Final settlement amount means the final payment amount that CMS owes and ultimately pays to a Part D sponsor, or that a Part D sponsor owes and ultimately pays to CMS, with respect to a Part D contract that has consolidated, nonrenewed, or terminated. The final settlement amount is calculated by summing final retroactive payment adjustments for a specific contract that accumulated after that contract ceases operation but before the calculation of the final settlement amount and all of the following applicable reconciliation amounts that have been completed as of the date the notice of final settlement has been issued, without accounting for any data submitted after the data submission deadlines for calculating these reconciliation amounts:

(1) Risk adjustment reconciliation, as applicable (described in § 422.310 of this chapter).

(2) Part D annual reconciliation (described in § 423.343).

(3) Coverage Gap Discount Program annual reconciliation (described in § 423.2320).

(4) MLR remittances (described in §§ 422.2470 of this chapter and 423.2470).

Final settlement process means for a contract that has been consolidated, nonrenewed, or terminated, the process by which CMS does all of the following:

(1) Calculates the final settlement amount.

(2) Issues the final settlement amount along with supporting documentation in the notice of final settlement to the Part D sponsor.

(3) Receives responses from the Part D sponsor requesting an appeal of the final settlement amount.

(5) Takes final actions to adjudicate an appeal (if requested) and make payments to or receive payments from the Part D sponsor. The final settlement amount is calculated after all applicable reconciliations have occurred after a contract has been consolidated, nonrenewed, or terminated.

■ 66. Section 423.503 is amended by—

■ a. Adding paragraph headings for paragraphs (a)(1) through (3) and adding paragraph (a)(4); and

■ b. Revising paragraphs (b)(1)(i)(A) and (C).

The addition and revisions read as follows:

§ 423.503 Evaluation and determination procedures.

* * * * *

(a) * * *

(1) *Information used to evaluate applications.* * * *

(2) *Issuing application determination.* * * *

(3) *Limitation on PDP contracts under a single parent organization* * * *

(4) *Substantially incomplete applications.* (i) CMS does not evaluate or issue a notice of determination described in § 423.503(c) when an organization submits a substantially incomplete application.

(ii) An application is substantially incomplete when the submission as of the deadline for applications established by CMS is missing content or responsive materials for one or more sections of the application form required by CMS.

(iii) A determination that an application is substantially incomplete is not a contract determination as defined in § 423.641 and a determination that an organization submitted a substantially incomplete application is not subject to the appeals provisions of subpart N of this part.

* * * * *

(b) * * *
(1) * * *
(i) * * *
(A) Was under an intermediate sanction under subpart O of this part, or a determination by CMS to prohibit the enrollment of new enrollees under § 423.2410(c).
* * * * *
(C) Filed for or is currently in federal or state bankruptcy proceedings.
* * * * *

■ 67. Section 423.505 is amended by revising paragraph (b)(22) and adding paragraph (i)(6) to read as follows:

§ 423.505 Contract provisions.

* * * * *
(b) * * *
(22) As described in § 423.129, address and resolve complaints received by CMS against the Part D sponsor in the Complaints Tracking Module.
* * * * *
(i) * * *
(6) If the Part D plan sponsor delegates any of the following functions to a first tier, downstream, or related entity, the Part D sponsor's written arrangements must state that a termination initiated by such entity must provide, at minimum, 60-days' prior notice and have an effective termination date that coincides with the end of a calendar month:
(i) Authorization, adjudication, and processing of prescription drug claims at the point of sale.
(ii) Administration and tracking of enrollees' drug benefits in real time, including automated coordination of benefits with other payers.
(iii) Operation of an enrollee appeals and grievance process.
(iv) Contracting with or selection of prescription drug providers for inclusion in the Part D sponsor's network.

■ 68. Section 423.507 is amended by revising paragraph (a)(3) to read as follows:

§ 423.507 Nonrenewal of contract.

* * * * *
(a) * * *
(3)(i) If a Part D plan sponsor does not renew a contract under this paragraph (a), CMS cannot enter into a contract with the organization for 2 years in the PDP region or regions served by the contract unless there are circumstances that warrant special consideration, as determined by CMS.
(ii) If a PDP sponsor does not renew any of its PBPs in a PDP region, CMS does not approve plan bids submitted by the organization in that PDP region for 2 years unless there are circumstances that warrant special consideration, as determined by CMS.
(iii) The provisions of this paragraph do not apply to employer group waiver plans offered by a Part D plan sponsor.
* * * * *

■ 69. Section 423.508 is amended by revising paragraph (e) to read as follows:

§ 423.508 Modification or termination of contract by mutual consent.

* * * * *
(e) *Agreement to limit new Part D applications.* (1) As a condition of the consent to a mutual termination, CMS requires, as a provision of the termination agreement, language prohibiting the Part D plan sponsor from applying for new contracts or service area expansions in the PDP region or regions served by the contract for a period up to 2 years unless there are circumstances that warrant special consideration, as determined by CMS.
(2) A PDP sponsor that agrees to terminate its offering of PBPs in a PDP region also agrees that it is not eligible to apply to resume offering plans in that region for 2 years.
(3) The provisions of this paragraph do not apply to employer group waiver plans offered by a Part D plan sponsor.
* * * * *

■ 69a. Section 423.509 is amended by adding paragraph (f) to read as follows:

§ 423.509 Termination of contract by CMS.

* * * * *
(f) If CMS makes a determination to terminate a Part D sponsor's contract under § 423.509(a), CMS also imposes the intermediate sanctions at § 423.750(a)(1) and (3) in accordance with the following procedures:
(1) The sanction will go into effect 15 days after the termination notice is sent.
(2) The Part D sponsor will have a right to appeal the intermediate sanction in the same proceeding as the termination appeal specified in paragraph (d) of this section.
(3) A request for a hearing does not delay the date specified by CMS when the sanction becomes effective.
(4) The sanction will remain in effect—
(i) Until the effective date of the termination; or
(ii) If the termination decision is overturned on appeal, when a final decision is made by the hearing officer or Administrator.

■ 69b. Section 423.514 is amended by revising paragraph (a) introductory text and paragraph (a)(2) to read as follows:

§ 423.514 Validation of Part D reporting requirements.

(a) *Required information.* Each Part D plan sponsor must have an effective procedure to develop, compile, evaluate, and report to CMS, to its enrollees, and to the general public, at the times and in the manner that CMS requires, information indicating the following—
* * * * *
(2) The procedures related to and utilization of its services and items.
* * * * *

■ 69c. Section 423.521 is added to read as follows:

§ 423.521 Final settlement process and payment.

(a) *Notice of final settlement.* After the calculation of the final settlement amount, CMS sends the Part D sponsor a notice of final settlement. The notice of final settlement contains at least the following information:
(1) A final settlement amount for the contract that has been consolidated, nonrenewed, or terminated, which may be one of the following:
(i) An amount due to the Part D sponsor.
(ii) An amount due from the Part D sponsor.
(iii) $0 if nothing is due to or from the Part D sponsor.
(2) Relevant banking and financial mailing instructions for Part D sponsors that owe CMS a final settlement amount.
(3) Relevant CMS contact information.
(4) A description of the steps for requesting an appeal of the final settlement amount calculation, in accordance with the requirements specified in § 423.522.
(b) *Request for an appeal.* A Part D sponsor that disagrees with the final settlement amount has 15 calendar days from issuance of the notice of final settlement, as described in paragraph (a) of this section, to request an appeal of the final settlement amount under the process described in § 423.522.
(1) If a Part D sponsor agrees with the final settlement amount, no response is required.
(2) If a Part D sponsor disagrees with the final settlement amount but does not request an appeal within 15 calendar days from the date of the issuance of the notice of final settlement, CMS does not consider subsequent requests for appeal.
(c) *Actions if a Part D sponsor does not request an appeal.* (1) For Part D sponsors that are owed money by CMS, CMS remits payment to the Part D sponsor within 60 calendar days from the date of the issuance of the notice of final settlement.

(2) For Part D sponsors that owe CMS money, the Part D sponsor is required to remit payment to CMS within 120 calendar days from issuance of the notice of final settlement. If the Part D sponsor fails to remit payment within that 120-calendar-day period, CMS refers the debt owed to CMS to the Department of the Treasury for collection.

(d) *Actions following a request for appeal.* If a Part D sponsor responds to the notice of final settlement disagreeing with the final settlement amount and requesting appeal, CMS conducts a review process under the process described at § 423.522.

(e) *No additional payment adjustments.* After the final settlement amount is calculated and the notice of final settlement, as described under § 423.521(a), is issued to the Part D sponsor, CMS—

(1) No longer applies retroactive payment adjustments to the terminated, consolidated or nonrenewed contract; and

(2) There are no adjustments applied to amounts used in the calculation of the final settlement amount.

■ 69d. Section 423.522 is added to read as follows:

§ 423.522 Requesting an appeal of the final settlement amount.

(a) *Appeals process.* If a Part D sponsor does not agree with the final settlement amount described in § 423.521(a) of this section, it may appeal under the following three-level appeal process:

(1) *Reconsideration.* A Part D sponsor may request reconsideration of the final settlement amount described in § 423.521(a) according to the following process:

(i) *Manner and timing of request.* A written request for reconsideration must be filed within 15 days from the date that CMS issued the notice of final settlement to the Part D sponsor.

(ii) *Content of request.* The written request for reconsideration must do all of the following:

(A) Specify the calculation with which the Part D sponsor disagrees and the reasons for its disagreement.

(B) Include evidence supporting the assertion that CMS's calculation of the final settlement amount is incorrect.

(C) Not include new reconciliation data or data that was submitted to CMS after the final settlement notice was issued. CMS does not consider information submitted for the purposes of retroactively adjusting a prior reconciliation.

(iii) *Conduct of reconsideration.* In conducting the reconsideration, the CMS reconsideration official reviews the calculations that were used to determine the final settlement amount and any additional evidence timely submitted by the Part D sponsor.

(iv) *Reconsideration decision.* The CMS reconsideration official informs the Part D sponsor of its decision on the reconsideration in writing.

(v) *Effect of reconsideration decision.* The decision of the CMS reconsideration official is final and binding unless a timely request for an informal hearing is filed in accordance with paragraph (a)(2) of this section.

(2) *Informal hearing.* A Part D sponsor dissatisfied with CMS's reconsideration decision made under paragraph (a)(1) of this section is entitled to an informal hearing as provided for under paragraphs (a)(2)(i) through (a)(2)(iv) of this section.

(i) *Manner and timing of request.* A request for an informal hearing must be made in writing and filed with CMS within 15 calendar days of the date of CMS's reconsideration decision.

(ii) *Content of request.* The request for an informal hearing must include a copy of the reconsideration decision and must specify the findings or issues in the decision with which the Part D sponsor disagrees and the reasons for its disagreement.

(iii) *Informal hearing procedures.* The informal hearing is conducted in accordance with the following:

(A) The CMS Hearing Officer provides written notice of the time and place of the informal hearing at least 30 calendar days before the scheduled date.

(B) The CMS reconsideration official provides a copy of the record that was before CMS when CMS made its decision to the hearing officer.

(C) The hearing officer review is conducted by a CMS hearing officer who neither receives testimony nor accepts any new evidence. The CMS hearing officer is limited to the review of the record that was before CMS when CMS made its decision.

(iv) *Decision of the CMS hearing officer.* The CMS hearing officer decides the case and sends a written decision to the Part D sponsor explaining the basis for the decision.

(v) *Effect of hearing officer's decision.* The hearing officer's decision is final and binding, unless the decision is reversed or modified by the CMS Administrator in accordance with paragraph (a)(3) of this section.

(3) *Review by the Administrator.* The Administrator's review is conducted in the following manner:

(i) *Manner and timing of request.* A Part D sponsor that has received a hearing officer's decision may request review by the Administrator within 15 calendar days of the date of issuance of the hearing officer's decision under paragraph (a)(2)(iv) of this section. The Part D sponsor may submit written arguments to the Administrator for review.

(ii) *Discretionary review.* (A) After receiving a request for review, the Administrator has the discretion to elect to review the hearing officer's determination in accordance with paragraph (a)(3)(iii) of this section or to decline to review the hearing officer's decision within 30 calendar days of receiving the request for review.

(B) If the Administrator declines to review the hearing officer's decision, the hearing officer's decision is final and binding.

(iii) *Electing to review.* If the Administrator elects to review the hearing officer's decision, the Administrator reviews the hearing officer's decision, as well as any information included in the record of the hearing officer's decision and any written argument submitted by the Part D sponsor, and determine whether to uphold, reverse, or modify the hearing officer's decision.

(iv) *Effect of Administrator's decision.* The Administrator's decision is final and binding.

(b) *Matters subject to appeal and burden of proof.* (1) The Part D sponsor's appeal is limited to CMS's calculation of the final settlement amount. CMS does not consider information submitted for the purposes of retroactively adjusting a prior reconciliation.

(2) The Part D sponsor bears the burden of proof by providing evidence demonstrating that CMS' calculation of the final settlement amount is incorrect.

(e) *Stay of financial transaction until appeals are exhausted.* If a Part D sponsor requests review of the final settlement amount, the financial transaction associated with the issuance or payment of the final settlement amount is stayed until all appeals are exhausted. Once all levels of appeal are exhausted or the Part D sponsor fails to request further review within the applicable 15-calendar-day timeframe, CMS communicates with the Part D sponsor to complete the financial transaction associated with the issuance or payment of the final settlement amount, as appropriate.

(f) *Continued compliance with other law required.* Nothing in this section limits a Part D sponsor's responsibility to comply with any other statute or regulation.

■ 70. Section 423.530 is added to read as follows:

§ 423.530 Plan crosswalks.

(a) *General rules*—(1) *Definition of plan crosswalk.* A plan crosswalk is the movement of enrollees from one plan benefit package (PBP) in a PDP contract to another PBP under a PDP contract between a Part D Sponsor and CMS. To crosswalk enrollees from one PBP to another is to change the enrollment from the first PBP to the second.

(2) *Prohibitions.* (i) Plan crosswalks between PBPs under one PDP contract and PBPs under another PDP contract are prohibited unless both the PDP sponsors with which CMS contracts are the same legal entity or have the same parent organization.

(ii) Plan crosswalks are prohibited that split the enrollment of one PBP into multiple PBPs.

(iii) Plan crosswalks are prohibited from a PBP offering basic prescription drug coverage to a PBP offering enhanced alternative coverage.

(3) *Compliance with renewal/non-renewal rules.* The PDP sponsor must comply with renewal and non-renewal rules in §§ 423.506 and 423.507 in order to complete plan crosswalks.

(4) *Eligibility.* Enrollees must be eligible for enrollment under § 423.30 in order to be moved from one PBP to another PBP.

(5) *Applicability to Employer group health or waiver plans.* Nothing in this section permits the crosswalk of enrollees in an employer group health or waiver plan PBP to another PBP outside the usual process for enrollment in employer group health or waiver plans.

(b) *Mandatory plan crosswalks.* A Part D sponsor of a PDP must perform a plan crosswalk in the following circumstances:

(1) *Renewal of a PBP offering basic prescription drug coverage.* A PDP sponsor that plans to continue operating a PBP offering basic prescription coverage in the same service area for the upcoming contract year must crosswalk enrollment from the PBP offering basic prescription drug coverage in the current contract year into a PBP offering basic prescription drug coverage under the same PDP contract in the upcoming contract year. The PBP for the upcoming contract year must retain the same plan ID as the PBP for the current contract year.

(2) *Renewal of a PBP offering enhanced alternative drug coverage.* A PDP sponsor that plans to continue operating a PBP offering enhanced alternative coverage in the same service area for the upcoming contract year must crosswalk enrollment from the PBP offering enhanced alternative drug coverage in the current contract year into a PBP offering enhanced alternative drug coverage in the upcoming contract year. The PBP for the upcoming contract year PBP must retain the same plan ID as the PBP for the current contract year.

(c) *Plan crosswalk exceptions.* A Part D sponsor of a PDP may perform a plan crosswalk in the following circumstances after receiving approval from CMS under the procedures described in paragraph (d) of this section.

(1) *Consolidated renewals.* If a PDP sponsor wishes to non-renew a PBP offering enhanced alternative prescription drug coverage under a PDP contract that is not non-renewing or reducing its service area so that the contract no longer includes the service area of the non-renewing PBP, it may crosswalk enrollment from the non-renewing PBP into a PBP offered under the contract in the upcoming contract year.

(i) The plan ID for the upcoming contract year PBP must be the same plan ID as one of PBPs for the current contract year.

(ii) The PBPs being consolidated must be under the same PDP contract.

(iii) A PBP offering basic prescription drug coverage may not be discontinued if the PDP contract continues to offer coverage (other than employer group waiver plans) in the service area of the PBP.

(iv) Enrollment from a PBP offering enhanced alternative coverage may be crosswalked into a PBP offering either enhanced alternative or basic prescription drug coverage.

(v) If the PDP contract includes more than one renewing PBP into which enrollment of the non-renewing PBP can be crosswalked, the enrollment of the non-renewing PBP must be crosswalked into the renewing PBP that will result in lowest increase in monthly premiums for the enrollees.

(vi) A plan crosswalk is not approved under this paragraph if it will result in a premium increase for the following benefit year (as reflected in the bid for the receiving PBP submitted on the first Monday in June) that is higher than the greater of the following:

(A) The current year's premium for the non-renewing PBP.

(B) The current year's average base beneficiary premium, as described in § 423.286(c) of this part, for the PDP region in which the PBP operates.

(vii) If an organization that non-renews an enhanced alternative PBP does not request and receive a plan crosswalk exception as provided in paragraph (d) of this section, CMS does not approve a new enhanced alternative PBP in the same service area as the non-renewing PBP in the following contract year.

(2) *Contract consolidations.* If a PDP sponsor non-renews all or part of the service area of its contract with CMS in accordance with §§ 423.507 or 423.508, the enrollees of the non-renewing PBPs may be crosswalked into one or more PBPs in another PDP contract (the surviving contract).

(i) The non-renewing PDP contract and the surviving contract must be held by the same legal entity or by legal entities with the same parent organization.

(ii) The approved service area of the surviving contract must include the service area of the non-renewing PBPs whose enrollment will be crosswalked into the surviving contract.

(iii) Enrollment may be crosswalked between PBPs offering the same type of prescription drug coverage (basic or enhanced alternative).

(iv) Enrollment from a PBP offering enhanced alternative coverage may be crosswalked into a PBP offering basic prescription drug coverage.

(v) Enrollment from a PBP offering enhanced alternative coverage must be crosswalked into the PBP in the surviving contract that will result in the lowest premium increase.

(vi) A plan crosswalk is not approved under this paragraph if it will result in a premium increase for the following benefit year (as reflected in the bid for the receiving PBP submitted on the first Monday in June) that is higher than the greater of:

(A) The current year's premium for the non-renewing PBP, or

(B) The current year's average base beneficiary premium, as described in § 423.286(c), for the region in which the PBP operates.

(d) *Procedures.* (1) A PDP sponsor must submit the following:

(i) All plan crosswalks described in paragraph (b) of this section in writing through the bid submission process in HPMS by the bid submission deadline.

(ii) All plan crosswalk exception requests described in paragraph (c) of this section in writing through the plan crosswalk exceptions process in HPMS by the plan crosswalk exception request deadline announced annually by CMS.

(2) CMS verifies the requests and notifies a requesting PDP sponsor of the approval or denial after the crosswalk exception request deadline.

■ 71. Section 423.551 is amended by revising paragraph (e) to read as follows:

§ 423.551 General provisions.

* * * * *

(e) Effect of change of ownership without novation agreement. Except to

the extent provided in paragraph (c)(2) of this section, the effect of a change of ownership without a novation agreement is that—

(1) The current PDP sponsor, with respect to the affected contract, has substantially failed to comply with the regulatory requirements as described in § 423.509(a)(4)(ix) and the contract may be subject to intermediate enrollment and marketing sanctions as outlined in § 423.750(a)(1) and (a)(3). Intermediate sanctions imposed as part of this section remain in place until CMS approves the change of ownership (including execution of an approved novation agreement), or the contract is terminated.

(i)(A) If the new owner does not participate in the Medicare program in the same service area as the affected contract, it must apply for, and enter into, a contract in accordance with subpart K of this part and part 422 if applicable; and

(B) If the application is conditionally approved, must submit, within 30 days of the conditional approval, the documentation required under § 423.551(d) for review and approval by CMS; or

(ii) If the new owner currently participates in the Medicare program and operates in the same service area as the affected contract, it must, within 30 days of imposition of intermediate sanctions as outlined in paragraph (e)(1) of this section, submit the documentation required under § 423.551(d) for review and approval by CMS.

(2) If the new owner fails to begin the processes required under paragraph (e)(1)(i) or (e)(1)(ii) of this section, within 30 days of imposition of intermediate sanctions as outlined in paragraph (e)(1) of this section, the existing contract is subject to termination in accordance with § 423.509(a)(4)(ix).

* * * * *

■ 72. Section 423.562 is amended by revising paragraph (a)(1)(v) to read as follows:

§ 423.562 General provisions.

(a) * * *

(1) * * *

(v) Appeal procedures that meet the requirements of this subpart for issues that involve at-risk determinations. Determinations made in accordance with the processes at § 423.153(f) are collectively referred to as an at-risk determination, defined at § 423.560, made under a drug management program.

* * * * *

■ 73. Section 423.578 is amended by revising paragraph (d) to read as follows:

§ 423.578 Exceptions process.

* * * * *

(d) Notice regarding formulary changes. Whenever a Part D plan sponsor makes any negative formulary change, as defined in § 423.100, to its CMS-approved formulary, the Part D plan sponsor must provide notice in accordance with the requirements at § 423.120(b)(5) and (f).

■ 74. Section 423.582 is amended by revising paragraph (b) to read as follows:

§ 423.582 Request for a standard redetermination.

* * * * *

(b) *Timeframe for filing a request.* Except as provided in paragraph (c) of this section, a request for a redetermination must be filed within 60 calendar days after receipt of the written coverage determination notice or the at-risk determination under a drug management program in accordance with § 423.153(f).

(1) The date of receipt of the coverage determination or at-risk determination is presumed to be 5 calendar days after the date of the written coverage determination or at-risk determination, unless there is evidence to the contrary.

(2) For purposes of meeting the 60-calendar day filing deadline, the request is considered as filed on the date it is received by the Part D plan sponsor or delegated entity specified in the Part D plan sponsor's written coverage determination or at-risk determination.

* * * * *

■ 75. Section 423.584 is amended by revising paragraph (b) introductory text and adding paragraph (b)(3) and (4) to read as follows:

§ 423.584 Expediting certain redeterminations.

* * * * *

(b) *Procedure and timeframe for filing a request.* A request for redetermination must be filed within 60 calendar days after receipt of the written coverage determination notice or at-risk determination notice.

* * * * *

(3) The date of receipt of the coverage determination or at-risk determination is presumed to be 5 calendar days after the date of the written coverage determination or at-risk determination, unless there is evidence to the contrary.

(4) For purposes of meeting the 60-calendar day filing deadline, the request is considered as filed on the date it is received by the Part D plan sponsor or delegated entity specified the Part D plan sponsor's written coverage determination or at-risk determination.

* * * * *

■ 76. Section 423.600 is amended by revising paragraph (a) to read as follows:

§ 423.600 Reconsideration by an independent review entity (IRE).

(a) An enrollee who is dissatisfied with the redetermination of a Part D plan sponsor has a right to a reconsideration by an independent review entity that contracts with CMS. The prescribing physician or other prescriber (acting on behalf of an enrollee), upon providing notice to the enrollee, may request an IRE reconsideration. The enrollee, or the enrollee's prescribing physician or other prescriber (acting on behalf of the enrollee) must file a written request for reconsideration with the IRE within 60 calendar days after receipt of the written redetermination by the Part D plan sponsor.

(1) The date of receipt of the redetermination is presumed to be 5 calendar days after the date of the Part D plan sponsor's written redetermination, unless there is evidence to the contrary.

(2) For purposes of meeting the 60-calendar day filing deadline, the request is considered as filed on the date it is received by the IRE specified in the Part D plan sponsor's written redetermination.

* * * * *

■ 77. Section 423.760 is amended by revising paragraph (b)(3) to read as follows:

§ 423.760 Definitions for calculating penalty amounts.

* * * * *

(b) * * *

(3)(i) Definitions for calculating penalty amounts—

(A) *Per determination.* The penalty amounts calculated under paragraph (b)(1) of this section.

(B) *Per enrollee.* The penalty amounts calculated under paragraph (b)(2) of this section.

(C) *Standard minimum penalty.* The per enrollee or per determination penalty amount that is dependent on the type of adverse impact that occurred.

(D) *Aggravating factor(s).* Specific penalty amounts that may increase the per enrollee or per determination standard minimum penalty and are determined based on criteria under paragraph (a) of this section.

(ii) CMS sets minimum penalty amounts in accordance with paragraphs (b)(1) and (2) of this section.

(iii) CMS announces the standard minimum penalty amounts and

aggravating factor amounts for per determination and per enrollee penalties on an annual basis.

(iv) CMS has the discretion to issue penalties up to the maximum amount under paragraphs (b)(1) and (2) of this section when CMS determines that an organization's non-compliance warrants a penalty that is higher than would be applied under the minimum penalty amounts set by CMS.

* * * * *

■ 78. Section 423.2267 is amended by revising paragraph (e)(33) to read as follows:

§ 423.2267 Required materials and content.

* * * * *

(e) * * *

(33) *Notice of availability of language assistance services and auxiliary aids and services (Notice of Availability).*

(i) Prior to contract year 2026 marketing on September 30, 2025, the notice is referred to as the *Multi-language insert (MLI).* This is a standardized communications material which states, ''We have free interpreter services to answer any questions you may have about our health or drug plan. To get an interpreter, just call us at [1–xxx–xxx–xxxx]. Someone who speaks [language] can help you. This is a free service.'' in the following languages: Spanish, Chinese, Tagalog, French, Vietnamese, German, Korean, Russian, Arabic, Italian, Portuguese, French Creole, Polish, Hindi, and Japanese.

(A) Additional languages that meet the 5-percent service area threshold, as required under paragraph (a)(2) of this section, must be added to the MLI used in that service area. A plan may also opt to include in the MLI any additional language that do not meet the 5 percent service area threshold, where it determines that this inclusion would be appropriate.

(B) Except where otherwise provided in paragraph (e)(33)(i)(G) of this section, the MLI must be provided with all required materials under paragraph (e) of this section.

(C) The MLI may be included as a part of the required material or as a standalone material in conjunction with the required material.

(D) When used as a standalone material, the MLI may include organization name and logo.

(E) When mailing multiple required materials together, only one MLI is required.

(F) The MLI may be provided electronically when a required material is provided electronically as permitted under paragraph (d)(2) of this section.

(G) At plan option for CY 2025 marketing and communications beginning September 30, 2024, the plan may use the model notice described in § 423.2267(e)(33)(ii) to satisfy the MLI requirements set forth in paragraph (e)(33)(i) of this section.

(ii) For CY 2026 marketing and communications beginning September 30, 2025, the required notice is referred to as the *Notice of availability of language assistance services and auxiliary aids and services (Notice of Availability).* This is a model communications material through which MA organizations must provide a notice of availability of language assistance services and auxiliary aids and services that, at a minimum, states that the MA organization provides language assistance services and appropriate auxiliary aids and services free of charge.

(A) This notice of availability of language assistance services and auxiliary aids and services must be provided in English and at least the 15 languages most commonly spoken by individuals with limited English proficiency of the relevant State or States associated with the plan's service area and must be provided in alternate formats for individuals with disabilities who require auxiliary aids and services to ensure effective communication.

(B) If there are additional languages in a particular service area that meet the 5 percent service area threshold, described in paragraph (a)(2) of this section, beyond the languages described in paragraph (e)(33)(i) of this section, the notice of availability of language assistance services and auxiliary aids and services must also be translated into those languages. MA organizations may also opt to translate the notice in any additional languages that do not meet the 5-percent service area threshold, where the MA organization determines that this inclusion would be appropriate.

(C) The notice must be provided with all required materials under paragraph (e) of this section.

(D) The notice may be included as a part of the required material or as a standalone material in conjunction with the required material.

(E) When used as a standalone material, the notice may include organization name and logo.

(F) When mailing multiple required materials together, only one notice is required.

(G) The notice may be provided electronically when a required material is provided electronically as permitted under paragraph (d)(2) of this section.

* * * * *

■ 79. Section 423.2274 is amended by—

■ a. Revising paragraph (i) of the definition of ''Compensation'' and the definition of ''Fair market value'' in paragraph (a);

■ b. Adding paragraph (c)(13);

■ c. Revising paragraphs (c)(5), (d)(1)(ii), (d)(2) introductory text, (d)(3) introductory text, (e)(1) and (e)(2);

■ d. Adding paragraph (g)(4).

The revisions and addition read as follows:

§ 423.2274 Agent, broker, and other third-party requirements.

* * * * *

(a) * * *

Compensation. (i) Includes monetary or non-monetary remuneration of any kind relating to the sale, renewal, or services related to a plan or product offered by a Part D sponsor including, but not limited to the following:

(A) Commissions.

(B) Bonuses.

(C) Gifts.

(D) Prizes or Awards.

(E) Beginning with contract year 2025, payment of fees to comply with state appointment laws, training, certification, and testing costs.

(F) Beginning with contract year 2025, reimbursement for mileage to, and from, appointments with beneficiaries.

(G) Beginning with contract year 2025, reimbursement for actual costs associated with beneficiary sales appointments such as venue rent, snacks, and materials.

(H) Beginning with contract year 2025, any other payments made to an agent or broker that are tied to enrollment, related to an enrollment in a Part D plan or product, or for services conducted as a part of the relationship associated with the enrollment into a Part D plan or product.

* * * * *

Fair market value (FMV) means, for purposes of evaluating agent or broker compensation under the requirements of this section only, the amount that CMS determines could reasonably be expected to be paid for an enrollment or continued enrollment into a Part D plan. Beginning January 1, 2021, the national FMV is 81. In contract year 2025, there will be a one-time increase of $100 to the FMV to account for administrative payments included under the compensation rate. For subsequent years, FMV is calculated by adding the current year FMV and the produce of the current year FMV and Annual Percentage Increase for Part D, which is published for each year in the rate announcement issued under § 422.312.

* * * * *

(c) * * *

(5) On an annual basis for plan years through 2024, by the last Friday in July, report to CMS whether the MA organization intends to use employed, captive, or independent agents or brokers in the upcoming plan year and the specific rates or range of rates the plan will pay independent agents and brokers. Following the reporting deadline, MA organizations may not change their decisions related to agent or broker type, or their compensation rates and ranges, until the next plan year.

* * * * *

(13) Beginning with contract year 2025, ensure that no provision of a contract with an agent, broker, or other TPMO has a direct or indirect effect of creating an incentive that would reasonably be expected to inhibit an agent or broker's ability to objectively assess and recommend which plan best fits the health care needs of a beneficiary.

* * * * *

(d) * * *

(1) * * *

(ii) For contract years through contract year 2024, Part D sponsors may determine, through their contracts, the amount of compensation to be paid, provided it does not exceed limitations outlined in this section. Beginning with contract year 2025, Part D sponsors are limited to the compensation amounts outlined in this section.

(2) Initial enrollment year compensation. For each enrollment in an initial enrollment year for contract years through contract year 2024, Part D sponsors may pay compensation at or below FMV.

* * * * *

(3) *Renewal compensation.* For each enrollment in a renewal year for contract years through contract year 2024, Part D sponsors may pay compensation at a rate of up to 50 percent of FMV. For contract years beginning with contract year 2025, for each enrollment in a renewal year, MA organizations may pay compensation at 50 percent of FMV.

* * * * *

(e) * * *

(1) For contract years through contract year 2024, payments for services other than enrollment of beneficiaries (for example, training, customer service, agent recruitment, operational overhead, or assistance with completion of health risk assessments) must not exceed the value of those services in the marketplace.

(2) Beginning with contract year 2025, administrative payments are included in the calculation of enrollment-based compensation.

(g) * * *

(4) Beginning October 1, 2024, personal beneficiary data collected by a TPMO for marketing or enrolling them into a Part D plan may only be shared with another TPMO when prior express written consent is given by the beneficiary. Prior express written consent from the beneficiary to share the information and be contacted for marketing or enrollment purposes must be obtained through a clear and conspicuous disclosure that lists each entity receiving the data and allows the beneficiary to consent or reject to the sharing of their data with each individual TPMO.

PART 460—PROGRAMS OF ALL-INCLUSIVE CARE FOR THE ELDERLY (PACE)

■ 80. The authority citation for part 460 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395, 1395eee(f), and 1396u–4(f).

■ 80a. Section 460.12 is amended by revising paragraph (a) to read as follows:

§ 460.12 Application requirements.

(a) *Submission of application.* (1) An individual authorized to act for an entity that seeks to become a PACE organization or a PACE organization that seeks to expand its service area or add a PACE center site must submit to CMS a complete application in the form and manner, including timeframes for submission, specified by CMS, that describes how the entity or PACE organization meets all requirements in this part.

(2) An individual authorized to act for an entity that seeks to become a PACE organization must submit an application to qualify as a Part D sponsor in the form and manner required by CMS in accordance with 42 CFR part 423, subpart K.

■ 81. Section 460.18 is amended by adding paragraphs (c) and (d) to read as follows:

§ 460.18 CMS evaluation of applications.

* * * * *

(c) *Use of information from a current or prior PACE program agreement.* (1) If, during the 12 months preceding the deadline established by CMS for the submission of an application or submission of a response to a CMS request for additional information, a PACE organization fails to comply with the requirements of the PACE program under any current or prior PACE program agreement or fails to complete a corrective action plan during the applicable 12-month period, CMS may deny an application based on the applicant's failure to comply with the requirements of the PACE program under any current or prior PACE program agreement even if the applicant currently meets all of the requirements of this part.

(i) An applicant may be considered to have failed to comply with the requirements of the PACE program under a PACE program agreement for purposes of an application denial under paragraph (c)(1) of this section if any of the following conditions apply with respect to the applicant during the applicable 12-month review period:

(A) Was subject to the imposition of an enrollment or payment sanction under § 460.42(a) or (b) for one or more of the violations specified in § 460.40.

(B) Failed to maintain a fiscally sound operation consistent with the requirements of § 460.80(a) after the end of the trial period.

(C) Filed for or is currently in State bankruptcy proceedings.

(D) Met or exceeded 13 points for compliance actions for any one PACE program agreement.

(*1*) CMS determines the number of points accumulated during the performance period for compliance actions based on the following point values:

(*i*) Each corrective action plan issued under § 460.19(c)(3) during the performance period counts for 6 points. Corrective action requests issued under § 460.194 are not included in the point calculations.

(*ii*) Each warning letter issued under § 460.19(c)(2) during the performance period counts for 3 points.

(*iii*) Each notice of non-compliance issued under § 460.19(c)(1) during the performance period counts for 1 point.

(*2*) CMS adds all the point values for each PACE organization's program agreement to determine if the 13-point threshold described in paragraph (c)(1)(i)(D) of this section has been reached.

(ii) CMS may deny an application submitted by an organization that does not hold a PACE program agreement at the time of the submission if the applicant's parent organization or another subsidiary of the parent organization meets the criteria for denial stated in paragraph (c)(1)(i) of this section. This paragraph does not apply to a parent organization that completed the acquisition of a subsidiary that meets the criteria for denial within the 24 months preceding the application submission deadline.

(d) If CMS has terminated a PACE program agreement under § 460.50, or

did not renew a PACE program agreement, and that termination or non-renewal took effect within the 38 months preceding the submission of an initial or expansion PACE application from the same organization, CMS may deny the application based on the applicant's substantial failure to comply with the requirements of the PACE program, even if the applicant currently meets all of the requirements of this part.

* * * * *

■ 81. Section 460.19 is added to read as follows:

§ 460.19 Issuance of compliance actions for failure to comply with the terms of the PACE program agreement.

(a) CMS may take compliance actions as described in paragraph (c)(1) of this section if CMS determines that the PACE organization has not complied with the terms of a current or prior PACE program agreement with CMS and a State administering agency.

(1) CMS may determine that a PACE organization is out of compliance with requirements when the organization fails to meet performance standards articulated in sections 1894 and 1934 of the Act and regulations in this chapter.

(2) If CMS has not already articulated a measure for determining non-compliance, CMS may determine that a PACE organization is out of compliance when its performance in fulfilling requirements represents an outlier relative to the performance of other PACE organizations.

(b) CMS bases its decision on whether to issue a compliance action and what level of compliance action to take on an assessment of the circumstances surrounding the non-compliance, including all of the following:

(1) The nature of the conduct.

(2) The degree of culpability of the PACE organization.

(3) The actual or potential adverse effect on beneficiaries which resulted or could have resulted from the conduct of the PACE organization.

(4) The history of prior offenses by the PACE organization or its related entities.

(5) Whether the non-compliance was self-reported.

(6) Other factors which relate to the impact of the underlying non-compliance or to the PACE organization's inadequate oversight of the operations that contributed to the non-compliance.

(c) CMS may take one of three types of compliance actions based on the nature of the non-compliance.

(1) *Notice of non-compliance.* A notice of non-compliance may be issued for any failure to comply with the requirements of the PACE organization's current or prior PACE program agreement with CMS and a State administering agency, as described in paragraph (a) of this section.

(2) *Warning letter.* A warning letter may be issued for serious and/or continued non-compliance with the requirements of the PACE organization's current or prior PACE program agreement with CMS and a State administering agency, as described in paragraph (a) of this section and as assessed in accordance with paragraph (b) of this section.

(3) *Corrective action plan.* (i) Corrective action plans are issued for particularly serious or continued non-compliance with the requirements of the PACE organization's current or prior PACE program agreement with CMS and a State administering agency, as described in paragraph (a) of this section and as assessed in accordance with paragraph (b) of this section.

(ii) CMS issues a corrective action plan if CMS determines that the PACE organization has repeated or not corrected non-compliance identified in prior compliance actions, has substantially impacted beneficiaries or the program with its non-compliance, or must implement a detailed plan to correct the underlying causes of the non-compliance.

■ 82. Section 460.20 is amended by revising paragraph (c) to read as follows:

§ 460.20 Notice of CMS determination.

(c) *Incomplete application due to the lack of required State assurances documentation.* An application that, upon submission, is determined to be incomplete under § 460.12(b)(3) is withdrawn by CMS and the applicant is notified accordingly. The applicant is not entitled to a fair hearing when CMS withdraws an incomplete application on this basis.

■ 83. Section 460.64 is amended by revising paragraph (a)(5) and adding paragraph (a)(6) to read as follows:

§ 460.64 Personnel qualifications for staff with direct participant contact.

(a) * * *

(5) Be medically cleared for communicable diseases before engaging in direct participant contact.

(i) Staff must be cleared for communicable diseases based on a physical examination performed by a licensed physician, nurse practitioner, or physician assistant acting within the scope of their authority to practice, unless—

(A) The PACE organization conducts an individual risk assessment that meets the conditions specified in paragraph (a)(5)(iii) of this section; and

(B) The results of the risk assessment indicate the individual does not require a physical examination for medical clearance.

(ii) As part of the initial physical examination, staff must be determined to be free of active Tuberculosis disease.

(iii) If the PACE organization conducts a risk assessment on an individual under paragraphs (a)(5)(i)(A) and (B) of this section—

(A) Policies and procedures for conducting a risk assessment on each individual with direct participant contact must be based on accepted professional standards of care;

(B) The PACE organization's risk assessment must identify when a physical examination is required based on the results of the assessment; and

(C) The results of the risk assessment must be reviewed by a registered nurse, physician, nurse practitioner, or physician assistant.

(D) At a minimum, the risk assessment must do both of the following:

(*1*) Assess whether staff have been exposed to or have any symptoms of the following diseases:

(*i*) COVID–19.

(*ii*) Diphtheria.

(*iii*) Influenza.

(*iv*) Measles.

(*v*) Meningitis.

(*vi*) Meningococcal Disease.

(*vii*) Mumps.

(*viii*) Pertussis.

(*ix*) Pneumococcal Disease.

(*x*) Rubella.

(*xi*) Streptococcal Infection.

(*xii*) Varicella Zoster Virus.

(*xiii*) Any other infectious diseases noted as a potential threat to public health by the CDC.

(*2*) Determine if staff are free of active Tuberculosis during the initial risk assessment.

(6) Have all immunizations up to date before engaging in direct participant contact.

* * * * *

■ 84. Section 460.71 is amended by—

■ a. Revising paragraph (b)(4);

■ b. Redesignating paragraph (b)(5) and (6) as paragraphs (b)(6) and (7), respectively; and

■ c. Adding new paragraph (b)(5).

The revision and addition read as follows:

§ 460.71 Oversight of direct participant care.

* * * * *

(b) * * *

(4) Be medically cleared for communicable diseases before engaging

in direct participant contact as required under § 460.64(a)(5).

(5) Have all immunizations up to date before engaging in direct participant contact.

* * * * *

■ 85. Section 460.98 is amended by:
■ a. Removing paragraph (b)(4);
■ b. Redesignating paragraphs (b)(5) and (c) through (e) as paragraphs (b)(4) and (d) through (f), respectively; and
■ c. Adding new paragraph (c).

The addition reads as follows:

§ 460.98 Service delivery.

* * * * *

(c) *Timeframes for arranging and providing services*—(1) *Medications.* The PACE organization must arrange and schedule the dispensing of medications as expeditiously as the participant's condition requires, but no later than 24 hours after a primary care provider orders the medication.

(2) *All other services.* The PACE organization must arrange or schedule the delivery of interdisciplinary team approved services, other than medications, as identified in paragraph (c)(2)(i) of this section, as expeditiously as the participant's health condition requires, but no later than 7 calendar days after the date the interdisciplinary team or member of the interdisciplinary team first approves the service, except as identified in paragraph (c)(3) of this section.

(i) Interdisciplinary team approved services include:

(A) Services approved by the full interdisciplinary team.

(B) Services approved by a member of the interdisciplinary team.

(C) Services ordered by a member of the interdisciplinary team.

(D) Care planned services.

(ii) [Reserved]

(3) *Routine or preventative services.* Routine or preventive services are excluded from the requirement in paragraph (c)(2) of this section when all of the following requirements are met:

(i) The PACE organization documents that they were unable to schedule the appointment due to circumstances beyond the control of the PACE organization.

(ii) The participant does not have a change in status that requires the service to be provided more quickly.

(iii) The PACE organization provides the service as expeditiously as the participant's condition requires.

(4) *Providing approved services.* Services must be provided as expeditiously as the participant's health condition requires, taking into account the participant's medical, physical, social, and emotional needs.

■ 87. Section 460.102 is amended by revising paragraph (d)(1) to read as follows:

§ 460.102 Interdisciplinary team.

* * * * *

(d) * * *

(1) The interdisciplinary team is responsible for the following for each participant:

(i) *Assessments and plan of care.* The initial assessment, periodic reassessments, and plan of care.

(ii) *Coordination of care.* Coordination and implementation of 24-hour care delivery that meets participant needs across all care settings, including but not limited to the following:

(A) Ordering, approving, or authorizing all necessary care.

(B) Communicating all necessary care and relevant instructions for care.

(C) Ensuring care is implemented as it was ordered, approved, or authorized by the IDT.

(D) Monitoring and evaluating the participant's condition to ensure that the care provided is effective and meets the participant's needs.

(E) Promptly modifying care when the IDT determines the participant's needs are not met in order to provide safe, appropriate, and effective care to the participant.

(iii) *Documenting recommended services.* Documenting all recommendations for care or services and the reason(s) for not approving or providing recommended care or services, if applicable, in accordance with § 460.210(b).

(iv) *Consideration of recommended services.* The interdisciplinary team must review, assess, and act on recommendations from emergency or urgent care providers, employees, and contractors, including medical specialists. Specifically, the interdisciplinary team must ensure the following requirements are met:

(A) The appropriate member(s) of the interdisciplinary team must review all recommendations from hospitals, emergency departments, and urgent care providers and determine if the recommended services are necessary to meet the participant's medical, physical, social, or emotional needs as expeditiously as the participant's health condition requires, but no later than 48 hours from the time of the participant's discharge.

(B) The appropriate member(s) of the interdisciplinary team must review all recommendations from other employees and contractors and determine if the recommended services are necessary to meet the participant's medical, physical, social, or emotional needs as expeditiously as the participant's health condition requires, but no later than 7 calendar days from the date the recommendation was made.

(C) If recommendations are authorized or approved by the interdisciplinary team or a member of the interdisciplinary team, the services must be promptly arranged and furnished under § 460.98(c).

■ 88. Section 460.104 is amended by revising paragraph (e) to read as follows:

§ 460.104 Participant assessments.

* * * * *

(e) *Changes to plan of care.* When the interdisciplinary team conducts semiannual or unscheduled reassessments, the interdisciplinary team must reevaluate and, if necessary, revise the plan of care in accordance with § 460.106(c) following the completion of all required assessments.

■ 87. Section 460.106 is revised to read as follows:

§ 460.106 Plan of care.

(a) *Definition and basic requirements*—(1) *Definition.* For purposes of this section, a ''change in participant's status'' means a major decline or improvement in a participant's status that will not normally resolve itself without further intervention by staff or by implementing standard disease-related clinical interventions, that has an impact on more than one area of the participant's health status and requires interdisciplinary team review or revision of the care plan, or both.

(2) *Basic requirements.* (i) The interdisciplinary team members specified in § 460.102(b) must develop, evaluate, and if necessary, revise a comprehensive person-centered plan of care for each participant.

(ii) Each plan of care must do all of the following:

(A) Take into consideration the most current assessment findings.

(B) Identify the services to be furnished to attain or maintain the participant's highest practicable level of well-being.

(b) *Timeframes for developing, evaluating, and revising plan of care.* (1) *Initial plan of care.* The interdisciplinary team must complete the initial plan of care within 30 calendar days of the participant's date of enrollment.

(2) *Semi-annual plan of care evaluation.* At least once every 180 calendar days from the date the latest plan of care was finalized the interdisciplinary team must complete a reevaluation of, and if necessary,

revisions to each participant's plan of care.

(3) *Change in participant's status.* (i) Except as specified in paragraph (b)(3)(ii) of this section, the interdisciplinary team must complete a re-evaluation of, and if necessary, revisions to a participant's plan of care within 14 calendar days after the PACE organization determines, or should have determined, that there has been a change in the participant's health or psychosocial status, or more expeditiously if the participant's condition requires.

(ii) If a participant is hospitalized within 14 calendar days of the change in participant status, the interdisciplinary team must complete a reevaluation of, and if necessary, revisions to the plan of care as expeditiously as the participant's condition requires but no later than 14 calendar days after the date of discharge from the hospital.

(c) *Content of plan of care.* At a minimum, each plan of care must meet the following requirements:

(1) Identify all of the participant's current medical, physical, emotional, and social needs, including all needs associated with chronic diseases, behavioral disorders, and psychiatric disorders that require treatment or routine monitoring. At a minimum, the care plan must address the following factors:

(i) Vision.

(ii) Hearing.

(iii) Dentition.

(iv) Skin integrity.

(v) Mobility.

(vi) Physical functioning, including activities of daily living.

(vii) Pain management.

(viii) Nutrition, including access to meals that meet the participant's daily nutritional and special dietary needs.

(ix) The participant's ability to live safely in the community, including the safety of their home environment.

(x) Home care.

(xi) Center attendance.

(xii) Transportation.

(xiii) Communication, including any identified language barriers.

(2)(i) Identify each intervention (the care and services) needed to meet each medical, physical, emotional, and social needs.

(ii) It does not have to identify the medications needed to meet the participant's needs if a comprehensive list of medications is already documented elsewhere in the medical record.

(3) Utilize the most appropriate interventions for each care need that advances the participant toward a measurable goal and outcome.

(4) Identify how each intervention will be implemented, including a timeframe for implementation.

(5) Identify a measurable goal for each intervention.

(6) Identify how the goal for each intervention will be evaluated to determine whether the intervention should be continued, discontinued, or modified.

(7) The participant's preferences and goals of care.

(d) *Implementation of the plan of care.* The team must continuously do all of the following:

(1) Implement, coordinate, and monitor the plan of care regardless of whether the services are furnished by PACE employees or contractors, across all care settings.

(2) Evaluate and monitor the participant's medical, physical, emotional, and social needs as well as the effectiveness of the plan of care, through the provision of services, informal observation, input from participants or caregivers, and communications among members of the interdisciplinary team and other employees or contractors.

(e) *Participant and caregiver involvement in plan of care.* (1) The interdisciplinary team must develop, evaluate, and revise each plan of care in collaboration with the participant, the participant's caregiver, or both.

(2) The interdisciplinary team must review and discuss each plan of care with the participant or the participant's caregiver or both before the plan of care is completed to ensure that there is agreement with the plan of care and that the participant's concerns are addressed.

(f) *Documentation.* The team must do all of the following:

(1) Establish and implement a process to document and maintain records related to all requirements for plans of care, in the participant's medical record.

(2) Ensure that the most recent care plan is available to all employees and contractors within the organization as needed.

■ 88. Section 460.112 is amended by—

■ a. Removing paragraph (d);

■ b. Redesignating paragraphs (a) through (c) as paragraphs (b) through (d);

■ c. Adding new paragraph (a);

■ d. Adding paragraph (b)(8);

■ e. Revising newly redesignated paragraph (c) introductory text;

■ f. Adding paragraph (c)(5);

■ g. Revising paragraph (e)(1);

■ h. Redesignating paragraphs (e)(2) through (6) as (e)(3) through (7);

■ i. Adding new paragraph (e)(2);

■ j. Revising the paragraph heading for paragraphs (g) introductory text and revise paragraph (g)(2); and

■ k. Adding paragraph (g)(3).

The additions and revisions read as follows:

§ 460.112 Specific rights to which a participant is entitled.

(a) *Right to treatment.* Each participant has the right to appropriate and timely treatment for their health conditions, including the right to all of the following:

(1) Receive all care and services needed to improve or maintain the participant's health condition and attain the highest practicable physical, emotional, and social well-being.

(2) Access emergency health care services when and where the need arises without prior authorization by the PACE interdisciplinary team.

(b) * * *

(8) To have all information regarding PACE services and treatment options explained in a culturally competent manner.

(c) *Information disclosure.* Each PACE participant has the right to receive accurate, easily understood information and to receive assistance in making informed health decisions. A participant has the right to have all information in this section shared with their designated representative. Specifically, each participant has the following rights:

* * * * *

(5) To be fully informed of the following, in writing, before the PACE organization implements palliative care, comfort care, or end-of-life care services:

(i) A description of the PACE organization's palliative care, comfort care, and end-of-life care services (as applicable) and how they differ from the care the participant is currently receiving.

(ii) Whether palliative care, comfort care, or end-of-life care services (as applicable) is provided in addition to or in lieu of the care the participant is currently receiving.

(iii) Identify all services that are impacted and provide a detailed explanation of how the services will be impacted if the participant or designated representative elects to initiate palliative care, comfort care, or end-of-life care, including but not limited to the following types of services.

(A) Physician services, including specialist services.

(B) Hospital services.

(C) Long-term care services.

(D) Nursing services.

(E) Social services.

(F) Dietary services.

(G) Transportation.
(H) Home care.
(I) Therapy, including physical, occupation, and speech therapy.
(J) Behavioral health.
(K) Diagnostic testing, including imaging and laboratory services.
(L) Medications.
(M) Preventative healthcare services.
(N) PACE center attendance.
(ii) The right to revoke or withdraw their consent to receive palliative, comfort, or end-of-life care at any time and for any reason, either verbally or in writing.

* * * * *

(e) * * *

(1) To make health care decisions, including the right to all of the following:

(i) Have all treatment options fully explained.

(ii) Refuse any and all care and services.

(iii) Be informed of the consequences their decisions may have on their health and/or psychosocial status.

(2) To fully understand the PACE organization's palliative care, comfort care, and end-of-life care services. Specifically, the PACE organization must do all of the following before palliative care, comfort care, or end-of-life care services can be initiated:

(i) Fully explain the applicable treatment options.

(ii) Provide the participant with written information about their treatment options, in accordance with paragraph (c)(5) of this section.

(iii) Obtain written consent from the participant or designated representative prior to initiating palliative care, comfort care, or end-of-life care.

* * * * *

(g) *Complaints, requests, and appeals.*

* * * * *

(2) To request services from the PACE organizations, its employees, or contractors through the process described in § 460.121.

(3) To appeal any treatment decision of the PACE organization, its employees, or contractors through the process described in § 460.122.

■ 89. Section 460.119 is added to read as follows:

§ 460.119 Resolution of complaints in the complaints tracking module.

The PACE organization must comply with requirements of §§ 422.125 and 422.504(a)(15) of this chapter, through the CMS complaints tracking module as defined in § 422.125(a) of this chapter, address and resolve complaints received by CMS against the PACE organization within the required timeframes. References to the MA organization or MA plan in those regulations must be read as references to the PACE organization. Nothing in this section should be construed to affect the PACE organization's obligation to resolve grievances as described in § 460.120, service determinations as described in § 460.121, or appeals as described in § 460.122.

■ 90. Section 460.120 is revised to read as follows:

§ 460.120 Grievance process.

(a) *Written procedures.* A PACE organization must have a formal written process to promptly identify, document, investigate, and resolve all medical and nonmedical grievances in accordance with the requirements in this part.

(b) *Definition of grievance.* For purposes of this part, a grievance is a complaint, either oral or written, expressing dissatisfaction with service delivery or the quality of care furnished, regardless of whether remedial action is requested. Grievances may be between participants and the PACE organization or any other entity or individual through which the PACE organization provides services to the participant.

(c) *Grievance process notification to participants.* Upon enrollment, and at least annually thereafter, the PACE organization must give a participant written information on the grievance process in understandable language, including all of the following:

(1) A participant or other individual specified in paragraph (d) of this section has the right to voice grievances without discrimination or reprisal, and without fear of discrimination or reprisal.

(2) A Medicare participant or other individual specified in paragraph (d) of this section acting on behalf of a Medicare participant has the right to file a written complaint with the quality improvement organization (QIO) with regard to Medicare covered services.

(3) The requirements under paragraphs (b) and (d) through (j) of this section.

(d) *Who can submit a grievance.* Any of the following individuals can submit a grievance:

(1) The participant.

(2) The participant's family member.

(3) The participant's designated representative.

(4) The participant's caregiver.

(e) *Methods for submitting a grievance.* (1) Any individual as permitted under paragraph (d) of this section may file a grievance with the PACE organization either orally or in writing.

(2) The PACE organization may not require a written grievance to be submitted on a specific form.

(3) A grievance may be made to any employee or contractor of the PACE organization that provides care to a participant in the participant's residence, the PACE center, or while transporting participants.

(f) *Conducting an investigation.* The PACE organization must conduct a thorough investigation of all distinct issues within the grievance when the cause of the issue is not already known.

(g) *Grievance resolution and notification timeframes.* The PACE organization must do all of the following:

(1) Take action to resolve the grievance based on the results of its investigation as expeditiously as the case requires, but no later than 30 calendar days after the date the PACE organization receives the oral or written grievance.

(2) Notify the individual who submitted the grievance of the grievance resolution as expeditiously as the case requires, but no later than 3 calendar days after the date the PACE organization resolves the grievance in accordance with paragraph (g)(1) of this section.

(h) *Grievance resolution notification.* The PACE organization must inform the individual who submitted the grievance of the resolution as follows:

(1) Either orally or in writing, based on the individual's preference for notification, except for grievances identified in paragraph (h)(3) of this section.

(2) At a minimum, oral or written notification of grievance resolutions must include the following, if applicable:

(i) A summary statement of the participant's grievance including all distinct issues.

(ii) A summary of the pertinent findings or conclusions regarding the concerns for each distinct issue that requires investigation.

(iii) For a grievance that requires corrective action, the corrective action(s) taken or to be taken by the PACE organization as a result of the grievance, and when the participant may expect corrective action(s) to occur.

(3) All grievances related to quality of care, regardless of how the grievance is filed, must be responded to in writing.

(i) The response must describe the right of a Medicare participant or other individual specified in paragraph (d) of this section acting on behalf of a Medicare participant to file a written complaint with the QIO with regard to Medicare covered services.

(ii) For any complaint submitted to a QIO, the PACE organization must cooperate with the QIO in resolving the complaint.

(4) The PACE organization may withhold notification of the grievance resolution if the individual who submitted the grievance specifically requests not to receive the notification, and the PACE organization has documented this request in writing. The PACE organization is still responsible for paragraphs (h)(1) through (3) of this section.

(i) *Continuing care during grievance process.* The PACE organization must continue to furnish all required services to the participant during the grievance process.

(j) *Maintaining confidentiality of grievances.* The PACE organization must develop and implement procedures to maintain the confidentiality of a grievance, including protecting the identity of all individuals involved in the grievance from other employees and contractors when appropriate.

(k) *Recordkeeping.* The PACE organization must establish and implement a process to document, track, and maintain records related to all processing requirements for grievances received both orally and in writing. These records, except for information deemed confidential as a part of paragraph (j) of this section, must be available to the interdisciplinary team to ensure that all members remain alert to pertinent participant information.

(l) *Analyzing grievance information.* The PACE organization must aggregate and analyze the information collected under paragraph (k) of this section for purposes of its internal quality improvement program.

■ 91. Section 460.121 is amended by revising paragraph (b)(2) to read as follows:

§ 460.121 Service determination process.

* * * * *

(b) * * *

(2) *Requests that do not constitute a service determination request.* Requests to initiate, modify, or continue a service do not constitute a service determination request if the request is made prior to completing the development of the initial plan of care. For all requests identified in this section, the interdisciplinary team must—

(i) Document the request; and

(ii) Discuss the request during the care planning meeting, and either:

(A) Approve the requested service and incorporate it into the participant's initial plan of care, or

(B) Document their rationale for not approving the service in the initial plan of care.

* * * * *

■ 92. Section 460.194 is amended by revising paragraph (b) to read as follows:

§ 460.194 Corrective action.

* * * * *

(b) At their discretion, CMS or the State administering agency may monitor the effectiveness of corrective actions.

* * * * *

■ 93. Section 460.198 is added to read as follows:

§ 460.198 Disclosure of compliance deficiencies.

CMS may require a PACE organization to disclose to its PACE participants or potential PACE participants the PACE organization's performance and contract compliance deficiencies in a manner specified by CMS.

* * * * *

§ 460.202 [Amended]

■ 94. Section 460.202(b) is amended by removing the last sentence.

Xavier Becerra,

Secretary, Department of Health and Human Services.

[Docket No. FR–6272–F–02]

RIN 2506–AC54

Floodplain Management and Protection of Wetlands; Minimum Property Standards for Flood Hazard Exposure; Building to the Federal Flood Risk Management Standard

AGENCY: Office of the Secretary, U.S. Department of Housing and Urban Development (HUD).

ACTION: Final rule.

SUMMARY: This final rule revises HUD's regulations governing floodplain management and the protection of wetlands to implement the Federal Flood Risk Management Standard (FFRMS) in accordance with the Executive Order titled ''Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input.'' These revisions to HUD's regulations will improve the resilience of HUD-assisted or financed projects to the effects of climate change and natural disasters and provide for greater flexibility in the use of HUD assistance in floodways under certain circumstances. Among other revisions, this rule provides a process for determining the extent of the FFRMS floodplain, with a preference for a climate-informed science approach (CISA) to making this determination. The rule also revises HUD's floodplain and wetland regulations to streamline, improve overall clarity, and modernize standards. Also, this rule revises HUD's Minimum Property Standards for one-to-four-unit housing under HUD's mortgage insurance and low-rent public housing programs to require that the lowest floor in newly constructed structures located within the 1-percent-annual-chance (100-year) floodplain be built at least 2 feet above the base flood elevation (BFE) as determined by best available information. The rule also revises a categorical exclusion when HUD performs environmental reviews and updates various HUD environmental regulations to permit online posting of public notices.

DATES:

Effective Date: May 23, 2024.

Compliance Date: Compliance with this final rule is required no later than June 24, 2024, except: compliance with this final rule's amendments to 24 CFR part 200 is required for new construction where building permit applications are submitted on or after January 1, 2025; and compliance with this final rule's amendments to 24 CFR part 55 is required no later than January 1, 2025 for the following programs: (1) Programs subject to chapter 9 of the Federal Housing Administration's (FHA) Multifamily Accelerated Processing (MAP) Guide (4430.G): Multifamily FHA, Section 202 and 811 capital advance grants, transfers under Section 8(bb) of the United States Housing Act and Section 209 of HUD's annual appropriations (or subsequent provisions), Section 8 Renewals with Capital Repairs, Rental Assistance Demonstration (RAD) conversions to Project-Based Rental Assistance (PBRA), and the Green and Resilient Retrofit Program; and (2) The other mortgage insurance programs subject to part 55: FHA Healthcare and FHA Risk Share.

FOR FURTHER INFORMATION CONTACT: Kristin L. Fontenot, Director, Office of Environment and Energy, Office of Community Planning and Development, Department of Housing and Urban Development, 451 7th Street SW, Room 7282, Washington, DC 20410–8000. For inquiry by phone or email, contact Lauren Hayes Knutson, Director, Environmental Planning Division, Office of Environment and Energy, Office of Community Planning and Development, at 202–402–4270 (this is not a toll-free number) or email to: *EnvironmentalPlanningDivision@hud.gov.* For questions regarding the Minimum Property Standards, contact Julie Shaffer, Associate Deputy Assistant Secretary, Office of Single Family Housing, 215–861–7216. SUPPLEMENTARY INFORMATION:

I. Background

On March 24, 2023, HUD published the ''Floodplain Management and Protection of Wetlands; Minimum Property Standards for Flood Hazard Exposure; Building to the Federal Flood Risk Management Standard'' proposed rule (the ''proposed rule'').[1] In the proposed rule, HUD explained that increased and increasing frequency of flooding and weather and climate disasters make it necessary for HUD to ensure it approves Federal investments wisely to minimize losses, particularly following repeated flooding events. The revisions to HUD's regulations implemented through this final rule will improve the resilience of HUD-assisted or financed projects to the effects of climate change and natural disasters and provide for greater flexibility in the use of HUD assistance in floodways under certain circumstances.

HUD has broad general rulemaking authority under 42 U.S.C. 3535 to ''make such rules and regulations as may be necessary to carry out [the Secretary's] functions, powers and duties'' in order to implement its statutory mission, which is to provide assistance for housing to promote ''the general welfare and security of the Nation and the health and living standards of [its] people.'' [2] Under the National Housing Act, HUD has discretion to set terms upon which it will insure mortgages. 12 U.S.C. 1701 *et seq.* HUD also has authority and responsibility under the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*):

- to use all practicable means;
- to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may:
  - fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;
  - assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings;
  - attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences.

42 U.S.C. 4331(b).

NEPA also requires all Federal agencies to ''utilize a systematic, interdisciplinary approach which will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decision making which may have an impact on man's environment.'' 42 U.S.C. 4332(2)(A). Each year, HUD provides States, local governments, and housing providers with billions of dollars in Federal financial assistance, appropriated and authorized by Congress. By taking the actions it does in this final rule, HUD protects Federal investments, preserves the environment for future generations, and promotes the health, safety, and general welfare of individuals. As described in the

[1] 88 FR 17755. On May 11, 2023, HUD extended the original 60-day comment period provided in the proposed rule by an additional 14 days. *See* 88 FR 30267.

[2] 42 U.S.C. 3531.

proposed rule, in response to the threats that increasing flood risks pose to life and taxpayer funded property, on January 30, 2015, President Obama signed Executive Order (E.O.) 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input.[3] E.O. 13690 amended E.O. 11988, Floodplain Management, which was originally issued in furtherance of the National Flood Insurance Act of 1968, as amended (42 U.S.C. 4001 *et seq.*); the Flood Disaster Protection Act of 1973, as amended (Pub. L. 93–234, 87 Stat. 975); and NEPA (42 U.S.C. 4321 *et seq.*).

Significantly for the purposes of this rulemaking, E.O. 13690 revised section 6(c) of E.O. 11988 to provide new approaches to establish the floodplain. E.O. 13690 provided, however, that prior to any actions implementing E.O. 13690, additional input from stakeholders be solicited and considered. Consistent with this direction, the Federal Emergency Management Agency (FEMA), as Chair of the Mitigation Framework Leadership Group (MitFLG),[4] published a notice in the **Federal Register** seeking public comment on the proposed ''Revised Guidelines for Implementing Executive Order 11988, Floodplain Management'' to provide guidance to agencies on the implementation of E.O. 13690 and 11988.[5] In addition, MitFLG held nine public listening sessions across the country that were attended by over 700 participants from State and local governments and other stakeholder organizations to discuss the Revised Guidelines for Implementing Executive Order 11988, Floodplain Management.[6] MitFLG considered stakeholder input and provided recommendations to the U.S. Water Resources Council (WRC).[7]

On October 8, 2015, the WRC issued the updated ''Guidelines for Implementing Executive Order 11988, Floodplain Management, and Executive Order 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input'' (the ''Guidelines'').[8] Although the Guidelines describe various approaches for determining the higher vertical flood elevation and corresponding horizontal floodplain for federally funded projects, the Guidelines indicate that it is not meant to be an elevation standard but rather a resilience standard. Further, the Guidelines provide that all future actions where Federal funds are used for new construction, substantial improvement,[9] or to address substantial damage [10] meet the level of resilience established by the Guidelines. In implementing the Guidelines and establishing the FFRMS, Federal agencies were to select among the following three approaches for establishing the flood elevation and hazard area in siting, design, and construction:

- *Climate-Informed Science Approach (CISA):* The elevation and flood hazard area that result from using a climate-informed science approach that uses the best-available, actionable, hydrologic and hydraulic data;
- *Freeboard* [11] *Value Approach (FVA):* The elevation and flood hazard area that result from using the freeboard value reached by adding an additional 2 feet to the base flood elevation (the 100-year, or 1-percent-annual-chance flood elevation) for non-critical actions and by adding an additional 3 feet to the base flood elevation for critical actions, or
- *0.2-Percent-Annual-Chance (500-Year) Flood Approach:* The elevation and flood hazard area that result from using the 0.2-percent-annual-chance flood approach (500-year flood elevation).

The FVA and 0.2-percent-annual-chance flood approach result in higher elevations than the base flood elevation with correspondingly larger horizontal floodplain areas. CISA will generally have a similar result, with the exception that agencies using CISA may find the resulting elevation to be equal to or lower than the current elevation in some areas due to the nature of the specific climate change processes and physical factors affecting flood risk at the project site. However, as a matter of policy established in the Guidelines, CISA should only be used if the resulting flood elevation is at least equal to or higher, depending on the criticality of the action, than current base flood elevation.

In response to comments received on the Guidelines, MitFLG included an appendix that explained CISA. Appendix H of the Guidelines [12] explains that CISA treats the future as potentially non-stationary; considers local conditions as well as global change; accommodates other factors beyond those that are climate-related; and assists in bounding the decision space by considering plausible future conditions appropriate to a given decision. CISA uses existing sound science and engineering methods as have historically been used to implement E.O. 11988 but supplemented with best available

[3] 80 FR 6425 (Feb. 2, 2015). E.O. 13690 was revoked by E.O. 13807, Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure Projects (Aug. 15, 2017); however, E.O. 13690 was reinstated by E.O. 14030, Climate-Related Financial Risk (May 20, 2021), published at 86 FR 27967.

[4] MitFLG is a senior level group formed in 2013 to coordinate mitigation efforts across the Federal Government and to assess the effectiveness of mitigation capabilities as they are developed and deployed across the Nation. The MitFLG includes relevant local, State, Tribal, and Federal organizations. More information about MitFLG can be found at *https://www.fema.gov/emergency-managers/national-preparedness/frameworks/mitigation/mitflg.*

[5] 80 FR 6530 (Feb. 5, 2015). The ''Revised Guidelines for Implementing Executive Order 11988, Floodplain Management'' is included as a supporting document with the docket associated with 80 FR 6530.

[6] Specific information on the listening sessions can be found in the notices on the docket at *https://www.regulations.gov/docket/FEMA-2015-0006/document?documentTypes=Notice.* Transcripts of those sessions are available on the docket at *https://www.regulations.gov/docket/FEMA-2015-0006/document?documentTypes=Supporting%20%26%20Related%20Material.*

[7] The WRC is a statutory body tasked to maintain a continuing study and prepare an assessment of the adequacy of supplies of water necessary to meet the water requirements in each water resource region in the United States and the national interest therein. 42 U.S.C. 1962a. The WRC is a means for the coordination of the water and related land resources policies and programs of several Federal agencies. The WRC is composed of the Secretary of the Interior, the Secretary of Agriculture, the Secretary of the Army, the Secretary of Commerce, the Secretary of Housing and Urban Development, the Secretary of Transportation, the Administrator of the Environmental Protection Agency, and the Secretary of Energy.

[8] The Guidelines are available at *https://www.fema.gov/sites/default/files/documents/fema_implementing-guidelines-EO11988-13690_10082015.pdf.* HUD notes that the WRC is not currently active.

[9] HUD defines substantial improvement in 24 CFR 55.2(b). This final rule does not substantively change this definition except by moving it from its current location in § 55.2(b)(10) to § 55.2(b)(12) to reflect other changes to that section and by clarifying that the term ''structure'' includes a manufactured housing unit.

[10] Substantial damage is defined in FEMA regulations at 44 CFR 59.1 as ''damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.'' For more information on substantial improvement and substantial damage, *see* FEMA, Substantial Improvement/Substantial Damage Desk Reference FEMA P–758 (May 2010), available at *https://www.fema.gov/sites/default/files/2020-08/fema_p_758_complete_r3_0.pdf.*

[11] Freeboard is defined by FEMA as ''a factor of safety usually expressed in feet above a flood level for purposes of floodplain management. 'Freeboard' tends to compensate for the many unknown factors that could contribute to flood heights greater than the height calculated for a selected size flood and floodway conditions, such as wave action, bridge openings, and the hydrological effect of urbanization of the watershed.'' 44 CFR 59.1. *See also* FEMA, National Flood Insurance Program Terminology Index, available at *http://www.fema.gov/freeboard.*

[12] The appendices to the Guidelines are available at *https://www.fema.gov/sites/default/files/documents/fema_IGA-appendices-a-h_10082015.pdf.*

climate-related scientific information when appropriate. CISA is consistent with the climate science and related information found in the latest National Climate Assessment report or other best-available, actionable science. CISA combines information from different disciplines (like atmospheric sciences, coastal sciences, oceanographic sciences) in addition to traditional science and engineering approaches. CISA should include impacts from projected land cover and land use changes, long-term coastal and/or riverine erosion, and vertical land movement expected over the lifecycle of the action.

As described in the Guidelines, CISA relies on best available and actionable science. Best available means data and science that is transparent, technically credible, usable, legitimate, and flexible. Actionable science consists of theories, data, analyses, models, projects, scenarios, and tools that are relevant to the decision under consideration; reliable in terms of its scientific or engineering basis and appropriate level of peer review; understandable to those making the decision; supportive of decisions across wide spatial, temporal, and organization ranges; and co-produced by scientists, practitioners, and decision-makers. Appendix H indicates that different approaches are appropriate for coastal and riverine flooding because the directional change of local sea level plus storm surge is generally known for coastal flood risk but, for riverine, it is difficult to determine the direction of changes in precipitation and resulting flood elevations. As a result, the MitFLG recommended that coastal flood risks agencies take into account mean sea level rise scenarios that are adjusted to reflect local conditions to identify CISA. The MitFLG and Appendix H to the Guidelines do not provide a similar hydrologic standard for CISA for riverine flood risks because of the limitations on best-available and actionable science.

In 2023, Federal agencies participating in the White House Flood Resilience Interagency Working Group [13] reviewed the science behind CISA and concluded that incorporating the latest projections of sea level rise in evaluation of future coastal flood risk continues to be best practice and actionable science, whereas the science surrounding the climate change impacts to precipitation and inland flooding is not mature enough to establish one CISA standard for riverine flooding.[14] In August 2023, the White House Flood Resilience Interagency Working Group released a job aid to assist agencies with their responsibility to identify the floodplain using the three approaches.[15]

E.O. 11988 directs Federal agencies to avoid, to the extent possible, the long- and short-term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. Floodplains are found both in coastal flood areas, where rising tides and storm surge are often responsible for flooding, and in riverine flood areas where moving water bodies may overrun their banks due to heavy rains or snow melt. E.O. 11988 directs each agency to evaluate the potential effects of any actions it may take in a floodplain; to ensure that agency planning programs and budget requests reflect consideration of flood hazards and floodplain management; and to identify the floodplain area.

E.O. 11988, as amended, requires agencies to take a scientific approach to determine if a proposed action is in or affects a floodplain. The result of this analysis is often most easily conveyed via a map, making floodplain maps ubiquitous with the process of identifying the floodplain, though, in process, they are separate. The identification of the floodplain is the analysis the agencies have been tasked with carrying out under E.O. 11988 and maps are the visual representation of that analysis. Because flood risk can change over time, FEMA and the National Flood Insurance Program (NFIP) program continually revise Flood Insurance Rate Maps (FIRMs), advisory base flood elevations and preliminary floodplain maps and studies to incorporate new information and reflect the current understanding of flood risk. E.O. 13690 amended E.O. 11988 to direct agencies to update the floodplain using one (or a combination) of the three approaches listed above, which are incorporated in the FFRMS.

Communities across the Nation have proactively strengthened their local floodplain management codes and standards to ensure that buildings and infrastructure are resilient to flood risk. By implementing the FFRMS, HUD's standards will better align with these actions and better protect against future flood risk, considering climate informed science, where available. At the same time, HUD recognizes that the need to make structures resilient also requires a flexible approach to adapt to the needs of the Federal agency, local community, and the circumstances surrounding each project or action.

II. This Final Rule

In its 2021 Climate Action Plan,[16] HUD committed to completing rulemaking to update 24 CFR part 55 and implement FFRMS as a key component of HUD's plan to increase climate resilience and climate justice across the Department, noting that underserved communities are disproportionately impacted by climate change.[17] Development of equitable strategies to protect low- to moderate-income persons and businesses serving communities disproportionately impacted by climate change is at the core of HUD's mission to create strong, sustainable, inclusive communities. This final rule will improve the resilience of HUD-assisted or financed projects to the effects of climate change and natural disasters and provide for greater flexibility in the use of HUD assistance in floodways under certain circumstances.

HUD notes that affordable housing is increasingly at risk from both extreme weather events and sea level rise, with coastal communities especially at risk. Recent peer-reviewed analysis and mapping by independent research organization Climate Central projects that the number of affordable housing units at risk from flooding in coastal areas will triple by 2050,[18] and a 2019 report from the Denali Commission found that 144 Native Alaskan Villages face infrastructure damage from erosion, flooding, and permafrost thaw.[19]

HUD's experience in the wake of flood disasters is that unless structures in flood-prone areas are properly designed, constructed, and elevated, they may not withstand future severe flooding events. This risk is exacerbated by climate change and projected increases in hurricane rainfall and intensity as well as other precipitation throughout most of the United States. This final rule provides for a more forward-looking approach to floodplain management, which bases decisions not just on past flooding but on how flood risk is anticipated to grow and change over the anticipated life of a project.

This final rule expands the floodplain of concern from the 1-percent-annual-chance floodplain to the FFRMS floodplain, designated based on projected future flood risk, to ensure that HUD projects are designed with a more complete picture of a proposed project site's flood risk over time. Flood risk projection based on current climate science can help HUD meet the objectives of E.O. 11988, including avoidance of floodplain impacts and minimization of such impacts where there is no practicable alternative to locating a HUD-assisted activity in proximity to flood sources. Adequate elevation of structures is a key minimization strategy, together with complementary natural ecosystem processes and nature-based approaches, to promote the preservation of beneficial floodplain functions.

As recognized by MitFLG and directed by the FFRMS and E.O. 13690, requiring structures located within the expanded FFRMS floodplain to be elevated or floodproofed to an additional elevation above the base flood elevation will increase resiliency and reduce loss of life, property damage, and other economic loss, and can also benefit property owners by reducing flood insurance rates. These higher standards provide an extra buffer above the base flood elevation based on the best available information to improve the long-term resilience of communities. Additionally, higher standards help account for increased flood risk associated with projected sea level rise, increased rainfall, and other climate risks, which are not considered in current FEMA maps and flood insurance costs. As stated in the report ''Global and Regional Sea Level Rise Scenarios for the United States'' (February 2022) by the U.S. Department of Commerce, National Oceanic and Atmospheric Administration (NOAA),[20] scientists are confident that global sea level will rise by between about 1 and as much as 6.56 feet by the year 2100.[21] The higher standards required, in some cases, by this final rule allow HUD to do more to address these increasing risks.

Choosing alternative sites outside the FFRMS floodplain and requiring additional elevation above the base flood elevation may also lead to a net reduction of expected housing costs over time. HUD's mission is to create strong, sustainable, inclusive communities and quality affordable homes for all. Flood insurance is a key financial tool to manage potential rebuilding costs and can make homes in risky areas more expensive due to their greater flood risk. By elevating additional feet above the base flood elevation, homeowners may benefit from flood insurance premium reductions that will increase long-term affordability.

Through this final rule, HUD is prioritizing using CISA in defining the floodplain because it provides a forward-looking assessment of flood risk based on likely or potential climate change scenarios, regional climate factors, and an advanced scientific understanding of these effects. Therefore, in this final rule, HUD will require the use of CISA, where data is available and actionable, to establish the required level of flood resilience for floodplain management decision making, elevation of structures, and floodproofing. In areas where CISA data is not currently available and actionable to define the FFRMS floodplain, as described in this final rule, HUD will typically require that the FFRMS floodplain to be based on the FEMA-mapped 0.2-percent-annual-chance floodplain or a freeboard height above the FEMA-mapped 1-percent-annual-chance floodplain, as further described in the subsection that follows. As CISA data availability improves over time and over a greater area, HUD expects the use of CISA to increase.

Beyond implementing the FFRMS floodplain and elevation requirements, this final rule implements broader changes to modernize and improve 24 CFR part 55 in accordance with the Department's climate adaptation, environmental justice, and equity priorities. These revisions explicitly recognize HUD's responsibility to consider the environmental justice impact of the Department's actions within the floodplain management and decision making process. To meet HUD's affordable housing and community development mission more effectively and efficiently, this final rule also streamlines decision making for activities that mitigate flood risk, avoid wetland losses, or provide co-benefits that directly contribute to HUD's efforts to reduce climate impacts. This final rule also strengthens HUD's commitment to use nature-based floodplain management approaches, where practicable, by identifying specific strategies and practices that have proven effective in increasing flood resilience and environmental quality.

HUD notes that adherence to the requirements in this final rule does not modify any party's responsibilities or obligations under any other Federal laws, including statutes and regulations administered by other Federal agencies.

A. Federal Flood Risk Management Standard (FFRMS) Floodplain

To implement the framework described in this rule, this final rule defines the FFRMS floodplain in a new 24 CFR 55.7. This new section establishes a three-tiered approach to define the FFRMS floodplain, depending on the data available in the project area.

1. *Climate Informed Science Approach (CISA):* The FFRMS floodplain is defined as areas designated as having an elevated flood risk during the anticipated life of the project based on CISA. CISA will generally use the same methodology for both critical and non-critical actions; however, the selection of climate change scenarios used for future projections should account for the lower tolerance of risk based on the action's criticality. Where

Marra, J. Obeysekera, M. Osler, M. Pendleton, D. Roman, L. Schmied, W. Veatch, K.D. White, and C. Zuzak, 2022: Global and Regional Sea Level Rise Scenarios for the United States: Updated Mean Projections and Extreme Water Level Probabilities Along U.S. Coastlines. NOAA Technical Report NOS 01. National Oceanic and Atmospheric Administration, National Ocean Service, Silver Spring, MD, 111 pp., *https://oceanservice.noaa.gov/hazards/sealevelrise/sealevelrise-tech-report.html.*

[21] *Id. See also* NOAA Climate Change Program Office, United States Global Change Research Program, U.S. Climate Resilience Toolkit, available at *https://toolkit.climate.gov/topics/coastal/sea-level-rise.*

part 55 applies,[22] CISA is the required approach to define the FFRMS floodplain if data is available and actionable. When preparing an Environmental Impact Statement (EIS), an analysis of sea level rise and other climate impacts utilizing CISA and other climate risk tools will be required regardless of whether pre-existing data is available for reference. Because EIS level projects have such a high potential for adverse impacts, HUD believes climate informed science is necessary to fully understand the potential environmental concerns, where available and actionable data exists or can be generated in accordance with 42 U.S.C. 4336(b)(3).

2. *0.2-Percent-Annual-Chance Flood Approach (0.2 PFA):* For non-critical actions, where CISA data or other types of CISA analysis is not available or actionable, but FEMA has defined the 0.2-percent-annual-chance floodplain, the FFRMS floodplain is defined as those areas that FEMA has designated as within the 0.2-percent-annual-chance floodplain. For critical actions where CISA data is not available nor actionable, the FFRMS floodplain is defined as either the area within the 0.2-percent-annual-chance floodplain or the area that results from adding an additional three feet to the base flood elevation, whichever results in the larger floodplain and higher elevation. For any action, newly constructed or substantially improved structures within this definition of the FFRMS floodplain are required to be elevated to or above the FFRMS floodplain.

