-derived estimate, the Department continues to estimate (as it did in the SME-derived estimate described above) that 25 percent (or 95,505 unlicensed individuals) may be engaged in the business of firearms dealing with an intent to profit and thus potentially affected by this rule. Consistent with the modification introduced in the SME-derived model, the Department also reduced this estimate by 10 percent to account for the proportion of unlicensed persons unwilling or unable to become FFLs as required by this rule. This brings the estimated population of unlicensed persons ''engaged in the business'' who would obtain licenses in order to continue selling under this rule to 85,954 using this RSF/Gallup-derived model.

In sum, based on the limited available sources of information, the Department estimates that either 23,006 or 85,954 could represent the number of currently unlicensed persons who might be engaged in the business as defined in this rule, and who would obtain a license to continue engaging in the business of dealing in firearms in compliance with the rule. The SME-derived estimate of 23,006 is based on real historical data and experience with relevant sales activities, combined with sampling from an online sales site and ATF's law enforcement and regulatory experience. Because of this, the Department considers the SME-derived estimate to be a more reliable data source than the RSF/Gallup estimate and uses it as the primary estimate. Nevertheless, for purposes of this final analysis, the Department provides the estimated costs under both population estimates.

The first cost that may apply to both estimated populations is the cost of initial familiarization with the final rule. Given the widespread attention, awareness, and publicly available discourse on these and other firearm regulations, and the nature of the firearms community, existing firearms owners would not need to spend a greater amount of time researching regulations and becoming updated on these topics than they already do as a regular course of activity. The

[266] *What percentage of Americans own guns?,* Gallup: The Short Answer (Nov. 13, 2020), *https://news.gallup.com/poll/264932/percentage-americans-own-guns.aspx.*

[267] 82,699,849.92 (rounded to 82,699,950, or 82.7 million) owners of firearms = 258,343,281 individuals living in the United States multiplied by 32 percent.

[268] 826,699 individuals transferring a firearm = 82,699,850 individuals owning a firearm multiplied by 1 percent.

[269] The RSF survey did not distinguish individuals who sold to family or friends on a recurring basis from those who made an occasional sale; nor did it distinguish between those who did so with intent to earn a profit from those who did not. As noted earlier in the preamble, a person who makes only occasional firearms transfers, such as gifts, to immediate family (without the intent to earn a profit or circumvent requirements placed on licensees), generally does not qualify as a dealer engaged in the business. Although it is possible that some portion of the RSF set of family and friend transferors might qualify as dealers if they engage in actions such as recurring transfers, transfers to others in addition to immediate family, or transfers with intent to profit, the survey did not provide enough information for the Department to make that determination. Therefore, the Department erred on the side of caution by assuming, for the purpose of this analysis, that the persons identified on the RSF survey as engaging in transfers to family and friends would likely not be affected by this rule, since, in general, such transfers are less likely to be recurring or for profit.

Department therefore assumed familiarization costs would be minimal for existing firearm owners and particularly for the affected population of sellers. Nevertheless, because of widespread attention and ATF outreach, among other efforts, the Department has costed a familiarization burden of approximately 12 minutes on all unlicensed sellers to account for the time they might spend gleaning guidance or accessing online blogs to determine whether the rule applies to them. Based on HHS's methodology for leisure time, the Department attributes a rounded value of $23 per hour for the estimated 12 minutes spent gaining familiarization with the rule, which amounts to an individual burden of $5 per unlicensed seller. Under the SME model, this cost would fall on all 102,250 sellers, while under the RSF model it would fall on all 382,018 sellers. Familiarization costs would amount to $470,350 in the first year of implementation under the primary SME model, and $1,757,283 in the first year under the alternative RSF model.

3. Costs for Unlicensed Persons Becoming FFLs

As stated earlier, consistent with the statutory changes in the BSCA, this rule implements a new statutory provision that requires individuals to become licensed dealers if they devote time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms. Costs to become an FFL include an initial application on Form 7, along with fingerprints, photographs, and a qualification inspection. This application requires fingerprints and photographs from the person applying and, in the case of a corporation, partnership, or association, from any other individual who is a responsible person of that business entity.

For purposes of this analysis, the Department assumes that most, if not all, unlicensed persons may be operating as sole proprietors because this new requirement would likely affect persons who have other sources of income and currently view dealing in firearms as a supplemental source of income not subject to a licensing requirement. Besides the initial cost of becoming an FFL, there are recurring costs to maintaining a license. These costs include renewing the license on a Federal Firearms License Renewal Application, ATF Form 8 (5310.11) (''Form 8'') every three years, maintaining acquisition and disposition (''A&D'') records, maintaining ATF Forms 4473, and undergoing periodic compliance inspections.

This rule, which further implements the statutory changes in the BSCA, would affect certain currently unlicensed persons who purchase and resell firearms with the intent to predominantly earn a profit (as defined), not those who are already licensed. Because affected unlicensed persons will need a license to continue to purchase and resell firearms, the Department estimates that the opportunity costs of acquiring a license would be based on their free time or ''leisure time.'' For this final rule, the Department has updated its estimate of the cost for leisure time below, relying on a new HHS methodology for calculating that cost, rather than the DOT methodology it used in the NPRM.[270] The Department considers the HHS methodology to more accurately measure the value of ''leisure time,'' for the purposes of this rule, than the DOT methodology used in the NPRM. Accordingly, consistent with HHS's methodology, the Department used the BLS median weekly income for full-time employees as the base for calculating the pre-tax hourly wage. The Department then used the proportion between Census publications on median household income and median household income after taxes to estimate the percent of State and Federal taxes (14 percent). This percent was deducted from the hourly pre-tax wage to derive the post-tax hourly wage, which becomes the leisure wage under the HHS methodology. Table 1 outlines the leisure wage.

Table 1. Leisure Wage Rate for Individuals

Inputs for Leisure Wage Rate	Numerical Inputs	Source
Median Weekly Wage	$1,085	News Release, BLS, *Usual Weekly Earnings for Wage and Salary Workers – Fourth Quarter 2022* (Jan. 19, 2023), https://www.bls.gov/news.release/archives/wkyeng_01192023.pdf
Median Hourly Wage	$27	Median Weekly Wage / 40 hours per week
Real Median Household Income Pre-Tax	$74,580	U.S. Census Bureau, *Median Household Income After Taxes Fell 8.8% in 2022* (Sept. 12, 2023), https://www.census.gov/library/stories/2023/09/median-household-income.html
Real Median Household Income Post-Tax	$64,240	U.S. Census Bureau, *Median Household Income After Taxes Fell 8.8% in 2022* (Sept. 12, 2023), https://www.census.gov/library/stories/2023/09/median-household-income.html
State and Federal Taxation	14 percent	$64,240 post-tax median income / $74,580 pre-tax median income = 86 percent; 14 percent State and Federal Taxes = 100 percent - 86 percent
Leisure Wage	$23.36	$23.36 Post-tax median wage = $27 Median hourly wage * (100 percent - 14 percent State and Federal Taxes)
Rounded Leisure Wage Rate	$23.00	

Based in part on HHS's methodology for leisure time, the Department attributes a rounded value of $23 per hour for time spent buying and reselling (including bartering) firearms on a repetitive basis. The same hourly cost applies to persons who will become licensed as a firearms dealer who would not have become licensed without the clarifications provided by this rule. This could include persons who begin selling firearms after the final rule's effective date and understand from the rule that they qualify as firearms dealers (as defined by the statute and regulations), or persons who were previously selling without a license and now realize they must acquire one to continue selling because their firearms transactions qualify them as dealers.

In addition to the cost of time, there are other costs associated with applying to become an FFL. To become an FFL, persons need to apply on a Form 7 and submit payment to ATF for fees associated with the Form 7 application. Furthermore, these unlicensed persons will need to obtain documentation, including fingerprints and photographs, undergo a background investigation, and submit all paperwork via mail. While not a cost attributed towards their first-year application to become an FFL, an FFL will need to reapply to renew their license every three years on a Form 8 renewal application to ensure that that they can continue to sell firearms thereafter. Table 2 outlines the costs to become an FFL and the costs to maintain a license.

Table 2. Cost Inputs to Become an FFL and Maintain a License

FFL Renewal Cost (Form 8)	$90	FFLC

BILLING CODE 4410–FY–C

For purposes of this rule, the Department assumes that unlicensed persons applying for a license as a result of this rule are likely to file for a Type 01 Dealer license.[271] This license costs $200 and requires the submission of a Form 7 application; every three years thereafter, the licensee must pay $90 to renew the license using Form 8. Applicants also need to obtain and submit fingerprints in paper format. The unlicensed person can obtain fingerprint cards for free from the Department and travel to select law enforcement offices that perform fingerprinting services (usually also for free). Or the unlicensed person may pay a fee to various market entities that offer fingerprinting services in paper format. The average cost found for market services for fingerprinting on paper cards is $24 (rounded).

Because it is not clear whether an unlicensed person would choose to obtain fingerprint cards from the Department and go to a local law enforcement office that provides fingerprinting services or use commercial services to obtain cards and fingerprinting services, an average cost of $12 was used. In addition to paper fingerprint cards, the unlicensed person must also submit a photograph appropriate for obtaining a passport. The average cost for a passport photo is $17 (rounded). Once they complete the application and gather the documentation, unlicensed persons must submit the Form 7 package by mail. The Department rounds the first-class stamp rate of $0.63 to $1 for calculating the estimated mailing cost.

In addition to the direct costs associated with compiling documentation for a Form 7 application, the Department estimates the time burdens related to obtaining and maintaining a Federal firearms license. Table 3 outlines the hourly burdens to apply, obtain, and maintain a license.

[271] A Type 01 Dealer license is used to purchase and resell firearms at wholesale or retail.

Table 3. Hourly Burdens to Apply, Obtain, and Maintain a License

Activity Type	Hourly Burden	Source
Form 7 Application	1	Application for Federal Firearms License (atf.gov)
Form 8 Application	0.5	OMB 1140-0019 Justification
Time to Travel to and obtain Fingerprints	1	N/A
Time to Travel to and obtain Photograph	0.5	N/A
A&D Records	0.05	OMB 1140-0032 Justification
Form 4473	0.5	OMB 1140-0020
Qualification Inspection Time	15	Department internal case management system
Compliance Inspection Time	34	Department internal case management system

As stated above, hourly burdens include one hour to complete a Form 7 license application and the time spent to obtain the required documentation. For purposes of this analysis, the Department assumes that vendors that offer passport photograph services are more readily available than places that provide fingerprinting services; therefore, the Department estimates that it may take 30 minutes (0.5 hours) to travel to a vendor and obtain a passport photograph, and up to one hour to travel to and obtain fingerprinting services. Other time burdens may include 0.05 hours (three minutes) to enter and maintain A&D records for each firearm transaction (0.3 hours for 6 transactions); 0.5 hours for maintaining a Form 4473 for each firearm sale (1.5 hours for 3 firearms); and 15 to 34 hours for an inspection (qualification or compliance, respectively).[272]

The Department then multiplied each of these hourly burdens by the $23 hourly leisure wage rate to account for the value of time spent applying for and obtaining a license using a Form 7 (including any other actions related to obtaining a license), then added the cost per item to determine a cost per action taken. Table 4 outlines the first-year costs to apply for an FFL.

Table 4. First-Year Costs to Obtain a Type 01 FFL

Cost Item	Hourly Burden	Hourly Wage Rate	Hourly Cost per Activity	Cost Item	Rounded Cost for Each Activity
Form 7	1	$23	$23	$200	$223
Fingerprints	1	$23	$23	$12	$35
Passport Photo	0.5	$23	$12	$17	$29
Postage	N/A	$23	N/A	$1	$1
Form 4473	1.5	$23	$35		$35
A&D Records	0.3	$23	$7		$7
Qualification Inspection	15	$23	$345	$0	$345
First Year Cost					$675

[272] These inspection times are an average of all currently regulated FFLs, including small and large dealers and manufacturers, and are not necessarily representative of the time involved in inspecting small dealers.

Overall, the Department estimates that it would cost an unlicensed person $675 in terms of time spent and fees paid to apply under a Form 7 to become a Type 01 FFL. The Department considers the $675 to be an unlicensed person's initial cost. In addition to their initial cost, the newly created FFL would need to maintain a Form 4473 and A&D records (two entries per firearm: one entry to purchase and one entry to sell) for every firearms transaction, undergo periodic compliance inspections, and renew their license every three years (ATF Form 8 application). Table 5 outlines the cost per recurring activity to maintain an FFL.

Table 5. Recurring Costs to Maintain an FFL

Cost Item	Number of Entries or Applications	Hourly Burden	Hourly Wage Rate	Hourly Cost	Cost Item	Rounded Cost for Each Activity
Form 8 Renewal Cost	1	0.5	$23	$12	$90	$102
Form 4473	3	0.5	$23	$35		$35
A&D Records	6	0.05	$23	$7		$7
Inspection Time	1	34	$23	$782		$782
Recurring Costs						Varies by Year

While renewing a license under a Form 8 application occurs every three years, there are additional costs associated with Form 4473 and A&D records that may occur more often. There are also costs from compliance inspections that may occur periodically. The Department notes that an FFL's actual number of firearms sales may range from zero sales to more than three per year. Persons engaged in the business of dealing in firearms can sell anywhere from a few firearms to hundreds per year, depending on the size of their operation and other factors. Information on these factors or on the number of sellers who might be at each level is not available. However, the average number of listings per seller on Armslist was three. So, for purposes of this economic analysis only, the Department uses three firearms (six A&D entries) per year to illustrate the potential costs that a person may incur as a result of this rule. Although a person might not resell a given firearm in the same year they purchase it, for the purposes of these estimates the Department includes both ends of the firearm transaction because the person could buy and sell the same firearm, or buy one and sell a different one in a given year.

As for compliance inspections, based on information gathered from ATF's Office of Field Operations, the frequency of such inspections varies depending on the size of the area of operations and the number of FFLs per area of operations. Overall, the Department estimates that it inspects approximately 8 percent of all existing FFLs in any given year. In the chart above, ATF has indicated the cost of an inspection, which would normally not occur more than once in a given year per FFL. ATF performs compliance inspections annually, so while every single FFL does not necessarily undergo a compliance inspection every year, this analysis includes an annual cost for inspections to account for a subset of the total number of affected FFLs that may be inspected in any given year (8 percent). The Department estimates that it would cost $782 for the time an individual will spend on a compliance inspection in a given subsequent year. Therefore, this individual would incur annually recurring costs that could range from a low of $42 a year to complete Forms 4473 and maintain A&D records, to a high of $926 to include that $42, Form 8 renewal costs ($102), and compliance inspection time ($782).[273]

In addition to the cost burdens of becoming licensed at the Federal level, persons who are currently engaged in the business as a dealer without a license under the Federal definition may reside in a State that either defines a dealer at the State level by linking it to the Federal statutory definition, or that requires any Federal dealer licensee to also become licensed as a dealer with the State. While this rule does not impose costs on States and does not directly impact whether persons must be licensed under State requirements, in the case where States have tied their dealer licensing requirements to Federal statutory licensing requirements, this rule indirectly causes new Federal licensees in those States to also incur State dealer licensing costs because they are incurred due to BSCA's amendments to the GCA. The Department accounts for such costs for that segment of the affected population in this final rule.

The Department found that State-level licensing linked to or contingent on Federal firearms licensing was required by State and local laws in ten states and the District of Columbia (DC).[274] Five of

[273] The Department notes that the high $926 estimate may be higher than actual costs because it assumes that an FFL would simultaneously renew their license (which occurs every three years) in the same year that they perform a compliance inspection, which typically occurs only periodically.

[274] Giffords Law Center surveyed all 50 States and the District of Columbia to determine which States have laws regulating firearms dealers. They determined that 26 States and DC have such laws. Of those with laws regulating dealers, Giffords Law Center found that 16 States and DC require persons dealing in firearms to obtain a State dealers license.

Continued

those States and DC required licensing for dealing in any type of firearms, and the other five States required licensing only for dealing in handguns. For the purposes of this analysis, the Department grouped all such States together as imposing additional licensing costs, so that all 11 jurisdictions were included in the cost analysis where data was available. The respective populations of each of these jurisdictions as a percentage of the total U.S. population were aggregated to a total of 29.08 percent. This total was applied to the populations estimated to be EIB under both the primary SME model and the alternative RSF model to estimate how many sellers affected by this rule at the Federal level would incur the additional State licensure costs as well. The respective State populations were also used as weights to their respective licensure costs, which ranged from 50 cents to $300 a year, in order to determine a weighted average cost per seller, which was $73.37 per year, rounded to $73.00 for calculations. The Department estimated a processing time of one hour of leisure time, since the application forms ranged from one to five pages, while maintaining the same dollar postage cost as for FFLs. Both photograph and fingerprint costs were assumed to be accounted for when securing both for FFL applications, as they are frequently secured in pairs. These costs are outlined in Table 6.

Table 6. State dealer licensing costs flowing from this rule

State	12-Year Cost[275]	Annualized 12 year	Percent of US Population	Weighted Average: 12–Year annualized
Alabama	$ 6.00	$0.50	1.499	$0.75
California	$1,380.00	$115.00	11.800	$1,357.00
Connecticut	$400.00	$33.33	1.076	$35.87
Delaware	$1,370.00	$114.17	0.295	$33.68
District of Columbia	$3,600.00	$300.00	0.206	$61.80
Illinois	$750.00	$62.50	3.824	$239.00
New Hampshire	$1,200.00	$100.00	0.411	$41.10
Pennsylvania	$120.00	$10.00	3.881	$38.81
Washington	$1,500.00	$125.00	2.300	$287.50
Indiana	$120.00	$10.00	2.025	$20.25
Wisconsin	$120.00	$10.00	1.759	$17.59
Total		**$880.50**	**29.08**	**$2,133.35**
Average				**$73.37**

The $73.37 average State costs, rounded to $73, were combined with the hour burden and postage cost, resulting in a total per-seller cost of $97. This total per-seller cost was applied to 29.08 percent of the EIB population, resulting in an estimated 6,689 sellers under the SME-derived model and 24,992 sellers under the RSF-derived model. This adds a total of $648,862 and $2,424,237 in annual costs for State dealer licenses, respectively.

4. Costs for FFLs After Termination of License

This rule is also designed to enhance compliance by former FFLs who no longer hold their licenses due to license revocation, denial of license renewal, license expiration, or surrender of license but nonetheless engage in the business of dealing in firearms. Under existing standards, such persons sometimes transfer their inventory to their personal collections instead of selling or otherwise disposing of the firearms to a licensed importer, licensed manufacturer, or licensed dealer for sale, auction, or pawn redemption. This rule clarifies what dispositions of former licensee inventory former FFLs may make after their license is terminated. The former licensee may transfer their business inventory within 30 days, or occasionally thereafter, to another licensee if they meet the requirements set out in the new provisions under 27 CFR 478.57 or 478.78. Another possibility is that the licensee may transfer their business inventory within 30 days to themselves in a personal capacity—called a ''former licensee inventory'' in the final rule. After that time, the firearms may be sold

See Giffords Law Center to Prevent Gun Violence, *Gun Dealers, https://giffords.org/lawcenter/gun-laws/policy-areas/gun-sales/gun-dealers/* (last accessed Mar. 30, 2024). The Department researched requirements it could access online for those 16 States and DC and determined that 10 of those 16 States, and DC, either link their definition of a dealer at the State level to the Federal definition of dealer or require a person selling firearms with a Federal firearms license for dealers to also obtain a State dealers license. The Department used the information on those 10 States and DC to calculate the costs in this section.

[275] Several States had 3- or 6-year renewal windows/validity periods rather than annual licensing costs. Using a 10-year horizon underestimates the cost burden in those cases, particularly for the States that had a 6-year validity window. The Department therefore calculated the total for 12 years for each State before annualizing them to find the weighted average.

only occasionally to a licensee or the former dealer risks being presumed to be ''engaged in the business'' of dealing without a license. In that case, former FFLs who sell such firearms would potentially be in violation of the statutory prohibitions (18 U.S.C. 922(a)(1)(A) and 923(a), (c)) on unlicensed dealers.

The various means by which a license can be terminated—revocation of a license, denial of license renewal, license expiration, or surrender of license—present two categories of affected populations. Group 1, comprising individuals who have their license revoked or are denied license renewals, could be described as former FFLs who have failed to comply with existing regulations and requirements to a degree that resulted in the revocation or denial of their licenses. This rule is likely to have a qualitative impact on this group because a revocation or denial may not provide ample opportunity for an orderly and planned liquidation or transfer of inventory before losing the license, which may therefore be disruptive. Based on data from the FFLC, such FFL license revocations and non-renewals are rare, with an annual average of 76 licenses revoked or denied renewal over the past five years (with a range between 14 and 180),[276] or a de minimis percentage of 0.093 percent of all active FFLs.[277] Furthermore, the economic impact of transferring inventory to another FFL instead of the former FFL holder retaining the inventory is unclear, as the underlying market value of the inventory is unchanged by this rule's requirements. Additional factors surrounding the potential cost of no longer being able to transfer one's business inventory after the first 30 days post-license termination are also unknown and presumed to be similarly *de minimis.* Therefore, the Department believes there are no quantitative impacts associated with this population. Although ATF requested public comments on the potential impacts on former FFLs with revoked licenses, ATF did not receive any data from which to assess such potential costs.

Group 2, comprising individuals who surrender their license or let it expire, captures those who no longer have a license for discretionary or lawful reasons. This group also comprises former FFLs that choose to close or to sell their business to another party. They are similarly excluded from expected impacts attributable to this rule: because the closure is planned, it is likely that the FFL will include reasonable considerations for orderly, lawful liquidation or inventory transfer as part of closing or selling their enterprise. Such considerations are also likely to occur ahead of, rather than subsequent to, the expiration or surrender of their license. As a result, the Department assumes that the options that exist under current standards—transferring business inventory to the licensee's personal collection or selling business inventory to another FFL—would similarly be freely available to Group 2 FFLs under this rule. As a result, we are excluding both groups from the affected population.

5. Government Costs

In addition to the private costs to unlicensed persons, ATF will incur additional work due to the increase in Form 7 and Form 8 applications for unlicensed persons who become FFLs, which would be offset by the fees received with FFL applications ($200) and renewals ($90). Based on information gathered from the FFLC, which processes and collects the fees for FFL applications, various contractors and Federal Government employees process Form 7 and 8 applications, verify and correct applications, and further process them for background checks and approval.

Based on information provided by the FFLC, the average hourly rate for contracting staff, including benefits, is $13.29.[278] To determine the wage rates for Federal employees, the Department used the wage rates set forth in the General Schedule (''GS''). At any level within the GS, step 5 is used as an average wage rate per activity. Government processing activities range from an entry level Federal employee between a GS–5/7, upwards to a GS–13.[279] To account for fringe benefits such as insurance, the Department estimated a Federal load rate using the methodology outlined in the Congressional Budget Office's report comparing Federal compensation to private sector compensation. It states that total compensation to Federal workers, factoring in both wages and benefits, is 17 percent higher than for similar private sector workers' benefits (or a multiplier factor of 1.17).[280] The Department calculated private sector benefits from the BLS (in 2022) and determined that the overall private sector benefits are 41.9 percent in addition to an hourly wage, or a load rate of 1.419. This makes the Federal load rate 1.66 above the hourly wage rate (after applying the 1.17 multiplier).[281]

Table 7 outlines the Government costs to process a Form 7 application to become an FFL.

[276] Data on FFL revocations and denials of renewal has been updated from the NPRM to cover 2018 through 2023.

[277] The Department did not reduce the estimated number of persons affected by this EIB rule to account for this reduction of FFLs that may have their license revoked, denied, expired, or surrendered because historically, the number of FFLs has been stable over time. This means that the increase and decrease of FFLs have been relatively equal to each other. Because the Department is not calculating an increase of population over time, the Department did not calculate a decrease of population over time. Additionally, for the existing number of FFLs, the number of revoked/denied renewals annually is 0.093 percent of all active FFLs. Therefore, applying this percentage to the estimated EIB population above (23,006) will affect a very small number (21) of the estimated EIB FFL population. For both of these reasons, the Department believes that any change in cost would be *de minimis* and would overestimate a decrease in population where the population has been held as constant in this analysis.

[278] The Department notes that because the contracting salary is a loaded wage rate, a base wage rate (not including benefits) was not included in Table 7 below.

[279] Off. of Pers. Mgmt, *OPM Salary Table 2023 For the Locality Pay Area of Washington-Baltimore-Arlington, DC–MD–VA–WV–PA* (effective Jan. 2023), *https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2023/DCB_h.pdf.*

Table 7. Hourly Burden and Costs to Process a New Application for an FFL

Government Costs to Process FFL Applications	Hourly Burden	Staffing Level	Hourly Wage	Loaded Hourly Wage	Rounded Cost
Average Contracting Time to Prepare and Enter Application	0.5	Contracting Staff	N/A	$13.29	$7
Processing Time for New Applications	1	GS 10	$38.85	$64.49	$64
Processing Time for Fingerprint Cards	2	GS 12	$51.15	$84.91	$170
Qualification Inspection Time (Includes Travel)	17	GS 5/7 to GS 13	$37.65	$62.50	$1,062
Subtotal					$1,303
Fees Received from New Application					($200)
Total					$1,103

Based on the hourly burdens and the hourly wage rates for various contract and Federal employees, the Department estimates that it would take on average 20.5 hours to process a Form 7 application, at a cost of $1,303 per application. This would be offset by the new $200 application (Form 7) fee paid to the government, for an overall net cost to the government of $1,103 per application as a result of this rule. Form 8 application renewals are estimated to cost $71 every three years (or $1,303 less the $1,062 inspection time and the $170 fingerprint costs). However, the cost to review a Form 8 application ($71) is offset by the renewal fee of $90 (which is set by statute), making the net cost or overall savings to Government for this rule $19 per FFL renewal (subsequently represented in this analysis as −$19).

In addition to processing Form 7 applications, ATF IOIs will need to perform qualification and compliance inspections. The qualification inspection occurs once during the application process and is accounted for in Table 7 above. But, as discussed above, there is a recurring compliance inspection after the person becomes a licensee. For both the qualification and compliance inspections, the Department notes that the respective 17-hour or 36-hour inspection time estimates for the Government are more than the inspection time for the private sector, as discussed above, because the Department is including travel time for an IOI to travel to the person's location. Based on the hourly burdens and wage rates of IOIs, the Department anticipates that it costs ATF $2,250 to perform a compliance inspection.

Table 8 outlines the recurring Government costs to inspect an FFL.

Table 8. Recurring Government Costs to Inspect an FFL

Government Annually Recurring Costs	Hourly Burden	Staffing Level	Hourly Wage	Loaded Hourly Wage	Rounded Cost
Compliance Inspection Time	36	GS 5/7 to GS 13	$37.65	$62.50	$2,250

To summarize the overall Government costs, Table 9 outlines the Government costs to process Form 7 applications, process Form 8 renewal applications, and conduct FFL compliance inspections.

Table 9. Summary of Government Costs per Action

Government Costs per Unlicensed Individual	Cost
Per Application Cost	$1,103
Per Renewal Cost	-$19
Per Compliance Inspection Cost	$2,250

The Department estimates that the Government costs of this rule include the initial application cost that occurs in the first year (including the qualification inspection), renewal costs that typically occur every three years after the first year, and the cost for the Government to conduct a compliance inspection of an FFL in a given year (the Government currently conducts compliance inspections of approximately 8 percent of FFLs per year).

6. Total Cost

The total costs take into account the familiarization burden, State and Federal private licensing costs, and Government costs to process and support the increase in licensing of this rule, as described above in Section VI.A.3 and VI.A.5 of this preamble. The Department estimates that the initial application cost (Form 7 and initial inspection) occurs in the first year, that renewal costs (Form 8 renewals) occur every three years after the first year, and that completion and maintenance of Forms 4473 and A&D records and compliance inspection costs (for a subset of FFLs affected by this rule) occur annually. Tables 10 to 13 illustrate the quantitative 10-year familiarization, Federal, and State licensing costs of this final rule. As discussed above, qualitative costs have been identified but were unable to be quantified for the *de minimis* proportion of FFLs that will have their licenses revoked for failure to comply with existing regulations. Qualitative costs have also been identified but not quantified for the estimated 10 percent of unlicensed sellers currently engaged in the business (or between 2,550 and 9,550 individuals) that are assumed to be unwilling or unable to become licensed as required by this rule. These individuals are expected to cease selling firearms altogether by choice or as a result of State or local restrictions acting as obstacles to their becoming FFLs.

Tables 10 and 11 provide the 10-year costs using the SME-derived estimate.

BILLING CODE 4410–FY–C

Overall, thetotal familiarization, Federal, and State licensing costs of this rule are $112.52 million over 10 years, which are annualized to $11.70 million at three percent discounting and $12.34 million at seven percent discounting under the SME-derived estimate. Meanwhile, under the RSF-derived estimate, the total familiarization, Federal, and State licensing costs of the rule are $318.39 million over 10 years, which are annualized to $33.69 million at three percent discounting and $36.29 million at seven percent discounting.

7. Benefits

By ensuring that ATF's regulatory definitions conform to the BSCA's statutory changes and can be relied upon by the public, this final rule will provide significant public safety benefits. The rule clarifies that persons who intend to predominantly earn a profit from the repetitive purchase and resale of firearms are engaged in the business of dealing in firearms. It also clarifies that such sellers must be licensed in order to continue selling firearms, even if they are conducting

[282] The ''Undiscounted'' column represents totals from the underlying costs. Consistent with guidance provided by OMB in Circular A–4, the ''3 Percent Discount Rate'' and ''7 Percent Discount Rate'' columns result from applying an economic formula to the number in each row of this ''Undiscounted'' column to show how these future costs over time would be valued today; they do not contain totals from other tables.

[283] The ''Undiscounted'' column represents totals from the underlying costs. Consistent with guidance provided by OMB in Circular A–4, the ''3 Percent Discount Rate'' and ''7 Percent Discount Rate'' columns result from applying an economic formula to the number in each row of this ''Undiscounted'' column to show how these future costs over time would be valued today; they do not contain totals from other tables.

such transactions on the internet or through other mediums or forums. As part of the license application, those dealers will undergo a background check, as will those who subsequently purchase a firearm from the licensed dealers.

The background check process for license applicants helps ensure that persons purchasing and selling (including bartering) firearms with the intent to earn a profit are not themselves prohibited from receiving or possessing firearms. It also correspondingly reduces the risk that those sellers engage in selling firearms to persons who are prohibited from receiving or possessing such firearms under Federal, State, local, or Tribal law—including violent criminals—because those prospective purchasers will also be subject to a background check. The NFCTA, a study conducted by ATF and a team of academic and other subject matter experts, concluded that ''[i]ndividuals who are prohibited due to their criminal records or other conditions are unlikely to purchase directly from a licensed federal firearms dealer. Instead, prohibited persons determined to get crime guns acquire them through underground crime gun markets that involve unregulated transactions with acquaintances and illicit 'street' sources.'' [284] By clarifying when a person is engaged in the business of dealing in firearms, the rule helps ensure such persons obtain licenses and comply with the safeguards in the GCA. This thereby promotes public safety by reducing the number of firearms transferred to violent criminals and others whom Congress has determined are prohibited from receiving or possessing firearms. In particular, these safeguards reduce the danger to public safety that results when firearms are trafficked to criminals who are likely to use them to commit violent crimes. Finally, beyond reducing unlicensed dealing of firearms to violent criminals, the safeguards applicable to licensees also help prevent the acquisition of firearms by those who may use a firearm to harm themselves,[285] or who allow children to access them because they cannot make proper decisions concerning the acquisition, use, storage, and disposition of firearms and ammunition.[286]

The rule will also benefit public safety by enhancing ATF's ability to trace firearms recovered in criminal investigations. The GCA requires licensees to maintain records when they transfer a firearm to an unlicensed purchaser, commonly referred to as both the ''first retail purchaser'' and, if they are the only known sale, the ''last known purchaser'' (the tracing process may also identify additional unlicensed purchasers beyond this first retail purchaser, in which case one of these unlicensed purchasers would become the last known purchaser instead). When a firearm is recovered in a criminal investigation and submitted for tracing, ATF is often able to identify the last known purchaser through records maintained by the licensee, providing crucial leads in the underlying criminal investigation. When a firearm is transferred by an unlicensed person, however, such records rarely exist and, if such records do exist, they are not accessible to ATF through the tracing system. By helping increase compliance with the GCA's licensing and recordkeeping requirements, the rule will enhance ATF's capacity to complete crime-gun traces, thereby expanding the evidentiary leads ATF provides to law enforcement investigating crimes involving firearms, particularly violent offenses such as homicide, aggravated assault, armed robbery, and armed drug trafficking.

Moreover, because unlicensed dealers who are engaged in the business of selling firearms often deal in used firearms, the rule will also enhance the tracing of crime guns that have been recovered after an initial retail sale by an FFL. By facilitating licensure of those who engage in the business of dealing firearms through purchasing and reselling used firearms, the rule will enhance the tracing system's capacity to identify ''secondary purchasers'' of crime guns. This capacity will be enhanced because new licensees will be required by the GCA to maintain records on sales of used firearms that are accessible to the Department when conducting a trace on a crime gun. When a used ''firearm re-enters regulated commerce, the tracing process may identify additional unlicensed purchasers beyond the first retail purchaser.'' [287]

Crime-gun tracing is one of the most valuable and effective services ATF provides to law enforcement agencies—nationally and internationally—in investigating crimes involving firearms. As one public commenter noted, law enforcement agencies submitted a total of ''1,922,577 crime guns for the Department to trace between 2017 and 2021.'' Largely as a result of the records the GCA requires licensees to maintain, ''ATF was able to determine the purchaser in 77 percent (1,482,861)'' of those trace requests.[288] By clarifying when a Federal firearms license is required, the rule will promote compliance by increasing licensure of those engaged in the business of dealing in firearms, and correspondingly increase the availability of GCA-required records from those newly licensed dealers. As a result, the rule will enhance the capacity of the Department to successfully complete crime-gun traces for law enforcement partners globally.

The benefits to public safety of crime-gun tracing are substantial. For example, in fiscal year 2022, the Department performed over 623,000 crime-gun traces.[289] Of these, 27,156 were deemed ''urgent,'' which included firearms used in criminal activities such as mass shootings, homicides, bank robberies, and other immediate threats to officer and public safety.[290] Tracing also allows ATF to determine if there are straw purchasing patterns or individuals operating as straw purchasers. Straw purchasers—individuals without a criminal record who purchase firearms for drug dealers, violent criminals, or persons who are prohibited by law from receiving firearms—are the lynchpin of most firearms trafficking operations.[291] Straw purchasers, often acquiring a relatively small number of firearms in each transaction, make it possible for firearms traffickers to effectively circumvent the background check and

[284] ATF, *National Firearms Commerce and Trafficking Assessment (NFCTA): Crime Gun Intelligence and Analysis, Volume Two, Part III: Crime Guns Recovered and Traced Within the United States and Its Territories* 41 (Mar. 27, 2024), *https://www.atf.gov/firearms/docs/report/nfcta-volume-ii-part-iii-crime-guns-recovered-and-traced-us/download*.

[285] For example, in 2021, there were an average of 127.2 suicides per day among U.S. adults, including 17.5 per day among veterans and 109.6 per day among non-veteran adults. Firearms were involved in 73.4% of deaths among veteran men, and 51.7% of veteran women. *See* U.S. Dep't of Veterans Affairs, *2023 National Veteran Suicide Prevention Annual Report* 15, 27 (Nov. 2023).

[286] In *Huddleston,* the Supreme Court examined the legislative history of the GCA and determined that ''[t]he principal purposes of the federal gun control legislation . . . was to curb crime by keeping firearms out of the hands of those not legally entitled to possess them, because of age, criminal background, or incompetency.'' 415 U.S. at 824.

[291] The BSCA amended the GCA to expressly prohibit straw purchasing of firearms. *See* 18 U.S.C. 932.

recordkeeping requirements of Federal law to get guns into the hands of criminals. Straw purchasers may acquire firearms directly for prohibited persons or purchase them for other middlemen on behalf of violent criminals.

After a trace is conducted on a recovered crime gun, ATF is able to determine whether the purchaser was also the possessor of the firearm when it was used in a crime, or whether the purchaser is different from the possessor. Traces where the purchaser and possessor are different provide leads to help determine whether the possessor or others in a trafficking distribution network utilized one or more straw purchasers to acquire firearms. Table 14 shows the share of traced guns attributed to these potential purchaser and possessor relationships.

Table 14. Percentage of Traced Crime Guns by Purchaser and Possessor Relationships, 2017 – 2021[292]

Purchaser and Possessor are the same	12.20%
Purchaser and Possessor are different	58.40%
Purchaser known, Possessor unknown	29.40%

In Table 14 above, in most traces, the purchaser of the traced crime gun was different from the possessor or the purchaser of the traced crime gun is known but the possessor is unknown. These two categories amount to a total of 87.8 percent of successfully traced crime guns.

Finally, the Department notes that, when a firearm is recovered in a criminal investigation and submitted for tracing, transactions in which the purchaser of the firearm was subject to a background check tend to have a longer time-to-crime. As stated in the NFCTA, ''a short [time-to-crime] can be an indicator of illegal firearms trafficking.'' [293] A time-to-crime recovery of three years or less is generally considered a ''short'' time-to-crime,[294] indicating that at time the firearm was purchased, the purchase was more likely to be associated with firearm trafficking, straw-purchasing, or other intended criminal use. Again, by clarifying when a Federal firearms license is required, the rule will facilitate increased licensure of those engaged in the business of dealing in firearms. This, in turn, will result in those newly licensed dealers conducting more purchaser background checks, which, the longer time-to-crime data indicates, will deter violent felons, traffickers, and other prohibited persons from obtaining firearms from those dealers.[295] FFLs who have a large number of traced firearms with short time-to-crime statistics may undergo more inspections, because certain FFL practices might be making them more susceptible to straw purchasing activities.

The longer time-to-crime for recovered crime guns in which the purchaser was subject to a background check is demonstrated by a review of state laws and geographic recovery data by city. Table 15 provides time-to-crime statistics by State.

Table 15. Shortest Time-to-Crime States versus Longest Time-to-Crime States

State	Median TTC (Years)	State	Median TTC (Years)
Virginia	1.6	Hawaii	7.5
Michigan	2	Connecticut	5.9
Arizona	2.1	New York	5.7
Missouri	2.2	New Jersey	5.3
Mississippi	2.2	Maryland	5

Table 16 provides time-to-crime statistics by city of recovery.

[294] *See generally id*. at 35 (A ''[s]hort TTC suggests that traced crime guns were rapidly diverted from lawful firearms commerce into criminal hands and represents a key indicator of firearm trafficking. Between 2017 and 2021, half of traced crime guns were purchased and recovered within three years of the last known sale.'').

[295] *See id*. at 41.

Table 16. Shortest Time-to-Crime Cities versus Longest Time-to-Crime Cities

City	Median TTC (Years)	City	Median TTC (Years)
Richmond, VA	1.5	New York, NY	6.3
Detroit, MI	1.6	Baltimore, MD	5.3
Columbia, SC	1.7	San Jose, CA	4.6
Phoenix, AZ	1.8	San Bernardino, CA	4.2
Memphis, TN	1.9	San Diego, CA	4.2
Saint Louis, MO	1.9	Los Angeles, CA	4.2

As explained by one public commenter, of the States and cities that have shorter time-to-crime statistics, only Virginia and Michigan also currently require background checks for all private party transactions.[296] The commenter further stated that all of the States and cities with longer time-to-crime statistics already require background checks for private party transactions. Consistent with the findings of the NFCTA, this data suggests that background checks tend to inhibit or otherwise deter prohibited persons from purchasing firearms and then subsequently using them in crime. In addition to making more records of transactions occurring on the secondary market readily available for tracing purposes, this rule—by increasing the number of properly licensed dealers who conduct background checks before selling a firearm—also helps ensure that prohibited persons are denied access to firearms, as suggested above. Based on FBI information, there were 131,865 prohibited persons in 2022 and 153,565 prohibited persons in 2021 who were denied the ability to purchase a firearm after a NICS background check.[297] The Department notes that these numbers are under-reported since there are a number of States that do not rely on the FBI to perform their background checks. Nonetheless, this data suggests that requiring firearms to be sold on the regulated market has a preventative effect, as the process to obtain a firearm sold on the regulated market can deter or prevent prohibited persons from acquiring and possessing firearms.

The U.S. Sentencing Commission has reported that ''88.8 percent of firearm offenders sentenced under § 2K2.1 [298] [of the November 2021 United States Sentencing Commission *Guidelines Manual*] were [already] prohibited from possessing a firearm'' under 18 U.S.C. 922(g). These individuals would thus have been flagged in a background check, and therefore would have been prohibited from buying a firearm from a licensed dealer after their first offense. As a result, they would not have been able to commit the subsequent firearms offense(s) with those firearms if the seller had been licensed. In addition, the U.S. Sentencing Commission reported that firearms offenders sentenced under section 2K2.1 ''have criminal histories that are more extensive and more serious than other offenders,'' and that they are ''more than twice as likely to have a prior conviction for a violent offense compared to all other offenders.'' [299]

In another report on ''armed career criminals'' (those who, at the time of sentencing, have three or more prior convictions for violent offenses, serious drug offenses, or both), the Commission found that a substantial share of such ''armed career criminals'' (83 percent in fiscal year 2019) had prior convictions for at least one violent offense, as opposed to solely serious drug offense convictions. This included ''57.7 percent who had three or more [prior violent] convictions.'' [300] In other words, many persons who are prohibited by law from possessing firearms, including the more serious ''armed career criminals,'' were able to obtain guns and continued to commit more violent offenses after they would have been flagged by a background check and denied a firearm if purchasing from a licensed dealer.

Such violence has a significant adverse effect on public safety. By increasing the number of licensed dealers who are required to conduct background checks on unlicensed transferees, this rule helps prevent firearms from being sold to felons or other prohibited persons, who may then use those firearms to commit crimes and acts of violence, or themselves become sources of firearms trafficking. Furthermore, these licensed dealers must also maintain firearms transaction records, which will help with criminal investigations and tracing firearms subsequently used in crimes.

In 2016, ATF distributed and discussed the above-mentioned ''engaged in the business'' guidance at gun shows to ensure that unlicensed dealers operating at gun shows became licensed, and portions of that previous guidance are incorporated in this rule. The 2016 guidance was particularly directed at encouraging unlicensed persons who sell firearms for a supplemental source of income to continue selling firearms, but as licensed dealers. Based on data from the FFLC, ATF found that, within one year after releasing the guidance, there was an increase of approximately 567 Form 7 applications to account for unlicensed persons selling at gun shows. This previous experience demonstrates that, when ATF clarified the licensing requirements, some unlicensed market participants immediately recognized the need to obtain a license to avoid enforcement action. Although the

[296] According to the commenter, which provided information current as of 2022, the following States require background checks for all private party firearms transactions: CA, CO, CT, DC, DE, HI, IL, MA, MD, MI, MN, NE, NJ, NM, NV, NY, OR, PA, RI, VA, VT, WA. *See https://www.regulations.gov/comment/ATF-2023-0002-354412.*

[300] U.S. Sent'g Comm'n, *Federal Armed Career Criminals: Prevalence, Patterns, and Pathways* 9 (Mar. 2021), *https://www.ussc.gov/sites/default/files/pdf/research-and-publications/research-publications/2021/20210303_ACCA-Report.pdf.*

guidance alone did not achieve the full effects that would result from having these requirements in a regulation, the response illustrated that persons engaged in the business of dealing in firearms will comply with Federal licensing requirements and that there will be an increase in dealers as awareness of those licensing requirements increases. This both enhances public safety by increasing sellers' ability to identify prohibited persons and keep them from purchasing firearms and increases the likelihood that more prohibited persons will be deterred from attempting to purchase firearms.

Finally, providing a clear option for FFLs to transfer their business inventory to another FFL when their license is terminated helps to ensure that these business inventories of firearms are traceable and do not become sources of trafficked firearms.

8. Alternatives

In addition to the requirements outlined in this rule, the Department considered the following alternative approaches:

Alternative 1. A rulemaking that focuses on a bright-line numerical threshold of what constitutes being engaged in the business as a dealer in firearms. As discussed above, in the past, it has been proposed to the Department that a rulemaking should set a specific threshold or number of sales per year to define ''engaged in the business.'' The Department considered this alternative in the past and again as part of developing this rulemaking. However, the Department chose not to adopt this alternative for a number of reasons stated in detail above.[301] In summary: courts have held even before the passage of the BSCA that the sale or attempted sale of even one firearm is sufficient to show that a person is ''engaged in the business'' if that person represents to others that they are willing and able to purchase more firearms for resale; a person could structure their transactions to avoid the minimum threshold by spreading out sales over time; and firearms could be sold by unlicensed persons below the threshold number without records, making those firearms unable to be traced when they are subsequently used in a crime. Finally, at this time, the Department does not believe there is a sufficient evidentiary basis to support setting a specific minimum number of firearms bought or sold that, without consideration of additional factors, would establish that a person is ''engaged in the business.''

The Department believes replacing this rule with a simple numerical threshold would not appropriately address the statutory language regarding the requisite intent predominantly to earn a profit and would have unintended effects, such as those summarized in the previous paragraph, which would impact personal firearms transactions and decrease public safety and law enforcement's ability to trace firearms used in crimes.

Alternative 2. Publishing guidance instead of revising the regulations. Under this alternative, rather than publishing regulations further defining ''engaged in the business,'' the Department would publish only guidance documents to clarify the topics included in this rule. Although the Department has determined that it will also update existing guidance documents to answer any questions that the firearms industry may have, the Department has also determined that issuing only guidance would be insufficient to address the issues discussed above. A regulation is much more effective at achieving compliance with the GCA, as amended by the BSCA, than guidance, which is both voluntary and distributed by ATF at gun shows or other venues when the agency is present, or found online if people search for it. People recognize that a regulation sets the requirements they must follow and affects all those participating in the topic area, and they also know where to look for a regulation. Now that the BSCA has redefined the term ''engaged in the business,'' there is even more of a need to ensure that unlicensed people who meet the definition of that term understand that they are violating the law if they do not obtain a license. And if the Department does not update its regulations, they would not accurately reflect the statutory text and would thus create confusion.

As a result, the Department did not select the alternative to publish only guidance documents in lieu of regulations. Guidance alone would be insufficient as a means to inform the public in general, rather than solely the currently regulated community; it would not have the same reach and attention as a regulation; it would not benefit from the input of public review and comment to aid in accounting for possible unintended impacts or interpretations; and it would not be able to change existing regulatory provisions on the subject of ''engaged in the business'' or impact intersecting regulatory provisions. In addition, the Department can incorporate existing guidance in a rule based on its experience or in response to comments. When an agency establishes or revises requirements that were previously established pursuant to a rulemaking process, it must do so through a regulation issued in compliance with the requirements of the Administrative Procedure Act and certain executive orders. Guidance does not meet these requirements. Therefore, although the Department considered this alternative, it determined it was not in the best interest of the public.

Alternative 3. No action. Rather than promulgating a regulation, the Department could instead take no action to further clarify the BSCA's amendments to the GCA. However, the Department considered this alternative and decided against it for a number of reasons. First, Congress, through the BSCA, determined that there was a need to revise the definition of ''engaged in the business'' for the first time in almost 40 years. While that by itself does not preclude the Department from using its discretion not to promulgate a formal rule, it indicates an important change to the landscape of who must have a license to deal in firearms and warrants consideration of what that means to persons who have been operating under the previous definition. It has potential effects on those who have not considered themselves to fall under the definition before but now would need to obtain a license. The change to the definition removed any consideration of an individual's intent to obtain ''livelihood'' from the ''engaged in the business'' analysis, and it is reasonable to expect that those who transact in firearms have questions about how to interpret and apply this change. This includes how it affects other aspects of existing laws and regulatory provisions that govern such transactions, as well as how other BSCA amendments, such as the new international trafficking provisions, might apply to the dealer requirements. For these reasons, the Department determined that taking no action was not a viable alternative.

Second, as the various enforcement actions and court decisions cited above demonstrate, ATF observed a significant level of noncompliance with the GCA's licensing requirements even prior to the BSCA. And third, on March 14, 2023, President Biden issued Executive Order 14092, requiring the Attorney General to report on agency efforts to implement the BSCA, develop and implement a plan to clarify the definition of who is engaged in the business of dealing in firearms, ''including by considering a

[301] The relevant discussion is set forth in Section II.A, ''Advance Notice of Proposed Rulemaking (1979),'' and in more detail in Section III.D, ''Presumptions that a Person is 'Engaged in the Business,' '' of this preamble.

rulemaking,'' and prevent former FFLs whose licenses have been revoked or surrendered from continuing to engage in the business of dealing in firearms.[302]

The alternative of taking no action would not generate direct monetary costs because it would leave the regulatory situation as it is. Because the costs and benefits of this alternative arise from the statute itself, the Department did not include an assessment of them in this rulemaking.

B. Executive Order 13132 (Federalism)

This regulation will not have substantial direct effects on the States, the relationship between the Federal Government and the States, or the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132 (Federalism), the Attorney General has determined that this regulation does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

C. Executive Order 12988 (Civil Justice Reform)

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 (Civil Justice Reform).

D. Regulatory Flexibility Act

The Regulatory Flexibility Act (''RFA'') establishes as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure that such proposals are given serious consideration. Public Law 96–354, section 2(b), 94 Stat. 1164 (1980).

Under the RFA, the agency is required to consider whether this rule will have a significant economic impact on a substantial number of small entities. Agencies must perform a review to determine whether a rule will have such an impact. If the agency determines that it will, the agency must prepare a regulatory flexibility analysis as described in the RFA.

Pursuant to 5 U.S.C. 604(a), the final regulatory flexibility analysis must contain:

- A statement of the need for, and objectives of, the rule;
- A statement of the significant issues raised by the public comments in response to the initial regulatory flexibility analysis, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments;
- The response of the agency to any comments filed by the Chief Counsel for Advocacy of the SBA in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments;
- A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available;
- A description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities that will be subject to the requirement and the type of professional skills necessary for preparation of the report or record; and
- A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency that affect the impact on small entities was rejected.

The RFA covers a wide range of small entities. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. 5 U.S.C. 601(3)–(6). The Department determined that the rule affects a variety of currently unlicensed persons engaged in the business of selling firearms, and assumed that all of these sellers would become small businesses upon the licensure required by this rule (see the section below titled ''A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available''). Based on the requirements above, the Department prepared the following regulatory flexibility analysis assessing the impact on small entities from the rule.

A statement of the need for, and objectives of, the rule.

See Section VI.A.1 of this preamble for discussion on the need for this regulation and the objectives of this rule.

A statement of the significant issues raised by the public comments in response to the initial regulatory flexibility analysis, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments.

See Section IV.D.13 of this preamble for public comments regarding the RFA. Responses to those public comments are included with each topic.

The response of the agency to any comments filed by the Chief Counsel for Advocacy of the SBA in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments.

There were no comments filed by the Chief Counsel for Advocacy of the SBA in response to the proposed rule. Therefore, no changes were made in the final rule as a result of such comments.

A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available.

Persons affected by this rule are not currently considered small businesses or small entities but will become small businesses upon implementation of this rule if they obtain licenses and continue selling firearms as dealers. However, the Department assumes that, should an individual be considered ''engaged in the business'' due to factors related to their sale of firearms and not simply to enhance their personal collection, there may be an impact on their revenue. Due to limitations on data, the Department is unable to determine the extent to which the licensing costs will impact their firearms sales revenue. As discussed in the primary analysis (Section VI.A.2 of this preamble), the Department estimated 10 percent of those affected by this rule would cease dealing in firearms for various reasons. To the extent such individuals are currently functioning as small businesses, even though not licensed, this could be deemed to represent an adverse regulatory impact on small businesses and their ability to operate as dealers.

A description of the projected reporting, recordkeeping and other compliance requirements of the rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.

Persons affected by this rule will need to apply for a license using Form 7, undergo an initial inspection, undergo background checks, maintain Form 4473

[302] 88 FR 16528.

records of firearms transactions, and periodically undergo a compliance inspection. No professional skills are required to fulfill these tasks.

A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

See Sections IV.D.13 and VI.A.8 of this preamble. No separate distinction was made in alternatives for small businesses, specifically, because the Department determined that all unlicensed sellers affected by this rule will become small businesses once they are licensed.

E. Small Business Regulatory Enforcement Fairness Act of 1996

This rule is likely to have a significant economic impact on a substantial number of small entities under SBREFA, 5 U.S.C. 601 *et seq.* Accordingly, the Department prepared an initial regulatory flexibility analysis for the proposed rule and prepared an FRFA for the final rule. 5 U.S.C. 603–04. Furthermore, a small business compliance guide will be published as required by SBREFA.

F. Congressional Review Act

Pursuant to the Congressional Review Act, 5 U.S.C. 801 *et seq.,* OMB's Office of Information and Regulatory Affairs has determined this rule does not meet the criteria in 5 U.S.C. 804(2). This rule will not result in an annual effect on the economy of $100 million or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. While there may be impacts on employment, investment, productivity, or innovation, these impacts will not have a significant impact on the overall economy.

G. Unfunded Mandates Reform Act of 1995

This rule would not result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year, and it will not significantly or uniquely affect small governments. Twenty-two States already require background checks for private party sales, and of the 28 States that do not, only three states (Florida, Tennessee, and Utah) do not rely on Federal law enforcement for their background checks. While these three States may be affected by this rule to the extent they have to conduct increased background checks, the Department did not determine that this rule will have an impact of $100 million or more in any year to any of these States. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995, Public Law 104–4, 109 Stat. 48.

H. Paperwork Reduction Act of 1995

Under the Paperwork Reduction Act of 1995 (''PRA''), 44 U.S.C. 3501–21, agencies are required to submit to OMB, for review and approval, any reporting requirements inherent in a rule. The collections of information contained in this rule are collections of information which have been reviewed and approved by OMB in accordance with the requirements of the PRA and have been assigned an OMB Control Number.

As defined in 5 CFR 1320.3(c), ''collection of information'' comprises reporting, recordkeeping, monitoring, posting, labeling, and other similar requirements. The collections of information in this rule are mandatory. The title and description of each information collection, a description of those who must collect the information, and an estimate of the total annual burden follow. The estimate covers the time for reviewing instructions, searching existing sources of data, gathering and maintaining the data needed, and completing and reviewing the collection.

Title: Application for a Federal Firearms License—ATF Form 7(5310.12)/7CR (5310.16).

OMB Control Number: OMB 1140–0018.

Summary of the Collection of Information: 18 U.S.C. 922 specifies a number of unlawful activities involving firearms in interstate and foreign commerce. Some of these activities are not unlawful if the persons taking the actions are licensed under the provisions of section 923. Some examples of activities that are not unlawful if a person has a license include: engaging in the business of dealing, shipping, receiving, and transporting firearms in interstate or foreign commerce, including the acquisition of curio or relic firearms acquired by collectors from out-of-State for personal collections. This collection of information is necessary to ensure that anyone who wishes to be licensed as required by section 923 meets the requirements to obtain the desired license.

Need for Information: Less frequent collection of this information would pose a threat to public safety. Without this information collection, ATF would not be able to issue licenses to persons required by law to have a license to engage in the business of dealing in firearms or shipping or transporting firearms in interstate or foreign commerce in support of that business, or acquire curio and relic firearms from out of State.

Proposed Use of Information: ATF personnel will analyze the submitted application to determine the applicant's eligibility to receive the requested license.

Description of the Respondents: Individuals or entities wishing to engage in the business of dealing, shipping, receiving, and transporting firearms in interstate or foreign commerce, as well as acquiring firearms classified as curios and relics for personal collections.

Number of Respondents: 13,000 existing. New respondents due to the rule: 24,540.

Frequency of Response: one time.

Burden of Response: one hour.

Estimate of Total Annual Burden: 24,540 hours (incremental change).

Title: Application for a Federal Firearms License—Renewal Application ATF Form 8 (5310.11).

OMB Control Number: OMB 1140–0019.

Summary of the Collection of Information: 18 U.S.C. chapter 44 provides that no person may engage in the business of importing, manufacturing, or dealing in either firearms, or ammunition, without first obtaining a license to do so. These activities are licensed for a specific period. The benefit of a collector's license is also provided for in the statute. In order to continue to engage in the aforementioned firearms activities without interruption, licensees must renew their FFL by filing Federal Firearms License (''FFL'') RENEWAL Application-ATF Form 8 (5310.11) Part II, prior to its expiration.

Need for Information: Less frequent use of this information collection would pose a threat to public safety, since the collected information helps ATF to ensure that the applicants remain eligible to renew their licenses.

Proposed Use of Information: ATF Form 8 (5310.11) Part II, is used to identify the applicant and determine their eligibility to retain the license.

Description of the Respondents: Respondents desiring to update the

responsible person (RP) information on an existing license must submit a letter in this regard, along with the completed FFL renewal application to ATF.

Number of Respondents: 34,000 existing. New respondents due to the rule: 24,540.

Frequency of Response: every three years and periodically.

Burden of Response: 0.5 hours.

Estimate of Total Annual Burden: 12,270 hours (incremental change).

Title: Firearms Transaction Record—ATF Form 4473 (5300.9) and Firearms Transaction Record Continuation Sheet.

OMB Control Number: OMB 1140–0020.

Summary of the Collection of Information: The subject form is required under the authority of 18 U.S.C. 922 and 923 and 27 CFR 478.124. These sections of the GCA prohibit certain persons from shipping, transporting, receiving, or possessing firearms. All persons, including FFLs, are prohibited from transferring firearms to such persons. FFLs are also subject to additional restrictions regarding the disposition of a firearm to an unlicensed person under the GCA. For example, age and State of residence also determine whether a person may lawfully receive a firearm. The information and certification on the Form 4473 are designed so that a person licensed under 18 U.S.C. 923 may determine if the licensee may lawfully sell or deliver a firearm to the person identified in section B of the Form 4473, and to alert the transferee/buyer of certain restrictions on the receipt and possession of firearms. The Form 4473 should only be used for sales or transfers of firearms where the seller is licensed under 18 U.S.C. 923. The seller of a firearm must determine the lawfulness of the transaction and maintain proper records of the transaction.

Need for Information: The consequences of not conducting this collection of information, or conducting it less frequently, are that the licensee might transfer a firearm to a person who is prohibited from possessing firearms under Federal law. The collection of this information is necessary for compliance with the statutory requirements to verify the eligibility of a person receiving or possessing firearms under the GCA. There is no discretionary authority on the part of ATF to waive these requirements. Respondents are required to supply this information as often as necessary to comply with statutory provisions. The form is critical to the prevention of criminal diversion of firearms and enhances law enforcement's ability to trace firearms that are recovered in crimes.

Proposed Use of Information: A person purchasing a firearm from an FFL must complete section B of the Form 4473. The buyer's answers to the questions determine if the potential transferee is eligible to receive the firearm. If those answers indicate that the buyer is not prohibited from receiving a firearm, the licensee completes section C of the Form 4473 and contacts the NICS or the State point of contact to determine if the firearm can legally be transferred to the purchaser.

Description of the Respondents: Unlicensed persons wishing to purchase a firearm.

Number of Respondents: 17,189,101 existing. New respondents due to the rule: 24,540.

Frequency of Response: periodically.

Burden of Response: 0.5 hours.

Estimate of Total Annual Burden: 12,270 hours (incremental change).

Title: Records of Acquisition and Disposition, Dealers of Type 01/02 Firearms, and Collectors of Type 03 Firearms [Records of Acquisition and Disposition, Collectors of Firearms].

OMB Control Number: OMB 1140–0032.

Summary of the Collection of Information: The recordkeeping requirements as authorized by the GCA, 18 U.S.C. 923, are for the purpose of allowing ATF to inquire into the disposition of any firearm received by a licensee in the course of a criminal investigation.

Need for Information: Less frequent collection of this information would pose a threat to public safety as the information is routinely used to assist law enforcement by allowing them to trace firearms in criminal investigations.

Proposed Use of Information: This collection of information grants ATF officers the authority to examine a collector's records for firearms traces or compliance inspections, per 27 CFR 478.23(c)(1), (2).

Description of the Respondents: Federal Firearms Licensees.

Number of Respondents: 60,790 existing. New respondents due to the rule: 24,540.

Frequency of Response: annually recurring.

Burden of Response: three minutes to maintain A&D records and one hour to perform an inspection.

Estimate of Total Annual Burden: 24,540 hours in inspection time (incremental change) and 3,681 hours maintaining A&D records (incremental change).

ATF asks for public comment on the proposed collection of information to help determine how useful the information is; whether the public can help perform ATF's functions better; whether the information is readily available elsewhere; how accurate ATF's estimate of the burden of collection is; how valid the methods for determining burden are; how to improve the quality, usefulness, and clarity of the information; and how to minimize the burden of collection.

If you submit comments on the collection of information, submit them following the ''Public Participation'' section under the **SUPPLEMENTARY INFORMATION** heading. You need not respond to a collection of information unless it displays a currently valid control number from OMB. Before the requirements for this collection of information become effective, ATF will publish a notice in the **Federal Register** of OMB's decision to approve, modify, or disapprove the proposed collection.

Disclosure

Copies of the proposed rule, the comments received in response to it, and this final rule are available through the Federal eRulemaking portal, at *www.regulations.gov* (search for RIN 1140–58), and for public inspection by appointment during normal business hours at: ATF Reading Room, Room 1E–063, 99 New York Ave. NE, Washington, DC 20226; telephone: (202) 648–8740.

List of Subjects in 27 CFR Part 478

Administrative practice and procedure, Arms and munitions, Exports, Freight, Imports, Intergovernmental relations, Law enforcement officers, Military personnel, Penalties, Reporting and recordkeeping requirements, Research, Seizures and forfeitures, Transportation.

Authority and Issuance

For the reasons discussed in the preamble, the Department amends 27 CFR part 478 as follows:

PART 478—COMMERCE IN FIREARMS AND AMMUNITION

■ 1. The authority citation for 27 CFR part 478 continues to read as follows:

Authority: 5 U.S.C. 552(a); 18 U.S.C. 847, 921–931; 44 U.S.C. 3504(h).

■ 2. Amend § 478.11 by:
■ a. Revising the definition of ''Dealer'';
■ b. In the definition of ''Engaged in the business'':
■ i. Redesignating paragraphs (a) through (f) as paragraphs (1) through (6);
■ ii. Revising newly redesignated paragraph (3); and

■ iii. Adding paragraph (7);
■ c. Adding definitions of ''Former licensee inventory'', ''Personal collection (or personal collection of firearms, or personal firearms collection)'', and ''Predominantly earn a profit'' in alphabetical order;
■ d. Revising the definition of ''Principal objective of livelihood and profit''; and
■ e. Adding definitions of ''Responsible person'' and ''Terrorism'' in alphabetical order.

The revisions and additions read as follows:

§ 478.11 Meaning of terms.

* * * * *

Dealer. Any person engaged in the business of selling firearms at wholesale or retail; any person engaged in the business of repairing firearms or of making or fitting special barrels, stocks, or trigger mechanisms to firearms; or any person who is a pawnbroker. The term shall include any person who engages in such business or occupation on a part-time basis. The term shall include such activities wherever, or through whatever medium, they are conducted, such as at a gun show or event, flea market, auction house, or gun range or club; at one's home; by mail order; over the internet (*e.g.,* online broker or auction); through the use of other electronic means (*e.g.,* text messaging service, social media raffle, or website); or at any other domestic or international public or private marketplace or premises.

* * * * *

Engaged in the business—* * *

(3) *Dealer in firearms other than a gunsmith or a pawnbroker.* The term ''engaged in the business as a dealer in firearms other than a gunsmith or a pawnbroker'' shall have the same meaning as in § 478.13.

* * * * *

(7) *Related definitions.* For purposes of this definition—

(i) The term ''purchase'' (and derivative terms thereof) means the act of obtaining a firearm in an agreed exchange for something of value;

(ii) The term ''sale'' (and derivative terms thereof) means the act of disposing of a firearm in an agreed exchange for something of value, and the term ''resale'' means selling a firearm, including a stolen firearm, after it was previously sold by the original manufacturer or any other person; and

(iii) The term ''something of value'' includes money, credit, personal property (*e.g.,* another firearm or ammunition), a service, a controlled substance, or any other medium of exchange or valuable consideration, legal or illegal.

* * * * *

Former licensee inventory. Firearms that were in the business inventory of a licensee at the time the license was terminated. Such firearms differ from a personal collection and other personal firearms in that they were purchased repetitively before the license was terminated as part of a licensee's business inventory with the predominant intent to earn a profit.

* * * * *

Personal collection (or personal collection of firearms, or personal firearms collection)—(1) *General definition.* Personal firearms that a person accumulates for study, comparison, exhibition (*e.g.,* collecting curios or relics, or collecting unique firearms to exhibit at gun club events), or for a hobby (*e.g.,* noncommercial, recreational activities for personal enjoyment, such as hunting, skeet, target, or competition shooting, historical re-enactment, or noncommercial firearms safety instruction). The term shall not include any firearm purchased for the purpose of resale with the predominant intent to earn a profit (*e.g.,* primarily for a commercial purpose or financial gain, as distinguished from personal firearms a person accumulates for study, comparison, exhibition, or for a hobby, but which the person may also intend to increase in value). In addition, the term shall not include firearms accumulated primarily for personal protection: *Provided,* that nothing in this definition shall be construed as precluding a person from lawfully acquiring firearms for self-protection or other lawful personal use.

(2) *Personal collection of licensee.* In the case of a firearm imported, manufactured, or otherwise acquired by a licensed manufacturer, licensed importer, or licensed dealer, the term shall include only a firearm described in paragraph (1) of this definition that was—

(i) Acquired or transferred without the intent to willfully evade the restrictions placed upon licensees under 18 U.S.C. chapter 44;

(ii) Recorded by the licensee as an acquisition in the licensee's acquisition and disposition record in accordance with § 478.122(a), § 478.123(a), or § 478.125(e) (unless acquired prior to licensure and not intended for sale);

(iii) Recorded as a disposition from the licensee's business inventory to the licensee's personal collection or otherwise as a personal firearm in accordance with § 478.122(a), § 478.123(a), or § 478.125(e) (unless acquired prior to licensure and not intended for sale);

(iv) Maintained in such personal collection or otherwise as a personal firearm (whether on or off the business premises) for at least one year from the date the firearm was so transferred, in accordance with 18 U.S.C. 923(c) and 27 CFR 478.125a; and

(v) Stored separately from, and not commingled with the business inventory. When stored or displayed on the business premises, the personal collection and other personal firearms shall be appropriately identified as ''not for sale'' (*e.g.,* by attaching a tag).

* * * * *

Predominantly earn a profit. The term ''predominantly earn a profit'' shall have the same meaning as in § 478.13.

Principal objective of livelihood and profit. The intent underlying the sale or disposition of firearms is predominantly one of obtaining livelihood and pecuniary gain, as opposed to other intents such as improving or liquidating a personal firearms collection: *Provided,* That proof of profit shall not be required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism.

* * * * *

Responsible person. Any individual possessing, directly or indirectly, the power to direct or cause the direction of the management and policies of a sole proprietorship, corporation, company, partnership, or association, insofar as they pertain to firearms.

* * * * *

Terrorism. For purposes of the definitions ''predominantly earn a profit'' and ''principal objective of livelihood and profit,'' the term ''terrorism'' means activity, directed against United States persons, which—

(1) Is committed by an individual who is not a national or permanent resident alien of the United States;

(2) Involves violent acts or acts dangerous to human life which would be a criminal violation if committed within the jurisdiction of the United States; and

(3) Is intended—

(i) To intimidate or coerce a civilian population;

(ii) To influence the policy of a government by intimidation or coercion; or

(iii) To affect the conduct of a government by assassination or kidnapping.

* * * * *

■ 3. Add § 478.13 to subpart B to read as follows:

§478.13 Definition of ''engaged in the business as a dealer in firearms other than a gunsmith or a pawnbroker.''

(a) *Definition.* A person who devotes time, attention, and labor to dealing in firearms as a regular course of trade or business to predominantly earn a profit through the repetitive purchase and resale of firearms. The term shall not include a person who makes occasional sales, exchanges, or purchases of firearms for the enhancement of a personal collection or for a hobby, or who sells all or part of the person's personal collection of firearms. In addition, the term shall not include an auctioneer who provides only auction services on commission to assist in liquidating firearms at an estate-type auction; *provided,* that the auctioneer does not purchase the firearms, or take possession of the firearms for sale on consignment.

(b) *Fact-specific inquiry.* Whether a person is engaged in the business as a dealer under paragraph (a) of this section is a fact-specific inquiry. Selling large numbers of firearms or engaging or offering to engage in frequent transactions may be highly indicative of business activity. However, there is no minimum threshold number of firearms purchased or sold that triggers the licensing requirement. Similarly, there is no minimum number of transactions that determines whether a person is ''engaged in the business'' of dealing in firearms. For example, even a single firearm transaction or offer to engage in a transaction, when combined with other evidence (*e.g.,* where a person represents to others a willingness and ability to purchase more firearms for resale), may require a license; whereas, a single isolated firearm transaction without such evidence would not require a license. At all times, the determination of whether a person is engaged in the business of dealing in firearms is based on the totality of the circumstances.

(c) *Presumptions that a person is engaged in the business as a dealer.* In civil and administrative proceedings, a person shall be presumed to be engaged in the business of dealing in firearms as defined in paragraph (a) of this section, absent reliable evidence to the contrary, when it is shown that the person—

(1) Resells or offers for resale firearms, and also represents to potential buyers or otherwise demonstrates a willingness and ability to purchase and resell additional firearms (*i.e.,* to be a source of additional firearms for resale);

(2) Repetitively purchases for the purpose of resale, or repetitively resells or offers for resale, firearms—

(i) Through straw or sham businesses, or individual straw purchasers or sellers; or

(ii) That cannot lawfully be purchased, received, or possessed under Federal, State, local, or Tribal law, including:

(A) Stolen firearms (*e.g.,* 18 U.S.C. 922(j));

(B) Firearms with the licensee's serial number removed, obliterated, or altered, or not identified as required by law (*e.g.,* 18 U.S.C. 922(k) or 26 U.S.C. 5861(i));

(C) Firearms imported in violation of law (*e.g.,* 18 U.S.C. 922(l), 22 U.S.C. 2778, or 26 U.S.C. 5844, 5861(k)); or

(D) Machineguns or other weapons defined as firearms under 26 U.S.C. 5845(b) that cannot lawfully be possessed (*e.g.,* 18 U.S.C. 922(o); 26 U.S.C. 5861(d));

(3) Repetitively resells or offers for resale firearms—

(i) Within 30 days after the person purchased the firearms; or

(ii) Within one year after the person purchased the firearms if they are—

(A) New, or like new in their original packaging; or

(B) The same make and model, or variants thereof;

(4) As a former licensee (or responsible person acting on behalf of the former licensee), resells or offers for resale to a person (other than a licensee in accordance with § 478.57 or § 478.78) firearms that were in the business inventory of the former licensee at the time the license was terminated (*i.e.,* license revocation, denial of license renewal, license expiration, or surrender of license), whether or not such firearms were transferred to a responsible person of the former licensee after the license was terminated in accordance with § 478.57(b)(2) or § 478.78(b)(2); or

(5) As a former licensee (or responsible person acting on behalf of the former licensee), resells or offers for resale firearms that were transferred to the licensee's personal collection or otherwise as personal firearms in accordance with 18 U.S.C. 923(c) and 27 CFR 478.125a(a) prior to the time the license was terminated, unless:

(i) The firearms were received and transferred without any intent to willfully evade the restrictions placed on licensees by 18 U.S.C. chapter 44; and

(ii) One year has passed from the date of transfer to the licensee's personal collection or otherwise as personal firearms.

(d) *Predominantly earn a profit*—(1) *Definition.* The intent underlying the sale or disposition of firearms is predominantly one of obtaining pecuniary gain, as opposed to other intents, such as improving or liquidating a personal firearms collection: *Provided,* that proof of profit, including the intent to profit, shall not be required as to a person who engages in the regular and repetitive purchase and disposition of firearms for criminal purposes or terrorism. For purposes of this section, a person may have the intent to profit even if the person does not actually obtain the intended pecuniary gain from the sale or disposition of firearms.

(2) *Presumptions that a person has intent to predominantly earn a profit.* In civil and administrative proceedings, a person shall be presumed to have the intent to predominantly earn a profit through the repetitive purchase and resale of firearms as defined in paragraph (d)(1) of this section, absent reliable evidence to the contrary, when it is shown that the person—

(i) Repetitively or continuously advertises, markets, or otherwise promotes a firearms business (*e.g.,* advertises or posts firearms for resale, including through the internet or other digital means, establishes a website to offer their firearms for resale, makes available business cards, or tags firearms with sales prices), regardless of whether the person incurs expenses or only promotes the business informally;

(ii) Repetitively or continuously purchases, rents, or otherwise exchanges (directly or indirectly) something of value to secure permanent or temporary physical space to display firearms they offer for resale, including part or all of a business premises, a table or space at a gun show, or a display case;

(iii) Makes and maintains records to document, track, or calculate profits and losses from firearms repetitively purchased for resale;

(iv) Purchases or otherwise secures merchant services as a business (*e.g.,* credit card transaction services, digital wallet for business) through which the person intends to repetitively accept payments for firearms transactions;

(v) Formally or informally purchases, hires, or otherwise secures business security services (*e.g.,* a central station-monitored security system registered to a business, or guards for security) to protect firearms assets and repetitive firearms transactions;

(vi) Formally or informally establishes a business entity, trade name, or online business account, including an account using a business name on a social media or other website, through which the person makes, or offers to make, repetitive firearms transactions; or

(vii) Secures or applies for a State or local business license to purchase for

resale or to resell merchandise that includes firearms.

(e) *Conduct that does not support a presumption.* A person shall not be presumed to be engaged in the business of dealing in firearms when reliable evidence shows that the person is only reselling or otherwise transferring firearms—

(1) As bona fide gifts;

(2) Occasionally to obtain more valuable, desirable, or useful firearms for the person's personal collection;

(3) Occasionally to a licensee or to a family member for lawful purposes;

(4) To liquidate (without restocking) all or part of the person's personal collection; or

(5) To liquidate firearms—

(i) That are inherited; or

(ii) Pursuant to a court order; or

(6) To assist in liquidating firearms as an auctioneer when providing auction services on commission at an estate-type auction.

(f) *Rebuttal evidence.* Reliable evidence of the conduct set forth in paragraph (e) of this section may be used to rebut any presumption in paragraph (c) or (d)(2) of this section that a person is engaged in the business of dealing in firearms, or intends to predominantly earn a profit through the repetitive purchase and resale of firearms.

(g) *Presumptions, conduct, and rebuttal evidence not exhaustive.* The activities set forth in the rebuttable presumptions in paragraphs (c) and (d)(2) of this section, and the activities and rebuttal evidence set forth in paragraphs (e) and (f) of this section, are not exhaustive of the conduct or evidence that may be considered in determining whether a person is engaged in the business of dealing in firearms, or has the intent to predominantly earn a profit through the repetitive purchase and resale of firearms.

(h) *Criminal proceedings.* The rebuttable presumptions in paragraphs (c) and (d)(2) of this section shall not apply to any criminal case, although they may be useful to courts in criminal cases, for example, when instructing juries regarding permissible inferences.

■ 4. Amend § 478.57 by designating the undesignated paragraph as paragraph (a) and adding paragraphs (b) through (d) to read as follows:

§478.57 Discontinuance of business.

* * * * *

(b) Upon termination of a license (*i.e.,* license revocation, denial of license renewal, license expiration, or surrender of license), the former licensee shall within 30 days, or such additional period approved by the Director for good cause, either:

(1) Liquidate the former licensee inventory by selling or otherwise disposing of the firearms to a licensed importer, licensed manufacturer, or licensed dealer for sale, auction, or pawn redemption in accordance with this part; or

(2) Transfer the former licensee inventory to a responsible person of the former licensee to whom the receipt, possession, sale, or other disposition is not prohibited by law. Any such transfer, however, does not negate the fact that the firearms were repetitively purchased, and were purchased with the predominant intent to earn a profit by repetitive purchase and resale.

(c) Transfers of former licensee inventory to a licensee or responsible person in accordance with paragraph (b)(1) or (2) of this section shall be appropriately recorded as dispositions, in accordance with § 478.122(b), § 478.123(b), or § 478.125(e), prior to delivering the records after discontinuing business consistent with § 478.127. Except for liquidation of former licensee inventory to a licensee within 30 days (or approved period) in accordance with paragraph (b)(1) of this section, or occasional sale of a firearm from such inventory thereafter to a licensee, a former licensee (or responsible person of such licensee) who resells any such inventory, including former licensee inventory transferred in accordance with paragraph (b)(2) of this section, is subject to the presumptions in § 478.13 (definition of ''engaged in the business as a dealer in firearms other than a gunsmith or pawnbroker'') that apply to a person who repetitively purchased those firearms for the purpose of resale.

(d) The former licensee shall not continue to engage in the business of importing, manufacturing, or dealing in firearms by importing or manufacturing additional firearms for purposes of sale or distribution, or purchasing additional firearms for resale (*i.e.,* ''restocking'').

■ 5. Amend § 478.78 by designating the undesignated paragraph as paragraph (a) and adding paragraphs (b) through (d) to read as follows:

§478.78 Operations by licensee after notice.

* * * * *

(b) Upon final disposition of license proceedings to disapprove or terminate a license (*i.e.,* by revocation or denial of renewal), the former licensee shall within 30 days, or such additional period approved by the Director for good cause, either:

(1) Liquidate the former licensee inventory by selling or otherwise disposing of the firearms to a licensed importer, licensed manufacturer, or licensed dealer for sale, auction, or pawn redemption in accordance with this part; or

(2) Transfer the former licensee inventory to a responsible person of the former licensee to whom the receipt, possession, sale, or other disposition is not prohibited by law. Any such transfer, however, does not negate the fact that the firearms were repetitively purchased, and were purchased with the predominant intent to earn a profit by repetitive purchase and resale.

(c) Transfers of former licensee inventory to a licensee or responsible person in accordance with paragraph (b)(1) or (2) of this section shall be appropriately recorded as dispositions, in accordance with § 478.122(b), § 478.123(b), or § 478.125(e), prior to delivering the records after discontinuing business consistent with § 478.127. Except for the sale of former licensee inventory to a licensee within 30 days (or approved period) in accordance with paragraph (b)(1) of this section, or occasional sale of a firearm from such inventory thereafter to a licensee, a former licensee (or responsible person of such former licensee) who resells any such inventory, including former licensee inventory transferred in accordance with paragraph (b)(2) of this section, is subject to the presumptions in § 478.13 (definition of ''engaged in the business as a dealer in firearms other than a gunsmith or pawnbroker'') that apply to a person who repetitively purchased those firearms for the purpose of resale.

(d) The former licensee shall not continue to engage in the business of importing, manufacturing, or dealing in firearms by importing or manufacturing additional firearms for purposes of sale or distribution, or purchasing additional firearms for resale (*i.e.,* ''restocking'').

■ 6. Amend § 478.124 by revising paragraph (a) to read as follows:

§478.124 Firearms transaction record.

(a) A licensed importer, licensed manufacturer, or licensed dealer shall not sell or otherwise dispose, temporarily or permanently, of any firearm to any person, other than another licensee, unless the licensee records the transaction on a firearm transaction record, Form 4473: *Provided,* that a firearms transaction record, Form 4473, shall not be required to record the disposition made of a firearm delivered to a licensee for the sole purpose of repair or customizing when such firearm or a replacement

firearm is returned to the person from whom received; *provided further,* that a firearms transaction record, Form 4473, shall not be used if the sale or other disposition is being made to another licensed importer, licensed manufacturer, or licensed dealer, or a curio or relic to a licensed collector, including a sole proprietor who transfers a firearm to their personal collection or otherwise as a personal firearm in accordance with § 478.125a. When a licensee transfers a firearm to another licensee, the licensee shall comply with the verification and recordkeeping requirements in § 478.94 and this subpart.

* * * * *

§ 478.125a [Amended]

■ 7. Amend § 478.125a in paragraphs (a)(2) and (3) by removing the citation ''§ 478.125(e)'' and adding in its place ''§ 478.122(a), § 478.123(a), or § 478.125(e)''.

Dated: April 8, 2024.

Equal Employment Opportunity Commission

29 CFR Part 1636
Implementation of the Pregnant Workers Fairness Act; Final Rule

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

29 CFR Part 1636

RIN 3046–AB30

Implementation of the Pregnant Workers Fairness Act

AGENCY: Equal Employment Opportunity Commission.

ACTION: Final rule and interpretive guidance.

SUMMARY: The Equal Employment Opportunity Commission is issuing this final rule and interpretive guidance to implement the Pregnant Workers Fairness Act, which requires a covered entity to provide reasonable accommodations to a qualified employee's or applicant's known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, unless the accommodation will cause an undue hardship on the operation of the business of the covered entity.

DATES: This final rule and interpretive guidance is effective on June 18, 2024.

FOR FURTHER INFORMATION CONTACT: Sharyn Tejani, Associate Legal Counsel, Office of Legal Counsel at 202–900–8652 (voice), 1–800–669–6820 (TTY), *sharyn.tejani@eeoc.gov.* Requests for this final rule and interpretive guidance in an alternative format should be made to the Office of Communications and Legislative Affairs at (202) 921–3191 (voice), 1–800–669–6820 (TTY), or 1–844–234–5122 (ASL video phone).

SUPPLEMENTARY INFORMATION:

Introduction

The Pregnant Workers Fairness Act (PWFA) [1] requires a covered entity to provide reasonable accommodations to a qualified employee's or applicant's known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, absent undue hardship on the operation of the business of the covered entity. The PWFA at 42 U.S.C. 2000gg–3(a) directs the Equal Employment Opportunity Commission (EEOC or Commission) to promulgate regulations to implement the PWFA.

The Commission issued its notice of proposed rulemaking (NPRM) on August 11, 2023, and invited public comment on this proposal from August 11, 2023, through October 10, 2023.[2] Members of the public submitted approximately 98,600 comments to the EEOC during this 60-day period. Several of those comments were signed by multiple individuals; thus, the total number of comments was over 100,000.[3]

Pursuant to 42 U.S.C. 2000gg–3(a), the Commission is issuing this final regulation and an appendix entitled ''Appendix A to Part 1636—Interpretive Guidance on the Pregnant Workers Fairness Act'' (Interpretive Guidance). As explained in the NPRM, the Interpretive Guidance (a proposed version of which was included in the NPRM) will become part of 29 CFR part 1636.[4] The Interpretive Guidance represents the Commission's interpretation of the issues addressed within it, and the Commission will be guided by the regulation and the Interpretive Guidance when enforcing the PWFA.[5]

General Information on Terms Used in the Regulation and Interpretive Guidance

The PWFA at 42 U.S.C. 2000gg(3) uses the term ''employee (including an applicant)'' in its definition of ''employee.'' Thus, throughout the statute, this preamble, the final regulation, and the Interpretive Guidance, the term ''employee'' should be understood to include ''applicant'' where relevant. Because the PWFA relies on Title VII of the Civil Rights Act of 1964 (Title VII), as amended by the Pregnancy Discrimination Act of 1978 (PDA), 42 U.S.C. 2000e *et seq.* for its definition of ''employee,'' that term also includes ''former employee,'' where relevant.[6]

The PWFA defines ''covered entity'' using the definition of ''employer'' from different statutes, including Title VII.[7] Thus ''covered entities'' under the PWFA include public and private employers with 15 or more employees, unions, employment agencies, and the Federal Government.[8] In this preamble, the final regulation, and the Interpretive Guidance, the Commission uses the terms ''covered entity'' and the term ''employer'' interchangeably.

To track the language of the statute more closely and improve readability, the Commission made three global changes from the proposed rule and proposed appendix to the final rule and Interpretive Guidance. First, the Commission removed most instances of the words ''applicant'' and ''former employee'' from the regulation and the Interpretive Guidance; based on the statute and Title VII, the term ''employee'' covers ''applicant'' and ''former employee'' when relevant. Second, the Commission replaced the word ''worker'' with the word ''employee'' throughout the regulation and the Interpretive Guidance. Third, the Commission removed sections of the proposed rule that pertained solely to employees covered by the Congressional Accountability Act of 1995 because the Commission does not have authority to regulate those employees (former §§ 1636.2(c)(2) and 1636.5(b)).

The Interpretive Guidance contains numerous examples to illustrate provisions in the regulation. The Commission received some comments identifying instances where these examples, in an effort to be simple and short, oversimplified situations related to pregnancy, childbirth, or related medical conditions. For example, the Commission used the term ''bed rest'' in some examples; that is a colloquialism for several actions that would be better described as ''rest and reduced activity.'' [9] The Commission agrees that in a real situation, there may or may not be more complexity and that describing a restriction may require different or more facts than are in an example. However, the purpose of these examples is to illustrate legal points, to suggest practical actions for covered entities and employees, and to encourage voluntary compliance with the law. Thus, while

[1] Consolidated Appropriations Act, 2023, Public Law 117–328, Div. II, 136 Stat. 4459, 6084 (2022) (codified at 42 U.S.C. 2000gg to 2000gg–6).

[2] 88 FR 54714–94 (proposed Aug. 11, 2023) (to be codified at 29 CFR part 1636).

[3] The vast majority of the comments were form comments that were identical or slightly altered versions of a few base form comments.

[4] 88 FR 54719.

[5] *Id.*

[6] *Robinson* v. *Shell Oil Co.,* 519 U.S. 337, 346 (1997).

[7] 42 U.S.C. 2000gg(2)(A), (B)(i), (B)(iii), (B)(iv). The other statutes are the Congressional Accountability Act of 1995 and 3 U.S.C. 411(c).

[8] The statute at 42 U.S.C. 2000gg(2) provides that the term ''covered entity'' ''has the meaning given the term 'respondent''' under 42 U.S.C. 2000e(n) and includes employers as defined in 42 U.S.C. 2000e(b), 2000e–16c(a), and 2000e–16(a). The statute at 42 U.S.C. 2000gg–5(b) provides as a rule of construction that ''[t]his chapter is subject to the applicability to religious employment set forth in section 2000e–1(a) of this title [section 702(a) of the Civil Rights Act of 1964].''

[9] Similarly, several examples discuss restrictions on how much an employee can lift. The examples in the Interpretive Guidance generally refer to these restrictions as ''lifting restrictions'' with a specific pound limit. In some situations, the determination of such restrictions can depend on the frequency of lifting, the height to which the object is lifted, the body position of the person, and the distance between the person and the object. *See, e.g.,* Leslie A. MacDonald et al., *Clinical Guidelines for Occupational Lifting in Pregnancy: Evidence Summary and Provisional Recommendations,* 209 a.m. J. Obstetrics & Gynecology 80–88 (2013), *https://pubmed.ncbi.nlm.nih.gov/23467051/;* U.S. Dep't of Health & Hum. Servs., Ctrs. for Disease Control & Prevention, Nat'l Inst. for Occupational Safety & Health, *Provisional Recommended Weight Limits for Lifting at Work During Pregnancy* (Infographic), *https://www.cdc.gov/niosh/topics/repro/images/Lifting_guidelines_during_pregnancy_-_NIOSH.jpg* (last visited Mar. 18, 2024).

the Commission has made some changes to the examples in response to these comments, it also has retained simple language in many examples to allow for ease of reading and to keep the focus of the examples on the PWFA's legal interpretation. The Commission notes that, depending on the facts in the examples, the same facts could lead to claims also being brought under other statutes that the Commission enforces, such as Title VII and the Americans with Disabilities Act of 1990 (ADA), as amended by the ADA Amendments Act of 2008 (ADAAA or Amendments Act), 42 U.S.C. 12101 *et seq.*[10] Moreover, the situations in specific examples could implicate other Federal laws, including, but not limited to, the Family and Medical Leave Act of 1993, as amended (FMLA), 29 U.S.C. 2601 *et seq.;* the Occupational Safety and Health Act of 1970, as amended (OSH Act), 29 U.S.C. 651 *et seq.;* and the Fair Labor Standards Act of 1938 (FLSA), 29 U.S.C. 201 *et seq.,* as amended by the Providing Urgent Maternal Protections for Nursing Mothers Act (PUMP Act), Public Law 117–328, Div. KK, 136 Stat. 4459, 6093 (2022).[11] Additionally, although some examples state that the described actions ''would violate'' the PWFA, additional facts not described in the examples could change that determination.

Finally, the Commission notes that the examples are illustrative. They do not and are not intended to cover every limitation or possible accommodation under the PWFA.[12]

[10] References to the ADA throughout the preamble, the regulation, and the Interpretive Guidance are intended to apply equally to the Rehabilitation Act of 1973, as all nondiscrimination standards under Title I of the ADA also apply to Federal agencies under section 501 of the Rehabilitation Act. *See* 29 U.S.C. 791(f).

[11] To the extent that an accommodation in an example is required under another law, like the OSH Act, the example should not be read to suggest that such a requirement is not applicable.

[12] In the examples, the preamble, the regulation, and the Interpretive Guidance, the Commission uses the terms ''leave'' or ''time off'' and intends those terms to cover leave however it is identified by the specific employer. As stated in the proposed rule, the Commission recognizes that different types of employers use different terms for time away from work, including leave, paid time off (PTO), time off, sick time, vacation, and administrative leave, among others. 88 FR 54715 n.19. Similarly, in the examples, the preamble, the regulation and the Interpretive Guidance, the Commission uses the term ''light duty.'' The Commission recognizes that ''light duty'' programs, or other programs providing modified duties, can vary depending on the covered entity. As stated in the proposed rule, the Commission intends ''light duty'' to include the types of programs included in Questions 27 and 28 of the EEOC's *Enforcement Guidance: Workers' Compensation and the ADA* and any other policy, practice, or system that a covered entity has for accommodating employees, including when one or more essential functions of a position are temporarily excused. EEOC, *Enforcement Guidance: Workers' Compensation and the ADA* (1996), *https://www.eeoc.gov/laws/guidance/enforcement-guidance-workers-compensation-and-ada;* 88 FR 54715 n.20.

[13] For example, the phrase ''Prohibits a covered entity from retaliating'' was replaced with ''Prohibits discrimination'' in the discussion of retaliation, and the phrase ''Prohibits a covered entity from interfering with any individual's rights'' was replaced with ''Prohibits coercion of individuals in the exercise of their rights'' in the discussion of coercion.

[14] 88 FR 54714–16 (discussing the purpose of the PWFA, including that it helps workers with uncomplicated pregnancies and minor limitations), 54719–20 (explaining that allowing employees to

Continued

1636.1 Purpose

The Commission made several minor changes to the *Purpose* section of the regulation to follow the language in the statute more closely. Specifically, the phrase ''related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions'' was added after ''known limitations'' throughout this paragraph, and the descriptions of the retaliation and coercion provisions were slightly modified.[13]

1636.2 Definitions—General

The Commission received numerous comments regarding the proposed general definitions. For example, many comments encouraged the Commission to clarify that restaurant workers are covered by the PWFA. Several comments also suggested the Commission clarify that the requirements for protection under the FMLA (in terms of how long an employee must work for an employer and the number of hours) do not apply under the PWFA and suggested the Commission clarify that employees need not work for an employer for any specific period of time in order to be covered by the PWFA.

The PWFA relies on definitions from Title VII to describe when an employer is covered and who is protected by the law. Employers are covered by the PWFA if they have 15 or more employees, regardless of the industry. Thus, restaurant workers who work for restaurants with 15 or more employees are covered. Because the PWFA's approach to coverage and protection follows Title VII, rather than the FMLA, employees are covered even if they have not worked for a specific employer for a specific length of time.

In the general definitions section of the rule, the Commission added ''or the employee of a political subdivision of a State'' in § 1636.2(b)(3) and (c)(4) to better describe the employees covered by the Government Employee Rights Act of 1991 (GERA), 42 U.S.C. 2000e–16c(a).

1636.3 Definitions—Specific to the PWFA

1636.3(a) Known Limitation

The rule reiterates the definition of ''known limitation'' from 42 U.S.C. 2000gg(4) and then provides definitions for the operative terms.

1636.3(a)(1) Known

The Commission did not change the definition of ''known'' from the proposed rule. Under that definition a limitation is ''known'' to a covered entity if the employee, or the employee's representative, has communicated the limitation to the covered entity.

1636.3(a)(2) Limitation

The proposed rule restated the definition of limitation from the statute and added that the physical or mental condition may be a modest or minor and/or episodic impediment or problem, that it included when an employee affected by pregnancy, childbirth, or related medical conditions had a need or a problem related to maintaining their health or the health of the pregnancy, and that it included when an employee affected by pregnancy, childbirth, or related medical conditions sought health care related to pregnancy, childbirth, or a related medical condition itself.

The Commission received several comments supporting the definition of ''limitation'' and suggesting that the word ''need'' be added to the second sentence (in addition to ''impediment'' or ''problem'') so that it would read: ''Physical or mental condition is an impediment, problem, or need that may be modest, minor, and/or episodic.'' The Commission declines to make this change because this sentence as it exists (which uses the term ''impediment'' or ''problem'') is sufficiently broad, and the third sentence of the definition of ''limitation'' covers when the employee has a ''need or a problem related to maintaining their health or the health of the pregnancy.''

The Commission received a few comments asserting that this definition was too broad and that it should be more restrictive. The Commission disagrees. As discussed in the NPRM, the PWFA was intended to cover all types of limitations, including those that are minor and those that are needed to maintain the employee's health or the health of the pregnancy.[14] Thus,

creating a higher threshold would not be in keeping with this rationale, would be contrary to congressional intent, and would impede a qualified employee's ability to stay on the job.

A handful of comments asked for clarification as to whether the language in the NPRM required employers to provide reasonable accommodations to an employee when an employee's partner, spouse, or family member—and not the employee themselves—has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. It does not. To respond to these comments, the Commission has included in the final rule's definition of ''limitation'' that the limitation must be of the specific employee in question. This is essentially the same language that was in the NPRM with regard to related medical conditions in § 1636.3(b).[15]

The Commission has made one minor change in the language of this provision in the regulation. To track the language of the statute in 42 U.S.C. 2000gg(4), the Commission has changed the last sentence of the definition of ''limitation'' regarding the ADA so that it now mirrors the language in the statute (''whether or not such condition meets the definition of disability'').

In the Interpretive Guidance, the Commission has added information in section *1636.3(a)(2) Limitation* calling attention to the possible overlap between the PWFA and the ADA and noting that in these situations the qualified employee may be entitled to an accommodation under either statute, as the protections of both may apply. The Commission has added information consistent with the changes in the regulation described above to state that the limitation must be of the specific employee in question and that the PWFA does not create a right to reasonable accommodation based on an individual's association with someone else with a PWFA-covered limitation or provide accommodations for bonding or childcare. To make the language in the Interpretive Guidance consistent with the regulation, the Commission has modified language in the Interpretive Guidance regarding accommodations for health care to clarify that accommodations may be needed to attend health care appointments for a variety of reasons.[16] Finally, the Commission has modified language from the proposed appendix regarding the PWFA and the lack of a ''severity'' requirement to avoid giving the mistaken impression that the ADA has such a requirement.

Comments and Response to Comments Regarding the Commission's Proposed Description of ''Related to, Affected by, or Arising Out of''

Some comments supported the Commission's reading of the language ''related to, affected by, or arising out of,'' stating that the Commission's reading was textually accurate in that nothing in the statutory language requires that the pregnancy, childbirth, or related medical conditions be the sole or original cause of the limitation. Other comments stated that the language in the NPRM explaining ''related to, affected by, or arising out of,'' especially when combined with the definition of ''related medical conditions,'' could require accommodations for known limitations caused by any physical or mental condition that has any real, perceived, or potential connection to—or impact on—an individual's pregnancy, fertility, or reproductive system. These comments asked the Commission to alter the NPRM language to counter this interpretation. Some comments asked for additional clarification regarding the language ''related to, affected by, or arising out of.''

The PWFA uses the language ''related to, affected by, or arising out of'' to explain the connection between the physical or mental condition and pregnancy, childbirth, or related medical conditions.[17] As such, the statute does not require that pregnancy, childbirth, or related medical conditions be the sole, the original, or a substantial reason for the physical or mental condition, and the Commission does not have the authority to change this term.

To help respond to these comments, in the Interpretive Guidance in section *1636.3(a)(2)* under *Related to, Affected by, or Arising Out of,* the Commission has added that ''related to, affected by, or arising out of'' are inclusive terms and that a pregnancy, childbirth, or related medical condition does not need to be the sole, the original, or a substantial cause of the physical or mental condition at issue for the physical or mental condition to be ''related to, affected by, or arising out of'' pregnancy, childbirth, or related medical conditions. This is in keeping with the dictionary definition of ''related to,'' which is generally defined as ''connected with'' or ''about'' something.[18] It also is consistent with the meaning of ''affected by,'' as the dictionary definition of the word ''affect'' is ''to cause,'' ''to produce,'' or ''to influence'' something.[19] Finally, it aligns with the meaning of ''arising out of,'' because the dictionary definition of ''arise'' includes ''to begin to occur or exist'' or ''to originate from a source.'' [20]

The Interpretive Guidance in section *1636.3(a)(2)* under *Related to, Affected by, or Arising Out of* further explains that determining whether a physical or mental condition is ''related to, affected by, or arising out of'' pregnancy, childbirth, or related medical conditions should typically be straightforward, particularly in cases where an individual is currently pregnant, is experiencing childbirth, or has just experienced childbirth. Pregnancy and childbirth cause systemic changes that not only create new physical and mental conditions but also can exacerbate preexisting conditions and can cause additional pain or risk.[21] Thus, a connection between an employee's physical or mental condition and their pregnancy, childbirth, or related medical conditions will be readily ascertained when an employee is currently pregnant or is experiencing or has just experienced childbirth.

The Commission has maintained the list of situations in the Interpretive

seek health care related to pregnancy, childbirth, or a related medical condition itself is consistent with the ADA).

[15] 88 FR 54767 (providing that related medical conditions are ''as applied to the specific employee or applicant in question'').

[16] The proposed appendix stated: ''The definition also includes when the worker is seeking health care related to the pregnancy, childbirth, or a related medical condition itself . . . and recognizes that for pregnancy, childbirth, or related medical conditions the proper course of care can include regular appointments and monitoring by a health care professional.'' 88 FR 54773. The new language in the Interpretive Guidance in section *1636.3(a)(2) Limitation* states: ''Similarly, under the PWFA, an employee may require a reasonable accommodation of leave to attend health care appointments or receive treatment for or recover from their pregnancy, childbirth, or related medical conditions.'' The new language more accurately reflects that accommodations are not limited to ''regular appointments'' or ''monitoring,'' which is consistent with how leave for health care appointments is described in the regulation and elsewhere in the Interpretive Guidance.

Guidance in section *1636.3(a)(2)* under *Related to, Affected by, or Arising Out of* that show the connection between pregnancy, childbirth, or related medical conditions and the limitation with some minor changes.[22] The Interpretive Guidance also maintains the discussion that some conditions (like lifting restrictions) can occur whether or not an employee is affected by pregnancy, childbirth, or related medical conditions and that the Commission anticipates that confirming that a physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions will usually be straightforward and can be accomplished through the interactive process. The Commission has added information to the Interpretive Guidance explaining that there may be situations where a physical or mental condition may no longer be related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, and that in those situations, an employee may seek an accommodation under the ADA. The Commission also has added that there may be situations where the physical or mental condition exacerbates an existing condition that is a disability under the ADA, and in those situations, an employee may be entitled to an accommodation under either the ADA or the PWFA.

1636.3(b) Pregnancy, Childbirth, or Related Medical Conditions

The NPRM explained that the phrase ''pregnancy, childbirth, or related medical conditions'' appears in Title VII's definition of ''sex,'' as amended in 1978 by the PDA.[23] Because Congress chose to write the PWFA using the same phrase as in Title VII, as amended by the PDA, and is presumed to have known the meaning given that phrase by the courts and the Commission for over 40 years, the Commission gave the phrase ''pregnancy, childbirth, or related medical conditions'' the same meaning under the PWFA as under Title VII.[24] When Congress chooses to ''use[ ] the same language in two statutes having similar purposes, . . . it is appropriate to presume that Congress intended that text to have the same meaning in both statutes.'' [25]

The PWFA's legislative history supports the Commission's reading of the phrase ''pregnancy, childbirth, or related medical conditions'' to have the same meaning as the phrase in Title VII. The U.S. House of Representatives Report accompanying the PWFA recounts the legislative steps Congress has taken to protect workers affected by pregnancy, childbirth, or related medical conditions. In 1964, Congress passed Title VII, which included protection from discrimination based on sex. In 1972, the EEOC interpreted the prohibition on sex discrimination to include pregnancy, childbirth, or related medical conditions.[26] In 1976, the Supreme Court determined that pregnancy discrimination was not covered by Title VII.[27] In 1978, responding to that decision, Congress passed the PDA ''to codify the EEOC's original interpretation of Title VII.'' [28] Courts' subsequent interpretations of the disparate treatment standard in the PDA, however, left ''[n]umerous [g]aps'' in protections, and the Supreme Court's 2015 decision in *Young* v. *United Parcel Service, Inc.,* 575 U.S. 206 (2015), created a standard that did not adequately protect the workers that the PDA covered, according to the PWFA House Report.[29] The House concluded that, ''[t]o remedy the shortcomings of the PDA, Congress must step in and act.'' [30] Congress' discussion of the PDA and identification of shortcomings in the PDA as a reason for enacting the PWFA show that in the PWFA, Congress sought to protect the same workers who are protected by the PDA. By using Title VII's longstanding definition of ''pregnancy, childbirth, or related medical conditions'' for the PWFA, the Commission is following both the text of the statute and its legislative history.

Comments Regarding Temporal Proximity to a Current or Recent Pregnancy

Some comments requested that the Commission limit the definition of ''pregnancy, childbirth, or related medical conditions'' under the PWFA to situations that met their definition of close temporal proximity to a current or recent pregnancy. These comments also

[22] For example, in the proposed appendix, many of the examples in this paragraph said that the physical or mental condition was ''related to'' pregnancy. This has been changed to ''related to, affected by, or arising out of'' to match the language in the statute. The Commission has added that a lifting restriction may be due to lower back pain that may be exacerbated by physical changes associated with pregnancy to connect the lifting restriction to pregnancy in that example. The Commission has added in this paragraph that: ''A lactating employee who seeks an accommodation to take breaks to eat has a related medical condition (lactation) and a physical condition related to, affected by, or arising out of it (increased nutritional needs),'' in order to include an example about a ''related medical condition.'' The Commission has changed the language in the proposed appendix from ''determining whether'' to ''confirming whether,'' where relevant, in order to match the language used in § 1636.3(l)(2).

[30] *Id.* at 17.

noted that many of the conditions listed in the NPRM as conditions that could qualify as ''pregnancy, childbirth, or related medical conditions'' also could impact individuals who have never been pregnant or could first arise years before or after pregnancy. Relatedly, several comments suggested that only conditions related to a current or recent pregnancy (which the comments defined as one occurring 6 or fewer months earlier) could be ''related medical conditions.''

Response to Comments Regarding Temporal Proximity to a Current or Recent Pregnancy

The Commission declines to adopt the changes suggested by these comments, as they seek to create a definition of ''pregnancy, childbirth, or related medical conditions'' that is not supported by Title VII case law or the Commission's *Enforcement Guidance on Pregnancy Discrimination and Related Issues.*[31] Further, adopting such a bright-line temporal rule would improperly exclude many employees, such as employees with postpartum limitations, who may require pregnancy-related accommodations.[32] That said, ''related medical conditions'' must be related to the pregnancy or childbirth of the specific employee in question, and whether a specific condition is related to pregnancy or childbirth is a fact-specific determination that will be guided by existing Title VII precedent and prior relevant Commission guidance.

Comments Regarding the List of Conditions Included in the Regulation as Examples of ''Pregnancy, Childbirth, or Related Medical Conditions''

Multiple comments supported the Commission's definition of ''pregnancy, childbirth, or related medical conditions'' and supported the inclusion of the list of numerous possible ''related medical conditions'' in the regulation. Comments argued that the Commission's reading of ''related medical conditions'' best effectuates the purpose and goals of the PWFA; is consistent with longstanding law, legislative history, agency interpretation, medical understanding, and common sense; and appropriately supplements the protections currently afforded under the PDA.

By contrast, several comments stated that the language in the NPRM explaining the term ''related medical conditions'' could require accommodations for any physical or mental condition that has any real, perceived, or potential connection to—or impact on—an individual's pregnancy, fertility, or reproductive system. These comments asked the Commission to alter the language in the proposed rule to counter this interpretation.

Other comments stated that the broad, non-exhaustive list of ''related medical conditions'' exceeded the Commission's delegated authority as intended by Congress and that such a list would, based on sex, improperly privilege employees with gynecological conditions, or disadvantage other employees with analogous conditions, and thus potentially illegally discriminate under Title VII or the Equal Protection Clause.

Response to Comments Regarding the List of Conditions Included in the Regulation as Examples of ''Pregnancy, Childbirth, or Related Medical Conditions''

Generally, the question of whether a condition constitutes ''pregnancy, childbirth, or related medical conditions'' in a particular case will be fact-specific and guided by existing Title VII precedent and relevant prior Commission guidance. To assist in making that determination, the Commission made clarifying changes and additions to the language in this section of the regulation and has added more information in the Interpretive Guidance in section *1636.3(b) Pregnancy, Childbirth, or Related Medical Conditions.*

First, the Commission removed the phrase ''relate to, are affected by, or arise out of'' with regard to ''related medical conditions'' in the proposed § 1636.3(b) in order to track the language of the statute and reflect more closely language in the Commission's prior enforcement guidance that explains the extent of the PDA and the definition of ''pregnancy, childbirth, or related medical conditions.'' [33] This sentence now says ''[r]elated medical conditions are medical conditions relating to the pregnancy or childbirth of the specific employee in question.''

Second, the Commission reorganized the list of conditions in § 1636.3(b) to follow more closely the organization of the Commission's *Enforcement Guidance on Pregnancy Discrimination* explaining the definition of ''pregnancy, childbirth, or related medical conditions,'' so that the two resources are consistent.[34]

Third, the Commission addressed concerns raised in the comments that conditions in the list of ''related medical conditions'' would ''always'' be ''related medical conditions'' and thus limitations related to, affected by, or arising out of those conditions would automatically be entitled to coverage under the PWFA. The Commission responded to these concerns and requests by changing the language in § 1636.3(b) so that the list is now explained as conditions that ''are, or may be,'' ''related medical conditions.''

Fourth, the Commission added that the pregnancy or childbirth must be ''of the specific employee in question.'' This language was already in the NPRM—in that the NPRM made clear that related medical conditions must be related to the pregnancy or childbirth of the specific employee in question—and has been added to the definition of ''limitation'' as well.[35]

In the Interpretive Guidance in section *1636.3(b) Pregnancy, Childbirth, or Related Medical Conditions,* the Commission has added information

[31] EEOC, *Enforcement Guidance on Pregnancy Discrimination and Related Issues,* (I)(A) (2015) [hereinafter *Enforcement Guidance on Pregnancy Discrimination*], *https://www.eeoc.gov/laws/guidance/enforcement-guidance-pregnancy-discrimination-and-related-issues* (providing that the term ''pregnancy, childbirth, or related medical conditions'' includes current pregnancy, past pregnancy, potential or intended pregnancy, and related medical conditions).

[32] *See, e.g.,* Am. Coll. of Obstetricians & Gynecologists, Comm. Opinion No. 736, *Optimizing Postpartum Care* (reaff'd 2021), *https://www.acog.org/clinical/clinical-guidance/committee-opinion/articles/2018/05/optimizing-postpartum-care* (discussing the importance of postpartum health care, including treatment for disorders arising during pregnancy and chronic medical conditions); Susanna Trost et al., U.S. Dep't of Health & Hum. Servs., Ctrs. for Disease Control & Prevention, *Pregnancy-Related Deaths: Data from Maternal Mortality Review Committees in 36 U.S. States, 2017–2019* (2022), *https://www.cdc.gov/reproductivehealth/maternal-mortality/erase-mm/data-mmrc.html* (30% of pregnancy-related deaths occurred one- and one-half months to one year postpartum).

[33] 42 U.S.C. 2000gg(4); *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(4)(a) (''[A]n employer may not discriminate against a woman with a medical condition relating to pregnancy or childbirth.'').

[34] *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A).

[35] Additionally, for consistency, the Commission replaced ''menstrual cycles'' with ''menstruation'' because menstruation is the term used elsewhere in the NPRM and also replaced ''birth control'' with ''contraception'' because that is the term used in *Enforcement Guidance on Pregnancy Discrimination* cited throughout the NPRM. *Compare* 88 FR 54767 (listing ''menstrual cycles'' in the list of ''related medical conditions''), *with* 88 FR 54721, 54774 (explaining that the list in the regulation for the definition of ''pregnancy, childbirth, or related medical conditions'' includes ''menstruation''); *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(3).

regarding the Commission's expectation that it will be readily apparent that certain medical conditions (*e.g.,* lactation, miscarriage, stillbirth, having or choosing not to have an abortion, preeclampsia, gestational diabetes, and HELLP (hemolysis, elevated liver enzymes and low platelets syndrome)) have a relation to pregnancy or childbirth; and that, similarly, a connection between a medical condition and pregnancy or childbirth will often be evident when a new medical condition occurs or an existing medical condition is exacerbated or poses a new risk during a current pregnancy, childbirth, or postpartum period.

The Commission disagrees that creating a list of potential ''related medical conditions'' that are or may be related to pregnancy or childbirth exceeds the Commission's authority. The list includes related medical conditions that courts and the Commission, in its *Enforcement Guidance on Pregnancy Discrimination,* have determined can, but are not always required to be, related medical conditions, as well as a non-exhaustive list of other conditions that, depending on the situation, can be related to pregnancy or childbirth.[36] The list clearly states that it consists of examples that ''are or may be'' related medical conditions in a specific case. In each case, a determination that a medical condition is related to pregnancy or childbirth is fact-specific and contingent on whether the medical condition at issue is related to the pregnancy or childbirth of the specific employee in question. The Commission notes that regardless of whether pregnancy, childbirth, or related medical conditions are at issue, the provision of 42 U.S.C. 2000gg–5(a)(2) stating that nothing in the PWFA shall be construed ''by regulation or otherwise, to require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment'' applies.

The Commission also disagrees that accommodations under the PWFA will potentially discriminate based on sex. The PWFA only provides accommodations to qualified employees with limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. This is in keeping with courts that have found that laws and other policies that provide leave for workers affected by pregnancy do not discriminate based on sex.[37] Additionally, in *Young* v. *United Parcel Service,*[38] the Supreme Court found that an employer could be required by the PDA to provide an accommodation for pregnant workers even if the employer's general policy did not provide for accommodations for workers except in certain situations. The accommodations provided under the PWFA are similar in purpose and effect to those that could have been obtained in *Young.* And, just as the accommodations contemplated by the Court in *Young* did not violate Title VII, neither do accommodations under the PWFA.

Moreover, Congress expressly intended that in some cases, the PWFA would require accommodations for a qualified employee's limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, even if such accommodations are not available to other employees. In fact, Congress observed that the PDA's comparator requirement ''is a burdensome and often impossible standard to meet'' and thus is ''insufficient to ensure that pregnant workers receive the accommodations they need.'' [39]

Comments and Response to Comments Requesting Deletions, Additions, or Other Modifications to the List of Examples of ''Pregnancy, Childbirth, or Related Medical Conditions''

Many comments requested deletions, additions, or other modifications to the list of examples of ''pregnancy, childbirth, or related medical conditions'' provided in the proposed definition at § 1636.3(b). The Commission declines to modify the provided list. As previously explained, the list of examples of ''pregnancy, childbirth, or related medical conditions'' is non-exhaustive and includes conditions that are commonly—but not always—associated with pregnancy or childbirth. The list neither requires blanket accommodation for every condition listed nor precludes accommodations for conditions that are not listed. Additionally, because ''pregnancy, childbirth, or related medical conditions'' has the same definition as in Title VII, as amended by the PDA, this phrase's use in the PWFA necessarily will continue to reflect Title VII case law regarding that phrase.