3. *Freeboard Value Approach (FVA):* For non-critical actions, if CISA data is not available or actionable and the FEMA 0.2-percent-annual-chance floodplain is not defined, the FFRMS floodplain is defined as those areas, including the horizontal extent, that result from adding an additional two feet to the base flood elevation as established by the effective FEMA FIRM or Flood Insurance Study (FIS). If available, a FEMA-provided interim or preliminary FIRM, FIS, or advisory base flood elevation, whether regulatory or informational in nature, may also be used; however, an interim or preliminary FEMA analysis map may not be used if the mapped base flood elevation is lower than the current FIRM or FIS. For critical actions where CISA data is not available or actionable and where the 0.2-percent-annual-chance floodplain elevation is not defined, the FFRMS floodplain is defined as those areas, including the horizontal extent, that result from adding an additional three feet to the base flood elevation.

If CISA data is not available or actionable and FEMA FIRMs, FIS, preliminary maps, and advisory base flood elevations are unavailable or insufficiently detailed to determine base flood elevation, other Federal, State, local, or Tribal data may be used as ''best available information'' to define the 1-percent-annual-chance floodplain.

B. Climate Informed Science Approach—Availability and Actionability of Data

As described throughout this final rule, CISA is the preferred approach to define the FFRMS floodplain. In § 55.7, HUD requires that the FFRMS floodplain be defined using CISA where data is available and actionable.

As described in § 55.7, HUD considers CISA data to be available and actionable for a particular project where: (1) the data is included in a tool, resource, or other process developed or identified by a Federal agency or agencies to define the floodplain using CISA, and (2) HUD has adopted the particular tool, resource, or other process through a **Federal Register** notice for comment. As a matter of policy, HUD has decided to publish a **Federal Register** notice for comment prior to the use of a particular tool, resource, or other process under § 55.7.

Regardless of whether HUD has adopted a particular tool, resource, or other process to define the floodplain using CISA, this final rule at § 55.7(f) permits HUD or a responsible entity to voluntarily define the FFRMS floodplain utilizing CISA when a State, Tribal, or local government has formally adopted, through code or other formal adoption measures, a tool, resource, or other written standards that provides data or other methods to identify the FFRMS floodplain using CISA for a particular project. In addition, HUD may identify additional tools, resources, or other processes that a responsible entity may voluntarily use to define the FFRMS floodplain using CISA. HUD or a responsible entity has the option to utilize a tool, resource, written standard, or other process permitted in § 55.7(f) where it results in an elevation that is at least as high as the lowest of (1) the 0.2-percent-annual-chance floodplain elevation; (2) the elevation that results from adding an additional two feet to the base flood elevation; or (3) the elevation required by paragraphs (b) or (c) of § 55.7, if CISA data is available and actionable under paragraphs (b)(1) or (c)(1). Where HUD or a responsible entity voluntarily defines the FFRMS floodplain using the options in paragraphs (f)(1)(i) or (f)(1)(ii) of § 55.7, the criticality of the action must be considered when determining the appropriate elevation of the FFRMS floodplain.

C. Revised Definitions

This final rule revises various definitions in 24 CFR 55.2. The definitions are revised as follows:

Best available information: The final rule relocates the definition of ''best available information'' from within the definition of coastal high hazard area in 24 CFR 55.2 to two new sections, 24 CFR 55.7 and 55.8. The final rule also adjusts the definitions of ''0.2-percent-annual-chance (500-year) floodplain,'' ''floodway,'' and ''1-percent-annual-chance (100-year) floodplain,'' to reflect these new citations.

Sources of best available information for identifying the FFRMS floodplain are described in 24 CFR 55.7 according to CISA, 0.2-Percent-Annual-Chance Flood Approach, and FVA methods. Best available information sources for floodways, coastal high hazard areas, and areas within the Limit of Moderate Wave Action (LiMWA) are identified in 24 CFR 55.8 and include effective and advisory or preliminary FEMA analysis reflected in FEMA's maps.

Critical action: The final rule revises the definition of ''critical action'' to include community stormwater management infrastructure and water treatment plants as examples of utilities or services that could become inoperative during flood and storm events.

Federal Flood Risk Management Standard (FFRMS) floodplain: The final rule adds the definition of FFRMS floodplain.

0.2 percent-annual chance floodplain: The final rule updates the definition of ''0.2-percent-annual-chance floodplain'' to be consistent with the new definition of FFRMS floodplain. The final rule also removes the statement that the 0.2-percent-annual-chance floodplain is the minimum area of concern for critical actions, which is not consistent with HUD's implementation of FFRMS when CISA data is available and actionable.

Impervious surface area: The final rule adds the definition of ''impervious surface area'' to provide an objective criterion for use in §§ 55.8(a)(1), 55.12, and 55.14.

Limit of Moderate Wave Action (LiMWA): The final rule adds the definition of ''Limit of Moderate Wave Action (LiMWA).'' The LiMWA is the

[22] All HUD programs, with the exception of programs that are not subject to NEPA (*e.g.,* the Federal Housing Administration single family program and the Housing Trust Fund), are subject to part 55. Certain projects may be exempt from part 55 based on project activities, as discussed in § 55.12 of this final rule.

inland limit of the portion of Coastal A Zone where wave heights can be between 1.5 and 3 feet during a base flood event, subjecting properties to damage from waves and storm surge.[23] The area on the flood map between the coastal high hazard area (Zone V) and the LiMWA is called the Coastal A Zone, and laboratory tests have consistently confirmed that wave heights within the Coastal A Zone can cause significant damage to structures that are not constructed to withstand coastal hazards.[24] Consistent with the risks posed by these coastal hazards, this final rule requires structures within the Coastal A Zone to be built to Zone V standards.

New construction: The final rule removes the definition for new construction from § 55.2 and incorporates it into a new § 55.10, ''Limitations on HUD assistance in wetlands.'' The definition is also revised to provide additional context on construction actions.

Wetlands: The final rule revises the definition for ''wetlands'' by removing the part of the definition that described how wetlands are determined and moves that description to a new § 55.9, ''Identifying wetlands.'' The final rule also removes the non-exhaustive list of examples of what does not constitute a wetland because it is not necessary to list things that the definition does not cover and in order to avoid confusion about certain areas around deep water aquatic habitats that may be considered wetlands.

D. Assignment of Responsibilities

This final rule clarifies in 24 CFR 55.3 that HUD Assistant Secretaries, the HUD General Counsel, and the President of the Government National Mortgage Association shall take responsibility for all decisions made under their jurisdictions that are made pursuant to the decision making process in 24 CFR 55.20. The final rule also revises the duties of grantees and applicants for clarity and adds a new § 55.3(f) that codifies the role of third-party providers.

E. Notification of Floodplain Hazard

This final rule revises HUD's regulations requiring notification of floodplain hazard. The notification requirements in 24 CFR 55.21 and conveyance restrictions in 24 CFR 55.22 are moved to a new 24 CFR 55.4. This creation of the new § 55.4 emphasizes the importance of providing notice as early in the process as possible. Section 55.4 retains the requirement that HUD (or HUD's designee) or the responsible entity must ensure that any party participating in a financial transaction for a property located in a floodplain and any current or prospective tenant is notified of the hazards of the floodplain location. In addition, 24 CFR 55.4 defines the notification requirements for property owners, buyers, developers, and renters and identifies specific hazards and information that must be included in these notices based on the interests of these parties.

The required information for owners, buyers, and developers includes the requirement or option to obtain flood insurance, the approximate elevation of the FFRMS floodplain, proximity of the site to flood-related infrastructure including dams and levees,[25] ingress and egress or evacuation routes, disclosure of information on flood insurance claims filed on the property, and other relevant information such as available emergency notification resources. For HUD-assisted, HUD-acquired, and HUD-insured rental properties, new and renewal leases are required to include acknowledgements signed by residents indicating that they have been advised that the property is in a floodplain and flood insurance is available for their personal property. Renters must also be informed of the location of ingress and egress or evacuation routes, available emergency notification resources, and emergency procedures for residents in the event of flooding. HUD encourages a proactive and systematic approach to notification requirements for properties in floodplains to ensure that prospective buyers and renters are made aware of potential flood risk with sufficient warning so that they can make risk-informed decisions.

The final rule also moves the conveyance restrictions for the disposition of multifamily real property from 24 CFR 55.22 to 24 CFR 55.4 with minimal changes to reflect updated floodplain terminology.

F. Flood Insurance

To address the issues of flood insurance requirements more comprehensively in the context of 24 CFR part 55 decision making, this final rule consolidates and moves all applicable flood insurance requirements to a new § 55.5. The flood insurance topic requirements covered in the new § 55.5 include Flood Disaster Protection Act (FDPA) limitations on HUD program participation for properties in communities not participating in FEMA's NFIP and on HUD disaster assistance for property damage in a special flood hazard area where previous flood disaster assistance required maintenance of flood insurance and the insurance was not maintained. In addition, § 55.5 includes the much more frequently applicable FDPA requirement for HUD-assisted projects regarding the mandatory purchase of flood insurance within the Special Flood Hazard Area (SFHA) as designated by FEMA on the effective FIRM or FIS, and the NFIP plays an important role in minimization measures to reduce flood losses.

The new § 55.5 also includes new language clarifying that HUD or the responsible entity may require flood insurance beyond the minimums established in the FDPA or by a State, locality, Tribe, or part 55 when necessary to minimize financial risk. Also, the new § 55.5 clarifies that mortgagees participating in a HUD assistance or mortgage insurance or guarantee program may impose additional flood insurance requirements.

While nothing in part 55 requires flood insurance outside of the SFHA, HUD strongly encourages that flood insurance be obtained and maintained for all structures within the FFRMS floodplain to mitigate financial losses. It may also be appropriate for high-value structures to maintain more flood insurance than is available under the NFIP. The maximum available building coverage through the NFIP is $250,000 for single family structures of one-to-four units and $500,000 for multifamily structures with five or more housing units and commercial structures.[26] For example, for FHA multifamily programs, the MAP Guide provides for flood insurance in an amount at least equal to the greater of: (1) the maximum flood insurance available for that type of property under the NFIP; or (2) an amount equal to the replacement cost of

[23] The LiMWA marks the inland limit of the ''Coastal A Zone,'' a term referenced by building codes and standards. The Coastal A Zone is the part of the coastal Special Flood Hazard Area (SFHA) where wave heights can be between 1.5 and 3 feet during the base flood event, see *https://www.fema.gov/sites/default/files/documents/fema_coastal-glossary.pdf.*

[24] *See, e.g.,* Federal Emergency Management Agency, National Flood Insurance Program, Answers to Questions About the NFIP, available at *https://agents.floodsmart.gov/nfip-answers-to-questions.*

[25] Proximity to flood control infrastructure can be identified through the U.S. Army Corps of Engineers' National Levee Database and National Inventory of Dams, *https://levees.sec.usace.army.mil/.*

[26] *See* FEMA, Flood Insurance and the NFIP Fact Sheet (June 14, 2021), available at *https://www.fema.gov/fact-sheet/flood-insurance-and-nfip.*

the bottom two stories above grade.[27] For larger structures in more expensive areas, it may be necessary to obtain private flood insurance to insure up to the full replacement cost of the structure or owners may risk catastrophic financial losses even with NFIP coverage.

G. Compliance

This final rule creates a new § 55.6 regarding complying with the requirements for floodplain management and protection of wetlands by outlining the process HUD or the responsible entity must follow to determine whether compliance with part 55 is required. The new § 55.6 also describes how to determine whether the 8-step decision making process [28] is required and whether the proposed action would require notification and flood insurance. The new § 55.6 does not create any new requirements but, to assist practitioners, § 55.6 does provide a process to comply with part 55. The new § 55.6 also moves a summary of documentation requirements from § 55.27 to § 55.6(d).

This final rule also creates a new section regarding limitations on HUD assistance in floodplains at § 55.8 and revises § 55.10 to address the topic of limitations on HUD assistance in wetlands. Sections 55.8 and 55.10 largely maintain the restrictions that existed prior to this final rule but with some revisions and additions. For example, § 55.8(b) maintains the current requirement that all decisions be based on the best available flood data provided by FEMA unless the current effective data indicates a higher flood risk than interim or preliminary sources.

In order for HUD assistance to be used in a proposed activity, § 55.8(c) requires that HUD or the responsible entity take measures to address repeat flood losses associated with structures identified by FEMA as Severe Repetitive Loss (SRL) properties.[29] When FEMA has approved improvements designed to prevent repeated flood losses at the SRL property and communicated these to the property owner, completion of this FEMA-identified mitigation qualifies the structure to be listed as ''Mitigated'' and may reduce the flood insurance premium of the SRL property. To ensure that HUD substantial improvement, reconstruction, or new construction funding and HUD-required mitigation identified in the 8-step decision making process delivers this benefit, under § 55.8(c) HUD or the responsible entity must identify and incorporate the FEMA identified SRL mitigation within Step 5 (minimization of impacts) of the 8-step decision making process at § 55.20. The intent of this addition is to preserve lives and property, avoid repeated flood losses, potentially reduce flood insurance costs, and ensure that HUD-identified mitigation at a minimum meets the level of mitigation required by FEMA to be listed as ''Mitigated'' in its NFIP database.

H. Incidental Floodplain Exception

For purposes of defining when projects with onsite floodways may proceed, this final rule removes floodways, as well as coastal high hazard areas and the LiMWA, from the incidental floodplain exception at § 55.12(c)(7) and replaces it with the new § 55.8(a)(1), which covers limitations on HUD assistance in floodways. The new § 55.8(a)(1) clarifies that HUD assistance may be used in floodways in two circumstances:

1. Where an exception in § 55.12 applies. This is not a change from HUD's existing regulations.

2. Where all structures and most improvements are removed from the floodway and a permanent covenant or comparable restriction would prevent future development or expansion of existing uses in the floodplain and/or wetland. Rehabilitation activities, including reconstruction in the case of Presidentially declared disasters, that do not expand existing uses in the FFRMS floodplain outside of the floodway are permitted under the new § 55.8. This exception combines aspects of the existing exceptions for floodplain restoration activities and incidental floodplains and allows for limited improvements in the floodway, including functionally dependent uses, utility lines, de minimis improvements, and removal of existing structures or improvements. This option allows for a broader range of activities in the floodway and in the adjacent FFRMS floodplain than is permitted under the current incidental floodplain exception. This option does require projects with onsite floodways to complete the 8-step decision making process in § 55.20 and determine that there are no practicable alternatives before approving any proposed activity on a site that includes a floodway.

This final rule maintains a narrower version of the existing incidental floodplain exception as applied to the FFRMS floodplain (not including floodways, coastal high hazard areas, or within the LiMWA) in the revised § 55.12(g). The revised § 55.12(g) allows projects to proceed without completing the 8-step decision making process where an incidental portion of the project site falls within the FFRMS floodplain.

I. Identifying Wetlands and Limitations on HUD Assistance in Wetlands

This final rule adds a new § 55.9 and revises § 55.10 to address issues regarding wetlands identification and HUD's limitations on work impacting wetlands.

The new § 55.9, ''Identifying Wetlands,'' builds on the definition of ''wetlands'' in § 55.2(b)(13) by clarifying common areas of confusion and removes unnecessary procedural requirements. Section 55.9 revises HUD's current regulations to address limitations associated with the exclusive use of the National Wetlands Inventory (NWI) for wetlands screening.[30] This final rule broadens the wetlands definition beyond NWI screening alone and addresses the potential for data gaps or outdated information by requiring that HUD and

[27] *See* MAP Guide, sec. 3.9.2.3, available at *https://www.hud.gov/program_offices/administration/hudclips/guidebooks/hsg-GB4430. See also* form HUD–92329, available at *https://www.hud.gov/program_offices/administration/hudclips/forms/hud9*. Per the NFIP definition, the grade level is defined as the lowest or highest finished ground level that is immediately adjacent to the walls of the building. Use natural (pre-construction), ground level, if available, for Zone AO and Zone A (without BFE).

[28] For a discussion of the decision making process in the *Guidelines, see Guidelines for Implementing Executive Order 11988, Floodplain Management, and Executive Order 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input* (October 8, 2015).

[29] SRL properties are defined following current FEMA standards. In its April 2020 NFIP Flood Insurance Manual, FEMA designates NFIP-insured single family or multifamily residential buildings as SRL where:

1. The building has incurred flood-related damage for which four or more separate claims payments have been made, with the amount of each claim (including building and contents payments) exceeding $5,000, and with the cumulative amount of such claims payments exceeding $20,000; or

2. At least two separate claims payments (building payments only) have been made under such coverage, with the cumulative amount of such claims exceeding the market value of the building.

In both instances, at least two of the claims must be within 10 years of each other, and claims made within 10 days of each other will be counted as one claim. In determining SRL status, FEMA considers the loss history since 1978, or from the building's construction if it was built after 1978, regardless of any changes in the ownership of the building. The term ''SRL property'' refers to either an SRL building or the contents within an SRL building, or both. The most recent designations can be found in Appendix I of the April 2020 NFIP Flood Insurance Manual, available at *https://www.fema.gov/sites/default/files/2020-05/fim_appendix-i-severe-repetitive-loss-properties_apr2020.pdf*.

[30] The U.S. Fish and Wildlife Service maintains the NWI. For more information regarding the NWI, see the U.S. Fish and Wildlife Service's National Wetlands Inventory website, available at *https://www.fws.gov/program/national-wetlands-inventory*.

responsible entities supplement the NWI with a visual observation of the property to assess wetlands indicators. Where these sources do not provide a conclusive answer as to whether a wetland is present, practitioners may use one of three methods to determine the presence or absence of a wetland: (1) consultation with the U.S. Fish and Wildlife Service (USFWS); (2) reference to other Federal, State, and/or local resources and site analysis by the environmental review preparer; or (3) a wetlands evaluation prepared by a qualified wetlands scientist. This process of determining the presence or absence of a wetland increases flexibility and avoids unnecessary consultation with the USFWS without increasing the risk that wetlands will not be accurately identified.[31]

The revised § 55.10, ''Limitations of HUD Assistance in Wetlands,'' explicitly defines the procedural requirements for projects with the potential to directly or indirectly impact on- or off-site wetlands. These revisions to § 55.10 codify and clarify existing policies on wetlands compliance without imposing new requirements.

J. Clarification and Revisions of Exceptions

This final rule breaks down the exceptions in the current § 55.12(a)–(c) into three separate sections, §§ 55.12, 55.13, and 55.14. This revision improves the overall clarity of the three distinct categories of excepted activities: (1) those that are excluded from all compliance with part 55 (§ 55.12); (2) those that must comply with the standards and limitations in part 55, such as prohibitions on activities in floodways but that are not required to complete the 8-step decision making process (§ 55.13); and (3) those that may complete the modified 5-Step decision making process in lieu of the full 8-step decision making process (§ 55.14). Beyond this revision, the final rule makes only limited changes to the exceptions themselves.

1. Exceptions in § 55.12

Based on HUD's experience and activities reflected in environmental review records for floodplain restoration projects, this final rule provides flexibility for floodplain-compatible parks and recreation uses routinely combined with floodplain and wetland restoration and preservation work. In the revised 24 CFR 55.12, ''Inapplicability of 24 CFR part 55 to certain categories of proposed actions,'' this final rule expands on the existing exception for floodplain and wetland restoration and preservation activities to allow certain structures and improvements designed to be compatible with the beneficial floodplain or wetland function of a property.

Two exceptions are removed through this final rule. The exception for sites where FEMA has issued a Letter of Map Amendment (LOMA) or Letter of Map Revision (LOMR) in the current § 55.12(c)(8) is removed. HUD is removing the exception described in the current § 55.12(c)(8)(i) because a FEMA determination, through the LOMA/LOMR process, that a location is outside of the 1-percent-annual-chance floodplain or above base flood elevation is not intended to state whether the location is or is not within the FFRMS floodplain. HUD is removing the exception described in the current § 55.12(c)(8)(ii) on conditional LOMAs and conditional LOMRs for the same reason, as well as because this exception can incentivize adding fill in a floodplain in a manner that reduces floodplain function in adjoining areas by excepting such actions from compliance with part 55. HUD is changing this policy to disincentivize the use of sitewide fill and require completion of the 8-step decision making process before adding fill to modify a floodplain.

HUD is also removing the exception described in the current § 55.12(c)(11) for projects related to ships and waterborne vessels because these are not activities that generally receive HUD funds and practitioners have expressed confusion over its presence in the rule.

2. Exceptions in §§ 55.13 and 55.14

The final rule makes minimal changes to the activities listed in the current § 55.12(a) and (b), which must comply with the requirements in part 55 but do not trigger the full 8-step decision making process. The final rule makes clarifying changes to the requirements currently listed in § 55.12(a)(3) and (4) that the footprint of the structure and paved areas are not significantly increased. Through this final rule, the new § 55.14(c) and (d) require that the footprint of the structure and paved areas are not increased by more than 20 percent. The final rule also includes a clarification for the requirement currently listed in § 55.12(b)(5)(iii) that the approval of financial assistance to lease an existing structure located in the floodplain requires that the structure be insured to the maximum in order to meet the exception. This existing provision was inadvertently omitted from the text of the proposed rule. The final rule provision also clarifies that this exception applies to financial assistance to lease both an existing structure and units within an existing structure.

Notably, the final rule adds two new exceptions:

1. *Section 55.13(f).* For special projects dedicated to improving energy or water efficiency of utilities or installing renewable energy that do not meet the threshold for substantial improvement, the new § 55.13(f) limits procedural hurdles to energy or water efficiency retrofit projects, which have limited potential to adversely affect floodplains or wetlands.

2. *Section 55.14(e).* For repairs, rehabilitation, or replacement of certain infrastructure with limited impact on impervious surface area, including streets, curbs, and gutters, § 55.14(e) provides an exception for smaller scale infrastructure projects that had been lacking from part 55. This added exception does not apply to critical actions, levee systems, chemical storage facilities (including any tanks), wastewater facilities, or sewer lagoons, all of which would require the 8-step decision making process.

K. 8-Step Decision Making Process

For actions that trigger the 8-step decision making process in whole or in part, the final rule makes several revisions to § 55.20 to implement FFRMS, clarify proper completion of each of the 8 steps of the decision making process, and otherwise modernize requirements. These revisions include:

1. Codifying roles and responsibilities in the 8-step decision making process, which have been frequently misunderstood.

2. Editing for consistency with FFRMS and new paragraphs on identification and limitations associated with the FFRMS floodplain and wetlands.

3. Adding an option to publish public notices in Steps 2 and 7 on an appropriate government website as an alternative to a printed news medium.

4. Inserting further clarifications and examples of required and suggested analysis.

5. Adding a requirement to coordinate the 8-step decision making process with any public engagement process associated with environmental justice, where project planners are also engaging stakeholders. This is consistent with the policy goals of Executive Order 14096, ''Revitalizing Our Nation's Commitment

[31] This approach is specific to HUD's regulations and differs from the United States Army Corps of Engineers' (USACE) current process for jurisdictional wetland determination identified in the USACE Wetland Delineation Manual.

to Environmental Justice.'' [32] HUD intends to issue updated guidance on advancing environmental justice.

L. Elevation, Floodproofing, Minimization, and Restoration

In addition to the revisions to § 55.20 previously described, this final rule significantly expands Step 5 in § 55.20(e) to implement FFRMS. Section 55.20(e) of the final rule provides that, in addition to the current mitigation and risk reduction requirements, all new construction and substantial improvement actions in the FFRMS floodplain subject to the 8-step decision making process must be elevated or, in certain cases, floodproofed above the FFRMS floodplain. If higher elevations, setbacks, or other floodplain management measures are required by State, Tribal, or locally adopted code or standards, HUD will require that those higher standards apply. The revised § 55.20(e) also provides more specific instruction on minimization and floodplain restoration measures, which are a key component of increasing flood resilience and must be considered in the 8-step decision making process.

For non-critical actions that are non-residential structures or multifamily residential structures that have no residential dwelling units below the FFRMS floodplain, through § 55.20(e)(1)(ii) of this final rule, new construction and substantial improvement projects may, as an alternative to being elevated above the FFRMS floodplain, be designed and constructed such that, below the FFRMS floodplain, the structure is floodproofed. Except for changing ''base flood level'' to ''FFRMS floodplain,'' as defined in § 55.7, this final rule adopts FEMA's requirements for floodproofing as provided in FEMA's regulations at 44 CFR 60.3(c)(3)(ii) and 60.3(c)(4)(i). In summary, all substantially rehabilitated or newly constructed structures within the FFRMS floodplain which are not elevated must be floodproofed consistent with the latest FEMA standards at or above the level of the FFRMS floodplain. This provision permits owners of non-residential and certain residential buildings to construct structures in a way that is less expensive than elevating but allows the buildings to withstand flooding, thus appropriately balancing property protection with costs and reflecting the lower risk to human life and safety in non-residential structures or parts of structures.

In the case of residential buildings, § 55.20(e)(1) of this final rule provides that the term ''lowest floor'' must be applied consistent with FEMA regulations in 44 CFR 59.1, FEMA's Elevation Certificate guidance, or FEMA's current guidance that establishes lowest floor.

Through this final rule, § 55.20(e)(2) identifies specific strategies that can reduce flood risk and loss of beneficial values of floodplains and wetlands, including green infrastructure, reconfiguration of the project footprint, and incorporation of resilient buildings standards. These strategies are based on floodplain and stormwater management best practices and HUD experience. Based on requests for technical assistance in this area, HUD believes the inclusion of recommended minimization measures will assist persons engaged in an 8-step decision making process.

This final rule also adds a new § 55.20(e)(3) to describe more clearly what is meant by restoration and preservation of wetlands or beneficial functions of the floodplain. Floodplain preservation is a concept that has been used in 24 CFR part 55 implementation historically but has been defined primarily through guidance, and this clarification is based on past practice and the successful incorporation of these measures in HUD-assisted projects.

Finally, this final rule replaces the current § 55.20(e)(3), which defines mitigation measures specific to critical actions, with a new § 55.20(e)(4). Section 55.20(e)(4) establishes mandatory actions to plan ahead for residents' safety in multifamily residential properties, healthcare facilities, and critical actions.

M. Processing for Existing Nonconforming Sites

This final rule creates a new § 55.21, ''Alternate processing for existing nonconforming sites,'' to address concerns about existing sites with onsite floodways. This section creates a special approval process for improvements to existing HUD-assisted or HUD-insured properties with onsite floodways under the following circumstances, summarized as:

1. HUD completes an 8-step decision making process and environmental review pursuant to part 50 and mandates measures to reduce flood risk and ensure that there are no other environmental risks or hazards at the site;

2. Specific measures will be taken to minimize flood risk and improve overall resilience at the site, including removing all residential units and critical action structures from the floodway; and

3. HUD determines that the HUD assistance cannot be practicably transferred to a safer site.

The purpose of this section is to establish a means of continuing HUD assistance or financing in exceptional circumstances to existing HUD-assisted or HUD-financed projects (*e.g.,* properties receiving assistance through Public Housing, Section 8 Project-based Rental Assistance, or subject to a HUD-insured mortgage) that would otherwise be unable to comply with part 55 due to the presence of an on-site floodway. This section should be applied only in very rare cases and is not intended to eliminate the general prohibition on providing HUD assistance for projects within floodways. However, HUD recognizes that there are circumstances in which terminating HUD assistance would not improve residents' overall resilience or safety in the context of HUD's mission. In such cases, HUD will closely review the site and determine whether the best option to improve flood resilience would be financing improvements at the existing site or rejecting HUD assistance at the site. The Assistant Secretary for Community Planning and Development has the authority to approve a project after HUD has met all of the conditions above.

N. Other Changes to Part 55

This final rule makes various other changes to part 55 to update terminology and references and restructures part 55 for readability and accuracy. Additionally, this final rule removes various provisions codified in part 55 that are outdated or underutilized.

The final rule removes § 55.24, ''Aggregation,'' because this provision is redundant with aggregation principles described more clearly in 24 CFR parts 50 and 58, which also apply to projects processed under 24 CFR part 55.

The final rule also removes the current § 55.25, ''Areawide compliance.'' Areawide decision making described in this section requires a complex notification process involving publications, and HUD has no record of the provision's use in a HUD-assisted activity since the promulgation of 24 CFR part 55. This provision is unnecessary because HUD has well-established procedures for tiering of environmental review records that similarly facilitate compliance with part

[32] E.O. 14096 builds on and supplements prior E.O.s. *See* 88 FR 25,251 (Apr. 26, 2023), *https://www.federalregister.gov/documents/2023/04/26/2023-08955/revitalizing-our-nations-commitment-to-environmental-justice-for-all.*

55 across a geographic area without relying on § 55.25.

The final rule relocates instructions on documenting 24 CFR part 55 decision making in the HUD environmental review record from § 55.27 to § 55.6 so that the instructions appear in context with general instructions on compliance with 24 CFR part 55 and a description of its structure. Additionally, the final rule revises the documentation requirements for consideration of alternatives to the proposed action to remove the requirement to compile a list of alternative properties in the local market. This information may be unavailable for some project types or not relevant to consideration of viable alternatives to achieve the goals of the decision making process within a given HUD program context.

The final rule removes § 55.28, which, in concept, provides relief from five of the eight steps in the wetlands decision making process when a permit has been secured from the United States Army Corps of Engineers (USACE) under Section 404 of the Clean Water Act for a proposed HUD-assisted construction activity in a jurisdictional wetland outside of the floodplain. The final rule removes this section because practitioners have not historically found it useful, and part 55 already contains another section that offers similar relief from the 8-step decision making process where USACE (or any other Federal agency) has already completed the 8-step decision making process for the same action. Section 55.26, which the final rule retains with revisions, allows HUD or responsible entities to adopt another agency or responsible entity's 8-step decision making process under conditions that are less restrictive than those in § 55.28, which apply to decision making under E.O. 11988 or E.O. 11990 carried out by USACE.

O. Minimum Property Standards

This final rule applies a new elevation standard to one-to-four-family residential structures with mortgages insured by FHA. Generally, in HUD's single family mortgage insurance programs, Direct Endorsement mortgagees submit applications for mortgage insurance to HUD, and Lender Insurance mortgagees endorse loans for insurance after the structure has been built. Thus, there is no HUD review or approval before the completion of construction. In these instances, HUD is not undertaking, financing, or assisting construction or improvements. Thus, the FHA single family mortgage insurance program is not subject to review under E.O. 11988, NEPA, or related environmental laws or authorities. However, newly constructed single family properties in HUD's mortgage insurance programs are generally required to meet HUD's Minimum Property Standards under 24 CFR 200.926 through 200.926e. These property standards require that when HUD insures a mortgage on a property, the property meets basic livability and safety standards and is code compliant. The section relating to construction in flood hazard areas, § 200.926d(c)(4), has long been included as a property standard.

In alignment with the revisions in this final rule that address FFRMS under E.O. 11988, this final rule also amends the Minimum Property Standards on site design, specifically the standards addressing drainage and flood hazard exposure at § 200.926d(c)(4). The purpose of the amendment of the property standards is to decrease potential damage from floods, increase the safety and soundness of the property for residents, and provide for more resilient communities in flood hazard areas. The final rule revises § 200.926d(c)(4) by requiring the lowest floor (including basements and other permanent enclosures) of newly constructed dwellings, within the 1-percent-annual-chance floodplain, to be at least 2 feet above the base flood elevation as determined by best available information. For one- to four-unit housing under HUD's mortgage insurance and low-rent public housing programs, HUD's Minimum Property Standards in 24 CFR part 200 currently require that a one- to four-unit property involving new construction, located in the 1 percent-annual-chance floodplain in the effective FIRM, be elevated to the effective FIRM base flood elevation. This final rule adds two feet of additional elevation to the base flood elevation as a resilience standard and applies this standard only to new construction of such properties and not to substantial improvement. This final rule does not require consideration of the horizontally expanded FFRMS floodplain for single family mortgage insurance projects governed by the requirements in the Minimum Property Standards.

P. Categorical Exclusion

This final rule amends § 50.20(a)(2)(i) to revise the categorical exclusion from further environmental review under NEPA for minor rehabilitation of one- to four-unit residential properties. Specifically, this final rule removes the qualification that the footprint of the structure may not be increased in a floodplain or wetland when HUD performs the review. In 2013, HUD removed the footprint trigger from the corresponding categorical exclusion at § 58.35(a)(3)(i) for rehabilitations reviewed by responsible entities. This change makes the review standard the same regardless of whether HUD or a responsible entity is performing the review. Moreover, when HUD performs a review under 24 CFR part 50, the categorical exclusion in § 50.20(a)(3) applies to construction, but not rehabilitation, of up to four units in a floodplain or wetland as an individual action such that an environmental assessment or environmental impact statement is normally not required. Rehabilitated structures in a floodplain or wetland with an increased footprint currently require an environmental assessment or environmental impact statement.[33] It is logically inconsistent to require a greater review for minor rehabilitations than new construction. Similarly, it is logically inconsistent to apply a higher level of review for HUD as opposed to grantees because the proposed actions would be the same regardless of review authority under 24 CFR part 50 or part 58.

Actions under this revised categorical exclusion remain subject to E.O. 11988, E.O. 11990, and part 55, and any impact resulting from an increased footprint in a floodplain or wetland will be fully addressed by the 8-step decision making process in part 55.

Q. Permitting Online Posting

This final rule updates §§ 50.23, 58.43, 58.45, and 58.59 to allow public notices to be posted on an appropriate government website as an alternative to publication in local news media if the appropriate government website is accessible to individuals with disabilities and provides meaningful access to individuals with Limited English Proficiency. This change makes parts 50 and 58 consistent with revised § 55.20, which allows public notices required as part of the 8-step decision making process to be posted on a government website instead of in a newspaper.

R. Severability

This final rule incorporates a new severability provision in a new subpart D, at § 55.30. As described in § 55.30, it is HUD's intent that each provision of this final rule has effect to its fullest extent permitted by law, including by ensuring the severability of any provision affected by a judicial order. Should a court find any specific portion of this final rule unenforceable, the

[33] *See* § 50.20(a)(3)(iii).

remainder of this final rule and its application should remain effective to the fullest extent permitted by law. Those portions that are unaffected by any judicial ruling can be implemented by HUD without a new rulemaking simply to promulgate provisions that are not subject to a court ruling. For example, this final rule revises standards in both 24 CFR parts 55 and 200. The administration and workability of each part are independent; and so, severing a portion of the revision to one part would not affect the administration and workability of the revisions in the other part. Similarly, severing one program from the application of this final rule would not affect the administration and workability of its application to other HUD programs. As another example, severing one approach for identifying the FFRMS floodplain described in § 55.7 would not affect the validity and administration of the remainder of § 55.7, nor the remaining portions of this final rule.

S. Tribal Consultation and Stakeholder Listening Sessions

HUD's Government-to-Government Tribal Consultation Policy calls for consultation with Tribal Nations and Tribal Leaders early in the rulemaking process on matters that have Tribal implications. Accordingly, on June 10, 2021, HUD sent letters to all eligible funding recipients under the Native American Housing Assistance and Self Determination Act of 1996 (NAHASDA) and their tribally designated housing entities informing them of the nature of the forthcoming rule and soliciting comments. This letter announced a 30-day comment period and a webinar and conference call consultation session regarding the forthcoming rule. On August 18, 2021, HUD sent a second letter with a 60-day comment period to review an early draft of the proposed regulatory changes. During this period, HUD held an additional consultation session via webinar and conference call. This letter was posted on Codetalk, the HUD Office of Native American Programs' website, along with an early outline of the rule. During this draft review period, HUD received one written comment, suggesting that HUD explicitly recognize the right to Tribal self-governance in part 55. HUD acknowledges the sovereignty of federally recognized American Indian and Alaska Native Tribes and is committed to operate within a Government-to-Government relationship to allow Tribes the maximum amount of responsibility for administering their housing programs. Tribes had the opportunity to comment on this rule at the proposed rule stage.

During the comment period of the proposed rule, HUD engaged in additional stakeholder outreach through four live listening sessions held April 17, 2023, May 2, 2023, May 4, 2023, and May 15, 2023. While all sessions were free and open to the public, local government officials, Tribal representatives, housing industry representatives, and the general public each had a session targeted towards their respective organizations or groups. These sessions were intended as informative listening sessions in which HUD provided an overview of the proposed rule and an opportunity for members of the public to comment. Notes from the listening sessions can be found at *https://www.hud.gov/program_offices/comm_planning/environment_energy/ffrms.*

T. Delayed Compliance Date

This final rule has an effective date of *May 23, 2024;* however, required compliance with this final rule is delayed until June 24, 2024, except: compliance with this final rule's amendments to 24 CFR part 200 is required for new construction where building permit applications are submitted on or after January 1, 2025; and compliance with this final rule's amendments to 24 CFR part 55 is required no later than January 1, 2025 for the following programs: (1) Programs subject to chapter 9 of the MAP Guide (Multifamily FHA, Section 202 and 811 capital advance grants, transfers under Section 8(bb) of the United States Housing Act and Section 209 of HUD's annual appropriations (or subsequent provisions), Section 8 Renewals with Capital Repairs, RAD conversions to PBRA, and Green and Resilient Retrofit Program); and (2) The other mortgage insurance programs subject to part 55 (FHA Healthcare and FHA Risk Share).

After reviewing public comments, HUD has determined, in certain instances, to provide a delayed compliance period to allow entities regulated by this rule a grace period to come into compliance with the revised requirements. As described, compliance with the amendments to part 200 of this rule is required for new construction where building permit applications are submitted on or after January 1, 2025. This delay is intended to provide home builders ample opportunity to adapt and prepare for the requirements of this rule, including the increased elevation standards. Setting a delayed compliance period for the amended requirements for part 200 is appropriate to address public comments received expressing concern that the rule could limit the availability of single family affordable housing. Applications for single family FHA insurance are submitted to HUD after housing construction is completed. As a result, for new construction located in Special Flood Hazard Areas, applications submitted to HUD following implementation of this rule will be rejected if they do not meet the elevation requirements in the Minimum Property Standards. HUD is extending the compliance date for the part 200 revisions to allow time for housing developers to incorporate the new Minimum Property Standards into the planning process for new construction.

Similarly, after reviewing public comments, HUD has determined to provide a delayed compliance period until January 1, 2025, for entities to come into compliance with the revisions this final rule makes to part 55 for the following programs: (1) Programs subject to chapter 9 of the MAP Guide (Multifamily FHA, Section 202 and 811 capital advance grants, transfers under Section 8(bb) and under Section 209 of HUD's annual appropriations (or subsequent provisions), Section 8 Renewals with Capital Repairs, RAD conversions to PBRA, and the Green and Resilient Retrofit Program); and (2) The other mortgage insurance programs subject to part 55 (FHA Healthcare and FHA Risk Share). Setting a delayed compliance period for the revised part 55 is appropriate for these programs to account for the extensive lead time required for site design, planning, and environmental analysis, all of which are required prior to submitting an application for FHA mortgage insurance. Many mortgage insurance projects include large-scale development that requires significant time and monetary investment in planning initiatives, thereby requiring a longer compliance period to incorporate part 55 revisions into the planning process. Additional programs subject to the MAP Guide have similar project planning timelines. The delayed compliance period poses limited increased flood risk for these programs in the interim because the MAP Guide currently requires elevation to BFE +2 feet for new construction, which is one of the methods for defining the FFRMS floodplain under this rule.

III. Changes at the Final Rule Stage

In response to comments received during the proposed rule stage of this rulemaking, HUD is making several revisions to the final rule:

Part 50 (Authority). The final rule revises the authority section at the beginning of part 50 to update the

authority of ''42 U.S.C. 4321–4335'' to ''42 U.S.C. 4321–4336e.'' This change to the citation to NEPA is appropriate because the Fiscal Responsibility Act of 2023 (Pub. L. 118–5) added additional sections to NEPA.

Part 55 (Authority). The final rule revises the authority section at the beginning of part 55 to add the authority 42 U.S.C. 4321 *et seq.* This change to include NEPA is appropriate because NEPA requires the Federal government to act as a ''trustee of the environment'' for future generations.

Section 55.2. In § 55.2(b)(12), the final rule, in paragraphs (i)(A) and (i)(B), clarifies that the repair, reconstruction, modernization, or improvement of a structure includes a manufactured housing unit. In § 55.2(b)(13), the final rule also removes the non-exhaustive list of examples of what does not constitute a wetland because it is not necessary to list things that the definition does not cover and in order to avoid confusion about certain areas around deep water aquatic habitats that may be considered wetlands.

Section 55.4. In § 55.4(b), the final rule adds the term ''HUD-acquired'' to the list of property types to clarify that properties that had been previously insured by HUD and were then acquired by HUD through default are also subject to the requirements for notification to renters when a property is in a floodplain.

Section 55.6a. The final rule adds a new section regarding severability at § 55.6a, which describes that any portion of this rule found to be unlawful shall be severable from this rule and the remainder of the part shall continue to remain effective.

Section 55.7. The final rule adds language to § 55.7(b)(1) and (c)(1) to clarify when HUD considers data to be available and actionable to define the FFRMS floodplain using CISA. The final rule also adds language to 55.7(e) to clarify that CISA must be used for EIS level projects where available and actionable data exists or can be generated. Additionally, the final rule adds language to § 55.7(f) to clarify that HUD and responsible entities may utilize local tools to implement CISA on a voluntary basis, as long as the resulting elevation is at least as high as the lowest of (1) the 0.2-percent-annual-chance flood elevation; (2) the elevation that results from adding an additional two feet to the base flood elevation; or (3) the elevation required by paragraphs (b) or (c) of § 55.7, if CISA data is available and actionable under paragraphs (b)(1) or (c)(1). The final rule also permits the voluntary use of any particular tool, resource, or other process that defines the floodplain using CISA that HUD identifies through guidance.

Section 55.8. In § 55.8(a)(1)(ii), the final rule expands the scope of activities allowed in the FFRMS floodplain where there is a floodway onsite to include rehabilitation that does not expand the footprint of existing buildings or the number of units on the site. In § 55.8(a)(1)(ii)(B), HUD removed specific examples of de minimis improvements from the rule. HUD intends to provide more detailed guidance on de minimis improvements to ensure that only compliant work is allowable under this part. In § 55.8(a)(2), the final rule clarifies that certain critical actions may be located in the floodway if they are functionally dependent and any existing or new structure has been or will be elevated or floodproofed to the FFRMS elevation for critical actions; and that certain critical actions may be located in a coastal high hazard area or LiMWA if they are functionally dependent and meet FEMA's mitigation requirements for such actions located in the coastal high hazard area. This section also clarifies that for critical actions, mortgage insurance on a property containing a floodway may be exempt from the prohibition in § 55.8(a)(2) if there are no structures or improvements located in the floodway, and subject instead to § 55.8(a)(1).

Section 55.9. In § 55.9(a), the final rule makes minimal changes to align the text of § 55.9(a) with § 55.10.

Section 55.10. In § 55.10(a), the final rule clarifies, through an added example, that new construction activities for a proposed project include related activities for any structures or facilities including the siting of new manufactured housing units.

Section 55.12. The final rule excludes the proposed § 55.12(g)(3) so as to avoid duplication and to better align with both existing processes and new incidental floodway provisions.

Section 55.13. In § 55.13(e), the final rule clarifies that the exception to § 55.20 applies to financial assistance to lease an existing structure and/or units within an existing structure, adds paragraph (e)(3), which was unintentionally omitted from the proposed rule and aligns with existing regulatory language, and specifies in paragraph (e)(3) that the structure should be insured to the maximum extent available under the NFIP. In § 55.13(f), the final rule clarifies that the exception applies to special projects for the purpose of improving the ''energy or water efficiency'' of utilities rather than the ''efficiency'' of utilities. The final rule excludes the proposed 55.13(g) exemption to avoid unnecessary duplication. HUD determined that both the Section 184 Indian Housing loan guarantee program and the Section 184A Native Hawaiian Housing loan guarantee program meet the categorical exclusion at 24 CFR 50.19(b)(17), which is already exempt from part 55 under § 55.12(b).

Section 55.16. In Table 1 to § 55.16, the final rule clarifies that certain critical actions may be located in the floodway, coastal high hazard area, and LiMWA, if they meet the requirements for critical actions in § 55.8.

Section 55.20. The final rule adds a new paragraph (e)(2)(iv) to § 55.20 to clarify that, if applicable, minimization techniques include identifying and incorporating FEMA identified Severe Repetitive Loss mitigation as outlined in § 55.8(c). The final rule also makes minimal changes to § 55.20(a) to align the language with § 55.10. The final rule also adds nature-based approaches as an alternative method for avoiding impacts to wetlands and floodplains in § 55.20(c)(1)(ii). Additionally, the final rule makes other changes to eliminate redundant language.

Section 55.21. The final rule revises the layout of § 55.21(b) to improve readability. Additionally, § 55.21(b) adds minimum requirements for proposed projects to meaningfully reduce flood risk and increase the overall resilience of the site, including a No-Rise Certification for any new improvements in the floodway.

Section 55.30. The final rule adds a new section regarding severability at § 55.30, which describes that any portion of this rule found to be unlawful shall be severable from this rule and the remainder of the part shall continue to remain effective.

Part 58 (Authority). The final rule revises the authority section at the beginning of part 58 to update the authority of ''42 U.S.C. 4321–4335'' to ''42 U.S.C. 4321–4336e.'' This change to the citation to NEPA is appropriate because the Fiscal Responsibility Act of 2023 (Pub. L. 118–5) added additional sections to NEPA.

Section 200.926. The final rule removes the proposed revision to § 200.926(a) that would have applied the elevation standard in § 200.926d(c)(4)(i) through (iii) to substantial improvement activities. In response to public comments received, HUD determined to not include the proposed change to § 200.926(a) in the final rule to avoid creating adverse impacts on homeowners renovating their existing single family homes in low-cost areas.

Section 200.926d. The final rule does not apply § 200.926d elevation requirements to substantial improvement activities. The final rule also clarifies that for the elevation certificate required by § 200.926d(c)(4)(iii), HUD's elevation standard for newly erected manufactured housing is the standard required in 24 CFR 203.43f or 24 CFR part 3285, as applicable, rather than two feet above base flood elevation.

IV. Public Comments

This public comments section contains a summary of the public comments that HUD received in response to the proposed rule.

Specific Questions for Comment From the Proposed Rule

In section III.Q of the proposed rule, HUD included several specific questions for public comment. Those specific questions from the proposed rule and public comments received in response to those specific questions are summarized here, along with HUD's responses to the public comments received.

A. Question #1: Whether To Prioritize an Alternative Method Among the Three Approaches To Define the FFRMS Floodplain

1. General Support for the Proposed CISA Approach

Several commenters generally expressed support for HUD's goals outlined in the proposed rule, such as protecting safety, health and welfare, preserving natural floodplains, considering environmental justice impacts, preventing the significant impact of flooding on underserved communities, and more accurately measuring flood risk. One commenter emphasized that it was HUD's fiscal obligation to regulate the FFRMS floodplain using CISA to reduce the Federal government's fiscal exposure to climate change. Another commenter strongly supported HUD's assessment to subject more of the floodplain area to the 8-step decision making process and encouraged HUD to solidify the basic purpose and guidance in 24 CFR 55.1(a)(5) of the proposed rule. The commenter emphasized the importance of HUD's commitment because flooding—even inland flooding—is becoming more frequent across the U.S. coastline, due to climate change, no matter how it is measured.

Several commenters expressed support for the three-tiered approach for defining the FFRMS floodplain outlined in the proposed rule. These commenters also agreed that CISA should remain the primary method for determining the FFRMS floodplain. Commenters noted a preference for CISA because it is forward-looking, acknowledges ongoing advances in climate science, is more dynamic, and provides a more complete picture of flood risk over the lifetime of a project.

Several commenters also expressed their support for HUD's proposal to utilize the 0.2-Percent-Annual-Chance Flood Approach and the Freeboard Value Approach when CISA maps and analyses are not available. One commenter noted that where CISA floodplains cannot be implemented in the short- and medium-term, it is important to rely on proven standards that will give stakeholders tools that are well-understood and widely available.

Another commenter agreed with HUD that FEMA flood maps are often out of date and cited the White House Flood Resilience Interagency Working Group's Federal Flood Risk Management Standard CISA State of the Science Report in noting that the maps reflect that efforts to prioritize modernizing and implementing the NFIP are overdue. This commenter believed that the latest science on flood risk hazards demonstrates that there is sufficient data to regulate the FFRMS based on climate science and that it is critical the Federal government do so when the data are available in order to prevent risky planning and investment decisions.

One commenter emphasized that they support HUD's CISA-centered approach because it is likely that FEMA's 1-percent-annual-chance flood hazard measurements underestimate the number of assisted housing units within those areas. This commenter encouraged HUD to use CISA to the maximum extent possible. Another commenter agreed that continuing to use the 1-percent-annual-chance or even the 0.2-percent-annual-chance floodplain in place of CISA is irresponsible especially given HUD's mission of serving low-income families who are particularly ill-equipped to recover from flood-related hardships.

One commenter supported HUD's three-tiered approach prioritizing CISA, and added that since flood elevations are not static, a cautionary statement of reviewing the characteristics of flooding (velocity, debris, and flashiness) should also be considered for all proposals. Another commenter emphasized that no matter what approach was ultimately taken, it is important to streamline the FFRMS floodplain determination process and limit room for conjecture.

One commenter urged HUD to go further in its rule by requiring the evaluation of potential flooding throughout the design lifetime of structures using the best available risk modeling and science. This commenter said HUD should require project plans to account for expected flood heights and other mitigation measures. Another commenter requested HUD consider at minimum a 50-year projection for CISA and suggested HUD project larger floodplains because of the time necessary for climate instability to manifest. Another commenter recommended HUD use the same lower level of risk tolerance for critical and non-critical actions, arguing that the Federal government has a moral imperative to safeguard new and updated affordable housing by ensuring affordable housing can withstand climate change.

Several commenters asked HUD to incorporate some clarity in its final rule surrounding the meaning of ''anticipated life of the project.'' One commenter noted that it is not unusual for projects to extend beyond their anticipated life for years or even decades and that a project's extended life could impact the elevation for which they should be designed. Another commenter asked that HUD require CISA criteria to be extended over the entire life of a project—a minimum of 50 years, which is the length of time used for most building life cycle assessments.

HUD Response: HUD appreciates the support from commenters for HUD's goals outlined in the proposed rule. HUD disagrees that it is our fiscal obligation to regulate using CISA; however, we agree that it should be used as the preferred approach where data is available and actionable. HUD developed the three-tiered approach to defining the FFRMS floodplain with the intent to be more forward-looking and acknowledge that being flexible is necessary as science advances to best achieve the outlined goals. HUD appreciates commenters' feedback regarding the use of a multi-tiered approach and the importance of using proven standards when CISA is unavailable. HUD also appreciates the commenters' support that a wider floodplain area be considered in the 8-step decision making process, though HUD disagrees that this needs to be stated in 24 CFR 55.1(a)(5) because HUD considers the existing language sufficient and effective.

HUD also appreciates the commenters' considerations that FEMA FIRMs are static and based on a snapshot of data in time. HUD believes that its preferred approach, CISA, provides a significant advantage to provide future flood risk management.

HUD intends to publish guidance to help grantees choose appropriate design life horizons to utilize CISA effectively. The goal is for the chosen design life to protect the Federal investment throughout the anticipated life of the project without overly burdening projects with unreasonable elevation requirements. HUD notes that critical actions are given additional mitigation requirements as per the instructions in the Guidelines which ask Federal agencies to use higher standards for critical actions due to their more sensitive nature. This higher standard was considered too economically burdensome to impose on all projects with lower inherent risk, so it was not imposed for all activities. HUD intends that this rule will help protect Federal investments against future flood risk.

2. Concerns Regarding the Proposed CISA Approach

Several commenters also wrote in with concerns about HUD's approach for defining the FFRMS floodplain in its proposed rule.

a. Burden and Uncertainty

One commenter stated that the three-tiered definition of FFRMS floodplain was too confusing and burdensome. This commenter noted that establishing whether an action was in a floodplain or not is a critical first step in HUD's regulatory process given that if the action does occur in a floodplain, additional analysis and mitigation requirements are triggered. The commenter went on to say that without established floodplain maps, stakeholders will have a difficult time completing this first step and these material unknowns and uncertainties will generate increased project delays, increased project costs, and increased project cancelations—all at the expense of much-needed housing.

One commenter was specifically concerned with the horizontal floodplain definition. The commenter stated that FEMA's FIRMs are well-established and have clearly depicted the 1-percent-annual-chance floodplain in most communities across the Nation to the extent that many Federal, State, and local regulations are tied to the 1-percent-annual-chance floodplain. FEMA's maps regularly provide certainty to property owners to know when and where they must comply with a multitude of rules, codes, ordinances, and grant conditions.

HUD Response: HUD appreciates the commenters' feedback regarding the potential complexity of the tiered approach outlined in the proposed rule. As described earlier in this preamble in section II.B., the tiered approach to defining the FFRMS floodplain provides sufficient direction to grantees and applicants on how to determine if a project is located in the FFRMS floodplain based on data availability. Moreover, HUD intends to roll out ample training and technical assistance with this rule to ensure that grantees are well prepared to execute compliant environmental reviews. With training and assistance, HUD is confident that grantees will be able to navigate the process and avoid unnecessary negative effects on project timelines. This training will also help grantees work with their builders and avoid uncertainty associated with projects located in the FFRMS floodplain.

b. Local Data

Several commenters noted that some communities lack local, State, or Federal elevation data to establish the FFRMS floodplain with any of the three methods outlined in the proposed rule. These commenters suggested that this lack of available data could discourage developers and disproportionately impact rural communities that already have a lack of affordable housing. One commenter noted specifically that professional surveyors will not generally provide the 0.2-percent-annual-chance flood elevation without a formal flood study, which is not only very expensive but is also time-consuming. This commenter urged HUD to consider an alternative elevation for use in these circumstances. Another commenter also noted the expense of land surveys and the resulting decrease in housing that may result.

Conversely, one commenter noted they have created their own mapping tools to evaluate flood risk. This commenter is hoping to be able to continue using their tools and would like HUD to provide an approval process for using them. This commenter reiterated that one of HUD's stated goals is to better align with local standards that have already been strengthened and to take ''a flexible approach to adapt to the needs of . . . the local community.'' Commenters asked HUD to provide up to date maps and data to local communities and asked HUD to model FFRMS requirements after local codes.

One commenter hoped the FFRMS rule would encourage partnerships at all levels of government to adopt floodplain management policies. Another commenter suggested that HUD collaborate with state-level data providers to ensure that local data products meet CISA requirements and receive HUD approval. One commenter used the fact that many localities have made significant investments in ''down-scaled'' mapping of future flood risk as evidence that the availability of technically credible data on future flood risks has developed significantly since HUD's last proposed rule.

Another commenter urged HUD to incorporate local data that considers climate change by considering flood risk information available in each State's Hazard Mitigation Plan.

HUD Response: HUD appreciates the commenter's concerns regarding the availability of data in some communities. HUD understands that there are existing data limitations in some communities, particularly in rural areas, where FEMA mapping is unavailable. This rule does not change the current process and allows communities to utilize flood and elevation studies or best available data, including anything relevant from hazard mitigation plans, to proceed with their floodplain determination. Therefore, where FEMA FIRMs are not available, this rule has no impact on the current part 55 process to utilize best available information and would not have major cost impacts in those areas. The Regulatory Impact Analysis (RIA) did not offer evidence that the cost of surveys would have a significant impact on housing supply. Given the diversity of geography and data for HUD projects, HUD cannot set a standardized baseline elevation for all projects and instead must rely on a project-by-project approach.

As described earlier in this preamble, HUD appreciates that some State, Tribal, and local governments have created CISA tools capable of determining the extent of the FFRMS floodplain in their respective jurisdictions. As such, HUD has adjusted the language of this rule to voluntarily permit the use of local tools where they result in an elevation at least as high as the lowest of (1) the 0.2-percent-annual-chance floodplain elevation; (2) the elevation that results from adding an additional two feet to the base flood elevation or (3) the elevation required by paragraph (b) or (c) of § 55.7, if CISA data is available and actionable under paragraphs (b)(1) or (c)(1). While HUD will not model the FFRMS floodplain around local code requirements because it would lead to uneven protection standards nationwide, this change will better recognize the efforts many localities have made to address their own climate risks.

As part of the White House Flood Resilience Interagency Working Group helping to develop CISA tools nationwide, HUD appreciates the sentiment of commenters who wish to

encourage intergovernmental partnerships to adopt floodplain risk management policies. HUD relies on the Federal science agencies like FEMA and NOAA to work with their local partners to obtain accurate local flood risk data for use in their development of tools which may be used to implement CISA, as well as other FFRMS approaches. HUD is also open to coordinating with state-level providers on a project-specific basis as needed.

c. Federal CISA Implementation Tools

Several commenters agreed that, though they support forward-looking risk projections that consider climate change, it is premature to rely on CISA maps with national coverage, which may take years to develop. One commenter suggested that without stakeholder approval and practical application of tools, any proposed higher elevation requirements may be too severe and result in unintended, adverse consequences. Another commenter noted the opposite concern, that while CISA maps are being developed, older maps will need to be relied upon, which are insufficient. This commenter also noted that no funding is attached to HUD's proposed rulemaking.

One commenter stated that because a BFE based on CISA data cannot be used if the elevation is lower than the current FIRM or FIS and because there may be other environmental disclosure rules regarding climate flooding risk, this multilayered approach, reliant on maps that are not yet available, would create an impractical and untenable level of uncertainty for builders and developers. The commenter urged HUD to withdraw the proposed rule until maps of the floodplains were available and to release a CISA tool for public comment on the data, methodology, functionality, accuracy, and user friendliness of the model before it is implemented. The commenter also recommended the rule be subject to peer-review. If not, they predicted builders would have to do a lot of research and expend resources trying to determine if they were in a floodplain.

One commenter emphasized the complexity of developing a CISA mapping tool and recommended that HUD provide additional clarification on what process it will use to approve maps developed using CISA. The commenter suggested that this proposed rule should have focused more on the development of the mapping tool, and HUD may need to issue a separate notice seeking comment from the public on the tool's development given the complexity of the development process. Specifically, the commenter recommends HUD seek input from stakeholders and industry participants, as their input is critical for the tool's eventual success.

Several other commenters also requested the opportunity to provide feedback on CISA maps. One commenter noted that they would like to provide further comment on a focused handful of HUD's actionable modeling criteria. Other commenters asked whether CISA maps would be available for stakeholders to identify the FFRMS floodplains and whether HUD would require approval for a process that would result in FFRMS floodplain boundaries different than what a user would generate using CISA mapping. These commenters also asked who would approve CISA maps and by what process and what qualifications HUD's approver would have to determine the CISA maps' sufficiency.

Another commenter noted that it is critical for HUD to define the specific circumstances in which it will approve CISA maps. While the commenter stated that might be best done in guidance, they emphasized that HUD's final rule must define some ''high-level guardrails'' as well. The commenter suggested the following guardrails: (1) all maps must, at a minimum, be consistent with current CISA guidelines issued by the Water Resources Council,[34] National Climate Task Force, or equivalent Federal authority and (2) HUD should state clearly that it reserves the authority to deny or revoke approval of CISA maps for any reason.

Other commenters agreed that the proposed rule cannot be fully evaluated without CISA mapping being available for review and that it should not be implemented before the public can review the CISA mapping tools and provide comments. One commenter asked when the tools would be available to make nationwide determinations. Other commenters asked whether there will be a process for the public to refute the CISA maps.

One commenter emphasized the need to analyze granular property-specific data, including structure-specific identifications, first-floor height (FFH) assessments, and 1-meter digital elevation model data, in order to develop a reliable flood risk model. This commenter recommended that HUD use its co-chair position on the National Climate Task Force's FFRMS Science Subgroup to advocate for the addition of 'granular' as a necessary characteristic for ''best available data and science.''

One commenter requested that HUD develop its CISA maps with the following in mind to ensure they are developed properly: use currently established catastrophe models that have been recognized by State agencies and insurance commissions; do not extrapolate results; do not downscale data except through dynamic downscaling; do not rely on steady-state assumptions of the future; and display information on uncertainty and provide understandable outputs. The commenter emphasized that adoption by standard-setting organizations demonstrates model reliability as does peer-review. To that end, the commenter asked HUD to clarify what standard of peer-review would be effective and to follow up to confirm this standard has been met.

One commenter asked if CISA flood risk areas would be publicly available online. This commenter encouraged the development of a singular, publicly available website that reflects FFRMS approved methodologies.

Several commenters expressed concern about how HUD's CISA maps will be kept up to date. Commenters noted that these forward-looking maps should be required to be updated regularly as more data becomes available. Another commenter asked whether there will be a budget to make sure the CISA tool remains up to date.

One commenter requested HUD rename CISA to CISA–F to avoid confusion with another Federal tool called CISA for the Critical Infrastructure Act.

HUD Response: As described earlier in this preamble in section II.B., CISA is the preferred approach to define the FFRMS floodplain and HUD intends to require use of CISA where data is available and actionable. HUD agrees that it is premature to rely entirely on the CISA standard which is why HUD proposed CISA as the preferred of three methodologies to define the FFRMS floodplain. HUD recognizes that CISA data is not currently available nationwide via a Federal CISA implementation tool and therefore HUD has adjusted the language of this rule to allow, but not require, the use of State, local, or Tribal CISA data if they are available and actionable, as defined in § 55.7. HUD notes that while it cannot make funding explicitly available for this rule as no congressional appropriation has been made available to do so, many HUD programs do allow funding to be used for mitigation activities such as elevation and flood resilience efforts.

[34] HUD notes that these CISA guidelines are the same Guidelines discussed in the Background section of this preamble, available at *https://www.fema.gov/sites/default/files/documents/fema_implementing-guidelines-EO11988-13690_10082015.pdf.*

HUD made the proposed rule available for both public comment and comment through interagency review. Through the proposed rule, the public had opportunity to comment on, for example, whether the FFRMS floodplain should be defined using CISA where data is available. HUD received numerous comments on utilizing CISA to determine the FFRMS floodplain and other topics. As discussed more thoroughly elsewhere in this final rule, the public also had opportunity to comment on the use of CISA outside of this rulemaking through the guidelines.

HUD intends to release subregulatory guidance to help communities better understand the CISA process and how they can use acceptable tools to map the FFRMS floodplain. While HUD will not be releasing any CISA maps of its own, HUD does intend to accept maps, tools, or resources developed through Federal or local CISA data, when that data is available and actionable, as long as those maps, tools, and resources meet the requirements outlined in § 55.7(b), (c), and (f).

HUD disagrees that the proposed rule could not be evaluated or reviewed without CISA mapping being available. The concept of CISA and associated data is well established, as outlined in the FFRMS, the Guidelines, and the White House State of the Science Report, for instance.[35] The public has accordingly had opportunity to comment on CISA generally as well as its specific proposed use in topics addressed by this rule. The FFRMS and Guidelines, which were subject to public notice and comment, provided a method for considering CISA for coastal flood hazards that takes into account regional sea-level rise variability and service life of the project. Using CISA to define the FFRMS floodplain provides a forward-looking approach to flood risk management. Available and actionable CISA data is currently most readily available along the coasts in areas with the highest risk of flooding and, in accordance with E.O. 13690 and E.O. 11988, HUD is directed to utilize the best-available and actionable data to protect Federal investments. Where CISA data isn't available or actionable, HUD has provided additional acceptable processes to define the FFRMS floodplain including the 0.2-percent-annual-chance flood approach and the FVA.

[35] See *https://www.whitehouse.gov/wp-content/uploads/2023/03/Federal-Flood-Risk-Management-Standard-Climate-Informed-Science-Approach-CISA-State-of-the-Science-Report.pdf.*

HUD appreciates the commenter's thoughts regarding the need to analyze granular property-specific data and encourages grantees to utilize best-available data when complying with this rule. HUD notes that its outlined CISA approach for identifying the floodplain is consistent with the recommended approach from the Water Resources Council Guidelines.[36]

HUD disagrees that renaming CISA to CISA–F is necessary to avoid confusion and suggests that grantees use context to help differentiate between the acronyms.

d. 0.2-Annual-Chance-Flood Approach (500-Year Floodplain Approach)

Several commenters had concerns about limitations to the 0.2-percent-annual-chance flood approach. Several commenters pointed out that FEMA maps do not usually provide an elevation for the 0.2-percent-annual-chance floodplain. One commenter noted that FEMA does not regularly produce maps that incorporate wave modeling, which makes it difficult to plan projects and for residents to understand how regulations may impact their homes. This commenter encouraged HUD to work with FEMA to incorporate wave modeling in its 0.2-percent-annual-chance floodplain maps.

One commenter asked that HUD's final rule clearly define what 0.2-percent-annual-chance floodplain can be used, wondering whether its limits need to contain the structure, be within the subject property parcel, or be within 500 feet of the nearest structure. Several other commenters wondered what data would be used to determine the 0.2-percent-annual-chance floodplain.

One commenter asked if the addition of 2 or 3 feet to existing BFE to calculate a revised flood hazard area and flood elevation results in any changes to the extent of area considered seaward of the LiMWA. This commenter asked that the 0.2-percent-annual-chance flood method reflect the potential of the LiMWA to shift, as a result of sea level rise.

One commenter worried that the effects of using the 0.2-percent-annual-chance floodplain for properties with no known or previously occurring flood risk would reduce density and property values.

One commenter asked HUD to clarify if the 5/8-step process would be triggered by improvements in a 0.2-percent-annual-chance floodplain, and asked HUD to make the FFRMS guidance clear.

HUD Response: HUD appreciates the commenter's feedback regarding the limitations of the 0.2-percent-annual-chance flood approach. When the FEMA-mapped 0.2-percent-annual-chance floodplain is unavailable, or when, for critical actions, the FVA approach is higher, HUD would allow the FVA to be utilized.

In coastal areas, actionably accurate wave models can be difficult and expensive for jurisdictions to obtain. HUD would generally agree with the commenter that including wave modeling in coastal area flood maps is beneficial to accurately depicting flood risk which is why the CISA method is preferred. HUD will continue to work with its Federal partners to support their efforts toward increasing availability of mapping and modeling in coastal areas so that the best available data may be utilized for HUD projects.

For the 0.2-percent-annual-chance flood approach with non-critical actions, the final rule requires that the FEMA-mapped 0.2-percent-annual-chance floodplain must be utilized to determine if the structure is within the floodplain of concern. Additional technical assistance and guidance will be released alongside the rule to help grantees and practitioners make appropriate determinations for their projects and help them understand when the 8-step decision making process is required. As the 0.2-percent-annual-chance floodplain is not based on climate informed data but on current FEMA mapping, it would therefore be unable to account for sea level rise over time. Additionally, HUD notes that the rule does not change the FEMA-defined Base Flood Elevation.

The RIA found no evidence that the 0.2-percent-annual-chance flood approach would reduce property values and HUD expects any density loss to be intentional based on the goal of reducing flood risk.

e. Freeboard Value Approach

Several commenters encouraged HUD to adopt the FVA as the primary approach for defining the FFRMS floodplain. Several commenters recommended use of the FVA over CISA because CISA mapping is not available for public review and the public has not been provided adequate information to assess its impacts and implications. One commenter suggested the NEPA process cannot be completed correctly using CISA maps. One commenter concluded that given the uncertainties, relying on the FVA would be most likely to ensure

[36] HUD notes that these CISA guidelines are the same Guidelines discussed in the Background section of this preamble, available at *https://www.fema.gov/sites/default/files/documents/fema_implementing-guidelines-EO11988-13690_10082015.pdf.*

reliable and consistently documented building elevations.

Another commenter reasoned that FVA is the most accurate method of identifying flood risk and would be the most efficient use of government resources. Additionally, the commenter said FVA could be even more protective by adding two or three feet to the base flood elevation. This commenter urged HUD to consider further research into the FVA to compare the flood resiliency of HUD projects built to this increased standard to those that were not and into the possible benefits of using information in State Hazard Mitigation Plans.

Other commenters supported the FVA over the 0.2-percent-annual-chance flood approach because many sites do not have the 0.2-percent-annual-chance floodplain mapped and using the FVA across the board would result in a more consistent approach. Another commenter agreed that FVA is familiar to most stakeholders and supported its continued use given that it was HUD's previously selected method in 2016.

One commenter supported the inclusion of the horizontal floodplain when using the FVA.

Several commenters critiqued the requirement to add three feet to the BFE for critical actions, regardless of known or previous flood risk, and predicted this would lead to a reduction in density, higher costs, higher rents, and lower valuation of properties.

One commenter asked how the FVA method would account for high hazard areas that are subject to sea level rise and concurrent land subsidence.

HUD Response: HUD disagrees that the FVA should be utilized as the preferred approach to defining the FFRMS floodplain. While the FVA provides a beneficial fallback option when CISA and the 0.2-percent-annual-chance flood approach are unavailable, it does not account for sea level rise and the rising risk of flooding over time. The 0.2-percent-annual-chance flood approach is preferred to the FVA as it allows grantees to utilize existing tools to visually display the more protective horizontal extent of the floodplain. As stated earlier in section II.B., HUD requires that the FFRMS floodplain be defined using CISA where data is available and actionable, as it is the most scientifically accurate in providing impacts to the floodplain from climate change. As described in § 55.7, HUD considers CISA data to be available and actionable for a particular project where: (1) the data is included in a tool, resource, or other process developed or identified by a Federal agency or agencies to define the floodplain using CISA, and (2) HUD has adopted the particular tool, resource, or other process through a **Federal Register** notice for comment.

HUD disagrees that utilizing FVA as the preferred approach would be the most efficient use of government resources. HUD believes that the additional resilience provided by utilizing the hierarchy of CISA, then 0.2-percent-annual-chance flood approach, and finally FVA provides for a more resilient and effective use of resources than using a single approach across the board.

HUD appreciates the commenter's support for the inclusion of the added horizontal area under the FVA approach.

E.O. 13690 directs HUD to elevate critical actions at least three feet above freeboard value when using the FVA regardless of any previous flood risk at the site. While the FVA does not necessarily consider climate change because it is based on FEMA mapping of the BFE, a Federal tool for CISA is expected to be available in coastal and high-risk areas in FY24. As HUD's preferred methodology, CISA will better be able to account for sea level rise over time than other methodologies, even if they are more protective than current standards.

3. Other Alternative Approaches

One commenter suggested that HUD should consider looking to nearby areas that do have CISA resources available rather than solely relying on the two alternative approaches in the proposed rule.

One commenter requested certain public facilities such as fire and police stations, emergency medical facilities, and schools be given a heightened level of protection, and that HUD could look to more stringent standards for such structures from other entities.

One commenter asked HUD to reconsider using Advisory Base Flood Elevations (ABFE) to assess risk. ABFEs established after major flood events are often much higher than the 0.2-percent-annual-chance flood elevation, thus ABFE may result in situations where development would be required to elevate well above what the other proposed approaches would require. The commenter asked HUD to exclude ABFE from establishing elevations though, as it may not represent the true floodplain and could result in excessive fill or loss of opportunities to develop affordable housing.

One commenter noted that 0.2-percent-annual-chance floodplain elevation is not noted on FIRMS, which could lead to subjective elevation determinations by the technical experts required.

Another commenter recommended a new approach entirely, given that FEMA FIRM maps fail to account for forward-looking climate change and are not necessarily reliable with respect to historical flood risk either.

HUD Response: HUD agrees with the commenter and has revised the language of the rule at 24 CFR 55.7 to clarify that it permits a responsible entity to voluntarily define the FFRMS floodplain utilizing CISA when a State, Tribal, or local government has formally adopted, through code or other formal adoption measures, a tool, resource, or other written standards that provide data or other methods to identify the FFRMS floodplain using CISA for a particular project. HUD also notes that critical actions require a higher standard of protection, as their definition indicates, due to the potentially extreme impacts of flooding.

HUD believes that use of interim flood hazard data such as ABFEs is acceptable and that they can provide a realistic picture of the true floodplain when drawn by FEMA. While FEMA does not yet have comprehensive coverage of elevations on the 0.2-percent-annual-chance floodplain published maps, grantees will have the option of utilizing the FVA or calculating the 0.2-percent-annual-chance elevation when those elevations are unavailable from FEMA sources.

4. Questions About the Proposed CISA Approach

One commenter asked how maps would address the unpredictability of elevation sinking and if the maps would be adjusted yearly. Another commenter asked how HUD will decide what FIRM to go by and how a lender can be assured that the benchmark is accurate. This commenter also asked what happens when the FIRM is changed. Other commenters asked if flood studies would be required if there was insufficient information to establish FFRMS floodplains with one of the three approaches.

One commenter asked HUD to confirm whether the new rules apply to existing HUD-insured projects or federally funded projects seeking refinancing or acquisition and to detail all HUD Multifamily Housing programs that are expected to comply with this new guidance or any exceptions that make projects exempt or require compliance with these new rules.

HUD Response: HUD intends to provide additional guidance to grantees and practitioners to help them understand what options are available

when none of the three approaches have sufficient information to establish the FFRMS floodplain. Generally, HUD will rely on project-by-project technical assistance to help grantees find and utilize best available data to make their determinations. HUD believes that CISA tools will be regularly updated with best available climate and topographic data as outlined in the FFRMS CISA State of the Science Report.

HUD intends that the CISA provisions of the final rule will apply to any project funded by programs subject to part 55 review, including Multifamily FHA programs, in accordance with the compliance dates described in the Compliance Date section of this final rule.

B. Question #2: Whether HUD Should Define the FFRMS Floodplain for Non-Critical Actions as Whichever Is Lower Between the 0.2-Percent-Annual-Chance Floodplain or the Base Flood Elevation Plus Two Feet of Freeboard, Where CISA Resources Are Not Available

1. Support for HUD's Proposed Standard

Several commenters expressed support for whichever approach would offer the most protection when CISA is not available. Several of these commenters emphasized that the alternative proposed in Question #2 could significantly reduce flood resilience in some areas especially given that flood events are likely to become deeper and more frequent and because livelihoods, resident health, and safe homes are at stake. Another commenter said that any reduced short-term cost in using the less stringent approach would come at greater long-term expenses and would run counter to the risk management approach identified by the Government Accountability Office. The commenter also noted that models may underrate flood risk and the more protective approach is justified by the precautionary principle.

Another commenter urged HUD to consider collaboration with other agencies to gather data for critical actions in the proposed FFRMS floodplain.

HUD Response: HUD appreciates the feedback from commenters regarding the need for higher elevation standards and protections as flood events worsen due to climate change. The intent of HUD's preference for the CISA option is to be more proactive and protective as flood risks increase over time and to use the best science available at the time the project is considered. HUD believes that the process for using the 0.2-percent-annual-chance flood approach or the FVA when CISA is not available or actionable provides a protective and efficient process that is not only more likely to provide a more protective approach but also reduce administrative burden (*e.g.,* comparison between the 0.2-percent-annual-chance flood approach and FVA elevations).

For critical actions, where comparison between the 0.2-percent-annual-chance flood approach and the FVA +3 feet elevations is necessary, HUD believes the extra analysis is warranted to ensure more protection for those actions for which any risk of flooding is simply too great. HUD is also supportive of further collaboration with other agencies to analyze data on critical actions as it becomes available.

2. Support for the Lower Standard

Several commenters asked HUD to allow for the lower standard for non-critical actions. These commenters were concerned about incentivizing excessive fill in 0.2-percent-annual-chance floodplains.

Several commenters suggested that the FVA method should take preference over the 0.2-percent-annual-chance flood approach as it is easier to calculate. Some of these commenters went onto suggest that a site-specific flood study would be the best option.

HUD Response: HUD disagrees with commenters' feedback that lower standards should be used for non-critical actions. Since flood risks are increasing as a result of climate change and associated sea level rise, lowering the current regulatory standard on top of this increased risk would create an exponentially riskier environment for Federal investments and go against HUD's stated goals. HUD also disagrees that higher standards create incentive for fill as elevation does not necessarily require fill. In fact, the rule no longer provides an exemption for LOMR based on fill, further disincentivizing its use.

HUD disagrees that the FVA method is easier for grantees and practitioners to calculate than the 0.2-percent-annual-chance flood approach. The 0.2-percent-annual-chance floodplain is mapped by FEMA and where it is available for non-critical actions, grantees would not need to calculate anything. While HUD agrees that site-specific flood studies can be helpful, requiring them for all projects would be prohibitively expensive.

C. Question #3: Whether, and Under What Conditions, Part 55 Should Permit HUD or the Responsible Entity To Rely on the FFRMS Floodplain as Defined by Another Federal Agency

1. Support for Alignment With Other Agencies

Several commenters supported HUD using FFRMS boundaries established by other agencies to reduce redundancy in Federal oversight. These commenters also requested a process by which a stakeholder could request a reconsideration of HUD's floodplain boundaries.

Several commenters urged a cohesive and consistent Federal vision when there are multiple flood risk related efforts occurring simultaneously to avoid conflicting standards and potential noncompliance. One commenter noted the weaknesses inherent in not having a comprehensive nationwide approach to defining floodplains. This commenter encouraged HUD to include requirements for tracking the location and quantity of developments in floodplains as part of its 8-step decision making process. The commenter urged collaboration among Federal agencies to track and quantify the effectiveness of E.O. 11988 and E.O. 13690. Specifically, this commenter recommended that Federal agencies collaborate with the National Floodplain Functions Alliance.

One commenter suggested Federal agencies align their resilience and disaster response policies, including building codes and elevation requirements.

One commenter expressed support for a process whereby a project's lead Federal agency's implementation of FFRMS is sufficient for the entire project, as long as such approach looked at long-term risks.

More broadly, several commenters asked that HUD participate in collaboration with other agencies, affiliations, and interagency groups.

Several commenters stated that the Federal Interagency Floodplain Management Task Force (FIFM–TF) is an existing interagency body to facilitate collaboration and ensure that all agencies are using a forward-thinking, climate-informed approach. One commenter noted that HUD should rely on FIFM–TF policies, as long as its deliberations are more transparent and accessible to interested non-Federal stakeholders. This commenter suggested that since various Federal agencies have developed tools, data, and expertise, that collaboration would lead to more consistent CISA floodplain definition methods.

Several other commenters endorsed HUD's cooperation with the White House Flood Resilience Interagency Working Group. Some of these commenters said HUD should prioritize funding and interagency coordination, including continued participation in this working group. One commenter was concerned that the working group would not have enough resources available to accurately identify flood risks throughout the country. Another commenter asked who in this working group is preparing the CISA tools and whether they have any conflicts of interest between potential consultants working on these resources.

Several commenters urged HUD to rely on FEMA and its flood-risk data and to engage with FEMA to ensure complementary approaches as the agencies implement FFRMS through rulemaking. Another commenter emphasized that FEMA has spent billions of dollars on flood engineering studies and that adopting an alternative flood map dataset would waste previous Federal investments. The commenter went on to say that other entities, such as States, cities, and communities, have come to rely on FEMA's flood map data for various purposes. Another commenter noted that because FEMA is actively working to incorporate climate risk and future conditions into its data and mapping program, HUD should delay finalizing the proposed rule and continue to rely on FEMA's flood risk and mapping tools until its formal release of climate-informed flood risk data and flood maps.

One commenter supported coordination between HUD, FEMA, USACE, and other agencies to consistently articulate flood risks and best practices. This commenter reasoned that a comprehensive Federal narrative would allow for consistency and transparency for owners, local decision makers, and regulators as opposed to the current contradicting flood risk identification efforts.

One commenter suggested that HUD align its disaster recovery and mitigation construction standards with FEMA's Building Resilient Infrastructure and Communities and Public Assistance Programs, which have been successfully implemented for several years. The commenter said that adopting the flood provisions captured in modern building codes consistently across like programs would help the Federal government reduce complexity and increase programmatic efficiency.

One commenter asked that HUD share what it learns from developing CISA mapping tools with other Federal agencies.

HUD Response: HUD's outlined process in the rule requires the use of Federal CISA data where available and actionable, as described in § 55.7, or permits the voluntary use of formally adopted local CISA data, as described in § 55.7(f). A Federal agency tool is being developed by the Council on Environmental Quality (CEQ), the Office of Science and Technology Policy (OSTP), FEMA, NOAA, and HUD with input from the White House Flood Resilience Interagency Working Group and the FFRMS Science Subgroup. The Science Subgroup of the White House Flood Resilience Interagency Working Group has found that accounting for sea level rise in the coastal environment represents available and actionable data to help identify the CISA floodplain. The White House Flood Resilience Interagency Working Group has developed a job aid to help agencies identify the floodplain using the three approaches.[37] This job aid will help provide consistency of FFRMS application across the Federal Government.

Where Federal CISA data is not available and actionable, as provided in § 55.7, and grantees or practitioners use local, State, or Tribal CISA data, the 0.2-percent-annual-chance flood approach, and/or FVA, there may be some variation in the exact horizontal and vertical extents of the FFRMS floodplain depending on the approach that is utilized. HUD does not believe that these variations are likely to be significant and further believes that minor floodplain variation is worth the greater protection that the methodology in HUD's rule provides. HUD's rule does not define the boundary of the floodplain, only a methodology for determining where that boundary is. HUD does not intend to implement a formal process to contest the methodology used to define the floodplain at this time but will continue to monitor and make changes to policy, as necessary, to ensure effective determination of the FFRMS floodplain.

HUD agrees with the commenter that Federal disaster response policies, inclusive of their floodplain management policies, should be complementary and cohesive. As such, HUD drafted this rule to align with the E.O. 13690 guidance. Additionally, HUD appreciates the commenter's encouragement for HUD to continue cooperating with the White House Flood Resilience Interagency Working Group.

HUD's Federal partners are also engaging in rulemaking to update FFRMS floodplain requirements to comply with E.O. 13690. HUD cannot wait for these other agencies' rules and must act to protect its own investments which are otherwise at risk. However, each agency, including HUD, is developing these regulations with feedback provided through a required interagency review process which occurs prior to publication of any proposed and final rulemaking.

In cases where a Federal project is funded by multiple Federal funding sources, HUD plans to utilize the Unified Federal Review (UFR) to assist in the collaborative cross-agency/Department discussions to resolve compliance issues and ensure cohesion in project funding and goals. Additionally, HUD has procedures in place to adopt the environmental reviews of other Federal agencies to avoid unnecessary duplication of effort.

HUD supports its interagency partners and is always looking for new opportunities to work with other industry leaders in addition to other Federal agencies. While HUD agrees with the general sentiment behind adopting resilient building codes, HUD does not believe this rule is the proper place to include them.

2. Concerns With Relying on Other Agencies To Define the Floodplain

Several commenters expressed concerns regarding HUD relying on another agency's definition of FFRMS floodplains.

Several commenters said that HUD must ensure it is addressing resident health and safety as well as economic-related flood disaster relief in setting its floodplain determination, urging HUD to only rely on another agency's designation of FFRMS floodplain where that agency's methodology is at least as rigorous as HUD's; in other words, rely on whichever generates the highest elevation and most expansive horizontal floodplain. Another commenter similarly expressed concern for adopting other agencies' floodplain policies because they believe that HUD's proposed rule likely better protects wetlands. The commenter said that HUD should not rely on other Federal agencies at a time when the USACE's analysis for wetlands has changed through proposed rulemaking and the Supreme Court case *Sackett* v. *EPA*[38] regarding the definition of ''waters of the United States.''

Several commenters suggested that by not relying on FEMA's maps in its

[37] See *https://www.fema.gov/sites/default/files/documents/fema_ffrms-floodplain-determination-job-aid.pdf.*

[38] 598 U.S. 651 (2023).

proposed rule, HUD is indicating that FEMA's maps cannot be relied upon. Specifically, one commenter said the language that an interim or preliminary FEMA map could not be used if it is lower than the current FIRM or FIS indicates the FEMA maps cannot be relied upon for accurate flood risk data.

HUD Response: HUD agrees that it should avoid relying on another agency's definition of FFRMS floodplains. E.O. 13690 requires agencies to utilize one of the processes (CISA, 0.2-percent-annual-chance flood approach, FVA) based on best-available information and FIRMS from FEMA to define the FFRMS floodplain.

HUD is looking for the most scientifically prudent elevation based on available data that will provide protection of life, property, and the Federal investment. Using the CISA approach, HUD's preferred method, will likely result in the most protective elevation based on scientific data compared to other methods.

HUD believes that FIRMs provide an accurate point in time snapshot of flood risk. Unfortunately, these risks are continually changing and given the time horizon for FIRM updates they may be generally less accurate than HUD would prefer. The FFRMS approaches outlined in HUD's final rule allow for greater protection in the face of changing needs and uncertainty than a floodplain management approach solely based on FEMA's mapped BFE boundary.

D. Question #4: What Factors or Stakeholder Needs HUD Should Consider When Establishing an Effective Date for This Rule

1. Support for Extended Effective Date

Several commenters urged HUD to extend the effective date of implementation to at least one year after issuing this rule to avoid unforeseen expenses and delays for projects already in planning stages because development planning often begins years prior to land acquisition and formal planning processes. Of those commenters, several raised concerns that absent extension, developers would bear unequitable financial losses due to changes in land value purchased, revisions to plans, and resulting delays.

One commenter specifically urged HUD to include a grandfathering provision that would allow new Community Development Block Grants (CDBG) and HOME Investment Partnerships Program (HOME) awards, as well as FHA multi- and single family projects already under development and applications submitted prior to the effective date to proceed under current regulations. This commenter reasoned that if developers had to repeat the lengthy planning, platting, and government approval process for new development under changed regulations, they would be forced to engage in more consultation, negotiation, and compromise among all project stakeholders. This commenter added that the planning process for FHA insured projects is particularly lengthy.

Several commenters urged HUD to consider stakeholders' need to access the CISA maps prior to implementation, stating that it is impossible to examine implications of the rule absent sufficient review of the CISA method that the rule relies upon. Several commenters suggested that stakeholders needed at least one year to access the CISA maps prior to implementation. One commenter urged HUD to delay implementation until the CISA maps are available and approved and asked when HUD expected the tools will be made available.

Several other commenters went further, asking HUD to factor in time to engage industry stakeholders in developing the CISA mapping tool prior to implementing this rule. One commenter reasoned that improper development of this tool, or reliance on problematic data, could negatively impact industry stakeholders (*e.g.,* developers, insurance providers, floodplain mapping experts).

One commenter sought HUD's consideration that large public housing authorities need time to determine the impact of the regulation on costs of rehabilitation and repair, including a portfolio-wide review of covered properties and a building-by-building analysis. This commenter estimated that this review would take at least a year after final rule issuance.

One commenter suggested that HUD consider the potential positive result that proposed FHA mortgage requirements may incentivize communities to adopt 2-foot freeboard standards matching the HUD Minimum Property Standards, so that all development in special flood hazard areas will maintain qualification for FHA-insured mortgages. This commenter suggested that HUD extend the effective date for FHA mortgage requirements by one year to allow this commenter and other stakeholders to assist communities in updating their floodplain management codes. For all other aspects of the rule, this commenter urged HUD not to extend the effective date.

HUD Response: HUD appreciates the feedback from commenters regarding concerns over ongoing projects incurring unforeseen expenses and delays. As such, HUD is setting a delayed compliance period for the rule. Compliance with this final rule is required no later than 30 days after the rule becomes effective, except compliance with the amendments to 24 CFR part 200 is required for new construction where building permit applications are submitted on or after January 1, 2025, and compliance with the amendments to 24 CFR part 55 is similarly required no later than January 1, 2025, for FHA programs and programs subject to the MAP Guide, as more thoroughly described in the Compliance Date section of this final rule. This delayed compliance period will provide regulated entities time to come into compliance with this rule, including the portions of the rule implementing the Minimum Property Standards. HUD believes this delayed compliance period will allow ample time for project sponsors to prepare for any increased costs for compliance with the rule. Additionally, HUD notes that projects currently in development which have completed environmental reviews would not be required to backtrack for compliance.

HUD disagrees that stakeholders require access to CISA maps prior to implementation. After this rule becomes effective, CISA maps will not be used if they are not available and actionable. The three-tiered approach to define the FFRMS floodplain adopted by this rule will allow responsible entities to utilize the best available data and tools in their area to understand and mitigate their flood risk. As described in § 55.7, where State, Tribal, or local jurisdictions have already invested in data and modeling and created CISA data and tools, HUD permits the voluntary use of those tools if they result in an elevation that is at least as high as the lowest of (1) the 0.2-percent-annual-chance floodplain elevation; (2) the elevation that results from adding an additional two feet to the base flood elevation; or (3) the elevation required by paragraph (b) or (c) of § 55.7, if CISA data is available and actionable under paragraphs (b)(1) or (c)(1).

Federally assisted multifamily housing, especially housing for low-income and vulnerable populations, including the public housing portfolio, is currently in need of the additional flood mitigation and resilience requirements the rule requires. The rule will ensure that as properties undergo rehabilitation, flood mitigation and resilience will be incorporated. HUD does not believe it is appropriate or necessary to delay the implementation

of the part 55 update of this rule for additional study.

2. Support Implementing as Soon as Possible

Several commenters asked HUD to consider the urgent need to mitigate loss of properties and lives, along with the health and financial inequalities exacerbated by increasing flooding events, citing statistics on projected increases in flooding and disparate impacts of these events. Another commenter asserted that an effective date no later than January 1, 2025, would provide ample time for development stakeholders to prepare for implementation.

One commenter urged consideration of the number of HUD-supported new construction and substantial improvement projects that will or will not have enhanced resiliency and flood protections, depending on any delays to implementing this rule.

Another commenter suggested that HUD should consider the regulatory impact findings that the reduction in financial damages over the life of the project is greater than the one-time construction cost increases necessary for implementing the rule. This commentor also urged HUD to consider its knowledge of these impending requirements since at least 2015 as a factor supporting prompt implementation, with an effective date of no later than one year.

HUD's Response: After reviewing public comments, HUD has determined to provide a delayed compliance period to allow entities regulated by this rule a grace period to come into compliance with the revised requirements. Compliance with the amendments to part 200 of this rule is required for new construction where building permit applications are submitted on or after January 1, 2025. This delay is intended to provide home builders ample opportunity to adapt and prepare for the requirements of this rule, including the increased elevation standards. Compliance with the amendments to 24 CFR part 55 is similarly required no later than January 1, 2025, for FHA programs and programs subject to the MAP Guide, as more thoroughly described in the Compliance Date section of this final rule. Compliance with all other parts of this rule and for all other programs, except for those noted for parts 200 and 55, is required no later than 30 days after the rule becomes effective.

3. Additional Considerations

One commenter suggested that HUD consider the Supreme Court's decision on the Clean Water Act's definition of ''waters of the United States'' in *Sackett* v. *EPA.*

HUD's Response: HUD appreciates the feedback from commenters; however, HUD's definition of a wetland is unaffected by the Supreme Court's ruling in *Sackett vs. EPA* because HUD's wetlands definition originates from E.O. 11990, not from the Clean Water Act.

E. Question #5: Feedback on Exception Requiring the More Protective FVA Approach for Coastal Areas

Several commenters continued to recommend the most protective standard, supporting HUD's excepted use of the FVA standard in coastal areas. One commenter reasoned that wave action, sea level rise, land subsidence, warmer seas, and intensification of tropical storms/hurricanes compound uncertainty in coastal areas. Another commenter supported the higher standard to increase flood protection in areas where the mapped floodplain may not accurately reflect risks from wave action. Another commenter reasoned that the higher standard for coastal areas is necessary due to particular vulnerabilities of coastal communities to tidal flooding.

One commenter suggested that HUD's final rule should allow for the flexibility to use the most protective and up to date science in coastal regions or where higher quality data and analytics are available.

One commenter asked about HUD's plan for renovations in order to eventually have all projects in accordance with the new standards, and what the projected date is to achieve that plan. The commenter also asked, if there is no plan, whether one can be added to protect sustainability of coastal projects.

Other commenters opposed the higher standard for coastal areas, urging HUD to use a consistent approach in defining the FFRMS floodplain. These commenters suggested that compliance is stronger when the rules are consistently applied and easy to understand and recommended the FVA approach in all circumstances.

HUD's Response: HUD appreciates the commenters' preferences regarding the use of the most protective standard; however, HUD intends to retain the three-tiered decision making process to define the FFRMS floodplain as originally proposed to avoid complicating the process for builders and grantees. While HUD certainly encourages grantees to use the most protective approach where CISA isn't available or actionable, the Department believes that requiring grantees to look at both the FVA and 0.2-percent-annual-chance flood approach is unnecessary for noncritical actions. Instead, HUD will require review of both 0.2-percent-annual-chance flood approach and FVA to determine elevation heights only for critical actions. HUD believes that CISA tools will likely be available in coastal areas more quickly than inland locations and as such, should help to better determine the effects of sea level rise and wave heights for those structures.

HUD believes that a tiered approach with a preference for using CISA, where possible, before considering the 0.2-percent-annual-chance flood approach and/or FVA approaches, allows for the best outcome of both protectiveness and functionality for HUD grantees and recipients.

It should also be noted that the Federal funding action is the trigger for NEPA and part 55 compliance. Where a HUD-funded or -insured action is proposed, an environmental review meeting part 55 requirements is required. HUD will not be enforcing these requirements retroactively for projects with a completed environmental review.

F. Question #6: Feedback on Alternative Measures That May Help To Promote the Production and Availability of Affordable Housing in the Near-Term While Still Promoting Flood Resilience

1. Arguments That HUD's Proposed Rule Will Impede Affordability and Housing Supply

Several commenters raised concerns that development restrictions and/or increased costs to comply with proposed requirements would chill interest and ability to develop, operate, or rehabilitate affordable housing, resulting in higher rents and housing costs, limited ability to borrow, and/or unattainable loans. Additionally, several commenters stated that increased compliance costs will result in borrowers deferring or foregoing repairs and upgrades to existing affordable housing.

One commenter disagreed with HUD's projected construction costs, asserting that HUD relied upon an outdated 2013 FEMA study, which fails to account for inflated input prices, supply chain challenges, and labor challenges. This commenter also questioned HUD's certification that there is no significant economic impact on small entities, citing that 88 percent of homebuilders and specialty contract firms are self-employed independent contractors. The commenter provided its own survey of builders, finding that elevating single-

family home to two feet above BFE would add $5-$10 thousand dollars to cost of construction; and costs would be even higher where builders prefer slab foundations due to humidity, which are more expensive to elevate than homes on piers. Further, this commenter conducted the following analysis of the impacts of cost increases on homeowners and renters: a $1,000 increase in median home price would price 140,436 households out of the market; a $1,000 rent increase per unit would price out an additional 32,289 renters.

Several commenters explained that elevation requirements would cause increased transportation costs for soil import from certified fill sites and earthwork and compacting costs of the additional fill.

Several commenters specifically identified the requirement to maintain flood insurance as causing additional operating costs, which will be passed along to residents in the form of higher rents and housing costs. Several commenters stated that it is unlikely that insurance costs for homeowners or multifamily owners will decrease sufficiently to offset the increased construction costs, asserting that HUD did not provide evidence that insurance costs will decline.

One commenter stated that limiting the current streamlined 203(k) loan to $35,000 in renovations means that it may not be a lending option for borrowers mandated to raise substantially damaged properties to BFE +2 feet.

Several commenters noted that affordable multifamily building and rehabilitation projects may be deferred, scaled back, or foregone where increased costs cannot be offset by increased rent, preventing delivery of needed housing supply. Several of these commenters reasoned that there is a direct correlation between Federal housing policies impacting housing supply and affordability and homebuilding stakeholders' willingness to create affordable housing supply.

One commenter noted that underproduction of housing has translated into higher housing costs, resulting in a decline in the number of affordable units currently available. This commenter outlined difficulties facing housing providers—narrow margins, ongoing labor and material challenges, elevated regulatory costs—and cited recent surveys indicating that 79 percent of developers reported construction delays, with almost half citing project infeasibility as the cause.

One commenter stated that the proposed rule's floodplain expansion will reduce opportunities to develop HUD projects in low-lying areas and thus reduce housing for low-income families, who are in turn less likely to be able to afford relocation.

HUD Response: HUD appreciates the commenters' feedback about their concerns that additional elevation requirements could increase costs and chill investment in future housing. HUD acknowledges that the additional elevation requirements from the increased elevation standards proposed to the Minimum Property Standards and the increased regulatory footprint proposed in the part 55 update could have additional costs associated with them. In the RIA, HUD found that the increase in construction costs for new residential structures of elevating an additional 2 feet above BFE would average between 0.3 and 4.8 percent of the building cost. HUD contends that the benefits of protection provided by these mitigations are greater than the cost of compliance. In fact, the RIA shows that the lower bound for losses avoided based on the updated part 55 provides more than $50 million in benefits even using the higher 7 percent discount rate. Federal investment in the construction of multifamily and/or public housing in riskier areas prone to flooding does not increase the availability of safe affordable housing units. It is HUD's goal to disincentivize continued Federal investment in high-risk flood-prone areas.

Short term market volatility in prices and labor is a poor indicator for regulatory decisions and those factors are instead looked at in aggregate over longer study periods. HUD reviewed the best available studies and stands by the construction costs and potential impacts on builders of all sizes as outlined in the RIA.

HUD strongly disagrees that elevation requirements would cause any change in transportation costs for fill. In its rule, HUD is not mandating how elevation is achieved; therefore, grantees are free to utilize methods of elevation that do not involve fill. Additionally, with the removal of the exemption for LOMRs based on fill, HUD is actively discouraging its use as a method for elevation.

With this rule, HUD is not changing its requirements for maintaining flood insurance, which are mandated by statute. Therefore, HUD disagrees that utilizing existing requirements will increase operating costs. HUD grantees have also always had the ability to extend flood insurance requirements beyond those established as the minimum by HUD. Additionally, HUD notes that HUD's encouragement for the purchase of flood insurance outside the 1-percent-annual-chance floodplain is not a requirement.

HUD has decided to remove the elevation requirement for substantial improvement under the Minimum Property Standards to avoid adversely impacting homeowners renovating existing single-family homes. While HUD appreciates the commenter's feedback regarding 203(k) loans, Standard 203(k) financing allows a homeowner to finance improvements with an insured mortgage that may be based on a loan-to-value ratio using 110 percent of after improved value of the property. Regarding Limited 203(k), on November 29, 2023, HUD published a draft Mortgagee Letter (ML), *Revisions to increase the Maximum Rehabilitation Costs for Limited 203(k), Rehabilitation Period for both Standard and Limited 203(k), and Consultant Fees Schedule for the 203(k) Rehabilitation Mortgage Insurance Program (Section 203(k) Program),* for feedback on the FHA's Office of Single Family Housing Drafting Table. The ML proposes to expand the rehabilitation costs for Limited 203(k) from $35,000 to $50,000 and to $75,000 for high cost areas.[39]

2. Arguments That HUD's Proposed Rule Will Improve Housing Affordability

Several commenters asserted that property resilience investments are necessary to increase affordable housing at individual and/or government-wide levels.

Several commenters suggested that reduced property damage and broader socio-economic costs (*e.g.,* displacement) created by this rule outweigh potentially increased construction costs for projects in flood-prone areas, in turn increasing housing affordability. One commenter cited evidence that the number of affordable housing units at risk from coastal floods and sea level rise is expected to triple over the next 30 years.

Several commenters stated that it is incorrect to measure the costs of flood resilience requirements solely by increased construction costs/home prices because the cost of homeownership also includes costs to live in, maintain, and insure a home over time, especially homes subject to recurrent natural disasters that may become uninhabitable (and the broader cost of communities becoming uninhabitable).

[39] The draft ML is available at *https://www.hud.gov/program_offices/housing/sfh/SFH_policy_drafts.*

Another commenter cited evidence that the savings benefits of building to modern building codes come without negatively impacting housing affordability, stating that no peer reviewed research finds otherwise. This commenter cited findings that insurance savings from meeting mitigation requirements can reduce homeowners' net monthly mortgage and flood insurance costs by at least 5 percent, balanced against about half a percentage point increase in home purchase price for improvements to model resilience codes in an area affected by riverine floods.

Another commenter suggested that the proposed rule mitigates increased construction costs through its identification of practicable alternatives and provision of technical assistance to help recipients comply with new standards.

One commenter argued that disaster resiliency standards will lessen reliance on HUD to rebuild and replace community assets damaged by natural disasters, allowing HUD to prioritize programs that increase the stock of affordable housing and availability of mortgage insurance. This commenter provided examples of post-flood closures of multifamily units precipitating negative shocks to local housing markets.

Several commenters pointed to jurisdictions and programs that already require greater elevation standards and requirements than HUD as demonstrating that stronger standards are feasible and cost-effective.

One commenter urged that the demonstrated long-term financial benefits of flood adaptation (citing a 6:1 benefit-cost ratio for HUD- and FEMA-supported mitigation measures) should be extended to affordable housing residents.

Another commenter supported measuring/scoring property-level risks across the spectrum of environmental hazards, providing government and private stakeholders with insight to balance the costs and benefits of adding finely tuned/tailored resiliency measures to building codes.

HUD's Response: HUD appreciates the commenter's sentiment that property resilience investment from the Federal level is necessary to increase affordable housing. HUD agrees that the reduced property damage and broader socioeconomic benefits created by this rule outweigh the additional cost of compliance for flood-prone areas. This is even more important in areas that may be affected by climate change.

HUD appreciates commenters' feedback regarding the measurement of the cost of flood resilience. While HUD agrees that the cost of a community becoming uninhabitable over time would have more devastating effects than simply more expensive housing, it is unfortunately difficult to quantify those consequences outside of their direct economic impact. Generally, HUD agrees with the commenter's sentiment that the savings benefits of modern building codes on housing outweigh any impacts on housing affordability. HUD has previously and will continue to help grantees review practicable alternatives when project costs are too high to build due to elevation requirements.

HUD generally agrees with the commenter's feedback that the increased resilience standards should help avoid damages from future flood disasters and thus increase the longevity of new affordable housing. HUD appreciates its local partners that have already demonstrated the effectiveness and feasibility of higher standards in their communities.

3. Suggested Revisions Commenters Believe Will Help Promote Affordable Housing

One commenter suggested that HUD amend the rule to provide greater financial flexibility to design and construction firms by quantifying design/construction-related costs to achieve the FFRMS as deferred maintenance instead of substantial improvements.

Another commenter suggested that HUD proactively target financial and technical assistance to support low-income and historically disadvantaged communities, stating that opportunities recently codified by the Community Disaster Resilience Zones Act, Public Law No. 117–225 could be instrumental.

One commenter urged HUD to increase per unit maximums and provide waivers where necessary (*i.e.,* match requirements) to ensure that communities in which the entire buildable area is within newly designated floodplains do not confront such high costs as to effectively cut off HUD funding.

One commenter urged HUD to revise the flood elevation measurement for manufactured homes to be consistent with the site-built homes measurement, to ensure that manufactured homes remain cost effective. This commenter reasoned that expanding the supply of manufactured housing is a crucial component of preserving affordable housing and that a large number of manufactured homes are located on floodplains.

HUD's Response: HUD believes that for the purposes of compliance with floodplain mitigation requirements under part 55, rehabilitation needs to be considered substantial improvement when the costs are more than 50 percent of the value of the structure and/or they include the expansion of units by more than 20 percent. HUD notes that simply because a project is considered a substantial improvement does not mean that that project cannot move forward under the current part 55 requirements. Part 55 simply adds mitigation requirements to ensure that the overall structure is more resilient. Even in communities where large swaths of the buildable area fall into the regulatory floodplain of concern, the requirements do not prohibit building; they require mitigation to ensure new construction is safe. HUD notes that § 55.21 also provides an alternative process for existing nonconforming sites meeting specific thresholds for protectiveness to continue to receive support and avoid cutting off existing communities from Federal funding.

HUD agrees with the commenter's feedback that HUD funding programs and technical assistance should benefit low-income and historically disadvantaged communities. Such benefits are explicit requirements for many HUD funding programs and are included in Goals 1 and 2 of HUD's Strategic Plan: Support Underserved Communities and Ensure Access to and Increase the Production of Affordable Housing.

HUD agrees with the commenter about consistent regulations and HUD has and will continue to require that manufactured housing requirements be consistent with those for stick-built homes with regards to part 55 elevation requirements. Under part 55, new siting and substantial improvement of manufactured housing units (MHUs) are considered the same as new construction and substantial improvement for stick-built homes and therefore subject to the part 55 elevation requirements. To clarify this policy, HUD has revised the rule language to reference MHUs in the definitions for new construction and substantial improvement.

Further, for both manufactured homes and stick-built homes subject to part 55, to determine the lowest floor, HUD looks to FEMA's regulations in 44 CFR 59.1 and FEMA's Elevation Certificate guidance or other applicable current FEMA guidance. For manufactured homes in A Zones, FEMA recommends measurement of MHU elevation from the I-beam as a best practice. HUD recommends following FEMA best practice where feasible. For manufactured homes in coastal high

hazard areas (Zone V), FEMA requires measurement of MHU elevation from the bottom of the lowest horizontal structural member (*e.g.,* the I-beam).

It is important to note that FHA-insured single family housing is not subject to part 55 and that FHA-insured manufactured housing is not subject to part 55 or to the 24 CFR 200.926d elevation standards under this final rule. Eligibility requirements, including elevation standards, for FHA-insured manufactured housing can be found at 24 CFR part 3285: Manufactured Home Installation Standards and 24 CFR 203.43f: Eligibility of Mortgages Covering Manufactured Homes, as applicable, which are outside the scope of this rulemaking. HUD understands that the part 55 elevation requirements for MHUs differing from the FHA insured MHU requirements may lead to confusion where HUD programs subject to part 55 are installing MHUs. To address this, HUD intends to release guidance and technical assistance material focused on these MHU requirements which should help project sponsors and responsible entities ensure compliant programs.

HUD agrees with commenters that wish to minimize the disruption to the delivery of affordable housing. As such, after reviewing public comments, HUD has determined to provide a delayed compliance period to allow entities regulated by this rule a grace period to come into compliance with the revised requirements. Compliance with the amendments to part 200 of this rule, including the update to the Minimum Property Standards, is required for new construction where building permit applications are submitted on or after January 1, 2025. This delay is intended to allow home builders and developers ample opportunity to adapt and prepare for the requirements of this rule. For FHA programs and programs subject to the MAP Guide, compliance with the amendments to 24 CFR part 55 is similarly required no later than January 1, 2025, as more thoroughly described in the Compliance Date section of this rule. Compliance with all other parts of this rule and for all other programs, except for those noted for parts 200 and 55, is required no later than 30 days after the rule becomes effective.

4. Additional Suggestions To Promote Resilient and Affordable Housing

Several commenters urged HUD to pair efforts to make floodplain housing more resilient with a focus on affordable housing development outside of floodplains and solving how to accommodate growing housing need as floodplain housing becomes increasingly uninhabitable. One commenter reasoned that focusing affordable housing development outside floodplains and wetlands will counter longtime exclusionary zoning practices and direct scarce financial resources to building affordable housing instead of mitigation activities. However, this commenter stated that HUD should still fund rehabilitation of existing affordable housing in floodplains through programs like Community Development Block Grants for Disaster Recovery (CDBG–DR) to prevent displacement. This commenter outlined their view of three root causes of the current shortage of affordable housing—Congress consistently underfunding housing subsidies; Congress's decade's long divestment in existing public housing; and a severe lack of disaster housing resources and the use of those limited funds for non-housing costs, and those funds disproportionately benefit homeowners over renters. Another commenter suggested that HUD proactively fund buyouts with relocation assistance for persons living at properties that have experienced severe repetitive losses.

One commenter urged HUD to take the following additional measures to promote production and availability of affordable housing: (1) require HUD CDBG–DR and Community Development Block Grants for Mitigation (CDBG–MIT) grantees to rebuild public and affordable housing on a one-for-one basis, deeply affordable in lower-risk areas and in a manner that affirmatively furthers fair housing (AFFH); (2) ensure that the right to return to communities is not conditioned on returning to high-risk area; (3) ensure that grantees are using funding to redress historical disinvestment in infrastructure—including flood protection infrastructure—in low-income communities and communities of color; (4) carry out Department AFFH obligations and ensure that HUD holds grantees accountable for complying with civil rights obligations on which Federal funding is conditioned; and (5) ensure that subsidies, including Housing Assistance Payments (HAP) contracts, can be easily transferred to new sites and require a new assessment before HAP contracts are renewed following a flooding event.

Another commenter urged HUD to consider ways to expedite the regulatory process for affordable housing projects, while ensuring they follow proposed requirements.

HUD's Response: HUD appreciates the commenters' feedback regarding making floodplain housing more resilient by encouraging development outside the floodplain where feasible. The 8-step decision making process does require project sponsors to consider alternatives to any development plans in the floodplain. HUD encourages this alternatives analysis to consider other more resilient sites located outside the floodplain.

While HUD does not consider this rulemaking the appropriate place to consider changes to disaster assistance funding or other HUD programs, HUD appreciates the commenters' enthusiasm for Federal assistance directed towards increasing affordable and resilient housing. HUD notes that individual HUD programs may introduce program specific guidance or policy to more efficiently implement FFRMS requirements.

F. Question #7: Feedback on the Proposed FHA Single Family Minimum Property Standards

A discussion of the comments received regarding the FHA single family Minimum Property Standards can be found in this Public Comments section of this final rule in the subsection titled *Minimum Property Standards for 1–4 unit residential structures.*

G. Question #8: Whether Provisions of the Proposed Rule Will Redress, Perpetuate, or Create Any Disproportionate Adverse Impact Against Any Group Based on Race, National Origin, Color, Religion, Sex, Familial Status, or Disability, as Well as How HUD Can Further Incorporate Equity Considerations Into This Proposed Rule To Help HUD Meet Its Affordable Housing and Community Development Mission

1. Proposed Rule Promotes Equity

Several commenters stated that the proposed rule's blended climate and equity lens will contribute to redressing disproportionate adverse impacts faced by protected classes; and that allowing communities of color and low-income communities to endure elevated flood risk would perpetuate systemic inequalities.

Several commenters specifically supported requiring inclusion of environmental justice public engagement in the 8-step decision making process. Several commenters added support for HUD's plan to issue policy guidance on environmental justice.

Several commenters stated that replacing the misleading 1-percent-annual-chance flood approach with the CISA approach will ensure more

accurate accounting for hazard risks to federally assisted housing. One commenter explained that this is essential to promote wealth retention in Black, Hispanic, Indigenous, and low-income communities harmed by centuries of inequitable resource allocation and exposure to natural and artificial hazards, including heightened exposure to hazardous flooding and inequitable distribution of disaster aid.

HUD Response: HUD appreciates the commenter's feedback regarding climate and equity. It is the Department's goal to fully implement the goals and objectives of E.O. 14096, including to identify and address disproportionate and adverse human health or environmental effects of the Department's programs, policies, and activities on communities with environmental justice concerns, while also working to be more protective and promote resiliency to flooding. HUD agrees with the commenter's sentiment that CISA should help to better account for and reduce hazard risks to federally assisted housing. HUD also agrees that housing is an essential component to generational wealth building and that ensuring its resilience in the face of flooding helps communities build into the future.

2. Proposed Rule Perpetuates or Creates Disproportionate Adverse Impacts on Protected Classes

a. Inequities Perpetuated by Continued Development in High-Risk Areas

Several commenters raised concerns with provisions of the proposed rule that they assert would perpetuate or create disproportionate adverse impacts on protected classes, citing evidence showing the following: a disproportionately high percentage of low-income, minority, and other communities that are vulnerable to flooding live in high-risk areas; communities of color face disparate adverse impacts of flooding (both in rate of flooding and damage caused by flooding), as well as face challenges with access to post-disaster resources and rehabilitation. One commenter cited evidence that flood risk will increase by 26 percent by midcentury and would be disproportionately high for Black communities, with population growth in flood-prone areas accounting for 75 percent of that increased risk (and 19 percent caused by climate-related flood impacts).

Several commenters asserted that even with the administrative steps of § 55.20, the exemptions in part 55 allowing continued housing development in high-risk areas will perpetuate and create disproportionate adverse impacts on several protected classes of people, especially considering that its primary application is subsidized housing units. Several commenters noted that along with placing residents in danger, this will cause HUD and other public entities to spend limited resources on disaster recovery for all citizens, taking away from investments in affordable housing and programs to redress historical disparities. Several commenters cited FEMA risk data that 32 percent of federally assisted housing stock (1.5 million housing units) is at high risk of negative impact for natural hazards, compared to 24 percent of market rent homes and 14 percent of owner-occupied homes. These commenters noted that underestimates in FEMA's 1-percent-annual-chance flood hazard measurements mean that many more federally assisted homes are at risk, which supports the need for the new FFRMS standard to better assess risk. Another commenter presented evidence on how maladaptation measures—such as new infrastructure that cannot be improved without significant investment—entrench inequities.

One commenter explained that racial disparities in flood vulnerability are a direct result of local, State, and Federal exclusionary policies and practices, perpetuated by this rule. This commenter asked HUD to revise the 8-step decision making process to directly account for historical patterns and practices of affordable housing placement. This commenter caveated their response by adding that HUD must continue to provide funding to rehabilitate and improve the resilience of existing subsidized units in high-risk areas and honor residents' right to return to prevent post-disaster displacement.

This commenter also emphasized that households with low incomes are negatively impacted by flooding even if all mitigation and floodproofing measures are taken. The commenter explained that flooding damage takes a variety of forms such as the destruction of vehicles and personal property, toxins spread by floodwaters, and disruption of employment or childcare. As such, people with low incomes may experience significant negative impacts from flooding that are not related to damage to a housing unit. The commenter added that FEMA is shifting resources away from ''small disasters,'' reducing the resources available for replacing personal property, and that residents of homes built in FFRMS floodplains will continue to be significantly impacted even with the floodproofing and mitigation steps outlined in this proposed rule.

Several commenters asserted the alternative processing for existing nonconforming sites under § 55.21 will perpetuate or exacerbate inequalities. One commenter explained that exceptions are typically granted based on the condition under § 55.21(a)(1) that it's not ''practicable to transfer . . . under existing program rules, financial limitations, and site availability,'' by relying on historical discriminatory policies and practices that resulted in the disproportionately high rates of affordable housing in the high-risk locations. Providing two examples of HUD supporting development repair in unsafe areas, this commenter argued that HUD cannot excuse its obligation to redress discriminatory government policies and practices because those policies have, for example, increased property values in lower risk areas. Another commenter asserted that HUD failed to support the existing non-conforming sites with evidence that the floodway and adjacent areas will be safe over the next 20–40 years, also the relevant term of years for several listed forms of HUD assistance. This commenter referenced four HUD Inspector General reports finding problems with HUD's assessment of environmental and health risks. This commenter posed the following questions to HUD as important considerations in understanding the impacts of this provision on protected classes:

(1) Did HUD perform analysis on potential complete impacts related to floodways?

(2) How will the floodway analysis occur on an individual site basis?

(3) How is HUD projecting floodway expansion related to increased atmospheric water vapor over coming decades?

(4) How will HUD use climate science to project floodways' potential instability?

(5) How will HUD's site analysis consider climate-induced increase in pluvial flooding?

(6) How will HUD's site analysis consider potential sea level and associated groundwater rise?

(7) What is the universe of these floodway projects?

(8) What is HUD's estimate of how many HUD-assisted projects have buildings in floodways?

(9) How many similar projects has HUD found with floodway impacts?

(10) What racial equity and environmental justice considerations did HUD account for in drafting this provision?

(11) How will racial equity and environmental justice analysis apply to individual sites?

Another commenter asked HUD to address its decision to allow public housing residents to stay in or near a floodway in a rule acknowledging the dangerous and increasing impacts of climate change.

Another commenter added that stronger protections would lessen reliance on HUD to rebuild and replace community assets damaged by natural disasters, which currently divert funds away from programs targeting low-income families, aging populations, and persons with disabilities.

HUD Response: HUD appreciates the commenter's concern that many low-income communities and communities of color live in higher risk areas in and around floodplains. HUD believes that this rule supports a greater resilience within these communities to flooding and other related disasters, thus avoiding loss of services during disasters and any disparate adverse impacts. Resilient infrastructure helps to counteract entrenched inequalities by providing communities with resilient services through floods. HUD believes that a policy which bars development in the FFRMS floodplain would be too restrictive and have a significant negative impact on affordable housing availability. By allowing limited development and requiring flood risk mitigation equitably across the FFRMS floodplain through this rule, HUD believes substantial risk reduction can occur without substantial impact on housing affordability for all communities across the Nation who face flood risk. HUD agrees with commenters that the FFRMS standard is needed to better assess risk for Federal projects.

Separate from this rulemaking, a critical part of HUD's mission is to fully implement the Fair Housing Act, which not only prohibits discrimination but also directs HUD to ensure that the Department and its program participants proactively take meaningful actions to overcome patterns of segregation, promote fair housing choice, eliminate disparities in housing-related opportunities, and foster inclusive communities that are free from discrimination. In keeping with this mission, HUD also notes that under the new rule, § 55.20(b)(4) requires that any activity in a community with environmental justice concerns must coordinate its consultation and decision making from §§ 50.4(l) and 58.5(j). HUD disagrees that this rule perpetuates exclusionary policy that exacerbates racial disparities in vulnerable communities. HUD is working on fully implementing the goals of E.O. 14096 on revitalizing the nation's commitment to addressing environmental justice, which includes implementing practices that address or prevent exacerbating disparities in vulnerable or other affected local communities, along with other relevant E.O.s. In keeping with the goals of E.O. 14096, this rule will align other HUD programs with existing disaster recovery program requirements for elevation and will continue to allow projects to proceed in the floodplain so long as mitigation is incorporated into the project scope. HUD believes this alignment will help to increase the resiliency of vulnerable communities in high-risk areas.

HUD appreciates that no flood mitigation except for buyouts is entirely safe over time and that some households with low incomes can be negatively impacted despite the best mitigation efforts. The RIA considered the benefits of losses avoided from flooding. While HUD maintains no authority over FEMA's disaster assistance efforts, it is the objective of HUD for this rule to significantly improve resilience of newly built structures in the floodplain.

HUD appreciates the specific questions provided by commenters regarding implementation of the rule and will work to address these questions through future guidance. Regarding increases in atmospheric vapor and the expansion of the floodway, HUD relies on FEMA to determine and define the floodway as part of its FIRM process. HUD also intends to continue to rely on CISA data as it becomes more readily available. Over the next 20–40 years, HUD anticipates a significant development in flood resilience data, which will bolster the availability of CISA data nationwide. This in turn will result in better flood resilience outcomes. HUD notes that the rule's RIA contains equity and environmental justice analyses.

b. Concerns With the Public Notice and Community Engagement Requirements

Several commenters urged HUD to go beyond proposed public engagement and notice requirements in the proposed rule, mandating more accessible and transparent public notice to prospective buyers and renters in floodplains; community-led planning and decision making; and full accounting for long-term and indirect risks. These commenters reiterated that community engagement in planning and the floodplain hazard notice is a critical requirement that will allow for informed decisions but identified issues that they believe will perpetuate inequalities.

Several commenters stated the proposed 8-step decision making process and transparency requirements only account for short-term, direct damages of flooding and must be improved to account for long-term and indirect safety risks to those considering living in flood-prone areas. One commenter specified several indirect harms of flood events that have a disproportionate impact on marginalized communities not addressed by the proposed mitigation and floodproofing measures—toxins spread through floodwaters; disruption of employment, education, healthcare access; and infrastructure damage. More broadly, another commenter urged HUD to specifically account for the holistic cost of homeownership/rental value over the life of a home in assessing economic impact of requirements and disparate burdens throughout this rule, including the cost to live in, maintain, and insure a home over time, especially homes subject to recurrent natural disasters that may become uninhabitable. This commenter cited several sources finding that race, ethnicity, physical disability, and age are factors that significantly impact disaster vulnerabilities.

Another commenter urged HUD to amend §§ 55.20(f)(2)(iii) and 55.4 to ensure that environmental justice reviews require both public participation and a substantive analysis of the proposed action to ensure it does not overly burden existing communities. This commenter opposed exempting environmental justice outreach when data or mapping does not identify a particular community of concern. This commenter asserted that such flexibility: (1) incentivizes developers to save money by foregoing robust environmental justice review alongside communities historically underrepresented by land use decisions; and (2) shifts the burden onto community members. Specifically, this commenter urged HUD to delete the parenthetical ''if conducted'' from Step 6 under § 55.20(f)(2)(iii). This commenter stated that this proposed revision aligns with other HUD guidance, such as the environmental justice worksheet.

This commenter also asked HUD to amend § 55.4, § 50.23, § 58.43, or § 58.59 by adopting language access requirements from the voting rights context to ensure that immigrant and other non-English speaking communities have access to hazard notifications and can participate in community engagement. This commenter recommended that HUD model requirements after Section 203 of

the Voting Rights Act, stating that materials must be provided in alternative languages where, according to the U.S. census, citizens of voting age: are more than 10,000, or more than five percent of all voting age citizens, or on an Indian reservation, are more than five percent of all reservation residents; and the illiteracy rate of the group is higher than the national illiteracy rate. Additionally, this commenter urged HUD to amend § 55.20(b)(2) to allow at least a sixty (60) calendar day comment period, which this commenter stated will create no additional delay or economic harm, while providing necessary opportunity for public awareness.

Another commenter asked HUD to add notification requirements for actions involving repossession, receivership, foreclosures, and similar property acquisitions; and where issuance of rental subsidies is not associated with a project. This commenter reasoned that that HUD-associated foreclosed homes are often resold with scant information.

Another commenter urged HUD to strengthen the flood risk management and project design criteria in the following ways: (1) mandate proactive outreach to affected communities; (2) require both early resident and community leader engagement and engagement carried forward throughout project design and implementation; and (3) specify that communities' lived experiences—regarding community priorities, intended uses, flood susceptibility, and population specific concerns—are given equal weight as technical modeling in flood mitigation options assessments. This commenter reasoned that co-producing these assessments and planning processes will make residents more likely to support projects and help to address any obstacles, improve community understanding of flood risks and how they can individually prepare, and reinforce a sense of community.

Another commenter encouraged HUD to include additional flood insurance resources for those who may have difficulty understanding these insurance policies.

Another commenter urged HUD to amend §§ 55.20(f)(2)(iii) and 55.4 by incorporating other agencies' guidance (*e.g.,* the EPA Legal Tools to Advance Environmental Justice) and to define the substantive analysis necessary in an environmental justice review. For example, this commenter stated that environmental justice reviews must also require mitigation or an alternatives analysis if a project will have harmful impacts on the community. This commenter also stated that review must account not only for flood risk, but also for the intersecting and cumulative risks from all environmental hazards and disparate impacts, including discriminatory zoning, hazardous uses, disinvestment in infrastructure, and housing discrimination.

Several commenters stated that while allowing online posting improves accessibility in some ways, it still puts the onus on residents to identify projects that may affect them.

One commenter asked how HUD plans to remove barriers that low-income and protected stakeholders face that may make it more difficult for them to participate stakeholder meetings.

HUD Response: HUD appreciates the commenters' sentiment for greater accessibility and transparency for public notices to prospective buyers and renters in floodplains. HUD agrees that greater notification standards can allow for buyers and renters to better account for those risks when considering flood insurance. Additionally, HUD agrees that greater community engagement in planning and floodplain hazard notices is a critical component of the 8-step decision making process. HUD believes that the increased notification requirements for buyers and renters, along with more acceptable methods of public noticing for the 8-step decision making process found in the rule, will create the greater transparency and accessibility of vital floodplain information without creating undue regulatory burdens on already limited funding for projects.

HUD believes that Step 4 of the 8-step decision making process specifically requires responsible entities to look at direct and indirect impacts of building their project in the floodplain or wetland and that the requirements in the rule and the existing 8-step decision making process are not limited to the short-term impacts of living in flood-prone areas.

While HUD appreciates the comments on economic impacts associated with living in the floodplain, it would be inappropriate under the rule for HUD to address the holistic cost of home ownership in areas prone to natural disasters. There are innumerable potential influences of the holistic costs and indirect safety risks associated with homeownership/renting and it is impossible to account for all possible factors. HUD feels strongly that the RIA analyzes all relevant costs and benefits associated with this rulemaking. HUD appreciates the commenters' feedback that environmental justice reviews should be included more broadly, applying additional study and review is something the Department may consider in the future, contingent on the availability of resources. HUD also notes that consideration of environmental justice is a requirement for grantees under § 58.5(j), consistent with HUD's policy goals, including pursuant to E.O. 14096, as well as the consideration for environmental justice requirements under NEPA. HUD notes that responsible entities are required to complete an acceptable 8-step decision making process, that public input must be captured throughout that process, and that such process avoids placing the burden of compliance on community members.

HUD agrees that providing language from the Voting Rights Act or a 60-day public comment period could further public awareness. However, HUD believes that using requirements similar to Section 203 of the Voting Rights Act and quadrupling the required public comment period would cause significant economic harm to projects ready to complete environmental reviews and move towards construction. Additionally, while HUD would encourage grantees to utilize the tools of Federal partners in the completion of their environmental justice reviews, HUD has no plans to mandate the use of any particular tool for environmental justice analysis with this regulation as no one tool is suitable for every type of project HUD funds.

Under § 55.4 of the final rule, HUD-acquired properties sold after foreclosure would include the same notification requirements as those sold in other manners even where no rental subsidies were applied. HUD contends that the final rule will cut down on the properties sold where little information on flood hazard status was available so that homebuyers could make better informed decisions.

HUD notes that public participation in planning and implementation projects subject to review under NEPA is strongly encouraged. HUD believes that communities need to play a substantive role in the development of these plans and implementation of these actions because helps to ensure those communities are taking positive steps to be a part of their own solutions. That said, while HUD appreciates accounts of community members' lived experiences, flood modeling and mapping based on the standards described in this rule, like the FFRMS Federal agency tool in development by the White House Flood Resilience Interagency Working Group and the FFRMS Science Subgroup, with input from CEQ, OSTP, FEMA, NOAA, and HUD, is expected to be available at a consistent and nation-wide scale.

HUD appreciates the commenters' feedback regarding flood insurance resources for homeowners and notes that while this rule does not require flood insurance to be obtained beyond the FEMA-mapped 1-percent-annual-chance floodplain, it does encourage it. As has always been the case, grantees may extend additional requirements for flood insurance beyond the HUD minimum. Additionally, many HUD programs, like CDBG–DR, do allow for flood insurance to be subsidized for a period where it is a required mitigation post construction completion.

HUD appreciates the commenters' feedback that online posting improves accessibility for public noticing. HUD suggests that project sponsors work with their regional HUD representatives to help them achieve greater levels of accessibility and remove any other barriers their potentially affected project populations may face in their attempts at participation in the 8-step decision making process.

c. Program Standards

Several commenters pointed to disparate standards and requirements that they assert will exacerbate disproportionate adverse impacts on affordable housing residents and communities of color.

One commenter urged HUD to adopt the same higher floodplain management standards Department-wide, stating that not expanding higher standards across HUD programs may exacerbate inequalities.

Another commenter offered a direct and specific critique of the higher floodplain management standards FHA-insured market rate multifamily housing is subject to under the MAP Guide as compared to public housing. This commenter also urged HUD to increase resilience for manufactured housing residents (*e.g.,* facilitating public investments in adaptation projects, mandating stricter building codes, increasing access to disaster recovery funds, and incentivizing siting manufactured housing on safer areas).

HUD Response: HUD contends that this rule will have a beneficial impact on communities at greatest risk for flooding and that making those communities resilient in the face of climate change will help them continue to thrive in the future. Furthermore, HUD believes that the requirements in this rule will not have a disproportionate adverse impact on affordable housing residents and communities of color.

HUD appreciates the commenters' concerns regarding higher floodplain standards Department-wide beyond those programs covered by the Minimum Property Standards. The vast majority of other HUD programs are subject to floodplain management standards laid out in the revisions to part 55. While some HUD programs have historically implemented higher floodplain management standards, all HUD programs subject to part 55 will now be required to implement the same more protective FFRMS standard. Following implementation of the final part 55 and part 200 rules, HUD programs may issue program-specific guidance to implement these more protective requirements.

While HUD agrees with the commenter that FHA insured multifamily programs are currently subject to the standard from the MAP Guide and thus, a higher standard than public housing programs which are subject to part 55, HUD notes that the part 55 revisions align floodplain management standards across these programs—both FHA insured multifamily and public housing programs will be subject to the FFRMS floodplain management requirements.

HUD appreciates the commenter's feedback regarding increasing resilience for manufactured housing residents. It should be noted that under part 55, HUD has historically considered MHUs as site-built housing and therefore subject to the same part 55 requirements under various HUD programs. Part 55 does not apply to FHA's Single Family insured mortgage programs. In this final rule, HUD has made a small revision to clarify the Department's historical position that using HUD assistance for the new siting of MHUs has the same environmental requirements as building and substantially improving site-built housing under 24 CFR part 55.

d. Concerns About Disparate Impacts on Housing Supply

Several commenters raised concerns that restricting affordable housing development and rehabilitation in floodplains, along with a lack of elevation data available to establish the FFRMS, will disproportionately harm low-income and rural communities who are less likely to be able to afford relocation outside floodplains, unless HUD provides additional funding and waivers and increases the per-unit maximum limits. One commenter urged HUD to provide waivers for those most impacted by the rule's curtail of development. Another commenter stated that HUD should consider a practical alternative for developing in floodplains in these areas to avoid excluding rural communities in need of affordable housing.

HUD Response: HUD believes that to align with the goals of E.O. 13690 and E.O. 11988, Federal investment should not place vulnerable populations in risky flood-prone environments and promoting development in the floodplain will place harm on low-income populations. Federal investment in the construction of multifamily and/or public housing in riskier areas prone to flooding does not increase the availability of safe affordable housing units. It is HUD's goal to disincentivize continued Federal investment in high-risk flood-prone areas. HUD encourages grantees to seek practicable alternatives to development in floodplains through the 8-step decision making process.

3. Suggestions How HUD Can Further Incorporate Equity Considerations Into This Proposed Rule

Several commenters recommended that HUD prohibit use of fill dirt to achieve elevation requirements to avoid the damaging consequences of stormwater runoff on adjacent properties and communities, which are often lower-lying and most vulnerable. One commenter stated that where fill is necessary, HUD should require projects to retain the volume of water on site equivalent to the volume of fill used.

Several commenters asked HUD to provide additional and inclusive opportunities for communities historically disproportionately affected by flooding to provide feedback to the Department, during and beyond the public comment period.

One commenter asked that outreach include: clear communication of implementation timelines; broad and extensive training for public officials and stakeholders; and stakeholder partnerships across mitigation, housing, land use, floodplain management, and education sectors focused on engineering, architecture, and environmental science curricula nationwide. This commenter explained that education and clear implementation timelines are essential to prevent potential negative real-estate market impacts, especially in communities that already experience disproportionate adverse impacts of flooding. Another commenter asked HUD to provide additional detail and public engagement on how HUD will consider environmental justice impacts of Department actions.

Several commenters urged HUD to provide additional financial and robust technical assistance targeted to communities of color and low-income communities to help offset costs and break down barriers to implementing the rule. One commenter encouraged

HUD to provide (or require housing authorities to provide) renters insurance, property recovery assistance, and temporary housing, prioritizing Black, Hispanic, Indigenous, and low-income communities that experience disproportionate impacts of climate change and inequitable access to the resources to rebuild after disasters. This commenter reasoned that because renter's insurance is often more expensive in low-income communities and communities of color and HUD programs do not require insurance, these communities often experience property loss that resonates for generations, whereas higher-income people are more likely to be made whole. Further, this commenter explained that critical disaster recovery resources are often denied to, or delayed in reaching, marginalized communities.

Another commenter urged HUD to commit substantial funding and staff to the following actions to ensure equity goals are met: communicating flood risks, potential loss, and environmental justice implications across its portfolio and monitoring and enforcing implementation and compliance.

One commenter described the requirement to coordinate the 8-step decision making process with public engagement associated with environmental justice as a good first step in working towards considering environmental justice impacts, which must be paired with greater affordable housing development outside of the floodplain. This commenter encouraged HUD to proactively provide buyout funding with relocation assistance for repetitive loss properties.

HUD Response: HUD does not mandate how a structure may be elevated and leaves that authority to local jurisdictions who have a better understanding of the necessary engineering needed for foundations in their area. This is also true with regard to the needs of the community when it comes to water runoff from properties.

HUD will continue to work with our local partners and stakeholders to ensure the best possible technical assistance and support can be provided which helps our partners achieve efficient, compliant, and effective floodplain management. HUD intends to provide specific technical assistance to responsible entities to ensure a smooth transition to any new requirements. HUD agrees that clearly communicated requirements and implementation timelines are a necessary part of any successful regulatory update.

HUD notes that the rule does maintain but does not expand previously instituted flood insurance requirements for HUD projects within the 1-percent-annual-chance floodplain. HUD strongly encourages flood insurance for projects located in the FFRMS floodplain to minimize financial losses, but it is not mandated. HUD or the responsible entity may also require flood insurance beyond the minimums established by the FDPA when necessary to minimize financial risk. Renter's insurance does not generally cover floods and is not considered a requirement under the rule.

HUD appreciates the commenters' sentiment that additional funding should be made available to HUD to ensure flood risks are adequately addressed throughout its portfolio. Should funds be congressionally appropriated for flood resilience, HUD would enthusiastically utilize them.

Definitions

A. General Comments on Definitions

Some commenters requested that HUD ''put all definitions at the top of 24 CFR part 55.''

HUD Response: HUD intends to maintain the format and structure of part 55. As such, the definitions section will be maintained in its current location at § 55.2 and not relocated to § 55.1.

B. ''Critical Action'' Definition at Proposed 24 CFR 55.2(b)(3)

One commenter found the definition of ''critical action'' in § 55.2 to be vague. The commenter said this vagueness would make it challenging to align with the standards set forth in this proposed rule and recommended revising the definition, both to make it clearer as to what facilities would be included and to expand its reach.

Several commenters supported the inclusion of ''community stormwater management infrastructure'' and water treatment plants under the ''critical action'' definition. Other commenters requested that HUD define ''community stormwater management infrastructure.'' Commenters said that if the definition includes any stormwater development associated with multifamily construction, including offsite, the definition could be applied to any site at or below the 0.2-percent-annual-chance floodplain elevation, based on the definitions for FFRMS included in the proposed language.

HUD Response: HUD's definition for ''critical action'' comes from E.O. 11988 and guidance issued by the Federal Interagency Floodplain Management Task Force and is considered the same definition for these actions by Federal agencies and departments. As such, HUD has determined that the definition is sufficient to provide guidance and flexibility as needed for practitioners to implement the rule as it stands and disagrees that a definitive list is necessary or advisable.

HUD disagrees that the definition of ''community stormwater management'' could be applied to any stormwater development associated with multifamily construction. As discussed in the proposed rule, the revised definition of critical actions specifically references water treatment plants as examples of a utility or service that would be considered as critical actions. This makes evident that the change is intended to focus on larger infrastructure level projects and not smaller upgrades to most individual structures.

C. ''FFRMS Floodplain'' Definition at Proposed 24 CFR 55.2(b)(4)

One commenter suggested including a very clear definition of what is meant by the ''horizontal floodplain'' for each approach where it applies. The commenter went on to suggest that New York State's guidance document for the Community Risk and Resiliency Act could provide model language.

Another commenter expressed concern that HUD is proposing to use a different definition of ''floodplain'' than is used by FEMA to establish FIRMs. The commenter urged HUD to consider applying terminology and standards consistent with FEMA's. Another commenter asked HUD to clarify if the definition of floodplain applies to a FEMA-recognized 1-percent-annual-chance floodplain or the HUD-recognized FFRMS floodplain. This commenter said that assuming the latter, this represents additional administrative burden and can result in reduced property values compared to similarly located multifamily properties.

HUD Response: HUD appreciates the commenters' suggestion to use the New York State guidance on Community Risk and Resiliency Act as a model for the horizontal floodplain definition. Additionally, HUD understands that some people may have a hard time visualizing what the horizontal extent of a floodplain is without maps created by FEMA. As such, HUD intends to create implementation guidance that includes supportive materials and references to existing tools, such as the FFRMS Floodplain Determination Job Aid,[40] to help individuals identify and visualize

[40] *See https://www.fema.gov/sites/default/files/documents/fema_ffrms-floodplain-determination-job-aid.pdf.*

the horizontal extent of the FFRMS floodplain.

Under Executive Orders 13690 and 14030, HUD, like all Federal agencies, is directed to update its floodplain regulations to be consistent with the FFRMS. Though all agencies are required to comply, not all are able to comply at the same pace. HUD continues to work closely with our interagency partners to ensure that our rules are as aligned as possible and that tools developed by NOAA and FEMA are compatible with our regulatory framework. HUD and FEMA continue to work closely together in these efforts to ensure consistency of guidance. In addition, FEMA has already begun implementation of the FFRMS, in part, through policy and guidance, thereby this regulatory revision will better align with FEMA's current approach to FFRMS requirements.

D. ''Impervious Surface Area'' Definition at 24 CFR 55.2(b)(9)

One commenter stated that runoff coefficients vary greatly among surfaces, including lawn and other surfaces not generally associated with ''impervious surface.'' The commenter recommended that when calculating the effects of projects on receiving waters, metrics be utilized to assess the pre- and post-project runoff calculations to determine appropriate mitigative efforts to minimize impacts to receiving waters and downstream communities.

Another commenter noted that it can be difficult to define whether an entire area is an ''impervious surface'' because some parts of the area fit the definition and some do not. The commenter asked how such a situation would affect the management of an area.

HUD Response: HUD appreciates the commenters' feedback regarding runoff coefficients. HUD policy recommends that project sponsors utilize experts to help them implement effective mitigation activities for all projects with potential to impact wetland and floodplain resources. Professional engineers utilizing best available data and current best practices are recommended where appropriate. These experts can also help determine how permeable various materials are and where they can best be used to mitigate a layered landscape. Additionally, HUD requires the 8-step decision making process to outline necessary mitigations to avoid impacts and to examine practicable alternatives to the project. Because the 8-step decision making process also outlines a public engagement requirement, the public can weigh in on a proposed project to comment on the impervious surface area and its impacts.

E. ''Wetlands'' Definition at Proposed 24 CFR 55.2(b)(13)

Many commenters wrote to support expanding the definition of wetlands. One commenter said that with the expanded definition, HUD can more safely and sustainably carry out its mission in a more streamlined manner. Another commenter reasoned that the expanded definition would provide benefits for soil retention by avoiding flooding. This commenter went on to say that there is greater specificity in how soils may determine which areas are wetlands but that the new definition is a good starting point.

Another commenter stated that the definition of ''wetlands'' in the proposed rule is very similar to the definition in the 1987 Army Corps of Engineers manual, which is employed by the Clean Water Act (CWA) Section 404 regulatory program and Natural Resources Conservation Service. However, the commenter says that such definition does not capture all areas performing wetland functions that benefit storm flow augmentation and enhance resiliency.

The commenter argued that the part of the proposed definition that states ''This definition includes those wetland areas separated from their natural supply of water as a result of activities such as the construction of structural flood protection methods or solid fill roadbeds and activities such as mineral extraction and navigation improvements,'' is unnecessary since the wetland definition is based on ''in-situ'' information rather than geographic location or genesis. The commenter said it is also not clear why the rule states that ''This definition includes both wetlands subject to and those not subject to Section 404 of the Clean Water Act as well as constructed wetlands.''

This commenter suggested that the linkage of wetlands defined under this proposed rule and Section 404 of the CWA, or the Food Securities Act, be removed and that a functional analysis methodology be employed for aquatic resources proposed to be impacted by HUD actions. The commenter said this method would better protect communities and natural infrastructure from the effects of climate change and better preserve those resources functioning to the benefit of the watershed. This commenter further explained that while there are resource areas which may ''overlap'' with other Federal, State, and Tribal regulatory programs, it is worth noting that the intent should be the broad protections of floodplains and their function to ameliorate the effects of climate induced flooding and not merely to replicate Federal program standards.

Several commenters expressed support for a uniform definition of ''wetlands'' across Federal agencies to avoid inconsistent and unpredictable wetland delineations and ultimately unequal application of mitigation measures. Several commenters said wetlands would likely be better protected if the definition of wetlands among Federal agencies could be consistent. Several commenters stated that human error based on misunderstanding of what a wetland is likely results in compliance issues related to unauthorized filling of wetlands.

One commenter argued that HUD should follow the U.S. Army Corps of Engineers and EPA definition of ''wetlands.''

Other commenters wrote that HUD should use the consistent definition of a wetland as defined by the NWI.

Several commenters recommended a clarifying change to the definition of ''wetlands.'' The commenters stated that the definition does not differentiate between ephemeral, intermittent, or perennial streams. They asked HUD to please include the definition of deep-water aquatic habitat in the final rule as it would be helpful to avoid confusion as to whether these mentioned aquatic resources qualify as wetland.

HUD Response: While HUD appreciates the commenters' feedback regarding a broader definition of wetland, it should be noted that the rule does not change HUD's definition of a wetland, it merely clarifies its existing policies that describe wetlands as being more than what is identified on an NWI map. HUD generally agrees that soil profiles can be helpful in determining if a wetland may be present on a site; however, HUD, like many Federal agencies, bases its definition of a wetland on the definition found in Executive Order 11990. As such, many agencies have similar definitions. HUD believes that its definition is sufficient to capture the sensitive areas which are protected under its rules.

While HUD agrees that a functional analysis model could be useful in limited circumstances, the benefits are outweighed by the general complexity of the approach. HUD does not want the rule to be burdensome to its grantees in a way that could limit funding towards necessary programs.

HUD disagrees that all Federal agencies should utilize the same definition for wetlands and that HUD's

definition should be dependent solely on the NWI. Not all Federal agencies fund projects with the same level of potential impact and HUD projects are rarely subject to the permitting requirements of the Clean Water Act. HUD feels that its definition of wetlands is therefore more appropriate for the types of impacts associated with HUD projects.

HUD amended its definition of wetlands to remove reference to things that do not constitute wetlands. This change was made both because it is not necessary to list things that the definition does not cover and avoid confusion about certain areas around deep water aquatic habitats that may be considered wetlands.

HUD intends to release subregulatory implementation guidance to ensure responsible entities utilize compliant processes in their environmental reviews.

F. Recommended Additional Definitions

1. Incidental Floodplain

Several commenters requested that HUD provide a clear definition of the incidental floodplain for public comment. One commenter said this proposed rule would maintain a narrower version of the existing incidental floodplain exception as applied to the FFRMS floodplain (not including floodways, coastal high hazard areas, or within the LiMWA) in proposed § 55.12(g). This commenter said this section would allow projects to proceed without completing the 8-step decision making process where an incidental portion of the project site includes the FFRMS floodplain.

HUD Response: HUD has provided subregulatory guidance and resources on the HUD exchange website to illustrate requirements for approval of a project site, an incidental portion of which is situated in a floodplain. HUD agrees that the rule would maintain a narrower version of the existing incidental floodplain (not including floodways, coastal high hazard areas, or within the LiMWA) and allow those projects that fit under the more limited exception to proceed without completing the 8-step decision making process as stated in Section G of the proposed rule. HUD has also removed § 55.12(g)(3) to avoid duplication and to better align with both existing processes and with the new incidental floodway provisions at § 55.8.

2. De Minimis Improvements

Several commenters requested that HUD define ''de minimis improvements'' in detail.

HUD Response: HUD notes that de minimis improvements, as the name implies, are improvements too trivial or minor to merit consideration. De minimis improvements referenced in § 55.8(a)(1)(ii)(B) include activities that have minimal ground disturbance or placement of impervious surface area to ensure accessibility where permitted by local ordinances and where it does not increase flood risk to the property. HUD intends to provide guidance and technical assistance to help project sponsors ensure any improvements in a floodway are de minimis and utilize the best available engineering practices.

Compliance—New § 55.6 Providing a Process To Complying With This Part, and New §§ 55.8 and 55.10 on Limitations on HUD Assistance in Floodplains and Wetlands

A. New § 55.6, Complying With Floodplain Management and Protections of Wetlands Regulations

One commenter described the new § 55.6 as a useful process for practitioners. This commenter asked HUD to strengthen compliance in the following ways: (1) emphasize floodplain avoidance; (2) require reporting on quality of functional floodplain and wetlands impacted by a floodplain action; and (3) develop methods for tracking cumulative loss of functional floodplains and wetlands.

Several commenters asked HUD to provide the ''Roadmap to complying with this part'' for public comment once available.

Several commenters urged HUD to ensure State, local, Tribal, and regional entities have the tools they need to comply with this proposed rule.

HUD Response: HUD appreciates commenters' feedback on the new § 55.6 on complying with floodplain management and protection of wetlands regulations. HUD agrees that compliance can be strengthened via floodplain avoidance, reporting on impacts to floodplains and wetlands, and tracking cumulative losses. HUD believes that the 8-step decision making process at § 55.20 implements many of these recommendations and HUD will continue to emphasize these best practices via existing and forthcoming subregulatory guidance. HUD notes that the ''roadmap to complying with this part'' is the new § 55.6 language itself that was published for public comment. HUD will continue to support local government and Tribal entities and commits to providing additional guidance and resources to aid in regulatory compliance.

B. New §§ 55.8 and 55.10, Limits to HUD Assistance in Floodplains and Wetlands

Several commenters expressed support for proposed § 55.8(c) requiring that HUD or the responsible identity address severe repetitive loss (SRL) properties.

One commenter urged HUD to pay close attention to rehabilitation of multifamily units where residents have needed evacuation and rescue by emergency personnel (in addition to those who have lost property and/or experienced displacement). This commenter recommended that HUD prioritize protections that break the cycle of loss faced by residents, particularly in communities where SRL properties comprise a significant portion of affordable housing stock. This commenter also noted that FEMA determined that repetitive loss is ''the single most important factor that affects stability of the National Flood Insurance Fund.''

Another commenter stated the threshold for a property being designated as SRL is relatively low and therefore suggested that under proposed requirements at § 55.8(c), HUD or the responsible entity should be required to provide this information to the third party conducting the 5- or 8-step review.

Another commenter encouraged HUD to proactively designate funding for buyers with relocation assistance for SRL properties that will otherwise be subject to increasingly frequent and intense damage due to climate change.

Another commenter stated that properties experiencing repetitive loss should be rebuilt to modern standards that mitigate flood risk.

HUD Response: HUD agrees with commenters that § 55.8(c) is an important provision to protect lives and property and maintain stability of the National Flood Insurance Fund. The intent of this provision is to better protect those living in communities where a significant portion of the affordable housing stock is comprised of SRL properties, particularly those who may have previously experienced displacement. HUD agrees that SRL mitigation requirements should be included in the 5- or 8-step decision making process and notes that §§ 55.8(c) and 55.20(e) of the final rule require disclosure and implementation of FEMA identified SRL mitigation in Step 5 of the process. The mitigation measures identified in Step 5 may be identified by HUD, the responsible entity, or a third-party environmental review preparer.

HUD does not have congressionally appropriated funds specifically for SRL properties, but relocation or other mitigation activities at SRL properties may be eligible under multiple HUD grant programs that fund relocation and other mitigation assistance.

C. HUD Compliance Monitoring

Several commenters asked how HUD will monitor, enforce, and address violations of the proposed rule.

One commenter posed the following specific questions about HUD's current and proposed monitoring practices: (1) What types, and to what extent, do offices outside of HUD's Office of Environment and Energy perform monitoring to ensure assisted properties and proposed sites do not occupy floodways in violation of part 55? (2) How does HUD monitor housing authorities outside of Community Planning and Development (CPD) entitlement communities for environmental compliance? (3) Outside those performed by HUD's Office of Environment and Energy, how does HUD monitor flood insurance for programs administered by FHA Multifamily, the Office of Disaster Recovery, and the Office of Public and Indian Housing? (4) What steps did HUD take following the 2015 HUD Inspector General report, ''Buildings at Three Public Housing Authorities Did Not Have Flood Insurance Before Hurricane Sandy'' to ensure compliance with mandatory flood insurance maintenance under the Flood Disaster Protection Act of 1973? (5) How will HUD exercise its oversight responsibility over properties approved under the proposed § 55.21 to ensure residents are not subject to flooding or repeated floods, or to monitor changes in the mapped floodways, especially increased flood risk over time? (6) Does HUD have staff with the qualifications to review hydrological, hydraulic, and hydrostatic threats to structures from floodways?

Another commenter explained that strong code enforcement—including adequate staffing numbers/expertise and continuing education on code updates and best practices—is necessary to realize public safety and resilience goals, citing evidence that strong code enforcement can contribute to loss reduction by 15–25 percent.

Another commenter urged HUD to commit the following to ensuring compliance with the FFRMS and protections: funds, additional staff, and a comprehensive implementation plan that strategizes data collation on flood risk communications and environmental justice.

HUD Response: HUD will address enforcement and compliance with the rule via environmental monitoring identified at § 58.77(d). HUD's Office of Environment and Energy conducts in-depth environmental monitoring and exercises quality control (via training and technical assistance) for the environmental review activities, including part 55 requirements, performed by responsible entities. Program offices, including FHA Multifamily, Office of Disaster Recovery, and Public and Indian Housing are also responsible for limited environmental monitoring to review compliance. This includes monitoring for compliance with Federal flood insurance requirements for projects involving mortgage insurance, refinance, acquisition, repairs, rehabilitation, or new construction.

HUD has floodplain and wetlands subject matter experts who will review and make recommendations for exemptions requested under the § 55.21 provision. HUD may rely on project engineers, Federal science agencies (*e.g.,* FEMA, U.S. Army Corps of Engineers), and other experts as needed, depending on the nature of the flood risk and the project proposed. To provide further clarity, HUD has outlined the specific minimum requirements to utilize the alternative process from § 55.21 which includes removing all residential units from the floodway, elevating or floodproofing all buildings in the FFRMS floodplain where practicable, and receiving a No Rise Certification for any new improvements in the floodway.

HUD agrees that code enforcement is an important piece of meeting public safety and resilience goals and works with its local partners to ensure HUD programs are compliant with local requirements. HUD also agrees that increased capacity to implement FFRMS via funding, staffing capacity, and data collection is critical and will continue to emphasize this need through proper appropriation and hiring channels. HUD is addressing the 2015 HUD OIG report referenced by the commenter outside of this rulemaking.

Notification of Floodplain Hazard Requirements Under 24 CFR 55.4

A. Support for Notification Requirement

Several commenters expressed support for the proposed changes to notification of floodplain hazard requirements as a critical requirement to ensure buyers, developers, renters, and other stakeholders are fully informed of a site's flood risk and potential direct and indirect costs. One commenter explained that increased transparency of flood risk and benefits of flood insurance creates stronger consumer protection. Another commenter described the notification requirements as morally right.

One commenter stated that the notice of floodplain hazard requirements remedies deficiencies and inconsistencies in State protections, explaining that 21 States have no requirements to disclose to prospective homebuyers past incidents of flooding, flood risk, or flood insurance information, and only 8 States require prospective tenants receive any of these disclosures.

Another commenter explained that these requirements are particularly necessary for publicly subsidized housing, which prospective renters and buyers may assume is safe by virtue of being built by a public agency or housing authority and in accordance with Federal requirements, despite most affordable housing being located in vulnerable areas.

Another commenter stated that HUD's inclusion of detailed notice contents requirements and lease acknowledgements will support consistent implementation of this protection.

Another commenter expressed support for the new proposed § 55.6, which outlines the required process that HUD or another responsible entity must follow in carrying out notification requirements. This commenter urged HUD to commit necessary resources to effectively fulfill notification of floodplain risk obligations across its portfolio.

Another commenter encouraged HUD to require notification as early in the process as possible and in a method and language appropriate to potentially impacted communities.

HUD Response: HUD appreciates the commenters' support for the proposed changes to the notification requirements which ensure buyers, developers, renters, and other stakeholders can make informed decisions about a property's flood risk. HUD agrees that increased transparency creates stronger consumer protection for residents of publicly subsidized housing. HUD notes that the final rule adds the term ''HUD-acquired'' to the list of property types in § 55.4(b) to clarify that properties that had previously been insured by HUD and were then acquired by HUD through default are also subject to the requirements for notification to renters when a property is in a floodplain.

B. Recommendations To Strengthen Notification Requirements

Several commenters asked HUD to strengthen the rule to require that notifications are written in accessible, plain language that is tailored to impacted communities. One commenter asked HUD to amend §§ 55.4, 50.23, 58.43 or 58.59 by adding language access requirements mirroring Section 203 of the Voting Rights Act to ensure that immigrant and other non-English speaking communities have access to hazard notifications and can participate in community engagement. Another commenter stated that notice should be given in as many forms/methods as necessary to reach the community, which may include methods beyond government websites or newspapers of general circulation. Several other commenters encouraged HUD to specifically encourage publication in resources that are free to the public.

One commenter recommended that notification include flood disaster mitigation plans. Another commenter recommended adding emergency preparedness information to the required notification contents on emergency procedures under proposed § 55.4(b).

Several commenters encouraged HUD to work with FEMA to provide useful information to buyers and renters about the value of flood insurance and resources to help people understand how flood insurance policies work.

Another commenter urged HUD to revise the list of exceptions in § 55.12 to include notification of floodplain hazard requirements for property transactions involving repossession, receivership, foreclosure, etc.; as well as HCVs and rental subsidies not associated with a project. This commenter reasoned that HUD-associated foreclosed homes are often resold with scant information.

Another commenter asked HUD to revise the rule to apply the notification requirements beyond floodplain boundaries. This commenter explained that this suggestion is based on this commenter's experience during a tropical storm and projected expansion of flood risk due to climate change.

Another commenter suggested expanding the effort to make sure prospective buyers and renters have adequate information about flood risk and insurance, beyond those living in the floodplain.

HUD Response: HUD intends to provide grantees, applicants, and responsible entities with technical assistance and guidance which will help ensure that notifications are effective and compliant. HUD encourages any property owner to work with their tenants and ensure notices are communicated effectively.

HUD guidance and trainings instruct grantees to translate environmental review public notice documents for relevant limited English proficiency (LEP) populations to meet Title VI requirements for LEP.

HUD notes that while it encourages property owners to share all pertinent information surrounding flood risk for their properties, many communities do not have formal mitigation plans in place. That said, the rule does require evacuation information to be included along with ingress and egress routes.

HUD does not intend to expand the list of exceptions at § 55.12 currently and notes that certain property dispositions are subject to analysis under part 55. While HUD encourages notification of flood risk, HUD does not intend to require that notification for properties outside of the floodplain. HUD encourages grantees to work with Federal partners and disseminate relevant information regarding flood insurance to those in the floodplain.

HUD appreciates the commenters' feedback regarding the expanded notification requirements for renters within the floodplain. HUD believes the notice requirements will help without overly increasing the administrative burden on landlords.

C. Opposition to Notification Requirement

Several commenters objected to expanded floodplain hazard notification requirements, stating that the resulting administrative burden on property owners and management agents could result in reduced occupancy at covered properties compared to similarly located housing.

One commenter added that since regional HUD offices can also require flood insurance, including for properties not within the 1-percent-annual-chance floodplain per HUD's MAP Guide, the fact that flood insurance is available or required does not necessarily indicate a property is within a floodplain. Another commenter urged HUD to strike ''and flood insurance is available for their personal property'' from renter notification requirements at § 55.4(b) and ''the availability of flood insurance on the contents of their dwelling unit or business'' from conveyance restrictions for disposition of real property in § 55.4(c)(2)(i)(B), reasoning that housing providers are not positioned to make definitive statements about flood insurance availability to renters.

HUD Response: HUD strongly disagrees with the commenters' statements that notification of flood hazards to residents is a significant administrative burden on property owners and management agents. A single disclosure necessary to provide tenants the opportunity to make informed decisions about their flood risk is not a significant administrative burden especially in context of other information property owners/management are expected to gather when leasing.

HUD disagrees also that property owners are not positioned to make statements about flood insurance availability for structures that they own. HUD encourages responsible entities and project partners to implement flood insurance requirements beyond the minimums established by the Flood Disaster Protection Act where they feel it is appropriate to minimize financial risk, but going beyond the minimum standard is not required.

D. Requests for Clarification of Hazard Notice Requirement Regulations

One commenter asked if ''floodplain'' covered by hazard notification requirements under the new § 55.4 means FEMA-recognized 1-percent-annual-chance floodplains or HUD-recognized FFRMS floodplains. This commenter stated that if the notification of floodplain hazard applies to FFRMS floodplains, the additional administrative burden caused by this expanded application can result in reduced property values compared to similarly located multifamily properties.

Several commenters asked HUD to provide a standard tenant notification form that meets the hazard notification requirements.

Additionally, several commenters asked HUD to revise the rule to clarify aspects of the notification requirements, which they stated was necessary to carry out the requirements. Several commenters asked HUD to more clearly define the conveyance restrictions moved from current 24 CFR 55.22 to the new 24 CFR 55.4. Several commenters asked for clearer details on the process, including: (1) the method for providing the notification to prospective homebuyers/renters; (2) whether the notification is signed; and (3) who prepares the notification.

One commenter stated that additional guidance or specificity to required notification content is needed to provide any of the information listed (*e.g.,* proximity to flood-related infrastructure, ingress and egress, flood insurance claims disclosure). Several commenters specifically asked HUD to

define what proximity must be included and what information is required regarding ''proximity of a site to the flood-related infrastructure.'' One commenter explained that property owners may not know reliable sources for this information.

One commenter asked HUD what type of notice residents would receive that a floodway is proximate to the site, the risk it poses, and how to relocate during a flooding event.

HUD Response: In the language of the new § 55.4, HUD states that the notification requirements extend to the FFRMS floodplain. HUD contends that if a property were reduced in value due to flood risk, that risk would exist outside of any notification requirement HUD imposes.

HUD intends to release additional guidance and technical assistance to assist grantees to better understand and utilize the conveyance restrictions outlined in § 55.4. HUD intends to provide technical assistance and guidance for compliance with the hazard notification requirements which may include some form templates that grantees can use and what information regarding proximity to the floodplain should be included. Use of these forms will not be mandated in keeping with other public notice documents HUD provides for part 55. HUD contends that any administrative effort necessary to inform renters of their flood risk is not only minimal but necessary for the health and safety of residents. Given the existing requirements necessary in a rental agreement, HUD believes the additional costs of this notification to be de minimis.

HUD intends to provide guidance and technical assistance to grantees, applicants, and responsible entities to help ensure consistent and compliant notice is provided to tenants when their buildings are in the floodplain of concern.

Consolidation and Clarification of Flood Insurance Requirements Under New 24 CFR 55.5

A. Support for Flood Insurance Requirements

Several commenters expressed their support for the new flood insurance provisions in the proposed rule. One commenter suggested the changes will increase transparency and communication of flood risk and the benefits of flood insurance.

Another commenter supported HUD requiring flood insurance beyond the minimum requirements established in the FDPA and said it was prudent and necessarily minimized financial risk. This commenter said that the existing FDPA is insufficient due to inadequate policy limits in an era of rapidly rising home valuations, the fact that the need for flood insurance in flood-prone areas that may be located just ''outside'' of a designated Special Flood Hazard Area (''SFHA''), and the fact that FEMA has only mapped 1/3 of the Nation's floodplains.

Another commenter said that the flood insurance provisions in the proposed rule are an important step to ensuring the sustainability of America's housing stock. Incorporating concepts such as CISA, additional freeboard protection, open space foundation systems and the limitation of the use of fill within SFHAs are higher standards proven to reduce risk.

Another commenter agreed that HUD must ''prudently'' manage its FHA-insured mortgages by first understanding the portfolio's actual exposure to flood risk and the extent to which FHA homeowners must purchase flood insurance policies. The commenter said flood risk management policies at all levels of government are critical to reducing national flood losses.

Another commenter said that all consumers should be encouraged to obtain flood insurance, especially given the increasing flood risk due to climate change.

One commenter suggested that HUD expand the requirement for flood insurance for all assisted properties that have previously flooded, especially CDBG–DR projects.

HUD Response: HUD appreciates the commenters' feedback regarding their support for the flood insurance provision and the increase in transparency and communication for flood risk. While the Department also appreciates the sentiment behind wanting to expand the flood insurance requirements outside of the special flood hazard area, HUD intends to strongly encourage flood insurance outside of those areas rather than mandate it. HUD does not have the authority to change or alter the NFIP regulations as those regulations are implemented by FEMA.

HUD appreciates the commenters' sentiment regarding the need to improve flood risk management policies at all levels of government. The Federal government can help set a national regulatory floor for things like elevation and insurance standards, but local and State governments are encouraged to evaluate their own regions and develop code requirements that suit their needs if they go beyond the minimum set at the Federal level. This rule, which applies to the CDBG–DR program, explicitly encourages flood insurance for all properties within the FFRMS floodplain and beyond the 1-percent-annual-chance floodplain mapped by FEMA. Additionally, the rule clarifies that HUD, or the responsible entity, may require flood insurance coverage beyond the minimums to minimize financial risk.

B. Flexibilities and Exemptions to Requirements Sought

One commenter urged HUD to allow flexibility for Public Housing Authorities to use different methods of transferring or retaining risk in proposed § 55.5(b). This commenter said that requiring flood insurance up to replacement value for such entities may impact the market for flood insurance nationwide.

Another commenter asked that any floodplain requirements be limited only to ''Federally funded projects.'' This commenter said that since HUD does not originate loans or fund projects through the FHA Multifamily Program, but rather, it insures those loans through the FHA, projects insured by these programs should not be required to meet the mandates of the FFRMS.