Comments and Response to Comments Regarding Coverage of Specific Conditions—Menstruation

A number of comments argued for or against the inclusion of menstruation in the list of ''related medical conditions.'' While the limited number of Federal courts that have addressed the issue of whether menstruation falls within the Title VII definition of ''related medical conditions'' have not always held that it does, read together, the majority of these cases illustrate that, at a minimum, menstruation is covered under Title VII when it has a nexus to a current or prior pregnancy or childbirth. Accordingly, as with many conditions that can be ''related medical conditions,'' this determination will be made on a case-by-case basis.[40]

[36] *Enforcement Guidance on Pregnancy Discrimination, supra* note 31.

[37] *See Cal. Fed. Sav. & Loan Ass'n* v. *Guerra,* 479 U.S. 272, 290 (1987) (holding that, without violating Title VII, the State could require employers to provide up to four months of medical leave to pregnant women where ''[t]he statute is narrowly drawn to cover only the period of *actual physical disability* on account of pregnancy, childbirth, or related medical conditions'') (emphasis in original); *Johnson* v. *Univ. of Iowa,* 431 F.3d 325, 328 (8th Cir. 2005) (''If the leave given to biological mothers is granted due to the physical trauma they sustain giving birth, then it is conferred for a valid reason wholly separate from gender.'').

[38] 575 U.S. 206 (2015).

[39] *See* H.R. Rep. No. 117–27, pt. 1, at 11–12.

[40] *See EEOC* v. *Houston Funding II, Ltd.,* 717 F.3d 425, 429–30 (5th Cir. 2013) (observing, in a case about whether lactation was a ''related medical condition,'' that ''as both menstruation and lactation are aspects of female physiology that are affected by pregnancy, each seems readily to fit into a reasonable definition of 'pregnancy, childbirth, or related medical conditions' ''); *Flores* v. *Va. Dep't of Corr.,* No. 5:20–CV–00087, 2021 WL 668802, at *4 (W.D. Va. Feb. 22, 2021) (declining to decide whether heavy menstruation due to perimenopause was a ''related medical condition,'' but observing that ''there is a strong argument that menstruation is a 'related medical condition' to pregnancy and childbirth under the PDA''); *but see Jirak* v. *Fed. Express Corp.,* 805 F. Supp. 193, 195 (S.D.N.Y. 1992) (stating that menstrual cramps alone were not a medical condition related to pregnancy or childbirth); *Coleman* v. *Bobby Dodd Inst., Inc.,* No. 4:17–CV–00029, 2017 WL 2486080, at *2 (M.D. Ga. June 8, 2017) (stating that the employee's excessive menstruation was ''related to pre-menopause, not pregnancy or childbirth'').

However, these and other cases suggest that, even if menstruation (or another condition) is not found to be ''pregnancy, childbirth, or related medical conditions'' in a particular case, discrimination based on that condition could nevertheless violate Title VII's prohibition on sex discrimination. *See, e.g., Harper* v. *Thiokol Chem. Corp.,* 619 F.2d 489, 492 (5th Cir. 1980) (concluding that a policy requiring individuals returning from pregnancy leave to have a normal menstrual cycle violated Title VII because it denied ''persons of like qualifications equal employment opportunities because of their sex,'' as ''company rules which single out certain subclasses of women for disparate treatment constitute unlawful sex discrimination''); *Flores,* 2021 WL 668802, at *4 (allowing a Title VII claim to proceed ''regardless of applying an expanded definition of 'because of sex' or 'on the basis of sex' under the PDA'' where the plaintiff was fired for suspicion of contraband due to her use of tampons while menstruating); *see also Int'l Union, United Auto., Aerospace & Agric. Implement Workers of Am., UAW* v. *Johnson Controls, Inc.,* 499 U.S. 187, 198–99 (1991) (providing that a policy excluding women with childbearing capacity from certain jobs was discrimination based on gender under Title VII; this conclusion was ''bolstered'' by the PDA, which prohibits discrimination ''because of or on the basis of pregnancy, childbirth, or related medical conditions''); *Phillips* v. *Martin Marietta Corp.,* 400 U.S. 542, 544 (1971) (per curiam) (opining that an

Comments and Response to Comments Regarding Coverage of Specific Conditions—Lactation

One comment claimed there was a split between courts on the issue of whether lactation falls within the scope of the PDA, stating that some courts, including the Fourth and Sixth Circuits, found that it does not, while other courts have found that it does. One case cited by the comment, however, does not address coverage of lactation as a related medical condition under Title VII. The case of *Derungs* v. *Wal-Mart Stores, Inc.,* 374 F.3d 428 (6th Cir. 2004), involved a question of whether a store's ban on public breastfeeding was discriminatory under a State public accommodation statute where that statute did not include protection on the basis of ''pregnancy, childbirth, or related medical conditions.'' [41] Another case cited by the comment, *Barrash* v. *Bowen,* 846 F.2d 927 (4th Cir. 1988) (per curiam), is similarly inapposite. In *Barrash,* the Fourth Circuit held that a Federal Government employee who challenged her termination of employment on grounds of unauthorized absence as violative of her constitutional and contractual rights was not entitled to 6 months of leave in order to breastfeed her baby. That court's statement, that ''[u]nder the [PDA] . . . , pregnancy and related conditions must be treated as illnesses only when incapacitating,'' [42] was subsequently recognized by the same court as ''*dicta* without any citation of authority.'' [43] By contrast, *EEOC* v. *Houston Funding II, Ltd.,* held that lactation is a related medical condition of pregnancy for purposes of the PDA because it is the ''physiological process of secreting milk from mammary glands and is directly caused by hormonal changes associated with pregnancy and childbirth'' and is ''a physiological result of being pregnant and bearing a child.'' [44] *Hicks* v. *City of Tuscaloosa* agrees with *Houston Funding* that lactation is a related medical condition and therefore covered under the PDA.[45] Thus, *Derungs* and *Barrash* do not foreclose a finding that lactation can be a ''related medical condition'' under Title VII and do not undercut the Commission's conclusion that lactation can be a related medical condition under the PWFA.

Comments and Response to Comments Regarding Coverage of Specific Conditions—Infertility and Fertility Treatments

Some comments agreed with the Commission's inclusion of infertility and fertility treatments in the list of covered conditions in the regulation. By contrast, other comments stated that the Title VII case law on infertility is inconsistent and thus infertility and fertility treatments should not be included in the list of potentially covered conditions in the regulation. The Commission concludes that, as with other conditions, and consistent with case law and its prior policy, whether infertility and fertility treatments are covered by the PWFA will be based on the particular circumstances of the situation, thus potentially allowing for reasonable accommodations for treatment for infertility when an employee with the capacity to become pregnant is trying to get pregnant.

In *Johnson Controls,* the Supreme Court struck down an employer policy that discriminated between workers based on childbearing capacity and held that the PDA prohibits discrimination based on potential pregnancy.[46] In accordance with *Johnson Controls,* discrimination based on the potential to be pregnant, not only current pregnancy, is covered by Title VII and the PDA. Because Title VII, as amended by the PDA, can cover potential pregnancy, several courts have found that it protects against discrimination for those undergoing in vitro fertilization (IVF) or infertility treatments related to becoming pregnant because these actions are related to the capacity to become pregnant.[47] By contrast, notably in the insurance context where the challenged restriction excluded all types of infertility treatments from coverage, regardless of the insured employee's capacity to become pregnant, courts have found such policies did not violate the PDA.[48] Those cases do not stand for the proposition that fertility treatments are never covered by the statutory phrase ''pregnancy, childbirth, or related medical conditions,'' but instead hold that the particular claims in those cases fail based on the lack of differential treatment based on sex. The Commission's *Enforcement Guidance on Pregnancy Discrimination* summarizes the law in this regard:

> Employment decisions related to infertility treatments implicate Title VII under limited circumstances. Because surgical impregnation is intrinsically tied to a woman's childbearing capacity, an inference of unlawful sex discrimination may be raised if, for example, an employee is penalized for taking time off from work to undergo such a procedure. In contrast, with respect to the exclusion of infertility from employer-provided health insurance, courts have generally held that exclusions of all infertility coverage for all employees is gender neutral and does not violate Title VII. Title VII may be implicated by exclusions of particular treatments that apply only to one gender.[49]

Thus, depending upon the facts of the case, including whether the infertility treatments are sought by an employee with the capacity to become pregnant

employer who refused to take applications from women with preschool-age children but hired men with preschool-age children and other women would violate Title VII, absent a defense).

[41] In its analysis, *Derungs* also discussed Title VII coverage for breastfeeding under a comparator analysis and found that breastfeeding would not be covered because of an absence of comparators (*i.e.,* men who could breastfeed). *Derungs,* 374 F.3d at 438–39. Independent of the soundness of that analysis, the case did not address whether lactation was or could be a ''related medical condition'' to pregnancy and noted in its description of the Ohio statute regarding employment that parallels Title VII that ''[t]he Legislature made a conscious choice to extend the definition of discrimination to include pregnancy even though there cannot be a class of similarly situated males.'' *Id.* at 436.

[42] *Barrash,* 846 F.2d at 931.

[44] 717 F.3d at 428.

[45] 870 F.3d 1253, 1259 (11th Cir. 2017).

[46] 499 U.S. at 204–06; *see also Kocak* v. *Cmty. Health Partners of Ohio,* 400 F.3d 466, 470 (6th Cir. 2005) (reasoning that the plaintiff ''cannot be refused employment on the basis of her potential pregnancy'').

[47] *Hall* v. *Nalco Co.,* 534 F.3d 644, 649 (7th Cir. 2008) (finding an employer's practice of terminating employees who took leave for IVF treatment violated the PDA because only women undergo IVF); *Erickson* v. *Bd. of Governors of State Colls. & Univs.,* 911 F. Supp. 316, 320 (N.D. Ill. 1995) (finding that a plaintiff who underwent infertility treatment, ''although infertile, may have been viewed by her employer as potentially pregnant,'' and distinguishing between ''infertility [that] does not relate to [the] capacity to become pregnant'' and that which does relate to the capacity to become pregnant); *Pacourek* v. *Inland Steel Co.,* 858 F. Supp. 1393, 1397, 1403–04 (N.D. Ill. 1994) (finding that infertility or its treatment were conditions that fell under the umbrella of pregnancy (including potential pregnancy), childbirth, or related medical conditions).

[48] *Saks* v. *Franklin Covey, Inc.,* 316 F.3d 337, 346 (2d Cir. 2003) (finding that generally, ''[i]nfertility is a medical condition that afflicts men and women with equal frequency,'' but leaving open the question of whether an individual ''would be able to state a claim under the PDA or Title VII for adverse employment action taken against her because she has taken numerous sick days in order to undergo surgical implantation procedures''); *Krauel* v. *Iowa Methodist Med. Ctr.,* 95 F.3d 674, 679–680 (8th Cir. 1996) (finding the benefits policy at issue did not violate Title VII, reasoning that ''the policy of denying insurance benefits for treatment of fertility problems applies to both female and male workers and thus is gender-neutral''), *abrogated on other grounds by Bragdon* v. *Abbott,* 524 U.S. 624 (1998). Notably, because of 42 U.S.C. 2000gg–5(a)(2), nothing in the PWFA can require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment. Thus, PWFA accommodation claims will not involve coverage by health care plans.

[49] *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(3)(c) (footnotes omitted).

for the purpose of becoming pregnant, accommodations for an employee due to physical or mental conditions related to, affected by, or arising out of infertility or fertility treatments may be provided under the PWFA, absent undue hardship.

Comments and Response to Comments Regarding Coverage of Specific Conditions—Contraception

Some comments agreed with the Commission's inclusion of contraception in the regulation. By contrast, some comments stated that the Commission had not properly interpreted Federal case law related to the coverage of contraception and that the Eighth Circuit's holding in *In re Union Pacific Railroad Employment Practices Litigation* [50] forecloses accommodations related to contraception under all circumstances.

The Commission disagrees that reasonable accommodations regarding contraception for an employee who has the capacity to become pregnant are foreclosed in all cases by *In re Union Pacific.* As stated above, the Supreme Court has held that Title VII ''prohibit[s] an employer from discriminating against a woman because of her capacity to become pregnant.'' [51] Consistent with this holding, the Eighth Circuit and other courts, like the Commission, have long recognized that the protections of Title VII extend to employees based on the employees' potential or intent to become pregnant.[52]

As stated in the *Enforcement Guidance on Pregnancy Discrimination,* interpreting *In re Union Pacific* as holding that contraception is never related to pregnancy for purposes of the PDA because it is used prior to pregnancy would be inconsistent with *Johnson Controls* and many other cases.

In the Commission's view, *In re Union Pacific* is best understood as a case about a specific health insurance policy that excluded coverage of both prescription and non-prescription contraceptive methods that were used to prevent pregnancy, regardless of the sex of the employee who used them.[53] The gender-neutral nature of the insurance exclusion was central to *In re Union Pacific*'s holding that the insurance policy did not constitute disparate treatment under Title VII. This is similar to the reasoning of courts that have found that denial of insurance coverage for infertility generally, which can affect employees regardless of their capacity to become pregnant, does not violate the PDA, while still leaving open the possibility that the PDA could be violated if an employee was penalized for using leave for IVF treatments.[54] As with infertility, the failure of particular Title VII claims related to contraception based on the lack of gender-based differential treatment does not mean that contraception can never be covered by the statutory phrase ''pregnancy, childbirth, or related medical conditions.''

As stated in the *Commission Decision on Coverage of Contraception,* the PDA can cover discrimination regarding contraception when, unlike the facts in *In re Union Pacific,* the challenged restriction regarding contraception coverage is limited to those who have the capacity to become pregnant.[55] Thus, in the *Commission Decision on Coverage of Contraception,* the exclusion of prescription contraception violated the PDA's prohibition on sex discrimination because prescription contraception could only be used by those who have the capacity to become pregnant.[56] Other courts similarly have concluded that an insurance policy's exclusion of contraception coverage that only can be used by those with the capacity to become pregnant violates the PDA.[57]

[50] 479 F.3d 936, 939, 942 (8th Cir. 2007) (concluding that Union Pacific's insurance policy—which excluded ''all types of contraception, whether prescription, non-prescription or surgical and whether for men or women''—did not discriminate against women and therefore did not violate the PDA and distinguishing *Johnson Controls* on the ground that, unlike ''potential pregnancy,'' ''contraception is not a gender-specific term'').

[51] *Johnson Controls,* 499 U.S. at 206.

[52] *See Walsh* v. *Nat'l Computer Sys., Inc.,* 332 F.3d 1150, 1154, 1160 (8th Cir. 2003) (upholding a judgment and award for a plaintiff claiming pregnancy discrimination where the plaintiff provided evidence that her supervisor's discriminatory behavior was based on the supervisor's belief that she was, or was intending to become, pregnant a second time); *see also Kocak,* 400 F.3d at 470 (reasoning that the plaintiff ''cannot be refused employment on the basis of her potential pregnancy''); *Batchelor* v. *Merck & Co.,* 651 F. Supp. 2d 818, 830–31 (N.D. Ind. 2008) (holding that the plaintiff was protected under the PDA where her supervisor allegedly discriminated against her because of her stated intention to start a family); *Cleese* v. *Hewlett-Packard Co.,* 911 F. Supp. 1312, 1317–18 (D. Or. 1995) (concluding that the plaintiff, who claimed that the defendant employer discriminated against her because it knew she planned to become pregnant, fell within the PDA's protections and noting that the court agreed with ''*Pacourek* that the purpose of the PDA is best served by extending its coverage to women who are trying to become pregnant'').

[53] *See also Newport News Shipbuilding & Dry Dock Co.* v. *EEOC,* 462 U.S. 669, 678–79 & n.17, 683–84 (1983) (noting that the legislative history of the PDA demonstrates Congress' intent that it would be facially discriminatory for an employer to discriminate in insurance coverage between persons who face a risk of pregnancy and those who do not, and concluding that the employer unlawfully gave married male employees a benefit package for their dependents that was less inclusive than the dependency coverage provided to married female employees). In *Newport News,* the Court found that the benefits that a male employee and his dependents could receive were less than what a female employee and her dependents could receive, and thus the plan violated the PDA. This rationale further explains the decisions in *In re Union Pacific* and *Krauel.* In those cases, both of which involved insurance benefits, the benefits received by employees and their dependents were the same; thus, there was not a PDA violation. *See Saks,* 316 F.3d at 344–345 (describing *Newport News* as ''focused on whether male and female employees received equal coverage under their health benefits package'' and finding that *Newport News* would not allow exclusions based on pregnancy); *id.* at 345 n.2 (describing the decision in *Saks* as looking at ''whether the exclusion of surgical impregnation procedures result in [a] less comprehensive benefits package for female employees'').

[54] *See Saks,* 316 F.3d at 346 & n.4 (concluding that the insurance coverage plan at issue, which did not cover treatments for infertility regardless of capacity to become pregnant, would not violate the PDA, but stating that ''[w]e expressly decline to consider whether an infertile female employee would be able to state a claim under the PDA or Title VII for adverse employment action taken against her because she has taken numerous sick days in order to undergo surgical impregnation procedures'').

Continued

Finally, Congress chose to write the PWFA using the same phrase as in Title VII, as amended by the PDA, and directed the Commission to issue regulations. Congress is presumed to have known the meaning previously given to ''pregnancy, childbirth, or related medical conditions'' by courts and the Commission, as well as the established principles of statutory construction.[58] This includes the Commission's interpretation in its 2000 *Commission Decision on Coverage of Contraception* and in its 2015 *Enforcement Guidance on Pregnancy Discrimination.* Therefore, it is reasonable to conclude that Congress expected the Commission to interpret the language in the PWFA consistently with its interpretation of the same language in the PDA.

Thus, under the PWFA, depending on the facts, a limitation related to contraception that affects the individual employee's potential pregnancy can be the basis for a request for an accommodation.[59] Whether a particular set of facts will support the necessary nexus between contraception and an individual employee's potential pregnancy is a determination that will be made on a case-by-case basis.

Comments and Response to Comments Regarding Coverage of Specific Conditions—Other Conditions

Some comments requested that specific conditions be added to the list in the regulation. However, inclusion on the list does not make it more or less likely that a specific condition in a specific situation will be considered pregnancy, childbirth or a related medical condition—it is a fact-specific determination. Some comments requested that the Commission opine on whether specific conditions (including ones on which neither the courts nor the Commission have yet opined) would be covered under ''related medical conditions'' under the PWFA. Especially in the situations where the courts and the Commission have not yet spoken, the Commission believes that this is something best left to development on a case-by-case basis within specific factual contexts.

Inclusion of Abortion in the Definition of ''Pregnancy, Childbirth, or Related Medical Conditions''

Preliminary Considerations

The Commission received approximately 54,000 comments (most of which were form or slightly altered form comments from individuals) urging the Commission to exclude abortion from the definition of ''pregnancy, childbirth, or related medical conditions.'' The Commission also received approximately 40,000 comments (most of which were form or slightly altered form comments from individuals or sign-on letters) supporting the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions.'' [60]

Many of the comments urging the Commission to exclude abortion from the definition of ''pregnancy, childbirth, or related medical conditions'' expressed the view that abortion is the destruction of a human life, that it is objectionable for moral or religious reasons, and that it is not health care.[61] The Commission recognizes these are sincere, deeply held convictions and are often part of an individual's religious beliefs. The Commission also received many comments that expressed deeply held beliefs, including religious beliefs, that abortion is a necessary part of health care and that an employer's religious beliefs should not dictate an employee's ability to receive a reasonable accommodation under the PWFA.

In the final regulation, the Commission includes abortion in its definition of ''pregnancy, childbirth, or related medical conditions,'' as proposed in the NPRM and consistent with the Commission's and courts' longstanding interpretation of the same phrase in Title VII. The Commission responds to comments regarding this issue below. Preliminarily, the Commission provides the following context to clarify the limits of the PWFA.

First, the PWFA is a workplace anti-discrimination law. It does not regulate the provision of abortion services or affect whether and under what circumstances an abortion should be permitted. The PWFA does not require any employee to have—or not to have—an abortion, does not require taxpayers to pay for any abortions, and does not compel health care providers to provide any abortions. The PWFA also cannot be used to require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment, including an abortion.[62] The PWFA does not require reasonable accommodations that would cause an employer to pay any travel-related expenses for an employee to obtain an abortion.[63] Given these limitations, the type of accommodation that most likely will be sought under the PWFA regarding an abortion is time off to attend a medical appointment or for recovery. The PWFA, like the ADA, does not require that leave as an accommodation be paid leave, so leave will be unpaid unless the employer's policies provide otherwise.[64]

Second, the PWFA provides a mechanism for a qualified employee with a known limitation related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions to receive workplace accommodations. The term ''abortion'' is included in the regulation's definition of ''pregnancy, childbirth, or related medical conditions'' for the limited purpose of determining whether an employee qualifies for a workplace accommodation under the PWFA. As shown in the public comments, beliefs about when an abortion may be morally or religiously permissible, even within religious traditions, are not monolithic.

Third, despite the large number of comments that the Commission received, the Commission's historical experience, in more than four decades of enforcing Title VII, is that very few employers have actually faced a situation where an employee is expressly requesting leave for an

body. These changes can exacerbate underlying or preexisting conditions, like renal or cardiac disease, and can severely compromise health or even cause death.'').

[58] *See supra* note 24.

[59] *See* H.R. Rep. No. 117–27, pt. 1, at 27 (''Throughout the bill's text, the PWFA ensures that workers have access to reasonable accommodations for conditions connected with a pregnancy, not just a pregnancy itself.'').

[60] The number of comments does not require the EEOC to adopt a specific view. *U.S. Cellular Corp. vs. FCC*, 254 F.3d 78,87 (D.C. Cir. 2001) (''[T]he Commission has no obligation to take the approach advocated by the largest number of commenters . . . ; indeed, the Commission may adopt a course endorsed by no commenter. The Commission's only responsibilities are to respond to comments, 5 U.S.C. 553, and to choose a reasonable approach backed up by record evidence.'') (internal citations omitted).

[61] Some comments also expressed religious and conscience objections to other conditions included in the definition of ''pregnancy, childbirth, or related medical conditions,'' such as infertility treatments and contraception. The Commission has addressed these other issues, *supra,* in the preamble in section *1636.3(b) Pregnancy, Childbirth, or Related Medical Conditions.* Responses to comments that object to these procedures for religious reasons are addressed *infra* in the preamble in section *1636.7(b) Rule of Construction* and in the preamble in section *1636.7* under *Religious Freedom Restoration Act.*

[62] 42 U.S.C. 2000gg–5(a)(2) provides that nothing in the PWFA shall be construed ''by regulation or otherwise, to require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment.''

[63] The PWFA does not prohibit an employer from taking these actions, either.

[64] *See infra* in the preamble in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation.*

abortion and the employer declines to grant the leave on religious or moral grounds. Since 1978, Title VII has required that employers who provide sick leave provide that leave in a non-discriminatory manner to women affected by pregnancy, childbirth, or related medical conditions. This includes, and has included since 1978, allowing employees affected by pregnancy, childbirth, or related medical conditions to use employer-provided leave in order to have time off to have an abortion.[65] Yet the public comments the Commission received did not cite any Title VII cases that ruled against the employer where a request for leave for an abortion was at issue, and the comments did not provide evidence that the Title VII requirement has caused problems for employers in the past. Nonetheless, under the framework of this final rule, accommodations related to abortion—like all accommodations—remain subject to applicable exceptions and defenses, including both those based on religion and undue hardship.

With this background, the Commission responds to the comments it received.

[65] *See* 42 U.S.C. 2000e(k); 124 Cong. Rec. S18,978 (daily ed. Oct. 13, 1978) (statement of Sen. Harrison A. Williams, Jr.) (''The House-passed bill included a provision which would have excluded health insurance benefits, sick leave benefits, and disability leave benefits for abortions altogether, except where the life of the mother would be endangered if the fetus were carried to term, or in case of complications. The legislation which passed this body included no such provision. After lengthy debate, and discussion of this difficult issue, the conferees have adopted a compromise which requires the provision of sick leave and disability benefits in connection with an abortion on the same basis as for any other illness or disabling condition.''); *see also* H.R. Rep. No. 95–1786, at 3–4 (Conf. Rep.) (explaining the differences between the Senate bill, the House amendment, and the substitute agreed to in conference).

Since 1979, the Commission's guidelines have provided that ''[a]ll fringe benefits other than health insurance, such as sick leave, which are provided for other medical conditions, must be provided for abortions.'' 29 CFR part 1604, appendix, Question 35 (1979). This has been the EEOC's consistent interpretation for over 40 years.

In 2015, the EEOC reaffirmed that ''pregnancy, childbirth, or related medical conditions'' includes abortions. *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(4)(c); *see, e.g., Doe* v. *C.A.R.S. Prot. Plus, Inc.,* 527 F.3d 358, 364 (3d Cir. 2008) (''Clearly, the plain language of the statute, together with the legislative history and the EEOC guidelines, support a conclusion that an employer may not discriminate against a woman employee because she has exercised her right to have an abortion. We now hold that the term 'related medical conditions' includes an abortion.''); *DeJesus* v. *Fla. Cent. Credit Union,* No. 8:17–CV–2502, 2018 WL 4931817, at *1 (M.D. Fla. Oct. 11, 2018) (denying the employer's motion to dismiss in a Title VII case where an employee used approved leave to have an abortion and was fired shortly thereafter when her supervisor stated that the abortion was not an appropriate excuse for her absence).

Interpretation of ''Pregnancy, Childbirth, or Related Medical Conditions'' as Consistent With Its Meaning in Title VII

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' as Reflected in Statutory Text

Comments regarding the Commission's decision to include ''abortion'' in the definition of ''pregnancy, childbirth, or related medical conditions'' made several arguments related to the statutory text of the PWFA and Title VII.

Many comments in favor of the Commission's inclusion of abortion in the proposed definition of ''pregnancy, childbirth, or related medical conditions'' asserted that its inclusion accurately reflects the statutory text of the PWFA; that the phrase ''pregnancy, childbirth, or related medical conditions'' is taken directly from Title VII and uses identical language; that the identical language in the PWFA and Title VII must be interpreted consistently; that Congress' drafting the PWFA against the backdrop of Title VII strongly suggests that its use of Title VII's language would require the language to have the same meaning in the PWFA, absent a clear indication to the contrary; and that in enacting the PDA, Congress expressly stated that the statute applied to employees who obtained abortions, confirming its statutory intent to prohibit discrimination against employees for obtaining abortion care, and that Congress' use of the term in the PWFA is consistent with that underlying interpretation.

Other comments favoring the Commission's inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' stated that its inclusion is important for consistency and clarity, noting that both employers and employees have relied on the Commission's longstanding inclusion of this interpretation in guidance to understand what constitutes ''pregnancy, childbirth, or related medical conditions''; that applying the same definition under the PWFA provides important consistency when litigation is brought under Title VII and the PWFA simultaneously; and that the PWFA's drafters intentionally drew specific terms from Title VII and the ADA to ensure employees and employers would have a clear understanding of the meaning of those terms.

By contrast, many comments opposing the Commission's proposed definition stated that abortion could not be included in the definition of ''pregnancy, childbirth, or related medical conditions'' because the PWFA's text does not mention abortion; that Congress' intent to include abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' cannot be inferred simply because the PWFA uses the same language as Title VII; that the PWFA does not direct the Commission to construct a broad definition of ''related medical conditions''; and that the inclusion of ''pregnant workers'' in the statute's title should exclude employees who end their pregnancies via an abortion. Comments also stated that, under canons of statutory interpretation, the general term ''or related medical conditions'' is best read to cover only those concepts akin to the specific terms it follows—and that abortion is not related to ''pregnancy'' or ''childbirth.''

Comments opposed to the Commission's inclusion of abortion in the proposed definition of ''pregnancy, childbirth, or related medical conditions'' also asserted that under the text of the PWFA, employers should be required only to accommodate employees who are currently pregnant or who give birth. For instance, comments asserting that under the PWFA a ''related medical condition'' must be related to a current or recent pregnancy or childbirth analogized the PWFA's accommodation provision to the accommodation provisions under Title VII and the ADA, which apply when an employee has a sincerely held religious belief or practice, or a disability, respectively.

Comments also asserted that abortion is the opposite of pregnancy and childbirth. For instance, comments stated that an abortion is unlike pregnancy because it is a procedure that ends a pregnancy and the possibility of childbirth from that pregnancy; and that pregnancy is not a medical condition to be treated with an abortion.

Comments opposed to the Commission's inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' also maintained that ''related medical conditions'' should be construed narrowly under the PWFA. For instance, some comments stated that Congress' inclusion of the term ''childbirth'' meant that abortion could not be included in the regulation; that a broad definition of ''related medical conditions'' would render the term ''childbirth'' superfluous; and that the PWFA's definition should only refer to involuntary, detrimental impacts of pregnancy, childbirth, or related

medical conditions. Comments stated that, in including contraception and abortion, the Commission's definition goes beyond medical conditions to cover medical interventions; these comments argued, for example, that the act of obtaining reproductive health care—including contraception and abortion—is not, by definition, a medical, physical, or mental condition, and thus it cannot be a PWFA limitation.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' as Reflected in Statutory Text

The Commission agrees with comments expressing support for inclusion of abortion in the proposed definition of ''pregnancy, childbirth, or related medical conditions'' for which a qualified employee could receive an accommodation, absent undue hardship.

In interpreting a statute, an agency must start with its text. The PWFA does not define the phrase ''pregnancy, childbirth, or related medical conditions.'' For nearly 45 years, however, consistent with the plain language of the statute, congressional intent, and Federal courts' interpretation of the statutory text, the Commission has interpreted ''pregnancy, childbirth, or related medical conditions'' in Title VII to include the decision to have—or not to have—an abortion and to prohibit discrimination in employment practices because an employee had or did not have an abortion.[66] Based on well-established rules of statutory interpretation, the Commission properly interprets ''pregnancy, childbirth, or related medical conditions'' to have the same meaning in the PWFA as it does under Title VII.[67] As the Supreme Court has stated, ''When administrative and judicial interpretations have settled the meaning of an existing statutory provision, repetition of the same language in a new statute indicates, as a general matter, the intent to incorporate its administrative and judicial interpretations as well.'' [68] The Commission concludes that it would not be consistent with Congress' intent, as expressed in its choice of this statutory language for the PWFA, to construct a broader or narrower definition of ''pregnancy, childbirth, or related medical conditions'' than under Title VII. Rather, following the canons of statutory interpretation, the Commission is using the definition that already exists for this identical phrase under Title VII. Indeed, it is likely that defining this phrase differently than it has been defined in a parallel statute would exceed the Commission's congressionally delegated authority.

As set out in the NPRM, Congress previously used the phrase ''pregnancy, childbirth, or related medical conditions'' when, in enacting the PDA, it amended Title VII to explicitly state that Title VII's prohibition against sex discrimination includes a prohibition against discrimination on the basis of ''pregnancy, childbirth, or related medical conditions.'' [69] The legislative history of the PDA expressly stated that the PDA's protections applied to situations involving abortions, and indeed, the statutory text enacted by Congress explicitly excluded certain abortion procedures from health insurance requirements, since the statute would otherwise have been read to require their coverage, while still requiring coverage in certain limited circumstances.[70]

Congress' express purpose in enacting the PWFA was to supplement Title VII's protections for qualified employees affected by pregnancy, childbirth, or related medical conditions; in other words, the same employees protected by Title VII, as amended by the PDA.[71] To that end, Congress' approach in both laws was to ensure that employers are not required to pay for abortions for their employees but that employees are not discriminated against in the workplace for having them. Further, the Commission agrees with the comments that using the same definition that the Commission and courts have used for the same phrase in Title VII provides important clarity and consistency for employers and employees.

Using the same definition also provides clarity and consistency for courts and harmonizes the two statutory schemes. Title VII and the PWFA cover the same employers and employees. Having two definitions of the same term would cause confusion for courts and potentially require them to reach conflicting decisions. Moreover, as cases under the PWFA may, depending on the circumstances, also be brought under Title VII, courts could be asked to decide cases involving both Title VII's prohibition of discrimination based on ''pregnancy, childbirth, or related medical conditions'' and the PWFA's reasonable accommodation provision.

Even if the Commission were authorized to ignore the courts' and its own prior longstanding, consistent interpretation of ''pregnancy, childbirth, or related medical conditions,'' the Commission would reach the same conclusion that the 1978 Congress did—that the phrase ''pregnancy, childbirth, or related medical conditions'' includes choosing to have or not to have an abortion, based on the plain meaning of the phrase ''pregnancy, childbirth, or related medical conditions.'' By definition, individuals who are choosing whether or not to have an abortion are pregnant. And the

[69] 42 U.S.C. 2000e(k).

[70] *See id.* (''This subsection shall not require an employer to pay for health insurance benefits for abortion, except where the life of the mother would be endangered if the fetus were carried to term, or except where medical complications have arisen from an abortion . . . .''); H.R. Rep. No. 95–1786, at 4 (1978) (Conf. Rep.).

[71] *See supra,* preamble section *1636.3(b) Pregnancy, Childbirth, or Related Medical Conditions.*

condition of being pregnant does not depend on the ultimate outcome of the pregnancy, as highlighted by Congress extending coverage to ''childbirth'' separate from ''pregnancy.'' Thus, the term ''pregnancy'' naturally includes all of those limitations arising out of the pregnancy itself, regardless of whether any particular pregnancy ends in miscarriage, live birth, an abortion, or any other potential outcome. If an employee is denied an accommodation because they are seeking an abortion, or not seeking an abortion, that employee has necessarily been denied an accommodation on account of their current pregnancy. Accordingly, the decision to have or not to have an abortion falls squarely within the ordinary meaning of the phrase ''pregnancy, childbirth, or related medical conditions.''

Given how courts and the Commission have defined ''pregnancy, childbirth, or related medical conditions'' in Title VII, the Commission disagrees that the PWFA and its implementing regulation only would apply to qualified employees who are currently pregnant or who recently gave birth, thus implicitly excluding abortion. First, such an interpretation would exclude qualified employees who have had miscarriages or are otherwise no longer pregnant, which appears to be inconsistent with the text of, and does not appear to be the intent of, either the PWFA or the PDA.[72] As stated above, by definition, qualified employees who seek an abortion are either currently or recently pregnant. Finally, the Commission sees no evidence that the inclusion of ''childbirth'' evinces congressional intent to construct a narrower definition of ''related medical conditions'' under the PWFA than under Title VII, as both statutes contain this identical language. As stated above, both the legislative history and the explicit exclusion of certain abortion procedures from health insurance requirements under the PDA evince Congress' intent to include abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' under Title VII.

[72] *See, e.g.,* H.R. Rep. No. 117–27, pt. 1, at 20 (discussing the need for the PWFA, citing to a case in which an employee's miscarriage was not covered by the ADA, and noting that ''[t]here are many cases where courts have found that even severe complications related to pregnancy do not constitute disabilities triggering [ADA] protection'').

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' as Reflected in the Statutory Intent and Structure of the PWFA

Many comments regarding the Commission's proposed inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' made arguments related to the statutory intent and structure of the PWFA.

Comments in favor of the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions,'' including from Members of Congress, asserted that the Commission's inclusion of abortion in the definition is consistent with the PWFA's statutory intent and structure; that Congress' express purpose in enacting the PWFA was to supplement Title VII's protections; that Congress adopted the PWFA to remedy gaps in existing legal protections, including in Title VII, and it understood how ''pregnancy, childbirth, or related medical conditions'' is interpreted by the courts; that Congress understood that the PWFA could include possible accommodations related to an abortion, as evidenced by the statements of legislators who opposed the PWFA, showing that they understood it could require accommodations related to an abortion; that Congress recognized the PWFA as an opportunity for Congress to finally fulfill a promise of Title VII; and that Congress intentionally included ''related medical conditions'' in the PWFA to encompass conditions beyond simply pregnancy and childbirth.

Many comments in favor of the inclusion of abortion expressed that including abortion furthers Congress' policy goal of protecting pregnant workers from harm; that it accurately reflects the range of needs and conditions that workers may experience that require reasonable workplace accommodations in relation to pregnancy; that abortion care is a safe, common, and essential component of reproductive health care; that decisions regarding abortion are private medical matters and should be made by patients in consultation with their clinicians and without undue interference by outside parties; and that providing accommodations for abortion would mean that employees would not have to risk their health, lives, or livelihoods to access care. Many such comments focused on specific positive health and social outcomes that employees would enjoy if they had access to accommodations for abortion, such as the ability to maintain personal bodily autonomy; to choose when to have or not have children; to receive necessary health care in the event of intimate partner violence, rape, incest, fetal anomalies, and exposure to teratogenic medications; and to receive necessary health care in the event of pregnancy complications that may be so severe that abortion is the only measure that will preserve a pregnant employee's health or save their life—including placental abruption, bleeding from placenta previa, preeclampsia or eclampsia, and cardiac or renal conditions.

Comments opposed to the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' asserted that including abortion does not reflect Congress' generally expressed intent for the PWFA. For instance, comments stated that the PWFA's intent only is to ensure that pregnant and postpartum women can receive reasonable accommodations to safely work; that the PWFA's intent only is to support mothers during pregnancy and childbirth and only to protect and benefit the health of mothers and their fetuses, as well as to provide accommodations for miscarriage, stillbirth, treatment of an ectopic pregnancy, or emergency treatment intended to preserve the life of the pregnant employee, but not an abortion; that the Commission's interpretation turns the PWFA into a general reproductive health care statute, defying Congress' intent; that the PWFA was intended by its supporters to be like the ADA, which the comments construed not to require accommodations for abortion; that Congress did not intend to make forays into controversial social policy by enacting the PWFA; that including abortion ignores that Congress cited statistics about working mothers in support of the PWFA and talked about the health of the mother and baby; and that Congress does not hide ''elephants in mouseholes,'' and abortion is an elephant in the mousehole of ''pregnancy, childbirth, or related medical conditions.''

Some comments opposed to the inclusion of abortion also asserted that the definition does not reflect congressional intent as expressed by the PWFA's structure. These comments noted that Congress chose not to amend Title VII by incorporating the PWFA. Such comments inferred from this choice that Congress implicitly declined to import Title VII's definition of ''pregnancy, childbirth, or related medical conditions'' and its abortion-related requirements into the PWFA. These comments stated that the PWFA

does not specifically require the same definition of ''pregnancy, childbirth, or related medical conditions'' as Title VII, as it does with other terms from the ADA and Title VII, and if Congress wanted the Commission to provide examples of ''related medical conditions'' it would have expressly said so.

Finally, some comments opposed to the proposed definition stated that Title VII's insurance exclusion provision, which addresses abortion and has been used to suggest that Title VII otherwise covers abortion, is different from the PWFA's similar exclusion provision.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' as Reflected in the Statutory Intent and Structure of the PWFA

As stated above, the Commission's inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' is supported by the plain text of the statute and by statutory intent and structure and is in keeping with the well-established rules of statutory construction.[73] Congress chose to write the PWFA using an identical phrase, ''pregnancy, childbirth, or related medical conditions,'' from Title VII and did not define the phrase in the PWFA. Nor did it place any limitations or rules of construction on the definition of the phrase in the PWFA. Accordingly, the Commission gives the phrase the same meaning under the PWFA as it has under Title VII for nearly 45 years. The Commission agrees that the PWFA's focus is accommodation, but, as the text of the PWFA and the ADA state and the Supreme Court has reiterated, accommodations are a form of nondiscrimination.[74] Thus, the fact that the PWFA provides accommodations does not make it a different type of statute from Title VII. Additionally, although Congress specifically incorporated certain definitions into the PWFA from the ADA and Title VII, such as those for ''reasonable accommodation,'' ''undue hardship,'' ''employer,'' and ''employee,'' in those situations, the terms appear in more than one other statute enforced by the Commission, and some of their definitions vary across statutes.[75] In incorporating certain terms, the Commission understands Congress' intent as specifying which definition it chose to adopt in the PWFA to avoid confusion. By contrast, there is only one other statute that the Commission enforces that uses the phrase ''pregnancy, childbirth, or related medical conditions,'' and that is Title VII, as amended by the PDA. Therefore, Congress' intent to use the Title VII definition in the PWFA is clear.

Further supporting the Commission's interpretation of the phrase ''pregnancy, childbirth, or related medical conditions'' is the fact that the PWFA passed as part of the Consolidated Appropriations Act, 2023 (CAA), in which Congress included several provisions explicitly limiting the use of Federal funds for abortion.[76] Where Congress includes particular language in one section of a law but omits it in another, it is generally presumed that Congress acts intentionally and purposely in including or excluding certain language.[77] Given that Congress explicitly included exclusions regarding abortion in certain sections of the CAA but omitted any such exclusion in the PWFA, the Commission concludes that the omission was an intentional act.

The Commission's interpretation also is consistent with the legislative history of the PDA, the statute that is the source of the phrase, ''pregnancy, childbirth, or related medical conditions.'' The Congressional Conference Report accompanying the PDA provides: ''Because [the PDA] applies to all situations in which women are 'affected by pregnancy, childbirth, and related medical conditions,' its basic language covers decisions by women who chose to terminate their pregnancies. Thus, no employer may, for example, fire or refuse to hire a woman simply because she has exercised her right to have an abortion.'' [78] By including the same key phrase in the PWFA and not articulating a different meaning than in the PDA, Congress is presumed to know and intend that the same definition will be applied.[79] And given the longstanding and public interpretation of this phrase, by both the Commission and the courts, the Commission disagrees that adopting the same interpretation as Title VII amounts to Congress ''hiding'' an elephant in a mousehole.

Furthermore, the second sentence of the PDA states that employers do not have to pay for health insurance benefits for abortion, except where necessary to preserve the life of the mother or where medical complications have arisen from an abortion.[80] The inclusion of this limited language regarding abortion coverage, coupled with clear statements in the legislative history, supports the conclusion that Congress intended for Title VII, as amended by the PDA, to protect employees against discrimination based on abortion and that Congress provided an exception, largely motivated by religious freedom concerns, for employers to opt out of providing health benefits to cover the procedure itself.[81] Of note, the PWFA has a similar structure—it requires employers not to discriminate against protected qualified employees by failing to provide them reasonable accommodations, but it does not require, or permit the Commission to

[76] *See, e.g.,* sec. 613, Public Law 117–328, 136 Stat. 4459, 4699 (2022) (providing that: ''No funds appropriated by this Act shall be available to pay for an abortion, or the administrative expenses in connection with any health plan under the Federal employees health benefits program which provides any benefits or coverage for abortions.'').

[77] *Keene Corp.* v. *United States,* 508 U.S. 200, 208 (1993) (quoting *Russello* v. *United States,* 464 U.S. 16, 23 (1983)). Of note, in the debate surrounding the PWFA before its passage in the Senate, the Senators discussed abortion. *See* 168 Cong. Rec. S7,049–50 (daily ed. Dec. 8, 2022); 168 Cong. Rec. S10,071, S10,081 (daily ed. Dec. 22, 2022). The House Report also discusses abortion. *See* H.R. Rep. No. 117–27, pt. 1, at 60. Thus, both chambers were seemingly aware of this issue, but the law does not include the type of abortion exclusion found in other parts of the CAA.

[78] *See* H.R. Rep. No. 95–1786, at 4 (1978) (Conf. Rep.).

[79] *See supra* note 67.

[80] *See* 42 U.S.C. 2000e(k).

[81] *See* H.R. Rep. No. 95–948, at 7 (1978), *as reprinted in* 1978 U.S.C.C.A.N. 4749, 4755 (''Many members of the committee were troubled . . . by any implication that an employer would have to *pay* for abortions not necessary to preserve the life of the mother through medical benefits or other fringe benefit programs, even if that employer—a church organization for example—harbored religious or moral objections to abortion; such a requirement, it was felt, could compromise the religious freedom of such employers. The committee, therefore, amended the language of the bill to deal with the problem, by making clear that such employers will not be required to pay for abortions except where the life of the mother would be endangered if the fetus was carried to term.'' (emphasis in original)).

require, ''an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment.'' [82]

As a matter of the PWFA's plain text, therefore, the Commission determines that the decision to have, or not to have, an abortion is encompassed within the phrase ''pregnancy, childbirth, or related medical conditions.'' Because this conclusion follows from the statutory text, the Commission does not believe that other concerns raised by commenters are relevant. The Commission's determination is not based on the potential health or social outcomes related to abortion; rather, the Commission's determination is based on the statutory text. Moreover, it bears emphasizing that this rulemaking does not require abortions or affect the availability of abortion; it simply ensures that employees who choose to have (or not to have) an abortion are able to continue participating in the workforce, by seeking reasonable accommodations from covered employers, as needed and absent undue hardship.

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Statements From Members of Congress and the White House About the PWFA

Some comments pointed to statements made by Members of Congress to either support or dispute the idea that the definition of ''pregnancy, childbirth, or related medical conditions'' in the PWFA includes abortion. Comments also noted the absence of certain statements from Members of Congress and the White House.

First, comments that supported the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' pointed to statements by opponents of the bill, whose opposition was based on the lawmakers' views that abortion would be covered.[83] Some comments also pointed to an amendment proposed by Senator James Lankford that the Senate rejected, which stated that ''[t]his division shall not be construed to require a religious entity described in Section 702(a) of the Civil Rights Act of 1964 to make an accommodation that would violate the entity's religion'' [84] as evidence that Senators knew that abortion would be covered.

Comments that did not support the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' pointed to statements made during floor debate by two of the co-sponsors of the PWFA in the Senate, Senator Robert P. Casey, Jr.[85] and Senator William Cassidy.[86] These comments also mentioned that, in a statement on the House floor, Representative Jerrold Nadler, lead sponsor of the PWFA, explained that the PWFA should be interpreted consistently with Title VII, stating: ''The Pregnant Workers Fairness Act aligns with Title VII in providing protections and reasonable accommodations for 'pregnancy, childbirth, and related medical conditions,' like lactation.'' [87]

Second, comments that disagreed with the Commission's proposed inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' pointed to statements made by Senator Steven Daines and Senator Cassidy after the Senate voted to add the PWFA to the CAA, both of which stated that accommodations related to abortion should not be covered. In addition, comments that disagreed with the Commission's position pointed to the lack of statements by supporters of the bill in Congress and the White House, and by advocacy groups, regarding its coverage of abortion. Comments stated that the PWFA would not have enjoyed bipartisan support, if the intent of the law were to include abortion, and including abortion as a related medical condition in the rule would make the political parties less likely to work together.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Statements From Members of Congress and the White House About the PWFA

The PWFA's text, structure, and intent support the Commission's proposed definition. Even if the Commission's interpretation were inconsistent with the cited statements of individual Members of Congress during the PWFA's passage, statements made by individual Members of Congress during floor debate do not justify a departure from an interpretation that Congress, courts, and the Commission have consistently adhered to since the PDA was enacted more than four decades ago. Again, the Commission's interpretation must start with the text of the statute. Relying on the text, rather than the individual statements of Members of Congress, follows the Supreme Court's requirements when interpreting a statute; as the Court has noted, ''[p]assing a law often requires compromise, where even the most firm public demands bend to competing interests. What Congress ultimately agrees on is the text that it enacts, not the preferences expressed by certain legislators.'' [88]

In addition, the Commission does not agree that the PWFA's legislative history counsels for a different interpretation of ''pregnancy, childbirth, or related medical conditions'' than in the PDA. For example, according to the House PWFA Committee Report, Members knew that abortion would be covered as a pregnancy-related condition for which some employers would need to provide accommodation.[89] Additionally, the Commission's definition is consistent with the full floor statement of Senator Casey and the comment that the Senator submitted during the public comment period.[90] Consistent with the statutory text and Congress' intent, the PWFA does not impose a categorical mandate on an employer to provide leave for an abortion. Leave, like any accommodation, is subject to applicable exceptions and defenses, including both those based on religion and on undue hardship. Nothing in the PWFA requires an employer to pay for an abortion or provide health care benefits for abortion in violation of State law.[91]

Finally, numerous legislators submitted comments during the public

No. 117–27, pt. 1, at 60 (stating under minority views that ''if an employee working for a religious organization requests time off to have an abortion procedure, H.R. 1065 could require the organization to comply with this request as a reasonable accommodation of known limitations related to pregnancy, childbirth, or related medical conditions'').

[90] 168 Cong. Rec. S7,050 (daily ed. Dec. 8, 2022); Comment EEOC–2023–0004–98384, Sen. Robert P. Casey, Jr. (Oct. 10, 2023) (stating that in drafting the PWFA, legislators intentionally used terms from other laws, including ''pregnancy, childbirth, or related medical conditions,'' and supporting the definition in the proposed rule).

[91] *See* 42 U.S.C. 2000gg–5(a)(2); 88 FR 54745 (stating that ''nothing in the PWFA requires or forbids an employer to pay for health insurance benefits for an abortion''). Covered entities, however, may separately be subject to the PDA's provisions regarding abortion coverage in certain circumstances. *See* 42 U.S.C. 2000e(k).

comment period that supported or opposed the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions.'' As these were statements made by Members of Congress after the passage of a bill, the Commission gave them due consideration as statements of the views of each particular Member who signed them.[92]

In response to the comments regarding the political process, the Commission cannot speculate on counterfactual scenarios such as what might have triggered a filibuster of the PWFA in Congress, nor what would diminish bipartisan support for future legislation. And the Commission cannot reinterpret the definition of ''pregnancy, childbirth, or related medical conditions'' based on the purported absence of certain statements by Members of Congress, advocates, or the executive branch during the bill's passage.

As explained above, the Commission must rely on the plain text of the statute. Given the meaning of the words that Congress chose to use in the PWFA, and the Commission's and courts' long history of interpreting those identical words to include abortion, the Commission will interpret those words the same way in the PWFA.

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Administrative and Judicial Interpretation

Many comments in favor of the Commission's inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' asserted that the Commission's inclusion of abortion in the definition accurately reflects longstanding judicial and administrative interpretations under Title VII. Comments stated that the Commission's interpretation is correct and consistent with decades of authority under Title VII, including legislative history, Federal case law, and Commission guidance; that existing case law supports the Commission's interpretation that Title VII protects employees from discrimination for contemplating or obtaining an abortion or refusing to submit to an employer's demand that they obtain an abortion; and that the Commission's *Enforcement Guidance on Pregnancy Discrimination* reaffirmed that choosing whether to have or not to have an abortion is covered under the PDA.

Some comments opposed to the Commission's proposed inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' asserted that the Commission's definition is contrary to judicial and administrative interpretations under Title VII.

Some comments disputed the Commission's statement that existing case law under Title VII supports the Commission's definition, claiming that the decisions do not apply to the PWFA and are distinguishable; that there is not a widespread judicial consensus about the meaning of ''related medical conditions''; and that the Commission should not rely on lower court decisions.

Some comments took issue with the Commission's reliance on its 2015 *Enforcement Guidance on Pregnancy Discrimination* to interpret the phrase ''pregnancy, childbirth, or related medical conditions'' under the PWFA, as the *Enforcement Guidance on Pregnancy Discrimination* does not receive binding judicial deference; only addresses pregnancy discrimination, not accommodation; and was issued many years after the PDA's enactment.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Administrative and Judicial Interpretation

The Commission disagrees with the comments that dispute the case law it cited and its reliance on its *Enforcement Guidance on Pregnancy Discrimination.* The Title VII decisions the Commission cited involve situations where employers discriminated against employees because they contemplated having, or chose to have, an abortion. These decisions include *Doe* v. *C.A.R.S. Protection Plus,* a Third Circuit decision relating to leave holding that an employer may not discriminate against an employee because she had an abortion.[93] As stated above, refusal to provide reasonable accommodation is a form of discrimination.[94] Finally, the Commission's reliance on its *Enforcement Guidance on Pregnancy Discrimination* is appropriate because it represents and demonstrates the consistent position of the Commission. It is immaterial that the guidance was voted on and approved by the Commission years after the passage of the PDA, especially given that the year after the PDA was enacted, the Commission issued its Questions & Answers about the PDA stating that abortion is covered under the PDA and prohibiting discrimination in employment practices because an employee had or did not have an abortion.[95] Thus, the *Enforcement Guidance on Pregnancy Discrimination* reconfirmed and still reflects the Commission's decades-long position.

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Other Laws

Some comments pointed to other laws to dispute the Commission's definition of ''pregnancy, childbirth, or related medical conditions.'' The comments pointed to the provisions in annual appropriations legislation, for example, the Hyde and Weldon Amendments, limiting the use of Federal funds for abortion except in certain circumstances. The comments also stated that Congress has never passed a law explicitly promoting the right to abortion. Similar comments noted that

[92] *Cf. Nat'l Woodwork Mfrs. Ass'n* v. *NLRB,* 386 U.S. 612, 639 n.34 (1967) (observing that statements inserted into the record after passage of a bill are regarded as ''represent[ing] only the personal views of the[ ] legislators'' involved). Senator Patricia Murray, joined by 24 Senators, endorsed the Commission's interpretation regarding the definition of ''pregnancy, childbirth, or related medical conditions,'' Comment EEOC–2023–0004–98257, Sen. Patricia (Patty) Murray and 24 U.S. Senators (Oct. 10, 2023); as did Representative Jerrold Nadler, joined by 82 House Representatives, Comment EEOC–2023–0004–98470, Rep. Jerrold (Jerry) Nadler and 82 Members of Congress (Oct. 10, 2023); and Representative Robert Scott, Comment EEOC–2023–0004–98339, Rep. Robert C. (Bobby) Scott, Ranking Member of the House Committee on Education and the Workforce (Oct. 10, 2023). By contrast, Senator James Lankford's comment, which was joined by 19 Senators, including Senator Bill Cassidy, and 41 House Representatives, disagreed with the Commission's interpretation. Comment EEOC–2023–0004–98436, Sen. James Lankford, 19 U.S. Senators, and 41 Members of Congress (Oct. 10, 2023). Similarly, Senator Michael Braun's comment disagreed with the Commission's interpretation. Comment EEOC–2023–0004–98486, Sen. Michael (Mike) Braun (Oct. 10, 2023).

[94] *See supra* note 74.

[95] 29 CFR part 1604, appendix, Question 34 (''Q. Can an employer discharge, refuse to hire or otherwise discriminate against a woman because she has had an abortion?/A. No. An employer cannot discriminate in its employment practices against a woman who has had an abortion.''), Question 35 (''Q. Is an employer required to provide fringe benefits for abortions if fringe benefits are provided for other medical conditions?/A. All fringe benefits other than health insurance, such as sick leave, which are provided for other medical conditions, must be provided for abortions. Health insurance, however, need be provided for abortions only where the life of the woman would be endangered if the fetus were carried to term or where medical complications arise from an abortion.''); *see also supra* note 28 (noting that in the PWFA Congress was seeking to protect the same employees who are protected by the PDA).

some States such as West Virginia and Louisiana have adopted their own versions of the PWFA, and no court appears to have interpreted State or local PWFAs to include abortion. Comments also stated that the Commission should clarify whether its regulation supersedes abortion funding restrictions in the Hyde Amendment and similar amendments, and how the Federal Government will ensure that Federal agencies do not pay for abortion accommodations and ensure that the same rules that apply to the ADA regarding taxpayer funding for abortion apply to the PWFA.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Other Laws

In interpreting the identical language from Title VII in the context of the PWFA, the Commission cannot infer congressional intent in a manner contrary to the plain text interpretation, particularly not based on what Congress could have said, but chose not to say. There is no evidence to suggest that the other Federal statutes cited by the comments should be considered by the Commission as interpreting the PWFA, nor is there any persuasive reason to give controlling weight to these statutes (instead of interpreting the PWFA consistently with Title VII, as Congress intended). Rather, the fact that Congress chose to provide express exclusions related to abortion in the cited statutes, including in the CAA, but did not choose to do so in the PWFA, suggests that if Congress wanted to exclude abortion from the definition of ''pregnancy, childbirth, or related medical conditions'' in the PWFA, it would have done so expressly.

Moreover, the PWFA, as interpreted by the Commission in this rule, does not in any way promote abortion; it simply provides for the possibility of an accommodation related to a qualified employee seeking an abortion, absent undue hardship, and there is only a narrow context in which this protection would likely apply—when an employee is seeking leave—given the prohibitions of 42 U.S.C. 2000gg–5(a)(2).[96] The PWFA also provides for accommodations for employees who choose not to have an abortion, absent undue hardship.

Further, the interpretation of State laws is not as persuasive as the interpretation of Title VII when Congress used the same words in both Federal statutes. Comments addressing State laws did not address whether cases regarding abortion arose under these PWFA-analogous laws. As stated above, despite the large number of comments on this issue, the Commission's practical experience under Title VII shows that litigation regarding this issue is not common. Finally, as stated previously, the Commission's rule does not require any employer to pay for an abortion.

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and the Dobbs Decision

Some comments stated that the Supreme Court's decision in *Dobbs* v. *Jackson Women's Health Org.,* 597 U.S. 215 (2022), which concluded that there is no Federal constitutional right to abortion and overruled *Roe* v. *Wade,* 410 U.S. 113 (1973), and *Planned Parenthood of Southeastern Pennsylvania* v. *Casey,* 505 U.S. 833 (1992), affects the Commission's rulemaking.

First, some comments said that, because the PWFA was enacted soon after the Court issued its *Dobbs* decision, Congress should have stated more clearly in the PWFA any protection for an employee seeking an accommodation related to an abortion, if that was its intent. Second, some comments asserted that, because of the *Dobbs* decision, abortion is a State issue, not a Federal issue, that there is no Federal right to abortion, that including abortion accommodations in the PWFA would circumvent *Dobbs,* and that under *Dobbs,* abortion is not health care. Comments also stated that the Title VII case law cited by the Commission involved substantial reliance on the constitutional right to abortion now undone by *Dobbs.*

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and the Dobbs Decision

Given the language that Congress used in the PWFA and the use and interpretation of that same language in Title VII, the *Dobbs* decision does not suggest a different definition of the phrase ''pregnancy, childbirth, or related medical conditions.'' First, Congress is not required to speak directly to a specific issue when it legislates. ''In some cases, Congress intends silence to rule out a particular statutory application, while in others Congress' silence signifies merely an expectation that nothing more need be said in order to effectuate the relevant legislative objective.'' [97] Congress' choice to use the same phrase in the PWFA as in Title VII, coupled with Congress' decision to enact limitations with respect to abortion in other portions of the CAA but not in the PWFA, supports the Commission's interpretation that ''pregnancy, childbirth, or related medical conditions'' has the same meaning in the PWFA that it does in Title VII, and it includes abortion. Thus, the conclusion the Commission draws from Congress' lack of an explicit mention of abortion in the PWFA is that Congress did not express its intent for the phrase to have any different meaning than it has under Title VII.

As stated at the beginning of this discussion, the Commission's rule does not regulate abortion or abortion procedures, nor does it require an employer to pay for, promote, or endorse abortion. Additionally, although *Dobbs* held that the U.S. Constitution's Due Process Clause does not provide a right to abortion, that interpretation of the Constitution does not address Congress' authority to regulate potential employment discrimination by providing for reasonable accommodations for pregnancy, childbirth, or related medical conditions absent undue hardship, as Congress has done in the PWFA. *Dobbs* did not involve, and the Court did not discuss, employment protections under Title VII, and *Dobbs* did not purport to interpret the meaning of the phrase ''pregnancy, childbirth, or related medical conditions'' in Title VII. Ultimately, *Dobbs* concerned a matter of constitutional interpretation and not one of statutory interpretation, and the cases cited by the Commission in support of the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' may still be relied on. Indeed, Congress enacted the PWFA after the *Dobbs* decision and chose to retain the phrase ''pregnancy, childbirth, or related medical conditions'' that it had used in Title VII without any modification or instruction. Thus, even if *Dobbs* could be construed as an invitation for Congress to reevaluate that language from Title VII, Congress did not do so.

[96] 42 U.S.C. 2000gg–5(a)(2) provides that ''[n]othing in this chapter shall be construed . . . by regulation or otherwise, to require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment or to affect any right or remedy available under any other Federal, State, or local law with respect to any such payment or coverage requirement.''

[97] *Burns* v. *United States,* 501 U.S. 129, 136 (1991), *abrogated on other grounds as recognized by Dillon* v. *United States,* 560 U.S. 817 (2010).

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Policy Arguments Regarding Abortion

Many comments supported the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' for various policy reasons. As discussed at length above, such reasons included, for example, stating that it would help employees access essential health care and have autonomy about their reproductive decisions.

By contrast, other comments stated that, as a policy matter, the Commission should not include abortion in the definition of ''pregnancy, childbirth, or related medical conditions.'' First, some comments speculated that including abortion in the definition will result in employers encouraging their pregnant workers to have abortions. Some of these comments suggested that employers might even require pregnant workers to take leave to have an abortion instead of another available accommodation. Second, some comments stated that there should be no accommodations for abortion because, according to the comments, abortion causes mental health issues for women.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Policy Arguments Regarding Abortion

As explained above, the Commission must rely on the plain text of the statute. Given the words that Congress chose to use in the PWFA, and the Commission's and courts' long history of interpreting those identical words to include abortion, the Commission will interpret those words the same way in the PWFA. The Commission disagrees with commenters who argued that excluding abortion from the definition serves the policy goals expressed by Congress in the PWFA. On the contrary, as discussed above, the Commission concludes that including abortion in the definition best serves the policy goals expressed by Congress in the PWFA in that it will allow qualified employees with known limitations related to pregnancy, childbirth, or related medical conditions to obtain accommodations to address their needs, absent undue hardship. While the comments make policy arguments opposed to the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions,'' these policy objections are not a reason for the Commission to change its interpretation and deviate from the text of the statute and established rules of statutory construction. Additionally, the Commission notes that some of the claims in the comments that argued against abortion for policy reasons have been disputed by health care professionals.[98]

With regard to concerns that employers will force their employees to have abortions, Title VII prohibits covered entities from taking adverse employment actions against an employee based on their decisions to have, or not to have, an abortion.[99] Consistent with this interpretation, the Commission's definition of ''pregnancy, childbirth, or related medical conditions'' includes both having an abortion and choosing not to have an abortion, thus protecting pregnant employees who decide to continue their pregnancies.[100]

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and the Interaction Between State Laws Regarding Abortion and the PWFA

Some comments asserted that covered entities cannot be required to provide accommodations relating to an abortion because some State laws prohibit abortion under certain circumstances. Some comments also noted that some State laws provide that an individual may sue another individual for conduct that aids in the performance of an abortion in violation of State law. A few comments stated that the rule will compel State and local governments to provide accommodations contrary to State law, and that doing so transgresses limits of federalism; one comment asserted that certain Senators were concerned about litigation against the States and voted to remove the PWFA's text that waives State immunity to lawsuits.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and the Interaction Between State Laws Regarding Abortion and the PWFA

The Commission does not agree with comments that the inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' requires covered entities, including State and local governments, to violate State laws that limit access to abortion, nor does the rule transgress limits of federalism. The rule does not prescribe when, where, or under what circumstances an abortion can be obtained or what procedures may be used. If the issue of a PWFA accommodation regarding abortion arises, it will likely concern only a request by a qualified employee for leave from work.[101] Accordingly, State laws that regulate the provision of abortions in certain circumstances do not conflict with covered entities' obligations under the PWFA.

Any potential interaction or conflict between PWFA and State laws, including State laws that allow civil suits to challenge actions that private individuals claim aid in the provision of an abortion, will be addressed on a case-by-case basis. Of note, the PWFA does not require an employer to pay for an abortion, and neither does the regulation.[102]

[98] For example, the contention that abortion causes mental health issues for women is refuted by major mental health organizations. Am. Psych. Ass'n, *Abortion* (2024), *https://www.apa.org/topics/abortion; see also* Healthline, *Understanding the Relationship Between Abortion and Mental Health* (July 6, 2023), *https://www.healthline.com/health/abortion-and-mental-health;* M. Antonia Biggs et al., *Women's Mental Health and Well-Being 5 Years After Receiving or Being Denied an Abortion: A Prospective, Longitudinal Cohort Study*, 74 JAMA Psychiatry 169 (Feb. 2017), *https://jamanetwork.com/journals/jamapsychiatry/fullarticle/2592320.*

[99] *See, e.g., EEOC* v. *Ryan's Pointe Houston, LLC,* No. 19–20656, 2022 WL 4494148, at *7 (5th Cir. Sept. 27, 2022); *Velez* v. *Novartis Pharms. Corp.,* 244 FRD. 243, 267 (S.D.N.Y. 2007) (including a declaration by a female employee that she was encouraged by a manager to get an abortion as anecdotal evidence supporting a class claim of pregnancy discrimination); *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(4)(c).

[100] *See, e.g., Ryan's Pointe Houston,* 2022 WL 4494148, at *7; Press Release, EEOC, *Best Western Hotels in Tacoma and Federal Way To Pay $365,000 To Settle EEOC Suit for Harassment* (July 5, 2012) (announcing settlement of a harassment case by the EEOC that included allegations that the harasser belittled the religious beliefs of employees, including telling a pregnant employee she should have an abortion even though she said it was against her religious beliefs).

[101] 42 U.S.C. 2000gg–5(a)(2) provides that ''[n]othing in this chapter shall be construed . . . by regulation or otherwise, to require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment or to affect any right or remedy available under any other Federal, State, or local law with respect to any such payment or coverage requirement.'' Some comments speculated that employers, including State and local governments, could violate State laws restricting abortion access if they provided leave to employees who then traveled across State lines to obtain abortion care. The Commission notes that employees can currently use their leave to do so, and the comments did not explain why the leave being a reasonable accommodation under the PWFA would create a different set of circumstances or a different result.

[102] *See* 42 U.S.C. 2000gg–5(a)(2); 88 FR 54745 (stating that ''nothing in the PWFA requires or forbids an employer to pay for health insurance benefits for an abortion''). Covered entities may, however, be subject to Title VII's provisions regarding abortion coverage in certain circumstances. *See* 42 U.S.C. 2000e(k).

The Commission agrees that State and local governments are covered employers and are required to provide accommodations under the PWFA, absent undue hardship. As stated above, any potential interaction or conflict between a State law and the PWFA will be addressed on a case-by-case basis. Further, States and local governments that are covered by the PWFA are covered by Title VII, which has protected employees' rights to be free from discrimination in employment for having, or for not having, an abortion for nearly 45 years, and yet comments on this topic did not point to a situation where a State was forced to violate its own laws. Finally, Congress did not vote to remove the section of the PWFA that waives State sovereign immunity; that provision is in 42 U.S.C. 2000gg–4.

Ultimately, whether any particular action taken by an employer pursuant to the PWFA could potentially implicate State law is dependent on the content of each individual State's laws, including how those laws are interpreted by each State's courts. As noted above, commenters did not identify any real-world scenarios in which Title VII's protections for employees' rights with regard to abortion have led to employer concerns about liability under State law. To the extent any such issues arise in connection with the PWFA, the Commission believes they are best addressed on a case-by-case basis, particularly given the State- and fact-specific nature of these issues.

Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and the Major Questions Doctrine

Some comments argued that to include abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' implicates the major questions doctrine.[103]

In claiming that the major questions doctrine applies, comments stated that abortion has been a heated political topic or a source of moral controversy; that the *Dobbs* majority and dissent both found abortion to have important economic consequences; and that the possibility of reasonable accommodations for an abortion meets the threshold of deep political significance, implicating the major questions doctrine. Comments also stated that the Commission must show that the decision to allow for possible reasonable accommodations for an abortion, absent undue hardship, was clear in the text of the PWFA at the time of enactment; that if Congress wanted to put paid abortion leave into the PWFA, it would have done so explicitly; and that the Commission may not issue regulations with vast political significance unless clearly directed by Congress.

By contrast, other comments disputed whether the major questions doctrine applies to the PWFA and the Commission's definition of ''pregnancy, childbirth, or related medical conditions.'' For instance, one detailed comment noted that the Supreme Court has limited the major questions doctrine to a narrow category of extraordinary paradigm cases that are very different from the posture of the PWFA rulemaking.[104] The comment stated that none of the indicia of a major question exist in this rulemaking—the Commission is merely interpreting a phrase the same way it did in Title VII, with no change to the prevailing interpretation of this longstanding statutory text. Additionally, the comment asserted the rule does not address questions of such vast economic and political significance as to raise a presumption against congressional delegation of authority and the comment supported the rule as an exercise of agency authority to interpret and implement a statute, using the same long-established textual interpretation as in a related statute.

Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and the Major Questions Doctrine

The Commission disagrees that inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' implicates the major questions doctrine. The inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' is for the limited purpose of qualifying for a workplace accommodation under the PWFA, which is subject to defenses and case-by-case assessment. Moreover, the Commission anticipates that any requests for accommodations related to abortion will typically involve the provision of unpaid leave. Thus, including abortion in the definition of ''pregnancy, childbirth, or related medical conditions'' is not the type of ''extraordinary case[ ]'' that implicates the major questions doctrine.[105] The Commission is simply implementing Congress' intent by confirming that the term ''related medical conditions'' has the same meaning given to the term in Title VII for over four decades. Thus, the Commission is effectuating a policy decision made by Congress itself, not claiming a ''newfound power'' that would ''represent[ ] a transformative expansion in its regulatory authority'' or ''make a radical or fundamental change to a statutory scheme.'' [106] And no court has applied the major questions doctrine to the Commission's identical interpretation of Title VII's identical text.

The provision of possible reasonable accommodations for known limitations related to an abortion does not have the type of economic impact found in other cases that successfully invoked the major questions doctrine. Because the PWFA prohibits any requirement ''by regulation or otherwise . . . [for] an employer-sponsored health plan to pay for or cover a particular item, procedure, or treatment,'' the Commission anticipates that most requests for accommodations related to an abortion will involve only the provision of leave, which will likely be unpaid.[107] Thus, any economic impact will be minimal.

Further, the Commission's use of the term does not ''effec[t] a 'fundamental revision of the statute, changing it from [one sort of] scheme of . . . regulation' into an entirely different kind'';[108] rather, it implements a new statute by harmonizing the meaning of ''pregnancy, childbirth, or related medical conditions'' in Title VII and the PWFA. The ''consistency of [an agency's] prior position is significant'' when it comes to the major questions doctrine, because ''[i]t provides important context'' about what Congress ''understood'' the statute to permit.[109]

[103] The major questions doctrine applies to ''extraordinary cases that call for a different approach—cases in which the history and the breadth of the authority that [the agency] has asserted, and the economic and political significance of that assertion, provide a reason to hesitate before concluding that Congress meant to confer such authority.'' *West Virginia* v. *EPA,* 597 U.S. 697, 721 (2022) (internal quotation marks omitted). Under this doctrine, the Court has rejected agency claims of statutory authority when: (1) the underlying claim of authority concerns an issue of ''vast economic and political significance,'' and (2) Congress has not clearly empowered the agency with authority over the issue. *Util. Air Regul. Grp.* v. *EPA,* 573 U.S. 302, 324 (2014) (internal quotation marks omitted).

[104] *See* Comment EEOC–2023–0004–98328, Professors Greer Donley, David S. Cohen, Rachel Rebouche, Kate Shaw, Melissa Murray, and Leah Litman (Oct. 10, 2023).

[105] *See West Virginia,* 597 U.S. at 721.

[106] *Id.* at 723–24 (internal quotation marks omitted).

[107] *See* 42 U.S.C. 2000gg–5(a)(2).

[108] *Biden* v. *Nebraska,* 600 U.S. __, 143 S. Ct. 2355, 2373 (2023) (quoting *West Virginia,* 597 U.S. at 728).

[109] *FDA* v. *Brown & Williamson Tobacco Corp.,* 529 U.S. 120, 157 (2000).

''Congress must be taken to have been familiar with the existing administrative interpretation.'' [110] The relevant statutory language—''pregnancy, childbirth, or related medical conditions''—has a well-documented, consistent, and historical definition, and the Commission is within its authority to use that definition in implementing a new statute.

By contrast, were the Commission to stray from Title VII's interpretation of ''pregnancy, childbirth, or related medical conditions'' for the purpose of adopting a definition that excluded abortion, the Commission would be taking a novel stance, contrary to the language of the PWFA and the intent expressed by Congress in using the language of Title VII.

Comment Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Separation of Powers Concerns

One comment raised a constitutional objection to the Commission's structure, asserting that the President can remove Commissioners ''only for cause.''

Response to Comment Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' and Separation of Powers Concerns

The Commission disagrees that there is any constitutional defect in the agency's structure, and, in any event, the comment provides no basis to believe that anything about the rule or its implementation would be different if the Commission had a different structure.

1636.3(c) Employee's Representative

Several comments suggested additions to the definition of ''employee's representative,'' including ''union representative,'' ''co-worker,'' and ''manager.'' The Commission has added ''union representative'' to the list, which is further illustrated in Example #31. The addition reflects an important kind of representative and differs from the other illustrative third parties listed. The Commission has not made further changes to the list. The list in the proposed regulation mirrors that set out in ADA [111] policy and is not exhaustive. Further, the Commission believes that the addition of ''manager'' would not add clarity to the definition and would risk confusing management officials about their roles and obligations under the PWFA.

Other comments proposed changing ''other representative'' to what they believe to be more descriptive language, such as ''any other person who communicates.'' The Commission is maintaining ''representative'' because it is the language used in the statute.

Several comments recommended that the rule require the employee's representative to have the employee's permission to communicate the employee's limitation. The Commission expects that normally the representative will have the employee's permission but notes that there may be situations, for example when the employee is incapacitated, where that may not be possible. The Commission has added this information in the Interpretive Guidance in section *1636.3(c) Employee's Representative.* The Commission declines to delineate a specific form or manner for an individual to be considered a representative because this would unnecessarily increase the burden on employees and potentially delay the processing of an accommodation request. The PWFA intends to make seeking and obtaining an accommodation efficient and effective. Requiring an employee to submit evidence of their authorization to enable a third party to request an accommodation on their behalf would thwart the PWFA's efforts to make such communication a simple task.

Several comments proposed that once the employee's representative has made the need for an accommodation known, the employer must then engage in the interactive process directly with the employee. Again, the Commission expects that this will be the normal situation but notes, for example, that when the employee is incapacitated or the representative is the employee's attorney, the employer may need to continue to engage with the representative rather than the employee. The Commission has added information to this effect in the Interpretive Guidance in *1636.3(c) Employee's Representative.* Finally, the Commission has removed the word ''known'' before ''limitation'' in the Interpretive Guidance for this section because the limitation is not ''known'' until it has been communicated.

1636.3(d) Communicated to the Employer

The Commission received numerous comments regarding the definition of ''communicated to the employer,'' what information the employee should have to provide to the employer, with whom the employee should communicate, and what the employer can or cannot require the employee to do after the initial request.

Several comments correctly pointed out that the statutory definition of ''communicated to the employer'' in the PWFA does not include a description or requirement of how the employee must request a reasonable accommodation. Thus, the Commission has moved the information regarding how an employee requests a reasonable accommodation (formerly in proposed § 1636.3(d)(3)) to the section of the rule regarding reasonable accommodations (§ 1636.3(h)(2)). Although these sections are now separate and therefore follow the statutory text more closely, they have many important commonalities. Specifically, both communicating to the employer regarding the limitation and requesting a reasonable accommodation should be simple processes that do not require any specific language; both can be made to the same people at the covered entity at the same time; and for both there are limitations as to the information the covered entity can require. In practice, the Commission recognizes that in most cases these communications will occur simultaneously: an employee will communicate about their limitation in the process of informing the employer that they need an adjustment or change at work for reasons related to the limitation.

Thus, the final regulation's definition of ''communicated to the employer'' consists only of § 1636.3(d) introductory text and (d)(1) and (2) from the NPRM. Paragraph (d)(3), with some modifications, has been moved to § 1636.3(h)(2).

Section 1636.3(d) of the proposed regulation stated that ''communicated to the employer'' means to make known to the covered entity either by communicating with a supervisor, manager, someone who has supervisory authority for the employee (or the equivalent for an applicant), or human resources personnel, or by following the covered entity's policy to request an accommodation. Several comments suggested that this list include someone ''who directs the employee's tasks'' in order to better reflect circumstances where a workplace may not use a supervisory structure or specific job titles. The Commission agrees that this additional language will help employees and covered entities better understand that such communication also is appropriately directed to those

[110] *McFeely* v. *Comm'r of Internal Revenue,* 296 U.S. 102, 110 (1935).

[111] *See* EEOC, *Enforcement Guidance on Reasonable Accommodation and Undue Hardship under the ADA,* Question 2 (2002) [hereinafter *Enforcement Guidance on Reasonable Accommodation*], *http://www.eeoc.gov/laws/guidance/enforcement-guidance-reasonable-accommodation-and-undue-hardship-under-ada.*

individuals whom an employee would normally consult if they had a question or concern. Thus, the final rule includes the addition of ''or who regularly directs the employee's tasks.'' Some comments also suggested that the Commission clarify that the entity with whom the employee may communicate could include any agents of the employer such as a search firm, staffing agency, or third-party benefits administrator. The Commission has included that information in the Interpretive Guidance in section *1636.3(d) Communicated to the Employer and 1636.3(h)(2) How To Request a Reasonable Accommodation* and has covered these entities in the regulation by adding ''another appropriate official,'' a term that also serves to cover other entities with authority for the employee who may not have one of the titles used in the rest of this portion of the regulation.

Paragraph (d)(1) has not changed from the NPRM. In paragraph (d)(2), the Commission has added that the communication regarding the limitation need not use specific words in order for it to be considered ''communicated to the employer.'' The Commission also has changed the structure of this sentence so that it matches that of paragraph (d)(1) and refers to the communication, rather than what a covered entity may or may not require and has slightly changed the wording of the prohibitions. For example, the proposed rule said, ''any specific format'' and the final rule says, ''in a specific format''; and the proposed rule said, ''any particular form'' and the final rule says, ''on a specific form.''

In the Interpretive Guidance in section *1636.3(d) Communicated to the Employer and 1636.3(h)(2) How To Request a Reasonable Accommodation,* the Commission has combined the information for § 1636.3(d) and (h)(2) to emphasize that the communication of the limitation and the request for an accommodation will usually happen at the same time, that both should be simple tasks, and that both are governed by the same rules regarding with whom the employee may communicate, and the lack of a requirement for any specific words or forms (§ 1636.3(d)). The Commission also has added information explaining that, because many situations that may qualify for coverage under the PWFA could be classified as either a ''limitation'' (a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions) or ''pregnancy, childbirth, or related medical conditions,'' employees do not need to identify a specific part of the regulation under which they believe they are entitled to coverage in order to make a request. Employers should not decide that an employee is not covered by the PWFA or otherwise restrict an employee's rights under the PWFA because the employer thinks the employee has improperly labeled something a ''limitation'' when it is better characterized as a ''related medical condition,'' or the reverse. For example, if an employee needs bed rest because they are pregnant and have placenta previa, the placenta previa could be the ''physical or mental condition'' related to, affected by, or arising out of pregnancy, or the placenta previa could be a ''related medical condition'' to pregnancy and the physical or mental condition could be the need to limit walking or standing. In either instance, the employee is covered by the PWFA and can request an accommodation.

The Interpretive Guidance in section *1636.3(d) Communicated to the Employer and 1636.3(h)(2) How To Request a Reasonable Accommodation* also has been modified to explain that an employee is not required to identify the statute under which they are requesting a reasonable accommodation (*e.g.,* the ADA, the PWFA, or Title VII). Doing so would require that employees seeking accommodations use specific words or phrases, which the regulation prohibits.

Finally, the Commission has added information to the Interpretive Guidance that explains the types of people with whom the employee may communicate as set out in the final rule. The Commission has moved the examples that were in § 1636.3(d) in the NPRM to section *1636.3(h)(2) How To Request a Reasonable Accommodation* in the Interpretive Guidance and has added an explanation at the start of the list of examples regarding the communications, rather than having an explanation after each example.

1636.3(e) Consideration of Mitigating Measures

The Commission received very few comments concerning mitigating measures. The language in the final rule is unchanged from the proposed rule and is the same as the language in the ADA regulation, except that the Commission made a minor edit for accuracy to remove the word ''known'' from § 1636.3(e)(1). This edit is necessary because the consideration of mitigating measures would only affect the determination of whether an employee has a limitation and not whether that limitation is ''known.'' The Commission further changed language in the Interpretive Guidance in section *1636.3(e) Consideration of Mitigating Measures* slightly to point out that the ameliorative effects of mitigating measures can be considered when determining the appropriate reasonable accommodation.[112]

1636.3(f) Qualified Employee

1636.3(f)(1) With or Without Reasonable Accommodation

The Commission received very few comments concerning the definition of ''qualified employee'' as an employee who, with or without reasonable accommodation, can perform the essential functions of the job. The final rule maintains the language from the proposed rule, which uses the language from the ADA.

The Commission also did not receive many comments regarding the definition of ''qualified'' for the reasonable accommodation of leave and has maintained that definition and the language in § 1636.3(f)(1) and in the Interpretive Guidance in section *1636.3(f)(1)* under ''*Qualified*'' *for the Reasonable Accommodation of Leave.* The Commission addresses other comments it received regarding leave as a reasonable accommodation in the preamble in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation.*

1636.3(f)(2) Temporary Suspension of an Essential Function(s)

The Commission received numerous comments regarding the definition of ''qualified'' with regard to the temporary suspension of essential function(s), the definition of ''temporary,'' the definition of ''in the near future,'' how different periods of temporary suspension of essential function(s) should be considered, whether more than one essential function can be suspended, and the meaning of ''can be reasonably accommodated.''

Preliminarily, it is important to emphasize that the definition of ''qualified'' that includes the temporary suspension of an essential function is taken directly from the text of the statute. It is not a creation of the Commission, and the Commission could not ignore it or read it out of the statute, as some comments suggested. Second,

[112] The Commission notes that ''mitigating measures'' for the purposes of the PWFA are not the same as ''mitigation measures'' taken as part of occupational safety and health which refer to actions taken by employers. *See, e.g.,* U.S. Dep't of Health & Hum. Servs., Ctrs. for Disease Control & Prevention, Nat'l Inst. for Occupational Safety & Health, *Hierarchy of Controls* (Jan. 17, 2023), *https://www.cdc.gov/niosh/topics/hierarchy/default.html.*

as noted in the NPRM, this definition of ''qualified'' is relevant only when an employee cannot perform one or more essential functions of the job in question, with or without a reasonable accommodation, due to a known limitation. It is not relevant in any other circumstance. If the employee can perform the essential functions of the position with or without a reasonable accommodation, the first definition of ''qualified'' applies (*i.e.,* able to do the job with or without a reasonable accommodation). Third, this definition is relevant solely to determining whether an employee is ''qualified.'' An employer may still defend the failure to provide a reasonable accommodation based on undue hardship. Thus, the Commission responds to concerns regarding the possible disruption of production or scheduling or difficulties in accommodating the temporary suspension of an essential function(s) that a certain employer may face in the discussion of undue hardship (in the preamble in section *1636.3(j)(3) Undue Hardship—Temporary Suspension of an Essential Function(s)*) rather than in the discussion of the definition of ''qualified.''

1636.3(f)(2)(i) Temporary

The Commission received several comments regarding the definition of ''temporary.'' Some asserted that the Commission's definition was subsumed by the definition of ''in the near future,'' while others argued that the definitions of ''temporary'' and ''in the near future'' should be the same. The Commission has not changed the definition of ''temporary.'' As Congress set out two terms (''temporary'' and ''in the near future''), the Commission should define both and not assume that they are the same. The definition that the Commission proposed in the NPRM for ''temporary'' is consistent with the dictionary definition of this term and the legislative history of the provision.[113]

1636.3(f)(2)(ii) In the Near Future

The Commission's proposed definition of ''in the near future'' had four parts: (1) how long this would be for a current pregnancy (generally 40 weeks); (2) how long this should be for conditions other than a current pregnancy (generally 40 weeks); (3) how leave should not count in the determination of the time for which an essential function(s) is temporarily suspended; and (4) how to address successive periods of suspension of essential function(s). As discussed below, the Commission is maintaining the provisions in the NPRM for issues 1, 3, and 4.

Comments and Response to Comments Regarding the Definition of ''In the Near Future''

The NPRM proposed that for both a current pregnancy and conditions other than a current pregnancy it would be presumed that the employee could perform the essential functions of the position ''in the near future'' if they could do so within generally 40 weeks.

Many comments supported the idea that for a current pregnancy, an employee would be considered qualified if they could perform the essential function(s) generally within 40 weeks of the suspension of the essential function(s). As these comments pointed out, this would allow a pregnant employee the ability to continue working and earning a paycheck during their pregnancy, even if due to a known limitation they had to temporarily suspend an essential function(s). As one comment noted, a shorter time could lead to ''dangerous and perverse consequences'' such as employees ''saving up'' their ability to request the temporary suspension of essential function(s), leading to potential risks to their health or the health of their pregnancy early in the pregnancy, or employees being temporarily excused from essential function(s) early in their pregnancy only to have to resume them later in their pregnancy in order to keep earning a paycheck.[114]

Several comments argued against the definition of ''generally 40 weeks'' for a current pregnancy, stating that such a long time was not within the intent of Congress, was outside the scope of the Commission's regulatory authority, and was not in keeping with how courts have defined this term in cases regarding leave and the ADA.

For conditions other than a current pregnancy, including post-pregnancy, the NPRM also proposed ''in the near future'' to mean generally 40 weeks. Several comments, based on the health care studies cited in the NPRM, recommended that for post-pregnancy reasons the definition of ''in the near future'' should be 1 year. These comments also recommended that the definition of ''in the near future'' for lactation-related accommodations that require the temporary suspension of an essential function(s) be 2 years, based on the recommendation of the American Academy of Pediatrics.

Other comments pointed out that although pregnancy has a generally accepted length, other conditions do not. As a result, these comments asserted, an individualized assessment, akin to when a person with a disability is having surgery and then must go on leave, is more appropriate. Other comments suggested that the definition should be less than 6 months, based on an ADA case cited in the House Report on the PWFA.[115]

In the final rule, the Commission has changed the provision in the regulation defining ''in the near future'' at § 1636.3(f)(2)(ii) so that the determination will be made on a case-by-case basis. This determination, however, includes the concept from the NPRM's definition of ''in the near future,'' which explained that, if the employee is pregnant, it is assumed that the employee could perform the essential function(s) in the near future because they could perform the essential function(s) within generally 40 weeks of their suspension.

The Commission is retaining ''generally 40 weeks'' [116] in the final regulation's definition of ''in the near future'' for pregnant employees for several reasons. First, one of the purposes of the PWFA is to provide pregnant employees with the ability to keep working while they are pregnant in order to protect their economic security as well as their health and the health of their pregnancy. Given the established length of pregnancy, this goal cannot be met if the employee is not considered qualified simply because they have to suspend an essential function(s) for generally 40 weeks. Second, Congress did not provide a definition for ''in the near future'' but did give the Commission rulemaking authority for the statute.[117] Defining terms within a statute that have not been defined by Congress is well within the rulemaking authority of the agency directed by the law to write rules for it.[118] Furthermore,

[114] Comment EEOC–2023–0004–98298, A Better Balance 29–30 (Oct. 10, 2023).

[115] H.R. Rep. No. 117–27, pt. 1, at 28 (citing *Robert* v. *Bd. of Cnty. Comm'rs of Brown Cnty.,* 691 F.3d 1211, 1218 (10th Cir. 2012)). However, the Commission notes that the House Report does not assign a definition to ''in the near future.'' Although *Robert* notes an Eighth Circuit case that found that a 6-month leave request ''was too long to be a reasonable accommodation,'' it stated that with respect to the durational element of in the ''near future,'' ''this court has not specified how near that future must be'' and declined to address whether a more than 6-month accommodation ''exceeded reasonable durational bounds.'' *Robert,* 691 F.3d at 1218.

[116] One comment noted that pregnancy can last 42 weeks or longer. To account for this, the EEOC is using the phrase ''generally 40 weeks.''

[117] 42 U.S.C. 2000gg–3(a).

[118] *See AT&T Corp.* v. *Iowa Utils. Bd.,* 525 U.S. 366, 397 (1999) (''Congress is well aware that the

as explained below, courts have generally determined that indefinite amounts of time cannot be ''in the near future.'' Because pregnancy by definition is not indefinite, defining ''in the near future'' to be the length of a pregnancy is consistent with the views of courts and with the purpose of the PWFA.

Those who opposed generally 40 weeks as the definition of ''in the near future'' for pregnant employees did not explain how a shorter definition would impact pregnant employees or why the definition should change from workplace to workplace, given the established length of pregnancy. Given that there is a history of employers failing to provide pregnant employees light duty positions to the severe detriment of those employees, even after the Supreme Court's decision in *Young* v. *United Parcel Service,*[119] and Congress' awareness of this problem,[120] the Commission believes it is necessary to define ''in the near future'' for the PWFA's second definition of ''qualified'' as the full length of a pregnancy. The Commission agrees with comments stating that a shorter period of time could create situations where an employee continues to perform an essential function(s) in order to save time when they are not required to perform the essential function(s) for later in their pregnancy or following childbirth, thus imperiling their health or the health of the pregnancy, or where an employee is forced to return to the performance of an essential function(s) later in their pregnancy, despite the health risks. The Commission reiterates that this rule does not mean that a pregnant employee is automatically entitled to the temporary suspension of one or more essential functions for 40 weeks, or that the employee will need the suspension of one or more essential functions for 40 weeks. The temporary suspension must be able to be reasonably accommodated, and the employer retains the ability to establish that the reasonable accommodation causes an undue hardship.

The Commission agrees that there should not be a presumptively consistent measure of the term ''in the near future'' for issues other than current pregnancy. The physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions faced by employees other than those who are currently pregnant certainly may be serious and may, in some cases, mean that an employee may seek to have one or more essential functions of the job temporarily suspended. Unlike a current pregnancy, however, there is not a consistent measure of how long these diverse conditions generally will last or, thus, of what ''in the near future'' might mean in these instances.

In explaining the inclusion of this additional definition of ''qualified,'' the House Report analogized the suspension of an essential function under the PWFA to cases under the ADA regarding leave.[121] Thus, ADA leave cases provide some helpful guideposts for employers and employees to understand this term in the context of whether an employee is ''qualified'' under the PWFA in situations not involving a current pregnancy. First, an employee who needs indefinite leave (that is, leave for a period of time that they cannot reasonably estimate under the circumstances) cannot perform essential job functions ''in the near future.'' [122] Similarly, a request to indefinitely suspend an essential function(s) cannot reasonably be considered to meet the standard of an employee who could perform the essential function(s) ''in the near future.'' However, the Commission notes that the temporary suspension of an essential function(s) is not ''indefinite'' simply because the employee cannot pinpoint the exact date when they expect to be able to perform the essential function(s) or can provide only an estimated range of dates.[123] Nor do these circumstances mean that the employee cannot perform the job's essential functions ''in the near future.'' [124]

Beyond an agreement that an indefinite amount of time does not meet the standard of ''in the near future,'' courts' definitions of how long a period of leave may be under the ADA and still be a reasonable accommodation (thus, allowing the individual to remain qualified) vary.[125] The Commission

ambiguities it chooses to produce in a statute will be resolved by the implementing agency.''); *Smiley* v. *Citibank (South Dakota), N.A.,* 517 U.S. 735, 740–41 (1996) (''[T]hat Congress, when it left ambiguity in a statute meant for implementation by an agency, understood that the ambiguity would be resolved, first and foremost, by the agency, and desired the agency (rather than the courts) to possess whatever degree of discretion the ambiguity allows.''); *Chevron, U.S.A., Inc.* v. *Nat. Res. Def. Council, Inc.,* 467 U.S. 837, 843 (1984) (''The power of an administrative agency to administer a congressionally created . . . program necessarily requires the formulation of policy and the making of rules to fill any gap left, implicitly or explicitly, by Congress.'') Utah Mar. 31, 2023) (concluding that the employee's request to remain on leave until the appeal of her demotion was resolved was not a request for indefinite leave, as she ''provided a general timeframe for her return in the near future''), *appeal filed* (10th Cir. May 2, 2023); *Johnson* v. *Del. Cnty. Cmty. Coll.,* 2:15–CV–01310, 2015 WL 8316624, at *1, *5 (E.D. Pa. Dec. 9, 2015) (determining that a custodian, who was on medical leave for nearly 5 months due to a knee injury and requested ''a brief extension of medical leave'' to undergo surgery and physical therapy, ''did not request an indefinite leave''); *Criado* v. *IBM Corp.,* 145 F.3d 437, 443–44 (1st Cir. 1998) (concluding that an employee's request for additional leave to ''allow her physician to design an effective treatment program'' with no specific return date given could be a reasonable accommodation); *Graves* v. *Finch Pryun & Co.,* 457 F.3d 181, 185–86 (2d Cir. 2006) (reasoning that an employee's request ''for 'more time' to get a doctor's appointment'' that would take ''maybe a couple weeks'' was not a request for indefinite leave).

[124] The fact that an exact date is not necessary is supported by the definition in the statute, which requires that the essential function(s) ''could'' be performed in the near future. 42 U.S.C. 2000gg(6)(B).

[125] *See, e.g., Robert,* 691 F.3d at 1218 (citing a case in which a 6-month leave request was too long to be a reasonable accommodation but declining to address whether, in the instant case, a further exemption following the 6-month temporary accommodation at issue would exceed ''reasonable durational bounds'') (citing *Epps* v. *City of Pine Lawn,* 353 F.3d 588, 593 (8th Cir. 2003)); *see also Blanchet* v. *Charter Commc'ns, LLC,* 27 F.4th 1221, 1225–26, 1230–31 (6th Cir. 2022) (determining that a pregnant employee who developed postpartum depression and requested a 5-month leave after her initial return date and was fired after requesting an additional 60 days of leave could still be ''qualified,'' as additional leave could have been a reasonable accommodation); *Cleveland* v. *Fed. Express Corp.,* 83 F. App'x 74, 76–81 (6th Cir. 2003) (declining ''to adopt a bright-line rule defining a maximum duration of leave that can constitute a reasonable accommodation'' and determining that a 6-month medical leave for a pregnant employee with systemic lupus could be a reasonable accommodation); *Garcia-Ayala* v. *Lederle Parenterals, Inc.,* 212 F.3d 638, 641–42, 646–49 (1st Cir. 2000) (reversing the district court's finding that a secretary was not a ''qualified individual'' under the ADA because additional months of unpaid leave could be a reasonable accommodation, even though she had already taken over year of medical leave for breast cancer treatment, and rejecting per se rules as to when additional medical leave is unreasonable); *Nunes* v. *Wal-Mart Stores, Inc.,* 164 F.3d 1243, 1245–1247 (9th Cir. 1999) (holding that, because extending leave to 9 months to treat a fainting disorder could be a reasonable accommodation, an employee's inability to work during that period of leave did not automatically render her unqualified); *Cayetano* v. *Fed. Express Corp.,* No. 1:19–CV–10619, 2022 WL 2467735, at *1–*2, *4–*7 (S.D.N.Y. July 6, 2022) (determining that an employee who underwent shoulder surgery

Continued

believes, however, that depending on the facts of a case ''in the near future'' may extend beyond the 6-month limit suggested by some comments under the PWFA for three reasons.

First, what constitutes ''in the near future'' may differ depending on factors including, but not limited to, the known limitation and the employee's position. For example, an employee whose essential job functions require lifting during only the summer months would remain qualified even if unable to lift during a 7-month period over the fall, winter, and spring months because the employee could perform the essential function ''in the near future'' (in this case, as soon as the employee was required to perform that function). Second, the determination of whether the employee could resume the essential function(s) of their position in the near future is only one aspect of establishing that an employee is qualified despite not being able to perform an essential function(s). If the temporary suspension cannot be reasonably accommodated or if the temporary suspension causes an undue hardship, the employer is not required to provide a reasonable accommodation. Third, as detailed in the NPRM, especially in the first year after giving birth, employees may experience serious health issues related to pregnancy, childbirth, or related medical conditions that may prevent them from performing the essential function(s) of their positions.[126] Accommodating these situations and allowing employees to stay employed is one of the key purposes of the PWFA. To assist employers and employees in making this determination, the Commission has added several examples in the Interpretive Guidance in section *1636.3(f)(2) Qualified Employee—Temporary Suspension of an Essential Function(s)* regarding ''in the near future'' and non-pregnancy conditions.

Additionally, the Commission disagrees that the terms ''temporary'' and ''in the near future'' should be defined using the definition of ''transitory'' under the ADA.[127] Congress knew of this definition but decided not to incorporate it into the PWFA and used different terms (''temporary'' and ''in the near future,'' not ''transitory'').

Comments and Response to Comments Regarding Leave Not Being Part of the Calculation of the Temporary Suspension of an Essential Function(s)

The Commission did not receive many comments regarding whether leave should be counted as part of the definition of ''qualified'' for the suspension of an essential function(s). Those comments it did receive supported the Commission's view that it should not be counted; the Commission has maintained that position.

Comments and Response to Comments Regarding Resetting the Clock for the Temporary Suspension of an Essential Function(s)

The Commission received several comments regarding the proposal that the clock for determining ''in the near future'' should reset after childbirth. Some comments supported this for the reasons set out in the NPRM, specifically, that a pregnant employee cannot know whether or for how long they will need the temporary suspension of an essential function(s) after they give birth. Further, not resetting the clock could create the same issues discussed above of creating dangerous or perverse incentives for employees to ''save'' the temporary suspension of an essential function(s) for later in their pregnancy or post-pregnancy, even when it could lead to potential risks to their health or the health of their pregnancy. Conversely, several comments argued that allowing the clock to reset would permit employees to ''stack'' the temporary suspension of essential functions to get more than 40 weeks of an essential function(s) suspended. Given that the definition of ''in the near future'' for non-pregnancy issues has changed, this is less of a concern for the final rule. Additionally, as stated above, employees are not automatically granted 40 weeks of suspension of an essential function(s) during pregnancy under the regulation. Rather, they are merely considered ''qualified.'' Many employees will need less than 40 weeks of a temporary suspension of an essential function(s).

The Commission also received comments recommending that resetting the clock be added to the regulation itself. Because this general rule—that the determination of ''qualified'' is made at the time of the employment decision [128]—applies to all accommodations, the Commission has not added it to this part of the regulation. The Commission has included this general rule in the Interpretive Guidance in section *1636.3(f) Qualified Employee* and has added a specific reference to when essential functions are being temporarily suspended to state that determining ''in the near future'' should start at the time of the employment decision in the Interpretive Guidance in section *1636.3(f)(2)(ii) In the Near Future.*

The Commission also received comments interpreting the statute to say that only one essential function could be temporarily suspended in a given pregnancy. The Commission disagrees. First, the Commission notes that in interpreting acts of Congress, ''words importing the singular apply to several persons, parties, or things'' unless the context indicates otherwise.[129] Further, such a rule would undercut the purpose of the PWFA and lead to lengthy delays for litigation about what specific essential function was being suspended and whether it was the same or a different function. Such a rule also does not reflect that a pregnant employee may need more than one essential function suspended or different essential functions suspended at different times.

1636.3(f)(2)(iii) Can Be Reasonably Accommodated

The Commission received a few comments on its proposed definition of ''can be reasonably accommodated'' that claimed that the NPRM had conflated this provision with undue hardship. Other comments suggested that this provision required a new definition, with a lower standard than ''undue hardship,'' that a covered entity could meet to show that the temporary suspension of the essential function(s) could not be reasonably accommodated. The Commission disagrees with these comments and is retaining the definition of this section set forth in the NPRM. The Commission expects that the language that the temporary suspension of an essential function(s)

could be ''qualified'' because 6 months of leave is not per se unreasonable as a matter of law); *Durrant* v. *Chemical/Chase Bank/Manhattan Bank, N.A.,* 81 F. Supp. 2d 518, 519, 521–22 (S.D.N.Y. 2000) (concluding that an employee who was on leave for nearly 1 year due to a leg injury and extended her leave to treat a psychiatric condition could be ''qualified'' under the ADA with the accommodation of additional leave of reasonable duration).The Commission is aware of and disagrees with ADA cases that held, for example, that 2 to 3 months of leave following a 12-week FMLA period was presumptively unreasonable as an accommodation. *See, e.g., Severson* v. *Heartland Woodcraft, Inc.,* 872 F.3d 476, 481 (7th Cir. 2017).

[126] *See* Susanna Trost et al., U.S. Dep't of Health & Hum. Servs., Ctrs. For Disease Control & Prevention, *Pregnancy-Related Deaths: Data from Maternal Mortality Review Committees in 36 U.S. States, 2017–2019* (2022), *https://www.cdc.gov/reproductivehealth/maternal-mortality/erase-mm/data-mmrc.html* (stating that 53% of pregnancy-related deaths occurred from one week to one year after delivery, and 30% occurred one- and one-half months to one year postpartum).

[127] 42 U.S.C. 12102(3)(B).

[128] *See* 29 CFR part 1630, appendix, 1630.2(m).

[129] 1 U.S.C. 1.

''can be reasonably accommodated'' will be interpreted similarly to the idea that an individual is ''qualified'' if they can do the job with or without a reasonable accommodation. If, under the first definition of ''qualified,'' an employee cannot perform the essential functions of the position without a reasonable accommodation, and there is no reasonable accommodation, the employee is not qualified. Similarly, if the temporary suspension of the essential function(s) cannot be ''reasonably accommodated,'' the employee is not qualified. Thus, the definition of ''can be reasonably accommodated'' provides suggested means by which the temporary suspension of an essential function(s) can be reasonably accommodated. Whether granting the accommodation would impose undue hardship on the operation of the business of the covered entity is a separate analysis.[130] The Commission has removed the reference to undue hardship from this section in the Interpretive Guidance in order to avoid any confusion.

The Commission made a few changes to the examples in this section in the Interpretive Guidance. The Commission deleted former Example #7 from this section. In former Examples #8 and #9 (now Examples #1 and #2), the Commission added: facts to clarify that there is work for the employees to accomplish; the phrase ''affected by, or arising out of'' after ''related to''; and that the employees need an accommodation ''due to'' their limitation. The Commission removed the sentences regarding undue hardship in order to focus the examples on the issue of ''qualified.'' The Commission also added three additional examples to this section.

1636.3(g) Essential Functions

The NPRM adopted the definition of ''essential functions'' contained in the ADA regulation and sought comment on whether there were additional factors that should be considered in determining whether a function is ''essential'' for the purposes of the PWFA. Several comments suggested clarifications or departures from the definition of ''essential functions'' set forth in the ADA. These suggestions included proposed additions to the overall definition of ''essential functions''; a request to add a factor to § 1636.3(g)(1) to further explain when a particular function is ''essential''; and requests to delete, add, combine, or reorganize the factors in § 1636.3(g)(2) that can establish whether a particular function is ''essential.''

First, a few comments suggested adding language to § 1636.3(g) that would define essential functions as discrete tasks and clarify that essential functions are not conditions of employment regarding when, where, and how discrete tasks are performed. The Commission declines to adopt this proposal. The term ''essential functions'' in the PWFA is the same term used in the ADA, and therefore the definition of ''essential functions'' in the ADA regulation is instructive.[131] The Commission concludes that the suggested departure from the language and definition used in the ADA regulation is not appropriate. Although in the Commission's view, conditions of employment that are completely divorced from any job duties (*e.g.,* a requirement of ''regular attendance'' or ''in-person work'') are not essential functions in and of themselves, certain essential functions may need to be performed in a particular manner, time, or location.[132] For example, a neurosurgeon hired to perform surgeries may have to perform those surgeries in a sterile operating room; a receptionist hired to greet clients and answer calls during business hours may need to be available at certain times of day; and a truck driver responsible for transporting hazardous materials may need to use a specific type of vehicle. The final regulation, therefore, maintains the ADA regulatory language from 29 CFR 1630.2(n)(1).[133]

Second, the Commission received comments requesting that it add a factor to those listed in § 1636.3(g)(1) examining whether the function was essential during the limited time for which the accommodation is needed. As described in the next paragraph, the Commission has added this consideration to § 1636.3(g)(2). Because the list of factors in § 1636.3(g)(1) is non-exhaustive, the Commission has retained the factors in § 1636.3(g)(1).

Third, the Commission received comments requesting modification, addition, reorganization, or deletion of factors in § 1636.3(g)(2) that can be used to show a function is ''essential.'' Because the factors in § 1636.3(g)(2) are not exhaustive, the Commission declines to delete any factors, as this could incorrectly suggest that those factors are not relevant to PWFA accommodations. Additionally, the Commission declines to reorder any factors to emphasize their importance, as the factors in § 1636.3(g)(2) are not set forth in order of importance and the significance of any particular factor will vary by case. However, in response to comments that essential functions may change over time (or even by season), and that variations in essential functions are particularly important where the need for accommodation is temporary (as is the case for most known limitations), the Commission has made changes to § 1636.3(g)(2)(iii) to clarify that seasonal or other temporal variations in essential functions should be considered.

Some comments asked for clarification on whether the employer's judgment on essential functions is given priority and whether an employer's framing of the essential job functions can undermine or limit an individual's right to accommodation under the PWFA. First, as in the ADA, an employer's judgment as to which functions are ''essential'' is given due consideration among various types of relevant evidence but is not dispositive.[134] Therefore, evidence that is contrary to the employer's judgment may be presented and used to demonstrate the employer's judgment is incorrect. To this point, the Commission also has revised the language in the Interpretive Guidance in section *1636.3(g) Essential Functions* to reinforce that the listed factors in § 1636.3(g)(2) are non-exhaustive and fact-specific, which further underscores that no single factor is dispositive, that not all factors apply in each case, and that additional factors may be considered.

Finally, some comments questioned the effect of a temporary suspension of an essential function(s) as a reasonable accommodation on future determinations of whether the function was essential. Temporary suspension of an essential function(s) as a reasonable accommodation pursuant to the PWFA does not mean that the function(s) is no longer essential. Whether something is an essential function(s) remains a fact-specific determination, and the employer's temporary suspension of a job function(s) does not bar the employer from contending that the function(s) is essential for other accommodation requests in the future.

[130] *See, e.g., Barnett,* 535 U.S. at 401–02 (describing ADA accommodations cases where, to defeat summary judgment, a worker must show that the accommodation ''seems reasonable on its face''; after such a showing, the employer must show specific circumstances to prove an undue hardship).

[131] H.R. Rep. No. 117–27, pt. 1, at 28.

[132] *See Enforcement Guidance on Reasonable Accommodation, supra* note 111, at Questions 22 & 34.

[133] For completeness, the Commission has added ''with a known limitation under the PWFA'' after the word ''employee'' in the regulation.

[134] *See* 29 CFR part 1630, appendix 1630.2(n).

1636.3(h) Reasonable Accommodation—Generally

1636.3(h)(1) Definition of Reasonable Accommodation

The Commission received very few comments regarding the definition of reasonable accommodation, which uses the language from the ADA with certain changes to account for the differences in statutes. The Commission is retaining the definition of reasonable accommodation from the NPRM, with the following technical edits to § 1636.3(h)(1): insertion of the term ''qualified'' in the definition of reasonable accommodation relating to applicants; [135] and removal of the term ''qualified'' and addition of the phrase ''as are enjoyed by its other similarly situated employees without known limitations'' in the definition of reasonable accommodation related to benefits and privileges of employment.[136] These technical edits are necessary so that the definition of reasonable accommodation parallels the ADA definition, as required by the PWFA.

The Commission also has moved the explanation of how to request a reasonable accommodation, which was formerly part of § 1636.3(d), to § 1636.3(h)(2). As a result, the parts of § 1636.3(h) have been renumbered so that the definition of reasonable accommodation is at § 1636.3(h)(1)(i) through (iv), and information regarding the interactive process is located at § 1636.3(h)(3).[137]

1636.3(h)(2) How To Request a Reasonable Accommodation

The final rule contains a new section, § 1636.3(h)(2), that explains how an employee may request a reasonable accommodation. This information was proposed to appear at § 1636.3(d).

The Commission received several comments regarding this section when it was part of the ''Communicated to the Employer'' definition in the NPRM. First, comments expressed concern that the Commission's original language (that this was the process to ''request'' a reasonable accommodation) would add a requirement that employees phrase this as a ''request'' and that employees may not know that they have the right to make such a request. The Commission declines to change this provision. The examples in the NPRM (now Examples #6 to #11 in the Interpretive Guidance in section *1636.3(h)(2) How To Request a Reasonable Accommodation*) do not require that the communication be phrased as a request. Additionally, ''request for accommodation'' is the language the Commission uses in its ADA guidance,[138] and the Commission believes that changing the language on this point would create confusion. However, to respond to the comments, the Commission has added in the Interpretive Guidance in section *1636.3(h)(2) How To Request a Reasonable Accommodation* that a request for a reasonable accommodation need not be formulated as a ''request.''

Second, many comments suggested alternative language to proposed § 1636.3(d)(3)(i) and (ii) (§ 1636.3(h)(2)(i) and (ii) in the final rule), stating that the emphasis should be that the limitation necessitates a change (rather than the employee needing a change), that the rule should require a limitation ''or'' needing a change (rather than ''and''), or that communicating the limitation was sufficient. The Commission declines to make these changes. First, the Commission does not think it is appropriate or accurate to require that the limitation ''necessitates'' a change; this may increase the burden on what an employee would have to show and would complicate what should be simple communication. Second, while the Commission agrees that the statute provides for accommodations for known limitations, having the process start simply because the employee communicated a known limitation could lead to situations where the accommodation process begins when it was not the employee's intention, or it could lead to covered entities assuming that an accommodation is necessary which could result in violations of 42 U.S.C. 2000gg–1(2).

Finally, some comments recommended including that the employee must connect the need for the change with the limitation. The Commission agrees with this change and has added that idea to § 1636.3(h)(2) (''needs an adjustment or change at work due to the limitation''). As with the ADA and as shown in Examples #6 to #11, this is a simple communication that does not require specific words.

The Commission also has moved the point that was in § 1636.3(b) in the proposed regulation—that the employee need not mention a specific medical condition from the list in § 1636.3(b), or indeed any medical condition, or use medical terms—to § 1636.3(h)(2)(ii) so that all of the information about requesting an accommodation is in one place.

Many comments addressed with whom the employee must communicate in order to start the process. As with the definition of ''Communicated to the Employer'' (§ 1636.3(d)), the employer should permit an employee to request an accommodation through multiple avenues and means. Thus, the individuals at the covered entity to whom an employee may communicate to start the reasonable accommodation process are the same as those in § 1636.3(d), and the Interpretive Guidance language for that provision applies to requesting a reasonable accommodation as well. Some comments recommended against allowing for a broad range of individuals at the covered entity who could receive such requests because those who receive such requests require training; other comments stated that an employer should be able through its policy to limit the individuals who can receive such a request. The Commission did not make changes to support these views because the steps to request a reasonable accommodation should not be made more difficult and the individuals identified in § 1636.3(d) should be able to receive and direct the requests if they are not able to grant them independently.

Several comments also addressed whether the employer could require the process to start by the employee filling in a form and whether, if the employer had a process, the employee was required to follow it so that a request would be considered only when made to the entity identified in the employer's policy. The Commission did not adopt either of these views. First, requiring an employee to create a written request or to follow a specific provision to begin the reasonable accommodation process is contrary to the idea that this should not be a difficult or burdensome task for employees. Second, as one comment pointed out, some employees, such as those facing intimate partner violence, may be cautious or afraid of putting into

[135] As under the ADA, the term ''qualified'' in relation to applicants that are entitled to reasonable accommodation under the PWFA refers to whether the applicant meets the initial requirements for the job in order to be considered and not whether the applicant is able to perform the essential functions of the position with or without an accommodation. *See Enforcement Guidance on Reasonable Accommodation, supra* note 111, at Question 13, Example A and B.