HUD Response: HUD appreciates commenter concerns regarding the market for flood insurance nationwide. HUD has a responsibility to ensure that publicly funded investments in public housing authorities in higher risk areas like floodplains are protected against loss through insurance. Through Executive Order 11988, HUD is directed to protect Federal investments including those providing insurance of mortgages. Additionally, insurance markets are not generally limited by supply and more policy holders tend to drive down actuarial risk-based rates. HUD and FEMA both offer homeowners several resources to help them differentiate between types and obtain appropriate levels of flood insurance for their structures.

For FHA multifamily mortgage insurance, the project is submitted to HUD as an application for approval prior to construction or rehabilitation. Therefore, the project is subject to NEPA and part 55. In contrast, newly constructed single family homes have already been constructed when an application for mortgage insurance is submitted to HUD. Therefore, newly constructed FHA insured single family properties are only subject to the Minimum Property Standards—NEPA and part 55 do not apply.

C. Opposition to Flood Insurance Requirements

Several commenters opposed the proposed rule's changes to flood insurance requirements and language in the proposed rule stating that HUD ''strongly encourages'' flood insurance for all structures within the FFRMS floodplain. These commenters argued that maintaining flood insurance for all structures within the FFRMS floodplain will make it prohibitively expensive to build and operate necessary housing, and the costs will be passed along to residents in the form of higher rents and higher housing costs. Several of these commenters went on to say that though purchasing flood insurance beyond what is required may mitigate future financial losses, it may require some consumers to suffer current financial losses in the form of higher operating expenses. One commenter emphasized that they agree that flood insurance is an essential tool to manage potential future costs but that it can also make homes in risky areas less affordable.

HUD Response: HUD believes that flood insurance is an important component of flood resilience. While HUD does not require flood insurance when a structure is located outside the 1-percent-annual-chance floodplain, the Department supports and strongly encourages owners to obtain it as HUD knows that structures within the FFRMS floodplain are still at greater risk of flooding than those outside the floodplain. The Department recognized and acknowledged in the RIA that the rule has the potential to increase construction costs for housing. After weighing the increased cost against the potential savings associated with the benefit of more resilient housing stock, HUD determined it to be cost effective to move forward with the rule, including flood insurance requirements. HUD notes that the flood insurance requirements referenced in this rule are mandated by statute under the Flood Disaster Protection Act of 1973 (42 U.S.C. 4012a(a)); the regulatory language in § 55.5(a) applicable to financial assistance within the special flood hazard area restates the flood insurance requirements that are already required by statute outside of this rule. HUD does recognize though that while flood insurance can be a financial burden it is only required within the 1-percent-annual-chance floodplain. The rule does not require flood insurance for all structures within the FFRMS floodplain but instead strongly recommends it.

D. FEMA Floodplain

Several commenters urged HUD not to expand its requirements beyond FEMA mapping, asking HUD to limit flood insurance requirements to only structures located in the SFHA per FEMA maps. These commenters said that utilizing CISA maps would create a disjointed approach to flood insurance.

Another commenter urged HUD to work with and support FEMA in its recommendations to reform the NFIP.

One commenter suggested HUD rephrase the statement ''. . . the NFIP plays an important role in minimization measures to reduce flood losses,'' reasoning that flood insurance does not minimize losses but enables the insured to recoup some of the material losses.

HUD Response: HUD appreciates the feedback from commenters concerned with flood insurance outside of the SFHA and FEMA-mapped 1-percent-annual-chance floodplain. As stated in response to opposition to requirements, the rule does not extend flood insurance requirements to the FFRMS floodplain outside of the FEMA mapped 1-percent-annual-chance floodplain. The rule only strongly recommends flood insurance in those areas. This is in keeping with FEMA's requirements under NFIP regulations. HUD will continue to work with its Federal partners and support their efforts to increase the Nation's resilience to disaster through various programs, including NFIP.

HUD appreciates the comment but believes that the recoupment of flood damages may be considered a reduction of flood losses.

E. Limitations for Multifamily Housing

One commenter supported increasing coverage limits but asked that HUD recognize the limitations on coverage in more expensive areas, particularly for multifamily buildings. This commenter explained that while some large residential buildings may be able to purchase private excess coverage, options in most areas are limited and often cost-prohibitive for affordable housing providers. This commenter also said that NFIP coverage limits are insufficient to cover the costs of flood damage in multifamily homes, as well as in mixed-use buildings, and urged HUD to support efforts to increase coverage for such buildings. This commenter added that private insurers can refuse coverage to at-risk buildings.

Another commenter emphasized that the insurance industry is increasingly refusing coverage in high-risk areas.

Other commenters said there are unique challenges for flood insurance for multifamily housing. Commenters said stories of multifamily buildings are usually elevated ten or more feet and if the first floor of a multifamily building is already elevated 2–4 feet above the Base Flood Elevation per the FEMA flood elevation, providing increased flood coverage for units located some 22–24 feet+ above the Base Flood Elevation would create unnecessary financial burdens to developers of multifamily projects in cases where no practical alternative to locating a project in the floodplain may be identified.

HUD Response: While HUD appreciates the commenters' feedback regarding insurance coverage limits, HUD does not have the authority to change or alter the NFIP regulations as those regulations are implemented by FEMA. Generally, HUD supports the insurance of multifamily buildings in flood risk areas to the maximum extent possible, noting that they do often face significant challenges protecting the full value of the structure under NFIP. Where there is no practicable alternative to locating a HUD-assisted activity in proximity to flood sources, HUD will continue to require elevation or floodproofing where allowable to ensure these buildings and their tenants are protected.

F. Requests for Clarity on Flood Insurance Requirements

One commenter expressed confusion over the language ''strongly encourages'' and asked HUD to consider replacing this language and to make clear what its expectations would be for flood insurance for those properties outside the FFRMS floodplain.

Several commenters sought clarity on how HUD would determine if flood coverage equivalent to the full replacement cost of the structure would be required. These commenters recommended that the final rule make it clear for developers to know exactly what will be required for flood insurance when making decisions to acquire or develop land for housing use and not to leave it up to the individual developer's discretion.

Other commenters wondered how HUD would enforce the acquisition and maintenance of flood insurance if it is not required by regulation. Who at HUD will have that authority and what training will they receive in order to make them qualified to make this determination?

HUD Response: As discussed in response to opposition to flood insurance requirements above, flood insurance is only required within the 1-percent-annual-chance floodplain. To be clear, encouragement to obtain flood insurance outside the 1-percent-annual-

chance floodplain is not a requirement although grantees are allowed to expand requirements beyond the HUD minimums. HUD does not believe the binary status of obtaining or not obtaining flood insurance requires any particular specialized expertise to determine. Acquisition and maintenance of required flood insurance will be reviewed on a project-specific basis as part of program monitoring requirements, as applicable.

HUD will continue to utilize the direction of the MAP guide to determine the flood insurance coverage requirements for Multifamily FHA projects and the Section 232 Handbook for Healthcare FHA projects.

Exceptions

A. Incidental Floodplain Exceptions

1. Support for Limited Exceptions

Several commenters expressed support for the exceptions at § 55.8(a)(2) for floodplain restoration activities, explaining that the proposed language is more flexible than the current standards, while incurring de minimis impacts to the floodway.

One commenter expressed their support for proposed language to clarify and ensure that floodways assistance would only be allowed for limited floodplain restoration activities and only after engaging in the 8-step decision making process and justifying that there are no practicable alternatives. This commenter explained, citing FEMA guidance, that floodways naturally convey floodwaters downstream and thus designing a floodway and regulating development within that floodway is necessary because any obstruction increases likelihood and elevation of flooding both upstream and downstream.

Several commenters supported allowing safe installation of utility lines to cross floodways where it is the most practicable method for connecting existing lines, reasoning that this is practical because utility mains are often in low-elevation areas and likely to be safe because development codes often require tie ins in these areas and utility line instillation causes only temporary impacts.

One commenter supported allowing removal of man-made structures from the floodway/floodplain. This commenter recommended that HUD amend the rule to make clear that projects restoring wetlands, floodplains, rivers, or other aquatic habitats in alignment with FFRMS objectives are exempt from the 8-step decision making process.

One commenter supported equivalent protections in the LiMWA as the V Zones. Another commenter endorsed the improved protections in Coastal A zones or areas within the LiMWA.

HUD Response: HUD appreciates the support from commenters regarding the exceptions at § 55.8(a)(2). That said, based on feedback received, HUD has made language changes in this section to more clearly delineate the purpose of the section in relation to §§ 55.12(g) and 55.21. Specifically, in § 55.12(g), HUD has removed the requirement for a permanent covenant such that the exemption more logically follows the review process for projects with an incidental floodplain. In § 55.21, HUD has clarified that to be eligible for the alternate processing for existing projects, the project must meet certain minimum eligibility criteria. These minimum criteria include the following: removing all residential units from the floodway, elevating or floodproofing all buildings in the FFRMS floodplain, including existing structures where practicable, and receiving a No Rise Certification for any new improvements in the floodway. HUD intends to produce additional guidance and technical assistance material which will outline the types of activities allowed on properties containing a floodway but not within the floodway itself. HUD notes that under CPD–17–013, it has outlined a methodology that allows certain linear infrastructure to cross a floodway where it is appropriately mitigated and there are no practicable alternatives. HUD also notes that under § 55.12(c), the restoration of wetlands and floodplains is exempt from the 8-step decision making process.

HUD appreciates the support for the equivalent protections across the V zones and the LiMWA. HUD's intent with this revision is to increase the resilience of coastal construction.

2. Exceptions Are Not Protective Enough

Several commenters expressed concerns that proposed exceptions provide insufficient floodway protection. Several commenters urged HUD to prohibit all development and reconstruction within floodways, the deepest and highest velocity portion of drainage, to avoid certain continued losses to HUD projects and safety risks to residents.

One commenter urged HUD to prohibit both critical and noncritical building actions in floodways and coastal high hazard areas, instead of allowing noncritical actions under the circumstances listed in the proposed rule. This commenter reasoned that the focus must not only be on ceasing development in floodways, but also on restoring and re-establishing natural infrastructure. This commenter supports the proposed rule permitting noncritical actions within the remaining two categories—wetlands/1-percent-annual-chance floodplain outside floodways and non-wetlands area outside of the 1-percent-annual-chance and within the 0.2-percent-annual-chance floodplain—but only on a case-by-case basis and requiring the 8-step decision making process.

This commenter supported the proposed amendment prohibiting placing ''community stormwater management infrastructure and water treatment plants'' in floodways due to high risk of becoming inoperative in a flooding event. However, this commenter urged HUD to go further by amending § 55.1(c)(2) to read: ''any critical action located in a coastal high hazard area *or within the existing 100-year or 500-year floodplain maps, to be amended*.'' This commenter also asked HUD to add ''schools'' to the definition of ''critical action'' reasoning that damage to schools causes significant disruption to students and communities.

Several commenters asserted that new construction in floodplains, even under the 8-step decision making process, will have the following negative impacts: (1) waste scarce financial resources on resilience and mitigation activities; (2) subject households, predominantly low-income families, to damage and danger; and (3) continue legacies of exclusionary zoning practices.

One commenter urged HUD to remove floodplain exceptions for residential structural infrastructure (utility lines, pipelines) from the proposed rule. This commenter explained that flooding results in catastrophic impacts to nearby residential drinking water when water, sewer, and wastewater utilities are in flood-prone areas, citing joint EPA and FEMA guidance that these utilities face unique risks in flood-prone areas and that it is cost intensive to build them to resilient standards.

Several commenters asked HUD to provide a clear definition of the incidental floodplain for public comment. One commenter asked HUD to clarify whether part 55 requirements would be triggered if an undeveloped portion of a property is within the floodplain, while the structure itself is not.

One commenter posed the following questions: (1) How did HUD determine that paving floodway areas for basketball and tennis courts is de minimis? (2) Is there a critical number

of projects that cannot avoid paving floodway areas such that this exception is necessary?

Several commenters requested explicit guidance on the methods of utility installation that are permitted/prohibited.

Several commenters stated that HUD should defer to NFIP/local regulations for floodway actions.

HUD Response: HUD appreciates the feedback from commenters regarding concerns over exceptions HUD uses to allow work on properties with a floodway on site. HUD disagrees that all work needs to be prohibited from floodways, noting that many functionally dependent uses must be built in these areas in order to work properly. HUD does not exempt this work from the 8-step decision making process; however, work in these sensitive areas is often the most critical to review for impacts, alternatives, mitigations, and engagement with the public. Under the rule, HUD will prohibit any new residential construction in the floodway with the goal of ensuring the potential to harm human life is minimized. Because of feedback received, HUD has revised the language of § 55.21 to make it clear that residential units must be removed from the floodway, all buildings in the FFRMS floodplain must be elevated or floodproofed where practicable, and a No Rise Certification must be obtained for any new improvements in the floodway, in order for the exception to apply. HUD intends for the alternative processing for existing nonconforming sites outlined in § 55.21 to be used in very rare circumstances and only under the strict review and sole discretion of HUD's Office of Environment and Energy and the Assistant Secretary for Community Planning and Development, where HUD determines the proposed action is protective of human health and the environment. Depending on the nature of the proposed activities in or near a floodway, the alternative processing may require substantial mitigation measures and appropriate documentation to obtain, if approved.

HUD disagrees that funding spent on any mitigation determined necessary through an 8-step decision making process would be considered a ''waste of resources.'' Mitigation that reduces risk and protects life and property can only be seen as a benefit for populations that would otherwise be at increased risk of flooding. Additionally, HUD contends that supporting the resilience of structures in the floodplain better protects those structures against future loss and disagrees that increasing community resilience continues the legacy of exclusionary zoning.

HUD notes the commenters' feedback regarding wastewater treatment and stormwater facilities; however, these facilities, while critical actions, are also functionally dependent on being near water. HUD did not intend to disallow functionally dependent facilities from receiving funding with this rule and as such has allowed an exception for functionally dependent projects which meet the mitigation requirements at § 55.8(a)(2) and complete an 8-step decision making process in accordance with 24 CFR 55.20. This change brings HUD in line with its Federal partners like FEMA in allowing the funding of certain types of functionally dependent facilities.

HUD disagrees that all schools need to be included as critical actions because schools do not have permanent residents and will not be occupied during an emergency.

Examples of de minimis improvements listed in § 55.8(a)(1)(ii)(B) include activities that have minimal ground disturbance or placement of impervious surface area to ensure accessibility where permitted by local ordinances and where it does not increase flood risk to the property. HUD intends to provide grantees, applicants, and responsible entities with technical assistance and guidance to ensure any improvements in a floodway are de minimis and that only compliant work is allowable under this part.

Any action allowed by HUD would also need to be compliant with NFIP and local regulations.

HUD intends to release technical assistance and guidance to help grantees, applicants, and responsible entities better determine when it is appropriate to utilize the incidental floodplain exception at § 55.12(g). HUD notes that projects with an undeveloped portion of the property located within the floodplain will be exempted from part 55 analysis if all requirements under § 55.12(g) are met.

B. Inapplicability of 24 CFR Part 55 to Certain Categories of Proposed Actions Under § 55.12

1. Expanded Exception for Floodplain and Wetland Restoration and Preservation Activities

Several commenters expressed support for the expanded flexibility for parks and recreation uses in combination with restoration and preservation activities. Several commenters explained that the proposed exception will increase the quality of life for HUD-assisted tenants by providing opportunities to connect with nature and the floodplain and wetland habitat where they live, without significant disruption to those areas' function.

One commenter urged HUD to amend the rule to add incentives or favor parks and greenspace projects that incorporate green infrastructure to restore/protect natural ecosystems like wetlands, prairie, riparian corridors, and bayous. This commenter explained that preserving remaining riparian and wetland infrastructure is proven to slow flood waters avoiding future flooding damages, while also providing communities with necessary parks and green space for communities. This commenter cited a study showing that affluent bayou communities received greater government investment in flood protection following Hurricane Harvey than low-income communities as reasoning for going beyond the proposed mandated process towards an incentive model.

Another commenter asked if HUD could expand the flexibility for restoration activities compatible with beneficial floodplain and wetland function beyond parks and recreation activities.

Several commenters asked HUD to explain what kinds of ''structures and improvements designed to be compatible with the beneficial floodplain or wetland function'' would be allowed and asked for this clarification to be included for public comment.

HUD Response: HUD appreciates the support from commenters regarding the expanded flexibility for parks and recreational space within the floodplain. It is HUD's hope that these spaces are maintained as a benefit to HUD-assisted tenants as an improvement to their quality of life without adversely impacting the floodplain.

HUD believes that by allowing greenspace restoration within the floodway, HUD can better incentivize restoration and protection of riparian buffer spaces and wetlands which provide compounding resilience benefits across the floodplain.

HUD does not currently have plans to expand the flexibility for restoration activities beyond what the rule allows because there is no funding for HUD to provide additional incentives. HUD intends to provide additional guidance and technical assistance to help grantees, applicants, and responsible entities discern which improvements and structures are allowed and compatible with beneficial floodplain or wetland function.

2. Removal of LOMA/LOMR Exceptions

Several commenters expressed support for removing both part 55 exceptions for sites that have received LOMAs/LOMRs. Several commenters specifically supported the removal of the conditional LOMA/LOMR exception, explaining that provisions to disincentivize the use of fill will protect natural and beneficial floodplain and wetland functions. Several commenters further reasoned that adding fill to floodplains causes increased flood risk to surrounding properties/areas and expansion of the floodplain. One commenter stated that disincentivizing the use of fill will protect neighboring residents, property, and the environment. Another commenter expressed support for limiting fill within special flood hazard areas. Conversely, several other commenters opposed removing the LOMA/LOMR exceptions. Several argued that doing so would result in an unnecessary administrative burden on borrowers and lenders; and that additional government agencies—HUD and the USACE—would add unnecessary bureaucratic processes. Several commenters asked HUD to define which governmental agency would have final authority to determine if a floodplain change is required. One commenter added that the additional layer of bureaucracy created by requiring projects that are outside the 1-percent-annual-chance floodplain under FEMA's requirements to complete the 8-step decision making process will create confusion and regulatory conflicts and delay much needed housing. This commenter urged HUD to defer to FEMA's expertise on whether a property is outside of a floodplain.

Several commenters asked HUD to clarify whether the requirement to elevate sites with no known or previously occurring flood risk to the respective required standards under each approach will result in requiring completion of the 8-step decision making process before adding fill, per § 55.12(c)(8). These commenters added that if this would trigger the 8-step decision making process, it would cause administrative burden on borrowers and lenders.

Several commenters specifically urged HUD to retain the conditional LOMA/LOMR exception. Several commenters stated that the current conditional LOMR/LOMA system is more effective for determining when fill may be added to remove sites from the 1 percent annual chance floodplain because FEMA, civil engineers, and local authorities understand the impact to adjoining sites and provide sufficient governmental oversight. These commenters stated that HUD's reasoning for removing the exception on conditional LOMAs/LOMRs to avoid incentivizing adding fill is contradictory or is a moot point, considering that other portions of the proposed rule require the use of fill without limits due to the impact on adjoining areas.

Several commenters disagreed that excepting conditional LOMA/LOMR projects from the 8-step decision making process incentivizes filing floodplain areas, stating that the exception allows developers to incorporate plans to minimize floodplain impacts in the early stages of planning, prior to civil plans required as part of the 8-step decision making process.

HUD Response: HUD appreciates the commenters' support for the removal of exemptions based on LOMAs/LOMRs. As LOMAs/LOMRs act to remove an area or structure from the base floodplain and not the FFRMS floodplain, HUD did not think they would provide the necessary information to remain as an exemption to part 55. Additionally, HUD did not want to incentivize the use of fill in the FFRMS floodplain.

HUD disagrees with commenters' feedback that removing the LOMA/LOMR exemption creates an unnecessary administrative burden on borrowers and lenders because LOMAs/LOMRs do not remove sites from the FFRMS floodplain. Regardless of whether or not exempting conditional LOMA/LOMR projects from the 8-step decision making process incentivizes the use of fill, misaligned Federal processes and policies inherently create a greater burden on practitioners attempting to comply with conflicting rules, so the exemption must be removed to reduce these burdens. As the FFRMS floodplain is defined by the processes laid out in the rule, HUD or the responsible entity has final authority to determine if a site is located in the FFRMS floodplain, based on the appropriate FFRMS definition for the locality. HUD agrees that the rule will expand HUD's regulatory footprint beyond the FEMA-mapped 1-percent-annual-chance floodplain. However, under E.O. 13690 HUD is directed to review a broader area and account for an increasing flood risk over time through the use of the FFRMS floodplain. While LOMAs/LOMRs can be effective tools at determining when sites have been removed from the FEMA mapped 1-percent-annual-chance floodplain, they have no bearing on the state of a site with regards to the FFRMS floodplain.

Additionally, HUD notes that other Federal agencies like FEMA are working on updating their own floodplain management regulations to account for E.O. 13690 and increasing flood risks to Federal investments.

HUD notes that § 55.12(c)(8) is being removed but if a project were to add fill to a site located in the FFRMS floodplain, it would likely trigger the 8-step decision making process under the rule. That said, the rule does not require that elevation be completed with fill and in fact, discourages its use for compliance.

HUD disagrees with commenters' feedback that removing the existing LOMA/LOMR exemption will affect the ability of developers to incorporate mitigation in the early stages of planning. Because the NEPA process mandates that environmental review be complete prior to any choice limiting actions being taken, any mitigations for a project site must be considered prior to construction regardless of the status of a FEMA FIRM change.

C. Exceptions in Proposed §§ 55.13 and 55.14

Several commenters expressed support for the proposed exception for special renewable energy projects, stating that the exception is forward-thinking and will likely result in increased use of energy-efficient technology in HUD projects.

One commenter urged HUD to revise the rule to provide the following limits on this exception: (1) do not permit a streamlined 8-step decision making process for energy efficiency projects that replace systems or appliances with fossil fuel-fired system or appliance under 24 CFR 50.13 and 50.14; and (2) add language to 24 CFR 55.13(f) requiring that proposals to install fossil fuel infrastructure to improve energy efficiency have no feasible electric alternative.

One commenter asked HUD to clarify the threshold for ''limited potential to adversely affect floodplains or wetlands'' for energy efficiency projects seeking the § 55.13(f) exception.

HUD Response: HUD appreciates the commenters' feedback regarding exceptions for renewable energy projects. HUD disagrees that it is necessary to limit this exception to apply only to energy efficiency projects that do not use fossil fuels. HUD wishes for this exception to benefit any project that improves energy or water efficiency or installs renewable energy that does not meet the threshold for substantial improvement and does not wish to limit fossil fuel projects to only those where there is no electric alternative.

HUD intends to provide guidance and technical assistance to grantees,

applicants, and responsible entities acting as HUD to ensure they can properly assess projects seeking the exemption at § 55.13(f) and understand which projects have the potential to affect floodplains and wetlands.

D. Revisions to Categorical Exclusion From Further Environmental Review Under NEPA Under § 50.20(a)(2)(i)

1. Support for Proposed Revisions to Categorical Exclusion

One commenter expressed support for proposed revisions that allow timelier remediation of existing floodplain properties if HUD ensures that any impact resulting from an increased footprint would be fully addressed in the 8-step decision making process. This commenter provided maps of existing affordable housing units overlaid with FEMA flood maps showing many single family homes in flood zones that have already lost money and explained that allowing remediation for these homeowners will allow more low-income homeowners to decide for themselves whether to rehabilitate their homes. This commenter further explained that they would not support this amendment but for the ''hard look'' required by the 8-step decision making process that this commenter hopes will discourage floodplain development.

Another commenter stated that if the 8-step decision making process is part of a full environmental review, the information sought is addressed under NEPA and HUD should avoid repetition.

HUD Response: HUD appreciates the commenters' feedback regarding HUD's plans to align its part 50 regulations with its part 58 regulations.

HUD notes that compliance with part 55, including completion of the 8-step decision making process when required, is included as part of HUD's NEPA compliance regulations under parts 50 and 58.

2. Opposition to Proposed Revisions to Categorical Exclusion

One commenter opposed removing the qualification to categorical exclusion where a rehabilitation project would increase the footprint of a structure within a floodplain or wetland under § 50.20(a)(2)(i). This commenter reasoned that foregoing full NEPA analysis of projects receiving HUD funds that would adversely impact critical habitat and flood mitigation services is counterproductive. This commenter also asked HUD to expand wetland identification protocols beyond the National Wetlands Inventory where necessary.

This commenter also suggested the following revisions to the categorical exclusion list at § 50.19: (1) require environmental review when HUD supports new construction projects with fossil fuel utility service or homebuying assistance for homes that are not all-electric, and (2) qualify equipment purchase and operating costs under § 50.19(b)(13) and (14) to exclude costs associated with newly installed fossil fuel-fired systems and appliances. This commenter explained that fossil fuel extraction and combustion contribute to climate change, increasing the likelihood and severity of flooding and that further government subsidy of climate change inducing housing is an irresponsible use of taxpayer funds. Further, this commenter suggested that HUD could reallocate savings to increase sustainable affordable housing.

HUD Response: HUD disagrees with the commenter's feedback that aligning its part 50 categorical exclusion with its part 58 exclusion will allow adverse impacts to critical habitat and flood mitigation. HUD has utilized this approach for part 58 reviews since 2013 and has not seen the described adverse impacts. Projects that meet this categorical exclusion remain subject to the requirements under part 55 as well as other laws and authorities at 24 CFR 58.5 and 50.4. The potential adverse impacts of a project do not change based on the determination of which entity is responsible under NEPA. Furthermore, HUD notes that before applying a categorical exclusion to a proposed action, HUD or the responsible entity assesses the proposed action for extraordinary circumstances that would require preparation of an environmental assessment or environmental impact statement. Additionally, HUD addresses potential climate change impacts for projects that require an Environmental Assessment or environmental impact statement through the climate change environmental assessment factor. Additional edits to the categorical exclusions at parts 50 and 58 are outside the scope of this rulemaking.

E. U.S. Army Corps of Engineers Permit Exception

Several commenters opposed the proposed removal of § 55.28 when a permit has been obtained from the USACE for a proposed HUD-assisted construction activity in a jurisdictional wetland outside of the floodplain. These commenters questioned whether the USACE consistently implements the 8-step decision making process per FEMA guidance in implementing E.O. 11988 and urged HUD to revise the rule to require that prior to granting relief, HUD confirm that other agencies have adequately completed the 8-step decision making process.

HUD Response: HUD appreciates the commenters' feedback regarding the removal of § 55.28. However, HUD contends that this section was unnecessary because this exemption was rarely utilized by grantees and, under the new § 55.26, HUD maintains a method for adopting another agency's 8-step decision making process when appropriate. Through § 55.26, HUD intends to reduce unnecessary duplication of Federal regulatory processes to support the development of compliant and resilient projects.

Wetlands

A. Approach to Identifying Wetlands in § 55.9

1. Support for Changes to § 55.9

Several commenters supported HUD's changes to § 55.9, broadening its approach for identifying wetlands. Several other commenters acknowledged their support and cited the important biodiversity wetlands provide, along with the ways that wetlands naturally regulate the climate. One commenter supported HUD for looking beyond a ''desktop review'' of landscapes to determine wetlands.

Several commenters specifically supported HUD's proposal to broaden the screening of wetlands beyond the use of USFWS' NWI. One commenter quoted from the USFWS' explanation that the NWI methodology does not effectively identify all types of wetlands and a ''margin of error is inherent.'' Noting this plus the United States Supreme Court's rollback of wetlands protections under the Clean Water Act, the commenter supported backup protocol for identifying wetlands and urged HUD to use the full extent of its legal authority to protect these critical habitats and the important flood mitigation functions they provide.

HUD Response: HUD appreciates the commenters' support for § 55.9 of the proposed rule; however, HUD notes that the rule does not change HUD's definition of a wetland, it clarifies it as being more than what is identified on an NWI map.

2. Recommendations To Increase Wetland Identification Requirements

One commenter stated that the NWI data varies in accuracy and that in order to ensure the accuracy of wetlands determinations, such a determination should be confirmed by an on-site analysis that includes an assessment of the functions of the ecosystem. This commenter went on to say that the analysis should be confirmed with the

USFWS, along with further consultation with the USACE, U.S. Environmental Protection Agency (EPA), and/or State or Tribal aquatic resource regulators. This commenter agreed with HUD's proposal to assess ''biological'' rather than regulatory wetlands and urged HUD to develop a functional analysis methodology in consultation with the Academy of Science and Tribal and State programs for aquatic resources proposed to be impacted by HUD actions.

One commenter stated that resource identification needs to be done in combination with other geospatial tools, such as Light Detection and Ranging (LiDAR) technology. The commenter stated that NWI should not be a primary presence/absence indicator of wetlands, but rather used as part of a suite of remote tools and ''on the ground'' analysis including a functional analysis method to determine the role the resource is playing in flood resiliency and abatement. This commenter recommended additional consultation with the USACE, the EPA, and/or State or Tribal aquatic resource regulators.

Other commenters added that the NWI indicates the general presence of wetlands on a site but fails to accurately capture the full delineation of wetlands at ground-scale, especially for the identification of smaller wetlands of an acre or less. These commenters also supported the proposed requirement for a ''visual assessment'' of a site to help identify wetlands. The commenters suggested that HUD revise the requirement to require evaluation of all undeveloped sites using one of the three proposed methods to ensure that wetlands identification on an undeveloped tract is not left to the visual assessment of an untrained practitioner.

One commenter urged HUD to clearly articulate that a physical review of a property by a qualified wetland scientist is necessary by adding the word ''physically'' to § 55.9(b). If not, this commenter asked HUD to add language explaining in detail how the development community should meet the proposed rule's intent of slowing the destruction of wetlands within communities.

Several commenters emphasized the importance of trained professionals conducting the visual assessment. Other commenters asked whether there are any qualification requirements for the personnel performing the visual screening and whether an environmental review consultant would be acceptable. One commenter asked who at HUD would be adequately trained to perform the visual observation and what this training will consist of.

HUD Response: Existing HUD policy has historically encouraged the use of tools and delineations that go beyond the NWI mapper to determine if wetlands are present on a site. The rule's methodology for wetland identification streamlines that policy into a more actionable and functional process for practitioners and reviewers. It is important to HUD that this rule maintains strong protection for wetlands without increasing regulatory burden. HUD agrees that wetlands are critical habitat and play a vital role in flood mitigation for communities.

HUD disagrees that either an on-site wetlands delineation or LiDAR assessment is necessary or appropriate for every wetland review. NWI maps and visual observations of a site provide sufficient information for responsible entities to preliminarily determine if further investigations are warranted. Requiring fully detailed delineations by certified wetland scientists for all projects on undeveloped land would constitute a significant financial and administrative burden that HUD does not wish to impose on its grantees at this time.

It is HUD's intent to provide subregulatory guidance to help grantees navigate the wetland review process including desktop review, visual inspection, and when delineation performed by a certified wetland scientist would be considered necessary and appropriate. Any of these options may be appropriate and will depend on the associated needs of the project involved. Additionally, HUD may consult with other agencies like USACE, EPA, or USFWS as necessary to ensure potential impacts are appropriately mitigated and/or any necessary permits are obtained. During the 8-step decision making process, HUD also requires responsible entities to engage with the public and interested parties like local, Tribal, and non-profit groups with an interest in the resource.

HUD has floodplain and wetlands subject matter experts who will work with grantees, applicants, and responsible entities to ensure compliant reviews are performed in accordance with E.O. 11990.

3. Concerns With Changes to § 55.9

Some commenters suggested if a wetland is suspected, sites should be evaluated by the NWI, State, and local wetland and stream maps, hydric soil maps, topographic maps, and historical imagery. These commenters said hydric soil maps should be included in the environmental review as part of wetlands protection, similarly to the United States Department of Agriculture (USDA) requirements. The commenters went on to say that if suspected wetlands are identified through these desktop methodologies, the property should be reviewed by a wetlands consultant and receive comment from the USACE.

Another commenter wrote that the several approaches to identifying wetlands in this proposed rule will produce inconsistent and unpredictable results. The commenter said HUD's goal in updating its wetland regulations is ''to streamline them, improve overall clarity, and modernize standards.'' This commenter believes the most effective approach to realizing these goals is through the adoption of the universally recognized definition of wetlands developed by the USACE and EPA.

Several commenters submitted a more specific concern that the meaning and intent of ''visual indication'' is not clear. The commenters urged HUD to clarify the ''visual indication,'' and said such vague terminology may lead to widespread inconsistency in the application of the wetland identification process.

These commenters also asked whether the use of just one of the evaluations (USFWS consultation or NRCS Soil Survey with further evaluation performed by the environmental review preparer) would be sufficient to rule out the presence of wetlands, without the need to complete a wetland delineation.

Several commenters recommended that HUD completely remove the first method from its final rule. The commenters argued that the job of the USFWS is not to consult on wetlands, rather sites should be evaluated by the NWI, State, and local wetland and stream maps, hydric soil maps, topographic maps, and historical imagery and the property should be reviewed by a wetlands consultant with comment from the USACE.

One commenter pointed out that it is not clear in the proposed rule whether the three methods provided are in order of preference or if any one of them can be selected to rule out the presence of wetlands. Commenters also requested that HUD clarify whether once a site has screened inconclusive for potential wetlands, a developer may rely on citing just one of the three methods outlined to conclude there are no wetlands onsite.

HUD Response: HUD agrees with commenters that when NWI maps are unavailable or responsible entities feel they may be inaccurate, HUD does allow grantees to use best available information to support their

conclusions. This can include local and State maps, soil maps, topographic maps, and historical imagery. This has historically been, and continues to be, HUD's approach to wetlands review under the rule. HUD disagrees that the rule's approach to wetland identification will create inconsistent and unpredictable results. The definition for wetlands as used by the USACE and the EPA stems from the Clean Water Act and covers a narrower definition of wetland which is tied into their respective permit authorities.

It is HUD's intent to provide subregulatory guidance which will help grantees navigate the wetland review process including visual inspection and when delineation would be considered necessary and appropriate.

As the Federal agency tasked with managing the NWI mapper, USFWS is the first agency consulted if a potential issue or deficiency with the NWI is identified.

B. Limitations of HUD Assistance in Wetlands in § 55.10

Several commenters argued that the rule should prohibit all new construction in wetlands. One commenter said that subjecting construction in wetlands to the 8-step decision making process is not enough and that the importance of wetlands in lessening the impact of both riverine and coastal flooding should spur HUD to take additional steps to prevent new construction within them. The commenter emphasized that wetlands and wetland vegetation provide low-maintenance storm mitigation by storing water and slowing the speed of flood waters, along with serving as storm surge protectors. This commenter also noted that coastal wetlands are often viewed as cultural resources by the surrounding communities who view the continued encroachment of development into these areas as a destruction of their heritage. One commenter urged HUD to use stronger language prioritizing the preservation of wetlands and firmly assert that wetland and riparian corridors should be avoided. The commenter opined that Federal dollars should not be used to develop properties that put people in harm's way.

Several commenters emphasized the importance of nature-based solutions and existing green infrastructure known to slow flood waters and protect communities such as wetlands, prairies, riparian corridors and/or bayous as well as reconfiguration of the project footprint and incorporating resilient building standards. One commenter asked HUD to add specific provisions to the proposed rule protecting wetlands and incorporating green infrastructure and to conduct an economic analysis through case studies on various high-flood-prone communities to show that protecting the riparian corridors and wetland green infrastructure would be more cost beneficial than allowing development and covering properties with insurance.

One commenter recommended that all Federal agencies calculate the effects of wetland loss through funding and permitting programs in accordance with E.O.s 11988 and 13690. The commenter noted that Step 5 in FEMA's ''Guidelines for Implementing E.O. 11988 and E.O. 13690,'' published October 8, 2015, states that the concepts of ''Minimize, Restore, Preserve . . . apply if a proposed action will result in harm to or within the floodplain'' and defines ''harm'' to apply to both lives and property, and natural and beneficial floodplain functions. Therefore, the commenter went on to say, it would seem logical that any unavoidable impacts to natural infrastructure within a floodplain, including wetlands, should be mitigated for within the sub-watershed effected and provide ecosystem services to the same locality where the impacts occurred.

Another commenter asked if the impact to one or more acres of non-jurisdictional wetlands is proposed, how HUD will manage the mitigation requirement. This commenter urged HUD to define the one-acre mitigation policy. The commenter noted that compensatory mitigation for jurisdictional wetlands is well-established and widely understood but the prescription of compensatory mitigation for disturbance to more than one acre of non-jurisdictional wetlands is not clear in the proposed rule, and HUD should indicate that it is not required for non-jurisdictional wetlands.

Another commenter asked for clearer information about the costs and process of purchasing compensatory mitigation for non-jurisdictional wetlands.

Another commenter stated that they do not agree that wetlands mitigation should be limited to impacts greater than one acre since any loss of wetlands and floodplains impacts communities and water quality by impairing the ability of watersheds to provide resiliency and flood storage capacity during storm events. This commenter also said that they do not agree with an approach whereby mitigation would be translocated to an in-lieu-fee or banking instrument which is not providing direct benefits to the impacted reach of the waterway and associated floodplain.

HUD Response: HUD disagrees that new construction should be entirely barred from wetlands and that the 8-step decision making process is not enough. While HUD agrees that wetlands are important and play important roles as critical habitat and flood protection, an outright ban on construction would have significant adverse impacts on development nationwide. HUD will continue to fund new construction in wetlands where it has been demonstrated that no practicable alternative exists and that all necessary mitigation measures have been taken. HUD acknowledges that many communities identify coastal wetlands as cultural resources or important heritage sites and notes that consultation requirements on historic and culturally significant resources are covered under the National Historic Preservation Act (NHPA). No part of this rule exempts sites from review under the NHPA or any other applicable Federal laws and authorities.

HUD agrees with commenters on the importance of nature-based solutions. HUD is seeking to strengthen the commitment to use nature-based floodplain management approaches where practicable by identifying specific strategies and practices that have proven effective in increasing flood resilience and environmental quality, identified in § 55.20(e). These strategies include encouraging the use of natural systems, ecosystem processes, and nature-based approaches when developing alternatives for consideration where possible.

HUD continues to work with FEMA and other Federal partners to minimize any adverse impacts to wetlands from HUD funded projects. In addition, in cases where multiple funding sources are anticipated, HUD recommends utilizing the Unified Federal Review (UFR) to assist in the collaborative cross-agency/Department discussions to resolve any differences across the agencies and ensure cohesion in funding and goals for the project. Additionally, it should be noted that HUD has procedures in place to adopt the environmental reviews of other Federal agencies to avoid unnecessary duplication of effort.

HUD intends to provide grantees, applicants, and responsible entities training and technical assistance to assist them in utilizing appropriate mitigation measures when non-jurisdictional wetlands have unavoidable impacts. Historically, these mitigations have included various forms of compensatory mitigation, and the rule is not intended to change this provision. The use of any compensatory

mitigation is not viewed as a substitute for the requirement to minimize impacts to the maximum extent possible.

Changes to the 8-Step Decision Making Process

A. Roles and Responsibilities

One commenter asked HUD to clarify who will conduct encroachment and other floodway analysis and how that analysis is to be done under the new § 55.21. This commenter stated that FEMA's current guidance is for the community or developer to conduct it and explained that most local permit officials are not qualified and thus require the developer to pay for an engineer to conduct encroachment analysis.

HUD Response: HUD has floodplain and wetlands subject matter experts who will review and make recommendations for exemptions requested under the § 55.21 provision. HUD and responsible entities may rely on project engineers, Federal science agencies (*e.g.,* FEMA, USACE), and other experts as needed, depending on the nature of the flood risk and the project proposed.

B. Consistency With FFRMS and New Sections

One commenter expressed support for the proposed updates to the 8-step decision making process to provide clarity and alignment with the FFRMS.

One commenter recommended that wherever HUD defines FFRMS floodplain identification methods, it should consistently use terms referring to both elements of the definition—flood elevation and floodplain extent.

Several commenters asked for clarification whether improvements within the 0.2-percent-annual-chance floodplain will trigger the 5- or 8-step decision making process considering that CISA maps are not currently available and HUD does not predict national coverage for years. These commenters urged HUD to make FFRMS guidance clear and methodical to avoid leaving room for interpretation.

Several commenters suggested that HUD define ''areas required for ingress and egress,'' a triggering ''action'' under § 55.20(a), and that the definition should exclude public thoroughfares, which these commenters reasoned including could stretch the covered area further from a development than necessary. One commenter cautioned that including ingress/egress to an action may increase HUD or property owner liability for harm to residents occurring on roads off the subject property. This commenter stated that neither HUD nor borrowers are authorized or responsible for road conditions of the subject property, citing that a majority of flood-related fatalities occur on roads during floods.

Several commenters urged HUD to address how the FFRMS applies to infrastructure projects by incorporating mitigation considerations (*e.g.,* useful life, ingress/egress) and requirements for infrastructure projects in § 55.20(e). These commenters asked HUD to mandate elevation for ingress and egress to flood-prone areas, as well as mitigation measures based on the site's entire landscape for critical utilities where elevation is not possible (*e.g.,* stormwater). These commenters reasoned that the proposed steps in § 55.2(b)(3) are insufficient because grantees increasingly use CDBG, CDBG–DR, and CDBG–MIT funds to construct and improve bridges, water utility lines, and other critical infrastructure not subject to the structure-specific elevation requirements in § 55.20, despite the preamble's recognition of the vulnerability of essential infrastructure to flood damage.

HUD Response: HUD appreciates the commenters' support for the proposed changes to the 8-step decision making process to provide clarity and alignment with FFRMS. HUD recognizes that floodplain terminology can be confusing for grantees, applicants, and responsible entities and HUD intends to provide significant technical assistance and training to help ensure that practitioners are using the correct language to refer to various aspects of the floodplain.

As described in the proposed rule, where CISA is unavailable to define the FFRMS floodplain, grantees, applicants, and responsible entities will use the 0.2-percent-annual-chance floodplain if it is available for non-critical actions and FVA +2 feet when it is not. Note that it is the FFRMS floodplain that will trigger the need for a 5- or 8-step decision making process, regardless of the method used to define it. For critical actions, projects must utilize the higher of FVA +3 feet or the 0.2-percent-annual-chance floodplain if it is available. HUD expects to provide training and technical assistance covering the various methods for defining the FFRMS floodplain along with the 8-step decision making processes to grantees, applicants, and responsible entities which should help them maintain compliance across their project portfolios. HUD disagrees that the 8-step decision making process is insufficient for infrastructure projects and notes that elevating infrastructure is often not practicable. In these cases, HUD requires infrastructure be floodproofed and protected through other means than strictly elevating it. CPD–17–013 outlines that critical infrastructure like bridges needs to be elevated or floodproofed to the 0.2-percent-annual-chance floodplain. This is also in keeping with the FEMA requirements for critical facilities.

HUD notes that the 8-step decision making process for critical actions does require projects to consider ingress and egress along with alternative locations for the project with the intent of removing it from the floodplain if practicable. Access to sites is vital to the functional use and safe evacuation of a site during a flood and therefore must be considered as part of the 8-step decision making process. HUD disagrees that consideration of ingress and egress will create any greater liability for property owners than otherwise would exist if they maintained unsafe conditions. Road conditions during a flood are not considered in this analysis beyond their ability to function as ingress and egress to a site.

C. Public Notice and Comment in Steps 2 and 7

Several commenters urged HUD to shift the onus from residents having to look to newspapers or government websites to identify projects that may affect them. One commenter urged HUD to require providing comprehensive proposal details to impacted communities and soliciting their feedback in as many forms/methods necessary, beyond posting to a government website or newspaper. Several commenters urged HUD to shift notice and comment requirements to a community-led planning model, mandating earlier engagement of impacted communities, carried through project lifecycles. These commenters asserted that more substantive participation of impacted communities will: increase likelihood that residents will support projects and help to address any obstacles; improve community understanding of flood risks and how they can individually prepare; reinforce a sense of community; and lead to better project outcomes.

One commenter specifically sought revisions to § 55.20 to require that flood risk assessment and project design criteria steps be co-produced with impacted residents and require flood mitigation assessment to weigh community members' lived experiences (*e.g.,* intended uses, flood susceptibility, population-specific concerns) equally with technical modeling assessments. This commenter explained that residents' familiarity with the property allows them to identify characteristics/

risks that site developers and engineers may otherwise miss, such as stormwater issues and critical ingress/egress.

Several commenters sought clarification on the deadline meant by ''earliest possible time of a proposal'' for sending required Initial Notice required under § 55.20(b). In clarifying ''earliest possible time,'' these commenters asked HUD to consider a developer's planning process, explaining that developers would need detailed plans to prepare the initial notice and that developers may not be able to respond to comments until later in a project timeline. Another commenter asked if the proposed rule would change public notice publication timing.

One commenter urged HUD to amend § 55.20(b)(2) from providing ''a minimum of 15 calendar days . . . for comment on the public notice'' to a minimum of sixty (60) calendar days, which this commenter stated will create no additional delay to the lengthy building process or economic harm, while providing necessary opportunity for public awareness.

Several commenters expressed support for the option to publish Steps 2 and 7 notices on an appropriate government website as an alternative to local news outlets.

Several commenters raised concerns that the public's lack of access to, or knowledge of, government-operated websites may decrease the efficacy of public notices. One commenter asked HUD to consider requiring publication in local newspapers circulated in print and online, characterizing this as a more practical alternative to government websites.

Several commenters sought clarification on what classifies as an ''approved government website'' for public notices and who at HUD would be authorized to ''approve'' websites. Several commenters asked if ''government website'' refers to local, State, or Federal government websites. Commenters also asked HUD to clarify who at HUD has the authority to determine what is or is not an ''approved'' site. Several commenters asked HUD to detail the roles and responsibilities for public notice.

Several commenters asked whether HUD would publish the 8-step analysis and Finding of No Significant Impact (FONSI) on HUD's website for public comment. One commenter asked what the required length of comment periods for a FONSI for choice-limiting actions under part 50 would be and what the typical comment period length for these actions is. Another commenter asked HUD to describe its current notice and comment process for floodway projects under part 50 at both the environmental assessment and ''categorically excluded subject to'' levels of review.

HUD Response: HUD appreciates commenters' feedback regarding the solicitation of public engagement through additional means other than government websites or newspapers; however, HUD will not currently expand the requirement. HUD recognizes that community outreach requires valuable time and resources and while HUD would hope that all affected community members participate in any public comment process, it cannot mandate participation. HUD follows the public engagement considerations as laid out in 24 CFR 50.4, 24 CFR 58.59 and 40 CFR parts 1500–1508 where appropriate. While HUD appreciates anecdotal community input regarding flood risk and encourages projects to consider this information, HUD cannot rely solely only on this information for decision making. Because the 8-step decision making process for floodplains and part 55 compliance falls under laws and authorities at §§ 58.5 and 50.4 for applicable project activities, grantees, applicants, and responsible entities must complete all parts of the process prior to engaging in any choice limiting actions. HUD field staff from the Office of Environment and Energy are available to assist in determining if it is the right time to publish their early notices under § 55.20(b).

HUD disagrees with the commenters' statement that increasing the early notice publication timeframe from 15 to 60 days would cause no additional project delays. HUD believes an increase of this magnitude at this time would cause significant project delays and provide little benefit for public awareness. HUD does not intend to increase the early public notice period at § 55.20 to 60 days at this time.

HUD appreciates the commenters' support for the use of government websites to distribute public notices under part 55. This rule requires that an official government website used for public notification must include accessibility features and languages necessary to ensure the affected community has access to provide meaningful public feedback. The rule clarifies responsibility for public notices falls to the responsible entities who complete the 8-step decision making process. HUD intends to provide grantees with necessary training and guidance to support their efforts at ensuring any government websites used are appropriate. Additionally, under Title VI of the Civil Rights Act of 1964, Executive Order 13166, and in accordance with the U.S. Supreme Court ruling in *Lau* v *Nichols,*[41] recipients of Federal financial assistance are required to take reasonable steps to ensure meaningful access to their programs and activities by LEP persons. This means that a government website would need to meet the accessibility requirements all HUD programs are subject to in order to be considered acceptable.[42] The rule does not change the responsible entity's responsibility for publication.

D. Clarifications and Recommendations

One commenter expressed support for the proposed Step 4 impact evaluation language, while stressing that in addition to evaluating the impacts, the evaluation process must include mitigating loss of natural functions within the impacted watershed where avoidance is not feasible.

Several commenters sought clarification in the rule of what information is needed to meet the requirement to demonstrate that runoff from a proposed development would not impact surrounding properties under § 55.20(d)(1)(ii)(C), and whether it would be sufficient to document compliance with local requirements. These commenters explained that many local ordinances require total stormwater volume not increase from pre- to post-construction; however, the addition of fill to any floodplain will generally result in watershed changes, including increased stormwater volume.

One commenter asked HUD to work with Federal partners to develop post-regulatory guidance and training to inform Steps 4 and 5 that clearly define: the values of floodplains, wetlands, and nature-based solutions; the ecosystem process/functions that generate these values; and the bio-geomorphology (ecological interactions between hydrology, geomorphology, and biology of floodplain environments) and attributes of ''functional'' floodplains. This commenter stated that the proposed rule and Guidelines for Implementing Executive Orders 11988 and 13690 fail to adequately describe these values and attributes, resulting in this commenter regularly seeing local agencies incorrectly interpret ''functional'' floodplains and allow projects to proceed that fail to protect and restore floodplain functions (*e.g.,* planting grass for parks). This commenter explained the value of supported floodplain bio-geomorphology, along with the four attributes that must be attained to

[41] 414 U.S. 563 (1974).

[42] 68 FR 70968.

achieve it, that HUD should incorporate into guidance: (1) connectivity between the floodplain and its river/stream; (2) necessary timing, magnitude, duration, and frequency of flow from connected water source; (3) special scale; and (4) habitat and structural diversity.

HUD Response: HUD appreciates the commenters' support for the proposed Step 4 impact evaluation language. HUD recommends that project specific environmental review questions be addressed by Regional and Field Environmental Officers from HUD's Office of Environment and Energy. HUD notes that the rule does not mandate how elevation is achieved and recommends that applicants concerned about runoff on their property utilize methods of elevation that do not increase surface flow.

HUD intends to provide technical assistance and guidance to grantees, applicants, and responsible entities for all 8 steps of the 8-step decision making process to help ensure compliance with E.O. 11988, E.O. 11990, and E.O. 13690.

Due to the potential for an increased regulatory burden, HUD does not intend to require grantees, applicants, and responsible entities to track the locations and quantities of growth and development in the floodplain over time as part of their 8-step analysis.

HUD notes that § 55.20(d)(ii)(C) does not forbid a project from impacting surrounding properties; however, those impacts must be considered and documented. HUD projects are required to follow all relevant laws and authorities.

E. Environmental Justice Requirements

Several commenters expressed support for this provision as a step towards HUD's responsibility to address environmental justice and equity impacts of floodplain management and decision making processes.

One commenter urged HUD to target robust technical assistance towards communities with limited resources to implement the 8-step decision making process.

Another commenter urged HUD to engage the public in developing guidance, and for that guidance to address the following topics: (1) detail how HUD will weigh environmental justice impacts; (2) provide streamlined decision making for activities that mitigate flood risk or wetland loss or that provide co-benefits; and (3) detailed actions manifesting HUD's commitment to nature-based floodplain management approaches.

One commenter raised concerns that the proposed environmental justice review provisions fail to mandate public participation and substantive analysis of proposed actions by including flexible language that incentivizes not engaging historically underrepresented communities in land decisions that impact them. Specifically, this commenter urged HUD to delete ''(if conducted)'' from § 55.20(f)(2)(iii) (''If the proposed activity is located in or affects a community with environmental justice concerns . . . the reevaluation must address public input provided during environmental justice outreach (if conducted) . . . .''). This commenter reasoned that permitting developers to forego environmental justice outreach where census data/mapping programs do not identify a community of concern inappropriately shifts the burden onto community members to identify and mitigate hazards and could result in HUD supporting development near hazardous sites that are not yet documented on a map. This commenter also stated that non-discretionary public outreach requirements align with other HUD rules, citing HUD's environmental justice worksheet's instruction that project planners should always mitigate environmental justice impacts.

The same commenter also urged HUD to revise the proposed rule to clearly define the substantive analysis necessary to adequately conduct an environmental justice review, suggesting that HUD incorporate guidance from other administrative agencies, citing the EPA's Legal Tools to Advance Environmental Justice as an example. This commenter explained that analysis must account for the cumulative risks from all environmental hazards, beyond flooding itself, illustrating with the example that discriminatory zoning, concentration of hazardous uses, and disinvestment in infrastructure mean that when flooding occurs, communities also experience hazard contamination and harmful emissions from producers' increased emergency outputs.

Several commenters stated that if the 8-step decision making process is part of a full environmental review, NEPA will address environmental justice information and discouraged requiring duplication.

HUD Response: HUD appreciates the commenters' support for the proposed rule's steps towards addressing environmental justice and equity impacts of floodplain management and decision making processes. HUD intends to issue updated guidance for advancing environmental justice and coordinating public engagement under the 8-step decision making process with any ongoing engagements associated with environmental justice goals. Additionally, HUD created a new Environmental Assessment factor for environmental justice in 2022 which requires environmental review preparers to outline potential project impacts and mitigations for environmental justice.

HUD disagrees that the requirement for engaging communities facing environmental justice issues inappropriately shifts the burden of identifying and mitigating hazards onto those communities that are not identified as communities of concern. HUD mandates public participation in the 8-step decision making process in Steps 2 and 7 which require an early and final public notice respectively regardless of the community affected. Feedback received as part of the public participation process is intended to inform decision making related to site locations and mitigation measures, but the responsibility for identifying and mitigating hazards is limited to HUD and the responsible entity. HUD also notes that environmental justice is a required consideration as listed at 24 CFR 50.4 and 58.5 and is not limited to part 55. The rule simply requires coordination of public outreach efforts if they exist.

Elevation and Floodproofing

A. Overall Resilience

1. Elevation Is Insufficient To Increase Flood Resilience

Several commenters urged HUD to keep in mind that FFRMS is more than just an elevation standard, but rather a broad framework to increase flood resilience and preserve floodplains.

One commenter urged HUD to focus more on the overall health of the floodplain itself rather than the ability of a structure to withstand a flooding event. This commenter said that focusing on the effects an activity has on floodplains and analyzing and mitigating for the benefit of the watershed effected would comply with the intent of E.O. 11988 and E.O. 13690.

One commenter asked HUD to revise the rule to encourage a wide range of resilience measures, to better conform with E.O. 13690's requirement that agencies use nature-based approaches wherever possible. This commenter reasoned that while the proposed elevation standards have a potential to significantly reduce damage, nature-based measures like wetlands restoration are more effective over a large area, in cost and environmental values, citing a case study comparing cost effectiveness of nature-based and coastal adaptation. Another commenter pointed out that ''resilience'' is not

defined in the proposed rule and that the elevation standards demonstrate a concern only for lost property rather than harm to people after a flood event.

Another commenter noted that for some projects, including those deemed as ''critical'' (such as community assets like hospitals, fire stations, and water treatment facilities) elevation alone might not offer the most cost-effective or durable protections. This commenter urged HUD to require careful consideration for what constitutes ''critical'' and assure protection of ingress, egress, and continued functioning rather than simply protection of the structure itself.

One commenter urged HUD to draw a firm line against allowing ''floodproofing'' in the FFRMS floodplain for any ''new'' build or substantial improvement, or alternatively, clarify that floodproofing through elevation be accomplished through pier and beam construction and not by pouring concrete slabs. The commenter noted that this was especially important given HUD's shift to CISA maps because, without additional funding, those maps could take many years to update and release. The commenter also believed that HUD's attempt to mitigate by adopting the 8-step decision making process is insufficient and would allow continued development within the current 1-percent-annual-chance floodplain maps.

HUD Response: FFRMS is more than an elevation standard, it is a flood risk reduction standard designed as a flexible framework to increase resilience against flooding and help preserve the natural values of floodplains. Resilience in this context is the ability to withstand and recover quickly from flood events. HUD contends that increasing the resilience of the built environment through elevation standards decreases the risk to people who reside in those structures. HUD must account for the impacts of its actions and activities on floodplains and wetlands per E.O. 11990, E.O. 11988, and E.O. 13690. Many HUD programs like CDBG–DR and CDBG–MIT fund wetland restoration and nature-based solutions to flooding issues. HUD agrees with the commenter that nature-based solutions are an effective way to reduce damage and has added language in this final rule at § 55.20(c)(1)(ii) to encourage nature-based solutions as alternatives to avoid floodplain and wetland impacts. HUD also encourages the use of nature-based solutions where feasible as a resilience measure per the guidance found in the Community Resilience Toolkit.[43]

HUD notes that the 8-step decision making process for critical actions does require projects to consider ingress and egress along with alternative locations for the project with the intent of removing it from the floodplain if practicable.

HUD disagrees with the commenter that floodproofing fails to provide adequate flood mitigation for non-residential structures in the floodplain. HUD also notes that floodproofing can be done on any number of foundation types and does not require the use of poured concrete slabs. Additionally, HUD contends that CISA will provide a more realistic value for future risk than existing processes as it will address climate change over time. HUD disagrees that all development within the 1-percent-annual-chance floodplain should be forbidden so long as that development is subject to the requirements and protectiveness of a thorough evaluation through the 8-step decision making process.

2. Encouraging Use of Additional Resilience Strategies

Several commenters suggested a different set of strategies beyond elevation for substantial rehabilitation that would allow for more design upgrades to promote flood resiliency rather than elevating alone.

For example, some commenters recommended that HUD allow floodproofing to be used on residential buildings where there are units below the FFRMS floodplain. The commenters were concerned that the proposed rule could result in reducing the number of garden-style multifamily residential communities in urban locations that cannot comply with the elevation standards. The commenters went onto say that there are other ways such developments can support flood resiliency such as elevated machinery through design initiatives.

One commenter recommended that HUD consider the characteristics of the specific floodplain in addition to flood stage. The commenter said that elevation should incorporate evacuation planning, including evacuation prior to a flood event for resident and first responder safety.

Another commenter wrote to raise the importance of the International Code Council's model codes (''I-Codes''), which are developed in an open forum with a balance of interests represented and due process. The commenter strongly encouraged HUD to require numerous provisions within the I-Codes that provide flood mitigation benefits, including the latest International Residential Code and International Building Code, in order to ensure the most stringent flood provisions for federally assisted construction in flood zones and an enhanced level of resilience for both structures and communities. The commenter went on to emphasize that the National Institute of Building Sciences estimates that building to modern building codes saves $11 for every $1 invested (including earthquake, flood, and wind mitigation benefits) and retrofitting structures to current flood mitigation requirements can provide $6 in mitigation benefits for every $1 invested.

Another commenter supported the adoption of up-to-date modern building codes and standards and urged HUD to adopt the ASCE 7 Minimum Design Loads and Associated Criteria for Buildings and Other Structures, especially Chapter 5 Flood Loads.

HUD Response: HUD believes that floodproofing alone is insufficient to protect residents in the event of a flood and therefore does not allow floodproofing of residential units. HUD contends that units at high risk of flood loss are not safe and do not contribute to HUD's mission of providing safe affordable housing.

HUD appreciates the commenters' feedback regarding evacuation planning and notes that for critical actions, ingress and egress must be considered in the 8-step decision making process. HUD notes that additional hydrology characteristics of any individual floodplain and associated impacts should also be considered during the 8-step decision making process.

While HUD appreciates the efforts of the International Code Council, ASCE and others to increase building resilience and the importance of building codes generally, HUD currently has no intention of adding them into the part 55 requirements. HUD is separately coordinating with an interagency group in an effort to address building codes for HUD-assisted properties.

3. Opposition to Resiliency Requirements

One commenter suggested that because the proposed rule allows ''floodproofing'' instead of elevation, for example, for parking garages, it would cause individuals to potentially lose access to not only their homes but also their vehicles during a major weather event. This commenter suggested this

[43] Information on the Community Resilience Toolkit can be found here. *https://www.hudexchange.info/resource/5981/community-resilience-toolkit/.*

impact would fall on low-income communities, that the proposed rule doesn't craft more resilient livable locations, and that HUD should draw a firm line against ''floodproofing'' in the FFRMS floodplain for any new build.

Another commenter suggested that HUD's proposal unnecessarily expands floodplain management requirements and threatens access to FHA mortgage insurance programs for single family home buyers and multifamily builders. This commenter said that by establishing a higher flood risk standard, the proposed rule is inconsistent with NFIP and creates unwarranted and expansive flood mitigation requirements beyond those established by FEMA.

HUD Response: HUD disagrees with the commenter regarding the use of floodproofing on structures where all of the residential units are elevated above FFRMS. HUD maintains that floodproofing structures allows for resilient development that keeps residential structures out of riskier locations without significantly reducing the availability of land for construction. This is also in keeping with existing HUD regulations under part 55 which allow for the floodproofing of structures that do not have residential units below the floodplain elevation.

HUD disagrees that the rule unnecessarily expands floodplain management requirements. The increasing risk to housing structures and associated risks to human life posed by climate change are well documented. Under E.O. 11988, HUD is directed to protect the public's investment in housing and ensure a resilient housing stock. As such, HUD believes that increasing elevation standards for FHA backed new construction within the 1-percent-annual-chance floodplain is necessary in the Minimum Property Standards. As the Minimum Property Standards update is limited to the 1-percent-annual-chance floodplain, the horizontal extent of the floodplain of concern remains consistent with NFIP.

B. Use of Fill To Achieve Elevation Requirements

Several commenters were concerned about the use of fill within floodplains. Some commenters emphasized that the use of fill could redirect flood waters onto other properties with existing structures or otherwise cause expansion of the mapped floodplain elsewhere. One commenter worried this impact could lead local municipalities to decline to support FHA-financed projects. Another commenter was also concerned that the elevation requirements may cause cities and counties to reject development of HUD-insured or HUD-assisted housing if the sites are required to be elevated above neighboring sites.

Several commenters said that the proposed rule's floodproofing requirement for sites with no known or previously occurring flood risk will be prohibitively expensive. Some commenters noted it may result in reduced density allowable on the site to accommodate increased retention requirements and therefore a further reduction of property value. One commenter emphasized that elevation by fill has become common in the coastal plain of the Southeast and many communities have suffered worsening flooding and septic tank failures as a result of more water being pushed into their yards.

Several commenters suggested alternatives where fill is necessary to achieve elevation requirements, such as requiring that a project retain the volume of water onsite that is equivalent to the volume of fill used. Another commenter suggested that HUD should consider alternatives that would allow exceptions through which the local Floodplain Administrator may provide input on other design considerations for promoting flood resiliency; elevating residential structures above the FFRMS should not be the only option. Another commenter asked HUD to include guidance for how to remedy if neighboring properties are negatively impacted by improvements. Another commenter asked that HUD include what type of information would be needed to demonstrate runoff from a proposed development would not impact surrounding properties.

One commenter pointed out that using fill material to elevate structures will add significant cost to new construction including transport, earthwork, and compacting costs. Such an increase in costs, the commenter noted, might be passed onto low-income homeowners and renters.

Several commenters urged HUD to prohibit the use of fill to achieve elevation requirements altogether.

HUD Response: HUD agrees that use of fill within the floodplain can affect floodplain function. HUD notes that while the rule does increase elevation standards, it does not mandate the method by which elevation must be achieved. Under this rule, HUD would generally encourage grantees to use fill to elevate a site only where no other practicable alternative exists. Instead, HUD's preference is to elevate using methods that do not affect runoff of a site, such as piers or foundation walls. All project impacts, both on and offsite, must be addressed under the 8-step decision making process. It is up to the HUD or responsible entity environmental review preparer to propose mitigation measures which account for any impacts found during the 8-step decision making process though regional HUD staff may be able to provide technical assistance on a project-by-project basis.

According to the RIA, the cost of elevating and floodproofing structures is outweighed by the benefits of flood risk reduction and flood loss avoidance.

C. Cost and Feasibility of Elevation and Floodproofing Requirements

One commenter felt that HUD provided compelling data that the benefits of the proposed two-foot-above standard far exceed the costs, and without a standard, property owners would tend to under-insure and under-mitigate relative to the flood risk.

Another commenter argued, contrary to the proposed rule, that the cost of elevating properties is a financial burden to homeowners that would not be made up in saved insurance premiums. One commenter referenced HUD's RIA, which notes that the construction cost to elevate a new residential structure two feet does not pose a significant burden to small entities in the single family housing development industry and contended that more research is needed to come to that determination. The commenter cited one recent analysis that such costs are anywhere from $20,000–$80,000 and encouraged consideration of HUD's proposal to include the basement in the minimum elevation determination.

One commenter expressed their concern that one-story homeowners would not be able to reserve their only floor for a non-residential use to reduce their compliance costs and do not have the same flexibilities as builders to locate new projects outside floodplains.

One commenter noted that it is difficult to predict if the revised elevation standard is viable because land is forever shifting and changing, especially in wetlands.

Some commenters expressed their concern that requiring existing structures to elevate to 2-feet above the BFE may result in significant pushback from borrowers especially those associated with low-income housing transactions. These commenters were concerned that as a result, needed repairs and upgrades to low-income housing will not happen thus placing an undue burden on existing low-income housing.

Other commenters also expressed concern that it will be infeasible to

elevate an existing property to FFRMS elevation and so the inability to comply will leave housing stock in disrepair. Moreover, one commenter suggested that for the 40 percent of the U.S. population that resides in coastal communities—many of whom live in densely populated urban areas with limited alternative locations for development—raising a building several feet above BFE is not feasible. The commenter urged HUD to make exceptions where a building can be elevated above BFE but not as high as the FFRMS flood elevation.

One comment focused specifically on communities that may have restrictions on building heights for multifamily developments. Since, in those cases, the proposed rule's increased elevation requirements may result in a development exceeding building height requirements, this commenter urged HUD to work with FEMA to develop incentives within the ''Community Rating System'' for building additional stories on multifamily buildings located in floodplains instead of building horizontally. The commenter suggested that additional stories may be possible if they would increase a building's Community Rating System rating and result in cost savings to the community.

Several commenters asked for HUD to clarify how an existing multifamily structure with a basement could be practicably elevated above BFE.

HUD Response: HUD appreciates the commenters' feedback regarding the benefits and costs of the BFE+2 elevation standard. HUD's RIA determined that the cost of the increased elevation standard would be outweighed by the benefits of flood risk mitigation including flood loss avoidance and flood insurance cost reductions. HUD believes the RIA reflects the best available economic data on costs associated with flood insurance and flood risk.

HUD notes that per the rule, residential units will need to be elevated and not floodproofed for new construction and substantial improvement activities if they are located in the FFRMS floodplain. HUD disagrees that any potential changes in the land make it impossible to determine if the elevation standard is effective. HUD notes that non-residential floors can be floodproofed without elevation.

HUD contends that elevation and floodproofing of low-income housing is a needed repair or upgrade for these facilities, so funding spent on elevating and floodproofing these facilities is necessary. Any repairs that meet the threshold for substantial improvement as defined at § 55.2(b)(12) will trigger requirements for elevation. HUD does not currently have any plans to allow exceptions for buildings which can be elevated to BFE but not the FFRMS floodplain. HUD appreciates the feedback regarding populations living near the coasts as it highlights the need for the rule.

HUD notes that HUD funded projects must also be in compliance with local ordinances including those on height restrictions for design. Additionally, the Community Rating System is a function of NFIP regulations which fall under the purview of FEMA. HUD has no authority to grant incentives under the Community Rating System.

D. Strategies To Restore and Preserve Beneficial Values of Floodplains and Wetlands

Several commenters expressed support for HUD's commitment to nature-based floodplain management solutions through proposed § 55.20(e) and asked HUD to encourage projects to assess mitigation opportunities that restore natural floodplain and wetland functions proximate to project sites wherever practicable. One commenter expressed support for streamlining decision making for nature-based approaches.

Several commenters explained that nature-based approaches retain excess water and slowly release it back to natural drainage systems while improving water and air quality, recreational function, heat mitigation, and property aesthetics (citing FEMA and National Wildlife Federation research). One commenter described the strategies deployed for three successful nature-based mitigation projects of varying scope—a wetland and shoreline stabilization project, a creek restoration project in a residential and business development, and a stormwater resilience project in a flood-prone residential neighborhood. Several commenters reasoned that this rule's focus on nature-based solutions aligns with Federal adaptation strategy outlined in E.O. 14072, E.O. 13960, and the Biden-Harris Administration's Roadmap to Accelerate Nature-Based Solutions, encouraging HUD to use the Roadmap and its companion resource guide to further identify specific practices proven effective.

Several commenters encouraged HUD to include the following in mitigation guidance and training: (1) promote effectiveness of landscape-level practices encompassing the full property, including natural stormwater strategies (*e.g.,* bioswales, retention ponds); (2) provide a suite of strategies flexible to meet varying site-specific needs; and (3) encourage no- or low-adverse impact development practices.

Several commenters expressed support for HUD's efforts to better communicate the ecosystem services that natural systems provide through proposed § 55.20(e)(3), defining restoration and preservation of wetlands and the beneficial functions of floodplains. One commenter provided an Association of State Wetland Managers manual prepared for agency floodplain management staff and others to assess, protect, and restore floodplain ''natural and beneficial'' functions.

One commenter suggested that providing more details on the ecosystem services and economic benefits that wetlands and floodplains provide will increase public acceptance of the rule.

HUD Response: HUD appreciates commenters' support for the nature-based strategies identified in the new § 55.20(e). HUD encourages the use of nature-based solutions where practicable across its portfolio. HUD agrees that nature-based solutions provide significant benefits and ecosystem services to the floodplain and wetland areas in and around projects.

HUD not only encourages grantees to utilize nature-based solutions for floodplain management where possible, but § 55.20(e) requires the restoration and preservation of the natural and beneficial functions of the FFRMS floodplain where practicable. HUD believes these projects can provide significant value to both people in the built environment and the floodplain. Additionally, HUD strongly encourages floodways to be returned to greenspace when feasible.

HUD intends to provide guidance and technical assistance to grantees, applicants, and responsible entities to help them restore and preserve the natural and beneficial functions of the floodplain as part of their project. Additionally, HUD staff from the Office of Environment and Energy are available to help individual projects integrate mitigation into their projects.

E. Questions About Elevation and Floodproofing Requirements

Commenters asked HUD to confirm that the requirement for elevation of a site to or above a 0.2-percent-annual-chance floodplain with no known or previously occurring flood risk will not result in the requirement for completion of the 8-step decision making process before adding fill to modify a floodplain per section § 55.12(c)(8). If the 8-step decision making process would result, this commenter objects to the administrative burden it would place on

borrowers, lenders, and other stakeholders.

One commenter asked whether FHA Multifamily will allow lenders to avoid the FFRMS requirements and add risk to FHA by building with non-HUD funds and refinancing with FHA in a few years.

Some commenters noted that they did not understand the need to use a FEMA Elevation Certificate or FEMA Floodproofing Certificate to document elevations when CISA mapping is used because these tools are used in conjunction with FEMA maps rather than CISA maps.

Commenters also asked HUD to clarify what it means by ''by other means'' and ''from time to time'' when discussing documentation of elevation to avoid inconsistent or unequitable prescription of unknown data requirements.

Another commenter suggested HUD adopt the standard jointly developed by the Association of State Floodplain Managers, the USACE, and FM Approvals for floodproofing non-residential areas below the FFRMS floodplain elevation, which has existed for about 10 years and ensures that floodproofing products perform as designed and advertised.

HUD Response: The rule removes the exemption for LOMA/LOMR from § 55.12(c)(8). Additionally, LOMAs/LOMRs do not remove sites from the FFRMS floodplain. As such, sites within the FFRMS floodplain will be subject to part 55 including, potentially, a full 8-step decision making process. While HUD encourages local and State authorities to match HUD regulations where possible, HUD cannot regulate projects that fall outside the Federal nexus and do not receive HUD funding.

FEMA elevation certificates, floodproofing certificates, or other documentation as directed by HUD, provides the official elevation of structures. This elevation is necessary to compare structures with the FFRMS floodplain and determine if they are subject to part 55 and/or any elevation mitigation requirements. HUD programs must also follow any local or State requirements for documenting elevation if they exist. HUD notes that any documentation HUD directs the use of must at least meet the minimum elevation requirement of the FFRMS floodplain. HUD appreciates the commenter's thoughtful ideas and considerations for use of floodproofing standards; however, this rule requires alignment with FEMA's floodproofing standards at 44 CFR 60.3(c)(3)(ii) and 60.3(c)(4)(i).

The FHA Multifamily program strongly discourages lenders building with non-HUD funds and refinancing with FHA later to skirt HUD requirements as the FFRMS requirements under this rule are critical to protecting the safety of HUD-assisted residents and the long-term resilience of HUD investments.

F. Additional Recommendations for Elevation and Floodproofing Requirements

One commenter recommended that tested and certified engineered flood barriers be used for floodproofing, where applicable. This commenter also recommended that HUD amend its proposed rule to be effective for the ''lowest habitable'' floor of the building.

One commenter suggested that funding be provided via FEMA to provide low interest loans for house raising. The commenter noted the average cost of house raising is over $100,000.

One commenter recommended that HUD incorporate a requirement that parking areas be built to the BFE to ensure a consistent practice that can be anticipated by all stakeholders during project planning.

One commenter emphasized that the residents of communities impacted by floods possess a right of return consistent with human rights law that must be honored. The commenter said that such residents should be provided assistance in recovering via programs such as CDBG–DR.

One commenter recommended that HUD make it clear that elevation requirements apply to the new installation of manufactured housing. The commenter urged HUD to prioritize department-wide actions that increase climate resilience for manufactured housing, including facilitating public investments in flood adaptation projects that would protect manufactured housing, mandating stricter building codes including foundation anchoring standards, increasing access to Disaster Recovery funds, and creating incentives to move manufactured housing to safer sites outside of the FFRMS floodplain. Citing several studies, this commenter explained that manufactured and mobile homes have a higher risk of flooding than other housing types due to location and foundation types; and that natural disasters disproportionately adversely affect these residents due to limited legal protections, limited access to disaster relief, and higher poverty rates and mobility limitations.

One commenter encouraged HUD to implement enhanced construction standards consistently across its programs. The commenter said this would reduce complexity and increase programmatic efficiency.

One commenter recommended HUD exclude FHA multifamily mortgage insurance programs from the FFRMS and any elevation and/or flood proofing requirements outside of the 1-percent-annual-chance floodplain. This commenter pointed out that HUD's Office of Multifamily Housing already promotes resilience against flooding in the absence of a new FFRMS, and these changes, as well as State and local code requirements, increase resiliency for FHA-insured multifamily properties without the confusing and costly FFRMS requirements. This commenter urged HUD to defer to State and local governments to decide what resiliency measures are necessary and workable for multifamily developments in their communities, especially if those properties are not HUD-funded or HUD-assisted. This commenter reasoned that State and local governments typically adopt nationally recognized model codes, tailored to reflect local practices and needs, and that residences are built to these codes to withstand natural hazards while maintaining affordability.

HUD Response: HUD appreciates the commenter's thoughtful ideas and considerations for alteration of this section of the rule; however, currently, HUD has no plans to adopt any floodproofing or enhanced construction standards. Additionally, HUD does not intend to exclude FHA multifamily programs from FFRMS. HUD notes that HUD funded projects are required to comply with local and State regulations where they exceed the HUD minimum standards.

HUD notes that it has no control over FEMA's budget or funding program design. HUD also notes that CDBG–DR is funded through individual supplemental appropriations and, when available, grantees have broad discretion in determining how to use the funds. Homeowners that apply for CDBG–DR funding through grantee-run programs and are deemed ineligible for assistance are still welcome to fund their own repairs.

HUD does not believe that parking areas need to be built to BFE. While HUD would encourage projects to build outside of the 1-percent-annual-chance floodplain where practicable, HUD does not believe it is necessary to elevate parking lots.

HUD appreciates the commenters' request to make it clear that elevation requirements apply to the installation of new manufactured housing that is subject to part 55. HUD has historically interpreted the rule related to the

installation of new HUD-assisted MHUs to be equivalent to the building of new site-built homes under part 55. This would mean that elevation requirements for site-built homes also apply to MHUs subject to part 55. That being said, HUD has decided to revise the rule to clearly state that new siting and substantial improvements of MHUs are included in the part 55 definitions of new construction and substantial improvement, respectively. Additionally, HUD intends to provide subregulatory guidance and technical assistance focused on MHU elevation requirements. HUD also notes that facilitating public investments in flood adaptation projects that would protect manufactured housing, mandating stricter building codes including foundation anchoring standards, increasing access to Disaster Recovery funds, and creating incentives to move manufactured housing to safer sites outside of the FFRMS floodplain all fall outside the scope of this rulemaking.

As discussed earlier in this preamble, it is important to note that FHA-insured single family housing is not subject to part 55 and that FHA-insured single family manufactured housing is not subject to the 24 CFR 200.926d elevation standards of this final rule. Eligibility requirements, including elevation requirements, for FHA-insured manufactured housing can be found at 24 CFR part 3285: Manufactured Home Installation Standards and 24 CFR 203.43f: Eligibility of Mortgages Covering Manufactured Homes, as applicable, which are outside the scope of this rulemaking.

Existing Nonconforming Sites in § 55.21

Several commenters expressed general opposition towards HUD's proposed process for existing nonconforming sites. One commenter urged HUD to seriously consider disallowing construction and reconstruction within the floodway altogether. Another commenter remarked that § 55.21 appears to be a backdoor for HUD to continue subsidizing risky properties. This commenter felt that the provision was too vague and asked a number of questions such as: whether it will apply to buildings built in violation of NFIP or State, local, or Tribal law or ordinances; whether it will apply to buildings below the current FFRMS standard; how will financial risk be assessed for FHA projects; will it apply to hospitals and nursing homes; how will ingress and egress be analyzed; will HUD coordinate with first responders and emergency rescuers; will it apply to buildings with a history of flooding; how much staff time will it take to conduct this process and would that time be better used finding a safe site; whether HUD believes properties with improvements in floodways comply with the requirements of 24 CFR 5.703, especially paragraphs (a) and (f) and whether HUD is waiving 24 CFR 5.703 for applicable programs as well; and whether there is potential for greater litigation. The commenter said that this provision keeps the most vulnerable in harm's way and recommended it be removed from the final rule.

Several other commenters asked for clarity surrounding the process for existing nonconforming sites. One commenter said they found the change to § 55.21 confusing and asked whether the change means that HUD will continue to assist properties in the floodway in violation of its own regulations. Another commenter said the language of § 55.21(b) is confusing and potentially misleading and asked whether HUD would allow buildings with residential units to occupy the floodway as long as the individual units are out of the floodway or whether HUD will exclude buildings containing residential units from occupying the floodway. Additionally, this commenter asked how HUD will ensure building foundations that remain in the floodway are safe. Another commenter wanted clarity as to what stage HUD would be conducting a ''close look'' at the site to determine whether to continue assistance. This commenter was concerned that applicants will be reluctant to proceed with applications without assurance that HUD mortgage insurance will be possible. Other commenters asked whether HUD has examined its FHA and public housing portfolios to understand how many floodway projects will be subject to the ''very rare'' process. This commenter asked whether the alternative process would be used in lieu of oversight and whether any engineers or building science experts were involved in formulating this proposed provision.

Several other commenters supported the proposed provisions relating to existing nonconforming sites. One commenter wrote that they strongly believe that housing preservation and sustainability are complementary and that they recommend HUD pay particular attention to the preservation of existing affordable housing units and the buildings in which they reside. Another commenter welcomed HUD's proposal to address repeatedly flooded properties and urged HUD to pay close attention to repair and reconstruction of multifamily units and to prioritize new protections in communities where residents have been displaced, lost belongings, and required evacuation and rescue. This commenter emphasized that HUD should pay particular attention to communities where such existing structures are a significant portion of the affordable housing stock.

Several other commenters had recommendations for how to change or improve the existing nonconforming site process. One commenter recommended that the footprint of any building located in a FEMA floodway not be allowed to increase in size for rehabilitation purposes. This commenter also discouraged HUD from demolishing existing buildings and instead supported conducting detailed risk assessments to determine the viability of elevation, floodproofing, and relocation. Another commenter urged HUD to defer to NFIP or local regulations for actions within a floodway. Another commenter also suggested that an effective form of mitigation can be the implementation and enforcement of modern building codes for properties being rebuilt due to repetitive losses. Another commenter encouraged HUD to provide funding for buyouts with relocation assistance for properties experiencing repeated loss due to flood damage. This commenter supported HUD policies that increase resilience of existing housing stock but asked HUD to recognize that that is a short-term, temporary measure and that HUD should work towards the long-term goal of eliminating more housing in places at risk of flooding and erosion.

HUD Response: HUD appreciates the commenters' feedback regarding the updates to § 55.21. HUD intends to produce additional guidance and technical assistance to help provide context for when the exemption at § 55.21 should apply. Generally, HUD intends this alternative processing for existing nonconforming sites to be rarely authorized and only under limited circumstances. While HUD has not created an inventory of projects where this rule may be applicable, HUD is responsible for ensuring continued compliance with NEPA and part 55 via monitoring and other tracking mechanisms. HUD is also developing an internal dashboard for environmental review data that will provide additional information on project location and part 55 compliance over time. Regulatory rigidity can be useful in many circumstances but having limited flexibility to allow certain projects to receive necessary repairs/upgrades ensures that HUD avoids placing undue burdens on existing HUD-assisted or -insured housing.