[136] As under the ADA, reasonable accommodation to enable employees to enjoy equal benefits and privileges under the PWFA does not turn on whether an employee is qualified but on whether the benefit or privilege is available to those who are similarly situated. *See* 29 CFR 1630.2(o)(1)(iii).

[137] The Commission has not included the section from the proposed appendix ''Additions to the Definition of Reasonable Accommodation'' in the Interpretive Guidance because its explanation of the PWFA and ADA rule regarding the definition of reasonable accommodation is not necessary for the final Interpretive Guidance.

[138] *See Enforcement Guidance on Reasonable Accommodation, supra* note 111, at Question 1.

writing their need for an accommodation.[139] Third, many of the limitations and accommodations under the PWFA will be small or minor; the Commission expects that most accommodations will be provided following nothing more than a conversation or email between the employee and their supervisor, and there will not be any other forms or processes. If an employer does have a process to confirm what was stated in the initial request and that process uses a form, the form should be a simple one that does not deter the employee from making the request and does not delay the provision of an accommodation.

Alleviating Increased Pain or Risk to Health Due to the Known Limitation

First, the Commission received numerous comments recommending that the amelioration of pain or risk be added to the list in § 1636.3(h) for the definition of the term ''reasonable accommodation.'' The Commission is not making this change. The statute at 42 U.S.C. 2000gg(7) states that the term ''reasonable accommodation'' shall have the same meaning under the PWFA as it has in the ADA and the regulation under the PWFA. Section 1636.3(h) uses the same definition as in the ADA and adds one paragraph regarding the temporary suspension of essential functions, which is necessary pursuant to 42 U.S.C. 2000gg(6). As explained in the NPRM and in the Interpretive Guidance in section *1636.3(h)* under *Alleviating Increased Pain or Risk to Health Due to the Known Limitation,* accommodations to alleviate increased pain or risk fit under the current paragraphs in § 1636.3(h)(1)(i) through (iv).[140] This includes situations where an employee can do the essential functions of the position, and the accommodation is to alleviate increased pain or risk due to the known limitation.[141] This is because the reasonable accommodations operate to ''remove[ ] or alleviate[ ]'' a covered individual's ''barriers to the equal employment opportunity,'' which may include making reasonable accommodations that mitigate the increased pain or a health risk a qualified employee experiences related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions when performing their job.[142]

Second, the Commission received several comments suggesting an edit to § 1636.3(i)(2) in the proposed regulation, which listed examples of possible reasonable accommodations. The comments pointed out that ''adjustments to allow an employee or applicant to work without increased pain or risk to the employee's or applicant's health or the health of the employee's or applicant's pregnancy'' are the only accommodations listed that are expressly required to be ''due to the employee's or applicant's known limitation,'' even though that is obviously true for any of the other listed accommodations. The Commission agrees and has made this edit.

Third, the Commission received numerous suggestions of additional examples to include in this section to illustrate modifications to alleviate increased pain or risk. The Commission has added additional examples and information in the Interpretive Guidance in section *1636.3(h)* under *Alleviating Increased Pain or Risk to Health Due to the Known Limitation,* including, as suggested by some comments, examples involving exposure to chemicals, commuting, excessive heat, and contagious diseases. The Commission also has deleted one example.

Finally, the Commission received some comments expressing concern that the proposed appendix examples' focus on what was and what was not related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions would lead to employers focusing on this issue, requiring documentation regarding this issue, and denying accommodations. These comments also pointed out that, given pregnancy's effect on the whole body, the situations set out in the examples, especially former Examples #10 and #13 (now Examples #12 and #15 in the Interpretive Guidance in section *1636.3(h)* under *Alleviating Increased Pain or Risk to Health Due to the Known Limitation*), were unrealistic and could cause covered entities and employees to waste time trying to determine whether a limitation was related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. The Commission appreciates the concerns raised regarding these examples. At the same time, it is important that covered entities and employees understand the principles illustrated in the examples so that voluntary compliance with the PWFA is maximized. The Commission has edited these examples to account for these concerns by, for example, changing or deleting language regarding the limitations that in the example may not have been related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. Finally, in order to highlight different reasons for accommodations, the Commission has changed one of the examples to include lactation.

[139] Am. Coll. Of Obstetricians & Gynecologists, Comm. Opinion No. 518, *Intimate Partner Violence* (Feb. 2012; reaff'd 2022), *https://www.acog.org/clinical/clinical-guidance/committee-opinion/articles/2012/02/intimate-partner-violence* (''Approximately 324,000 pregnant women are abused each year in the United States. . . . [T]he severity of violence may sometimes escalate during pregnancy or the postpartum period.'').

[140] 88 FR 54727 n.85 (''Depending on the facts of the case, the accommodation sought will allow the employee to apply for the position, to perform the essential functions of the job, to enjoy equal benefits and privileges of employment, or allow the temporary suspension of an essential function of the job.'').

[141] Many Federal circuit courts to have considered this issue have agreed that under the ADA, an accommodation needed to enable an employee to work without pain or risk to health may be required, even if the employee can perform the essential job functions without the accommodation. *See Burnett* v. *Ocean Props., Ltd.,* 987 F.3d 57, 68–69 (1st Cir. 2021) (observing that the plaintiff's ability to perform the essential functions of his job, albeit at the risk of bodily injury, ''does not necessarily mean he did not require an accommodation or that his requested accommodation was unreasonable''); *Bell* v. *O'Reilly Auto Enters., LLC,* 972 F.3d 21, 24 (1st Cir. 2020) (''An employee who can, with some difficulty, perform the essential functions of his job without accommodation remains eligible to request and receive a reasonable accommodation.''); *Hill* v. *Ass'n for Renewal in Educ.,* 897 F.3d 232, 239 (D.C. Cir. 2018) (rejecting the argument that no accommodation was required because the plaintiff ''could perform the essential functions of his job without accommodation, 'but not without pain'''); *Gleed* v. *AT&T Mobility Servs.,* 613 F. App'x 535, 538–39 (6th Cir. 2015) (rejecting the argument that ''if Gleed was physically capable of doing his job—no matter the pain or risk to his health—then it had no obligation to provide him with any accommodation, reasonable or not''); *Feist* v. *La. Dep't of Justice,* 730 F.3d 450, 453 (5th Cir. 2013) (''[T]he language of the ADA, and all available interpretive authority, indicate[s] that'' ''reasonable accommodations are not restricted to modifications that enable performance of essential job functions.''); *Sanchez* v. *Vilsack,* 695 F.3d 1174, 1182 (10th Cir. 2012) (rejecting the argument that the Rehabilitation Act requires accommodation ''only if an employee cannot perform the essential functions of her job''); *Buckingham* v. *United States,* 998 F.2d 735, 740 (9th Cir. 1993) (stating that, under the Rehabilitation Act, ''employers are not relieved of their duty to accommodate when employees are already able to perform the essential functions of the job''). Even cases that have rejected this idea have done so on a very limited basis. *See Hopman* v. *Union Pac. R.R.,* 68 F.4th 394, 402 (8th Cir. 2023) (refusing to endorse the employer's argument that the ADA ''requires employers to provide reasonable accommodations only when necessary to enable employees to perform the essential functions of their jobs'' in all cases and observing that the requirement to accommodate will be fact-specific); *Brumfield* v. *City of Chicago,* 735 F.3d 619, 632 (7th Cir. 2013) (holding that ''an employer need not accommodate a disability that is irrelevant to an employee's ability to perform the essential functions of her job,'' but not addressing whether alleviating pain is ''irrelevant'' to essential job functions).

[142] *See* 29 CFR part 1630, appendix, 1630.9 (''The reasonable accommodation requirement [under the ADA] is best understood as a means by which barriers to the equal employment opportunity of an individual with a disability are removed or alleviated.'').

Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations

The Commission received many comments agreeing with the general principle that covered entities must ensure that their workplace policies or practices do not operate to penalize employees for utilizing accommodations under the PWFA. Many of these comments also asked for additional clarification and examples.

First, numerous comments suggested that the Commission explicitly state that the general rule that a covered entity does not have to waive a production standard as a reasonable accommodation does not apply when an employee has received the temporary suspension of an essential function(s) as a reasonable accommodation and the production standard would normally apply to the performance of that function. Applying such a production standard when the essential function(s) is temporarily suspended would penalize the employee for using the reasonable accommodation. The Commission agrees and has made this clarification in the Interpretive Guidance in section *1636.3(h)* under *Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations.*

One comment recommended clarifying that the definition of ''production standards'' includes not penalizing an employee for lower ''productivity,'' ''focus,'' ''availability,'' or ''contributions'' if the employee's lower production in those areas is due to the employee's reasonable accommodation. The Commission agrees. For example, if, as a reasonable accommodation, an employee is not working overtime, and ''availability'' or ''contribution'' is measured by an employee's working overtime, an employee should not be penalized in these categories. This concept has been added to the Interpretive Guidance in section *1636.3(h)* under *Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations.*

A few comments noted that in addition to potentially violating 42 U.S.C. 2000gg–1(5) and 2000gg–2(f), penalizing an employee for using a reasonable accommodation could violate 42 U.S.C. 2000gg–1(1), because by doing so the covered entity would not be providing an effective accommodation. The Commission agrees and has made this change in the Interpretive Guidance in section *1636.3(h)* under *Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations.*

Several comments suggested examples for this section focusing on no-fault attendance policies and electronic productivity monitoring. The Commission added two examples to this section and moved Example #30 from the NPRM (now Example #22) to this section with some edits. The Commission also added language to the Interpretive Guidance in section *1636.3(h)* under *Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations* about the types of rules that may need to be considered.

One comment stated that allowing employers to not pay for break time was, in effect, penalizing employees for taking those breaks. For the reasons explained in the section on leave, the Commission is adhering to the approach under the ADA that whether or not leave or breaks are paid depends on how the employer normally treats such time away from work and the requirements of other laws.

A final set of comments on this issue requested clarification regarding whether specific situations would be seen as penalizing an employee for using a reasonable accommodation. Specifically, comments asked whether pay could be lowered or whether merit-based incentives tied to the performance of the essential function(s) could be omitted if the employee was not performing an essential function(s). One comment asked whether an employee could be required to work extra time to make up for time spent on breaks.

Whether these situations regarding the temporary suspension of an essential function(s) would be viewed as penalizing a qualified employee in violation of the PWFA depends on certain factors. As stated in § 1636.4(a)(4), if a covered entity is choosing between accommodations, it must select the one that provides the qualified employee with equal employment opportunity, which includes no reduction in pay, advancement, or bonuses. If the only accommodation available for the temporary suspension of the essential function(s) requires the temporary reassignment of the qualified employee to a job that pays less, and the employer's practice in these situations is to lower the pay of employees temporarily assigned to such a position, the employer may make the temporary reassignment and the PWFA does not prohibit the employer from reducing the qualified employee's pay. Both conditions must be true: (1) that there is no other reasonable accommodation that does not pose an undue hardship and (2) that this is the employer's normal practice in these situations. Similarly, an employer could limit bonuses related to the performance of an essential function(s) that has been temporarily suspended if there is not another accommodation that provides equal employment opportunity, and this is the employer's normal practice in these situations.

For situations where the reasonable accommodation is additional breaks, a qualified employee may be given the opportunity to make up the additional time and may choose to do so. However, if making up the time renders the accommodation ineffective (for example, because the breaks are due to fatigue), the employer may not require the qualified employee to do so.

Personal Use

The Commission received very limited comments on this section. The Commission has made one minor change to the language in the Interpretive Guidance for this section (removing reference to a ''white noise machine'').

Particular Matters Regarding Leave as a Reasonable Accommodation

The Commission received numerous comments on its discussion of leave as a reasonable accommodation, including requests for clarification regarding the purpose and length of leave as a reasonable accommodation, as well as the application of the undue hardship standard to leave. Other comments recommended changes to the rules for paid leave and the continuation of health insurance while on leave. Some suggested that the PWFA explicitly provide coverage for ''extended leave.''

As set out in the NPRM, the Commission has long recognized the use of leave as a potential reasonable accommodation under the ADA.[143] Leave as a reasonable accommodation under the PWFA can be for any known limitation and includes leave for health care and treatment of pregnancy, childbirth, and related medical conditions and recovery from pregnancy, childbirth, and related medical conditions. The Commission declines to include the term ''extended leave'' in the regulation or Interpretive Guidance. The amount of leave under the PWFA depends on the employee and the known limitation and thus the term ''extended'' in this context does not have a uniform definition. In response to a few comments, the Commission has changed the language in § 1636.3(i)(3)(i) slightly to specifically provide that leave is available to recover

[143] 88 FR 54728.

from any related medical condition. This was implied by the language in the NPRM, which stated that leave for recovery was available and described an explicitly non-exhaustive list of specific conditions. The Commission has also removed the word ''receive'' before ''unpaid leave'' in § 1636.3(i)(3)(i) to be consistent with how it refers to unpaid leave.

Two groups of comments sought clarifications regarding leave and undue hardship. First, some comments agreed with proposed § 1636.3(i)(3)(iv), which states that concerns about the length, frequency, or unpredictable nature of leave are questions of undue hardship. However, the comments also suggested that the Commission make clear that it is not merely the fact that leave is long, frequent, or unpredictable that makes it an undue hardship. Rather, those factors may be considered to the extent that they impact the established undue hardship considerations. Thus, the fact that leave is unpredictable is not sufficient—standing alone—to make it an undue hardship; rather, the employer would have to show the unpredictable leave caused significant difficulty or expense on the operation of the business. The Commission agrees with these comments. Because this concept sets out how undue hardship and leave should interact, the Commission has determined that it is more appropriately discussed in the Interpretive Guidance rather than the regulation itself. Section 1636.3(i)(3)(iv) has, therefore, been removed from the regulation and the issue is instead discussed in the Interpretive Guidance in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation.*

The other set of comments regarding undue hardship stated that the mere fact that an employee has taken leave should not be determinative in assessing undue hardship, but rather the impact of that leave should be determined by using the undue hardship factors in § 1636.3(j)(2). The Commission agrees and has added this information to the Interpretive Guidance in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation* because proposed § 1636.3(i)(3)(iv) has been removed from the regulation.

Many comments recommended that, instead of looking to an employer's policies for individuals in similar situations, paid leave and continuation of health insurance should be designated as possible accommodations under the PWFA. The Commission declines to make this change. The current language in the Interpretive Guidance in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation* is the same as under the ADA. The PWFA at 42 U.S.C. 2000gg(7) provides that the term ''reasonable accommodation'' should have the same meaning as in the ADA and the PWFA regulations. Thus, the Commission is maintaining this definition.

Finally, a few comments recommended that a short amount of leave (*e.g.,* 2 days) could be a reasonable accommodation while the covered entity determines what other reasonable accommodations are possible or during the interactive process. The response to this suggestion is discussed in the preamble in section *1636.3(h)* under *Interim Reasonable Accommodations.*

All Services and Programs

The Commission received very limited comments on this section. The Commission has added language in the Interpretive Guidance in section *1636.3(h)* under *All Services and Programs* to clarify that the term ''all services and programs'' includes situations where a qualified employee is traveling for work and may need, for example, accommodations at a different work site.

Interim Reasonable Accommodations

The Commission received numerous comments regarding interim reasonable accommodations, including requests to provide examples of when interim reasonable accommodations are needed, recommendations that the provision be strengthened or made mandatory, discussion of the provision of leave as an interim reasonable accommodation, and suggestions of alternative definitions for ''interim reasonable accommodations.''

Some comments provided helpful real-world examples of when interim reasonable accommodations are needed. For example, one comment stated that after asking for an accommodation, some pregnant employees are required to ''continue to lift, push, and pull heavy objects'' and ''drive when not fit to do so'' in violation of the recommendations of their health care providers as they wait for the decision about their reasonable accommodation from their employer.[144] The same comment noted that some employees have been fired while waiting to hear whether they can receive a reasonable accommodation because the employee cannot do the job without one.[145] Another comment described a situation where an employee was put on leave after asking for a reasonable accommodation because the request occurred on a Friday afternoon, the employee was scheduled to work on Sunday, and the staff to address the provision of reasonable accommodations were not available until the beginning of the next week.[146] A comment from an organization noted that employees call their hotline after weeks of waiting for a response on a request for an accommodation, and during that time ''they must continue to perform duties that put their health or the health of their pregnancy at risk so they can earn a paycheck and maintain their health insurance.'' [147]

The Commission understands the dilemma facing both employers and employees in circumstances where the accommodation is needed immediately but cannot be provided immediately. Requiring an employee to take leave (whether paid or unpaid) in this situation can be harmful to the employee, either because it will require the employee to exhaust their paid leave or because it will require an employee to go without income. In the face of these reasonable reactions to what is, based on comments received, a common situation, the Commission has added information regarding interim reasonable accommodations to the Interpretive Guidance in section *1636.3(h)* under *Interim Reasonable Accommodations.*

An interim reasonable accommodation can be used when there is a delay in providing the reasonable accommodation. For example, an interim reasonable accommodation may be needed when there is a sudden onset of a known limitation under the PWFA, including one that makes it unsafe, risky, or dangerous to perform the normal tasks of the job, when the interactive process is ongoing, when the parties are waiting for a piece of equipment, or when the employee is waiting for the employer's decision on the accommodation request.

Interim reasonable accommodations are not required. However, providing an interim reasonable accommodation is a best practice under the PWFA and may help limit a covered entity's exposure to liability under 42 U.S.C. 2000gg–1(1) and § 1636.4(a)(1) (''An unnecessary delay in providing a reasonable accommodation to the known limitations related to pregnancy, childbirth, or related medical conditions

[144] Comment EEOC–2023–0004–98479, The Center for WorkLife Law, at 11 (Oct. 10, 2023).

[145] *Id.* at 2.

[146] Comment EEOC–2023–0004–34728, Cloquet Area Fire District (Sept. 12, 2023).

[147] Comment EEOC–2023–0004–98479, The Center for WorkLife Law, at 2 (Oct. 10, 2023).

of a qualified employee may result in a violation of the PWFA if the delay constitutes a failure to provide a reasonable accommodation.''). Furthermore, depending on the circumstances, requiring an employee to take leave as an interim reasonable accommodation may violate 42 U.S.C. 2000gg–2(f). To help illustrate these principles, the Commission has added additional examples regarding this issue to the Interpretive Guidance in section *1636.3(h)* under *Interim Reasonable Accommodations.*

Finally, in response to several comments, the Commission declines to define ''interim reasonable accommodation'' differently than ''reasonable accommodation.'' The term ''reasonable accommodation'' is already defined under the ADA and the PWFA.[148] The Commission declines to create a new definition for such a similar term because it will create confusion.

1636.3(i) Reasonable Accommodation—Examples

The Commission received numerous requests for additional examples and suggested edits for existing examples in this section. In response, the Commission has added a few examples to explain specific points, using a variety of employees to illustrate that the PWFA applies to all types of occupations and professions. Further, the Commission has made minor edits to the language in the examples from the NPRM to standardize the language and format used in these examples. For example, the Commission added ''affected by, or arising out of'' after ''related to,'' added ''pregnancy, childbirth, or related medical conditions,'' and added that the adjustment or change at work is ''due to'' the limitation.

The Commission did not receive comments related to § 1636.3(i)(1) from the NPRM. Comments the Commission received regarding § 1636.3(i)(2) and (4) from the NPRM are discussed below. Comments regarding § 1636.3(i)(3) from the NPRM (addressing leave as a reasonable accommodation) are discussed *supra* in the preamble in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation.* Comments received regarding § 1636.3(i)(5) from the NPRM (regarding the suspension of an essential function(s) as a reasonable accommodation) are discussed *supra* in the preamble in section *1636.3(f)(2) Temporary Suspension of an Essential Function(s)* and *infra* in the preamble in section *1636.3(j)(3) Undue Hardship—Temporary Suspension of an Essential Function(s).*

1636.3(i)(2) List of Possible Accommodations

The Commission received a few comments recommending that in addition to listing telework in § 1636.3(i)(2), the Commission include ''remote work'' and the ability to change work sites and add that telework is a possible accommodation to avoid heightened health risks, such as from communicable diseases. The Commission has added remote work and change in worksites to the non-exhaustive list of possible accommodations in § 1636.3(i)(2) and to the Interpretive Guidance. The Commission also deleted the word ''additional'' before ''unpaid leave'' in § 1636.3(i)(2) because unpaid leave can be an accommodation whether or not it is additional.[149]

In the Interpretive Guidance in section *1636.3(i) Reasonable Accommodation—Examples,* the Commission added within the possible accommodation of ''frequent breaks'' the situation where the regular location of the employee's workplace makes nursing during work hours a possibility because the child is within close proximity. This concept has also been added to the regulation in § 1636.3(i)(4)(iii). It also is described, in more detail, *infra* in the preamble in section *1636.3(i)(4) Examples of Reasonable Accommodations Related to Lactation* in the Commission's response to the comments for § 1636.3(i)(4).

1636.3(i)(4) Examples of Reasonable Accommodations Related to Lactation

As an initial matter, some comments suggested the Commission include additional conditions related to lactation, such as ''difficulty with attachment'' or ''inability to pump milk,'' in the illustrative, non-exhaustive list of related medical conditions in § 1636.3(b). As explained elsewhere, the Commission has not added or deleted any terms from its non-exhaustive list. The fact that these terms have not been added to the non-exhaustive list in § 1636.3(b) should not be interpreted to deny coverage for those conditions.

With regard to § 1636.3(i)(4), many comments expressed concern over the wording used in proposed § 1636.3(i)(4) which, in describing examples of accommodations related to lactation, referenced the Providing Urgent Maternal Protections for Nursing Mothers Act (PUMP Act) (Pub. L. 117–328, Div. KK, 136 Stat. 4459, 6093). Specifically, comments cautioned that the existing language could inadvertently create the impression that the PUMP Act does not require certain measures to ensure an adequate lactation space. To clarify this matter, the Commission has incorporated the suggested edits, both removing the introductory phrase in § 1636.3(i)(4)(ii) (''Whether the space for lactation is provided under the PUMP Act or paragraph (i)(4)(i) of this section'') and adding the phrase ''shielded from view and free from intrusion,'' which is utilized in the PUMP Act, in an effort to emphasize the PUMP Act's requirements and what can be a reasonable accommodation under the PWFA. For the same reason, the Commission has added the phrase ''a place other than a bathroom,'' also from the PUMP Act, to § 1636.3(i)(4)(ii).

Also related to the PUMP Act, some comments asserted that leave and breaks under the PWFA could improperly exceed those provided under the PUMP Act. The Commission does not agree. The PUMP Act provides covered employees with a reasonable break each time the employee has a need to express milk, for up to 1 year after giving birth.[150] There is not a maximum number of breaks.[151] The frequency, duration, and timing of breaks can vary;[152] thus, there is no defined number of breaks under the PUMP Act.

Another comment suggested that the Commission should not include accommodations related to lactation because the PUMP Act provides for breaks to pump at work and should be the exclusive mechanism for accommodations related to lactation. The Commission declines to make this change. The PUMP Act applies to almost all employees covered under the Fair Labor Standards Act of 1938, as amended (FLSA), 29 U.S.C. 201 *et seq.,* with exemptions created for specifically identified transportation-related jobs, and allows for employers with 50 or fewer employees to seek an exemption based on undue hardship.[153] The PWFA applies to all employers with 15 or more

[148] 29 CFR 1630.2(o) (ADA); § 1636.3(h) (PWFA).

[149] These changes are in addition to the change noted in the preamble in section *1636.3(h)* under *Alleviating Increased Pain or Risk to Health Due to the Known Limitation.*

[151] *See supra* note 150.

[152] *Id.*

[153] *Id.*

employees.[154] Congress passed both laws at the same time and decided which entities would be covered; the Commission has a responsibility to follow the text of the statute it has been charged with enforcing. Furthermore, an employer that is covered under the PWFA but not under the PUMP Act does not automatically have to provide a reasonable accommodation related to pumping; under the PWFA, the covered entity, regardless of size or industry, does not have to provide the accommodation if it causes an undue hardship in the specific situation. Additionally, while the PWFA provides that it does not ''invalidate or limit the powers, remedies, or procedures under any Federal law . . . that provides greater or equal protection for individuals affected by pregnancy, childbirth, or related medical conditions,'' [155] nothing in the PWFA prohibits it from providing more or additional protections.

Other comments suggested adding a new subsection, § 1636.3(i)(4)(iii), to specify additional examples of reasonable accommodations related to lactation such as modifications that would remove barriers to breastfeeding or pumping and avoid or alleviate lactation-related health complications. The Commission does not find the proposed additions, which reiterate the broader goals of the law, necessary in the list of accommodations. However, the Commission has added language in a new paragraph (i)(4)(iv) to § 1636.3 to clarify that the types of accommodations listed in this section are not the only ones available for lactation.

Some comments urged the Commission to make clear that it could be a violation of the PWFA to ''prohibit an employee from pumping milk in a space where they otherwise have permission to work or to be present'' unless it creates an undue hardship, and that coworker discomfort about being in the same room while an employee is pumping is not a valid ground for failing to provide an accommodation. The Commission is not making this addition. While it may be that the situation described in this comment could be a reasonable accommodation, as set out in § 1636.4(a)(4), an employer has the ultimate discretion in choosing between effective accommodations. The Commission agrees that generally coworker discomfort does not establish undue hardship and has added that point in the Interpretive Guidance in section *1636.3(j)(1) Undue Hardship—In General.*[156]

Another comment suggested that the Commission explicitly state that certain accommodations, such as telework, are not available for lactation. The Commission declines to add which accommodations may cause an undue hardship in a specific situation, as such a determination is fact-specific. Under the PWFA, as under the ADA, employers should conduct an individualized assessment in response to each request for a reasonable accommodation.

Some comments recommended that the Commission also include nursing at work for those circumstances where the employee works in close proximity to their child and can easily nurse during the workday. The Commission agrees that in situations where the regular location of the qualified employee's workplace makes nursing during work hours a possibility because the child is in close proximity, allowing breaks for nursing would be a possible reasonable accommodation (*e.g.,* an employee who regularly works from home and has their child at home or an employee whose child is at a nearby or onsite daycare center). The Commission has added this to the regulation in § 1636.3(i)(4)(iii). The Commission cautions that this provision is intended to address situations where the qualified employee and child are in close proximity in the normal course of business. It is not intended to indicate that there is a right to create proximity to nurse because of an employee's preference. Of course, there may be known limitations that would entitle a qualified employee to the creation of proximity as a reasonable accommodation, absent undue hardship (*e.g.,* a limitation that made pumping difficult or unworkable).

Some comments sought reassurances that lactation accommodations also may include not only breaks to pump, but also refrigeration to store milk. Section 1636.3(i)(4)(ii) specifically references refrigeration for storing milk.

1636.3(j) Undue Hardship and 1636.3(j)(1) Undue Hardship—In General

The Commission did not receive comments regarding § 1636.3(j)(1), which defines ''undue hardship'' using the language from the ADA. The Commission has not made changes to the regulation on this point. Because undue hardship under the PWFA is defined as in the ADA, the Commission has added information from the appendix to 29 CFR part 1630 (Interpretive Guidance on Title I of the Americans With Disabilities Act) regarding undue hardship generally to the PWFA Interpretive Guidance in section *1636.3(j)(1) Undue Hardship—In General* so that information is easily available to covered entities and employees.

1636.3(j)(2) Undue Hardship Factors

The Commission did not receive comments that disagreed with the Commission's use of the ADA's undue hardship factors in the PWFA and has maintained the proposed language in the final regulation.

The Commission received many comments regarding what facts should and should not be considered when an employer is determining undue hardship.

First, the Commission received many comments discussing how previously granted accommodations should affect the undue hardship analysis. Undue hardship is a broad concept in terms of what may go into determining whether a particular reasonable accommodation imposes a significant difficulty or expense. An employer may consider the current impact of cumulative costs or burdens of accommodations that have already been granted to other employees or the same employee when considering whether a new request for the same or similar accommodation imposes an undue hardship. However, as the comments emphasized, and the Commission has stated, ''[g]eneralized conclusions will not suffice to support a claim of undue hardship. Instead, undue hardship must be based on an individualized assessment of current circumstances that show that a specific reasonable accommodation would cause significant difficulty or expense.'' [157] Additionally, in some circumstances, rather than supporting a possible contention of an undue hardship based on cumulative burden, the fact that an employer has provided the same or similar accommodations in the past can weigh against an argument that granting it will impose an undue hardship. Ultimately, whether a particular accommodation will impose an undue hardship for an employer is determined on a case-by-case basis. This information has been added to the Interpretive Guidance in section *1636.3(j)* under *Undue Hardship—Consideration of Prior or Future Accommodations.*

Second, several comments stated that an employer should not be able to rely

[154] 42 U.S.C. 2000gg(2)(A), (B)(1).

[155] 42 U.S.C. 2000gg–5(a)(1).

[156] *See* 29 CFR part 1630, appendix, 1630.15(d).

[157] *Enforcement Guidance on Reasonable Accommodation, supra* note 111, text at n.113.

solely on the fact that an employee previously received an accommodation to assert undue hardship. The Commission agrees and reiterates that although an employer may consider the impact of prior accommodations granted to the employee currently seeking an accommodation, the mere fact that an employee previously received an accommodation or, indeed, several accommodations, does not establish that it would impose an undue hardship on the employer to grant a new accommodation. This information has been added to the Interpretive Guidance in section *1636.3(j)* under *Undue Hardship—Consideration of Prior or Future Accommodations.*

The Commission received several comments regarding whether or how other employees should play a role in the undue hardship determination. The factors considered in the undue hardship analysis under the PWFA mirror those under the ADA. Accordingly, an employer cannot assert undue hardship based on employees' fears or prejudices toward the individual's pregnancy, childbirth, or related medical condition, nor can an undue hardship defense be based on the possibility that granting an accommodation would negatively impact the morale of other employees. Employers, however, may be able to show undue hardship where the provision of an accommodation would be unduly disruptive to other employees' ability to work.[158] This information has been added to the Interpretive Guidance in section *1636.3(j)(1) Undue Hardship—In General.*

A few comments requested more examples of when an employer does meet the burden of showing undue hardship. An additional example has been added in the Interpretive Guidance in section *1636.3(j)(2) Undue Hardship Factors* and the examples from the proposed appendix have been edited to include additional facts to help better explain why the situation creates an undue hardship.

Undue Hardship and Safety

A few comments asked for clarification on which standard applies when an employee requests an accommodation that the covered entity asserts would cause a safety risk to co-workers or clients and whether there is a ''direct threat'' affirmative defense as in the ADA.[159] Congress did not include a ''direct threat'' defense in the PWFA. Thus, as explained in the NPRM, the undue hardship analysis is the controlling framework for evaluating accommodation requests by employees with limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, including with regard to considerations of safety.[160] Additionally, as stated in the NPRM, Title VII's bona fide occupational qualification (BFOQ) standard, rather than the PWFA's undue hardship standard, applies to assertions by employers that employees create a safety risk merely by being pregnant.[161] The Commission has included this information in the Interpretive Guidance in section *1636.3(j)* under *Undue Hardship and Safety.*

1636.3(j)(3) Undue Hardship—Temporary Suspension of an Essential Function(s)

The Commission received numerous comments describing the potential difficulties that employers may face in providing accommodations to employees who temporarily cannot perform one or more essential functions, pointing to specialized functions in certain industries and the burden of training employees. The Commission understands that in certain situations, providing the accommodation of the temporary suspension of an essential function(s) may cause an undue hardship. The difficulties addressed in the comments can be raised under the undue hardship defense and are all part of the individualized assessment under the PWFA. The Commission notes that employees seeking accommodations under the PWFA are not unlike other employees who are temporarily unable to perform one or more essential functions for various reasons and have received job modifications without a significant difficulty imposed on business operations under similar circumstances.

The Commission received a comment suggesting the deletion of § 1636.3(j)(3)(iv) (''Whether the covered entity has provided other employees in similar positions who are unable to perform the essential function(s) of their position with temporary suspensions of essential functions'') because, the comment asserted, it inappropriately imports a ''comparative'' approach into the PWFA, which was enacted in part to address similar challenges experienced under Title VII. In the Interpretive Guidance in section *1636.3(j)(3) Undue Hardship—Temporary Suspension of an Essential Function(s),* the Commission clarifies that under § 1636.3(j)(3)(iv) an employer not having provided an accommodation previously does not tend to demonstrate that doing so now, for the qualified employee with a known limitation, would cause an undue hardship because making a change to a workplace procedure or rule can itself be a reasonable accommodation. Instead, if this factor is relevant, it will tend to demonstrate the lack of an undue hardship. For example, if an employer has consistently provided light duty assignments to those who are temporarily unable to perform a certain essential function(s) for reasons other than pregnancy, it will be difficult for the employer to prove that it is an undue hardship to provide a light duty assignment to a qualified pregnant employee who is similarly unable to perform such an essential function(s).

Finally, the Commission also has added to the Interpretive Guidance in section *1636.3(j)(3) Undue Hardship—Temporary Suspension of an Essential Function(s)* that for the undue hardship factor laid out in § 1636.3(j)(3)(ii) (whether there is work for the employee to accomplish), the employer is not required to invent work for an employee.

1636.3(j)(4) Undue Hardship—Predictable Assessments

In response to the Commission's directed question regarding the adoption of the predictable assessment approach and whether the list of accommodations should be modified, a large number of comments agreed with the method, and many suggested expanding the list. Several comments specifically requested the addition of: modifications to uniforms or dress codes; minor physical modifications to a workstation (*e.g.,* a fan or a chair); permitting the use of a workstation closer to a bathroom or lactation space, or farther away from environmental hazards (*e.g.,* heat, fumes, or toxins); use of a closer parking space in an employer-provided parking facility; permitting eating or drinking at a workstation or nearby location where food or drink is not usually permitted; rest breaks as needed; and providing personal protective equipment (*e.g.,* gloves, goggles, earplugs, hardhats, or

[158] *See* 29 CFR part 1630, appendix, 1630.15(d); *Enforcement Guidance on Reasonable Accommodation, supra* note 111, at text after n.117; *cf. Groff* v. *DeJoy,* 600 U.S. 447, 472–73 (2023) (opining that, under the Title VII undue hardship standard, the employer may not justify refusal to accommodate based on other employees' bias or hostility).

[159] *See* 42 U.S.C. 12111(3) (defining ''direct threat''), 12113(b) (providing that the qualification standard can include a condition that a person not pose a direct threat); 29 CFR 1630.2(r)(1) through (4) (outlining factors to be considered in whether an employee poses a direct threat).

[160] 88 FR 54733.

[161] *Id.*

masks). The Commission acknowledges that several of the recommended additions also are common and simple, and employers should be able to provide these, and, in fact, many accommodations under the PWFA, with little difficulty. However, the Commission declines to make these additions to the list of predictable assessments, because they are not the accommodations frequently mentioned in the legislative history, some may not be easily applied across a broad category of jobs or workplaces, others also are provided under other laws and employee protections,[162] and certain modifications are not so commonly needed. This is not to say that such accommodations should not be granted when requested, but simply that the Commission will not categorize them as the type of change that in ''virtually all cases'' is a reasonable accommodation that does not create an undue hardship.

In seeking the inclusion of these accommodations as predictable assessments, some comments asserted that other States and localities do not allow employers to assert undue hardship for some of these specific modifications. The Commission acknowledges the similarities between the PWFA and certain State laws, having referenced them in support of the predictable assessment approach.[163] However, given the differences in State laws on this issue, with some having a version of predictable assessments and others having none, the Commission declines to expand the list of predictable assessments.

Some comments recommended that predictable assessments include, specifically, 16 health care appointments. The comments reasoned that this number represents the typical recommended number of prenatal and postnatal care visits for an uncomplicated pregnancy. The Commission is not adding this to the list of predictable assessments because the Commission acknowledges that the timing of an appointment and the length of an appointment may differ for each employee. The Commission also is concerned that setting a number of appointments could erroneously imply that additional appointments would necessarily create an undue hardship. However, the Commission emphasizes that employers should expect such requests, that such requests are covered by the PWFA, and that granting such requests should be a straightforward process, absent undue hardship.

Another comment suggested that 8 weeks of leave to recover from childbirth be added as a predictable assessment, noting that despite the regularity of such a request, it is routinely rejected by employers. The Commission recognizes it is predictable that pregnant employees will need leave to recover from childbirth. However, given the differences in workplaces and the possibility that the employee has access to leave through the FMLA, State law, or an employer's program, the Commission is not making this change.

Citing the number of pregnancies affected by gestational diabetes, one comment recommended the addition of short breaks to monitor blood glucose levels. As with breaks to hydrate, eat, or use the restroom, the Commission recognizes that these types of breaks should be simple for employers to provide. However, because this is a less universal need and was not repeatedly mentioned in the legislative history of the PWFA, the Commission does not believe it is appropriate to include it in the list of predictable assessments.

The Commission also received numerous comments claiming that the identification of predictable assessments violates the statutory text of the PWFA and is beyond the Commission's authority because, according to these comments, ''predictable assessments'' create a category of ''per se'' reasonable accommodations. Comments also stated that predictable assessments undercut the individualized assessment principles of the ADA, that there are differences among various jobs and workplaces, and that Congress intended for individualized assessments to be used. The Commission disagrees with these comments as they are misreading the NPRM. As stated in the NPRM, ''the adoption of predictable assessments . . . does not change the requirement that, as under the regulation implementing the ADA, employers must conduct an individualized assessment'' and ''[t]he identification of certain modifications as 'predictable assessments' does not alter the definition of undue hardship or deprive a covered entity of the opportunity to bring forward facts to demonstrate a proposed accommodation imposes an undue hardship for its business under its own particular circumstances.'' [164]

In a similar vein, the Commission received comments stating that certain industries would have a more difficult time providing the accommodations that the Commission has identified as predictable assessments. As the Commission has stated, in those industries (as in any others), an employer may assert that the requested accommodation causes an undue hardship.

Some comments suggested the Commission include additional language in § 1636.3(j)(4)(i) to encompass circumstances where it may not be reasonable for the employee to ''carry'' water. The Commission agrees and has added ''keep water near'' to § 1636.3(j)(4)(i). In explaining the predictable assessments in the Interpretive Guidance, the Commission also has clarified that, depending on the worksite, the employee may be able to eat or drink at their workstation without taking a break.

In the regulation, the Commission has removed the following language from the proposed rule (§ 1636.3(j)(4)): ''Although a covered entity must assess on a case-by-case basis whether a requested modification is a reasonable accommodation that would cause an undue hardship . . .''; ''[g]iven the simple and straightforward nature of these modifications, they will, as a factual matter, virtually always be found to be reasonable accommodations that do not impose significant difficulty or expense (*i.e.,* undue hardship)''; and ''[i]t should easily be concluded that the following modifications will virtually always be reasonable accommodations that do not impose an undue hardship.'' While all of these sentences remain true, including this information in the regulation is repetitive and unnecessary. These concepts have been moved to the Interpretive Guidance in section *1636.3(j)(4) Undue Hardship—Predictable Assessments.*

Finally, the Commission made a few minor changes to the language in § 1636.3(j)(4).[165]

Formerly Proposed 1636.3(j)(5) Undue Hardship—Future Accommodations

Several comments recommended that the Commission clarify that the potential for future accommodation requests from other employees cannot serve as a basis for failing to provide an accommodation. The Commission agrees and has added language in the Interpretive Guidance to the effect that an employer may not fail to provide an accommodation based on the

[162] *See, e.g.,* 29 CFR 1910.132(a); U.S. Dep't of Lab., *OSHA Personal Protective Equipment, https://www.osha.gov/personal-protective-equipment/standards* (last visited Mar. 18, 2024); U.S. Dep't of Lab., *OSHA Factsheet—Personal Protective Equipment, https://www.osha.gov/sites/default/files/publications/ppe-factsheet.pdf* (last visited Mar. 18, 2024).

[163] 88 FR 54785–86.

[164] *Id.*

[165] For example, for consistency the Commission added ''as needed'' to § 1636.3(j)(4)(ii) and (iii); removed ''through the workday'' from § 1636.3(j)(4)(i); and added ''to take'' in § 1636.3(j)(4)(ii) and (iv).

possibility—whether speculative or nearly certain—that it will have to provide the accommodation to other employees in the future. Because this point is relevant to how a covered entity should consider other accommodations, it has been added in the Interpretive Guidance in section *1636.3(j)* under *Undue Hardship—Consideration of Prior or Future Accommodations,* which also includes more information about the consideration of prior and future accommodations. Accordingly, § 1636.3(j)(5) of the NPRM has been removed from the regulation.

1636.3(k) Interactive Process

The NPRM largely adopted the explanation of the interactive process in the regulation implementing the ADA.

The Commission has made one change in the regulatory language of § 1636.3(k). The final rule states that the adjustment or change at work must be ''due to the limitation.'' This is intended to clarify that there is a connection between the limitation and the requested adjustment or change at work.

Numerous comments suggested that the Commission highlight that in many instances the interactive process may occur in a very abbreviated form, given that most accommodations employees are likely to seek under the PWFA are simple and easy to provide and have little to no cost to covered entities, and because the temporary nature of pregnancy, childbirth, and related medical conditions makes expediency in responding to and providing requested accommodations crucial.

The Commission, in enforcing the ADA, has acknowledged that in many instances both the need for an accommodation and the accommodation required will be obvious, leaving ''little or no need to engage in any discussion.'' [166] In advising Federal agencies on creating their disability reasonable accommodation procedures, the Commission recommends that they process requests ''in a manner that imposes the fewest burdens on the individuals . . . and permits the most expeditious consideration and delivery of the reasonable accommodation.'' [167] The same is true for the PWFA. Where an employee has requested a simple and easy accommodation under the PWFA, such as using a portable fan in the office, engaging in a lengthy back-and-forth would be unwarranted.

Some comments recommended that the Commission modify its guidance for the interactive process. The modifications, these comments explained, will better ensure that covered entities recognize the differences in the interactive process under the PWFA and the ADA. According to these comments, during the short time the PWFA has been in effect, covered entities have used their ADA policies to process pregnancy-related accommodation requests. Some employers have purportedly required their employees to fill out lengthy forms and medical certifications, which seek unnecessary information, leading to lengthy delays and denials.[168]

The Commission agrees with the suggestions to emphasize that most requests for accommodations under the PWFA can be provided quickly and typically will consist of nothing more than brief conversations or email exchanges and has added language to this effect in the Interpretive Guidance in section *1636.3(k) Interactive Process.* However, the Commission disagrees that this is meaningfully different than the ADA; under both statutes, the interactive process should focus on finding an appropriate reasonable accommodation.

In order to further highlight the flexible, individualized nature of the interactive process, in the Interpretive Guidance in section *1636.3(k) Interactive Process* the Commission has added information about how the process does not have to follow specific steps and has changed the title of the possible steps in the interactive process in the Interpretive Guidance in section *1636.3(k)* to *Recommendations for an Interactive Process,* while maintaining the substance from the ADA guidance. The Commission also has added that information provided by the employee in the interactive process does not need to be in any specific format, include specific words, or be on a specific form.

The Commission received a few comments regarding the omission of the word ''precise'' from the description of the interactive process in the proposed appendix. As set out in § 1636.3(a)(2), limitations may be modest, minor, and/or episodic. A limitation also may be a need or a problem related to maintaining the health of the employee or the health of the pregnancy. A process that tries to determine the ''precise'' limitation is in tension with the idea that limitations can be minor impediments.

Another comment questioned whether the absence of the word ''precise'' limited whether the covered entity could, for example, require information about how many breaks an employee needs and for how long. It does not. The Commission's view is that under such circumstances, the employer could ask such follow-up questions in order to craft an effective accommodation that is not an undue hardship.

One comment suggested that the Commission clarify that to initiate the interactive process the employee does not need to identify what the specific limitation is, but only that they have such a limitation and need an adjustment or change at work. Section 1636.3(h)(2) describes how an employee begins the reasonable accommodation process.

To ensure that employees and covered entities understand that any medical information obtained during the interactive process under the PWFA is subject to the ADA's confidentiality rules and restrictions on disability-related inquiries, the Interpretive Guidance in section *1636.3(k) Interactive Process* includes a brief overview of these topics, with further information provided in the Interpretive Guidance in section *1636.7(a)(1)* under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.* Of particular relevance to the PWFA, that an employee is pregnant, has recently been pregnant, or has a medical condition related to pregnancy or childbirth is medical information.[169] The ADA requires that employers keep such information confidential and only disclose it within the confines of the ADA's limited disclosure rules.[170]

[170] 42 U.S.C. 12112(d)(3)(B); 29 CFR 1630.14(b)(1), (c)(1), (d)(4); EEOC, *Enforcement Guidance on Disability-Related Inquiries and Medical Exams of Employees Under the ADA,* at text accompanying nn.9–10 (2000) [hereinafter *Enforcement Guidance on Disability-Related Inquiries*], *http://www.eeoc.gov/laws/guidance/enforcement-guidance-disability-related-inquiries-and-medical-examinations-employees* (''The ADA requires employers to treat any medical information obtained from a disability-related inquiry or medical examination . . . as well as any medical information voluntarily disclosed by an employee, as a confidential medical record. Employers may share such information only in limited circumstances with supervisors, managers, first aid and safety personnel, and government officials investigating compliance with the ADA.''); EEOC, *Enforcement Guidance: Preemployment Disability-Related Questions and Medical Examinations,* at text accompanying n.6 (1995) [hereinafter *Enforcement Guidance: Preemployment Disability-Related Questions*], *https://www.eeoc.gov/laws/*

Similarly, disclosing that an employee is receiving or has requested a reasonable accommodation under the PWFA usually amounts to a disclosure that the employee is pregnant, has recently been pregnant, or has a related medical condition.[171]

Many comments described the difficulty pregnant employees may experience obtaining appointments with health care providers, especially early in pregnancy. To help address this concern, the Commission has added language to the Interpretive Guidance in section *1636.3(k)* under *Engaging in the Interactive Process*[172] to the effect that when a covered entity is permitted to seek supporting documentation from a health care provider under the parameters outlined in § 1636.3(l), the covered entity should be aware that it may take time for the employee to find a health care provider and provide the documentation. Delay caused by the difficulty faced by an employee in obtaining information from a health care provider in these circumstances should not be considered a withdrawal from or refusal to participate in the interactive process. If there is such a delay, an employer should consider providing an interim reasonable accommodation.

Several comments requested that the Commission specifically address the need for reasonable accommodations in unforeseen, urgent, emergency situations when the employee has not already requested a reasonable accommodation. One comment described instances where employees experienced bleeding or passed out due to their pregnancies and had to immediately leave their worksites to obtain emergency care, only to return to work and find they were charged with violating the covered entities' attendance policy. In response, the Commission has added information and an example in the Interpretive Guidance in section *1636.3(k)* under *Engaging in the Interactive Process.* This example involves a situation where the employee, who has not asked for an accommodation or informed their employer that they are pregnant, experiences an emergency that is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. The example explains that by informing the employer that they are experiencing an emergency related to pregnancy, childbirth, or related medical conditions and need leave immediately, the employee has made a request for a reasonable accommodation. The example goes on to explain that, if it is later determined that the employee is entitled to a reasonable accommodation, the employer should not penalize the employee because the emergency required a pause in the interactive process.

In the Interpretive Guidance, the information regarding delay and emergencies explained in the preceding paragraphs has been added to section *1636.3(k)* under the heading formerly titled *Failure to Engage in the Interactive Process.* To reflect these additions, the title of that heading has been changed to *Engaging in the Interactive Process.*

One comment asked that the Commission clarify whether the ''interactive process'' requirements can be met by using software. There are no required steps or methodology for the interactive process; thus, the Commission has not taken a position on whether such a system will meet the requirements of the interactive process. The Commission does remind covered entities that they are responsible for their part of the interactive process, regardless of how they meet that obligation.

A comment requested that the Commission oversee the interactive process between covered entities and employees, suggesting a system of monitoring and evaluation. While the Commission issues guidance, provides technical assistance, and engages in litigation, the Commission is unable to offer the level of monitoring proposed. Generally, the employee and employer are in the best position to understand the limitations, affected job functions, and possible accommodations involved in the interactive process.

Finally, the Commission has included additional examples in the Interpretive Guidance in section *1636.3(k) Interactive Process* to illustrate how accommodations may be granted through the interactive process.

1636.3(l) Limits on Supporting Documentation

The Commission received numerous comments about the NPRM's approach to supporting documentation and the extent to which the final regulation should permit covered entities to seek such documentation in support of an employee's request for a reasonable accommodation under the PWFA. The proposed rule provided that a covered entity could require supporting documentation that is reasonable under the circumstances for the covered entity to determine whether to grant the accommodation. Further, the rule provided that when it was reasonable under the circumstances, the employer could only require reasonable documentation.

1636.3(l)(1) Seeking Supporting Documentation Only When Reasonable Under the Circumstances

Comments and Response to Comments That Were Generally Supportive or Generally Unsupportive of the Commission's Approach

The Commission received many comments that were generally supportive of the approach to documentation set forth in the proposed rule, although most had suggestions for further limiting the ability of employers to seek supporting documentation.

Many comments agreed with the Commission that employees who are pregnant may experience limitations and, therefore, require accommodations before they have had any medical appointments, and that it may be difficult for a pregnant employee to obtain an immediate appointment with a health care provider early in a pregnancy, especially for those living in certain regions of the country where there are limited resources for maternal health. These and other comments also provided numerous additional reasons for limiting the amount of documentation that covered entities may seek under the PWFA, including: the burden and corresponding reduction in quality of care that administrative duties (such as paperwork) place on health care professionals; the possibility that the notes doctors provide are ''overprotective'' and result in a person who wants to work being placed on leave; the costs in time and money employees face when they must obtain medical documentation;[173] the concern that a doctor may feel uncomfortable certifying that a condition is completely due to pregnancy;[174] the fact that these

guidance/enforcement-guidance-preemployment-disability-related-questions-and-medical (''Medical information must be kept confidential.'').

[171] 88 FR 54744.

[172] In the proposed appendix, this heading was entitled ''Failure to Engage in Interactive Process.'' 88 FR 54787.

[173] Some comments that were generally sympathetic to the idea that it is difficult for pregnant employees to obtain supporting documentation in some circumstances argued that rather than limiting employers' ability to seek supporting documentation in those circumstances, employers could provide interim accommodations while waiting for supporting documentation. The Commission agrees providing interim reasonable accommodations is a possibility and has expanded the section regarding interim reasonable accommodations in the Interpretive Guidance in section *1636.3(h)* under *Interim Reasonable Accommodations,* although providing an interim reasonable accommodation is not required.

[174] This concern is misplaced, as the PWFA requires accommodation for physical or mental

Continued

burdens may deter employees who need accommodations from asking for them; and the possibility that employers will not maintain the confidentiality of medical documentation they obtain, among other reasons. These comments agreed with the overall structure of the proposed rule's documentation provision but also offered suggestions for further limiting the circumstances in which documentation could be sought, as explained in more detail below. Some comments, generally supportive of the proposed rule's approach, urged the Commission to ensure that there is a broad understanding among covered entities and employees of the PWFA's rules limiting the ability of covered entities to seek supporting documentation.

Other comments, however, were generally unsupportive of the proposed rule's approach, arguing that before deciding whether to grant requests for reasonable accommodations, employers need to be able to seek supporting documentation beyond what the proposed rule would allow. Such comments expressed concern about employee fraud, including employees who might seek accommodations with no relation to a PWFA-covered limitation.[175] Others said that the proposed rule did not allow employers to request sufficient justification for a requested accommodation and that this aspect of the proposal violated the spirit of mutually beneficial cooperation that the PWFA represents. Concerns about vague requests, employees who did not know what sort of accommodation they needed, and the absence of a concrete rule also were mentioned in these comments.

In drafting the final rule on supporting documentation, the Commission took these comments into consideration, as well as the more specific suggestions discussed below.

Comments and Response to Comments Suggesting That the PWFA's Rule on Supporting Documentation Should Follow the ADA

Some comments that generally were unsupportive of the proposed rule's approach to supporting documentation argued that the PWFA regulation should follow the approach employers use under the ADA. Some argued that this approach should be followed because it provides a familiar bright line that is more useful to employers than a general ''reasonableness'' standard. These comments also asserted that difficulties pregnant employees have obtaining documentation are faced equally by those with disabilities and, therefore, should not be a factor in the drafting of a final rule.

The Commission disagrees with the comments that argued that it automatically can or should apply the ADA's approach to supporting documentation under the PWFA in all circumstances. The ADA's statutory restrictions on disability-related inquiries apply to all disability-related inquiries, whether or not an employee has a disability,[176] including when such inquiries are made in response to a request for an accommodation under the PWFA, as discussed in detail in the Interpretive Guidance in section *1636.7(a)(1)* under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.* These restrictions limit an employer's ability to ask employees questions that are likely to elicit information about a disability to situations when doing so is job-related and consistent with business necessity.[177]

The PWFA does not have a similar statutory provision regarding pregnancy-related inquiries.[178] However, the PWFA does make it unlawful for a covered entity not to make reasonable accommodation to the known limitations related to the pregnancy, childbirth, or related medical conditions of a qualified employee, unless such covered entity can demonstrate that the accommodation would impose an undue hardship.[179] Adopting a reasonableness standard for when employers can seek supporting documentation to determine coverage and the need for an accommodation ensures that covered entities can meet the statute's requirements without overly broad documentation requests that could result in the failure to provide accommodations that should be granted or could lead to claims of retaliation. Additionally, the Commission concludes that it is critical to limit inquiries and the supporting documentation that a covered entity can seek when an employee requests an accommodation under the PWFA so that covered entities do not obtain sensitive information that they do not need when making employment decisions and employees are not dissuaded from asking for accommodations out of concern that such requests will lead to probing questions unrelated to their ability to do the job. Thus, the Commission has retained the reasonableness standard from the proposed rule.

The Commission notes that the rule it is adopting about seeking supporting documentation for the PWFA is similar to the Commission's guidance regarding the ADA in some ways. The most important similarity is that a covered entity is not required to seek supporting documentation from an employee who requests an accommodation under the PWFA, as is true under the ADA. For example, if an employee, early in their pregnancy, informs the employer that they are pregnant, have morning sickness, and need a later start time, the employer and the employee can discuss what type of schedule changes are needed and implement them. Because of the difficulty employees may face in finding care, the fact that many health care providers will not see employees until later in their pregnancies,[180] and the fact that many accommodations under the PWFA will be simple and temporary, the Commission encourages employers to engage in this simple type of interactive process to determine appropriate accommodations under the PWFA.

The final PWFA rule contains five examples of when it is not reasonable under the circumstances to seek supporting documentation. Two of these examples build on the Commission's ADA policy guidance (§ 1636.3(l)(1)(i) (obvious) and (ii) (known)); and a third example is based on disparate treatment principles that apply equally under the ADA (§ 1636.3(l)(1)(v)) (it would not be reasonable under the circumstances to seek documentation when the requested

conditions ''related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions'' and not that the physical or mental condition solely be due to pregnancy, childbirth, or related medical conditions. 42 U.S.C. 2000gg(4); *see also* section *1636.3(a)(2)* under *Related to, Affected by, or Arising Out of* in the Interpretive Guidance.

[175] Another comment noted, however, that the fact that covered entities are permitted to request supporting documentation ''when necessary'' to determine if a limitation is ''related to, affected by, or arising out of'' pregnancy overcame any concerns that the employer will have to provide an accommodation for a condition not related to a PWFA limitation.

[176] 42 U.S.C. 12112(d). *See also Enforcement Guidance on Disability-Related Inquiries, supra* note 170 (''The ADA's restrictions on inquiries and examinations apply to all employees, not just those with disabilities.'').

[177] 42 U.S.C. 12112(d).

[178] However, in the context of Title VII, the Commission has stated, ''Because Title VII prohibits discrimination based on pregnancy, employers should not make inquiries into whether an applicant or employee intends to become pregnant. The EEOC will generally regard such an inquiry as evidence of pregnancy discrimination where the employer subsequently makes an unfavorable job decision affecting a pregnant worker.'' *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(3)(b). And, as stated, *supra,* the ADA's restrictions on disability-related inquiries apply to individuals seeking accommodations under the PWFA.

[179] 42 U.S.C. 2000gg–1(1).

[180] 88 FR 54736, 54787.

accommodation is available to employees without PWFA limitations pursuant to a covered entity's policies or practices without submitting supporting documentation.). The two other examples involve pregnancy and predictable assessments, and lactation, nursing, and pumping. They are described in detail below.

Reorganization of § 1636.3(l) and Changes in the Language Describing the Reasonableness Standard

The Commission has made several changes in the regulation for § 1636.3(l).

First, the Commission has changed the language in § 1636.3(l)(1) regarding when it is reasonable under the circumstances from ''reasonable under the circumstances for the covered entity to determine whether to grant the accommodation'' to ''reasonable under the circumstances for the covered entity to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation.'' The Commission believes that, given the context, ''to determine whether to grant the accommodation'' would be understood to mean ''to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation.'' However, the Commission also recognizes that there may be other factors involved in an effort ''to determine whether to grant the accommodation'' that do not involve supporting documentation. Thus, the Commission has changed the language to be more precise.

Second, throughout the regulation and the Interpretive Guidance, references to an employer ''requiring'' documentation in the proposed rule have been changed to an employer ''seeking'' documentation. This change was made to account for situations where an employer's request for supporting documentation is effectively a requirement even if it does not contain the word ''requirement.''

Third, the Commission has moved the information regarding confidentiality from § 1636.3(l)(4) of the proposed regulation to section *1636.7(a)(1)* under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information* in the Interpretive Guidance. The Commission has made this change because the prohibition on disability-related inquiries and the confidentiality provisions that apply to medical information obtained under the PWFA arise from the ADA, not the PWFA, and therefore are enforceable under the ADA, not the PWFA. Accordingly, they are more appropriately addressed in the Interpretive Guidance's discussion of the application of the ADA's rules and exceptions regarding the confidentiality of medical information than in the PWFA regulation itself.

Fourth, the Commission has moved information regarding how documentation requests that violate § 1636.3(l) also may be a violation of 42 U.S.C. 2000gg–2(f) (§ 1636.5(f) (prohibition on retaliation and coercion)) to the Interpretive Guidance in section *1636.5(f)* under *Possible Violations of 42 U.S.C. 2000gg–2(f) (1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information.*

Fifth, the final rule contains a new paragraph (new paragraph (l)(4) of § 1636.3) regarding self-confirmation for the purposes of § 1636.3(l)(1)(i), (iii), and (iv). The NPRM stated that, in certain circumstances, an employer could not request documentation to confirm pregnancy when an employee ''states or confirms'' that they are pregnant.[181] Some comments discussed the question of what kind of confirmation should be allowed and, in particular, when covered entities should be permitted to seek documentation to confirm that an employee is pregnant. Some argued that self-attestation should always suffice, others argued that covered entities should be allowed to seek supporting documentation confirming pregnancy unless the pregnancy is ''obvious,'' while still others discussed the types of tests that should or should not be allowed to confirm pregnancy. As explained in detail below, the final rule provides two circumstances in which covered entities must accept self-confirmation of pregnancy: when the pregnancy is obvious, or when the request for a change at work involves one of the modifications listed under § 1636.3(j)(4) due to pregnancy. As explained in the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation,* when the covered entity is permitted to seek confirmation of pregnancy other than through self-confirmation, it may not require a specific test or method.

Additionally, the Commission has included new subsections in the Interpretive Guidance: in section *1636.3(l)* under *Interaction Between the PWFA and the ADA;* and in section *1636.7(a)(1)* under *The PWFA and the ADA.*

Comments and Response to Comments Regarding Examples of When It Is Not Reasonable To Seek Supporting Documentation

As noted above, the NPRM explained that if an employer decided to seek supporting documentation, it was only permitted to do so if it was reasonable under the circumstances in order for the employer to determine whether to grant the accommodation. The NPRM provided four examples of when it is not reasonable under the circumstances.

The Commission received comments seeking additional factual scenarios illustrating circumstances when it would, as well as when it would not, be reasonable under the circumstances to seek documentation. Some of these comments provided suggestions for desired examples. The Commission agrees that further illustrations would be useful and therefore has added further illustrations to the Interpretive Guidance in section *1636.3(l)(1) Seeking Supporting Documentation Only When Reasonable Under the Circumstances.*

Other comments suggested that the final rule should state that covered entities that seek documentation must provide paid leave for the employee to obtain the documentation, as well as cover any costs incurred to obtain it. To the extent that these comments intended to suggest that it would not be reasonable under the circumstances to seek documentation unless the covered entity provides paid leave for the employee to obtain the documentation and covers any costs incurred, the Commission disagrees and declines to adopt this suggestion.

Not Reasonable To Seek Supporting Documentation—Obvious

The first example in the proposed rule of when it would not be reasonable under the circumstances to seek supporting documentation is when: (1) the known limitation and need for reasonable accommodation are obvious; and (2) the employee confirms the obvious limitation and need for reasonable accommodation through self-attestation. This example is retained in the final rule, although the language has been modified to reflect changes in the description of what documentation may be sought.

Thus, the language in the final rule regarding this example has been changed from ''when the known limitation and the need for reasonable accommodation are obvious and the

[181] 88 FR 54737, 54788 (''For example, when an obviously pregnant worker states or confirms they are pregnant and asks for a different size uniform . . . the employer may not require supporting documentation.'').

employee confirms the obvious limitation and need for reasonable accommodation through self-attestation'' to ''[w]hen the physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and the adjustment or change at work needed due to the limitation are obvious, and the employee provides self-confirmation as defined in paragraph (l)(4) of this section.'' The Interpretive Guidance for this section, in section *1636.3(l)(1)(i)—Obvious,* has generally remained the same with some minor language edits.

Many comments expressed concerns with the meaning of the word ''obvious.'' Comments noted, among other things, that a rule that envisions employers making decisions based on whether someone is ''obviously'' pregnant will lead employers to subject employees' bodies to invasive scrutiny. This, in turn, might lead employers to unilaterally impose restrictions based on gendered and racialized stereotypes about what pregnant and postpartum people need. Other comments argued that it is irrelevant whether a pregnancy is ''obvious'' because if the individual in question is seeking an accommodation for which the employer is permitted to seek documentation, that documentation will automatically include a confirmation that the person is pregnant. Another comment pointed out that it will be very difficult for covered entities to determine if a pregnancy is ''obvious,'' and that attempting to do so might expose employers to liability if a manager judges incorrectly.

In response to these comments, the Commission first notes that the idea of prohibiting requests for supporting documentation when the condition is ''obvious'' is similar to the Commission's guidance regarding the ADA although, unlike the ADA, the PWFA regulation includes a self-confirmation requirement. The Commission also has used the concept of ''obvious'' previously regarding pregnancy discrimination.[182] An ''obvious'' pregnancy is one where the pregnancy is showing, and onlookers easily notice by observation. Importantly, as several comments noted, not everyone who is pregnant looks the same.

Moreover, the Commission concludes that concerns about this provision encouraging employers to force employees to accept unnecessary accommodations based on stereotypes are misplaced. Whether a pregnancy is obvious will only be relevant after an employee requests a reasonable accommodation. Other parts of the PWFA prohibit employers from requiring employees to accept reasonable accommodations.[183]

The requirement that obviously pregnant employees must self-confirm that they are pregnant (new § 1636.3(l)(4)) is intended to address the concerns expressed by comments about managers being uncertain whether someone is pregnant. Although there may be circumstances in which a pregnant employee asks for an accommodation and considers themselves to be ''obviously'' pregnant, but the employer disagrees and requests supporting documentation, the Commission believes such cases will be rare. Finally, although the Commission understands concerns about an employer's possible scrutiny of an employee's body, it is impractical to suggest that an employer in such circumstances should not consider the obvious physical condition of the employee requesting accommodation and instead seek documentation.

Some comments also requested more details about and examples of what would be considered an ''obvious'' limitation and/or an ''obvious'' need for accommodation (for example, asking when a limitation would be obvious based on something other than physical appearance). These comments suggested, for instance, that if someone self-attested to pregnancy and then was seen frequently vomiting, the limitation (vomiting due to pregnancy) should be considered obvious, and no documentation would be needed because vomiting is a common symptom of pregnancy.

Under these circumstances, the comments suggested, the need for an accommodation of a temporary relocation of a workstation closer to the bathroom also would be obvious. These comments recommended that the Commission, in the final rule, identify the following conditions as ''obvious'': morning sickness, edema, fatigue, back pain, medical visits, lifting restrictions, and time to recover from childbirth, among others. Comments additionally recommended that the final rule make clear that the need for accommodation is obvious when a pregnant employee requests removal from exposure to certain harmful chemicals or infectious diseases.

Under the final rule, the first example of when it is not reasonable under the circumstances for an employer to seek supporting documentation is when the employee's limitation (physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions) and the adjustment or change at work that is needed due to the limitation are obvious and the employee confirms the limitation and the adjustment or change at work needed due to the limitation. As stated in the Interpretive Guidance in section *1636.3(l)(1)(i)—Obvious,* the Commission expects this example will usually apply when the employee is obviously pregnant. ''Obvious'' means that the condition is apparent without being mentioned. In terms of pregnancy itself, this may depend on physical appearance, *i.e.,* whether the pregnancy is ''showing.''

In response to comments suggesting that additional circumstances will always fall within the parameters of ''obvious'' limitations and/or ''obvious'' accommodations, the Commission does not have enough information to agree with those comments maintaining, for example, that there should be a nationwide standard establishing that it always is obvious that all pregnant employees need accommodations due to lifting restrictions, avoiding certain chemicals, or back pain, such that it would never be reasonable for employers to seek supporting documentation when someone requests accommodation due to these limitations. Although there may be circumstances under which these and other limitations or accommodations are obvious, when accompanied by self-confirmation, the Commission does not view these sorts of limitations or types of accommodations as ''obvious'' in the way that it is obvious that a pregnant employee late in pregnancy needs a larger uniform or properly fitting safety equipment. Thus, the Commission did not make any changes to the proposed rule based on comments concerning limitations or accommodations that should be considered ''obvious.''

Not Reasonable To Seek Supporting Documentation—Known

Although fewer comments mentioned the proposed rule's second example of when it would not be reasonable for a covered entity to seek documentation in support of a request for PWFA accommodation, some did suggest that the term ''sufficient information'' was too vague and asked if ''information'' was intended to encompass something broader than ''documentation.''

[182] *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(1)(a) (discussing the ''obviousness'' of pregnancy and how that can play into a discrimination claim).

[183] 42 U.S.C. 2000gg–1(2); 29 CFR 1636.4(b).

This example is intended to prevent covered entities from seeking supporting documentation unnecessarily. In the NPRM, the Commission explained that information is sufficient if it substantiates that the employee has a known PWFA limitation and needs a change or adjustment at work. The word ''information'' was intentionally used to make clear that it does not have to be documentation from a health care provider but can be information provided by the employee or their representative, such as a self-confirmation of pregnancy, when permitted, or confirmation from the employee that the need, explained by previously submitted documentation, has occurred again. The example provided in one of the comments illustrates the need for this provision—in this example, an employee who had already provided documentation from her health care provider was required to provide a new doctor's note for each absence due to morning sickness, an impossible requirement given that no one would be able to see a doctor every time they were too nauseous to go to work. If an employee already has provided documentation that because of morning sickness they need to use intermittent leave as necessary for the next 2 months, the covered entity may not seek new documentation from a health care provider every time the employee needs to use leave due to morning sickness.

To ensure that this example is not misunderstood to be broader than intended, the Interpretive Guidance makes clear in section *1636.3(l)(1)(ii)—Known* that when it is otherwise reasonable under the circumstances to seek supporting documentation, an employer is not prohibited from doing so simply because the employee has stated that they have a PWFA limitation and need an adjustment or change at work.

The language in the final rule about this example has been changed to follow the language in the final rule regarding the supporting documentation that may be sought and to clarify that the example applies whenever the employer has sufficient information to determine that the employee has a PWFA limitation and needs an adjustment or change at work, regardless of how the employer obtains that information. Thus, the Commission changed ''When the employee or applicant already has provided the covered entity with sufficient information to substantiate that the employee or applicant has a known limitation and that a change or adjustment at work is needed;'' to ''When the employer already has sufficient information to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation.'' Additionally in the Interpretive Guidance for this section, the Commission has added how this provision may apply to episodic conditions.

Not Reasonable To Seek Supporting Documentation—Predictable Assessments

The proposed rule provided a third example of when it is not reasonable for an employer to seek supporting documentation: when an employee at any time during their pregnancy states or confirms that they are pregnant and seeks one of the modifications described as ''predictable assessments'' under § 1636.3(j)(4)(i) through (iv).

Many comments suggested that this example be expanded to include modifications beyond those recognized as ''predictable assessments'' under § 1636.3(j)(4)(i) through (iv). Some of these comments argued that the list should be expanded because the principles underlying whether a particular accommodation warrants medical certification differ from concerns related to undue hardship. The Commission declines to expand this example. The recognized ''predictable assessments'' reflect a small set of simple, inexpensive, commonly sought accommodations that are widely known to be needed during an uncomplicated pregnancy, and where documentation would not be easily obtained or necessary. In the Commission's view, the examples suggested for the possible expansion of the rule do not fall within this same category, although the Commission agrees that in some situations the modifications offered in the comments would not require supporting documentation and reminds employers that they are not obligated to seek supporting documentation.[184] Moreover, because the proposed list of accommodations that fit within this example are limited to modifications already singled out in § 1636.3(j)(4), the example is clear and easy to apply.

One comment, focused more on the proposed regulation's discussion of predictable assessments in an undue hardship context, noted that employers should be able to seek documentation to confirm that the requested ''predictable assessments'' modifications are needed due to pregnancy, as opposed to some other reason. The Commission agrees that this example is limited to pregnancy. Thus, under the final rule, the employer is not permitted to seek supporting documentation if the employee asks for one of these modifications due to a physical or mental condition related to, affected by, or arising out of pregnancy (a limitation) and provides self-confirmation as defined in § 1636.3(l)(4).[185]

Not Reasonable To Seek Supporting Documentation—Lactation

The fourth example in the proposed rule regarding when it is not reasonable under the circumstances to seek documentation concerns lactation and pumping. A few comments noted that, as written, the example suggests it is not reasonable to seek additional supporting documentation, as opposed to making clear that no supporting documentation may be requested. The Commission has reworded this example for purposes of clarification, in the final rule, as explained below.

Another comment noted that the example as written was overly broad because it prohibits an employer from asking for documentation anytime the requested accommodation relates to lactation. The comment noted that if, for example, an individual requests to work from home while breastfeeding or requests accommodations due to anxiety over a child's difficulties learning to bottle feed, the employer would be prohibited from seeking supporting documentation regarding such requested accommodations.

The Commission agrees that the language in the proposed rule could be interpreted too broadly. The final rule makes clear that it is not reasonable under the circumstances for a covered entity to seek supporting documentation in response to a request for reasonable accommodations involving lactation and a time and/or place to pump at work or any other modification related to pumping at work. In response to comments raising questions regarding nursing during work hours, the final

[184] The comments suggested the following additions: time off, up to 8 weeks (or 12 weeks in some comments) to recover from childbirth; time off to attend up to 16 health care appointments while pregnant; flexible scheduling or remote work for nausea or bleeding; modifications to uniforms or dress codes; minor physical modifications to the workstation; relocation of the workstation; reprieve from lifting over 20 pounds; and access to a closer parking space, among others.

[185] A minor edit has been made to the final rule to correctly identify the items listed in § 1636.3(j)(4) as ''modifications'' and not ''reasonable accommodations.'' As noted in the rule, these modifications will virtually always be determined to be reasonable accommodations that do not impose an undue hardship.

rule also explains that when the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity, it would not be reasonable to seek supporting documentation in response to a request for reasonable accommodations involving a time to nurse during work hours.[186] This example does not extend, however, to accommodations involving lactation beyond these modifications. Thus, for example, if a lactating employee requests full-time remote work due to a condition that makes pumping difficult, it may be reasonable for the covered entity to seek reasonable documentation about the limitation and need for remote work, although it is not required to do so.

The final rule is, therefore, modified to clarify that when the reasonable accommodation is related to a time and/or place to pump, or any other modification related to pumping at work, and the employee has provided self-confirmation as defined in paragraph (l)(4), it is not reasonable to request supporting documentation. Likewise, it would not be reasonable to seek documentation when the accommodation is related to a time to nurse when the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity and the employee has provided self-confirmation of the fact, as defined in paragraph (l)(4). The Commission has added information regarding nursing during work hours in the Interpretive Guidance in section *1636.3(l)(1)(iv)—Lactation* and made other minor modifications.

Not Reasonable To Seek Supporting Documentation—Employer's Own Policies or Practices (New § 1636.3(l)(1)(v))

The final rule contains a new example of when it is not reasonable under the circumstances for the employer to seek supporting documentation. New § 1636.3(l)(1)(v) states that seeking supporting documentation is not reasonable under the circumstances when the requested modification is one that employees without known limitations under the PWFA would receive pursuant to the employer's policy or practice without submitting supporting documentation. For example, if an employer has a policy or practice of only seeking supporting documentation for the use of leave if the leave is for 3 or more consecutive days, it would not be reasonable for the employer to seek supporting documentation from someone who needs leave due to a known limitation under the PWFA when they request leave for 2 or fewer days.[187] The Commission has added information from this paragraph in the Interpretive Guidance in section *1636.3(l)(1)(v)—Employer's Own Policies or Practices.*

Comments and Response to Comments Regarding Self-Confirmation and Concerns About Fraudulent Requests

Several comments requested that the Commission provide a definition of ''self-attestation.'' Others argued that, when it comes to pregnancy itself, self-attestation should always be sufficient to avoid deterring requests for accommodations, stigmatizing those who need accommodations due to pregnancy, or violating rights to privacy. Yet other comments agreed that self-attestation of pregnancy should usually be sufficient but suggested that the final rule allow requests for documentation when the employer has reason to believe that there is ''abuse.'' Some argued that self-attestation of pregnancy should only be adequate when the pregnancy is obvious and, in all other circumstances, documentation of pregnancy should be required. Still others suggested that, while self-attestation was sufficient to establish pregnancy, employers should develop policies to address situations where they have reason to believe an employee who claimed to be pregnant is not being honest.

The Commission agrees that a definition of ''self-attestation'' is necessary and also has determined that the word ''attestation'' suggests too formal a requirement. Instead, the final rule uses the term ''self-confirmation'' and provides a definition at § 1636.3(l)(4). As explained above, the final rule permits self-confirmation of pregnancy when the pregnancy is obvious and at any stage in a pregnancy when the employee is requesting one of the modifications outlined in § 1636.3(j)(4)(i) through (iv) due to pregnancy. When the reasonable accommodation is related to a time and/or place to pump at work, a time to nurse during work hours (where the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity), or any other modification related to pumping at work, the final rule permits self-confirmation of the fact that the employee is pumping at work or nursing during work hours.

In addition to comments arguing that self-confirmation of pregnancy should not be allowed when an employer has ''reason to believe'' there is abuse, several comments expressed fear that limiting an employer's ability to seek supporting documentation will lead to fraudulent requests and prevent employers from punishing those who lie about limitations or the need for accommodations.

In response, the Commission notes that the final regulation permits employers to seek supporting documentation when it is reasonable under the circumstances to determine that the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation. Moreover, the PWFA itself does not prohibit employers from taking disciplinary action against those who make false claims about limitations or the need for accommodations. The Commission urges covered entities to follow the advice of the comment proposing that employers should have clear policies in place regarding how to address fraud, dishonesty, and abuse. It is, of course, also the case that an employee may not be punished for seeking an accommodation even if it is ultimately determined that they are not entitled to one under the law.

The Commission declines to implement the suggestion that the final rule include a provision stating it would not violate the PWFA's anti-retaliation and anti-coercion provisions if a covered entity punished someone who falsely claimed to need a reasonable accommodation. The final rule, like the proposed rule, explains the requirements for establishing that a covered entity has retaliated against or coerced someone in violation of the PWFA. Moreover, it would not violate the PWFA to fail to provide an accommodation to an individual who failed to establish they were entitled to one, assuming the covered entity abided by the requirements and prohibitions of the PWFA. Of course, the Commission cautions that neither those seeking

[186] ''Nursing during work hours'' is where the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity and could include, for example, when an employee who always teleworks from home has their child at home and takes a break to nurse the child, or when an employee takes a break to travel to a nearby or onsite daycare center to nurse.

[187] Conversely, if regular employer practices would require documentation when the PWFA would not, or would require more documentation than the PWFA would allow, in a situation where the employee is requesting an accommodation under the PWFA, the PWFA restrictions on supporting documentation would apply.

accommodations under the PWFA nor those charged with responding to such requests may lie during their interactions.

Comments and Response to Comments Suggesting Other Frameworks for the Final Rule on Supporting Documentation

Another documentation framework suggested by comments was that covered entities may seek supporting documentation except when: (1) the need for accommodation is obvious; and (2) the covered entity's requirement conflicts with their stated policy on non-pregnancy-related requests for accommodations. Another comment argued that while covered entities should not typically be able to seek supporting documentation, they should be able to do so if someone claims to be pregnant but never gives birth or supplies a birth certificate or is requesting accommodations for fertility treatments.

The Commission declines to adopt either of these suggestions. The first suggestion appears to be a combination of the proposed rule's example of ''obvious'' conditions and an acknowledgment that employers already provide accommodations to employees in certain situations without seeking supporting documentation. The Commission declines to make this change, although the first example of when it would not be reasonable under the circumstances to seek documentation in the final rule is based on the ''obvious'' conditions and accommodations, as explained above.

The Commission declines to make the changes in the other comment because it does not account for many situations, such as where an employer may need details about a lifting restriction or need for remote work during pregnancy or any type of limitation post-partum.

1636.3(l)(2) Reasonable Documentation

The proposed rule explained that when it is reasonable under the circumstances to require supporting documentation to determine whether to grant the accommodation, the covered entity is permitted only to require ''reasonable documentation.'' The proposed rule defined ''reasonable documentation'' as documentation that is sufficient to describe or confirm: (1) the physical or mental condition; (2) that it is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; and (3) that an adjustment or change at work is needed.

Many comments argued that the definition of ''reasonable documentation'' should be revised to state that the documentation does not need to identify the nature of, or provide a detailed description of, the physical or mental condition that is the known limitation. These comments suggested that reasonable documentation be limited to documentation that: (1) confirms the individual has a limitation that is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, and (2) explains that a change at work is needed due to the limitation. Some comments expressed concern about protecting the privacy of employees and urged that ''reasonable documentation'' be limited to the ''minimum information'' necessary to assess the condition's nexus to pregnancy, childbirth, or a related medical condition. The comments noted, for example, that supporting documentation need not state that an employee has to attend a medical appointment related to a miscarriage, but can simply state that the employee needs to attend a medical appointment during work hours due to pregnancy, childbirth, or a related medical condition and thus needs a modified start time on a particular day; or the employee has a prohibition on lifting more than 50 pounds in connection with a condition related to pregnancy and thus needs an accommodation that eliminates the need to lift more than 50 pounds. In support of this suggestion, the comments explained that asking employees to disclose detailed medical information to their employers, especially information related to reproductive and mental health, which can be particularly sensitive or stigmatizing, may deter employees from seeking accommodations.[188] Comments also noted that limiting reasonable documentation to confirming the related medical condition would help protect patient privacy, which the comments said could be especially important for employees obtaining abortions or facing intimate partner violence.

The Commission agrees that protecting patient privacy is an important goal and that covered entities should be limited to seeking the minimum documentation needed to determine if an employee is entitled to a reasonable accommodation under the PWFA. However, the Commission also recognizes that there may be situations when an employer needs documentation to determine whether the employee has a PWFA limitation and the adjustment or change at work is needed due to the limitation.

To take account of these interests, the Commission made several changes to the definition of ''reasonable documentation.''

First, the Commission modified the proposed definition of ''reasonable documentation'' to clarify that reasonable documentation means ''the minimum that is sufficient,'' rather than merely stating that reasonable documentation means documentation that is ''sufficient.''

Second, because all that is required is the minimum documentation that is sufficient, the Commission has changed the language in the regulation to specify that the supporting documentation need only confirm (rather than ''describe or confirm'') the physical or mental condition. The Commission has included the language from § 1636.3(a)(2) in § 1636.3(l)(2)(i) defining a physical or mental condition (*i.e.,* an impediment or problem that may be modest, minor, and/or episodic; a need or a problem related to maintaining the employee's health or the health of the pregnancy; or an employee seeking health care related to pregnancy, childbirth, or a related medical condition itself). Finally, in the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation,* the Commission has explained that this confirmation can be accomplished through a simple statement and that it does not need to include a diagnosis.

Third, again because all that is required is the minimum documentation that is sufficient, the Commission has changed the language in the regulation to specify that the supporting documentation need only confirm (rather than ''describe or confirm'') that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions and has explained in the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation* that pregnancy, childbirth, or related medical conditions

[188] Although not directly on point, one comment suggested that allowing employers to request supporting documentation about an employee's anticipated or actual abortion, *i.e.,* information about the specific condition that is the known limitation or the specific related medical condition, would potentially conflict with a proposed rule currently under consideration by the U.S. Department of Health and Human Services concerning the Health Insurance Portability and Accountability Act (HIPAA) and heightened confidentiality requirements for information related to reproductive health care. In response, the Commission notes that HIPAA applies to health care providers, employers are not required to obtain supporting documentation under the PWFA, and any such documentation must be kept confidential, as explained in the Interpretive Guidance in section *1636.7(a)(1)* under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.*

need not be the sole, the original, or a substantial cause of the physical or mental condition given that the statutory language only requires that physical or mental condition be ''related to, affected by, or arising out of'' ''pregnancy, childbirth, or related medical conditions.''

Fourth, the final rule provides that the supporting documentation should describe (rather than ''describe or confirm'') the adjustment or change needed at work and has added that the adjustment or change needed at work must be ''due to the limitation'' in order to ensure that the documentation connects the physical or mental condition with the adjustment or change at work.

In the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation,* the Commission has added information explaining how seeking more documentation than is set out in § 1636.3(l) can violate 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)(3)) (if the employer fails to provide the accommodation based on lack of documentation) and how seeking additional documentation or information beyond what is permitted in § 1636.3(l) when an employee requests a reasonable accommodation may violate the PWFA's prohibitions on retaliation in 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)).[189]

The Commission also has added examples in the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation* to illustrate when documentation from a health care provider is sufficient.

Generally, as explained in the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation,* confirming the physical or mental condition requires only a simple statement that the physical or mental condition meets the first part of the definition of ''limitation'' at § 1636.3(a)(2) (*i.e.,* the physical or mental condition is: an impediment or problem, including ones that are modest, minor, or episodic; a need or a problem related to maintaining the health of the employee or the pregnancy; or that the employee is seeking health care related to pregnancy, childbirth, or a related medical condition itself). Because the physical or mental condition can be something like fatigue or vomiting, there is no need for the statement to contain a medical diagnosis. Thus, as set out in the Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation,* documentation is sufficient under § 1636.3(l)(2) even if it does not contain a medical diagnosis, as long as it has a simple statement of the physical or mental condition.

The physical or mental condition must be related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. The supporting documentation need not state that the pregnancy, childbirth, or related medical conditions are the sole, the original, or a substantial cause of the physical or mental condition at issue, because the statute only requires that the physical or mental condition be ''related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions.'' If relevant, the documentation should include confirmation that the ''related medical condition'' is related to pregnancy or childbirth.

The documentation should describe what adjustment or change at work is needed due to the limitation. The Interpretive Guidance in section *1636.3(l)(2) Reasonable Documentation* provides examples of these.

Other comments pointed out that reasonable documentation should include information about the duration of the limitation. These comments observed that while some limitations may continue for the entire length of a pregnancy, the duration of other limitations, such as a postpartum limitation that requires leave, may be less definite. The comments also noted that the expected duration of the limitation and corresponding accommodation can be a key factor in determining whether the accommodation would impose an undue hardship, or whether an essential function(s) could be performed ''in the near future.'' The Commission generally agrees with this point but concludes that it would be more useful for covered entities to have information about the expected duration of the needed modification, rather than the duration of the limitation itself. The Commission also believes including information about the duration of the modification could address concerns other comments raised about the need for periodic updates of documentation. If, for example, supporting documentation indicates that a pregnant employee would need an hour of leave every morning due to morning sickness for the first 3 months of the pregnancy, the employer would be permitted to request updated documentation at the end of those 3 months if the employee requested that the accommodation continue. Thus, the Interpretive Guidance states that an estimate of the expected duration of the modification may be part of the supporting documentation sought by the employer, if necessary.[190]

Numerous comments argued that covered entities may not require employees to use a specific form for supporting documentation, as long as the necessary information is provided. These and other comments also expressed concern about employers who require employees seeking accommodations under the PWFA to submit specific forms that call for extensive medical information. One comment submitted, as attachments, several examples of forms that employees requesting accommodations under the PWFA have been required to use. These forms require information beyond the description of ''reasonable documentation'' presented in the proposed rule and adopted by this final rule. The forms submitted sought extensive information, including: whether the individual had previously requested an accommodation; validation that the individual could perform a long list of essential functions, irrespective of the accommodation being requested; identification of any diagnoses, impairments, or conditions that might affect the individual's ability to perform essential job functions or major life activities; description of side effects of any treatment received; the length of time the impairment or condition had been treated; the expected duration of each impairment or condition; and whether the health care practitioner considered the condition in question to be a disability. The comments also noted that some covered entities reject supporting documentation based on

[189] The Commission has moved the examples that were in the proposed appendix (formerly Examples #36 and #37) to § 1636.5(f).

[190] The Commission is aware of case law under the ADA indicating that, when determining whether the reasonable accommodation of leave will enable an employee to perform the essential functions of a position ''in the near future,'' the focus should be on the expected duration of the impairment, as opposed to the expected duration of the needed leave. *See, e.g., Punt* v. *Kelly Servs.,* 862 F.3d 1040, 1051 (10th Cir. 2017); *Aubrey* v. *Koppes,* 975 F.3d 995, 1010–11 (10th Cir. 2020); *Herrmann,* 21 F.4th at 676–77. In those cases, courts appear to be concerned about situations where the end of the leave and the ability to return to work are not coterminous. Because many accommodations under the PWFA will be for temporary conditions, the Commission expects that this issue will not arise with frequency. For example, if an employee needs an essential function temporarily suspended until the end of their pregnancy, the end of the suspension and the end of their pregnancy are the same time. The Commission also is concerned that using the duration of the limitation could lead to inaccurate information. An employee may, for example, have a limitation that will last for an entire pregnancy, such as an inability to be around certain chemicals, but only needs a change at work for the 2-month period during which the job in question involves proximity to those chemicals.

technical issues, such as use of the wrong form.

Other comments argued that instead of prohibiting the use of specific forms to request documentation, the final rule should create a PWFA certification form, similar to the FMLA certification form, that covered entities could use to request documentation and that would provide what comments called a ''safe harbor.''

The final rule provides that when a covered entity is permitted to seek supporting documentation under this rule, it may not require that supporting documentation be submitted on a specific form. This is consistent with similar rules under the FMLA [191] and the ADA [192] and recognizes that although employers may seek supporting documentation, they should not burden employees or health care providers with unnecessary technical requirements in their efforts to obtain the information.

Finally, the final rule does not include a ''PWFA certification form.'' Covered entities should comply with the PWFA's rule on supporting documentation by only seeking supporting documentation when it is reasonable under the circumstances and, in those cases, requesting only reasonable documentation, as defined in the final rule. The Commission fears that designing a PWFA certification form will create an assumption that supporting documentation is necessary in every case. It is not, and indeed it is barred in many circumstances. Employers are not required to obtain documentation for any reasonable accommodation under the PWFA and are encouraged to minimize documentation burdens on employees seeking accommodation under the PWFA whenever possible.

The final rule therefore states, at new § 1636.3(l)(2)(i), that when it is reasonable under the circumstances, as established in paragraph (l)(1), to seek supporting documentation, the covered entity is limited to seeking reasonable documentation. Reasonable documentation means the minimum that is sufficient to: (A) confirm the physical or mental condition (*i.e.,* an impediment or problem that may be modest, minor, and/or episodic; a need or a problem related to maintaining the employee's health or the health of the pregnancy; or an employee seeking health care related to pregnancy, childbirth, or a related medical condition itself) whether or not such condition meets the definition of disability specified in the ADA; (B) confirm that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (together with paragraph (l)(2)(i)(A), ''a limitation''); and (C) describe the adjustment or change at work that is needed due to the limitation.

Furthermore, new § 1636.3(l)(2)(ii) states that covered entities may not require that supporting documentation be submitted on a specific form.

1636.3(l)(3) Limitations on a Covered Entity Seeking Supporting Documentation From a Health Care Provider

The proposed rule explained that if a covered entity decides to seek supporting documentation and meets the requirements set forth in the rule, the covered entity may require that the reasonable documentation come from a health care provider. Comments suggested one additional type of health care provider, an industrial hygienist, and also questioned whether ''doula'' should be included. The Commission has added ''industrial hygienist'' to the list and has moved the reference to ''doula'' to a place on the list closer to health care providers who offer similar services. Many comments also recommended that the Commission affirmatively state that the health care provider could be one that provides services through telehealth; the Commission has made that addition in the regulation. The final rule also slightly reorders the listed health care providers so that those focused on mental health care are listed together, adds ''psychiatrist,'' which was unintentionally left out of the proposed list, and changes the term ''providers'' in ''mental health care providers'' to ''professionals,'' to parallel the term used in the Commission's ADA policy guidance.[193]

Some comments focused on the first part of the proposed rule's list of health care providers, *i.e.,* ''A covered entity may require documentation comes from an appropriate health care provider, in a particular situation,'' and suggested that the words ''appropriate'' and ''in a particular situation'' be removed in the final rule. The comments argued that these words give covered entities unnecessary power over the type of health care provider an employee should visit. The Commission concludes that these qualifiers are unnecessary and that it should be up to the employee seeking care and the health care provider providing care to determine what type of health care provider can best serve the person's needs. The final rule therefore removes these words.

Other comments suggested that the final rule make clear that the treating physician does not need to be the one to provide the reasonable documentation, pointing to privacy concerns in relation to certain kinds of medical care; these comments cited the example of abortion care. The comments stated that a health care provider familiar with the employee's circumstances should be allowed to provide the necessary information even if they are not the person treating the condition in question. As noted above, when an employer is permitted to seek supporting documentation, they are only permitted to seek reasonable documentation, which means the minimum that is sufficient to: (A) confirm the physical or mental condition (*i.e.,* an impediment or problem that may be modest, minor, and/or episodic; a need or a problem related to maintaining the employee's health or the health of the pregnancy; or an employee seeking health care related to pregnancy, childbirth, or a related medical condition itself) whether or not such condition meets the definition of disability specified in the ADA; (B) confirm that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (together with paragraph (l)(2)(i)(A), ''a limitation''); and (C) describe the adjustment or change at work that is needed due to the limitation. Any health care provider familiar enough with the individual's circumstances to provide the described information may do so under the final rule, whether or not they are treating the individual for the condition at issue.

Comments and Response to Comments Regarding Prohibition on Examinations by Employer's Health Care Provider

The NPRM stated that it is not practical or necessary for a covered entity to request or require that an employee be examined by a health care provider of the covered entity's choosing.

[191] *See* U.S. Dep't of Lab., Wage & Hour Division, *The Employer's Guide to the Family and Medical Leave Act* 32, *https://www.dol.gov/sites/dolgov/files/WHD/legacy/files/employerguide.pdf* (last visited Mar. 18, 2024) (''The employer must accept a complete and sufficient medical certification, regardless of the format. The employer cannot reject a medical certification that contains all the information needed to determine if the leave is FMLA-qualifying.'').

[192] *See Enforcement Guidance on Reasonable Accommodation, supra* note 111, at Question 6 (explaining that employers may only request reasonable documentation).

[193] *See id.*

Most of the comments on this proposal agreed that covered entities should never be able to require individuals requesting accommodation under the PWFA to be examined by a health care provider of the covered entity's choosing. Comments explained that this would cause an unnecessary invasion of privacy, have a chilling effect, burden employees unnecessarily, and cause delay. Some comments noted that such a requirement would have a particularly negative effect on individuals seeking abortion care and women of color who face racism in health care and may be particularly reluctant to go to a new provider selected by their employer. A few comments disagreed with the proposed rule, noting that second opinions should be permitted since they are permitted under the FMLA, that some employees may not have a doctor, and/or that employers who do not want to provide the accommodation supported by the employee's doctor will need to seek the opinion of their own doctor.

The final rule prohibits covered entities from requiring that an employee be examined by a health care provider of the covered entity's choosing. Although such a practice is allowed in certain cases under the ADA and the FMLA, even under those laws the practice is limited.[194] The PWFA covers many common physical or mental conditions for which there will never be a need for a medical diagnosis, and accommodations under the PWFA will usually be temporary. This supports a final rule under the PWFA that prohibits examinations by the employer's health care provider, even in the limited situations in which the practice is permitted under the ADA.

The final rule, for these reasons and to avoid the chilling effect, burdens, and potential delays outlined in the comments, states that a covered entity may not require that the employee seeking the accommodation be examined by a health care provider selected by the covered entity.

1636.3(l)(4) Formerly Proposed Confidentiality/New Final Self-Confirmation of Pregnancy or Lactation

As explained *supra* in the preamble in section *1636.3(l)(1) Seeking Supporting Documentation Only When Reasonable Under the Circumstances,* the final rule at § 1636.3(l)(4) provides a definition for self-confirmation of pregnancy or lactation. The corresponding section in the Interpretive Guidance, *1636.3(l)(4) Self-Confirmation of Pregnancy or Lactation,* explains how this is a simple procedure that can occur in the same conversation where the employee requests an accommodation.

The proposed rule, § 1636.3(l)(4), and the corresponding discussion in the proposed appendix, described the ADA's prohibition on disclosure of confidential medical information, including medical information obtained under the PWFA. Because these legal protections arise from the ADA and not the PWFA, the Commission removed reference to them in the PWFA regulation itself. The relevant protections are now described in the Interpretive Guidance in section *1636.7(a)(1)* under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.* This section explains, as did the NPRM, that while the PWFA does not have its own provision requiring the protection of medical information, employees covered by the PWFA also are covered by the ADA, and, under the ADA, covered entities are required to keep medical information confidential, with limited exceptions.[195] The NPRM also stated that intentional disclosure of medical information obtained through the PWFA's reasonable accommodation process may violate the PWFA's prohibition on retaliation and/or coercion.[196] Information regarding how the disclosure of medical information also may violate the retaliation provision of the PWFA is in the Interpretive Guidance in section *1636.5(f)* under *Possible Violations of 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information.*

1636.4 Formerly Proposed Prohibited Practices/New Final Nondiscrimination With Regard to Reasonable Accommodations Related to Pregnancy

The Commission changed the title of § 1636.4 in the regulation and the corresponding section of the Interpretive Guidance to match the title of this section in the statute.

1636.4(a) Failing To Provide Reasonable Accommodation

The Commission did not receive comments suggesting changes to § 1636.4(a). The Commission made only one minor change to that part of the regulation, to change the terminology used there (and throughout the preamble, regulation, and Interpretive Guidance) from ''denial'' of reasonable accommodation to ''failure to provide'' reasonable accommodation. This better reflects the language in 42 U.S.C. 2000gg–1(1), which makes it ''an unlawful employment practice for a covered entity to'' ''not make reasonable accommodations.'' Throughout the preamble, regulation, and the Interpretive Guidance, the Commission uses ''failure to provide a reasonable accommodation'' and ''not make reasonable accommodation'' interchangeably. In § 1636.4(a)(1) through (4) in the regulation, in addition to the changes described below, the Commission has added language to the effect that these sections apply to ''qualified employees'' with ''known limitations related to pregnancy, childbirth, or related medical conditions'' so that they use the same language as 42 U.S.C. 2000gg–1(1) and § 1636.4(a).

1636.4(a)(1) Formerly Proposed Unnecessary Delay in Responding to a Request for Reasonable Accommodation/New Final Unnecessary Delay in Providing a Reasonable Accommodation

The Commission received several comments regarding the importance of making delay in the provision of a reasonable accommodation actionable.

First, numerous comments recommended that the Commission clarify that ''unnecessary delay in responding to the request for a reasonable accommodation'' (the language in § 1636.4(a)(1) in the proposed rule) would cover delay in all parts of the reasonable accommodation process, including delay in responding to the initial request, engaging in the interactive process, or providing the reasonable accommodation. The Commission agrees that the intent of the phrase ''delay in responding to the

[194] Under the FMLA, an employer can only require a second opinion (at the employer's expense) if it has ''reason to doubt the validity of a medical certification.'' 29 CFR 825.307(b). The employer can choose the health care provider to provide the second opinion but generally may not select a health care provider that it employs or contracts with on a regular basis. For the third opinion (also at the employer's expense), if one is sought, the health care provider must be jointly designated or approved by the employer and the employee. 29 CFR 825.307(c). Under the ADA, the practice is allowed only if the individual provides insufficient information from their own health care provider and, even in those circumstances, ADA guidance explains that the employer should explain why the documentation is insufficient and allow the individual an opportunity to provide the missing information in a timely manner. The ADA also requires the employer to pay all costs associated with the visit and requires that the examination be limited to determining the existence of an ADA disability and the functional limitations that require reasonable accommodation. *See Enforcement Guidance on Reasonable Accommodation, supra* note 111, at Question 7.

[195] 88 FR 54738, 54789.

[196] *Id.* at 54744, 54789, 54793.

request for a reasonable accommodation'' encompasses delay in any part of the reasonable accommodation process. To clarify this point, the Commission has changed the language in the rule to ''unnecessary delay in providing a reasonable accommodation,'' has changed the title of this provision in the Interpretive Guidance in section to *1636.4(a)(1) Unnecessary Delay in Providing a Reasonable Accommodation* and has added examples of the different ways this could manifest in the Interpretive Guidance for this section.

Second, one comment recommended clarifying that a delay by a third-party administrator acting for the covered entity is attributable to the covered entity. The Commission agrees and has added that information in the Interpretive Guidance in section *1636.4(a)(1) Unnecessary Delay in Providing a Reasonable Accommodation.*

Third, numerous comments suggested adding that the ''urgency'' of the need for the accommodation be included as a factor, to account for situations where the need for the accommodation is an emergency. The Commission declines to add this as a factor because defining ''urgency'' would be difficult and could lead to unnecessary litigation regarding whether or not something was ''urgent.'' However, the Commission has added information regarding emergencies in the Interpretive Guidance in section *1636.3(k)* under *Engaging in the Interactive Process.*

Numerous comments also suggested removing the factor in paragraph (a)(1)(vi) of the proposed rule (the factor in paragraph (a)(1)(vii) of the final rule), which provides that delay in providing a reasonable accommodation is more likely to be excused where an interim reasonable accommodation is offered and that the interim reasonable accommodation cannot be leave, unless certain circumstances apply. Comments argued that the factor in paragraph (a)(1)(vi) of the proposed rule could encourage covered entities to rely on interim accommodations and engage in delay. The Commission recognizes this risk, but, given the numerous comments that argued in favor of requiring employers to provide interim reasonable accommodations, the Commission believes that creating an incentive for the provision of interim reasonable accommodations is important. Responding to the comments, the Commission has limited the use of leave to excuse an unnecessary delay to the situations where an employee requests or selects leave as an interim reasonable accommodation. The Commission also has removed the sentence, ''[i]f an interim reasonable accommodation is offered, delay by the covered entity is more likely to be excused'' from proposed § 1636.4(a)(1)(vi) (now § 1636.4(a)(1)(vii)). The language in § 1636.4(a)(1) stating that these are factors to be considered in determining whether there has been unnecessary delay already explains this concept.

The Commission has included an additional factor for determining whether delay is unnecessary—how long the accommodation may be required. This factor accounts for situations where the accommodation is a short-term matter, and, by unnecessarily delaying the response, the covered entity, in effect, fails to provide the accommodation. This factor is in keeping with the discussion of delay in the NPRM, which noted that ''[g]iven that pregnancy-related limitations are frequently temporary, a delay in providing an accommodation may mean that the period necessitating the accommodation could pass without action simply because of the delay.'' [197]

1636.4(a)(2) Refusing an Accommodation

The Commission received a few comments regarding § 1636.4(a)(2), which provides that a qualified employee does not have to accept an accommodation. If the employee cannot perform the essential functions of the position without the accommodation, the employee is not qualified. The proposed rule required employers also to consider whether the employee could be qualified with the temporary suspension of an essential function(s). The comments stated that the proposed rule created a situation where the employee could refuse the reasonable accommodation that allowed them to perform the essential functions of the position because the employee would prefer an accommodation that allowed them to suspend an essential function(s) and this, in effect, would remove the employer's ''ultimate discretion'' in choosing between effective accommodations. In order to address this issue, the Commission changed this paragraph in the final regulation so that it does not give the impression that an employee can reject a reasonable accommodation that allows them to do the essential function(s) of their position in order to have an essential function(s) of the position temporarily suspended.

[197] 88 FR 54739, 54789.

1636.4(a)(3) Covered Entity Failing To Provide a Reasonable Accommodation Due to Lack of Supporting Documentation

The Commission has made four changes to this section of the regulation in order to make it align with § 1636.3(l), the provision regarding the limits on supporting documentation, and has reflected these changes in the Interpretive Guidance in section *1636.4(a)(3) Covered Entity Failing To Provide a Reasonable Accommodation Due to Lack of Supporting Documentation.* First, the Commission has added as § 1636.4(a)(3)(i) that the covered entity must have sought the supporting documentation. The Commission has maintained as § 1636.4(a)(3)(ii) that seeking supporting documentation must be reasonable under the circumstances as set out in § 1636.3(l)(1). Second, the Commission has added at § 1636.4(a)(3)(iii) that the supporting documentation sought must be ''reasonable documentation'' as defined by § 1636.3(l)(2). Third, the Commission has added at § 1636.4(a)(3)(iv) that the employer must provide the employee sufficient time to obtain and provide the supporting documentation. Fourth, the Commission has added the word ''unnecessary'' before the word ''delay'' because an employer only has to justify unnecessary delay.

Finally, the Commission has reformatted this section to indicate the different requirements.

1636.4(a)(4) Choosing Among Possible Accommodations

The Commission received several comments about this provision. These comments pointed out that ''similarly situated'' is a term that courts have narrowly construed and that its use here could impede ensuring that employees receive the accommodations that provide equal opportunity. Some comments suggested adding that equal employment opportunity can be determined based on evidence of the opportunities that would have been available to the employee had they not identified a known limitation or sought an accommodation.

The Commission agrees that modifications should be made in this section to protect qualified employees and to minimize the need for litigation. Thus, the regulation provides that the ''average employee'' who is ''similarly situated'' without a known limitation can include the qualified employee themselves, and the Interpretive Guidance in section *1636.4(a)(4) Choosing Among Possible*

Accommodations contains additional information regarding evidence about possible comparators. Other comments suggested adding that the similarly situated employees should be similar in material respects, not all respects; the Commission agrees that this is true for similarly situated employees in general but did not add this concept to the regulation.

The Commission also received some comments recommending the addition of another standard, requiring employers to choose an option that most effectively meets the employee's needs and provides the employee with equal employment opportunity. The Commission declines to make this change. Employers must provide an accommodation that is effective. The employer does not have to provide the ''most effective'' accommodation or the accommodation that is the choice of the qualified employee. The Commission also received a comment recommending that the Commission add a provision to the rule stating that employers may not select any accommodation that negatively affects an employee's terms or conditions of employment at any time. The Commission did not add this because adopting a requirement that employers may not select an accommodation that ''negatively affects'' terms or conditions would be a new standard, and the general concept of this comment is covered by the provision requiring equal employment opportunity.

One comment suggested an employer should provide the employee with a choice of options that are responsive to the employee's needs and allow the employee to choose from the options. This comment asserted that doing so would decrease litigation for the employer. While the Commission agrees that this is a best practice and may help the covered entity avoid litigation, the Commission did not add this idea to the regulation or the Interpretive Guidance.

Finally, the Commission reordered the sentences in this provision in the regulation and removed the phrase ''that do not cause an undue hardship'' from this section of the regulation because it is redundant. The covered entity does not have to provide an accommodation that causes an undue hardship.

1636.4(b) Requiring a Qualified Employee To Accept an Accommodation

The Commission received a few comments regarding this provision. One comment argued that the interactive process is not always necessary. The Commission agrees that for some simple accommodations, the interactive process can be a very quick conversation where the employee provides information to the covered entity and the covered entity provides the accommodation. However, covered entities may not require a qualified employee to accept an accommodation other than one arrived at through the interactive process under 42 U.S.C. 2000gg–1(2). Thus, employers should not provide employees with an accommodation because the covered entity thinks the accommodation is ''obvious.'' Rather, the covered entity should engage the employee in the interactive process, even if it is very abbreviated.

The Commission received a few comments suggesting changes to the description of damages that could be available in Example #39 in the proposed rule. The Commission agrees that the damages suggested by the comments could be available and has made changes to the example, which is now Example #57 in the Interpretive Guidance in section *1636.4(b) Requiring a Qualified Employee To Accept an Accommodation.*

1636.4(c) Denying Opportunities to Qualified Employees

The Commission did not receive comments regarding this provision. The Commission maintained the language from the proposed rule for this provision. The Commission also has made minor changes in the Interpretive Guidance in section *1636.4(c) Denying Opportunities to Qualified Employees* for this provision.

1636.4(d) Requiring a Qualified Employee To Take Leave

The Commission maintained the language from the proposed rule for this provision. The Commission also has made minor changes in the Interpretive Guidance in section *1636.4(d) Requiring a Qualified Employee To Take Leave* for this provision.

Some comments involving this section raised questions about whether an employer may temporarily require the employee to take leave in situations when the employee cannot work without an accommodation. The Commission has responded to these comments in the preamble in section *1636.3(h)* under *Interim Reasonable Accommodations.* Other comments expressed concerns that this provision would prohibit an employee from requesting leave as a reasonable accommodation. As explained in the proposed rule, the proposed appendix, and the Interpretive Guidance in section *1636.4(d) Requiring a Qualified Employee To Take Leave,* this is incorrect—the prohibition on requiring a qualified employee to take leave does not prohibit an employee from requesting leave as a reasonable accommodation.

1636.4(e) Adverse Action on Account of Requesting or Using a Reasonable Accommodation

The Commission received a few comments regarding the definition of ''adverse action,'' including comments that disagreed with the Commission's definition and instead recommended using the definition of ''adverse employment action''; comments that suggested that the Commission include its proposed definition in the regulation itself; and a few comments agreeing with its definition of ''terms, conditions, or privileges of employment.''

The Commission disagrees that ''adverse action in terms, conditions, or privileges of employment'' should have the same meaning as courts have given the term ''adverse employment action.'' Given the divergent views of the circuits at the time of this writing, adopting the definition of ''adverse employment action'' in interpreting 42 U.S.C. 2000gg–1(5) would lead to different outcomes in different circuits and could reduce protections for employees covered by the PWFA.[198]

The Commission has retained the language in the proposed regulation, as well as the language from the proposed appendix, with minor changes. Specifically, the Commission has removed language from the proposed appendix about this standard not appearing in Title VII or the ADA, and the reference to the basic dictionary definition ''adverse,'' because it has determined that this information is not necessary to the explanation of this provision. The Commission also has reorganized the paragraphs in the Interpretive Guidance in section *1636.4(e) Adverse Action on Account of Requesting or Using a Reasonable Accommodation* and made a few minor edits to the examples for this section. The Commission has added language to Example #58 in section *1636.4(e) Adverse Action on Account of Requesting or Using a Reasonable Accommodation* (proposed Example #40) to clarify that when an employee receives leave as a reasonable accommodation, production standards such as sales quotas may need to be

[198] *Compare, e.g., Muldrow* v. *City of St. Louis,* 30 F.4th 680 (8th Cir. 2022) (concluding that a transfer is not an adverse employment action absent materially significant disadvantage), *cert. granted in part,* 143 S. Ct. 2686 (2023), *with Threat* v. *City of Cleveland,* 6 F.4th 672, 678–79 (6th Cir. 2021) (concluding that an ''adverse employment action'' may include shift changes and reassignments).

prorated to ensure that leave is an effective accommodation, as discussed *infra* in the Interpretive Guidance in section *1636.3(h)* under *Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations.*

1636.5 Remedies and Enforcement

Some comments expressed general concerns regarding enforcement, including a concern that employees would find it too difficult to enforce their rights under the law, a suggestion that the Commission find a way to enforce the law quickly, and a recommendation that the Commission create a safe harbor for small businesses that would allow businesses with 15 to 50 employees the opportunity to fix a violation once it was brought to their attention and that would permit a finding of liability only following repeated or willful violations.

The Commission agrees that it is important that employees be able to enforce their rights; to that end, the Commission conducts outreach with employees on a regular basis. The Commission shares the desire for expeditious compliance; this regulation is one step in furtherance of that goal. The Commission conducts significant outreach to small businesses to help them with compliance; employers can obtain more information about these opportunities at: *https://www.eeoc.gov/employers/small-business.* Finally, the Commission does not have the authority to create an exemption for small employers; however, the Commission notes that damages in cases regarding the provision of a reasonable accommodation can be limited by the employer's good-faith efforts.[199]

In the final rule, the Commission has removed section § 1636.5(b) because it applies to employees protected by the Congressional Accountability Act. Throughout this section of this regulation, the Commission has replaced references to ''this section'' with ''the PWFA'' to clarify that the powers, remedies, and procedures referenced in this section are provided by the statute itself.

1636.5(a) Remedies and Enforcement Under Title VII

The final rule at § 1636.5(a) is the same as the proposed rule. The Commission has added information in the Interpretive Guidance in section *1636.5(a) Remedies and Enforcement Under Title VII* to inform employees and covered entities regarding the time limit for filing charges under the PWFA, based on how the Commission enforces other statutes for which it is responsible.

1636.5(e) Remedies and Enforcement Under Section 717 of the Civil Rights Act of 1964

In the Interpretive Guidance in section *1636.5(e) Remedies and Enforcement Under Section 717 of the Civil Rights Act of 1964,* the Commission has added information from the NPRM regarding the application of § 1636.5(e).[200]

Damages

In the Interpretive Guidance in section *1636.5* under *Damages,* the Commission has added information regarding the damages available under the PWFA pursuant to 1977A of the Revised Statutes of the United States, 42 U.S.C. 1981a.

1636.5(f)(1) and (2) Prohibition Against Retaliation

The Commission received some comments regarding the prohibitions on retaliation and coercion.

First, one comment questioned whether the regulation's prohibition of an employer seeking documentation when it is not reasonable to do so would create a new standard for retaliation that does not require intent; it does not. To minimize any misunderstanding and provide a fuller explanation of when going beyond the regulatory limits on seeking supporting documentation set out in § 1636.3(l) may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)), the Commission removed proposed rule § 1636.5(f)(1)(iv) and (v) and proposed rule § 1636.5(f)(2)(iv) and (v) and, instead, explained the interaction between the limitations on supporting documentation and the PWFA's retaliation provision in detail in the Interpretive Guidance in section *1636.5(f) Prohibition Against Retaliation.*

Second, as part of these changes, the Commission has created a new section in the Interpretive Guidance in section *1636.5(f)* entitled *Possible Violations of 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information* and has moved the explanation of how seeking supporting documentation or disclosing medical information may violate 42 U.S.C. 2000gg–2(f) to this section. The Commission also has added an additional example regarding the unauthorized disclosure of medical information to the examples of retaliation in the Interpretive Guidance in section *1636.5(f) Prohibition Against Retaliation.*

Third, the Commission removed language that a request for a reasonable accommodation constitutes ''protected activity'' in the coercion section of the regulation, at proposed rule § 1636.5(f)(2)(ii), because ''protected activity'' is not a phrase used in the analysis of coercion claims.

The Commission received several comments requesting additional examples involving the prohibition on retaliation. The Commission agrees that more examples could be helpful and has included a few more in the Interpretive Guidance in section *1636.5(f) Prohibition Against Retaliation,* including some related to requests for supporting documentation. Other comments suggested edits to certain examples in the proposal, and the Commission incorporated some of those modifications. For example, in addition to adding descriptive titles to the examples in this section, the Commission has added facts to certain examples to strengthen the connection between the covered entity's actions and the protected activity. The Commission added explanations to clarify how certain actions that may violate this provision of the PWFA, also may violate 42 U.S.C. 2000gg–1(1) (because these actions may make the accommodation ineffective) and 2000gg–1(5) (prohibiting adverse actions), rather than merely including the relevant statutory citation.

The Commission also has included in the Interpretive Guidance in section *1636.5(f) Prohibition Against Retaliation* additional information about retaliation and coercion from its *Enforcement Guidance on Retaliation and Related Issues* so that this information is more easily accessible.

One comment requested that information regarding neutral work rules, such as fixed leave policies, be moved from the Interpretive Guidance to the regulation. The Commission declines to make this change but has added examples regarding this type of policy to the Interpretive Guidance in section *1636.5(f) Prohibition Against Retaliation.*

The Commission received a few comments expressing concern that mission statements, statements regarding religious beliefs of an employer, or statements in employee handbooks would be seen as violating § 1636.5(f)(2). Whether a statement violates 42 U.S.C. 2000gg–2(f)(2) will depend on the language of the statement, but, as the examples provided in the NPRM and the final rule

[199] 42 U.S.C. 2000gg–2(g).

[200] 88 FR 54742.

for this provision show, the making of general statements regarding an employer's mission or religious beliefs is not the type of conduct that the Commission previously has determined would be prohibited by this provision.[201]

Additionally, the Commission made minor changes to § 1636.5(f). The proposed rule at § 1636.5(f)(1) referred to ''employee, applicant, or former employee'' and ''individual'' to refer to this group; the final rule uses only ''employee'' as that is the language in the statute. The removal of the words ''applicant'' and ''former employee'' and ''individual'' is a minor change. The statute at 42 U.S.C. 2000gg(3) provides that ''employee'' in the statute includes ''applicant''; the same is true for the regulation and the Interpretive Guidance. The statute at 42 U.S.C. 2000gg(3)(A) refers to the Title VII definition of employee; that definition includes former employees when relevant.[202] Finally, the proposed rule in § 1636.5(f)(2) used the word ''because''; this has been changed to ''on account of'' to match the statute.

1636.5(g) Limitation on Monetary Damages

Several comments recommended that the Commission clarify that the good faith defense to money damages is limited to damages for a covered entity's failure to make reasonable accommodations under 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)) only. The Commission agrees that this clarification would be helpful and has added it to the Interpretive Guidance in section *1636.5(g) Limitation on Monetary Damages.*

1636.6 Waiver of State Immunity

A few comments recommended that the Commission either exempt State employers from the PWFA or create exceptions in the PWFA for certain State laws to provide States greater protection from the PWFA. The Commission declines to make these changes. The statute at 42 U.S.C. 2000gg–4 provides that ''A State shall not be immune under the 11th Amendment to the Constitution from an action in a Federal or State court of competent jurisdiction for a violation of [the PWFA].'' A decision by the Commission to modify this waiver would be in violation of the statute.[203]

1636.7 Relationship to Other Laws

1636.7(a)(1) Relationship to Other Laws in General

Many comments addressed the PWFA and its relationship to other laws, some suggesting the inclusion of additional laws in the discussion in the Interpretive Guidance and others asking whether accommodations under the PWFA would lead to violations of other laws. The Commission has maintained the rule language from the NPRM and has made changes and additions to the Interpretive Guidance in section *1636.7(a)(1) Relationship to Other Laws in General* in response to the comments. These changes and the Commission's responses to specific comments are discussed below.

Some comments recommended that collective bargaining agreements (CBAs) and workplace safety laws be added to the list of laws in § 1636.7(a)(1), to clarify that the PWFA does not invalidate CBAs or workplace safety laws that provide greater or equal protection for individuals affected by pregnancy, childbirth, or related medical conditions. The Commission agrees with this suggestion and has added language to this effect in the Interpretive Guidance in section *1636.7(a)(1) Relationship to Other Laws in General.*

Other comments asked how the PWFA will interact with the FMLA. The FMLA provides job-protected unpaid leave for serious health conditions, including pregnancy. As set out in 2000gg–5(a)(1), nothing in the PWFA invalidates or limits the powers, remedies, and procedures under other Federal laws that provide greater or equal protection for individuals affected by pregnancy, childbirth, or related medical conditions. Thus, the PWFA does not invalidate or limit the rights of employees covered by the FMLA or State versions of it. The Department of Labor's regulations set out how the FMLA interacts with other civil rights laws, including leave as a reasonable accommodation under the ADA.[204]

Some comments asked the Commission whether breaks under the PWFA must be paid, either under the PUMP Act or the FLSA.[205] As the Commission explained in the discussion of reasonable accommodations in the NPRM, ''Breaks may be paid or unpaid depending on the employer's normal policies and other applicable laws. Breaks may exceed the number that an employer normally provides because reasonable accommodations may require an employer to alter its policies, barring undue hardship.'' [206]

One comment suggested that the Commission create a safe harbor provision for covered entities similar to one created by the Department of Labor for wage deductions. The PWFA does not provide the Commission with this authority.

The Commission received some comments regarding the requirements for Federal agencies under Executive Order 13164. The Commission will respond to those through its work with Federal agencies.

Comments and Response to Comments Regarding the Relationship With Title VII

The Commission did not receive many comments regarding the discussion in the proposed appendix concerning § 1636.7(a)(1), about the relationship between the PWFA and Title VII. The Commission has maintained the discussion from the proposed appendix with some edits for style and clarity and added it in the Interpretive Guidance in section *1636.7(a)(1)* under *The PWFA and Title VII.*

A few comments questioned whether providing an accommodation under the PWFA would violate Title VII's prohibition on sex discrimination. This issue is discussed in more detail above.[207] The employees covered by the

[201] Certain types of employer statements or policies, of course, may violate 42 U.S.C. 2000gg–2(f). *Cf. [207] *See supra, Response to Comments Regarding the Commission's Proposed Definition of ''Pregnancy, Childbirth, or Related Medical Conditions'' as Reflected in Statutory Text; see, e.g., Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(C)(3); *Cal. Fed. Sav. & Loan Ass'n,* 479 U.S. at 290 (concluding that the State could require employers to provide up to four months of medical leave to pregnant women where ''[t]he statute is narrowly drawn to cover only the period of actual physical disability on account of pregnancy, childbirth, or related medical

PWFA also are covered by Title VII. Title VII, as amended by the PDA, provides for accommodations for employees affected by pregnancy, childbirth, or related medical conditions under certain circumstances, even when all employees do not receive the same accommodations.[208] Providing these accommodations under Title VII does not violate Title VII even if they are not provided to all employees; the same is true under the PWFA.

Comments and Response to Comments Regarding the Relationship With the ADA

The Commission received some comments with questions regarding the interaction between the ADA and the PWFA. One comment recommended that the Commission state that if an employee might be covered by both the ADA and the PWFA, an employer should consider the ADA first. The Commission disagrees that it should make this determination or that employers should necessarily consider the ADA first. While it will depend on the specific facts of the situation, generally, when an employee might be covered by both the ADA and the PWFA, an employer's analysis should begin with the PWFA because the definition of ''known limitation'' means that under the PWFA an employer is required to provide reasonable accommodations in situations in which it may not be required to do so under the ADA. This is consistent with 42 U.S.C. 2000gg–5(a)(1), which states that when multiple State or Federal laws provide protection, a covered entity should consider all applicable laws and follow the principles that provide the broadest protections and impose the smallest burden on the employee. This has been added in the Interpretive Guidance in section *1636.7(a)(1)* under *The PWFA and the ADA.*

A few comments questioned whether providing an accommodation under the PWFA would result in violations of the ADA if doing so made granting the accommodation to an individual covered by the ADA an undue hardship or because the PWFA provides for accommodations in situations that may not be covered by other laws. As an initial matter, the Commission disagrees that accommodations should be viewed as a zero-sum game. Under both the ADA and the PWFA, an individualized assessment occurs; there is no guarantee that an accommodation for one employee will result in another employee receiving or not receiving one. As data from the Job Accommodation Network show, most accommodations under the ADA are no-cost or low-cost.[209] If there is truly a situation where there are limits—for example, if there are only 10 parking spaces—the employer can provide the accommodation until the limit is reached on a first-come, first-served or another neutral basis. Further, the fact that an employee is able to receive an accommodation under the PWFA that an employee cannot receive under the ADA does not violate the ADA because in that case, the employer is not refusing the accommodation to the person because of their disability. Rather, the employer is complying with its obligations under a different Federal law.

The Commission has provided additional information and examples regarding the interaction between the PWFA and the ADA, in the Interpretive Guidance in section *1636.7(a)(1)* under *The PWFA and the ADA,* including examples of that relationship.

Within section *1636.7(a)(1)* of the Interpretive Guidance, as set out below, the Commission has included information about two critical ADA protections that apply to employees covered by the PWFA: the rules that limit covered entities from making disability-related inquiries and requiring medical exams and the rules protecting confidential medical information.[210] The information explains how the ADA's provisions that restrict the ability of employers to make disability-related inquiries interact with the PWFA and how the ADA's rules regarding confidential medical information and restrictions on sharing confidential medical information apply to medical information collected under the PWFA.

Comments and Response to Comments Regarding the Confidentiality of Medical Information

As explained in the NPRM, the PWFA does not include a provision specifically requiring covered entities to maintain the confidentiality of medical information obtained in support of accommodation requests under the PWFA. However, applicants, employees, and former employees covered by the PWFA also are covered by the ADA.[211] Under the ADA, covered entities are required to keep medical information of all applicants, employees, and former employees (whether or not those individuals have disabilities) confidential, with limited exceptions.[212] The Commission has long held that these ADA rules on confidentiality apply to all medical information, whether obtained through the ADA process or otherwise; thus this protection applies to medical information obtained under the PWFA, including medical information voluntarily provided and medical information provided as part of the reasonable accommodation process.[213] Moreover, as a practical matter, in many circumstances under the PWFA the medical information obtained by an employer may involve a condition that could be a disability; rather than an employer attempting to parse out whether to keep certain information confidential or not, all medical information should be kept confidential.[214] Additionally, an employer's disclosure of medical information obtained through the PWFA's reasonable accommodation process beyond what is permitted under the ADA may violate the PWFA's prohibition on retaliation.

Many comments expressed support for the proposed rule's position that the ADA rules regarding medical confidentiality apply to medical information obtained by covered entities under the PWFA. Some of these

conditions.''); *Johnson,* 431 F.3d at 328 (''If the leave given to biological mothers is granted due to the physical trauma they sustain giving birth, then it is conferred for a valid reason wholly separate from gender.'').

Employers may share such information only in limited circumstances with supervisors, managers, first aid and safety personnel, and government officials investigating compliance with the ADA.''); *Enforcement Guidance: Preemployment Disability-Related Questions,* supra note 170, at text accompanying n.6 (''Medical information must be kept confidential.'').

[213] *See supra* note 212. This policy also appears in numerous EEOC technical assistance documents. *See, e.g.,* EEOC, *Visual Disabilities in the Workplace and the Americans with Disabilities Act,* text preceding n.43 (2023), *https://www.eeoc.gov/laws/guidance/visual-disabilities-workplace-and-americans-disabilities-act#q8* (''With limited exceptions, an employer must keep confidential any medical information it learns about an applicant or employee.'').

[214] Requests for accommodation under the PWFA also may overlap with FMLA issues, and the FMLA requires medical information to be kept confidential as well. 29 CFR 825.500(g).

comments urged the Commission to specifically state in the final rule that employers must store an employee's medical information separate from personnel files and may not share it with anyone other than the supervisor implementing the accommodation. Another comment suggested that the final rule require employers to obtain an employee's written consent before disclosing medical information received under the PWFA in all circumstances. Finally, some comments expressed concern that State law enforcement agencies may seek medical information from covered entities regarding abortion care and requested that the final rule address this issue.

Because these confidentiality provisions arise from a statute other than the PWFA, and the violation of these provisions, if one occurred, would be of the ADA and not the PWFA, the Commission has decided not to include them in the regulation itself. Rather, this information has been included in the Interpretive Guidance in section *1636.7(a)(1)* under *The PWFA and the ADA* and under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.*

In response to concerns about State law enforcement agencies seeking medical information related to abortion care from PWFA-covered entities, the Commission reminds employers that the PWFA rules do not require employers to seek supporting documentation regarding requested reasonable accommodations. The Commission further reminds employers that when the employer is permitted to seek supporting documentation, it is limited to the minimum that is sufficient to confirm that the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation), and describe the adjustment or change at work that is needed due to the limitation. Moreover, as noted above, the ADA's confidentiality provisions and limits on disclosure of medical information, reiterated in the Interpretive Guidance in section *1636.7(a)(1)* under *The PWFA and the ADA* and under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information,* apply to medical information, including medical information collected by the employer under the PWFA, and thus the ADA prohibits an employer from releasing medical information except in five specified circumstances.

Further, the Commission has reorganized section *1636.5(f)* in the Interpretive Guidance to highlight the potential retaliation claims that could arise regarding a covered entity seeking or releasing supporting documentation in situations where it would not be permissible under the regulation. These situations are now addressed in the Interpretive Guidance in section *1636.5(f)* under *Possible Violations of 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information.*

1636.7(a)(2) Limitations Related to Employer-Sponsored Health Plans

The Commission has not changed the regulation for this provision.

1636.7(b) Rule of Construction

The Commission received thousands of comments supporting the Commission's case-by-case approach to considering employer defenses asserting religious or constitutional considerations. The Commission also received tens of thousands of comments asserting that giving certain accommodations for pregnancy, childbirth, or related medical conditions, such as providing leave for abortion, infertility treatments, or contraception, would infringe upon the employer's religious freedom and therefore the employer should not be required to provide such accommodations. As explained below, employers who assert that the provision of such accommodations infringes upon their religious exercise may assert numerous statutory and constitutional defenses. Because the facts of each case will differ, the Commission will apply these defenses using a case-by-case analysis,[215] using the framework provided here and consistent with the Commission's approach to other statutes that the Commission enforces.[216]

Section 107(b) of the PWFA, codified at 42 U.S.C. 2000gg–5(b), provides a ''rule of construction'' stating that the law is ''subject to the applicability to religious employment'' set forth in section 702(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e–1(a). The relevant portion of section 702(a) provides that ''[Title VII] shall not apply . . . to a religious corporation, association, educational institution, or society with respect to the employment of individuals of a particular religion to perform work connected with the carrying on by such corporation, association, educational institution, or society of its activities.'' [217] The final rule reiterates this PWFA statutory language and adds that nothing in the regulation limits the rights of a covered entity under the U.S. Constitution, and nothing in 42 U.S.C. 2000gg–5(b) or the regulation limits the rights of an employee under other civil rights statutes.

Comments Regarding the Rule of Construction

The Commission received comments that expressed a broad range of interpretations of the PWFA's ''rule of construction'' provision in section 107(b). Numerous comments agreed with the Commission's proposed rule to consider the provision's application to employers on a case-by-case basis. Many such comments reasoned that the provision should be interpreted consistent with section 702(a) of the Civil Rights Act of 1964 to avoid confusion regarding its application, especially because the same facts may underlie Title VII and PWFA claims. Those comments further observed that section 702(a) strikes the correct balance between the rights of employees and the rights of employers. Other comments focused on one or more of three of section 107(b)'s components: (1) which entities qualify under the provision; (2) the scope of employment decisions to which the provision applies; and (3) the extent to which the provision limits the application of the PWFA's requirements as to qualifying religious entities. The Commission describes the range of comments received as to each component in turn.

Many comments asserted that section 107(b) covers religious entities only if they are qualifying entities under section 702(a). Conversely, many other comments asserted that section 107(b) should apply more broadly to entities owned and operated by religious employers. A few such comments stated that the provision should assess whether entities qualify under section 702(a) using the definition of a ''religious'' organization articulated in a 2017 Memorandum issued by the U.S. Attorney General.[218] Other comments

[215] *See* EEOC, *Compliance Manual on Religious Discrimination,* (12–I)(C) (2021) [hereinafter *Compliance Manual on Religious Discrimination*], *https://www.eeoc.gov/laws/guidance/section-12-religious-discrimination.*

[216] In accordance with the Commission's *Compliance Manual on Religious Discrimination* and the Commission's long-standing polices, the Commission will consider these defenses, when asserted, in all parts of its investigation and enforcement process.

[217] 42 U.S.C. 2000e–1(a).

[218] Memorandum from the Attorney General to All Executive Departments and Agencies, *Federal Law Protections for Religious Liberty* (Oct. 6, 2017), 82 FR 49668, 49670, 49677 (Oct. 26, 2017) [hereinafter *Attorney General Religious Liberty*

said that the provision should be redefined to include employers that object to accommodations on conscience, moral, ethical, scientific, health or medical, or any other secular grounds.

Comments varied regarding their view of the scope of employment decisions to which section 107(b) applies. Some comments asserted that section 107(b) applies only to hiring and firing coreligionists, and other comments asserted that it applies only to providing PWFA accommodations. By contrast, some comments asserted that the provision broadly covers all aspects of the employment relationship.

Furthermore, comments varied regarding the extent to which section 107(b) limits the application of the PWFA's requirements as to qualifying religious entities. Some comments stated that the provision allows qualifying entities to prefer coreligionists only in providing accommodation but does not otherwise exempt qualifying religious organizations from providing accommodations or permit them not to provide accommodations based on religious beliefs. Such comments noted that Congress demonstrated its intent not to broadly exempt religious employers from PWFA compliance when, prior to the law's passage, it rejected an amendment that would have done so.[219] A few such comments maintained that an overly broad religious exemption would permit employers to impede employees' autonomy over decision-making regarding pregnancy, freedom of religion, and freedom from the religious beliefs of others. Further, some comments asserted that the provision, like section 702(a), does not allow a qualifying entity to discriminate on other protected bases, such as sex. Some comments stated that, in their view, when an employer is a qualifying entity under section 702(a), the employer is exempt from all of Title VII's requirements, and the same rule should apply to the PWFA.

Other comments argued that section 107(b) exempts religious organizations more broadly than section 702(a). Some of these comments stated that limiting the exemption only to allow qualifying organizations to prefer coreligionists is at odds with Title VII's text and *Bostock* v. *Clayton County;*[220] that this reasoning does not follow given that the PWFA does not prohibit religious discrimination; that it ignores the Supreme Court's expressed concerns about such an interpretation; and that it ignores the PWFA's legislative history indicating that Members of Congress were concerned about religious organizations' rights. Such comments therefore concluded that a qualifying organization should be able both to prefer coreligionists and to abstain from making an accommodation that would violate the organization's religion under section 107(b).

Comments urging the Commission to interpret section 107(b) more broadly than section 702(a) recommended that the provision be interpreted consistent with the religious entities provision in Title I of the ADA;[221] those comments asserted that an employer should be permitted to require conformity to its religious tenets but acknowledged that the ADA provision does not allow employers to discriminate on other grounds.

The Commission also received comments that either directly or indirectly responded to five directed questions about how the rule of construction would apply in concrete factual scenarios. These comments offered a few fact patterns and expressed concerns that employers may be required to provide leave for medical procedures to which they have religious objections, and that employers may be liable under the PWFA's retaliation and coercion provisions for objecting to medical procedures for religious reasons. Comments expressed concern that employers would violate the law's coercion provision if they informed their employees of their religious objections to certain medical procedures, or that they would violate the law's retaliation provision if they terminated the employment of an employee who requested or received an accommodation for such a medical procedure.

Response to Comments Regarding the Rule of Construction

The Commission will interpret the applicability of the PWFA's rule of construction provision on a case-by-case basis as it does with section 702(a) of the Civil Rights Act of 1964. The Commission's decision is based on several considerations. First, section 107(b) of the PWFA expressly states that the PWFA is ''subject to the applicability to religious employment'' set forth in section 702(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e–1(a). Courts and the Commission always have considered defenses raised under section 702(a) on a case-by-case basis.[222] Second, comments suggesting a different approach provided conflicting recommendations and few concrete factual scenarios as to how the provision would apply under these different rules, thereby creating ambiguity and, as detailed below, failing to provide sufficient justification for deviating from the established case-by-case approach. Third, this case-by-case approach will enable employers, employees, the Commission, and courts to consider the circumstances of each case to the fullest extent under both Title VII—should accommodation claims for pregnancy, childbirth, or related medical conditions be raised under that statute—and the PWFA.[223]

The Commission declines to adopt the religious entities provision set forth in Title I of the ADA because the ADA's provision contains an additional clause not found in section 702(a) of the Civil Rights Act, and Congress explicitly referenced section 702(a)—not the ADA religious entities provision—in enacting the PWFA. As stated above, the Commission must rely on the text of the law that Congress enacted.

In support of the idea that the Commission should adopt a broader interpretation of section 107(b) than section 702(a), many comments cited to the legislative history of the PWFA. Although the Commission's interpretation is driven by the statute's text,[224] given the many comments that cited to the legislative history and the comments submitted by legislators, the Commission reviews the legislative

[220] 590 U.S. 644, 682 (2020) (describing section 702(a) of the Civil Rights Act of 1964).

[221] *See* 42 U.S.C. 12113(d).

[222] *See, e.g., Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(C)(1) (stating that whether an organization is covered by section 702 ''depend[s] on the facts''; ''Where the religious organization exemption is asserted by a respondent employer, the Commission will consider the facts on a case-by-case basis; no one factor is dispositive in determining if a covered entity is a religious organization under Title VII's exemption.''); *id.* at n.60 (discussing court decisions when a defendant has asserted section 702(a) as a defense); *Newsome* v. *EEOC,* 301 F.3d 227, 229–30 (5th Cir. 2002) (per curiam) (addressing a case in which EEOC dismissed a charge where the employer offered evidence that it fell under the religious organization exception).

[223] For example, an employee can bring a failure to accommodate claim under 42 U.S.C. 2000gg–1(1); the same facts could be the subject of a discrimination claim under Title VII. *See generally Young,* 575 U.S. 206 (concerning the Title VII claim of a pregnant employee who was denied a light duty position). Likewise, depending on the facts, an employee who was terminated after requesting or using a reasonable accommodation under the PWFA could have a claim under both the PWFA (42 U.S.C. 2000gg–1(5), 2000gg–2(f)) and Title VII for pregnancy discrimination or retaliation.

[224] *See supra* note 67.

history of section 107(b) and responds to these comments.

The PWFA, as it passed the U.S. House of Representatives, did not include the language now contained in section 107(b). The House also had voted against including similar language in section 107(b) in the definition of ''employer.'' [225] In the U.S. Senate, the language now contained in section 107(b) was first offered as an amendment by one of the bill's principal sponsors, Senator William Cassidy.[226] Senator James Lankford then offered a different amendment that would have provided even broader protection for religious organizations using language that differed from both the ultimately enacted language of section 107(b) and Title VII's section 702(a).[227] Senator Cassidy spoke against that broader amendment, stating that language referring to section 702(a) would be broad enough—he noted the initial section 107(b) language ''was drafted by House Republican Virginia Foxx. . . . [and] addresses the issue,'' and asserted that Senator Lankford's amendment ''would increase the likelihood of changing previous [Title VII] jurisprudence.'' [228] Ultimately, the section 107(b) language offered by Senator Cassidy and adopted in the final bill was added to a rule of construction, rather than to the definition of ''employer.'' [229] Prior to the House vote on the final omnibus bill, Representative Jerrold Nadler, the principal sponsor of the PWFA in the House, and Representative Robert Scott, the Chair of the House committee that had jurisdiction over the PWFA, issued statements regarding the interpretation of section 107(b); both statements interpreted the provision's protections differently than Senator Cassidy had interpreted them.[230]

The Commission also reviewed the post-enactment statements of legislators.[231] After enactment, and during this proposed rule's public comment period, Senator Lankford submitted a comment that included a legal analysis of why he believed the language in section 702(a) applied more broadly than hiring and firing.[232] Senator Patricia Murray and Senator Robert Casey both submitted comments that agreed with the Commission's proposed case-by-case approach.[233] Representatives Nadler and Scott also submitted comments; Representative Nadler's comment endorsed the Commission's proposed case-by-case approach and restated the views he had expressed earlier about section 107(b)—namely, that section 107(b) allows religious employers to prefer people who practice their religion in hiring and firing, and in making comparable pregnancy accommodations, but it does not otherwise exempt employers from their obligations under the PWFA to provide reasonable accommodations that do not pose an undue hardship; [234] Representative Scott also endorsed the case-by-case approach.[235]

Taken together, the statements prior to the enactment of the PWFA show that some Members of Congress disagreed about the extent of the protection they were conferring on religious organizations. This does not contradict the Commission's decision to apply section 107(b) on a case-by-case basis; in fact, a case-by-case approach will allow employers, employees, the Commission, and courts to evaluate in concrete situations the way in which section 107(b) should apply.

The Commission has made minor changes to the regulation to clarify the rights of covered entities and employees by providing parallel language in each subsection of § 1636.7(b). Specifically, § 1636.7(b)(1) previously stated: ''Nothing in this provision limits the rights under the U.S. Constitution of a covered entity''; in the final regulation, it states: ''Nothing in 42 U.S.C. 2000gg–5(b) or this part should be interpreted to limit a covered entity's rights under the U.S. Constitution.'' This language now parallels the language in § 1636.7(b)(2) regarding employees' rights.

The Commission's Interpretation of Section 107(b) of the PWFA Applied

Under the Commission's interpretation of section 107(b) of the PWFA, analogous to the Commission's interpretation of section 702(a) of the Civil Rights Act of 1964, an employer meets the definition of a ''religious corporation, association, educational institution, or society'' [236] if its ''purpose and character are primarily religious.'' [237] When a respondent employer asserts that it qualifies as a religious organization under section 107(b), the Commission will use the same factors it uses to make the determination under section 702(a). These factors include, but are not limited to: (1) whether the entity operates for a profit; (2) whether it produces a secular product; (3) whether the entity's articles of incorporation or other pertinent documents state a religious purpose; (4) whether it is owned, affiliated with, or financially supported by a formally religious entity such as a church or synagogue; (5) whether a formally religious entity participates in the management, for instance by having representatives on the board of trustees; (6) whether the entity holds itself out to the public as secular or sectarian; (7) whether the entity regularly includes prayer or other forms of worship in its activities; (8) whether it includes religious instruction in its curriculum, to the extent it is an educational institution; and (9) whether its membership is made up by coreligionists.[238] No one factor is dispositive in making this determination.

Under the Commission's interpretation of section 107(b), the PWFA does not fully exempt qualifying religious organizations from making reasonable accommodations. This is analogous to section 702(a), which likewise does not operate as a total exemption from Title VII's requirements.

Under section 702(a), for example, qualifying religious organizations are exempt from Title VII's prohibition against discrimination on the basis of religion, but, as U.S. courts of appeals have recognized, qualifying religious organizations are still subject to the law's prohibitions against discrimination on the basis of race, color, sex, and national origin, and they

[237] *See Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(C)(1) & n.58. Because the Commission has already defined the type of employer that is covered by section 702(a), and the PWFA references section 702(a), the Commission is maintaining this definition rather than adopting the language in the *Attorney General Religious Liberty Memorandum, supra* note 218, which does not have the force of law.

[238] *LeBoon* v. *Lancaster Jewish Cmty. Ctr. Ass'n,* 503 F.3d 217, 226 (3d Cir. 2007); *Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(C)(1).

may not engage in related retaliation.[239] If a qualifying religious organization asserts as a defense to a claim under the PWFA that it took the challenged action on the basis of religion and that section 107(b) should apply, the merits of any such asserted defense will therefore be determined on a case-by-case basis consistent with the facts presented and applicable law.

In response to comments that discussed potential religious defenses to the PWFA's requirements, the Commission notes that its statutory authority to investigate alleged unlawful employment practices under the statutes it enforces, including the PWFA, starts only after an aggrieved individual (or a Commissioner) files a charge of discrimination against a specific covered entity.[240] The PWFA does not provide a mechanism for the Commission to provide legally binding responses to employer inquiries about the potential applicability of religious or other defenses before this point. Moreover, the Commission does not believe it is capable of providing such responses in the abstract, in the absence of a concrete factual context presented by a specific charge of discrimination.

In the event that a charge alleging one or more violations of the PWFA [241] is filed against a particular employer, the employer can raise religious and other defenses at any time during the Commission's administrative process [242]—from as early as when the employer first receives a Notice of Charge of Discrimination, pursuant to 42 U.S.C. 2000e–5(b), or even after the EEOC has found reasonable cause and attempted to resolve the matter through conciliation, and is considering potential litigation.[243] Although defenses can be asserted at any time during the EEOC's administrative process, the Commission encourages employers to raise defenses as early as possible after receiving a notice of a charge of discrimination. This will allow the EEOC to promptly consider asserted defense(s) that, if applicable, would result in dismissal of the charge. The Commission will ''take great care'' in evaluating the asserted religious or other defense(s) based on the facts presented and applicable law, regardless of when in the administrative process it is raised.[244]

To further assist employers with potential religious defenses in the context of individual charge investigations, the Commission is enhancing its administrative procedures to provide additional information to facilitate the submission of information regarding potential religious defenses.[245] Specifically, the Commission will revise materials accompanying the Notice of Charge of Discrimination letter and related web pages to identify how employers can raise defenses, including religious defenses, in response to the charge. These updates will be public and viewable by any employer with questions or concerns about how to raise a defense, including a religious defense, in the event that one of its employees files a charge of discrimination. In addition, as it is currently the case, the Notice of Charge will continue to direct employers to the EEOC Respondent Portal, where the employer can view and download the underlying charge of discrimination and submit documents to the EEOC

[239] *See Kennedy* v. *St. Joseph's Ministries, Inc.,* 657 F.3d 189, 192 (4th Cir. 2011) (observing that the exemption ''does not exempt religious organizations from Title VII's provisions barring discrimination on the basis of race, gender, or national origin''); *Boyd* v. *Harding Acad. of Memphis, Inc.,* 88 F.3d 410, 413 (6th Cir. 1996) (stating that the exemption ''does not . . . exempt religious educational institutions with respect to all discrimination''); *DeMarco* v. *Holy Cross High Sch.,* 4 F.3d 166, 173 (2d Cir. 1993) (''[R]eligious institutions that otherwise qualify as 'employer[s]' are subject to Title VII provisions relating to discrimination based on race, gender and national origin.''); *Rayburn* v. *Gen. Conf. of Seventh-Day Adventists,* 772 F.2d 1164, 1166 (4th Cir. 1985) (''While the language of § 702 makes clear that religious institutions may base relevant hiring decisions upon religious preferences, Title VII does not confer upon religious organizations a license to make those same decisions on the basis of race, sex, or national origin. . . .'') (citations omitted); *cf. Garcia* v. *Salvation Army,* 918 F.3d 997, 1004–05, 1011 (9th Cir. 2019) (holding that Title VII retaliation and hostile work environment claims related to religious discrimination were barred by the religious organization exception but adjudicating the disability discrimination claim on the merits). The Commission recognizes that a few judges have recently suggested otherwise. *See Starkey* v. *Roman Catholic Archdiocese of Indianapolis, Inc.,* 41 F.4th 931, 946 (7th Cir. 2022) (Easterbrook, J., concurring); *Bear Creek Bible Church* v. *EEOC,* 571 F. Supp. 3d 571, 590–91 (N.D. Tex. 2021). However, this is not a common understanding of Title VII's religious exemption. *See* 88 FR 12852–54.

Typically, courts have accepted an employer's defense under this provision with regard to hiring or firing claims, rather than terms or conditions of employment. *Compare EEOC* v. *Miss. Coll.,* 626 F.2d 477, 485–86 (5th Cir. 1980) (holding that the college may prefer a Baptist to a non-Baptist in hiring), *with EEOC* v. *Fremont Christian Sch.,* 781 F.2d 1362, 1365–66 (9th Cir. 1986) (holding that the section 702(a) exemption did not apply where a religious school provided ''head of household'' health insurance benefits only to single persons and married men).

[240] *See* 42 U.S.C. 2000e–5(b).

[241] The procedures described in this paragraph apply to charges filed under any of the statutes that the Commission enforces.

[242] The Commission's administrative process typically begins when an individual, referred to as the charging party, files a charge of employment discrimination with the Commission. *See* 42 U.S.C. 2000e–5(b). The statute requires that within 10 days of the date a charge is filed, the Commission inform the employer, also referred to as the respondent, that a charge has been filed, *see id.,* and, if appropriate, the parties are invited to participate in the Commission's robust voluntary mediation program. This is an opportunity for the parties to resolve the charge early and before the Commission completes its investigation.

If there is no mediated resolution of the charge, the Commission requests a position statement from the employer and proceeds with the investigation. An employer may raise any applicable defenses in the position statement, including religious defenses. If the Commission determines that further investigation is not warranted, the agency will dismiss the charge and the employee may file suit in Federal court.

Otherwise, the Commission may request additional information from the employer during the investigation. At any point during the investigation, the employer may assert any religious defenses, including under section 107(b). The Commission generally relies on voluntary compliance with its investigation requests, although it does have statutory authority to examine or copy evidence relevant to its investigation. 42 U.S.C. 2000e–8(a); 42 U.S.C. 2000e–9; 29 U.S.C. 161(1)–(2).

Based on the evidence obtained during its investigation, the Commission makes a determination. The agency may dismiss the charge and the employee may file suit in Federal court.

If, however, the Commission makes a determination that there is ''reasonable cause'' to believe discrimination occurred, it endeavors to resolve the charge through conciliation, which is an informal process through which the Commission works with the parties in an attempt to develop an appropriate remedy for the discrimination and reach a final resolution administratively. *See* 42 U.S.C. 2000e–5(b). Participation in conciliation is voluntary, and it is another step in the statutorily-required administrative procedure where an employer may raise section 107(b) defenses. A finding of ''reasonable cause'' does not lead to any fines or penalties for the employer. If conciliation is not successful, the Commission either files a lawsuit or issues the charging party a notice of conciliation failure and closes the charge; under the Commission's current procedure, the notice of conciliation failure includes a notice informing the employee of their right to file suit in Federal court. *See generally* 29 CFR part 1601 (Procedural Regulations).

[243] Indeed, the Commission will consider religious defenses even when they are raised for the first time in the context of an EEOC enforcement action in court. *See, e.g., EEOC* v. *R.G. & G.R. Harris Funeral Homes, Inc.,* 201 F. Supp. 3d 837, 846 (E.D. Mich. 2016) (noting that the defendant raised its RFRA defense for the first time in answer to the EEOC's amended complaint, which simply corrected a typographical error in the spelling of the aggrieved employee's first name), *rev'd and remanded sub nom. EEOC* v. *R.G. &. G.R. Harris Funeral Homes, Inc.,* 884 F.3d 560 (6th Cir. 2018), *aff'd sub nom. Bostock* v. *Clayton Cnty., Ga.,* 590 U.S. 644 (2020).

[244] *Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(C)(3) (counseling EEOC investigators to ''take great care'' in situations involving the First Amendment and RFRA); *see also Newsome,* 301 F.3d at 229–30 (addressing a case in which the EEOC dismissed a charge where the employer offered evidence that it fell under the religious organization exception).

[245] These enhancements will apply to charges filed under any of the statutes that the EEOC enforces. Covered entities will be able to learn about the PWFA, this rule, and the enhancements outlined in this section at EEOC public outreach events and through the EEOC's website and publications. *See, e.g.,* EEOC, *Outreach, Education & Technical Assistance, https://www.eeoc.gov/outreach-education-technical-assistance* (last visited Mar. 23, 2024).

electronically. The Commission will update the Respondent Portal to encourage an employer to raise in its position statement (or as soon as possible after a charge is filed) any factual or legal defenses it believes apply, including ones based on religion. The Portal also will direct employers to the Commission's website, which provides detailed instructions with examples on what a position statement should include, which will allow the employer to easily inform the Commission of a potential defense, including a religious defense. The Commission will update other resources to provide additional, clear instructions about how the employer should submit factual or legal support for any asserted defenses, including religious ones.

As appropriate, the Commission will resolve the charge based on the information submitted in support of asserted defenses, including religious defenses, in order to minimize the burden on the employer and the charging party. The Commission may contact the employer and/or the charging party if it needs additional information to evaluate the applicability of any asserted defenses. The employer or charging party may also voluntarily submit additional information regarding the applicability of any asserted defenses and may request that the EEOC prioritize the consideration of a particular defense that could be dispositive and obviate the need to investigate the merits of a charge. As with the EEOC's reasonable cause determinations, the EEOC's decision to close or continue investigating a particular charge is not entitled to deference in any subsequent litigation, where a religious or other defense will receive *de novo* review if raised by the employer.[246] Thus, regardless of whether the Commission agrees with the employer's asserted defenses, those defenses are entitled to *de novo* review by a court in any subsequent litigation.

Application of Section 107(b) of the PWFA to Retaliation and Coercion Claims

Some comments specifically raised the application of section 107(b) of the PWFA to claims regarding retaliation and coercion. The Commission's application of section 107(b) in this context will be informed by its application of section 702(a) of the Civil Rights Act of 1964 in analogous circumstances.

The Commission notes that the operative language in the PWFA's retaliation provision is the same as the language in Title VII's retaliation provision, and the Commission will interpret it accordingly.[247]

The coercion provision in the PWFA, 42 U.S.C. 2000gg–2(f)(2), is not in Title VII, but similar language is in the ADA's interference provision, and the Commission will interpret it accordingly.[248] As set out in the Interpretive Guidance in section *1636.5(f)(2)* under *Prohibition Against Coercion,* the purpose of this provision is to ensure that employees are free to avail themselves of the protections of the statute. Thus, consistent with the ADA regulation for the essentially identical provision, the rule adds ''harass'' to the list of prohibitions; the inclusion of the term ''harass'' in the regulation is intended to characterize the type of adverse treatment that may in some circumstances violate the interference provision.[249] As with the ADA, the provision does not apply to any and all conduct or statements that an individual finds intimidating; it prohibits only conduct that is reasonably likely to interfere with the exercise or enjoyment of PWFA rights.[250] As the Commission stated in the preamble in section *1636.5(f)* regarding the coercion provision, the Commission received a few comments expressing concern that mission statements, statements regarding religious beliefs of an employer, or statements in employee handbooks would be seen as violating § 1636.5(f)(2). Whether a statement violates 42 U.S.C. 2000gg–2 (§ 1636.5(f)(2)) will depend on the language of the statement, but, as the examples provided in the NPRM and in the Interpretive Guidance in section *1636.5(f)(2) Prohibition Against Coercion* show, the making of general statements regarding an employer's mission or religious beliefs is not the type of conduct that the Commission previously has determined would be prohibited by this provision.

If a claim is raised regarding retaliation or coercion against a religious employer, the Commission will apply the same type of case-by-case analysis it applies to other PWFA and Title VII claims.

Additional Potential Defenses to the PWFA for Covered Entities

Religious Freedom Restoration Act

The Religious Freedom Restoration Act (RFRA) provides that the ''[g]overnment shall not substantially burden a person's exercise of religion even if the burden results from a rule of general applicability,'' except when application of the burden to the person ''is in furtherance of a compelling governmental interest'' and ''is the least restrictive means of furthering that compelling governmental interest.'' [251] Nondiscrimination laws and policies have been found to serve a compelling governmental interest, including where the Commission has sought to enforce Title VII.[252] As stated in the NPRM, the Commission will carefully consider these matters, analyzing RFRA defenses to claims of discrimination on a case-by-case basis.[253]

Ct. 2367, 2383 (2020) (''[T]he [government] must accept the sincerely held complicity-based objections of religious entities.'').

Comments Related to RFRA

Some comments agreed with the Commission that RFRA may be a defense to PWFA claims brought by the Commission. Some comments asserted that being required to provide accommodations, absent undue hardship, for certain health care services to which employers may object for religious reasons—such as abortion, IVF, surrogacy, contraception, and sterilization—violates RFRA. These comments argued that being required to provide a workplace accommodation to receive these services would substantially burden some employers' ability to exercise their religious beliefs.

The Commission received several comments stating that the PWFA proposed regulation would impose a substantial burden on employers' religious exercise and that the Commission lacks a compelling governmental interest in enforcing the statute, as implemented by the regulation. In support, comments asserted that: in the Title VII context, the Federal Government must demonstrate a very specific compelling interest when requiring a religious organization to act contrary to its understanding of sex; strict scrutiny applies when there is a threat to religious freedom by the Federal Government; the Commission should acknowledge that the PWFA regulation would substantially burden employers' religious exercise; the Commission should offer its analysis of existing case law and state whether it believes it could ever have a compelling interest in requiring an objecting religious employer to violate its religious convictions regarding abortion; the Commission's case-by-case view does not comport with Title VII's definition of religion, which includes all aspects of religious observance and practice as well as belief; and the Commission does not have a compelling interest in denying an exception under the PWFA to a religious employer because that would force religious parties to violate their sincerely held religious beliefs.

Many comments addressed the application of RFRA in lawsuits that do not involve the Government. These comments asserted that: because the Commission says RFRA may not be an applicable defense in some cases and is no defense at all to private suits,[254] the Commission needs to clarify how its RFRA process will operate; RFRA should be available in all cases, including all cases where the Government substantially burdens religious exercise through the implementation of Federal law, regardless of whether the Government is a party to the lawsuit; if RFRA is not available in cases in which the Government is not a party, then the Commission could decline to bring a lawsuit where a religious employer could have brought a successful RFRA defense, and the employer would lose its rights to religious exercise; and if a RFRA defense only is available if the Government is a party to the lawsuit, the Commission should describe the steps it will take to ensure it does not intentionally avoid involving itself in litigation with the intent of preventing the employer from raising RFRA as a defense.

The Commission also received comments stating that the Commission must conduct an individualized review of any defense raised under RFRA and ensure that there is a sufficiently strong nexus between the asserted burden and a religious exercise, the religious exercise is based on sincerely held religious beliefs, the burden is substantial, and the requested religious exception is tailored to address the burden. Further, comments asserted that the Commission must conduct an Establishment Clause analysis of any proposed exception.

Response to Comments Related to RFRA

As the Supreme Court has recognized, RFRA requires a fact-sensitive, case-by-case analysis of burdens and interests.[255] The Commission takes the protections of RFRA seriously and has instructed its staff to use ''great care in situations involving both (a) the statutory rights of employees to be free from discrimination at work, and (b) the rights of employers under the First Amendment and RFRA.'' [256] Consistent with RFRA, as part of that analysis, the Commission will ensure when considering the application of any RFRA defense raised that it assesses whether any religious burden imposed on the employer is substantial and whether enforcement is the least restrictive means of furthering a compelling governmental interest, as applied to that employer. It will further analyze any defense to ensure that any limitation on enforcement is constitutionally permissible under the Establishment Clause.[257]

Here, the Commission generally explains its understanding of the requirements of RFRA and provides some information regarding how RFRA may apply in the context of the PWFA. As stated above, RFRA requires a fact-specific analysis. Thus, in a specific situation, the information provided here may or may not apply.[258]

Although RFRA applies to enforcement by the Government, in order to inform the Commission of possible RFRA defenses and reasons the Government should not bring an enforcement action, an employer may raise a RFRA defense at any point during the Commission's administrative process. Assuming the employer asserted a RFRA defense based on a sincerely held religious belief, the Commission would first assess whether, were the Government to bring a lawsuit to enforce the PWFA against the employer, that enforcement would impose a substantial burden on the employer's religious exercise.[259] The Commission would consider a variety of factors in making that assessment.[260]

[254] *See, e.g., Listecki* v. *Off. Comm. of Unsecured Creditors,* 780 F.3d 731, 736–37 (7th Cir. 2015); *Gen. Conf. Corp. of Seventh-Day Adventists* v. *McGill,* 617 F.3d 402, 409–12 (6th Cir. 2010). The Second Circuit has held otherwise in the ADEA context, *Hankins* v. *Lyght,* 441 F.3d 96, 103–04 (2d Cir. 2006) (holding that an employer could raise RFRA as a defense to an employee's Age Discrimination in Employment Act (ADEA) claim because the ADEA is enforceable both by the EEOC and private litigants), but the Second Circuit has questioned the correctness of *Hankins* given the text of RFRA, *Rweyemamu* v. *Cote,* 520 F.3d 198, 203 & n.2 (2d Cir. 2008).

[255] *See, e.g., Gonzales* v. *O Centro Espírita Beneficente União do Vegetal,* 546 U.S. 418, 430–31 (2006) (observing that, when applying RFRA, courts look ''beyond broadly formulated interests justifying the general applicability of government mandates and scrutinize[] the asserted harm of granting specific exemptions to particular religious claimants''); *cf. Ramirez* v. *Collier,* 595 U.S. 411, 433 (2022) (holding that the Religious Land Use and Institutionalized Persons Act, which applies RFRA's test for religious defenses in the prison context, ''requires that courts take cases one at a time, considering only 'the particular claimant whose sincere exercise of religion is being substantially burdened' '' (quoting *Holt,* 574 U.S. at 363)).

[256] *Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(C)(3).

[257] *See infra* in the preamble in section *1636.7* under *Response to Comments Related to First Amendment Establishment Clause Considerations.*

[258] Initially, the Commission notes that for a RFRA defense to arise in litigation brought by the Commission under the PWFA, there would first have to be a charge of discrimination filed where the employer refused to provide an accommodation based on its religious exercise. Then, prior to filing an enforcement action in court, the Commission would have to investigate the charge, find reasonable cause, and decide to bring litigation. At any point during that administrative process, the employer could assert a RFRA defense.

[259] *See Harris Funeral Homes,* 884 F.3d at 587 (''Under *Holt* v. *Hobbs* . . . a government action that puts a religious practitioner to the choice of engaging in conduct that seriously violates his religious beliefs or facing serious consequences constitutes a substantial burden for the purposes of RFRA.'') (internal citations, quotation marks, and alterations omitted).

[260] *See, e.g., Hobby Lobby,* 573 U.S. at 720–26 (finding that a contraceptive mandate imposed a substantial burden on religious beliefs by forcing employers to choose between providing coverage or

Continued

The Commission also would consider whether, as applied in the specific case, filing a PWFA enforcement lawsuit would further the Government's compelling interest,[261] including as expressed by Congress.[262]

Finally, the Commission disagrees with comments stating that the Commission must file suit against those employers the Commission believes have a valid RFRA defense so that the covered entities may avoid liability by successfully proving their RFRA defense in court. Imposing such a requirement would infringe on the executive branch's Article II authority to determine which enforcement actions to bring, and the Commission will not interpret the PWFA to impose any unconstitutional requirements.[263] The Commission concludes that the better approach to situations in which it agrees with employers regarding their RFRA defenses raised during the administrative process is to refrain from bringing an enforcement action.[264]

Constitutional Considerations

The Ministerial Exception

As set out in the NPRM, the Supreme Court has recognized a ministerial exception, derived from the religion clauses of the First Amendment, which may provide an affirmative defense to an otherwise cognizable claim of a certain category of employees under certain anti-discrimination laws, including the PWFA. Under the ministerial exception, a religious organization may select those who will ''personify its beliefs,'' ''shape its own faith and mission,'' or ''minister to the faithful.'' [265] The exception applies to discrimination claims involving the selection, supervision, and removal by a religious institution of employees who perform vital religious duties at the core of the mission of the religious institution.[266]

Comments Regarding the Ministerial Exception

A few comments requested that the Commission state or clarify the scope of the First Amendment ''ministerial exception'' in the final rule, including by: adding language from *Our Lady of Guadalupe School* v. *Morrissey-Berru* to the rule; [267] stating that the exception bars all PWFA claims for qualifying ministerial employees; or stating that the PWFA covers a religious entity's non-ministerial employees.

Response to Comments Regarding the Ministerial Exception

The Commission declines to make changes regarding its interpretation of the ministerial exception, as the Commission's position is consistent with the relevant Supreme Court case law and reflects the policies set forth in this preamble. The Commission will apply the exception on a case-by-case basis in light of the facts,[268] and in determining whether the exception applies to a claim, the Commission follows the Supreme Court's reasoning in *Hosanna-Tabor Evangelical Lutheran Church & School* v. *EEOC,*[269] *Our Lady of Guadalupe School* v. *Morrissey-Berru*,[270] and other applicable decisions, reviewing the factors set out by the Court. For example, if a religious school instructor employed by the Catholic Church as a Catechist (typically the type of teacher who performs vital religious duties) [271] asks her employer for time to attend prenatal appointments and the employer refuses to provide the leave because the teacher is pregnant but not married, and raises the ministerial exception as a defense to the employee's charge of discrimination, the Commission (after gathering relevant facts about the applicability of that defense) will likely apply the ministerial exception and find that the employee is not entitled to the requested accommodation. In making such a determination, the Commission will ''take all relevant circumstances into account'' and determine whether the ''particular position implicate[s] the fundamental purpose of the exception.'' [272]

---

paying ''an enormous sum of money—as much as $475 million per year'' if they did not); *Harris Funeral Homes,* 884 F.3d at 586–90 (holding that the employer's religious exercise would not be substantially burdened by continuing to employ a transgender worker); *Braidwood Mgmt.,* 70 F.4th at 938 (finding a substantial burden by being forced to employ individuals whose conduct violates ''the company's convictions'').

[261] *See, e.g., Hobby Lobby,* 573 U.S. at 733 (''The Government has a compelling interest in providing an equal opportunity to participate in the workforce without regard to race, and prohibitions on racial discrimination are precisely tailored to achieve that critical goal.''); *Harris Funeral Homes,* 884 F.3d at 591–92; *Hosanna-Tabor Evangelical Lutheran Church & Sch.* v. *EEOC,* 565 U.S. 171, 196 (2012) (''The interest of society in the enforcement of employment discrimination statutes is undoubtedly important.''); *Fremont Christian Sch.,* 781 F.2d at 1368–69 (''By enacting Title VII, Congress clearly targeted the elimination of all forms of discrimination as a 'highest priority' . . . . Congress' purpose to end discrimination is equally if not more compelling than other interests that have been held to justify legislation that burdened the exercise of religious convictions.'' (quoting *EEOC* v. *Pacific Press Publ'g Ass'n,* 676 F.2d 1272, 1280 (9th Cir. 1982), *abrogated on other grounds by Emp. Div., Dep't of Hum. Res. of Oregon* v. *Smith,* 494 U.S. 872 (1990)); *Miss. Coll.,* 626 F.2d 477, 488 (5th Cir. 1980) (stating, in a Title VII subpoena enforcement action related to a race and sex discrimination charge, that ''the government has a compelling interest in eradicating discrimination in all forms''); *Redhead* v. *Conf. of Seventh-Day Adventists,* 440 F. Supp. 2d 211, 220 (E.D.N.Y. 2006) (rejecting a RFRA defense in a Title VII sex discrimination case and stating, ''generally, Title VII's purpose of eradicating employment discrimination is a 'compelling government interest' ''); *see also* H.R. Rep. No. 117–27, pt. 1, at 32 (''Although religious employers may claim that a required accommodation is a substantial burden on their free exercise of religion under RFRA, it is the position of the Committee that nondiscrimination provisions are a compelling government interest and the least restrictive means to achieve the policy of equal employment opportunity.''); *cf. Bd. of Dirs. of Rotary Int'l* v. *Rotary Club of Duarte,* 481 U.S. 537, 549 (1987) (observing that the State has a compelling interest in eliminating sex-based discrimination) (citing *Roberts* v. *U.S. Jaycees,* 468 U.S. 609, 624 (1984) (explaining that the goal of ''eliminating discrimination and assuring [citizens] equal access to publicly available goods and services . . . plainly serves compelling state interests of the highest order'') (internal citation omitted))).

[262] *See* H.R. Rep. No. 117–27, pt. 1, at 5 (stating under the report's purpose and summary, ''When pregnant workers do not have access to reasonable workplace accommodations, they are often forced to choose between their financial security and a healthy pregnancy. Ensuring that pregnant workers have access to reasonable accommodations will promote the economic well-being of working mothers and their families and promote healthy pregnancies.''); *see also Little Sisters,* 140 S. Ct. at 2392 (Alito, J., concurring) (observing that courts ''answer the compelling interest question simply by asking whether *Congress* has treated the [interest] as a compelling interest'') (emphasis in original).

[263] *See, e.g., United States* v. *Texas,* 599 U.S. 670, 678 (2023) (''Under Article II, the Executive Branch possesses authority to decide 'how to prioritize and how aggressively to pursue legal actions against defendants who violate the law.'" (citations omitted)); *id.* at 679 (''[T]he Executive Branch has exclusive authority and absolute discretion to decide whether to prosecute a case'') (quoting *United States* v. *Nixon,* 418 U.S. 683, 693 (1974)) (internal quotation marks omitted).

[264] Additionally, under section 706(f)(1) of Title VII, which is incorporated into the PWFA in 42 U.S.C. 2000gg–2(a)(1), an employee may, as a matter of right, intervene in a case brought by the Commission on behalf of that employee. Thus, even if the Commission were required to bring such an action, the employer could still face a claim from the employee.

[265] *Hosanna-Tabor,* 565 U.S. at 188–89.

[266] *Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(C)(2) (citing *Our Lady of Guadalupe Sch.* v. *Morrissey-Berru,* 591 U.S. __, 140 S. Ct. 2049, 2055, 2066 (2020)). There is some disagreement among courts as to the applicability of the ministerial exception to hostile work environment claims. *Compare Demkovich* v. *St. Andrew the Apostle Par., Calumet City,* 3 F.4th 968, 979 (7th Cir. 2021) (applying the ministerial exception to a hostile work environment claim involving allegations of minister-on-minister harassment), *with Elvig* v. *Calvin Presbyterian Church,* 375 F.3d 951, 962 (9th Cir. 2004) (finding that a hostile work environment claim was not barred by the ministerial exception, because sexual harassment is not a protected employment decision).

[268] *See id.* at 2063 (''In determining whether a particular position falls within the *Hosanna-Tabor* exception, a variety of factors may be important.'').

[269] *See* 565 U.S. at 190–94.

[270] *See* 140 S. Ct. at 2063–69.

[271] *See id.* at 2057, 2066.

[272] *See* 140 S. Ct. at 2067.

First Amendment Establishment and Free Exercise Clause Considerations

The First Amendment provides that ''Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof.'' [273] Under the Establishment Clause of the First Amendment, the Government's actions cannot establish religion; in other words, ''government may not, consistent with a historically sensitive understanding of the Establishment Clause, make a religious observance compulsory.'' [274]

Under the Free Exercise Clause, the ''Government fails to act neutrally when it proceeds in a manner intolerant of religious beliefs or restricts practices because of their religious nature.'' [275] Where a law burdens religious exercise and is not neutral or generally applicable, it is subject to strict scrutiny, meaning that it must advance a compelling governmental interest and be narrowly tailored to achieve that interest.[276] By contrast, laws that merely incidentally burden religion are ordinarily not subject to strict scrutiny, and thus do not need to be justified by a compelling governmental interest, to defeat a Free Exercise claim, as long as they are neutral and generally applicable.[277] Laws are not neutral and generally applicable ''whenever they treat any comparable secular activity more favorably than religious exercise.'' [278] In addition, ''[a] law is not generally applicable if it invite[s] the government to consider the particular reasons for a person's conduct by providing a mechanism for individualized exemptions'' that are entirely discretionary.[279]

Comments Related to First Amendment Establishment Clause Considerations

As noted above, the Commission received comments stating that the Commission must conduct an individualized review of any defense asserted under RFRA and ensure that there is a sufficiently strong nexus between the asserted burden and a religious exercise, the religious exercise is based on sincerely held religious beliefs, the burden is substantial, and the action taken by the government is tailored to address the burden. Further, comments asserted that the Commission must conduct an Establishment Clause analysis of any asserted RFRA defense.

Response to Comments Related to First Amendment Establishment Clause Considerations

The Commission agrees that when evaluating a religious employer's RFRA defense or any other religious defense, the Commission will consider the Establishment Clause implications as part of its case-by-case analysis.[280]

Comments Related to First Amendment Free Exercise Clause Considerations

Several comments stated that the rule could violate a covered entity's First Amendment right to the free exercise of religion. Some comments disputed whether the final rule is a rule of general applicability, asserting that the PWFA is not generally applicable, *e.g.,* because it contains religious exemptions and excludes small employers with fewer than 15 employees.

Response to Comments Related to First Amendment Free Exercise Clause Considerations

The PWFA, like Title VII, is a neutral law of general applicability.[281] Thus, it does not need to be justified by a compelling governmental interest and narrowly tailored to achieve that interest under the First Amendment Free Exercise Clause.[282] The PWFA does not provide any system of discretionary, individualized exemptions for any secular employers, and it does not treat religious exercise any less favorably than comparable secular activities.[283] Congress, in enacting the PWFA, as it did with Title VII, exempted employers (both secular and religious) with fewer than 15 employees.[284] It also provided an exception for religious employers under the rule of construction, which requires the Commission to assess whether an entity is a qualifying religious employer under an established set of factors based in case law.[285] Thus, the PWFA does not provide the Commission with discretion to grant individualized exemptions, for either secular or religious purposes.[286]

[273] U.S. Const. amend. I.

[274] *Kennedy* v. *Bremerton Sch. Dist.,* 597 U.S. 507, 536–37 (2022) (citation and internal quotation marks omitted).

[276] *See, e.g., id.* at 541 (citation omitted); *Church of Lukumi Babalu Aye, Inc.* v. *City of Hialeah,* 508 U.S. 520, 531–32 (1993).

[277] *Fulton,* 593 U.S. at 533 (citing *Emp't Div., Dep't of Hum. Res. of Ore.* v. *Smith,* 494 U.S. 872, 878–82 (1990)).

[278] *Tandon* v. *Newsom,* 593 U.S. 61, 62 (2021) (per curiam) (providing that whether two activities are comparable must be judged against the governmental interest that justifies the law at issue and concerns the risks various activities pose); *see also Fulton,* 593 U.S. at 534 (''A law . . . lacks general applicability if it prohibits religious conduct while permitting secular conduct that undermines the government's asserted interests in a similar way.'').

[279] *Fulton,* 593 U.S. at 533, 535 (citing *Smith,* 494 U.S. at 884 (1990)) (internal quotation marks omitted).

[280] As the Supreme Court has observed, ''The First Amendment provides, in part, that Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof. We have said that these two Clauses often exert conflicting pressures, and that there can be internal tension between the Establishment Clause and the Free Exercise Clause.'' *Hosanna-Tabor,* 565 U.S. at 181 (internal citations and quotation marks omitted).

[281] *See, e.g., Hosanna-Tabor,* 565 U.S. at 190 (stating in dicta that the ADA's anti-retaliation provision, which (like Title VII) exempts certain employers for secular reasons, ''is a valid and neutral law of general applicability''); *EEOC* v. *Cath. Univ. of Am.,* 83 F.3d 455, 467 (D.C. Cir. 1996) (stating that Title VII is ''a neutral law of general application'').

[282] *See Fulton,* 593 U.S. at 533 (citing *Smith,* 494 U.S. at 878–82); *see also Smith,* 494 U.S. at 894 (O'Connor, J., concurring).

[283] *See, e.g., Fulton,* 593 U.S. at 533–34 (citing *Lukumi Babalu Aye,* 508 U.S. at 542–46; *Smith,* 494 U.S. at 884).

[284] *See* 42 U.S.C. 2000gg(2)(B)(i), 2000e(b). The Commission rejects the assertion that simply because the PWFA only applies to businesses with 15 or more employees, the Commission can never make out a compelling interest. *See, e.g., Harris Funeral Homes,* 884 F.3d at 600 (''EEOC has shown that enforcing Title VII here is the least restrictive means of furthering its compelling interest in combating and eradicating sex discrimination.''). As the Supreme Court has noted, Congress decided to limit Title VII's coverage to firms with 15 or more employees for the purpose of ''easing entry into the market and preserving the competitive position of smaller firms.'' *Clackamas Gastroenterology Assocs., P.C.* v. *Wells,* 538 U.S. 440, 447 (2003) (quoting the lower court's dissent, that ''Congress decided to spare very small firms from the potentially crushing expense of mastering the intricacies of the antidiscrimination laws, establishing procedures to assure compliance, and defending against suits when efforts at compliance fail'') (citation and internal quotation marks omitted). The legislative history of Title VII supports this proposition. *See Tomka* v. *Seiler Corp.,* 66 F.3d 1295, 1314 (2d Cir. 1995) (outlining Title VII's legislative history around the factors Congress considered in enacting 42 U.S.C. 2000e(b), including the costs associated with defending against discrimination claims), *abrogated on other grounds as recognized by Eisenhauer* v. *Culinary Inst. of Am.,* 84 F.4th 507, 524, n.83 (2d Cir. 2023). Federal statutes often include exemptions for small employers, and such exemptions do not undermine the larger interests served by those statutes. *See, e.g.,* FMLA, 29 U.S.C. 2611(4)(A)(i) (applicable to employers with 50 or more employees); ADEA, 29 U.S.C. 630(b) (originally exempting employers with fewer than 50 employees, 81 Stat. 605, the statute now governs employers with 20 or more employees); ADA, 42 U.S.C. 12111(5)(A) (applicable to employers with 15 or more employees). The government's generally applicable goal of protecting small businesses from the burdens of regulatory compliance is not comparable to the type of discretionary, individualized exemption that the Supreme Court rejected in *Fulton. See* 593 U.S. at 533–34.

[285] *See supra* in the preamble in section *1636.7(b) Rule of Construction.*

[286] *Cf. Fulton,* 593 U.S. at 536–41 (providing that the inclusion of ''a formal system of entirely discretionary exceptions'' in the contractual nondiscrimination requirement at issue rendered the requirement not generally applicable and thus subject to strict scrutiny).

First Amendment Free Speech and Expressive Association Considerations

The First Amendment provides that ''Congress shall make no law . . . abridging the freedom of speech.'' [287] To determine whether ''particular conduct possesses sufficient communicative elements to bring the First Amendment into play,'' courts consider whether ''[a]n intent to convey a particularized message was present, and [whether] the likelihood was great that the message would be understood by those who viewed it.'' [288]

The Supreme Court also has recognized a ''right to associate for the purpose of engaging in those activities protected by the First Amendment.'' [289] The freedom of expressive association includes a freedom not to associate.[290] In order for Government action to unconstitutionally burden the right of expressive association, a group must engage in expressive association.[291] If a group does so, then the proper inquiry is whether the Government action at issue, often the forced inclusion of a member, would significantly affect the group's ability to advocate public or private viewpoints.[292] Finally, to determine whether the Government's interest justifies the burden, the Government's interest implicated in its action is weighed against the burden imposed on the associational expression.[293]

Comments Related to First Amendment Free Speech Considerations

Several comments asserted that including infertility treatments, contraception, abortion, sterilization, and surrogacy in the definition of ''pregnancy, childbirth, or related medical conditions'' would require covered entities to provide accommodations for employees that would violate the entities' freedom of speech. For example, some comments stated that providing an accommodation related to an employee's abortion would chill the speech of covered entities by requiring them to convey a message to employees and the public that abortion is a legitimate medical procedure, contrary to their anti-abortion beliefs or identity, or because maintaining their policies would put them in the position of violating the PWFA's anti-retaliation and anti-coercion provisions.

Response to Comments Related to First Amendment Free Speech Considerations

The Commission does not agree that the PWFA or the final rule infringes on any covered entity's freedom of speech. The act of making a personnel decision, such as employing or continuing to employ an individual who has engaged in personal conduct with which an employer disagrees, is not protected speech or expressive conduct that communicates the employer's agreement with the individual's personal decisions.[294] In this business context, providing an employee a reasonable accommodation under the PWFA during their employment does not constitute speech or expressive conduct on the part of the employer.[295]

As discussed in relation to the PWFA's rule of construction, whether an employer's policies or actions could implicate the PWFA's anti-retaliation or anti-coercion provision is a highly fact-specific inquiry. For over four decades, the Commission has interpreted Title VII, which contains an anti-retaliation provision, to protect employees from being fired for having an abortion or contemplating an abortion, and courts have affirmed this interpretation.[296] The Commission is not aware of any cases during these past four decades in which an employer has challenged this interpretation on First Amendment free speech grounds. Likewise, the ADA has language similar to the PWFA's anti-coercion provision in its interference provision, and the Commission is similarly unaware of any cases where an employer challenged the interference provision on First Amendment free speech grounds. In addition, the Commission has explained in the preamble and the Interpretive Guidance in section *1636.5(f) Prohibition Against Retaliation* the type of actions that could be violations under the anti-coercion and anti-retaliation provisions; they do not involve protected speech.[297] Nevertheless, should the Commission receive a charge alleging coercion or retaliation, and should the responding employer raise constitutional concerns as a defense to the charge during the administrative charge process, the Commission will evaluate each claim on a case-by-case basis under the process it has outlined above.[298]

Comments Related to First Amendment Expressive Association Considerations

Some comments asserted that including certain pregnancy-related health care services as medical conditions related to pregnancy or childbirth would require covered entities to provide accommodations for employees that would violate the entities' First Amendment right to expressive association. In particular, some comments stated that employers, particularly those whose express mission is to oppose abortion, might be required under the rule to hire, or continue to employ, or promote, employees who have abortions in violation of an employer's policies.

Response to Comments Related to First Amendment Expressive Association Considerations

The Commission does not agree that the PWFA or the final rule infringes on any covered entity's freedom of expressive association. First, the Commission is unaware of any case holding that enforcing Title VII violates the First Amendment's right of free association, and, indeed, the Supreme Court has expressly held to the contrary.[299] Second, assuming that a covered entity can show that it engages in expressive activity, with the possible exception of certain mission-driven organizations, it is unlikely that a covered entity also could show that simply allowing an employee to access an accommodation would significantly affect its ability to advocate public or private viewpoints.[300] The Commission

[300] *Compare Boy Scouts,* 530 U.S. at 655–59 (determining that retaining a gay scoutmaster would significantly affect the organization's expression),

believes its position strikes the correct balance between, on one hand, the Government's interest in ensuring employees affected by pregnancy, childbirth, or related medical conditions are able to remain healthy and in their jobs and, on the other, the employer's ability to express its message to the public, its employees, and other stakeholders such that its advocacy is not significantly affected by providing an accommodation.[301] Nevertheless, should the Commission receive a charge relating to an accommodation for pregnancy, childbirth, or related medical conditions, and should the responding employer raise constitutional expressive association concerns as a defense to the charge during the charge process, the Commission will evaluate each claim on a case-by-case basis under the framework outlined above.[302]

Comments Related to Constitutional Avoidance

A few comments stated that including abortion in the definition of medical conditions related to pregnancy and childbirth creates First Amendment free speech and religion conflicts, and statutes should be interpreted to avoid constitutional concerns; therefore, the Commission should exclude the possibility of an employee receiving an accommodation related to an abortion from the regulation.

Response to Comments Related to Constitutional Avoidance

As explained *supra,* the Commission disagrees that the rule categorically conflicts with the First Amendment, and thus does not agree that the canon of constitutional avoidance applies. The Commission's interpretation of ''pregnancy, childbirth, or related medical conditions'' is consistent with its interpretation of this phrase for more than four decades in Title VII, as amended by the PDA, a similar statute. In those decades, the Commission's interpretation under Title VII has never been successfully challenged on First Amendment grounds. The comments that raised this issue did not demonstrate that abortion must be excluded to avoid an unconstitutional interpretation. Moreover, the Commission cannot anticipate whether constitutional issues will arise in future litigation on facts that have not yet occurred.

Comments Regarding Requests for an Exemption for a Covered Entity's Moral Objections

Several comments stated that the final rule should provide an exemption for covered entities that object to abortion and other medical conditions related to pregnancy and childbirth based on conscience, moral, ethical, scientific, health, or medical grounds, or for any other reason that is not associated with a religious belief. A few comments further asserted that, because the PWFA rule of construction provides an exception for certain religious entities, the Commission must provide an exception for similarly situated covered entities that object to accommodations on non-religious grounds.

Response to Comments Regarding Requests for an Exemption for a Covered Entity's Moral Objections

To create a new, stand-alone exemption for secular entities would exceed the Commission's congressionally-provided authority. In enacting the PWFA, Congress restricted coverage for only two categories of employers: (1) certain qualifying religious entities under the rule of construction at section 107(b), ''subject to the applicability to religious employment'' set forth in section 702(a) of the Civil Rights Act of 1964; and (2) certain entities, regardless of religious affiliation, that have fewer than 15 employees. The Commission notes that an individual's religious beliefs may include moral and ethical beliefs,[303] and thus in individual cases, the Commission will assess asserted accommodation requests and objections based on that longstanding interpretation and applicable law. However, the Commission will not create through rulemaking a new exemption for secular organizations with certain moral or ethical beliefs, beyond the PWFA's existing exceptions.

Comments Regarding Requests for a Per Se Undue Hardship Exemption

In the alternative, several comments asserted that covered entities that do not qualify for an exemption under the rule of construction, but that nevertheless object to abortion or other medical conditions related to pregnancy or childbirth for religious reasons, reasons related to their mission, or other secular reasons, should receive a per se undue hardship exemption.

Response to Comments Regarding Requests for a Per Se Undue Hardship Exemption

The Commission declines to create a per se undue hardship exemption, for several reasons. First, the PWFA incorporates the ADA's ''undue hardship'' definition, and under the ADA, employers may assert undue hardship as a defense but must conduct an individualized assessment when determining whether a reasonable accommodation will impose an undue hardship.[304] Creating a per se rule that an employer's beliefs automatically and always create an undue hardship would be fundamentally inconsistent with this requirement that undue hardship be assessed as a defense on a case-by-case basis, and would therefore be inconsistent with the PWFA.[305] This is especially so where, as here, even the religious beliefs of employers that share the same religion are not monolithic, and the specific facts and circumstances in a given situation may affect whether the employer objects to an employee's actions on religious grounds.

Second, nothing in the PWFA provides for an exemption that directly links the undue hardship standard to an entity's religious beliefs, status, or secular beliefs. On the contrary, the statute expressly directs that the term ''undue hardship'' should ''have the meaning[ ] given such term[ ] in [the ADA] and shall be construed as such

and Slattery v. *Hochul,* 61 F.4th 278, 288 (2d Cir. 2023) (holding that rape crisis pregnancy center stated plausible claim that application of New York law prohibiting discrimination in employment based on reproductive health decisions would severely burden its right to freedom of expressive association given that the statute, if applied, would ''forc[e] [the center] to employ individuals who act or have acted against the very mission of its organization''), *with Rumsfeld,* 547 U.S. at 68–69 (explaining that a law that allows military recruiters equal access to law schools does not force the school ''to accept members it does not desire'').

[301] *See Rumsfeld,* 547 U.S. at 69–70.

[302] *See supra* note 242.

[303] In the context of Title VII's prohibition of discrimination against employees based on religion, the Commission has said that ''[c]ourts have looked for certain features to determine if an individual's beliefs can be considered religious.'' To this end, ''[s]ocial, political, or economic philosophies, as well as mere personal preferences, are not religious beliefs protected by Title VII,'' but overlap between a religious and political view may be protected under Title VII ''as long as that view is part of a comprehensive religious belief system.'' *Compliance Manual on Religious Discrimination, supra* note 215, at (12–I)(A)(1); *see also* 29 CFR 1605.1.

[304] 88 FR 54734.

[305] 42 U.S.C. 2000gg(7). The final rule creates a small category of modifications that will, ''in virtually all cases,'' be reasonable accommodations that do not impose an undue hardship. Importantly, in creating this category, the Commission did not alter the definition of ''undue hardship'' or deprive a covered entity of the opportunity to bring forward facts to demonstrate that a proposed accommodation imposes an undue hardship for its business under its own particular circumstances, even when one of the four simple modifications in § 1636.3(j)(4) is involved. Given the differences in religious beliefs and the impact of an accommodation that may violate those beliefs, it would not be possible for the Commission to determine that these beliefs would ''in virtually all cases'' cause an undue hardship.

[term is] construed under such Act and as set forth in the regulations required by this division.'' [306]

Third, the factors used to assess an undue hardship defense typically focus on measurable impacts on business operations. Under the PWFA rule, ''undue hardship'' means an action requiring significant difficulty or expense, when considered in light of several factors: (i) the nature and net cost of the accommodation needed under the PWFA; (ii) the overall financial resources of the facility or facilities involved in the provision of the reasonable accommodation, the number of persons employed at such facility, and the effect on expenses and resources; (iii) the overall financial resources of the covered entity, the overall size of the business of the covered entity with respect to the number of its employees, and the number, type and location of its facilities; (iv) the type of operation or operations of the covered entity, including the composition, structure, and functions of the workforce of such entity, and the geographic separateness and administrative or fiscal relationship of the facility or facilities in question to the covered entity; and (v) the impact of the accommodation upon the operation of the facility, including the impact on the ability of other employees to perform their duties and the impact on the facility's ability to conduct business.[307] As explained by Congress, ''Like the ADA, the PWFA seeks to balance the interests of the employer and employee and, although there may be some costs associated with making a reasonable accommodation, the 'undue hardship' standard limits the employer's exposure both to overly burdensome accommodation requests and lawsuits that would attempt to hold the employer liable for failing to provide a prohibitively expensive accommodation.'' [308]

The Commission has stated that under the ADA, ''the 'undue hardship' provision takes into account the financial realities of the particular employer or other covered entity. However, the concept of undue hardship is not limited to financial difficulty. 'Undue hardship' refers to any accommodation that would be unduly costly, extensive, substantial, or disruptive, or that would fundamentally alter the nature or operation of the business.'' [309] Of note, cases interpreting the impact of a reasonable accommodation on other employees or the facility's ability to conduct business have generally been about distribution of workloads, business operational needs, and elemental changes to the day-to-day operations of a business, not the moral views of coworkers or employers.[310] That said, the Commission will, as it currently does, consider all assertions of the undue hardship defense on a case-by-case basis, including whether granting a particular reasonable accommodation would ''fundamentally alter the nature of the business.''

Additionally, in determining whether there is disruption to the covered entity's business under the ADA, the Commission has stated with regard to disabilities that an employer will be unable to ''show undue hardship if the disruption to its employees [is] the result of those employees' fears or prejudices toward the individual's disability and not the result of the provision of the accommodation. Nor [will] the employer be able to demonstrate undue hardship by showing that the provision of the accommodation has a negative impact on the morale of its other employees but not on the ability of these employees to perform their jobs.'' [311] As the definition of ''undue hardship'' under the PWFA follows the ADA, the same rules will apply. An employer will not be able to demonstrate undue hardship under the PWFA if the disruption to its employees was the result of those employees' fears or prejudices. Nor would the employer be able to demonstrate undue hardship by showing that the provision of the accommodation has a negative impact on the morale of its other employees but not on the ability of these employees to perform their jobs.

Ultimately, an employer may assert an undue hardship defense to any PWFA claim. An employer may be able to show undue hardship if the provision of a particular accommodation results in an impact that is unduly costly, extensive, substantial, or disruptive, or that would fundamentally alter the nature or operation of the business.[312] As with all undue hardship assessments, an employer would need to show individualized evidence of undue hardship.

Other Comments and Response to Comments Regarding Religious and Conscience Considerations

Several comments stated that the inclusion of abortion as a related medical condition revealed that the Commission harbored anti-Catholic bias, and others claimed that the Commission would target Catholic employers for enforcement.

As explained above, the Commission interprets the PWFA's provision regarding pregnancy, childbirth, or related medical conditions consistent with the PWFA's text and the Commission's interpretation of identical language in Title VII, an interpretation adopted more than 40 years ago. The Commission disagrees that interpreting the PWFA in a manner consistent with the statutory text and the agency's decades-long interpretation of Title VII is suggestive of any anti-Catholic bias or that the Commission otherwise harbors any bias. The Commission's enforcement decisions are based on whether the facts of the charge show reasonable cause to believe discrimination occurred. Further, the Commission's history under Title VII reflects that the Commission brings cases that protect employees who are being harassed about their decision not to have an abortion and that protect the

Supp. 1075, 1081 (S.D. Ga. 1995) (concluding that an accommodation that would require employees from six different departments to deliver invoices to the plaintiff adversely impacted other employees' ability to do their jobs and was an undue burden), *aff'd,* 87 F.3d 1331 (11th Cir. 1996); *Bryant* v. *Caritas Norwood Hosp.,* 345 F. Supp. 2d 155, 171 (D. Mass. 2004) (shifting responsibility for an essential function, all heavy lifting, to coworkers would have a deleterious impact on the ability of coworkers to do their own jobs); *Fralick* v. *Ford,* No. 2:12–CV–1210, 2014 WL 1875705, at *7 (D. Utah May 9, 2014) (permitting the plaintiff to work fewer than 60 hours per week was found to ''fundamentally alter the nature of'' the finance manager position and therefore was not a reasonable accommodation); *cf. Morrill* v. *Acadia Healthcare,* No. 2:17–CV–01332, 2020 WL 1249478, at *8 (D. Utah Mar. 16, 2020) (determining that the defendant failed to establish that prior equitable distribution of a mopping task amongst all employees, as a reasonable accommodation, impeded functioning of the business or harmed coworkers).

[311] *See* 29 CFR part 1630, appendix, 1630.15(d).

[312] *See* 29 CFR part 1630, appendix, 1630.2(p).

religious views of employees who oppose abortion.[313]

Second, some comments asserted that an employer's potential obligation under the PWFA to provide an accommodation for abortion could violate the religious rights of other employees, such as human resources employees, who would have to explain to an employee that a reasonable accommodation is available in these circumstances and process the paperwork. The Commission has addressed steps employers may take to respond to conflicts with religious beliefs in these circumstances in its *Compliance Manual on Religious Discrimination.*[314]

Third, some comments stated that if employees decide to work for a religious employer, then they must abide by the employer's beliefs or risk consequences. The Commission made no changes based on these comments. As explained above, the PWFA provides for defenses for religious organizations and is subject to certain other constitutional and statutory exceptions. But none of those defenses or exceptions remove all rights from employees who are employed by religious employers.

1636.8 Severability

In the final rule, the Commission has added that the severability provisions express the Commission's intent as to severability. Further, the Commission clarified that its intent regarding severability applies to the Interpretive Guidance as well and has included this language in the Interpretive Guidance in section *1636.8 Severability.*

As stated in the Interpretive Guidance in section *1636.8 Severability,* pursuant to 42 U.S.C. 2000gg–6, in places where the regulation uses the same language as the statute, if any of those identical regulatory provisions, or the application of those provisions to particular persons or circumstances, is held invalid or found to be unconstitutional, the remainder of the regulation and the application of that provision of the regulation to other persons or circumstances shall not be affected. For example, if § 1636.4(d) (which uses the same language as 42 U.S.C. 2000gg–1(4) and prohibits a covered entity from requiring a qualified employee to take leave as a reasonable accommodation if there is another reasonable accommodation that can be provided) were to be found invalid or unconstitutional, it is the intent of the Commission that the remainder of the regulation shall not be affected. The Commission would continue to enforce the statute but, in this hypothetical example, would not consider it a violation if an employer required an employee to take leave as a reasonable accommodation when there was another reasonable accommodation available.

Where the regulation or the Interpretive Guidance provides additional guidance to carry out the PWFA, including examples of reasonable accommodations, it is the Commission's intent that if any of those provisions or the application of those provisions to particular persons or circumstances were to be held invalid or found to be unconstitutional, the remainder of the regulation or the Interpretive Guidance and the application of that provision of the regulation or the Interpretive Guidance to other persons or circumstances shall not be affected. For example, if a court were to determine that a certain medical condition such as a pelvic prolapse is not found to be a ''related medical condition'' in a specific case, the Commission intends other conditions could still be determined to be ''related medical conditions,'' including pelvic prolapse in another case, depending on the facts.

Preamble to the Final Economic Analysis

Executive Orders 12866 (Regulatory Planning and Review), 13563 (Improving Regulation and Regulatory Review), and 14094 (Modernizing Regulatory Review)

Summary of the Commission's Preliminary Economic Analysis of Impacts: Costs

According to the Commission's preliminary economic analysis, the proposed rule would impose two quantifiable costs on employers: the annual cost of providing pregnancy-related reasonable accommodations as a result of the statute and the rule, and the one-time cost of becoming familiar with the rule. In all cases, the Commission relied on publicly available data for its estimates.[315]

To estimate the annual cost of providing pregnancy-related reasonable accommodations as a result of the statute and the rule, the Commission first estimated the total number of employees who were not independently entitled to PWFA-type accommodations under an analogous State law, which the Commission calculated is 65.11 million employees.

The Commission then estimated the number of such individuals who will be entitled to a reasonable accommodation under the PWFA. To do so, the Commission first assumed that the number of such individuals will be approximately the same as the number of individuals who actually become pregnant during that year. Again, based on publicly available data, the Commission estimated that 33 percent of the 65.11 million employees who are not independently entitled to PWFA-type accommodations under an analogous State law are capable of becoming pregnant, and that of these, 4.7 percent will actually become pregnant in a given year. Applying these percentages yielded a total estimate of one million individuals who (a) were not independently entitled to PWFA-type accommodations under an analogous State law, and (b) will actually become pregnant during a given year. Finally, the Commission estimated that between 23 percent (''lower bound estimate'') and 71 percent (''upper bound estimate'') of these one million individuals (between 230,000 and 710,000 individuals) will require a pregnancy-related reasonable accommodation.

To calculate the associated costs, the Commission first estimated that the accommodations needed by 49.4 percent of the individuals above will have zero cost, leaving between 116,000 and 360,000 individuals needing accommodations with non-zero cost. It then estimated that each of the accommodations needed by these individuals would cost an average of $300 distributed over 5 years, or $60 annually. Multiplying these numbers together yielded final estimated annual costs of between $6 million and $18 million for private employers; between $800,000 and $2.4 million for State and local government employers; and between $300,000 and $800,000 for Federal employers.

[313] *See, e.g., EEOC* v. *Big Lots Stores, Inc.,* No. 9:08–CV–177, 2009 WL 10677352, at *6 (E.D. Tex. Oct. 6, 2009) (alleging, as part of the plaintiff's harassment claim, that the harasser urged the plaintiff to have an abortion). Other suits brought by the EEOC regarding abortion pertained to the EEOC protecting the religious views of employees. *See, e.g., EEOC* v. *Univ. of Detroit,* 904 F.2d 331, 335 (6th Cir. 1990) (suit brought by EEOC on behalf of an employee who did not want to pay union dues because the dues were used to support political action in favor of abortion, which the employee disagreed with on religious grounds); *EEOC* v. *Am. Fed'n of State, Cnty. & Mun. Emps., AFL–CIO,* 937 F. Supp. 166, 167 (N.D.N.Y. 1996) (addressing a lawsuit brought by EEOC on behalf of an employee who did not want to pay union dues because the dues were used to support political action in favor of abortion and the death penalty, which the employee disagreed with on religious grounds).

[314] *Compliance Manual on Religious Discrimination, supra* note 215, at Examples #44 & #45.

[315] For the Commission's preliminary economic analysis, see 88 FR 54754–65.

Comments and Response to Comments Regarding the Estimated Percentage of Individuals Capable of Becoming Pregnant Who Will Actually Become Pregnant in a Given Year

As explained above, in the NPRM, the Commission estimated that 4.7 percent of individuals who are capable of becoming pregnant will actually become pregnant in a given year.[316] Some comments stated that this estimate is too low because the Commission based its estimate on research that tracked the percentage of women participants who gave birth in a given year. As such, the 4.7 percent estimate did not include individuals who became pregnant in a given year but did not give birth, including individuals who had miscarriages, stillbirths, or abortions. Because this figure was used to calculate the number of reasonable accommodations needed, the comments further reasoned, the cost estimates did not take into account any reasonable accommodations needed by individuals who had miscarriages, stillbirths, or abortions.

The Commission agrees that the research it relied upon did not take account of individuals who became pregnant during a given year but who did not give birth, and therefore that its previous estimate of 4.7 percent was too low. To correct the shortcoming, the Commission has relied upon Centers for Disease Control (CDC) research showing that, between 2015 and 2019, live births in the United States accounted for 67% of all pregnancies among women aged 15–44 years on average.[317] Assuming that the ratio of live births to total pregnancies among women of reproductive age in the labor force is the same as among all 15–44 years old women, the Commission thus estimates that the percentage of individuals capable of becoming pregnant who will actually become pregnant in given year is 0.047 ÷ 0.67 = 0.071 (rounded up), or 7.1 percent. This revised estimate is used in the revised economic analysis below.

Comments and Response to Comments Regarding the Percentage of Pregnant Employees Needing a Reasonable Accommodation Under the PWFA

As explained above, in the NPRM, the Commission estimated that between 23 percent (lower bound estimate) and 71 percent (upper bound estimate) of individuals who are actually pregnant in a given year will need a reasonable accommodation under the PWFA.[318] The report that the Commission used to arrive at these estimates stated that 71 percent of pregnant individuals surveyed needed more frequent breaks, such as extra bathroom breaks; 61 percent needed a change in schedule or more time off; 53 percent needed a change in duties; and 40 percent needed some other type of workplace adjustment.[319] The Commission chose the highest of these numbers (71 percent) as its upper bound estimate of the percentage of pregnant employees needing accommodations.

The Commission received a comment stating that the report cited by the Commission does not support the use of 71 percent as an upper bound estimate of the percentage of pregnant individuals needing an accommodation because the report established that 71 percent of the pregnant individuals surveyed needed additional breaks, but did not state whether any of the other 29 percent of pregnant individuals surveyed needed a different type of accommodation (such as a change in schedule or a change in duties). If so, then more than 71 percent of pregnant individuals surveyed needed at least one accommodation.

The report the Commission relied upon to set its upper and lower bound estimates did not state whether any of the 29 percent of individuals who did not need additional breaks needed a different sort of accommodation. It was therefore not possible for the Commission to determine, on the basis of this report, the percentage of employees surveyed who needed at least one accommodation. The comment objecting to the Commission's use of the 71 percent estimate did not provide additional data for the Commission to consider, and the Commission could not independently locate any more precise information. The Commission therefore must rely on reasonable assumptions to set its upper bound estimate of the percentage of pregnant employees needing accommodation.

Although it is possible that some of the 29 percent of pregnant individuals who did not need additional breaks needed a different type of accommodation, the Commission continues to assume for purposes of the economic analysis that the individuals who needed a different type of pregnancy-related accommodation are a subset of those who needed additional breaks. In the Commission's opinion, it is unlikely that a pregnant individual who does not need additional breaks would need a less common type of accommodation such as a change in schedule or a change in duties. Additionally, many of the 71 percent of pregnant individuals surveyed who needed additional breaks may be entitled to them under the ADA, Title VII, or employer policies, and therefore the 71 percent figure likely overstates the number of individuals who will receive those breaks specifically as a consequence of the PWFA. The Commission is therefore confident that 71 percent is a reasonable estimate of the proportion of pregnant individuals needing accommodation under the PWFA given the paucity of data available at the time of this rulemaking.

The same comment objected to the Commission's use of 23 percent as a lower bound estimate of the percentage of pregnant employees who will need an accommodation under the rule. The Commission relied on the same report discussed immediately above to arrive at this estimate. Based on data in this report, the Commission calculated that 32 percent of pregnant individuals surveyed needed, but did not receive, more frequent breaks, such as extra bathroom breaks; 20 percent needed, but did not receive, a change in schedule or more time off; 23 percent needed, but did not receive, a change in duties; and 18 percent needed, but did not receive, some other type of workplace adjustment.[320] The Commission averaged these numbers to arrive at a lower bound estimate of 23 percent.[321]

According to the comment, the Commission's calculations established that at least 32 percent of pregnant employees surveyed needed, but did not receive, at least one pregnancy-related accommodation (specifically, additional breaks). The comment further argued that the Commission failed to offer any justification for the decision to average the four figures.

The Commission agrees with the comment that using the highest of the four figures (32 percent) is the better approach. As explained above, the report establishes that 32 percent of pregnant employees surveyed needed, but did not receive, at least one type of pregnancy-related accommodation. The Commission therefore has raised its lower bound estimate from 23 percent to 32 percent in the analysis below.

Comments and Response to Comments Regarding the Estimated Average Cost of an Accommodation

As stated above, in its previous analysis, the Commission estimated that 49.4 percent of needed pregnancy-related accommodations will have no cost, and that the average cost of the remaining 50.6 percent will be $300 distributed over 5 years, or $60 annually.[322]

One comment stated that this estimate was too low because it did not include costs associated with having a vacant position and with looking for new hires, both of which may be necessary when a pregnant employee takes leave. The comment emphasized that these costs affect both customers and other staff members.

The Commission declines to raise the estimated average cost of an accommodation in response to this comment. To estimate costs responsibly, the Commission must rely on existing data. According to the best available data, the average cost of a non-zero-cost reasonable accommodation provided pursuant to the ADA is $300.[323] Leave is an accommodation that is available under the ADA. The costs associated with leave, including the kinds of costs identified by the comment, were therefore presumably included in the data used to generate the $300 average. Additionally, if an employer did not provide leave to the employee and simply terminated the employee, the employer would still face the costs of having a vacant position and looking for new hires. To the extent that an accommodation allows the pregnant employee to stay with the employer, the employer could realize cost savings because it will not have to hire and train new employees.[324]

Comments and Response to Comments Regarding Alleged Additional Costs: Abortion

Many comments stated that the economic analysis should be revised to incorporate not only costs arising from the provision of abortion-related reasonable accommodations, but also the costs of abortions themselves together with some of their alleged downstream consequences.

Some comments suggested adding the costs of abortions to the analysis because they mistakenly understood the proposed rule as requiring employers to bear those costs. For example, some comments stated that the proposed rule required employers to pay for abortion services or to pay for associated travel and lodging expenses as reasonable accommodations. Because the proposed rule did not, and the final rule does not, require covered employers to bear these costs, the Commission declines to amend the economic analysis to incorporate these costs to employers.

In most cases, however, comments suggesting inclusion of abortion-related costs identified costs that do not apply directly to employers. For example, some of these comments stated that the estimated cost of the rule should be increased by the value of the years of life lost by the individuals who were never born due to abortion. Others stated that the estimated cost of the rule should be revised to include health care costs that the comments alleged would be incurred by individuals who undergo abortion care. Other comments stated that the estimate should include certain large-scale societal costs that they linked to abortion. Several of these comments cited a 2022 report by Joint Economic Committee Republicans.[325]

The Commission declines to change its analysis in response to these comments. The alleged cost of abortion and its downstream consequences cannot properly be attributed to the final rule and statute simply because abortion-related accommodations are available under the PWFA.[326] Neither the statute nor the final rule has an impact on the costs that commenters allege are associated with abortion. Indeed, the comments themselves appear to acknowledge that the purported costs imposed by abortion are independent of the rule.[327]

The Commission recognizes that, under the statute and final rule, some individuals will obtain reasonable accommodations that they may not have otherwise obtained, possibly including leave as a reasonable accommodation related to an abortion.[328] But it does not follow that any of these individuals will have abortions because they were able to obtain an accommodation. It therefore does not follow that the costs associated with the abortions themselves should be included in the economic analysis.

A small number of comments argued that the proposed rule will increase the number of abortions performed, and that the economic analysis should include costs associated specifically with this increase. According to these comments, to calculate the cost of the final rule, the Commission must first determine the proportional economic impact of a single abortion and then multiply that figure by the number of additional abortions performed as a result of the rule.

The Commission declines to take this approach because the comments did not provide any evidence, and the Commission is not aware of such evidence, to support the conclusion that the number of abortions will increase as a consequence of the statute and the final rule.

A few comments asserted that the number of abortions will increase because the rule, by making abortion-related accommodations available, will make pregnant employees ''uncomfortable'' about bringing their pregnancies to term. These commenters did not provide support for this proposition, however. Other comments stated that the rule will increase the number of abortions because some employers may prefer that their employees terminate their pregnancies rather than bring their pregnancies to term, and, therefore, these employers may pressure their employees into having abortions by refusing to provide any pregnancy-related accommodations other than leave to obtain an abortion. This argument is unpersuasive because such refusal would be unlawful under the PWFA. An employer could not satisfy its PWFA obligations by providing leave to have an abortion to an individual who requests additional bathroom breaks due to pregnancy, for example, because such leave would not be an effective accommodation under those circumstances. In addition, Title VII prohibits employers from coercing

[322] *Id.* at 54759.

[324] *Id.* at 54754.

[325] Joint Economic Committee Republicans, *The Economic Cost of Abortion* (2022), *https://www.jec.senate.gov/public/_cache/files/b8807501-210c-4554-9d72-31de4e939578/the-economic-cost-of-abortion.pdf.*

[326] Many of the comments stating that the Commission should account for the cost of abortion and its downstream consequences described the rule as containing an ''abortion mandate'' or as ''encouraging'' abortion. This is a mischaracterization of the rule. Rather than requiring or encouraging abortion, this rule simply requires employers to provide reasonable accommodations to the known limitations of employees under some circumstances.

[327] The $6.9 trillion in annual abortion-related costs identified by Joint Economic Committee Republicans in their 2022 report, for example, were said to have occurred in 2019—well before the effective date of the statute or final rule. These costs should therefore be considered part of the pre-statutory baseline, rather than new costs attributable specifically to the statute and final rule.

[328] The Commission notes that it is possible that the availability of abortion-related reasonable accommodations—such as leave—may have additional effects on the circumstances of an abortion, for example by enabling the individual to have the abortion at an earlier time; to elect a different method of abortion; to have the abortion at a nearby clinic instead of traveling to a more distant clinic; or to have the abortion performed by a reputable provider. The Commission was unable to incorporate these cost savings into the quantitative analysis, however, due to lack of data.

employees into having abortions because it prohibits them from taking an adverse action against an individual because of the individual's decision to have—or not to have—an abortion.[329]

Again, the Commission recognizes that, under the statute and the final rule, an employee who has decided to have an abortion may request and receive an abortion-related accommodation, absent undue hardship. But it does not follow from this fact alone that the individual has decided to have the abortion because of the rule. The assumption implicit in comments—that some employees will decide to have abortions because the final rule and statute make abortion-related accommodations available—is speculative.[330] Research shows that individuals who are unable to access abortion care typically are unable to do so for multiple reasons, none of which are determinative.[331] Because the Commission is unaware of any data showing specifically that access to PWFA-type accommodations will increase the number of abortions performed, it declines to add the associated costs to its analysis.[332]

Comments and Response to Comments Regarding Alleged Additional Costs: Litigation

Some comments stated that the rule would increase costs for employers by increasing litigation. Some of these provided only a very brief justification for the claim. Some comments, for example, claimed that the rule would increase litigation because it is ''expansive'' or because the range of accommodations required is broad. One comment stated that the rule is likely to invite litigation because it is likely that a different Presidential administration will change this policy. These comments did not include data or cite any supporting research.

One comment, signed by several Attorneys General from States that have PWFA-type statutes, supports the opposite conclusion:

> Nor have the PWFA-analogue States experienced a marked increase in litigation following enactment of their PWFA/Break Time law analogues. In Washington State, all but 2 of the 650 pregnancy accommodation intakes received by the Attorney General's Office resolved without the need to file a lawsuit. In New York State, which enacted its PWFA analogue in 2016, the vast majority of discrimination complaints filed with the New York Division of Human Rights involve allegations of employment discrimination, yet complaints relating to reasonable accommodations for pregnancy-related conditions account for at most .03% of all employment discrimination filings. Moreover, 86% of the employment discrimination cases that involve reasonable accommodations for a pregnancy-related condition resolve prior to an agency hearing. The pre-hearing resolution numbers are similar in Connecticut. In Oregon, only about 1.5% of cases filed with the Civil Rights Division of the state's Bureau of Labor and Industries involve pregnancy or post-partum accommodation issues, a good portion of which are voluntarily resolved. . . . And in Illinois, only 1% of charges filed with the Department of Human Rights involved pregnancy-related charges seeking an accommodation. A study in California, which enacted its state PWFA in 2000, showed the total number of pregnancy discrimination charges filed with the state human rights agency actually decreased after the law was enacted.[333]

The Commission also disagrees with the claim that its definition of ''pregnancy, childbirth, or related medical conditions'' is expansive and will increase litigation, or the characterization of its definition as an example of something that will lead to litigation because another Presidential administration will change it. As explained in the preamble to the final rule, ''pregnancy, childbirth, or related medical conditions'' is language from Title VII, and the Commission's interpretation of that phrase in the PWFA is consistent with how courts and the Commission have interpreted that phrase in Title VII. Moreover, the interpretation of ''pregnancy, childbirth, or related medical conditions'' in the PWFA is consistent with the interpretation the Commission has had in many different Presidential administrations. Finally, given the long-standing definition of ''pregnancy, childbirth, or related medical conditions'' in Title VII, changing it for the PWFA also would have the potential to create litigation.

Some comments stated more specifically that interpreting the term ''related medical conditions'' to include abortion will cause litigation because employers that comply by providing abortion-related leave as a reasonable accommodation may be found liable for pregnancy discrimination. For example, one comment stated that if an employer provided an employee sufficient leave to travel out of the State to have an abortion but denied a request by a pregnant employee who did not want an abortion for the same amount of leave to see an out-of-State obstetrician, instead only providing an amount of leave sufficient to visit an in-State obstetrician, the employer could face a claim that it is discriminating against women who do not get abortions.

The Commission disagrees that provision of abortion-related leave as a reasonable accommodation could give rise to liability for pregnancy discrimination under the circumstances described. First, if the employer is providing the leave as a reasonable accommodation, then it is not providing either employee with ''benefits.'' Rather, it is providing them with reasonable accommodations to which they are entitled under the law.

Second, the two kinds of leave are not ''unequal.'' With respect to both individuals, the employer is providing the amount of leave necessary to address the individual's known pregnancy-related limitation. It is often the case that the cash value of one reasonable accommodation is less than that of another. For example, if an employer provides one pregnant individual a reasonable accommodation of drinking water because that is what the individual needs, and provides a second pregnant individual with a chair to sit on because that is what the second pregnant individual needs, the employer is not discriminating against the first individual just because a chair costs more than permission to drink water—both individuals have been given reasonable accommodations appropriate to their known pregnancy-related limitations.

Because the comments discussed above did not provide evidence to support the conclusion that promulgation of the rule will invite increased litigation, the Commission declines to incorporate litigation-related costs into the final economic analysis.

---

[329] *Enforcement Guidance on Pregnancy Discrimination, supra* note 31, at (I)(A)(4)(c).

[330] To support the assertion that the costs of an abortion are attributable to the final rule and statute, research would need to show that the abortion-related accommodation provided under the rule—in most cases leave—is a but-for cause of the abortion, and that the individual does not have independent access to the leave under a different law or policy.

[331] *See, e.g.,* Jenna Jerman et al., *Barriers to Abortion Care and Their Consequences for Patients Traveling for Services: Qualitative Findings From Two States,* 49 Persps. on Sexual & Reprod. Health 95, 98–99 (2017).

[332] The Commission notes that, even if data could be found showing that the final rule and statute will increase the number of abortions that are performed, the Commission would still need to engage in considerable speculation in order to estimate the associated costs. Although some comments cited research purporting to measure costs imposed by abortion on individuals who undergo abortion care and on society as a whole, the research did not establish a consensus on this issue. *See generally* Ushma D. Upadhyay et al., *Intended Pregnancy After Receiving* Vs. *Being Denied a Wanted Abortion,* 99 Contraception 42 (2019).

[333] Comment EEOC–2023–0004–98337, New York State Attorney General, at 5 (Oct. 10, 2023).

Comments and Response to Comments Regarding Additional Costs: Male Employees

Some comments stated that it was unclear whether the rule entitled men to pregnancy-related accommodations (including, for example, male infertility treatment), but that, if the rule entitled men to such accommodations, these costs should be reflected in the analysis. The Commission declines to incorporate these costs into the analysis because, as explained in the preamble to the final rule, the definition of ''pregnancy, childbirth, or related medical conditions'' in the final rule only encompasses medical conditions which relate to pregnancy or childbirth, ''as applied to the specific employee or applicant in question.''

Comments and Response to Comments Regarding Alleged Additional Costs: Other Costs

One comment stated that the Commission's economic analysis should account for costs arising from the loss of free speech and free exercise rights. The Commission does not agree that the regulation creates such a loss and has explained in the preamble to the final rule why free speech and religious exercise are not negatively affected by and are, instead, protected by the rule.

A few comments stated that the Commission should account for the reduction in hiring of women based on the ''expansive'' accommodation requirements. The Commission does not agree that this is a cost it should take into account for the economic analysis. First, discrimination against women because they need an accommodation, or may need an accommodation, under the PWFA violates the PWFA and potentially Title VII. Second, these comments did not provide evidence supporting the conclusion that employers will hire fewer women as a result of the rule and underlying law.

One comment stated that the Commission's economic analysis, which did not consider accommodation costs for States with their own PWFA-type statutes, did not account for the fact that these State statutes do not permit accommodations for abortions. This comment did not support this statement with data or case law, and the Commission was unable to find any independent evidence of any such restriction.[334] Additionally, as noted in the preamble to the final rule, an employee may need an abortion for a variety of reasons, which could affect the ability of the employee to use the State statute for an accommodation.

One comment stated that the economic analysis should include costs related to severance, retirement, and labor shortages, and, additionally, that it should include costs arising from the decline in private firms' participation in the national economy. The Commission declines to include these costs because the comment provided no data supporting a connection between provision of pregnancy-related reasonable accommodations, on the one hand, and an employee's decision to leave the workforce or to decline to participate in market activities, on the other hand. The Commission further notes that it received countervailing comments on this issue, suggesting that the rule will enable covered entities to prevent individuals from leaving the workforce by making pregnancy-related accommodations available to those who need them.

One comment stated that the Commission should consider the alternative of defining ''related medical conditions'' to exclude abortion. As explained in the final rule, the Commission's interpretation is consistent with the PWFA's text, and for over 40 years, the Commission and courts have interpreted the phrase ''pregnancy, childbirth, or related medical conditions'' in Title VII to include abortion. The Commission concludes that it is unnecessary to consider this alternative for the economic analysis.

One comment stated that, in States that have laws like the PWFA, employees are more likely to ask for and receive accommodations, and in States where there are no PWFA-like laws, employees are less likely to ask for or receive accommodations; thus, those who have not received accommodations prior to the PWFA should be overrepresented among those who now have rights. The Commission based its calculations on the data that is available, and this comment did not provide data to support this point or dispute the Commission's calculations.

Comments and Response to Comments Regarding the Time To Read the Regulation

Several comments stated that the Commission underestimated the time to read and understand the regulation, including stating that small businesses without a legal staff would take a long time to read and understand the rule; that the amount of time for compliance should be increased to account for time to read and review the regulation, obtain legal advice, develop a compliance policy, train employees, and implement the rule, including creating systems to collect, retain, and secure protected information; that a specific individual took 2 days to read the regulation and several of the comments; that the cost should account for the hiring of outside counsel; that the Commission should include the cost of processing each request for an accommodation; and that the Commission should account for costs to train new employees and for new businesses in future years. Most of these comments on this topic did not provide either data or evidence to support a revision by the Commission. Those that did so provided estimates that varied greatly, and none were grounded in research.

The Commission has slightly increased its estimate of the amount of time allotted for compliance activities, in part to account for the fact that the final rule and Interpretive Guidance are slightly longer, and therefore would take slightly longer to read, than the proposed rule and Interpretive Guidance contained in the NPRM, and in part in response to comments indicating additional time is needed for covered entities to become familiar with the rule. The Commission estimates that compliance activities for a covered entity will take an average of 135 minutes, or 2.25 hours, in States that do not already have laws substantially similar to the PWFA and an average of 45 minutes in States with existing laws similar to the PWFA. This estimate is consistent with the amount of time the Commission allotted for compliance activities under other recent regulations that it has published in connection with civil rights laws. For example, in publishing a regulation implementing Title II of the Genetic Information Nondiscrimination Act (GINA), the Commission estimated 3 hours for rule familiarization, which was appropriate because GINA involved a new protection against discrimination based on genetic information.[335] Conversely, the Commission did not include a calculation of the cost for rule familiarization in its rule amending its Age Discrimination in Employment Act (ADEA) regulations concerning disparate-impact claims and the reasonable factors other than age

[334] Some comments stated more generally that the impact analysis should account for the fact that some State PWFA-type laws may not be identical to the PWFA, and therefore that such States may face slightly additional costs for reasonable accommodations required by the PWFA but not by the pre-existing State law. These comments failed to identify whether or how the interpretations of the State law differ from the PWFA and to cite or provide data that would support any changes.

[335] 75 FR 68912, 68931 (Nov. 9, 2010).

defense (RFOA)[336] or its rule implementing the ADA Amendments Act (ADAAA).[337]

Here, the Commission has calculated compliance activities under the PWFA regulation in light of the fact that the PWFA is a new civil rights statute, but employers covered by the PWFA already are covered by Title VII and the ADA. Presumably, these employers already have standard procedures to inform their employees and supervisors about their rights and responsibilities under Title VII, the ADA, and other workplace laws. Given the similarities between the PWFA and the ADA and Title VII, employers will be able to use many of their existing procedures and include the PWFA in their training regarding the ADA and Title VII.[338] Further, the Commission offers training and assistance specifically tailored to small businesses.[339] The Commission does not anticipate that covered entities will need legal advice; the PWFA and the regulation draw on well-established concepts and procedures from Title VII and the ADA. For example, as under the ADA, an employer does not have to require supporting documentation to provide a PWFA accommodation; if it does, the documentation under the PWFA, like under the ADA, must be kept separate from the employee's personnel file. Thus, employers will be able to use a compliance mechanism they have already developed for the ADA for the PWFA. Similarly, employers can use the same human resources staff they use to process requests for accommodations under the ADA or Title VII for such requests under the PWFA. Accordingly, the Commission does not anticipate that covered employers will need time in addition to the time provided in the final rule.

Additionally, the Commission received comments that stated that the regulation would provide appropriate guidance and would assist employers in compliance, which would reduce employer costs.

Summary of the Commission's Preliminary Economic Analysis of Impacts: Nonquantifiable Benefits

In the NPRM, the Commission identified five primary benefits of the proposed rule and underlying statute that are difficult to quantify: (1) improvements in maternal and infant health outcomes; (2) improvements in pregnant employees' economic security; (3) non-discrimination and other intrinsic benefits, such as the enhancement of human dignity; (4) clarity in enforcement and efficiencies in litigation; and (5) benefits for covered entities.[340]

Comments and Response to Comments Regarding Non-Quantifiable Benefits

A number of comments agreed with the identified benefits and provided additional research or anecdotal evidence to support the benefits.

Regarding improvements in maternal and infant health outcomes, one comment asserted that the rule will have positive effects on pregnant employees' mental health, stating that even perceived pregnancy discrimination at work has been linked to increased stress and symptoms of postpartum depression.[341] This comment linked stress resulting from workplace discrimination and workplace conditions to increased risk of preterm birth or low birth weight, potentially resulting in serious health problems at birth that may cause long-term health and developmental consequences in children.[342] Such health challenges may result in additional health care costs; accordingly, reducing stress during pregnancy also may reduce health care costs.[343] Other comments observed that, because research shows that certain workplace conditions, such as lengthy periods of standing or walking, or high risk of chemical exposure or noise, can result in complications for a pregnant employee and their baby, accommodations to alleviate those conditions improve health outcomes for pregnant employees and their children.[344] Additionally, one comment cited a source that drew from a study that found that, overall, employment during pregnancy is associated with a reduction in the risk of preterm birth, which supports the need to keep pregnant employees in the workforce.[345] Other comments provided anecdotal evidence that employees who received accommodations under the PWFA felt secure in their employment and thus better able to focus on their new babies' needs.

Regarding improvements in pregnant employees' economic security, several comments underscored that many American workers lack a financial cushion and that the proposed rule and underlying law will mitigate short- and long-term negative financial consequences associated with losing a job at a critical time, given increased costs due to childbirth, child rearing, and childcare.[346] At least one comment observed that women of color and Native women are overrepresented in low-paid jobs with few benefits, and that providing accommodations that can help employees stay in the workforce is critical to promoting economic security.[347]

Regarding non-discrimination and other intrinsic benefits, several comments confirmed that non-discrimination and other intrinsic benefits result from the proposed rule and underlying law. For example, one comment stated that the underlying law gives pregnant employees ''a strong sense of dignity and belonging in the workforce,'' reduces stigma and stereotyping regarding pregnancy, and

reestablishes pregnancy as an ordinary part of employment. One comment cited a source that stated, ''The reasonable accommodation framework relieves individual employees of the burden of proving animus: of showing that an employer's inflexible imposition of workplace standards reflects sex stereotyping that flows from the invidious assumption that pregnant workers are not competent or committed workers.'' [348] Several comments provided anecdotal accounts of the sense of dignity that receiving pregnancy-related accommodations under the PWFA has given individual employees. Another comment noted that the proposed rule and underlying law will reduce incidents in which pregnant employees experienced humiliation at the hands of supervisors who denied accommodations and singled out pregnant employees for negative treatment.

Regarding clarity in enforcement and efficiencies in litigation, multiple comments confirmed that the proposed rule would provide clarity regarding employees' rights and employers' obligations under the PWFA. One comment stated that the NPRM explains the PWFA in an understandable and accessible way. One comment from a nonprofit observed that ''dozens and dozens'' of low-wage employees had informed them of the ''transformative'' effect of the law in their lives; some employees reported that their employers had previously denied or ignored their requests for accommodation but granted them after the PWFA became effective.[349] At the same time, this nonprofit noted that many employees, particularly low-wage women of color, are still denied their rights under the PWFA, demonstrating the need for a clear and comprehensive rule. Finally, as previously noted, the comment from several State Attorneys General observed that States that had enacted laws protecting pregnant employees in the workplace did not experience a marked increase in litigation following the law's enactment, and the vast majority of complaints resolve prior to administrative proceedings or litigation.[350]

Regarding benefits for covered entities, some comments stated that employers benefit from retaining pregnant employees because searching for and training new employees results in costs and stress on an organization, which can, in turn, negatively affect customers and other employees. Several comments highlighted that laws like the PWFA enable businesses to retain valuable employees, improve productivity and morale, reduce workers' compensation costs and absenteeism, and improve company diversity, and stated that the proposed rule would have the same effects. One comment observed that, for small businesses struggling with worker shortages and seeking to incentivize employee retention, the proposed rule could facilitate incentivizing worker retention.

One comment asserted that the rule would benefit employees in industries that are traditionally male dominated, such as manufacturing and the trades, and are physically demanding. The comment stated that providing pregnancy-related accommodations will reduce occupational segregation by gender, which in turn may affect the pay gap. Although this logically may be a possible benefit, the sources cited did not directly support this proposition. The Commission thus declines to include this as a benefit of the final rule.

The Commission received a few comments asserting that certain factors offset the non-quantifiable benefits identified by the Commission. One comment stated that in its discussion of the benefits to civil rights, the Commission must account for the harm done to the civil rights of religious employers that may have to provide accommodations that conflict with their religious beliefs. The Commission does not agree with this comment; as discussed in the preamble to the final rule, several defenses are available to religious employers.

The Commission also received several comments stating that the proposed rule would create harm to women and families because of its inclusion of abortion in the definition of ''pregnancy, childbirth, or related medical conditions.'' As set out in the economic analysis and the preamble to the final rule, the rule does not require anyone to have an abortion or force employers to pay for abortions. Further, as set out in the response to comments on the quantitative analysis above, there is no evidence that the rule will increase the number of abortions. The Commission does not agree that the considerations raised in these comments should be included here.

The Commission concludes that the benefits articulated in the NPRM are attributable to the rule and the Commission incorporates supplemental evidence of each benefit, as described above, into the final rule.