HUD disagrees that this provision will keep the most vulnerable populations in harm's way. HUD contends that by requiring all residential units be removed from the floodway, completion of the 8-step decision making process, and incorporation of all practicable measures to meaningfully reduce flood risk and increase resilience, residents will be protected from future harm. HUD intends to review projects on a case-by-case basis and reserves the right to refuse to approve the project if it believes mitigation is inadequate to reduce the risk sufficiently for resident safety. This alternative processing for existing nonconforming sites is not intended to be used in lieu of oversight at any particular property and it should be noted that the NSPIRE inspection standards require grantees to ensure that all residents live in safe, habitable dwellings, and that the items and components located inside the building, outside the building, and within the units of HUD housing are to be functionally adequate, operable, and free of health and safety hazards.

HUD appreciates the commenter's sentiment that housing preservation and sustainability are inextricably linked and complimentary of one another. HUD also appreciates the feedback from the commenter regarding FEMA designated SRL properties, and HUD agrees that communities with a high percentage of SRL properties are worth particular attention. These properties represent some of the highest risk and HUD wishes to ensure any Federal investment is well protected.

HUD appreciates the commenter's thoughtful ideas and considerations for alteration of this section of the rule. HUD has revised the language of § 55.21 to provide additional clarity and to more explicitly state that all residential units are required to be removed from the floodway under this provision.

HUD does not expressly forbid the expansion of buildings in the floodway under § 55.21; however, any expansion would need to meet a strict set of minimum standards including no residential units, identified evacuation routes, a no-rise certification (as defined by FEMA), and elevation to the FFRMS floodplain. Additionally, HUD may impose any other requirements it deems necessary to ensure the safety of the structure and its occupants. HUD contends that while the section doesn't forbid construction, the requirements laid out will make it exceptionally difficult to expand a building in the floodway. The purpose of § 55.21 is to allow existing buildings to continue to provide safe housing to residents where no feasible alternatives currently exist. HUD notes that changes in local building codes or funding of additional buyout programs exist outside the scope of this rulemaking and require either local governance or acts of Congress to fund.

Minimum Property Standards for 1–4 Unit Residential Structures

Several commenters expressed support for the proposed elevation standards for the FHA Minimum Property Standards. One commenter predicted that the new standards would likely decrease flood losses for families who may be particularly impacted by flooding as they do not have the resources to respond or recover. Another commenter urged HUD to work with the White House Flood Resilience Interagency Working Group to monitor whether the new standard will adequately protect the structures in question. Another commenter supported the BFE plus two feet proposal but said that the 0.2-percent-annual-chance flood approach would be even better. Another commenter hoped that the new elevation standards would incentivize adoption of a freeboard standard matching the HUD Minimum Property Standard to ensure that all new development in special flood hazard areas will continue to qualify for FHA-insured mortgages. The commenter emphasized that such a result would have a tremendous positive impact on improving nationwide resilience to flooding.

One commenter supported the new standards but noted that they may be unachievable by certain properties such as row houses and small lots in high-cost areas where substantial improvements may be cost prohibitive especially for low and middle-income homeowners. This commenter went on to encourage HUD to look to a wider suite of mitigation measures in such circumstances, such as elevation of mechanical systems and installation of backwater valves, which can improve resilience while also being more cost effective. Additionally, this commenter noted that new elevation standards could impact building height limitations and recommended that the revised regulations acknowledge that building height may need to be measured on an appropriate reference plane that is not the ground surface to support resilient construction without putting undue restrictions on building height.

One commenter asked HUD to revise the proposed rule to make the standards for elevation consistent for site-built and manufactured homes. This commenter said that current NFIP standards measure the elevation of site-built homes from the bottom of the lowest floor but measure the elevation of manufactured homes from the bottom of the I-beam. The commenter noted that the space between the I-beam and the lowest floor in a manufactured home is usually used for insulation and duct work, which would be expensive to move versus the cost of the extra elevation of the home. The commenter did not see any evidence to support a higher BFE measurement for manufactured homes and said if the standards were more uniform, it would help manufactured home properties meet the BFE requirements.

One commenter pointed out that HUD's proposed rule speaks to substantial improvements but does not speak to requirements for repairs to homes that are substantially damaged by flooding. This commenter was concerned about the costs of elevating an existing home an additional two feet following substantial damage, especially given that NFIP's Increased Cost of Compliance coverage only provides up to $30,000 for such elevation. Another commenter also expressed concern that elevating a site may negatively impact adjoining sites as previously established draining patterns will be altered, which could lead to objections by local municipalities and rejection of FHA-financed projects.

Another commenter was concerned that even the new proposed Minimum Property Standards were inadequate. This commenter suggested that new construction within the floodplain should be avoided, and existing structures should be removed over time. The commenter went on to suggest that HUD's final rule also include an option or incentive for managed retreat from floodplains whereby new construction in a floodplain is prohibited, and once a HUD-funded property experiences a loss from flooding it should be given the opportunity for a buyout or a one-time replacement for existing loss plus a withdrawal of future Federal funding for the property. The commenter suggested that the managed retreat option is cost-effective, would reduce disaster loss and displacement of tenant and owners, and would improve tenant safety and the quality of floodplain function.

One commenter emphasized the need for a consistent Federal narrative on the required minimal development standard for constructing or insuring a structure with known flood risk, noting that the minimal standard for communities within an NFIP SFHA is the lowest floor at or above the BFE. This commenter was concerned about the potential for confusion if HUD changes its Minimum

Property Standards to two feet above BFE.

One commenter requested to see the proposed rule as it will be implemented—at least at 90 percent completion—prior to final publication in order to provide final comments.

HUD Response: HUD appreciates the commenter's feedback regarding the proposed elevation standards in the FHA Minimum Property Standards update. HUD agrees that updated standards should reduce flood losses for structures residing in the 1-percent-annual-chance floodplain. HUD intends to continually monitor this regulation along with all of its regulations to ensure they are having the intended impact. It should be noted that the update to the Minimum Property Standards elevation requirements is only regulated within the FEMA-mapped 1-percent-annual-chance floodplain and that the FFRMS floodplain requirements outlined in the part 55 update would not apply to FHA-insured single family mortgages.

HUD appreciates the commenters' feedback about properties where elevation may be difficult or infeasible. HUD contends these difficulties are present in only a limited number of structures substantially improved through FHA-insured loans which sit in the FEMA mapped 1-percent-annual-chance floodplain. To avoid this issue, HUD has removed elevation requirements for substantial improvement activities from the Minimum Property Standards update. While newly constructed units purchased with FHA-insured mortgages would still be subject to the elevation requirements, this change would alleviate much of the concern facing homeowners of existing structures which may need to undergo substantial improvements. HUD also contends that not all Federal programs fund the same types of projects; therefore, not all Federal agencies need to regulate to the same elevation requirements. HUD also notes that some programs, such as CDBG–DR, have already imposed higher elevation standards than the NFIP minimums for years. The increased elevation standard for FHA-insured single family new construction will increase the nation's resilient housing stock and help protect the communities that HUD serves.

Also, HUD notes that FHA-insured single family manufactured housing is not subject to part 55 or 24 CFR 200.926d elevation standards under the final rule. Flood elevation standards for FHA-insured manufactured housing can be found at 24 CFR 3285: Manufactured Home Installation Standards and 24 CFR 203.43f: Eligibility of Mortgages Covering Manufactured Homes, as applicable, and are outside the scope of this rulemaking.

Further, for both manufactured homes and stick-built homes subject to part 55, to determine the lowest floor, HUD looks to FEMA's regulations in 44 CFR 59.1 and FEMA's Elevation Certificate guidance or other applicable current FEMA guidance. For manufactured homes in A Zones, FEMA recommends measurement of MHU elevation from the I-beam as a best practice. HUD recommends following FEMA best practice where feasible. For manufactured homes in coastal high hazard areas (Zone V), FEMA requires measurement of MHU elevation from the bottom of the lowest horizontal structural member (*e.g.,* the I-beam).

HUD strongly disagrees that elevation inherently impacts drainage patterns on a given lot. HUD does not require elevation to be completed using any particular method and there are many methods that have no impact on the impervious surface or general slope of a lot. For example, homes may be elevated using pier and beam, knee wall, or crawl space construction methods.

While HUD appreciates the commenters' sentiment that new construction within a floodplain should be avoided, the need for new affordable housing nationwide can necessitate construction in these areas. HUD feels that a ban on new construction in all floodplain areas would have a significant impact on affordable housing availability. Instead, while HUD agrees that avoidance is generally preferred to mitigation, HUD also believes in resilient design and ensuring that construction which does occur is done with appropriate resilient measures. Managed retreat through buyout is an allowable option for local jurisdictions to utilize under existing rules. It should be noted that the rule is intended to incentivize floodplain restoration and preservation activities via an existing exemption from part 55 applicability for such activities. Funding and program eligibility for programs and projects focused on buyout or managed retreat fall outside the scope of this rulemaking and require changes to individual program regulations and/or Congressional funding acts to proceed.

HUD will not release an additional 90 percent draft proposal of the rule for public comment. HUD intends to continuously update and monitor all of its rules and regulations as it sees fit to ensure the continued pursuit of its missions and directives. This includes continued discussions with Federal interagency partners and the White House Flood Resilience Interagency Working Group that may provide useful outside perspectives on any shortcomings or limitations of existing regulations.

A. Question for Public Comment #7: Feedback on the Proposed FHA Single Family Minimum Property Standards

Several commenters supported HUD applying the same FHA single family Minimum Property Standards as were proposed in 2016.[44] One commenter wrote that existing HUD programs, such as CDBG–DR and FHA Multifamily programs, already demonstrate that higher elevation standards are practicable. Another commenter wrote that adopting FHA single family elevation standards consistent with what exists for the Multifamily and CDBG programs will increase equity. This commenter suggested that not expanding higher floodplain management standards across all HUD programs may exacerbate inequities and unacceptably suggest that residents of affordable housing must inevitably tolerate elevated flood risk.

Another commenter encouraged HUD to engage with additional scientific and model experts, home builders and developers, community officials, lenders, realtors, consumer groups, and other Federal agencies before changing how it determines which homes are subject to the Minimum Property Standards requirements. This commenter recognized that single family homes in many communities face the potential for increased severity and frequency of flooding events due to climate change but was concerned that more certainty around the proposed FFRMS floodplain approach is needed before major housing programs are impacted.

One commenter asked HUD to exempt FHA single family newly constructed and substantially improved structures located within the 1-percent-annual-chance (100-year) floodplain from any elevation and/or flood proofing requirements.

HUD Response: HUD appreciates the feedback received from commenters regarding changes to the Minimum Property Standards. While HUD agrees that higher standards can be more protective, HUD contends that they can also be more burdensome. HUD wishes to avoid creating an undue regulatory burden by creating too high a regulatory

[44] 81 FR 74967. In the 2016 proposed rule, the Minimum Property Standards would have relied on an FVA approach requiring elevation of new construction and substantial improvement to two feet above the base flood elevation.

floor through the Minimum Property Standards thereby potentially impacting the availability of affordable housing. HUD does not believe that FHA single-family newly constructed homes should be exempt from this rule. However, based on feedback received, HUD will require that the lowest floor be at least two feet above base flood elevation for new construction, as proposed, but will remove the requirement for elevation of substantially improved homes under the Minimum Property Standards. With this change, the elevation standard in this rule provides a substantial increase in protection without being unreasonably costly or creating an undue hardship on homeowners and builders as confirmed through the RIA and review of multiple alternatives to the rule.

Regulatory Impact Analysis

One commenter stated that HUD's RIA falls short of its mandate under E.O. 12866 because it does not analyze the most readily available alternative to this proposed rule, which is to raise the elevation standard one-foot-above instead of two. This commenter suggested HUD re-release the proposed rule with this analysis before publishing a final rule. Moreover, this commenter said that HUD also used a 2013 new construction study to calculate the costs of retrofitting existing homes, despite recognizing that the cost for substantial improvement projects is significantly higher than for new construction.

The same commenter suggested that HUD measured the proposed rule's benefits using the decreased insurance premiums from an outdated and inaccurate methodology that has been replaced by Risk Rating 2.0. Several other commenters also wrote in regarding FEMA's Risk Rating 2.0 program. One commenter requested that HUD support the reinstallation of flood insurance premium discounts for buildings mitigated through elevation or floodproofing within the Risk Rating 2.0 program. The commenter said these discounts are effective in driving mitigation to reduce flood risk and incentivize mitigation to at-risk buildings.

One commenter recommended that HUD conduct a study of the potential future impacts of implementing the new standards before issuing a final rule. This commenter expressed a lack of confidence in HUD's summary view that the impact is minimal in relation to the actual costs to elevate a home—particularly an existing home—under local building codes and Federal regulations. One commenter noted that the real-world impacts on individuals protected from flood related harms were not factored into the damage reduction found through HUD's regulatory impact analysis.

Another commenter noted that the Risk Rating 2.0 premium reductions for elevating properties should be more transparent. This commenter also noted HUD should consider working with FEMA to clarify financial benefits of elevating properties on flood insurance premiums. Following up on comments made during a listening event, another commenter stated that the expected 30 percent reduction in flood insurance described in the RIA resulting from building a home to base flood elevation plus one, is incorrect. The commenter also stated that HUD has not been transparent with the formula for calculating Risk Rating 2.0 pricing and so there is no easy way to determine if the 30 percent is accurate or inaccurate without obtaining full quotes. The commenter then attached multiple supporting documents that outline an example structure receiving flood insurance rate discounts for elevation that are lower than expected elevation discounts provided in the RIA.

One commenter requested more detailed information as to all aspects of the cost benefit analysis completed for the proposed rule that relate to the value of requiring flood coverage up to the full replacement cost of a building compared to a lesser degree of flood insurance. The commenter asked for more information regarding the value of full replacement cost coverage versus limiting the amount of flood insurance. Another commenter also requested more detail in the RIA (and in the FONSI) before a final rule is implemented. This commenter would like stakeholders to have access to CISA mapping, and clearer information as to when increased flood insurance requirements would apply.

Another commenter asked for clarification because the proposed rule states that CISA methodology would be the required methodology to define the FFRMS floodplain ''if HUD-approved maps are available''; however, the RIA describes the process as the developer being able to enter the project location, the anticipated life of the project, and the project criticality to generate an appropriate amount of climate-informed freeboard.

HUD Response: HUD disagrees with the commenter that the RIA falls short of meeting its mandate in E.O. 12866. According to the Mitigation Framework Leadership Group (MitFLG), BFE+2 is the recommended elevation height for Federal projects. This elevation standard provides a substantial increase in protection without being unreasonably costly or creating an undue hardship on homeowners and builders. The RIA reviewed multiple alternatives to the proposed rule and determined this was a viable option. The RIA used the best available data to make its determination. More recent peer reviewed studies utilizing FEMA's new Risk Rating 2.0 remain unavailable at time of writing and cannot be used to ascertain any better information. Given the unclear outlook of the future of Risk Rating 2.0, HUD felt it was prudent to leave out more recent, incomplete, and unvetted sources from its determination. HUD also notes that calculating damage loss avoidance can be difficult, particularly as it relates to human impacts.

HUD supports its Federal partners' efforts to increase the resilience of housing nationwide and believes that FEMA will have good cause to support any rating system used by NFIP. HUD has no direct authority over the management or implementation of elevation discounts for flood insurance policies. The discounts used in the RIA are based on the best available information and studies at the time of HUD's review. HUD has published all available information used in its decision making in the RIA attachment to the proposed and final rule. HUD encourages stakeholders to review CISA mapping tools as they become available from FEMA and NOAA and other Federal sources. Alternatively, HUD has revised the rule to clarify its position that it permits the voluntary use of formally adopted State, Tribal, and local CISA data, as described in § 55.7(f) and section II.B. of this preamble.

HUD intends to produce implementation guidance for grantees, applicants, and responsible entities to help them correctly utilize available tools to implement CISA. Additionally, HUD intends to provide technical assistance training to help grantees walk through particularly difficult cases.

V. Findings and Certifications

Regulatory Review—Executive Orders 12866, 13563, and 14094

Under E.O. 12866 (Regulatory Planning and Review), a determination must be made whether a regulatory action is significant and, therefore, subject to review by the Office of Management and Budget (OMB) in accordance with the requirements of the order. E.O. 13563 (Improving Regulations and Regulatory Review) directs Executive agencies to analyze regulations that are ''outmoded, ineffective, insufficient, or excessively burdensome, and to modify, streamline,

expand, or repeal them in accordance with what has been learned.'' E.O. 13563 also directs that, where relevant, feasible, and consistent with regulatory objectives, and to the extent permitted by law, agencies are to identify and consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public. E.O. 14094 (Modernizing Regulatory Review) amends section 3(f) of E.O. 12866, among other things. This final rule was determined to be a significant regulatory action under section 3(f) of Executive Order 12866 as amended by Executive Order 14094 but was not deemed to be significant under section 3(f)(1).

As discussed in this preamble, the regulatory amendments will, based on E.O. 13690 and the Guidelines, require, as part of the decision making process established to ensure compliance with E.O. 11988 (Floodplain Management), that new construction or substantial improvement in a floodplain be elevated above the FFRMS floodplain or floodproofed. HUD notes that E.O. 13690 amended E.O. 11988, Floodplain Management, which was originally issued in furtherance of the National Flood Insurance Act of 1968, as amended (42 U.S.C. 4001 *et seq.*); the Flood Disaster Protection Act of 1973, as amended (Pub. L. 93–234, 87 Stat. 975); and NEPA (42 U.S.C. 4321 *et seq.*). These amendments will also provide a process for determining the FFRMS floodplain that would establish a preference for the climate-informed science approach. This final rule also revises HUD regulations in various other ways, including permitting HUD assistance to be used for a broader range of reasonable activities in floodways and would allow improvements beyond maintenance at sites with onsite floodplains in exceptional circumstances, after completion of the 8-step decision making process. This final rule also revises HUD's Minimum Property Standards for one-to-four-unit housing to require that the lowest floor in newly constructed structures located within the 1-percent-annual-chance floodplain be built at least 2 feet above the base flood elevation. Additionally, this final rule also revises a categorical exclusion available when HUD performs the environmental review by making it consistent with changes to a similar categorical exclusion that is available to HUD grantees or other responsible entities when they perform the environmental review. Other changes clarify, streamline, and update HUD's regulations.

This final rule is part of HUD's commitment under HUD's Climate Action Plan. Building to the standards discussed in this final rule will increase resiliency, reduce the risk of flood loss, minimize the impact of floods on human safety, health, and welfare, and promote sound, sustainable, long-term planning informed by a more accurate evaluation of risk that considers possible sea level rise and increased development associated with population growth.

Regulatory Impact Analysis

Elevating HUD-assisted structures located in and around the FFRMS floodplain will lessen damage caused by flooding and avoid relocation costs to tenants associated with temporary moves when HUD-assisted structures sustain flood damage and are temporarily uninhabitable. These benefits, which are realized throughout the life of HUD-assisted structures, are offset by the one-time increase in construction costs, borne only at the time of construction.

In addition, the likelihood that floods in coastal areas will become more frequent and damaging due to rising sea levels in future decades necessitates a stricter standard than the one currently in place. Sea level along the contiguous U.S. coastline is expected to rise, on average, 10 to 12 inches (0.25 to 0.30 meters) over the next 30 years (2020 to 2050).[45] The Intergovernmental Panel on Climate Change (2019) also confirms that the sea level rise will continue throughout the 21st century.[46]

As discussed in the regulatory impact analysis (RIA) that accompanies this rule, HUD estimates that requiring developers to construct or floodproof HUD-funded or insured properties to two feet above base flood elevation for FHA-insured single family homes subject to part 200 and at or above the FFRMS floodplain for single and multi-family properties subject to part 55 will increase construction costs by $4.492 million to $85.036 million per annual cohort. These are one-time costs which occur at the time of construction. Benefits of the increased standard include avoided damage to buildings, as measured by decreased insurance premiums, and avoided costs associated with homeowners and tenants being displaced. These benefits occur annually over the life of the structures. Over a 40-year period, HUD estimates the net present value of aggregate benefits will total $56.4 million to $324.3 million for each annual cohort of new construction.

These estimates are based on the annual production and rehabilitation of HUD-assisted and insured structures in the floodplain and accounts for the 40 States (in addition to the District of Columbia and Puerto Rico) with existing freeboard requirements. The cost of compliance and expected benefits are lower in these States than in States that have no minimum elevation requirements above base flood elevation. HUD's analysis does not consider benefits due to further coastal sea level or riverine rise. Further increases in sea level rise or inland and riverine flooding would increase the benefits of this rule. For a complete description of HUD's analysis, please see the accompanying RIA for this rule on *regulations.gov.*

Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements, unless the agency certifies that the rule would not have a significant economic impact on a substantial number of small entities.

With respect to all entities, including small entities, it is unlikely that the economic impact would be significant. As the RIA explains, the benefits of reduced damage offset the construction costs. Further, small entities may benefit more since they are less likely to be able to endure financial hardships caused by severe flooding.

Based on an engineering study conducted for FEMA,[47] the construction cost of increasing the elevation of the base of a new residential structure two additional feet of vertical elevation varies from 0.3 percent to 4.8 percent of the base building cost. This results in an increase in the construction cost of a new house of up to $7,834 per single family home and $4,772 per unit of

multifamily new construction for a multifamily property located in States with no existing freeboard requirements. Consequently, this would not pose a significant burden to small entities in the single family housing development industry.

These costs are likely higher than would be caused by the increased standards in this final rule because most HUD-assisted substantial improvement projects already involve elevation to comply with the current standard, elevation to the base flood elevation (base flood elevation +0). Thus, elevating a structure an additional two feet would be marginal compared to the initial cost of elevation to the floodplain level.

For these reasons, the undersigned certifies that this rule would not have a significant economic impact on a substantial number of small entities.

Environmental Impact

A Finding of No Significant Impact (FONSI) with respect to the environment has been made in accordance with HUD regulations at 24 CFR part 50, which implement section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)). The FONSI is available through the Federal eRulemaking Portal at *regulations.gov.* The FONSI is also available for public inspection during regular business hours in the Regulations Division, Office of General Counsel, Room 10276, Department of Housing and Urban Development, 451 Seventh Street SW, Washington, DC 20410–0500. Due to security measures at the HUD Headquarters building, you must schedule an appointment in advance to review the FONSI by calling the Regulations Division at 202–708–3055 (this is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

Executive Order 13132, Federalism

E.O. 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either: (1) imposes substantial direct compliance costs on State and local governments and is not required by statute, or (2) preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Order. This rule does not have federalism implications and would not impose substantial direct compliance costs on State and local governments nor preempts State law within the meaning of the Order.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) (UMRA) establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments, and on the private sector. This rule does not impose any Federal mandates on any State, local, or Tribal governments, or on the private sector, within the meaning of UMRA.

Paperwork Reduction Act

The information collection requirements contained in this rule were reviewed by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) and assigned OMB Control Number 2506–0151. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless the collection displays a valid control number.

For the reasons stated in this preamble, HUD amends 24 CFR parts 50, 55, 58, and 200 as follows:

PART 50—PROTECTION AND ENHANCEMENT OF ENVIRONMENTAL QUALITY

■ 1. The authority citation for part 50 is revised to read as follows:

Authority: 42 U.S.C. 3535(d) and 4321–4336e; and Executive Order 11991, 3 CFR, 1977 Comp., p.123.

§ 50.4 [Amended]

■ 2. Amend § 50.4 in paragraph (b)(2) by removing ''(3 CFR, 1977 Comp., p. 117)'' and adding in its place ''as amended by Executive Order 13690, February 4, 2015 (3 CFR, 2016 Comp., p. 268)''.

■ 3. Amend § 50.20 by revising paragraph (a)(2)(i) to read as follows:

§ 50.20 Categorical exclusions subject to the Federal laws and authorities cited in § 50.4.

(a) * * *

(2) * * *

(i) In the case of a building for residential use (with one to four units), the density is not increased beyond four units and the land use is not changed;

* * * * *

■ 4. Amend § 50.23 by revising paragraph (c) to read as follows:

§ 50.23 Public participation.

* * * * *

(c) All required notices shall be published in an appropriate local printed news medium or on an appropriate government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency. The required notices shall be sent to individuals and groups known to be interested in the proposed action.

* * * * *

PART 55—FLOODPLAIN MANAGEMENT AND PROTECTION OF WETLANDS

■ 5. The authority citation for part 55 is revised to read as follows:

Authority: 42 U.S.C. 3535(d), 4001–4128, and 5154a; 42 U.S.C. 4321 *et seq.;* E.O. 13690, 80 FR 6425; Pub. L. 93–234, 87 Stat. 975; E.O. 11988, 42 FR 26951, 3 CFR, 1977 Comp., p. 117; E.O. 11990, 42 FR 26961, 3 CFR, 1977 Comp., p 121.

■ 6. Amend § 55.1 by:

■ a. Revising the section heading;

■ b. In paragraph (a)(1), adding the text ''as amended,'' after ''Floodplain Management,'';

■ c. Revising paragraph (a)(3);

■ d. Removing paragraphs (a)(4) and (5);

■ e. Removing and reserving paragraph (b); and

■ f. Removing paragraph (c).

The revisions read as follows:

§ 55.1 Purpose.

(a) * * *

(3) This part implements requirements consistent with Executive

Order 11988, Floodplain Management, as amended, and Executive Order 11990, Protection of Wetlands, and employs the principles of the Unified National Program for Floodplain Management. These regulations apply to all proposed actions for which approval is required, either from HUD (under any applicable HUD program) or from a recipient (under programs subject to 24 CFR part 58), that are subject to potential harm by location in floodplains or wetlands. Covered actions include acquisition, construction, demolition, improvement, disposition, financing, and use of properties located in floodplains or wetlands.

* * * * *

■ 7. Revise and republish § 55.2 to read as follows:

§ 55.2 Terminology.

(a) With the exception of those terms defined in paragraph (b) of this section, the terms used in this part shall follow the definitions contained in section 6 of Executive Order 11988, section 7 of Executive Order 11990, and the ''Guidelines for Implementing Executive Order 11988, Floodplain Management, and Executive Order 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input''; the terms ''special flood hazard area,'' ''criteria,'' and ''Regular Program'' shall follow the definitions contained in FEMA regulations at 44 CFR 59.1; and the terms ''Letter of Map Revision'' and ''Letter of Map Amendment'' shall refer to letters issued by FEMA, as provided in 44 CFR part 65 and 44 CFR part 70, respectively.

(b) For purposes of this part, the following definitions apply:

(1) *Coastal high hazard area* means the area subject to high velocity waters, including but not limited to hurricane wave wash or tsunamis. The area is designated on a Flood Insurance Rate Map (FIRM) or Flood Insurance Study (FIS) under FEMA regulations, or according to best available information. (See § 55.8(b) for appropriate data sources.)

(2) *Compensatory mitigation* means the restoration (reestablishment or rehabilitation), establishment (creation), enhancement, and/or, in certain circumstances, preservation of aquatic resources for the purposes of offsetting unavoidable adverse impacts that remain after all appropriate and practicable avoidance and minimization have been achieved. Examples include, but are not limited to:

(i) *Permittee-responsible mitigation:* On-site or off-site mitigation undertaken by the holder of a wetlands permit under section 404 of the Clean Water Act (or an authorized agent or contractor), for which the permittee retains full responsibility;

(ii) *Mitigation banking:* A permittee's purchase of credits from a wetlands mitigation bank, comprising wetlands that have been set aside to compensate for conversions of other wetlands; the mitigation obligation is transferred to the sponsor of the mitigation bank; and

(iii) *In-lieu fee mitigation:* A permittee's provision of funds to an in-lieu fee sponsor (public agency or nonprofit organization) that builds and maintains a mitigation site, often after the permitted adverse wetland impacts have occurred; the mitigation obligation is transferred to the in-lieu fee sponsor.

(3)(i) *Critical action* means any activity for which even a slight chance of flooding would be too great, because such flooding might result in loss of life, injury to persons, or damage to property. Critical actions include activities that create, maintain or extend the useful life of those structures or facilities that:

(A) Produce, use or store highly volatile, flammable, explosive, toxic or water-reactive materials;

(B) Provide essential and irreplaceable records or utility or emergency services that may become lost or inoperative during flood and storm events (*e.g.,* community stormwater management infrastructure, water treatment plants, data storage centers, generating plants, principal utility lines, emergency operations centers including fire and police stations, and roadways providing sole egress from flood-prone areas); or

(C) Are likely to contain occupants who may not be sufficiently mobile to avoid loss of life or injury during flood or storm events, *e.g.,* persons who reside in hospitals, nursing homes, convalescent homes, intermediate care facilities, board and care facilities, and retirement service centers. Housing for independent living for the elderly is not considered a critical action.

(ii) Critical actions shall not be approved in floodways, LiMWAs, or coastal high hazard areas unless they meet an exception at § 55.8 or § 55.21.

(4) *Federal Flood Risk Management Standard (FFRMS) floodplain* means the floodplain as defined by Executive Order 13690 and the Guidelines for Implementing Executive Order 11988, Floodplain Management, and Executive Order 13690, Establishing a Federal Flood Risk Management Standard and a Process for Further Soliciting and Considering Stakeholder Input and further described as applied to HUD-assisted activities by § 55.7 of this part.

(5) *0.2-percent-annual-chance (500-year) floodplain* means the area, including the base flood elevation, subject to inundation from a flood having a 0.2 percent chance or greater of being equaled or exceeded in any given year. (See § 55.8(b) for appropriate data sources).

(6) *Floodway* means that portion of the floodplain which is effective in carrying flow, where the flood hazard is generally the greatest, and where water depths and velocities are the highest. The term ''floodway'' as used here is consistent with ''regulatory floodways'' as identified by FEMA. (See § 55.8(b) for appropriate data sources.)

(7) *Functionally dependent use* means a land use that must necessarily be conducted in close proximity to water (*e.g.,* a dam, marina, port facility, waterfront park, and many types of bridges).

(8) *High hazard area* means a floodway or a coastal high hazard area.

(9) *Impervious surface area* means an improved surface that measurably reduces the rate of water infiltration below the rate that would otherwise be provided by the soil present in a location prior to improvement, based on the soil type identified either by the Natural Resource Conservation Service Soil Survey or geotechnical study. Impervious surfaces include, but are not limited to, unperforated concrete or asphalt ground cover, unvegetated roofing materials, and other similar treatments that impede infiltration.

(10) *Limit of Moderate Wave Action (LiMWA)* means the inland limit of the portion of Coastal A Zone where wave heights can be between 1.5 and 3 feet during a base flood event, subjecting properties to damage from waves and storm surge. (See § 55.8(b) for appropriate data sources.)

(11) *1-percent-annual-chance (100-year) floodplain* means the area subject to inundation from a flood having a one percent or greater chance of being equaled or exceeded in any given year. (See § 55.8(b) for appropriate data sources.)

(12) *Substantial improvement*—(i) *Substantial improvement* means either:

(A) Any repair, reconstruction, modernization, or improvement of a structure, including a manufactured housing unit, the cost of which equals or exceeds 50 percent of the market value of the structure either:

(*1*) Before the improvement or repair is started; or

(*2*) If the structure has been damaged, and is being restored, before the damage occurred; or

(B) Any repair, reconstruction, modernization, or improvement of a structure, including a manufactured

housing unit, that results in an increase of more than twenty percent in the number of dwelling units in a residential project or in the average peak number of customers and employees likely to be on-site at any one time for a commercial or industrial project.

(ii) *Substantial improvement* may not be defined to include either:

(A) Any project for improvement of a structure to comply with existing state or local health, sanitary or safety code specifications that is solely necessary to assure safe living conditions, or

(B) Any alteration of a structure listed on the National Register of Historical Places or on a State Inventory of Historic Places.

(iii) Structural repairs, reconstruction, or improvements not meeting this definition are considered ''minor improvements''.

(13) *Wetlands* means those areas that are inundated or saturated by surface or ground water with a frequency sufficient to support, and under normal circumstances does or would support, a prevalence of vegetative or aquatic life that requires saturated or seasonally saturated soil conditions for growth and reproduction. Wetlands generally include swamps, marshes, bogs, and similar areas such as sloughs, prairie potholes, wet meadows, river overflows, mud flats, and natural ponds. This definition includes those wetland areas separated from their natural supply of water as a result of activities such as the construction of structural flood protection methods or solid fill roadbeds and activities such as mineral extraction and navigation improvements. This definition includes both wetlands subject to and those not subject to Section 404 of the Clean Water Act as well as constructed wetlands.

■ 8. Amend § 55.3 by:
■ a. Redesignating paragraphs (a) through (d) as paragraphs (b) through (e), respectively;
■ b. Add a new paragraph (a);
■ c. Revising newly redesignated paragraph (c)(1);
■ d. Removing the word ''technical'' from newly redesignated paragraph (c)(3);
■ e. Revising newly redesignated paragraphs (c)(4), (d), and (e); and
■ f. Adding paragraph (f).

The revisions and additions read as follows:

§ 55.3 Assignment of responsibilities.

(a) *General.* The implementation of Executive Orders 11988 and 11990 under this part shall be conducted by HUD for Department-administered programs subject to environmental review under 24 CFR part 50 and by authorized responsible entities that are responsible for environmental review under 24 CFR part 58.

* * * * *

(c) * * *

(1) Ensure compliance with this part for all actions under their jurisdiction that are proposed to be conducted, supported, or permitted in a floodplain or wetland, including taking full responsibility for all decisions made under their jurisdiction that are made pursuant to § 55.20 for environmental reviews completed pursuant to 24 CFR part 50;

* * * * *

(4) Incorporate in departmental regulations, handbooks, and project and site standards those criteria, standards, and procedures related to compliance with this part.

(d) *Responsible entity Certifying Officer.* Certifying Officers of responsible entities administering or reviewing activities subject to 24 CFR part 58 shall comply with this part in carrying out HUD-assisted programs. Certifying Officers shall monitor approved actions and ensure that any prescribed mitigation is implemented.

(e) *Grantees and applicants.* Grantees and Applicants that are not acting as responsible entities shall:

(1) Supply HUD (or the responsible entity authorized by 24 CFR part 58) with all available, relevant information necessary for HUD (or the responsible entity) to perform the compliance required by this part, including environmental review record documentation described in 24 CFR 58.38, as applicable;

(2) Implement mitigating measures required by HUD (or the responsible entity authorized by 24 CFR part 58) under this part or select alternate eligible property; and

(3) Monitor approved actions and ensure that any prescribed mitigation is implemented.

(f) *Third party providers.* Consultants and other parties to the environmental review process may prepare maps, studies (*e.g.,* hydraulic and hydrologic studies), and reports to support compliance with this part, including identification of floodplains and wetlands and development of alternatives or minimization measures. The following responsibilities, however, may not be delegated to the third-party provider:

(1) Receipt of public or agency comments;

(2) Selection or rejection of alternatives analyzed in Step 3 of the 8-step decision making process in § 55.20;

(3) Selection or rejection of minimization measures analyzed in Step 5 of the 8-step decision making process in § 55.20;

(4) Determination whether avoidance of floodplain or wetland impacts, according to the purpose of Executive Orders 11988 and 11990, is or is not practicable.

■ 9. Add §§ 55.4 through 55.6 to subpart A to read as follows:

Sec.

* * * * *

55.4 Notification of floodplain hazard.
55.5 Flood insurance.
55.6 Complying with this part.

§ 55.4 Notification of floodplain hazard.

(a) *Notification for property owners, buyers, and developers.* For actions in the FFRMS floodplain (as defined in § 55.7), HUD (or HUD's designee) or the responsible entity must ensure that any party participating in the transaction is notified that the property is in the FFRMS floodplain and whether flood insurance is required or available in this location. Notification shall also include a description of the approximate elevation of the FFRMS floodplain, proximity to flood-related infrastructure impacting the site including dams and levees, the location of ingress and egress or evacuation routes relative to the FFRMS floodplain, disclosure of information on flood insurance claims filed on the property to the extent available from FEMA, and other relevant information such as available emergency notification resources.

(b) *Renter notification.* For HUD-assisted, HUD-acquired, and HUD-insured rental properties within the FFRMS floodplain, new and renewal leases must include acknowledgements signed by residents indicating that they have been advised that the property is in a floodplain and flood insurance is available for their personal property. Notification shall also include the location of ingress and egress routes relative to the FFRMS floodplain, available emergency notification resources, and the property's emergency procedures for residents in the event of flooding.

(c) *Conveyance restrictions for the disposition of multifamily real property.* (1) In the disposition (including leasing) of multifamily properties acquired by HUD that are located in the FFRMS floodplain, the documents used for the conveyance must:

(i) Refer to those uses that are restricted under identified Federal, State, or local floodplain regulations; and

(ii) Include any land use restrictions limiting the use of the property by a

grantee or purchaser and any successors under State or local laws.

(2)(i) For disposition of multifamily properties acquired by HUD that are located in the FFRMS floodplain and contain critical actions, HUD shall, as a condition of approval of the disposition, require by covenant or comparable restriction on the property's use that the property owner and successive owners provide written notification to each current and prospective tenant concerning:

(A) The hazards to life and to property for those persons who reside or work in a structure located within the FFRMS floodplain, and

(B) The availability of flood insurance on the contents of their dwelling unit or business.

(ii) The notice described in paragraph (c)(2)(i) of this section shall also be posted in the building so that it will be legible at all times and easily visible to all persons entering or using the building.

§ 55.5 Flood insurance.

(a)(1) As required by section 102(a) of the Flood Disaster Protection Act of 1973, as amended (42 U.S.C. 4012a), when HUD financial assistance (including mortgage insurance) is proposed for acquisition or construction purposes in any special flood hazard area (as designated by the Federal Emergency Management Agency (FEMA) on an effective Flood Insurance Rate Map (FIRM) or Flood Insurance Study (FIS)), structures for which HUD financial assistance is provided must be covered by flood insurance in an amount at least equal to the project cost less estimated land cost, the outstanding principal balance of any HUD-assisted or HUD-insured loan, or the maximum limit of coverage available under the National Flood Insurance Program, whichever is least. Under section 202(a) of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4106(a), such proposed assistance in any special flood hazard area shall not be approved in communities identified by FEMA as eligible for flood insurance but which are not participating in the National Flood Insurance Program. This prohibition only applies to proposed HUD financial assistance in a FEMA-designated special flood hazard area one year after the community has been formally notified by FEMA of the designation of the affected area. This requirement is not applicable to HUD financial assistance in the form of formula grants to States, including financial assistance under the State-administered CDBG Program (24 CFR part 570, subpart I), Emergency Solutions Grant amounts allocated to States (24 CFR part 576), and HOME funds provided to a State under Title II of the Cranston-Gonzalez National Affordable Housing Act (42 U.S.C. 12701–12839). HUD strongly encourages that flood insurance be obtained and maintained for all HUD-assisted structures in the FFRMS floodplain, sites that have previously flooded, or sites in close proximity to a floodplain.

(2) Under section 582 of the National Flood Insurance Reform Act of 1994 (42 U.S.C. 5154a), HUD disaster assistance that is made available in a special flood hazard area may not be used to make a payment (including any loan assistance payment) to a person for repair, replacement, or restoration of damage to any personal, residential, or commercial property if:

(i) The person had previously received Federal flood disaster assistance conditioned on obtaining and maintaining flood insurance; and

(ii) The person failed to obtain and maintain the flood insurance.

(b) HUD or the responsible entity may impose flood insurance requirements that exceed the minimums established by the Flood Disaster Protection Act of 1973 or by Tribal, State, or local requirements when needed to minimize financial risk from flood hazards. HUD and responsible entities have discretion to require that flood insurance be maintained for structures outside of the FEMA-mapped floodplain but within the FFRMS floodplain and/or that structures be insured up to the full replacement cost of the structure when needed to minimize financial risk from flood hazards. Nothing in this part limits additional flood insurance requirements that may be imposed by a mortgagee participating in a HUD assistance or mortgage insurance or guarantee program.

§ 55.6 Complying with this part.

(a) *Process.* The process to comply with this part is as follows:

(1) HUD or the responsible entity shall determine whether compliance with this part is required. Refer to § 55.12 for a list of activities that do not require further compliance with this part beyond the provisions of paragraph (c) of this section.

(2) HUD or the responsible entity shall refer to § 55.8 to determine whether the proposed action is eligible for HUD assistance or if it must be rejected as proposed.

(3) If the project requires compliance under this part and is not prohibited by § 55.8, HUD or the responsible entity shall refer to § 55.13 to determine whether the 8-step decision making process in § 55.20 is required.

(4) HUD or the responsible entity shall refer to § 55.10 to determine whether the 8-step decision making process in § 55.20 for wetland protection is required or whether best practices to minimize potential indirect impacts to wetlands should be pursued.

(5) HUD or the responsible entity shall determine whether an exception in § 55.14 applies that would allow them to complete an abbreviated decision-making process under § 55.20.

(6) Where the decision-making process is required, HUD or the responsible entity shall follow the decision-making process described in § 55.20, eliminating any steps as permitted under § 55.14.

(b) *Decision making.* HUD or the responsible entity shall determine whether to approve the action as proposed, approve the action with modifications or at an alternative site, or reject the proposed action, based on its analysis of the proposed risks and impacts. HUD or the responsible entity has discretion to reject any project where it determines that the level of flood hazard is incompatible with the proposed use of the site or that the extent of impacts to wetlands or to the beneficial function of floodplains is not acceptable, regardless of whether it would otherwise be acceptable under this part.

(c) *Other requirements.* Refer to §§ 55.4 and 55.5 to determine whether the proposed action may require notifications and/or flood insurance. Actions that do not require full compliance under this part may still trigger notification and flood insurance requirements.

(d) *Documentation.* HUD or the responsible entity shall require that all of the analysis required under this part, including applicable exceptions and all required steps described in § 55.20, be documented in the environmental review record.

Subpart B—Application of Executive Orders on Floodplain Management and Protection of Wetlands

■ 10. Add §§ 55.7 through 55.9 to read as follows:

Sec.

* * * * *

55.7 Identifying the FFRMS floodplain.

55.8 Limitations on HUD assistance in floodplains.

55.9 Identifying wetlands.

* * * * *

§ 55.7 Identifying the FFRMS floodplain.

(a) HUD or the responsible entity shall determine all compliance with the

floodplain review requirements of this part based on the FFRMS floodplain.

(b) For a non-critical action, HUD or the responsible entity shall define the FFRMS floodplain using the following process:

(1) The climate-informed science approach (CISA) to identify the area having an elevated flood risk during the anticipated life of the project if data is available and actionable. Data is available and actionable for a particular project where:

(i) The data can be accessed via a tool, resource, or other process developed or identified by a Federal agency or agencies to define the floodplain using the CISA, and

(ii) HUD has adopted the particular tool, resource, or other process through a **Federal Register** publication for comment.

(2) If CISA data is not available or actionable but FEMA has defined the 0.2-percent-annual-chance floodplain, those areas that FEMA has designated as within the 0.2-percent-annual-chance floodplain; or

(3) If neither CISA data nor FEMA-mapped 0.2-percent-annual-chance floodplain data is available, those areas that result from adding an additional two feet to the base flood elevation as established by the effective FIRM or FIS or—if available—FEMA-provided interim or preliminary maps or studies or advisory base flood elevations.

(4) FFRMS floodplain determinations under paragraphs (b)(2) and (3) of this section shall be made using the information provided in the latest FEMA resources. Elevation determinations based on CISA data or an interim or preliminary FEMA map cannot be used as a basis for a lower elevation than the base flood elevation on the current FIRM or FIS.

(c) For a critical action, the FFRMS floodplain is either:

(1) Those areas designated as having an elevated flood risk identified by the climate-informed science approach (CISA)—as determined based on the criticality of the action—during the anticipated life of the project if the data is available and actionable, as available and actionable is described in paragraph (b)(1) of this section; or

(2) If CISA data as described above is not available or actionable, an area either within the 0.2-percent-annual-chance floodplain or within the area that results from adding an additional three feet to the base flood elevation. The larger floodplain and higher elevation must be applied where the 0.2-percent-annual-chance floodplain is mapped. If FEMA resources do not map the 0.2-percent-annual-chance floodplain, the FFRMS floodplain is the area that results from adding an additional three feet to the base flood elevation based on best available information.

(3) FFRMS floodplain determinations under paragraph (c)(2) of this section shall be made using the information provided in the latest FEMA resources.

(d) If CISA data is not available or actionable and if FEMA FIRMS, FIS, preliminary maps or advisory base flood elevations are unavailable or insufficiently detailed to determine base flood elevation, other Federal, Tribal, State, or local data shall be used as ''best available information.'' If best available information is based only on past flooding and does not consider future flood risk:

(1) For non-critical actions, the FFRMS floodplain includes those areas that result from adding an additional two feet to the base flood elevation based on best available information.

(2) For critical actions, the FFRMS floodplain includes those areas that result from adding an additional three feet to the base flood elevation based on best available information.

(e) When preparing an Environmental Impact Statement (EIS), an analysis of the best available, actionable climate science, where available and actionable data exists or can be generated in accordance with 42 U.S.C. 4336(b)(3), as determined by HUD or the responsible entity, must be performed to define the FFRMS floodplain. These sources may supplement the FIRM or Advisory Base Flood Elevation (ABFE) in order to better minimize impacts to projects or to elevate or floodproof structures above the risk adjusted floodplain. These sources may not be used as a basis for a lower elevation than otherwise required under this section.

(f)(1) Regardless of whether HUD has adopted a particular tool, resource, or other process to define the floodplain using CISA, as described in paragraphs (b)(1) and (c)(1) of this section, HUD or a responsible entity may voluntarily define the FFRMS floodplain utilizing CISA when:

(i) A State, Tribal, or local government formally adopts, through code or other formal adoption measures, a tool, resource, or other written standard developed or utilized by the State, Tribal, or local government that provides data or other methods to identify the FFRMS floodplain using CISA for a particular project; or

(ii) HUD publishes guidance identifying a particular tool, resource, or other process that may be used to define the floodplain using CISA, and the tool, resource, or other process identified in the HUD-published guidance contains the necessary data or information to define the floodplain for the project being considered.

(2)(i) The approach in this paragraph (f) may not be used as a basis for a lower elevation than the lowest of:

(A) The 0.2-percent-annual-chance floodplain elevation;

(B) The elevation that results from adding an additional two feet to the base flood elevation; or

(C) The elevation required by paragraph (b) or (c) of this section, if CISA data is available and actionable under paragraph (b)(1) or (c)(1).

(ii) Where HUD or a responsible entity voluntarily defines the FFRMS floodplain using the options in paragraph (f)(1)(i) or (ii) of this section, the criticality of the action must be considered when determining the appropriate elevation of the FFRMS floodplain.

§ 55.8 Limitations on HUD assistance in floodplains.

(a) HUD financial assistance (including mortgage insurance) may not be approved with respect to:

(1) Any action located in a floodway unless one of the following applies:

(i) An exception listed in § 55.12 applies; or

(ii) A permanent covenant or comparable restriction will preserve all onsite FFRMS floodplain and/or wetland areas from future development or expansion of existing uses in the floodplain and/or wetland areas. Any rehabilitation, including reconstruction in the case of properties affected by Presidentially declared disasters, that does not expand the footprint of the buildings or the number of units on the site would be allowed within the FFRMS floodplain outside of the floodway. No buildings or improvements may modify or occupy the floodway, with the exception of:

(A) Functionally dependent uses (as defined in § 55.2(b)(7)) and utility lines;

(B) De minimis improvements, including minimal ground disturbance or placement of impervious surface area to ensure accessibility where this is permitted by local ordinances and does not increase flood risk to the property; or

(C) Buildings and improvements that will be removed as part of the proposed action.

(2) Any critical action located in a floodway, other than a functionally dependent use where any existing or new structure has been or will be elevated or floodproofed to the FFRMS elevation for critical actions; or any critical action in a coastal high hazard

area or LiMWA, other than a functionally dependent use where any existing or new structure has been or will be elevated and constructed in accordance with current FEMA V-zone construction standards at 44 CFR 60.3(e); provided that, for a critical action that is insurance of a mortgage on a property containing a floodway with no structures or improvements in the floodway, paragraph (a)(1) of this section applies; or

(3) Any noncritical action located in a coastal high hazard area, or LiMWA, unless the action is a functionally dependent use, is limited to existing structures or improvements, or is reconstruction following destruction caused by a Presidentially declared disaster. If the action is not a functionally dependent use, the action must be designed for location in a coastal high hazard area. An action will be considered designed for a coastal high hazard area if:

(i) In the case of reconstruction following destruction caused by a disaster, or substantial improvement, the work meets the current standards for V zones in FEMA regulations (44 CFR 60.3(e)) and, if applicable, the Minimum Property Standards for such construction in 24 CFR 200.926d(c)(4)(iii); or

(ii) In the case of existing construction (including any minor improvements that are not substantial improvements):

(A) The work met FEMA elevation and construction standards for a coastal high hazard area (or if such a zone or such standards were not designated, the 1-percent-annual-chance floodplain) applicable at the time the original improvements were constructed; or

(B) If the original improvements were constructed before FEMA standards for the 1-percent-annual-chance floodplain became effective or before FEMA designated the location of the action as within the 1-percent-annual-chance floodplain, the work would meet at least the earliest FEMA standards for construction in the 1-percent-annual-chance floodplain.

(b) All determinations made pursuant to this section shall be based on the effective FIRM or FIS unless FEMA has provided more current information. When FEMA provides interim flood hazard data, such as ABFE or preliminary maps and studies, HUD or the responsible entity shall use the latest of these sources. However, a base flood elevation from an interim or preliminary source cannot be used if it is lower than the base flood elevation on the current FIRM and FIS.

(c) Where HUD assistance is proposed for actions subject to § 55.20 on structures designated by FEMA as Severe Repetitive Loss (SRL) properties, and FEMA has approved measures that if implemented would qualify the property for a status of ''Mitigated'' as to the SRL list, HUD or the responsible entity will ensure that FEMA-identified mitigation measures are identified and implemented as part of the decision making process under § 55.20(e).

§ 55.9 Identifying wetlands.

The following process shall be followed in making the wetlands determination:

(a) HUD or the responsible entity shall determine whether the action involves new construction that is located in or impacts a wetland.

(b) As primary screening, HUD or the responsible entity shall verify whether the project area is located in proximity to wetlands identified on the National Wetlands Inventory (NWI) and assess the site for visual indication of the presence of wetlands such as hydrology (water), hydric soils, or wetland vegetation. Where the primary screening is inconclusive, potential wetlands should be further evaluated using one or more of the following methods:

(1) Consultation with the Department of the Interior, U.S. Fish and Wildlife Service (USFWS), for information concerning the location, boundaries, scale, and classification of wetlands within the area.

(2) Reference to the Department of Agriculture, Natural Resources Conservation Service (NRCS) National Soil Survey (NSS), and any Tribal, State, or local information concerning the location, boundaries, scale, and classification of wetlands within the action area and further site study by the environmental review preparer with reference to Federal guidance on field identification of the biological (rather than jurisdictional) characteristics of wetlands.

(3) Evaluation by a qualified wetlands scientist to delineate the wetland boundaries on site.

■ 11. Revise § 55.10 to read as follows:

§ 55.10 Limitations on HUD assistance in wetlands.

(a) When the proposed project includes new construction activities (including grading, clearing, draining, filling, diking, impounding, and related activities for any structure or facilities including the siting of new manufactured housing units) that will have a direct impact to onsite wetlands identified by the process described in § 55.9, compliance with this part requires completion of the 8-step decision making process in § 55.20 to address wetland impacts.

(b) When the proposed project may indirectly affect wetlands by modifying the flow of stormwater, releasing pollutants, or otherwise changing conditions that contribute to wetlands viability, the significance of these impacts must be evaluated and the impacts minimized through best management practices. If the project site includes wetlands that will not be impacted by new construction, HUD strongly encourages measures to preserve such wetlands from future impacts, including by obtaining a restrictive covenant, conservation easement, or other mechanism.

(c) When the proposed project may indirectly affect off-site wetlands, impacts should be minimized to the extent practicable. While this part does not require further decision making to address these effects under the authority of Executive Order 11990, measures to address offsite wetlands impacts may be necessary to comply with related laws and authorities including the Endangered Species Act or to address significant impacts under the National Environmental Policy Act.

§ 55.11 [Removed and Reserved]

■ 12. Remove and reserve § 55.11.

■ 13. Revise § 55.12 to read as follows:

§ 55.12 Inapplicability of 24 CFR part 55 to certain categories of proposed actions.

With the exception of the flood insurance requirements in § 55.5, this part shall not apply to the following categories of proposed HUD actions:

(a) HUD-assisted activities described in 24 CFR 58.34 and 58.35(b);

(b) HUD-assisted activities described in 24 CFR 50.19, except as otherwise indicated in § 50.19;

(c) The approval of financial assistance for restoring and preserving the natural and beneficial functions and values of floodplains and wetlands, including through acquisition of such floodplain and wetland property, where a permanent covenant or comparable restriction is placed on the property's continued use for flood control, wetland protection, open space, or park land, but only if:

(1) The property is cleared of all existing buildings and walled structures; and

(2) The property is cleared of related improvements except those which:

(i) Are directly related to flood control, wetland protection, open space, or park land (including playgrounds and recreation areas);

(ii) Do not modify existing wetland areas or involve fill, paving, or other

ground disturbance beyond minimal trails or paths; and

(iii) Are designed to be compatible with the beneficial floodplain or wetland function of the property.

(d) An action involving a repossession, receivership, foreclosure, or similar acquisition of property to protect or enforce HUD's financial interests under previously approved loans, grants, mortgage insurance, or other HUD assistance;

(e) Policy-level actions described at 24 CFR 50.16 that do not involve site-based decisions;

(f) A minor amendment to a previously approved action with no additional adverse impact on or from a floodplain or wetland;

(g) HUD's or the responsible entity's approval of a project site, an incidental portion of which is situated in the FFRMS floodplain (not including the floodway, LiMWA, or coastal high hazard area), but only if:

(1) The proposed project site does not include any existing or proposed buildings or improvements that modify or occupy the FFRMS floodplain except de minimis improvements such as recreation areas and trails; and

(2) The proposed project will not result in any new construction in or modifications of a wetland.

(h) Issuance or use of Housing Vouchers or other forms of rental subsidy where HUD, the awarding community, or the public housing agency that administers the contract awards rental subsidies that are not project-based (*i.e.,* do not involve site-specific subsidies);

(i) Special projects directed to the removal of material and architectural barriers that restrict the mobility of and accessibility to elderly and persons with disabilities.

■ 14. Add §§ 55.13 and 55.14 to read as follows:

§ 55.13 Inapplicability of 8-step decision making process to certain categories of proposed actions.

The decision-making process in § 55.20 shall not apply to the following categories of proposed actions:

(a) HUD's mortgage insurance actions and other financial assistance for the purchasing, mortgaging, or refinancing of existing one- to four-family properties in communities that are in the Regular Program of the National Flood Insurance Program (NFIP) and in good standing (*i.e.,* not suspended from program eligibility or placed on probation under 44 CFR 59.24), where the action is not a critical action and the property is not located in a floodway, coastal high hazard area, or LiMWA;

(b) Financial assistance for minor repairs or improvements on one- to four-family properties that do not meet the thresholds for ''substantial improvement'' under § 55.2(b)(12);

(c) HUD or a recipient's actions involving the disposition of individual HUD or recipient held one- to four-family properties;

(d) HUD guarantees under the Loan Guarantee Recovery Fund Program (24 CFR part 573), where any new construction or rehabilitation financed by the existing loan or mortgage has been completed prior to the filing of an application under the program, and the refinancing will not allow further construction or rehabilitation, nor result in any physical impacts or changes except for routine maintenance;

(e) The approval of financial assistance to lease an existing structure and/or units within an existing structure located within the floodplain, but only if;

(1) The structure is located outside the floodway or coastal high hazard area, and is in a community that is in the Regular Program of the NFIP and in good standing (*i.e.,* not suspended from program eligibility or placed on probation under 44 CFR 59.24);

(2) The project is not a critical action; and

(3) The entire structure is or will be fully insured or insured to the maximum extent available under the NFIP for at least the term of the lease.

(f) Special projects for the purpose of improving the energy or water efficiency of utilities or installing renewable energy that involve the repair, rehabilitation, modernization, weatherization, or improvement of existing structures or infrastructure, do not meet the thresholds for ''substantial improvement'' under § 55.2(b)(12), and do not include the installation of equipment below the FFRMS floodplain elevation; and

§ 55.14 Modified 5-step decision making process for certain categories of proposed actions.

The decision making steps in § 55.20(b), (c), and (g) (Steps 2, 3, and 7) do not apply to the following categories of proposed actions:

(a) HUD's or the recipient's actions involving the disposition of acquired multifamily housing projects or ''bulk sales'' of HUD-acquired (or under part 58 of recipients') one- to four-family properties in communities that are in the Regular Program of the NFIP and in good standing (*i.e.,* not suspended from program eligibility or placed on probation under 44 CFR 59.24). For programs subject to part 58, this paragraph applies only to recipients' disposition activities that are subject to review under part 58.

(b) HUD's actions under the National Housing Act (12 U.S.C. 1701 *et seq.*) for the purchase or refinancing of existing multifamily housing projects, hospitals, nursing homes, assisted living facilities, board and care facilities, and intermediate care facilities, in communities that are in good standing under the NFIP.

(c) HUD's or the recipient's actions under any HUD program involving the repair, rehabilitation, modernization, weatherization, or improvement of existing multifamily housing projects, hospitals, nursing homes, assisted living facilities, board and care facilities, intermediate care facilities, and one- to four-family properties, in communities that are in the Regular Program of the NFIP and are in good standing (*i.e.,* not suspended from program eligibility or placed on probation under 44 CFR 59.24), provided that the number of units is not increased more than 20 percent, the action does not involve a conversion from nonresidential to residential land use, the action does not meet the thresholds for ''substantial improvement'' under § 55.2(b)(12), and the footprint of the structure and paved areas is not increased by more than 20 percent.

(d) HUD's or the recipient's actions under any HUD program involving the repair, rehabilitation, modernization, weatherization, or improvement of existing nonresidential buildings and structures, in communities that are in the Regular Program of the NFIP and are in good standing (*i.e.,* not suspended from program eligibility or placed on probation under 44 CFR 59.24), provided that the action does not meet the thresholds for ''substantial improvement'' under § 55.2(b)(12) and the footprint of the structure and paved areas is not increased by more than 20 percent.

(e) HUD's or the recipient's actions under any HUD program involving the repair, rehabilitation, or replacement of existing nonstructural improvements including streets, curbs, and gutters, where any increase of the total impervious surface area of the facility is de minimis. This provision does not include critical actions, levee systems, chemical storage facilities (including any tanks), wastewater facilities, or sewer lagoons.

Subpart C—Procedures for Making Determinations on Floodplain Management and Protection of Wetlands

■ 15. Add § 55.16 to read as follows:

§ 55.16 Applicability of subpart C decision making process.

Table 1 to this section indicates the applicability, by location and type of action, of the decision making process for implementing Executive Order 11988 and Executive Order 11990 under this subpart.

TABLE 1 TO § 55.16

Type of proposed action (new reviewable action or an amendment) [1]	Floodways	Coastal high hazard and LiMWA areas	Wetlands or FFRMS floodplain outside coastal high hazard area, LiMWA area, and floodways
Critical actions as defined in § 55.2(b)(3).	Critical actions not allowed unless they meet the requirements for critical actions in § 55.8 and are processed under § 55.20 [2].	Critical actions not allowed unless they meet the requirements for critical actions in § 55.8 and are processed under § 55.20 [2].	Allowed if the proposed critical action is processed under § 55.20.[2]
Noncritical actions not excluded under § 55.12 or § 55.13.	Allowed only if the proposed non-critical action is not prohibited under § 55.8(a)(1) and is processed under § 55.20 [2].	Allowed only if the proposed noncritical action is processed under § 55.20 [2] and is (1) a functionally dependent use, (2) existing construction (including improvements), or (3) reconstruction following destruction caused by a disaster. If the action is not a functionally dependent use, the action must be designed for location in a coastal high hazard area under § 55.8(a)(3).	Allowed if proposed noncritical action is processed under § 55.20.[2]

[1] Under Executive Order 11990, the decision making process in § 55.20 only applies to Federal assistance for new construction in wetlands locations.

[2] Or those paragraphs of § 55.20 that are applicable to an action listed in § 55.14.

■ 16. Amend § 55.20 by:
■ a. Revising the introductory text, paragraph (a), paragraph (b) introductory text, and paragraphs (b)(1) and (2);
■ b. Removing ''HUD'' from the last sentence and adding in its place ''HUD's'' in paragraph (b)(3);
■ c. Adding paragraph (b)(4);
■ d. Revising paragraphs (c) introductory text, (c)(1)(i) and (ii), (c)(2) introductory text, (c)(2)(iii), (c)(3), (d) introductory text, (d)(1), (d)(2) introductory text, (d)(2)(i), (e), (f) introductory text, and (f)(2)(ii);
■ e. Adding paragraph (f)(2)(iii); and
■ f. Revising paragraph (g)(1) introductory text.

The revisions and additions read as follows:

§ 55.20 Decision making process.

Except for actions covered by § 55.14, the decision making process for compliance with this part contains eight steps, including public notices and an examination of practicable alternatives when addressing floodplains and wetlands. Third parties may provide analysis and information to support the decision making process; however, final determinations for each step, authorization of public notices, and receipt of public comments, are the responsibility of HUD or the responsible entity. The steps to be followed in the decision making process are as follows:

(a) *Step 1.* Using the processes described in §§ 55.7 and 55.9, determine whether the proposed action is located in the FFRMS floodplain or results in new construction that directly impacts an onsite wetland. If the action does not occur in the FFRMS floodplain or include new construction directly impacting an onsite wetland, then no further compliance with this section is required. Where the proposed action would be located in the FFRMS floodplain and includes new construction directly impacting an onsite wetland, these impacts should be evaluated together in a single 8-step decision making process. In such a case, the wetland will be considered among the primary natural and beneficial functions and values of the floodplain. For purposes of this section, an ''action'' includes areas required for ingress and egress, even if they are not within the site boundary, and other integral components of the proposed action, even if they are not within the site boundary.

(b) *Step 2.* Notify the public and agencies responsible for floodplain management or wetlands protection at the earliest possible time of a proposal to consider an action in an FFRMS floodplain or wetland and involve the affected and interested public and agencies in the decision making process.

(1) The public notices required by paragraphs (b) and (g) of this section may be combined with other project notices wherever appropriate. Notices required under this part must be bilingual or multilingual, as appropriate, if the affected public has Limited English Proficiency. In addition, all notices must be published in a newspaper of general circulation in the affected community or on an appropriate government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency, and must be sent to Federal, State, and local public agencies, organizations, and, where not otherwise covered, individuals known to be interested in the proposed action.

(2) A minimum of 15 calendar days shall be allowed for comment on the public notice. The first day of a time period begins at 12:01 a.m. local time on the day following the publication or the mailing and posting date of the notice which initiates the time period.

* * * * *

(4) When the proposed activity is located in or affects a community with environmental justice concerns, public comment and decision making under this part shall be coordinated with consultation and decision making under HUD policies implementing 24 CFR 58.5(j) or 50.4(l).

(c) *Step 3.* Identify and evaluate practicable alternatives to locating the proposed action in the FFRMS floodplain or wetland.

(1) * * *

(i) Locations outside and not affecting the FFRMS floodplain or wetland;

(ii) Alternative methods to serve the identical project objective, including but not limited to design alternatives such as repositioning or reconfiguring proposed siting of structures and improvements or incorporating natural systems, ecosystem processes, and nature-based solutions to avoid floodplain and wetland impacts; and

* * * * *

(2) Practicability of alternatives should be addressed in light of the goals identified in the project description related to the following:

* * * * *

(iii) Economic values such as the cost of space, construction, services, relocation, potential property losses from flooding, and cost of flood insurance.

(3) For multifamily and healthcare projects involving HUD mortgage insurance that are initiated by third parties, HUD in its consideration of practicable alternatives is not required to consider alternative sites, but must include consideration of:

(i) A determination to approve the request without modification;

(ii) A determination to approve the request with modification; and

(iii) A determination not to approve the request.

(d) *Step 4.* Identify and evaluate the potential direct and indirect impacts associated with the occupancy or modification of the FFRMS floodplain or the wetland and the potential direct and indirect support of floodplain and wetland development that could result from the proposed action, including impacts related to future climate-related flood levels, sea level rise, and the related increased value of beneficial floodplain and wetland functions.

(1) *Floodplain evaluation.* The floodplain evaluation for the proposed action must evaluate floodplain characteristics (both existing and as proposed for modification by the project) to determine potential adverse impacts to lives, property, and natural and beneficial floodplain values as compared with alternatives identified in Step 3.

(i) Floodplain characteristics include:

(A) Identification of portions of the site that are subject to flood risk, documented through mapping and, as required by § 55.7(e) or commensurate with the scale of the project and available resources as permitted by § 55.7(f), climate-informed analysis of factors including development patterns, streamflow, and hydrologic and hydraulic modeling;

(B) Topographic information that can inform flooding patterns and distance to flood sources, as described in flood mapping, Flood Insurance Studies, and other data sources; and

(C) Public safety communications and data related to flood risk including available information on structures such as dams, levees, or other flood protection infrastructure located in proximity to the site.

(ii) Impacts to lives and property include:

(A) Potential loss of life, injury, or hardship to residents of the subject property during a flood event;

(B) Damage to the subject property during a flood event;

(C) Damage to surrounding properties from increased runoff or reduction in floodplain function during a flood event due to modification of the subject site;

(D) Health impacts due to exposure to toxic substance releases that may be caused or exacerbated by flood events; and

(E) Damage to a community as a result of project failure (*e.g.,* failure of stormwater management infrastructure due to scouring).

(iii) Impacts to natural and beneficial values include changes to:

(A) Water resources such as natural moderation of floods, water quality maintenance, and groundwater recharge;

(B) Living resources such as flora and fauna (if the project requires consultation under 24 CFR 50.4(e) or 58.5(e), consultation with the U.S. Fish and Wildlife Service or National Marine Fisheries Service must include a description of impacts evaluated under this part);

(C) Cultural resources such as archaeological, historic, aesthetic and recreational aspects; and

(D) Agricultural, aquacultural, and forestry resources.

(2) *Wetland evaluation.* In accordance with section 5 of Executive Order 11990, the decision maker shall consider factors relevant to a proposal's effect on the survival and quality of the wetland. Factors that must be evaluated include, but are not limited to:

(i) Public health, safety, and welfare, including water supply, quality, recharge, and discharge; pollution; flood and storm hazards and hazard protection; and sediment and erosion, including the impact of increased quantity or velocity of stormwater runoff on, or to areas outside of, the proposed site;

* * * * *

(e) *Step 5.* Where practicable, design or modify the proposed action to minimize the potential adverse impacts to and from the FFRMS floodplain or wetland and to restore and preserve their natural and beneficial functions and values.

(1) *Elevation.* For actions in the FFRMS floodplain, the required elevation described in this section must be documented on an Elevation Certificate or a Floodproofing Certificate in the Environmental Review Record prior to construction, or by such other means as HUD may from time to time direct, provided that notwithstanding any language to the contrary, the minimum elevation or floodproofing requirement for new construction or substantial improvement actions shall be the elevation of the FFRMS floodplain as defined in this section.

(i) If a residential structure undergoing new construction or substantial improvement is located in the FFRMS floodplain, the lowest floor or FEMA-approved equivalent must be designed using the elevation of the FFRMS floodplain as the baseline standard for elevation, except where higher elevations are required by Tribal, State, or locally adopted code or standards, in which case those higher elevations apply. Where non-elevation standards such as setbacks or other flood risk reduction standards that have been issued to identify, communicate, or reduce the risks and costs of floods are required by Tribal, State, or locally adopted code or standards, those standards shall apply in addition to the FFRMS baseline elevation standard.

(ii) New construction and substantial improvement of residential structures that have no dwelling units below the FFRMS floodplain and that are not critical actions as defined at § 55.2(b)(3), or of non-residential structures, shall be designed either:

(A) With the lowest floor, including basement, elevated to or above the elevation of the FFRMS floodplain; or

(B) With the structure floodproofed at least up to the elevation of the FFRMS floodplain. Floodproofing standards are as stated in FEMA's regulations at 44 CFR 60.3(c)(3)(ii) and (c)(4)(i), or such other regulatory standard as FEMA may issue, and applicable guidance, except that where the standard refers to base flood level, floodproofing is required at or above the FFRMS floodplain, as defined in this part.

(iii) The term ''lowest floor'' must be applied consistent with FEMA regulations in 44 CFR 59.1 and FEMA's Elevation Certificate guidance or other applicable current FEMA guidance.

(2) *Minimization.* Potential harm to or within the floodplain and/or wetland must be reduced to the smallest possible amount. E.O. 11988's requirement to minimize potential harm applies to the

investment at risk or the flood loss potential of the action itself, the impact the action may have on others, and the impact the action may have on floodplain and wetland values. The record must include a discussion of all minimization techniques that will be incorporated into project designs as well as those that were considered but not approved. Minimization techniques for floodplain and wetlands purposes include, but are not limited to:

(i) *Stormwater management and green infrastructure:* The use of permeable surfaces; natural landscape enhancements that maintain or restore natural hydrology through infiltration, native plant species, bioswales, rain gardens, or evapotranspiration; stormwater capture and reuse; green or vegetative roofs with drainage provisions; WaterSense products; rain barrels and grey water diversion systems; protective gates or angled safety grates for culverts and stormwater drains; and other low impact development and green infrastructure strategies, technologies, and techniques. Where possible, use natural systems, ecosystem processes, and nature-based approaches when developing alternatives for consideration.

(ii) *Adjusting project footprint:* Evaluate options to relocate or redesign structures, amenities, and infrastructure to minimize the amount of impermeable surfaces and other impacts in the FFRMS floodplain or wetland. This may include changes such as designing structures to be taller and narrower or avoiding tree clearing to reduce potential erosion from flooding.

(iii) *Resilient building standards:* Consider implementing resilient building codes or standards to ensure a reliable and consistent level of safety.

(iv) *Severe Repetitive Loss (SRL) mitigation:* Identify and incorporate FEMA identified SRL mitigation as outlined in § 55.8(c), if applicable.

(3) *Restoration and preservation.* Restore means to reestablish a setting or environment in which the natural and beneficial values of floodplains and wetlands could again function. Where floodplain and wetland values have been degraded by past actions, restoration is informed by evaluation of the impacts of such actions on beneficial values of the floodplain or wetland and identification, evaluation, and implementation of practicable measures to restore the values diminished or lost. Preserve means to prevent modification to the natural floodplain or wetland environment or to maintain it as closely as possible to its natural state. If an action will result in harm to or within the floodplain or wetland, HUD or the responsible entity must ensure that the action is designed or modified to assure that it will be carried out in a manner which preserves as much of the natural and beneficial floodplain and values as is possible. Restoration and preservation techniques for floodplain and wetlands purposes include, but are not limited to:

(i) Natural Resource Conservation Service or other conservation easements;

(ii) Appropriate and practicable compensatory mitigation, which is required for unavoidable adverse impacts to more than one acre of wetlands. Compensatory mitigation includes but is not limited to: permittee-responsible mitigation, mitigation banking, in-lieu fee mitigation, the use of preservation easements or protective covenants, and any form of mitigation promoted by State or Federal agencies. The use of compensatory mitigation may not substitute for the requirement to avoid and minimize impacts to the maximum extent practicable.

(4) *Planning for residents' and occupants' safety.* (i) For multifamily residential properties and residential healthcare facilities, an evacuation plan must be developed that includes safe egress route(s) out of the FFRMS floodplain, plans for evacuating residents with special needs, and clear communication of the evacuation plan and safety resources for residents.

(ii) For all healthcare facilities, evacuation route(s) out of the FFRMS floodplain must be identified and clearly communicated to all residents and employees. Such actions must include a plan for emergency evacuation and relocation to a facility of like capacity that is equipped to provide required critical needs-related care and services at a level similar to the originating facility.

(iii) All critical actions in the FFRMS floodplain must operate and maintain an early warning system that serves all facility occupants.

(f) *Step 6.* HUD or the responsible entity shall consider the totality of the previous steps and the criteria in this section to make a decision as to whether to approve, approve with modifications, or reject the proposed action. Adverse impacts to floodplains and wetlands must be avoided if there is a practicable alternative. This analysis must consider:

* * * * *

(2) * * *

(ii) A reevaluation of alternatives under this step should include a discussion of economic costs. For floodplains, the cost estimates should include savings or the costs of flood insurance, where applicable; flood proofing; replacement of services or functions of critical actions that might be lost; and elevation to at least the elevation of the FFRMS floodplain, as appropriate based on the applicable source under § 55.7. For wetlands, the cost estimates should include the cost of filling the wetlands and mitigation.

(iii) If the proposed activity is located in or affects a community with environmental justice concerns, the reevaluation must address public input provided during environmental justice outreach, if conducted, and must document the ways in which the activity, in light of information analyzed, mitigation measures applied, and alternatives selected, serves to reduce any historical environmental disparities related to flood risk or wetlands impacts in the community.

(g) * * *

(1) If the reevaluation results in a determination that there is no practicable alternative to locating the proposal in the FFRMS floodplain or the wetland, publish a final notice that includes:

* * * * *

■ 17. Revise § 55.21 to read as follows:

§ 55.21 Alternate processing for existing nonconforming sites.

Notwithstanding the limitations on HUD assistance defined in § 55.8, in exceptional circumstances, the Assistant Secretary for Community Planning and Development may approve HUD assistance or insurance to improve an existing property with ongoing HUD assistance or mortgage insurance if the following conditions are satisfied:

(a) HUD completes an environmental review pursuant to 24 CFR part 50, including the 8-step decision making process pursuant to § 55.20, that:

(1) Documents that it is not practicable to transfer the HUD assistance to a site with lower flood risk under existing program rules, financial limitations, and site availability; and

(2) Mandates measures to ensure that the elevated flood risk is the only environmental hazard or impact that does not comply or that requires mitigation to comply, with HUD's environmental requirements at 24 CFR parts 50, 51, 55, and 58; and

(b) The proposed project incorporates all practicable measures to minimize flood risk, preserve the function of the floodplain and any impacted wetlands as described in § 55.20(e), and increase the overall resilience of the site, as approved and/or required by HUD. At minimum, these measures must include:

(1) Removal of all residential units and critical action structures from the floodway;

(2) Identification of evacuation routes out of the FFRMS floodplain;

(3) A No-Rise Certification for any new improvements in the floodway; and

(4) Elevation (or floodproofing pursuant to § 55.20(e)(1)) of existing structures within the FFRMS Floodplain, where practicable.

§§ 55.22, 55.24, and 55.25 [Removed and Reserved]

■ 18. Remove and reserve §§ 55.22, 55.24, and 55.25.

■ 19. Amend § 55.26 by revising the section heading, the introductory text, and paragraphs (b)(1) and (c) to read as follows:

§ 55.26 Adoption of another agency's review under the Executive orders.

If a proposed action covered under this part is already covered in a prior review performed under Executive Order 11988 or Executive Order 11990 by another agency, including HUD or a different responsible entity, that review may be adopted by HUD or by a responsible entity authorized under 24 CFR part 58 without further public notice, provided that:

* * * * *

(b) * * *

(1) The action currently proposed has not substantially changed in project description, scope, and magnitude from the action previously reviewed by the other agency; and

* * * * *

(c) HUD assistance must be conditioned on mitigation measures prescribed in the previous review.

§§ 55.27 and 55.28 [Removed]

■ 20. Remove §§ 55.27 and 55.28.

■ 21. Add subpart D, consisting of § 55.30, to read as follows:

Subpart D—Severability

§ 55.30 Severability.

Any provision of this part held to be invalid or unenforceable as applied to any action should be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding is that the provision of this part is invalid and unenforceable in all circumstances, in which event the provision should be severable from the remainder of this part and shall not affect the remainder thereof.

PART 58—ENVIRONMENTAL REVIEW PROCEDURES FOR ENTITIES ASSUMING HUD ENVIRONMENTAL REVIEW RESPONSIBILITIES

■ 22. The authority citation for part 58 is revised to read as follows:

Authority: 12 U.S.C. 1707 note, 1715z–13a(k); 25 U.S.C. 4115 and 4226; 42 U.S.C. 1437x, 3535(d), 3547, 4321–4336e, 4852, 5304(g), 12838, and 12905(h); title II of Pub. L. 105–276; E.O. 11514 as amended by E.O. 11991, 3 CFR, 1977 Comp., p. 123.

■ 23. Amend § 58.5 by revising paragraph (b)(1) to read as follows:

§ 58.5 Related Federal laws and authorities.

* * * * *

(b) * * *

(1) Executive Order 11988, Floodplain Management, as amended by Executive Order 13690, February 4, 2015 (3 CFR, 2016 Comp., p. 268), as implemented in HUD regulations at 24 CFR part 55, particularly section 2(a) of Executive Order 11988, as amended.

* * * * *

§ 58.43 [Amended]

■ 24. Amend § 58.43 in paragraph (a) by:

■ a. Removing ''tribal, local, State and Federal agencies;'' and add in its place ''Tribal, Federal, State, and local agencies''; and

■ b. Adding ''or on an appropriate Government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency'' after ''affected community'' in the third sentence.

■ 25. Revise and republish § 58.45 to read as follows:

§ 58.45 Public comment periods.

Required notices must afford the public the following minimum comment periods, counted in accordance with § 58.21:

(a) Notice of Finding of No Significant Impact (FONSI).	15 days when published in a general circulation newspaper or on a Government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency or, if no publication, 18 days when mailing and posting.
(b) Notice of Intent to Request Release of Funds (NOI–RROF).	7 days when published in a general circulation newspaper or on a Government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency or, if no publication, 10 days when mailing and posting.
(c) Concurrent or combined notices	15 days when published in a general circulation newspaper or on a Government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency or, if no publication, 18 days when mailing and posting.

§ 58.59 [Amended]

■ 26. Amend § 58.59 in paragraph (b) introductory text by adding ''or on an appropriate government website that is accessible to individuals with disabilities and provides meaningful access for individuals with Limited English Proficiency'' after ''news media''.

PART 200—INTRODUCTION TO FHA PROGRAMS

■ 27. The authority citation for part 200 continues to read as follows:

Authority: 12 U.S.C. 1702–1715z-21; 42 U.S.C. 3535(d).

■ 28. Amend § 200.926d by

■ a. Revising paragraphs (c)(4)(i) through (iii);

■ b. Removing paragraph (c)(4)(iv); and

■ c. Redesignating paragraphs (c)(4)(v) and (vi) as paragraphs (c)(4)(iv) and (v), respectively.

The revisions read as follows:

§ 200.926d Construction requirements.

* * * * *

(c) * * *

(4) * * *

(i) *Residential structures located in Special Flood Hazard Areas.* The elevation of the lowest floor (including basements and other permanent enclosures) shall be at least two feet above the base flood elevation (see 24 CFR 55.8(b) for appropriate data sources).

(ii) *Residential structures located in FEMA-designated ''coastal high hazard areas.''* Where FEMA has determined the base flood level without establishing stillwater elevations, the bottom of the lowest structural member of the lowest floor (excluding pilings and columns) and its horizontal supports shall be at least two feet above the base flood elevation.

(iii) *New construction.* (A) In all cases in which a Direct Endorsement (DE) mortgagee or a Lender Insurance (LI) mortgagee seeks to insure a mortgage on a one- to four-family dwelling that is newly constructed (including a newly

erected manufactured home) that was processed by the DE or LI mortgagee, the DE or LI mortgagee must determine whether the property improvements (dwelling and related structures/equipment essential to the value of the property and subject to flood damage) are located on a site that is within a Special Flood Hazard Area, as designated on maps of the Federal Emergency Management Agency. If so, the DE mortgagee, before submitting the application for insurance to HUD, or the LI mortgagee, before submitting all the required data regarding the mortgage to HUD, must obtain:

(*1*) A final Letter of Map Amendment (LOMA);

(*2*) A final Letter of Map Revision (LOMR); or

(*3*) A signed Elevation Certificate documenting that the lowest floor (including basements and other permanent enclosures) of the property improvements is at least two feet above the base flood elevation as determined by FEMA's best available information (or documenting that the lowest floor meets HUD's elevation standard for newly erected manufactured housing in 24 CFR 203.43f or 24 CFR part 3285, as applicable).

(B) Under the DE program, these mortgages are not eligible for insurance unless the DE mortgagee submits the LOMA, LOMR, or Elevation Certificate to HUD with the mortgagee's request for endorsement.