Regulatory Flexibility Act and Executive Order 13272 (Proper Consideration of Small Entities in Agency Rulemaking)

Summary of the Commission's Certification That the Rule Will Not Have a Significant Economic Impact on a Substantial Number of Small Entities

In the NPRM, the Commission certified that the rule will not have a significant economic impact on a substantial number of small entities.[351] The Commission reasoned that, although the rule would apply to all small entities with 15 or more employees, and therefore would affect a ''substantial'' number of small entities, it would not have a ''significant economic impact'' on a substantial number of small entities.

To justify its decision to certify in the final rule, the Commission again began its analysis by assuming that the rule will impose two quantifiable costs on small entities: the annual cost of providing pregnancy-related reasonable accommodations as a result of the statute and the rule, and the one-time cost of becoming familiar with the rule.

To estimate the one-time cost of becoming familiar with the rule, based on the analysis detailed in the Initial Regulatory Impact Analysis (IRIA), the Commission estimated that small entities in States and localities that have laws substantially similar to the PWFA will be limited to a one-time administrative cost of approximately $56.76, and that small entities that are not already subject to State or local laws substantially similar to the PWFA will face a one-time administrative cost of approximately $170.27.

To estimate the annual cost of accommodation required by the rule, consistent with the IRIA, in the NPRM the Commission assumed that the number of individuals seeking accommodations will be approximately equal to the number of individuals who actually become pregnant during that year; that 33 percent of the employees within each small entity are capable of becoming pregnant, and that, of these, 4.7 percent will actually become pregnant in a given year; that between 23 and 71 percent of pregnant individuals within each small entity will need an accommodation; that 49.4 percent of such accommodations will have no cost; and that the average cost of the remaining 50.6 percent of needed accommodations will be $300 distributed over 5 years, or $60

annually. Using these figures, it generated the following cost estimates for small entities of various sizes: [352]

generated the following cost estimates for small entities of various sizes: [352]

Table 13 (from the NPRM): Annual Costs for Reasonable Accommodations for Small Businesses Based on Size

Number of Employees	33% Women Aged 16–50	4.7% Pregnant in a Given Year	Needing Accommodations: 23% (Lower Bound Estimate) – 71% (Upper Bound Estimate)	50.6% Non-Zero-Cost Accommodations: Lower Bound Estimate – Higher Bound Estimate (Rounded Up)	Total Expected Cost: Lower Bound Estimate – Higher Bound Estimate
15	4.95	0.233	0.054 – 0.165	1	$60
50	16.5	0.7755	0.178 – 0.55	1	$60
100	33	1.551	0.357 – 1.01	1	$60
150	49.5	2.326	0.535 – 1.652	1	$60
200	66	3.102	0.713 – 2.202	1 – 2	$60 – $120
250	82.5	3.878	0.892 – 2.75	1 – 2	$60 – $120
500	165	7.755	1.78 – 5.5	1 – 3	$60 – $180
750	247.5	11.633	2.676 – 8.259	2 – 5	$120 – $300
1000	330	15.51	3.567 – 11.012	2 – 6	$120 – $360
1250	412.5	19.388	4.459 – 13.765	3 – 7	$180 – $420
1500	495	23.265	5.351 – 16.518	3 – 9	$180 – $540

Because entities that are already subject to laws substantially similar to the PWFA are already required to provide accommodations consistent with the PWFA, their total costs were estimated to be the one-time cost of $56.75.

Total costs for entities that are not already subject to laws substantially similar to the PWFA were estimated to be the annual cost of providing reasonable accommodations as detailed in Table 13 in the NPRM (between $60 for businesses with 15 employees and $540 for businesses with 1,500 employees), plus $170.27 (the cost of becoming familiar with the rule) in the first year.

Revisions in Response to Comments That Addressed Both the IRIA and the Commission's Justification for Certifying Under the Regulatory Flexibility Act (RFA)

As detailed in the discussion of the Regulatory Impact Analysis (RIA) above, in response to comments the Commission made adjustments to its estimate of the percentage of individuals capable of becoming pregnant who actually become pregnant during a given year (revised upward from 4.7 percent to 7.1 percent), and to its lower bound estimate of the percentage of pregnant individuals who will need a reasonable accommodation (revised upward from 23 percent to 32 percent). The Commission also increased the amount of time it estimated employers would need to familiarize themselves with the rule. Because the Commission's analysis under the Regulatory Flexibility Act (RFA) relied on these same estimates, the Commission has made conforming changes below.

Comments and Response to Comments Pertaining Specifically to Small Entities

In addition to the comments that apply both to the RIA and the analysis under the RFA, the Commission received some comments specifically addressing the rule's effect on small entities.

Many comments made general statements about the rule's effect on small businesses, without addressing specific aspects of the reasoning offered by the Commission in support of its decision to certify.

Some comments stated generally that small entities will have difficulty complying with the rule. A few of these emphasized that small entities may have especial difficulty reading and understanding the rule or hiring personnel to cover for pregnant employees who take leave as a reasonable accommodation. Some asserted that small entities will hire fewer women in anticipation of added costs arising from the need to provide accommodations.

Other comments stated broadly that the rule will be beneficial to small entities. One such comment noted that many States have laws similar to the PWFA with thresholds even lower than 15 employees; that, in those States, even smaller employers must provide reasonable accommodations absent undue hardship; that providing for accommodations may allow employers to keep employees and thus reduce costs for replacement and retraining; that the PWFA will encourage pregnant employees to stay in the workforce, thereby supporting small businesses; and that in States with PWFA-type statutes, increased costs or adverse economic outcomes either have not been reported or have been so insignificant that they are not easily measurable, likely because the required accommodations tend to be low-cost or no-cost.

On balance, the Commission concludes that the comments discussed above do not provide it with sufficient

[352] *Id.* at 54764–65.

reason to withdraw its earlier decision to certify that the rule will not have a significant economic effect on a substantial number of small entities. As detailed above, these comments were not uniformly in favor of withdrawal. Further, the comments stating generally that small entities will have difficulty complying with the rule did not provide data in support of those claims. The Commission also observes that these comments generally appear to overlook the fact that, if a particular reasonable accommodation would impose undue hardship on the employer, neither the PWFA nor the rule require the employer to provide it. To the extent that the above comments predict that the rule will cause small employers to hire fewer women, the Commission notes that such action is independently unlawful pursuant to Title VII's prohibition against refusal to hire women because they may become pregnant.[353]

Some comments addressed the Commission's reasoning more directly. One comment stated that the Commission should retract its certification because over 10 percent of the 33 million small businesses in the United States will be required to comply with the rule. This comment misrepresents the Commission's reason for certifying. As explained above, in the NPRM the Commission agreed that the rule will affect a ''substantial'' number of small entities but concluded that the economic impact on such entities would, in almost all cases, fail to be ''significant.'' [354] The Commission thus declines to retract its certification in response to this comment.

One comment stated that, in estimating the cost of accommodations on small entities, the Commission should not have relied on the average cost for such accommodations, but rather should have focused on ''budget-busting'' accommodations that would be especially difficult for small entities to handle. This comment did not cite data establishing how much an accommodation would need to cost in order to qualify as ''budget-busting'' for small entities of a given size, what sorts of pregnancy-related accommodations were likely to reach that threshold, or how often such an accommodation is likely to be needed. Further, the comment did not account for the fact that the PWFA does not require employers to provide reasonable accommodations that would impose undue hardship; presumably the ''budget-busting'' accommodations would be likely to meet this standard.

One comment objected to the Commission's method of determining whether a given entity meets the 15-employee threshold for coverage under the PWFA. Specifically, the comment objected to the fact that the Commission counts temporary or seasonal employees toward this total under some circumstances. The Commission declines to change its method for determining whether an entity has 15 employees in response to this comment. The same method has been used consistently for decades under all of the statutes enforced by the EEOC and has been endorsed by the Supreme Court.[355]

One comment objected to the Commission's decision to distribute the average cost of a non-zero-cost accommodation ($300) over 5 years for purposes of the RFA analysis. The Commission distributed the costs over 5 years under the assumption that most accommodations with a cost will involve purchase of durable goods with a life of 5 years.[356] The Commission made this same assumption when it estimated the costs arising from the provision of additional reasonable accommodations as a result of the ADAAA.[357] The comment stated that small employers generally will have no use for these durable goods after they are used by the original requester. The comment provided no data to support this assertion. Further, the comment did not identify a reason why the Commission's estimate of average accommodation costs under the PWFA should differ from its estimate of the same under the ADA. The Commission, therefore, declines to amend its analysis in response to the comment.

Some comments objected to the Commission's method of estimating the percentage of employees within a given small entity who actually become pregnant in a given year. Although the Commission's estimate may be accurate for small entities in certain industries, these comments argued, they may not be accurate for small entities operating in industries that employ disproportionately high numbers of women. One comment identified ''education and health; leisure and hospitality; and retail and wholesale trade'' as industries that employ disproportionately high numbers of women. The comment offered the hypothetical situation of a preschool with 25 employees, 20 of whom are women of reproductive age. The comment concluded that the preschool likely will have continuous costs imposed by the proposed rule, even though it has just 25 employees.

The Commission is unpersuaded that it should retract its certification that the rule will not have a significant economic impact on a substantial number of small entities in response to these comments. In the Commission's view, they overestimate the costs that will be experienced in industries with disproportionately high numbers of women employees. Consider the example discussed above in which a business employs 25 employees, 20 of whom are capable of becoming pregnant. To generate a lower bound estimate of the number of expected non-zero-cost accommodations per year in the example, the Commission calculates as follows: $20 \times 0.071 \times 0.32 \times 0.506 = 0.22$ individuals per year are likely to need a non-zero-cost pregnancy-related reasonable accommodation, roughly equivalent to one individual every 5 years.[358] To generate an upper bound estimate: $20 \times 0.071 \times 0.71 \times 0.506 = 0.52$ individuals per year are likely to need a non-zero-cost pregnancy-related accommodation, roughly equivalent to one individual every 2 years. As discussed above, these costs are not expected to be high—the expected annual cost per accommodation is estimated to be $60 per year. Thus, rather than imposing ''continuous'' high costs, businesses like the one in the example should only expect to provide one relatively low-cost accommodation every 2 to 5 years.[359] Additionally, even

[353] 42 U.S.C. 2000e(k).

[354] 88 FR 54764.

[355] *See generally Walters* v. *Metro. Educ. Enters., Inc.,* 519 U.S. 202 (1997).

[356] 88 FR 54759.

[357] 76 FR 16977, 16994 (Mar. 25, 2011).

[358] The estimate was calculated by multiplying the number of individuals in the business who are capable of becoming pregnant (20) by (a) 7.1 percent, to account for the fact that only some individuals who are capable of becoming pregnant will actually become pregnant in a given year; (b) 32 percent, to account for the fact that only some pregnant individuals will need accommodation; and (c) 50.6 percent, to account for the fact that only some needed accommodations will have a cost. For a detailed discussion of these calculations, see the *Costs* section in the Final Regulatory Impact Analysis below.

[359] Further, the Commission has been given no reason to believe that the example offered in the comment and discussed here is representative of any real industry. The percentage of employees capable of becoming pregnant in the example is $20 \div 25 = 80$ percent—roughly 2.5 times as high as the 33 percent national average. Additionally, the business in the example had only 25 employees. The comment failed to provide any data establishing the existence of any industry that has a ''substantial'' number of entities that have so few employees and that employs women at such a disproportionately high rate. The example is of an entity in the education industry. The Small Business Administration does not define the meaning of ''small entity'' for any of the education-related industries in terms of a number of employees. *See* 13 CFR 121.210. It defines ''small entity'' in the elementary and secondary school industry to be an entity that has $20 million or less

Continued

if a substantial number of small entities in a particular industry were to face ''continuous'' costs as a result of the rule—as demonstrated by the calculations above, a highly unlikely occurrence—it would not follow that such costs would be ''economically significant.''

For the reasons discussed above, the Commission has determined that the comments it received regarding occupational segregation do not require it to retract its certification that the rule will not have a significant economic impact on a substantial number of small entities, or to revise its justification for certifying.

Final Economic Analysis

Executive Orders 12866 (Regulatory Planning and Review), 13563 (Improving Regulation and Regulatory Review), and 14094 (Modernizing Regulatory Review)

Introduction

The final rule has been drafted and reviewed in accordance with Executive Order (E.O.) 12866. The rule and the Interpretive Guidance are intended to add to the predictability and consistency of executive enforcement of the PWFA and to provide covered entities and employees with information regarding their rights and responsibilities. The rule is required pursuant to 42 U.S.C. 2000gg–5. The Final Regulatory Impact Analysis estimates the cost of the rule to be between $466.71 million and $484.71 million in the first year, and between $14.82 and $32.82 million annually thereafter. It estimates that the benefits will be significant. While those benefits cannot be fully quantified and monetized, the Commission concludes that, consistent with E.O. 13563, the benefits (qualitative and quantitative) will justify the costs. The Commission notes that the rule and underlying statute create many important benefits that, in the words of E.O. 13563, stem from ''values that are difficult or impossible to quantify'' including ''equity, human dignity, fairness and distributive impacts.'' Additionally, because the rule provides employees who are affected by pregnancy, childbirth, or related medical conditions with reasonable accommodations that enable them to continue working, the benefits of the rule include increased productivity. These benefits cannot be quantified at this time, however.

in annual receipts, *id.,* but the Commission was unable to determine the percentage of elementary or secondary schools with $20 million or less in annual receipts that have 25 or fewer employees.

Summary

As detailed in the Final Regulatory Impact Analysis (FRIA) section below, the final rule and underlying statute are expected to provide numerous unquantifiable benefits to qualified employees and applicants with known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, especially in States that currently do not have laws substantially similar to the PWFA. It will also benefit covered entities, the U.S. economy, and society as a whole. These unquantifiable benefits include improved maternal and infant health; improved economic security for pregnant employees; increased equity, human dignity, and fairness; improved clarity of enforcement standards and efficiencies in litigation; and decreased costs related to employee turnover for covered entities.

The quantitative section in the FRIA below provides estimates of the two main expected costs associated with the rule and underlying statute: (a) annual costs associated with providing reasonable accommodations to qualified applicants and employees with known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions by employers in States that do not currently have such a requirement, and (b) one-time administrative costs for covered entities, which include becoming familiar with the rule, posting new equal employment opportunity (EEO) posters,[360] and updating EEO policies and handbooks. The Commission expresses the quantifiable impacts in 2022 dollars and uses discount rates of 3 and 7 percent pursuant to OMB Circular A–4.

The analysis concludes that approximately 49.4 percent of the reasonable accommodations that will be required by the rule and underlying statute will have no cost to covered entities, and that the average annual cost for the remaining 50.6 percent of such accommodations is approximately $60 per year per accommodation. Taking into account that many entities covered by the PWFA are already required to provide such accommodations under State and local laws, the total impact on the U.S. economy to provide reasonable accommodations under the rule and underlying statute is estimated to be between $14.82 million and $32.82 million per year.

The estimated one-time costs associated with administrative tasks are quite low on a per-establishment basis—between $57.02 and $255.40, depending on the State and on the type of employer. Despite the low per-establishment cost, the proposed rule is a ''significant regulatory action'' under section 3(f)(1) of E.O. 12866, as amended by E.O. 14094, because the number of regulated entities—hence the number of entities expected to incur one-time administrative costs—is extremely large (including all public and private employers with 15 or more employees and the Federal Government). As a result, the Commission has concluded that the overall cost to the U.S. economy will be in excess of $200 million.[361]

Final Regulatory Impact Analysis (FRIA)

The Need for Regulatory Action

The PWFA and the final rule respond to the previously limited availability of accommodations for employees affected by pregnancy, childbirth, or related medical conditions under Federal law. Although Title VII (as amended by the Pregnancy Discrimination Act (PDA)) provided some protections for employees affected by pregnancy, childbirth or related medical conditions, court decisions regarding the ability of employees affected by pregnancy, childbirth, or related medical conditions to obtain workplace accommodations created ''unworkable'' standards that did not adequately protect pregnant employees.[362] Similarly, prior to the PWFA, some pregnant employees could obtain protections under the ADA, but these were limited.[363] Pregnant employees who could not obtain accommodations risked their economic security, which had harmful effects for

[360] The Commission posted an updated poster on its website concurrent with the PWFA's effective date of June 27, 2023. *See* EEOC, ''Know Your Rights: Workplace Discrimination is Illegal'' Poster, *https://www.eeoc.gov/poster* (last visited Mar. 25, 2024).

[361] The Congressional Budget Office (CBO) did not review the PWFA for intergovernmental or private-sector mandates because ''[s]ection 4 of the Unfunded Mandates Reform Act excludes from the application of that act any legislative provision that would establish or enforce statutory rights prohibiting discrimination,'' and CBO ''determined that the bill falls within that exclusion because it would extend protections against discrimination in the workplace based on sex to employees requesting reasonable accommodations for pregnancy, childbirth, or related medical conditions.'' H.R. Rep. No. 117–27, pt. 1, at 41.

[362] *Id.* at 14–16 (describing court rulings under Title VII and the Supreme Court's decision in *Young,* 575 U.S. 206); *see* 88 FR 54714–16.

[363] H.R. Rep. No. 117–27, pt. 1, at 19–21 (describing court decisions under the ADA that failed to find coverage for employees with pregnancy-related disabilities).

themselves and their families.[364] Furthermore, the loss of a job can affect a pregnant employee's economic security for decades, as they lose out on ''retirement contributions . . . short-term disability benefits, seniority, pensions, social security contributions, life insurance, and more.'' [365] Additionally, the lack of workplace accommodations can harm the health of the employee and their pregnancy.[366] While numerous States have laws that provide for accommodations for pregnant employees, the lack of a national standard prior to passage of the PWFA meant that employees' rights varied depending on the State in which they lived, some of which left employees completely unprotected.[367]

The PWFA at 42 U.S.C. 2000gg–3(a) provides that ''[n]ot later than 1 year after [the date of enactment of the Act], the Commission shall issue regulations in an accessible format in accordance with subchapter II of chapter 5 of title 5 [of the United States Code] to carry out this chapter. Such regulations shall provide examples of reasonable accommodations addressing known limitations related to pregnancy, childbirth, or related medical conditions.''

Pursuant to 42 U.S.C. 2000gg–3(a), the EEOC is issuing this rule following the procedures codified at 5 U.S.C. 553(b).

Baseline

The PWFA is a new law that requires covered entities to provide reasonable accommodations to the known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions of qualified employees. As set out in the NPRM,[368] the PWFA seeks to fill gaps in the Federal and State legal landscape regarding protections for employees affected by pregnancy, childbirth, or related medical conditions.

Employees affected by pregnancy, childbirth, or related medical conditions have certain rights under existing civil rights laws, such as Title VII, the ADA, the Family and Medical Leave Act of 1993, 29 U.S.C. 2601 *et seq.* (FMLA), the Providing Urgent Maternal Protections for Nursing Mothers Act (PUMP Act), and various State and local laws.[369]

Under Title VII, an employee affected by pregnancy, childbirth, or related medical conditions may be able to obtain a workplace modification to allow them to continue to work.[370] Typically courts have only found in favor of such claims if the employee can identify another individual similar in their ability or inability to work who received such an accommodation, or if there is some direct evidence of disparate treatment (such as a biased comment or a policy that, on its face, excludes pregnant employees). However, there may not always be similarly situated employees. For this reason, some pregnant employees have not received simple, common-sense accommodations, such as a stool for a cashier [371] or bathroom breaks for a preschool teacher.[372] And even when the pregnant employee can identify other employees who are similar in their ability or inability to work, some courts still have not found a Title VII violation.[373]

Under the ADA, certain employees affected by pregnancy, childbirth, or related medical conditions may have the right to accommodations if they have an ''actual'' or ''record of'' ADA disability; this standard does not include pregnancy itself but includes a pregnancy-related disability.[374]

Under the FMLA, covered employees can receive up to 12 weeks of job-protected unpaid leave for, among other things, a serious health condition, the birth of a child, and bonding with a newborn within 1 year of birth.[375] However, employees must work for an employer with 50 or more employees within 75 miles of their worksite and meet certain tenure requirements in order to be entitled to FMLA leave.[376] Survey data from 2018 show that only 56 percent of employees are eligible for FMLA leave.[377] Further, the FMLA only provides unpaid leave—it does not require reasonable accommodations that would allow employees to stay on the job and continue to be paid.

The PUMP Act requires employers who are covered by the Fair Labor Standards Act, 29 U.S.C. 201 *et seq.* (FLSA), to provide reasonable break time for an employee to express breast milk for their nursing child each time such employee has need to express milk for 1 year after the child's birth. The PUMP Act also requires employers to provide a place to pump at work, other than a bathroom, that is shielded from view and free from intrusion from coworkers and the public.[378]

As set out in Table 1, 30 States currently have laws similar to the PWFA that provide for accommodations for pregnant employees. In most States, again as set out in Table 1, the State laws cover the same employers that are covered by the PWFA. Employees in the remaining States and Federal Government employees have the rights set out in the Federal laws described above and, until the passage of the PWFA, did not have the protections of a law like the PWFA.

In addition to the protections provided by the above laws, the Federal Government provides 12 weeks of paid parental leave to eligible Federal employees upon the birth of a new child.[379]

[364] *Id.* at 22 (''When pregnant workers are not provided reasonable accommodations on the job, they are oftentimes forced to choose between economic security and their health or the health of their babies.''); *id.* at 24 (noting that ''families increasingly rely on pregnant workers' incomes.'').

[365] *Id.* at 25.

[366] *Id.* at 22 (''According to the American College of Obstetricians and Gynecologists (ACOG), providing reasonable accommodations to pregnant workers is critical for the health of women and their children.''); *id.* (describing how a lack of an accommodation led to a miscarriage for a worker).

[367] See *infra* Table 1 for a calculation of the number of employees who live in States without PWFA-analogue laws.

[368] 88 FR 54714–15.

[369] For a list of State laws, see *infra* Table 1. In addition, Federal laws regarding Federal funding such as Title IX of the Education Amendments of 1972, 20 U.S.C. 1681 *et seq.,* and the Workforce Innovation and Opportunity Act, 29 U.S.C. 3248(a)(2), provide protection from sex discrimination, including discrimination based on pregnancy, childbirth, or related medical conditions.

[370] As relevant here, Title VII protects employees from discrimination based on pregnancy, childbirth, or related medical conditions ''with respect to . . . compensation, terms, conditions, or privileges of employment[ ] because of such individual's . . . sex.'' 42 U.S.C. 2000e–2(a)(1). Discrimination because of sex includes discrimination based on ''pregnancy, childbirth, or related medical conditions.'' 42 U.S.C. 2000e(k). Title VII also provides that ''women affected by pregnancy, childbirth, or related medical conditions shall be treated the same for all employment-related purposes, including receipt of benefits under fringe benefit programs, as other persons not so affected but similar in their ability or inability to work.'' *Id.*

Nonquantifiable Benefits

The final rule and the underlying statute create many important benefits that stem from ''values that are difficult or impossible to quantify,'' including ''equity, human dignity, [and] fairness.'' [380] These benefits are the marginal increase in those values beyond the protections provided in the laws outlined above. The Commission has identified five primary benefits of the rule and underlying statute. The Commission did not quantify each of the following benefits that are expected to result from the PWFA and its implementing regulation, however, because it did not identify sufficient data to quantify these benefits.[381]

Improvements in Health for Pregnant Employees and Their Babies

Congress enacted the PWFA in large part to improve maternal and infant health outcomes. The legislative history emphasizes that the new law was needed because ''[n]o worker should have to choose between their health, the health of their pregnancy, and the ability to earn a living.'' [382] Congress further concluded that ''providing reasonable accommodations to pregnant workers is critical to the health of women and their children.'' [383] The need to improve health outcomes surrounding pregnancy is critical—as a recent report noted, ''women in our country are dying at a higher rate from pregnancy-related causes than in any other developed nation.'' [384] Additionally, ''Black women are more than three times as likely as White women to die from pregnancy-related causes, while American Indian/Alaska Native [women] are more than twice as likely,'' [385] and a recent study shows that negative health outcomes during pregnancy disproportionately affect Black women compared to White women regardless of wealth.[386]

Some studies have shown increased risk of miscarriage,[387] preterm birth,[388] low birth weight, urinary tract infections, fainting, and other health problems for pregnant employees because of workplace conditions.[389] Research also shows that certain workplace conditions, such as lengthy periods of standing or walking, or high risk of chemical exposure or noise, can result in complications for a pregnant employee and their baby; thus accommodations to alleviate those conditions improve health outcomes for pregnant employees and their children.[390]

Additionally, the provision of accommodations may improve pregnant employees' mental health, as even perceived pregnancy discrimination at work has been linked to increased stress and symptoms of postpartum depression.[391] Stress resulting from workplace discrimination and workplace conditions can increase risk of preterm birth or low birth weight, potentially resulting in serious health problems at birth that may cause long-term health and developmental consequences in children.[392] Such health challenges may result in additional health care costs; accordingly, reducing stress during pregnancy also may reduce health care costs.[393]

Moreover, employees who do not receive needed accommodations, and who quit their jobs as a result in order to maintain a healthy pregnancy, often lose employer-sponsored health insurance in addition to losing their incomes.[394] In a letter to Congress, a group of leading health care practitioner organizations explained that when a pregnant employee loses health insurance, ''the impact on both mother and baby may be long-lasting and severe. One of the main predictors of a healthy pregnancy is early and consistent prenatal care. Loss of employment and health benefits impact family resources, threatening the ability to access vital health care when a woman needs it the most.'' [395]

Finally, by helping pregnant employees avoid health risks to themselves and their pregnancies, the PWFA will help contribute to improved maternal and child health and lower health care costs nationally.

Improvements in Pregnant Employees' Economic Security

Access to reasonable accommodations at work will help employees with limitations related to pregnancy, childbirth, or related medical conditions to stay in the workforce, maintain their income, and provide for themselves and their families.[396] Based on anecdotal evidence, unavailability of accommodations often forces employees to take unpaid leave, quit their jobs, or seek jobs that are potentially less lucrative, threatening their economic security.[397] The lack of an accommodation may also have far-reaching economic effects. As the House Committee on Education and Labor Report for the PWFA stated, ''Pregnant workers who are pushed out of the workplace might feel the effects for decades, losing out on everything from 401(k) or other retirement contributions to short-term disability benefits, seniority, pensions, social security contributions, life insurance, and more.'' [398] Provision of reasonable accommodations may also have economic benefits to society as a whole by keeping people attached to the labor force and lowering the likelihood of some employees being compelled to seek public assistance after they are forced to quit their jobs.[399]

Providing needed workplace accommodations to qualified applicants and employees with limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions is another step toward ensuring women's continued and increased participation in the labor force.[400] Among other things, women's participation in the labor force is heavily impacted by pregnancy and the demands associated with raising young children.[401] The passage of the PDA in 1978, which prohibits employment discrimination based on pregnancy, childbirth, or related medical conditions and requires that women affected by pregnancy, childbirth, or related medical conditions be treated the same as other individuals similar in their ability or inability to work, increased the participation rate of pregnant women in the labor market.[402] As of 2021, over 66 percent of women in the United States who gave birth in the prior year were in the labor force,[403] up from about 57 percent in 2006.[404] Moreover, an increasing number of pregnant employees are working later into their pregnancies—over 65 percent of first-time mothers who worked during their pregnancy worked into the last month before their child's birth.[405]

By requiring reasonable accommodations for employees with limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, the PWFA and this rule will further support and enhance women's labor force participation, and, in turn, grow the U.S. economy.[406]

Non-Discrimination and Other Intrinsic Benefits

Providing accommodations to employees with limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions also has important implications for equity, human dignity, and fairness.

First, by allowing pregnant employees to care for their health and the health of their pregnancies, the PWFA enhances human dignity. Employees will be able to prioritize their health and the health of their future children, giving their children the best possible start in life while also protecting their economic security. As one comment explained, the PWFA gives pregnant employees a strong sense of dignity and belonging in the workforce, and ''the reasonable accommodation framework relieves individual employees of the burden of proving animus: of showing that an employer's inflexible imposition of workplace standards reflects sex stereotyping that flows from the invidious assumption that pregnant workers are not competent or committed workers.'' [407]

Second, the PWFA will diminish the incidence of sex discrimination against qualified employees, enable them to reach their full potential, reduce exclusion, and promote self-respect. The statute and the rule provide for reasonable accommodations to employees who would otherwise not receive them and thus could be forced to leave their jobs or the workforce because of their pregnancy, childbirth, or related medical conditions. Also, the statute and the rule require a covered entity to engage an employee in an interactive process, rather than simply assigning the employee an accommodation, which combats stereotypes about the capabilities of employees affected by pregnancy, childbirth, or related medical conditions. Finally, the statute and the rule protect employees against retaliation and coercion for using the protections of the statute. These protections against discrimination

Barton, a pregnant corrections officer who quit her job because she did not receive an accommodation and therefore lost her health insurance).

[396] The Commission is not able to monetize or quantify this benefit because, although anecdotal evidence establishes that lack of accommodation has led employees to quit their jobs, there are no data on how frequently this happens.

[407] Siegel, *supra* note 348, at 220–26.

promote human dignity and equity by enabling qualified employees to participate or continue to participate in the workforce.[408]

Third, because the PWFA applies to so many covered entities, it will improve equity in the workforce. Currently, employees affected by pregnancy, childbirth, or related medical conditions in higher paying jobs and non-physical jobs are much more likely to be able to control their schedules, take bathroom breaks, or eat, drink water, or telework when necessary.[409] These employees may not have to request accommodations from their employers to meet many of their pregnancy-related needs. Employees in low-wage jobs, however, are much less likely to be able to organize their schedules to allow them to take breaks that may be necessary due to pregnancy, childbirth, or related medical conditions.[410] Nearly one-third of Black and Latina workers are in low-wage jobs,[411] the types of jobs that are less likely to currently provide accommodations.[412] Therefore, the PWFA and this rule will improve equity in the workforce by ensuring that low-paid employees, including Black and Latina employees who may have a more difficult time securing voluntary accommodations, will have a right to them.

Fourth, providing reasonable accommodations to employees who would otherwise have been denied them yields third-party benefits that include diminishing stereotypes regarding employees who are experiencing pregnancy, childbirth, or related medical conditions;[413] promoting design, availability, and awareness of accommodations that can have benefits for the general public, including non-pregnant employees, and attitudinal benefits;[414] increasing understanding and fairness in the workplace;[415] and creating less discriminatory work environments that benefit employees, employers, and society.[416]

Clarity in Enforcement and Efficiencies in Litigation

Congress, in describing the goals of the PWFA, also focused on the clarity that the PWFA would bring to the question of when employers must provide accommodations for limitations related to pregnancy, childbirth, or related medical conditions: ''The PWFA eliminates a lack of clarity in the current legal framework that has frustrated pregnant workers' legal rights to reasonable accommodations while providing clear guidance to both workers and employers.''[417] By creating a national standard, the PWFA also may increase compliance with State laws requiring accommodations for pregnant employees,[418] as coming into compliance with the PWFA may increase employers' knowledge about these laws in general. In the short time that the PWFA has been in effect, one comment noted that dozens of employees had informed them of the ''transformative effect'' of the law, with employees who had previously been denied reasonable accommodations having them provided.[419] For example, an electrician's assistant reported that, following her request for a pregnancy-related accommodation, her employer attempted to place her on leave; but after advocating for herself under the PWFA, her employer exhibited increased flexibility and willingness to accommodate her.[420] An employee in telecommunications stated that, after her employer took months to respond to her request for a postpartum accommodation, she informed her employer of her rights under the PWFA, and her employer granted the accommodation request.[421] A tax specialist reported that she requested a pregnancy-related accommodation that her employer denied without explanation; after she educated her employer about the PWFA, her employer granted her request for an accommodation.[422]

By clarifying the rules regarding accommodations for pregnant employees, the PWFA and the rule will decrease the need for litigation

[408] *See* Salihu et al., *supra* note 389, at 94 (finding that ''[w]omen who perceive employers and superiors as supportive are more likely to return to work after childbirth. This reduces the risk to employers regarding loss in skill and training. Similarly, businesses that plan for and proactively approach pregnancy in the workplace show lower rates of quitting and greater ease of shifting workloads in the event of a pregnancy, which increases productivity and decreases losses''); *Long Over Due, supra* note 395, at 15 (testimony of Kimberlie Michelle Durham) (''I wanted to work. I loved my job.''). *See also* Salihu et al., *supra* note 389, at 93 (describing steps pregnant women take to combat the perception that they are a liability in the workforce and reinforce their role as ''professionals''); *Long Over Due, supra* note 395, at 41 (statement of Dina Bakst, Co-Founder & Co-President, A Better Balance) (describing an employee who was denied an accommodation but who ''desperately wanted to continue working''); Hackney et al., *supra* note 341, at 780 (explaining that managers may make incorrect assumptions about what pregnant employees want, such as assuming a reduced workload is beneficial, whereas pregnant employees might find this accommodation demeaning or discriminatory, and noting the importance of managers ''hav[ing] an open dialogue with their employees about what types of support [are] needed and desired'').

[409] *Long Over Due, supra* note 395, at 83 (statement of Rep. Barbara Lee) (describing her own pregnancy, which required bedrest, and contrasting her experience with the experience of employees in less flexible jobs).

[410] *Fighting for Fairness, supra* note 394, at 108 (statement of Fatima Goss Graves, President & CEO of the National Women's Law Center) (''[O]ver 40% of full-time workers in low-paid jobs report that their employers do not permit them to decide when to take breaks, and roughly half report having very little or no control over the scheduling of hours.''). NWLC defines low-wage occupations as jobs that pay $11.50 per hour or less (the annual equivalent of about $23,920 per year ($11.50 × 2080 hours), which assumes a 40-hour workweek for 52 weeks). regarding accommodations under the PWFA. To the extent that litigation remains unavoidable in certain circumstances, the PWFA and the rule are expected to eliminate the need to litigate whether the condition in question is a ''disability'' under the ADA, and to limit discovery and litigation costs that arise under Title VII regarding determining if there are valid comparators, thus streamlining the issues requiring judicial attention.[423]

Benefits for Covered Entities

Providing accommodations needed due to pregnancy, childbirth, or related medical conditions is also likely to provide benefits to covered entities. By providing accommodations to employees affected by pregnancy, childbirth, or related medical conditions and retaining them as employees, employers will save money by not having to obtain and train new employees. The Commission is not aware of any data regarding the need to obtain and train employees arising specifically from provision of reasonable accommodations for pregnancy, childbirth, or related medical conditions. Studies examining the relationship between employee retention and provision of reasonable accommodations for disabilities generally suggest that the benefits to covered entities may be significant. According to one study, 85 percent of employers that provided accommodations to individuals with disabilities reported that doing so enabled them to retain a valued employee; 53 percent reported an increase in that employee's productivity; 46 percent reported elimination of costs associated with training a new employee; 48 percent reported an increase in that employee's attendance; 33 percent noted that providing the accommodation increased diversity in the company; and 23 percent reported a decrease in workers' compensation or other costs. Employers also noted several indirect benefits: 30 percent noted an increase in company morale, and 21 percent noted an increase in overall company productivity.[424]

Costs

Covered Entities and the Existing Legal Landscape

Entities covered by the PWFA and the regulation include all employers covered by Title VII and the Government Employee Rights Act of 1991, 42 U.S.C. 2000e–16a–16c (GERA), including private and public sector employers with 15 or more employees, Federal agencies, employment agencies, and labor organizations.[425]

In addition to the legal protections described earlier in the preamble pertaining to Title VII, the ADA, and the FMLA, there are three other important legal considerations that impact the costs of accommodations under the PWFA and this regulation.

First, 30 States and 5 localities have laws substantially similar to the PWFA, requiring covered employers to provide reasonable accommodations to pregnant employees.[426] As a result, this rule will impose minimal, if any, additional costs on the covered entities in these States and localities.[427]

Second, when it enacted the PWFA, Congress also enacted the PUMP Act, which requires employers who are covered by the FLSA to provide reasonable break time for an employee to pump breast milk each time such employee has the need to express milk for up to 1 year after the child's birth. The PUMP Act also requires employers to provide a place to pump at work, other than a bathroom, that is shielded from view and free from intrusion from coworkers and the public.[428] As a result, the Commission anticipates that most employees will not need to seek reasonable accommodations regarding a time and place to pump at work under the PWFA because they will already be entitled to these under the PUMP Act.

Third, the Federal Government provides 12 weeks of paid parental leave to eligible Federal employees upon the birth of a new child.[429] As a result, these Federal employees may make fewer requests for leave as a reasonable accommodation under the PWFA as they are already guaranteed a certain amount of paid leave.

Estimate of the Number of Reasonable Accommodations That Will Be Provided as a Result of the Rule and Underlying Statute

As set out in Tables 1 and 2 and explained in detail below, the rule and underlying statute cover approximately 116.7 million employees of private establishments with 15 or more employees, 18.8 million State and local government employees, and 2.3 million Federal employees. Only a small percentage of these employees are expected to seek and be entitled to accommodations as a result of the rule and underlying statute.

Approximately 52 percent of private sector enterprises with 15 or more employees in the United States (1.4 million establishments), employing about 61.2 million employees (accounting for 52 percent of employment in those States), are currently subject to State or local laws that are substantially similar to the PWFA. The enactment of the PWFA and promulgation of the rule, therefore, should not result in additional accommodation-related costs for these employers. Subtracting 61.2 million employees from the total number of covered employees employed by private sector enterprises (116.7 million) yields a total of approximately 55.5 million employees of private sector establishments who will be covered by the rule and underlying statute, and who are not also covered by State or local laws that are substantially similar to the PWFA. Tables 1 and 2 display

[423] *See* H.R. Report No. 117–27, pt. 1, at 14–17 (describing the need to find comparators under Title VII and the difficulties it has caused pregnant employees seeking accommodations); *id.* at 17–21 (describing the protections available for pregnant employees under the ADA and the fact that frequently even pregnancies with severe complications are found by courts not to be ''disabilities'').

[424] *See Costs and Benefits of Accommodation, supra* note 209.

[425] *See* 42 U.S.C. 2000gg(2)(A). The PWFA also applies to employers covered by the Congressional Accountability Act of 1995 (42 U.S.C. 2000gg(2)(B)(ii)). The proposed regulation does not apply to employers covered under the Congressional Accountability Act, as the Commission does not have the authority to enforce the PWFA with respect to employees covered by the Act.

[426] *See infra* Table 1; *see also* U.S. Dep't of Lab., *Employment Protections for Workers Who Are Pregnant or Nursing, https://www.dol.gov/agencies/wb/pregnant-nursing-employment-protections* (last visited Mar. 25, 2024).

[427] The PWFA analogues in Alaska, North Carolina, and Texas only cover certain public employers. The laws in Louisiana and Minnesota apply to employers larger than the PWFA threshold of 15 or more employees (25 or more employees in Louisiana; 21 or more employees in Minnesota). As explained below, the analysis takes these differences into account.

[428] U.S. Dep't of Lab., *FLSA Protections to Pump at Work, https://www.dol.gov/agencies/whd/pump-at-work* (last visited Mar. 25, 2024).

[429] Federal Employee Paid Leave Act, 133 Stat. at 2304–05.

each State's share of the total national number of private sector establishments that have 15 or more employees and thus will be subject to the PWFA, and the percentage of employees in the State employed by such establishments. States with laws substantially similar to the PWFA are in Table 1; States without such a law are in Table 2.

BILLING CODE 6570–01–P

Table 1: Share of Employers with 15 or More Employees in States Already Subject to Local Pregnancy Accommodation Laws Similar to the PWFA[430]

State			Share in U.S. Total[431]	
	Statute	Threshold[432]	Establishments	Employment
California	Cal. Gov't Code sec. 12945(a)(3)	5	10.6%	11.6%

Total (in millions)	**1.3**	**55.5**

Similarly, approximately 11.5 million State and local government employees are covered by laws that are substantially similar to the PWFA.[445] Subtracting this number from the total number of covered State and local government employees (18.8 million) yields a total of 7.3 million State and local government employees who will be covered by the rule and underlying statute and who are not already covered by State or local laws substantially similar to the PWFA.

[437] *Firms and Establishments Data by State, supra* note 430. Percentages in the table reflect filtering by size and summing by State.

[438] This number is limited to enterprises with 15 or more employees.

[439] Alaska's statute, codified at Alaska Stat. sec. 39.20.520 (1992), covers public employers only.

[440] These numbers only include enterprises with 15–24 employees because Louisiana's pregnancy accommodation law applies to employers with 25 or more employees. La. Rev. Stat. Ann. sec. 23:341 (2021).

[441] These numbers only include enterprises with 15–24 employees because Minnesota's pregnancy accommodation law applies to employers with 21 or more employees. Minn. Stat. sec. 181.940, 181.9414, 181.9436 (2014). Data on enterprises with 15–20 employees are not available.

[442] North Carolina Executive Order No. 82 (2018) covers public employers only.

[443] *See supra* note 435.

[444] The Texas statute, codified at Tex. Loc. Gov't Code sec. 180.004 (2001), covers local public employers only.

[445] U.S. Dep't of Com., Census Bureau, *2021 ASPEP Datasets & Tables* (2021) [hereinafter *ASPEP Datasets*], *https://www.census.gov/data/datasets/2021/econ/apes/annual-apes.html.* The calculation is based on data from the ''State Government Employment & Payroll Data'' and the ''Local Government Employment & Payroll'' files, in the ''Government Function'' column.

Finally, there are 2.3 million Federal employees. The Federal Government does not currently require accommodations for pregnant employees; thus, the PWFA provides a new right for these employees.[446]

Again, however, not all employees who are now covered by the PWFA will seek and be entitled to accommodations as a result of the rule and underlying statute; only a small percentage will become pregnant and need accommodations in a given year.

To estimate the number of individuals who will be entitled to a pregnancy-related accommodation, and who will receive one as a result of the PWFA and its implementing regulations, the Commission first estimates the proportion of newly covered employees who are capable of becoming pregnant. In 2021, women of reproductive age (aged 16–50 years) comprised approximately 33 percent of U.S. employees.[447] On the basis of this finding, the Commission adopts 33 percent as its estimate of the percentage of employees who are capable of becoming pregnant.

The Commission next estimates the proportion of individuals capable of becoming pregnant who will actually become pregnant in a given year. Research shows that approximately 4.7 percent of individuals who are capable of becoming pregnant gave birth to at least one child during the previous year.[448] This figure must be adjusted upward to account for the fact that not all individuals who become pregnant give birth—some pregnant individuals have miscarriages, stillbirths, or abortions. Research shows that, between 2015 and 2019, live births in the United States accounted for 67 percent of all pregnancies among women aged 15–44 years on average.[449] Assuming that the ratio of live births to total pregnancies among women of reproductive age in the labor force is the same as among all 15–44 years old women, the Commission estimates that the percentage of individuals capable of becoming pregnant who will actually become pregnant in given year is $0.047 \div 0.67 = 0.071$ (rounded up), or 7.1 percent. The Commission thus adopts 7.1 percent as its estimate of the percentage of individuals capable of becoming pregnant within a population who will actually become pregnant in a given year.

Applying these percentages to the numbers above yields totals (rounded to the nearest 1,000) of, in a given year, 1.3 million private sector employees ($55{,}500{,}000 \times 0.33 \times 0.071$), 171,000 State and local government employees ($7{,}300{,}000 \times 0.33 \times 0.071$), and 54,000 Federal employees ($2{,}300{,}000 \times 0.33 \times 0.071$) who are both newly eligible for reasonable accommodations under the rule and underlying statute, and who may be expected to become pregnant in a given year. Tables 3, 4, and 5 display these calculations.

Table 3: Computation of Expected Number of Pregnant Women Eligible for PWFA Accommodations at Private Employers

Total employment in establishments covered under PWFA (*i.e.*, those with 15 or more employees)	116.7 million
Total employment in establishments covered under PWFA, with existing PWFA-type accommodations under State/local laws (from Table 1)	61.2 million
Total employment in establishments covered under PWFA, without existing PWFA-type accommodations under State/local laws (from Table 2)	55.5 million
Share of 16-50 years old women	33%
Total number of women employees newly eligible for accommodations under PWFA (33% of 55.5 million)	18.3 million
Expected share of women employees to be pregnant in a year	7.1%
Expected number of pregnant employees newly eligible for accommodations under PWFA (7.1% of 18.3 million)	1.3 million

[446] As noted above, however, most Federal employees are entitled to 12 weeks of paid parental leave during the 12-month period following birth of a child (or other qualifying event) under the FEPLA. *See* Federal Employee Paid Leave Act, 133 Stat. at 2304–05. Individuals eligible for such leave may be less likely to need leave as a reasonable accommodation under the PWFA.

[447] *See* Ruggles et al., *supra* note 403.

[448] *Id.*

[449] Rossen et al., *supra* note 317, at 9 tbl. A.

Table 4 Computation of Expected Number of Pregnant Women Eligible for PWFA Accommodations in State and Local Government Employment[450]

Total State and local government employment	18.8 million
Total State and local government employment in States with existing PWFA-type accommodations under State/local laws[451]	11.5 million
Total State and local government employment in States without existing PWFA-type accommodations under State/local laws[452]	7.3 million
Share of 16-50 years old women	33%
Total number of State and local government women employees newly eligible for accommodations under PWFA (33% of 7.3 million)	2.41 million
Expected share of women employees to be pregnant in a year	7.1%
Expected number of pregnant State and local government employees newly eligible for accommodations under PWFA (7.1% of 2.41 million)	171,000

Table 5: Computation of Expected Number of Pregnant Women Eligible for PWFA Accommodations in Federal Government Employment

Total Federal Government civilian employment[453]	2.3 million
Share of 16-50 years old women	33%
Total number of women Federal Government employees newly eligible for accommodations under PWFA	0.76 million
Expected share of women employees to be pregnant in a year	7.1%
Expected number of pregnant Federal Government employees newly eligible for accommodations under PWFA (7.1% of 0.76 million)	54,000

BILLING CODE 6570–01–C

The sum of the expected number of pregnant women eligible for PWFA accommodations in the private sector (1.3 million), State and local government (171,000), and Federal Government (54,000) is 1.525 million.

The Commission next estimates the proportion of pregnant individuals in the workplace who may need a pregnancy-related reasonable accommodation and who will receive such accommodation as a result of the rule and the underlying statute. Data regarding the number of pregnant employees needing some type of accommodation are limited. One survey indicated that 71 percent of pregnant employees experience a pregnancy-related limitation that requires extra breaks, such as bathroom breaks; 61 percent experience a limitation that requires a change in schedule or more time off, for example, to see prenatal care providers; 53 percent experience a limitation that requires a change in duties, such as less lifting or more sitting; and 40 percent experience a limitation that requires some other type of workplace adjustment.[454]

The research establishes that 71 percent of pregnant individuals surveyed needed the most common type of pregnancy-related reasonable accommodation: additional breaks. The Commission assumes for purposes of the final economic impact analysis that the pregnant individuals in the study who needed one of the more unusual accommodations are a subset of the 71 percent who need additional breaks. The Commission thus adopts 71 percent as its upper bound estimate of the percentage of pregnant employees who will need a pregnancy-related accommodation under the rule.[455] Applying the 71 percent estimate yields upper bound estimates (rounded to the nearest 1,000) of 923,000 private sector employees (71 percent of 1,300,000), 121,000 State and local government employees (71 percent of 171,000), and 38,000 Federal sector employees (71 percent of 54,000), for a total 1,082,000 employees, who will need a reasonable accommodation and who will receive one as a result of the PWFA and the rule in a given year.

In setting its lower bound estimate, the Commission observes that not every individual who is newly entitled to a pregnancy-related accommodation under the PWFA and the rule, and who receives such an accommodation, will receive it as a result of the rule. Some of these individuals will already be entitled to receive pregnancy-related accommodations under other authorities, independently of the PWFA and its implementing regulations—some will already be entitled to them under the ADA, others will be entitled to them under Title VII, and yet others will be

[450] The calculation is based on data as described in *ASPEP Datasets, supra* note 445.

[451] This number includes 12 percent of State and local government employment in Pennsylvania to account for Philadelphia's PWFA-type law, excludes local government employment in North Carolina because the existing law only applies to State employees, and excludes State government employment in Texas because the existing law only applies to local governments.

[452] This number includes State and local government employment in Pennsylvania not accounted for by Philadelphia, includes local government employment in North Carolina because the existing law only applies to State employees, and includes State government employment in Texas because the existing law only applies to local governments.

[453] U.S. Dep't of Com., Bureau of Econ. Analysis, *Full-Time and Part-Time Employees by Industry, https://apps.bea.gov/iTable/?reqid=19&step=2&isuri=1&1921=survey#eyJhcHBpZCI6MTksInN0ZXBzIjpbMSwyLDNdLCJkYXRhIjpbWyJDYXRlZ29yaWVzIiwiU3VydmV5Il0sWyJOSVBBX1RhYmxlX0xpc3QiLCIxOTMiXV19* (last updated Sept. 29, 2023).

[454] Declercq et al., *supra* note 319, at 36. As explained in the preamble, the Commission is maintaining this as the high bound of employees who may need an accommodation because this is the percentage of employees who needed the simplest accommodation (*e.g.,* breaks to use the bathroom).

[455] The Commission asserts that this estimate is almost certainly too high because, although 71 percent of the pregnant individuals participating in the research needed a reasonable accommodation, not all such individuals needed the PWFA to obtain such accommodation. As explained above, many individuals who need pregnancy-related accommodations may already be entitled to them under the ADA, Title VII, or formal or informal employer policies.

entitled to them under formal or informal employer policies.[456] Therefore, costs arising from pregnancy-related accommodations cannot always be attributed to the rule and the underlying statute, even where the employee in question was not previously covered under a State law analogous to the PWFA.

To generate its lower bound estimate, the Commission reduces its upper bound estimate of 71 percent to reflect the fact that some of those individuals would receive their requested accommodation independently of the rule. According to the study cited above,[457] 42 percent of the individuals who needed additional breaks due to a pregnancy-related limitation did not receive them because they were never requested, and 3 percent did not receive them because the employer denied their request. Thus, $0.71 \times 0.45 = 0.32$, or 32 percent, of pregnant individuals surveyed needed, but did not receive the requested accommodation. On the basis of this research, the Commission adopts 32 percent as its lower bound estimate of the percentage of pregnant employees who will need a reasonable accommodation under the PWFA and its implementing regulations. Applying this percentage yields lower bound estimates (rounded to the nearest 1,000) of approximately 416,000 private sector employees (32 percent of 1,300,000); 55,000 State and local government employees (32 percent of 171,000); and 17,000 Federal sector employees (32 percent of 54,000), for a total of 488,000 employees who will need, and be newly entitled to, reasonable accommodations under the rule and underlying statute in a given year.

Cost of Accommodation

Accommodations that allow pregnant employees to continue to perform their job duties, thereby allowing them to receive continued pay and benefits, include additional rest or bathroom breaks, use of a stool or chair, a change in duties to avoid strenuous physical activities, and schedule changes to attend prenatal appointments.[458] Some of these accommodations, especially additional rest or bathroom breaks and provision of a stool or chair, are expected to impose minimal or no additional costs on the employer. Certain other types of accommodations, such as allowing the employee to avoid heavy lifting or exposure to certain types of chemicals, may be easy to provide in some jobs but more difficult to provide in others, necessitating temporary restructuring of responsibilities or transferring to a different position.

The Commission was unable to find any data on the average cost of reasonable accommodations related specifically to pregnancy, childbirth, or related medical conditions. The Commission has therefore relied on the available data on the cost of accommodations for individuals with disabilities for purposes of this analysis.

A survey conducted by the Job Accommodation Network (JAN) indicates that most workplace accommodations for individuals with disabilities are low-cost.[459] Of the employers participating in this survey between 2019 and 2022, 49.4 percent reported that they provided an accommodation needed because of a disability that did not cost anything to implement. The Commission believes that the percentage of no-cost accommodations is likely to be higher for accommodations related specifically to pregnancy, childbirth, or related medical conditions, because many will be simple and no-cost like access to water, stools, or more frequent bathroom breaks, and because the vast majority will be temporary. Nevertheless, because the Commission is unable to locate any data on the percentage of accommodations needed because of pregnancy-related conditions that have no cost, the Commission conservatively assumes for purposes of this analysis that the percentages are the same.

The same research showed that the median one-time cost of providing a non-zero-cost accommodation was $300. Only 7.2 percent of employers reported that they provided an accommodation that resulted in ongoing annual costs. Because pregnancy is a temporary condition, the ongoing costs incurred by 7.2 percent of employers are unlikely to be applicable to pregnancy-related accommodations, and the Commission adopts $300 as the median one-time cost for employers that incurred a cost (50.6 percent of employers). Again, although the Commission believes that the average cost is likely lower for accommodations needed specifically for pregnancy, childbirth, or related medical conditions, it will use the data for the purposes of this analysis.

Because non-zero-cost accommodations generally involve durable goods such as additional stools, infrastructure for telework, and machines to help with lifting, and because these goods generally have a useful life of 5 years, the Commission will assume that the annual cost of providing these accommodations is approximately $60 per year per accommodation.[460]

Using these cost estimates, and applying them to the upper and lower bound estimates for the number of additional accommodations that will likely be required by the rule and underlying statute, the estimated annual costs (rounded to the nearest 1,000) for private employers is between $12.60 million and $28.02 million; the estimated annual costs for State and local governments is between $1.68 million and $3.66 million, and the estimated annual costs for the Federal Government is between $540,000 and $1.14 million. *See* Tables 6, 7, and 8.

BILLING CODE 6570–01–P

Table 6: Estimated Reasonable Accommodation Costs to Private Employers with 15 or More Employees

Cost of accommodation	Lower Bound (32%)	Upper Bound (71%)
Number of women needing accommodation	416,000	923,000
Number of non-zero-cost accommodations (50.6%)	210,000	467,000
Annual cost of accommodation	$12.60 million	$28.02 million

[456] Additionally, some workplace modifications, such as providing personal protective equipment, and protecting employees from exposures to hazardous chemicals, may already be required by Federal or State workplace health and safety laws, regardless of whether the employee is pregnant.

[457] *See* Declercq et al., *supra* note 319, at 36. We note that this study was conducted prior to many PWFA-type laws being enacted. Because the data are being used to estimate the number of requests that will occur in States and localities that do not already have PWFA-type laws, EEOC believes it is appropriate to rely on this survey.

[458] *Id.; see also Long Over Due, supra* note 395, at 79 (statement of Dina Bakst, Co-Founder & Co-President, A Better Balance) (describing potential accommodations).

[459] *Costs and Benefits of Accommodation, supra* note 209.

[460] The Commission made a similar assumption of a 5-year life for accommodations in its cost analysis of the amendments to the ADA. 76 FR 16977, 16994 (Mar. 25, 2011).

Table 7: Estimated Reasonable Accommodation Costs to State and Local Government Employers

Cost of accommodation	Lower Bound (32%)	Upper Bound (71%)
Number of women needing accommodation	55,000	121,000
Number of non-zero-cost accommodations (50.6%)	28,000	61,000
Annual cost of accommodation	$1.68 million	$3.66 million

Table 8: Estimated Reasonable Accommodation Costs to the Federal Government

Cost of accommodation	Lower Bound (32%)	Upper Bound (71%)
Number of women needing accommodation	17,000	38,000
Number of non-zero-cost accommodations (50.6%)	9,000	19,000
Annual cost of accommodation	$540,000	$1.14 million

Table 9: One-Time Administrative Costs

	Number of Establishments (a)	Time for Rule Familiarization (b)	Equal Opportunity Officer Fully-Loaded Wage (c)	Rule Familiarization Cost (a) × (b) × (c)
Private employers in States with existing PWFA-type laws	1.4 million	0.75 hours	$113.51	$119.19 million
Private employers in States without existing PWFA-type laws	1.3 million	2.25 hours	$113.51	$332.03 million
Public employers in States with existing PWFA-laws	3,255[461]	0.75 hours	$76.03	$186,000
Public employers in States without existing PWFA-type laws	2,533[462]	2.25 hours	$76.03	$433,000
Federal Government	209[463]	2.25 hours	$103.76[464]	$49,000
Total				$451.89 million

BILLING CODE 6570–01–C

Thus, the overall economic cost on the U.S. economy of providing reasonable accommodations pursuant to the rule and underlying statute is estimated to be between $14.82 million and $32.82 million annually.

[461] This is based on the distinct number of States and local government filers of the 2021 EEO–4 survey where available, and the 2021 Annual Survey of Public Employment & Payroll (ASPEP) when not available.

[464] As described above, a GS–14, Step 5 salary is $63.21 per hour. *See* U.S. Off. of Pers. Mgmt., *Salary Table 2023-RUS* (Jan. 2023), *https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2023/RUS_h.pdf.* This is then adjusted for average hourly benefits for Federal employees. *See* Cong. Budget Off., *Comparing the Compensation of Federal and Private-Sector Employees, 2011 to 2015,* at 14 (Apr. 25, 2017), *https://www.cbo.gov/system/files/115th-congress-2017-2018/reports/52637-federalprivatepay.pdf* (reporting that the average benefits for Federal employees range from $21.30 per hour to $29.80 per hour). This analysis uses the high estimate of $29.80 to compute the total hourly compensation at $93.01 ($63.21 + $29.80). The Commission was unable to find data on overhead costs for the Federal Government. The Commission assumed the rate to be the same as in the private sector (17 percent), *see supra* note 467, totaling $10.75 ($63.21 × 0.17) per hour. This resulted in a fully-loaded hourly compensation rate of $103.76 (%63.21 + 29.80 + 10.75).

The costs in Tables 6, 7, and 8 likely overestimate the costs to covered entities in at least six respects:

- The estimated one-time cost of $300 per non-zero-cost accommodation is based on costs of accommodations for individuals with disabilities generally, not only those related to pregnancy, among the JAN survey respondents. The Commission believes that the average cost of accommodations related to pregnancy, childbirth, or related medical conditions is less than the average cost of disability-related accommodations because many of the reasonable accommodations requested under the PWFA will be simple and inexpensive to provide, and the vast majority will be temporary.
- The sample obtained in the JAN study may not be representative of all employers, because employers who consult with JAN are likely to be facing more difficult and costly accommodation issues than employers overall.[465]
- The estimate does not account for the fact that some employees who will be entitled to reasonable accommodations under the PWFA and the rule are independently entitled to accommodations under the ADA or Title VII, to break time and a private place to pump at work under the PUMP Act, and, in some cases, leave under the FMLA or the Federal Employees Paid Leave Act.[466]
- The estimate does not account for the fact that some employers voluntarily provide accommodations to employees affected by pregnancy, childbirth, or related medical conditions and may not incur new costs.
- This analysis does not account for the fact that not all employees who seek accommodations will meet the definition of ''qualified,'' and an employer may decline to provide a reasonable accommodation if doing so creates an undue hardship.

[465] JAN provides free assistance regarding workplace accommodation issues. *See generally* Job Accommodation Network, *https://askjan.org/* (last visited Mar. 25, 2024).

[466] Brown et al., *supra* note 377, at 6 (finding that about 56 percent of U.S. employees were eligible for FMLA in 2018, and 25 percent of the FMLA leave taken in the prior 12 months accounted for the arrival of a new child).

The Commission did not include costs related to processing requests for accommodation in its estimate because it expects these costs to be extremely low. Employers that are covered by State or local laws substantially similar to the PWFA already have these procedures in place. The Commission assumes that employers not covered by such State or local laws, and the Federal Government, will adapt existing procedures for providing accommodations under Title VII and the ADA and for providing leave under the FMLA.

One-Time Administrative Costs for Covered Entities

Administrative costs, which include rule familiarization, posting new EEO posters, and updating EEO policies and handbooks, represent additional, one-time direct costs to covered entities.

It is estimated that in States that do not already have laws substantially similar to the PWFA, compliance activities for a covered entity would take an average of 135 minutes, or 2.25 hours, by an Equal Opportunity Officer who is paid a fully-loaded wage of $113.51 per hour[467] ($76.03 for a State or local government employee).[468] In States with already existing laws similar to the PWFA, an Equal Opportunity Officer will take an average of 45 minutes for compliance activities. For the Federal Government, which does not have an existing PWFA, it is estimated that compliance activities would take an average of 135 minutes by an Equal Opportunity Officer at a GS 14–5 salary.[469] These calculations are displayed in Table 9.

Totals and Discount Rates

Total costs for providing reasonable accommodations in each year are estimated by multiplying the number of non-zero accommodations in Tables 6–8 above by the upfront cost of $300. Because these are assumed to be durable accommodations, we assume that an employer that acquires an accommodation in a given year will reuse the accommodation throughout its useful life. Throughout the document, we assume a useful life of 5 years, which amounts to an average annual cost of $60. To more accurately reflect the present value of these upfront expenses, EEOC annualizes the total costs.

Adding the annualized cost of providing reasonable accommodations, assuming a useful life of 5 years (between $14.82 million and $32.82 million), to the estimated administrative costs in year 1 ($451.89 million) yields estimated total costs of between $466.71 million and $484.71 million in the first year, and between $14.82 million and $32.82 million annually thereafter.

Table 10 provides the analysis of discount rates at 3% and 7%, as required by OMB Circular A–4, for the lower and upper bound costs of providing accommodations. Table 11 provides that information for the one-time administrative costs.

BILLING CODE 6570–01–P

[467] The Commission anticipates that the bulk of the workload under this rule would be performed by employees in occupations similar to those associated with the Standard Occupational Classification (SOC) code of SOC 11–3121 (Human Resources Managers). According to the U.S. Bureau of Labor Statistics, the mean hourly wage rate for Human Resources Managers in May 2022 was $70.07. *See* U.S. Dep't of Lab., Bureau of Lab. Stat., *Employment of Human Resources Managers, by State, May 2022* (2022), *https://www.bls.gov/oes/current/oes113121.htm#st.* For this analysis, the Commission used a fringe benefits rate of 45 percent and an overhead rate of 17 percent, resulting in a fully-loaded hourly compensation rate for Human Resources Managers of $113.51 ($70.07 + ($70.07 × 0.45) + ($70.07 × 0.17)).

[468] U.S. Dep't of Lab., Bureau of Lab. Stat., *Employer Costs for Employee Compensation for State and Local Government Workers by Occupational and Industry Group* (Mar. 17, 2023), *https://www.bls.gov/news.release/archives/ecec_03172023.pdf.* Total employer compensation costs for State and local government averaged $57.60 per hour worked (see Table 3 row 1, column 1 of the cited document). Average compensation ranged from $68.57 in management, professional, and related occupations (row 3) to $40.05 in sales and office occupation (row 7). This analysis uses the high estimate of $68.57 per hour worked, which includes average wage and salary cost of $43.87 per hour (row 3, column 3) and average benefit costs of $24.70 per hour (row 3, column 5). The Commission was not able to find data on overhead costs for State and local governments. The Commission assumed the rate to be the same as in the private sector (17 percent), *see supra* note 467, totaling $7.46 ($43.87 × 0.17) per hour. This resulted in a fully-loaded hourly compensation rate of $76.03 ($43.87 + $24.70 + $7.46).

[469] In 2023, a GS–14, Step 5 salary is $63.21 per hour. *See* U.S. Off. of Pers. Mgmt., *Salary Table 2023–RUS* (Jan. 2023), *https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2023/RUS_h.pdf.*

BILLING CODE 6570–01–C

Time Horizon of Analysis

Neither the PWFA nor the rule contains a sunset provision.

The cost analysis assumes a one-time administrative cost for employers, and the amount of time varies depending on whether the employer is in a State with or without its own version of the PWFA.

The cost and benefit analysis calculates the annual cost of accommodations per pregnant employee who may need them. Because different employees enter the labor market every year and may become pregnant, or an employee who was pregnant may become pregnant again, the Commission does not believe that the need for accommodations or the costs or benefits will substantially change over time.

Range of Regulatory Alternatives

The range of alternatives available to the Commission consistent with the Executive Order is narrow:

- Because 42 U.S.C. 2000gg–3(a) requires the Commission to issue regulations, the Commission could not consider non-regulatory alternatives.
- Because 42 U.S.C. 2000gg determines coverage, the Commission could not consider exemptions based on firm size or geography.
- Because 42 U.S.C. 2000gg–2 provides how the statute will be enforced, the Commission could not consider alternative methods of enforcement, such as market-oriented approaches, performance standards, default rules, monitoring by other agencies, or reporting.
- Because section 109 of the PWFA states when the law will go into effect, the Commission could not consider alternative compliance dates.[471]

Further, because the PWFA is a Federal law that intentionally sets a national standard, the Commission could not consider deferring to State or local regulations. The one exception to this is that 42 U.S.C 2000gg–5(a)(1) provides that nothing in the PWFA invalidates or limits rights under Federal, State, or local laws that provide equal or greater protection for individuals affected by pregnancy, childbirth, or related medical conditions. The rule includes this language. Thus, the rule does not preempt State or local regulations that provide equal or greater protection relative to the PWFA.

The Commission considered two regulatory alternatives, discussed below. The Commission does not believe that either alternative would decrease the costs for covered entities.

Definition of ''In the Near Future''

The statute at 42 U.S.C. 2000gg(6) defines a ''qualified'' employee to include employees whose inability to perform one or more essential functions of the job is temporary, who will be able to perform the essential functions ''in the near future,'' and whose inability to perform essential function(s) can be reasonably accommodated without undue hardship.

The final rule defines ''in the near future'' to mean ''generally within 40 weeks'' for pregnancy only. The Commission considered, but rejected, shorter periods such as 6 months or less[472] for several reasons. First, pregnancy generally lasts 40 weeks; a rule that an employee is only ''qualified'' if they are able to perform all the essential functions of the job within 6 months of the function(s) being temporarily suspended could classify many employees who need a temporary suspension of an essential function(s) for a longer period as ''unqualified'' and therefore ineligible for reasonable accommodations. The Commission believes that this outcome would frustrate the purpose of the statute, which is to enable employees who need temporary accommodations related to pregnancy, childbirth, or related medical conditions to continue working.

Second, defining ''in the near future'' to mean ''generally 40 weeks'' for pregnancy does not mean that the employer will be required to actually provide a reasonable accommodation for that length of time. The definition of ''in the near future'' is one step in the definition of ''qualified''; even if an employee can meet this part of the definition, an employer still may refuse to provide an accommodation if the employer cannot reasonably accommodate the temporary suspension of the essential function or if doing so would impose ''undue hardship'' (defined as significant difficulty or expense, relative to the employer's overall resources). Additionally, not all employees who need an essential function(s) suspended will need it suspended for 40 weeks. It is the Commission's hope that setting a single standard for the meaning of ''in the near future'' for pregnancy will benefit both employers and employees by reducing litigation over the meaning of the term and placing the focus on the central issue of whether the accommodation would impose an undue hardship.

If the definition of ''qualified'' is ''generally 40 weeks'' rather than ''less than 6 months,'' more pregnant employees will be able to meet the definition of qualified. It is not possible to estimate how many. The Commission anticipates that there will be little or no additional cost to covered entities because it is the act of providing an accommodation—not classifying an individual as meeting part of the definition of qualified—that imposes actual costs on the employer. A covered entity can still argue that the accommodation would impose an undue hardship. Further, even if it provides the accommodation, the covered entity is likely to experience cost savings from not having to recruit, hire, or train a new employee.

The Commission also considered not defining the term ''in the near future,'' but determined that doing so would harm employers by increasing uncertainty and harm employees by failing to ensure equal treatment.

Predictable Assessments

In the section defining ''undue hardship,'' the rule lists four job modifications often sought by pregnant employees that, in virtually all cases, will be found to be reasonable accommodations that do not impose undue hardship: (1) carrying or keeping water near and drinking, as needed; (2) allowing additional restroom breaks, as needed; (3) allowing sitting for those whose work requires standing and standing for those whose work requires sitting, as needed; and (4) allowing breaks to eat and drink, as needed.

As explained in the NPRM, these accommodations are repeatedly discussed in the PWFA's legislative history as common sense, low-cost accommodations that most pregnant employees will need.[473] To increase

[471] 136 Stat. 6089.

[472] H.R. Rep. No. 117–27, pt. 1, at 28 (citing *Robert,* 691 F.3d at 1218). Although it does not define ''in the near future,'' *Robert* cites to *Epps,* 353 F.3d at 593, which found that under the ADA, a request for leave that would last 6 months was too long to be ''in the near future'' to qualify as a possible reasonable accommodation.

[473] See H.R. Rep.117–27, pt. 1, at 11, 22, 29, 113; *Fighting for Fairness, supra* note 394, at 4 (statement of Rep. Suzanne Bonamici); *Long Over Due, supra* note 395, at 7 (statement of Rep. Jerrold Nadler), 25 (statement of Iris Wilbur, Vice President of Government Affairs & Public Policy, Greater Louisville, Inc., The Metro Chamber of Commerce), 83 (statement of Rep. Barbara Lee). *See also* 168 Cong. Rec. H10,527 (daily ed. Dec. 23, 2022) (statement of Rep. Jerrold Nadler); 168 Cong. Rec. S10,081 (daily ed. Dec. 22, 2022) (statement of Sen. Robert P. Casey, Jr.); 168 Cong. Rec. S7,079 (daily ed. Dec. 8, 2022) (statement of Sen. Robert P. Casey, Jr.); 168 Cong. Rec. H2,324 (daily ed. May 14, 2021) (statement of Rep. Suzanne Bonamici).

efficiency and to decrease the time that it takes for employees to receive these accommodations, the Commission has determined that these modifications will in virtually all cases be determined to be reasonable accommodations that do not impose an undue hardship.

As an alternative to providing that these simple, common-sense modifications will virtually always be determined to be reasonable accommodations that do not impose undue hardship, the Commission considered taking the position that such modifications would always be reasonable accommodations and never impose undue hardship. The Commission decided against this approach because some employers may encounter circumstances that would lead to a determination that these modifications are not reasonable accommodations and/or would impose an undue hardship.

The Commission also considered the option of not including information regarding ''predictable assessments'' in the rule. The Commission determined that providing this information will be helpful to the public because doing so explains to covered entities and employees how the Commission intends to enforce the PWFA, potentially increases voluntary compliance, and increases certainty for covered entities, which will decrease costs.

The Commission does not anticipate that the rule's ''predictable assessments'' section would increase costs for covered entities. The examples given are low- to no-cost accommodations, and under the rule, the employer may still claim that these modifications would impose an undue hardship.

Uncertainty in Benefits, Costs, and Net Benefits

The Commission has based its estimates of the costs and benefits of the rule on the best data available to it at the current time. Nevertheless, the Commission recognizes these estimates are somewhat uncertain in several respects.

The data used to estimate the cost of providing accommodations as required by the PWFA come entirely from research on the cost of accommodations for individuals with disabilities; the Commission is not aware of any data concerning the cost of accommodations that relate specifically to pregnancy, childbirth, or related medical conditions. The reliance on ADA data has likely resulted in an inflated cost estimate. As discussed above, the Commission believes that the percentage of accommodations that do not cost anything to implement is likely to be higher for accommodations related specifically to pregnancy, childbirth, or related medical conditions than for accommodations needed because of a disability. Additionally, in some cases, an individual who is entitled to an accommodation under the PWFA may be entitled to it under another law or policy. For example, although leave often may be needed for recovery from childbirth, Bureau of Labor Statistics data show that 88 percent of employees already have access to some unpaid family leave independent of the PWFA, either through the FMLA or otherwise.[474] Therefore, with respect to these individuals, any costs attributable to or benefits accruing from the PWFA for leave related to childbirth would be limited to the short period of time during which such leave is required due to childbirth but unavailable from those other sources.

Conclusion

As detailed above, the estimated annual cost of providing accommodations required by the rule and underlying statute—but not independently required by a State or local law substantially similar to the PWFA—is estimated to be up to $28.02 million for private employers, up to $3.66 million for State and local governments, and up to $1.14 million for the Federal Government. In addition, employers are expected to face one-time costs associated with complying with the rule and underlying statute. These are estimated to be $451.22 million for private employers ($119.19 million for private employers in States with existing PWFA-type laws + $332.03 million for private employers in States without existing PWFA-type laws), $619,000 for State and local governments ($186,000 for public employers in States with existing PWFA-type laws + $433,000 for public employers in States without existing PWFA-type laws), and $49,000 for the Federal Government.

These figures are almost certainly overestimates of the costs imposed by the rule, in part because some of the accommodations required by the rule and underlying statute are already required under the ADA and Title VII and some employers voluntarily provide accommodations. Due to a lack of data, however, the Commission was unable to account for this overlap in the above analysis.

The Commission has nevertheless determined that the benefits of the rule and underlying statute justify its costs.[475] The annual costs associated with the main requirement of the rule—to give reasonable accommodations to individuals who need them because of pregnancy, childbirth, or related medical conditions—are not significant under section 3(f)(1) of E.O. 12866. And although the aggregate one-time compliance costs are in excess of $200 million, and therefore significant, the estimated cost on a per-establishment basis is low—between $57.02 and $255.40, depending on whether or not the State in which the entity is located has a law substantially similar to the PWFA and on the type of employer.

The benefits of the rule and underlying statute to employees affected by pregnancy, childbirth, or related medical conditions, however, are significant, including improved health, improved economic security, and increased equity, human dignity, and fairness. The number of individuals who may experience such benefits is relatively large—the number of employees who will be newly entitled to reasonable accommodations for pregnancy and may need them is estimated to be between approximately 488,000 and 1.082 million per year. This number does not include the children, family members, and members of society at large who also will potentially enjoy some of the benefits listed above.

The Commission further concludes that the rule is tailored to impose the least burden on society consistent with achieving the regulatory objectives, and that the agency has selected the approach that maximizes net benefits. The range of alternatives available to the Commission was extremely limited. The alternatives that were consistent with the PWFA's statutory language would not, in the Commission's opinion, reduce costs to employers.

Regulatory Flexibility Act and Executive Order 13272 (Proper Consideration of Small Entities in Agency Rulemaking)

The Regulatory Flexibility Act (RFA), 5 U.S.C. 601–612, requires the Commission to evaluate the economic impact of this rule on small entities. The RFA defines small entities to include small businesses, small organizations, including not-for-profit organizations, and small governmental jurisdictions. The Commission must determine whether the rule would impose a significant economic impact on a

[474] U.S. Dep't of Labor, Bureau of Lab. Stat., *Access to Paid and Unpaid Family Leave in 2018* (Feb. 27, 2019), *https://www.bls.gov/opub/ted/2019/access-to-paid-and-unpaid-family-leave-in-2018.htm.*

[475] 76 FR 3821 (Jan. 21, 2011).

substantial number of such small entities.

When an agency issues a rulemaking proposal, the RFA requires the agency to ''prepare and make available for public comment an initial regulatory flexibility analysis'' which will ''describe the impact of the rule on small entities.'' [476] Section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the rulemaking is not expected to have a significant economic impact on a substantial number of small entities. For the reasons outlined below, the Chair of the Commission hereby certifies that this rule will not have a significant economic impact on a substantial number of small entities.

Small businesses range in size, based on the industry, between 1 to 1,500 employees; [477] the PWFA and the rule apply to all employers in the United States with 15 or more employees. Thus, for purposes of the RFA, the Commission has determined that the regulation will have an economic impact on a substantial number of small entities.[478]

However, the Commission has determined that the economic impact on entities affected by the PWFA and the rule will not be ''significant.''

As detailed in the FRIA above, the impact on small entities in States and localities that have laws substantially similar to the PWFA will be limited to a one-time administrative cost of approximately $85.13 in the first year for small private employers (0.75 hours × $113.51 hourly wage), and $57.02 for small State or local government employers (0.75 hours × $76.03 hourly wage). Since these entities are already required to provide accommodations consistent with the PWFA, they will face no additional costs for accommodations.

Small entities that are not already subject to State or local laws substantially similar to the PWFA will face a one-time administrative cost of approximately $255.40 for private employers (2.25 hours × $113.51 hourly wage) and $171.07 for State or local government employers (2.25 hours × $76.03 hourly wage), plus annual costs associated with providing reasonable accommodations consistent with the rule and underlying statute. To calculate the cost of providing such accommodations, the Commission has constructed cost estimates for a range of small business sizes.

Table 12: Annual Costs for Reasonable Accommodations for Small Businesses Based on Size

Number of Employees	33% Women Aged 16-50	7.1% Pregnant In a Given Year	Needing Accommodations: 32% (Lower Bound Estimate) – 71% (Upper Bound Estimate)	50.6% Non-Zero-Cost Accommodations: Lower Bound Estimate – Higher Bound Estimate (Rounded Up)	Total Expected Cost: Lower Bound Estimate – Higher Bound Estimate
15	4.95	0.351	0.112 – 0.249	1	$60
50	16.5	1.172	0.375 – 0.832	1	$60
100	33	2.34	0.749 – 1.66	1	$60
150	49.5	3.515	1.124 – 2.496	1 – 2	$60 – $120
200	66	4.686	1.5 – 3.327	1 – 2	$60 – $120
250	82.5	5.858	1.875 – 4.159	1 – 3	$60 – $180
500	165	11.715	3.749 – 8.318	2 – 5	$120 – $300
750	247.5	17.573	5.623 – 12.477	3 – 7	$180 – $420
1000	330	23.43	7.498 – 16.635	4 – 9	$240 – $540
1250	412.5	29.288	9.372 – 20.794	5 – 11	$300 – $660
1500	495	35.145	11.246 – 24.953	6 – 13	$360 – $780

Using the amounts for a small entity with 500 employees as an example, the calculation was conducted as follows:

- Based on data outlined in the FRIA above, the Commission estimates that approximately 33 percent, or 165, of these employees are women of reproductive age (aged 16–50 years),[479] and that approximately 7.1 percent of these, or 11.715 employees, will give birth to at least one child during a given year.
- The Commission again adopts 71 percent as its upper bound estimate and 32 percent as its lower bound estimate of the percentage of pregnant employees who will need a reasonable accommodation related to pregnancy.
- Thus, the Commission estimates that between 3.749 (32 percent of 11.715) and 8.318 (71 percent of 11.715) employees of a small entity with 500 employees will require annually a reasonable accommodation under the PWFA.
- The Commission further assumes, based on data regarding the average cost of reasonable accommodations for individuals with disabilities presented in the FRIA above, that 50.6 percent of the required accommodations will have a non-zero cost.
- This yields lower and upper bound estimates of the number of non-zero-cost accommodations of 1.9 (50.6 percent of 3.749) and 4.21 (50.6 percent of 8.318), respectively. Rounding up these numbers, the Commission estimates that

[477] U.S. Small Bus. Admin., *Table of Size Standards* (Mar. 17, 2023), *https://www.sba.gov/document/support-table-size-standards.*

[478] For example, there are over 1 million businesses with between 20 and 500 employees. *See* U.S. Dep't of Com., Census Bureau, *Small Business Week: April 30–May 6, 2023* (Apr. 30, 2023), *https://www.census.gov/newsroom/stories/small-business-week.html.*

[479] The Commission acknowledges that there may be industries in which the representation rate for individuals capable of giving birth is higher than 33 percent. The Commission has determined, however, that these differences are not large enough to affect the decision to certify that the final rule will not have a significant economic impact on a substantial number of small entities. For a discussion in the response to comments received, see *supra, Summary of the Commission's Certification That the Rule Will Not Have a Significant Economic Impact on a Substantial Number of Small Entities* in the preamble.

a small entity with 500 employees will be required to provide between 2 and 5 additional non-zero-cost accommodations per year as a result of the rule and underlying statute. Multiplying by an average cost of $60 per year for each accommodation, the estimated total cost for accommodations required under the PWFA per small entity with 500 employees is between $120 and $300.

Thus, the annual cost of providing reasonable accommodations for entities not already subject to State or local laws substantially similar to the PWFA is estimated to be between $60 (lower bound estimate, for entities with 15 employees) and $780 (upper bound estimate, for entities with 1,500 employees).

The costs detailed above are not likely to constitute a ''significant'' economic impact for many small entities, if any. Further, the Commission notes that all businesses in the United States with 15 or more employees already must comply with Title VII and the ADA, both of which could, in certain circumstances, require accommodations for employees affected by pregnancy, childbirth, or related medical conditions. Further, Title VII, the ADA, and State laws requiring accommodations for pregnancy apply to all industries; given that, the Commission does not believe that the PWFA will have a greater effect in any industry.

Accordingly, the Chair of the Commission hereby certifies that this rule will not have a significant economic impact on a substantial number of small entities.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.* (PRA), requires the EEOC to consider the impact of information collection burdens imposed on the public. The PRA typically requires an agency to provide notice and seek public comments on any ''collection of information'' contained in a rule.[480]

The Commission has determined that there is no new requirement for information collection associated with this rule.

Consequently, this rule does not require review by the Office of Management and Budget under the authority of the PRA.

Executive Order 13132 (Federalism)

The Commission has reviewed this rule in accordance with Executive Order 13132 regarding federalism and has determined that it does not have ''federalism implications.'' The statute at 42 U.S.C. 2000gg(2) provides that the PWFA applies to employers as that term is defined in Title VII. States and local governments are subject to Title VII, including its prohibition on sex discrimination, which includes discrimination based on pregnancy, childbirth, or related medical conditions. The statute at 42 U.S.C. 2000gg–4 provides that a State will not be immune under the 11th Amendment to actions brought under the PWFA in a court of competent jurisdiction and that in any action against a State for a violation of the PWFA, remedies, including remedies both at law and in equity, are available for such violation to the same extent that they are available against any other public or private entity. The rule does not limit or expand these statutory definitions. Additionally, the regulation will not have substantial direct effects ''on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.''

Unfunded Mandates Reform Act of 1995

Section 202(a) of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that the Commission determine whether a regulation proposes a Federal mandate that may result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more in a single year (adjusted annually for inflation). However, 2 U.S.C. 1503 excludes from UMRA's ambit any provision in a final regulation that, among other things, enforces constitutional rights of individuals or establishes or enforces any statutory rights that prohibit discrimination on the basis of race, color, religion, sex, national origin, age, handicap, or disability; thus, UMRA does not apply to the PWFA.[481]

Plain Language

The Commission has attempted to draft this final rule in plain language.

Assessment of Federal Regulations and Policies on Families

The undersigned hereby certifies that the rule will not adversely affect the well-being of families, as discussed under section 654 of the Treasury and General Government Appropriations Act of 1999. To the contrary, by providing reasonable accommodation to employees with known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, absent undue hardship, the rule will have a positive effect on the economic well-being and security of families.

Executive Order 13175 (Indian Tribal Governments)

This rule does not have tribal implications under Executive Order 13175 that require a tribal summary impact statement. The rule will not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. The definition of ''covered entity'' in the PWFA follows that of Title VII; Title VII exempts ''a corporation wholly owned by an Indian tribe.''[482]

Executive Order 12988 (Civil Justice Reform)

This rule was drafted and reviewed in accordance with Executive Order 12988 and will not unduly burden the Federal court system. The rule was: (1) reviewed to eliminate drafting errors and ambiguities; (2) written to minimize litigation; and (3) written to provide a clear legal standard for affected conduct and to promote burden reduction.

List of Subjects in 29 CFR Part 1636

Administrative practice and procedure, Equal employment opportunity, Reasonable accommodation, Pregnancy.

For the Commission.

Charlotte A. Burrows,

Chair.

■ For the reasons set forth in the preamble, the EEOC amends 29 CFR chapter XIV by adding part 1636 to read as follows:

PART 1636—PREGNANT WORKERS FAIRNESS ACT

Sec.

[480] *See* 44 U.S.C. 3506(c)(2)(B); 5 CFR 1320.8.

[481] H.R. Report No. 117–27, pt. 1, at 41 (containing a report by the Congressional Budget Office stating that the PWFA was not reviewed ''for intergovernmental or private-sector mandates'' because it falls within the exception to the Unfunded Mandates Reform Act as it ''would extend protections against discrimination in the workplace based on sex to employees requesting reasonable accommodation for pregnancy, childbirth, or related medical conditions'').

[482] 42 U.S.C. 2000e(b).

Authority: 42 U.S.C. 2000gg *et seq.*

§ 1636.1 Purpose.

(a) The purpose of this part is to implement the Pregnant Workers Fairness Act, 42 U.S.C. 2000gg *et seq.* (PWFA).

(b) The PWFA:

(1) Requires a covered entity to make reasonable accommodation to the known limitations of a qualified employee related to pregnancy, childbirth, or related medical conditions, absent undue hardship;

(2) Prohibits a covered entity from requiring a qualified employee to accept an accommodation, other than a reasonable accommodation arrived at through the interactive process;

(3) Prohibits the denial of employment opportunities based on the need of the covered entity to make reasonable accommodation to the known limitations related to the pregnancy, childbirth, or related medical conditions of a qualified employee;

(4) Prohibits a covered entity from requiring a qualified employee to take leave if another reasonable accommodation can be provided to the known limitations related to the pregnancy, childbirth, or related medical conditions of the employee;

(5) Prohibits a covered entity from taking adverse actions in terms, conditions, or privileges of employment against a qualified employee on account of the employee requesting or using a reasonable accommodation for known limitations related to pregnancy, childbirth, or related medical conditions;

(6) Prohibits discrimination against an employee for opposing unlawful discrimination under the PWFA or participating in a proceeding under the PWFA;

(7) Prohibits coercion of individuals in the exercise of their rights under the PWFA; and

(8) Provides remedies for individuals whose rights under the PWFA are violated.

§ 1636.2 Definitions—general.

(a) *Commission* means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964, 42 U.S.C. 2000e–4.

(b) *Covered entity* means *respondent* as defined in section 701(n) of the Civil Rights Act of 1964, 42 U.S.C. 2000e(n), and includes:

(1) *Employer,* which is a person engaged in an industry affecting commerce who has 15 or more employees, as defined in section 701(b) of the Civil Rights Act of 1964, 42 U.S.C. 2000e(b);

(2) *Employing office,* as defined in section 101 of the Congressional Accountability Act of 1995, 2 U.S.C. 1301, and 3 U.S.C. 411(c);

(3) An entity employing a State employee (or the employee of a political subdivision of a State) described in section 304(a) of the Government Employee Rights Act of 1991, 42 U.S.C. 2000e–16c(a); and

(4) An entity to which section 717(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e–16(a), applies.

(c) *Employee* means:

(1) An employee (including an applicant), as defined in section 701(f) of the Civil Rights Act of 1964, 42 U.S.C. 2000e(f);

(2) [Reserved]

(3) A covered employee (including an applicant), as defined in 3 U.S.C. 411(c);

(4) A State employee (including an applicant) (or the employee or applicant of a political subdivision of a State) described in section 304(a) of the Government Employee Rights Act of 1991, 42 U.S.C. 2000e–16c(a); and

(5) An employee (including an applicant) to which section 717(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e–16(a), applies.

(d) *Person* means person as defined by section 701(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e(a).

§ 1636.3 Definitions—specific to the PWFA.

(a) *Known limitation. Known limitation* means a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions that the employee or the employee's representative has communicated to the covered entity, whether or not such condition meets the definition of disability specified in section 3 of the Americans with Disabilities Act of 1990, 42 U.S.C. 12102.

(1) *Known,* in terms of limitation, means the employee or the employee's representative has communicated the limitation to the employer.

(2) *Limitation* means a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, of the specific employee in question. ''Physical or mental condition'' is an impediment or problem that may be modest, minor, and/or episodic. The physical or mental condition may be that an employee affected by pregnancy, childbirth, or related medical conditions has a need or a problem related to maintaining their health or the health of the pregnancy. The definition also includes when an employee is seeking health care related to pregnancy, childbirth, or a related medical condition itself. The physical or mental condition can be a limitation whether or not such condition meets the definition of disability specified in section 3 of the Americans with Disabilities Act of 1990, 42 U.S.C. 12102.

(b) *Pregnancy, childbirth, or related medical conditions.* ''Pregnancy'' and ''childbirth'' refer to the pregnancy or childbirth of the specific employee in question and include, but are not limited to, current pregnancy; past pregnancy; potential or intended pregnancy (which can include infertility, fertility treatment, and the use of contraception); labor; and childbirth (including vaginal and cesarean delivery). ''Related medical conditions'' are medical conditions relating to the pregnancy or childbirth of the specific employee in question. The following are examples of conditions that are, or may be, ''related medical conditions'': termination of pregnancy, including via miscarriage, stillbirth, or abortion; ectopic pregnancy; preterm labor; pelvic prolapse; nerve injuries; cesarean or perineal wound infection; maternal cardiometabolic disease; gestational diabetes; preeclampsia; HELLP (hemolysis, elevated liver enzymes and low platelets) syndrome; hyperemesis gravidarum; anemia; endometriosis; sciatica; lumbar lordosis; carpal tunnel syndrome; chronic migraines; dehydration; hemorrhoids; nausea or vomiting; edema of the legs, ankles, feet, or fingers; high blood pressure; infection; antenatal (during pregnancy) anxiety, depression, or psychosis; postpartum depression, anxiety, or psychosis; frequent urination; incontinence; loss of balance; vision changes; varicose veins; changes in hormone levels; vaginal bleeding; menstruation; and lactation and conditions related to lactation, such as low milk supply, engorgement, plugged ducts, mastitis, or fungal infections. This list is non-exhaustive.

(c) *Employee's representative. Employee's representative* means a family member, friend, union representative, health care provider, or other representative of the employee.

(d) *Communicated to the employer. Communicated to the employer,* with

respect to a known limitation, means an employee or the employee's representative has made the employer aware of the limitation by communicating with a supervisor, a manager, someone who has supervisory authority for the employee or who regularly directs the employee's tasks (or the equivalent for an applicant), human resources personnel, or another appropriate official, or by following the steps in the covered entity's policy to request an accommodation.

(1) The communication may be made orally, in writing, or by another effective means.

(2) The communication need not be in writing, be in a specific format, use specific words, or be on a specific form in order for it to be considered ''communicated to the employer.''

(e) *Consideration of mitigating measures.* (1) The determination of whether an employee has a limitation shall be made without regard to the ameliorative effects of mitigating measures.

(2) The non-ameliorative effects of mitigating measures, such as negative side effects of medication or burdens associated with following a particular treatment regimen, may be considered when determining whether an employee has a limitation.

(f) *Qualified employee. Qualified employee* with respect to an employee with a known limitation under the PWFA means:

(1) An employee who, with or without reasonable accommodation, can perform the essential functions of the employment position. With respect to leave as an accommodation, the relevant inquiry is whether the employee is reasonably expected to be able to perform the essential functions, with or without a reasonable accommodation, at the end of the leave, if time off is granted, or if the employee is qualified as set out in paragraph (f)(2) of this section after returning from leave.

(2) Additionally, an employee shall be considered qualified if they cannot perform one or more essential functions if:

(i) Any inability to perform an essential function(s) is for a temporary period, where ''temporary'' means lasting for a limited time, not permanent, and may extend beyond ''in the near future'';

(ii) The essential function(s) could be performed in the near future. This determination is made on a case-by-case basis. If the employee is pregnant, it is presumed that the employee could perform the essential function(s) in the near future because they could perform the essential function(s) within generally 40 weeks of its suspension; and

(iii) The inability to perform the essential function(s) can be reasonably accommodated. This may be accomplished by temporary suspension of the essential function(s) and the employee performing the remaining functions of their position or, depending on the position, other arrangements, including, but not limited to: the employee performing the remaining functions of their position and other functions assigned by the covered entity; the employee performing the functions of a different job to which the covered entity temporarily transfers or assigns the employee; or the employee being assigned to light duty or modified duty or participating in the covered entity's light or modified duty program.

(g) *Essential functions. Essential functions* mean the fundamental job duties of the employment position the employee with a known limitation under the PWFA holds or desires. The term ''essential functions'' does not include the marginal functions of the position.

(1) A job function may be considered essential for any of several reasons, including but not limited to the following:

(i) The function may be essential because the reason the position exists is to perform that function;

(ii) The function may be essential because of the limited number of employees available among whom the performance of that job function can be distributed; and/or

(iii) The function may be highly specialized so that the incumbent in the position is hired for their expertise or ability to perform the particular function.

(2) Evidence of whether a particular function is essential includes, but is not limited to:

(i) The employer's judgment as to which functions are essential;

(ii) Written job descriptions prepared before advertising or interviewing applicants for the job;

(iii) The amount of time that would be spent on the job performing the function during the time the requested accommodation will be in effect;

(iv) The consequences of not requiring the incumbent to perform the function;

(v) The terms of a collective bargaining agreement;

(vi) The work experience of past incumbents in the job; and/or

(vii) The current work experience of incumbents in similar jobs.

(h) *Reasonable accommodation—generally.* (1) With respect to an employee or applicant with a known limitation under the PWFA, reasonable accommodation includes:

(i) Modifications or adjustments to a job application process that enable a qualified applicant with a known limitation under the PWFA to be considered for the position such qualified applicant desires;

(ii) Modifications or adjustments to the work environment, or to the manner or circumstances under which the position held or desired is customarily performed, that enable a qualified employee with a known limitation under the PWFA to perform the essential functions of that position;

(iii) Modifications or adjustments that enable a covered entity's employee with a known limitation under the PWFA to enjoy equal benefits and privileges of employment as are enjoyed by its other similarly situated employees without known limitations; or

(iv) Temporary suspension of essential function(s) and/or modifications or adjustments that permit the temporary suspension of essential function(s).

(2) To request a reasonable accommodation, the employee or the employee's representative need only communicate to the covered entity that the employee needs an adjustment or change at work due to their limitation (a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions).

(i) The communication may be made to any of the individuals in paragraph (d) of this section. The provisions of paragraphs (d)(1) and (2) of this section, which define what it means to communicate a limitation to a covered entity, apply to communications under this paragraph (h)(2).

(ii) An employee's request does not have to identify a medical condition, whether from paragraph (b) of this section or otherwise, or use medical terms.

(3) To determine the appropriate reasonable accommodation, it may be necessary for the covered entity to initiate an informal, interactive process as explained in paragraph (k) of this section.

(i) *Reasonable accommodation—examples.* Reasonable accommodation may include, but is not limited to:

(1) Making existing facilities used by employees readily accessible to and usable by employees with known limitations under the PWFA;

(2) Job restructuring; part-time or modified work schedules; reassignment to a vacant position; breaks for use of the restroom, drinking, eating, and/or resting; acquisition or modification of

equipment, uniforms, or devices, including devices that assist with lifting or carrying for jobs that involve lifting or carrying; modifying the work environment; providing seating for jobs that require standing, or allowing standing for jobs that require sitting; appropriate adjustment or modifications of examinations or policies; permitting the use of paid leave (whether accrued, as part of a short-term disability program, or any other employer benefit) or providing unpaid leave for reasons including, but not limited to, recovery from childbirth, miscarriage, stillbirth, or medical conditions related to pregnancy or childbirth, or to attend health care appointments or receive health care treatment related to pregnancy, childbirth, or related medical conditions; placement in the covered entity's light or modified duty program or assignment to light duty or modified work; telework, remote work, or change of work site; adjustments to allow an employee to work without increased pain or increased risk to the employee's health or the health of the pregnancy; temporarily suspending one or more essential functions of the position; providing a reserved parking space if the employee is otherwise entitled to use employer-provided parking; and other similar accommodations for employees with known limitations under the PWFA.

(3) The reasonable accommodation of leave includes, but is not limited to, the examples in paragraphs (i)(3)(i) through (iii) of this section.

(i) The ability to use paid leave (whether accrued, short-term disability, or another employer benefit) or unpaid leave, including, but not limited to, leave during pregnancy; to recover from childbirth, miscarriage, stillbirth, or other related medical conditions; and to attend health care appointments or receive health care treatments related to pregnancy, childbirth, or related medical conditions;

(ii) The ability to use paid leave (whether accrued, short-term disability, or another employer benefit) or unpaid leave for a known limitation under the PWFA; and

(iii) The ability to choose whether to use paid leave (whether accrued, short-term disability or another employer benefit) or unpaid leave to the extent that the covered entity allows employees using leave for reasons not related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions to choose between the use of paid leave and unpaid leave.

(4) Reasonable accommodation related to lactation includes, but is not limited to:

(i) Breaks, a space for lactation, and other related modifications as required under the Providing Urgent Maternal Protections for Nursing Mothers Act (PUMP Act) (Pub. L. 117–328, Div. KK, 136 Stat. 4459, 6093 (2022)), if not otherwise provided under the PUMP Act;

(ii) Accommodations related to pumping, such as, but not limited to, ensuring that the area for lactation is in reasonable proximity to the employee's usual work area; that it is a place other than a bathroom; that it is shielded from view and free from intrusion; that it is regularly cleaned; that it has electricity, appropriate seating, and a surface sufficient to place a breast pump; and that it is in reasonable proximity to a sink, running water, and a refrigerator for storing milk;

(iii) Accommodations related to nursing during work hours (where the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity); and

(iv) Other reasonable accommodations, including those listed in paragraphs (i)(1) through (3) of this section.

(5) The temporary suspension of one or more essential functions of the position in question, as defined in paragraph (g) of this section, is a reasonable accommodation if an employee with a known limitation under the PWFA is unable to perform one or more essential functions with or without a reasonable accommodation and the conditions set forth in paragraph (f)(2) of this section are met.

(j) *Undue hardship*—(1) *In general.* Undue hardship means, with respect to the provision of an accommodation, significant difficulty or expense incurred by a covered entity, when considered in light of the factors set forth in paragraph (j)(2) of this section.

(2) *Factors to be considered.* In determining whether an accommodation would impose an undue hardship on a covered entity, factors to be considered, with no one factor to be dispositive, include:

(i) The nature and net cost of the accommodation needed under the PWFA;

(ii) The overall financial resources of the facility or facilities involved in the provision of the reasonable accommodation, the number of persons employed at such facility, and the effect on expenses and resources;

(iii) The overall financial resources of the covered entity, the overall size of the business of the covered entity with respect to the number of its employees, and the number, type, and location of its facilities;

(iv) The type of operation or operations of the covered entity, including the composition, structure, and functions of the workforce of such entity, and the geographic separateness and administrative or fiscal relationship of the facility or facilities in question to the covered entity; and

(v) The impact of the accommodation upon the operation of the facility, including the impact on the ability of other employees to perform their duties and the impact on the facility's ability to conduct business.

(3) *Temporary suspension of an essential function(s).* If an employee with a known limitation under the PWFA meets the definition of ''qualified employee'' under paragraph (f)(2) of this section and needs one or more essential functions of the relevant position to be temporarily suspended, the covered entity must provide the accommodation unless doing so would impose an undue hardship on the covered entity when considered in light of the factors provided in paragraphs (j)(2)(i) through (v) of this section as well as the following additional factors where they are relevant and with no one factor to be dispositive:

(i) The length of time that the employee will be unable to perform the essential function(s);

(ii) Whether, through the factors listed in paragraph (f)(2)(iii) of this section or otherwise, there is work for the employee to accomplish;

(iii) The nature of the essential function(s), including its frequency;

(iv) Whether the covered entity has provided other employees in similar positions who are unable to perform the essential function(s) of their position with temporary suspensions of the essential function(s);

(v) If necessary, whether there are other employees, temporary employees, or third parties who can perform or be hired to perform the essential function(s); and

(vi) Whether the essential function(s) can be postponed or remain unperformed for any length of time and, if so, for how long.

(4) *Predictable assessments.* The individualized assessment of whether a modification listed in paragraphs (j)(4)(i) through (iv) of this section is a reasonable accommodation that would cause undue hardship will, in virtually all cases, result in a determination that the four modifications are reasonable accommodations that will not impose an undue hardship under the PWFA when they are requested as workplace accommodations by an employee who is

pregnant. Therefore, with respect to these modifications, the individualized assessment should be particularly simple and straightforward:

(i) Allowing an employee to carry or keep water near and drink, as needed;

(ii) Allowing an employee to take additional restroom breaks, as needed;

(iii) Allowing an employee whose work requires standing to sit and whose work requires sitting to stand, as needed; and

(iv) Allowing an employee to take breaks to eat and drink, as needed.

(k) *Interactive process. Interactive process* means an informal, interactive process between the covered entity and the employee seeking an accommodation under the PWFA. This process should identify the known limitation under the PWFA and the adjustment or change at work that is needed due to the limitation, if either of these is not clear from the request, and potential reasonable accommodations. There are no rigid steps that must be followed.

(l) *Limits on supporting documentation.* (1) A covered entity is not required to seek supporting documentation. A covered entity may seek supporting documentation from an employee who requests an accommodation under the PWFA only when it is reasonable under the circumstances for the covered entity to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation. The following situations are examples of when it is not reasonable under the circumstances to seek supporting documentation:

(i) When the physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation), and the adjustment or change at work needed due to the limitation are obvious and the employee provides self-confirmation as defined in paragraph (l)(4) of this section;

(ii) When the employer already has sufficient information to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation;

(iii) When the employee is pregnant and seeks one of the modifications listed in paragraphs (j)(4)(i) through (iv) of this section due to a physical or mental condition related to, affected by, or arising out of pregnancy (a limitation) and the employee provides self-confirmation as defined in paragraph (l)(4) of this section;

(iv) When the reasonable accommodation is related to a time and/or place to pump at work, other modifications related to pumping at work, or a time to nurse during work hours (where the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity), and the employee provides self-confirmation, as defined in paragraph (l)(4) of this section; or

(v) When the requested accommodation is available to employees without known limitations under the PWFA pursuant to a covered entity's policies or practices without submitting supporting documentation.

(2) When it is reasonable under the circumstances, based on paragraph (l)(1) of this section, to seek supporting documentation, the covered entity is limited to seeking reasonable documentation.

(i) *Reasonable documentation* means the minimum that is sufficient to:

(A) Confirm the physical or mental condition (*i.e.,* an impediment or problem that may be modest, minor, and/or episodic; a need or a problem related to maintaining the employee's health or the health of the pregnancy; or an employee seeking health care related to pregnancy, childbirth, or a related medical condition itself) whether or not such condition meets the definition of disability specified in section 3 of the Americans with Disabilities Act of 1990, 42 U.S.C. 12102;

(B) Confirm that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (together with paragraph (l)(2)(i)(A) of this section, ''a limitation''); and

(C) Describe the adjustment or change at work that is needed due to the limitation.

(ii) Covered entities may not require that supporting documentation be submitted on a specific form.

(3) When it is reasonable under the circumstances, based on paragraph (l)(1) of this section, to seek supporting documentation, a covered entity may require that the reasonable documentation comes from a health care provider, which may include, but is not limited to: doctors, midwives, nurses, nurse practitioners, physical therapists, lactation consultants, doulas, occupational therapists, vocational rehabilitation specialists, therapists, industrial hygienists, licensed mental health professionals, psychologists, or psychiatrists. The health care provider may be a telehealth provider. The covered entity may not require that the health care provider submitting documentation be the provider treating the condition at issue. The covered entity may not require that the employee seeking the accommodation be examined by a health care provider selected by the covered entity.

(4) *Self-confirmation* means a simple statement where the employee confirms, for purposes of paragraph (l)(1)(i), (iii), or (iv) of this section, the physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation), and the adjustment or change at work needed due to the limitation. The statement can be made in any manner and can be made as part of the request for reasonable accommodation under paragraph (h)(2) of this section. A covered entity may not require that the statement be in a specific format, use specific words, or be on a specific form.

§ 1636.4 Nondiscrimination with regard to reasonable accommodations related to pregnancy.

(a) It is an unlawful employment practice for a covered entity not to make reasonable accommodations to the known limitations related to the pregnancy, childbirth, or related medical conditions of a qualified employee, unless such covered entity can demonstrate that the accommodation would impose an undue hardship on the operation of the business of such covered entity.

(1) An unnecessary delay in providing a reasonable accommodation to the known limitations related to the pregnancy, childbirth, or related medical conditions of a qualified employee may result in a violation of the PWFA, 42 U.S.C. 2000gg–1(1), even if the covered entity eventually provides the reasonable accommodation. In determining whether there has been an unnecessary delay, factors to be considered, with no one factor to be dispositive, include:

(i) The reason for the delay;

(ii) The length of the delay;

(iii) The length of time that the accommodation is needed. If the accommodation is needed for a short time, unnecessary delay in providing it may effectively mean failure to provide the accommodation;

(iv) How much the employee and the covered entity each contributed to the delay;

(v) Whether the covered entity was engaged in actions related to the reasonable accommodation request during the delay;

(vi) Whether the accommodation was or would be simple or complex to provide. There are certain accommodations, set forth in § 1636.3(j)(4), that are common and easy to provide. Delay in providing these accommodations will virtually always result in a finding of unnecessary delay; and

(vii) Whether the covered entity offered the employee an interim reasonable accommodation during the interactive process or while waiting for the covered entity's response. For the purposes of this factor, the interim reasonable accommodation should be one that allows the employee to continue working. Leave will not be considered an interim reasonable accommodation supporting this factor, unless the employee selects or requests leave as an interim reasonable accommodation.

(2) An employee with known limitations related to pregnancy, childbirth, or related medical conditions is not required to accept an accommodation. However, if such employee rejects a reasonable accommodation that is necessary to enable the employee to perform an essential function(s) of the position held or desired or to apply for the position, or rejects the temporary suspension of an essential function(s) if the employee is qualified under § 1636.3(f)(2), and, as a result of that rejection, cannot perform an essential function(s) of the position, or cannot apply, the employee will not be considered ''qualified.''

(3) A covered entity cannot justify failing to provide a reasonable accommodation or the unnecessary delay in providing a reasonable accommodation to a qualified employee with known limitations related to pregnancy, childbirth, or related medical conditions based on the employee failing to provide supporting documentation, unless:

(i) The covered entity seeks the supporting documentation;

(ii) Seeking the supporting documentation is reasonable under the circumstances as set out in § 1636.3(l)(1);

(iii) The supporting documentation is ''reasonable documentation'' as defined in § 1636.3(l)(2); and

(iv) The covered entity provides the employee sufficient time to obtain and provide the supporting documentation.

(4) When choosing among effective accommodations, the covered entity must choose an accommodation that provides the qualified employee with known limitations related to pregnancy, childbirth, or related medical conditions equal employment opportunity to attain the same level of performance, or to enjoy the same level of benefits and privileges as are available to the average employee without a known limitation who is similarly situated. The similarly situated average employee without a known limitation may include the employee requesting an accommodation at a time prior to communicating the limitation.

(b) It is an unlawful employment practice for a covered entity to require a qualified employee affected by pregnancy, childbirth, or related medical conditions to accept an accommodation other than any reasonable accommodation arrived at through the interactive process referred to in 42 U.S.C. 2000gg(7) and described in § 1636.3(k).

(c) It is an unlawful employment practice for a covered entity to deny employment opportunities to a qualified employee if such denial is based on the need, or potential need, of the covered entity to make reasonable accommodations to the known limitations related to the pregnancy, childbirth, or related medical conditions of the qualified employee.

(d) It is an unlawful employment practice for a covered entity:

(1) To require a qualified employee to take leave, whether paid or unpaid, if another reasonable accommodation can be provided to the known limitations related to the pregnancy, childbirth, or related medical conditions of the qualified employee that does not result in an undue hardship for the covered entity; but

(2) Nothing in paragraph (d)(1) of this section prohibits leave as a reasonable accommodation if that is the reasonable accommodation requested or selected by the employee, or if it is the only reasonable accommodation that does not cause an undue hardship.

(e) It is an unlawful employment practice for a covered entity:

(1) To take adverse action in terms, conditions, or privileges of employment against a qualified employee on account of the employee requesting or using a reasonable accommodation to the known limitations related to the pregnancy, childbirth, or related medical conditions of the employee.

(2) Nothing in paragraph (e)(1) of this section limits the rights available under 42 U.S.C. 2000gg–2(f).

§ 1636.5 Remedies and enforcement.

(a) *Employees covered by Title VII of the Civil Rights Act of 1964*—(1) *In general.* The powers, remedies, and procedures provided in sections 705, 706, 707, 709, 710, and 711 of the Civil Rights Act of 1964, 42 U.S.C. 2000e–4 *et seq.,* to the Commission, the Attorney General, or any person alleging a violation of Title VII of such Act, 42 U.S.C. 2000e *et seq.,* shall be the powers, remedies, and procedures the PWFA provides to the Commission, the Attorney General, or any person, respectively, alleging an unlawful employment practice in violation of the PWFA against an employee described in 42 U.S.C. 2000gg(3)(A), except as provided in paragraphs (a)(2) and (3) of this section.

(2) *Costs and fees.* The powers, remedies, and procedures provided in subsections (b) and (c) of section 722 of the Revised Statutes, 42 U.S.C. 1988, shall be the powers, remedies, and procedures the PWFA provides to the Commission, the Attorney General, or any person alleging such practice.

(3) *Damages.* The powers, remedies, and procedures provided in section 1977A of the Revised Statutes, 42 U.S.C. 1981a, including the limitations contained in subsection (b)(3) of such section 1977A, shall be the powers, remedies, and procedures the PWFA provides to the Commission, the Attorney General, or any person alleging such practice (not an employment practice specifically excluded from coverage under section 1977A(a)(1) of the Revised Statutes, 42 U.S.C. 1981a(a)(1)).

(b) [Reserved]

(c) *Employees covered by Chapter 5 of Title 3, United States Code*—(1) *In general.* The powers, remedies, and procedures provided in chapter 5 of title 3, United States Code, to the President, the Commission, the Merit Systems Protection Board, or any person alleging a violation of section 411(a)(1) of such title shall be the powers, remedies, and procedures this section provides to the President, the Commission, the Board, or any person, respectively, alleging an unlawful employment practice in violation of this section against an employee described in 42 U.S.C. 2000gg(3)(C), except as provided in paragraphs (c)(2) and (3) of this section.

(2) *Costs and fees.* The powers, remedies, and procedures provided in subsections (b) and (c) of section 722 of the Revised Statutes, 42 U.S.C. 1988, shall be the powers, remedies, and procedures this section provides to the President, the Commission, the Board, or any person alleging such practice.

(3) *Damages.* The powers, remedies, and procedures provided in section 1977A of the Revised Statutes, 42 U.S.C. 1981a, including the limitations contained in subsection (b)(3) of such section 1977A, shall be the powers, remedies, and procedures this section provides to the President, the

Commission, the Board, or any person alleging such practice (not an employment practice specifically excluded from coverage under section 1977A(a)(1) of the Revised Statutes, 42 U.S.C. 1981a(a)(1)).

(d) *Employees covered by Government Employee Rights Act of 1991*—(1) *In general.* The powers, remedies, and procedures provided in sections 302 and 304 of the Government Employee Rights Act of 1991, 42 U.S.C. 2000e–16b and 2000e–16c, to the Commission or any person alleging a violation of section 302(a)(1) of such Act, 42 U.S.C. 2000e–16b(a)(1), shall be the powers, remedies, and procedures the PWFA provides to the Commission or any person, respectively, alleging an unlawful employment practice in violation of the PWFA against an employee described in 42 U.S.C. 2000gg(3)(D), except as provided in paragraphs (d)(2) and (3) of this section.

(2) *Costs and fees.* The powers, remedies, and procedures provided in subsections (b) and (c) of section 722 of the Revised Statutes, 42 U.S.C. 1988, shall be the powers, remedies, and procedures the PWFA provides to the Commission or any person alleging such practice.

(3) *Damages.* The powers, remedies, and procedures provided in section 1977A of the Revised Statutes, 42 U.S.C. 1981a, including the limitations contained in subsection (b)(3) of such section 1977A, shall be the powers, remedies, and procedures the PWFA provides to the Commission or any person alleging such practice (not an employment practice specifically excluded from coverage under section 1977A(a)(1) of the Revised Statutes, 42 U.S.C. 1981a(a)(1)).

(e) *Employees covered by Section 717 of the Civil Rights Act of 1964*—(1) *In general.* The powers, remedies, and procedures provided in section 717 of the Civil Rights Act of 1964, 42 U.S.C. 2000e–16, to the Commission, the Attorney General, the Librarian of Congress, or any person alleging a violation of that section shall be the powers, remedies, and procedures the PWFA provides to the Commission, the Attorney General, the Librarian of Congress, or any person, respectively, alleging an unlawful employment practice in violation of the PWFA against an employee described in 42 U.S.C. 2000gg(3)(E), except as provided in paragraphs (e)(2) and (3) of this section.

(2) *Costs and fees.* The powers, remedies, and procedures provided in subsections (b) and (c) of section 722 of the Revised Statutes, 42 U.S.C. 1988, shall be the powers, remedies, and procedures the PWFA provides to the Commission, the Attorney General, the Librarian of Congress, or any person alleging such practice.

(3) *Damages.* The powers, remedies, and procedures provided in section 1977A of the Revised Statutes, 42 U.S.C. 1981a, including the limitations contained in subsection (b)(3) of such section 1977A, shall be the powers, remedies, and procedures the PWFA provides to the Commission, the Attorney General, the Librarian of Congress, or any person alleging such practice (not an employment practice specifically excluded from coverage under section 1977A(a)(1) of the Revised Statutes, 42 U.S.C. 1981a(a)(1)).

(f) *Prohibition against retaliation*—(1) *Prohibition against retaliation.* No person shall discriminate against any employee because such employee has opposed any act or practice made unlawful by the PWFA or because such employee made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under the PWFA.

(i) An employee need not be a qualified employee with a known limitation under the PWFA to bring an action under this paragraph (f)(1).

(ii) A request for reasonable accommodation for a known limitation under the PWFA constitutes protected activity under this paragraph (f)(1).

(iii) An employee does not actually have to be deterred from exercising or enjoying rights under the PWFA in order for the retaliation to be actionable.

(2) *Prohibition against coercion.* It shall be unlawful to coerce, intimidate, threaten, harass, or interfere with any individual in the exercise or enjoyment of, or on account of such individual having exercised or enjoyed, or on account of such individual having aided or encouraged any other individual in the exercise or enjoyment of, any right granted or protected by the PWFA.

(i) An individual need not be a qualified employee with a known limitation under the PWFA to bring an action under this paragraph (f)(2).

(ii) An individual does not actually have to be deterred from exercising or enjoying rights under the PWFA for the coercion, intimidation, threats, harassment, or interference to be actionable.

(3) *Remedy.* The remedies and procedures otherwise provided for under this section shall be available to aggrieved individuals with respect to violations of this section regarding retaliation or coercion.

(g) *Limitation on monetary damages.* Notwithstanding paragraphs (a)(3), (c)(3), (d)(3), and (e)(3) of this section, if an unlawful employment practice involves the provision of a reasonable accommodation pursuant to the PWFA or this part, damages may not be awarded under section 1977A of the Revised Statutes, 42 U.S.C. 1981a, if the covered entity demonstrates good faith efforts, in consultation with the qualified employee with known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions who has informed the covered entity that accommodation is needed, to identify and make a reasonable accommodation that would provide such employee with an equally effective opportunity and would not cause an undue hardship on the operation of the business of the covered entity.

§ 1636.6 Waiver of State immunity.

A State shall not be immune under the 11th Amendment to the Constitution from an action in a Federal or State court of competent jurisdiction for a violation of the PWFA. In any action against a State for a violation of the PWFA, remedies (including remedies both at law and in equity) are available for such a violation to the same extent such remedies are available for such a violation in an action against any public or private entity other than a State.

§ 1636.7 Relationship to other laws.

(a) *In general.* (1) The PWFA and this part do not invalidate or limit the powers, remedies, and procedures under any Federal law, State law, or the law of any political subdivision of any State or jurisdiction that provides greater or equal protection for individuals affected by pregnancy, childbirth, or related medical conditions.

(2) The PWFA and this part do not require an employer-sponsored health plan to pay for or cover any particular item, procedure, or treatment, or affect any right or remedy available under any other Federal, State, or local law with respect to any such payment or coverage requirement.

(b) *Rule of construction.* The PWFA and this part are subject to the applicability to religious employment set forth in section 702(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e–1(a).

(1) Nothing in 42 U.S.C. 2000gg–5(b) or this part should be interpreted to limit a covered entity's rights under the U.S. Constitution.

(2) Nothing in 42 U.S.C. 2000gg–5(b) or this part should be interpreted to limit an employee's rights under other civil rights statutes.

§ 1636.8 Severability.

(a) The Commission intends that, if any provision of the PWFA or the application of that provision to particular persons or circumstances is held invalid or found to be unconstitutional, the remainder of the statute and the application of that provision to other persons or circumstances shall not be affected.

(b) The Commission intends that, if any provision of this part that uses the same language as the statute, or the application of that provision to particular persons or circumstances, is held invalid or found to be unconstitutional, the remainder of this part and the application of that provision to other persons or circumstances shall not be affected.

(c) The Commission intends that, if any provision of this part or the interpretive guidance in appendix A to this part that provides additional guidance to implement the PWFA, including examples of reasonable accommodations, or the application of that provision to particular persons or circumstances, is held invalid or found to be unconstitutional, the remainder of this part or the interpretive guidance and the application of that provision to other persons or circumstances shall not be affected.

Appendix A to Part 1636—Interpretive Guidance on the Pregnant Workers Fairness Act

I. Introduction

1. The Pregnant Workers Fairness Act (PWFA) requires a covered entity to provide reasonable accommodations to a qualified employee's known limitation related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, absent undue hardship on the operation of the business of the covered entity. Although employees affected by pregnancy, childbirth, or related medical conditions have certain rights under existing civil rights laws, including Title VII of the Civil Rights Act of 1964 (Title VII), as amended by the Pregnancy Discrimination Act of 1978 (PDA), 42 U.S.C. 2000e *et seq.,* and the Americans with Disabilities Act of 1990 (ADA), as amended by the ADA Amendments Act of 2008 (ADAAA or Amendments Act), 42 U.S.C. 12111 *et seq.,*[1] Congress determined that the legal protections offered by these two statutes, particularly as interpreted by the courts, were ''insufficient to ensure that pregnant workers receive the accommodations they need.'' [2]

2. The PWFA, at 42 U.S.C. 2000gg–3, directs the U.S. Equal Employment Opportunity Commission (EEOC or Commission) to promulgate regulations to implement the PWFA.

3. This Interpretive Guidance addresses the major provisions of the PWFA and its regulation and explains the major concepts pertaining to nondiscrimination with respect to reasonable accommodations for known limitations (physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions) under the statute. The Interpretive Guidance represents the Commission's interpretation of the issues addressed within it, and the Commission will be guided by the regulation and the Interpretive Guidance when enforcing the PWFA.

II. General Information and Terms Used in the Regulation and Interpretive Guidance

1. The PWFA at 42 U.S.C. 2000gg(3) uses the term ''employee (including an applicant)'' in its definition of ''employee.'' [3] Thus, throughout the statute, the final regulation, and this Interpretive Guidance, the term ''employee'' should be understood to include ''applicant'' where relevant. Because the PWFA relies on Title VII for its definition of ''employee,'' that term also includes ''former employee,'' where relevant.[4] The PWFA defines ''covered entity'' using the definition of ''employer'' from different statutes, including Title VII.[5] Thus ''covered entities'' under the PWFA include public or private employers with 15 or more employees, unions, employment agencies, and the Federal Government.[6] In the regulation and this Interpretive Guidance, the Commission uses the terms ''covered entity'' and ''employer'' interchangeably.

2. This Interpretive Guidance contains many examples to illustrate situations under the PWFA. The examples do not, and are not intended to, cover every limitation or possible accommodation under the PWFA. Depending on the facts in the examples, the same facts could lead to claims also being brought under other statutes that the Commission enforces, such as Title VII and the ADA. Moreover, the situations in specific examples could implicate other Federal laws, including, but not limited to, the Family and Medical Leave Act of 1993, 29 U.S.C. 2601 *et seq.* (FMLA); the Occupational Safety and Health Act, 29 U.S.C. 651 *et seq.* (OSH Act); and the Providing Urgent Maternal Protections for Nursing Mothers Act (PUMP Act) (Pub. L. 117–328, Div. KK, 136 Stat. 4459, 6093 (2022)).[7] Finally, although some examples state that the described actions ''would violate'' the PWFA, additional facts not described in the examples could change that determination.[8]

III. 1636. Definitions—Specific to the PWFA

1636.3(a) Known Limitation

1. Section 1636.3(a) reiterates the definition of ''known limitation'' from 42 U.S.C. 2000gg(4) of the PWFA and then provides definitions for the operative terms.

1636.3(a)(1) Known

2. Paragraph (a)(1) adopts the definition of ''known'' from the PWFA and thus defines it to mean that the employee, or the employee's representative, has communicated the limitation to the covered entity.[9]

1636.3(a)(2) Limitation

3. Paragraph (a)(2) adopts the definition of ''limitation'' from the PWFA and thus defines it to mean a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions.[10] The limitation must be of the specific employee in question. The ''physical or mental condition'' that is the limitation may be a modest, minor, and/or episodic impediment or problem. The definition encompasses when an employee affected by pregnancy, childbirth, or related medical conditions has a need or a problem related to maintaining their health or the health of the pregnancy.[11]

4. The definition of ''limitation'' also includes when an employee is seeking health care related to the pregnancy, childbirth, or a related medical condition itself. Under the ADA, when an individual has an actual or a record of a disability, employers often may be required to provide the reasonable accommodation of leave so that an employee

[1] References to the ADA throughout this part and the Interpretive Guidance in this appendix are intended to apply equally to the Rehabilitation Act of 1973, as all nondiscrimination standards under title I of the ADA also apply to Federal agencies under section 501 of the Rehabilitation Act. *See* 29 U.S.C. 791(f).

[2] H.R. Rep. No. 117–27, pt. 1, at 12 (2021).

[3] 42 U.S.C. 2000gg(3).

[4] *Robinson* v. *Shell Oil Co.,* 519 U.S. 337, 346 (1997).

[5] 42 U.S.C. 2000gg(2)(A), (B)(i), (B)(iii), (B)(iv). The other statutes are the Congressional Accountability Act of 1995 and 3 U.S.C. 411(c).

[6] The statute at 42 U.S.C. 2000gg(2) provides that the term ''covered entity'' has the meaning given the term ''respondent'' under 42 U.S.C. 2000e(n) and includes employers as defined in 42 U.S.C. 2000e(b), 2000e–16c(a), and 2000e–16(a). The statute at 42 U.S.C. 2000gg–5(b) provides as a rule of construction that the chapter is subject to the applicability to religious employment set forth in 42 U.S.C. 2000e–1(a) [section 702(a) of the Civil Rights Act of 1964].

[7] To the extent that an accommodation in an example is required under another law, like the OSH Act, the example should not be read to suggest that such a requirement is not applicable.

[8] In this part and the Interpretive Guidance, the Commission uses the terms ''leave'' and ''time off'' and intends those terms to cover leave however it is identified by the specific employer. Additionally, in this part and the Interpretive Guidance, the Commission uses the term ''light duty.'' The Commission recognizes that ''light duty'' programs, or other programs providing modified duties, can vary depending on the covered entity. *See* EEOC, *Enforcement Guidance: Workers' Compensation and the ADA,* text preceding Question 27 (1996) [hereinafter *Enforcement Guidance: Workers' Compensation*], *https://www.eeoc.gov/laws/guidance/enforcement-guidance-workers-compensation-and-ada.* The Commission intends ''light duty'' to include the types of programs included in Questions 27 and 28 of the *Enforcement Guidance: Workers' Compensation* and any other policy, practice, or system that a covered entity has for accommodating employees, including when one or more essential functions of a position are temporarily excused.

[9] 42 U.S.C. 2000gg(4).

[10] *Id.*

[11] In § 1636.3(a)(2) and the Interpretive Guidance, the Commission uses the phrase ''maintaining their health or the health of the pregnancy.'' This includes avoiding risk to the employee's health or to the health of the pregnancy.

can obtain medical treatment.[12] Similarly, under the PWFA, an employee may require a reasonable accommodation of leave to attend health care appointments or receive treatment for or recover from their pregnancy, childbirth, or related medical conditions.[13] In passing the PWFA, Congress sought, in part, to help pregnant employees maintain their health.[14] Thus, the PWFA covers situations when an employee requests an accommodation in order to maintain their health or the health of their pregnancy and avoid negative consequences, and when an employee seeks health care for their pregnancy, childbirth, or related medical conditions. Practically, allowing for accommodations to maintain health and attend medical appointments may decrease the need for a more extensive accommodation because the employee may be able to avoid more serious complications.

5. The physical or mental condition (the limitation) required to trigger the obligation to provide a reasonable accommodation under the PWFA does not need to meet the definition of a ''disability'' under the ADA.[15] In other words, an employee need not have an impairment that substantially limits a major life activity to be entitled to a reasonable accommodation under the PWFA, nor does an employee need to have an ''impairment'' as defined in the regulation implementing the ADA.[16] The PWFA can cover physical or mental conditions that also are covered under the ADA. In these situations, an individual may be entitled to an accommodation under the ADA as well as the PWFA.

6. The PWFA does not create a right to reasonable accommodation based on an individual's association with someone else who may have a PWFA-covered limitation. Nor is a qualified employee entitled to accommodation because they have a physical or mental condition related to, affected by, or arising out of someone else's pregnancy, childbirth, or related medical conditions. For example, a spouse experiencing anxiety due to a partner's pregnancy is not covered by the PWFA. Time for bonding or time for childcare also is not covered by the PWFA.

7. Whether an employee has a ''physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions'' shall be construed broadly to the maximum extent permitted by the PWFA.

Related to, Affected by, or Arising Out of

8. The PWFA's use of the inclusive terms ''related to, affected by, or arising out of''[17] means that pregnancy, childbirth, or related medical conditions do not need to be the sole, the original, or a substantial cause of the physical or mental condition at issue for the physical or mental condition to be ''related to, affected by, or arising out of'' pregnancy, childbirth, or related medical conditions.

9. Whether a physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions will be apparent in the majority of cases. Pregnancy and childbirth cause systemic changes that not only create new physical and mental conditions but also can exacerbate preexisting conditions and can cause additional pain or risk.[18] Thus, a connection between an employee's physical or mental condition and their pregnancy, childbirth, or related medical conditions will be readily ascertained when an employee is currently pregnant or the employee is experiencing or has just experienced childbirth.

10. For example, if an employee is pregnant and as a result has pain when standing for long periods of time, the employee's physical or mental condition (pain when standing for a protracted period) is related to, affected by, or arising out of the employee's pregnancy. An employee who is pregnant and because of the pregnancy cannot lift more than 20 pounds has a physical condition related to, affected by, or arising out of pregnancy, because lifting is associated with low back pain and musculoskeletal disorders that may be exacerbated by physical changes associated with pregnancy.[19] An employee who is pregnant and seeks time off for prenatal health care appointments is attending medical appointments related to, affected by, or arising out of pregnancy. An employee who requests an accommodation to attend therapy appointments for postpartum depression has a medical condition related to pregnancy or childbirth (postpartum depression) and is obtaining health care related to, affected by, or arising out of a related medical condition. A pregnant employee who is seeking an accommodation to limit exposure to secondhand smoke to protect the health of their pregnancy has a physical or mental condition (trying to maintain the employee's health or the health of their pregnancy, or to address increased sensitivity to secondhand smoke) related to, affected by, or arising out of pregnancy. A lactating employee who seeks an accommodation to take breaks to eat has a related medical condition (lactation) and a physical condition related to, affected by, or arising out of it (increased nutritional needs). A pregnant employee seeking time off in order to have an amniocentesis procedure is attending a medical appointment related to, affected by, or arising out of pregnancy. An employee who requests leave for in vitro fertilization (IVF) treatment for the employee to get pregnant has a limitation, either related to potential or intended pregnancy or a medical condition related to pregnancy (difficulty in becoming pregnant or infertility), and is seeking health care related to, affected by, or arising out of it. An employee whose pregnancy is causing fatigue has a physical condition (fatigue) related to, affected by, or arising out of pregnancy. An employee whose pregnancy is causing back pain has a physical condition (back pain) related to, affected by, or arising out of pregnancy. This is not by any means a complete list of physical or mental

[15] 42 U.S.C. 2000gg(4).

[16] *See* 29 CFR 1630.2(h).

[17] The statute at 42 U.S.C. 2000gg(4) defines the term ''known limitation'' as a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. Most of the prohibited acts in the statute, however, use the phrase ''known limitations related to the pregnancy, childbirth, or related medical conditions.'' *See* 42 U.S.C. 2000gg–1(1), (3)–(5). Thus, the Commission will define ''related to, affected by, or arising out of'' as one phrase and will not attempt to define each of the parts of it separately.

[19] Am. Coll. of Obstetricians & Gynecologists, Comm. Opinion No. 733, *Employment Considerations During Pregnancy and the Postpartum Period* (reaff'd 2023), *https://www.acog.org/clinical/clinical-guidance/committee-opinion/articles/2018/04/employment-considerations-during-pregnancy-and-the-postpartum-period.*

conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, but rather a discussion of examples to illustrate application of the legal rule.

11. The Commission recognizes that some physical or mental conditions (which can be ''limitations'' as defined by the PWFA [20]), including some of those in the examples in paragraph 10 of this section, may occur even if they are not related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (*e.g.,* attending medical appointments, increased nutritional needs, constraints on lifting). The Commission anticipates that confirming whether a physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions usually will be straightforward and can be accomplished through the interactive process. If a physical or mental condition is not covered by the PWFA, it may be that the physical or mental condition constitutes a disability that is covered by the ADA.

12. There may be situations where a physical or mental condition begins as something that is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, and, once the pregnancy, childbirth, or related medical conditions resolve, the physical or mental condition remains, evolves, or worsens. To confirm whether the employee's physical or mental condition is still related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, the employer and the employee can engage in the interactive process.

13. There will be situations where an individual with a physical or mental condition that is no longer related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions has an ''actual'' or ''record of'' disability under the ADA. In those situations, an individual may seek an accommodation under the ADA and the reasonable accommodation process would follow the ADA.[21]

14. Finally, there may be situations where the pregnancy, childbirth, or related medical conditions exacerbate existing conditions that may be disabilities under the ADA. In those situations, an employee can seek an accommodation under the PWFA or the ADA, or both statutes.

1636.3(b) Pregnancy, Childbirth, or Related Medical Conditions

15. The PWFA uses the term ''pregnancy, childbirth, or related medical conditions,'' which appears in Title VII's definition of ''sex.'' [22] Because Congress chose to write the PWFA using the same language as Title VII, § 1636.3(b) gives the term ''pregnancy, childbirth, or related medical conditions'' the same meaning as under Title VII.[23]

16. The non-exhaustive list of examples in § 1636.3(b) for the definition of ''pregnancy'' and ''childbirth'' includes current pregnancy, past pregnancy, potential or intended pregnancy (which can include infertility, fertility treatments, and the use of contraception), and labor and childbirth (including vaginal delivery and cesarean section).[24]

17. ''Related medical conditions'' are medical conditions that relate to pregnancy or childbirth.[25] To be a related medical condition, the medical condition need not be caused solely, originally, or substantially by pregnancy or childbirth.

18. There are some medical conditions where the relation to pregnancy will be readily apparent. They can include, but are not limited to, lactation (including breastfeeding and pumping), miscarriage, stillbirth, having or choosing not to have an abortion, preeclampsia, gestational diabetes, and HELLP (hemolysis, elevated liver enzymes and low platelets) syndrome.[26]

[20] 42 U.S.C. 2000gg(4) (providing that a ''known limitation'' is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions that the employee or employee's representative has communicated to the employer).

Continued

Pregnancy causes systemic changes that can create new medical conditions and risks and can exacerbate preexisting conditions and the risks posed by such conditions.[27] Thus, the fact that a medical condition is related to pregnancy will usually be evident when the medical condition develops, is exacerbated, or poses a new risk during an employee's current pregnancy. Additionally, the relation will be apparent in many cases where the medical condition develops, is exacerbated, or poses a new risk during an employee's childbirth or during the employee's postpartum period.

19. However, simply because a condition is listed as one that may be a related medical condition does not mean it necessarily meets the definition of ''related medical conditions'' for the purposes of the PWFA. To be a related medical condition for the PWFA, the employee's medical condition must relate to pregnancy or childbirth. If an employee has a condition but, in their situation, it does not relate to pregnancy or childbirth, the condition is not covered under the PWFA. For example, if an employee who gave birth 2 weeks ago is vomiting because of food poisoning, that medical condition is not related to pregnancy or childbirth and the employee is not eligible on that basis for a PWFA reasonable accommodation.

20. Related medical conditions may include conditions that existed before pregnancy or childbirth and for which an individual may already receive an ADA reasonable accommodation. Pregnancy or childbirth may exacerbate the condition, such that additional or different accommodations are needed. For example, an employee who received extra breaks to eat or drink due to Type 2 diabetes before pregnancy (an ADA reasonable accommodation) may need additional accommodations during pregnancy to monitor and manage the diabetes more closely to avoid or minimize adverse health consequences to the employee or the pregnancy. As another example, an employee may have had high blood pressure that could be managed with medication prior to pregnancy, but once the employee is pregnant, the high blood pressure may pose a risk to the employee or their pregnancy such that the employee needs bed rest. In these situations, an employee could request a continued or an additional accommodation under the ADA and/or an accommodation under the PWFA.

21. The Commission emphasizes that the list of ''pregnancy, childbirth or related medical conditions'' in § 1636.3(b) is non-exhaustive; to receive an accommodation a qualified employee does not have to specify a condition on this list or use medical terms to describe a condition.

22. When an employer has received a request for an accommodation under the PWFA, the employer and employee can engage in the interactive process, if necessary, in order to confirm whether a medical condition is related to pregnancy or childbirth.

1636.3(c) Employee's Representative

23. The limitation may be communicated to the covered entity by the employee or the employee's representative. The term ''employee's representative'' encompasses any representative of the employee, including a family member, friend, union representative, health care provider, or other representative. In most instances, the Commission expects that the representative will have the employee's permission before communicating the limitation to the covered entity, but there may be some situations, for example if the employee is incapacitated, where that is not the case. Once the covered entity is made aware of the limitation, the representative's participation in any aspect of the reasonable accommodation process is at the discretion of the employee, and the employee may decide not to have the representative participate at any time. In most instances, the Commission expects that the covered entity will engage directly with the employee, even where the employee's representative began the process, but acknowledges that in some situations, for example, when the employee is incapacitated or the representative is the employee's attorney, the covered entity will need to continue to engage with the representative rather than the employee.

1636.3(d) Communicated to the Employer and 1636.3(h)(2) How To Request a Reasonable Accommodation

24. Section 1636.3(d) and (h)(2) sets out how an employee informs a covered entity of their limitation in order to make it ''known'' and how an employee requests a reasonable accommodation. In practice, the Commission expects that these actions—communicating the limitation to the employer and requesting a reasonable accommodation—will take place at the same time.

25. Informing the employer of the limitation and requesting a reasonable accommodation should not be complicated or difficult. The covered entity must permit an employee to do both through various avenues and means, as set forth in § 1636.3(d). Given that many accommodations requested under the PWFA will be straightforward—like additional bathroom breaks or access to water—the Commission emphasizes the importance of employees being able to obtain accommodations by communicating with the employer representative(s) with whom they would normally consult if they had questions or concerns about work matters. Employees should not be made to wait for a reasonable accommodation, especially one that is simple and imposes negligible cost or is temporary, because they spoke to the ''wrong'' supervisor. The individuals to whom an employee can communicate to seek accommodation include persons with supervisory authority for or who regularly direct the employee's work (or the equivalent for the applicant) and human resources personnel. Depending on the situation, employees also may communicate with other appropriate officials such as an agent of the employer (*e.g.,* a search firm, staffing agency, or third-party benefits administrator).

26. Section 1636.3(d)(1) and (2) explains that the communication informing the covered entity of the limitation does not need to be in writing, be in a specific format, use specific words, or be on a specific form in order for it to be considered ''communicated to the employer.''

27. Just as the communication informing the covered entity of the limitation does not need to be in writing or use specific phrases, the same is true for the request for a reasonable accommodation. Employees may inform the employer of the limitation and request an accommodation in a conversation or may use another mode of communication to inform the employer.[28] A covered entity may choose to confirm a request in writing or may ask the employee to fill out a form or otherwise confirm the request in writing. However, the covered entity cannot ignore or close an initial request that satisfies § 1636.3(h)(2) if the employee does not complete such confirmation procedures, because that initial request is sufficient to place the employer on notice.[29] If a form is used, the form should be a simple one that does not deter the employee from pursuing the request and does not delay the provision of an accommodation. Additionally, although employees are not required to communicate limitations or request reasonable accommodations in writing, an employee may choose email or other written means to submit a request for an accommodation, which can promote clarity and create a record of their request. Finally, the request for accommodation does not need to be in the form of a ''request,'' *i.e.,* an employee does not need to ''ask'' but may provide a statement of their need for an accommodation.

28. The requirement that no specific words or phrases are necessary to communicate a limitation or request a reasonable accommodation includes not needing to specifically identify whether a condition is ''pregnancy, childbirth, or related medical conditions'' or whether it is a ''physical or mental condition.'' The statutory definition of ''limitation'' uses the words ''condition''

and noting commentator agreement that ''[b]y broadly defining pregnancy discrimination, Congress clearly intended to extend protection beyond the simple fact of an employee's pregnancy to include 'related medical conditions' such as nausea or potential miscarriage'') (internal citations and quotation marks omitted); *Ducharme* v. *Crescent City Déjà Vu, LLC,* 406 F. Supp. 3d 548, 556 (E.D. La. 2019) (finding that ''abortion is encompassed within the statutory text prohibiting adverse employment actions 'because of or on the basis of pregnancy, childbirth, or related medical conditions' ''); 29 CFR part 1604, appendix, Questions 34–37 (1979) (addressing coverage of abortion under the PDA); H.R. Rep. No. 95–1786, at 4 (1978), *as reprinted in* 1978 U.S.C.C.A.N. 4749, 4766 (''Because the bill applies to all situations in which women are 'affected by pregnancy, childbirth, and related medical conditions,' its basic language covers decisions by women who chose to terminate their pregnancies. Thus, no employer may, for example, fire or refuse to hire a woman simply because she has exercised her right to have an abortion.'').

[27] *See supra* note 18.

[28] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Questions 1–3 (addressing requests for accommodation under the ADA).

[29] *See id.*

and ''related'' twice (''known limitation'' means a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions.).[30] Under § 1636.3(d), ''physical or mental conditions'' are impediments or problems affecting an employee that may be modest or minor.[31] A ''physical or mental condition'' includes when an employee affected by pregnancy, childbirth, or related medical conditions has a need or a problem related to maintaining their health or the health of the pregnancy; or is seeking health care related to pregnancy, childbirth, or a related medical condition itself.[32] ''Related medical conditions'' are conditions related to the pregnancy or childbirth of the specific employee in question.

29. Many, but not all, conditions related to pregnancy and childbirth can be both a ''limitation'' and a ''related medical condition.'' For example, hyperemesis gravidarum experienced during pregnancy is a ''condition'' that could be classified as either a ''limitation'' (nausea and vomiting that arises out of pregnancy), or a ''related medical condition'' (a condition that is related to pregnancy); similarly, incontinence could be a ''limitation'' (for example, when someone who is pregnant becomes less able to comfortably hold urine and thus requires more frequent bathroom breaks), or a ''related medical condition'' (for example, when the medical condition of incontinence arises out of or is exacerbated as a result of pregnancy or childbirth).[33] Either way, such needs can be a reason for a reasonable accommodation under the PWFA.

30. Because the statute uses the same term (''condition'') to define both ''limitation'' and ''related medical conditions'' and because some ''conditions'' can be both a ''limitation'' and a ''related medical condition,'' an employee does not have to identify whether a particular condition is a ''limitation'' or a ''related medical condition'' when requesting a reasonable accommodation. For example, where an employee is experiencing nausea and vomiting in connection with a pregnancy, the employee need not determine whether this is a ''limitation'' or a ''related medical condition'' in order to request an accommodation under the PWFA. Similarly, there is no need for the employer to make such a determination before granting an accommodation under the PWFA.

31. Finally, PWFA limitations also may be ADA disabilities.[34] Therefore, an employee is not required to identify the statute under which they are requesting a reasonable accommodation. Doing so would require that employees seeking accommodations use specific words or phrases, which § 1636.3(d) prohibits.

[31] 29 CFR 1636.3(a)(2).

[32] *Id.*

[33] By contrast, normal weight gain during pregnancy that necessitates a larger uniform would be a ''limitation'' but not a ''related medical condition.''

[34] 42 U.S.C. 2000gg(4); *see also infra* in the Interpretive Guidance in section *1636.7(a)(1)* under *The PWFA and the ADA.*

1636.3(e) Consideration of Mitigating Measures

32. There may be steps that an employee can take to mitigate, or lessen, the effects of a known limitation such as taking medication, getting extra rest, or using a reasonable accommodation. Paragraph (e) of § 1636.3 explains that the ameliorative, or positive, effects of ''mitigating measures,'' as that term is defined in the ADA,[35] shall not be considered when determining whether the employee has a limitation under the PWFA. By contrast, the detrimental or non-ameliorative effects of mitigating measures, such as negative side effects of medication, the burden of following a particular treatment regimen, and complications that arise from surgery, may be considered when determining whether an employee has a limitation under the PWFA.[36] Both the positive and negative effects of mitigating measures may be considered when determining what accommodation an employee may need.

1636.3(f) Qualified Employee

33. An employee must meet the definition of ''qualified'' in the PWFA in one of two ways.[37] Paragraph (f) of § 1636.3 reiterates the statutory language that ''qualified employee'' means an employee who, with or without reasonable accommodation, can perform the essential functions of the position.[38] Additionally, following the statute, § 1636.3(f) also states that an employee shall be considered qualified if: (1) any inability to perform an essential function(s) is for a temporary period; (2) the essential function(s) could be performed in the near future; and (3) the inability to perform the essential function(s) can be reasonably accommodated.[39]

34. For both definitions of qualified, the determination of whether an employee with a known limitation is qualified should be based on the capabilities of the employee at the time of the relevant employment decision.[40] The determination of qualified should not be based on speculation that the employee may become unable in the future to perform certain tasks, may cause increased health insurance premiums or workers' compensation costs, or may require leave.[41]

1636.3(f)(1) Qualified Employee—With or Without Reasonable Accommodation

35. The first way that an employee can be ''qualified'' under 42 U.S.C. 2000gg(6) is if they can perform the essential functions of their job with or without reasonable accommodation, which is the same language as in the ADA and is interpreted accordingly. ''Reasonable'' has the same meaning as under the ADA on this topic—an accommodation that ''seems reasonable on its face, *i.e.,* ordinarily or in the run of cases,'' ''feasible,'' or ''plausible.''[42] Many employees will meet this part of the PWFA definition of qualified. For example, a pregnant cashier who needs a stool to perform the job will be qualified with the reasonable accommodation of a stool. A teacher recovering from childbirth who needs additional bathroom breaks will be qualified with a reasonable accommodation that allows such breaks.

''Qualified'' for the Reasonable Accommodation of Leave

36. When determining whether an employee who needs leave as a reasonable accommodation meets the definition of ''qualified,'' the relevant inquiry is whether the employee would be able to perform the essential functions of the position, with or without reasonable accommodation (or, if not, if the inability to perform the essential function(s) is for a temporary period, the essential function(s) could be performed in the near future, and the inability to perform the essential function(s) can be reasonably accommodated), with the benefit of a period of leave (*e.g.,* intermittent leave, part-time work, or a period of leave or time off). Thus, an employee who needs some form of leave to recover from a known limitation related to pregnancy, childbirth, or related medical conditions can readily meet the definition of ''qualified'' under the first part of the PWFA definition because it is reasonable to conclude that once they return from the period of leave (or during the time they are working if it is intermittent leave), they will be able to perform the essential functions of the job, with or without additional reasonable accommodations, or will be ''qualified'' under the second part of the PWFA definition.[43]

1636.3(f)(2) Qualified Employee—Temporary Suspension of an Essential Function(s)

37. The PWFA provides that an employee can meet the definition of ''qualified'' even if they cannot perform one or more essential functions of the position in question with or without a reasonable accommodation, provided three conditions are met: (1) the inability to perform an essential function(s) is for a temporary period; (2) the essential function(s) could be performed in the near future; and (3) the inability to perform the

[35] *See* 42 U.S.C. 12102(4)(E).

[36] *See* 29 CFR 1630.2(j)(1)(vi) and (j)(4)(ii); *see also* 29 CFR part 1630, appendix, 1630.2(j)(1)(vi).

[37] The PWFA does not address prerequisites for a position. Whether an employee is qualified for the position in question is determined based on whether the employee can perform the essential functions of the position, with or without a reasonable accommodation, or based on the second part of the PWFA's definition of ''qualified.'' 42 U.S.C. 2000gg(6).

[38] 42 U.S.C. 2000gg(6).

[39] 42 U.S.C. 2000gg(6)(A)–(C).

[40] *See* 29 CFR part 1630, appendix, 1630.2(m).

[41] *See* 29 CFR part 1630, appendix, 1630.2(m).

[42] *US Airways, Inc.* v. *Barnett,* 535 U.S. 391, 401–02 (2002); *see, e.g., Shapiro* v. *Twp. of Lakewood,* 292 F.3d 356, 360 (3d Cir. 2002) (citing the definition from *Barnett*); *Osborne* v. *Baxter Healthcare Corp.,* 798 F.3d 1260, 1267 (10th Cir. 2015) (citing the definition from *Barnett*); *EEOC* v. *United Airlines, Inc.,* 693 F.3d 760, 762 (7th Cir. 2012) (citing the definition from *Barnett*); *see also Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text accompanying nn.8–9 (citing the definition from *Barnett*).

[43] If the employee will not be able to perform all of the essential functions at the end of the leave period, with or without accommodation, the employee may still be qualified under the second part of the PWFA's definition of qualified employee. 42 U.S.C. 2000gg(6).

essential function(s) can be reasonably accommodated.[44]

38. Based on the overall structure and wording of the statute, the second part of the definition of ''qualified'' is relevant only when an employee cannot perform one or more essential functions of the job in question, even with a reasonable accommodation, due to a known limitation under the PWFA. It is not relevant in any other circumstance. If the employee can perform the essential functions of the position with or without a reasonable accommodation, the first definition of ''qualified'' applies (*i.e.,* able to do the job with or without a reasonable accommodation). For example, if a pregnant employee requests additional restroom breaks, they are qualified if they can perform the essential functions of the job with the reasonable accommodation of additional restroom breaks, and, if so, there is no need to reach the second part of the definition of ''qualified,'' *i.e.,* to apply definitions of ''temporary'' or ''in the near future,'' or to determine whether the inability to perform an essential function(s) can be reasonably accommodated (as no such inability exists).

39. By contrast, some examples of situations where the second part of the definition of ''qualified'' may be relevant include: (1) a pregnant construction worker is told by their health care provider to avoid lifting more than 20 pounds during the second through ninth months of pregnancy, an essential function of the worker's job requires lifting more than 20 pounds, and there is not a reasonable accommodation that will allow the employee to perform that function without lifting more than 20 pounds; and (2) a pregnant police officer is unable because of their pregnancy to perform patrol duties during the third through ninth months of pregnancy, patrol duties are an essential function of the job, and there is not a reasonable accommodation that will allow the employee to perform the patrol duties.

40. This definition is solely concerned with determining whether an individual is ''qualified.'' An employer may still defend the failure to provide the reasonable accommodation based on undue hardship.

1636.3(f)(2)(i) Temporary

41. ''Temporary'' means that the need to suspend one or more essential functions is ''lasting for a limited time,[45] not permanent, and may extend beyond 'in the near future.' '' How long it may take before the essential function(s) can be performed is further limited by the definition of ''in the near future.''

1636.3(f)(2)(ii) In the Near Future

42. An employee can be qualified under the exception in 42 U.S.C. 2000gg(6)(A)–(C) if they could perform the essential function(s) ''in the near future.'' In explaining the inclusion of this additional definition of ''qualified,'' the House Report analogized the suspension of an essential function under the PWFA to cases under the ADA regarding leave; ''in the near future'' is a term some courts have used in the context of determining whether an employee can perform the essential functions of the job with a reasonable accommodation of leave and, therefore, is qualified under the ADA.[46] These ADA leave cases provide some helpful guideposts to interpret this term in the PWFA. Under the ADA, courts have concluded that an employee who needs indefinite leave (that is, leave for a period of time that they cannot reasonably estimate under the circumstances) cannot perform essential job functions ''in the near future.''[47] Similarly, the Commission concludes that a need under the PWFA to indefinitely suspend an essential function(s) cannot reasonably be considered to meet the standard of an employee who could perform the essential function(s) ''in the near future.''[48]

43. Pregnancy is a temporary condition with an ascertainable end date; the request to temporarily suspend an essential function(s) due to a current pregnancy will never be indefinite and will not be more than generally 40 weeks. Thus, for a current pregnancy, § 1636.3(f) defines ''in the near future'' to mean generally 40 weeks from the start of the temporary suspension of an essential function(s). To define ''in the near future'' as less than generally 40 weeks—*i.e.,* the duration of a full-term pregnancy—would run counter to a central purpose of the PWFA of keeping pregnant employees in the workforce even when pregnancy, childbirth, or related medical conditions necessitate the reasonable accommodation of temporarily suspending the performance of one or more essential functions of a job.[49]

44. The Commission emphasizes that the definition in § 1636.3(f)(2)(ii) does not mean that the essential function(s) always must be suspended for 40 weeks, or that if an employee seeks the temporary suspension of an essential function(s) for 40 weeks the employer must automatically grant it. The actual length of the temporary suspension of the essential function(s) will depend upon what the employee requires, and the covered entity always has available the defense that it would create an undue hardship. However, the mere fact that the temporary suspension of one or more essential functions is needed for any time period up to and including generally 40 weeks for a pregnant employee will not, on its own, render an employee unqualified under the PWFA.

45. For conditions other than a current pregnancy, the Commission is not setting a specific length of time for ''in the near future'' because, unlike a current pregnancy, there is not a consistent measure of how long these diverse conditions can generally last, and thus, what ''in the near future'' might mean in different instances.

46. The Commission notes that beyond an agreement that an indefinite amount of time does not meet the standard of ''in the near future,'' how long a period of leave may be under the ADA and still be a reasonable accommodation (thus, allowing the individual to remain qualified) varies.[50] The

[44] 42 U.S.C. 2000gg(6); *see* H.R. Rep. No. 117–27, pt. 1, at 27 (''[T]he temporary inability to perform essential functions due to pregnancy, childbirth, or related medical conditions does not render a worker 'unqualified.' . . . [T]here may be a need for a pregnant worker to temporarily perform other tasks or otherwise be excused from performing essential functions before fully returning to her position once she is able.'').

[45] *Temporary, Merriam-Webster.com, https://www.merriam-webster.com/dictionary/temporary* (last visited Mar. 13, 2024) (defining ''temporary'' as ''lasting for a limited time''). This definition is consistent with logic in the House Report, which states that ''the temporary inability to perform essential functions due to pregnancy, childbirth, or related medical conditions does not render a worker 'unqualified' '' and cites to *Robert* v. *Board of County Commissioners of Brown County,* 691 F.3d 1211, 1218 (10th Cir. 2012). *See* H.R. Rep. No. 117–27, pt. 1, at 27, n.109.

[46] H.R. Rep. No. 117–27, pt. 1, at 27–28. As explained *infra,* this definition of ''qualified'' at 42 U.S.C. 2000gg(6)(A)–(C) is not used to determine ''qualified'' for the purposes of leave under the PWFA.

[47] *See, e.g., Herrmann* v. *Salt Lake City Corp.,* 21 F.4th 666, 676–77 (10th Cir. 2021); *Cisneros* v. *Wilson,* 226 F.3d 1113, 1129 (10th Cir. 2000), *overruled on other grounds by Bd. of Trs. of Univ. of Ala.* v. *Garrett,* 531 U.S. 356 (2001). The Commission cites these ADA cases because they use the term ''in the near future'' in a related context (employees are ''qualified'' for leave under the ADA because the leave will allow them to return to work and perform essential functions ''in the near future''). The Commission emphasizes its position, as discussed below, that under both the PWFA and the ADA, leave provided as an accommodation does not constitute a suspension of an essential function. Thus, under the PWFA, in determining whether an essential function could be performed ''in the near future,'' the period of time during which an employee may be on leave is not included in the assessment. Likewise, in determining whether an individual is qualified for leave as a reasonable accommodation under the PWFA, the statutory term ''in the near future'' is not relevant.

[48] However, the Commission notes that the employee's inability to pinpoint the exact date when they expect to be able to perform the essential functions of the position, or their ability to provide only an estimated range of dates, does not make the temporary suspension of the essential function(s) ''indefinite'' or mean that they cannot perform the job's essential functions ''in the near future.'' The fact that an exact date is not necessary is supported by the language in the statute, which requires that the essential function(s) ''could'' be performed in the near future. 42 U.S.C. 2000gg(6)(B).

[49] *See* H.R. Rep. No. 117–27, pt. 1, at 5 (''When pregnant workers do not have access to reasonable workplace accommodations, they are often forced to choose between their financial security and a healthy pregnancy. Ensuring that pregnant workers have access to reasonable accommodations will promote the economic well-being of working mothers and their families and promote healthy pregnancies.''); *id.* at 22 (''When pregnant workers are not provided reasonable accommodations on the job, they are oftentimes forced to choose between economic security and their health or the health of their babies.''); *id.* at 24 (''Ensuring pregnant workers have reasonable accommodations helps ensure that pregnant workers remain healthy and earn an income when they need it the most.''); *id.* at 33 (''The PWFA is about ensuring that pregnant workers can stay safe and healthy on the job by being provided reasonable accommodations for pregnancy, childbirth, or related medical conditions . . . . The PWFA is one crucial step needed to reduce the disparities pregnant workers face by ensuring that pregnant women, and especially pregnant women of color, can remain safe and healthy at work.'').

[50] *See, e.g., Robert,* 691 F.3d at 1218 (citing a case in which a 6-month leave request was too long to be a reasonable accommodation but declining to address whether, in the instant case, a further exemption following the 6-month temporary

Commission believes, however, that depending on the facts of a case, leave cases that allow for a longer period are more relevant to the determination of ''in the near future'' under the PWFA for three reasons. First, what constitutes ''in the near future'' may differ depending on factors, including but not limited to, the known limitation and the employee's position. For example, an employee whose essential job functions require lifting only during the summer months would remain qualified even if unable to lift during a 7-month period over the fall, winter, and spring months because the employee could perform the essential function ''in the near future'' (in this case, as soon as the employee was required to perform that function). Second, the determination of whether the employee could resume the essential functions of their position in the near future is only one step in the definition of qualified; standing alone, it does not require the employer to provide an accommodation. If the temporary suspension cannot be reasonably accommodated, or if the temporary suspension causes an undue hardship, the employer is not required to provide it.[51]

Third, as detailed in the notice of proposed rulemaking (NPRM), especially in the first year after giving birth, employees may experience serious health issues related to their pregnancy that may prevent them from performing the essential functions of their positions.[52] Accommodating these situations and allowing employees to stay employed are among the key purposes of the PWFA.

47. Further, the Commission recognizes that employees may need an essential function(s) temporarily suspended because of a current pregnancy; take leave to recover from childbirth; and, upon returning to work, need the same essential function(s) or a different one temporarily suspended due to the same or a different physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. In keeping with the requirement that the determination of whether an individual is qualified under the PWFA should be made at the time of the employment decision,[53] the determination of ''in the near future'' should be made when the employee asks for each accommodation that requires the suspension of one or more essential functions. Thus, an employee who is 3 months pregnant and who is seeking an accommodation of the temporary suspension of an essential function(s) due to a limitation related to pregnancy will meet the definition of ''in the near future'' because the inability to perform the essential function(s) will end in less than 40 weeks. When the employee returns to work from leave after childbirth, if the employee needs an essential function temporarily suspended for a reason related to pregnancy, childbirth, or related medical conditions, there should be a new determination made as to whether the employee is qualified under § 1636.3(f)(2). In other words, there is a new calculation of ''in the near future'' with the new employment decision that involves the temporary suspension of an essential function(s).[54]

48. Determining ''in the near future'' in the definition of ''qualified'' when the employment decision is made is necessary because it would often be difficult, if not impossible, for a pregnant employee to predict what their limitations (if any) will be when returning to work after pregnancy. While pregnant, they may not know whether and, if so, for how long, they will have a known limitation or need an accommodation. They also may not know whether an accommodation after returning to work will require the temporary suspension of an essential function(s), and, if so, for how long. All of these questions may be relevant under the PWFA's second definition of ''qualified.''

49. Leave as a reasonable accommodation (*e.g.,* for recovery from pregnancy, childbirth, or related medical conditions or any other purpose) does not count as time when an essential function(s) is suspended and, thus, is not relevant for the second part of the definition of ''qualified'' (§ 1636.3(f)(2)). If an individual needs leave as a reasonable accommodation under the PWFA or, indeed, any reasonable accommodation other than the temporary suspension of an essential function(s), only the first part of the definition of ''qualified'' is relevant (§ 1636.3(f)(1)). In the case of leave, the question would be whether the employee, after returning from the requested period of leave, would be able to perform the essential functions of the position with or without reasonable accommodation (or, if not, if the inability to perform the essential function(s) is for a temporary period, the essential function(s) could be performed in the near future, and the inability to perform the essential function(s) can be reasonably accommodated). Furthermore, for some employees, leave to recover from childbirth will not require a reasonable accommodation because they have a right to leave under Federal, State, or local law or under an employer's policy.[55]

1636.3(f)(2)(iii) Can Be Reasonably Accommodated

50. The second part of the PWFA's definition of ''qualified'' further requires that the suspension ''can be reasonably accommodated.'' [56] For some positions, this may mean that one or more essential functions are temporarily suspended, with or without assigning the essential function(s) to someone else, and the employee continues to perform the remaining functions of the job. For other positions, some of the essential function(s) may be temporarily suspended, with or without assigning the essential function(s) to someone else, and the employee may be given other tasks to replace them. In other situations, one or more essential functions may be temporarily suspended, with or without giving the essential function(s) to someone else, and the employee may perform the functions of a different job to which the employer temporarily transfers or moves them, or the employee may participate in the employer's light or modified duty program.[57]

51. Examples Regarding § 1636.3(f)(2):

Example #1/Definition of ''Qualified'': One month into pregnancy, Akira, an employee in

accommodation at issue would exceed ''reasonable durational bounds'') (citing *Epps* v. *City of Pine Lawn,* 353 F.3d 588, 593 (8th Cir. 2003)); *see also Blanchet* v. *Charter Commc'ns, LLC,* 27 F.4th 1221, 1225–26, 1230–31 (6th Cir. 2022) (determining that a pregnant employee who developed postpartum depression and requested a 5-month leave after her initial return date, and was fired after requesting an additional 60 days of leave could still be ''qualified,'' as additional leave could have been a reasonable accommodation); *Cleveland* v. *Fed. Express Corp.,* 83 F. App'x 74, 76–81 (6th Cir. 2003) (declining ''to adopt a bright-line rule defining a maximum duration of leave that can constitute a reasonable accommodation'' and determining that a 6-month medical leave for a pregnant employee with systemic lupus could be a reasonable accommodation); *Garcia-Ayala* v. *Lederle Parenterals, Inc.,* 212 F.3d 638, 641–42, 646–49 (1st Cir. 2000) (reversing the district court's finding that a secretary was not a ''qualified individual'' under the ADA because additional months of unpaid leave could be a reasonable accommodation, even though she had already taken over year of medical leave for breast cancer treatment, and rejecting per se rules as to when additional medical leave is unreasonable); *Nunes* v. *Wal-Mart Stores, Inc.,* 164 F.3d 1243, 1245–1247 (9th Cir. 1999) (opining that, because extending leave to 9 months to treat a fainting disorder could be a reasonable accommodation, an employee's inability to work during that period of leave did not automatically render her unqualified); *Cayetano* v. *Fed. Express Corp.,* No. 1:19–CV–10619, 2022 WL 2467735, at *1–*2, *4–*7 (S.D.N.Y. July 6, 2022) (determining that an employee who underwent shoulder surgery could be ''qualified'' because 6 months of leave is not per se unreasonable as a matter of law); *Durrant* v. *Chemical/Chase Bank/Manhattan Bank, N.A.,* 81 F. Supp. 2d 518, 519, 521–22 (S.D.N.Y. 2000) (concluding that an employee who was on leave for nearly 1 year due to a leg injury and extended her leave to treat a psychiatric condition could be ''qualified'' under the ADA with the accommodation of additional leave of reasonable duration).

[51] The Commission is aware of and disagrees with ADA cases that held, for example, that 2 to 3 months of leave following a 12-week FMLA period was presumptively unreasonable as an accommodation. *See, e.g., Severson* v. *Heartland Woodcraft, Inc.,* 872 F.3d 476, 481 (7th Cir. 2017). In any event, such cases have no bearing on the determination of ''in the near future'' under the definition of ''qualified'' for the PWFA because this definition expressly contemplates temporarily suspending one or more essential functions.

[52] 88 FR 54724–25; *see, e.g.,* Susanna Trost et al., U.S. Dep't of Health & Hum. Servs., Ctrs. for Disease Control & Prevention, *Pregnancy-Related Deaths: Data from Maternal Mortality Review Committees in 36 U.S. States, 2017–2019* (2022), *https://www.cdc.gov/reproductivehealth/maternal-mortality/erase-mm/data-mmrc.html* (stating that 53% of pregnancy-related deaths occurred from one week to one year after delivery, and 30% occurred one- and one-half months to one year postpartum).

[53] *See* 29 CFR part 1630, appendix, 1630.2(m).

[54] There is a new calculation regardless of whether the employee seeks to temporarily suspend the same essential function that was suspended during pregnancy or a different one.

[55] For additional information on how leave should be addressed under the PWFA, *see infra* in the Interpretive Guidance in section *1636.3(h)* under *Particular Matters Regarding Leave as a Reasonable Accommodation.*

[56] 42 U.S.C. 2000gg(6)(C).

[57] *See* H.R. Rep. No. 117–27, pt. 1, at 27 (''[T]he temporary inability to perform essential functions due to pregnancy, childbirth, or related medical conditions does not render a worker 'unqualified.' . . . [T]here may be a need for a pregnant worker to temporarily perform other tasks or otherwise be excused from performing essential functions before fully returning to her position once she is able.'').

a paint manufacturing plant, is told by her health care provider that she should avoid certain chemicals for the remainder of the pregnancy. One of several essential functions of the job involves regular exposure to these chemicals. Akira talks to her supervisor, explains her limitation, and asks that she be allowed to continue to perform her other tasks that do not require exposure to the chemicals.

1. Known limitation and request for accommodation: Akira's need to avoid exposure to chemicals is a physical or mental condition related to, affected by, or arising out pregnancy, childbirth, or related medical conditions; Akira needs an adjustment or change at work due to the limitation; and Akira has communicated this information to her employer.

2. Qualified: If modifications that would allow Akira to continue to perform the essential functions of her position (such as enclosing the chemicals, providing a local exhaust vent, or providing additional personal protective gear) are not effective or cause an undue hardship, Akira can still be qualified under the definition that allows for a temporary suspension of an essential function(s).

a. Akira's inability to perform the essential function(s) is temporary.

b. Akira can perform the essential function(s) of her job in the near future because she is pregnant and needs an essential function(s) suspended for less than 40 weeks.

c. Akira's inability to perform the essential function(s) may be reasonably accommodated. The employer can suspend the essential function(s) that requires her to work with the chemicals, while allowing her to do the remainder of her job.

Example #2/Definition of ''Qualified'': Two months into a pregnancy, Lydia, a delivery driver, is told by her health care provider that she should adhere to clinical guidelines for lifting during pregnancy, which means she should not continue to lift 30–40 pounds, which she routinely did at work when moving packages as part of the job. She discusses the limitation with her employer. The employer is unable to provide Lydia with assistance in lifting packages, and Lydia requests placement in the employer's light duty program, which is used for drivers who have on-the-job injuries.

1. Known limitation and request for accommodation: Lydia's lifting restriction is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; she needs an adjustment or change at work due to the limitation; and she has communicated this information to the employer.

2. Qualified: Lydia needs the temporary suspension of an essential function(s).

a. Lydia's inability to perform the essential function(s) is temporary.

b. Lydia can perform the essential function(s) of her job in the near future because Lydia is pregnant and needs an essential function(s) suspended for less than 40 weeks.

c. Lydia's need to temporarily suspend an essential function(s) of her job may be reasonably accommodated through the existing light duty program.

Example #3/Definition of ''Qualified'': Olga's position as a carpenter involves lifting heavy wood that weighs more than 20 pounds. Upon returning to work after giving birth, Olga tells her supervisor that she has a lifting restriction of 10 pounds due to her cesarean delivery. The restriction is for 8 weeks. The employer does not have an established light duty program but does have other design or administrative duties that Olga can perform.

1. Known limitation and request for accommodation: Olga's lifting restriction is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; she needs an adjustment or change at work due to the limitation; and she has communicated this information to the employer.

2. Qualified: Olga needs the temporary suspension of an essential function(s).

a. Olga's inability to perform the essential function(s) is temporary.

b. Olga can perform the essential function(s) of her job in the near future because she needs the essential function(s) suspended for 8 weeks.[58]

c. Olga's need to temporarily suspend an essential function(s) of her job may be reasonably accommodated by temporarily suspending the essential function(s) and temporarily assigning Olga to design or administrative duties.

Example #4/Definition of ''Qualified'': One of the essential functions of Elena's position as a park ranger involves patrolling the park. Park rangers also answer questions for guests, sell merchandise, and explain artifacts and maps. Due to her postpartum depression, Elena is experiencing an inability to sleep, severe anxiety, and fatigue. Her anti-depressant medication also is causing dizziness and blurred vision, which make it difficult to drive. Elena seeks the temporary suspension of the essential function of patrolling the park for 12 weeks.

1. Known limitation and request for accommodation: Elena's inability to sleep, anxiety, fatigue, dizziness, and blurred vision are physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; she needs an adjustment or change at work due to the limitation; and she has communicated this information to the employer.

2. Qualified: Elena needs the temporary suspension of an essential function(s).

a. Elena's inability to perform the essential function(s) is temporary.

b. Elena can perform the essential function(s) of her job in the near future because she needs an essential function(s) suspended for 12 weeks.[59]

c. Elena's need to temporarily suspend an essential function(s) of her job may be reasonably accommodated by temporarily suspending the essential function(s) and temporarily assigning Elena to duties such as answering questions and selling merchandise at the visitor's center.

Example #5/Definition of ''Qualified'': Tamara's position at a retail establishment involves working as a cashier and folding and putting away clothing. In her final trimester of pregnancy, Tamara develops carpal tunnel syndrome that makes gripping objects and buttoning clothing difficult. Tamara seeks the temporary suspension of the essential functions of folding and putting away clothing. The employer provides the accommodation and temporarily assigns Tamara to greeting and assisting customers, tasks that cashiers are normally assigned to on a rotating basis. When she returns to work after she gives birth, Tamara continues to experience carpal tunnel symptoms, which her doctor believes will cease in approximately 16 weeks.

1. Known limitation and request for accommodation: Tamara's inability to grip objects and button clothing are physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; she needs an adjustment or change at work due to the limitation; and she has communicated this information to the employer.

2. Qualified: Tamara needs the temporary suspension of an essential function(s).

a. Tamara's inability to perform the essential function(s) is temporary.

b. Tamara can perform the essential functions of her job in the near future because she needs an essential function(s) suspended for 16 weeks.[60]

c. Tamara's need to temporarily suspend an essential function(s) of her job may be reasonably accommodated by temporarily suspending the essential function(s) and temporarily assigning Tamara to duties such as greeting and assisting customers.

1636.3(g) Essential Functions

52. Section 1636.3(g) adopts the Commission's definition of ''essential functions'' contained in the regulation implementing the ADA.[61] Thus, in determining whether something is an essential function, the first consideration is whether employees in the position actually are required to perform the function. This consideration will generally include one or more of the factors listed in § 1636.3(g)(1), although this list is non-exhaustive. Relevant evidence as to whether a particular function

[58] *See Cehrs* v. *Ne. Ohio Alzheimer's Rsch. Ctr.,* 155 F.3d 775, 781–783 (6th Cir. 1998) (determining that an employee suffering from severe psoriasis who was on an 8-week leave of absence and requested an additional 1-month leave could be ''otherwise qualified'' under the ADA).

[59] *See Criado* v. *IBM Corp.,* 145 F.3d 437, 443–43 (1st Cir. 1998) (concluding that an employee with severe anxiety and depression who was on leave for approximately 6 weeks and requested an extension of temporary leave was ''qualified'' under the ADA); *Durrant,* 81 F. Supp. 2d at 519, 521–22 (concluding that an employee who was on leave for nearly 11 months due to a leg injury and extended her leave to treat a psychiatric condition could be ''qualified'' under the ADA); *Powers* v. *Polygram Holding,* 40 F. Supp. 2d 195, 199 (S.D.N.Y. 1999) (determining that an employee experiencing bipolar disorder who requested a total of 17 weeks of leave could be ''qualified'' under the ADA).

[60] *See Rascon* v. *U.S. W. Commc'ns, Inc.,* 143 F.3d 1324, 1333 (10th Cir. 1998) (agreeing that an employee diagnosed with post-traumatic stress disorder who requested a 4-month leave for a treatment program was a ''qualified'' individual under the ADA), *abrogated on other grounds by New Hampshire* v. *Maine,* 532 U.S. 742 (2001).

[61] *See* 29 CFR 1630.2(n).

is essential includes, but is not limited to, information from the employer (such as the position description) and information from incumbents (including the employee requesting the accommodation) about what they actually do on the job.[62] This includes whether employees in the position actually will be required to perform the function during the time for which an accommodation is expected to be needed. The list of factors in § 1636.3(g)(2) is not exhaustive, and other relevant evidence also may be presented. No single factor is dispositive, and greater weight will not be granted to the types of evidence included on the list than to the types of evidence not listed.[63]

1636.3(h) Reasonable Accommodation—Generally

1636.3(h)(1) Definition of Reasonable Accommodation

53. The statute at 42 U.S.C. 2000gg(7) states that the term ''reasonable accommodation'' has the meaning given to it in section 101 of the ADA[64] and shall be construed as it is construed under the ADA and the Commission's regulation implementing the PWFA. Thus, under the PWFA, as under the ADA, the obligation to make reasonable accommodation is a form of non-discrimination and is therefore best understood as a means by which barriers to the equal employment opportunity are removed or alleviated.[65] A modification or adjustment is reasonable if it ''seems reasonable on its face, *i.e.,* ordinarily or in the run of cases''; this means it is ''reasonable'' if it appears to be ''feasible'' or ''plausible.''[66] An accommodation also must be effective in meeting the qualified employee's needs, meaning it removes a work-related barrier and provides the employee with equal employment opportunity.[67]

54. Under the PWFA, ''reasonable accommodation'' has the same definition as under the ADA, with the exceptions noted in items (1) through (3) of this paragraph.[68] Therefore, like the ADA, reasonable accommodation under the PWFA includes: (1) modifications or adjustments to the job application process that enable a qualified applicant with a known limitation to be considered for the position; (2) modifications or adjustments to the work environment, or to the manner or circumstances under which the position is preformed to allow a qualified employee with a known limitation to perform the essential functions of the job; and (3) modifications or adjustments that enable an employee with a known limitation to enjoy equal benefits and privileges of employment as are enjoyed by its other similarly situated employees without known limitations.[69]

55. Because the PWFA also provides for reasonable accommodations when a qualified employee temporarily cannot perform one or more essential functions of a position but can meet the requirements of 42 U.S.C. 2000gg(6)(A)–(C), reasonable accommodations under the PWFA also include modifications or adjustments that allow a qualified employee with a known limitation to temporarily suspend one or more essential functions of the position. This can be either through the essential function(s) being suspended or through the essential function(s) being suspended and the employee doing other work as set out in § 1636.3(f)(2)(iii).

1636.3(h)(2) How To Request a Reasonable Accommodation

56. To request a reasonable accommodation, the employee (or the employee's representative) must communicate to the employer that they need an adjustment or change at work due to their known limitation (a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions). Section 1636.3(d) applies to communications to request a reasonable accommodation. An employee may use plain language and need not mention the PWFA. An employee does not have to use the phrases ''reasonable accommodation,'' ''limitation,'' ''known limitation,'' ''qualified,'' or ''essential function''; use any medical terminology; provide a specific medical condition; use any other specific words or phrases; or put the explanation of the need for accommodation in the form of a request.

57. In these examples, the employee is communicating both their limitation and that they need an adjustment or change at work due to the limitation. The Commission expects that in the vast majority of cases these two communications will happen at the same time. All of these are examples of requests for reasonable accommodations under the PWFA.

Example #6: A pregnant employee tells her supervisor, ''I'm having trouble getting to work at my scheduled starting time because of morning sickness.''

Example #7: An employee who gave birth 3 months ago tells the person who assigns her work at the employment agency, ''I need an hour off once a week for treatments to help with my back problem that started during my pregnancy.''

Example #8: An employee tells a human resources specialist that they are worried about continuing to lift heavy boxes because they are concerned that it will harm their pregnancy.

Example #9: At the employee's request, an employee's spouse requests light duty for the employee because the employee has a lifting restriction related to pregnancy; the employee's spouse uses the employer's established process for requesting a reasonable accommodation.

Example #10: An employee tells a manager of her need for more frequent bathroom breaks, explains that the breaks are needed because the employee is pregnant, but does not complete the employer's online form for requesting an accommodation.

Example #11: An employee tells a supervisor that she needs time off to recover from childbirth.

Alleviating Increased Pain or Risk to Health Due to the Known Limitation

58. One reason an employee may seek a reasonable accommodation is to alleviate increased pain or risk to health that is attributable to the physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions that has been communicated to the employer (the known limitation).[70] When dealing with requests for accommodation concerning the alleviation of increased pain or risk to health associated with a known limitation, the goal is to provide an accommodation that allows the qualified employee to alleviate the identified pain or risk to health.

59. Examples Regarding Alleviating Pain or Risk to Health Due to the Known Limitation:

Example #12/Alleviating Pain or Risk to Health: Celia is a factory worker whose job requires her to regularly move boxes that weigh 50 pounds. Prior to her pregnancy, Celia occasionally felt pain in her knee when she walked for extended periods of time. When Celia returns to work after giving birth,

[66] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at General Principles (quoting *Barnett,* 535 U.S. at 403–06).

[67] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at General Principles & Question 9; 29 CFR part 1630, appendix, 1630.9.

[68] *See* 42 U.S.C. 2000gg(7).

[69] *See* 29 CFR 1630.2(o)(1)(i) through (iii). The requirement for employers to provide reasonable accommodations when requested that provide for equal benefits and privileges encompasses the requirement that an accommodation should provide the individual with an equal employment opportunity. 29 CFR part 1630, appendix, 1630.9. This requirement stems from the ADA's prohibition on discrimination in ''terms, conditions, and privileges of employment.'' 42 U.S.C. 12112(a). The PWFA prohibits adverse action in the terms, conditions, or privileges of employment against a qualified employee for using or requesting an accommodation and Title VII—which applies to employees affected by pregnancy, childbirth, or related medical conditions—prohibits discrimination in the terms, conditions, or privileges of employment. *See* 42 U.S.C. 2000e–2(a)(1). Based on the text of the PWFA, Title VII, and the requirement under the PWFA that reasonable accommodation has the same definition as in the ADA, the same requirement applies. Thus, a reasonable accommodation under the PWFA includes a change to allow employees affected by pregnancy, childbirth, or related medical conditions nondiscrimination in the terms, conditions, or privileges of employment or, in shorthand, to enjoy equal benefits and privileges. *See also* EEOC, *Compliance Manual Section 613 Terms, Conditions, and Privileges of Employment,* 613.1(a) (1982) [hereinafter *Compliance Manual on Terms, Conditions, and Privileges of Employment*], *https://www.eeoc.gov/laws/guidance/cm-613-terms-conditions-and-privileges-employment* (providing that ''terms, conditions, and privileges of employment'' are ''to be read in the broadest possible terms'' and ''a distinction is rarely made between terms of employment, conditions of employment, or privileges of employment'').

[70] Depending on the facts of the case, the accommodation sought will allow an applicant to apply for the position, or an employee to perform the essential functions of the job, to enjoy equal benefits and privileges of employment, or to temporarily suspend an essential function(s) of the job.

which was by cesarean section, Celia requests that she limit tasks to those that do not require moving boxes of more than 30 pounds for 3 months because heavier lifting could increase the risk to her health and her continued recovery from childbirth. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship. However, under the PWFA, the employer would not be required to provide an accommodation for Celia's knee pain unless it was related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. The employer also may have accommodation responsibilities regarding Celia's knee pain and lifting restrictions under the ADA.

Example #13/Alleviating Pain or Risk to Health: Emily is a candidate for a police officer position. The application process takes place over several months and has multiple steps, one of which is a physical agility test. By the time it is Emily's turn to take the test, she is 7 months pregnant. To avoid risk to her health and the health of her pregnancy, Emily asks that the test be postponed and that her application be kept active so that once she has recovered from childbirth, she can resume the application process and not have to re-apply. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship.

Example #14/Alleviating Pain or Risk to Health: Jackie's position at a fabrication plant involves working with certain chemicals, which Jackie thinks is the reason she has a nagging cough and chapped skin on her hands. For the one year when she is nursing, Jackie seeks the accommodation of a temporary suspension of an essential function—working with the chemicals—because of the risk that the chemicals will contaminate the milk she produces. The employer provides the accommodation. After Jackie stops nursing, she no longer has any known limitations. Thus, under the PWFA, she can be assigned to work with the chemicals again even if she would prefer not to do that work, because the PWFA requires an employer to provide an accommodation only if it is needed due to a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. Jackie's employer may have accommodation responsibilities under the ADA.

Example #15/Alleviating Pain or Risk to Health: Margaret is a retail worker who is pregnant. Because of her pregnancy, Margaret feels pain in her back and legs when she has to move stacks of clothing from one area to the other, one of the essential functions of her position. She can still manage to move the clothes, but, because of the pain, she requests a cart to use when she is moving the garments. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship.

Example #16/Alleviating Pain or Risk to Health: Lourdes is pregnant and works outdoors as a farmworker. The conditions where she works expose her to certain chemicals and the conditions can be slippery. Because of her pregnancy, Lourdes has a problem with her balance and is more likely to slip and fall, and she needs to avoid exposure to the chemicals that she is normally exposed to at work. She seeks the accommodation of working indoors, which will allow her to avoid the conditions that could lead her to slip and fall and will allow her to avoid exposure to the chemicals. There is indoor work, which Lourdes is occasionally assigned to perform, available at the farm, as well as work that does not involve chemicals. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship.

Example #17/Alleviating Pain or Risk to Health: Avery works as an administrative assistant and is pregnant. Avery normally works in the office and commutes by driving and public transportation. Due to pregnancy, Avery is experiencing sciatica; commuting is painful because it requires Avery to sit and stand in one position for an extended period of time. Avery seeks the accommodation of teleworking or changing the start and end time of the workday in order to commute during less crowded times and reduce the commute time and thereby reduce the pain. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship.

Example #18/Alleviating Pain or Risk to Health: Arya is pregnant and works in a warehouse. When it is hot outside, the temperature in the warehouse increases to a level that creates a risk to Arya and her pregnancy.[71] Arya seeks an accommodation of a portable cooling device to reduce the risk to her health and the health of her pregnancy because of the heat in her workplace. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship.

Example #19/Alleviating Pain or Risk to Health: Talia is a nurse and is pregnant. The community where she lives is experiencing a surge in cases of a contagious respiratory viral disease that has been shown to increase the risk of negative outcomes for pregnancy. To reduce her risk and the risk to her pregnancy, Talia requests additional protective gear and to not be assigned to patients exhibiting symptoms of this virus. Under the PWFA, the employer is required to provide the requested accommodation (or another reasonable accommodation) absent undue hardship.

Particular Matters Regarding Leave as a Reasonable Accommodation

60. Under the PWFA, leave may be a reasonable accommodation.[72] If an employee requests leave as an accommodation or if there is no other reasonable accommodation that does not cause an undue hardship, the covered entity should evaluate whether to offer leave as a reasonable accommodation under the PWFA. This is the case even if the covered entity does not offer leave as an employee benefit,[73] the employee is not eligible for leave under the employer's leave policy, or the employee has exhausted the leave the covered entity provides as a benefit (including leave exhausted under a workers' compensation program, the FMLA, or similar State or local laws).[74]

61. The Commission recognizes that there may be situations where an employer provides a reasonable accommodation to a qualified pregnant employee (*e.g.,* a stool, additional breaks, or temporary suspension of one or more essential functions) under the PWFA, and then the employee requests leave as a reasonable accommodation (*e.g.,* to recover from childbirth). In these situations, the covered entity should consider the request for the reasonable accommodation of leave to recover from childbirth in the same manner that it would any other request for leave as a reasonable accommodation. This requires first considering whether the employee will be able to perform the essential functions of the position with or without a reasonable accommodation after the period of leave, or, if not, whether, after the period of leave, the employee will meet the definition of ''qualified'' under § 1636.3(f)(2).[75]

62. A qualified employee with a known limitation who is granted leave as a reasonable accommodation under the PWFA is entitled to return to their same position unless the employer demonstrates that holding open the position would impose an undue hardship.[76] When the employee is

[71] U.S. Dep't of Health & Hum. Servs., Ctrs. for Disease Control & Prevention, *Heat and Pregnant Women* (Aug. 25, 2022), *https://www.cdc.gov/disasters/extremeheat/heat_and_pregnant_women.html.*

[72] H.R. Rep. No. 117–27, pt. 1, at 29 (noting that ''leave is one possible accommodation under the PWFA, including time off to recover from delivery'').

[73] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text preceding Question 17 (explaining that if an employee with a disability needs 15 days of leave and an employer only provides 10 days of paid leave, the employer should allow the employee to use 10 days of paid leave and 5 days of unpaid leave). The Commission has stated in a technical assistance document regarding leave and the ADA that an employer should consider providing unpaid leave to an employee with a disability as a reasonable accommodation even when the employer does not offer leave as an employee benefit. *See* EEOC, *Employer-Provided Leave and the Americans with Disabilities Act,* at text above Example 4 (2016) [hereinafter *Technical Assistance on Employer-Provided Leave*], *https://www.eeoc.gov/laws/guidance/employer-provided-leave-and-americans-disabilities-act.*

[74] *See supra* note 73. If an employee has a right to leave under the FMLA, an employer policy, or a State or local law, the employee is entitled to leave regardless of whether they request leave as a reasonable accommodation. An employee who needs leave beyond what they are entitled to under those laws or policies may request a reasonable accommodation.

[75] These considerations are relevant only if the leave is needed as a reasonable accommodation. The covered entity should first consider if there is a leave program that covers the need for leave to recover from childbirth and for which the employee is eligible. If there is a leave program that covers the request, the covered entity may not need to assess the employee's ability to perform essential functions upon return from leave under the PWFA.

[76] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Question 18. As

ready to return to work, the employer must allow the individual to return to the same position (assuming that there was no undue hardship in holding it open) if the employee is still qualified (*i.e.,* the employee can perform the essential functions of the position with or without reasonable accommodation under § 1636.3(f)(1) or if the employee meets the definition of ''qualified'' under § 1636.3(f)(2)).[77]

63. Under the PWFA, an employer does not have to provide a reasonable accommodation if it causes an undue hardship—a significant difficulty or expense. Thus, if an employer can demonstrate that the impact of the leave requested as a reasonable accommodation poses an undue hardship under the factors set out in § 1636.3(j)(2)—for example, because of the impact of its length, frequency, or unpredictable nature, or because of another factor that causes significant difficulty or expense—it does not have to provide the requested leave under the PWFA.

64. Employees must be permitted to choose whether to use paid leave (whether accrued, as part of a short-term disability program, or as part of any other employee benefit) or unpaid leave to the same extent that the covered entity allows employees to choose between these types of leave when they are using leave for reasons unrelated to pregnancy, childbirth, or related medical conditions.[78] Similarly, an employer must continue an employee's health insurance benefits during their leave period to the extent that it does so for other employees in a similar leave status, such as paid or unpaid leave. An employer is not required to provide additional paid leave under the PWFA beyond the amount provided to similarly situated employees.[79]

Ensuring That Employees Are Not Penalized for Using Reasonable Accommodations

65. Generally, covered entities are not required to lower production standards for qualified employees receiving accommodations under the PWFA.[80] However, for example, when the reasonable accommodation is leave, the employee may not be able to meet a production standard during the period of leave or, depending on the length of the leave, meet that standard for a defined period of time (*e.g.,* the production standard measures production in 1 year and the employee was on leave for 4 months). Thus, if the reasonable accommodation is leave, the production standard may need to be prorated to account for the reduced amount of time the qualified employee worked.[81]

66. In addition, covered entities making reasonable accommodations must ensure that their ordinary workplace policies or practices—including, but not limited to, attendance policies, productivity quotas, and requirements for mandatory overtime—do not operate to penalize qualified employees for utilizing PWFA accommodations.[82] When a reasonable accommodation involves a pause in work—such as a break, a part-time or other reduced work schedule, or leave—a qualified employee cannot be penalized, or threatened with a penalty, for failing to perform work during that non-work period, including through actions like the assessment of penalty points for time off or discipline for failing to meet a production quota. For example, if a call center employee with a known limitation requests and is granted 2 hours of unpaid leave in the afternoon for rest, the employee's required number of calls may need to be reduced proportionately. Alternatively, the accommodation could allow for the qualified employee to make up the time at a different time during the day so that the employee's production standards and pay would not be reduced, as long as this would not make the accommodation ineffective.

67. Similarly, policies that monitor employees for time on task (whether through automated means or otherwise) and penalize them for being off task may need to be modified to avoid imposing penalties for non-work periods that the qualified employee was granted as a reasonable accommodation. This includes situations in which hours worked or time on task are used to measure traits like ''productivity,'' ''focus,'' ''availability,'' or ''contributions.'' For example, if, as a reasonable accommodation, a qualified employee is excused from working overtime, and ''availability'' or ''contribution'' is measured by an employee's overtime hours, a qualified employee should not be penalized in those categories.

68. If an accommodation under the PWFA involves the temporary suspension of an essential function(s) of the position, a covered entity may not penalize a qualified employee for not performing the essential function(s) that has been temporarily suspended. So, for example, a covered entity must not penalize a qualified employee for not meeting a production standard related to the performance of the essential function(s) that has been temporarily suspended.

69. Penalizing an employee in these situations could render the accommodation ineffective, thus making the covered entity liable for failing to make reasonable accommodation.[83] It also may be an adverse action in the terms, conditions, or privileges of employment or retaliation.[84]

70. The following examples illustrate situations where penalizing an employee may violate 42 U.S.C. 2000gg–1(1) (failing to make reasonable accommodation absent undue hardship), (5) (prohibiting employers from taking adverse action against an employee on account of the employee using a reasonable accommodation), and/or section 2000gg–2(f) (prohibiting retaliation).

Example #20/Not Penalizing Employees: Arisa works in a fulfillment center that tracks employee productivity using personal tracking devices that monitor an employee's time on task and how long it takes an employee to complete a task. If the technology determines that an employee is spending insufficient time on task or taking too long to complete a task, the employee receives a warning, which can escalate to a reprimand and further discipline. Arisa is pregnant and, as a reasonable accommodation, is permitted to take bathroom breaks as necessary. Because the wearable technology determines that due to the approved additional bathroom breaks Arisa is spending insufficient time on task, Arisa receives a warning.

Example #21/Not Penalizing Employees: Hanh works in a call center that has a ''no-fault'' attendance policy where employees accrue penalty points for all absences and late arrivals, regardless of the reason for the lateness or absence. The policy allows for discipline or termination when an employee accrues enough points within a certain time period. Hanh gave birth and has had some complications that involve heavy vaginal bleeding for which she occasionally needs time off, and she also needs to attend related medical appointments. She sought, and her employer provided, the reasonable accommodations of being able to arrive up to 1 hour late on certain days with time to attend medical appointments. Despite the reasonable accommodations, because of the no-fault policy, Hanh accrues penalty points under the policy, subjecting her to possible discipline or termination.

Example #22/Not Penalizing Employees: Afefa, a customer service agent who is pregnant, requests two additional 10-minute rest breaks and additional bathroom breaks, as needed, during the workday. The employer determines that these breaks would not pose an undue hardship and grants the request. Because of the additional breaks, Afefa responds to three fewer calls during a shift. Afefa's supervisor gives her a lower performance rating because of her decrease in productivity.

Personal Use

71. The obligation to provide reasonable accommodation under the PWFA, like that under the ADA, does not extend to the provision of adjustments or modifications that are primarily for the personal benefit of the qualified employee with a known limitation. However, adjustments or modifications that might otherwise be considered personal may be required as

under the ADA, if an employer cannot hold a position open during the entire leave period without incurring undue hardship, the employer should consider whether it has a vacant, equivalent position for which the employee is qualified and to which the employee can be reassigned to continue their leave for a specific period of time and then, at the conclusion of the leave, can be returned to this new position.

[77] *See id.*

[78] A failure to allow an employee affected by pregnancy, childbirth, or related medical conditions to use paid or unpaid leave to the same extent that the covered entity allows employees using leave for reasons unrelated to pregnancy, childbirth, or related medical conditions to do so or a failure to continue health care insurance for an employee affected by pregnancy, childbirth, or related medical conditions to the same extent that a covered entity does for other employees may be a violation of Title VII as well.

[84] 42 U.S.C. 2000gg–1(5); 42 U.S.C. 2000gg–2(f).

reasonable accommodations ''where such items are specifically designed or required to meet job-related rather than personal needs.'' [85]

72. For example, if a warehouse employee is pregnant and is having difficulty sleeping, the PWFA would not require as a reasonable accommodation for the employer to provide a pregnancy pillow to help with sleeping because that is strictly for an employee's personal use. However, allowing the employee some flexibility in start times for the workday may be a reasonable accommodation because it modifies an employment-related policy. In a different context, if the employee who is having trouble sleeping works at a job that involves sleeping between shifts on-site, such as a job as a firefighter, sailor, emergency responder, health care worker, or truck driver, a pregnancy pillow may be a reasonable accommodation because the employee is having difficulty sleeping because of the pregnancy, the employer is providing pillows for all employees required to sleep on-site, and the employee needs a modification of the pillows provided.

All Services and Programs

73. Under the PWFA, as under the ADA, the obligation to make reasonable accommodations applies to all services and programs provided in connection with employment and to all non-work facilities provided or maintained by an employer for use by its employees, so that employees with known limitations can enjoy equal benefits and privileges of employment.[86] Accordingly, the obligation to provide reasonable accommodations, barring undue hardship, includes providing access to employer-sponsored placement or counseling services, such as employee assistance programs, to employer-provided cafeterias, lounges, gymnasiums, auditoriums, transportation, and to similar facilities, services, or programs.[87] This includes situations where an employee is traveling for work and may need, for example, accommodations at a different work site or during travel.

Interim Reasonable Accommodations

74. An interim reasonable accommodation can be used when there is a delay in providing the reasonable accommodation. For example, an interim reasonable accommodation may be sought when: there is a sudden onset of a known limitation under the PWFA, sometimes as an emergency, including one that makes it unsafe, risky, or dangerous to continue performing the normal tasks of the job; while the interactive process is ongoing, such as when an employer is waiting for the arrival of ordered equipment; or when the employee is waiting for the employer's decision on the accommodation request.

75. Providing an interim reasonable accommodation is a best practice under the PWFA and may help limit a covered entity's exposure to liability under 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)(1)), or 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)).

76. For example, consider a situation where an employee lets their supervisor know that they are pregnant and need to avoid working with certain chemicals in the workplace. Given the chemicals and the fact that the employee is pregnant, the employee needs the change immediately. In this situation, the best practice is to provide the employee with an interim reasonable accommodation that meets the employee's needs or limitations and allows the employee to perform tasks for the benefit of the employer while the employer determines its response. This is the best possible situation for both the employer and the employee, and the one that the Commission strongly encourages. In addition, this type of interim reasonable accommodation could help mitigate a claim of delay by the employee.[88] The shortcomings and risks of two other approaches an employer might take are addressed in the following scenarios.

- Require the employee to continue to work with the chemicals while the employer determines its response. In this situation, the employee would be forced to work outside of their restrictions. In addition to placing the employee in a situation that the PWFA was enacted to prevent—choosing between their health and the health of their pregnancy on one hand and a paycheck on the other—the covered entity may be risking liability under 42 U.S.C. 2000gg–1(1) (if there is an unnecessary delay in providing the accommodation), and/or State and Federal workplace health and safety laws.
- Require the employee to take leave while the employer determines its response. In this situation, the employee is not exposed to the chemicals, so the risk is mitigated. However, depending on the facts, this option can have a severely detrimental effect on the employee—either because the leave is unpaid or because the employee is forced to use their paid leave. Meanwhile, the employee is unable to perform tasks for the employer.

77. Moreover, depending on the facts, requiring an employee to take unpaid leave or use their leave after they ask for an accommodation and are awaiting a response could lead to a violation of 42 U.S.C. 2000gg–2(f). For example, if the employee is put on unpaid leave, even though there is paid work that the employer reasonably could have given the employee, the employer's decision could be retaliatory because it might well dissuade a reasonable person from engaging in protected activity, such as asking for an accommodation under the PWFA. If the employer's actions were challenged, the employer would have to produce a legitimate, non-discriminatory reason for its actions. The employee could then show that the real reason for the action was retaliation.[89] Because the claim would arise under 42 U.S.C. 2000gg–2(f), the employee would not have to show that they are qualified under 42 U.S.C. 2000gg(6), and the employer would not have recourse to an undue hardship defense.

78. The possible connection between requiring leave as an interim reasonable accommodation and a potential violation of 42 U.S.C. 2000gg–2(f) is in keeping with the purposes of the PWFA. The PWFA recognizes that historically employees with limitations related to pregnancy, childbirth, or related medical conditions have been required to take leave to their detriment. Thus, 42 U.S.C. 2000gg–1(4) limits the use of leave as a reasonable accommodation, prohibiting employers from requiring qualified employees with known limitations to take leave as a reasonable accommodation where there is another reasonable accommodation that will allow them to remain at work that does not result in an undue hardship.

79. Examples Regarding Interim Reasonable Accommodations:

Example #23/Interim Reasonable Accommodation: Alicia is pregnant and works in a fulfillment center. Her job involves regularly moving boxes that weigh 15 to 20 pounds. On her Saturday shift, she informs her supervisor, Michelle, that she is pregnant and that she is worried about lifting these packages while she is pregnant. Michelle recognizes that Alicia is requesting a reasonable accommodation under the PWFA. While Michelle tells Alicia that she needs to wait until Monday to consult with human resources on the next steps, Michelle also immediately offers Alicia a cart to help move the boxes and assigns her to a line that has lighter packages. On Monday, Michelle tells Alicia that she will be provided with a hoist to help Alicia lift packages, but it will take a few days before it is installed. In the meantime, Alicia can continue to use the cart and work the lighter line. Once the hoist arrives, Alicia is able to use it while working on her usual line. If there were an unnecessary delay in providing the reasonable accommodation, and if Alicia were to challenge the delay as constituting a failure to make an accommodation, the employer could argue that the interim reasonable accommodation mitigates its liability.

Example #24/Interim Reasonable Accommodation: Nour is pregnant, and she drives a delivery van. Her employer uses vans that do not have air conditioning. It is summer and the temperature is over 100 degrees. Nour tells her supervisor she is pregnant and needs a change at work because of the risk to her health and the health of her pregnancy because of the excessive heat. Her supervisor orders equipment that will help Nour, such as a personal cooling vest or neck fan. While waiting for the equipment to be delivered, the employer does not have other possible work that Nour can do. In this situation, the employer could tell Nour that she may take leave while waiting for the equipment to arrive.

Example #25/Interim Reasonable Accommodation: The scenario is the same as described in Example #24, but there is office work that Nour could perform while waiting for the equipment. Further, there is evidence

[85] *See* 29 CFR part 1630, appendix, 1630.9.

[86] *See id.*

[87] *See id.*

[88] Section 1636.4(a)(1)(vii).

[89] *See* EEOC, *Enforcement Guidance on Retaliation and Related Issues,* (II)(C)(1)–(3) (discussing causation standard and evidence of causation), (4) (discussing facts that would defeat a claim of retaliation), and (III) (discussing ADA interference claims) (2016) [hereinafter *Enforcement Guidance on Retaliation*], *https://www.eeoc.gov/laws/guidance/enforcement-guidance-retaliation-and-related-issues.*

that the supervisor and others at the covered entity discussed the idea of giving Nour office work but decided against it because then ''every woman is going to come in here and demand it.'' In this situation, failing to provide Nour the opportunity to work in the office could be a violation of 42 U.S.C. 2000gg–2(f).

80. Covered entities that do not provide interim reasonable accommodations are reminded that an unnecessary delay in making a reasonable accommodation, including in responding to the initial request, in the interactive process, or in providing the accommodation may result in a violation of the PWFA if the delay constitutes an unlawful failure to make reasonable accommodation, as set forth in 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)(1)).

1636.3(i) Reasonable Accommodation—Examples

81. The definition of ''reasonable accommodation'' in § 1636.3(h)(1) tracks the meaning of the term from the ADA statute, regulation, and EEOC guidance documents.[90] The PWFA, at 42 U.S.C. 2000gg–3, directs the Commission to issue regulations providing examples of reasonable accommodations addressing known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. The Commission notes that a qualified employee may need more than one of these accommodations at the same time, as a pregnancy progresses, or before, during, or after pregnancy. This list of possible reasonable accommodations is non-exhaustive.[91]

- Frequent breaks. The Commission has long construed the ADA to require additional breaks as a reasonable accommodation, absent undue hardship.[92] Under the PWFA, for example, a pregnant employee might need more frequent breaks due to shortness of breath; an employee recovering from childbirth might need more frequent restroom breaks or breaks due to fatigue; an employee who is nursing during work hours, where the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity (for example, if the employee normally works from home and the child is there or the child is at a nearby or onsite day care center), may need additional breaks to nurse during the workday;[93] or an employee who is lactating might need more frequent breaks for water, for food, or to pump.[94]
- Sitting/Standing. The Commission has recognized the provision of seating for jobs that require standing and standing for those that require sitting as potential reasonable accommodations under the ADA.[95] Under the PWFA, reasonable accommodation of these needs might include, but is not limited to, policy modifications and the provision of equipment, such as seating, a sit/stand desk, or anti-fatigue floor matting, among other possibilities.
- Schedule changes, part-time work, and paid and unpaid leave. Permitting the use of paid leave (whether accrued, as part of a short-term disability program, or as part of any other employee benefit) or providing unpaid leave is a potential reasonable accommodation under the ADA.[96] Additionally, leave for medical treatment can be a reasonable accommodation.[97] By way of example, under the PWFA an employee could need a schedule change to attend a round of IVF appointments to get pregnant; a part-time schedule to address fatigue during pregnancy; or unpaid leave for recovery from childbirth, medical treatment, postpartum treatment or recuperation related to a cesarean section, episiotomy, infection, depression, thyroiditis, or preeclampsia.
- Telework. Telework (or ''remote work'' or ''work from home'') has been recognized by the Commission as a potential reasonable accommodation under the ADA.[98] Under the PWFA, telework could be used to accommodate, for example, a period of bed rest, a mobility impairment, or a need to avoid heightened health risk, such as from a communicable disease.
- Parking. Providing a reserved parking space if the employee is otherwise entitled to use employer-provided parking may be a reasonable accommodation to assist an employee who is experiencing fatigue or limited mobility related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions.
- Light duty. Assignment to light duty or placement in a light duty program has been recognized by the Commission as a potential reasonable accommodation, even if the employer's light duty positions are normally reserved for those injured on-the-job and the person seeking a light duty position as an accommodation does not have an on-the-job injury.[99]
- Making existing facilities accessible or modifying the work environment.[100] Examples of reasonable accommodations might include allowing access to an elevator not normally used by employees; moving the employee's workspace closer to a bathroom; providing a fan to regulate temperature; moving a pregnant or lactating employee to a different workspace to avoid exposure to chemical fumes; changing the assigned worksite of the employee; or modifying the work space by providing local exhaust ventilation or providing enhanced personal protective equipment and training to reduce exposure to chemical hazards.[101] As noted in the regulation, this also may include modifications of the work environment to allow an employee to pump breast milk at work.[102]

[90] *See* 42 U.S.C. 12111(9); 29 CFR 1630.2(o); *Enforcement Guidance on Reasonable Accommodation, supra* note 12.

[91] *See, e.g.,* H.R. Rep. No. 117–27, pt. 1, at 29 (stating that ''[t]he Job Accommodation Network (JAN), an ADA technical assistance center . . . lists numerous potential accommodations . . . including more than 20 suggested accommodations just for lifting restrictions related to pregnancy'').

[92] *Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Question 22; *see also* H.R. Rep. 117–27, pt. 1, at 22; 168 Cong. Rec. S7,048 (daily ed. Dec. 8, 2022) (statement of Sen. Robert P. Casey, Jr.); 168 Cong. Rec. S10,081 (daily ed. Dec. 22, 2022) (statement of Sen. Robert P. Casey, Jr.).

[93] The Commission cautions that this provision is intended to address situations where the employee and child are in close proximity in the normal course of business. It is not intended to state that there is a right to create proximity to nurse because of an employee's preference. Of course, there may be limitations that would allow an employee to request as a reasonable accommodation the creation of proximity (*e.g.,* a limitation that made pumping difficult or unworkable).

[94] Breaks may be paid or unpaid depending on the employer's normal policies and other applicable laws. Breaks may exceed the number that an employer normally provides because reasonable accommodations may require an employer to alter its policies, barring undue hardship.

[102] On December 29, 2022, President Biden signed the Providing Urgent Maternal Protections for Nursing Mothers Act (PUMP Act) (Pub. L. 117–328, Div. KK, 136 Stat. 4459, 6093). The law extended coverage of the Fair Labor Standards Act of 1938, as amended (FLSA), 29 U.S.C. 201 *et seq.,* protections for nursing employees to apply to most employees. The FLSA provides most employees with the right to break time and a place to pump breast milk at work for a year following the child's birth. 29 U.S.C. 218d; U.S. Dep't of Lab., *Field Assistance Bulletin No. 2023–02: Enforcement of Protections for Employees to Pump Breast Milk at Work* (May 17, 2023), *https://www.dol.gov/sites/dolgov/files/WHD/fab/2023-2.pdf;* U.S. Dep't of Lab., *Fact Sheet #73: FLSA Protections for Employees to Pump Breast Milk at Work* (Jan. 2023), *https://www.dol.gov/agencies/whd/fact-sheets/73-flsa-break-time-nursing-mothers.* Employees who are not covered by the PUMP Act or employees who seek to pump longer than 1 year may seek reasonable accommodations regarding pumping under the PWFA. Further, whether or not employees are covered by the PUMP Act, employees may seek under the PWFA any reasonable accommodations needed for lactation, including things not necessarily required by the PUMP Act such as access to a sink, a refrigerator, and electricity. *See, e.g.,* U.S. Dep't of Lab., *Notice on Reasonable Break Time for Nursing Mothers,* 75 FR 80073, 80075–76 (Dec. 21, 2010) (discussing space requirements and noting factors such as the location of the area for pumping compared to the employee's workspace, the availability of a sink and running water, the location of a refrigerator to store

Continued

• Job restructuring.[103] Job restructuring might involve, for example, removing a marginal function (any nonessential job function) that requires a pregnant employee to climb a ladder or occasionally retrieve boxes from a supply closet, or providing assistance with manual labor.[104]

• Temporarily suspending one or more essential function(s). For some positions, this may mean that one or more essential function(s) are temporarily suspended, and the employee continues to perform the remaining functions of the job. For others, the essential function(s) will be temporarily suspended, and the employee may be assigned other tasks. For still others, the essential function(s) will be temporarily suspended, and the employee may perform the functions of a different job to which the employer temporarily transfers or assigns them. For yet others, the essential function(s) will be temporarily suspended, and the employee will participate in the employer's light or modified duty program.

• Acquiring or modifying equipment, uniforms, or devices.[105] Examples of reasonable accommodations might include providing uniforms and equipment, including safety equipment, that account for changes in body size during and after pregnancy, including during lactation; providing devices to assist with mobility, lifting, carrying, reaching, and bending; or providing an ergonomic keyboard to accommodate pregnancy-related hand swelling or tendonitis.

• Adjusting or modifying examinations or policies.[106] Examples of reasonable accommodations include allowing employees with a known limitations to postpone examinations that require physical exertion. Adjustments to policies also could include increasing the time or frequency of breaks to eat or drink or to use the restroom.

82. Pursuant to 42 U.S.C. 2000gg–3, the following are further examples of types of reasonable accommodations and how they can be analyzed.[107]

Example #26/Telework: Gabriela, a billing specialist in a doctor's office, experiences nausea and vomiting beginning in her first trimester of pregnancy. Because the nausea makes commuting extremely difficult, Gabriela makes a verbal request to her manager stating she has nausea and vomiting due to her pregnancy and requests that she be permitted to work from home for the next 2 months so that she can avoid the difficulty of commuting. The billing work can be done from her home or in the office.

1. Known limitation and request for reasonable accommodation: Gabriela's nausea and vomiting is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Gabriela needs an adjustment or change at work due to the limitation; Gabriela has communicated the information to the employer.

2. Qualified: Gabriela can perform the essential functions of the job with the reasonable accommodation of telework.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #27/Temporary Suspension of an Essential Function: Nisha, a nurse assistant working in a large elder care facility, is advised in the fourth month of her pregnancy to stop lifting more than 25 pounds for the remainder of the pregnancy. One of the essential functions of the job is to assist patients in dressing, bathing, and moving from and to their beds, tasks that typically require lifting more than 25 pounds. Nisha sends an email to human resources asking that she not be required to lift more than 25 pounds for the remainder of her pregnancy and requesting a place in the established light duty program under which employees who are hurt on the job take on different duties while coworkers take on their temporarily suspended duties.

1. Known limitation and request for reasonable accommodation: Nisha's lifting restriction is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Nisha needs an adjustment or change at work due to the limitation; Nisha has communicated that information to the employer.

2. Qualified: Nisha is asking for the temporary suspension of an essential function. The suspension is temporary, and Nisha can perform the essential functions of the job ''in the near future'' (generally within 40 weeks). It appears that the inability to perform the function can be reasonably accommodated through its temporary suspension and Nisha's placement in the light duty program.

3. The employer must grant the reasonable accommodation of temporarily suspending the essential function (or another reasonable accommodation) absent undue hardship. As part of the temporary suspension, the employer may assign Nisha to the light duty program.

Example #28: The scenario is the same as described in Example #27 of this appendix, except that the employer establishes that the light duty program is limited to 10 slots and all 10 slots are filled for the next 6 months. In these circumstances, the employer should consider other possible reasonable accommodations, such as the temporary suspension of an essential function without assigning Nisha to the light duty program, or job restructuring outside of the established light duty program. If such accommodations cannot be provided without undue hardship, then the employer should consider providing a temporary reassignment to a vacant position for which Nisha is qualified, with or without reasonable accommodation. For example, if the employer has a vacant position that does not require lifting patients which Nisha could perform with or without a reasonable accommodation, the employer must offer her the temporary reassignment as a reasonable accommodation, absent undue hardship.

Example #29/Temporary Suspension of Essential Function(s): Fatima's position as a farmworker usually involves working outdoors in the field although there also is indoor work such as sorting produce. After she returns from giving birth, Fatima develops postpartum thyroiditis, which has made her extremely sensitive to heat, and has contributed to muscle weakness and fatigue. She seeks the accommodation of a 7-month temporary suspension of the essential function of working outdoors in hot weather.

1. Known limitation and request for reasonable accommodation: Fatima's sensitivity to heat, muscle weakness, and fatigue are physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Fatima needs an adjustment or change at work due to the limitation; Fatima has communicated this information to the employer.

2. Qualified: Fatima is asking for the temporary suspension of an essential function. The suspension is temporary, and Fatima could perform the essential functions of the job in the near future (7 months). It appears that the inability to perform the essential function can be reasonably accommodated by temporarily assigning Fatima indoor work, such as sorting produce.

3. The employer must grant the accommodation of temporarily suspending the essential function (or another reasonable accommodation) absent undue hardship.

Example #30/Assistance with Performing an Essential Function: Mei, a warehouse worker, uses her employer's online accommodation portal to ask for a dolly to assist her for 3 months in moving items that are bulky, in order to accommodate lifting and carrying restrictions due to her cesarean section.

1. Known limitation and request for reasonable accommodation: Mei's lifting and carrying restrictions are physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Mei needs an adjustment or change at work due to the limitation; Mei has communicated this information to the employer.

---

milk, and electricity may affect the amount of break time needed). The PUMP Act is enforced by the Department of Labor, not the EEOC.

[107] As with all the examples in this Interpretive Guidance, these examples are illustrative only and are not intended to suggest that these are the only conditions under which an employee may receive a reasonable accommodation, or that the reasonable accommodations sought or given in the examples are the only ones that should be selected in similar situations.

For further examples, see the Job Accommodation Network (JAN), which provides free assistance regarding workplace accommodation issues. *See generally* Job Accommodation Network [hereinafter JAN], *https://askjan.org/* (last visited Mar. 25, 2024). Covered entities and employees also may seek additional information from the National Institute for Occupational Safety and Health (NIOSH). *See* U.S. Dep't of Health & Hum. Servs., Ctrs. for Disease Control & Prevention, Nat'l Inst. for Occupational Safety & Health, *Reproductive Health and The Workplace, https://www.cdc.gov/niosh/topics/repro/default.html* (last reviewed May 1, 2023).

2. Qualified: Mei can perform the essential functions of the job with the reasonable accommodation of a dolly.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #31/Appropriate Uniform and Safety Gear: Ava is a police officer and is pregnant. They ask their union representative for help getting a larger size uniform and larger size bullet proof vest in order to cover their growing pregnancy. The union representative asks management for an appropriately-sized uniform and vest for Ava.

1. Known limitation and request for reasonable accommodation: Ava's inability to wear the standard uniform and safety gear is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Ava needs an adjustment or change at work due to the limitation; Ava's representative has communicated this information to the employer.

2. Qualified: Ava can perform the essential functions of the job with the reasonable accommodation of appropriate gear.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #32/Temporary Suspension of Essential Function(s): Darina is a police officer and is 3 months pregnant. She talks to human resources about being taken off of patrol and put on light duty for the remainder of her pregnancy to avoid physical altercations and the need to physically subdue suspects, which may harm her pregnancy. The department has an established light duty program that it uses for officers with injuries that occurred on the job.

1. Known limitation and request for reasonable accommodation: Darina's inability to perform certain patrol duties is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Darina needs an adjustment or change at work due to the limitation; Darina has communicated this information to the employer.

2. Qualified: The suspension of the essential functions of patrol duties is temporary, and Darina can perform the essential functions of the job in the near future (within generally 40 weeks). It appears that the temporary suspension of the essential functions can be accommodated through the light duty program.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #33/Temporary Suspension of Essential Function(s): Rory works in a fulfillment center where she is usually assigned to a line that requires moving 20-pound packages. After returning from work after giving birth, Rory lets her supervisor know that she has a lifting restriction of 10 pounds due to sciatica during her pregnancy that continues postpartum. The restriction is for 6 months. The employer does not have an established light duty program. There are other lines in the warehouse that do not require lifting more than 10 pounds.

1. Known limitation and request for reasonable accommodation: Rory's lifting restriction is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Rory needs an adjustment or change at work due to the limitation; Rory has communicated this information to the employer.

2. Qualified: The suspension of the essential function of lifting packages that weigh up to 10 pounds is temporary, and Rory can perform the essential function in the near future (6 months). It appears that the temporary suspension of the essential function could be accommodated by temporarily assigning her to a different line.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #34/Unpaid Leave: Tallah, a newly hired cashier at a small bookstore, has a miscarriage in the third month of pregnancy and asks a supervisor for 10 days of leave to recover. As a new employee, Tallah has only earned 2 days of paid leave, she is not covered by the FMLA, and the employer does not have a company policy regarding the provision of unpaid leave. Nevertheless, Tallah is covered by the PWFA.

1. Known limitation and request for reasonable accommodation: Tallah's need for time for recovery is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Tallah needs an adjustment or change at work due to the limitation; Tallah has communicated this information to the employer.

2. Qualified: After the reasonable accommodation of leave, Tallah will be able to perform the essential functions of the job with or without accommodation.

3. The employer must grant the accommodation of unpaid leave (or another reasonable accommodation) absent an undue hardship.

Example #35/Unpaid Leave for Prenatal Appointments: Margot started working at a retail store shortly after she became pregnant. She has an uncomplicated pregnancy. Because she has not worked at the store very long, she has earned very little leave and is not covered by the FMLA. In her fifth month of pregnancy, she asks her supervisor for the reasonable accommodation of unpaid time off beyond the leave she has earned to attend her regularly scheduled prenatal appointments.

1. Known limitation and request for reasonable accommodation: Margot's need to attend health care appointments is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Margot needs an adjustment or change at work due to the limitation; Margot has communicated the information to the employer.

2. Qualified: Margot can perform the essential functions of the job with the reasonable accommodation of leave to attend health care appointments.

3. The employer must grant the accommodation of unpaid time off (or another reasonable accommodation) absent undue hardship.

Example #36/Unpaid Leave for Recovery from Childbirth: Sofia, a custodian, is pregnant and will need 6 to 8 weeks of leave to recover from childbirth. Sofia is nervous about asking for leave, so Sofia asks her mother, who knows the owner, to do it for her. The employer has a sick leave policy, but no policy for longer periods of leave. Sofia is not eligible for FMLA leave because her employer is not covered by the FMLA.

1. Known limitation and request for reasonable accommodation: Sofia's need to recover from childbirth is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Sofia needs an adjustment or change at work due to the limitation; Sofia's representative has communicated this information to the employer.

2. Qualified: After the reasonable accommodation of leave, Sofia will be able to perform the essential functions of the job with or without reasonable accommodation.

3. The employer must grant the accommodation of unpaid leave (or another reasonable accommodation) absent undue hardship.

Example #37/Unpaid Leave for Medical Appointments: Taylor, a newly hired member of the waitstaff, requests time off to attend therapy appointments for postpartum depression. As a new employee, Taylor has not yet accrued sick or personal leave and is not covered by the FMLA. Taylor asks her manager if there is some way that she can take time off.

1. Known limitation and request for reasonable accommodation: Taylor's need to attend health care appointments is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Taylor needs an adjustment or change at work due to the limitation; Taylor has communicated this information to the employer.

2. Qualified: Taylor can perform the essential functions of the job with a reasonable accommodation of time off to attend the health care appointments.

3. The employer must grant the accommodation (or another reasonable accommodation) absent an undue hardship.

Example #38/Unpaid Leave: Claudine is 6 months pregnant and asks for leave so that she can attend her regular check-ups. The clinic where Claudine gets her health care is an hour drive away, the clinic frequently gets delayed, and Claudine has to wait for her appointment. Depending on the time of day, between commuting to the appointment, waiting for the appointment, and seeing her provider, Claudine may miss all or most of an assigned day at work. Claudine's employer is not covered by the FMLA, and Claudine does not have any sick leave left. Claudine asks human resources for time off as a reasonable accommodation so she can attend her medical appointments.

1. Known limitation and request for reasonable accommodation: Claudine's need to attend health care appointments is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Claudine needs an adjustment or change at work due to the limitation; Claudine has communicated that information to the employer.

2. Qualified: Claudine can perform the essential functions of the job with a reasonable accommodation of time off to attend health care appointments.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #39/Telework: Raim, a social worker, is pregnant. As her third trimester starts, she is feeling more fatigue and needs more rest. She asks her supervisor if she can telework and see clients virtually so she can lie down and take rest breaks between client appointments.

1. Known limitation and request for reasonable accommodation: Raim's fatigue is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Raim needs an adjustment or change at work due to the limitation; Raim has communicated that information to the employer.

2. Qualified: Assuming the appointments can be conducted virtually, Raim can perform the essential functions of the job with the reasonable accommodation of working virtually. If there are certain appointments that must be done in person, the reasonable accommodation could be a few days of telework a week and then other accommodations that would give Raim time to rest, such as assigning Raim in-person appointments at times when traffic will be light so that they are easy to get to, or setting up Raim's assignments so that on the days when she has in-person appointments she has breaks between them. Or the reasonable accommodation can be the temporary suspension of the essential function of in-person appointments.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #40/Temporary Workspace/Possible Temporary Suspension of Essential Function(s): Brooke, a research assistant who is in her first trimester of pregnancy, asks the lead researcher in the laboratory for a temporary workspace that would allow her to work in a well-ventilated area because her work involves hazardous chemicals that her health care provider has told her to avoid. There are several research projects she can work on that do not involve exposure to hazardous chemicals.

1. Known limitation and request for reasonable accommodation: Brooke's need to avoid the chemicals related to maintaining her health or the health of her pregnancy is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Brooke needs an adjustment or change at work due to the limitation; Brooke has communicated this information to the employer.

2. Qualified: If working with hazardous chemicals is an essential function of the job, Brooke may be able to perform that function with the accommodation of a well-ventilated work area, a chemical fume hood, local exhaust ventilation, and/or personal protective equipment such as chemical-resistant gloves, a lab coat, and a powered air-purifying respirator. If providing these modifications would be an undue hardship or would not be effective, Brooke can still be qualified with the temporary suspension of the essential function of working with the hazardous chemicals because Brooke's inability to work with hazardous chemicals is temporary, and Brooke can perform the essential functions of the job in the near future (within generally 40 weeks). Her need to avoid exposure to hazardous chemicals also can be accommodated by allowing her to focus on the other research projects.

3. The employer must grant the accommodation (or another reasonable accommodation), absent undue hardship. If the employer cannot accommodate Brooke in a way that allows Brooke to continue to perform the essential function(s) of the position, the employer should consider providing alternative reasonable accommodations, including temporarily suspending one or more essential functions, absent undue hardship.

Example #41/Temporary Transfer to Different Location: Katherine, a budget analyst who has cancer also is pregnant, which creates complications for her cancer treatment. She asks her manager for a temporary transfer so that she can work out of an office in a larger city that has a medical center that can address her medical needs due to the combination of cancer and pregnancy. Katherine is able to do all her essential functions for the original office from the employer's other location and can continue to work full-time while obtaining treatment.

1. Known limitation and request for reasonable accommodation: Katherine's need for treatment at a particular medical facility related to maintaining her health or the health of the pregnancy is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Katherine needs an adjustment or change at work due to the limitation; Katherine has communicated that information to the employer.

2. Qualified: Katherine is able to perform the essential functions of the job and work full-time with the reasonable accommodation of a temporary transfer to a different location.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship. A reasonable accommodation can include a workplace change to facilitate medical treatment, including accommodations such as leave, a schedule change, or a temporary transfer to a different work location needed in order to obtain treatment.

Example #42/Pumping Breast Milk: Salma gave birth 13 months ago and wants to be able to pump breast milk at work. Salma works for an employment agency that sends her to different jobs for a day or week at a time. Salma asks the person at the agency who makes her assignments to ensure she will be able to take breaks and have a space to pump breast milk at work at her various assignments.

1. Known limitation and request for reasonable accommodation: Salma's need to express breast milk is a physical or mental condition related to, affected by, or arising out pregnancy, childbirth, or related medical conditions; Salma needs an adjustment or change at work due to the limitation; Salma has communicated this information to the employer.

2. Qualified: Salma is able to perform the essential functions of the jobs to which she is assigned with the reasonable accommodation of being assigned to workplaces where she can pump at work.

3. The agency must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #43/Commuting: Jayde is a retail clerk who gave birth 2 months ago. Because of childbirth, Jayde is experiencing urinary incontinence, constipation, and hemorrhoids. Jayde normally commutes by driving 45 minutes; because of the limitations due to childbirth, it is painful for Jayde to sit in one position for an extended period, and Jayde may need a bathroom during the commute. Jayde requests the reasonable accommodation of working at a different, closer store for 2 months. The commute to this other store is only 10 minutes.

1. Known limitation and request for reasonable accommodation: Jayde's urinary incontinence, constipation, and hemorrhoids are physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Jayde needs an adjustment or change at work due to the limitation; Jayde has communicated this information to the employer.

2. Qualified: Jayde can perform the essential functions of the job with the reasonable accommodation of a temporary assignment to a different location.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

Example #44/Medications Affected by Pregnancy: Riya is a data analyst who is pregnant, and her health care provider recommended that she stop taking her current ADHD medication and switch to another medication. As Riya is adjusting to her new medication, she finds it more difficult to concentrate and asks for more frequent breaks, a quiet place to work, and for her tasks to be divided up into smaller duties.

1. Known limitation and request for reasonable accommodation: Riya's difficulty concentrating due to her change in medication is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions; Riya needs an adjustment or change at work due to the limitation; Riya has provided this information to the employer.

2. Qualified: Riya can perform the essential functions of the job with the reasonable accommodation of more frequent breaks, a quiet place to work, and division of her tasks into smaller duties.

3. The employer must grant the accommodation (or another reasonable accommodation) absent undue hardship.

1636.3(j) Undue Hardship

1636.3(j)(1) Undue Hardship—In General

83. The PWFA provides that ''undue hardship'' shall be construed under the

PWFA as it is under the ADA and as set forth in this part.[108] This part, at § 1636.3(j)(1), reiterates the definition of undue hardship provided in the ADA statute and regulation, which explains that undue hardship means significant difficulty or expense incurred by a covered entity.[109] Because the definition of undue hardship under the PWFA follows the ADA, under the PWFA the term ''undue hardship'' means significant difficulty or expense in, or resulting from, the provision of the accommodation. The ''undue hardship'' provision takes into account the financial realities of the particular employer or other covered entity. However, the concept of undue hardship is not limited to financial difficulty. ''Undue hardship'' refers to any accommodation that would be unduly costly, extensive, substantial, or disruptive, or that would fundamentally alter the nature or operation of the business.[110]

84. As under the ADA, if an employer asserts undue hardship based on cost, then there will be a determination made regarding whose financial resources should be considered.[111] Further, in determining whether an accommodation causes an undue hardship an employer cannot simply assert that a needed accommodation will cause it undue hardship and thereupon be relieved of the duty to provide accommodation. Rather, an employer will have to present evidence and demonstrate that the accommodation will, in fact, cause it undue hardship. Whether a particular accommodation will impose an undue hardship for a particular employer is determined on a case-by-case basis. Consequently, an accommodation that poses an undue hardship for one employer at a particular time may not pose an undue hardship for another employer, or even for the same employer at another time.[112]

85. As the Commission has stated under the ADA, ''[u]ndue hardship must be based on an individualized assessment of current circumstances that show that a specific reasonable accommodation would cause significant difficulty or expense.'' [113]

86. Additionally, an employer cannot demonstrate undue hardship based on employees', clients', or customers' fears or prejudices toward the employee's pregnancy, childbirth, or related medical conditions, nor can an employer demonstrate undue hardship based on the possibility that the provision of an accommodation would negatively impact the morale of other employees.[114] Employers, however, may be able to show undue hardship where the provision of an accommodation would be unduly disruptive to other employees' ability to work.

87. Consistent with the ADA, a covered entity asserting that a reasonable accommodation will cause an undue hardship must offer other reasonable accommodations that it can provide, absent undue hardship.[115] Additionally, if the employer can provide only part of the reasonable accommodation absent undue hardship—for example, the employer can provide 6 weeks of leave absent undue hardship but the 8 weeks that the employee is seeking would cause undue hardship—the employer must provide the reasonable accommodation up to the point of undue hardship. Thus, in the example, the employer would have to provide 6 weeks of leave and then consider whether there are other reasonable accommodations it could provide for the remaining 2 weeks that would not cause an undue hardship.