Bureau of Land Management

43 CFR Parts 3000, 3100, 3110, et al.
Fluid Mineral Leases and Leasing Process; Final Rule

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Parts 3000, 3100, 3110, 3120, 3130, 3140, 3150, 3160, 3170, and 3180

[BLM_HQ_FRN_MO4500176829]

RIN 1004–AE80

Fluid Mineral Leases and Leasing Process

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: The Bureau of Land Management (BLM) is revising its oil and gas leasing regulations. Among other changes, the final rule implements provisions of the Inflation Reduction Act (IRA) pertaining to royalty rates, rentals, and minimum bids; updates the bonding requirements for leasing, development, and production; and revises some operating requirements. The final rule will improve the BLM's leasing process by ensuring proper stewardship of public lands and resources.

DATES: The final rule is effective on June 22, 2024.

FOR FURTHER INFORMATION CONTACT: Yvette M. Fields, Division Chief, Fluid Minerals Division, telephone: 240–712–8358, email: *yfields@blm.gov,* or by mail 1849 C St. NW, Washington, DC 20240, for information regarding the substance of this final rule.

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. For a summary of the final rule, please see the final rule summary document in docket BLM–2023–0005 on *www.regulations.gov.*

SUPPLEMENTARY INFORMATION:

List of Acronyms

APD = Application for Permit to Drill
BLM = Bureau of Land Management
BOEM = Bureau of Ocean Energy Management
CA = Communitization Agreement
CD = Certificate of Deposit
CFR = Code of Federal Regulations
DOI = Department of the Interior
E.O. = Executive Order
EOI = Expression of Interest
FLPMA = Federal Land Policy and Management Act
GAO = Government Accountability Office
GHG = Greenhouse Gas
IBLA = Interior Board of Land Appeals
IIJA = Infrastructure Investment and Jobs Act of 2021
IM = Instruction Memoranda
IRA = Inflation Reduction Act of 2022
LOC = Letter of Credit
MLA = Mineral Leasing Act of 1920, as amended (MLA is also referred to as ''Act'' in the regulations.)
MLAAL = Mineral Leasing Act for Acquired Lands of 1947, as amended
MLRS = Mineral and Land Records System
NAICS = North American Industry Classification System
NEPA = National Environmental Policy Act
OIG = Office of the Inspector General
ONRR = Office of Natural Resources Revenue
PRA = Paperwork Reduction Act
RIA = Regulatory Impact Analysis
RMP = Resource management plan
ROW = Right-of-way
SBA = Small Business Administration
U.S.C. = United States Code

Executive Summary

On July 24, 2023, the BLM published a proposed rule to amend the regulations in 43 CFR parts 3000, 3100, 3110, 3120, 3130, 3140, 3150, 3160, 3170, and 3180 in the **Federal Register** (88 FR 47562), with a 60-day comment period. Generally, the comments supported this rulemaking and expressed the view that the changes outlined by the proposed rule will be helpful. Comments on specific sections of the proposed rulemaking opposed certain provisions and recommended changes. Within this preamble, the BLM discusses those comments and the BLM's responses.

Overall, this rule will enhance the BLM's administration of oil and gas-related activities on America's public lands and reflects Congress's changes to the oil and gas program in the IRA. Specifically, the rule will reflect requirements of the IRA by increasing royalty rates, rentals, and minimum bids for BLM-issued oil and gas leases, and by imposing a fee for the submittal of an expression of interest (EOI) for leasing Federal oil and gas. The rule also updates the bonding requirements for leasing, development, and production to address shortcomings identified in reports by the Government Accountability Office (GAO) and the Department of the Interior's (DOI's) Office of Inspector General (OIG). Collectively, the BLM proposed these changes to bring the regulations into compliance with the IRA and the Infrastructure Investment and Jobs Act (IIJA) mandates and to ensure that reclamation costs are not borne by the American public. The BLM is also adjusting its cost recovery mechanisms so that project applicants provide a more appropriate share of the BLM's up-front costs for processing these applications. Finally, the BLM is implementing several changes to focus leasing on areas with fewer resource conflicts. The BLM's final rule will be the first comprehensive update to the Federal onshore oil and gas program's regulatory framework since 1988.

The Secretary of the Interior manages the Federal onshore oil and gas program pursuant to the requirements of various statutes, including the Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 *et seq.*) (FLPMA); the Mineral Leasing Act of 1920, as amended (30 U.S.C. 181 *et seq.*) (MLA or Act); and the Mineral Leasing Act for Acquired Lands of 1947, as amended (30 U.S.C. 351 *et seq.*) (MLAAL), as well as the recently enacted IRA (Pub. L. 117–169 (2022)) and IIJA (Pub. L. 117–58 (2021)). Under section 102 of FLPMA (43 U.S.C. 1701(a)(7)), the BLM manages approximately 245 million acres of public lands and approximately 700 million acres of federally owned subsurface minerals ''on the basis of multiple use and sustained yield.'' FLPMA's definition of ''multiple use'' in section 103 (43 U.S.C. 1702(c)) requires the BLM to achieve ''a combination of balanced and diverse resource uses that takes into account the long-term needs of future generations for renewable and non-renewable resources.'' Oil and gas-related activities are one of the multiple uses that FLPMA authorizes and which the BLM administers in accordance with the MLA and MLAAL. Both of those Acts govern the leasing of public lands to explore for and develop oil, natural gas, coal, and other hydrocarbons, amongst other mineral deposits.

Discussion of Public Comments on the Proposed Rule

The public comment period for the proposed rule ended on September 22, 2023. During the 60-day public comment period, the BLM received over 215,000 comments submitted by Federal, State, and local governments, local agencies, Tribal organizations, industry representatives, individuals, and other external stakeholders. The vast majority of submissions were form letters. Commenters also submitted roughly 1,000 unique letters. From all submissions, the BLM identified approximately 1,200 unique comments

raising specific issues on the proposed rule.

The BLM carefully reviewed all comments received on the proposed rule. Certain comments suggesting that the BLM address issues outside the scope of this rulemaking are discussed in Section III.A.

The BLM categorized the remaining comments received and provides an overview of those categories and associated responses in Section III.B. The BLM provides more detailed discussions of those comments in Section IV.B. The Federal Government posts all comments at the Federal eRulemaking portal: *http://www.regulations.gov.* To access the comments at that website, enter 1004–AE80 in the Search box and select the Fluid Mineral Leases and Leasing Process proposed rule.

A. Comments Outside the Scope of This Rulemaking

The BLM received many comments directed at matters outside of the scope of this rulemaking, including those regarding: project-specific considerations; the BLM's existing website or computer application programs (*e.g.,* Automated Fluid Mineral Support System, National Fluid Lease Sale System, etc.); additional rulemaking or programmatic environmental impact statements specific to greenhouse gas (GHG) emissions; geothermal or helium leasing activities; and additional operational provisions in 43 CFR part 3160 or additional unit provisions in 43 CFR part 3180 that were not part of the proposed rule. Other commenters recommended changes to national energy policies and priorities, such as to halt all oil and gas leasing activities due to climate change, or discussed matters not specific to the BLM's administration of oil and gas leasing. Many comments expressed general statements of support or opposition to the rule. The BLM has not responded to these comments in detail, because these myriad matters were not encompassed in the proposed rule and are best addressed, if at all, through future rulemakings.

A commenter stated that the BLM failed to write this entire rule in a manner that is easily understood without providing any examples to support the assertion. When drafting the proposed and final rules, the BLM reviewed the rule text to identify areas where the regulations could be written more clearly and made changes as necessary.

B. Categorized Public Comments on the Proposed Rule

This section of the preamble summarizes the major categories of public comments that the BLM received in response to the proposed rule, as well as the BLM's responses.

1. Comments Recommending Additional Oil and Gas Rulemaking, or Policy Development

Summary of comments: Multiple commenters recommended that the BLM initiate additional rulemaking efforts or develop additional policy that are beyond the scope of this rulemaking. These recommendations include: (1) a rule to update the BLM's unitization process in part 3180; (2) a rule to update the BLM's permitting process in 43 CFR part 3160; (3) development of ''The Bureau of Land Management's Blueprint for 21st Century Outdoor Recreation''; (4) updated policy related to oil and gas lease suspension; (5) updated policy related to oil and gas unitization; (6) a similar joint rulemaking between the BLM and the Bureau of Indian Affairs; and (7) a bureau-wide review of its standard stipulation lists.

Response: The BLM reviewed these comments and determined that the requested changes are outside the scope of this rulemaking. With respect to the comments recommending the BLM update the unitization portion of the regulations at part 3180, the BLM made changes to the final rule to implement the increased royalty rate mandated by Congress in the IRA but did not propose any changes to the remaining unitization provisions. As the BLM did not propose any changes in the proposed rule, the public was not provided with a chance to comment on any other changes to the regulations governing unitization. As it reviews its current policy in light of this rule's changes, the BLM will determine whether to implement any changes to its approval process for lease suspensions. Although a comment requested that the BLM review and standardize a list of lease stipulations, in addition to the terms and conditions in the BLM's standard form oil and gas lease, the BLM develops lease stipulations as part of its resource management planning process (which includes analysis under NEPA and other statutes), in which the public has opportunities to comment, and those stipulations apply to oil and gas leases issued within each RMP area. Any site-specific concerns can be addressed through the NEPA process for a particular sale or through conditions of approval at the Application for Permit to Drill (APD) stage.

During the comment period, the BLM received comments requesting additional updates to parts 3160 and 3170. As part of its review under Executive Order (E.O.) 14008, issued on January 27, 2021, the Department reviewed the onshore oil and gas leasing program and published the *Report on the Federal Oil and Gas Leasing Program* on November 26, 2021. The *Report on the Federal Oil and Gas Leasing Program* recommended that the BLM should reform its royalty rate, minimum bonus bids, rental rates, and bonding amounts; establish new requirements for bidders; and take steps to discourage nominations of low-potential lands. When the BLM drafted the proposed rule, the BLM considered any critical permitting or operational changes to parts 3160 and 3170 that were needed in response to the Report's recommendation to reduce speculation but did not propose any changes to the remaining provisions. As the BLM did not propose any changes to parts 3160 and 3170, outside of the limited changes in the proposed rule, the public was not provided with a chance to comment on any other changes to the regulations governing permitting or operations.

As noted above in the summary of comments outside the scope of this rulemaking effort, the BLM received a comment requesting the development of a blueprint for outdoor recreation. Such a revision is beyond the scope of this rulemaking as it would involve revising regulations in Title 43 of the CFR, Subchapter H, and those regulations do not pertain to oil and gas leasing and development, which is the focus of this effort. Finally, a joint rulemaking between the BLM and the Bureau of Indian Affairs is outside the scope of this rulemaking effort.

2. Comments on Greenhouse Gas Emissions and Climate Change

Summary of comments: In the proposed rule, the BLM requested comment on whether the preference criteria in § 3120.34 or other portions of the proposed rule should be expanded, or new provisions added, to discuss analysis of GHG emissions and related decision making based on that analysis. The BLM received many comments recommending different approaches, including:

- Not changing the rule to address GHG emissions and climate change on the grounds that the NEPA review process at the project level provides a sufficient review for climate change issues, and that refraining from leasing Federal minerals will not change the demand for oil and gas production;

- Amending the rule to forgo future leasing based upon the need to avoid exceeding the world's pre-industrial global temperature level by 1.5 degree Celsius;
- Setting lease rates based on the Social Cost of Carbon calculated by the U.S. Environmental Protection Agency in November 2022 at a discount rate of 1.5 percent;
- Aligning the oil and gas program with President Biden's climate goals;
- Limiting GHG emissions via emissions monitoring;
- Implementing a three-stage leasing process to prioritize lands for leasing with a final climate screening;
- Creating a carbon budget for the Federal onshore oil and gas program;
- Requiring climate change mitigation, analyzing climate impacts across BLM-managed lands, or implementing a rule to ensure climate protection for all new leasing and permitting decisions;
- Initiating a programmatic environmental impact statement for the onshore oil and gas program to assess the potential GHG impacts;
- Establishing a quantitative climate test tool to evaluate the relative impact and significance of GHG emissions at the project level; and
- Expanding the competitive leasing preference criteria for conformity with State policies on GHG emissions.

Response: Climate change is a global process that is affected by the sum total of GHGs in the Earth's atmosphere. The BLM acknowledges the views and suggestions reflected in these comments and recognizes that GHG emissions from the Federal onshore oil and gas program contributes to climate change. After reviewing the comments received, the BLM did not make any changes to the final rule to address GHG emissions and climate change. In this rule, the BLM implements regulatory modifications required by Congress in the IRA and other revisions that aim to improve the leasing process and ensure proper management of public lands and resources. These reforms are not focused on climate change. For example, the majority of these regulations cover the administration of an oil and gas lease, such as changes to the fixed filing fees, the fiscal terms mandated by Congress, the type of lease the BLM can issue (eliminating noncompetitive leases as mandated by Congress), and the method by which the public requests lands to be considered for leasing (formal nominations vs. expressions of interest). In implementing the MLA's requirement to hold quarterly lease sales when lands are eligible and available, the BLM will continue to use the NEPA review process and guidance issued by the Council on Environmental Quality to evaluate GHG emissions that result from oil and gas leasing and development and its effects on climate change. The BLM understands the commenters' suggestions and may proceed with those suggestions in future rulemakings that more directly address GHG emissions. Further responses to comments related to the preference criteria specifically are addressed in section IV.B.12 of the preamble.

3. Comments Recommending the BLM Stop All Oil and Gas Lease Sales and Permitting

Summary of comments: Multiple commenters recommended that the BLM stop, or phase out, all oil and gas lease sales, the issuance of leases, as well as permitting and development, due to climate change and the GHG emissions from oil and gas development.

Response: Pursuant to the IRA, the BLM is required to conduct lease sales in order to permit wind and solar energy development projects on public lands. The approach suggested by the commenters thus would require the BLM to stop desirable wind and solar development. In implementing the MLA's requirement to hold quarterly lease sales when lands are eligible and available, the BLM will continue to use the NEPA review process to evaluate GHG emissions that result from oil and gas leasing and development and its effects on climate change.

4. Comments on Public Participation

Summary of comments: Tribes, States, and local governments submitted comments requesting that the BLM update the rule to provide additional consultation and outreach to them on oil and gas leasing and development. Some comments encouraged the BLM to coordinate with the relevant State and county agencies when land-use actions are taken or if the BLM is considering leasing lands adjacent to State-owned or managed lands. Other comments requested that the BLM explore opportunities for Tribal cultural site protection and co-stewardship to ensure the BLM fully advances opportunities for the incorporation of Indigenous Knowledge, respect for Tribal sovereignty and treaty rights, and the protection of Tribal cultural sites. Comments also recommended that the BLM consult the State or local government's land use plans to ensure the BLM applies the appropriate provisions to responsibly manage natural resources, climate, and environmental quality issues during the decision making and planning efforts for oil and gas leasing.

Response: The BLM will continue to engage with the public, Tribes, Federal, State, and local government partners on the BLM's management of its public lands, as appropriate. Subsequent actions that the BLM may take will be subject to the applicable policies, laws, and regulations pertaining to that action, including those for consultation and environmental review. The BLM added language into the competitive leasing process (see § 3120.42) to include scoping, comment, and protest periods to ensure that the BLM provides adequate time to evaluate the views of a wide range of partners, stakeholders, and landowners in any future decisions. Furthermore, in formulating or amending its resource management plans (RMPs), the BLM complies with FLPMA, NEPA, and its regulations providing for public participation, coordination of planning efforts, and consistency. See 43 CFR 1610.2, 1610.3–1, 1610.3–2. The RMPs serve as blueprints to enable the BLM to sustain the health, diversity, and productivity of public lands for the use and enjoyment of present and future generations. Under an RMP, the BLM will identify the lands closed to leasing of Federal oil and gas, the lands open to leasing of Federal oil and gas, and the appropriate stipulations to apply to a Federal oil and gas lease based upon the location of the lease. These decisions are not made as part of this rulemaking and will continue to be made through the BLM's land use planning process, which involves cooperating with State and local governments, consulting with Tribes, and robust public engagement.

The BLM takes its responsibilities to Tribes seriously and respects Tribal sovereignty and treaty rights. Where there are such opportunities, the BLM is committed to exploring co-stewardship opportunities with Tribes. However, co-stewardship is outside the scope of this rulemaking.

5. Comments on the BLM's Discretion To Offer Parcels for Lease Sales

Summary of comments: Multiple commenters stated that the rule improperly limits and discourages exploration or closes off lands to leasing outside of the NEPA process. These commenters pointed to different aspects of the rule to support their claim that the rule limits and discourages exploration. Some comments stated that the rule violates, or evades, the multiple-use mandate of FLPMA or exceeds the authority of the BLM under the MLA. Other comments stated that when a person requests the BLM

include certain lands in an upcoming competitive oil and gas lease sale (via EOI) the BLM should offer all lands described in the EOI in the next available sale based on and consistent with the management decisions made in the relevant RMPs. Multiple comments stated that the new preference criteria (see § 3120.32) will create uncertainty, conflicts among stakeholders and uses, and will hinder the BLM's ability to achieve the congressional mandates such as offering enough acreage for oil and gas leasing in order to allow wind and solar right-of-way (ROW) permit issuance.

Response: With respect to contentions that the BLM's proposed regulations exceed the Secretary's authority to select lands for leasing, the BLM notes that the MLA, 30 U.S.C. 226(a), by providing that the Secretary ''may'' lease lands, necessarily provides the BLM with broad discretion in determining precisely which lands and parcels the BLM will offer at an oil and gas lease sale. Accordingly, the agency has, since at least 1988, consistently applied a public interest determination to any such decisions. *See* 53 FR 22828 (June 17, 1988) (''It is Bureau policy prior to offering the lands to determine whether leasing will be in the public interest.''). The MLA does not specify how and when this decision is to be made, and both the Supreme Court and the U.S. Court of Appeals for the Tenth Circuit have recognized the Secretary's discretion in this sphere. *See Udall* v. *Tallman,* 380 U.S. 1, 4 (1965); *W. Energy All.* v. *Salazar,* 709 F.3d 1040, 1044 (10th Cir. 2013).

Comments asserting that the application of the preference criteria will result in the closure of any lands to oil and gas leasing are incorrect. The BLM has and will continue to make land use decisions at the land use planning stage and document those decisions in the applicable RMP. The preference criteria, on the other hand, were proposed consistent with the MLA to direct the BLM's administrative resources to leasing tracts most likely to be developed, to reduce conflicts between oil and gas development and other public land uses that were not resolved in the resource management plans, and to ''take[ ] into account the long-term needs of future generations for renewable and nonrenewable resources,'' 43 U.S.C. 1702. These criteria may be considered on a case-by-case basis in light of specific circumstances. Even if the BLM were to apply such criteria and decide to defer including particular lands from any particular lease sale, nothing in this rule prevents those lands from being offered in future sales. The RMPs do not always resolve all conflicts, especially those that may be unforeseen or arise due to a change in circumstances. In many cases, this calls for a more specific site review, and the MLA provides the necessary discretion, apart from FLPMA, to engage in this type of site-specific review.

6. Comments Recommending BLM Processes Should Be Addressed in Policy and Not Regulations

Summary of comments: The BLM received multiple comments stating that many of the BLM processes in the proposed rule should instead be expressed in policy documents and that the rule goes beyond the authority of the BLM under the IRA and IIJA. Comments expressed the view that the function of regulations is to inform and instruct the public with regard to actions that they may or may not take while policy interprets those regulations and provides guidance to the agency in implementing them. The commenters stated that inserting existing policy guidance, which applies only to the BLM's actions, into the regulations, rather than leaving it in Instruction Memoranda (IM), is inappropriate. For example, commenters suggested that the preference criteria and the details regarding lease suspensions belong in BLM guidance documents and not in the regulations as these do not impose any requirements on the oil and gas industry. Finally, the commenters stated that the BLM does not need to update the existing regulations governing the BLM's discretionary functions under the existing regulations, since those regulations are adequate to protect the fiscal interests of the American public. These commenters recommended that the BLM only make the changes required by the IRA.

Response: By incorporating provisions such as the preference criteria and lease suspensions into the regulations, the BLM makes those provisions legally binding and provides greater certainty and transparency to the public on the decision-making processes the BLM will use when it processes EOIs (see § 3120.32) and the timeframes for lease suspensions (see § 3165.1). These regulatory criteria may influence a person's decision-making when deciding whether they will submit an EOI or may influence lessees when they are deciding whether to seek a lease suspension. Therefore, the BLM declines to make any changes to the final rule based upon concerns that the changes could be characterized as guidance.

7. Comments on Environmental Justice

Summary of comments: Multiple commenters stated that the BLM should ensure that the final rule includes environmental and social justice considerations as part of the oil and gas leasing process. Comments stated that many of the fluid mineral resources are located in underserved rural areas and on Tribal lands where the fluid mineral industry has a large economic impact. These comments alleged that the rule could undercut environmental justice goals by reducing the economic benefits that would otherwise flow to disadvantaged communities as a result of onshore Federal oil and gas activities. One comment stated that jobs in extractive industries, such as oil and gas development, are not going to the members of the communities burdened by the fossil fuel industry and therefore that the BLM should end the Federal fossil fuel leasing program. Another comment stated that the BLM should solicit the knowledge and experience of those in underserved communities and ensure that these communities' perspectives are meaningfully incorporated into and actively shape planning and decision-making, and the BLM should take into account community-driven and localized health impact assessments and relevant local health and demographic data as part of this process. Another comment recommended that the BLM incorporate environmental justice as part of § 3120.32.

Response: The BLM reviewed the comments recommending changes to the rule to address environmental justice concerns and determined that no changes were necessary. The BLM believes environmental justice concerns are initially addressed through the land use planning process when the BLM is evaluating whether lands should be open to leasing and what stipulations should be imposed, and then at the more site-specific level when identified parcels are being evaluated for possible inclusion in a lease sale. Both of these processes also involve an evaluation under NEPA, which provides an opportunity for considering environmental justice concerns, which are dependent on the specific conditions and history pertaining to each area and the communities potentially impacted. In addition, the preference criteria that the BLM is including in this final rule will provide a tool for the BLM to assess environmental justice concerns through government-to-government consultation and through scoping comments received from the public. To the extent a

comment noted a specific environmental-justice-related concern with a particular section of the rule, the BLM has also addressed such comments in the following Section-by-Section Discussion.

8. Comments on the Impact of the Rule on Indian Leases

Summary of comments: The BLM received a comment stating that the proposed rule preamble incorrectly stated that the rule ''will not impact the leasing of Indian minerals.'' The comment asserted that the rule would impact Indian interest, lands, and minerals, and that the BLM needs to clarify this in the final rule. The BLM also received comments stating that the rule should be revised to clarify that public lands managed by the BLM under FLPMA and do not include Indian lands; that the rule should eliminate BLM activities on Indian lands; and, that the BLM lacks authority to manage activities on Indian lands.

Response: The BLM does not make leasing decisions for Indian lands. However, the BLM does make recommendations for oil and gas operations that may impact Indian lands. Existing regulations at 43 CFR part 3100 outline the BLM's authority over offering lands to lease under the BLM's jurisdiction, which does not include Indian lands. The changes made in this rulemaking clearly fall within the BLM's existing statutory authorities. The BLM acknowledges that some of the proposed changes may affect Indian lands when the BLM makes recommendations for oil and gas operations to the Bureau of Indian Affairs under the Standard Operating Procedures between agencies for the leases they manage under their respective jurisdictions. While the majority of the changes in the final rule impact the leasing of Federal minerals and not Indian leases, there are some provisions that will apply to Indian leases: the operational changes for shut-in and temporarily abandoned wells at § 3162.3–4 and the changes to the APD timeframe at § 3171.14. The BLM has also increased filing fees to account for inflation for applications such as APDs, as required by 30 U.S.C. 191. The BLM considers these updates critical for both Federal and Indian minerals because these changes will give the BLM the ability to complete operator-diligence reviews, ensure that wells are producing on Indian leases as required by law, and to recover its costs to process applications.

9. Comments on the Rule Potentially Discouraging Federal Exploration and Development

Summary of comments: Multiple commenters expressed concerns that the proposed rule would discourage or eliminate future oil and gas exploration and development on Federal lands or would force production from Federal lands onto State or private lands. The BLM also received comments asserting that the combination of proposed § 3120.32 (reflecting the BLM's authority to defer certain parcels) and the increased fees, royalties, and bonding would result in the BLM violating its statutory requirements to prevent waste of the oil and gas resource. Specifically, the commenter claimed that provisions in this rule, such as the competitive leasing preference criteria at § 3120.32, could result in delays in or the complete exclusion of the development of non-Federal minerals in addition to the loss in Federal bonuses and royalties. These commenters also asserted that this rule fails to recognize studies indicating that the United States will continue to need fossil fuels for the foreseeable future. The commenters urged the BLM to look for ways to increase energy development. Commenters also stated that the proposed rule ignored the economic benefit provided by oil and gas development to local schools, hospitals, and infrastructure.

Response: The GAO and the DOI OIG reviewed and audited the BLM's Federal onshore oil and gas program to identify problematic areas in this program and recommended actions to address them. Both the GAO's and OIG's audits [1] highlighted weaknesses in the onshore program's fiscal framework and recommended that the BLM take steps to ensure that the American public receives a fair return from oil and gas activities on public lands. The DOI and the BLM concurred with these recommendations in the *Report on the Federal Oil and Gas Leasing Program* [2] issued in November 2021.

Accordingly, the BLM is adjusting its oil and gas bonding requirements, including by increasing minimum bond amounts for the first time in decades. The BLM is proposing to adjust its cost recovery mechanisms to account for changes in the leasing process since the fees were initially set in 2005. The BLM drafted the proposed rule to: (1) reflect the requirements of the IRA; and (2) enhance the administration of the onshore program, to direct leasing to lands with a higher development potential, and in response to the GAO's and OIG's numerous reports identifying shortcomings in the program, as discussed in the November 2021 *Report on the Federal Oil and Gas Leasing Program.*

The BLM did not make any changes to the final rule based upon the comments expressing concerns that the increased bonding and fees could result in the potential movement of production from Federal to State or private lands. The royalty rates on State and private lands are often higher than those for Federal lands as are the rental rates.[3] Given this, the BLM does not believe the increased rates will have the asserted affect and instead will bring the rates more in line with one another across jurisdictions. Moreover, § 3120.32 does not affect longstanding BLM policies that prioritize leasing parcels subject to drainage (from adjacent State and private minerals); the BLM will continue to work towards leasing lands that will allow for logical development of the minerals by giving preference to lands after accounting for expected yields of oil and gas, fair return for U.S. taxpayers, and decisions embodied by the BLM's RMPs. This will provide for continued development of Federal, State, and private minerals.

IV. Overview of Modifications to the Proposed Rule

A. Summary of Notable Changes

The BLM made changes to the rule in response to comments and for accuracy, clarity, or grammar.

The BLM received numerous comments on the proposed changes to the bonding regulations under subpart 3104, and in response to these comments, the BLM reinstated an operators' ability to post personal bonds secured with letters of credit (LOCs) and

[3] DOI, ''Report on the Federal Oil and Gas Leasing Program'' (Nov. 2021).

certificates of deposit (CDs). The proposed rule requested comments on if and how the BLM should adjust the minimum bond amounts in the future. After review of the comments, bond amounts will be adjusted for inflation every 10 years so that the minimum bond amounts do not become outdated as they have in the past.

The BLM deleted the existing and proposed sections governing the formal lease nomination process under part 3120.

The BLM revised the final rule to clarify that it will consider the preference criteria in § 3120.32 as part of the scoping process and will apply the criteria after the conclusion of scoping but before issuing the draft NEPA document for the lease sale, consistent with the BLM's existing policy and implementation of IM 2023–007, *Evaluating Competitive Oil and Gas Lease Sale Parcels for Future Lease Sales.*[4]

The BLM also revised the final rule to extend an approved APD's term based on a lease suspension.

These revisions are discussed in more detail in the Section-by-Section Discussion.

B. Section-by-Section Discussion

Sections that did not receive any comments, or that only received comments in support of the proposed changes, are not discussed in this Section-by-Section analysis and are adopted in the final rule as proposed. In addition, throughout the final rule, the BLM replaced the words ''he,'' ''she,'' or ''he/she'' with the appropriate title or entity to comply with Executive Order 13988, *Preventing and Combating Discrimination on the Basis of Gender Identity or Sexual Orientation.*

1. Section-by-Section Discussion for Changes to 43 CFR Part 3000

Section 3000.5 Definitions

The BLM received a number of comments on the definition of the terms ''Acreage for which expressions of interest have been submitted,'' ''Person,'' and ''Surface Management Agency.''

With respect to the phrase ''Acreage for which expressions of interest have been submitted,'' a comment stated the BLM should change the definition to ''acreage that is identified in an EOI on land eligible and available for leasing'' to ensure that the BLM accurately determines which EOIs have been properly submitted. No further changes are made to the final rule as the definition already states, ''and for which the BLM may lawfully issue an oil and gas lease.''

Comments on the term ''Person'' recommended that the BLM use the definition in the Federal Oil and Gas Royalty Management Act, 30 U.S.C. 1702, to avoid any unnecessary confusion. The BLM adopts this recommendation and has revised the definition of the term ''person'' in the final rule accordingly.

Comments on the term ''surface management agency'' focused on the assertion that the definition improperly required the BLM to obtain consent from other agencies within the DOI in order to lease lands managed by those agencies, and therefore, that the BLM should not adopt the proposed changes to this definition. Based on these comments, the BLM made additional changes to § 3101.51 to provide that public domain and acquired lands that are open to the operation of the Mineral Leasing Act will be leased only with the consent of the surface managing agency, which, upon receipt of a description of the lands from the authorized officer, can report to the authorized officer that it consents to leasing with stipulations, if any, or withholds consent or objects to leasing.

Section 3000.40 Appeals

The existing § 3000.4 details the appeal rights and exceptions for parts 3000 through 3930. The BLM received suggestions that this section be amended to include State Director Reviews, with an option to further appeal to the Interior Board of Land Appeals (IBLA). The commenters asserted that, without the intermediary appeal to the State Director, there would effectively be no opportunity to appeal in light of average times for IBLA decisions. The BLM does not believe any change to this section is needed. Decisions that are signed at the state office level, which are usually decisions that affect the administration of a lease under parts 3100 and 3120, are signed on behalf of the State Director, meaning that State Director review is not applicable. In addition, 43 CFR subpart 3165 already states that onshore oil and gas operational decisions made under the authority of part 3160 are subject to the State Director Review process and any decision of the State Director is appealable to the IBLA.

Section 3000.41 Severability

This is a new section that the BLM has added in response to comments. The BLM received comments suggesting that it should include a severability clause in the final rule similar to that found in the BLM's realty regulations (43 CFR 2801.8). The final rulemaking adopts this recommendation by adding a new section addressing severability. This section will read, ''If a court holds any provisions of the regulations in parts 3000 through 3180 or their applicability to any person or circumstances invalid, the remainder of these rules and their applicability to other people or circumstances will not be affected.'' The BLM published the proposed rule, in large part, to address the changes required by the IRA, various reports by the GAO and OIG, and the Department's report in response to section 208 of E.O. 14008. Those sections implementing the IRA can and do function separately from those sections proposing new bonding amounts or the competitive leasing preference criteria.

One commenter stated that the courts will determine if a provision is or is not severable from the rule. The comment is correct in that a court will ultimately determine whether portions of the rule can be severed from others in the event a court determines a provision was improperly promulgated. This section is designed to aid that review by demonstrating that the BLM intends the various components of the rule, with various provenances and independent functions, to continue to operate even if one or more of the provisions is declared unlawful.

Section 3000.50 Limitations on Time To Institute Suit To Challenge a Decision of the Secretary

The existing § 3000.5 reiterates the 90-day statute of limitations for judicial challenges to certain BLM decisions under the MLA. The BLM received comments on this section suggesting that the BLM clarify that the regulation does not apply to claims brought under statutes other than the MLA. The final rule does not adopt this recommendation, as this section also applies to other minerals management programs, such as mining claims, which are managed under the general mining laws (see part 3800).

Section 3000.60 Filing of Documents

The existing § 3000.6 specifies where and when documents filed under these regulations must be submitted and provides for filing by electronic means in addition to the hard copy or delivery service, as was previously authorized. Commenters generally supported the proposed changes to this section. Commenters suggested revising the provision to include a requirement that each BLM office designate an email address for filing, and that an e-filing should be deemed timely if it is

[4] *https://www.blm.gov/policy/im-2023-007.*

received by 11:59 p.m. local time in the appropriate BLM office. These changes were recommended to ensure that the appropriate official receives the e-filing and to avoid any risk of default as a result of e-filing with the wrong person in a BLM office. The BLM does not support the use of emails for electronic filings for many of the same reasons stated in the comment, *i.e.,* the potential to be directed to the wrong person and/or wrong office. In addition, the BLM will not incorporate the recommendation to state a specific local time, since the time by which a filing needs to be made is already addressed in 43 CFR 1821.11. The regulation at 43 CFR 1821.11 is entitled, ''During what hours may I file an application?'' and specifically states, ''You may file applications or other documents or inspect official records during BLM office hours. Each BLM office will prominently display a notice of the hours during which that particular office will be open. Except for offices which are open periodically, for example, every Wednesday or the 3rd Wednesday of the month, all offices will be open Monday through Friday, excluding Federal holidays, at least from 9 a.m. to 3 p.m., local time.'' Those instructions necessarily depend upon and encompass the local time at particular BLM offices.

Section 3000.100 Fees in General

The existing § 3000.10 provides general information on the types of fees the BLM may assess, how the fees are calculated, when the fees must be paid and how and when the BLM will adjust any fees. The BLM received a comment recommending a change to paragraph (c), which addresses adjustment of fees, recommending that any adjustments to fixed fees be subject to notice and comment. The BLM declines to make this change as further explained in the discussion of § 3000.120 below.

Section 3000.120 Fee Schedule for Fixed Fees

The existing § 3000.12 lists the fixed fees that must be paid for each transaction requiring a fixed fee and includes transactions that previously did not require a fee, such as the designation of a successor operator; unit agreement applications; subsurface storage agreement applications; unit agreement expansion applications; and formal lease nominations. The final rule removes the formal lease nominations process, consistent with the changes made under § 3120. The BLM received several comments on this section. Some comments supported the BLM's proposal to incorporate processing fees for new actions that were not previously subject to a fee, stating that the fees were appropriate given the BLM's limited resources, or stating that the proposed fees were not sufficient to cover the BLM's costs. Other comments opposed the increased fees, asserting they were excessive, disproportionate, unwarranted, and designed to be a deterrent to Federal oil and gas leasing activities. In addition, some commenters stated that the analysis in the preamble to the proposed rule failed to comprehensively analyze the BLM's fee system, and, specifically, failed to compare the fees to the increased bonus bids, rentals, and bonding. Another comment objected to the application of the new filing fees, royalty, and rental provisions to leases sold before the enactment of the IRA but issued after the IRA.

The preamble to the proposed rule outlined the processing steps considered by the BLM in calculating each of the fees. The general comments only criticized the processing steps associated with the BLM's review of a competitive lease application fee, as discussed below. No comments criticized the processing steps for the other application fees; therefore, the BLM will implement the proposed fixed filing fees as stated in the preamble to reimburse the BLM for its processing costs. With respect to the fixed filing fees, the preamble specifically stated that the BLM would not charge a new fixed filing fee under this rule for processing a document that the BLM received before the effective date of the rule. Documents submitted before the effective date of the final rule will be processed based on the fee that was in effect when the document was submitted.

One comment recommended that the competitive lease application fee, which includes the cost for the BLM to undertake any necessary NEPA review, should not be a fixed fee and instead should be determined on a case-by-case basis under § 3000.110, or, alternatively, that the cost should be fixed but that the applicant should have the option to request a case-by-case fee determination to establish a fee for a particular lease application. Although the BLM understands the impetus for suggesting that the fee be determined for a particular lease, the BLM cannot adopt the proposed change, because the NEPA analysis prepared for each lease sale covers all of the parcels offered in a given sale and is not for each individual parcel. Moreover, the competitive lease application fee is collected after the NEPA review has been completed, and after the lease sale has been held. Therefore, the applicant would not be able to help pay for the preparation of any BLM NEPA document before performing any case processing on a parcel-by-parcel basis.

Other comments stated that the BLM should charge fixed filing fees for compensatory royalty agreements and communitization agreements (CAs). The final rule includes a fixed fee for compensatory royalty agreements under ROW pursuant to subpart 3109 where the processing steps are the same for leases. The BLM added the following clarifying language to this provision in the final rule: ''Leasing and compensatory royalty agreements applications under right-of-way pursuant to subpart 3109.'' The BLM does not adopt the recommendation to require a fixed filing fee for CAs. The BLM explained in the preamble to the proposed rule that new fixed filing fees were considered for Federal CAs (§ 3105), Federal participating area applications (§ 3180), and royalty rate reduction applications (§ 3103), but it ultimately declined to propose these fees due to the low value and the public benefit related to these items.

The BLM received suggestions that the Bureau clarify requirements for the fixed filing fee for designation of successor operator for Federal agreements, such that the fee would not be required when a successor operator is designated for contracted unit agreements that do not contain Federal lands. The BLM adopts the suggestion and has revised the Processing and Filing Fee table in this section of the final rule to include the following language: ''Designation of successor operator for all Federal agreements, except for contracted unit agreements that contain no Federal lands.''

The BLM also received several comments stating the BLM erred in adding the fee for EOIs to the fixed filing fee table, because these fees are adjusted for inflation every year; and section 50262(d) of the IRA expressly authorizes the Secretary to only adjust the EOI fee ''not less frequently than every 4 years . . . to reflect the changes in inflation.'' The BLM concurs with this comment and has moved the EOI fee to the new § 3103.1(a) where it will be adjusted based on inflation every 4 years.

Another comment stated that the BLM did not explain its authority to impose an annual inflation adjustment and that for the annual inflation adjustment, the BLM must re-apply all of the factors set out in section 304(b) of FLPMA, make a new determination as to whether the fee warrants an adjustment, and similarly codify the determination via

rulemaking every time a fee is adjusted. A similar comment asked the BLM to consider the disproportionate impact continued increases have on the total cost to develop Federal minerals.

Section 304 of FLPMA, 43 U.S.C. 1734, authorizes the BLM to establish fees intended to reimburse the government for reasonable costs and authorizes the Secretary to change or abolish such fees. The BLM establishes fees based upon the reasonableness factors at section 304(b) of FLPMA, which include ''actual costs (exclusive of management overhead), the monetary value of the rights or privileges sought by the applicant, the efficiency to the government processing involved, that portion of the cost incurred for the benefit of the general public interest rather than for the exclusive benefit of the applicant, the public service provided, and other factors relevant to determining the reasonableness of the costs.'' Once the BLM establishes a fee, the BLM adjusts the fees for inflation annually to effectively keep fees in line with current costs. This process comports with the broad authority given to the BLM in section 304 to set reasonable fees. The BLM did not propose changes to this method, or how the fees are adjusted annually for inflation in this proposed rule. The BLM will not use an alternative method for annual fee adjustments as it would require collecting data periodically for each fee, which is inefficient, costly, and impractical. However, as recommended by the GAO,[5] the BLM did review the six factors, commonly known as ''FLPMA reasonableness factors'' in section 304(b), to account for changes in the leasing process since the fees were initially set. For the proposed rule, the BLM: (1) contacted each office with this type of application (the 10 state offices or all of the 40 field/district and state offices depending on the application type); (2) requested the offices to provide the average processing time for each type of application and the employee completing this work; (3) received the estimates from each office; (4) calculated the weighted average for each type of application; (5) reviewed the monetary value of the right or privilege that the applicant seeks; (6) evaluated how efficiently the BLM processes a document based upon the processing times; (7) reviewed the public benefit factor for the application; and (8) reviewed the public service factor for the application. The preamble to the proposed rule reflects this analysis of its fixed filing fees. Without the inflation adjustment that has existed since 2005, the BLM would instead be required to complete the same burdensome, eight step review under FLPMA for every subsequent update.

Furthermore, to verify the accuracy of the BLM's method for determining fees, the BLM reviewed a common oil and gas fixed filing fee—assignments and transfers—which has not experienced changes to the process since 2005. The BLM intentionally selected the assignment and transfer fixed filing fee as the most representative filing fee to review because (1) assignments and transfers are the most common application received by the BLM; (2) the other applications that require filing fees are more rarely used; and 3) all state offices are familiar with the assignment and transfer application. After completing the review of the assignment and transfer fixed filing fee for the proposed rule, the BLM compared the outcome of that review with the inflation adjustments (86 FR 54636 (Oct. 4, 2021)). The review identified that the assignment and transfer fixed filing fee should be $100 in FY2022 based upon the FLPMA factors. This amount matched the inflation-adjusted fixed filing fee for FY2022, which was also $100. Therefore, the FY2022 inflation adjustment matched the calculated fixed filing fee based upon the FLPMA factors in FY2022. If the BLM's review process changes for an application, and thus there is the potential that reasonable costs may change outside of the cost of inflation, the BLM would update the fixed filing fees based upon the FLPMA factors and provide the opportunity for notice and comment.

Finally, the BLM requested comments related to changing its current process, which requires publishing the annual fee adjustments as a final rule in the **Federal Register** and then incorporating the new fees in the Code of Federal Regulations (CFR). Instead, the BLM proposed to post the updated table on the BLM's web page with the historical fees posted in the same location.

Commenters stated that since the fixed filing fees are not subject to appeal, the BLM should remove this provision; that adjustment of the fees should include a notice and comment period; and that the BLM should continue to publish the annual fee adjustments in the **Federal Register**.

The BLM is updating the final rule to state that the BLM will ''announce annually in the **Federal Register**'' revised fees, as well as posting the fees to the website. The BLM initially promulgated the fixed filing fees in 2005 after conducting a notice-and-comment rulemaking. Each year since, the fees have been adjusted for inflation through a final rule without further notice and comment. This is because the BLM included the method used to calculate inflation in its proposal in 2005, and the same method has been used for each subsequent increase. As stated in the proposed rule, the BLM will follow this same procedure for any new fees. For example, the BLM will: (1) publish a proposed rule with information on the proposed fee and propose to adjust the fee based on inflation; (2) review the comments received on the proposed rule for the new fixed filing; (3) publish a final rule with the new fixed filing fee; and (4) adjust the new fixed filing fee based upon inflation without notice and comment for any subsequent increases. This process negates the need for notice and comment every time the BLM adjusts the fee solely for inflation. These periodic inflation adjustments are not subject to appeal.

Additionally, as stated above, if the BLM's review process for any application changes, and thus there is the potential that the BLM's reasonable costs may change outside of the cost of inflation, the BLM would review the FLPMA factors to update the fixed filing fees and provide the opportunity for notice and comment.

The BLM adopts the proposed change to publish the fixed filing fees on the BLM's web page and to publish the adjusted fees each year in the **Federal Register** to provide additional public notice. The table in this section will still contain a list of the types of applications that require a fixed filing fee, but the fee itself will be removed from the table so it does not become outdated as each subsequent adjustment for inflation is made. In addition, the BLM modified the regulatory text to reflect that the table in 3000.120 does not include the actual fee amounts. When fees are added, deleted, or need to be adjusted due to changes in the processing steps for the application or a change to the method to calculate the inflation adjustment amount, the BLM will do so by a notice and comment rulemaking.

Section 3000.130 Fiscal Terms of New Leases

The provisions within § 3000.130 only apply to oil and gas leasing; therefore, the BLM moved the fiscal terms for new leases to a new section under subpart 3103 for Fees, Rentals and Royalty in the final rule in response to comments stating that failure to specify the rental amounts, within the context of the regulation on annual

[5] GAO. GAO–22–103968: OIL AND GAS LEASING BLM Should Update Its Guidance and Review Its Fees. *https://www.gao.gov/assets/gao-22-103968.pdf.*

rentals, would be a disservice, detracting from the regulations' value as an orderly source for basic information.

2. Section-by-Section Discussion for Changes to 43 CFR Subpart 3100

The BLM received a recommendation to reference its legal authority and duties under FLPMA and NEPA in all authority citations in the regulation. The BLM concurred in part and added a full reference to FLPMA into the authority introduction to the regulatory text, which changes ''43 U.S.C. 1732(b), 1733, and 1740'' to now state, ''43 U.S.C. 1701 *et seq.*'' This update was only made to part 3100 since the other authority references already include a reference to FLPMA. The BLM did not add NEPA into the authority section, as NEPA does not provide the BLM with any authority for leasing.

Section 3100.3 Authority

The existing § 3100.0–3 sets out the BLM's authority for leasing on various types of lands, such as public domain land and acquired lands. During the comment review period, the BLM decided to add clarifying language in the final rule on Wild and Scenic Rivers to comply with the Wild and Scenic Rivers Act (16 U.S.C. 1280). Therefore, the final rule makes the following adjustments to the language for the Wild and Scenic Rivers exceptions listed under both Public Domain and Acquired lands: ''subject to valid existing rights,'' is moved to the beginning of the sentence to clarify that this applies to all types of National Wild and Scenic Rivers Systems lands. The following clarifying language is added to the end of the sentence ''lands within designated Wild and Scenic Rivers System that constitute the bed or bank or are situated within one-quarter mile of the bank of certain rivers designated as scenic or recreational, and in some cases, designating legislation may apply a different boundary extent. Lands within the National Wild and Scenic Rivers System that constitute the bed or bank or are situated within one-half mile of the bank of any river designated a wild river by the Alaska National Interest Lands Conservation Act (16 U.S.C. 3148).''

The BLM received a comment on paragraphs (a)(1) and (b)(1), suggesting that the BLM change the phrase ''are subject to lease'' to ''may be subject to lease'' to align with the discretion afforded the Interior Secretary under the MLA, 30 U.S.C. 226(a), that lands ''may be leased.'' The final rule does not adopt this recommendation. In 1920, Congress enacted the MLA to facilitate the exploration and development of oil and gas and other federally owned minerals. The MLA specifies the lands that are subject to the statute, and then provides discretion to the Secretary to determine which of those lands may be leased. The first step in exercising that discretion is making decisions in the BLM's resource management plans under FLPMA. The BLM declines to change this phrase so as not to confuse this section on the authority to lease, including the exceptions listed under both public domain and acquired lands, where there is no discretion to lease ineligible lands.

A comment recommended that paragraphs (a)(2) and (b)(2) rely solely on the subhead—Exceptions—to indicate what the provisions in the sections mean and, for clarity, that the BLM should consider inserting language to the effect of: ''The following lands are not subject to lease.'' The final rule adopts this recommendation.

The BLM received a comment requesting that the BLM identify additional exceptions for both public domain and acquired lands. This exception would specify that the BLM cannot lease lands identified in the land use plans as unavailable for oil and gas leasing or otherwise determined by the authorized officer to be inappropriate for leasing to protect other multiple use resources and values. The final rule does not adopt this recommendation. As stated in the proposed rule, the purpose of this section is to describe lands subject to leasing, and changes proposed to this section were made to provide clarity and to conform the regulations to exceptions identified in various other laws. The change requested by the comment does not meet this requirement, as the comment addresses discretionary decisions regarding leasing. Moreover, the concerns represented by this comment are already addressed in the BLM's land use planning process, NEPA reviews, and other processes that identify suitable areas for leasing.

Section 3100.5 Definitions

The existing § 3100.0–5 sets out the definitions applicable to part 3100. The BLM added new proposed definitions for ''competitive auction,'' ''exception,'' ''modification,'' ''oil and gas agreement,'' ''qualified bidder,'' ''qualified lessee,'' ''responsible bidder,'' ''responsible lessee,'' and ''waiver.'' The BLM received several comments on this section requesting additional definitions for ''bad actors,'' ''current land use plan,'' ''exclusion area,'' ''mitigation,'' ''permanent impairment,'' and ''preferred leasing area.'' Since these terms are not used in parts 3000, 3100, and 3120, the BLM has not adopted these recommendations.

In addition, a comment recommended adding a definition for ''restoration.'' The BLM declines to make this change given that § 3104.10, where this term is used, specifically states that the restoration is to be ''in accordance with, but not limited to, the standards and requirements set forth in 43 CFR 3162.3 and 3162.5 and orders issued by the authorized officer.'' This flexible definition does not warrant modification at this time.

Some comments recommended that the BLM expand the definitions in this section to include the terms ''eligible'' and ''available.'' The BLM declines to define those terms by regulation at this time and may revisit the issue in future rulemakings.

One commenter requested that the BLM remove the definition for ''modification'' to avoid confusion where this term is used in contexts other than changes to lease stipulations. The BLM agrees there is a potential for confusion given the numerous different contexts in which the word ''modification'' is used and has therefore revised the definition to clarify that it only applies to lease stipulations. For similar reasons, the BLM has made changes to ''exception'' and ''waiver'' in the final rule. Each definition now includes the phrase ''as used for lease stipulations.''

A comment recommended modifying the term ''oil and gas agreement'' to reflect the fact that an agreement may in some instances include unleased lands. The BLM adopts this recommendation.

The BLM received a comment suggesting that the term ''operator'' should be revised to explicitly state that the operator holds operating rights and thus has the same obligations as the operating rights owners to plug wells and remediate the well sites. The BLM does not concur with the recommendation, as an operator could be a lessee and may or may not own operating rights. The current definition for ''operator'' states, ''including, but not limited to, the lessee or operating rights owner, who has stated in writing to the authorized officer that it is responsible under the terms and conditions of the lease for the operations conducted on the leased lands or a portion thereof.'' Therefore, the BLM kept the existing definition of ''operator'' in the final rule.

The BLM received several comments on the proposed definitions for the terms ''qualified bidder,'' ''qualified lessee,'' ''responsible bidder,'' and ''responsible lessee.'' Those comments that supported the inclusion of these

new definitions suggested modifications that would also exclude from those terms anyone with a history of failing to make timely rental or royalty payments; failing to meet a diligent development obligation; maintaining a significant number of inactive wells; engaging in repeated or ongoing environmental, worker safety, or labor violations; violating State reclamation requirements on other leases; or engaging in lease speculation, such as failing to drill approved APDs, or holding large quantities of undeveloped leases.

The BLM declines to include this language, which is too vague and overlooks existing enforcement tools. For example, when a company fails to make timely payments, such as rental payments, the Act already dictates that the lease will automatically terminate through operation of law. In addition, if a company fails to make royalty payments after being notified such payments are due and exhausting its legal remedies, the Office of Natural Resources Revenue (ONRR) may refer an entity to the Federal suspension and debarment list. It is the BLM's policy to check SAM.gov (the Federal suspension and debarment site) before issuing a lease or approving an entity to acquire a lease interest through an assignment or transfer of operating rights. The BLM may also take enforcement actions when lessees violate the terms of a lease, including environmental, worker safety, or labor standards. The BLM does not agree that a company's decision to not drill a well or develop leases should determine if they are responsible or qualified, because such fact-specific business decisions do not, by themselves, determine whether a lessee has acted irresponsibly or incompetently. The BLM generally lacks the capacity to investigate and evaluate State law reclamation violations; however, the current definition for responsible lessee provides for the lessee to be in compliance with statutes applicable to oil and gas development. While it is not the BLM's practice to investigate a person's compliance with State law reclamation requirements, the BLM would not ignore a person's noncompliance when it has been brought to the BLM's attention for consideration if a person is a responsible lessee prior to lease issuance.

Other comments suggested that, in connection with these definitions, the BLM should: (1) create a public registry of individuals and companies currently identified as not being responsible bidders and/or lessees, and make the list of ''Entities in Noncompliance with Reclamation Requirements of section 17(g) of the MLA'' public and updated on a regular basis; (2) clarify, in § 3108.30, that leases are subject to cancellation if the lessee is found not to be a ''qualified lessee'' or a ''responsible lessee''; and (3) implement a system that allows States, local government, Tribal governments, and individuals to report behavior or conduct that warrants investigation.

The BLM updates the list of ''Entities in Noncompliance with Reclamation Requirements of section 17(g) of the MLA'' on an as needed basis, and then forwards the names of the entities to the Federal Government's suspension and debarment program. SAM.gov is a publicly available website. In turn, when a company returns to compliance, the BLM notifies the suspension and debarment program that the entity should be removed from SAM.gov. The cancellation provisions in § 3108.30 contains language for entities that fail to comply with the laws and regulations. The BLM also notes that any entity or individual can contact the BLM to report behavior or conduct that warrants investigation, and the BLM declines to create a separate regulatory system for this purpose at this time.

The BLM also received comments regarding the new definitions for ''qualified bidder,'' ''qualified lessee,'' ''responsible bidder,'' and ''responsible lessee.'' One comment suggested that the term ''qualified bidder'' does not take into account that brokers or non-operating partners bid on leases, and that the new term could substantially impede bidding if it were to mandate that bonding or similar bidder requirements that historically only applied to a lessee be in place prior to bidding. The BLM considered the involvement of brokers or non-operating partners when it drafted these definitions, which is evidenced by the separate definitions for ''qualified bidder'' and ''responsible bidder'', as well as to whom the lease is issued (''qualified lessee'' and ''responsible lessee''), since these may not be the same entities. In addition, there is no mandate, in either the proposed or final rules, for bonding or similar requirements prior to bidding.

Another comment suggested that the BLM should clarify in the definitions (and in proposed § 3102.51) that it will continue to adhere only to the factors in MLA section 17(g), 30 U.S.C. 226(g), in determining who may hold a lease. The BLM disagrees. The MLA, 30 U.S.C. 226(b)(1)(A), refers to responsible qualified bidders and specifically states that: ''[a]ll lands to be leased which are not subject to leasing under paragraph (2) shall be leased as provided in this paragraph to the highest responsible qualified bidder by competitive bidding under general regulations in units of not more than 2,560 acres, except in Alaska, where units shall be not more than 5,760 acres.'' The MLA also states that ''[t]he Secretary shall accept the highest bid from a responsible qualified bidder which is equal to or greater than the national minimum acceptable bid, without evaluation of the value of the lands proposed for lease.'' The BLM's regulations reiterate and rely on these statutory terms. Specifically, because a person who bids on a lease is not necessarily the same person to whom the lease is issued, it is appropriate to include definitions for ''qualified bidder'' and ''responsible bidder,'' as well as definitions for whom the lease is issued, *i.e.,* ''qualified lessee'' and ''responsible lessee.''

Another comment on the definitions for ''responsible bidder'' and ''responsible lessee'' questioned the inclusion of the phrase ''history of noncompliance'' with applicable regulations and lease terms, stating that the meaning of a ''history of noncompliance'' is unclear. The comment suggested that the phrase could be construed broadly to mean that, if a person ever was found to have been in noncompliance with the terms of its Federal oil and gas lease or applicable regulations, that person could be precluded from obtaining future Federal lease interests, even if they corrected the alleged noncompliance or disputed the alleged violation and won.

The BLM agrees the term is imprecise and has revised the definitions by changing the phrase ''does not have a history of noncompliance'' to ''is in compliance.'' A lessee would not be precluded from obtaining future Federal lease interests if it corrected the noncompliance. A lessee's noncompliance ends: (1) when the entity has paid all civil penalties and performed the required reclamation; (2) the BLM accepts the required reclamation performed under contract, and the entity reimburses the U.S. for all costs associated with the required reclamation, including the costs associated with the BLM's issuing and overseeing the performance contract during its life; and (3) if the bond is collected and is insufficient to cover the total costs, the entity pays the entire amount due to the U.S. and the BLM accepts compliance. This is outlined in

the BLM handbook H–3120–1, *Competitive Leases,* Appendix 4.[6]

The BLM proposed to separate the definitions for ''assignment'' and ''sublease'' from the current definition of ''transfer'' in the existing regulations. One comment stated that a greater understanding of the differences between assignment and transfer of operating rights is long overdue. Another comment stated that the BLM's definitions for ''assignment'' and ''transfer'' have corresponding, but different, meanings; that the Bureau of Ocean Energy Management (BOEM) recently issued a proposed rule stating that the terms are interchangeable; and that the BLM should ensure consistency and clarity in use of these terms between the two bureaus regulating Federal oil and gas leasing onshore and on the Outer Continental Shelf. The BLM reviewed its definitions and believes the two terms are distinct and should remain separate. An assignment of record title conveys both record title and operating rights and is limited under § 3106.10 to certain restrictions that do not apply to transfers. The BOEM regulations do not have this distinction, which is why the BLM is retaining the separate definitions.

Comments recommended adding a definition for ''unnecessary or undue degradation.'' The BLM declines to define this phrase in this rule because it is used only once, in § 3120.32, and such a definition would benefit from public input before promulgation. As used in § 3120.32, the phrase reflects the ordinary meaning of the terms used in section 302(b) of FLPMA.

Section 3100.22 Drilling and Production or Payment of Compensatory Royalty

The existing § 3100.2–2 addresses drainage protection, an express covenant of the lease agreement. Under the terms of Federal leases, the lessee has the obligation to protect the leased land from drainage by drilling and producing any well that is necessary to protect the lease from drainage, or, in lieu thereof and with the consent of the authorized officer, by paying a compensatory royalty assessment to the Federal government. The BLM did not propose changes to this section but did receive a comment stating that the BLM should consider using this opportunity to amend this section to (1) clarify when drainage involving two Federal leases with different fund distribution codes occurs; and (2) specify that the lessee may resolve drainage by creating a federally approved agreement for sharing production among the affected leases. These proposals already reflect current policy; refer to the BLM Manual Section 3160, *Drainage Protection Manual.*[7] The Drainage Protection Manual provides guidelines, standards, and procedures to prevent the loss of oil and gas resources and any resulting loss of royalty revenues from drainage on leased and unleased public domain, acquired, and Indian lands. The BLM does not believe changes are needed to this section since these proposals are already allowed under the current regulations to address possible solutions to drainage.

Section 3100.40 Public Availability of Information

The proposed rule stated that the BLM was considering adding language that would provide notice that names and addresses of the nominator, lessee, operating rights holders, and operators would be made public on the BLM's Mineral & Land Records System (MLRS). The BLM's lease and agreement case files are already public records, and any change to the existing § 3100.4 would merely reflect the BLM's current practice. The BLM received comments supporting additional changes to this section, stating that it should be made clear to nominators, lessees, operating rights holders, and lessees that their identities will be made public through the MLRS rather than the current practice, which requires a member of the public to be at the BLM state office to submit a paper request to document the case file. The BLM will continue to release the names and addresses of nominators, lessees, operating rights holders, and lessees to the extent allowed by the Privacy Act to ensure there is a transparent onshore leasing process and does not believe any further changes to this section are needed. The names and addresses of individuals were redacted from all reports, including Serial Register Pages, as a result of a recent privacy review. The redacted information only applies to individuals (MLRS personal accounts) and not companies (MLRS business accounts). Specifically, the privacy review determined that all personal accounts regardless of type of case are considered to contain Personally Identifiable Information (PII). In order to release this PII—specifically names and addresses that are collected of our applicants/interest holders—the BLM must meet two requirements. First, the BLM must establish and disclose a routine use for the information—which, in other words, is establishing that the public need and benefit outweighs the need for the protection of the privacy information and notifies that the PII may potentially be released. This has been completed by disclosing the routine uses contained in BLM System of Records Notice (SORN) LLM32 in accordance with the Privacy Act. The SORN LLM32 is for Lands & Minerals Authorization Tracking System and covers the data from both LR2000 and MLRS. Most requests made in the Information Access Center at the state offices fall under routine use number ''(2) to Federal, State, or local agencies or a member of the general public in response to a specific request for pertinent information.'' Second, to meet Privacy Act requirements, the BLM must be able to track who received the information, when, and for what purpose to satisfy the Privacy Act's requirement that the information was released in accordance with a ''specific request for pertinent information.'' A member of the public can create an MLRS account to view unredacted information. This log in method allows for the BLM to meet this requirement through a logging system.

The BLM received a comment stating that the BLM provides no justification for publishing information on all entities registered to bid during a lease sale, rather than providing this information only for issued leases. Publishing participants in oil and gas lease sales has been a long-standing Bureau policy to provide transparency in the competitive leasing process. Refer to H–3120–1 *Competitive Leases* handbook, published February 2013.[8] This policy specifically states, ''Names of bidders/high bidders remain confidential until the end of the sale.'' In addition, each Notice of Competitive Lease Sale provides adequate notice that the names and addresses of bidders will be released and no further changes to the lease sale process are needed.

Another comment stated that the final rule should also authorize researchers to use lease and production data to analyze market-level royalty, bid, and rental rates. The comment then stated that independent, professional analysis would provide the BLM with critical data on the appropriate market-level rates for Federal mineral charges. In addition, the commenter also stated that the final rule should authorize the BLM to provide a quarterly report to the

public on all revenues received from leasing and mineral production on Federal lands on a lease-by-lease basis, and as the ultimate owners of the lands and minerals being leased, the public has a right to know this information. The BLM makes lease information, including lease terms such as rental rates and royalty rates, available through the MLRS; however, because the amount of royalty is a function of production and proprietary data is confidential, the royalty amount the Federal government receives cannot be released on a lease-by-lease basis. The public may obtain general information on production data, rental, and royalty payments from the ONRR.

Section-by-Section Discussion for Changes to 43 CFR Subpart 3101

Section 3101.12 Surface Use Rights

The proposed rule revised the existing § 3101.1–2, which was originally promulgated in 1988, to provide that the BLM could impose reasonable measures under the lease terms to avoid, minimize, or mitigate adverse impacts to other resource values, land uses or users, federally recognized Tribes, and underserved communities. Those reasonable measures include site-specific minimum siting and timing parameters that the BLM may impose on lessees to protect the public interest.

The BLM received numerous comments on this section, including: (1) support for the proposed changes, and statements that the changes are critical to mitigate impacts when the relevant RMP is outdated; (2) requests for clarification that leases are contingent on NEPA analysis and not a lessee's expectation; (3) requests for clarification that a lessee's surface use rights are subject to a land use plan's term, including terms provided for by land use plans either revised or amended after a lease is issued; and (4) requests for the BLM to clarify that the agency retains its full authority to condition development and production on leases after the lease is issued in order to respond to findings of site-specific NEPA analyses or changing conditions between the time a lease is issued and when it is developed. These changes are unwarranted as the BLM has the authority to impose measures that are more stringent than those in the regulations as long as they constitute reasonable measures to minimize adverse impacts, *Yates Petroleum,* 176 IBLA 144, 156 (2008). Therefore, the BLM is not revising this section further based on these comments, many of which request unwarranted or unnecessary clarification or specificity that would exceed the scope of this rulemaking.

Some comments opposed the proposed changes to this section, including by asserting that: (1) distance/siting requirements could lead to the BLM exceeding its authority to regulate air quality; (2) the BLM did not reference a lease provision that grants the agency the proposed new authority to constrain or deny lease operations; and (3) the BLM should consider public welfare when determining which measures may be reasonable. The BLM has the authority to use terms and conditions under Section 6 of the standard lease form to control site-specific environmental or public welfare impacts on leaseholds, as opposed to using lease-specific protective measures in lease stipulations from the RMPs.[9] Section 6 of the standard lease form authorizes the BLM to require ''reasonable measures'' to the extent that such measures would be consistent with the lessee's lease rights. The existing regulation has been misconstrued as limiting the BLM's authority to establish reasonable measures to protect resources and to establish minimum parameters within which the BLM can specify site-specific mitigating measures that are consistent with the lease rights granted a lessee.

Comments requested (1) the removal of language that arguably suggests that the BLM could require a lessee to ''avoid'' or ''mitigate'' all adverse impacts of developing mineral rights; and (2) that the final rule specify how water sources will be protected. The BLM has revised this section by clarifying that not all surface impacts must be mitigated and by clarifying the distance the BLM may require operations to be moved. The final rule strikes the words ''avoid, minimize, or'' since this is not needed as avoidance and minimization are integral to mitigating adverse impacts.

Some comments requested changes to require the relocation distances to be either a maximum of or be at least 1 mile and requested the BLM to prohibit new surface disturbing operations. The language in this section has been in place since at least 1988 and does not prohibit new surface disturbance. The BLM proposed to change only the minimum siting and timing parameters to account for changes in technology. The BLM declines to further increase or set a maximum parameter as this would not allow the flexibility that may be required to avoid resource conflict. The final rule amends the last sentence of the section to clarify the intent of the proposed rule. The proposed rule removed the phrase ''At a minimum'' from the existing regulations but retained the phrase ''by more than.'' The final rule is amended to state, ''At a minimum, modifications that are consistent with lease rights include, but are not limited to, requiring relocation of proposed operations by up to 800 meters,'', which allows the BLM to require a lessee to relocate proposed operations by up to 800 meters to avoid a resource conflict that may not have been identified at the time the BLM issued the lease. For example, the BLM may need to move operations to avoid a sage grouse lek, a contingency that may not be encompassed by standard lease terms. In that circumstance, this provision would allow the BLM to move the operations up to 800 meters to minimize the impacts to the sage grouse lek. As stated in the 1988 final rule preamble for the existing regulations, ''Similarly, the authority of the BLM to prescribe ''reasonable,'' but more stringent, protection measures is not affected by the final rulemaking,'' see 53 FR 17341 (May 16, 1988). This section does not apply to the protection of resource values that are already addressed in lease stipulations.

Comments requested that the BLM strike the word ''specific'' as a modifier for ''nondiscretionary statutes'' that provide post-lease restrictions on surface use rights. The final rule adopts the recommendation to strike the word ''specific'' as a modifier to nondiscretionary statutes.

Comments stated that the language explicitly allowing a BLM officer to restrict the development of a project to proactively avoid impacts to ''land users'' or ''underserved communities,'' is improper because, the commenter contended, such language is vague and would improperly expand the BLM's authority, potentially encroach upon a lessee's lease rights, and cause uncertainty. Other comments requested that the BLM add ''overburdened and'' before ''underserved communities'' in the final rule, and that the BLM better specify procedures the BLM could use to protect multiple use standards and Native Americans' land rights in areas near reservations. For the reasons explained below, the BLM does not agree with these comments and retains its proposed language to proactively avoid impacts to ''land users'' or ''underserved communities.''

The term ''land users'' is already used in the existing 43 CFR 3101.1–2 and is specifically included in Section 6 of the

[9] Stipulations are additional specific terms and conditions that change the manner in which operations may be conducted on a lease or modify the lease rights granted.

standard lease form. This term identifies segments of the public that use the land for recreation or for economic growth in the community. Like the term, ''resource values''—which the BLM's regulations do not define—the term ''underserved communities'' has a straightforward and commonly understood meaning that would not benefit from elaboration here, and the BLM has an obligation under the MLA and APA to articulate a rational connection between underserved communities and the proposed operations, as modified by the BLM. Based on the above, the BLM declines to modify or remove either ''land users'' or ''underserved communities.''

Section 3101.13 Stipulations and Information Notices

The BLM proposed to split the existing § 3101.13 into two separate provisions and add a new paragraph (a), stating the BLM would consider the sensitivity and importance of a resource when developing stipulations without regard to the restrictiveness of the stipulation.

One comment on this section recommended that the consideration of affected resources and potential uncertainty be made mandatory by substituting ''shall'' or ''must'' for ''may'' in the final rule text to remove any uncertainty. The BLM declines to make this change so as to maintain discretion when considering potential stipulations. The BLM requires this discretion because the BLM need not consider every potentially affected resource for each parcel. Instead, the BLM will use its discretion to determine, based on the sensitivity, importance, and any uncertainty, which resources should be considered, and will then assess whether those resources are adequately protected by stipulation.

Some comments stated that the BLM should delete the proposed paragraph (a) [10], arguing that the language is subjective and would allow the inclusion of new stipulations that were not addressed in the underlying planning documents. Some comments stated that proposed paragraph (a), and in particular the phrase ''without regard to the restrictiveness of the stipulation,'' disregards the principle of multiple use by elevating certain uses or allows the BLM to essentially prevent oil and gas operations. Another comment recommended changing the phrase ''without regard'' to ''along with consideration.''

As stated in the proposed rule, the BLM added this paragraph to more explicitly recognize its mandate to manage the Federal lands for multiple use. Stipulations do not prevent oil and gas operations from occurring under a lease. Rather, stipulations that allow, but control, surface use are a valuable management tool to achieve balanced multiple resource use, including oil and gas development. As stated above, the BLM retains discretion in this section and will rely on its expertise when making these site-specific decisions regarding stipulations. Consistent with these objectives, the BLM agrees that the bureau should consider the restrictiveness of a stipulation on operations. In the final rule, the BLM deletes the phrase ''without regard for'' and inserts instead ''while considering'' to recognize the BLM's mandate to manage the Federal lands for multiple use and to provide for the protection of the resources on those lands.

The BLM also received a comment on proposed paragraph (c), which specified that the BLM may attach an information notice to the lease. That comment requested that the BLM remove the last sentence in the paragraph—which reads, ''Information notices may not be a basis for denial of lease operations''—because it undermines the BLM's management authority. Another comment recommended that this paragraph incorporate a requirement that information notices highlight potential conflicts with other resource values and be accompanied by full lease stipulations specifying how those conflicts will be resolved. The final rule does not adopt these recommendations, as the information notice is a method of informing lessees of requirements that may be imposed by an existing law or regulation, not of imposing new requirements.

Finally, the BLM received comments recommending the development of specific stipulations and considerations for all leases, including a no surface occupancy within 2 miles of developed recreation sites and a 1-mile no surface occupancy from key recreation areas. The BLM disagrees and declines to adopt one-size-fits-all stipulations for all leases. The BLM historically has identified the appropriate stipulations through RMPs, ensuring that the BLM ties the appropriate stipulations to the lease under consideration. That approach allows the BLM to develop and set forth lease stipulations in the land-use planning documents/RMPs so that the public is aware of the balance that will exist between environmental protection and opportunities for development of oil and gas resources in advance of offering the lands for lease.

Section 3101.14 Modification, Waiver, or Exception

This section describes the standards that the BLM will use when evaluating modifications, waivers, or exceptions. The BLM proposed changes to the existing § 3101.14 to more explicitly recognize its mandate to manage the Federal lands for multiple use and to provide for the protection of the resources on those lands. The proposed rule also split the existing provision into two components: one to address modifications prior to lease issuance and one for modifications after lease issuance.

The BLM received multiple comments on the BLM's proposed approach. For example, comments: (1) expressed concern that the language broadened the ability of surface management agencies to object to the inclusion of parcels in an oil and gas lease sale; (2) requested a revision to paragraph (a) to state that requests for modification, waivers, or exceptions would not be posted for public comment; (3) suggested the BLM should clarify that this paragraph does not alter or affect criteria for modification, waivers, and exceptions of stipulations in the BLM's RMPs; (4) suggested that the proposed rule introduced new subjective standards, such as a ''major concern to the public;'' and (5) recommended that the BLM should not remove the language ''or if proposed operations would not cause unacceptable impacts,'', since, in the commentors' view, that edit would curtail the BLM's flexibility for addressing circumstances where the BLM's granting of the modification or waiver would not result in unacceptable impacts.

After consideration of these comments, the final rule splits paragraph (a) into two paragraphs for clarity. The first sentence in proposed paragraph (a) now appears at the end of the section in new final paragraph (d), since modifications, waivers, and exceptions to a stipulation are considered later at the APD stage, not at the leasing stage. The restructuring of this provision addresses concerns that the paragraph alters or affects criteria for modification, waivers, and exceptions of stipulations in the BLM's RMPs.

As stated in the proposed rule, the BLM removed the existing provision—allowing the granting of modifications, waivers, or exceptions to lease stipulations if the authorized officer

[10] Proposed regulation text at 43 CFR 3101.13(a): ''The BLM may consider the sensitivity and importance of potentially affected resources and any uncertainty concerning the present or future condition of those resources and will assess whether a resource is adequately protected by stipulation without regard for the restrictiveness of the stipulation on operations.''

determines that the ''proposed operations would not cause unacceptable impacts''—because this authority has been overused [11] and has potentially led to unnecessary adverse environmental impacts.

The BLM has concluded that it is appropriate to exempt situations based on time-sensitive information from the review requirement. For example, if a survey is completed for nesting raptors and it can be confirmed that there are no raptors present, then an exception from a timing stipulation based on the presence of nesting raptors would be appropriate. However, if the 30-day review period applied, the conditions would no longer be in effect to support the exception. Final paragraph (a), which applies to lease terms and stipulations, now states, ''If the authorized officer determines that a change to a lease term or stipulation is substantial or a stipulation involves an issue of major concern to the public, except time-sensitive exceptions based on verified data, the changes will be subject to public review for at least 30 calendar days.'' As stated in the proposed rule, the BLM would consider a change to the lease terms to be substantial if the change would have an important, considerable, consequential, major, or meaningful effect on the environment that was not previously considered, thus requiring public notification (30-day public review) of a lease term or stipulation.

The language in this section does not broaden surface management agencies' ability to object to the inclusion of parcels in an oil and gas lease sale, because lands requiring the consent of other surface management agencies is addressed under § 3101.51. This rulemaking does not introduce new subjective standards. Language such as a ''major concern to the public'' appears in existing regulations and has not caused issues.

One commenter stated paragraph (b) presents potential disruption to the competitive lease sale process as all lease conditions or stipulations must be disclosed prior to a lease sale. The BLM revised this paragraph to reflect IBLA decisions, which have stated that if a lease is issued without prior notice of an additional stipulation, the stipulation is not binding on the potential lessee and is without effect in the absence of the potential lessee's acceptance of the stipulation, see *Emery Energy, Inc,* 64 IBLA 175 (1982). While this rarely occurs, the purpose of this section is to allow the BLM to correct errors made when preparing the Notice of Competitive Lease Sale. Moreover, the MLA vests the Secretary with broad discretion to decide, up until the time of lease issuance, whether particular parcels of Federal land ''may be leased'' for oil and gas development, see 30 U.S.C. 226(a). Under the final rule, the BLM may decide not to issue a lease if the modification of a stipulation could increase the value of a parcel. For example, if the Notice of Competitive Lease Sale incorrectly listed a parcel as subject to a no-surface-occupancy stipulation, and it is then realized that the parcel should not have been subject to that limitation, but this mistake is not caught until after the sale, this could increase the value of the lease. To ensure a fair return to the public, the BLM would decline to issue the lease and would offer the parcel in a future lease sale. The competitive bidding process would ensure that the BLM receives the appropriate bid for the parcel with the modified stipulation.

One comment on paragraph (c) recommended striking the phrase ''was inadvertently omitted,'' and adding ''to comply with a nondiscretionary legal requirement, or to address an adverse effect that was not reasonably foreseeable at the time of lease issuance or whose analysis was otherwise expressly deferred to the site-specific proposal stage,'' and changing ''may'' to ''will'' in reference to lease cancellation. These recommendations would substantially change the meaning of the paragraph, which was intended to address situations when the BLM inadvertently omits a stipulation when preparing parcels for a lease sale. The intent of the modified language is to reflect IBLA decisions on this issue. The BLM has not made any changes based on this comment.

Section 3101.21 Public Domain Lands

The BLM did not propose any changes to the existing § 3101.2–1; however, the BLM received a comment stating that the BLM should not only rely on the section title to convey to readers that the language in the section applies to public domain lands (whereas the next section applies to acquired lands). The BLM concurs with this recommendation and inserts in final paragraph (a) ''on public domain lands.''

Section 3101.22 Acquired Lands

The BLM did not propose any changes to the existing § 3101.2–2; however, the BLM received a comment stating that the BLM should not only rely on the section title to convey to readers that the language applies to acquired lands. Another comment stated that the BLM should specify that the acquired lands limitation is separate from, and in addition to, the limitation for public domain lands. The BLM concurs with these recommendations and inserts in final paragraph (a) ''on acquired lands'' as well as ''separate from, and in addition to, the limitation for public domain lands.''

Federal Lands Administered by an Agency Other Than the Bureau of Land Management

Because of other proposed changes to part 3100, the BLM proposed to redesignate and consolidate the provisions under this heading. The BLM received several comments suggesting that the new definition for ''surface management agency'' under § 3000.5 of this chapter, which includes Interior agencies such as the Fish and Wildlife Service and the Bureau of Reclamation, conflicts with and causes confusion with the provisions under this heading. The BLM concurs and changes the title of this heading from ''Federal Lands Administered by an Agency Outside of the Department of the Interior'' to ''Federal Lands Administered by an Agency Other than the Bureau of Land Management.''

Section 3101.51 General Requirements and Section 3101.52 Action by the Bureau of Land Management

The BLM received numerous comments on proposed revisions, which, collectively, would replicate several paragraphs in the existing regulations requiring the BLM to seek and, in some cases, obtain the consent of surface management agencies prior to leasing acquired or public domain lands into one paragraph. Some comments supported the change. Several comments opposed the change, asserting that it expands the authority of some surface managing agencies, such as the Fish and Wildlife Service and the Bureau of Reclamation, beyond that which is provided under the applicable statute.

The BLM disagrees that the proposed change improperly expands the authority of certain surface management agencies, such as the Fish and Wildlife Service. Instead, this change merely consolidates and clarifies the BLM's duties with respect to prohibitions provided elsewhere in statute or regulation. The BLM has a longstanding practice of consultation with all Federal surface management agencies before authorizing subsurface mineral leasing. For example, the existing regulation at 43 CFR 3101.7–1 recognizes that in some cases the Secretary may lease over the objection of the surface management

[11] See, *e.g.,* GAO–17–307, *https://www.gao.gov/products/gao-17-307.*

agency and in other cases the Secretary may not. Moreover, even where consent is statutorily required, such as on Forest Service lands, the MLA directs that the Secretary of the Interior the Secretary of the Interior ultimately must apply their independent judgement before any leasing may occur. The proposed regulation merely supplies the BLM with the uniform procedures necessary to facilitate these preexisting prohibitions and grants of discretion; it does not enlarge or restrict the BLM's authority. The BLM has added a clause to § 3101.52(b) to clarify that a lack of consent or concurrence will preclude leasing only where provided by law. The BLM has also made certain minor changes for clarity.

Commentors stated that, under the MLAAL, 30 U.S.C. 352, only the head of an executive department has the authority to consent to leasing covered by that statute, such that it necessarily does not embrace ''consent'' by subdivisions of the DOI. The BLM agrees, particularly because the Department's sub-agencies ordinarily enjoy their authority only be virtue of delegation from the Secretary. As set forth above, the proposed text does not alter the balance of authority and discretion among agencies within the Department, but instead simply clarifies that the BLM shall, as a procedural matter, confer with surface management agencies.

Section-by-Section Discussion for Changes to 43 CFR Subpart 3102

Section 3102.20 Non-U.S. Citizens

The BLM proposed to revise the existing § 3102.2 to remove the reference to the outdated term ''alien.'' The BLM received a comment stating that this section should be amended to include more stringent language that would require prospective, non-U.S. citizen bidders, lessees, or interest holders to submit to the BLM a certification of compliance with Federal foreign ownership laws and procedures, including the final rule from the Office of Investment Security, Department of the Treasury, implementing the provisions relating to real estate transactions in section 721 of the Defense Production Act of 1950, as amended by the Foreign Investment Risk Review Modernization Act of 2018, prior to the BLM granting such entities a lease. The BLM declines to adopt this change, which is unnecessary. In 1982, the BLM eliminated the requirement for entities to submit documents substantiating their qualifications to hold a lease or an interest in a lease and now requires entities to certify their compliance, including those relating to foreign investment in Federal land, on the lease or assignment application. Any false statements on these documents are subject to the criminal sanctions in 18 U.S.C. 1001 (see 47 FR 8544, February 28, 1982).

Section 3102.40 Signature

The BLM proposed changes to the existing § 3102.4 to clarify that it applies to all applications submitted to the BLM and to allow for electronic signatures. The BLM received a comment in support of the proposal to remove paragraph (b) from this section. The commenter also said the BLM erred, as the submission of three hard copies of any transfer of record title or operating rights is required by the MLA. 30 U.S.C. 187a. The BLM agrees and makes the appropriate changes to the final § 3106.41. The BLM declines to reinstate paragraph (b) in this section to avoid confusion when the BLM starts accepting transfers electronically.

Section 3102.51 Compliance

The BLM proposed revising the existing § 3102.5–1 to clarify who is entitled to hold a lease and that the reclamation obligations under the lease reside with the lessee, operating rights owners, and operators, and not the American taxpayer. The BLM received comments in support of the proposed changes to this section and a recommendation in a comment that the BLM publish and regularly update the list of entities that are not in noncompliance with reclamation requirements of section 17(g) of the MLA. Many comments opposed the proposed changes, citing a lack of due process, fairness, the BLM's ability to take enforcement actions to address any compliance deficiencies, and the need to provide entities the ability to remedy any alleged compliance issues before the BLM turns to cancelling a lease, among other concerns.

To address the comments, the BLM is revising the phrase ''will be subject to cancellation'' to ''may be subject to cancellation'' to clarify that cancellation is only one of the enforcement tools the BLM could apply and allows for due process. As provided under § 3000.40 of this chapter, any decision issued by the BLM pursuant to this section would be subject to appeal. In addition, the BLM updates the list of ''Entities in Noncompliance with Reclamation Requirements of section 17(g) of the MLA'' on an as-needed basis, and then forwards the names of the entities to the Federal Government's suspension and debarment program. *SAM.gov* is a publicly available website that contains the list of suspended or debarred entities. Likewise, when a company returns to compliance, the BLM notifies the suspension and debarment program that the entity should be removed from *SAM.gov*. The BLM declines to publish a duplicate list of these entities. Thus, no further changes are warranted.