1636.3(j)(2) Undue Hardship Factors

88. Section 1636.3(j)(2) sets out factors to be considered when determining whether a particular accommodation would impose an undue hardship on the covered entity using the factors from the ADA regulation.[116]

89. Examples Regarding Undue Hardship:

Example #45/Undue Hardship: Patricia, a convenience store clerk, requests that she be allowed to switch from full-time to part-time work for the last 3 months of her pregnancy due to extreme fatigue. The store assigns two clerks per shift. If Patricia's hours are reduced, the other clerk's workload will increase significantly beyond his ability to handle his responsibilities. The store determines that such an arrangement will result in inadequate coverage to serve customers in a timely manner, keep the shelves stocked, and maintain store security. It also would be infeasible for the store to hire a temporary worker on short notice at this time. Based on these facts, the employer likely can show undue hardship based on the significant disruption to its operations and, therefore, can refuse to reduce Patricia's hours. The employer, however, must offer other reasonable accommodations, such as providing a stool and allowing rest breaks throughout the shift, assuming they do not cause undue hardship.

Example #46/Undue Hardship: Shirin, a dental hygienist who is undergoing IVF treatments, needs to attend medical appointments for the IVF treatment near her house every other day and is fatigued. She asks her supervisor if the essential function of seeing patients can be temporarily suspended, so that she does not see patients 3 days a week and instead can work from home on those days assisting with billing and insurance claims, work for which she is qualified. Temporarily suspending the essential function of seeing patients and allowing Shirin to work at home may be an undue hardship for the employer because there is only one other hygienist and there is not enough work for Shirin to do remotely. However, the employer must offer other reasonable accommodations, such as a schedule that would allow Shirin breaks between patients, part-time work, permitting her to work from home for 1 or 2 days, or a reduced schedule, assuming they do not cause undue hardship.

Example #47/Undue Hardship: Cynthia, an office manager working in a large building, has asthma that she controls with medication. Because of her pregnancy, her asthma becomes worse, and she requests a ban on airborne irritants and chemicals (*e.g.,* fragrances, sprays, cleaning products) in the building. The employer could potentially show that ensuring a workplace completely free of any scents or irritants would impose a significant financial and administrative burden on it, as a ban would be difficult to enforce and encompass a wide variety of hygiene and cleaning products. Nevertheless, the employer must offer alternative accommodations, such as providing an air purifier, minimizing the use of irritants in her vicinity, or allowing her to telework, assuming they do not cause undue hardship.

1636.3(j)(3) Undue Hardship—Temporary Suspension of an Essential Function(s)

90. In certain circumstances, the PWFA requires an employer to accommodate an employee's temporary inability to perform one or more essential functions. Therefore, § 1636.3(j)(3) provides additional factors that may be considered when determining whether the temporary suspension of one or more essential functions causes an undue hardship. These additional factors include: the length of time that the employee will be unable to perform the essential function(s); whether, through the methods listed in § 1636.3(f)(2)(iii) (describing potential reasonable accommodations related to the temporary suspension of essential function(s)) or otherwise, there is work for the employee to accomplish;[117] the nature of the essential function(s), including its frequency; whether the covered entity has provided other employees in similar positions who are unable to perform essential function(s) of their positions with temporary suspensions of those function(s) and other duties; if necessary, whether or not there are other employees, temporary employees, or third parties who can perform or be temporarily hired to perform the essential function(s) in question; and whether the essential function(s) can be postponed or remain unperformed for any length of time and, if so, for how long.

91. As with other reasonable accommodations, if the covered entity can establish that accommodating an employee's temporary suspension of an essential function(s) would impose an undue hardship

[108] 42 U.S.C. 2000gg(7).

[109] 42 U.S.C. 12111(10)(A); 29 CFR 1630.2(p); *see Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text after n.112.

[110] *See* 29 CFR part 1630, appendix, 1630.2(p). The ADA defines ''undue hardship'' at 42 U.S.C. 12111(10).

[111] *See* 29 CFR part 1630, appendix, 1630.2(p).

[112] *See* 29 CFR part 1630, appendix, 1630.15(d).

[113] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text accompanying n.113.

[114] *See* 29 CFR part 1630, appendix, 1630.15(d) (explaining that under the ADA an employer cannot show undue hardship based on employees' fears or prejudices toward the individual's disability or by showing that the provision of the accommodation has a negative impact on the morale of its other employees but not on the ability of these employees to perform their jobs); *Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text surrounding n.117; *cf. Groff* v. *DeJoy,* 600 U.S. 447, 472 (2023) (providing that, under the Title VII undue hardship standard, an employer may not justify refusal to accommodate based on other employees' bias or hostility).

[115] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text after n.116.

[116] *See* 29 CFR 1630.2(p).

[117] The employer is not required to make up work for an employee.

if extended beyond a certain period of time, the covered entity would only be required to provide that accommodation for the period of time that it does not impose an undue hardship. For example, consider the situation where an employee seeks to have an essential function suspended for 6 months. The employer can go without the function being accomplished for 4 months, but after that, it will create an undue hardship. The employer must accommodate the employee's inability to perform the essential function for 4 months and then consider whether there are other reasonable accommodations that it can provide, absent undue hardship, for the remaining time.

92. Section 1636.3(j)(3)(iv) is intended to account for situations where the covered entity has provided a similar accommodation to other employees. If the covered entity has temporarily suspended essential functions for other employees in similar positions before, it would tend to demonstrate that the accommodation is not an undue hardship. The reverse, however, is not true. A covered entity's failure to temporarily suspend an essential function(s) in the past does not tend to demonstrate that the accommodation creates an undue hardship because reasonable accommodation can include changing workplace procedures or rules.

1636.3(j)(4) Undue Hardship—Predictable Assessments [118]

93. The Commission has identified a limited number of simple modifications that will, in virtually all cases, be found to be reasonable accommodations that do not impose an undue hardship when requested by a qualified employee due to pregnancy.

94. These modifications are: (1) allowing an employee to carry or keep water near and drink, as needed; (2) allowing an employee to take additional restroom breaks, as needed; (3) allowing an employee whose work requires standing to sit and whose work requires sitting to stand, as needed; and (4) allowing an employee to take breaks to eat and drink, as needed.[119] These accommodations are low cost and unlikely to affect the overall financial resources of the covered entity, the operations of the facility, or the ability of the facility to conduct business.[120] By identifying these predictable assessments, the Commission seeks to improve how quickly employees will be able to receive certain simple, common accommodations for pregnancy under the PWFA and thereby reduce litigation.

95. The Commission emphasizes that the predictable assessments provision does not alter the meaning of the term ''reasonable accommodation'' or ''undue hardship.'' Employers should still conduct an individualized assessment when one of these accommodations is requested by a pregnant employee to determine if the requested accommodation causes an undue hardship, and employers may still bring forward facts to demonstrate that the proposed accommodation imposes an undue hardship for its business under its own particular circumstances. Instead, the provision informs covered entities that the individualized assessment of whether one of the straightforward and simple modifications listed in paragraphs (j)(4)(i) through (iv) is a reasonable accommodation that would cause undue hardship will, in virtually all cases, result in a determination that the four modifications are reasonable accommodations that will not impose an undue hardship under the PWFA when they are requested as workplace accommodations by an employee who is pregnant.

96. Examples Regarding Predictable Assessments:

Example #48/Predictable Assessments: Amara, a quality inspector for a manufacturing company, experiences painful swelling in her legs, ankles, and feet during the final 3 months of her pregnancy. Her job requires standing for long periods of time, although it can be performed sitting as well. Amara asks the person who assigns her daily work for a stool to sit on while she performs her job. Amara's swelling in her legs and ankles is a physical or mental condition related to, affected by, or arising out of pregnancy. Amara's request is for a modification that will virtually always be a reasonable accommodation that does not impose an undue hardship. The employer argues that it has never provided a stool to any other worker who complained of difficulty standing, but points to nothing that suggests that this modification is not reasonable or that it would impose an undue hardship on the operation of the employer's business. The employer has not established that providing Amara a stool imposes an undue hardship.

Example #49/Predictable Assessments: Jazmin, a pregnant teacher who typically is only able to use the bathroom when her class is at lunch, requests additional bathroom breaks during her sixth month of pregnancy. Jazmin's need for additional bathroom breaks is a physical or mental condition related to, affected by, or arising out of pregnancy. The employer argues that finding an adult to watch over the Jazmin's class when she needs to take a bathroom break imposes an undue hardship. However, there are several teachers in nearby classrooms, aides in some classes, and an administrative assistant in the front office, any of whom, with a few minutes' notice, would be able to provide supervision either by standing in the hallway between classes or sitting in Jazmin's classroom to allow Jazmin a break to use bathroom. The employer has not established that providing Jazmin with additional bathroom breaks imposes an undue hardship.

Example #50/Predictable Assessments: Addison, a clerk responsible for receiving and filing construction plans for development proposals, needs to maintain a regular intake of water throughout the day to maintain a healthy pregnancy. They ask their manager if an exception can be made to the office policy prohibiting liquids at workstations. Addison's need to maintain a regular intake of water is a physical or mental condition related to, affected by, or arising out of pregnancy. Here, although the manager decides against allowing Addison to bring water into their workstation, he proposes that a table be placed just outside the workstation and gives permission for Addison to access water placed on the table as needed. The employer has satisfied its obligation to provide a reasonable accommodation.

Undue Hardship—Consideration of Prior or Future Accommodations

97. An employer may consider the current impact of past and current cumulative costs or burdens of accommodations that have already been granted to other employees or the same employee, when considering whether a new request for the same or a similar accommodation imposes an undue hardship. For example, where an employer is already allowing two of the three employees who are able to open the store to arrive after opening time on certain days, it could pose an undue hardship to grant the accommodation of a delayed arrival time to the third employee on those same days.

98. The fact that an employer has provided the same or similar accommodations in the past may indicate that the accommodation can be provided without causing an undue hardship. Additionally, even if an employer previously failed to provide an employee a similar type of accommodation, if the employer intends to assert that providing the accommodation to another employee would pose an undue hardship, the employer should engage in the interactive process with the employee regarding the currently requested accommodation and determine whether the same conditions that previously imposed an undue hardship still exist. Ultimately, whether a particular accommodation will impose an undue hardship for an employer is determined on a case-by-case basis.

99. While an employer may consider the impact of prior accommodations granted to the employee currently seeking an accommodation, the mere fact that an employee previously received an accommodation or, indeed, several accommodations, does not establish that it would impose an undue hardship on the employer to grant a new accommodation.

100. Thus, for example, the fact that an employer already has provided an employee with an accommodation, such as the

[118] The term ''predictable assessments'' also is seen in the ADA regulations, where it applies to establishing coverage. In the ADA, ''predictable assessments'' are impairments that will ''in virtually all cases'' be considered a disability covered by the ADA. 29 CFR 1630.2(j)(3). As used in this PWFA rule, however, the term relates to accommodations, not limitations or disabilities.

[119] The first and fourth categories of predictable assessments are related but separate. The first category of accommodations addresses an employee's ability to carry water on the employee's person while they perform their job duties, or their ability to have water nearby while working, without requiring the employee to take a break to access and drink it. The fourth category of accommodations addresses an employee's ability to take additional, short breaks in performing work (either at the employee's work location or a break location) to eat and drink (including beverages that are not water). Additionally, depending on the worksite, any employee may be able to eat or drink at the work location without taking a break.

[120] As explained in the NPRM, the Commission identified these modifications based on the legislative history of the PWFA and analogous State laws. 88 FR 54734.

temporary suspension of an essential function due to their pregnancy, does not establish that providing this accommodation due to a post-pregnancy limitation would be an undue hardship. Instead, the employer would have to provide evidence showing that continuing the temporary suspension would impose an undue hardship. This showing could include, for example, evidence demonstrating why and how the cumulative impact of having already provided the accommodation during pregnancy makes the current impact of providing it post-pregnancy rise to the level of significant difficulty or expense.

101. A covered entity cannot demonstrate that a reasonable accommodation imposes an undue hardship based on the possibility—whether speculative or near certain—that it will have to provide the accommodation to other employees in the future.[121] Relatedly, a covered entity that receives numerous requests for the same or similar accommodations at the same time (for example, parking spaces closer to the factory) cannot fail to provide all of them simply because processing the volume of current or anticipated requests is, or would be, burdensome or because it cannot grant all of them. Rather, the covered entity must evaluate and provide reasonable accommodations on a case-by-case basis unless, or until, doing so imposes an undue hardship.

102. Finally, for the purposes of an employer asserting undue hardship based on the impact of prior or future accommodations, as with any assertion of an undue hardship, ''[g]eneralized conclusions will not suffice to support a claim of undue hardship. Instead, undue hardship must be based on an individualized assessment of current circumstances that show that a specific reasonable accommodation would cause significant difficulty or expense.'' [122]

Undue Hardship and Safety

103. An employer's contention that the accommodation an employee requests would cause a safety risk to co-workers or clients will be assessed under the PWFA's undue hardship standard. For example, consider a qualified pregnant employee in a busy fulfillment center that has narrow aisles between the shelves of products. The employee asks for the reasonable accommodation of a cart to use while they are walking through the aisles filling orders. The employer's assertion that the aisles are too narrow and its concern for the safety of other workers being bumped by the cart could be raised as a defense based on undue hardship, specifically § 1636.3(j)(2)(v), but the employer will have to demonstrate that the accommodation would actually pose an undue hardship.

104. If a particular reasonable accommodation causes an undue hardship because of safety, just as with any other situation where an employer cannot provide the requested accommodation, the employer must provide an alternative reasonable accommodation, if there is one available that does not impose an undue hardship. Importantly, assertions by employers that employees create a safety risk merely by being pregnant (as opposed to a safety risk that stems from an accommodation for a pregnancy-related limitation) should be addressed under Title VII's bona fide occupational qualification (BFOQ) standard and not under the PWFA.[123]

1636.3(k) Interactive Process

105. The PWFA states that the interactive process will typically be used to determine an appropriate reasonable accommodation.[124] Section 1636.3(k) largely adopts the explanation of the interactive process in the regulation implementing the ADA.[125] Section 1636.3(k) defines the interactive process as an informal, interactive process and states that the process should identify the known limitation and the adjustment or change at work that is needed due to the limitation, if either of these are not clear from the request, as well as potential reasonable accommodations.

106. There are no rigid steps that must be followed when engaging in the interactive process under the PWFA, and information provided by the employee does not need to be in any specific format, include specific words, or be on a specific form.

107. In many instances, the appropriate reasonable accommodation may be obvious to either or both the employer and the employee with the known limitation so that the interactive process can be a brief discussion. The request and granting of the accommodation can occur in a single informal conversation or short email exchange.[126]

108. Examples Regarding the Interactive Process:

Example #51/Interactive Process: Marge works at an assembly plant. She is 5 weeks pregnant. She knows that staying hydrated is important during pregnancy. She texts her supervisor that she is pregnant and that she needs to carry water with her and use the bathroom more frequently. Her supervisor explains how Marge can call for a substitute when she needs a break, and Marge uses that system when she needs to drink water or go to the bathroom.

Example #52/Interactive Process: Launa is a customer service representative. She is 6 weeks pregnant. Some mornings she has morning sickness. She has found that eating small amounts during the morning helps to control it. Launa uses the company's internal message system to tell her supervisor that she is pregnant and either needs to take breaks to eat or needs to eat in her cubicle, and that she may need a break if she is feeling nauseous. Her supervisor agrees.

109. In some instances, for example to determine an appropriate reasonable accommodation, the employer and employee may engage further in the interactive process. The process is not composed of rigid steps but is an opportunity for the covered entity and employee to participate in a dialogue to quickly identify a reasonable accommodation that enables the employee to address their limitation through a reasonable accommodation that does not pose an undue hardship. The interactive process also may provide an opportunity for the covered entity and the employee to discuss how different accommodations will provide the employee with equal employment opportunity and what accommodation the employee prefers.[127]

110. While the interactive process is an informal exchange of information, there are still certain rules that apply. The ADA restrictions on when employers are permitted to ask disability-related questions and require medical examinations apply to all such inquiries or examinations, whether employers make them of people with or without disabilities, including questions that an employer asks during the interactive process under the PWFA.[128] For example, an employer who requires an employee who requests an accommodation due to a pregnancy-related limitation to fill out a form identifying their physical and mental impairments would have difficulty demonstrating that this disability-related inquiry is job-related and consistent with business necessity, as required by the ADA.[129] Further, if a covered entity has sufficient information from the employee to determine whether they have a PWFA limitation and need an adjustment or change at work due to the limitation, requiring the

[123] *See, e.g., UAW* v. *Johnson Controls,* 499 U.S. 187, 211 (1991) (striking down the employer's fetal protection policy that limited the opportunities of women); *Everts* v. *Sushi Brokers LLC,* 247 F. Supp. 3d 1075, 1082–83 (D. Ariz. 2017) (relying on *Johnson Controls* and denying BFOQ defense in a case regarding a pregnant employee as a restaurant server, noting that, ''[u]nlike cases involving prisoners and dangers to customers where a BFOQ defense might be colorable, the present situation is exactly the type of case that Title VII guards against''); *EEOC* v. *New Prime, Inc.,* 42 F. Supp. 3d 1201, 1213–14 (W.D. Mo. 2014) (relying on *Johnson Controls* and denying a policy allegedly in place for the ''privacy'' and ''safety'' of women employees was a BFOQ); *Enforcement Guidance on Pregnancy Discrimination, supra* note 24, at (I)(B)(1)(c).

[124] 42 U.S.C. 2000gg(7).

[125] *See* 29 CFR 1630.2(o)(3).

[126] 42 U.S.C. 2000gg–1(2) (§ 1636.4(b)) prohibits a covered entity from requiring a qualified employee with a PWFA limitation to accept an accommodation other than any reasonable accommodation arrived at through the interactive process.

[127] During the interactive process, especially if it is lengthened due to, for example, equipment being ordered or the employee waiting for information from or an appointment with a health care provider, the employer should determine how to address the employee's needs while the interactive process is ongoing. *See, e.g., Enforcement Guidance on Reasonable Accommodation, supra* note 12, at n.89 (discussing a situation when the employee is waiting for reassignment). The Commission has discussed a similar situation with regard to postponing an employee's evaluation pending the employee receiving a requested reasonable accommodation. EEOC, *Technical Assistance on Applying Performance and Conduct Standards to Employees with Disabilities,* Examples 8 & 11 (2008) *https://www.eeoc.gov/laws/guidance/applying-performance-and-conduct-standards-employees-disabilities. See also supra* in the Interpretive Guidance in section *1636.3(h)* under *Interim Reasonable Accommodations.*

[128] *See* 42 U.S.C. 12112(d); 29 CFR 1630.13, 1630.14.

[129] 42 U.S.C. 12112(d)(4)(A); 29 CFR 1630.14(c).

employee to provide additional information could be a violation of the PWFA's anti-retaliation provision (42 U.S.C. 2000gg–2(f)) (§ 1636.5(f)) or the PWFA's prohibition on taking adverse action in response to a request for reasonable accommodation (42 U.S.C. 2000gg–1(5)) (§ 1636.4(e)). If an employer decides to seek supporting documentation in response to a request for a PWFA reasonable accommodation, the restrictions limiting supporting documentation set forth in § 1636.3(l) apply. Finally, any medical information obtained during the interactive process under the PWFA must be maintained on separate forms and in separate medical files and be treated as a confidential medical record, in accordance with the ADA's rules on the confidentiality of medical information, as explained in section *1636.7(a)(1)* of this appendix under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.* Of particular relevance to the PWFA, the fact that an employee is pregnant, has recently been pregnant, or has a medical condition related to pregnancy or childbirth is medical information. Similarly, disclosing that an employee is receiving or has requested an accommodation under the PWFA or has limitations for which they requested or are receiving a reasonable accommodation under the PWFA, usually amounts to a disclosure that the employee is pregnant, has recently been pregnant, or has a related medical condition.

Recommendations for an Interactive Process

111. Appropriate reasonable accommodations are best determined through a flexible interactive process that includes both the employer and the employee with the known limitation. Employers and employees may use some of the steps noted in paragraph 112 of this section, if warranted, to address requests for reasonable accommodations under the PWFA, but the Commission emphasizes that, as under the ADA, a covered entity and an employee do not have to complete all or even some of these steps. The Commission expects that typically a simple conversation will be sufficient for employers to obtain all the information needed to determine the appropriate reasonable accommodation. As with the ADA, a covered entity should respond expeditiously to a request for reasonable accommodation and act promptly to provide the reasonable accommodation.[130]

112. If an employer has not obtained enough information to determine the appropriate reasonable accommodation through the initial request or a simple conversation or email exchange, the flexible interactive process may continue. For example, when an employee with a known limitation has requested a reasonable accommodation regarding the performance of the essential functions of the job, the covered entity, using a problem-solving approach, may, as needed:

a. Analyze the particular job involved and determine its purpose and essential functions;

b. Consult with the employee with a known limitation to ascertain what kind of accommodation is necessary given the known limitation;

c. In consultation with the employee with the known limitation, identify potential accommodations and assess the effectiveness each would have in enabling the employee to perform the essential functions of the position. If the employee's limitation means that they are temporarily unable to perform one or more essential functions of the position, the parties also must consider whether suspending the performance of one or more essential functions may be a part of the reasonable accommodation if the known limitation is temporary and the employee could perform the essential function(s) in the near future; and

d. Consider the preference of the employee to be accommodated and select and implement the accommodation that is most appropriate for both the employee and the covered entity.[131]

113. Steps (b) to (d) outlined in paragraph 112 of this section can be adapted and applied to requests for reasonable accommodations related to the application process and to benefits and privileges of employment. In those situations, in step (c), the consideration should be how to enable the applicant with a known limitation to be considered for the position in question or how to provide an employee with a known limitation with the ability to enjoy equal benefits and privileges of employment.

114. In some instances, neither the employee requesting the accommodation nor the covered entity may be able to readily identify an appropriate accommodation. For example, an applicant needing an accommodation may not know enough about the equipment used by the covered entity or the exact nature of the work site to suggest an appropriate accommodation. Likewise, the covered entity may not know enough about an employee's known limitation and its effect on the performance of the job to suggest an appropriate accommodation. In these situations, the steps in paragraph 112 of this section may be helpful as part of the employer's reasonable effort to identify the appropriate reasonable accommodation. In addition, parties may consult outside resources such as State or local entities, non-profit organizations, or the Job Accommodation Network (JAN) for ideas regarding potential reasonable accommodations.[132]

Engaging in the Interactive Process

115. A covered entity's failure to engage in the interactive process, in and of itself, is not a violation of the PWFA, just as it is not a violation of the ADA. However, a covered entity's failure to initiate or participate in the interactive process with the employee after receiving a request for reasonable accommodation could result in liability if the employee does not receive a reasonable accommodation even though one is available that would not have posed an undue hardship.[133] Relatedly, an employee's unilateral withdrawal from or refusal to participate in the interactive process can constitute sufficient grounds for failing to provide the reasonable accommodation.[134]

116. In situations where employers are permitted to seek supporting documentation, because employees may experience difficulty obtaining appointments with health care providers, especially early in pregnancy, the covered entity should be aware that it may take time for the employee to find a health care provider and provide documentation. Delay caused by the difficulty an employee faces in obtaining information from a health care provider in these circumstances should not be considered a withdrawal from or refusal to participate in the interactive process. If there is such a delay, an employer should consider providing an interim reasonable accommodation.

117. As set out in Example #53 of this appendix, if an employee requests an accommodation but then is unable to engage in the interactive process because of an emergency, an employer should not penalize the employee but rather should wait and restart the interactive process once the employee returns.

Example #53/Interruption of Interactive Process: Beryl is a quality control inspector at a labware manufacturing plant. She is in the early stage of pregnancy, and Beryl's employer does not know that she is pregnant. In the middle of her shift, Beryl suddenly experiences cramping and bleeding. She tells her supervisor that she thinks she is having a miscarriage and needs to leave. The next afternoon, Beryl's partner calls the supervisor and explains that Beryl will be resting at home for the next 24 hours. Following time at home, Beryl returns to the workplace and follows up with her supervisor regarding her emergency departure.

The bleeding and cramping Beryl experienced is a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions, and Beryl identified an adjustment or change needed at work (leave). Thus, Beryl made a request for a reasonable accommodation under the PWFA, and it serves to start the PWFA interactive process.

The employer received Beryl's request, but the interactive process was interrupted by the emergency situation that required immediate action. The interactive process resumed when Beryl's partner spoke with the supervisor and provided further information regarding Beryl's condition. When Beryl spoke with her supervisor upon her return, she reengaged in the interactive process. Through this continued conversation, the

[130] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Question 10. Following the steps laid out for the interactive process is not a defense to liability if the employer fails to provide a reasonable accommodation that it could have provided absent undue hardship.

[131] *See* 29 CFR part 1630, appendix, 1630.9.

[132] *See* JAN, *supra* note 107. *See also* U.S. Dep't of Lab., Occupational Safety & Health Admin., *Ergonomics–Solutions to Control Hazards, https://www.osha.gov/ergonomics/control-hazards* (last visited Apr. 3, 2024); U.S. Dep't of Health & Hum. [133] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Question 6.

[134] *See id.*

employer was able to gather sufficient information to determine that Beryl had a limitation under the PWFA and was entitled to a reasonable accommodation. The employer must grant Beryl leave for the time she took off because of her miscarriage unless it can establish that doing so would be an undue hardship. Moreover, if the employer is one that automatically assigns points or penalizes employees for unexcused absences, Beryl should not be penalized for using the leave because she was entitled to the accommodation of leave.[135]

1636.3(l) Limits on Supporting Documentation

118. A covered entity is not required to seek supporting documentation from an employee who requests an accommodation under the PWFA. If a covered entity decides to seek supporting documentation, the covered entity is permitted to do so only when reasonable under the circumstances to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation. When seeking documentation is reasonable, the employer is limited to seeking documentation that itself is reasonable.

119. The restrictions on a covered entity seeking supporting documentation are enforceable through different parts of the PWFA. As set out in § 1636.4(a)(3), as part of 42 U.S.C. 2000gg–1(1), a covered entity may not fail to provide a reasonable accommodation based on the employee's failure to provide supporting documentation if the covered entity's request for supporting documentation violates the standards set out in § 1636.3(l). Moreover, as discussed in section *1636.5(f)* of this appendix under *Possible Violations of 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information,* a covered entity may violate the PWFA's retaliation provisions by seeking documentation or information in circumstances beyond those that are permitted under § 1636.3(l). This is the case whether or not the employee provides the documentation or information sought by the employer and whether or not the employer grants the accommodation.

120. In addition to the PWFA regulation, covered entities are reminded that the ADA's limitations on disability-related inquiries and medical exams apply to all ADA-covered employers.[136] These ADA limitations protect all of the covered entity's employees whether they have disabilities or not and whether they are seeking an ADA reasonable accommodation or not. Thus, employers responding to reasonable accommodation requests under the PWFA should be mindful of the ADA's limitations on the employer's ability to make disability-related inquiries or require medical exams in response to these requests.[137] For example, separate from requirements imposed by the PWFA and § 1636.3(l), a covered entity may not ask an employee who requests an accommodation under the PWFA if the employee has asked for other reasonable accommodations in the past or whether the employee has preexisting conditions, because these questions are disability-related inquiries, *i.e.,* questions that are likely to elicit disability-related information, and they are not job-related and consistent with business necessity in these circumstances. Further, an employer may not require that an employee seeking an accommodation under the PWFA complete specific forms that ask for information regarding ''impairments'' or ''major life activities.'' These are disability-related inquiries and, because they are not job-related and consistent with business necessity in these circumstances, they would violate the ADA.

121. The Commission notes that pregnant employees may experience limitations and, therefore, require accommodations, before they have had any pregnancy-related medical appointments. Pregnant employees also may experience difficulty obtaining an immediate appointment with a health care provider early in a pregnancy or finding a health care provider at all. The Commission encourages employers who choose to seek supporting documentation, when that is permitted under § 1636.3(l), to consider the best practice of granting interim reasonable accommodations if an employee indicates that they have tried to obtain documentation and it will be provided at a later date.

1636.3(l)(1) Seeking Supporting Documentation Only When Reasonable Under the Circumstances

122. The Commission expects that most PWFA interactive processes will consist of simple exchanges of information between employees and employers, such as brief conversations or emails, and that many of these will be concluded very shortly after the employee with a known limitation requests a reasonable accommodation, without any requests for further information. Once an employer has determined an appropriate reasonable accommodation, such as through these types of simple communications, no further interactive process is necessary.

123. The PWFA does not require employers to seek supporting documentation from employees requesting accommodations. Under the PWFA, a covered entity may seek supporting documentation only if it is reasonable under the circumstances for the covered entity to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation.

124. Under § 1636.3(l), situations when it would be reasonable under the circumstances for a covered entity to seek supporting documentation include, for example, if a pregnant employee asks for the temporary suspension of an essential function(s) that involves climbing ladders due to dizziness and the danger of falling, then the employer may, but is not required to, seek reasonable documentation, which is the minimum that is sufficient to confirm the physical or mental condition—*i.e.,* dizziness and increased risk related to falling; confirm that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (together ''a limitation''); and describe the adjustment or change at work needed due to the limitation—*i.e.,* how high the employee may climb, the types of actions the employee should avoid, and how long the modification will be needed. As another example, if an employee requests an accommodation for a known limitation but has only a vague idea of what type of accommodation would be effective and the employer also does not know of a potential accommodation, it would be reasonable under the circumstances for the employer to seek supporting documentation describing the adjustment or change at work needed due to the limitation to help identify the needed accommodation. The employer also may consult resources such as JAN.[138]

125. Section 1636.3(l) provides five examples of when it would not be reasonable under the circumstances for the employer to seek supporting documentation.

1636.3(l)(1)(i)—Obvious

126. Under the PWFA, it is not reasonable under the circumstances for an employer to seek supporting documentation when the physical or mental condition related to, affected by, or arising out of the pregnancy, childbirth, or related medical conditions (the limitation) and the adjustment or change at work that is needed due to the limitation are obvious.

127. In practice, the Commission expects this example will usually apply when the

[135] There also may be other types of situations where the employer is on notice of the need for accommodation but then the interactive process is interrupted. *See, e.g., King* v. *Steward Trumbull Mem'l Hosp., Inc.,* 30 F.4th 551, 568 (6th Cir. 2022) (''Anti-discrimination laws sometimes require employers to accommodate unexpected circumstances. Sudden illnesses and episodic flare-ups are, by nature, difficult to plan for and can be quite disruptive to those who fall ill and those around them. But that does not mean that accommodating a sudden flare-up will cause undue hardship merely because handling these situations requires more flexibility.'')

Some workplace attendance policies explicitly provide for unexpected absences by, for example, not penalizing workers who experience an emergency health situation. *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text accompanying n.74. Providing this type of leave to some workers but not to workers affected by pregnancy, childbirth, or related medical conditions could be a violation of Title VII. Finally, if the worker does not qualify for coverage under the PWFA, there may be other laws, like the ADA or the FMLA, that would apply.

[136] The PWFA and title I of the ADA apply to the same entities. Therefore, all entities covered by title I of the ADA also are covered by the PWFA.

[137] For further discussion of this topic, *see infra* section *1636.7(a)(1)* of this appendix under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.*

[138] *See* JAN, *supra* note 107.

employee is obviously pregnant.[139] Whether someone is ''obviously'' pregnant can depend on a number of factors, and not everyone who is pregnant looks the same, but there is a large subset of pregnant workers who most individuals would agree are ''obviously'' pregnant, *i.e.,* the pregnancy is showing and onlookers easily notice by looking. To limit problems that can arise in some instances when employers attempt to determine if someone is pregnant by looking at them, the regulation requires the employee to confirm the limitation and the adjustment or change at work needed due to the limitation through self-confirmation as defined in § 1636.3(l)(4). This may happen in the same conversation where the employee requests an accommodation.

128. Thus, for example, when an obviously pregnant employee confirms they are pregnant and asks for a different size uniform or related safety gear, the limitation and the adjustment or change at work needed due to the limitation are obvious, and the employer may not seek supporting documentation. In situations where some information is obvious and other information is not, the employer may seek supporting documentation relevant only to the non-obvious issue. Thus, if an obviously pregnant employee requests the reasonable accommodation of leave related to childbirth and recovery and confirms that they are pregnant, it may be reasonable under the circumstances for the employer to seek supporting documentation about the length of leave for recovery, but it would not be reasonable to seek supporting documentation regarding the limitation. Of course, the employer does not have to seek supporting documentation and can simply engage the employee in a discussion about how much leave the employee will need and when they will need it.

1636.3(l)(1)(ii)—Known

129. The second example of when it would not be reasonable to seek supporting documentation is when the employer already has sufficient information to determine that the employee has a PWFA limitation and the adjustment or change at work needed due to the limitation. For example, if an employee already provided documentation stating that because of their recent cesarean section they should not lift over 20 pounds for 2 months, the employer may not seek further supporting documentation during those 2 months because the employer already has sufficient information.[140]

130. This principle also applies to episodic conditions. If an employer already has sufficient information to determine that the employee has a PWFA limitation that is episodic (*e.g.,* migraines that are related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions), and the adjustment or change at work needed periodically due to the limitation (breaks or time off), the employer cannot seek additional or new supporting documentation every time the condition arises.

1636.3(l)(1)(iii)—Predictable Assessments

131. The third example of when it is not reasonable under the circumstances for an employer to seek supporting documentation is based on the common types of pregnancy modifications sought under the PWFA. Specifically, it is not reasonable under the circumstances for an employer to seek supporting documentation when an employee, at any time during their pregnancy, seeks one of the following modifications, due to their pregnancy: (1) carrying or keeping water near for drinking, as needed; (2) taking additional restroom breaks, as needed; (3) sitting, for those whose work requires standing, and standing, for those whose work requires sitting, as needed; and (4) taking breaks to eat and drink, as needed. In these situations, an employee must provide self-confirmation as defined in § 1636.3(l)(4). Example #10 of this appendix shows how this can be part of the request for an accommodation. It is not reasonable to seek supporting documentation when an employee is pregnant, seeks one of the four listed modifications, and provides self-confirmation as defined in paragraph (l)(4) because these are a small set of commonly sought modifications that are widely known to be needed during an uncomplicated pregnancy.

1636.3(l)(1)(iv)—Lactation

132. The fourth example of when it is not reasonable under the circumstances to seek supporting documentation concerns lactation and pumping at work or nursing during work hours. Specifically, it is not reasonable under the circumstances to seek supporting documentation when the reasonable accommodation is related to a time and/or place to pump or any other modification related to pumping at work,[141] and the employee has provided a self-confirmation as set out in § 1636.3(l)(4). Likewise, it is not reasonable under the circumstances to seek supporting documentation when the reasonable accommodation is related to time to nurse during work hours when the regular location of the employee's workplace makes nursing during work hours a possibility because the child is in close proximity and the employee has provided self-confirmation as set out in paragraph (l)(4).[142]

133. It is not reasonable to seek supporting documentation regarding pumping or nursing at work because lactation beginning around or shortly after birth is an obvious fact. Additionally, and pragmatically, health care providers may not be able to provide supporting documentation about the details of how a specific employee is managing nursing or pumping, as this is not something necessarily discussed with a health care provider. This example does not, however, apply to all reasonable accommodations related to lactation; thus, this example would not apply if a lactating employee requested full-time remote work due to a condition that makes pumping difficult.

1636.3(l)(1)(v)—Employer's Own Policies or Practices

134. The fifth example of when it would not be reasonable under the circumstances for a covered entity to seek supporting documentation relates to an employer's own policies or practices. If the requested accommodation is one that is available to employees without known limitations pursuant to the covered entity's policies or practices without submitting supporting documentation, then it is not reasonable for the employer to seek supporting documentation from an employee seeking a similar accommodation under the PWFA. For example, if an employer has a policy or practice of requiring supporting documentation only for the use of leave for 3 or more consecutive days, it would not be reasonable to ask someone who is using the same type of leave due to a known limitation under the PWFA to submit supporting documentation when they request leave for 2 or fewer days.[143]

1636.3(l)(2) Reasonable Documentation

135. Under the PWFA, reasonable accommodations are available for physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. When it is reasonable under the circumstances for the covered entity to seek supporting documentation, the covered entity is limited to seeking documentation that is itself reasonable. When it is reasonable under the circumstances for the covered entity to seek supporting documentation, the covered entity may require that the supporting documentation come from a health care provider.

136. Confirming the physical or mental condition requires only a simple statement that the physical or mental condition meets the first part of the definition of ''limitation'' at § 1636.3(a)(2), (*i.e.,* the physical or mental condition is: an impediment or problem, including ones that are modest, minor, or episodic; a need or a problem related to maintaining the health of the employee or the pregnancy, or that the employee is seeking

[139] ''Obvious'' means that the condition is apparent without being mentioned. In terms of pregnancy itself, this may depend on physical appearance, *i.e.,* whether the pregnancy is ''showing.'' This is a concept that the Commission has used previously regarding pregnancy discrimination. *Enforcement Guidance on Pregnancy Discrimination, supra* note 24, at (I)(A)(1)(a) (discussing the ''obviousness'' of pregnancy and a discrimination claim).

[140] This example does not mean that when it is otherwise reasonable in the circumstances to seek supporting documentation, an employer is prohibited from doing so because the employee has simply stated that they have a limitation and need an adjustment or change at work due to the limitation. However, the employer also is not required to seek documentation and can accept the employee's statement.

[141] *See supra* note 102 for discussion of the PUMP Act and the types of accommodations that may be requested with regard to pumping.

[142] ''Nursing during work hours'' could include, for example, when an employee who always teleworks from home and has their child at home takes a break to nurse the child, or when an employee takes a break to travel to a nearby daycare center to nurse.

[143] Conversely, if regular employer policies or practices would require documentation when the PWFA would not, or would require more documentation than the PWFA would allow in a situation where the employee is requesting an accommodation under the PWFA, the PWFA's restrictions on supporting documentation would apply.

health care related to the pregnancy, childbirth, or a related medical condition itself).[144] The physical or mental condition can be a PWFA limitation whether or not such condition is an impairment or a disability under the ADA.[145] Some examples of physical or mental conditions that could be limitations are that the employee: has a back injury; has swollen ankles; is experiencing vomiting; has a lifting restriction; is experiencing fatigue; should not be exposed to a certain chemical; should avoid working in the heat; needs to avoid certain physical tasks such as walking, running, or physical confrontation because of increased risk; needs to attend a health care appointment; or needs to recover from a health care procedure. Because the physical or mental condition can be something like fatigue or vomiting, there is no need for the statement to contain a medical diagnosis. Thus, documentation is sufficient under § 1636.3(l)(2) even if it does not contain a medical diagnosis, as long as it has a simple statement of the physical or mental condition.

137. The supporting documentation should confirm that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions. The supporting documentation need not state that the pregnancy, childbirth, or related medical conditions are the sole, the original, or a substantial cause of the physical or mental condition at issue because the statute only requires that the physical or mental condition be ''related to, affected by, or arising out of'' pregnancy, childbirth, or related medical conditions.[146] If relevant, the documentation should include confirmation that the ''related medical condition'' is related to pregnancy or childbirth.

138. The employer also may seek reasonable documentation to describe the adjustment or change at work that is needed due to the limitation and an estimate of the expected duration of the need for the adjustment or change. This may be, for example: no heavy lifting for approximately 4 months; cannot stand for more than 30 minutes at a time until the end of the pregnancy; the maximum amount of weight involved in the lifting restriction and the approximate length of the restriction; the approximate number of and length of breaks; the kind of support or equipment needed and for approximately how long; a change in the type of protective equipment or ventilation needed and for approximately how long it will be needed; the need to limit movement and be allowed to lie down when necessary and for approximately how long the employee will need to limit movement; a change in work location and the approximate length of time of the change; a period of leave expected to be needed for recovery or to attend health care appointments; or the essential function(s) that should be temporarily suspended and for how long.

139. Where the supporting documentation meets the standards described in this section, it is sufficient to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation. Accordingly, a covered entity that has received sufficient documentation but fails to provide an accommodation based on the failure to provide sufficient documentation, or continues to seek additional documentation or information, risks liability under 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)(3)) and/or 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)).

140. Examples Regarding Documentation:[147]

Example #54/Reasonable Documentation: Amelia recently returns to work after giving birth and recovery from childbirth. Amelia requests that she not be required to lift more than 30 pounds due to a back injury arising out of her pregnancy. Amelia's employer can use the interactive process to identify Amelia's limitation and what accommodation will address her limitation. Amelia's employer may, but is not required to, seek supporting documentation; in this situation, the employer decides to seek supporting documentation from Amelia. At Amelia's request, her obstetrician emails the human resources department, explaining that Amelia's recent pregnancy has caused a back injury and that she should avoid lifting more than 30 pounds for approximately the next 3 months. This is sufficient documentation to confirm that Amelia has a limitation—a physical or mental condition (a back injury, which is an impediment or problem) related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions—and to describe an adjustment or change at work that is needed due to the limitation (avoid lifting more than 30 pounds for approximately the next three months). Because this is sufficient documentation, the covered entity failing to provide Amelia an accommodation based on a lack of documentation may violate 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)(3)), and the covered entity trying to obtain additional documentation or information related to Amelia's request for a reasonable accommodation may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)).

Example #55 Reasonable Documentation: Rachna is 6 months pregnant and has just learned that she has preeclampsia. She requires limited activity and bed rest for the remainder of her pregnancy to limit the risks to her health and the health of her pregnancy. Rachna's employer can use the interactive process to identify Rachna's limitation and what accommodation will address her limitation. Rachna's employer may, but is not required to, seek supporting documentation; in this situation, the employer decides to seek supporting documentation from Rachna. Rachna provides her employer with a note from her midwife saying that, because of risks related to her health and the health of her pregnancy, Rachna needs to limit activities that involve sitting or standing, needs bed rest as much as possible, and should not commute to work for the remaining 3 months of her pregnancy. This is sufficient documentation to confirm that Rachna has a limitation—a physical or mental condition (maintaining the health of the employee or the employee's pregnancy) related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions—and to describe the change at work that is needed (limiting activities involving sitting and standing, lying down as much as possible, and not commuting for the remainder of her pregnancy). Because this is sufficient documentation, the covered entity failing to provide Rachna an accommodation based on a lack of documentation may violate 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)(3)), and the covered entity trying to obtain additional documentation or information related to her request for a reasonable accommodation may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)).

141. Because a covered entity is limited to the minimum supporting documentation necessary, a covered entity may not require that a pregnancy be confirmed through a specific test or method. Moreover, such a requirement could implicate the ADA's provisions that medical examinations only are permitted when they are job-related and consistent with business necessity.[148]

142. Additionally, covered entities may not require that supporting documentation be submitted on a specific form, but only that documentation meets the requirements of § 1636.3(l)(2). If covered entities offer an optional form for employees to use in submitting supporting documentation, the covered entities may wish to review preexisting forms they have for reasonable accommodations or leave to ensure their compliance with the PWFA. For example, the PWFA does not require that an employee have a ''serious health condition'' and the statute does not use the term ''major life activity,'' so employer forms or other employer communications seeking supporting documentation for PWFA-related reasonable accommodations should not use this terminology.

1636.3(l)(3) Limitations on a Covered Entity Seeking Supporting Documentation From a Health Care Provider

143. When it is reasonable under the circumstances for the covered entity to seek supporting documentation, a covered entity may require that the supporting documentation comes from a health care provider. The regulation contains a non-exhaustive list of possible health care providers that is based on the non-exhaustive list provided in the Commission's ADA policy guidance.[149]

144. The covered entity may not require that the health care provider who is submitting documentation be the provider treating the employee for the condition at issue, as long as the health care provider is able to confirm the physical or mental

[144] Section 1636.3(a)(2).

[145] 42 U.S.C. 2000gg(4); *see* 29 CFR 1630.3(h).

[146] 42 U.S.C. 2000gg(4); *see supra* in section *1636.3(a)(2)* of this appendix under *Related to, Affected by, or Arising Out of*.

[147] The conditions described in these examples also may be disabilities under the ADA and therefore may entitle the employee to an accommodation under the ADA, regardless of whether they are entitled to one under the PWFA.

[148] 42 U.S.C. 12112(d)(4)(A).

[149] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Question 6.

condition; confirm that the physical or mental condition is related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (together ''a limitation''); and describe the adjustment or change at work that is needed due to the limitation. The covered entity may not require that an employee be examined by a health care provider of the covered entity's choosing.

1636.3(l)(4) Self-Confirmation of Pregnancy or Lactation

145. For the purposes of supporting documentation under the PWFA, self-confirmation is a simple statement in which the employee confirms, as set forth in § 1636.3(l)(1)(i), (iii) and (iv), the limitation and adjustment or change that is needed at work due to the limitation. The self-confirmation statement can be made in any manner and can be made as part of the request for reasonable accommodation under § 1636.3(h)(2). For example, self-confirmation may be spoken, it may be recorded or live, or it may be written on paper or electronically, such as in an email or text. Self-confirmation does not need to use any particular words or format, does not need to be written on a form, does not need to be a particular length, does not need to be notarized or otherwise verified, and does not need to be accompanied by documentary or physical evidence. In many instances, the self-confirmation will be part of what the employee communicates when they start the reasonable accommodation process. Example #10 of this appendix, where an employee tells a manager of her need for more frequent bathroom breaks and explains that the breaks are needed because the employee is pregnant, is an example of self-confirmation of pregnancy.

Interaction Between the PWFA and the ADA

146. Employers covered by the PWFA also are covered by the ADA.[150] The ADA's statutory text includes express restrictions on when a covered entity may require medical exams and make disability-related inquiries.[151] These restrictions apply to all the interactions between covered entities and their employees, regardless of whether an individual has a disability. Thus, for example, if an employee is requesting a reasonable accommodation under the PWFA, the ADA's restrictions apply and prevent an employer from seeking the employee's entire medical record or asking the employee if they have received accommodations in the past because these inquiries are likely to elicit information about a disability and are not job-related and consistent with business necessity in these circumstances. Independent of these ADA restrictions, § 1636.3(l)(2) also prohibits seeking this type of documentation under the PWFA because it goes beyond the definition of reasonable documentation. Finally, depending on the facts, seeking such information could violate 42 U.S.C. 2000gg–2(f).

147. The ADA provides for the confidentiality of medical information, subject to limited disclosure rules.[152] These rules apply to medical information in the employer's possession, including information obtained by an employer from disability-related inquiries or medical exams, or information obtained as part of the reasonable accommodation process.[153] That an employee is pregnant, has recently been pregnant, or has a medical condition related to pregnancy or childbirth is medical information. The ADA requires that employers keep such information confidential and only disclose it within the confines of the ADA's limited disclosure rules. Similarly, disclosing that an employee is receiving or has requested a reasonable accommodation under the PWFA usually amounts to a disclosure that the employee is pregnant, has recently been pregnant, or has a related medical condition and thus must be treated as confidential medical information as well. This is explained further in section *1636.7(a)(1)* of this appendix under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information.*

148. If there is a situation where an employee requests an accommodation and both the PWFA and the ADA could apply, the employer should apply the provision that it would be less demanding for the employee to satisfy. For example, assume a pregnant employee has diabetes that is exacerbated by the pregnancy and needs breaks to eat or drink. Under the PWFA, the covered entity cannot seek supporting documentation (as set forth in § 1636.3(l)(1)(iii)) and this is the provision that the employer should apply.

IV. 1636.4 Nondiscrimination With Regard to Reasonable Accommodations Related to Pregnancy

1636.4(a) Failing To Provide Reasonable Accommodation

1. The statute at 42 U.S.C. 2000gg–1(1) prohibits a covered entity from not making a reasonable accommodation for a qualified employee with a known limitation related to pregnancy, childbirth, or related medical conditions unless the covered entity can demonstrate that the accommodation would impose an undue hardship on the operation of its business. This provision of the PWFA uses the same language as the ADA, and the rule likewise uses the language from the corresponding ADA regulation.[154] Because 42 U.S.C. 2000gg–1(1) uses the same operative language as the ADA, it should be interpreted in a similar manner.

2. This section is violated when a covered entity fails to make reasonable accommodation to a qualified employee with a known limitation, absent undue hardship.[155] However, a covered entity does not violate 42 U.S.C. 2000gg–1(1) merely by refusing to engage in the interactive process; for a violation, there also must have been a reasonable accommodation that the employer could have provided absent undue hardship.

1636.4(a)(1) Unnecessary Delay in Providing a Reasonable Accommodation

3. An unnecessary delay in providing a reasonable accommodation to the known limitations related to pregnancy, childbirth, or related medical conditions of a qualified employee may result in a violation of the PWFA if the delay constitutes a failure to provide a reasonable accommodation. This can be true even if the reasonable accommodation is eventually provided, when the delay was unnecessary. Unnecessary delay that can be actionable under this section can occur at any time during the accommodation process including, but not limited to, responding to the initial request, during the interactive process, or in implementing the accommodation once the request is approved. Delay by a third-party administrator acting on behalf of the covered entity is attributable to the covered entity.

Employers may share such information only in limited circumstances with supervisors, managers, first aid and safety personnel, and government officials investigating compliance with the ADA.''); EEOC, *Enforcement Guidance: Preemployment Disability-Related Questions and Medical Examinations,* at text accompanying n.6 (1995) [hereinafter *Enforcement Guidance: Preemployment Disability-Related Questions*], *https://www.eeoc.gov/laws/guidance/enforcement-guidance-preemployment-disability-related-questions-and-medical. https://www.eeoc.gov/laws/guidance/enforcement-guidance-preemployment-disability-related-questions-and-medical* (''Medical information must be kept confidential.''). In addition, Federal agencies are covered by the Privacy Act of 1974, as amended, 5 U.S.C. 552a, and many Federal agencies maintain equal employment opportunity records subject to a Privacy Act System of Records Notice.

[153] *See Enforcement Guidance on Disability-Related Inquiries, supra* note 152, at General Principles (''The ADA requires employers to treat any medical information obtained from a disability-related inquiry or medical examination (including medical information from voluntary health or wellness programs), as well as any medical information voluntarily disclosed by an employee, as a confidential medical record.'') and text after n.12 (''[T]he ADA's restrictions on inquiries and examinations apply to all employees, not just those with disabilities.'').

[154] *See* 42 U.S.C. 12112(b)(5)(A); 29 CFR 1630.9(a).

[155] The regulation in § 1636.4, following the language in the statute, uses the phrase ''known limitations related to pregnancy, childbirth, or related medical conditions.'' 42 U.S.C. 2000gg–1(1), (3)–(5). Given the definition in the statute of ''known limitation'' (42 U.S.C. 2000gg(4)), the phrase ''known limitations related to pregnancy, childbirth, or related medical conditions'' in § 1636.4 and 42 U.S.C. 2000gg–1 should be understood to mean that the known limitations are related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions or that ''known limitations'' mean physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions.

4. Section 1636.4(a)(1) sets out the factors that are used when determining whether a delay in the provision of a reasonable accommodation violates the PWFA. Section 1636.4(a)(1) sets out the factors already identified in the ADA guidance [156] and adds three additional factors, described in paragraphs 5, 6, and 7 of this section.

5. First, whether providing the accommodation was simple or complex is a factor to be considered. Under the PWFA, there are certain modifications, set forth in § 1636.3(j)(4), that will virtually always be found to be reasonable accommodations that do not impose an undue hardship: (1) allowing a pregnant employee to carry or keep water near and drink, as needed; (2) allowing a pregnant employee to take additional restroom breaks, as needed; (3) allowing a pregnant employee whose work requires standing to sit and whose work requires sitting to stand, as needed; and (4) allowing a pregnant employee to take breaks to eat and drink, as needed. If there is delay in providing these accommodations to a qualified employee with a known limitation, it will virtually always be found to be unnecessary because of the presumption that these modifications will be reasonable accommodations that do not impose an undue hardship.

6. Second, whether the covered entity offered the employee an interim reasonable accommodation during the interactive process is a factor to be considered. The offer of an interim reasonable accommodation can be made at any time following the request for accommodation. The provision of an interim accommodation will decrease the likelihood that an unnecessary delay will be found. Under this factor, the interim reasonable accommodation should be one that enables the employee to keep working as much as possible; the provision of leave will not be considered as a factor that can excuse delay, unless the employee selects, or requests, leave as an interim reasonable accommodation.[157]

7. Third, the length of time for which the employee will need the reasonable accommodation is another factor to be considered. Given that limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions are frequently temporary, an unnecessary delay in providing an accommodation may mean that the period necessitating the accommodation could pass without action simply because of the delay.

1636.4(a)(2) Refusing an Accommodation

8. An employee with a known limitation is not required to accept a reasonable accommodation. However, if the rejection of the reasonable accommodation results in the employee being unable to perform the essential functions of the job, the employee is not qualified. This provision mirrors the language from a similar provision in the ADA regulation,[158] with the inclusion of employees who are qualified under § 1636.3(f)(2).

1636.4(a)(3) Covered Entity Failing To Provide a Reasonable Accommodation Due to Lack of Supporting Documentation

9. A covered entity cannot defend the failure to provide an accommodation based on the lack of supporting documentation if: the covered entity did not seek supporting documentation; seeking supporting documentation was not reasonable under the circumstances as defined in § 1636.3(l)(1); the covered entity sought documentation beyond that which is reasonable as defined in § 1636.3(l)(2); or the covered entity did not provide the employee sufficient time to obtain and provide the supporting documentation sought.

1636.4(a)(4) Choosing Among Possible Accommodations

10. The covered entity must provide an effective accommodation, *i.e.,* one that meets the employee's needs or limitations. If there is more than one effective accommodation, the employee's preference should be given primary consideration.[159] However, the employer providing the accommodation has the ultimate discretion to choose among effective reasonable accommodations.[160] The employer may choose, for example, the less expensive accommodation, the accommodation that is easier for it to provide, or, generally, the accommodation that imposes the least hardship.[161] In the situation where the employer is choosing among effective reasonable accommodations and does not provide the accommodation that is the employee's preferred accommodation, the employer does not have to show that it is an undue hardship to provide the employee's preferred accommodation.

11. A covered entity's ''ultimate discretion'' in choosing a reasonable accommodation is limited by certain other considerations. First, 42 U.S.C. 2000gg–1 (§ 1636.4(a)(4)) requires that the accommodation must provide the qualified employee with a known limitation with equal employment opportunity.[162] By this, the Commission means an opportunity to attain the same level of performance, experience the same level of benefits, or otherwise enjoy the same terms, conditions, and privileges of employment as are available to the average similarly situated employee without a known limitation, which includes the individual who needs the accommodation when they are without the known limitation.[163] This may be shown by evidence of the opportunities that would have been available to the employee seeking the accommodation had they not identified a known limitation or sought an accommodation, or other evidence that tends to demonstrate that the accommodation provided to the employee did not provide equal employment opportunity. Depending on the facts, selecting the accommodation that does not provide equal opportunity could violate 42 U.S.C. 2000gg–1(1), 2000gg–1(5), or 2000gg–2(f).[164]

12. Second, 42 U.S.C. 2000gg–1(2) prohibits a covered entity from requiring a qualified employee affected by pregnancy, childbirth, or related medical conditions to accept an accommodation other than any reasonable accommodation arrived at through the interactive process.

13. Third, 42 U.S.C. 2000gg–1(4) prohibits a covered entity from requiring a qualified employee with a known limitation to take leave, whether paid or unpaid, if there is a reasonable accommodation that will allow the employee to continue to work, absent undue hardship.

14. Fourth, 42 U.S.C. 2000gg–1(5) prohibits a covered entity from taking adverse action in terms, conditions, or privileges of employment against a qualified employee on account of the employee requesting or using a reasonable accommodation to the known limitations related to the pregnancy, childbirth, or related medical conditions of the employee.

15. Fifth, 42 U.S.C. 2000gg–2(f) prohibits retaliation and coercion by covered entities.

16. These limitations to the ''ultimate discretion'' of a covered entity to choose among effective accommodations are described in the discussions of §§ 1636.4(b), (d), and (e) and 1636.5(f).

17. Example Regarding Failing To Provide Equal Employment Opportunity:

Example #56/Failing To Provide Equal Employment Opportunity: Yasmin's job requires her to travel to meet with clients. Because of her pregnancy, she is not able to travel for 3 months. She asks that she be allowed to conduct her client meetings via

---

[163] *See* 29 CFR part 1630, appendix, 1630.9; 29 CFR part 1630, appendix, 1630.2(o) (explaining that reassignment should be to a position with equivalent pay, status, etc., if the individual is qualified, and if the position is vacant within a reasonable amount of time); *see also Enforcement Guidance on Reasonable Accommodation, supra* note 12, at text following n.80 (''However, if both the employer and the employee voluntarily agree that transfer is preferable to remaining in the current position with some form of reasonable accommodation, then the employer may transfer the employee.''); *cf.* EEOC, *Compliance Manual on Religious Discrimination,* (12–IV)(A)(3) (2021) [hereinafter *Compliance Manual on Religious Discrimination*], *https://www.eeoc.gov/laws/guidance/section-12-religious-discrimination* (stating that in the context of a religious accommodation, an accommodation would not be reasonable ''if it requires the employee to accept a reduction in pay rate or some other loss of a benefit or privilege of employment and there is an alternative accommodation that does not do so''); EEOC, *Enforcement Guidance: Unlawful Disparate Treatment of Workers With Caregiving Responsibilities,* Example 5 (2007), *https://www.eeoc.gov/laws/guidance/enforcement-guidance-unlawful-disparate-treatment-workers-caregiving-responsibilities* (explaining how a worker can be a comparator for themselves).

[164] Depending on the facts, this could be a violation of Title VII's prohibition on sex discrimination as well.

video conferencing. Although this accommodation would allow her to perform her essential job functions and would not impose an undue hardship, her employer reassigns her to smaller, local accounts. Being assigned only to these accounts is not an effective accommodation because it limits Yasmin's opportunity to compete for promotions and bonuses as she had in the past. This could be a violation of 42 U.S.C. 2000gg–1(1), because Yasmin is denied an equal opportunity to compete for promotions; thus, her employer has failed to provide her a reasonable accommodation. The employer's actions also could violate 42 U.S.C. 2000gg–1(5) and 2000gg–2(f), or Title VII's prohibition against pregnancy discrimination.

1636.4(b) Requiring a Qualified Employee To Accept an Accommodation

18. The statute at 42 U.S.C. 2000gg–1(2) prohibits a covered entity from requiring a qualified employee to accept an accommodation other than any reasonable accommodation arrived at through the interactive process. Pursuant to this provision in the PWFA and § 1636.4(b), a covered entity cannot require a qualified employee to accept an accommodation such as light duty or a temporary transfer, or delay of an examination that is part of the application process, without engaging in the interactive process, even if the covered entity's motivation is concern for the employee's health or pregnancy.

19. The statute at 42 U.S.C. 2000gg–1(2) does not require that the employee have a limitation, known or not; thus, a violation of 42 U.S.C. 2000gg–1(2) could occur if a covered entity believes that a qualified employee is pregnant and decides, without engaging in the interactive process with the employee, that the employee needs a particular accommodation, and unilaterally requires the employee to accept the accommodation, even though the employee has not requested it and can perform the essential functions of the job without it. For example, this provision could be violated if an employment agency, without discussing the situation with the candidate, decides that a candidate recovering from a miscarriage needs an accommodation in the form of not being sent to certain jobs that the agency views as too physical. Similarly, a violation could result if an employer decides to excuse a qualified pregnant employee from overtime as an accommodation without the employee seeking an accommodation and the employer and the employee engaging in the interactive process.[165]

20. Additionally, a violation could occur if a covered entity receives a request for a reasonable accommodation and unilaterally imposes an accommodation that was not requested by the qualified employee without engaging in the interactive process.

21. Example Regarding Requiring an Employee To Accept an Accommodation:

Example #57/Requiring an Employee To Accept an Accommodation: Kia, a restaurant server, is pregnant. She asks for additional breaks during her shifts as her pregnancy progresses because she feels tired, and her feet are swelling. Her employer, without engaging in the interactive process with Kia, directs Kia to take host shifts for the remainder of her pregnancy, because it allows her to sit for long periods. The employer has violated 42 U.S.C. 2000gg–1(2) (§ 1636.4(b)), because it required Kia to accept an accommodation other than one arrived at through the interactive process, even if Kia's earnings did not decrease and her terms, conditions, and privileges of employment were not harmed.

Moreover, if the host shift does not provide Kia with equal terms, conditions, and privileges of employment (*e.g.,* Kia's wages decrease or Kia no longer can earn tips), the covered entity also may have violated 42 U.S.C. 2000gg–1(1) (requiring reasonable accommodation absent undue hardship); 2000gg–1(5) (prohibiting adverse action in terms, conditions, or privileges of employment); and/or 2000gg–2(f) (prohibiting retaliation) (§§ 1636.4(a) and (e) and 1636.5(f)).

22. Finally, this provision also could be violated if a covered entity has a rule that requires all qualified pregnant employees to stop a certain function—such as traveling—automatically, without any evidence that the particular employee is unable to perform that function.

1636.4(c) Denying Opportunities to Qualified Employees

23. The statute at 42 U.S.C. 2000gg–1(3) prohibits a covered entity from denying employment opportunities to a qualified employee with a known limitation if the denial is based on the need of the covered entity to make reasonable accommodations to the known limitations related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions of the qualified employee. Thus, an employee's known limitation and need for a reasonable accommodation cannot be part of the covered entity's decision regarding hiring, discharge, promotion, or other employment decisions, unless the reasonable accommodation would impose an undue hardship on the covered entity.

24. This provision in the PWFA uses language similar to that of the ADA, and § 1636.4(c) likewise uses language similar to the corresponding ADA regulation.[166] Section 1636.4(c) encompasses situations where the covered entity's decision is based on the future possibility that a reasonable accommodation will be needed, *i.e.,* 42 U.S.C. 2000gg–1(3) prohibits a covered entity from making a decision based on its belief that an employee may need a reasonable accommodation in the future regardless of whether the employee has asked for one or not. Thus, under § 1636.4(c), this prohibition would include situations where a covered entity refuses to hire a pregnant applicant because the covered entity believes that the applicant will need leave to recover from childbirth, regardless of whether the covered entity knows the exact amount of leave the applicant will require, or whether the applicant has mentioned the need for leave as a reasonable accommodation to the covered entity.

1636.4(d) Requiring a Qualified Employee To Take Leave

25. A covered entity may not require a qualified employee to take leave, whether paid or unpaid, if another reasonable accommodation can be provided to the employee's known limitations related to pregnancy, childbirth, or related medical conditions absent undue hardship.

26. This provision does not prohibit a covered entity from offering leave as a reasonable accommodation if leave is the reasonable accommodation requested or selected by the qualified employee, or if it is the only reasonable accommodation that does not cause an undue hardship. As provided in § 1636.3(i)(3), both paid leave (accrued, short-term disability, or another employer benefit) and unpaid leave are potential reasonable accommodations under the PWFA.

1636.4(e) Adverse Action on Account of Requesting or Using a Reasonable Accommodation

27. The PWFA contains overlapping provisions that protect employees, applicants, and former employees seeking or using reasonable accommodations. Importantly, nothing in the PWFA limits which provision an employee may use to protect their rights.

28. One of these provisions is 42 U.S.C. 2000gg–1(5), which prohibits adverse action in the terms, conditions, or privileges of employment against a qualified employee on account of the employee requesting or using a reasonable accommodation to the known limitations related to the pregnancy, childbirth, or related medical conditions of the employee.

29. The protections provided by 42 U.S.C. 2000gg–1(5) are likely to have significant overlap with 42 U.S.C. 2000gg–2(f), which prohibits retaliation. However, the PWFA's anti-retaliation provisions apply to a broader group of individuals and actions than 42 U.S.C. 2000gg–1(5) does.

30. ''Terms, conditions, or privileges of employment'' is a term from Title VII, and the Commission has interpreted it to encompass a wide range of activities or practices that occur in the workplace including, but not limited to: discriminatory work environment or atmosphere; duration of work (such as the length of an employment contract, hours of work, or attendance); work rules; job assignments and duties; and job advancement (such as training, support, and performance evaluations).[167] In addition, for the purposes of 42 U.S.C. 2000gg–1(5), ''terms, conditions, or privileges of employment'' can include hiring, discharge, or compensation.

[165] These actions also could violate Title VII's prohibition of disparate treatment based on sex. *See Enforcement Guidance on Pregnancy Discrimination, supra* note 24, at (I)(B)(1).

[166] *See* 42 U.S.C. 12112(b)(5)(B); 29 CFR 1630.9(b).

[167] 42 U.S.C. 2000e–2(a)(1); *Compliance Manual on Terms, Conditions, and Privileges of Employment, supra* note 69, at 613.1(a) (stating that the language is to be read in the broadest possible terms and providing a list of examples).

31. This provision prohibits a covered entity from taking a harmful action against a qualified employee. For example, this provision prohibits a covered entity from penalizing an employee for having requested or used an accommodation that the covered entity had granted previously.

32. Examples Regarding Adverse Action in Terms, Conditions, or Privileges of Employment:

Example #58/Adverse Action in Terms, Conditions, or Privileges of Employment: Nava took leave to recover from childbirth as a reasonable accommodation under the PWFA, and, as a result, failed to meet the sales quota for that quarter, which led to a negative performance appraisal. The negative appraisal could be a violation of 42 U.S.C. 2000gg–1(5) because Nava received it due to the use of a reasonable accommodation. If an employee receives the reasonable accommodation of leave, a production standard, such as a sales quota, may need to be prorated to account for the reduced amount of time the employee works.[168]

33. Also, an employer may violate this provision if there is more than one reasonable accommodation that does not impose an undue hardship, and the employer, after the interactive process, chooses the accommodation that causes an adverse action with respect to the terms, conditions, or privileges of employment, despite the existence of an alternative accommodation that would not do so.

Example #59/Adverse Action in Terms, Conditions, or Privileges of Employment: Ivy asks for additional bathroom breaks during the workday because of pregnancy, including during overtime shifts. After talking to Ivy, Ivy's supervisor decides Ivy should simply not work overtime, because during the overtime shift there are fewer employees and the supervisor does not want to bother figuring out coverage for Ivy's bathroom breaks, although it would not be an undue hardship to do so. As a result, Ivy is not assigned overtime and loses earnings. The employer's actions could violate 42 U.S.C. 2000gg–1(5) because Ivy suffered the adverse action of not being assigned to overtime and losing wages because she used a reasonable accommodation.

Example #60/Adverse Action in Terms, Conditions, or Privileges of Employment: Leah asks for telework due to morning sickness. Through the interactive process, it is determined that either telework or a later schedule combined with an hour rest break in the afternoon would allow Leah to perform the essential functions of her job without imposing an undue hardship. Although Leah prefers telework, the employer would rather Leah be in the office. It would not be a violation of 42 U.S.C. 2000gg–1(5) to offer Leah the schedule change/rest break, instead of telework, as a reasonable accommodation.

34. The facts set out in Examples #58 and #59 of this appendix also could violate 42 U.S.C. 2000gg–1(1) and 2000gg–2(f).

V. 1636.5 Remedies and Enforcement

1. In crafting the PWFA remedies and enforcement section, Congress recognized the advisability of using the existing mechanisms for redress of other forms of employment discrimination. The regulation at § 1636.5(a), (c), (d), and (e) follows the language of the statute.

1636.5(a) Remedies and Enforcement Under Title VII

2. The enforcement mechanisms, procedures, and remedies available to employees and others covered by Title VII apply to the PWFA.[169] Thus, employees covered by section 706 of Title VII may file charges alleging violations of the PWFA with the Commission, and the Commission will investigate them using the same process as set out in Title VII.[170] Similarly, the Commission will use the same rules to determine the time limits for filing a charge; if the State or locality in which the charge has been filed has a law prohibiting sex discrimination, pregnancy discrimination, or specifically providing accommodations for pregnancy, childbirth, or related medical conditions, the deadline to file a charge will be 300 days.[171]

1636.5(e) Remedies and Enforcement Under Section 717 of the Civil Rights Act of 1964

3. The applicable procedures and available remedies for employees covered by section 717 of the Civil Rights Act of 1964, 42 U.S.C. 2000e–16, apply under the PWFA. Employees covered by section 717 of Title VII may file complaints with the relevant Federal agency which will investigate them, and the Commission will process appeals using the same process as set out in Title VII for Federal employees. Thus, the Commission's implementing regulations found at 29 CFR part 1614 (Federal sector equal employment opportunity) apply to the PWFA as well.

Damages

4. As with other Federal employment discrimination laws, the PWFA provides for recovery of pecuniary and non-pecuniary damages, including compensatory and punitive damages. The statute's adoption by reference of section 1977A of the Revised Statutes of the United States, 42 U.S.C. 1981a, also imports the limitations on the recovery of compensatory damages and punitive damages generally applicable in employment discrimination cases, depending on the size of the employer. Punitive damages are not available in actions against a government, government agency, or political subdivision. This part lays out these requirements involving damages in separate paragraphs under § 1636.5(a) through (e).

1636.5(f) Prohibition Against Retaliation

5. The anti-retaliation provisions of the PWFA should be interpreted broadly, like those of Title VII and the ADA, to effectuate Congress' broad remedial purpose in enacting these laws.[172] The protections of these provisions extend beyond qualified employees with known limitations and cover activity that may not yet have occurred, such as a circumstance in which a covered entity threatens an employee with termination if they file a charge or requires an employee to sign an agreement that prohibits such individual from filing a charge with the Commission.[173]

1636.5(f)(1) Prohibition Against Retaliation

6. The types of conduct prohibited, the standard for determining what constitutes retaliatory conduct, and the individuals protected under the PWFA are the same as they are under Title VII.[174] Accordingly, this provision prohibits discrimination against employees who engage in protected activity, which includes '"participating' in an EEO process or 'opposing' discrimination."[175] Title VII's anti-retaliation provision is broad and protects an employee from conduct, whether related to employment or not, that a reasonable person would have found ''materially adverse,'' meaning that the action ''well might have dissuaded a reasonable worker from making or supporting a charge of discrimination.''[176] Additionally, Title VII's anti-retaliation provision protects employees, applicants, and former employees.[177] The same interpretations apply to the PWFA's anti-retaliation provision.[178]

---

[168] *See Enforcement Guidance on Reasonable Accommodation, supra* note 12, at Question 19.

[169] 42 U.S.C. 2000gg–2(a), (d), (e).

[170] *See* 29 CFR part 1601.

[171] *See EEOC* v. *Dolgencorp, LLC,* 899 F.3d 428, 433–34 (6th Cir. 2018) (applying the 300-day time limit to a charge alleging failure to provide a reasonable accommodation under the ADA filed in Tennessee where the state statute prohibited discrimination against individuals with disabilities but did not provide for reasonable accommodations, noting, ''[t]he relevant question is whether the state agency has the power to entertain the claimant's disability discrimination claim, not whether state law recognizes the same theories of discrimination as federal law'').

[172] *See Enforcement Guidance on Retaliation and Related Issues, supra* note 89, at (II)(A)(1) (describing the broad protection of the participation clause); *id.* at (II)(A)(2), (2)(a) (describing the broad protection of the opposition clause).

[173] *See* EEOC, *Enforcement Guidance on Non-Waivable Employee Rights under EEOC Enforced Statutes,* (II) (1997), *https://www.eeoc.gov/laws/guidance/enforcement-guidance-non-waivable-employee-rights-under-eeoc-enforced-statutes* (''[P]romises not to file a charge or participate in an EEOC proceeding are null and void as a matter of public policy. Agreements extracting such promises from employees may also amount to separate and discrete violations of the anti-retaliation provisions of the civil rights statutes.'').

[174] *See* 42 U.S.C. 2000gg–2(f)(1) (using the same language as 42 U.S.C. 2000e–3(a)).

[175] *See Enforcement Guidance on Retaliation, supra* note 89, at (II)(A); *see also id.* at (II)(A)(1), (2) (describing protected activity under Title VII's anti-retaliation clause).

[176] *Burlington N. & Santa Fe Ry. Co.* v. *White,* 548 U.S. 53, 68 (2006) (internal citations and quotation marks omitted).

[177] *See* 42 U.S.C. 2000e–3(a). The statute at 42 U.S.C. 2000gg–2(f)(1) applies to an ''employee'' which 42 U.S.C. 2000gg(3) defines to include applicants. The statute at 42 U.S.C. 2000gg(3) relies on the Title VII definition of employee, which includes former employees, where relevant. *See also Robinson* v. *Shell Oil Co.,* 519 U.S. 337, 346 (1997) (finding former employees are protected under Title VII's anti-retaliation provision).

[178] All retaliatory conduct under Title VII (and the ADA), including retaliation that takes the form of harassment, is evaluated under the legal standard for retaliation. *See Enforcement Guidance on Retaliation, supra* note 89, at (II)(B)(3).

7. Section 1636.5(f) contains three other provisions based on the statutory language and established anti-retaliation concepts under Title VII and the ADA.

8. First, 42 U.S.C. 2000gg–2(f)(1) protects ''any employee,'' not only ''a qualified employee with a known limitation''; therefore, an employee, applicant, or former employee need not establish that they have a known limitation or are qualified (as those terms are defined in the PWFA) to bring a claim under 42 U.S.C. 2000gg–2(f)(1).[179]

9. Second, a request for a reasonable accommodation under the PWFA constitutes protected activity, and therefore retaliation for such a request is prohibited.[180]

10. Third, an employee, applicant, or former employee does not have to be actually deterred from exercising or enjoying rights under this section for the retaliation to be actionable.[181]

1636.5(f)(2) Prohibition Against Coercion

11. The PWFA's anti-coercion provision uses the same language as the ADA's interference provision, with one minor variation in the title of the section.[182] The scope of the PWFA anti-coercion provision is broader than the anti-retaliation provision; it reaches those instances ''when conduct does not meet the 'materially adverse' standard required for retaliation.'' [183] Following the language of 42 U.S.C. 2000gg–2(f)(2) and consistent with the ADA's analogous interference provision, § 1636.5(f)(2) protects individuals, not qualified employees with a known limitation under the PWFA. Thus, the individual need not be an employee, applicant, or former employee and need not establish that they have a known limitation or that they are qualified (as those terms are defined in the PWFA) to bring a claim for coercion under the PWFA.[184]

12. The purpose of this provision is to ensure that employees are free to avail themselves of the protections of the statute. Thus, consistent with the ADA regulation for the analogous provision, § 1636.5(f)(2) includes ''harass'' in the list of prohibitions; the inclusion is intended to characterize the type of adverse treatment that may in some circumstances violate the coercion provision.[185] Section 1636.5(f)(2) also states that an individual does not actually have to be deterred from exercising or enjoying rights under this section for the coercion to be actionable.[186]

13. Importantly the coercion provision does not apply to any and all conduct or statements that an individual finds intimidating; it only prohibits conduct that is reasonably likely to interfere with the exercise or enjoyment of PWFA rights.[187]

Some examples of coercion include:

- coercing an individual to relinquish or forgo an accommodation to which they are otherwise entitled;
- intimidating an applicant from requesting an accommodation for the application process by indicating that such a request will result in the applicant not being hired;
- issuing a policy or requirement that purports to limit an employee's rights to invoke PWFA protections (*e.g.,* a fixed leave policy that states ''no exceptions will be made for any reason'');
- interfering with a former employee's right to file a PWFA lawsuit against a former employer by stating that a negative job reference will be given to prospective employers if the suit is filed; and
- subjecting an employee to unwarranted discipline, demotion, or other adverse treatment because they assisted a coworker in requesting a reasonable accommodation.[188]

Possible Violations of 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information

14. Seeking documentation or information that goes beyond the parameters laid out in § 1636.3(l) when an employee requests a reasonable accommodation under the PWFA may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) because seeking such information or documentation might well dissuade a reasonable person from engaging in protected activity, such as requesting a reasonable accommodation, or might constitute coercion. Circumstances under which going beyond the parameters of § 1636.3(l) may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) include:

- Seeking supporting documentation or information in response to an employee's request for reasonable accommodation when it is not reasonable under the circumstances for the covered entity to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation, whether or not the employee provides the documentation or information and whether or not the employer grants the accommodation.
- Continued efforts to obtain more information or supporting documentation when sufficient information or supporting documentation has already been provided to allow the employer to determine whether the employee has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and the adjustment or change at work that is needed due to the limitation, whether or not the employee provides the documentation or information and whether or not the employer grants the accommodation.[189]

15. Disclosing medical information, threatening to disclose medical information, or requiring an employee to share their medical information other than in the limited situations set out in section *1636.7(a)(1)* of this appendix under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information* also may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)) because such actions might well dissuade a reasonable person from engaging in protected activity, such as requesting a reasonable accommodation, or might constitute coercion.[190]

16. Actions that the courts or the Commission have previously determined may be retaliation or interference under Title VII or the ADA may violate the retaliation and coercion provisions of the PWFA as well. Depending on the facts, a covered entity's retaliation for activity protected under the PWFA also may violate 42 U.S.C. 2000gg–1(1) (because these actions may make the accommodation ineffective) or 2000gg–1(5) (prohibiting adverse actions) (§ 1636.4(a) and (e)).

17. The following examples could violate 42 U.S.C. 2000gg–2(f) and also may violate 42 U.S.C. 2000gg–1(1), (5) or other laws.

Example #61/Retaliatory Performance Appraisal: Perrin requests a stool to sit on

---

[179] *See Enforcement Guidance on Retaliation, supra* note 89, at (II)(A)(3).

[180] *See id.* at (II)(A)(2)(e) and Example 10.

[181] *See id.* at (II)(B)(1), (2) (stating that the retaliation ''standard can be satisfied even if the individual was not in fact deterred'' and that ''[i]f the employer's action would be reasonably likely to deter protected activity, it can be challenged as retaliation even if it falls short of its goal'').

[182] The ADA uses the phrase ''Interference, coercion, or intimidation'' to preface the prohibition against interference (42 U.S.C. 12203(b)), whereas the PWFA uses ''Prohibition against coercion'' (42 U.S.C. 2000gg–2(f)(2)). The language of the prohibitions is otherwise identical.

[183] *See Enforcement Guidance on Retaliation, supra* note 89, at (III).

[184] *See id.*

[185] *See* 29 CFR 1630.12(b); *see also Enforcement Guidance on Retaliation, supra* note 89, at text accompanying n.177 (stating, with regard to the ADA, that ''[t]he statute, regulations, and court decisions have not separately defined the terms 'coerce,' 'intimidate,' 'threaten,' and 'interfere.' Rather, as a group, these terms have been interpreted to include at least certain types of actions which, whether or not they rise to the level of unlawful retaliation, are nevertheless actionable as interference.'').

[186] *See Enforcement Guidance on Retaliation, supra* note 89, at (II)(B)(1), (2) (noting that actions can be challenged as retaliatory even if the person was not deterred from engaging in protected activity).

[187] *See id* at (III) (discussing the ADA's interference provision).

[188] *See id.*

[189] This is based on a similar policy adopted under the ADA. *See Enforcement Guidance on Disability-Related Inquiries, supra* note 152, at Question 11 (''[W]hen an employee provides sufficient evidence of the existence of a disability and the need for reasonable accommodation, continued efforts by the employer to require that the individual provide more documentation and/or submit to a medical examination could be considered retaliation.''). The Commission notes that if the covered entity can show that it had a good faith belief that the submitted documentation was insufficient and thus sought additional documentation, its actions would not be retaliatory because they would lack the requisite intent.

[190] As described in detail *infra* in section *1636.7(a)(1)* of this appendix under *Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information,* the ADA's rules on medical confidentiality apply to medical information obtained under the PWFA and allow for disclosure of such information only in specific, limited circumstances. *See* 42 U.S.C. 12112(d)(3); 29 CFR 1630.14; *Enforcement Guidance on Disability-Related Inquiries, supra* note 152, at text accompanying nn.9–10; *Enforcement Guidance: Preemployment Disability-Related Questions, supra* note 152, at text accompanying n.6.

due to her pregnancy which makes standing difficult. Lucy, Perrin's supervisor, denies Perrin's request. The corporate human resources department instructs Lucy to grant the request because there is no undue hardship. Angry about being told to provide the reasonable accommodation, Lucy thereafter gives Perrin an unjustified poor performance rating and denies Perrin's request to attend training that Lucy approves for Perrin's coworkers.

Example #62/Retaliatory Surveillance: Marisol files an EEOC charge after Cyrus, her supervisor, refuses to provide her with the reasonable accommodation of help with lifting following her cesarean section. Marisol also alleges that after she requested the accommodation, Cyrus asked two coworkers to: conduct surveillance on Marisol, including watching her at work; note with whom she associated in the workplace; suggest to other employees that they should avoid her; and report her breaks to Cyrus, who said he kept a record of this information ''just in case.''

Example #63/Seeking Supporting Documentation Beyond § 1636.3(l): Mara provides her employer with a note from her health care provider explaining that she is pregnant and will need the functions of her position that require her to be around certain chemicals to be temporarily suspended. Mara's supervisor requires that Mara confirm the pregnancy through an ultrasound, even though the employer already has sufficient information to determine whether Mara has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions (a limitation) and needs an adjustment or change at work due to the limitation.

Example #64/Dissuaded from Requesting an Accommodation: During an interview at an employment agency, Arden tells the human resources staffer, Stanley, that Arden is dealing with complications from their recent childbirth and may need time off for doctor's appointments during their first few weeks at work. Stanley counsels Arden that needing leave so soon after starting will be a ''black mark'' on their application and that it would be a waste of time for the employment agency to try to find work for Arden.

Example #65/Threatening Future Employment: Merritt, who gets jobs through an employment agency, is fired after requesting an accommodation under the PWFA. The employment agency refuses to refer Merritt to other employers, telling Merritt that the agency only refers workers who will not cause any trouble.

Example #66/Disciplined for Assisting Other Employees: Jessie, a factory union steward, ensures that workers know about their rights under the PWFA and encourages employees with known limitations to ask for reasonable accommodations. Jessie helps employees navigate the reasonable accommodation process and provides suggestions of possible reasonable accommodations. Factory supervisors, annoyed by the number of PWFA reasonable accommodation requests, write up Jessie for trivial timekeeping violations and other actions that had not been deemed worthy of discipline prior to Jessie assisting other employees with their PWFA accommodation requests.

Example #67/Negative Reference: While she was pregnant, Laila requested and received the reasonable accommodation of a temporary suspension of the essential function of moving heavy boxes and placement in the light duty program. After giving birth, Laila tells her employer that she has decided to resign and stay home for a year. Her employer responds that if Laila follows through and resigns now, the employer will have no choice but to give her a negative reference because Laila demanded an accommodation but did not have the loyalty to come back after having her baby.

Example #68/Seeking Supporting Documentation Beyond § 1636.3(l): Robbie, a retail worker, is pregnant. Her job requires her to stand at a cash register. Because of her pregnancy, Robbie has difficulty standing for long periods of time. Robbie explains the situation to the manager, who requires Robbie to produce a signed doctor's note saying that Robbie is pregnant and needs to sit. Because Robbie is pregnant and has requested one of the simple modifications that will virtually always be found to be a reasonable accommodation that does not impose an undue hardship, and she has confirmed the limitation and her need for the modification due to the limitation, the manager is not permitted to seek supporting documentation, as set forth in § 1636.3(l)(1)(iii).

Example #69/Disciplined Through Workplace Policy: Tina gave birth and started a new job. She is experiencing urinary incontinence related to, affected by, or arising out of childbirth and needs time to attend a medical appointment. Her new employer has a policy that employees cannot be absent during the first 90 days of work. Tina requests and is given the reasonable accommodation of time to attend her medical appointment, but then is issued a disciplinary write-up for missing work during her first 90 days.

Example #70/Retaliatory Failure to Provide Interim Reasonable Accommodation: Dominique is lactating and, based on the recommendation of her health care provider, requests additional safety gear and protection to reduce the risk that chemicals she works with will contaminate her breast milk. The equipment has to be ordered, and the employer puts Dominique on unpaid leave while waiting for the equipment, although there is available work that Dominique could perform that would not require her to be around the chemicals while she waits for the additional safety gear. Additionally, her supervisor tells human resources staff that he is tired of accommodating Dominique because she asked for accommodations during her pregnancy as well and there has to be an end to her requests.

Example #71/Retaliation for Requesting Safety Information: Wynne is pregnant and is in a probationary period as a janitor. She asks her supervisor for safety information about the cleaning products that she handles as part of her job and explains it is to help her determine if she needs to ask for a reasonable accommodation regarding exposure to the chemicals. Her supervisor tells her not to worry and warns her that trying to get this kind of information will mark her as a troublemaker. During her first review near the end of the probationary period, the supervisor notes that, for an entry-level janitor, Wynne asks many questions and behaves like a troublemaker. The supervisor terminates Wynne even though she was performing satisfactorily.

Example #72/Seeking Supporting Documentation Beyond § 1636.3(l): An employer adopts a policy requiring everyone who requests a reasonable accommodation to provide medical documentation in support of the request. Cora, a production worker who is 8 months pregnant, requests additional bathroom breaks. The employer applies the policy to her, refusing to provide the accommodation until she submits supporting documentation, even though under § 1636.3(l)(1)(iii) the employer is not permitted to seek documentation in this situation.

Example #73/Seeking Supporting Documentation Beyond § 1636.3(l) and Failure to Provide Accommodation: An employer adopts a policy requiring everyone who requests a reasonable accommodation to provide supporting documentation. Fourteen months after giving birth, Alex wants to continue to pump at work, which is beyond the length of time the PUMP Act requires. She explains her request to her supervisor and asks that she have breaks to pump and that the room provided have a chair, a table, access to electricity and running water. Alex's employer refuses to grant the accommodations unless Alex provides supporting documentation from her health care provider. Alex cannot provide the information, so she stops pumping. In addition to potentially violating 42 U.S.C 2000gg–2(f), the employer cannot use the lack of supporting documentation as a defense to the failure to provide the accommodations because seeking documentation was not reasonable under the circumstances as set forth in § 1636.3(l)(1)(iv) and thus these actions may violate 42 U.S.C 2000gg–1(1) (§ 1636.4(a)(3)).

Example #74/Retaliatory Waiver of Rights: An employer adopts a policy under which an employee who files a claim with the EEOC or another outside agency automatically waives their right to have a complaint processed through the employer's internal complaint procedure. Rebecca submitted an internal complaint to her supervisor after her request for a reasonable accommodation was denied and, a month later, filed a charge with the EEOC. The employer notified her that it would stop investigating her internal complaint until the EEOC matter was resolved, but that she would be free to pursue the internal resolution of her complaint if she withdrew her EEOC charge. The employer's policy is retaliatory because it adversely affects the employee by stripping her of an employment privilege for filing a charge with the EEOC.

Example #75/Disclosure of Medical Information: Caroline requested and received an accommodation under the PWFA in the form of a lifting restriction due to a back injury related to her pregnancy. Caroline's

accommodation was granted early in her third trimester. Two weeks after her accommodation went into effect, during a team meeting, Caroline's supervisor went around the table describing each team members' duties, sighing as she explained that Caroline had a back injury due to pregnancy that prevented her from lifting and that Caroline's injury was the reason that other team members had extra duties. At each biweekly team meeting for the next two months, Caroline's supervisor noted that team members continued to be assigned extra duties because of Caroline's back injury. In addition to potential violation 42 U.S.C 2000gg–2(f), this disclosure of medical information violates the ADA's confidentiality rules, as it does not fit within any of the five disclosure exceptions.

Example #76/Retaliatory Harassment: Benita requested and received an accommodation under the PWFA in the form of a one-hour delayed start time due to morning sickness related to her pregnancy. Benita's coworkers are aware that she is receiving the accommodation due to a condition related to her pregnancy. A few days after Benita's accommodation is granted, her coworkers start to make unwelcome, critical comments about her ''late'' arrivals on a frequent basis, including that other pregnant individuals were able to start work on time during their pregnancies, that being able to ''work during pregnancy is mind over matter,'' and calling her ''lazy'' and a ''slacker.'' The coworkers schedule meetings that begin a half hour before Benita arrives in the office and complain to Benita's supervisor that she arrives late to those meetings. Because she cannot attend the meetings, Benita falls behind on her work.

1636.5(g) Limitation on Monetary Damages

18. The PWFA at 42 U.S.C. 2000gg–2(g), using the language of the Civil Rights Act of 1991, 42 U.S.C. 1981a(a)(3), provides a limitation on damages based on a ''good faith effort'' to provide a reasonable accommodation. The covered entity bears the burden of proof for this affirmative defense. This limitation on damages applies to violations of 42 U.S.C. 2000gg–1(1) (§ 1636.4(a)) only. It does not apply to any other provisions of the PWFA.

VI. 1636.7 Relationship to Other Laws

1636.7(a)(1) Relationship to Other Laws in General

1. The PWFA does not limit the rights of individuals affected by pregnancy, childbirth, or related medical conditions under a Federal, State, or local law that provides greater or equal protection. It is equally true that a Federal, State, or local law that provides less protection for individuals affected by pregnancy, childbirth, or related medical conditions than the PWFA does not limit the rights provided by the PWFA.

2. Federal laws, including, but not limited to, Title VII, the ADA, the FMLA, the Rehabilitation Act, the PUMP Act, and Title IX of the Education Amendments of 1972, 20 U.S.C. 1681 *et seq.,* provide protections for employees affected by pregnancy, childbirth, or related medical conditions. Numerous States and localities also have laws that provide accommodations for pregnant employees.[191] All of the protections for employees affected by pregnancy, childbirth, or related medical conditions in these laws are unaffected by the PWFA. If these laws provide greater protections than the PWFA, the greater protections will apply. For example, the State of Washington's Healthy Starts Act provides that certain accommodations, including lifting restrictions of 17 pounds or more, cannot be the subject of an undue hardship defense.[192] If an employee in Washington is seeking a lifting restriction as a reasonable accommodation for a pregnancy-related reason under the Healthy Starts Act, an employer in Washington cannot argue that a lifting restriction of 20 pounds is an undue hardship, even though that defense could be raised if the claim were brought under the PWFA.

3. Section 1636.7(a) also applies to Federal or State occupational health and safety laws and collective bargaining agreements (CBAs). Thus, nothing in the PWFA limits an employee's rights under laws such as the OSH Act or under a CBA if either of those provide protection greater than or equal to that of the PWFA.

The PWFA and Title VII

4. The PWFA uses many terms and definitions from Title VII, and conduct that is the subject of PWFA claims also may give rise to claims under Title VII. For example, a qualified pregnant employee who sought leave for recovery from childbirth and was terminated may have a claim under both Title VII for sex discrimination and the PWFA for failure to accommodate, adverse employment action, or retaliation.[193]

5. Under Title VII, employees affected by pregnancy, childbirth, or related medical conditions may be able to receive accommodations if they can identify a comparator similar in their ability or inability to work.[194] Under the PWFA, qualified employees with physical or mental conditions related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions are entitled to reasonable accommodations (absent undue hardship) whether or not other employees have those accommodations and whether or not the affected employees are similar in their ability or inability to work as employees not so affected. Additionally, if the covered entity offers a neutral reason or policy to explain why qualified employees affected by pregnancy, childbirth, or related medical conditions cannot access a specific benefit, the qualified employee with a known limitation under the PWFA still may ask for a waiver of that policy as a reasonable accommodation. Under the PWFA, the employer must grant the waiver, or another reasonable accommodation, absent undue hardship. If, for example, an employer denies a qualified pregnant employee's request to join its light duty program as a reasonable accommodation because the program is for employees with on-the-job injuries, it may be a reasonable accommodation for the employer's light duty program policy to be waived. Finally, employers in this situation should remember that if there are others to whom the benefit is extended, the Supreme Court stated in *Young* v. *UPS* that ''[the employer's] reason [for refusing to accommodate a pregnant employee] normally cannot consist simply of a claim that it is more expensive or less convenient to add pregnant women to the category of those . . . whom the employer accommodates.'' [195] Thus, if the undue hardship defense of the employer under the PWFA is based solely on cost or convenience, that defense could, under certain fact patterns, nonetheless lead to liability under Title VII.

6. Finally, nothing in the PWFA, this part, or this Interpretive Guidance should be interpreted to reduce or limit any protections provided by Title VII.

The PWFA and the ADA

7. The PWFA uses many terms and definitions from the ADA. Conduct that is the subject of PWFA claims also may give rise to claims under the ADA. For example, an employee with postpartum depression seeking a reasonable accommodation to attend treatment whose employer fails to provide the accommodation may have a claim under both the PWFA and the ADA (and possibly also Title VII). Similarly, an employee who has a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions may have both a known limitation under the PWFA and a disability under the ADA (where the physical or mental condition substantially limits a major life activity, including a major bodily function—in other words, the individual would have an ''actual'' ADA disability).[196] In such case, the employee may be entitled to accommodation, absent undue hardship, under both the PWFA and the ADA.

8. While it will depend on the specific facts, if an employee could be covered under either the PWFA or the ADA, a covered entity's analysis, in most cases, should begin with the PWFA because the definition of ''known limitation'' under the PWFA covers situations when the ADA does not apply.[197]

9. Requests for accommodation under the PWFA may be indistinguishable from requests for accommodation under the ADA and there will be situations in which both statutes apply. In one instance, the PWFA known limitation also may be an ADA disability. In another, employees with existing disabilities may seek ADA coverage for those, while also invoking the PWFA to address limitations related to pregnancy, childbirth, or related medical conditions interacting with an existing disability. In these situations, employees with disabilities may require additional or different accommodations and are entitled to them,

[191] U.S. Dep't of Lab., Women's Bureau, *Employment Protections for Workers Who Are Pregnant or Nursing, www.dol.gov/agencies/wb/pregnant-nursing-employment-protections* (last visited Mar. 25, 2024).

[192] Wash. Rev. Code 43.10.005(1)(d).

[193] *See* 42 U.S.C. 2000gg–1(1), (5); 2000gg–2(f).

[194] 42 U.S.C. 2000e(k).

[195] 575 U.S. at 229.

[196] 42 U.S.C. 12102(1); 29 CFR 1630.2(g).

[197] 42 U.S.C. 2000gg(4).

absent undue hardship, under the PWFA and/or the ADA.

10. There also will be situations where an employee with a disability who has an accommodation under the ADA seeks and is granted an accommodation under the PWFA. For example, an employee who uses an adaptive keyboard as an ADA reasonable accommodation temporarily may be assigned to a new position as part of an accommodation under the PWFA because an essential function of their original position has been temporarily suspended. In this situation, the employer must continue to provide the adaptive keyboard as an ADA reasonable accommodation if it is necessary for the employee to perform the essential functions of the new position.

11. Because an individual may be covered by both the ADA and the PWFA, and the PWFA provides at 42 U.S.C. 2000gg–5(a)(1) that nothing in the statute shall be construed to invalidate or limit the powers, remedies, and procedures under any Federal law that provides greater or equal protection for individuals affected by pregnancy, childbirth, or related medical conditions, a covered entity must apply the law that provides the worker the most protection.

12. Examples Regarding Disability and Pregnancy:

Example #77/Disability and Pregnancy: Roxy is an accountant who has developed gestational hypertension and preeclampsia late in her pregnancy, causing damage to her kidneys. As a result, Roxy needs leave for periodic medical appointments to protect her own health and the health of her pregnancy. Because Roxy's condition is both a physical or mental condition related to, affected by, or arising out of pregnancy, childbirth, or related medical conditions and a condition that substantially limits one of her major bodily functions (kidney function), it qualifies as both a limitation under the PWFA and a disability under the ADA. Absent undue hardship, the employer must provide Roxy with the accommodation she requires due to her pregnancy (under the PWFA) and her disability (under the ADA). Of course, one effective accommodation may be sufficient to satisfy requirements under both statutes in this instance.

Example #78/Disability and Pregnancy: Farah is a nurse who has diabetes, and her employer has provided her with the accommodation of breaks to eat small meals throughout the day and breaks to check her insulin levels. When Farah becomes pregnant, she experiences morning sickness that makes it difficult for her to eat in the morning. As a result, she needs more breaks for eating later in the day and occasionally needs a break to rest while at work. Absent undue hardship, the employer must provide Farah with the additional accommodations she requires due to her pregnancy under the PWFA.

13. In cases where both the ADA and PWFA apply, if an employer fails to provide an accommodation the employee could potentially file a claim for failure to accommodate under both the ADA and the PWFA. They also could file a separate ADA claim if they experienced disparate treatment based on a disability.

Prohibition on Disability-Related Inquiries and Medical Examinations and Protection of Medical Information

14. Important protections from the ADA that apply to all covered employees continue to apply when employees are seeking accommodations under the PWFA. First, the rules limiting the ability of covered entities to make disability-related inquiries or require medical exams in the ADA apply to all disability-related inquiries and medical exams including those made in the context of requests for PWFA accommodation.[198] For example, a covered entity may not ask an employee who is seeking an accommodation under the PWFA whether the employee has asked for other accommodations in the past or has preexisting conditions because these questions are likely to elicit information about a disability and are not job-related and consistent with business necessity in this context. Similarly, an employer's response to an employee's request for accommodation under the PWFA that requires the employee to complete a release permitting the employer to obtain the employee's complete medical records would not be job-related or consistent with business necessity.

15. Second, under the ADA, covered entities are required to keep medical information of all applicants, employees, and former employees (whether or not those individuals have disabilities) confidential, with limited exceptions.[199] The Commission has repeatedly stated that the requirement applies to all medical information in the employer's possession, whether obtained through inquiries pursuant to the ADA or otherwise.[200] Thus, this protection applies to medical information obtained under the PWFA, including medical information provided voluntarily and medical information provided as part of the reasonable accommodation process. Moreover, as a practical matter, in many circumstances under the PWFA, the medical information obtained by an employer may involve a condition that could be a disability; rather than an employer attempting to parse out whether to keep certain information confidential or not, all medical information should be kept confidential.[201] Therefore, medical information obtained under the PWFA is subject to the ADA requirement that information regarding the medical condition or history of any employee be collected and maintained on separate forms and in separate medical files and be treated as a confidential medical record.[202]

16. That an employee is pregnant, has recently been pregnant, or has a medical condition related to pregnancy or childbirth is medical information. The ADA requires that employers keep such information confidential and only disclose it within the confines of the limited disclosure rules described in paragraphs 17 and 18 of this section. Similarly, disclosing that an employee is receiving or has requested an accommodation under the PWFA, or has limitations for which they requested or are receiving a reasonable accommodation under the PWFA, usually amounts to a disclosure that the employee is pregnant, has recently been pregnant, or has a related medical condition.

17. As set forth at 29 CFR 1630.14, under the ADA, medical information must be collected and maintained on separate forms and in separate medical files and be treated as a confidential medical record, except that:

(i) Supervisors and managers may be informed regarding necessary restrictions on the work or duties of the employee and necessary accommodations;

(ii) First aid and safety personnel may be informed, when appropriate, if the disability might require emergency treatment; and

(iii) Government officials investigating compliance with the ADA shall be provided relevant information on request.

18. In addition to what is stated in the ADA regulation: covered entities (iv) may disclose the medical information to State workers' compensation offices, State second injury funds, or workers' compensation insurance carriers in accordance with State workers' compensation laws; and (v) may use the medical information for insurance purposes.[203] All these disclosure exceptions apply to medical information obtained under the PWFA. Disclosing medical information in any circumstances, other than those set forth in these five recognized disclosure exceptions, violates the ADA's confidentiality rule.

19. In addition, as explained in section *1636.5(f)* of this appendix under *Possible Violations of 42 U.S.C. 2000gg–2(f)*

[198] *See* 42 U.S.C. 12112(d); 29 CFR 1630.13, 1630.14.

[199] 42 U.S.C. 12112(d)(3)(B); 29 CFR 1630.14(b)(1)(i) through (iii), (c)(1), (d)(4); *Enforcement Guidance on Disability-Related Inquiries, supra* note 152, at text accompanying nn.9–10 (''The ADA requires employers to treat any medical information obtained from a disability-related inquiry or medical examination . . ., as well as any medical information voluntarily disclosed by an employee, as a confidential medical record. Employers may share such information only in limited circumstances with supervisors, managers, first aid and safety personnel, and government officials investigating compliance with the ADA.'') and text after n.12 (''[T]he ADA's restrictions on inquiries and examinations apply to all employees, not just those with disabilities.''); *Enforcement Guidance: Preemployment Disability-Related Questions, supra* note 152, at text accompanying n.6 (''Medical information must be kept confidential.'').

[200] *See supra* note 199. This policy also appears in numerous EEOC technical assistance documents. *See, e.g.,* EEOC, *Visual Disabilities in the Workplace and the Americans with Disabilities Act,* at text preceding n.43 (2023), *https://www.eeoc.gov/laws/guidance/visual-disabilities-workplace-and-americans-disabilities-act#q8* (''With limited exceptions, an employer must keep confidential any medical information it learns about an applicant or employee.'').

[201] Requests for accommodation under the PWFA also may overlap with FMLA issues, and the FMLA requires medical information to be kept confidential as well. 29 CFR 825.500(g).

[202] 42 U.S.C. 12112(d)(3)(B); 29 CFR 1630.14(b)(1), (c)(1), and (d)(4)(i); *see Enforcement Guidance: Preemployment Disability-Related Questions, supra* note 152, at text accompanying the question ''Can medical information be kept in an employee's regular personnel file?''

[203] *See Enforcement Guidance: Preemployment Disability-Related Questions, supra* note 152, at text accompanying the heading ''Confidentiality.''

(§ 1636.5(f)) Based on Seeking Supporting Documentation During the Reasonable Accommodation Process and Disclosure of Medical Information, disclosing medical information, threatening to disclose medical information, or requiring an employee to share their medical information other than in the limited situations set out in paragraphs 17 and 18 of this section also may violate 42 U.S.C. 2000gg–2(f) (§ 1636.5(f)).[204] Given the protections for confidential medical information under the ADA and the potential of violating 42 U.S.C. 2000gg–2(f), if a covered entity is under an obligation to disclose medical information received under the PWFA in any circumstances other than those provided in this Interpretive Guidance, before doing so it should inform the individual to whom the information relates of its intent to disclose the information; identify the specific reason for the disclosure; and provide sufficient time for the individual to object.

20. Finally, nothing in the PWFA, this part, or this Interpretive Guidance should be interpreted to reduce or limit any protections provided by the ADA.

1636.7(a)(2) Limitations Related to Employer-Sponsored Health Plans

21. The statute at 42 U.S.C. 2000gg–5(a)(2) states that nothing in the PWFA shall be construed to require an employer-sponsored health plan to pay for or cover any item, procedure, or treatment and, further, that nothing in the PWFA shall be construed to affect any right or remedy available under any other Federal, State, or local law with respect to any such payment or coverage requirement. For example, nothing in the PWFA requires, or forbids, an employer to pay for health insurance benefits for an abortion.

1636.7(b) Rule of Construction

22. The statute at 42 U.S.C. 2000gg–5(b) provides a ''rule of construction'' stating that the PWFA is ''subject to the applicability to religious employment'' set forth in section 702(a) of the Civil Rights Act of 1964, 42 U.S.C. 2000e–1(a). The relevant portion of section 702(a) provides that Title VII shall not apply to a religious corporation, association, educational institution, or society with respect to the employment of individuals of a particular religion to perform work connected with the carrying on by such corporation, association, educational institution, or society of its activities.[205] Section 1636.7(b) reiterates the PWFA statutory language and adds that nothing in 42 U.S.C. 2000g–5(b) or this part should be interpreted to limit the rights of a covered entity under the U.S. Constitution or the rights of an employee under other civil rights statutes. As with assertions of section 702(a) of the Civil Rights Act of 1964 in Title VII matters, when 42 U.S.C. 2000gg–5(b) is asserted by a respondent employer, the Commission will consider the application of the provision on a case-by-case basis.[206]

VII. 1636.8 Severability

1. The PWFA at 42 U.S.C. 2000gg–6 contains a severability provision regarding the statute. Section 1636.8 repeats the statutory provision and also addresses the Commission's intent regarding the severability of the Commission's regulations in this part and this Interpretive Guidance.

2. Following Congress' rule for the statute, in places where this part uses the same language as the statute, if any of those identical regulatory provisions, or the application of those provisions to particular persons or circumstances, is held invalid or found to be unconstitutional, the remainder of this part and the application of that provision of this part to other persons or circumstances shall not be affected.

3. In other places, where this part or this Interpretive Guidance provide additional guidance to carry out the PWFA, including examples of reasonable accommodations, following Congress' intent regarding the severability of the provisions of the statute, it is the Commission's intent that if any of those regulatory provisions or the Interpretive Guidance or the application of those provisions or the Interpretive Guidance to particular persons or circumstances is held invalid or found to be unconstitutional, the remainder of this part or the Interpretive Guidance and the application of that provision of this part or the Interpretive Guidance to other persons or circumstances shall not be affected.

[FR Doc. 2024–07527 Filed 4–15–24; 11:15 am]

BILLING CODE 6570–01–P

[204] *See, e.g., Haire* v. *Farm & Fleet of Rice Lake, Inc.,* No. 2:21–CV–10967, 2022 WL 128815, at *8–*9 (E.D. Mich. Jan. 12, 2022) (disclosing personal and confidential information about an employee's medical condition and mental health episodes to her coworkers could constitute retaliation under Title VII); *Holtrey* v. *Collier Cnty. Bd. of Cnty. Comm'rs,* No. 2:16–CV–00034, 2017 WL 119649, at *3 (M.D. Fla. Jan. 12, 2017) (determining that an employer's disclosure of its employee's confidential medical information about his genito-urinary system to his coworkers and subordinates could constitute retaliation under FMLA, relying on Title VII's definition of ''materially adverse action'').

[205] The PWFA makes no mention of section 703(e)(2) of the Civil Rights Act of 1964, which provides a second statutory exemption for religious educational institutions in certain circumstances.

[206] The case-by-case analysis of religious defenses asserted in response to a charge under the PWFA is consistent with the Commission's framework evaluating similar defenses under other statutes the Commission enforces. *See Compliance Manual on Religious Discrimination, supra* note 163, at (12–I)(C).

Federal Deposit Insurance Corporation

12 CFR Part 303
Request for Comment on Proposed Statement of Policy on Bank Merger Transactions; Agency Information Collection Activities; Proposals, Submissions, and Approvals; Proposed Rule and Notice

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Part 303

RIN 3064–ZA31

Request for Comment on Proposed Statement of Policy on Bank Merger Transactions

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Proposed Policy Statement; Request for Comment.

SUMMARY: The FDIC invites comments on a proposed Statement of Policy (SOP) on Bank Merger Transactions (Proposed SOP) that is relevant to all insured depository institutions (IDIs). The Proposed SOP would replace the FDIC's current SOP on Bank Merger Transactions (Current SOP) and proposes a principles-based overview that describes the FDIC's administration of its responsibilities under the Bank Merger Act (BMA). The Proposed SOP focuses on the scope of transactions subject to FDIC approval, the FDIC's process for evaluating merger applications, and the principles that guide the FDIC's consideration of the applicable statutory factors as set forth in the BMA. The Supplementary Information section below contains explanatory content, including historical data, to provide additional context for the Proposed SOP.

DATES: Comments must be received by June 18, 2024.

ADDRESSES: All comments related to this Proposed SOP must include the agency name and RIN 3064–ZA31. Please send comments by one method only directed to:

- *Agency Website: http://www.fdic.gov/regulations/laws/federal/.* Follow the instructions for submitting comments on the agency's website.
- *Email: Comments@fdic.gov.* Include RIN 3064–ZA31 in the subject line of the message.
- *Mail:* James P. Sheesley, Assistant Executive Secretary, Attention: Comments-RIN: 3064–ZA31, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 550 17th Street NW, building (located on F Street NW) on business days between 7:00 a.m. and 5:00 p.m. ET.

Public Inspection: All comments received will be posted without change to *http://www.fdic.gov/regulations/laws/federal/*—including any personal information provided—for public inspection. Commenters should submit only information that the commenter wishes to make available publicly. The FDIC may review, redact, or refrain from posting all or any portion of any comment that it may deem to be inappropriate for publication, such as irrelevant or obscene material. The FDIC may post only a single representative example of identical or substantially identical comments, and in such cases will generally identify the number of identical or substantially identical comments represented by the posted example. All comments that have been redacted, as well as those that have not been posted, that contain comments on the merits of this document will be retained in the public comment file and will be considered as required under all applicable laws. All comments may be accessible under the Freedom of Information Act.

SUPPLEMENTARY INFORMATION:

I. Background

The Bank Merger Act (BMA), Section 18(c) of the Federal Deposit Insurance Act (FDI Act), prohibits an insured depository institution (IDI) from engaging in a merger transaction without regulatory approval. The FDIC is one of three Federal banking agencies with responsibility for evaluating transactions subject to the BMA. The FDIC has jurisdiction to act on merger applications that involve an IDI and any non-insured entity, notwithstanding the IDI's charter.[1] The FDIC also has jurisdiction to act on merger applications that solely involve IDIs in which the acquiring, assuming, or resulting institution is a state nonmember bank or state savings association (FDIC-supervised institution).[2]

In order to implement its responsibilities under the BMA, the FDIC has codified regulations; issued a Statement of Policy (SOP); and published the Applications Procedures Manual (APM). The FDIC's APM provides application-processing instructions for the FDIC's professional staff assigned to review, evaluate, and process applications, notices, and other requests submitted to the FDIC. The APM includes a section on processing merger applications that provides detailed procedural instructions to staff, as well as information regarding the assessment of each statutory factor. In 2019, the FDIC published the APM to its external website to provide greater transparency regarding the FDIC's internal application processes. In light of prospective changes to the bank merger process, additional revisions are planned for the APM chapter on mergers. Finally, together with the other Federal banking agencies, the FDIC has issued an interagency application form, which includes a supplemental section specific to the FDIC. Concurrent with this Proposed SOP, the FDIC is seeking comment on proposed revisions to its supplemental section to the interagency form.

The current SOP on Bank Merger Transactions (Current SOP), last amended in 2008, addresses the FDIC's process for reviewing proposed merger applications in the context of the applicable statutory factors.[3] Since the Current SOP was last revised, the BMA has been amended and significant changes have occurred in the banking industry and financial system, including continued growth and consolidation. This growth and consolidation, which has been ongoing for the past several decades, has significantly reduced the number of smaller banking organizations, increased the number of large and systemically important banking organizations, and contributed to the need for a review of the regulatory framework that applies to bank merger transactions subject to the BMA.[4]

The number of large IDIs, especially IDIs with total assets of $100 billion or more, has grown considerably over the past few decades. This is due to a combination of factors, including consolidation in the banking sector (fueled in part by mergers and acquisitions), the easing of interstate banking restrictions,[5] and organic

[4] 12 U.S.C. 1828(c).

[5] Prior to the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994, Public Law 103–328, many states did not permit intra-state or interstate branching, and interstate branch

growth. As of December 31, 2004, there were only 12 IDIs with total assets greater than $100 billion; however, that number increased to 33 by December 31, 2023. Of the 33 IDIs with total assets greater than $100 billion, nine were owned by the eight U.S. bank holding companies designated as U.S. Global Systemically Important Banks (GSIBs), and four were owned by foreign banking organizations designated as foreign GSIBs.[6] While IDIs with total assets of more than $100 billion as of December 31, 2023, comprised less than one percent of the total number of IDIs, they held approximately 71 percent of total industry assets and approximately 68 percent of domestic deposits.

The FDIC has a responsibility to promote public confidence in the banking system, maintain financial stability, and resolve failing IDIs. Given the increased number, size, and complexity of large banks, greater attention to the financial stability risks that could arise from a merger involving a large bank is warranted. In particular, the failure of a large IDI could present greater challenges to the FDIC's resolution and receivership functions, and could present a broader financial stability threat. For various reasons, including their size, sources of funding, and other organizational complexities, the resolution of large IDIs can present significant risk to the Deposit Insurance Fund (DIF), as well as material operational risk for the FDIC. In addition, as a practical matter, the size of an IDI may limit the resolution options available to the FDIC in the event of failure.