Section 3102.52 Certification of Compliance

The BLM proposed a minor change to the existing § 3102.5–2: the removal of the word ''offer'' to reflect Congress' elimination of the noncompetitive leasing process. The BLM received a comment on this section recommending additional language to explicitly state that any false certification is subject to the criminal penalties contained in 18 U.S.C. 1001. The BLM declines to adopt this proposal, which is unnecessary. Section 3000.20 of this chapter already informs all entities that they are subject to criminal penalties if they provide false statements to the BLM. In addition, the standard forms used by the BLM under these regulations, such as the bid form (3000–002), assignment of record title form (3000–003) and the transfer of operating rights (3000–003a), and the lease form (3100–011), all include similar statements and references to 18 U.S.C. 1001 for any false statements.

5. Section-by-Section Discussion for Changes to 43 CFR Subpart 3103

Section 3103.1 Fiscal Terms

The BLM removes the proposed § 3000.130 from the final rule and moves the information in that section into final § 3103.1, since this section addresses oil and gas fiscal terms and does not impact other minerals management programs. Therefore, the BLM determined that it is more appropriate to codify this section in subpart 3103 instead of part 3000. As a result of this change, the BLM updated all cross references in the final rule from § 3000.130 to § 3103.1.

Based upon the comments received, the BLM also incorporates additional updates that include: (1) adding the EOI filing fee from the IRA to this section and (2) changing the timeframe that the BLM will adjust the fees for inflation from annually to once every 4 years.

First, the BLM moved the new EOI filing fee, established by the IRA, from proposed § 3000.120 to final § 3103.1(a). The BLM cannot update the EOI fee annually. The MLA at 30 U.S.C. 226(q)(2)(B) states, ''The Secretary shall, by regulation, not less frequently than every 4 years, adjust the amount of the fee under subparagraph (A) to reflect the change in inflation.'' Therefore, the final

rule moves the EOI fee to paragraph (a). Second, the EOI fee will be adjusted every 4 years by way of a final rule as part of the new Fiscal Terms Table. The BLM also changed the adjustment for minimum bonus bids and rentals to be adjusted every 4 years for inflation by way of a final rule. This change will allow the final rule to update these terms to occur at the same time and minimize the public's costs for these inflation adjustments. The BLM also renamed the title of this section from ''Fiscal terms of new leases'' to ''Fiscal terms.''

One commenter stated that the BLM should tie all costs and returns associated with oil and gas leasing to an inflation index. The BLM did not make any changes in response to this comment, as all fees in § 3000.120, the fiscal terms in § 3103.1, and the minimum bond amounts are tied to changes in the Implicit Price Deflator for Gross Domestic Product, which is published quarterly by the U.S. Department of Commerce. Finally, a comment stated that the BLM should clarify that the inflation adjustment as described in this section will include adjustments for inflation occurring over any period of multiple years after August 16, 2022, during which bid and rental rates were left unchanged despite inflation. The BLM concurs with this recommendation, which is reflected in the existing regulations and its use of the Implicit Price Deflator for Gross Domestic Product.

Another commentor stated that the proposed rule references no authority that would support annual inflation adjustments for the rental and bonus as the IRA precludes the adjustment of these fiscal terms until after August 16, 2032. The BLM agrees that the rental and minimum bonus bids must remain at the current rate until August 16, 2032; however, after this date, the IRA changes these amounts to minimums. Therefore, the BLM proposed and is implementing inflation adjustments for rental amounts and minimum bonus bids after August 16, 2032. To reduce confusion, the BLM updates paragraph (a) by adding the sentence, ''Per the Inflation Reduction Act, the BLM will not adjust the rental nor the minimum bonus bids until after August 16, 2032.''

Section 3103.12 Where Remittance is Submitted

The BLM proposed to update the existing § 3103.1–2 to clarify that fees set out in the fee schedule in § 3000.120 of this chapter and all first-year rentals and bonuses for leases issued under 43 CFR part 3100 must be paid to the proper BLM office. This final section also removes outdated references to the former Minerals Management Service and mailing address for payments. The BLM received a related comment on lease reinstatements, in which the commenter stated that references in the BLM regulations to rental payments through the ONRR's online system should also acknowledge ONRR's continuing practice of accepting non-electronic rental payments in some circumstances. The BLM concurs and changes the language in paragraph (a)(2) from ''through its online system'' to ''refer to 30 CFR 1218.51'' that lists the methods by which lessees and operators may submit payments to the ONRR.

Section 3103.21 Rental Requirements

The BLM requested comments on adding a new requirement for diligent development obligations.

Comments that supported a diligent development provision included recommendations that the BLM: (1) implement further leasing reforms, such as increasing production from existing leases by ensuring diligent development, implementing specific diligent operations standards, and adopting a mechanism to hold private companies accountable when they fail to meet the requirements; (2) tie the diligent development requirement to the definitions of ''qualified lessee,'' ''responsible bidder,'' and ''responsible lessee;'' and (3) impose a diligent operator standard with reporting requirements, and absent a rental rate increase, clarify what consequences an operator may face when it fails to operate diligently including lease termination. Comments also asserted that the proposed lease rentals are insufficient and leases that are not pursued for development within 5 years should be permanently revoked and should not be transferable to another entity.

Comments that opposed a diligent development provision included statements that: (1) failure to act diligently to develop a lease has no adverse impacts on the environment; (2) adding diligent development obligations would result in additional work for the BLM and an unnecessary burden on lessees; (3) the increased rental rates prescribed by Congress in the IRA and adopted in the final regulations will encourage diligent development on their own and encourage prudent development or lease surrender; (4) the diligent development obligations would impact business decisions that are based on markets, investment capital, supply chains, labor and equipment availability, and other factors; (5) geophysical exploration does not always result in lease development; (6) new diligent development terms would impose large cost increases on many leases and inhibit operator flexibility to properly evaluate and commence operations in a responsible developmental situation and economic manner consistent with lease requirements; (7) a diligent development requirement could exacerbate the climate crisis; (8) the BLM should consider delays that are out of an operator's control, such as the time certain Federal processes or lawsuits can take; (9) the proposed rule's list of alternatives is overly lenient and promotes speculative ventures; and (10) the BLM should not apply too broad an interpretation of diligent development.

After careful consideration of the comments received, the BLM did not implement a diligent development requirement with an escalating rental rate in the final rule. The BLM believes the existing increasing rental rates prescribed by Congress in the IRA will encourage diligent development on their own by incentivizing lessees and operators to develop a lease to avoid the increased costs. The BLM will continue to assess the oil and gas leasing program, and if the BLM determines Congress' rental rate increases are not as effective as expected at encouraging diligent development, the BLM may consider additional rulemaking. The BLM further clarifies final paragraph (a) by adding, ''for that lease'' after the words ''total acreage'' to clarify the basis for calculating the first-year rental. No further changes have been made to this section.

Section 3103.22 Annual Rental Payments

The BLM proposed changes to the existing § 3103.2–2 to implement changes made by Congress in the IRA and clarify what constitutes a timely payment of rental by tying the payment to the lease anniversary date. The BLM received numerous comments on this section. The comments encouraged the BLM to: (1) set out the actual required rental amounts, as provided by the current regulations, rather than referring to the lease terms; (2) set a policy determining when rental rates should be higher than the statutory minimums; (3) implement the regular rate increases; and (4) further increase the rental rates, on the theory that the rental rates in the IRA are too low.

In the IRA, Congress set rentals at $3 per acre, or fraction thereof, for lease years 1 and 2; $5 per acre, or fraction thereof, for years 3 through 8; and $15 per acre, or fraction thereof, thereafter. Ten years after the enactment of the

IRA, those rental rates become minimums and are subject to increase, as discussed in § 3103.1. The BLM agrees with the comments that the section in the proposed rule was not clear and adds the following clause at the end of paragraph (a) ''the annual rental for all new leases will be as specified in 43 CFR 3103.1.'' 43 CFR 3103.1 sets out the actual required rental rate, provides details on when the BLM will increase the rental rate, and implements a rate increase every 4 years. The BLM cannot increase the rental until August 16, 2032, based upon Congress' direction in the IRA.

Another comment objected to the application of these rentals to leases sold before the passage of the IRA but issued after the IRA was signed into law. The commenter explained that companies bid on those parcels relying on the rental and royalty rates that were in effect at the time of the lease sale and contended that lease issuance was only delayed due to the BLM's failure to timely resolve protests.

As explained in the preamble to the proposed rule, the IRA amended the rental rate for all new oil and gas leases *issued* in the next 10 years. Because the statute ties the new rates to lease issuance, the BLM does not have the authority to exempt leases sold but not issued prior to the enactment of the IRA from its terms.

Section 3103.31 Royalty on Production

The BLM proposed changes to the existing § 3103.3–1 to implement the requirements of the IRA and received numerous comments.

Supportive comments recommended that the final rule address plans, specify criteria, or include a procedure for increasing the royalty rate after 2032. These comments suggested various ways to implement this recommendation, including codifying a higher royalty rate of at least 18.75 percent, or 20 percent; increasing the royalty rate consistent with the previous 10-years' worth of inflation, but not deflation, and indexing the royalty rate to raise at prescribed intervals; or adjusting all rates to market levels on a regular basis to better ensure fair return. Supportive comments also requested a termination provision, similar to that for failure to pay rentals, for the failure to pay royalties. Other supportive comments stated that the BLM should limit changes to just those required by the IRA, as the new rate could affect the competitiveness of the U.S. minerals program.

Comments that opposed the changes included statements that: (1) higher royalty rates have consistently led to increased revenues without discouraging oil and gas development and the new rate of 16.67 percent is still well below the rate that is charged for offshore drilling in Federal waters (18.75 percent) and imposed by leading oil-and gas-producing States, including Texas (20–25 percent), Colorado (20 percent), and New Mexico (18.75 to 20 percent); (2) the final rule should refrain from setting a minimum rate because the cost of operating on Federal lands is higher than on State or private lands, and a higher royalty will make it uneconomic to operate on most Federal lands; (3) the higher minimum, and any increased royalty rate, will disincentivize operations on Federal lands, harming small business, local governments, and States; (4) the BLM failed to provide a justification for making the royalty rate the minimum, and the bureau should consider establishing 16.67 percent as the maximum with a mechanism for determining a lower rate when the 10-year statutory requirement expires; (5) the BLM should not comply with the IRA's mandate or adopt a permanent royalty relief rule for onshore production; (6) raising oil and gas royalty rates will directly reduce well operators' revenue margins, risking well closures and deliberate attempts to devalue oil fields; (7) higher royalty rates affect long term project economics by reducing the expected revenue and making them less financially feasible; (8) higher rates will deter small operators from investing in expensive enhanced oil recovery methods that can extend the productive life of a well; and (9) raising the Federal royalty rate encourages cheating and requires greater Federal investment in compliance enforcement at taxpayer expense.

As stated in the proposed rule, the BLM updated this section to implement IRA section 50262, which set royalty rates at 16.67 percent for the 10 years following the Act's enactment. Final paragraph (a)(3) of the regulation states that for leases issued after the 10-year period following the passage of the IRA, the royalty rate will be not less than 16.67 percent, which is the rate Congress required in the IRA. The BLM declines to set post-2032 rates now (or to implement associated procedures) so far in advance of any authorized increase. However, the BLM may consider further adjustments after 2032. The BLM also declines the suggestion to implement an automatic termination provision for the nonpayment of royalties. The procedures for lease forfeiture and cancellation are set forth in section 31(a) of the Act (30 U.S.C. 188) and § 3108.30(b) of the regulations. The BLM adopts this section into the final rule without any further changes.

Section 3103.41 Royalty Reductions

The BLM proposed revising the existing § 3103.4–1 to clarify that production in paying quantities is a prerequisite to obtaining royalty relief under this section. The BLM also solicited feedback to improve the royalty rate reduction section.

Comments recommended that the BLM: (1) describe the specific circumstances for justifying a reduction and clarify that the reductions will terminate as soon as the conditions justifying the reduction have passed; (2) explicitly state that a royalty rate reduction would transfer to the new lessee when a lease is assigned; (3) provide specific criteria for lowering the rate; (4) set a limit on the lower end of the reduced rate; (5) limit the period for the reduction to apply; (6) specify that reduced royalties transfer to assignees only on a case-by-case basis; (7) extend royalty relief to all producers at any point of production; (8) extend the royalty relief to any field where operators are seeking to conduct or are conducting waterfloods or other enhanced oil recovery methods; (9) not set a floor for royalty reductions because a universal rate, even a low one, cannot account for the varying productivity within a formation; (10) determine the royalty relief by the field productivity and the crude grade produced; (11) determine the appropriate royalty rate reductions based upon a critical review of the economic data for reasonableness and clearly enumerate the costs that are allowed for the economic evaluation to ensure operators send unbiased data; (12) closely monitor any approved royalty reduction; (13) clearly define under what circumstance/criteria royalty reduction terminates; (14) revise the phrase ''royalty reductions at the discretion of the Secretary'' to convey that reductions are the exception, not the norm; and (15) add language to require notification to the State when royalty reductions take place, given the State's interest in the royalty rate and the economic health of the industry and local communities.

The BLM rarely grants royalty rate reductions, and after careful review of the comments, has decided against making any further changes. The regulation states that the Secretary may waive, suspend, or reduce the rental or royalty upon a ''determination that it is necessary to promote development or that the leases cannot be produced in paying quantities under the terms provided therein.'' Thus, the BLM only

grants a reduction in royalty rate if the operating costs exceed the gross income. Otherwise, the BLM would deny the royalty rate reduction. The regulatory requirements reflecting these parameters come directly from the statutory authorization for royalty reductions at 30 U.S.C. 209. Additionally, if the operating costs would still exceed the gross income with a royalty rate reduction, the BLM must consider terminating the lease for no longer being capable of production in paying quantities under 43 CFR 3107.22.

The factors the BLM considers when evaluating a reduction are case-specific, and the BLM must review each application. Given this and the exceptional nature of circumstances that may warrant royalty reductions, the BLM declines to further specify the circumstances or specific criteria for lowering a royalty rate in the regulation in order to retain the discretion of the authorized officer to address case specific situations that may occur. The BLM is committed to adhering to the existing rules and policy and will ensure that they are consistently and faithfully applied to future royalty relief applications.

Second, the BLM declines to codify language stating that a royalty rate reduction would transfer to a new lessee when a lessee assigns its lease. The operating costs for the lease may change with the new lessee; therefore, the BLM would need to complete a new review to determine if the royalty rate reduction is appropriate.

Third, some commenters opposed and some supported implementing a lower limit for royalty reductions, but no lower limit was proposed. The BLM has decided not to implement a lower limit and will instead continue to rely on the economics of each lease to determine the appropriate royalty reduction, if warranted.

Fourth, the BLM will not provide royalty relief based only upon operators conducting or seeking to conduct waterfloods or other enhanced oil recovery methods. These operations will return a profit to the operators and in most cases a royalty reduction would not be appropriate as the gross income exceeds the operating costs.

Fifth, the requirements to monitor royalty rate reductions or to send notice to States are better suited to be addressed through policy as these requirements would apply only to the BLM and not the regulated community. The BLM already tracks royalty rate reductions in MLRS and will continue to closely monitor reductions. Given how rare royalty rate reductions are, the BLM has not established a requirement to notify the States. The BLM will consider whether a notification to the States should become a matter of policy in the future.

Sixth, the existing regulations and Bureau policy reserve the BLM's right to terminate a royalty reduction, re-adjust the amount of reduction, or restore the royalty rate to the rate required by the lease terms and/or regulations at any time for the entire lease or for any portion thereof. Given that the grant of a royalty rate reduction is uncommon, the BLM is declining to add any blanket provisions to the regulations that would remove this flexibility. For example, the BLM may need to terminate relief retroactively if such relief was based on manipulation of normal production or adulteration of oil sold.

Sections 3103.42 Stripper Well Royalty Reductions and 3103.4–3 Heavy Oil Royalty Reductions

The BLM proposed to eliminate both of §§ 3103.4–2 and 3103.4–3 in their entirety because they are obsolete for the reasons described below. The BLM received a comment stating the BLM's removal for obsolescence ignores the fact that over the next decade, the number of stripper wells on Federal lands will rise along with necessary oil exploration and production.

As stated in the proposed rule, the BLM revised both sections on October 6, 2010 (75 FR 61624), to eliminate these types of royalty relief, because Congress enacted separate relief in section 343 of the Energy Policy Act of 2005 (42 U.S.C. 15903). However, the BLM retained the regulations because, while these types of royalty relief were no longer available for current production, prior production subject to this relief continued to be subject to audits. This is no longer the case; therefore, these provisions serve no purpose. To the extent relief is required in the future, the BLM would promulgate any necessary regulations under section 343 of the Energy Policy Act of 2005 rather than relying on these provisions. In addition, the BLM has the authority under section 39 of the MLA to waive, suspend, or reduce the royalty for a lease.

Section 3103.42 Suspension of Operations and/or Production

The BLM proposed redesignating this section from 43 CFR 3103.4–4 to 43 CFR 3103.42 and clarifying how a lease term will be adjusted once the suspension ends.

The BLM received a comment on paragraph (a) stating that the BLM should broaden the circumstances for which a lease would be eligible for a suspension of operations only or a suspension of production only beyond force majeure, or at a minimum should acknowledge that the BLM's own delays constitute such a force majeure for the purposes of these types of suspensions. The regulations clarify that a force majeure is ''matters beyond the reasonable control of the lessee.'' Because this encompasses an administrative delay, the BLM already takes such delays into consideration when evaluating a suspension. The BLM is not revising the regulation to further specify instances that may be considered force majeure; BLM Manual 3160–10, *Suspension of Operations and or Production,* provides further examples of acts constituting force majeure.

Some comments stated that lease suspensions, whether requested by the lessee or directed by the BLM, should be made public as soon as they are submitted and should be subject to public review and comment in accordance with NEPA. The BLM disagrees with this recommendation. NEPA is only triggered if there is a proposal for a major Federal action that potentially affects the environment. Although the approval or direction of a suspension is a Federal action, lease suspensions are categorically excluded from NEPA review as administrative actions taken on an already existing authorized lease. See the BLM's National Environmental Policy Act Handbook H–1790–1, Appendix 4.[12]

Some comments stated that the BLM should clarify that both the suspension request and the decision by the BLM must be made in writing and published on a BLM website, and that the proposed rule fails to provide the transparency and public access to information about lease suspensions that is guaranteed by the Administrative Procedure Act. The BLM disagrees with this comment, as suspension decisions have always been publicly available through review of the case file located in the relevant BLM state offices or through the BLM's reporting application at *https://reports.blm.gov/reports/MLRS.*

Another comment stated that the BLM should clarify in paragraph (d) that any lease production is prohibited while a suspension of operations and production is in effect. The BLM agrees, and it is BLM policy that production from a lease is prohibited if there is a suspension of operations and production. *See* BLM Manual Section 3160–10, *Suspension of Operations*

[12] *https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_Handbook_h1790-1.pdf.*

and/or Production.[13] The rule provides that ''if there is any production sold or removed during the suspension, the lessee must pay royalty on that production.'' This statement covers instances where there are no operations or production, but the operator sells already existing product captured prior to when the suspension went into effect; it does not supersede the ordinary bar on production during suspensions, and merely ensures the lessees pay royalty on that sold production.

Multiple commenters stated that the BLM should: (1) clarify that lease suspensions are the exception and not the rule; (2) provide limited and specific criteria that would justify a suspension; and (3) offer guidance on how the BLM plans to deal with existing lease suspensions. The BLM declines to modify the regulations as detailed in the three comments above. The MLA provides direction, and the BLM has set guidance on when a lease suspension is appropriate. First, the BLM currently has approximately 3,000 suspended leases of the over 33,000 authorized onshore oil and gas leases. While suspensions are not a common occurrence, the number of lease suspensions has increased based upon the large number of leases litigated in court after lease issuance over the past decade. Second, the BLM declines to provide limited and specific criteria in the regulations. The BLM provides guidance to its employees in IMs and MS–3160–10, *Suspension of Operations and/or Production.*[14] The BLM declines to make this change at this time to retain the discretion of the authorized officer to address unique situations that may occur. Third, the BLM already established guidance on how the BLM plans to deal with existing lease suspensions in Permanent IM 2019–007, *Monitoring and Review of Lease Suspensions;*[15] therefore, the BLM declines to add this information into the regulations. The existing regulations require evaluation of lease suspensions on a lease-by-lease basis. Reviews of existing lease suspensions are currently addressed in the BLM's policy IM 2023–012, *Suspension of Operations and/or Production* [16]. No changes have been made in the final rule to avoid limiting the discretion of the authorized officer to address unique situations that may occur. For example, litigation or actions of Federal or State agencies that prevent commencement or continuation of operations may be applied to suspensions granted under section 17(i) or section 39 of the MLA depending on the unique circumstances of the case.

A commenter was concerned that changing the word ''terminating'' in existing paragraph (e) to ''lifting'' in final paragraph (g) will be interpreted by lessees and others to require the BLM to take affirmative action to end a suspension. The comment states that a lease suspension should lift automatically—without any subsequent administrative action by the BLM—when certain regulatory events occur or as otherwise stated in the approval letter, and the BLM should avoid any change that would increase the administrative burden on the agency. The BLM disagrees with this comment. While it is true that, in some cases, the BLM's decision to suspend a lease will document a particular event or action that will eventually lift a suspension, the BLM always issues a decision for the official record when lifting a suspension, allowing for the expiration date of the lease to be properly adjusted and facilitating any reconciliation of the rental amount that may be due, see *C.W. Trainer,* 69 I.D. 81 (1962). A copy of that decision is sent to ONRR to notify it of a change in the status of the lease. The final rule did not change this process. Based upon a review of the comments received, the BLM did not make any changes for this section from the proposed rule: the process described above is consistent with the term ''lifting'' as the term avoids confusion and leads to an understanding that the BLM takes an action to end a suspension.

Section-by-Section Discussion for Changes to 43 CFR Subpart 3104

In subpart 3104, the BLM proposed to revise its bonding regulations by increasing the minimum amount of bonds, removing nationwide and unit operator bonds, adding surface owner protection bonds, and removing letters of credit (LOCs) and CDs as options that lessees can use to secure the required bond amounts. The BLM received several comments on the proposed bond amounts. Some comments supported the higher amounts, with some stating these amounts do not reflect the full reclamation costs of oil and gas wells. Other commenters recommended the final rule establish a full-liability, individual lease bond or tie the bond amount to the number of wells covered by a bond. The MLA does not require the BLM to impose full cost reclamation bonds but does require the Secretary to ensure the bonding is adequate to ensure reclamation. Requiring a full liability bond would require increased staffing at the field and state offices to manage increased workloads for the review of changing conditions and the adjudication of additional bond riders to either raise or reduce the bond amount. In addition, the BLM's APD processing time would slow due to waits for additional bond riders. The BLM has opted to keep to a higher minimum bond amount and depend upon its policy guidance and future adjudications for increasing the bond amount for specific operations that pose additional risk, which will allow the BLM to direct its limited resources to where they can have the most impact.

Comments also recommended that the BLM review its average costs for reclaiming orphaned wells, noting that the States have identified a higher average cost for their orphaned wells. The BLM reviewed its costs related to cleaning up orphaned wells that were plugged since the BLM calculated the average cost as part of this rulemaking effort. Due to the limited number of additional orphaned wells that have been plugged in that time, there is not enough additional data to warrant a recalculation. Therefore, the BLM did not adjust the minimum bond amount based on a new average orphaned well cost.

Some comments stated the BLM should not have used the median number of wells to determine the new minimum bond amounts but rather should have considered the probability of the number of wells to be orphaned. The BLM is unable to predict whether any particular well will become an orphan well due to many factors that can lead to a well becoming orphaned (*e.g.,* operator's revenue stream, operator's cost stream, current regulatory framework within the State, remaining oil and gas reserves, etc.) and the lack of data for each of these factors. Therefore, the BLM lacks the necessary information to determine the probability of a well to become orphaned and thus did not use it as a basis to calculate bond costs.

Several comments opposed the higher minimum bond amounts and requested that the BLM remove the proposed bonding changes, explaining that the BLM rarely needs to access a bond to plug a well. Comments also asserted that the BLM's own statistics do not justify the bonding provisions in light of the MLA's requirement for an adequate bond. As stated in the proposed rule, the minimum bond amounts have not been increased since 1951 (for statewide and nationwide bonds) and 1960 (for lease bonds), have been repeatedly

[13] *https://www.blm.gov/sites/default/files/docs/2022-03/MS-3160-10%20Rel.%203-150.pdf.*

[15] *https://www.blm.gov/policy/pim-2019-007.*

[16] *https://www.blm.gov/policy/im-2023-012.*

found inadequate by the GAO and the OIG, and are no longer adequate to provide the requisite funding for reclamation when a lessee defaults on its obligations.

The BLM received several comments stating that the higher minimum bond amounts will be a significant financial burden on operators and small businesses, because sureties often require companies to post cash or security collateral. The BLM disagrees. The Small Business Administration (SBA) helps small businesses guarantee performance bonds issued by certain surety companies, which allows the companies to offer surety bonds to small businesses that might not meet the criteria for other sureties. The SBA's website states that all performance bond guarantees require small businesses to pay SBA a fee of 0.6% of the contract price. The operator would need to make a payment of $900 for an individual bond or $3,000 for a statewide bond to SBA, which would allow the small entity to obtain a surety bond without requiring the company to post cash or security collateral. The BLM encourages small businesses and operators to reach out to the resources available to them including those provided by the SBA and visit their web page: *https://www.sba.gov/funding-programs/surety-bonds.*

In addition, the BLM conducted a review of small entities operating on Federal oil and gas leases based upon public data. If these companies paid sureties 3% of the additional bonding cost annually, their overall cost-to-revenue ratios would increase by less than one-tenth of one percent. If these companies instead chose to fund the full bonding amount out of revenues, their cost-to-revenue ratio would increase by at most 1.4% for one year. Based upon our analysis, the BLM certifies that there will not be a significant economic impact on small entities in the RFA; refer to section V.B. Please also review the RIA for more information.

Section 3104.1 Bond Amounts

Based upon the comments received, the BLM decided to implement inflation adjustments for minimum bond amounts. The BLM completed this action by (1) adding the minimum bond amounts to this section to provide for inflation adjustments; (2) moving the phase-in period for lease and statewide bonds into this section; (3) providing a longer implementation for small operators to increase or replace their bonds; and (4) providing information to operators on the penalties they could incur if they fail to increase or replace existing bonds that do not meet the new minimum bond amounts.

First, the BLM requested comments on whether it should adjust the minimum bond amounts to keep up with inflation. The BLM received multiple comments recommending the BLM periodically adjust the minimum bond amounts to better protect the taxpayer's interests in adequate reclamation. The BLM agrees with these comments and updates the final rule to include inflation adjustments to bond amounts by way of a final rule and titled this § 3104.1 ''Bond amounts.'' This update will allow the BLM to periodically update bond amounts based upon the rates of inflation.

Second, the BLM moved the phase-in period for statewide and individual bonds from proposed § 3104.90 to final § 3104.1(c). The phase-in period for lessees to replace unit and nationwide bonds remains in final § 3104.90. This change allows the BLM to easily update the phase-in periods for individual or lease bonds and statewide bonds upon adjusting the minimum bond amounts for inflation. The BLM anticipates that when the minimum bond amounts are adjusted for inflation in the future, the phase-in periods will occur over 2 years:

- One year for statewide bonds, and
- Two years for individual bonds.

This phase-in follows the initial proposed timeframes. The BLM has calculated the staffing needs required to process all bond increases for a 1-year phase-in period and concluded the BLM will require 2 years to provide sufficient time to ensure all bonds are brought into compliance.

Third, the BLM considered comments regarding the impact to small operators from increasing the minimum bond amounts. Larger companies usually hold nationwide or statewide bonds, while smaller companies usually hold individual bonds. Initially, the BLM proposed to require individual bond holders to come into compliance with the new bond amounts first. Commenters expressed concerns that the higher minimum bond amounts may force small operators out of business. To alleviate some of the concerns expressed by commenters with respect to the impact on small operators and given the large number of individual bonds, the BLM has revised the final paragraph (c) to give those with individual bonds more time by phasing in this requirement over a 3-year period, instead of over a 2-year period. The longer phase-in period for individual bonds will provide more time for smaller operators, who predominantly rely on individual bonds, to research and obtain the appropriate bond amount. When minimum statewide and individual bond amounts are adjusted for inflation in the future, the BLM anticipates the shorter phase-in periods (2 years for individual bonds) will be sufficient for all bond holders to come into compliance because the bond amount increase will not be as significant a change.

A comment expressed concern regarding which penalties could accrue to lessees who do not increase the bond amounts within the time allowed. The BLM reviewed its existing regulations and added a new paragraph (d) to this section to address this comment. Paragraph (d) now refers to the existing regulations that the BLM may use if an operator fails to increase or replace an existing bond as required by the regulations. The potential penalties include shut down of operations under 43 CFR 3163.1(a)(3), lease cancellation under 43 CFR 3108.30, or referral of the obligor or principal to the Department's Suspension and Debarment Program under 2 CFR part 1400.

The BLM considered shorter timeframes for inflation adjustments to the minimum bond amounts, including annual adjustments, but concluded that shorter timeframes are unworkable given the BLM's workload associated with possible enforcement. Instead, the BLM has opted to update the minimum bond amounts in the final § 3104.1 table every 10 years. The final rule for the updated bond amounts in the 3104.1 table will also indicate the new deadlines for compliance. This 10-year timeframe will provide sufficient time for entities to come into compliance, for adjudication of the financial assurances, and for the BLM to ensure such compliance prior to the implementation of new minimum bond amounts.

The BLM received other comments related to adjusting the fiscal terms for inflation. One commenter stated that the BLM should not attempt to automatically adjust existing bonds for inflation without the surety's consent. The phase-in periods will provide time for the bonded principal to work with the surety to increase the amount or replace the bond. Another commenter recommended that the BLM conduct annual reviews and commit to increases in line with larger economic trends and not just inflation. The BLM will move forward with updating the minimum bond amounts based upon inflation every 10 years as part of the final rule; however, the BLM maintains the right to conduct reviews of bonds to determine if additional increases are necessary and in the public interest.

Section 3104.10 Bond Obligations

The BLM requested comments on the proposed revisions to § 3104.1 along with any supporting information on whether the final rule should provide for any other types of financial arrangements that the BLM should consider.

The BLM received several comments stating the BLM should not eliminate CDs and LOCs from the options available to satisfy bonding requirements, reasoning that the elimination would impose an unwarranted burden on lessees and operators, particularly small operators, and that the BLM should provide more options to post the bonds rather than eliminating options.

Based on the comments, the BLM has decided to reinstate CDs and LOCs as acceptable forms of security for a personal bond. To resolve some of the issues that led the BLM to propose eliminating the securities, the BLM made changes to the regulations for CDs and LOCs. Given that CDs are now issued electronically by banks, they do not meet the existing requirement that Secretarial approval be indicated on the face of the document. Therefore, the BLM modifies paragraph (c)(1) for CDs by inserting ''or through assignment'' to provide for Secretarial approval prior to any redemption.

The BLM modifies paragraph (c)(5) for LOCs to change ''shall'' to ''must'' or ''will'' as appropriate and consistent with the similar changes made in the proposed rule. The BLM also removes the language ''the deposits of which are federally insured,'' as this phrase in the existing regulation has caused confusion to both operators submitting a bond and BLM staff who review bonds and their associated securities. The $250,000 Federal deposit insurance limit for deposits that a person may have with a financial institution does not apply to LOCs, because the guarantee of payment under a LOC is made by the financial institution directly to the BLM by demand, see 31 CFR part 28.204–3(b). LOCs are not depositor accounts to which the Federal Deposit Insurance Corporation (FDIC) insurance applies. Therefore, the BLM is not concerned with FDIC insurance when the amount of a LOC exceeds the FDIC limit.

Paragraph (c)(5)(ii) is modified to appropriately reference the types of bonds as ''an individual lease or statewide bond,'' and to change the term ''attachment'' to ''collection'' for clarity.

Paragraph (c)(5)(v) is modified to state, ''In the event the BLM is notified of the financial institution's intent not to renew the letter of credit, the principal must extend the letter of credit or provide an adequate replacement bond with an assumption of liability rider. If the BLM does not receive an adequate notice or replacement bond with rider, the BLM will collect the letter of credit within 30 days of the expiration without further notification to the obligor.'' The BLM is including this language to ease the administrative burden that results if an entity fails to maintain the LOC. Previously, when an entity failed to pay the premiums to the bank, the BLM, in turn, had to notify the obligor (the bonded party) to replace the bond within 60 days; monitor the timeframes to ensure the LOC is extended or replaced; adjudicate an acceptable form of replacement security or bond; and send a demand to collect on the letter of credit when all else fails. The new language will reduce the BLM's workload by obviating the initial notice to the obligor to replace the bond. To be clear, the BLM will send a demand to the bank to collect the funds from the LOC 30 days prior to the expiration date without further notice of the action from the BLM when the obligor fails to take corrective action on their own accord.

For other types of financial guarantees, one commenter recommended that the oil and gas program review the bonding requirements and language of the BLM's solar and wind energy regulations in 43 CFR 2801.5(b) for consistency, especially language regarding whether corporate guarantees are an acceptable or unacceptable bond instrument. Another commenter stated that alternative financial arrangements could include insurance policies as both an alternative and to complement surety bonds such as insurance accounts to pre-fund decommissioning costs, where sureties direct a portion of their annual premiums and payouts could be made to the operator or the BLM upon default.

The BLM carefully considered the comments and other forms of financial assurance to secure bonding and is declining to include any other forms of financial assurance because the BLM believes the current list, with the retention of LOCs and CDs, is sufficient. The BLM reviewed BOEM regulations, which provide for corporate guarantees, insurance, decommissioning accounts, and other forms of security approved by the Regional Director. The BLM also reviewed the solar and wind energy regulations, which provide for the same financial assurances listed in this final rule as well as insurance. As discussed below, the BLM has decided not to allow corporate guarantees and insurance as means to satisfy the bond requirements. The BLM has determined that corporate guarantees are not an acceptable form of bond security given the need to continually confirm the viability of the corporate guarantee. The BLM does not have the staff or expertise to perform this function, and, without the ability to closely monitor the financial stability of the corporation providing the guarantee, there is a risk the company may default or go bankrupt during the term of a lease, before plugging and reclamation of the existing well(s) and disturbance. To secure a replacement bond at that time would be difficult, if not impossible, thereby potentially leaving the Federal taxpayer to foot the bill for any necessary reclamation.

While insurance is an acceptable form of bond security used in other BLM programs, the BLM declines to use insurance for the oil and gas program given the risks and increased administrative workload for the following reasons.

First, the basic principle of insurance is the transfer of risk. It transfers the risk of financial losses as a result of specified but unpredictable events to an insurer in return for a fee or premium. While insurance is acceptable for unforeseen events such as spills or accidents, the BLM's performance bond secures the promise to fulfill a known, contractual obligation an entity has undertaken to perform at some point in the future.

Second, an insurance policy is usually a written contract between two parties, the policyholder (the person or company that gets the policy) and the insurer (the insurance company). The BLM would be a third-party beneficiary under this scheme, and considered appropriate language to that effect, but this arrangement is still significantly different from surety bonds where there is a contract between three parties (the BLM, the principal (or bonded party), and the surety where the BLM is a party to the agreement). Therefore, the BLM would hold more risk because it is not a party to the insurance.

Third, generally, either party to an insurance contract may cancel the contract unilaterally. To address this, the BLM considered regulatory language stating, *e.g.,* that policy must be non-cancellable. However, this could cause confusion with cancellation of a bond since existing § 3104 does not provide for canceling or releasing oil and gas bonds and the only time a bond is canceled is by a court order. The regulations only provide for terminating the period of liability on the bond.

The BLM believes the revised regulations provide sufficient options

for the regulated community to meet the bonding requirements, and, for all the reasons stated above, the BLM has determined not to rely on insurance for bonding.

As mentioned above, BOEM's bonding regulations at 30 CFR 556.900 allow for the provision of ''Another form of security approved by the Regional Director.'' 30 CFR 556.902(e)(3). The BLM recognizes this option provides a level of flexibility that is not present in the BLM's regulations. However, the BLM has decided to refrain from including a similar provision in its regulations because the BLM does not have staff to implement such a provision. As of May 1, 2021, BOEM managed about 2,287 active oil and gas leases on approximately 12.1 million acres, while the BLM managed 35,871 leases on approximately 24.9 million acres. The BLM manages significantly more leases and significantly more bonds with no staff solely dedicated to bond adjudication. Instead, the BLM staff adjudicate both bonds and post-leasing actions. Therefore, the BLM does not have the staff nor expertise to implement a provision similar to 30 CFR 556.900.

The BLM considered decommissioning, abandonment, or trust accounts that can only be drawn upon to cover decommissioning expenses. Similar to corporate guarantees, allowing the use of these types of accounts would require continual review of constantly changing conditions and the expertise that BLM staff lack.

Some comments stated the BLM should require additional criteria for surety companies to ensure that bonded amounts will be available to the regulator if, and when, the operator defaults. The commenter recommended that the BLM should adopt additional criteria that (1) consider a surety's existing aggregate risk when determining whether that surety qualifies for certification, and (2) impose an underwriting limitation on the aggregate risk of all bonds issued by a surety. The BLM declines to make this change because the Department of Treasury already reviews the underwriting limitation and requires an excess risk reinsurance to protect the Federal Government. Please see Department of the Treasury Circular 570 for more information.

Section 3104.20 Lease Bond

For the existing § 3104.2, the BLM proposed changing the specifications regarding who must post a bond to state that the operator must be covered by a bond in its name as principal or obligor. The BLM received a comment urging the BLM to analyze the bonding regime of the host State jurisdiction and decline further bond requirements where that State provides for bonding inclusive of Federal leases and wells. The BLM declines to adopt this proposal. Including such a provision in the BLM's rules would require the BLM to execute separate agreements between the BLM and the State to allow the BLM to access any funds available. Moreover, for such arrangements to work, the State bonding requirements must, at a minimum, cover all of the terms and conditions of a Federal lease, including the amount of uncollected royalties due to ONRR, plus the amount of money owed to the BLM, as the lessor, due to previous violations remaining outstanding. In the BLM's experience, these characteristics are uncommon. The BLM would be in favor of such an alternate bonding option if any State is interested in pursuing adequate arrangements, but the BLM cannot make or assume the existence of such commitments in this rulemaking.

A commenter stated that the BLM should modify this section because it is inconsistent with other sections and is confusing. For example, § 3104.10 states that, before the start of any surface disturbing activities, the lessee, operating rights owner, or operator must submit a bond, whereas this section states only that the operator must provide a bond in its name. The comment then stated that the BLM's primary concern should be that at least one person post the required financial assurance for a lease, and should leave it to the operator, lessee, and operating rights owner to determine among themselves who will provide the required bonding for a particular lease. The BLM concurs that its primary concern is that at least one person must post the required financial assurance for a lease and that the proposed changes to this section may cause confusion. Therefore, the BLM revised final § 3104.20 to be consistent with final § 3104.10, so that an operator, a lessee, or an owner of operating rights (sublessee) must be covered by a bond in its own name as principal or obligor. In order to be consistent with existing § 3171.9(a), the BLM added the following sentence to the final rule § 3104.20: ''The operator shall be covered by a bond in his/her own name as principal, or a bond in the name of the lessee or sublessee, provided that a consent of the surety, or the obligor in the case of a personal bond, to include the operator under the coverage of the bond is furnished to the BLM office maintaining the bond.''

One commenter expressed concern that the proposed rule did not consider related operators or subsidiaries operating under a parent company and could cause a parent company to be required to provide multiple bonds with significantly greater total bonding. The BLM disagrees. Under the existing and final regulations, the BLM allows for co-principals to submit a bond or to be added through bond riders. Bond riders can accompany the original bond or be filed subsequent to the acceptance of the bond. Therefore, the BLM is not making any changes to the final rule based on this comment.

A commenter urged the BLM to require that an individual lease bond be increased if it is to cover more than two wells, and, in determining the lease bond amount to be posted, that the BLM must take into account a number of variables including the well depth, the presence of other resources, the number of wells, the number of low-producing or inactive wells, the capability of any responsible party to carry out the reclamation, the anticipated condition of the well site, the extent of reclamation and remediation to be required, and compliance with the laws. The BLM declines to make any changes based on this comment, which, if accepted, would require the BLM to calculate each bond amount based on constantly changing conditions. That practice is unworkable given the number of bonds the BLM is required to maintain. The BLM already prescribes when a bond will be increased in § 3104.50.

Section 3104.30 Statewide Bonds

In the proposed rule, the BLM renamed the existing § 3104.3 due to the proposed elimination of nationwide bonds and proposed increase in the amount of statewide bonds to $500,000. The BLM received numerous comments suggesting a larger statewide bond amount if the bond: (a) covers more than seven wells; (b) is based on a number of variables; or (c) should be a set amount for each additional well. Another commenter recommended eliminating both nationwide and statewide bonds. The BLM declines to adopt these suggestions, which would require the BLM to calculate each bond amount based on constantly changing conditions; that practice is unworkable given the number of bonds the BLM is required to maintain. The regulations in § 3104.50 already specify when an increase might be required and provides the BLM with sufficient authority to review and ensure bond amounts are adequate.

Nationwide Bonds

The BLM proposed to remove nationwide bonding as an option due to the administrative burden they impose on the agency.

The BLM received comments supporting the removal of nationwide bonds. Those comments generally asserted that no nationwide option can fulfill the purposes of incentivizing operator reclamation and ensuring availability of adequate funds. Comments that opposed the removal of nationwide bonding stated there are benefits to continuing the nationwide tier for companies. Comments asserted that this change would deprive lessees and operators of a financial tool currently available to mitigate bonding costs by spreading them over a larger universe of leases and that the BLM's analysis that these bonds are administratively inefficient is not by itself a reason to remove nationwide bonds. Commenters pointed to language in a draft version of the IRA bill that included nationwide bonds, which Congress ultimately removed before the law was enacted.

The majority of the commenters who wanted the BLM to maintain nationwide bonds did not understand why the BLM considered nationwide bonds more difficult to manage and why the BLM proposed eliminating nationwide bonds. As stated in the proposed rule, for bond adequacy reviews, the BLM state office, which manages the nationwide bond, must coordinate with every field and state office with wells covered by this type of bond. The BLM administrative state office will usually contact between 4 (2 field offices and 2 state offices) and 40 (32 field offices and 8 state offices) offices and request these offices to conduct a bond adequacy review, which entails pulling the operator's well and inspection records. This is needed as the environmental and development situations may vary between offices. The administrative state office, while familiar with its field offices, would not be familiar with field offices in other administrative state offices. This will result in staff spending approximately 1 hour per office conducting the bond adequacy review and the administrative state office spending approximately 10 hours consolidating the reviews. With coordination required with between 4 and 40 offices, this would result in approximately $700 to $2,500 per bond adequacy review (assuming $50 hourly cost). Annually, this results in total costs of $33,740 to $120,500.

With this change, the BLM will no longer manage nationwide bonds and instead will have additional statewide bonds. The BLM estimates that the 243 nationwide bonds would become approximately 143 additional statewide bonds (see the Regulatory Impact Analysis for more information).[17] The BLM estimates that each administrative state office would be able to review one statewide bond using 10 hours of staff time ($500 per bond adequacy review). The administrative state office requires less time to compile the review from the field offices as there will be fewer field office reviews to compile, so any time needed by field offices within the state office would come out of the assumed 10 hours of staff time. This would result in an annual cost of $14,300, which is a reduction of $19,440 to $106,200 annually. Overall, the BLM sees significant administrative benefits with the elimination of nationwide bonds.

Additionally, the elimination of nationwide bonding in favor of the proposed increase in the amount of the statewide and lease bonds will allow the agency to focus on specific areas and fields to ensure the bonds are adequate to cover reclamation costs in the event an operator fails to complete proper plugging and abandonment. As of March 1, 2024, the BLM has identified 35 unplugged orphaned wells that were covered by nationwide bonds. The bonds covering these wells were insufficient, so the BLM must seek funds under the IIJA to plug these wells. Localized bonding to the individual or statewide level will allow the agency to ensure improved bonding reviews, reduces the administrative burden, and the BLM anticipates additional environmental benefits from this regulatory change. As discussed in the RIA, the BLM expects that the expedited timing for reclamation of orphaned wells from increased bonding could provide benefits related to wildlife, vegetation, soil erosion, climate change (reduced greenhouse gas emissions from unplugged orphaned wells), visual and aesthetic resources, ground water, and allowing the surface land to be utilized for other uses sooner (for example, for grazing purposes). The BLM cannot currently quantify these benefits using the information available to the BLM.

Finally, the BLM reviewed the concerns from some commenters that eliminating nationwide bonds would deprive lessees and operators of one financial tool for mitigating bonding costs. No additional data or support was provided beyond a statement that nationwide bonds mitigate bonding costs by spreading these costs over a larger number of leases. The BLM does not anticipate a large impact to lessees and operators from this change, given the other options available, such as reinstating CDs and LOCs. The RIA provides additional details on the impact of eliminating nationwide bonds.

Therefore, the BLM does not adopt the recommendation to reinstate nationwide bonds and is not making any further changes to this section. As stated in the proposed rule, the BLM will be able to better tailor statewide bond amounts to the local conditions and State-specific requirements when reviewing a bond for adequacy.

Section 3104.4 Unit Operator's Bond

The BLM proposed eliminating operator bonds because they are seldom used and because the bonds are obsolete. The BLM has been treating and managing these bonds like statewide bonds and eliminating them would create efficiencies in the program. The BLM received several comments that supported the elimination of unit operator bonds for the reasons the BLM provided. The BLM also received a comment stating the BLM should keep unit operator bonds without providing a reason why these should be kept. The final rule eliminates unit operator bonds.

Section 3104.40 Surface Owner Protection Bond

The BLM proposed adding this new surface owner protection bond section, which is cross-referenced to 43 CFR 3171.19, to provide for an additional type of acceptable bond that can be submitted when the operator is unable to reach a surface access agreement with the surface owner. The BLM requested comments on whether the BLM should increase the minimum bond amount. The BLM received numerous comments on § 3104.40.

The BLM received comments opposing the inclusion of this provision on the basis that it duplicates State law and should only apply to lands where the surface is private, or that the BLM also should address the interplay between existing § 3171.19(b)(2) that allows for an ''agreement'' with the surface owner in lieu of bonding, noting such an agreement does not necessarily require payment of ''compensatory damages'' as proposed in § 3104.40. Comments also stated the BLM should clarify that such bonds are not intended to cover reclamation, but rather only compensate a surface owner for inadvertent, limited purpose,

[17] The BLM reviewed its bonds and found many bonds tied to no existing liability or operations. The BLM expects to terminate the period of liability for many of the nationwide bonds without liability, which is why the 243 nationwide bonds would become approximately 143 statewide bonds.

''reasonable and foreseeable damages to crops and tangible improvements,'' as stated in the proposed rule.

Some comments supported the proposed $1,000 minimum bond amount, while others stated the minimum bond amount must be raised to at least $10,000 per well to support adequate remediation, plus an additional $2,000 per acre of disturbed land, and the impacts covered under the surface owner protection bond must be expanded beyond ''the reasonable and foreseeable damages to crops and tangible improvements.''

As stated in the proposed rule, the BLM promulgated the current requirements for surface owner protection bonds through Onshore Order 1 in 2007 and subsequently codified these requirements in 43 CFR subpart 3171. This bond is for the limited purpose of ensuring a private surface owner's crops and other tangible improvements are protected. In response to comments, the BLM has revised final paragraph (a) to remove the phrase ''to pay compensatory damages to the surface owner,'' to clarify the purpose of these bonds and added the phrase ''under 43 CFR 3171.19'' to encompass the situation where an agreement is reached with the surface owner. The BLM reviewed the surface owner protection bond amount and determined it appropriate for the narrow purposes of the bond. This bond covers ''the payment of such damages to the crops or tangible improvements (*i.e.,* agricultural, residential and commercial improvements, including improvements made by residential subdividers) of the entryman or owner.'' See 43 U.S.C. 299(a). The BLM has not made any changes to the minimum bond amount. Paragraph I provides a process to increase the bond if the surface owner objects to the sufficiency of the bond. This mechanism adequately addresses the unique cases where the minimum bond amount may need to be increased.

Finally, the BLM declines to incorporate a provision that requires the BLM to defer to State bonding requirements for surface owner protection bonds. First, not all States require a surface owner protection bond if the surface owner and Federal lessee cannot complete a surface use agreement for operations. In addition, a State's surface owner protection bond provisions may not provide the same coverage as required in the BLM's surface owner protection bond because the State bonds are required under the State's law and not under Federal law. See Wyoming Stat Ann. section 30–5–402, Colorado Code Regs. section 404–1–704, or New Mexico Stat. section 70–12–6. Therefore, the BLM declines to incorporate a provision that requires the BLM to defer to State bonding requirements for surface owner protection bonds.

Section 3104.50 Increased Amount of Bonds

Although the BLM did not propose any changes to the existing § 3104.5, it did receive the following comments and recommendations for the BLM to: (1) require an increase in the bond amount when the wells covered by the bond exceeds the number of wells that the BLM originally used to determine the new minimum bond amounts; (2) incorporate the BLM's bond adequacy review policy into the regulations; (3) require a bond review when an operator temporarily abandons or shuts-in a Federal well; (4) change or expand the risk factors described in paragraph (b); (5) state that an operator may satisfy a demand for an increased bond amount by providing another form of security; (6) state that any person aggrieved by a decision to increase bond amounts may seek review of a decision through State Director review and appeal to the IBLA; (7) remove ''uncollected royalties due,'' alleging that the bond amount should not include amounts demanded, payment of which is stayed pending appeals under 30 CFR part 1243; (8) explicitly state that operators do not need to provide a full liability bond; and (9) require bonds from record title and operating rights holders for unpaid royalty payments.

The MLA requires the Secretary to ensure that bonding is adequate, and, after review of the comments, the BLM has determined that no changes are needed to this section at this time. The BLM's proposed changes and additions in 43 CFR 3104.1 and existing regulations are sufficient to ensure compliance with the lease terms. Bonds given to the BLM are performance bonds to guarantee performance of the lease requirements. The performance bond protects the BLM, and ultimately the taxpayers, from financial loss should the operator fail to perform and comply with the regulations and laws governing lease operations. This financial loss includes unpaid royalty amounts; however, the BLM will first use the funds to address all outstanding plugging and reclamation costs. The BLM did not make any changes to the appeal language that already exists in the regulations and provides for both IBLA appeals in 43 CFR 3000.40 and State Director review when BLM staff recommend increased bond amounts pursuant to 43 CFR 3165.3(b).

In the proposed rule, the BLM requested comments on whether to require a bond adequacy review when a well is temporarily abandoned. The BLM received comments in support and opposition to this proposal. After reviewing the comments, the BLM has decided not to require a bond adequacy review for a change in well status, including temporary abandonment of a well. The BLM can review the adequacy of a bond at any time, and the new reporting and operational requirements for operators of temporarily abandoned wells will allow enhanced oversight of these wells. The BLM considers the discretionary authority to review a bond, combined with the new reporting and operational requirements, sufficient to effectively manage any risks to the environment associated with these types of wells without needing to require a bond adequacy review.

The BLM declines to change or expand the risk factors described in paragraph (b). The BLM considers the existing risk factors to provide an adequate basis for reviewing and identifying the appropriate bond amount. In addition, the BLM may consider additional risk factors on a case-by-case basis due to the language, which states, ''including, but not limited to,'' in the existing regulations and in the final rule.

Further, the BLM may need to require an entity to provide a full liability bond. It is the BLM's responsibility to take proactive measures to minimize the liability associated with high-risk operators. To mitigate the public's risk with a high-risk operator, the BLM may need to require a full liability bond on a case-by-case basis; therefore, the BLM declines to explicitly state that operators do not need to provide a full liability bond.

The BLM also declines to require bonds from record title and operating rights holders, in addition to operators, for unpaid royalty payments. The BLM's bonds required for operations cover both environmental liabilities and unpaid royalty payments. At one point, the BLM did require bonds from lessees; however, the BLM moved away from this practice in the 1980's due to the administrative burden related to requiring lessees and operators to maintain a bond. The BLM declines to require bonds from record title and operating rights holders, in addition to operators, for unpaid royalty payments.

While the BLM used the median number of wells to determine the new minimum bond amounts, an increase to the bond based solely on the number of wells is unwarranted. The BLM will capture the need for any bond increases

based on its bond adequacy reviews. It is the BLM's responsibility to take proactive measures to minimize the liability associated with high-risk operators, which may include full liability bonding in certain circumstances. The current BLM policy outlined in IM 2024–014, *Oil and Gas Bonds Adequacy Reviews,*[18] supplements the requirements in this section by directing reviews of existing Federal bond amounts and requesting increases to the bond amounts based on the potential risk or liability posed by the operators. As stated in the proposed rule, similar bond adequacy review policy has been in place for the past decade, and the BLM has periodically revised that policy to account for changing risk factors including, critically, the status of the well(s) and the operator's compliance history. The BLM declines to incorporate risk factors into the regulation in order to retain flexibility in bond reviews and allow it to adapt guidance more quickly to changing needs. If the BLM issues a decision requiring an increase in the bond amount, the regulations do not prohibit the operator from satisfying this by providing another form of security.

Section 3104.70 Default

To improve clarity, the BLM proposed to divide the existing § 3104.7 into three separate paragraphs and included language to address what happens in the event a party fails to comply with the requirements. The BLM received a comment objecting to paragraph (b)(2), stating that the paragraph effectuates the equivalent of suspension or debarment even if the BLM does not pursue that route—with its corresponding procedural protections—under paragraph (b)(3). The BLM is not proceeding with proposed paragraph (b)(2), which refers to preventing the bonded principal from acquiring additional Federal leases, at this time. The BLM prefers to continue to address this situation through policy, as an operator can still come back into compliance even after the bond is collected once all reclamation has been completed and all monies owed the U.S. have been paid.

Because the BLM is deleting the proposed paragraph (b)(2), proposed (b)(3) is now redesignated as (b)(2) in the final rule.

Section 3104.80 Termination of Period of Liability

The BLM did not propose any changes to existing § 3104.8 but did receive comments urging the BLM to revise the section to clarify that any new bond supersedes and replaces any prior bonds, and that the liability of the prior surety is terminated. The current language addresses this comment by stating the period of liability for a previous bond will terminate once the BLM receives a new bond meeting the regulatory requirements.

Section 3104.90 Unit Operator and Nationwide Bonds Held Prior to June 22, 2024

The BLM proposed this new section to address the elimination of unit operator and nationwide bonds and to provide the timeline by which entities must comply with the new bonding requirements. The BLM received a number of comments recommending that the BLM adjust the minimum bond amounts for inflation. The BLM has addressed comments directed at increasing bond amounts for inflation in § 3104.1.

A comment asked how the BLM plans to terminate the liability of sureties under unit operator and nationwide bonds that are being eliminated. After the final rules goes into effect, the BLM will send a notice to the principals maintaining the bond explaining the new requirement to replace their bond. Once an acceptable replacement bond is received, the period of liability will be terminated on the prior bond under § 3104.80. A replacement bond is not considered acceptable unless it also has an assumption of liability rider which assumes any outstanding liability accrued by the prior bond.

Multiple commenters requested that the BLM exempt existing operations and bond amounts as part of the final rule or provide more time to meet the increased bond amounts. The BLM declines to exempt existing bond amounts. The BLM, GAO, and OIG have concluded that the BLM's current bond amounts are inadequate to protect the Federal resources. If the BLM were to exempt those bonds covering existing operations, the problems identified by the GAO and the OIG would persist. The GAO, in report GAO–11–292, *Oil and Gas Bonds: BLM Needs a Comprehensive Strategy to Better Manage Potential Oil and Gas Well Liability,*[19] recommended that the BLM develop a strategy to increase the regulatory minimum bonding amounts over time and to more clearly define the conditions that warrant a bond increase beyond the minimum bond amounts. The BLM implemented these recommendations in policy; however, the GAO, in report GAO–19–615, *Oil and Gas: Bureau of Land Management Should Address Risks from Insufficient Bonds to Reclaim Wells,*[20] went on to recommend that the BLM should take steps to adjust bond levels, for all bonds, to more closely reflect expected reclamation costs. Reading these two reports, it is clear that the BLM should not exempt bonds covering existing operations. Similarly, the OIG, in Report No. OI–OG–12–0085–I, *BLM Oil and Gas Bonding Procedures,*[21] recommended that the BLM conduct and support bond adequacy reviews and bond increases periodically and do so before problems arise. If the BLM exempted the increased bond amounts for existing operations, the BLM would not be able to increase the bonds before problems arise for the existing operations. Further, increasing the bonds for all operators maintains a level playing field.

While the BLM declines to expand the phase-in periods overall, swapping them in final § 3104.1 to give individual bonds the longer phase-in periods will allow additional time for smaller operators with individual bonds to come into compliance. The holders of nationwide bonds are larger companies, which have increased staff and can more easily comply with the updated phase-in period to convert their nationwide bonds to statewide and/or individual bonds. The BLM updated the phase-in period in the final rule by requiring lessees and operators that currently use nationwide and unit bonds to come into compliance within 1 year of the effective date of the final rule. This phase-in period provides time for the BLM and its staff to process the increased and new bond amounts expected. The BLM has a total of 3,234 bonds: 975 individual or lease bonds, 1,987 statewide bonds, 19 collective (unit) bonds, and 253 nationwide bonds. Upon identifying that the majority of the bonds are statewide and individual bonds, the BLM determined that it made more sense to revise the phase-in period by requiring current nationwide bonds to be brought into compliance first and the others as follows:

- 1 year for nationwide and unit bonds,
- 2 years for statewide bonds, and
- 3 years for individual bonds.

Specifically, this phase-in period will provide individual lease bond holders—the majority of those affected by the provision of the rule, many of which are small businesses—more time to prepare

for compliance, and, likewise, will allow the BLM to prepare for the associated workload.

Section-by-Section Discussion for Changes to 43 CFR Subpart 3105

Communitization Agreements

Section 3105.21 Where Filed

The BLM proposed to remove the requirement in the existing § 3105.2–1 to file the agreement in triplicate and to specify the minimum contents for such an agreement. The BLM received comments on this section stating that the BLM should include a fixed filing fee for CAs. As previously stated, the BLM considered proposing new fixed filing fees for Federal CAs but ultimately declined to add a fee due to the public benefit of allowing Federal and State minerals that might otherwise be wasted to be developed.

A commenter stated that paragraph (c), which recommends that an application be submitted at least 90 days prior to first production, overlooks that CAs are commonly submitted only after production has been obtained, and are usually effective retroactively to the date of first production. The BLM's proposed language did consider this fact, which is why the proposed section says ''should'' instead of ''must.''

The final rule does not make further changes in response to these comments. The final rule did remove the acronym ''CA'' from the final regulatory text and replace it with ''communitization agreement'' for clarity and consistency.

Subsurface Storage of Oil and Gas

Section 3105.42 Purpose

The BLM revised the existing the existing § 3105.4–2 to clarify that gas storage agreement applications must include a bond. The BLM received a comment stating that such agreements should also be subject to a significant rental fee and bond. No additional changes are warranted in response to this comment because this section already covers the rental and bonding requirements. A fee is also required in § 3105.41.

Section-by-Section Discussion for Changes to 43 CFR Subpart 3106

The BLM proposed to add one section, remove two sections, and update the headings of each section to remove the outdated question and answer format that appears in the existing regulations. The BLM received a comment on this subpart stating the BLM should, as a matter of transparency, codify the policies and procedures that the authorized officer is required to follow with regard to approving and overseeing lease transfers. The BLM did not make any changes to this subpart based on this comment. The BLM has a handbook, H–3106–1, *Transfers by Assignment, Sublease, or Otherwise,* that provides the necessary guidance to the BLM to adjudicate these transfers. The public may obtain copies of this handbook, which is not currently available online, from any BLM state office.

Section 3106.10 Transfers, General

The BLM proposed splitting the existing § 3106.1 paragraph (a) to provide clarity, added a new paragraph (b) clarifying that the BLM will deny a transfer in certain situations, and added a new paragraph (c) limiting the transfer of operating rights. The BLM received a comment recommending the BLM address the impact of the severance of operating rights from record title interest. The BLM agrees with this comment. The BLM receives a multitude of transfers of operating rights that are unnecessary because those rights have never been severed from the record title. The final rule includes a new paragraph (b) to state that a record title assignment conveys both record title and operating rights unless operating rights have been previously severed. The remaining paragraphs are redesignated accordingly.

The BLM received comments on the proposed paragraph (b), which is final paragraph (c). The BLM added this paragraph to state an assignment of a separate zone, deposit, depth, formation, specific well, or of part of a legal subdivision, will be denied. One commenter supported this language, while another commenter stated that wellbore assignments are not ambiguous, because wellbores have API numbers that include bottom hole data and that are within approved drilling and spacing units specifying the acreage being drained by the wellbore. Wellbore rights are private agreements between private parties and need not be reported to the BLM. If the intent is to transfer a specific legal surface area and/or depth of the operating rights for a lease, a legal description of that area and depth is required.

A commenter stated that the language in the proposed paragraph (c), which is final paragraph (d), providing that operating rights interests may only be divided with respect to legal subdivisions is ill-advised, as it implicitly would preclude transfers of operating rights as to parts of legal subdivisions. The BLM disagrees with this comment. The paragraph must be read in conjunction with paragraph (a) that specifically states, ''Leases may be transferred by assignment or sublease as to all or part of the acreage in the lease or as to either a divided or undivided interest therein.'' The final rule adopts the proposed paragraph unchanged.

Section 3106.20 Qualifications of Assignees and Transferees

The BLM proposed revisions to the existing § 3106.2 to clarify that entities to whom record title or operating rights are being transferred must be qualified to hold a lease. The BLM received one comment on this section, requesting that the BLM revise the section to clarify that the new bonding requirements apply only to operators and not all lessees, assignees, and transferees. The BLM is not making any changes to the section in the final rule, because the bonding requirements may apply to any entity to whom an interest is being transferred and not just an operator.

Forms

Section 3106.41 Transfers of Record Title and of Operating Rights (Subleases)

The BLM proposed revising the existing § 3106.4–1 to require the use of an approved form to accomplish these transfers and to reduce the required number of copies the transferee must file with the BLM from three to two. The BLM received a comment on this section stating the BLM could not change from triplicate to duplicate filings as laid out in the proposed rule, because the required number of originally executed transfer forms is fixed at three by statute.

The BLM proposed this change in accordance with the Government Paperwork Elimination Act (GPEA), Public Law 105–227. Section 1707 of the GPEA specifically states, ''Electronic records submitted or maintained in accordance with procedures developed under this title, or electronic signatures or other forms of electronic authentication used in accordance with such procedures, must not be denied legal effect, validity, or enforceability because such records are in electronic form.'' After reviewing the comment and 30 U.S.C. 187a, the BLM determined that it should reinstate the triplicate filing until the BLM implements an electronic filing method. At that time, the BLM would only require one electronic filing per the GPEA. Therefore, the BLM reinstated the triplicate-filing requirement in this final section; however, the final rule also states the BLM will not require triplicate copies of the assignment or transfer when it is electronically submitted.

Section 3106.42 Transfers of Other Interests, Including Royalty Interests and Production Payments

The BLM proposed revising the existing § 3106.4–2 to require transfers of overriding royalty interest to be submitted on the BLM's approved form. The BLM received a comment asserting that the use of a BLM-approved form should not be required, since the transfer is not subject to BLM approval.

Although transfers of overriding royalty interest do not require the BLM's approval, an overriding royalty interest is an interest in a Federal oil and gas lease. By requiring such transfers to be on an approved BLM form, the transferee is certifying that they are qualified to hold the interest. The BLM adopts this section in the final rule without further changes.

Section 3106.60 Bond Requirements

The BLM proposed changes to existing § 3106.6 to clarify that an entity to whom an interest in the lease is being transferred has the requisite level of bonding. The BLM received a comment questioning why—if the previous lessee is only transferring a portion of its leases—the transferee must maintain the same level of bonding in cases where the previous entity had many more leases and other reasons for an increased bond amount. A commenter stated, for example, that the proposed rule provision would result in a new lessee, record title owner, or operating rights owner being required to maintain a full statewide bond when the assignor or transferor only transferred a portion of its Federal wells.

The BLM does not intend to require such results. Therefore, the final rule removes the phrase ''(including a statewide bond)'' as a statewide bond may not be necessary. When a lessee or operating rights owner maintains a bond for a lease, the BLM expects the transferee or assignee to maintain the same level of bonding for operations *on the transferred lease(s).* If previous lessees or operating rights owners held a statewide bond, the BLM will work with the new owner to identify the appropriate level of bonding for that lease.

The BLM received a comment recommending a revision to this provision to include the following language: ''to the same extent as the assignor's or transferor's bond, or to a greater amount if deemed necessary following a bond adequacy review.'' This addition was recommended to ensure the adequacy of bonds at the time of lease transfer. The commenter also requested that the BLM adopt additional requirements expressly requiring bond adequacy review at the time of transfer. The comment went on to state that such a rule should require the assignor or transferor to furnish the BLM with information on the number, type, and depth of all wells existing on the lease to be transferred, and should require the BLM to use this information—and any other relevant information—to assess whether the existing bond amount is adequate to ensure prompt and complete reclamation of all existing wells and any new wells that may be drilled by the assignee or transferee.

The BLM received a comment stating the BLM should harmonize this section with § 3104.20, which places the bonding obligation for a lease on the operator. The BLM primarily requires bonds from the operator instead of the lease interest owners (record title or operating rights owner). However, the BLM will require a bond from the lessees when the operator's bond is insufficient.

The BLM received a comment stating the BLM should include a requirement that the assignee's or transferee's bond be in place prior to the approval of the assignment or transfer. The BLM concurs and already requires the bond to be in place prior to approving the assignment or transfer and therefore sees no need for the change.

The BLM received a comment recommending that the BLM examine and certify the transferee's or assignee's financial viability before approving the transfer or assignment. This recommendation is not adopted in the final rulemaking as the BLM does not currently have the staff or expertise to perform this function.

Approval of Transfer or Assignment

Section 3106.72 Continuing Obligation of an Assignor or Transferor

The BLM proposed revising the existing § 3106.7–2 by removing the question-and-answer format in the title and clarifying the responsibilities of the assignee or transferee. The BLM received a comment recommending that the BLM change the language in paragraph (b) to delete the references to ''operating rights'' and make it clear that in the case of the transfer of any interest in a lease, the transferor must maintain financial assurances subsequent to the approval of the transfer and that all transferors should be required to maintain financial assurances for a predetermined suitable period after a transfer is approved.

The BLM is not making any changes to the final rule based on this comment, as the proposed regulations already address the concerns expressed by the commenter. Under § 3104.80, when the BLM terminates the ''period of liability'' on a bond, this action sets an exact date after which no new liability may accrue under that bond. In addition, the BLM prefers to keep the phrases ''assignment or transfer,'' so it is clear this section applies to both.

The BLM received a comment on paragraph (b) requesting clarification on the obligations described. The BLM has revised this paragraph in the final rule to clarify the obligations of the assignor or transferor once the BLM approves an assignment or transfer. The last sentence in paragraph (b) now states ''It also includes responsibility for plugging wells drilled and removing facilities installed or used before the effective date of the assignment or transfer.'' The BLM has added this sentence to provide a more comprehensive list of lease obligations; however, this is not a complete list. The assignor or transferor will continue to be responsible for other lease obligations, not limited to the items enumerated in § 3106.72(b).

Section 3106.73 Lease Account Status

The BLM proposed changes to the existing § 3106.7–3 to remove the passive voice and to clarify that the lease account must be in good standing with all royalties paid and lease obligations met. The BLM received a comment recommending a change to this provision by providing 60 days to allow a transferor whose account is delinquent to remedy the delinquency before the BLM rejects a transfer.

This recommendation is not adopted in the final rule. While some state offices suffer from a backlog of transfers, the BLM aims to adjudicate transfers within 60 days as required by the MLA. Adding the suggested language would prolong the time it takes the BLM to adjudicate an assignment or transfer. The denial of a transfer for this reason does not preclude the assignor or transferor from filing a new transfer with the appropriate filing fee after the lease account has been brought into good standing.

Section 3106.76 Obligations of Assignee or Transferee

The BLM proposed changes to the existing § 3106.7–6 to remove the question-and-answer format in the title and to update the language to be consistent with other changes being proposed. The BLM received a comment stating the regulation should also mandate the maintenance of financial assurances by the assignor of record and the transferor of operating rights for a

suitable amount of time after the transfer or assignment to ensure the continued protection of the Federal resource: (1) during the transition to a new lessee or operator; and (2) in the event of a latent issue that was not reasonably identified at the time of the transfer or assignment and for which the transferee or assignee refuses to accept responsibility.

No changes to the rule are necessary because an assignor or transferor remains liable for reclamation of wells during the period of liability. The period of liability is fixed under § 3104.80, when the BLM terminates the ''period of liability'' on a bond. After this date, which is an exact date, no new liability may accrue under the bond. Even if the liability is not apparent at the time the liability terminates, the assignor or transferor would remain liable.

Other Types of Transfers

Section 3106.81 Heirs and Devisees

The BLM proposed to split the existing § 3106.8–1 paragraph (a) into two separate paragraphs for clarity and included a reference to the new filing fee in paragraph (b). The BLM received a comment on the proposed § 3106.81 stating the proposed rule should be revised to state that the deceased party's rights will be assigned or transferred to the appropriate successors, which implies an affirmative act—whereas such a transfer in fact takes place by operation of law, and so the term ''assignment'' is misused in this context.

The BLM agrees and has revised the final paragraph (a) to update the phrase ''their rights will be assigned'' and inserts instead ''their rights would be assigned.'' The BLM also removed the word ''assignment'' from paragraph (b) and inserted ''transfer'' instead.

Section 3106.83 Corporate Mergers and Dissolution of Corporations, Partnerships, and Trusts

The BLM proposed to revise and update the title of the existing § 3106.8–3 and proposed splitting the existing paragraph into three to improve clarity. The BLM received a comment on § 3106.83 stating the requirement for a filing fee is noted only as to corporate mergers, whereas the fee schedule in the proposed rules under § 3000.120 of this title lists a fee that covers corporate merger and corporate dissolution.

The BLM agrees with this comment and in the final rule has updated the phrase in paragraph (d) from ''the processing fee for corporate merger'' to ''the processing fee for corporate merger or dissolution of corporation, partnership, or trust.''

9. Section-by-Section Discussion for Changes to 43 CFR Subpart 3107

Section 3107.10 Extension by Drilling

The proposed rule revised the existing § 3107.1 for clarity by splitting the first paragraph into two and adding a new paragraph to address directional or horizontal wells drilled off lease. One commenter stated language should be added to confirm that a lease is held by production from a directional or horizontal well.

The BLM has not made any changes based on this comment, because this application is already clear. As stated in § 3107.21, a ''lease will be extended so long as oil or gas is being produced in paying quantities.'' This language is clear that production on and attributed to any lease will be held by production from a directional or horizontal well. In addition, the BLM's Handbook H–3107–1, *Continuation, Extension, or Renewal of Leases,* states that ''for a lease to be continued by production, it must contain a well capable of producing oil and/or gas in paying quantities.'' The public may obtain copies of this handbook, which is not currently available online, from any BLM state office. This direction will include all leases that the directional or horizontal wells drilled into and producing from a Federal lease.

Production

Section 3107.22 Cessation of Production

The BLM proposed changes to the existing § 3107.2–2 in response to IBLA decisions holding that the section conflicted with the MLA. In this final rule, the section now states that a lease in its extended term expires 60 days after production ceases, and not after the lessee receives notice from the BLM. A comment expressed concern that this change may cause confusion and unintended consequences, as the operator of the well may not be the same as the record title owner and timely notice of a cessation of production may not be received to remedy the non-production and preserve the lease.

The BLM understands this concern; however, as explained in the preamble to the proposed rule, multiple IBLA cases have held that the existing regulation directly conflicts with section 17(i) of the MLA (30 U.S.C. 226(i)).

The BLM received a comment stating the last sentence in this paragraph should be amended to clarify this section. The BLM agrees and has revised the final rule by inserting the word ''paying'' prior to ''production''.

Extension of Leases Within Agreements

The BLM received a comment stating that the undesignated center heading that appeared immediately above proposed § 3107.31 is misleading and could easily be interpreted to mean the extension of agreement terms as opposed to the extension of leases within agreements.

The BLM agrees and the final rule adopts this recommendation and changes the heading from ''Extension for Terms of Agreements'' to ''Extension of Leases Within Agreements.''

Section 3107.31 Leases Committed to an Agreement

The BLM proposed to update the title of the existing § 3107.3–1, remove a reference to a provision that is no longer applicable, and add a new paragraph to address IBLA decisions pertaining to production in paying quantities. A comment stated the rule should clarify that unitized leases in an extended term cannot be further extended unless it is through production. The comment requested that the BLM clarify that the mere commitment of a lease to an agreement would not extend the Federal lease. No further changes are warranted to the final rule, because paragraph (a) already states ''*provided,* that there is production of oil or gas in paying quantities under the agreement prior to the expiration date of such lease.''

Finally, the BLM deleted the second ''for'' to clarify that both conditions must exist for the leases to continue to receive the extension. For the leases to receive this extension, (1) the leases must be committed to the authorized unit agreement and (2) the well must continue to be capable of production in leasing paying quantities (able to pay out the operating costs of the well).

Other Extension Types

A comment stated that the undesignated center heading that appeared immediately above proposed § 3107.71 is meaningless and should be changed. The final rule adopts this recommendation and changes the title from ''Other Types'' to ''Other Extension Types.''

10. Section-by-Section Discussion for Changes to 43 CFR Subpart 3108

Termination by Operation of Law and Reinstatement

Section 3108.21 Automatic Termination

The BLM proposed changes to the existing § 3108.2–1 to reflect policy changes by ONRR and to address IBLA decisions. The changes included adding a new paragraph (c) clarifying when the

automatic lease termination would apply. Some comments supported the addition of paragraph (c). Other comments stated the preamble to the proposed rule included a misleading example referencing lease suspensions that may require additional rentals when they are lifted that could result in conflict and confusion if left uncorrected.

That criticism is misplaced for the reasons discussed in the context of § 3103.42 in this preamble. To be clear, such a notice will depend on the timing of the lifting of the suspension in relation to the lease anniversary date. Consider the following hypothetical example: A lease is issued effective 7/1/90 with a five-year primary term, so it will expire on 6/30/95. The lessee paid the rental timely for the fourth lease year which ended on 6/30/94. The BLM granted a suspension of operations and production effective 4/1/94. The suspension was lifted effective 9/1/94. The revised expiration date of the lease is therefore 11/30/95, because the lease is extended an additional five months to account for the five months in which the suspension was in place. The rental paid for the 1993–94 lease year covers the remaining three-month period of the fourth lease year from 9/1/94 to 11/30/94. The prorated rental is to be requested from the lessee for the seven months from 12/1/94 through 6/30/95 (to bring the regular rental due date back to the lease anniversary date). No changes were made to the final rule based on this comment.

Section 3108.22 Reinstatement at Existing Rental and Royalty Rates: Class I Reinstatements

The BLM proposed changes to the existing § 3108.2–2 to reflect the fact that ONRR accepts rental payments through its online system. The BLM received a comment on paragraph (a)(2), asserting the change in this subparagraph would narrow the definition of ''reasonable diligence'' to include only rental payments made through ONRR's online system on or before the lease anniversary date and disregards ONRR's continuing practice of accepting non-electronic rental payments in some circumstances that would effectively eliminate reasonable diligence as grounds for Class I reinstatement. The BLM agrees and has revised the final rule by removing the phrase ''through its online rental payment system'' from paragraph (a)(2).

The BLM received a comment on paragraph (a)(3) stating that increasing the filing fee for Class I reinstatements from $90 to $1,260 is disproportionate to the administrative fee for Class II reinstatements which would remain at $500. As stated in the preamble to the proposed rule, the BLM considered moving the existing fee for Class II reinstatements to § 3000.120 for inclusion alongside the other fixed filing fees, increasing the fee to reflect the processing costs, and then adjusting the fee annually for inflation. However, the MLA, at 30 U.S.C. 188(e), specifically states for Class II lease reinstatements that ''[t]he lessee of a reinstated lease shall reimburse the Secretary for the administrative costs of reinstating the lease, but not to exceed $500.'' Accordingly, the BLM does not have the authority to increase this fee. The BLM also considered reducing the Class I reinstatement fee to $500 for parity with the Class II reinstatement fee and concluded that doing so would be insufficient to cover the BLM's administrative costs.

Section 3108.30 Cancellation

The BLM proposed revising the existing § 3108.3 to remove language in paragraph (a) that repeatedly called for the BLM to provide notice to the lessee prior to cancellation. The BLM received a comment stating that a provision should be added stating leases are subject to cancellation if the lessee is found not to be a ''qualified lessee'' or a ''responsible lessee.'' No changes have been made to the final rule as the BLM does not have the authority under the MLA to cancel a lease for these reasons. 30 U.S.C. 188. Further, the existing requirements at § 3102 would be applied prior to the issuance of a lease, and these requirements address this concern.

11. Section-by-Section Discussion for Changes to 43 CFR Subpart 3109

Section 3109.15 Compensatory Royalty Agreement or Lease

The BLM revised the existing § 3109.1–5 to align the terms of a lease issued under a ROW to those for a competitive lease. A commenter caught a technical error in subparagraph (c)(1) of the provisions of 43 CFR part 3100, where the BLM referenced a regulatory section number that does not exist (§ 3101.20). The BLM proposed and is removing the regulatory section numbers for headings that have no text associated with them, which included § 3101.2 in the previous regulations, and changed these sections to undesignated center headings. Therefore, the final rule makes a minor technical change to correct this error. The statement of ''except § 3101.20'' in paragraph (c)(1) has changed to ''except §§ 3101.21, 3101.22, 3101.23, 3101.24, and 3101.25.''

Sections 3109.21–3109.22 [Reserved]

In the final rule, the BLM removes the existing reserved §§ 3109.2–1 and 3109.2–2 as these sections do not need to be reserved. In the previous regulations, the BLM reserved § 3109.2–1 for the ''Authority to lease'' and § 3109.2–2 for the ''Area subject to lease.'' The BLM incorporated the authority to lease in 43 CFR 3100.3 and provides the area to lease in § 3109.20; therefore, the BLM no longer needs to reserve these sections in the final rule.

12. Section-by-Section Discussion for Changes to 43 CFR Part 3110

The final rule removes the existing 43 CFR part 3110 in its entirety. Multiple commenters expressed support for the elimination of 43 CFR 3110 to comply with Congress' repeal in the IRA of noncompetitive leasing for Federal onshore oil and gas minerals.

13. Section-by-Section Discussion for Changes to 43 CFR Part 3120

The BLM proposed to add two new sections and remove four sections from part 3120 to provide clarity and to ensure these provisions are consistent with other changes being made. The BLM received several comments on part 3120. Some comments specifically requested that the BLM not issue new leases in certain areas of the country. Some comments recommended additional paragraphs such as including denial criteria based on consideration of localized conditions and lands already subject to various types of adverse impacts. These comments are directed at the land use planning process, which is when the BLM evaluates whether lands should be open or not to leasing. Because these regulations govern the leasing and development process, these comments are outside the scope of this rulemaking.

Section 3120.11 Lands Available for Competitive Bidding

The BLM proposed changes to the existing § 3120.1–1 to reflect Congress' repeal of noncompetitive leasing in the IRA and revised the language in the introductory paragraph such that it more closely aligns with the Act.

Some comments argued that the proposed changes give the BLM more discretion for leasing than granted by the MLA; however, these arguments were made in reference to the timing of holding quarterly lease sales and not with respect to the BLM's discretion regarding what lands may be offered for lease. The introductory paragraph in

this section states, ''All lands eligible and available for leasing *may* be offered for competitive auction.'' The BLM changed the ''shall'' to ''may'' to clarify that the Secretary retains the discretion to decide, even after lands have been determined to be eligible and available, what lands will ultimately be offered for lease. Timing of any lease sales is addressed in final § 3120.12(a) which was modified to state, ''Each BLM state office will hold sales at least quarterly if eligible lands are available for competitive leasing.''

One commenter objected to the addition of the term ''eligible'' to this section. The BLM has not made any changes based on this comment as the proposed language merely reflects the language in the MLA at 30 U.S.C 226(a) and (b).

Another comment recommended that the BLM consider issuing a protective lease covering open Federal acreage located in an existing drilling block to provide a mechanism for a unit operator to develop its drilling block, including the unleased Federal minerals. The BLM cannot issue a protective lease, as proposed in the comment, under the MLA. The BLM may only issue a protective lease through a competitive lease sale based upon the law at 30 U.S.C. 226 and due to drainage of the Federal minerals (see 43 U.S.C. 1457; see also Attorney General's Opinion of April 2, 1941 (Vol. 40 Op. Atty. Gen. 41)). The BLM did not make any changes to the final rule based on this comment.

One commenter recommended removing ''including but not limited to'' from the introductory paragraph and inserting a new subparagraph (a) to state ''lands that have been identified as preferred leasing areas in a current land use plan as well as lands identified as exclusion areas in a current land use plan shall not be available for leasing.'' The BLM did not make any changes to this section of the final rule. The BLM already identifies the lands closed to leasing or open to leasing in its land use plans. In addition, the BLM does not identify ''preferred leasing areas'' within its land use plans. Since the BLM did identify that the lands must be available for leasing at the beginning of the statement, the BLM declines to make the changes proposed by the comment.

Section 3120.12 Requirements

The BLM proposed changes to the existing § 3120.1–2 to reflect current practices in holding lease sales via the internet, a new paragraph (c) to strengthen and revise the bidding process, the redesignation of paragraph (c) to (d), and inclusion of the new minimum bid amount. One comment recommended that the BLM add language clarifying that the BLM's discretion also applies to the timing of lease sales, and, specifically, that a sale need not be held if there are no eligible or available lands. The BLM has not made any changes to the final rule based on this comment, because paragraph (a) already states ''Each BLM state office will hold sales at least quarterly if eligible lands are available for competitive leasing.''

The BLM received a comment stating that paragraph (d) should state the minimum bid amount instead of referring to the BLM's website and changes to the bid amount should be made through the regulatory process. The final rule does not adopt this recommendation, as the minimum is stated in regulation: the BLM has moved the minimum bid amount required to the Fiscal Terms Table at § 3103.1, and all of the fiscal terms will be adjusted every 4 years through the regulatory process. Please note that the BLM will not adjust the minimum bonus bid until the amount set by the IRA becomes a minimum after August 16, 2032.

Section 3120.30 Nomination Process

The BLM requested comments on whether the formal nomination process should be retained in regulations and, if so, what changes to the formal nomination process should be made. The BLM received comments supporting the retention of the nomination process to promote leasing in areas with greater potential for fluid minerals to be produced. The BLM received comments stating the BLM should implement a single nominations process that combines elements of formal nominations and expressions of interest. These commenters contended that, by exercising its authority at the front end regarding what public lands it will consider for leasing, the BLM would reduce land speculation, save time and resources, and create greater certainty for all parties. The BLM received comments supporting the elimination of § 3120.30 stating this section is unclear, confusing, would only be used to limit lease areas, and that the BLM does not have the level of technical expertise required to adequately analyze lands for expected yields of oil and gas.

The final rule removes the formal nomination, existing §§ 3120.3 through 3120.3–7 and proposed §§ 3120.30 through 3120.33, which the BLM has never used and which generally increases the time and resources necessary to hold lease sales.

Expression of Interest

The BLM proposed adding a new section to address the process for EOIs, which previously had not been codified in regulation. The proposed rule also included the new filing fee requirement for EOIs in paragraph (d) as required by Congress in the IRA (see also the Fiscal Terms Table in final § 3103.1). The final rule redesignates the citation numbers throughout this section consistent with the removal of sections that pertained to the nomination process. The BLM received several comments on this section. Based on the BLM's review of the comments, the final rule splits the proposed § 3120.41 into two new sections. The first section describes the requirements for an EOI (proposed paragraphs (a) through (e), and (g)) and a new section is created for the preference criteria (proposed paragraph (f)).

Section 3120.31 Expression of Interest Process

The final rule renames the proposed section from ''Process'' to ''Expression of interest process'' and redesignates § 3120.31 from proposed § 3120.41 to final § 3120.31 as doing so will provide consistency with the previous regulations. This section contains paragraphs (a) through (d) of the proposed § 3120.41. Proposed paragraph (g) has been redesignated as paragraph (e).

One comment objected to the requirement that, for split estate lands under paragraph (b)(6), an EOI submitter must submit the private surface owner's name and address, even though there is no explicit and corresponding statutory requirement, and even though the information is often difficult and time consuming for submitters to obtain. The BLM has not made any changes to the regulation based on this comment. Under section 1835 of the Energy Policy Act of 2005 (43 U.S.C. 15801), Congress directed the Secretary of the Interior to review current policies and practices with respect to management of Federal subsurface oil and gas development activities and their effects on the privately owned surface. The Split Estate Report to Congress, submitted in December 2006, documents the findings resulting from consultation on the split estate issue with affected private surface owners, the oil and gas industry, and other interested parties. In the Report, the BLM identified in Issue 4 that ''surface owners would like to be contacted when the BLM is leasing Federal mineral estate underlying their property. Notification is requested when parcels are nominated and offered on a

competitive lease sale.'' As a result of work done to implement portions of the Energy Policy Act of 2005 relating to split estate lands, the BLM asked individuals submitting EOIs to provide the name of the private surface owner. This is outlined in BLM Handbook H–3120–1, *Competitive Leases.*[22] This information allows the BLM to notify the surface owner when the BLM initiates a lease sale that contains a parcel with minerals underlying the owner's surface. The BLM will require this information under paragraph (b)(6) to ensure the BLM provides adequate outreach to the private surface owners overlying Federal minerals.

The BLM received a number of comments on paragraph (d), which requires payment of the per acre fee required by Congress in the IRA. Some commenters recommended that the BLM should require the fee to be payable by the winning bidder instead of the individual that submitted the EOI or that the fee should be refunded if: (1) the lands are not included in a sale; (2) the individual that submitted the EOI does not obtain the parcel at the lease sale; or (3) the individual submitted an EOI covering lands already submitted on a prior EOI submittal. The BLM cannot make any of these changes as Congress did not provide the Secretary with this discretion in the IRA. That Act requires the assessment of a nonrefundable fee payable by any person submitting an EOI.

In proposed paragraph (e), the BLM included language allowing the BLM to include lands in a sale on its own initiative. The BLM received comments objecting to the provision, asserting it would allow the BLM to include lands it knows to be unattractive and does not account for the BLM's policy on unleased lands within CAs. That policy directs the BLM to offer such lands for competitive leasing as soon as possible, such that the lands should not be subject to nomination limitations or EOI criteria set forth in the proposed rule. After reviewing these comments, the BLM is removing proposed paragraph (e) from the final rule. That paragraph is unnecessary because § 3120.11(f) already gives the BLM the option to include lands selected by the authorized officer in a sale. The removal of paragraph (e) from this section clarifies that Bureau motions are not considered or counted as EOIs for purposes of calculating the percent of EOI acreage offered on oil and gas lease sales during the past year for renewable development under 43 U.S.C. 3006.

[22] *https://www.blm.gov/sites/blm.gov/files/uploads/Media_Library_BLM_Policy_h3120.pdf.*

As a final note, the BLM is clarifying that it only self-nominates lands to protect the Federal minerals and the public interest. The BLM calls self-nominated lands a Bureau motion. The BLM creates a Bureau motion to protect the Federal mineral estate from drainage or when there are unleased Federal minerals within an approved oil and gas agreement. The BLM tracks information on which parcels originate from an EOI or a Bureau motion within the BLM's National Fluid Lease Sale System. As of December 14, 2023, approximately 92 percent of the lands under review came from an EOI. The BLM identified that from the nominations received in calendar year 2023, the BLM has a total of 83,917.23 acres of pending lands under review with only 6,815.36 acres created from Bureau motions. The remaining 77,101.87 acres under review for future oil and gas leasing are created from EOIs.

The proposed paragraph (g) has been redesignated to paragraph (e) in the final rule and reflects the BLM's long-standing authority to determine which lands will ultimately be offered for sale. Therefore, the BLM makes no changes to this paragraph.

Section 3120.32 Expression of Interest Leasing Preference

The BLM revised the final rule by creating new § 3120.32, which had appeared in proposed § 3120.41(f). Both the proposed and final sections address the preference criteria that the BLM may use when determining whether, when, and in what order certain lands specified in an EOI should be processed and offered in a lease sale. Creating the new section required certain redesignations and reorganizations.

The BLM received many comments on this proposed section. Most of the comments were generally supportive of the preference criteria, though some commenters were opposed to the use of the criteria. Some comments that expressed support for the preference criteria requested additional criteria be considered or requested an expansion of the proposed criteria to include greater specificity. As discussed in Section III.B.2 and III.B.7 of this preamble, these comments recommended revising the criteria to better account for impacts on GHG emissions and climate change, environmental justice, the environment (often suggesting criteria for specific habitat, natural resource areas, land or aquatic conditions, species, or other factors), cultural and Tribal resources, specific recreational uses, and protected areas such as special conservation areas, parks, and wilderness areas.

Other comments opposed the consideration of any criteria by: (1) stating that adding preference criteria to preliminary leasing decisions will lead to delays, create uncertainty, and detract from the predictability of the process; (2) expressing concern that the application of the preference criteria would exclude lands that would be considered exploratory and that such exploratory actions benefit the public at large; and (3) stating that the proposed criteria process was duplicative of other statutory processes, such as those under the Endangered Species Act and FLPMA.

Many commenters also expressed views on the proposed process for considering criteria before offering parcels. Some comments stated the application of the criteria is not a transparent process or could be subjective. Some commenters expressed concern that the BLM lacks the technical expertise and resources needed to apply some of the preference criteria and sought clarifying language to ensure consistent consideration of the criteria by BLM offices, including identifying the sources of information that offices are expected to use. Specifically, for example, some comments stated that the proposed rule does not explain how the criteria will be used when conflicts between development and other uses occur or how the preferences will be weighted. Commenters offered varied approaches for how the criteria should be applied. For example, some comments stated that lands with a low preference should be excluded from leasing, and other commenters suggested that an EOI should represent compelling evidence of some potential for development. Additionally, some comments stated the preference criteria should not be applied to lands administered by another Federal agency.

After careful consideration of the comments received, the BLM is clarifying in the regulatory text that the BLM will consider the preference criteria as part of the scoping process for leasing. During the leasing process, the BLM will apply the criteria after the conclusion of the scoping process but before issuing a draft NEPA document for a lease sale. As such, the BLM has revised the last sentence in the introductory paragraph. The BLM is inserting the phrase ''In evaluating the lands to be offered, as part of the scoping process.''

Applying the preference criteria after scoping but before publication of the NEPA document allows the BLM to consider public comment on the environmental analysis for the lease sale

at the outset of the leasing process and to better manage its workload by directing its resources towards tracts that are most likely to be developed. Since BLM New Mexico's May 25, 2023, oil and gas lease sale, the BLM has been applying the preference criteria in this way through the BLM's policy IM 2023–007, *Evaluating Competitive Oil and Gas Lease Sale Parcels for Future Lease Sales.*[23] This process enables the BLM to conduct preference criteria review while the public and industry provides scoping comments, which the BLM will incorporate into its determination in the NEPA compliance documentation.

This procedural clarification also addresses many of the comments received. First, considering the criteria at the conclusion of the scoping process will allow the public to provide input that the BLM should consider when applying the criteria to the preliminary list of lands for a lease sale. Consistent with § 3120.42, the BLM will provide at least 30 calendar days for public comment on the preliminary parcel list as part of the scoping process. During this public scoping period, commenters can raise site-specific considerations that should be considered in selecting parcels. These could include many of the concerns commenters raised as potential additional criteria, such as the potential for development, environmental justice considerations, and other important uses or resources like watershed vitality. Public input also will help ensure that the BLM has the necessary data and information to evaluate the criteria. In response to public input, the BLM will be able to consider new information raised and announce its initial conclusions on the preference criteria in the draft NEPA document. Second, these steps provide transparency for the public to see how the BLM is considering the criteria on a case-by-case basis. For example, in some scenarios, it may allow the public to understand why low preference parcels are being offered for leasing or to recognize when there is a conflict between resources. This increased transparency and ability for public input are responsive to the comments received, including those that urged the BLM to add additional criteria that should be considered for the localized area and those that expressed concern that the process lacked clarity or transparency. At the same time, the BLM will more efficiently manage the process by applying the criteria before publishing the draft NEPA document. If the BLM applied the criteria to the parcels after publishing the draft NEPA document, the BLM may need to re-work or apply amendments and changes to both the draft NEPA documents and the competitive lease sale notice.

The BLM moved the statement ''at minimum'' to the end of the final sentence in § 3120.32. Consistent with the original wording in the proposed rule that directed the BLM to consider ''at a minimum'' the listed criteria, this language allows the BLM's authorized officer to consider other unenumerated criteria specific to local circumstances, including those raised in public comments. As such, the BLM declines to add, modify, or remove the preference criteria that were proposed. On a case-by-case basis, stakeholders and the public will be able to provide the BLM with pertinent information on the criteria or additional criteria to consider.

In addition, the BLM will not promulgate a specific weighting for the different criteria within § 3120.32 as the weighting will depend on the specific location and conditions in relation to local circumstances. Instead, the BLM will use the scoping process to inform the weighting for the different criteria. This will allow the BLM to incorporate public feedback on the parcels to be offered on the sale and ensure the BLM appropriately weighs the critical uses or resources. This will also allow the BLM to move forward with parcels that could be considered exploratory. The operator for the area can inform the BLM during the scoping period that it is interested in exploring for oil and gas in this area, which would provide for the BLM to weight the potential development criteria lower. The BLM disagrees that consideration of the preference criteria increases uncertainty or will lead to delays; rather, considering the criteria at the beginning of the leasing process will allow the BLM to more efficaciously select parcels for which to conduct environmental analysis and to offer at the lease sale. Ultimately, this will increase certainty and efficiency in the leasing process by decreasing the number of parcels offered that would not be leased, and relatedly, the number of parcels that are leased but never developed. By considering parcels that make the most sense to lease in terms of expected yields of oil and gas, the BLM is addressing concerns expressed in GAO's report, GAO 21–138, *Onshore Competitive and Noncompetitive Lease Revenues.*[24] The improved management of agency workflow will better use the BLM's time and resources and will not result in delay.

Additionally, rather than duplicating provisions under other statutes, the preference criteria will provide the BLM with an additional tool, consistent with the Secretary's broad discretion to lease lands for oil and gas development, to direct leasing and better avoid or manage conflicting uses of public lands at the outset of the leasing process. Because scoping is part of the NEPA process, application of the criteria will not be duplicative of the NEPA process.

The MLA vests the Secretary with broad discretion to decide, up until the time of lease issuance, whether particular parcels of Federal land ''may be leased'' for oil and gas development, see 30 U.S.C. 226(a). The MLA does not specify how and when this decision is to be made, and courts have consistently recognized the Secretary's discretion. *E.g., Udall* v. *Tallman,* 380 U.S. 1, 4 (1965) (''The [MLA] gave the Secretary of the Interior broad power to issue oil and gas leases on public lands'') *United States ex rel. McLennan* v. *Wilbur,* 283 U.S. 414, 419 (1931) (''there is ground for a plausible, if not conclusive, argument that so far as it relates to the leasing of oil lands [the MLA] goes no further than to empower the Secretary to execute leases which, exercising a reasonable discretion, he may think would promote the public welfare''). The preference criteria fit squarely within this discretion by aiding the BLM in directing leasing towards areas that are more likely to produce oil and gas and that are less likely to have conflicts with other uses.

Additionally, some comments sought clarification regarding the BLM's policy in IM 2023–007, *Evaluating Competitive Oil and Gas Lease Sale Parcels for Future Lease Sales.*[25] The BLM will continue to use this policy to guide the BLM's consideration of the preference criteria to evaluate parcels for competitive lease sales. The BLM's application of the IM as part of scoping has worked well for the 13 sales held in calendar year 2023, which resulted in over $158 million of total receipts.

During the BLM's review of the final rule, the BLM identified an error in the proposed rule for § 3120.32(c). The language in the proposed rule described the evaluation of ''the presence of historic properties, sacred sites, and other high value leasing lands, giving preference to lands that would not impair the cultural significance of such resources.'' In its guidance, however, the BLM described the evaluation of ''the presence of historic properties, sacred sites, or other high value cultural resources, giving preference to lands

[23] *https://www.blm.gov/policy/im-2023-007.*

[24] *https://www.gao.gov/products/gao-21-138.*

[25] *https://www.blm.gov/policy/im-2023-007.*

that do not contribute to the cultural significance of such resources.'' To avoid any implication that ''high value leasing lands'' were akin to historic properties, rather than an independent consideration, ''other high value leasing lands,'' the BLM has changed § 3120.32(c) to read ''other high value cultural resources.''

Finally, the BLM concurs that the other surface management agencies will have extensive knowledge on the relevant parcels and the BLM should give deference to those agencies. Therefore, the BLM is not changing the language in the regulation; however, the BLM's policy going forward will be for the BLM to provide its proposed application of the preference criteria to the surface management agency when requesting consent. The surface management agency can use the information provided by the BLM to determine if it will grant consent. For a parcel with the surface management agency's consent, the BLM may move forward to offer the parcels on a lease sale, irrespective of the preference the BLM would otherwise afford the parcels. As noted above, the Secretary retains full authority under the Mineral Leasing Act to determine which parcels are offered for sale.

Section 3120.33 Agency Inventory of Leasing

The BLM proposed this new § 3120.33 (redesignated from § 3120.42 in the proposed rule) to address the IRA's requirement (section 50265 [26]) that the Department offer leases for a certain amount of land for oil and gas development as a prerequisite to permitting any new solar or wind energy projects. Some of the comments supported the inclusion of this section, stating it is essential that the BLM take this leasing inventory to determine compliance with the IRA.

Some comments noted the new provision provides no calculation method and requested that the BLM consider codifying some of the calculation process set forth in IM 2023–006, *Implementation of section 50265 in the Inflation Reduction Act for Expressions of Interest for Oil and Gas Lease Sales.*[27] Others requested that the BLM should not rely upon IM 2023–006 for the calculation method. The BLM has not made any changes to this provision in the final rule and will continue to rely on the policy as set forth in IM 2023–006 to calculate the acreage.

Some comments suggested the rule be revised to require calculations to be performed on a quarterly basis, rather than leaving it unclear in the rule when to run such calculations. These comments asserted quarterly calculations would allow the BLM to determine the amount of public land acreage needed to be offered to allow wind and solar ROW permit issuance on an ongoing basis. Further, the comments suggested the BLM should only allow parcels receiving a low preference to be leased to allow wind or solar ROW issuance if additional acreage was needed based on the quarterly calculations. These calculations are only required on the day that the BLM would issue a wind or solar energy right-of-way; therefore, the BLM has not made any changes to the final rule based on this comment. The BLM will look at providing a mechanism for both the BLM and the public to generate reports and such calculations on demand.

Multiple comments stated the BLM should clarify in the final regulation that ''the 1-year period refers to the year before the wind or solar energy right-of-way is issued.'' The final rule adopts this recommendation and clarified that the 1-year period refers to the year before the BLM issues the wind or solar energy right-of-way in the final rule.

One comment stated the BLM should require that, before offering any parcel that receives a low preference designation for lease, the agency demonstrate that doing so is necessary to allow issuance of wind or solar ROW permits to comply with the IRA's provisions. The BLM declines to make any changes to the final rule based on this comment as it would needlessly restrict the BLM's discretion to determine which parcels to offer.

Notice of Competitive Lease Sale

The BLM did not receive comments on its proposal to redesignate the following two sections based on the other changes made in the proposed rule.

Section 3120.42 Posting Timeframes

The BLM proposed changes to the existing § 3120.4–2 to clarify its process for identifying parcels for a sale, the public's comment opportunities, and the timing of the BLM's posting of a notice prior to a sale.

Some comments recommended that the rule should: (1) require NEPA compliance documents to be made publicly available at the time the Notice of Competitive Lease Sale is posted; (2) specify that comment periods close at 11:59:59 p.m. (local time) on the last day of the comment period; (3) require key documents and information be translated into those languages that are the primary languages of communities impacted by the particular lease sale; (4) revise the rule to provide schedules for making data and information available to the public; and (5) require parcels to be in a format that both geographic information system (GIS) users and non-GIS users can easily understand. The BLM does not adopt these recommendations as these are provisions best addressed in a handbook as BLM policy guidance. The BLM will continue to allow the BLM state offices to manage the lease sales in a manner that works best for each office. The BLM already implements some of these recommendations and is committed to posting and making the NEPA compliance documents publicly available online. In addition, the BLM is continuing to develop the MLRS such that it will be capable of providing information spatially. Mapped views of the parcels are also displayed from the BLM's internet auction provider.

One commenter stated the key component of environmental justice is meaningful involvement of those most affected by a proposed project, agency action, or decision, while other commenters expressed the opinion that these changes are unwarranted and only serve to invite additional rounds of protests further delaying the leasing process. One commenter stated the BLM should issue the final NEPA documents prior to the lease sale to allow protests to be lodged before leases are sold. The BLM has not made any changes based on these comments. The BLM believes its codification of the opportunities for public comment on parcels to be included in a lease will allow for the meaningful involvement of those potentially most affected. Rather than providing for an additional round of protests, the changes to the regulation merely codify the BLM's current policy.

The final rule makes a minor technical change to include ''or appeals'' at the end of paragraph (a), which is consistent with the text of paragraph (b), and replaces the acronym ''NEPA'' with ''National Environmental Policy Act'' to assist readability of the final rule.

Competitive Auction

The final rule redesignated the following section numbers consistent with the removal of the nomination process from the final rule.

[26] *https://www.congress.gov/bill/117th-congress/house-bill/5376/text.*

[27] *https://www.blm.gov/policy/im-2023-006.*

Section 3120.51 Competitive Auction

The BLM proposed changes to the existing § 3120.5–1 paragraph (a) to remove references to formal nominations, and to delete paragraph (c) for the same reason. The first sentence in paragraph (a) has been rewritten from ''Parcels shall be offered by oral or internet-based bidding'' to ''Parcels will be offered by competitive auction'' in the final rule. One commenter recommended that the BLM change its online auction format to allow parcels to remain open until bidding ceases, as under the current system the parcel is awarded to the highest bidder at the time the parcel times out.

The final rule does not adopt this recommendation. In the online bidding process, bidders are given ample time to review the parcels before a sale period opens for bidding. The bidding time is published, which will vary from sale to sale depending on the number of parcels offered, however the bid open and close time is clearly stated throughout the sale notice and in the auction. In the BLM's experience, most of the bidding occurs in the last few minutes of a parcel closing regardless of how long the bidding window is open. The BLM has found no data to support the assertion that the BLM will receive higher bids if the auction is allowed to run longer. Those bidding have a maximum amount they are willing to spend for a parcel and the amount of time allowed for bidding whether online or in person does not affect this.

Section 3120.52 Payments Required

The BLM proposed changes to the existing § 3120.5–2 to reflect changes enacted by Congress in the IRA and to be consistent with other changes made. The BLM received a comment recommending a change to paragraph (b) to clarify that the authorized officer can select a date other than the day of the sale for the payment.

The final rule adopts this recommendation and moves the phrase ''on the day of the sale for the parcel'' to earlier in the sentence to provide clarity. The final paragraph (b) now reads, ''Each winning bidder must submit, by the close of official business hours on the day of the sale for the parcel, or such other time as may be specified by the authorized officer.''

Some comments expressed the belief that the minimum bid was still too low or should be at least $20 per acre. The final rule does not adopt this recommendation. As previously explained, the minimum bid was changed to reflect the IRA, which requires $10 per acre.

The final rule makes a technical change to the cross reference for the minimum bonus bid in paragraph (b)(1) consistent with other changes in this rulemaking.

Section 3120.53 Award of Lease

The BLM proposed changes to the existing § 3120.5–3 to remove references to the noncompetitive lease process. The BLM received a comment recommending the BLM revise paragraph (b) to state that a ''lease will be awarded to the highest responsible and qualified bidder unless contrary to the public interest.'' The final rule does not adopt this recommendation. The BLM has historically used a public interest requirement in its oil and gas agreements, which require a drilling of a well into the target formation for a CA or drilling of the obligation well for an exploratory unit agreement. Adding a public interest requirement to this section may cause confusion related to the use of this same phrase with agreements. The Secretary still has the discretion to consider the public interest in the ultimate decision of which lands to lease.

A commenter stated that paragraph (d) should be revised to state that the lease will not be issued until all appeals are resolved in addition to the resolution of all protests. The final rule does not adopt this recommendation, because the MLA requires all leases to be issued within 60 days following the payment of any remaining bonus bid and rentals for the first year.

Comments opposing the inclusion of paragraph (e) stated that the BLM should not reject a lease offer without the bidder's consent if the protest is not timely resolved. In this section of the regulations, the BLM may reject a bid if the BLM cannot issue the lease within 60 days as required under 30 U.S.C. 226(b)(1)(A). However, the BLM concurs that it should not reject the bid without the successful bidder confirming that it would prefer its bid to be rejected rather than waiting longer than 60-days for the lease to be issued. Based on this comment, the BLM has revised this section in the final rule by inserting the phrase ''with the consent of the bidder'' to clarify the BLM's intent.

14. Section-by-Section Discussion for Changes to 43 CFR Subpart 3137

The final rule does not make any revisions to the section designations or the headings that appeared in the proposed 43 CFR subpart 3137 regulations. The BLM did not receive any comments on these sections and adopts the proposed changes in the final rule.

15. Section-by-Section Discussion for Changes to 43 CFR Subpart 3138

The final rule does not make any revisions to the section designations or the headings from the proposed rule for the 43 CFR subpart 3138 regulations. The BLM did not receive any comments on these sections and adopts the proposed changes in the final rule.

16. Section-by-Section Discussion for Changes to 43 CFR Subpart 3140

The final rule does not make any revisions to the section headings in the existing 43 CFR subpart 3140 regulations. It does redesignate the sections to make them conform to current Office of the Federal Register (OFR) Document Drafting Handbook requirements.

Section 3140.13 Exploration Plans

The BLM identified that paragraph (c) contained a technical error and referenced an outdated section number of the regulations. The final rule corrects the reference to § 3140.23. The BLM did not receive any comments on § 3140.13 and did not make any other changes to the final rule.

Section 3140.14 Other Provisions

The BLM proposed changes to the existing § 3140.1–4 to update the rental and royalty provisions. The BLM identified that existing paragraph (a) contained a technical error and referenced an outdated section of the regulations. The final rule corrects the references to 43 CFR 3101.21 and 3101.22. One comment suggested that the current rule set out the actual required rental amounts to ensure the regulations serve as an orderly source for basic information. The BLM revised paragraph (b) to provide this reference.

The BLM received a comment on paragraph (d) referencing the unitization provisions in 43 CFR part 3180. The commenter recommended that the BLM revise the final rule to provide that a lease, or part of a leasehold, having been made part of a unitized area will not be sufficient to extend the primary term of the entire leasehold and if the lessee fails to take actions to extend those portions of the lease outside of the unitized portion of the leased lands, the lease should expire as to those excluded lands. The BLM reviewed this comment and determined the suggested revision is unnecessary as it is already addressed inf 43 CFR 3107.32.

17. Section-by-Section Discussion for Changes to 43 CFR Subpart 3141

The final rule does not make any revisions to section headings in the existing 43 CFR subpart 3141

regulations. It does redesignate the sections to make them conform to current OFR Document Drafting Handbook requirements.

Section 3141.8 Other Applicable Regulations

The BLM did not receive any comments on the existing § 3141.0–8. However, when the BLM reviewed the regulations during drafting of the final rule, it identified that it needed to update § 3141.8(a)(1)(ii) to reflect the provisions in § 3140.14(a). Under 30 U.S.C. 226(b)(2)(A)(iv), ''no lease issued under this paragraph shall be included in any chargeability limitation associated with oil and gas leases.'' Therefore, the BLM updated this paragraph after reviewing the law and the applicable **Federal Register** notices that established these two sections of the regulations. See 48 FR 7420 (February 18, 1983), 47 FR 25720 (June 14, 1982), 47 FR 8734 (March 1, 1982), and 47 FR 22474 (May 24, 1982). Paragraph (ii) contained a technical error as it incorrectly applied the chargeable acreage and acreage limitations to combined hydrocarbon leases. Therefore, the BLM revises § 3141.8(a)(1)(ii) in the final rule to provide that all of 43 CFR 3101 applies to combined hydrocarbon leases, except for the chargeability limitation associated with oil and gas leases.

In addition, the BLM corrected an incorrect cross reference in proposed § 3141.8(a)(1)(iv). This final rule changes the cross references in this section to §§ 3103.21, and 3103.31(a), (b), and (c).

In addition, the BLM updated the cross reference in § 3141.8(a)(1)(vii) because the final rule adds another paragraph, which changed the reference to § 3106.10(j).

Finally, the BLM updated the cross reference in § 3141.8(c)(1)(ii) because the proposed rule referenced an incorrect citation. The final rule will correct the references to §§ 3103.31 and 3103.32 instead of § 3103.30.

Section 3141.53 Royalties and Rentals

The BLM proposed changes to the existing § 3141.5–3 mainly to address changes required by Congress in the IRA. One commenter objected to royalty rate reductions for tar sand leases and recommended that the royalty rate not be reduced. The BLM understands the concern but cannot make this change as the reduction is allowed by the statute, see 30 U.S.C. 226(b)(2)(D).

Section 3141.63 Conduct of Sales

The BLM proposed eliminating paragraph (a) and updating (b) to provide a consistent approach for combined hydrocarbon leases and tar sand leases. One commenter objected to the noncompetitive leasing of additional lands for tar sand development. The BLM can no longer issue noncompetitive tar sand leases after the passage of the IRA [28] and does not include a provision in the final rule that provides for noncompetitive leasing; therefore, the BLM did not make any changes to the final rule based upon this comment.

18. Section-by-Section Discussion for Changes to 43 CFR Subpart 3142

The final rule does not make any revisions to the numbering or section headings from the proposed rule for the 43 CFR 3142 regulations. The BLM did not receive any comments on these sections and adopts the proposed changes in the final rule.

19. Section-by-Section Discussion for Changes to 43 CFR Subpart 3151

The final rule does not revise the proposed section designations or their headings in the 43 CFR subpart 3151 regulations.

Section 3151.30 Collection and Submission of Data

The BLM proposed revising the existing § 3151.30 to require a permittee to submit to the BLM all data and information collected under a geophysical exploration permit. A commenter expressed concern related to the potential release of geophysical exploration data to competitors through a Freedom of Information Act (FOIA) request. The BLM understands the concern that geologic data be kept confidential. Geological and geophysical data is exempt from release under FOIA pursuant to exemption 9, 5 U.S.C. 552(b)(9). Although exemption 9 under FOIA would allow this information to be exempt from release, the BLM also updated the final regulations to ensure it is clear that the BLM would not release this information to the public by including new paragraph (b), which adds the statement that all information submitted under this section ''is presumptively confidential business information.''

The commenter also stated that the BLM provided no basis for why the BLM needs this information, how it will be used, or with whom it will be shared. Such data will support the BLM's review and analysis of oil and gas agreement applications and oil and gas leasing decisions. The BLM will use this data to inform an area's oil and gas development potential. In addition, the geophysical exploration data will allow the BLM to make better decisions related to an exploratory unit agreement's boundary by ensuring that the unit area encompasses only those lands necessary for the proper development of the unitized resources. This information is exempt from release to the public under exemption 9 of FOIA, and the BLM will respect and maintain the confidentiality of the information.

20. Section-by-Section Discussion for Changes to 43 CFR Subpart 3160

The final rule does not make any revisions to the section designations or their headings in the existing 43 CFR subpart 3160 regulations.

Section 3160.0–5 Definitions

The BLM proposed revising existing definitions and added some new definitions. The final rule does not make any changes from the proposed rule for the definitions within the existing § 3160.0–5.

One commenter requested that the BLM defer to the definitions and analysis from State regulatory bodies for what constitutes temporarily abandoned and shut-in wells, because the proposed regulations do not match State standards and could lead to inconsistency and confusion, particularly on Federal wells that are communitized with State or fee leases. The BLM understands the concern; however, the BLM declines to adopt this change because the BLM's definitions are in keeping with its statutory authority. For example, 30 U.S.C. 226(i) states that a lease will not expire if it contains a well capable of producing oil or gas in paying quantities. The BLM's proposed definition reflects this statutory requirement by defining ''temporary abandoned well'' as ''a nonoperational well that is not physically or mechanically capable of production or injection without additional equipment or without servicing the well, but that may have future beneficial use.'' Thus, a temporarily abandoned well would not be considered capable of production. This differs from, for example, the Wyoming Oil and Gas Conservation Commission's definition for ''temporarily abandoned'' that would not comport with the statutory framework. That definition is ''a well in which the completion interval has been isolated from the wellbore above and the surface. The completion interval may be isolated by a retainer, bridge

[28] Inflation Reduction Act, Section 50262(e), *https://www.congress.gov/bill/117th-congress/house-bill/5376/text.*

plug, cement plug, tubing and packer with tubing plug, or any combination thereof.'' In addition, each State has different definitions for temporarily abandoned wells and shut-in wells. If the BLM deferred to State regulatory body definitions, the BLM would have internal inconsistencies related to well status definitions, which would result in inconsistent regulatory and policy implementation based on different definitions for temporarily abandoned wells and shut-in wells. Therefore, the BLM declines to adopt this recommendation.

A commenter requested that the rule provide a definition of ''temporarily abandoned well'' that includes a reference to a well that may have ''future beneficial use'' and provided a recommended definition of ''a well that has the potential to produce oil and natural gas in the future as deemed by a reasonable operator including after recompletion, workover, and other maintenance activities. It also includes wells that have potential for geothermal, carbon management, scientific applications, technological advances, or other exploration and production related activities.'' The BLM declines to provide the definition as proposed by the commenter in the final rule and notes that reuse or conversion of wells for other purposes is not the subject of this rule. Moreover, the commenter's proposed definition varies significantly from the BLM's current policy regarding whether a well is producing or is abandoned, as found in Attachment 4 of IM 2020–006, *Idled Well Reviews and Data Entry,*[29] which provides guidance to BLM personnel about whether they should take any action with respect to wells that are not currently producing in an effort to prevent such wells from becoming orphan wells. Attachment 4 states the BLM ''will consider a well to have future beneficial use if the operator will be able to use the well to generate royalties in lease paying quantities or will support the operator's efforts to generate royalties from other wells on the lease.'' Therefore, the BLM did not make any changes to the definitions based upon this comment.

Another commenter recommended that the BLM define idled well, orphaned well, and inactive wells. The BLM declines to define these terms because the BLM does not use these in the regulations. In addition, the law defines both idled wells at 42 U.S.C. 15907(a)(2) and orphaned wells at 42 U.S.C. 15907(a)(5).

Finally, a comment recommended updating the definition of maximum ultimate economic recovery to include references to the BLM's responsibilities under FLPMA. The BLM declines to update this definition at this time. The BLM uses this definition in parts 3160 and 3170 to identify the maximum amount of oil and gas that could be produced from the reservoir using existing technology. This definition already is used in conjunction with the FLPMA requirements in part 3160 (see 43 CFR 3162.1(a)). In part 3170, the term is used to determine if a variance is appropriate (see 43 CFR 3173.14(b)(4)) and in relation to off-lease measurement. Based upon a review of the usage of the maximum ultimate economic recovery in the regulations, the BLM determined that it was unnecessary to include references to the BLM's responsibilities under FLPMA as part of this definition.

21. Section-by-Section Discussion for Changes to 43 CFR Subpart 3162

The final rule does not make any revisions to the section designations or their headings in the existing 43 CFR 3162 regulations.

Section 3162.3–4 Well Abandonment

The BLM received many comments both in support of and expressing concern on the proposed revision of the requirements for operators to monitor, track, and report on shut-in and temporarily abandoned wells. After reviewing the comments, the BLM has made the following changes:

(1) Reorganized paragraphs (c) and (d) pertaining to temporarily abandoned wells to ensure they are easy to read;

(2) Matched the plugging requirement between shut-in and temporarily abandoned wells in paragraph (d);

(3) Clarified in paragraph (e) that an onshore operator will only need to report a well as shut-in if the well will be shut-in for 90 consecutive days; and

(4) Required mechanical integrity tests every 3 years after a well is shut-in or temporarily abandoned in paragraph (f).

For paragraph (b), one commenter objected to the requirement that ''[a]ll costs over and above the normal plugging and abandonment expense will be paid by the party accepting the water well.'' The commenter recommended that the BLM revise this paragraph to allow the operator of the well, the State, a grazing association, or any other non-Federal entity to pay the additional costs if a well is being conditioned into a water supply source. The BLM did not propose any changes to this paragraph and disagrees with the commenter. If the operator does not need the water well and it is not supporting on-lease activity, the BLM cannot require the operator to cover any additional costs related to setting up the well as a water well. If the operator of the well, the State, a grazing association, or any other non-Federal entity agrees to pay the additional costs for a well to be conditioned into a water supply source, the BLM will work with the funding entity and the party accepting the water well. In general, this would be a private arrangement between the party accepting the water well and the other entity. The BLM did not make any changes to the final rule based upon this comment.

In reviewing the final rule for clarity, the BLM identified that the requirements for temporarily abandoned wells were included in a single paragraph at paragraph (c) in the proposed rule and were difficult to follow. Therefore, the BLM split paragraph (c) into two paragraphs (c) and (d) in the final rule and re-structured paragraph (d) to match the format for the requirements for shut-in wells in the final rule with the format for the requirements for temporarily abandoned wells.

Although a few commenters expressed support for the 4-year requirement to plug temporarily abandoned wells, one commenter recommended a 2-year requirement, and other commenters expressed concerns that the 4 years proposed was too short. The BLM reviewed these comments and identified that there are legitimate reasons why a well may need to remain temporarily abandoned for longer than 4 years. For example, an operator may be looking at converting a field for enhanced recovery. Until the operator has constructed the infrastructure to support the operations, multiple wells may need to be temporarily abandoned since they will not be used until the operator starts injections. Based upon this scenario and other considerations expressed in the comments, the BLM updated the final rule in paragraph (d) (paragraph (c) in the proposed rule) to match the requirements for shut-in wells and temporarily abandoned wells for final abandonment. The final rule now provides an option to ''provide the authorized officer with a detailed plan and timeline for future beneficial use of the well. If the authorized officer determines that there is a legitimate future beneficial use for the well, the officer may allow the operator to delay permanent abandonment by an additional 1 year. The authorized officer may grant additional delays in 1-year increments, provided that the operator confirms the future beneficial use of the well and is making verifiable progress

[29] *https://www.blm.gov/policy/im-2020-006.*

on returning the well to a beneficial use.'' This language matches the requirements for shut-in wells.

In revising the regulation to allow a well to be temporarily abandoned for longer than 4 years, the BLM determined that it needed to ensure that these nonoperational wells maintain their mechanical integrity. Therefore, the BLM added paragraph (f) to require mechanical integrity tests every 3 years, after the first mechanical integrity test is done. This section states, ''All wells that are temporarily abandoned or shut-in must have mechanical integrity verified as required in (d)(1) and (e)(2) and must ensure that mechanical integrity is verified every 3 years thereafter. The operator must submit the results of each verification of mechanical integrity to the Authorized Officer within 30 days of the mechanical integrity test.''

One commenter requested that a provision be added to the regulations that allows recreational access to the reclaimed locations. Once the lands have been reclaimed and the BLM has accepted an abandonment notice, the public may use the lands for recreation, provided the applicable RMP allows for such use.

One commenter expressed concerns related to the proposed rule's requirement that ''no well may be temporarily abandoned for more than 30 days without the prior approval of the authorized officer.'' The commenter requested that the BLM extend the temporary abandonment period for which a notice and prior approval is required from 30 days to 90 days. The thirty-day period has been in place since 1988, and the BLM is unaware of evidence showing that it or operators have experienced hardship from the period. Therefore, the BLM kept the current requirement of 30 days for notice and prior approval.

The BLM requested comments on whether to require a bond adequacy review when a well is temporarily abandoned. The BLM received comments in support and opposition to this proposal. After reviewing the comments, the BLM has decided not to require a bond adequacy review for a change in well status, including temporary abandonment of a well. The BLM can review the adequacy of a bond at any time, and the new reporting and operational requirements for operators of temporarily abandoned wells will allow enhanced oversight of these wells. The BLM considers the discretionary authority to review a bond, combined with the new reporting and operational requirements, sufficient to effectively manage any risks to the environment associated with these types of wells without needing to require a bond adequacy review.

Commenters expressed concerns that the extra administrative requirements related to temporarily abandoned and shut-in wells will become overly burdensome for the BLM to administer and will result in contradictory guidance and confusion for operators balancing between State and Federal regulations. One commenter also mentioned the number of orphaned wells that have been identified on Federal lands. Another commenter suggested the BLM should not require operators to report a well status change to the BLM because ONRR requires operators to report on ONRR Form-4054 (''OGOR'') the well status (Well Status codes 12 (OSI) and 13 (GSI)) beginning with the last month of drilling and continuing until the operator abandons the well. Another commenter stated that the BLM should accept all sundry notices for temporarily abandoned or shut-in wells as prima facia rationale and timing parameters for these nonoperational wells. After reviewing the comments, the BLM identified that paragraph (d)(1) in the proposed rule required operators to report whenever a well is shut-in. The BLM did not intend for an operator to report each time a well is shut-in. Instead, the BLM need only be notified if the well would be shut-in for 90 consecutive days. Therefore, the BLM revised this section to state, ''Notify the authorized officer of the well's shut-in status, if the well will be shut-in for 90 or more consecutive days, and provide the date the well was shut-in within 90 days of well shut-in.'' As for the administrative burden concerns, the BLM has reduced the operator's administrative burden with this change since the operator would not need to submit a notice for each shut-in well. Instead, the operator will only submit a notice for each well shut-in for 90 or more consecutive days. The final rule will also reduce the BLM's burden as the BLM can use the notifications to update well status instead of requiring the BLM to inspect wells or review ONRR or State agency data on well status. The BLM will review notification of shut-in or temporarily abandoned status to determine if the rationale for shutting-in or temporarily abandoning the well are supported by the information provided in the notice. The BLM will accept the sundry notice and update the well status in its system; however, the BLM will not provide a guarantee that it will consider each sundry notice as prima facia rationale for the status change. The BLM has a responsibility to the American public to ensure that unplugged non-operational wells are still necessary to support lease operations. If the unplugged non-operational well will not support future lease production, then the BLM will request that the operator plug and abandon the well.

Finally, the BLM reorganized this section in the final rule. The BLM removed the requirements for temporarily abandoned wells from paragraph (d) and left the reclamation requirements for all wells permanently abandoned within paragraph (c). The BLM reorganized paragraph (d) for temporarily abandoned wells to add subparagraphs and ensure the language in the final rule was clear. The BLM redesignated the section for shut-in wells to paragraph (e). The BLM also added paragraph (f) to cover the requirements for mechanical integrity tests. The BLM makes these changes in the final rule to more clearly inform the regulated community of the requirements.

22. Section-by-Section Discussion for Changes to 43 CFR Subpart 3164

The final rule does not make any revisions to the section designations or their headings in the existing 43 CFR subpart 3164 regulations.

Section 3164.1 Onshore Oil and Gas Orders

The BLM changed the existing paragraph (b) to clarify that there are no Onshore Oil and Gas Orders currently in effect. Since the BLM codified the Onshore Oil and Gas Orders in 43 CFR part 3170,[30] the BLM wants to ensure the regulated community is aware that they must follow 43 CFR subpart 3171. Therefore, the BLM removes the references to the Onshore Orders in this section. All of the Onshore Oil and Gas Orders are now codified in 43 CFR subparts 3171, 3172, 3176, and 3177. See 88 FR 39514 (June 16, 2023).

23. Section-by-Section Discussion for Changes to 43 CFR Subpart 3165

The proposed rule revised the heading for 43 CFR 3165.1 from ''Relief from operating and producing requirements'' to ''Relief from operating and/or producing requirements.'' The BLM did not receive any comments on this change and did not make any other changes in the final rule.

[30] Onshore Oil and Gas Operations; Federal and Indian Oil and Gas Leases; Codification of Onshore Orders 1, 2, 6, and 7 (88 FR 39514, June 16, 2023). *https://www.federalregister.gov/documents/2023/06/16/2023-11742/onshore-oil-and-gas-operations-federal-and-indian-oil-and-gas-leases-codification-of-onshore-orders.*

Section 3165.1 Relief From Operating and/or Producing Requirements

The BLM revised the existing § 3165.1 to encourage diligent development of leased lands and to ensure that any lease suspensions are justified and have a clearly stated end date. The BLM received many comments on the proposed rule related to changes to oil and gas lease suspensions. The final rule revises paragraph (c) to add the word ''only'' before ''cites'' and replace the acronym ''APD'' with ''application for permit to drill.''

A commenter expressed concerns regarding the proposed changes in light of the BLM's own delays in processing APDs and lease suspensions and with agency policy against ''premature suspensions.'' The commenter asked the BLM to clarify its intent so that lessees can clearly understand the appropriate time by which they should submit any requests for suspensions. The BLM agrees and drafted paragraph (c) to specify the timeframe for a submission of an APD such that a lessee could seek a suspension based upon a pending APD. The BLM does not believe any other changes are necessary.

For paragraphs (a) and (b), one commenter recommended that the final rule should require the ''full statement'' to include a showing of leaseholder diligence, 2and absent a showing of diligence, the BLM would be required to deny the request for relief. The BLM's existing policy in Manual Section 3160–10, *Suspension of Operations and/or Production,*[31] already suggests the BLM ensures that a lessee is diligently developing its lease prior to granting a suspension. The manual states, ''Suspension of operations may be directed or consented to by the authorized officer in cases where a lessee is prevented from operating on the lease, *despite the exercise of care and diligence,* by reason of force majeure, that is, by matters beyond the reasonable control of the lessee.'' (*Emphasis added*). The manual has similar guidance for suspensions of production. In addition, the BLM also not infrequently grants suspensions when litigation precludes development on an undeveloped lease. In these cases, the lessee could not provide a showing of leaseholder diligence when requesting a lease suspension because the BLM recently issued the lease. Therefore, the BLM did not make any changes in the final rule further specifying requirements for the full statement.

One commenter stated that the BLM should not add paragraph (c) into the final regulations, but instead leave the substance of the paragraph in guidance. Additionally, multiple commenters claimed that the authorized officer should have flexibility to approve a lease suspension in spite of the timing of the APD, if the officer believes it would be appropriate given the circumstances. The commenter then stated that the BLM should not push the operator towards diligent development, as the submission of an APD is a business decision based on markets, investment capital, supply chains, labor and equipment availability, and other factors and that the failure to act ''diligently'' to develop a lease has no adverse impacts on the environment. This is outlined in existing policy at Instruction Memorandum 2023–012, *Suspensions of Operations and/or Production,*[32] and the BLM agrees that the submission of an APD is a business decision for the lessee. The BLM has opted to incorporate this requirement in regulation, however, to ensure that BLM offices apply this requirement in the same way to promote fairness to all operators. The proposed changes provide definitive notice to operators and the BLM's authorized officers on processing these types of lease suspension, and therefore, the BLM did not make any changes based upon this comment.

Other commenters stated that the 90-day threshold proposed by the BLM is arbitrary, because there is no recorded evidence that the BLM can approve an APD in 90 days. The BLM proposed the 90 days based upon the BLM's average processing time for an APD across all BLM offices. The BLM provided this information in the preamble. In fiscal year 2022, the BLM's average processing time did increase to 162 days; however, the BLM decided to keep with the 90-day limit as it represents an average over a period of 3 years.

The commenters also recommended that instead of a set timeframe, the BLM should deny suspension requests based on a proposed action necessitating NEPA analysis, which cannot reasonably be completed prior to the lease expiration date; based on events the lessee could have and should have foreseen or avoided; and based on unknown, speculative, and or future events. Finally, the commenters recommended that the BLM should deny suspensions based upon adjacent unleased lands as the commenter considered these types of suspensions ripe for abuse and mismanagement. The BLM declines to make any changes to the rule based on these recommendations given the existing discretion of the authorized officer. For example, if the operator nominates adjacent unleased lands that are needed for development and are scheduled to be offered on an upcoming lease sale within the few months, the BLM does not see this as an unreasonable request.

Comments demonstrated confusion with the application of paragraph (c), seemingly believing that the APD submission requirement applies to all suspensions. This provision only applies when the applicant cites the pending APD as the sole basis for the suspension. If a lease needs to be suspended in the interest of conservation or for force majeure due to reasons other than a pending APD, then the BLM will not require an APD to be filed at least 90 calendar days prior to the expiration date of the lease. To remove the confusion, the BLM modifies the final rule by inserting the word ''only'' prior to the word ''cites.'' In addition, to increase readability, the BLM replaced the acronym ''APD'' with the words ''application for permit to drill'' as the BLM has not defined the acronym ''APD'' in part 3160.

In addition, one commenter stated that approving suspensions for only 1 year is arbitrary. The 1-year time frame ensures that suspensions are not granted for a longer period than necessary, and it provides a clear and easily trackable timeframe for both the BLM and lessees, which allows both parties to ensure compliance with applicable lease terms, such as the resumption of paying rentals or royalties. The BLM implemented an annual review of lease suspensions in Permanent Instruction Memorandum 2019–007, *Monitoring and Review of Lease Suspensions,*[33] after receiving GAO's recommendations in report GAO–18–411, *Oil and Gas Lease Management: BLM Could Improve Oversight of Lease Suspensions with Better Data and Monitoring Procedures.*[34] The BLM determined the 1-year timeframe was appropriate in this rulemaking because it conforms with BLM's existing policy. If, after a year, there is still a valid need for a suspension, a lessee may request a further extension.

Other commenters supported approving suspensions for 1 year; however, they also recommended that the BLM modify the final regulations to allow for only one extension to an oil and gas lease suspension. One commenter stated that the BLM should

[31] *https://www.blm.gov/sites/default/files/docs/2022-03/MS-3160-10%20Rel.%203-150.pdf.*

[32] *https://www.blm.gov/policy/im-2023-012.*

[33] *https://www.blm.gov/policy/pim-2019-007.*

[34] *https://www.gao.gov/products/gao-18-411.*

only grant additional suspensions in those situations where the lessee or operator is prevented from operating or producing due to force majeure. The BLM declines to accept this suggestion to limit suspensions to those based on force majeure because the MLA allows for suspensions of operations and production in the interest of conservation. The BLM will evaluate requests for suspension extensions to ensure the bases for the suspension remain valid, the operator has met any diligence requirements or other conditions of approval in the original approval, and the suspension is authorized by the MLA.

The BLM received several comments on paragraph (e) urging the BLM to modify this provision to only allow a directed suspension to last 1 year. The commenters claimed that long-term suspensions do not further the public interest or properly conserve natural resources and instead encumber public lands by making them unavailable for other uses and for other potential leaseholders, as well as fail to provide taxpayers with a fair return for the lease of public lands. The BLM declines to make this change. Given the reasons for which the BLM is authorized to issue a directed suspension, such as a court order, the suspension must remain in effect until the court allows operations.

24. Section-by-Section Discussion for Changes to 43 CFR Subpart 3171

The final rule does not make any revisions to the section designations or their headings in the existing 43 CFR subpart 3171 regulations.

Section 3171.14 Valid Period of Approved APD

The BLM received many comments on the proposed rule related to changing the term of an approved APD from the current 2 years with an optional 2-year extension to a 3-year term without extensions. The BLM received comments both in support and with concerns related to the proposed changes. After reviewing the comments, the BLM has made the following changes: (1) omitted the word ''ordinarily'' from paragraph (a); (2) clarified that the APD term in the regulations only applies to APDs approved after the effective date of the final rule; (3) clarified that the well must be drilled to total measured depth in paragraph (b); (4) clarified that paragraph (b)(1) includes wells drilled to approximate total measured depth and not yet completed; (5) stated that paragraph (b)(3) will only apply if the operator set the surface casing for the well and submits a plan to finish drilling and complete the well; (6) provided that the plan in paragraph (b)(3) must include the timeframe for continuously drilling and completing the well and any extenuating circumstances that may delay the continuous drilling and completion of the well; (7) specified that earthwork for reclamation must be completed within 6 months of the approved APD's expiration; and (8) added paragraph (e) to provide for the extension of an APD's term when the underlying lease is suspended.

Many commenters supported the BLM's proposal to extend the initial term of an approved APD from 2 to 3 years; however, multiple commenters recommended that the BLM establish a 4-year term for approved APDs. Commenters stated that a 4-year term for an approved APD would enable the BLM to process APDs efficiently and would provide consistency for industry. The BLM rejected this change, since approximately 95 percent of the approved APDs drilled under the existing regulations have been drilled within 3 years from the date of approval. By providing a set term without the option to extend, the BLM is providing more certainty for the industry to allow it to properly plan any operations. The remaining five percent may submit a new APD. Given the small percentage of operators who do not normally drill a well within 3 years of approval of an APD, the BLM believes the administrative burden on an operator of filing a new APD is justified in light of the BLM's interest in ensuring the public lands subject to an oil and gas lease are diligently developed.

One commenter encouraged the BLM to modify the rule and keep the current 2-year period for an approved APD with allowable extensions, stating the rule would have negative effects by increasing the BLM's administrative burden and requiring additional environmental review. The BLM disagrees. Currently, the BLM spends approximately 3,800 hours annually on processing APD extension requests. In some cases, the NEPA analysis is stale, and the BLM must complete a new analysis on the APD to verify that the impacts identified have not changed. This rule will reduce the administrative burden on both the BLM and the operator as extension requests would no longer be needed. The burden on the BLM would be further reduced by obviating the need for any potential additional NEPA analysis to support an extension. In addition, the 3 years in which to use an APD will provide sufficient time for 95 percent of the operators. Therefore, the BLM did not make any changes based upon this comment.

A commenter stated that changing the term of an approved APD from 2 years to 3 years without the possibility of an extension would kill many oil and gas projects before they ever get off the ground. The commenter supported this statement citing the length of time required to comply with NEPA. Without recourse to an extension, an operator is left without any means to maintain a lease. Often an operator is prevented from drilling due to circumstances completely out of their control. The comment encouraged the BLM to examine the negative effects the rule will have in this regard. The BLM believes the comment is confusing oil and gas lease suspensions and approved APD extensions. The BLM will still grant lease suspensions, which will allow an operator to maintain its lease if the suspension requirements are met, and which toll the running of the term of any previously issued permit to drill. This provision only addresses extensions for APDs. Moreover, even if a well is not drilled within the 3-year time period, as noted above, an operator can submit a new APD.

Another commenter recommended that the BLM omit the word ''ordinarily'' from paragraph (a) to avoid confusion. The comment stated that since ''ordinarily'' implies there is an exception, it is unnecessary with the ''notwithstanding'' clause, which is already addressed in paragraph (b). The BLM concurred with this recommendation and deleted the word ''ordinarily'' from paragraph (a).

In addition, one commenter requested that any change in terms to approved APDs only apply to the APDs approved and issued subsequent to the publication of a final rule. The BLM concurs with this recommendation. The BLM modified the final rule to clarify that the 3-year term only applies to APDs approved after the effective date of the rule. Consistent with general principles of retroactivity, any APD approved prior to the effective date of this rule will be eligible for a 2-year extension in accordance with the regulations in place when the BLM approved the APD.

For paragraph (b), a commenter requested that the rule specify either total vertical depth or total measured depth in the final rule. The BLM specifies total measured depth in the final rule as measured depths matches the requirements in an approved APD. A horizontal well drilled to total vertical depth would likely not be productive in paying quantities and would not meet the plans in the approved APD.

For paragraph (b)(1), a commenter requested that the BLM specify in the regulations that drilling, but not completing, would provide for the APD approval to remain valid. The BLM intended as much and has clarified the final rule by adding the statement ''including wells drilled to approximate total measured depth and not yet completed'' to paragraph (b)(1).

For paragraphs (b)(1) and (b)(2), a commenter recommended that the BLM set a time limit of one-year for any extensions beyond the initial term of the APD based on the criteria outlined in the proposed regulation. The BLM declines to provide for a further extension of an APD under either (b)(1) or (b)(2). In both of these scenarios, a well has already been drilled to the approximate total measured depth as authorized by the APD. Instead, the BLM will administer the wells as shut-in or temporarily abandoned if the well is not yet producing at the expiration of the APD. This allows the BLM to track and manage these wells under 43 CFR 3162.3–4. Therefore, there is no need to set a limit of one-year for paragraphs (b)(1) and (b)(2) in this section.

The BLM received multiple comments on paragraph (b)(3). Some commenters considered the requirement for the plan to be vague and that the regulatory language leaves the authorized officer with no guidance for approving such a plan. A separate comment recommended that the BLM accept reasonable plans to complete drilling any well to total depth if the operator has set surface casing prior to the APD expiring. The BLM reviewed the many comments on the plan required by this section and recognized that more information on the plan should be added to the regulations. Based on these comments, the BLM has revised paragraph (b)(3) to specify that the ''plan must include the timeframe for continuously drilling and completing the well and any extenuating circumstances that may delay the continuous drilling and completion of the well.''

In addition, multiple commenters encouraged the BLM to delete paragraph (b)(3). They asserted that paragraph (b)(3) would allow APD extensions based only on submission of a drilling plan to the BLM, with no requirement that on-the-ground activity have taken place, undermining the goal of diligent development. They further contended it may risk further waste of public lands and resources. The BLM concurs that the operator should be pursing diligent development with a showing of on-the-ground activity. The BLM modified paragraph (b)(3) to require that on-the-ground activity has taken place to ensure the operator has started development under the APD. For the final rule, the BLM updated paragraph (b)(3) to require the operator to have set the surface casing for the well and to have submitted a plan. This will ensure the operator is working towards developing its lease with a real effort to begin development. In addition, as noted above, one comment recommended the BLM accept reasonable plans to complete drilling any well to total depth if the operator has set surface casing prior to the APD expiring. Therefore, the BLM considered requiring surface casing for the BLM to consider a plan as a reasonable approach for paragraph (b)(3).

For paragraph (c), a commenter expressed concern that an operator may not be able to submit an APD to finish drilling the well during the time allowed under the proposed regulations, and the regulations would then require the operator to immediately comply with all applicable plugging, abandonment, and reclamation requirements. This was not the intent in the proposed rule; therefore, the BLM updated the final rule to provide two options for an expired APD. The ''operator or lessee must either comply with all applicable plugging, abandonment, and reclamation requirements or submit a new APD covering the existing disturbance.''

The BLM received a comment on paragraph (d) suggesting that the BLM should specify the timeframe by which reclamation must start once an APD expires. The BLM's existing regulations require earthwork for reclamation to begin within 6-months of well completion or well plugging under 43 CFR 3171.25(b)(2). To be consistent with 43 CFR 3171.25(b)(2), the final rule updates paragraph (d) to state, ''Earthwork for reclamation must be completed within 6 months of APD expiration (weather permitting).''

Multiple commenters expressed concern that the BLM proposes to no longer grant extensions to an APD's term. Some commenters expressed a concern that the lack of an APD extension would disadvantage project proponents in situations where drilling was delayed for a variety of on-the-ground reasons and there is not a way to seek an APD extension. Another commenter mentioned the need for extensions when there is litigation challenging the NEPA compliance for the lease or APD because the BLM cannot take any action on an APD when there is ongoing litigation. Upon review of the comments, the BLM recognizes that there is a valid concern related to litigation challenging the issuance of leases; therefore, the BLM added paragraph (e), which will allow the BLM to adjust an APD's term when the lease is suspended. The new paragraph (e) states, ''The valid period for an approved APD on a lease suspended under subpart 3103 will be adjusted to account for the suspension. Beginning on the date the suspension is lifted, the valid period of the approved APD will be extended by the time that was remaining on the term of the approved APD on the effective date of the suspension.'' This addition will allow the BLM to extend the term of an approved APD based upon an oil and gas lease suspension of operations and/or production. The BLM will not grant general extensions as the 3-year APD term will provide sufficient time for the Federal operator to drill a well under an approved APD.

25. Section-by-Section Discussion for Changes to 43 CFR Subpart 3181

The BLM identified that 43 CFR 3181.5 should be updated to recognize the changes to royalty made by the IRA. The BLM has revised the existing § 3181.5 in the final rule to reflect the increased royalty rate.

Finally, the rule will not make any revisions to the section designations or their headings in the existing 43 CFR subpart 3181 regulations.

Section 3181.5 Compensatory Royalty Payment for Unleased Federal Land

During the public comment period, the BLM discovered that § 3181.5 of the current regulations still references a royalty rate of 12.5 percent. As discussed earlier, in the IRA, Congress changed the royalty rate for onshore Federal oil and gas leases to 16.67 percent, a rate that will last until August 2032, at which time, the royalty rate becomes not less than 16.67 percent and subject to further increases. Therefore, the BLM is replacing the 12.5 percent royalty in § 3181.5 with the language ''the current royalty percentage for leases offered on onshore oil and gas lease sales.'' This will allow BLM offices to enter the appropriate royalty rate based upon the latest onshore oil and gas lease sales for the area.

26. Section-by-Section Discussion for Changes to 43 CFR Subpart 3186

During the comment period, BLM employees identified that a section in the model onshore unit agreement for unproven areas should be updated to recognize the changes Congress made to royalty rates in the IRA.

Section 3186.1 Model Onshore Unit Agreement for Unproven Areas

Section 17(b) of the model onshore unit agreement for unproven areas still references the old royalty rate of 12.5 percent. Because Congress changed the royalty rate in the IRA for onshore Federal oil and gas leases to 16.67 percent, the BLM is replacing the 12.5 percent royalty in Section 17(b) of the model onshore unit agreement for unproven areas with the language ''(current royalty for leases offered on onshore oil and gas lease sales).'' This will allow BLM offices to enter the appropriate royalty rate based upon the latest onshore oil and gas leases.

The BLM is republishing the revised model onshore unit agreement for unproven areas in the final rule in its entirety because the OFR is unable to make a piecemeal edit to the document. The document is not regulatory and, in conformance with current OFR Document Drafting Handbook requirements, cannot be given section numbers. Instead, the model onshore unit agreement for unproven areas must be redesignated in the final rule as Appendix A to Part 3180. The BLM uses this model form to identify where new unit agreements do not match the model form and ensures any differences from the model form are in the public interest.

Likewise, at the direction of the OFR, the BLM is redesignating four other models and exhibits that comprise the remainder of existing subpart 3186. These items will appear in the final rule as follows: (1) § 3186.1–1 Model ''Exhibit A'' will appear as Appendix B to Part 3180; (2) § 3186.1–2 Model ''Exhibit B'' will appear as Appendix C to Part 3180; (3) § 3186.3 Model for designation of successor unit operator by working interest owners will appear as Appendix D to Part 3180; and (4) § 3186.4 Model for change in unit operator by assignment will appear as Appendix E to Part 3180. The final rule does not revise the contents of Appendices B through E.

Cross refences in §§ 3107.10(a), 3181.1 and 3183.4(a) are revised in the final rule to reflect the redesignated appendices.

Procedural Matters

A. Regulatory Planning and Review (E.O. 12866, E.O. 14094, E.O. 13563)

E.O. 12866, as amended by E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) within the Office of Management and Budget (OMB) will review all significant rules. OIRA has determined that this final rule constitutes a ''significant regulatory action'' within the scope of section 3(f)(1) of E.O. 12866, as amended by E.O. 14094.

During the comment period for the proposed rule, some commenters suggested that the proposed rule would cause adverse effects on the economy, the energy sector of the economy, and all communities that rely on fluid mineral development as their major economic driver. Commenters pointed to the language in the preference criteria for leasing under § 3120.42, asserting it could severely restrict the amount of oil and gas leasing on Federal lands. The BLM disagrees. Codifying the preference criteria will ensure that oil and gas leasing on public lands focuses development where there is the most potential for recovery and allows the agency to manage public lands for other uses. The BLM completed an RIA and determined that the net costs to the economy range from a cost of $8.0 million to a cost of $13.2 million, depending on the cost of bonds (1 percent or 2 percent) and the number of wells the BLM reclaims (15 wells or 24 wells). As discussed in the RIA, the BLM expects that the expedited timing for reclamation of orphaned wells from increased bonding could provide benefits related to wildlife, vegetation, soil erosion, climate change (reduced greenhouse gas emissions from unplugged orphaned wells), visual and aesthetic resources, ground water, and allowing the surface land to be utilized for other uses sooner (for example, for grazing purposes). The BLM cannot currently quantify these benefits using the information available to the BLM.

Other benefits of the final rule include ensuring that costs reside with oil and gas lessees, operating rights owners, and operators, and not the American public. This includes adjusting the BLM's cost recovery mechanisms so that project applicants provide a more equitable share of the BLM's up-front costs for processing these applications. Finally, the BLM implements several changes to provide a transparent leasing process that focuses leasing on areas with a greater likelihood of being developed with fewer resource conflicts and ensuring transparency in these processes. Overall, shifting the financial responsibility for leasing to industries and ensuring transparency in the decision-making process will result in a more effective, fair, and accountable regulatory framework that benefits both businesses and society as a whole.

E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the Nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The E.O. directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas.

This final rule replaces the BLM's current rules governing oil and gas leasing, which are contained in 43 CFR 3100 through 3140, and revises some regulations governing oil and gas operations, which are contained in 43 CFR 3150 through 3171.

For any regulatory action that OIRA determines is a significant regulatory action under section 3(f)(1) of E.O. 12866, section 6(a)(3)(C) of E.O. 12866 requires Federal agencies to provide an assessment, including the underlying analysis, of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation, identified by the agencies or the public (including improving the current regulation and reasonably viable non-regulatory actions), and an explanation why the planned regulatory action is preferable to the identified potential alternatives. 58 FR 51735, 51741. The BLM developed this final rule in a manner consistent with the requirements in E.O. 12866 and E.O. 13563.

For more detailed information on the BLM's analysis, as required by the referenced Executive Orders, see the RIA prepared for this final rule. The RIA has been posted in the docket for the final rule on the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Searchbox, enter ''RIN 1004–AE80'', click the ''Search'' button, open the Docket Folder, and look under Supporting Documents.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) requires that Federal agencies prepare a regulatory flexibility analysis for rules subject to the notice-and-comment rulemaking requirements under the Administrative Procedure Act (5 U.S.C. 500 *et seq.*), if the rule would have a significant economic impact, whether detrimental or beneficial, on a substantial number of small entities. See 5 U.S.C. 601–612. Congress enacted the RFA to ensure that government regulations do not unnecessarily or disproportionately burden small entities. Small entities

include small businesses, small governmental jurisdictions, and small not-for-profit enterprises.

The BLM reviewed the Small Business Administration's (SBA) size standards for small businesses and the number of entities fitting those size standards as reported by the U.S. Census Bureau in the Economic Census. The number of small businesses in States where there are existing Federal oil and gas leases is estimated to be 20,975 for the Crude Petroleum Extraction and Natural Gas Extraction industries (North American Industry Classification System (NAICS) codes 211120 and 21130, respectively). The BLM concludes that the vast majority of entities operating in the relevant sectors are small businesses as defined by the SBA. As such, the final rule will likely affect a substantial number of small entities.

In addition, the rule will have a distributional and positive impact on the Direct Property and Casualty Insurance Carriers Industry (NAICS 524126). Additional premiums will be paid by lessees in the oil and natural gas extraction industries to surety companies who will be providing the coverage to meet the proposed bonding requirements. The number of small businesses in the oil and gas industry in States where there are existing Federal oil and gas leases is estimated to be 476,687. This is because the SBA defines a small business for purposes of the Crude Petroleum Extraction and Natural Gas Extraction industries (NAICS codes 211120 and 21130, respectively) as one which has 1,250 or fewer employees.

Finally, the BLM received multiple comments expressing concerns related to impacts that the proposed rule would have on small entities. Specifically, the comments stated that: (1) the BLM should have included the changes from the IRA in its analysis for the Regulatory Flexibility Act (RFA); (2) the BLM should have mailed notification of the proposed rule to the affected small businesses under the RFA; (3) the BLM should have considered alternatives as required by the RFA; and (4) this rule requires the preparation of an initial and final Regulatory Flexibility Analysis. The BLM reviewed the final rule and has determined that, although the final rule will likely affect a substantial number of small entities, that effect will not be significant. The basis for this determination is explained in more detail in the RIA.

Because the increased royalty amounts, bonus bids, and rentals, and the EOI fee, are non-discretionary, the BLM is not required to include these increases in its evaluation of the impacts on small businesses. Congress passed the RFA ''to establish as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure that such proposals are given serious consideration.'' Public Law 96–354, section 2(b), 94 Stat. 1164 (1980). The RFA requires agencies to analyze alternatives to their rules with an eye towards minimizing significant impacts on small entities. 5 U.S.C. 603(c), 604(a)(6). In this case, the BLM cannot consider alternatives to mandatory instructions in the IRA. The nondiscretionary changes include the increased minimum bonus bid, rental, and royalty rate, and the new EOI fee. The only discretionary cost increases at issue in this final rule are the increased bonding amounts and filing fees, which are fully analyzed. Aside from assessing alternatives to the statutorily mandated provisions of this rule, however, the BLM has provided the analysis the RFA requires.

Based on the BLM's review of the costs associated with the increased bonding, the BLM has determined that the incremental costs that a company must pay to meet the increased bonding amounts are unlikely to deter a company from obtaining a lease and developing it. As discussed in the RIA, sureties offer both new and existing operators the ability to cover the increased bond amount at an estimated cost of only 1 to 2 percent per year of the additional bond amount.

While there were multiple comments stating that small operators will be forced to shut in wells, will be at higher risk of going bankrupt, or will go bankrupt due to the increased costs, the comments did not provide the well- or lease-level financial information needed to support these claims. The BLM reviewed available data and reported statistics on the sensitivity of low-producing wells to changes in wellhead prices and concluded that, given the range of recent and expected oil prices, even low-producing wells generate sufficient revenue to fund the increased level of bonding. The economic data provided from the public comment period did not provide the necessary detail to support a more detailed analysis. For example, one commenter provided a report on the economic benefits of oil and gas leasing. This report supported our baseline in the RIA; however, it did not change the BLM's estimates of the impacts from this rule.

Notably, the BLM has only limited access to financial data of the small businesses themselves, since most of those small businesses are privately held and are not required to report their financial information to the BLM or any other public forum. Even if a company is public, those covered under the NAICS codes for Crude Petroleum and Natural Gas Extraction are often partnerships or limited liability companies, which frequently merge and split, making it difficult to determine if a firm composed of partners and subsidiaries are sufficiently affiliated to be considered small businesses or if they are functionally a subsidiary of a larger firm. Even when financial statements are available for review, those statements are designed to standardize overall reporting of an entity's finances and do not specify income and expenditures associated with production from Federal wells. Nor is it possible to obtain the requisite information on both Federal production volume and the production costs of this Federal production from any Federal database. For example, ONRR reports production volumes but not production costs. Constructing the needed data on Federal production and financial costs requires cross-referencing several data sources that are not readily available.

Therefore, based on the BLM's review, the BLM lacks the data to determine whether the rule will impact small businesses in the manner the commenters assert. Nor is such information reasonably available to the BLM such that it could undertake such analysis. The BLM has, nevertheless, reaffirmed its finding that the rule will not have a significant impact on a substantial number of small entities for the reasons described above in this section.

In summary, the per-entity, annualized compliance costs associated with this final rule are estimated to represent only a small fraction of the annual net incomes of the companies likely to be impacted. Because the final rule will not have a ''significant economic impact on a substantial number of small entities,'' neither an initial nor a final regulatory flexibility analysis is required.

The Secretary of the Interior certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

C. Congressional Review Act

The Congressional Review Act (5 U.S.C. 804(2)) requires certain procedures for ''any rule that the Administrator of the Office of Information and Regulatory Affairs of the Office of Management and Budget finds has resulted in or is likely to result in—

a. an annual effect on the economy of $100 million or more;

b. a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions;

c. significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

DOI will report to Congress on the promulgation of this rule prior to its effective date. The report will state that the Office of Information and Regulatory Affairs has determined that this rule meets the criteria set forth in 5 U.S.C. 804(2).

D. Unfunded Mandates Reform Act (UMRA)

The final rule will not have a significant or unique effect on State, local, or Tribal governments or the private sector. The rule contains no requirements that apply to State, local, or Tribal governments. The rule revises requirements that otherwise apply to the private sector participation in a voluntary Federal program. The compliance costs associated with the rule are below the monetary threshold established at 2 U.S.C. 1532(a). The rule updates the BLM's existing regulations to reflect the IRA's changes to lease terms. Those provisions (which became effective with the enactment of the IRA and which the BLM has no discretion to modify) will result in additional transfer payments made from the private sector to the U.S. Treasury, which then distributes portions to State governments and various funds, such as the Land and Water Conservation Fund. The BLM estimates the transfer payments will total $210 million per year, but these payments are not a result of action taken by the BLM and are instead Congressionally mandated. Since the discretionary provisions of the rule impose compliance costs that are below the $100,000,000 threshold established at 2 U.S.C. 1532(a), a statement containing the information required by the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1531 *et seq.*) is not required for the final rule. This final rule is also not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments, because it contains no requirements that apply to such governments, nor does it impose obligations upon them. In any event, this rule and the accompanying Regulatory Impact Analysis provide all the information the UMRA requires.

E. Governmental Actions and Interference With Constitutionally Protected Property Right—Takings (E.O. 12630)

This final rule will not effect a taking of private property or otherwise have taking implications under E.O. 12630; therefore, a takings implication assessment is not required. The final rule replaces the BLM's current rules governing oil and gas leasing, which are contained in 43 CFR 3100 through 3140, and some governing oil and gas operations, which are contained in 43 CFR 3160 and 3171. Therefore, the rule will impact future leases on Federal land; however, it will not impact current leases. All other terms in the regulations are not considered a taking of private property as such operations are subject to the existing lease terms which expressly require that subsequent lease activities be conducted in compliance with subsequently adopted Federal laws and regulations.

This final rule conforms to the terms of the existing leases and applicable statutes and, as such, the rule is not a government action capable of interfering with constitutionally protected property rights. Therefore, the BLM has determined that the rule will not cause a taking of private property or require further discussion of takings implications under E.O. 12630.

F. Federalism (E.O. 13132)

Under the criteria in section 1 of E.O. 13132, this final rule does not have any federalism implications to warrant the preparation of a federalism summary impact statement.

The final rule will not have a substantial direct effect on the States, on the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the levels of government. It does not apply to States or local governments or State or local governmental entities. The rule will affect the relationship between operators, lessees, and the BLM, but it does not directly impact the States. Therefore, in accordance with E.O. 13132, the BLM has determined that this final rule does not have sufficient federalism implications to warrant preparation of a Federalism Assessment.

Several commenters suggested that the BLM should make substantial changes to the rule to allow for better cooperation with States and local governments when their jurisdictions overlap. For example, one comment stated that the BLM must respect local governments' regulatory authority over State, private, and trust mineral and water resources within each State. Another comment stated that the proposed rule would have significant direct impacts on the States and local communities, and that, if the BLM does not offer Federal lands for lease, that omission will prevent State and private lessees from developing their leases due to the mixed ownership for horizontal wells. Some comments stated the rule is inconsistent with State laws that expedite the processing, granting, and streamlining of mineral and energy leases and permits.

The BLM developed this rule based on its statutory authority to offer federally owned lands and minerals for oil and gas leasing and development. The BLM has evaluated the federalism implications of this rule as required by E.O. 13132. Although the final rule will affect the relationship between operators, lessees, and the BLM, it will not directly impact the States' leasing ability. Local governments and the public may submit information to the BLM on how the development of nominated lands may affect the development of adjacent non-Federal lands when the BLM is considering lands for leasing. This could occur either when the EOI is submitted or during the scoping and public comment periods for the lease sales.

G. Civil Justice Reform (E.O. 12988)

This final rule complies with the requirements of E.O. 12988. More specifically, this final rule meets the criteria of section 3(a), which requires agencies to review all regulations to eliminate errors and ambiguity and to write all regulations to minimize litigation. This final rule also meets the criteria of section 3(b)(2), which requires agencies to write all regulations in clear language with clear legal standards.

H. Consultation and Coordination With Indian Tribal Governments (E.O. 13175 and Departmental Policy)

The Department strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their

right to self-governance and tribal sovereignty.

The BLM evaluated this final rule under the Department's consultation policy and under the criteria in E.O. 13175 to identify possible effects of the rule on federally recognized Indian Tribes. Since the changes to leasing only apply to Federal lands, the final rule will not impact the leasing of Indian minerals. The final rule could impact Tribal minerals as the BLM will require operators on both Federal and Tribal minerals to comply with the requirements within Parts 3160 and 3170, including the changes for shut-in and temporarily abandoned wells and approved APDs.

In August of 2021, the BLM sent a letter to each registered Tribe informing them of certain rulemaking efforts, including the development of this final rule. The letter offered Tribes the opportunity for individual government-to-government consultation regarding the rulemaking.

In June 2023, the BLM sent another letter to each registered Tribe informing them of the proposed rule. During the comment period for the proposed rule, a commenter, who is not from a Tribe, stated that the BLM should fulfill its Federal trust obligation to Tribes to protect their interest and further the government-to-government relationships with Tribes. The BLM concurs and worked to inform the Tribes of the changes proposed in this rulemaking. The BLM did receive comments from a Tribe as previously discussed in Section III.B.4. and III.B.8. of this preamble.

I. Paperwork Reduction Act

The Paperwork Reduction Act (PRA) (44 U.S.C. 3501–3521) generally provides that an agency may not conduct or sponsor, and not withstanding any other provision of law, a person is not required to respond to a collection of information, unless it displays a currently valid OMB control number. Collections of information include any request or requirement that persons obtain, maintain, retain, or report information to an agency, or disclose information to a third party or to the public (44 U.S.C. 3502(3) and 5 CFR 1320.3(c)).

This final rule contains information-collection requirements that are subject to review by OMB under the PRA. OMB has generally approved the existing information collection requirements contained in the regulations that will be affected by this final rule under the following OMB Control Numbers:

- 43 CFR 3100, 3120, and subpart 3162—OMB Control Number 1004–0185;
- 43 CFR 3106—OMB Control Number 1004–0034;
- 43 CFR part 3130—OMB Control Number 1004–0196;
- 43 CFR 3150—OMB Control Number 1004–0162; and
- 43 CFR 3160—OMB Control Number 1004–0137.

The BLM plans to transfer the information collection requirements contained in 43 CFR 3106 from OMB control number 1004–0034 to OMB Control Number 1004–0185 in order to keep similar information collections requirements together under the same OMB Control Number. Additionally, the BLM plans to transfer information collection requirements contained in 43 CFR 3160 from OMB Control Number 1004–0137 to a new OMB Control Number. Once approved by OMB, the new OMB Control Number will be 1004–0220. The new and revised information collection requirements are discussed as follows, along with the resulting changes in public burdens.

1. Changes Impacting Information Collections Previously Under OMB Control Number 1004–0137

The final rule will result in new information collection requirements that will require OMB approval under a new OMB control number (previously, 1004–0137). This final rule is estimated to result in 33,621 annual responses, 260,928 annual burden hours, $35,400,000 non-hour cost burdens under this new OMB Control Number.

The new information collection requirements are described as follows.

43 CFR 3162.3–4 Well Abandonment. The final rule requires that no well may be abandoned for more than 30 days unless the operator provides adequate and detailed justifications and verification of the mechanical integrity of the wells and isolation of the perforations. The new information collection requirements include:

- Justification for Temporary Well Abandonment—43 CFR 3162.3–4(d);
- Reporting Shut-in Status—43 CFR 3162.3–4(e);
- Verification of Mechanical Integrity—43 CFR 3162.3–4(e)(2) and 3162.3–4(f); and
- Plan and Timeline for Future Beneficial Use—43 CFR 3162.3–4(e)(3)(iii).

The BLM believes these new requirements with yearly interval checks will help operators stay on top of shut-in wells, thus preventing them from becoming orphaned in the future. The addition of these information collection requirements will result in an addition of 5,500 annual responses, 52,000 annual burden hours.

Currently, there are 301,663 annual responses, 1,835,888 annual burden hours, and $31,080,000 annual non-hour cost burdens inventoried under the OMB Control Number 1004–0137. This final rule will create a new OMB Control Number and moves 28,121 annual responses, 208,298 annual burden hours, and $31,080,000 annual non-hour cost burdens inventoried under OMB Control Number 1004–0137 into this OMB Control Number.

In addition, there is an adjustment of $4.3 million in annual non-hour cost burdens (from $31 million to 35.4 million). This adjustment results from the annual inflation adjustment of filing fees and do not result from the final rule. The resulting new estimated total burdens for this new OMB Control Number are provided as follows.

Title of Collection: Onshore Oil and Gas Operations and Production (43 CFR parts 3160 and 3170).

OMB Control Number: 1004–0220.

Form Numbers: BLM Form 3160–003; BLM Form 3160–004; and BLM Form 3160–005 (these forms will not change).

Type of Review: Revision of a currently approved collection of information.

Respondents/Affected Public: Oil and gas operators on public lands and some Indian lands.

Total