After the 2008 financial crisis, the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) amended the BMA to include, for the first time, a factor related to the risk to the stability of the United States (U.S.) banking or financial system (financial stability factor). The FDIC is seeking public comment on the SOP's approach to the financial stability factor, which integrates and builds upon the FDIC's existing framework for assessing this factor.

On July 9, 2021, an Executive Order addressed the impact that consolidation may have on maintaining a competitive marketplace. The Executive Order also addressed the impact that consolidation may have on maintaining a fair, open, and competitive marketplace, as well as the impact on the welfare of workers, farmers, small businesses, startups, and consumers. The FDIC continues to coordinate with the Department of Justice (DOJ) and the other Federal banking agencies in modernizing bank merger oversight.[7]

On March 31, 2022, the FDIC published in the **Federal Register** a request for information and comment (RFI) regarding the application of the laws, practices, rules, regulations, guidance, and SOP that apply to merger transactions subject to FDIC approval.[8] The RFI requested comments regarding the effectiveness of the FDIC's existing framework in meeting the requirements of the BMA. After review of the public comments received in response to the RFI, the FDIC determined that it is both timely and appropriate to review its regulatory framework for merger transactions as outlined in the Current SOP. The Proposed SOP was drafted in consideration of the comments received regarding the RFI and is being published in the **Federal Register** to obtain further input from interested parties.

II. Summary of Comments

While not all of the questions described in the RFI are pertinent to the SOP, the FDIC is summarizing the comments received to provide transparency with respect to the overall process for developing updated merger-related policies and procedures. The FDIC received 33 comment letters in response to the RFI.[9] The majority of RFI commenters (25 or 76 percent) were in favor of at least some changes to the FDIC's merger review processes. Six RFI commenters (18 percent) were against changes to the FDIC's merger review processes, and two RFI commenters (6 percent) were neither in favor of, nor against, changes to the FDIC's merger review processes.

Among RFI commenters in favor of updating the FDIC's processes that apply to merger transactions, four common themes for potential changes were observed: (i) amend the calculation of market concentration and the competitive effects analysis; (ii) enhance the analysis of the convenience and needs of the community to be served factor; (iii) establish risk criteria and thresholds for the analysis of the financial stability factor; and (iv) create a *de minimis* exception (or presumption of approval) for mergers involving small and mid-sized IDIs.

Some RFI commenters suggested the need for an interagency approach to the development of any new merger regulations, guidelines, and instructions, and noted that any new elements should be applied prospectively. RFI commenters also suggested enhancing the public's ability to review and comment on proposed mergers, including making the information exchange (questions posed and responses received between the FDIC and applicants) a part of the public record. Finally, RFI commenters requested that the FDIC review, to the extent possible, the effects of past mergers to evaluate the appropriateness of any revised merger guidelines. These RFI commenters requested that the FDIC make the results of the evaluation public and apply the results to future merger decisions.

Six RFI commenters were against updating the FDIC's merger related processes. In general, these RFI commenters argued that the FDIC's current framework for reviewing proposed merger transactions was sound and that revisions might harm the banking sector. More specifically, some RFI commenters argued that any change to the competitive review would make bank mergers more difficult; and such changes risked disproportionately impacting community, mid-size, and regional banks.

Multiple RFI commenters suggested revisions to the receipt and compilation of the FDIC's Summary of Deposits (SOD) data, and amendments to the calculations to improve the quality, accuracy, and consistency of the data used to calculate the Herfindahl–Hirschman Index (HHI).[10] The RFI commenters broadly agreed that the increased presence of non-bank firms, including those specializing in financial technology (fintech), and increased consolidation within the banking industry necessitate revision to the evaluative considerations for competitive effects to reflect the economic realities and the industry's competitive landscape. Some RFI

branching was not federally sanctioned. Following the passage of this law, many multi-bank holding companies with subsidiary IDIs with different home states chose to consolidate existing bank charters.

[9] Request for Information and Comment on Rules, Regulations, Guidance, and Statements of Policy Regarding Bank Merger Transactions. See 87 FR 18740.

[10] The HHI is calculated by squaring the market share of each firm competing in the market and then summing the resulting numbers. For example, for a market consisting of four firms with shares of 30, 30, 20, and 20 percent, the HHI is 2,600 ($30^2 + 30^2 + 20^2 + 20^2 = 2{,}600$). The HHI calculation can also be applied to other relevant Consolidated Reports of Condition categories or other appropriate sources of data, aside from deposits. For example, the HHI analysis may also include data relative to commercial and industrial loans.

commenters posited that deposit data for institutions that rely on technology-based delivery channels are not dependent on their branch locations.

Multiple RFI commenters stated that the HHI threshold for prospective competitive effects concerns should be increased from its current limit. These RFI commenters contended that the HHI screens applied to the banking industry were stricter than those that had been applied in any other industry. In the opinion of these RFI commenters, raising the HHI would account for the growing competition that IDIs with physical branches face from competitors with different business models, including fintech firms and digital banks.

Conversely, other RFI commenters suggested the overall HHI threshold should be lowered, and the threshold for a change in HHI should be revised from the current level. These RFI commenters suggested that mergers disproportionally affect low- to moderate-income and/or minority communities, and therefore, the threshold (and any change in it) must be lowered to appropriately capture competitive effects.

Some RFI commenters suggested consideration of alternate measures of concentration and/or evaluating the HHI of other asset or product categories such as business loans or residential lending. In addition, multiple RFI commenters requested that the FDIC revise the SOD data collection and calculation to improve precision. These RFI commenters suggested that the FDIC: (i) differentiate corporate and centrally booked deposits from retail deposits; (ii) amend methods and reporting standards, and provide more guidance on how a reporting entity attributes deposits to branches; (iii) include more data on depositors in certain circumstances in order to increase geographic specificity; and (iv) add data on thrifts, credit unions, fintech firms, farm credit banks, and online entities that serve customers in the relevant market.

Multiple RFI commenters recommended revisions to the analysis of the convenience and needs of the community to be served statutory factor. In general, these RFI commenters recommended that the FDIC focus the analysis on the additive benefits of the merger transaction for consumers, particularly in low- to moderate-income and minority communities; and place higher burden on applicants to demonstrate the public interest benefits of the transaction. Concerns with regard to the impact of branch closings were noted. A few RFI commenters suggested that the applicant should be required to submit a full plan related to branch closings.

Approximately half of the RFI commenters requested that the Federal banking agencies establish specific stability risk considerations (*e.g.* size, substitute providers, interconnectedness, complexity, and cross-border activities) and formalize thresholds (such as total asset metrics) for developing a resolution plan for large bank mergers.

About one quarter of RFI commenters noted a perceived burden on small institutions. These RFI commenters requested that the FDIC create a small bank *de minimis* exception whereby small bank mergers would be presumed not to create monopolies or have anticompetitive effects if they meet certain prudential thresholds that can only be overturned based on other criteria such as the results of the competitive effects analysis.

In general, RFI comments were mixed on the following topics: (i) whether there is a presumption of approval for merger applications; (ii) whether the existing framework considers all aspects of the BMA; and (iii) whether prudential considerations or ''bright lines'' should be developed for any of the statutory factors. Many of the comments, as well as new questions that the FDIC has developed in response to public comments on the RFI, are addressed in this preamble.

III. Description of the Proposed Statement of Policy

Overall Changes in the Proposed SOP

The Proposed SOP reflects regulatory, legislative, and industry changes since the SOP was last published for comment in 1997. Further, the Proposed SOP includes new content to make it more principles based, communicates the FDIC Board's expectations regarding the evaluation of merger applications filed pursuant to the BMA, and describes the types of merger applications for which the FDIC is the responsible agency.

The Proposed SOP does not include the application procedures narrative that is included in the Current SOP. The APM describes procedural matters such as application filing, expedited processing and notification to the Attorney General. The Proposed SOP includes a separate discussion of each statutory factor, including: competitive effects, financial and managerial resources, future prospects, convenience and needs of the community to be served, risk to the stability of the U.S. banking or financial system, and effectiveness in combatting money laundering. In addition, the Proposed SOP includes a declarative statement for each statutory factor to highlight the Board's expectations and accompanying narrative to describe the analytical considerations for the evaluation of each factor. While historical performance provides contextual insight into the evaluation of these factors, the SOP affirms that the evaluations are forward looking. A detailed discussion of each statutory factor follows this section.

The FDIC seeks comment on all aspects of the Proposed SOP.

Question:

1. Does the structure of the Proposed SOP effectively present the FDIC's expectations with regard to review and evaluation of merger applications? If not, please describe how the structure could be improved.

Jurisdiction and Scope

The Proposed SOP clarifies the circumstances in which FDIC approval is required in connection with a proposed merger transaction. The FDIC plays an important role in the administration of the BMA, which is codified in the FDI Act and covers a broad range of transactions.[11] Specifically, Section 18(c)(1) of the BMA requires FDIC approval in connection with transactions in which an IDI: (A) merges or consolidates with any non-insured bank or institution,[12] (B) assumes liability to pay any deposits or similar liabilities in a non-insured bank or institution,[13] or (C) transfers assets to any non-insured bank or institution in consideration of an assumption of deposit liabilities of the IDI.[14] The FDIC's authority extends to a variety of transactions between an IDI and a non-insured entity, which are ''merger transactions'' for the purposes

[11] The broad scope of transactions expressly subject to FDIC approval under the BMA evinces a clear congressional intent for the FDIC to review a wide array of transactions between IDIs and non-insured entities that have the potential to affect the safety and soundness of a resultant IDI or increase the potential liability of the Deposit Insurance Fund.

[12] 12 U.S.C. 1828(c)(1)(A). A non-insured entity refers to any entity that is not FDIC insured. Although there is no definition of the term ''non-insured institution'' in the BMA, it has long been the FDIC's interpretation that the term includes any non-insured entity with which an IDI can legally merge. Notably, although federally insured credit unions are insured by the National Credit Union Administration, such credit unions are not IDIs for the purposes of the FDI Act, see 12 U.S.C. 1813(a)-(c), and any merger transaction between an IDI and a credit union is therefore subject to FDIC approval under the BMA.

[13] 12 U.S.C. 1828(c)(1)(B).

[14] 12 U.S.C. 1828(c)(1)(C). The statutory requirements of 12 U.S.C. 1828(c)(1) originate from the Banking Act of 1935. Sec. 101, Public Law 74–305 (adopting Section 12B(v)(4) of the Federal Reserve Act).

of the BMA, even if the transaction is not legally structured as a merger.[15]

Mergers and Consolidations Involving IDIs and Non-Insured Entities

Section 18(c)(1)(A) of the BMA prohibits an IDI from merging or consolidating with a non-insured entity without the FDIC's approval. Neither the BMA nor the FDIC Rules and Regulations define the terms ''merge'' or ''consolidate.'' [16] The FDIC implements the BMA by emphasizing a transaction's substance over its form and asserting jurisdiction over transactions that substantively result in a merger (merger in substance). The FDIC interprets the term ''merge'' in the BMA to encompass all transactions that result in an IDI substantively and effectively combining with a non-insured entity, regardless of whether the transaction is structured as a merger or asset acquisition.

Although acquisitions of assets are not specifically enumerated as a category of transactions subject to FDIC approval under the BMA, an IDI's acquisition of assets from a non-insured entity could be the substantive equivalent of a transaction legally structured as a merger. For example, this occurs when the acquired assets constitute all, or substantially all, of the non-insured entity's assets or business enterprise and if the non-insured entity dissolves, is rendered a shell, or otherwise substantially ceases its main business operations or enterprise. This applies when there is a transfer of all, or substantially all, of a non-insured entity's assets to an IDI, regardless of whether: (i) such transactions consist of an assumption of identified liabilities, (ii) the assets acquired are tangible or intangible (without regard to whether the assets would be considered assets under generally accepted accounting principles), or (iii) such acquisitions occur as a single transaction or over the course of a series of transactions. Excluding transactions that are mergers in substance involving IDIs and non-insured entities from FDIC review would be inconsistent with the purposes of the BMA by overlooking transactions that could affect the safety and soundness of an IDI and increase the risk to the DIF.

The Proposed SOP clarifies the applicability of Section 18(c)(1)(A) of the BMA by emphasizing that the scope of merger transactions subject to approval encompasses transactions that take other forms, including purchase and assumption transactions that are mergers in substance. The Proposed SOP provides an example of a transaction that is a merger in substance, and is therefore subject to the BMA, such as when an IDI absorbs all (or substantially all) of a target entity's assets and the target entity dissolves or otherwise ceases engaging in the acquired lines of business.

Questions:

2. How can the FDIC increase clarity to interested parties regarding the applicability of the BMA to a merger in substance?

3. What additional clarity should the FDIC provide regarding the circumstances in which a transaction is subject to FDIC approval under the BMA, including transactions involving an IDI and a non-insured entity that is not a traditional financial institution, such as a fintech firm, whose assets may be primarily intangible in nature?

Assumptions of Deposits by IDIs From Non-Insured Entities

Section 18(c)(1)(B) of the BMA prohibits an IDI from assuming liability to pay any deposits made in, or similar liabilities of, any non-insured bank or entity.[17] The scope of this provision depends on the meaning of deposit (or other similar liability) and on the interpretation of what constitutes an IDI's assumption of such a deposit (or other similar liability). Section 3(*l*) of the FDI Act defines ''deposit'' broadly. In addition to the definition generally encompassing unpaid balances of money, the definition expressly includes a variety of other instruments, including trust funds and escrow funds.[18]

In addition to the breadth of the definition of ''deposit,'' the FDIC broadly interprets what it means to assume liability to pay such deposits for the purposes of Section 18(c)(1)(B) of the BMA in order to prevent circumvention of the provision. Specifically, the applicability of Section 18(c)(1)(B) does not depend on the existence of a formal written agreement between an IDI and a non-insured entity to transfer deposit liabilities. In cases where an IDI and a non-insured entity cooperate to arrange a transfer of deposits from a non-insured entity to an IDI, the FDIC will generally consider such an orchestration to constitute an assumption of deposits or other similar liabilities for the purposes of Section 18(c)(1)(B).[19]

Unlike the applicability of Section 18(c)(1)(A) of the BMA to asset acquisitions, which depends in part on the acquisition of ''all or substantially all'' of a non-insured entity's assets, the applicability of Section 18(c)(1)(B) does not depend on a finding that an IDI assumes all, or substantially all, of a non-insured entity's deposits or similar liabilities. The assumption of any deposits or other similar liabilities is sufficient to implicate Section 18(c)(1)(B).

The FDIC takes the view that any expansion of an IDI's deposit base via acquisition would be subject to approval under the BMA. As discussed above, when an IDI assumes liability to pay a deposit or other similar liability from a non-insured entity, FDIC approval is required under Section 18(c)(1)(B). As discussed later in this section, when an FDIC-supervised IDI assumes liability to pay a deposit from another IDI, FDIC approval is required under Section 18(c)(2)(C). The FDIC clarifies that the BMA would not necessarily be implicated by an organic expansion of an IDI's deposit base, such as when a depositor or a nonaffiliated third party that acts as agent, custodian, or trustee for a depositor, elects—at their initiative—to establish a deposit relationship with the IDI or to place deposits with the IDI. However, in cases where the agent, custodian, or trustee itself serves as a depository, a transfer of deposits for which it has liability to pay to an IDI would be subject to FDIC approval under the BMA. Furthermore, if customers are solicited to transfer their deposits to an IDI in connection with, or in relation to, an arrangement or agreement to which that IDI is party, the IDI is expected to seek approval under the BMA in connection with the ultimate transfer of such deposits.

The Proposed SOP seeks to capture and convey the broad applicability of Section 18(c)(1)(B) of the BMA by affirming that an FDIC-supervised IDI's assumption of a deposit from another IDI, or any IDI's assumption of a deposit from a non-FDIC insured entity, is likewise subject to FDIC approval even in the absence of an express agreement for a direct assumption. The Proposed SOP highlights the broad definition of ''deposit'' in Section 3(*l*) of the FDI Act, and notes that the definition extends beyond traditional demand deposits to include, among other things, trust funds, and escrow funds.

[15] 12 U.S.C. 1828(c)(1)–(3).

[16] A consolidation generally is a combination of the assets and liabilities of two or more IDIs into a newly chartered IDI, and the extinguishment or cancellation of the charters of the other institutions. Although rare, the FDIC would consider two institutions substantively combining with a newly created third institution to be a consolidation in substance.

[17] 12 U.S.C. 1828(c)(1)(B) (emphasis added).

[18] See 12 U.S.C. 1813(*l*). Section 18(c)(1)(B) also includes liabilities that would be deposits except for the provision in Section 3(*l*)(5) of the FDI Act.

[19] See id.

Question:

4. Does the Proposed SOP sufficiently alert interested parties to the range of transactions that could be subject to FDIC approval under Section 18(c)(1)(B) of the BMA? If not, please comment on how the range of transactions could be more clearly articulated.

Asset and Deposit Transfers From IDIs to Non-Insured Entities

Section 18(c)(1)(C) of the BMA prohibits an IDI from transferring assets to any non-insured bank or entity in consideration of the assumption for any portion of the deposits made in such IDI. Generally, when an IDI transfers deposits to a non-insured entity, an application to the FDIC would be necessary under Section 18(c)(1)(C) since such transfers are typically accompanied by a transfer of assets, even if such assets consist only of cash. As with Section 18(c)(1)(B), the applicability of Section 18(c)(1)(C) is broad given the scope of the FDI Act's definition of deposit. Furthermore, similar to the FDIC's approach to Section 18(c)(1)(B), the FDIC generally views an orchestration of a transfer of deposits from an IDI to a non-insured entity to be subject to FDIC approval under Section 18(c)(1)(C), even in the absence of an express agreement.

Although parties seeking to engage in transferring customer accounts that consist of both custodial and deposit relationships may characterize the transaction solely as a transfer of custodial relationships, such transactions implicate the BMA if they also result in a transfer of the deposit relationship. It has therefore been the view of the FDIC that the BMA is implicated if an IDI transfers deposit relationships concurrent with, or subsequent to, a transfer of the custodial relationship. Accordingly, where customers have both a custodial and depository relationship with an IDI, an IDI may not evade the BMA by transferring custodial rights to a third party that, in its newly acquired custodial capacity, causes the customer's depository relationship to be transferred either to itself or to another entity. This is true even if such transfer was ostensibly at the direction of a non-insured entity pursuant to custodial rights acquired from the IDI.

The Proposed SOP communicates the FDIC's policy with regard to transfers of deposits from IDIs to non-insured entities by stating that a transfer of deposits from any IDI to a non-insured entity is subject to FDIC approval.

Question:

5. What additional clarity, if any, is needed to make interested parties aware of the circumstances in which FDIC approval would be required in connection with a transfer of deposits from an IDI to a non-insured entity?

Merger Transactions Solely Involving Insured Depository Institutions

Section 18(c)(2)(C) of the BMA generally prohibits an IDI from merging or consolidating with any other IDI or, either directly or indirectly, acquiring the assets of, or assuming liability to pay any deposits made in, any other IDI except with the prior written approval of the FDIC if the acquiring, assuming, or resulting bank is a state nonmember bank or state savings association.[20] If the acquiring, assuming, or resulting bank is a national bank or Federal savings association, the approval of the Office of the Comptroller of the Currency (OCC) is required, and if it is a state member bank, the approval of the Board of Governors of the Federal Reserve System (FRB) is required.[21]

As with transactions involving IDIs and non-insured entities, the FDIC considers that a transaction in which an IDI absorbs another IDI by acquiring all, or substantially all, of its assets would be subject to FDIC approval under Section 18(c)(2)(C) of the BMA. It is less common for the FDIC to evaluate whether a large-scale transaction exclusively among IDIs constitutes a merger in substance since such transactions typically include an assumption of deposits, which is itself a sufficient basis to implicate Section 18(c)(2). As previously stated, the breadth of the FDIC's definition of ''deposit'' causes Section 18(c)(2) to encompass a wide range of transactions, and the FDIC similarly takes a broad view as to what constitutes a direct or indirect assumption of liability to pay deposits.

The foregoing discussion addresses the FDIC's policy with regard to the applicability of the BMA to a wide variety of transactions. However, the FDIC emphasizes that this is not an exhaustive overview of potential transactions that are subject to FDIC approval under the BMA. Interested parties should be alert to the FDIC's policies of emphasizing a transaction's substance over its form, its interest in preventing evasion of the BMA, and of the scope of the terms used in Sections 18(c)(1) and 18(c)(2) of the BMA.

Overview of the Application Process

The Proposed SOP describes the FDIC's expectations for application processing, emphasizing the utility of the pre-filing process and the importance of filing a substantially complete application. The Proposed SOP alerts applicants to the FDIC's expectation that all submitted materials, including the financial projections and any related analyses, be well supported and sufficiently detailed. In addition, the Proposed SOP emphasizes the importance of the narrative supporting the rationale for the proposed transaction, and communicates the FDIC's expectation that the narrative be supported by studies, surveys, analyses and reports, including those prepared by or for officers, directors, or deal team leads.

Merger Application Adjudication

Generally, if all statutory factors are favorably resolved, and all other regulatory requirements are satisfied, the FDIC will approve the merger application. Approvals will be subject to the standard conditions detailed in 12 CFR 303.2(bb) and any non-standard conditions deemed appropriate by the FDIC. However, the FDIC will not use conditions or written agreements that may be required as part of the conditions, as a means for favorably resolving any statutory factors that otherwise present material concerns. The Order and Basis for Approval (Order) will be posted to the FDIC's Decisions on Bank Applications page.

The Order will address all statutory factors, as well as summarize information regarding any Community Reinvestment Act (CRA) protests. The FDIC will summarize the related analysis and conclusions and include any conditions imposed in conjunction with the approval. Finally, the SOP articulates certain elements that may result in unfavorable findings and would require action by the Board of Directors on the application. This commentary presents a general overview of the potential scenarios and fact patterns that would present significant challenges to favorable findings on the statutory factors. The FDIC may not be able to find favorably on any given statutory factor (or therefore approve the application) if there are unresolved deficiencies, issues, or concerns (including with respect to any public comments), or the lack of sustained performance under corrective programs particularly when the transaction implicates the areas that are the subject of the corrective program.

Merger Application Activity

To provide some perspective on the volume and types of filings subject to FDIC review and action, the tables in

[20] 12 U.S.C. 1828(c)(2)(C).

[21] 12 U.S.C. 1828(c)(2)(A)–(B).

Appendix A to this preamble were developed regarding the volume, disposition, and size of merger transactions processed by the FDIC from January 1, 2004, through December 31, 2023. In total, the FDIC processed 2,497 merger applications that were either ''bank-to-bank'' merger applications solely involving IDIs where the resulting institution was an FDIC-supervised institution or that involved an IDI and a credit union or other non-insured institution.[22] This does not include pending applications or applications for corporate reorganizations or interim mergers.[23]

As shown in Table 1, the volume of bank-to-bank merger applications processed by the FDIC has ranged between 49 and 152 annually from 2004 through 2023. The annual average number of such applications processed during this period was 110. Of the 2,209 bank-to-bank applications processed over the referenced period, 92.9 percent (2,054) were approved, 5.4 percent (116) were withdrawn at the applicant's discretion, 1.7 percent (39) were returned due to insufficient information provided in the application submission, and none were denied. Applicants that choose to withdraw an application frequently do so before receiving a public denial. As described in the APM,[24] when applications are recommended for denial, FDIC staff are directed to contact applicants, describe the concerns, and provide a final opportunity to provide additional information that might influence the decision. The APM also states that at its discretion, the FDIC may offer the applicants the opportunity to withdraw the application. If an applicant withdraws their filing, the FDIC Board of Directors may release a statement regarding the concerns with the transaction if such a statement is considered to be in the public interest for purposes of creating transparency for the public and future applicants.

Table 2 provides a breakdown of the bank-to-bank merger applications processed during this period by the size of the resulting IDI. Approximately 93.0 percent (2,055) of applications received and acted upon, and 95.0 percent of applications approved, were for IDIs that would be $10 billion or less in asset size following the proposed merger. Of the 2,054 approved applications, approximately 4.4 percent (91) involved resulting IDIs with an asset size between $10 billion and $100 billion in total assets, and 0.3 percent (seven) were in excess of $100 billion.

Statutory Factors

Monopolistic or Anticompetitive Effects

The Federal banking agencies are prohibited from approving a merger that would result in a monopoly, or which would be in furtherance of any combination or conspiracy to monopolize or to attempt to monopolize the business of banking in the United States.[25] There is no exception to this prohibition. Furthermore, the Federal banking agencies are prohibited from approving a merger that does not constitute a monopoly or conspiracy to monopolize, but that would nonetheless substantially lessen competition, tend to create a monopoly, or otherwise be in restraint of trade, *unless* the anticompetitive effects of the transaction are clearly outweighed in the public interest by the probable effect of the transaction in meeting the convenience and needs of the community to be served.[26] For example, this public interest exception may apply where a transaction is necessary to prevent the probable failure of an IDI.

The FDIC conducts its own independent analysis to ensure compliance with the BMA's prohibition against the approval of any merger transaction that would result in a monopoly or be in furtherance of an attempt to monopolize the business of banking in any part of the U.S.[27] In situations where a transaction would not result in a monopoly but where anticompetitive effects are nonetheless identified, the FDIC will evaluate whether the applicants have established that the benefits to the convenience and needs of the community will clearly outweigh any anticompetitive effects.

The way in which the convenience and needs of the community to be served is juxtaposed against the antitrust competitive standard is important. A non-monopolistic yet anticompetitive merger can only be approved in situations where the proponents to the transaction can establish that the advantage of the merger for the convenience and needs of the community clearly outweighs the anticompetitive effects. This creates a heavy burden for the proponents of a merger to support that the benefits to the community outweigh identified anticompetitive concerns. A favorable finding on the convenience and needs of the community to be served factor may not support approval of the application when anticompetitive effects are identified.

In addition to its own independent analysis, the BMA requires the FDIC to request a competitive factors report from the Attorney General for any merger between an IDI and a non-affiliated entity, unless the FDIC finds that it must act immediately in order to prevent the probable failure of an IDI involved in the transaction.[28] The FDIC may consult with the DOJ on mergers that may raise competitive concerns. In cases where the FDIC considers proposed divestitures of business lines, branches, or portions thereof to mitigate anticompetitive effects, the FDIC will generally expect such divestitures to be completed before allowing the merger to be consummated. Additionally, to promote the ongoing competitiveness of the divested business lines, branches, or portions thereof, the FDIC will generally require that the selling institution will neither enter into non-compete agreements with any employee of the divested entity nor enforce any existing non-compete agreements with any of those entities.

The Proposed SOP does not include any bright lines or specific metrics for which it is presumed that the transaction would be considered anticompetitive. A few RFI commenters suggested that the FDIC develop a benchmark asset size at or below which there is no presumption of non-competitive effects. The Proposed SOP does not include such metrics or benchmarks, as it is important to

[22] As of December 31, 2023, there were 17 pending bank-to-bank merger applications and ten pending merger applications that involve a credit union or other non-insured institution. Data regarding FDIC-processed merger applications involving credit unions and other non-insured entities is provided as Tables 3–6 in Appendix A to this preamble. Table 7 in Appendix A provides data regarding the number of IDIs acquired by FDIC-supervised banks or savings associations, or by credit unions in purchase and assumption transactions.

[23] A corporate reorganization is a merger transaction that involves solely an IDI and one or more of its affiliates. Corporate reorganizations may include transactions where two IDIs merge immediately following a merger between two bank holding companies. An interim merger transaction is a merger transaction between an IDI and a newly formed IDI that is established solely to facilitate a corporate reorganization. From the beginning of 2004 through December 31, 2023, the FDIC processed 2,008 corporate reorganizations and 483 interim mergers. As of December 31, 2023, there were nine pending corporate reorganization applications and five pending interim merger applications.

[24] See APM, Section 1.3, ''Denials and Disapprovals.''

[25] 12 U.S.C. 1828(c)(5)(A).

[26] 12 U.S.C. 1828(c)(5)(B).

[27] 12 U.S.C. 1828(c)(5)(A). In addition to the BMA's prohibition against approving merger transactions that would result in a monopoly, the BMA generally prohibits the Federal banking agencies from approving an interstate merger that would result in an IDI (together with its affiliates) controlling more than 10 percent of the total amount of deposits of IDIs in the U.S. See 12 U.S.C. 1828(c)(13).

[28] 12 U.S.C. 1828(c)(4).

maintain flexibility to appropriately evaluate the facts and circumstances of each application filed.

The Proposed SOP reaffirms the FDIC's commitment to undertaking a thorough review of the potential competitive effects of a proposed merger transaction. As described in the Proposed SOP, the FDIC will tailor its evaluation of competitive effects to consider all relevant market participants (local, regional, and national). The Proposed SOP establishes the relevant geographic markets as the areas where the merging entities have a physical presence in the form of an office (generally a main office or a branch). It also notes that the market may include areas where the merging entities do not have a physical presence, but may still provide products and services. The Proposed SOP outlines the FDIC's approach to considering product markets. The FDIC uses deposits as an initial proxy for commercial banking products and services, but it will tailor the product market definition to individual products as needed. In its analysis, the FDIC uses proxies that reasonably reflect the competitive dynamics of the market, including deposit and loan activity. However, the Proposed SOP notes that the FDIC will, if appropriate, utilize additional analytical methods, data sources, or geographic or product market definitions in order to assess the competitive effects of a proposed merger when practicable and relevant with consideration given to whether consumers retain meaningful choices.

Consistent with the approach of the DOJ and the other Federal banking agencies, the FDIC uses deposits as reported in the SOD data submitted by IDIs (and compiled by the FDIC), as a general proxy for the product market and then calculates the resulting market concentration and change in market concentration in each relevant geographic market using the HHI calculation. The FDIC initially focuses on the respective shares of total deposits held by the merging IDIs and the various other participants with offices in the relevant geographic market(s) to measure market concentration. Multiple RFI commenters suggested that the analysis of competition should include the influence of thrifts, credit unions, fintech firms, Farm Credit System institutions, and other online entities that offer products and services in the relevant market. The Proposed SOP affirms that the FDIC considers the influence of these entities when evaluating competitive effects. Some RFI commenters suggested alternatives to the HHI calculation such as the Hall-Tideman Index (HTI)[29] or the comprehensive industrial concentration index (CCI).[30] The Proposed SOP indicates that the FDIC will consider other products in its competitive analysis, but does not incorporate any specific alternatives to the HHI calculation.

Several RFI commenters requested changes to how the FDIC compiles SOD data, such as assigning online accounts to the account owner's residence, rather than the main office of the entity receiving the deposit. Additionally, RFI commenters requested that the FDIC amend both the methods and reporting standards for SOD data, and provide more guidance and instruction regarding how a reporting entity attributes deposits to branches to enhance geographic specificity. The Proposed SOP indicates that, as applicable, the FDIC will take into account any additional data sources, appropriate analytical approaches, or additional products beyond deposits to fully assess the competitive effects of the transaction. Further, to the extent that amendments or revisions to the SOD's reporting requirements, standards, and methods are considered, they will be published in a separate request for industry comment and feedback.

The relevant geographic markets are the areas where the merging entities have overlapping branch footprints, and generally correspond with the geographic markets defined by the FRB. The Proposed SOP notes that on a case-by-case basis, the FDIC may consider alternative or additional geographic and product markets. A few RFI commenters suggested that the FDIC should conduct a separate analysis of the competitive impact in rural areas, minority markets, or low- to moderate-income communities when relevant. While the Proposed SOP does not specifically address analytics of rural, minority, or low- to moderate-income communities, it does affirm that the FDIC will use a geographic market with a scope that is suited to the products or services offered or planned.

RFI commenters were split on changes to the HHI; some RFI commenters suggested that the overall threshold should be raised, while others suggested that the overall level should be lowered. Similar differences were also noted with respect to the change in the HHI calculation; some RFI commenters suggested that the current change threshold be increased, while others believed it should be lowered or reflect any point change. Some RFI commenters suggested that the HHI should be calculated for certain types of loans such as residential or small business loans, rather than (or in addition to) deposits. The Proposed SOP does not address the calculation of the HHI or the attendant thresholds. The Proposed SOP notes that the FDIC will consider additional methods of assessing the competitive nature of markets for relevant products or services, as necessary or appropriate. The FDIC plans to coordinate with other appropriate agencies regarding any potential changes to the calculation of, or thresholds for, HHI usage.

Questions:

6. To what extent is the FDIC's approach to analyzing the competitive effects of a proposed merger transaction appropriate?

7. What changes to the current approach should the FDIC consider to better reflect present-day competitive conditions?

8. Should the HHI be a definitive factor in making a determination? In other words, should the FDIC find favorably regarding competitive effects if the proposed merger does not exceed the defined banking-specific HHI thresholds? If not, why not?

9. How should the Proposed SOP specifically address the ways to calculate the competitive effects of mergers of IDIs with non-insured entities, whether credit unions, financial services entities, bank service corporations, or other entities?

10. What additional information should the FDIC provide about the circumstances under which it will consider products other than deposits and loans for transparency and so that filers may provide a more complete initial submission?

11. Is the geographic market definition outdated? If so, why? How should the definition be updated and why?

12. Would it be appropriate to define relevant geographic markets by reference to markets in which the merging institutions have delineated CRA assessment areas, including both facility-based assessment areas and retail lending assessment areas?

13. Would it be appropriate to define relevant geographic markets by reference to markets in which the merging institutions have delineated CRA assessment areas?

[29] The HTI is used to measure the concentration (or unequal distribution) of n market participants, who each have a market share h_i and a rank i (ordered according to decreasing market shares).

[30] The CCI is the sum of the proportional share of the leading IDI and the summation of the squares of the proportional sizes of each IDI, weighted by a multiplier reflecting the proportional size of the rest of the industry.

14. Other than the HHI, what tools could be used to assess market concentration and why would such tools be appropriate?

15. How should the Proposed SOP specifically address analytics for rural, minority, or low- to moderate-income communities? What type of analytical standards or criteria would be appropriate?

16. How can the FDIC's review address competitive effects beyond geographic markets? For example, commenters are invited to provide their views on any concerns that might typically be associated with mergers that result in a large institution of a certain asset size, and are further invited to identify what asset size thresholds (*e.g.,* $50 billion, $100 billion, $250 billion, etc.) are most likely to present such concerns. In addition, commenters are invited to provide detailed views on the nature of competitive concerns that are associated with mergers that involve a large institution absorbing a community bank.

Financial Resources and Managerial Resources and Future Prospects

The BMA requires the Federal banking agencies to take into account the financial and managerial resources and future prospects of the existing and proposed institutions involved in a merger transaction.

Financial Resources

The FDIC assesses the financial history, condition, and performance of each entity involved in the merger transaction, as well as the combined financial resources of the resulting IDI. The assessment of financial resources includes an analysis of capital, asset quality, earnings, liquidity, and sensitivity to market risk. The FDIC will consider the liquidity risk of the resultant IDI, including the extent of its projected reliance on uninsured deposits and its contingency funding strategies. An IDI's overreliance on uninsured deposits or non-core funding sources may not be consistent with a favorable finding on this statutory factor.

Overall, the FDIC expects that the resulting IDI will reflect sound financial performance and condition consistent with the IDI's size, complexity, and risk profile. Generally, the FDIC will not find favorably on this factor if the merger would result in a larger, weaker IDI from an overall financial perspective.

RFI commenters were split on whether bright lines or formally defined metrics should be developed and implemented for the evaluation of this factor. Several RFI commenters desired to have defined ratings and benchmarks formally articulated, and requested that merging entities meeting these defined standards should have a streamlined review or a presumption of approval. The Proposed SOP does not include specific requirements for a favorable finding on this factor, as the FDIC believes each transaction should be evaluated based on the facts and circumstances presented in the application, and any determination on the filing should be specific to that transaction. The incorporation or adoption of formal metrics restricts the FDIC's ability to effectively analyze the findings regarding the statutory factors and make informed determinations and recommendations based on those findings.

If the proposed merger involves an operating non-insured entity, the FDIC will consider the entity's operational activities and performance record when evaluating financial resources. The FDIC will review audited financial statements (covering at least three years, unless the entity's operating history is shorter) including details regarding any deferred tax assets or liabilities, intangible assets, contingent liabilities, and any recent or pending legal or regulatory actions. The FDIC may also require an identification of, and accounting for, low quality assets, including independent appraisals or valuations to support the projected value of any businesses or assets expected to transfer to the resultant IDI upon consummation of the merger.

The FDIC's evaluation of financial resources also will consider the current and projected financial impact of any related entities on the IDI, including the parent organization and any key affiliates. For each relevant entity, the FDIC will consider, among other items, the size and scope of operations, capital position, quality of assets, overall financial performance and condition, compliance and regulatory history, primary revenue and expense sources, and funding strategies.

Depending on the anticipated risk profile of the resulting IDI, the FDIC may impose, as a non-standard condition, capital requirements that are higher than applicable capital standards. Further, as appropriate, the FDIC may impose a non-standard condition that requires the resulting IDI and other applicable parties (such as certain affiliates or investors) to enter into one or more written agreements that may address, as applicable, capital maintenance requirements, liquidity or funding support, affiliate transactions, and other relevant items.

Managerial Resources

The FDIC assesses the managerial resources of the existing entities involved in a merger transaction, as well as the proposed management of the resulting IDI. The FDIC expects that the proposed directors, officers, and as appropriate, principal shareholders (collectively, management) possess the capabilities to administer the resultant IDI's affairs in a safe and sound manner. The background and experience of each member of the proposed management team will be reviewed relative to the size, complexity, and risk profile of the resulting IDI. The capability of management to identify, measure, monitor, and control risks and ensure an efficient operation in compliance with applicable laws and regulations are important facets of the evaluation of managerial resources.

A few RFI commenters requested that specific performance standards (such as the management component rating) for small and mid-sized institutions should be publicly stated, and entities in compliance with these standards that meet certain other metrics (such as total asset size) would have a presumption of approval or streamlined review protocols. As previously stated, the Proposed SOP does not include specific performance metrics or bright lines for any of the statutory factors in order to maintain flexibility in the analysis and to ensure each proposed transaction is evaluated on its merits, facts, and circumstances.

The FDIC will review supervisory assessments of management made by the relevant prudential regulators. This includes the current and historical management ratings for any IDI involved in the proposed merger, and the managerial performance and supervisory record of any subsidiaries and affiliates. The FDIC will evaluate the extent and effect of any organizational relationships on the IDI, while also considering the operating history, risk management, and control environment of the parent organization. Inherent in these considerations are the condition, performance, risk profile, and prospects of the organization as a whole, as well as the capacity of management to successfully implement the resulting IDI's strategic (or business) plan.

The evaluation of managerial resources includes an assessment of each entity's record of compliance with respect to consumer protection, fair lending, and other relevant consumer laws and regulations. The FDIC will review supervisory assessments of management made by the relevant regulators. In addition, the FDIC will

analyze the record of compliance with consumer laws and regulations, the compliance management system for each of the IDIs, as well as the compliance management rating system for the resulting IDI, to ensure that there are appropriate controls to identify, monitor, and address consumer compliance risks. Consideration is also given to the consumer compliance rating pursuant to the Uniform Interagency Consumer Compliance Rating System and the CRA.[31]

The FDIC expects management to develop and implement effective plans and strategies, and the resulting IDI to have sufficient managerial and operational capacity, to integrate the acquired entity. Effective integration includes, but is not limited to, human capital; products and services; operating systems, policies, and procedures; internal controls and audit coverage; physical locations; information technology; and risk management programs. In conjunction with the integration, the FDIC expects a resulting IDI to have the managerial and operational capacity, and to devote adequate resources, to ensure full and timely compliance with any outstanding corrective programs or supervisory recommendations.

Various other matters are also pertinent to the evaluation of managerial resources. The FDIC will consider the breadth and depth of management, including the adequacy of succession planning; responsiveness to issues or supervisory recommendations raised by regulators or auditors; existing or pending formal or informal enforcement actions; management's performance with respect to information technology, consumer protection, and other specialty or functional areas; recent rapid growth and the record of management in overseeing and controlling risks associated with such growth; and the reasonableness of fees, expenses, and other payments made to insiders.

Future Prospects

The FDIC evaluates the future prospects of the existing and proposed entities involved in a merger transaction. As part of this evaluation, the FDIC will review the submitted business (or strategic) plan, including pro-forma financial projections and related assumptions to assess whether the resulting IDI will be able to operate in a safe and sound manner on a sustained basis following consummation of the merger. Any accompanying valuations (such as those related to the target entity, goodwill, or other assets) will also be reviewed to ensure that the applicant adequately supports that the resulting IDI will maintain an acceptable risk profile.

The FDIC will consider the economic environment, the competitive landscape, the acquiring IDI's history in integrating merger targets, the anticipated scope of the resulting IDI's operations and the quality of its supporting infrastructure, and any other relevant factors. Any significant planned changes to the resulting IDI's strategies, operations, products or services, activities, income or expense levels, or other key elements of its business will be closely assessed.

Questions:

17. To what extent is the FDIC's evaluation of financial resources appropriate, and what additional items, if any, should be considered?

18. To what extent is the FDIC's evaluation of managerial resources appropriate, and what additional items, if any, should be considered?

19. To what extent is the FDIC's evaluation of future prospects appropriate, and what additional items, if any, should be considered?

Convenience and Needs of the Community To Be Served

The BMA requires the Federal banking agencies to take into account the convenience and needs of the community to be served when evaluating a merger transaction.[32] One of the items considered in connection with this factor is each IDI's CRA performance evaluation record and any comments submitted by the public on the application. The FDIC provides the public the ability to search pending merger applications submitted to the FDIC and allows comments on merger applications to be submitted electronically during the comment period. A few RFI commenters suggested that the FDIC update its website to facilitate the public's ability to review and comment on applications; and that the FDIC should post any regulatory questions or information requests to the applicants, and any applicant responses to its website. The FDIC is considering enhancing the current website to include information regarding public comments received on applications.

Several RFI commenters requested that approval should be conditioned upon the fulfillment of a strategy to address the convenience and needs of the community, and that regulatory approval or non-objection should be sought when the resultant IDI deviates from the submitted plan. The Proposed SOP describes the analytical considerations, but does not require a separate strategy to address the convenience and needs of the community. However, the applicant is expected to provide forward-looking information to the FDIC for the purposes of evaluating the benefits of the merger on the community to be served. As appropriate, claims and commitments made by the applicant to the FDIC may be included in the Order and Basis for Approval, and the FDIC's ongoing supervisory efforts will evaluate the IDI's adherence to any such claims and commitments.

Multiple RFI commenters raised concerns with reliance on only the most recent CRA evaluation. One RFI commenter noted that an Outstanding CRA rating on two out of the most recent three CRA evaluations should be a predicate to obtain regulatory approval for a merger; and another RFI commenter requested a three-year average score for the CRA rating as a benchmark. Some RFI commenters stated the CRA rating should be no less than Outstanding, with a minimum of Satisfactory ratings on component categories. A few RFI commenters requested that a presumptive denial should be established if the CRA rating is not currently (or over a recent, multi-year average period) at least Outstanding with Satisfactory component ratings. The Proposed SOP does not establish specific CRA rating benchmarks or bright lines in order to maintain flexibility in the analysis and to ensure each proposed transaction is evaluated on its merits, facts, and circumstances. However, a less than Satisfactory rating or significant deterioration in CRA performance may present significant concerns in resolving this factor. The FDIC's review is not limited to the CRA record of the institutions and will encompass a broad review of the institutions' existing products and services and whether the products and services proposed by the applicants will meet the convenience and needs of the community to be served.

In addition, the FDIC will consider the record of each institution in complying with consumer protection requirements and maintaining a sound and effective compliance management system. This review will include consideration of any existing orders, ongoing enforcement actions, and pending reviews or investigations of

[31] Uniform Interagency Consumer Compliance Rating System, 81 FR 79473, (Nov. 14, 2016). Community Reinvestment Act ratings are defined in 12 CFR part 345, Appendix A.

[32] 12 U.S.C. 1828(c)(5).

violations of consumer protection laws and regulations. A less than Satisfactory consumer compliance rating may present significant concerns in resolving this factor.

The FDIC will evaluate the community to be served broadly, which will include the proposed assessment area(s), retail delivery systems, populations in affected communities, and identified needs for banking services. The FDIC expects that a merger between IDIs will enable the resulting IDI to *better* meet the convenience and the needs of the community to be served than would occur absent the merger. The FDIC expects applicants to demonstrate how the transaction will benefit the community such as through higher lending limits, greater access to existing products and services, introduction of new or expanded products or services, reduced prices and fees, increased convenience in utilizing the credit and banking services and facilities of the resulting IDI, or other means. Several RFI commenters suggested that a higher burden should be placed on the applicant to demonstrate the public benefits of the transaction. Multiple RFI commenters stated that the FDIC should focus the analysis on the additive benefits of the transaction for consumers, particularly those in low- to moderate-income and minority communities. Numerous RFI commenters indicated that a community benefit plan should be required, as should mandatory public hearings to discuss the impact on the relevant communities. Further, several RFI commenters stated that a cost/benefit analysis of the proposed merger should be prepared and included in the publicly available application materials. The Proposed SOP outlines the FDIC Board's expectations with regard to the public benefits of the transaction, but does not require public benefit statements or plans to be established.

In addition to the CRA and consumer compliance ratings and performance, the FDIC will also consider the resulting assessment area(s) and branch locations, as well as the impact of branch closings or consolidations, particularly on low- and moderate-income neighborhoods or designated areas. The application form solicits information regarding projected or anticipated branch expansions, closings, or consolidations. Generally, the FDIC considers a substantially complete merger application to include, among other items, at least three years of information regarding projected branch expansions, closings, or consolidations. Some RFI commenters suggested that the projected impact of prospective branch closings should be closely scrutinized, and that public meetings and community hearings should be conducted to discuss the impact of the proposed closings. The Proposed SOP states that any proposed or expected closures, including the timing of each closure, the effect on the availability of products and services, particularly to low- or moderate-income individuals or designated areas, any job losses or lost job opportunities from branching changes, and the broader effects on the convenience and needs of the community to be served will be closely evaluated. Applications that project material reductions in service to low- and moderate-income communities or consumers will generally result in unfavorable findings. A favorable finding on this factor may not necessarily be sufficient for approval of the application when anticompetitive effects are noted.

Further, the Proposed SOP advises applicants to be prepared to make commitments regarding future retail banking services in the community to be served for at least three years following consummation of the merger. The Proposed SOP places an affirmative expectation on applicants to provide specific and forward-looking information to enable the FDIC to evaluate the expected impact of the merger on convenience and needs of the community to be served. In certain cases, the FDIC may hold hearings or other proceedings in connection with evaluating a merger application The Proposed SOP provides that the FDIC will generally consider it is in the public interest to hold a hearing for merger applications resulting in an IDI with greater than $50 billion in assets or for which a significant number of CRA protests are received. The FDIC may also hold public or private meetings to receive input on the transaction. The decision to hold such meetings depends on issues raised during the comment period and the significance of the merger transaction to the public interest, the banking industry, and communities affected.

Questions:

20. How could the Proposed SOP more effectively describe the FDIC's expectations with regard to its review of the convenience and needs factor, and what notable considerations, if any, are overlooked?

21. What are the pros and cons of providing forward-looking information? What are some specific challenges and difficulties that applicants might experience when providing information concerning projected or anticipated branch expansion, closings, or consolidations for the first three years following consummation of the merger?

22. What are the pros and cons of holding a hearing for merger applications resulting in an IDI with greater than $50 billion in assets or for which a significant number of CRA protests are received? For what other situations, in addition to those described, would it generally be in the public interest to hold hearings?

23. How can the FDIC best consider comments and feedback from the public in the context of evaluating the convenience and needs of the community to be served, consistent with the BMA's public notice requirements?

24. What are the benefits of imposing a non-standard condition that captures the affirmative commitments an IDI has made to the FDIC to serve the needs of its community?

25. In addition to the methods described, how should the FDIC consider an institution's CRA performance in the context of an application subject to the BMA?

26. What additional information should be included in the application materials to enable a more comprehensive review of branch closings or consolidations? What additional information should be included in application materials related to retail delivery systems?

27. What additional benefits to the community could be specified in the SOP beyond those already detailed?

28. What other elements should be considered in the evaluation of the convenience and needs of the community with respect to mergers?

29. What types of merger transactions may present unique factors that the FDIC should consider in its evaluation of the convenience and needs of the community to be served? For example, are there special considerations that should be considered in connection with transactions in which a community bank is absorbed by a larger institution?

Risk to the Stability of the United States Banking or Financial System

The Dodd-Frank Act amended the BMA to require the responsible agency to consider the risk to the stability of the U.S. banking or financial system when evaluating a proposed bank merger.[33] The FDIC expects that the resulting IDI will not materially increase the risk to the stability of the U.S. banking or financial system. Multiple RFI commenters noted the FDIC's Current SOP does not incorporate this statutory factor. Additionally, while some RFI commenters asked for more clarity and

[33] 12 U.S.C. 1828(c)(5).

transparency regarding the FDIC's financial stability analysis, others objected to changing the existing regulatory framework. Finally, some RFI commenters asserted that recent large mergers have increased concentration within the banking sector and have created more systemic risk, while others presented positions that attempt to refute this assertion. The Proposed SOP largely builds upon the financial stability criteria previously employed in practice by the FDIC, FRB, and OCC since passage of the Dodd-Frank Act, and clarifies the FDIC's perspective when conducting the analysis.[34]

The Proposed SOP details the considerations that the FDIC uses to determine whether a resulting IDI's systemic footprint would be such that its financial distress or failure could compromise the stability of the U.S. banking or financial system. While many RFI commenters addressed entities other than a resulting IDI (*e.g.,* bank holding companies and broker-dealer subsidiaries), the Proposed SOP considers financial stability influences primarily from the perspective of the resulting IDI. Where appropriate, the FDIC's analysis will take into account the facts and circumstances of parent companies and affiliates. Proposed transactions that solely involve affiliates that were related at the time a merger application is filed generally will not raise concerns with regard to this factor. However, each such proposal will be reviewed to ensure that the resulting IDI would not present any new or unforeseen stability risks that may not have existed when the merging entities operated on a standalone basis.

In evaluating the risk to the stability of the U.S. banking or financial system, the Proposed SOP identifies the following: (i) the size of the entities involved in the transaction; (ii) the availability of substitute providers for any critical products and services to be offered by the resulting IDI; (iii) the resulting IDI's degree of interconnectedness with the U.S. banking or financial system; (iv) the extent to which the resulting IDI contributes to the U.S. banking or financial system's complexity; and (v) the extent of the resulting IDI's cross-border activities. These items are addressed in more detail below:

Size. The distress or failure of an IDI is more likely to adversely impact the banking or financial system if the IDI's activities comprise a relatively large share of system-wide activities. Upon financial distress or failure, a larger IDI may present greater challenges to replacing or substituting the services and products it provides, as compared with smaller institutions, thereby potentially increasing the possibility for the IDI's distress or failure to disrupt the broader system. Additionally, the negative effects to the banking or financial system caused by stress at a single large institution may be greater than the impact of simultaneous stress at multiple smaller institutions engaged in business lines similar to those of their larger peer. The majority of comments regarding financial stability focused on the resulting IDI's asset size with many concerned about not creating institutions that are ''too big to fail.'' Numerous RFI commenters suggested the imposition of asset limits, thresholds, or other quantitative measures that would be applicable to IDIs of a certain size, and suggested that any analysis start with certain presumptions. Others stated that any limits or presumptions with respect to asset size would be contrary to the plain language of the BMA, have anticompetitive results, and could even serve to ''insulate'' the largest banks. Some RFI commenters suggested the imposition of enhanced capital requirements in lieu of size limitations.

With respect to these suggestions, the FDIC believes that the asset size of a resulting IDI should not serve as the sole basis for evaluating this statutory factor. Rather, size is only one of several important considerations that needs to be evaluated in the context of the other criteria. However, transactions that result in a large IDI (*e.g.,* in excess of $100 billion) are more likely to present potential financial stability concerns with respect to substitute providers, interconnectedness, complexity, and cross-border activities, and will be subject to added scrutiny. The FDIC takes the view that the failure of a larger IDI with a traditional community bank business model may pose significantly different resolvability and stability risks than a smaller IDI with one or more complex business lines, large derivative exposures, or extensive cross-border operations.

Availability of substitute providers. The purpose of considering the availability of substitute providers is to understand whether an inability or unwillingness by a resulting IDI to continue providing specific products or services could be disruptive to the U.S. banking or financial system. The FDIC considers whether the resulting IDI provides critical products or services that may be difficult to replace or substitute, or conducts activities that comprise a relatively large share of the relevant activity in the banking or financial system. Concerns are heightened, and may preclude favorable resolution of this factor, in situations where there are limited readily available substitutes, as relied upon services may be disrupted or discontinued if the resulting IDI encounters financial distress or fails. Several RFI commenters recommended that specific risk factors be developed to address the availability of substitute providers; however, the Proposed SOP does not include specific targets or bright lines regarding the consideration and assessment of this factor.

Interconnectedness. The purpose of considering interconnectedness is to assess the degree to which the resulting IDI may be engaged in transactions with other financial system participants and the risk that exposures to the resulting IDI of creditors, counterparties, investors, or other market participants could affect U.S. banking or financial system stability. The purpose of considering the effects of asset liquidation by the resulting IDI as a component of interconnectedness is to assess whether, following the proposed merger, the resulting IDI would hold assets that, if liquidated quickly, could significantly disrupt the operation of key markets or cause significant losses or funding problems for other firms with similar holdings. The analysis of interconnectedness specifically contemplates intra-financial system assets and liabilities; exposures to creditors and counterparties; the potential volatility of the resulting IDI's funding structure; and the potential results of rapid asset liquidation.

A resulting IDI may present greater risk from a stability perspective if key aspects of its business (including any on- or off-balance sheet activities) are highly interconnected with other financial system participants. For example, securities contracts, commodity contracts, forward contracts, repurchase agreements, swap agreements, inter-affiliate guarantees, and other similar contracts which the FDI Act refers to collectively as ''qualified financial contracts'' [35] are all examples of interconnected exposures within the U.S. banking or financial system. A high volume of such contracts may equate to a higher degree of potential systemic spillover effects if the resulting IDI, or its parent or affiliates, are unable to perform.

Increased Complexity. Under the Proposed SOP, evaluation of the

[34] See, *e.g.,* Order and Basis for Corporation approval of BB&T's application for consent to merger with SunTrust Bank. Refer to FDIC Press Release PR–111–2019: *https://www.fdic.gov/news/press-releases/2019/pr19111.html.*

[35] 12 U.S.C. 1821(e)(8)(d)(i).

resulting IDI's contribution to the U.S banking or financial system's complexity would consider the full scope of the resulting IDI's operations. This includes the resulting IDI's business lines, products and services, on- and off-balance sheet activities, delivery channels, and any material affiliate or other third-party relationships. One RFI commenter stated that many large regional banks do not have complex operations and have recently reduced their level of complexity. The FDIC considers an important part of the complexity analysis to be the potential financial stability consequences of the resulting IDI failing and being placed into a receivership under Section 11 of the FDI Act. The FDIC is responsible for resolving the resulting IDI in a way least costly to the DIF.

The FDIC has several options for carrying out the resolution of an IDI. First, the FDIC can sell some or most of the assets of the failed IDI to a healthy acquiring IDI, which would also generally assume all of the deposits or only the insured deposits of the failed IDI along with some or most of the remaining liabilities. This is generally called a ''purchase and assumption transaction.'' Second, a special type of purchase and assumption transaction used when additional time is needed to market a failed IDI is referred to as a ''bridge bank.'' A bridge bank is a bank chartered by the OCC and temporarily owned and operated by the FDIC to bridge the time between the date of failure and the date of sale to an acquiring IDI. Use of a bridge bank enhances the FDIC's ability to pursue options that could involve the sale to multiple acquirers, and/or spinning off some remaining streamlined operations as a restructured entity with ongoing viability depending on which strategy is most desirable. The final option is executing an insured deposit payout. However, in deciding which option to pursue, the FDIC must show how it would meet the least cost test set forth in Section 13(c)(4) of the FDI Act. Additionally, regardless of the strategy selected, the challenges associated with resolving a large bank would be significant, both operationally and financially.

In addition to the resolution challenges presented based on size, many regional IDIs present complexities such as large branch networks, substantial information technology systems, millions of account holders, and heavy reliance on uninsured deposits. Further, cross-border operations or key dependencies on non-affiliated entities can raise additional challenges to effecting an orderly and least costly resolution.

The failure of a larger IDI with a traditional community bank business model may present significantly different resolvability and stability risks than a smaller IDI with a complex businesses model. Staff from the FDIC's Division of Resolutions and Receiverships and (if appropriate) the Division of Complex Institution Supervision and Resolution will identify potential purchasers for the resulting IDI or its component parts, and identify resolution impediments that could impact the stability of the U.S. banking or financial system. Some potential resolution impediments include the resulting IDI's organizational structure and the necessity and difficulty of: (i) continuing the IDI's operations and activities until they can be sold or wound down, (ii) marketing and selling key business lines and asset portfolios at the least cost to the DIF,[36] and (iii) separating business lines and other assets to enable their sale or other disposition. While the FDIC would perform this analysis on the IDI, it would also take into account possible alternative resolution strategies and scenarios. This process could consider the presence of support agreements from the resulting IDI's ultimate parent company, strengthened risk governance procedures, and capital maintenance requirements for the IDI. Several RFI commenters suggested formal thresholds should be developed (such as total asset metrics) for when a resolution plan should be required. Such thresholds have not been incorporated into the Proposed SOP as each prospective resolution presents unique facts and circumstances, and the FDIC does not believe a one size fits all approach to the resolution process is appropriate.

While the vast majority of IDIs that the FDIC has resolved have been relatively small in size (assets under $10 billion), experience has shown that the failure of a larger IDI can have a contagion effect. Two recent examples that illustrate the systemic risk associated with the failure of a large regional IDI are Silicon Valley Bank (SVB) and Signature Bank.

SVB, with $209 billion in assets as of December 31, 2022, failed on March 10, 2023. SVP's depositors were primarily commercial and private banking clients, mostly linked to businesses financed through venture capital. Total assets grew rapidly, coinciding with rapid growth in the innovation economy and a significant increase in the valuation placed on public and private companies. The resulting influx of deposits was largely invested in medium- and long-term Treasury and Agency securities.

On March 8, 2023, Silvergate Bank, with $11.3 billion in assets as of December 31, 2022, and a business model focused almost exclusively on providing services to digital asset firms, announced its self-liquidation.[37] On that same day, SVB announced that it had sold substantially its entire available-for-sale securities portfolio at a loss. Many of SVB's venture capital customers took to social media to urge companies to move their deposit accounts out of SVB. The deposit run, coupled with insufficient liquidity to meet the demands of depositors and other creditors, resulted in its failure.

On March 12, 2023, just two days after the failure of SVB, Signature Bank, with $110 billion in assets at year-end 2022, was closed and the FDIC was appointed as receiver. Signature Bank implemented an operating model that shared risk characteristics with SVB. Like SVB, Signature Bank grew rapidly, held deposit accounts for crypto-asset firms, and was heavily reliant on uninsured deposits for funding. As word of SVB's problems began to spread, Signature Bank began to experience contagion effects with deposit outflows. Signature Bank failed as withdrawal requests mounted beyond its ability to pay.

Because of these failures, and the fact that other institutions were experiencing stress, serious concerns arose about a broader economic spillover. As such, the FDIC invoked the systemic risk exception under Section 13 of the FDI Act in winding down SVB and Signature Bank.[38] These failures demonstrate the implications that IDIs with assets over $100 billion can have on financial stability. As of December 2023, the failures of SVB and Signature Bank have resulted in an estimated cost

[36] Id.

[37] Following the collapse of digital asset exchange FTX in November 2022, Silvergate Bank experienced a rapid loss of deposits, which necessitated the sale of debt securities to cover deposit withdrawals. The securities sales resulted in substantial losses. The troubles experienced by Silvergate Bank demonstrated the impact of a lack of diversification, aggressive growth, maturity mismatches in a rising interest rate environment, and inadequate management of liquidity risk. Many of these same risks were also present at SVB.

[38] As a general rule, Section 13(c)(4) of the FDI Act requires the FDIC to resolve failed IDIs at the least cost to the DIF, but provides an exception for instances where the failure would have serious adverse effects on economic conditions or financial stability, and any action to be taken would avoid or mitigate such adverse effects.

of $21.8 billion and $1.8 billion, respectively, to the DIF.[39]

Additional examples that highlight the impact of a larger IDI failure on the DIF are the failures of Washington Mutual Bank and IndyMac Bank in 2008. Washington Mutual Bank (Washington Mutual), with over $300 billion in assets at the time of its failure in September 2008, was the largest thrift institution in the United States and the sixth largest IDI. Its failure was the largest in the FDIC's history in terms of the IDI's asset size. Several factors made it possible for Washington Mutual to fail with no loss to the DIF and no loss imposed on its $45 billion of uninsured deposits, which approximated 24 percent of total deposits. First, there was an acquirer with the capacity to assume all the assets and all the deposits through a traditional purchase and assumption transaction. This acquirer could act quickly at the time of failure because it had previously performed due diligence on Washington Mutual for a potential open bank acquisition. Second, Washington Mutual had a substantial volume of unsecured debt—$13.8 billion, or 4.5 percent of total assets—which was available to absorb losses in resolution. This loss absorbing capacity was essential to meeting the least cost test and for uninsured depositors to avoid taking a loss. Absent these factors, the FDIC likely would have had to establish a bridge bank and take over the operation of the failed institution. The failure of Washington Mutual in that scenario would have depleted the DIF, and uninsured depositors would likely have had to take a loss in order to meet the least cost test. Imposing losses on uninsured deposits could have had a significantly destabilizing effect, especially given the stressed economic and financial environment in September 2008. The only way to avoid that outcome would have been for the FDIC to exercise the systemic risk exception.

When IndyMac Bank—a $30 billion thrift—failed in July 2008, it had no unsecured debt and there was no viable acquirer. The FDIC established a bridge bank and uninsured depositors realized losses.[40] IndyMac Bank was the most costly failure in the FDIC's history up to that point, resulting in a $12.4 billion loss to the DIF. If these conditions were to repeat for an institution several times larger, the effects could be significant for U.S. financial stability.

[39] See 2023 FDIC Annual Report, at *https://www.fdic.gov/about/financial-reports/reports/2023annualreport/2023-arfinal.pdf.*

[40] Uninsured deposits totaled $2.6 billion, which was almost 14 percent of total deposits.

Cross-Border Activities. The purpose of considering cross-border activities is to assess the degree to which coordination of the resulting IDI's supervision and resolution could be complicated by different legal requirements, geopolitical events, and competing national interests, leading to increased potential for spillover effects. A high degree of cross-border activity by the resulting IDI presents significant challenges to supervising and examining the operations of IDIs and their subsidiaries. Historically, cross-border operations present significant challenges to supervision and examination, and cross-border proceedings can be slow, cumbersome, and require significant amounts of coordination between different resolution authorities with differing objectives and administrators. Accordingly, the FDIC would determine if the resulting IDI's cross-border activities represent a significant component of operations; and if so, whether the activities present a high degree of cross-jurisdictional claims, liabilities, and other impediments to effective supervision and resolution. The Proposed SOP affirms that such activities may present challenges from both supervisory and resolution perspectives given the potential exposure to differing legal requirements, geopolitical events, and competing national interests.

Other Financial Stability Considerations

RFI commenters suggested that the FDIC impose various requirements upon large newly merged IDIs such as a requirement to submit resolution plans, a single-point-of entry resolution strategy, enhanced capital levels, total loss absorbing capacity standards, and other quantitative measures. With respect to these comments, the Proposed SOP does not include such requirements, in order to enable the FDIC to retain flexibility to review and evaluate the facts and circumstances appropriate to the application. For example, the FDIC may consider previously filed resolution plans (if any)[41] relevant to any IDI that may be party to a bank merger application. Resolution plans submitted are highly relevant and those submitted by large IDIs are intended to enable the FDIC, as receiver, to provide customers prompt access to their insured deposits and maximize the return from the sale or disposition of the bank's assets. These resolution plans include information pertaining to the bank's organizational structure, core business lines, information technology, funding needs, and other data to assist in the sale or disposition of the bank's deposit franchise, business lines, and material assets.

The FDIC will closely assess the degree to which the resulting IDI's potential financial distress or failure could cause other IDIs with similar activities or business profiles to experience a loss of market confidence, falling asset values, or liquidity stress and decreased funding options. Further, the FDIC may consider the resulting IDI's regulatory framework post-merger; however, the resulting framework cannot solely ameliorate other identified financial stability concerns.

In addition to the items previously noted, the FDIC will evaluate any additional elements that may affect the risk to the U.S. banking or financial system stability. This may include the resulting IDI's regulatory framework; however, the framework alone would not result in a favorable finding on this factor when other financial stability concerns exist. As appropriate, consideration may be given to the merging IDIs' records with respect to cybersecurity as well as their stress-testing results. For example, the FDIC evaluates the IDI's record of preventing data breaches and responding to and preventing cybersecurity threats.

Questions:

30. How could the FDIC enhance its approach to evaluating risk to the stability of the U.S. banking or financial system?

31. Should the FDIC adopt size thresholds (other than the proposed $100 billion threshold) related to financial stability? If so, why, and what size thresholds would be appropriate to identify transactions that present concerns for this statutory factor?

32. Should the FDIC consider a quantitative risk indicator for overall financial stability? If so, how should this indicator be calculated, and what historical data would support the validity of its usage?

33. How should the FDIC measure the potential impact (*e.g.,* financial, economic, or other) of a resulting IDI on the banking or financial system?

[41] This would include resolution plans filed under 12 CFR part 381 (those filed under Section 165(d) of the Dodd-Frank Act), as well as those filed under 12 CFR 360.10 (IDI Plans). Section 165(d) resolution plans typically include details of the firm's structure, assets, and obligations; information on how the depository subsidiaries are protected from risks posed by its non-bank affiliates; and information on the firm's cross-guarantees, counterparties, and processes for determining to whom collateral has been pledged. IDI Plans typically include information and analysis on the IDI that better enable the FDIC to resolve the IDI under the FDI Act.

34. When measuring the potential impact of a merger, what potential scenarios or assumptions regarding financial and economic conditions would be appropriate, regarding both the merger transaction parties and the overall banking and financial systems?

35. What, if any, additional criteria should be included in the evaluation of the financial stability risk factor?

36. How should the FDIC assess whether a change in the overall risk to financial stability is problematic? Should the FDIC place more emphasis on the creation of new risk to financial stability, an increase to existing risk, or both? If so, what emphasis should be placed and why?

Effectiveness in Combatting Money Laundering Activities

In every case, the BMA directs the responsible agency to consider the effectiveness of any IDI involved in the proposed merger transaction in combatting money laundering activities, including in overseas branches.[42] The FDIC expects that the resulting IDI will operate under a satisfactory anti-money laundering (AML)/countering the financing of terrorism (CFT) program commensurate with its risk profile and business (or strategic) plan.[43]

As part of its evaluation of this factor, the FDIC will undertake a comprehensive analysis of each entity's record with regard to AML/CFT. Among other relevant items, the FDIC will consider each entity's overseas branch operations; policies, procedures, and processes; risk management programs; supervisory record, including compliance with the Bank Secrecy Act (BSA) and its implementing regulations; and remediation efforts pursuant to any outstanding corrective programs. Significant unresolved AML/CFT deficiencies, or an outstanding or proposed formal or informal enforcement action that includes provisions related to AML/CFT, is generally inconsistent with a favorable resolution of this factor. One RFI commenter suggested a bar on the approval of any mergers where an IDI ''has been found guilty of AML misconduct in the previous five years.'' No such bar has been included in the Proposed SOP to retain flexibility in evaluating the merits of each proposed transaction.

Questions:

37. What additional items should the FDIC evaluate as it relates to the respective merger parties' AML/CFT programs?

38. If one party to the transaction has a less than satisfactory AML/CFT compliance program, how much emphasis should be placed on the resultant IDI's AML/CFT compliance program and its plan for integrating the target entity?

Other Matters and Considerations

With regard to interstate mergers, the Proposed SOP states that the FDIC will ensure that the additional requirements and restrictions of Section 44 are satisfied.[44]

The SOP highlights other matters and considerations, such as filings from non-banks[45] or banks that are not traditional community bank[46] applicants, as well as applications from operating non-insured entities.

While the Proposed SOP is solely an FDIC issuance, the FDIC is working collaboratively with the relevant Federal agencies to review and evaluate existing merger—related regulations, guidance, and instruction. Several RFI commenters requested that any amendments to any new merger regulations, guidelines, and instructions should be applied on an interagency basis, and any changes should be made prospectively. Regarding the roles of the Federal banking agencies, several RFI commenters requested that the Consumer Financial Protection Bureau (CFPB) be consulted on all mergers, or at least all mergers for which the CFPB has an examination interest. A similar number of RFI commenters presented the opposite position and noted that the CFPB should not be consulted in any capacity, as that is not their congressional mandate. Several RFI commenters noted that state regulatory and supervisory authorities should be consulted, such as state financial regulators, state Attorney's General, and courts. The Proposed SOP does not specifically address the CFPB by name, but as previously stated, the FDIC works collaboratively with the other Federal regulators, as well as the relevant state authorities when processing merger applications.

Finally, RFI commenters requested that the FDIC review, to the extent possible, the effects of past mergers to evaluate the appropriateness of merger guidelines; and make the results of the evaluation public and apply the results to future merger decisions. The FDIC is considering this recommendation.

Question:

39. Are there other elements of the Proposed SOP that would benefit from additional clarity? If so, please provide details and explain how the elements may be clarified.

IV. Administrative Law Matters

In accordance with the requirements of the Paperwork Reduction Act of 1995 (PRA),[47] the agencies may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

The proposed SOP does not create any new or revise any existing collections of information under the PRA. Therefore, no information collection request will be submitted to the OMB for review. The FDIC is separately requesting comment on proposed changes to the FDIC Supplement to the interagency Bank Merger Act application form.

[42] 12 U.S.C. 1828(c)(11).

[43] The Anti-Money Laundering Act of 2020 (the AML Act), amended subchapter II of chapter 53 of title 31 United States Code (the legislative framework commonly referred to as the Bank Secrecy Act or BSA). The AML Act requires the Financial Crimes Enforcement Network (FinCEN), in consultation with Federal functional regulators, to promulgate AML/CFT regulations. Due to the addition of the CFT, and for consistency with FinCEN, the FDIC will use the term AML/CFT (which includes BSA) when referring to, issuing, or amending regulations to address the requirements of the AML Act of 2020.

[44] See 12 U.S.C.1831u.

[45] A ''non-bank'' refers to an IDI that is a ''bank'' for purposes of the FDI Act, but not for purposes of the BHCA. Non-banks may be owned by parent companies that are not subject to the BHCA and therefore may not regulated or supervised by the FRB. Existing insured non-banks include IDIs that are controlled by parent organizations engaged in a variety of commercial activities. These include industrial banks and industrial loan companies, trust and credit card banks organized under the Competitive Equality Banking Act, and other IDIs, such as municipal deposit banks.

[46] In contrast to a traditional community bank, an IDI that is not a traditional community bank generally: (1) focuses on products, services, activities, market segments, funding, or delivery channels other than local lending and deposit taking; (2) pursues a broad geographic footprint (such as operating nationwide from a limited number of offices); (3) pursues a monoline, limited, or specialty business model; or (4) operates within an organizational structure that involves significant affiliate or other third-party relationships (other than common relationships such as audit, human resources, or core information technology processing services). A non-community bank may or may not operate under a non-bank charter. Specialty (sometimes referred to as ''niche'') IDIs are less-diversified and usually considered ''non-community'' in nature given the concentrated business focus or emphasis on specialized activities.

Assets >$0 and ≤$10 Billion	1,953	26	76	2,055
Assets >$10 Billion and ≤$100 Billion	91		6	97
Assets >$100 Billion	7			7
Totals	2,054	39	116	2,209

[48] Source of data in Tables 1–7: FDIC.

[49] Merger applications may be returned if they are not substantially complete. At its discretion, the FDIC may offer an applicant an opportunity to withdraw an application. Applicants may withdraw an application at any time if they elect not to pursue the transaction. In some cases, in anticipation of a denial recommendation, applicants choose to withdraw their filing. The number of mergers that occur in a given year may differ from the number of mergers approved by the FDIC that same year, as a merger may not be consummated in the same year it is approved.

A regular merger is generally a combination of the assets and liabilities of two or more unaffiliated IDIs under one IDI's charter with the extinguishment or cancellation of the charter(s) of the other IDI(s). For purposes of these tables, ''Bank to Bank'' refers to a merger when all of the parties involved are IDIs and the resulting IDI is a state nonmember bank or state savings association; ''Involving Credit Unions'' refers to a merger that involves the combination of any IDI with a credit union; and ''Involving Uninsured Entities'' refers to a merger that involves the combination of any IDI with an uninsured entity.

V. Proposed Statement of Policy

The text of the proposed Statement of Policy follows:

FDIC Statement of Policy on Bank Merger Transactions

I. Introduction

This Statement of Policy (SOP) communicates the FDIC Board of Directors' expectations and views regarding applications filed pursuant to Section 18(c) of the Federal Deposit Insurance Act (FDI Act), which is referred to herein as the Bank Merger Act (BMA). The SOP reflects the FDIC's interpretations of the BMA and its implementing regulations. The structure of the SOP follows the BMA's core statutory provisions, and its content highlights the principles that guide the FDIC's evaluation of the statutory factors for a merger application.

The BMA prohibits an insured depository institution (IDI) from engaging in a merger transaction without regulatory approval. It identifies the types of undertakings that constitute ''merger transactions'' and outlines which of the three Federal banking agencies is the ''responsible agency'' for acting on a given merger application.[1] In addition, the BMA sets forth advance public notice requirements [2] and generally requires the responsible agency to request a report on the competitive factors for a merger transaction from the Attorney General.[3]

The BMA generally prohibits the responsible agency from approving a monopolistic or otherwise anticompetitive merger transaction.[4] In addition to competitive considerations, the BMA requires the relevant agency to evaluate a merger transaction in light of the financial and managerial resources and future prospects of the existing and proposed institutions, the convenience and needs of the community to be served, the risk to the stability of the United States (U.S.) banking or financial system,[5] and the effectiveness of the IDIs involved in the merger transaction in combatting money laundering.[6]

II. Jurisdiction and Scope

The FDIC is one of three Federal banking agencies with responsibility for evaluating transactions subject to the BMA. The FDIC has jurisdiction to act on merger applications that involve an IDI and any non-insured entity,[7] and those that solely involve IDIs in which the acquiring, assuming, or resulting

[50] Only includes transactions in which the resulting institution was an FDIC-supervised state nonmember bank or state savings association, or in which an IDI sold substantially all of its assets to a credit union and ceased operation.

[7] 12 U.S.C. 1828(c)(1). A non-insured entity refers to any entity that is not FDIC insured.

institution is an FDIC-supervised institution.[8]

The BMA requires regulatory approval for any merger transaction involving an IDI.[9] The applicability of the BMA will depend on the facts and circumstances of the proposed transaction. In addition to transactions that combine institutions into a single legal entity through merger or consolidation, the scope of merger transactions subject to approval under the BMA encompasses transactions that take other forms, including purchase and assumption transactions or other transactions that are mergers in substance, and assumptions of deposits or other similar liabilities.[10]

The FDIC considers transactions to be mergers in substance when a target would no longer compete in the market, regardless of whether the target plans to liquidate immediately after consummating the transaction. An example of a transaction that is a merger in substance, and therefore subject to the BMA, is when an IDI absorbs all (or substantially all) of a target entity's assets and the target entity dissolves (or otherwise ceases to engage in the acquired lines of business).

An FDIC-supervised IDI's assumption of a deposit from another IDI, or any IDI's assumption of a deposit from a non-insured entity, is likewise subject to FDIC approval even in the absence of an express agreement for a direct assumption. Similarly, a transfer of deposits from any IDI to a non-insured entity is subject to FDIC approval.[11] The definition of ''deposit'' per Section 3(*l*) of the FDI Act is broad and extends beyond traditional demand deposits to include trust funds and escrow funds, among other items.

Merger and other corporate transactions may be conducted through a single transaction or through a series of related transactions that each require an application, such as transactions effected through interim institutions. In all cases, the FDIC will evaluate the substance of all of the facts and circumstances of the transaction and any related transactions, identify which aspects of the transaction(s) are subject to FDIC approval, and fully evaluate the statutory factors applicable to each transaction.

Overview of the Application Process

The FDIC encourages prospective applicants to engage in a pre-filing process to discuss regulatory expectations. It is particularly important for the application to be substantially complete when initially filed.[12] The quality and comprehensiveness of a filing are critical to the FDIC's evaluation of the application under the statutory factors and other regulatory requirements.[13] The FDIC expects all submitted materials, including the financial projections and any related analyses, to be well supported and sufficiently detailed. The narrative describing the analysis and evaluation of the transaction should be supported by studies, surveys, analyses and reports, including those prepared by or for officers, directors, or deal team leads. Incomplete filings or non-responsiveness to additional information requests are substantial impediments to the FDIC's ability to fully evaluate and resolve the statutory factors.

Public feedback is an important component of the FDIC's review of a merger application. Section 18(c)(3) of the FDI Act requires that public notice of the proposed merger transaction be published in an approved form and at appropriate intervals in a newspaper or newspapers of general circulation. A list of pending merger applications subject to the Community Reinvestment Act (CRA) is available on the FDIC's website using the Applications in Process Subject to the CRA Report Selection Options.[14] In all cases, the FDIC will review and evaluate any public comments received regarding the merger application, and will provide the applicant an opportunity to respond to any comment that is determined to be a CRA protest.[15] The FDIC will also consider the views of each relevant Federal and state agency. Generally, the FDIC will not approve a merger application if adverse CRA comments have not been resolved.[16] In certain cases, the FDIC may hold hearings or other proceedings in connection with evaluating a merger application.[17]

Section 18(c)(4) of the FDI Act requires the FDIC to request a competitive factors report from the Attorney General of the United States for any merger transaction between an IDI and a non-affiliated entity, unless the FDIC finds that it must act immediately in order to prevent the probable failure of an IDI involved in the transaction.[18] As circumstances warrant, the Department of Justice (DOJ) and the FDIC will coordinate the review when there are concerns or questions regarding the competitive effects of the transaction. As described below, the FDIC undertakes an independent review consistent with the statutory factors of the BMA.

Merger Application Adjudication

Generally, if all statutory factors are favorably resolved, and all other regulatory requirements are satisfied, the FDIC will approve the merger application. Approvals will be subject to the standard conditions detailed in 12 CFR 303.2(bb) and any non-standard conditions deemed appropriate by the FDIC. However, the FDIC will not use conditions as a means for favorably resolving any statutory factors that otherwise present material concerns. The Order and Basis for Approval (Order) will be posted to the FDIC's Decisions on Bank Applications web page.[19] The Order will address all statutory factors, as well as summarize information regarding any CRA protests. The FDIC will summarize the related analysis and conclusions and include any conditions imposed in conjunction with the approval.

The FDIC's publicly available Delegations of Authority set forth criteria that must be satisfied in order for staff in the FDIC Regional Offices or

[8] The Office of the Comptroller of the Currency has jurisdiction for any merger transaction between IDIs in which the acquiring, assuming, or resulting institution is a national bank or a Federal savings association. The Board of Governors of the Federal Reserve System (FRB) has jurisdiction for any merger transaction between IDIs in which the acquiring, assuming, or resulting institution is a state-chartered bank that is a member of the Federal Reserve System. The FRB also has approval authority under the Bank Holding Company Act for mergers involving bank holding companies and the Home Owners' Loan Act for mergers involving savings and loan holding companies. Merger transactions that are subject to the FDIC's review may also be subject to the review of state authorities.

[9] 12 U.S.C. 1828(c).

[10] A merger that includes the establishment or relocation of branches is also subject to approval under 12 U.S.C. 1828(d).

[11] 12 U.S.C. 1828(c)(1)(C).

[12] As noted in Section 1.1 of the Applications Procedures Manual, a filing that is not substantially complete lacks the substance necessary for the FDIC to evaluate the statutory factors.

[13] Regulatory requirements for merger applications are provided in 12 CFR part 303 (including Subparts A and D) and any other Federal or state regulations, statutes, or laws applicable to the filing.

[14] Applications In Process Subject to the CRA Report Selection Options, *https://cra.fdic.gov/*.

[15] 12 CFR 303.2(*l*) defines the term ''CRA protest'' to mean any adverse comment from the public related to a pending filing that raises a negative issue relative to the CRA, whether or not it is labeled a protest and whether or not a hearing is requested. An ''adverse comment'' is defined in 12 CFR 303.2(c), as any objection, protest, or other adverse written statement submitted by an interested party relating to a filing.

[16] See 12 CFR 303.2(c) and 303.2(*l*).

[17] See 12 CFR 303.10.

[18] 12 U.S.C. 1828(c)(4). In addition to acting to prevent the probable failure of an IDI, Section 18(c)(4)(C) of the FDI Act includes exceptions for merger transactions involving solely an IDI and one or more of its affiliates.

[19] Decisions on Bank Applications, *https://www.fdic.gov/regulations/laws/bankdecisions/merger/*.

Washington Office to approve a merger application.[20] Notably, the Board of Directors reserves the authority to deny any merger application or act on certain types of proposed transactions, including any transaction for which one or more statutory factors are unfavorably resolved.

Generally, applications will present significant concerns and will likely result in unfavorable findings with regard to one or more statutory factors if they include the following circumstances:

- Non-compliance with applicable Federal or state statutes, rules, or regulations (this includes, for example, transactions that would exceed the 10 percent nationwide deposit limit, as well as both issued and pending enforcement actions);
- Unsafe or unsound condition relating to the existing IDIs or the resulting IDI;
- Less than Satisfactory examination ratings, including for any specialty areas (*i.e.,* information technology or trust examinations);
- Significant concerns regarding financial performance or condition, risk profile, or future prospects;
- Inadequate management, including significant turnover, weak or poor corporate governance, or lax oversight and administration; or
- Incomplete, unsustainable, unrealistic or unsupported projections, analyses, and/or assumptions.

Additionally, the FDIC may not be able to find favorably on any given statutory factor (and the application as a whole) if there are unresolved deficiencies, issues, or concerns (including with respect to any public comments). A lack of sustained performance under corrective programs will also be inconsistent with a favorable finding on one or more statutory factors, particularly when the transaction implicates the areas that are the subject of the corrective program. Further, the inability or unwillingness of the applicant to agree to proposed conditions or execute written agreements, if deemed necessary, will result in unfavorable findings and would require action by the Board of Directors on the application.

If FDIC staff finds unfavorably on one or more statutory factors based on the application review, staff generally will recommend denial of the application. At the FDIC's discretion, applicants may be offered the opportunity to withdraw the filing. If an applicant withdraws their filing, the Board of Directors may release a statement regarding the concerns with the transaction if such a statement is considered to be in the public interest for purposes of creating transparency for the public and future applicants.

III. Statutory Factors

Merger applications are evaluated under the framework of statutory factors as described in the BMA. Generally, the BMA prohibits approval of monopolistic or otherwise anticompetitive transactions; and requires the responsible agency to consider specific statutory factors related to financial and managerial resources and future prospects, convenience and needs of the community to be served, combatting money laundering, and financial stability. The BMA also prohibits interstate mergers in which the resulting IDI would control more than 10 percent of the deposits of IDIs in the United States.[21] Evaluations of each statutory factor consider the respective entities' supervisory record, potential risks and compensating controls, and any other available information deemed appropriate.

Monopolistic or Anticompetitive Effects

The FDIC strives to ensure that resulting institutions continue as participants in a competitive environment. Section 18(c)(5) of the BMA prohibits the FDIC from approving a merger transaction that would result in a monopoly or would be in furtherance of an attempt to monopolize the business of banking in any part of the U.S. The BMA also prohibits the FDIC from approving a merger transaction that may substantially lessen competition in any section of the country, unless the anticompetitive effects of the proposed transaction are clearly outweighed in the public interest by the probable effect of the transaction in meeting the convenience and needs of the community to be served.[22] For example, such a circumstance may exist where a transaction is necessary to prevent the probable failure of an IDI.

The FDIC will evaluate the competitive effects of a proposed merger in a manner that is most relevant to each transaction. Consistent with the majority of merger transactions typically presented to the FDIC, the FDIC generally employs a framework for evaluating competitive effects involving a transaction between IDIs with traditional community banking operations within their local geographic markets. However, the FDIC will tailor its evaluation to consider the size and competitive effects of the resulting IDI. Additionally, the FDIC will consider all relevant market participants. For example, the FDIC may include any other financial service providers that the FDIC views as competitive with the merging entities, including providers located outside the geographic market when it is evident that such providers materially influence the market. Further, in cases involving merging entities with specialty lines of business or non-traditional products, services, or delivery methods, the FDIC will take into account any additional data sources or appropriate analytical approaches to fully assess the competitive effects of the transaction.

In assessing competitive effects, the FDIC considers concentrations with respect to both geographic and product markets. The FDIC identifies all relevant geographic markets (local, regional, and national) based on the geographic areas in which the merging entities operate and in which customers may practically turn to competitors for alternative products and services.[23] The FDIC uses deposits as an initial proxy for commercial banking products and services. The FDIC will initially measure the respective shares of total deposits held by the merging entities and the various other participants with offices in the geographic market. The FDIC evaluates the market concentration and change in market concentration in each geographic and product market.[24]

In addition, the FDIC will consider concentrations beyond those based on deposits. As appropriate, the FDIC may consider concentrations in any specific products or customer segments, such as, for example, the volume of small business or residential loan originations or activities requiring specialized expertise. Additionally, when relevant, the analysis may incorporate other products offered by the merging entities with consideration given to whether consumers retain meaningful choices. In its analysis, the FDIC will evaluate a market with a scope that is appropriate to the products or services offered or planned. Moreover, the FDIC will consider the emergence of new competitors for products or services in relevant markets; and the expansion of products and services offered by the merging entities and other market participants. Finally, as necessary or

[23] See *United States* v. *Philadelphia National Bank,* 374 U.S. 321 (1963).

[24] Indicators of market concentration and change in concentration include calculations using the Herfindahl-Hirschman Index (HHI).

appropriate, the FDIC will consider other products or services and additional methods of assessing the competitive nature of markets. In particular, the FDIC may consider information on the pricing of products and services to assess the competitive effects of a proposed merger when practicable and relevant.

The FDIC may require divestitures of business lines, branches, or portions thereof as a means to mitigate competitive concerns before allowing the merger to be consummated. In such cases, the FDIC will generally require that the selling institution will not enter into non-compete agreements with any employee of the divested entity nor enforce any existing non-compete agreements with any of those entities.

Nationwide Deposit Cap

The BMA prohibits approval of an interstate merger that results in an IDI (and its affiliates) controlling more than 10 percent of the total deposits of IDIs in the U.S.[25] This prohibition does not apply to transactions that involve one or more IDIs in default or in danger of default. Consistent with the competitive effects review, the FDIC will use the most current Summary of Deposits data to confirm the nationwide deposit share of the resulting IDI following the proposed transaction.

Financial Resources

The BMA requires the responsible agency to consider the financial resources of the existing and proposed entities involved in a merger transaction.[26] The FDIC expects that the resulting IDI will reflect sound financial performance and condition.[27] Generally, the FDIC will not find favorably on the financial resources factor if the merger would result in a weaker IDI from an overall financial perspective.

A critical component of the analysis of financial resources is the resultant IDI's ability to meet applicable capital standards (including maintenance of appropriate allowances for loan or credit losses). Depending on the anticipated risk profile of the resulting IDI, the FDIC may impose, as a non-standard condition, capital requirements that are higher than applicable capital standards.[28] Further, as appropriate, the FDIC may impose a non-standard condition that requires the resulting IDI and other relevant parties (such as certain affiliates or investors) to enter into one or more written agreements that address, as applicable, capital maintenance requirements, liquidity or funding support, affiliate transactions, and other relevant provisions. The FDIC also expects the resulting IDI to maintain sufficient liquidity and appropriate funding strategies given its size, complexity, and risk profile.

The FDIC will also consider the current and projected financial impact of any related entities on the IDI, including the parent organization and any key affiliates. For each relevant entity, the FDIC will consider, among other items, the size and scope of operations, capital position, quality of assets, overall financial performance and condition, compliance and regulatory history, primary revenue and expense sources, and funding strategies.

Managerial Resources

The BMA requires the responsible agency to consider the managerial resources of the existing and proposed entities involved in a merger transaction.[29] The FDIC expects that the directors, officers, and as appropriate, principal shareholders (collectively, management) possess the capabilities to administer the resultant IDI's affairs in a safe and sound manner, and effectively implement post-merger integration plans and strategies.

The capability of management to identify, measure, monitor, and control risks and ensure a safe and sound operation in compliance with applicable laws and regulations is included in the evaluation of managerial resources. The FDIC will consider the background and experience of each member of management relative to the size, complexity, and risk profile of the resulting IDI, including the managerial performance and supervisory record of affiliates and subsidiaries.

The FDIC will review supervisory assessments of management made by the relevant regulatory authorities, as well as the nature and extent of organizational relationships. The FDIC will also evaluate the effect of such relationships on the IDI, as well as the operating history, risk management, and control environment of the parent organization. Inherent in these considerations are the condition, performance, risk profile, and prospects of the organization as a whole, as well as the consistency of the proposed merger with the resulting IDI's strategic (or business) plan.

The FDIC will assess each IDI's record of compliance with respect to consumer protection, fair lending, and other relevant consumer laws and regulations. The FDIC will analyze the compliance management system of each of the IDIs, as well as the compliance management system for the resulting IDI to ensure that appropriate controls will be implemented to identify, monitor, and address consumer compliance risks. Consideration will also be given to the consumer compliance rating pursuant to the Uniform Interagency Consumer Compliance Rating System and the CRA rating.[30]

Additional managerial resource considerations include:

- The supervisory history of each entity involved in the proposed merger, including the management rating[31] for any IDI involved in the transaction;
- The breadth and depth of management, and adequacy of succession planning;
- Management's responsiveness to issues or supervisory recommendations raised by regulators or auditors;
- Any existing or pending enforcement actions;
- Any issues or concerns with regard to specialty areas including information technology, trust, consumer compliance, CRA, or Anti-Money Laundering (AML)/countering the financing of terrorist activities (CFT);[32] and
- The reasonableness of fees, expenses, and other payments made to insiders.
- Recent rapid growth and the record of management in overseeing and controlling risks associated with such growth.

The FDIC expects management to develop and implement effective plans and strategies, and the resulting IDI to have the managerial and operational capacity to integrate the acquired entity. Effective integration includes, but is not limited to, human capital; products and

[25] 12 U.S.C. 1828(c)(13).

[26] 12 U.S.C. 1828(c)(5).

[27] This evaluation encompasses capital, asset quality, earnings, liquidity, and sensitivity to market risk, as described in the Uniform Financial Institution Rating System (UFIRS); see 61 FR 67021 (December 19, 1996).

[28] Refer to the applicable capital regulations for the relevant parties. The minimum capital ratios for FDIC-supervised institutions are set forth at 12 CFR 324.10, and the capital measures and capital category definitions for the purposes of Prompt Corrective Action are set forth at 12 CFR 324.403 for FDIC-supervised institutions.

[29] 12 U.S.C. 1828(c)(5).

[30] 81 FR 79473, (Nov. 14, 2016).

[31] The management rating is defined in the UFIRS.

[32] The Anti-Money Laundering Act of 2020 (the AML Act), amended subchapter II of chapter 53 of title 31 United States Code (the legislative framework commonly referred to as the Bank Secrecy Act or BSA). The AML Act requires the Financial Crimes Enforcement Network (FinCEN), in consultation with Federal functional regulators, to promulgate AML/CFT regulations. Due to the addition of the CFT, and for consistency with FinCEN, the FDIC will use the term AML/CFT (which includes BSA) when referring to, issuing, or amending regulations to address the requirements of the AML Act of 2020.

services; operating systems, policies, and procedures; internal controls and audit coverage; physical locations; information technology; and risk management programs. In conjunction with the integration, the FDIC expects a resulting IDI to have the managerial and operational capacity, and to devote adequate resources, to ensure full and timely compliance with any outstanding corrective programs or supervisory recommendations.

Future Prospects

The BMA requires the responsible agency to consider the future prospects of the existing and proposed entities involved in a merger transaction.[33] The FDIC expects that the resulting IDI will operate in a safe and sound manner on a sustained basis following consummation of the merger. Among other items, the FDIC will consider the economic environment, the competitive landscape, the acquiring IDI's history in integrating merger targets and managing growth, the anticipated scope of the resulting IDI's operations, the quality of its supporting infrastructure, and other pertinent factors. Any significant planned changes to the resulting IDI's strategies, operations, products or services, activities, income or expense levels, or other key elements of its business will be closely assessed. The FDIC will review the pro forma financial projections, the underlying assumptions, and any accompanying valuations (such as those related to the target entity, goodwill, or other assets) to ensure they demonstrate and support that the resulting IDI will maintain an acceptable risk profile.

Convenience and Needs of the Community To Be Served

The BMA requires the responsible agency to consider the convenience and needs of the community to be served when evaluating a merger transaction.[34] The FDIC expects that a merger between IDIs will enable the resulting IDI to *better* meet the convenience and the needs of the community to be served than would occur absent the merger. Applicants are expected to demonstrate how the transaction will benefit the public through higher lending limits, greater access to existing products and services, introduction of new or expanded products or services, reduced prices and fees, increased convenience in utilizing the credit and banking services and facilities of the resulting IDI, or other means.

The FDIC expects applicants to provide specific and forward-looking information to enable the FDIC to evaluate the expected benefits of the merger on the convenience and needs of the community to be served. As appropriate, claims and commitments made to the FDIC to support the FDIC's evaluation of the expected benefits of the merger may be included in the Order, and the FDIC's ongoing supervisory efforts will evaluate the IDI's adherence with any such claims and commitments. The FDIC will evaluate the community to be served broadly, which will include the proposed assessment area(s), retail delivery systems, populations in affected communities, and identified needs for banking services.

As part of its evaluation, the FDIC will review the CRA record of the institutions. The CRA requires the FDIC to take into account each IDI's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of such institution.[35] As such, the FDIC will consider each institution's CRA performance evaluation record of helping to meet the credit needs of its assessment areas, including low- and moderate-income neighborhoods, and record of community development activity, as applicable. A less than Satisfactory historical rating or significant deterioration in CRA performance will generally result in unfavorable findings. The FDIC's review is not limited to the CRA record of the institutions and will encompass a broad review of the institutions' existing products and services and whether the products and services proposed by the applicants will meet the convenience and needs of the community to be served.

In addition, the FDIC will consider the record of each institution in complying with consumer protection requirements and maintaining a sound and effective compliance management system. This review will include consideration of any existing or pending orders, ongoing enforcement actions, and pending reviews or investigations of violations of consumer protection laws and regulations. A less than Satisfactory consumer compliance rating [36] may present significant concerns in resolving this factor.

The CRA assessment area(s) and branch locations resulting from the merger are evaluated as part of this factor. The assessment area(s) should be delineated in accordance with 12 CFR part 345 (or other appropriate regulations), and should not reflect illegal discrimination. The FDIC will evaluate all projected or anticipated branch expansion, closings, or consolidations for the first three years following consummation of the merger.[37] Branch closings are subject to both Section 42 of the FDI Act and the Interagency Policy Statement Concerning Branch Closing Notices and Policies.[38] Information regarding any proposed or expected closures, including the timing of each closure, the effect on the availability of products and services, particularly to low- or moderate-income individuals or designated areas, any job losses or lost job opportunities from branching changes, and the broader effects on the convenience and needs of the community to be served will be closely evaluated. Applications that project material reductions in service to low- and moderate-income communities or consumers will generally result in unfavorable findings.

The FDIC will consider all substantive public comments received in accordance with 12 CFR 303.9, as well as the views of relevant state and Federal regulators regarding the ability of the applicant to meet the convenience and needs of the community to be served. Non-standard conditions may be imposed, as appropriate, in response to CRA weaknesses, relevant regulator input, bank commitments, or public comments. The FDIC will consider whether it is in the public interest to hold a hearing for merger applications, and generally expects to hold a hearing for any application resulting in an IDI with greater than $50 billion in assets or for which a significant number of CRA protests are received. The FDIC may also hold public or private meetings to receive input on the transaction. The decision to hold such meetings depend on issues raised during the comment period and the significance of the merger transaction to the public interest, to the banking industry, and communities affected.

As noted above, the BMA prohibits the FDIC from approving a merger transaction that may substantially lessen competition in any section of the country, unless the anticompetitive

[33] 12 U.S.C. 1828(c)(5).

[34] 12 U.S.C. 2902(3)(E) and 2903(a)(2).

[35] 12 U.S.C. 2902(3)(E) and 2903(a)(2).

[36] Uniform Interagency Consumer Compliance Rating System, 81 FR 79473 (Nov. 14, 2016).

[37] Generally, the FDIC considers a substantially complete merger application to include, among other items, at least three years of information regarding projected branch expansions, closings, or consolidations. Short-distance consolidations that may not be subject to Section 42 outside of a merger context should be included in this information.

[38] 64 FR 34845 (June 29, 1999).

effects of the proposed transaction are clearly outweighed in the public interest by the probable effect of the transaction in meeting the convenience and needs of the community to be served.[39] In situations where anticompetitive effects are identified, the FDIC will evaluate whether the applicant has established that the benefits to the convenience and needs of the community will clearly outweigh the anticompetitive effects. A favorable finding on the convenience and needs of the community to be served factor may not support approval of the application when anticompetitive effects are identified.

Risk to the Stability of the United States Banking or Financial System

Section 604 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) amended the BMA to require the FDIC to consider the risk posed by a merger transaction to the stability of the U.S. banking or financial system. The FDIC expects that the resulting IDI (or consolidated company) will not materially increase the risk to the stability of the U.S. banking or financial system.[40] Consistent with the other Federal banking agencies,[41] the FDIC evaluates this factor with respect to the following:

- The size of the entities involved in the transaction;
- The availability of substitute providers for any critical products or services to be offered by the resulting IDI;
- The resulting IDI's degree of interconnectedness with the U.S. banking or financial system;
- The extent to which the resulting IDI contributes to the U.S. banking or financial system's complexity; and
- The extent of the resulting IDI's cross-border activities.

Generally, the FDIC will not view the size of the entities involved in a proposed merger transaction as a sole basis for determining the risk to the U.S. banking or financial system's stability. However, transactions that result in a large IDI (*e.g.,* in excess of $100 billion) are more likely to present potential financial stability concerns with respect to substitute providers, interconnectedness, complexity, and cross border activities, and will be subject to added scrutiny. The FDIC will consider the nature and scope of operations of the target entity, the resulting IDI, and any other elements that may also influence the risk to the U.S. banking or financial system's stability.

With regard to substitute providers, the FDIC will consider whether the resulting IDI provides critical products or services that may be difficult to replace, or conducts activities (including specific business lines) that comprise a relatively large share of system-wide activities. Concerns are heightened, and may preclude favorable resolution of this factor, in situations where there are limited readily available substitutes, as relied upon services may be disrupted or discontinued if the resulting IDI encounters financial distress or fails.

In assessing the resulting IDI's interconnectedness, the FDIC will consider the degree to which the merging entities are engaged in transactions or relationships with IDIs, affiliates of banking organizations, or other financial service providers. Consideration will be given to whether any exposures with creditors, counterparties, investors, or other market participants could affect the U.S. banking or financial system. A resulting IDI may present financial stability concerns if key aspects of its business (including any on- or off-balance sheet activities) are highly interconnected with other financial system participants.

The FDIC's evaluation of the resulting IDI's contribution to the U.S banking or financial system's complexity will consider the full scope of the IDI's operations. This includes the IDI's business lines, products and services, on- and off-balance sheet activities, branch network and delivery channels, number of account holders (including the volume of uninsured deposits), extent of information technology systems, and any material affiliate or other third-party relationships. As part of evaluating the resulting IDI's impact on complexity, the FDIC will also consider its resolvability in a potential failure situation. The FDIC may not be able to find favorably on this factor when the resultant IDI's organizational and funding structure preclude its ability to: (i) continue operations and activities until they can be sold or wound down, (ii) sell key business lines or large asset portfolios, and (iii) be marketed for sale in a manner that limits the potential for losses to the Deposit Insurance Fund.[42]

The extent of a resulting IDI's cross-border activities may also have implications with regard to a favorable finding on this factor. The FDIC will consider whether cross-border activities comprise a material component of the resulting IDI's operations and present a significant degree of cross-jurisdictional claims or liabilities. Such activities may present challenges from both supervisory and resolution perspectives given the potential exposure to differing legal requirements, geopolitical events, and competing national interests.

Other Stability Considerations

The above list of items is not exhaustive. The FDIC will evaluate any additional elements that may affect the risk to the U.S. banking or financial system's stability. This may include the resulting IDI's regulatory framework; however, the framework alone would not result in a favorable finding on this factor when other financial stability concerns exist. As appropriate, consideration may be given to the merging IDIs' records with respect to cybersecurity and stress-testing results. The FDIC may also evaluate the degree to which the resultant IDI's potential financial distress or rapid liquidation could cause other market participants with similar activities or business profiles to experience a loss of market confidence, falling asset values, or decreased funding options.

Proposed transactions that solely involve affiliates that were related at the time a merger application is filed generally will not raise concerns with regard to this factor. However, each proposal will be reviewed to ensure that the resulting IDI would not present any new or unforeseen financial stability risks that may not have existed when the merging entities operated as affiliates or on a standalone basis.

Effectiveness in Combatting Money Laundering Activities

The BMA requires the responsible agency to consider the effectiveness of any IDI involved in a merger transaction in combatting money-laundering activities, including in overseas branches.[43] The FDIC expects that approved merger transactions will result in institutions with effective programs to combat money laundering (Anti-Money Laundering or AML) and counter the financing of terrorism (CFT). A favorable finding on this factor will be based on a comprehensive evaluation of each entity's AML/CFT program that includes overseas branches; policies, procedures, and processes; risk

[39] 12 U.S.C. 1828(c)(5).

[40] 12 U.S.C. 1828(c)(5).

[41] The FDIC will consider data collected by the Federal Reserve to monitor the systemic risk profile of the institutions, which are subject to enhanced prudential standards under Section 165 of the Dodd-Frank Act.

[42] In addition to considering the FDIC's potential role as receiver of the resulting IDI under Section 11 of the FDI Act, it will also take into account possible alternative resolution scenarios.

[43] 12 U.S.C. 1828(c)(11).

management programs; the supervisory record of each participating entity, the entity's compliance with Bank Secrecy Act (BSA) and its implementing regulations; and remediation efforts pursuant to an outstanding corrective program.[44] In all cases, the FDIC will consider whether the resulting IDI has developed an appropriate plan for the integration of the combined operations into a single, comprehensive, and effective program to combat money laundering and terrorist financing. Additionally, the FDIC expects the applicant to demonstrate how the resulting IDI will comply with the BSA and its implementing regulations following consummation of the merger.

Significant unresolved AML/CFT concerns or uncorrected problems, or an outstanding or proposed formal or informal enforcement action that includes provisions related to AML/CFT, will generally result in unfavorable findings on this factor. In limited cases, sufficient mitigating factors may support a favorable finding, such as when an acquirer with a strong AML/CFT program replaces a target entity's less than satisfactory program and presents an appropriate plan to address the target entity's deficiencies.

IV. Other Matters and Considerations

Interstate Merger Transactions

In cases where Section 44 of the FDI Act applies to an interstate merger transaction, the FDIC will ensure that the additional requirements and restrictions of Section 44 are satisfied.[45]

Applications Involving Non-Banks or Banks That Are Not Traditional Community Banks

Historically, most merger transactions considered by the FDIC have involved traditional community banks. In general, traditional community banks focus on providing the banking services, including loans and core deposits, typically relied on by individuals and businesses in their local communities. However, merger applications may also involve non-banks[46] or banks that are not traditional community banks, which may involve more complexity than a traditional community bank in terms of its business model, products, services, activities, market segments, funding, delivery channels, geographic footprint, operations, or intercompany or other third-party relationships. Merger applications where the resulting IDI will be a non-bank or not a traditional community bank are subject to the same statutory factors as any other merger application. However, the FDIC will appropriately tailor its review to the nature, complexity, and scale of the entities involved in the transaction and the underlying business model. The FDIC's Washington Office or Board of Directors reserve authority to act on certain merger applications that do not involve traditional community banks.

Applications Involving Operating Non-Insured Entities

Applications may involve an existing IDI merging with an operating entity that is not FDIC-insured. Operating non-insured entities may vary widely in the type of business and activities conducted (*e.g.,* credit unions, which typically offer products and services consistent with a traditional community bank, mortgage companies, financing companies, payment services firms, or other types of entities whose business model may have elements more consistent with that of a non-community bank). Merger applications that involve an operating non-insured entity are subject to the same statutory factors as any other merger application. However, in reviewing such applications, the FDIC will consider the nature and complexity of the non-insured entity, its scale relative to the existing IDI, its current condition and historical performance, and any other relevant information regarding the entity's operations or risk profile.

The FDIC will review audited financial statements (covering at least three years, unless the entity's operating history is shorter) and assess any deferred tax assets or liabilities, intangible assets, contingent liabilities, and any recent or pending legal or regulatory actions. Further, independent appraisals or valuations may be necessary to support the projected value of any business (or assets) expected to be transferred from the operating non-insured entity to the resultant IDI through the merger transaction.

BILLING CODE 6714–01–P

[44] An IDI under an outstanding formal enforcement action should make substantial progress to correct problem(s) addressed in the action. Progress should be sufficient to determine that the AML/CFT program is now adequate.

[45] See 12 U.S.C.1831u.

[46] A ''non-bank'' refers to an IDI that is a bank for purposes of the FDI Act, but that is not a bank for purposes of the Bank Holding Company Act (BHCA). Non-banks may be owned by parent companies that are not subject to the BHCA, and therefore may not regulated or supervised by the FRB.

FEDERAL DEPOSIT INSURANCE CORPORATION

[OMB No. 3064–0015]

Agency Information Collection Activities: Proposed Collection Renewal; Comment Request

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comment.

SUMMARY: The FDIC, as part of its obligations under the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to take this opportunity to comment on the renewal of the existing information collection described below (OMB Control No. 3064–0015).

DATES: Comments must be submitted on or before June 18, 2024.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- *Agency Website: https://www.fdic.gov/resources/regulations/federal-register-publications/.*
- *Email: comments@fdic.gov.* Include the name and number of the collection in the subject line of the message.
- *Mail:* Michelle Mire, Senior Attorney, 202–898–7377, *mmire@fdic.gov,* MB–3072, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street NW building (located on F Street NW), on business days between 7 a.m. and 5 p.m.

All comments should refer to the relevant OMB control number. A copy of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Michelle Mire, Senior Attorney, 202–898–7377, *mmire@fdic.gov,* MB–3072, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

SUPPLEMENTARY INFORMATION:

Proposal to renew the following currently approved collection of information:

1. *Title:* Interagency Bank Merger Application.

OMB Number: 3064–0015.

Form Number: 6220/01.

Affected Public: FDIC-insured depository institutions.

Burden Estimate:

SUMMARY OF ANNUAL BURDEN

Information collection description	Type of burden	Obligation to respond	Estimated number of respondents	Estimated frequency of responses	Estimated time per response (hours)	Estimated annual burden (hours)
Interagency Bank Merger Act Application—Affiliated Transactions.	Reporting	Mandatory	103	On Occasion ...	19	1,957
Interagency Bank Merger Act Application—Nonaffiliated Transactions.	Reporting	Mandatory	117	On Occasion ...	33	3,861

Total Estimated Annual Burden: 5,818.

General Description of Collection: Section 18(c) of the Federal Deposit Insurance Act (FDI Act) requires an insured depository institution (IDI) that wishes to merge or consolidate with any other IDI or, either directly or indirectly, acquire the assets of, or assume liability to pay any deposits made in, any other IDI, to apply for the prior written approval of the responsible agency (the FDIC; the Board of Governors of the Federal Reserve (FRB); or the Office of the Comptroller of the Currency (OCC)).[1] Section 18(c) further requires FDIC approval in connection with any merger transaction involving an IDI and a non-insured entity.

The Interagency Bank Merger Act Application Form (Application Form) is used by the FDIC, the FRB, and the OCC for applications under section 18(c) of the FDI Act. The Application Form may be used for any merger transaction subject to section 18(c). There is a different level of burden for each of the two types of merger transactions, nonaffiliated and affiliated. An affiliate transaction refers to a merger, consolidation, other combination, or transfer of any deposit liabilities, between an IDI and another entity controlled by the same parent company, regardless of whether the other entity is FDIC-insured. It includes a business combination between an IDI and an affiliated interim institution. Applicants proposing affiliate transactions are not required to complete questions 12 through 14 of the Application Form. If the merging entities are not controlled by the same parent company, the merger transaction is considered nonaffiliated, and the applicant must complete the entire application form.

The FDIC Supplement to the Interagency Bank Merger Act Application Form (Supplement) requires each applicant to provide information that delineates the relevant geographic market(s) and describes the competition in the relevant geographic market(s). The information collected focuses on the relevant geographic market(s) where the applicant and the entity to be acquired provide banking products or services. The Supplement includes specific instructions to facilitate a comprehensive competitive analysis relative to transactions between nonaffiliated entities.

Proposed Changes to the FDIC Supplement

The proposed edits to the Supplement would make certain changes to the required information that would be applicable to all merger transactions that require FDIC approval. The revised Supplement clarifies that the delineation of the relevant geographic market(s) includes offices where customers may access a substantial share of banking products or services, which extend beyond deposits to include loans and private wealth management services, among other examples.

The delineation of the relevant geographic market(s) includes the county, municipality, or census tract where both the applicant and target entity operate offices and provide products and services, as well as the alternate areas where customers may practically turn for products and services. The revised Supplement includes additional details regarding lists of products and services, including the number and dollar volume of deposits and loans.

To enhance the analysis of the potential competitive effects in the relevant geographic market(s), the revised Supplement also seeks

[1] 12 U.S.C. 1828(c). The FDIC is the responsible agency if the acquiring, assuming, or resulting bank is to be a State nonmember insured bank or a State savings association.

information regarding non-FDIC insured entities (such as credit unions), as well as other entities that do not take deposits (such as finance companies or government agencies). Specific requests for additional information beyond the items articulated in the Supplement may be made to an applicant depending on the structure and nature of the proposed transaction. The proposed form can be viewed at *https://www.fdic.gov/resources/regulations/federal-register-publications/2024/2024-bank-merger-act-supplement-clean.pdf;* and the revisions to the form can be viewed at *https://www.fdic.gov/resources/regulations/federal-register-publications/2024/2024-bank-merger-act-supplement-redline.pdf.*

The changes to the Supplement results in a 234-hour increase in burden hours for applicants required to file the Supplement with the FDIC.

Request for Comment

Comments are invited on: (a) whether the collection of information is necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimate of the burden of the information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; (e) whether the FDIC should require additional information for transactions over a certain threshold (such as when the resulting IDI's total assets exceed $100 billion), and if so, what information should be requested; and (f) whether the FDIC should streamline the Supplement to limit the information provided when the application is filed, and only seek additional information, as needed, depending on the nature of the transaction, and if so, how should the Supplement be streamlined. All comments will become a matter of public record.

Federal Deposit Insurance Corporation.

Dated at Washington, DC, on April 11, 2024.

James P. Sheesley,

Assistant Executive Secretary.
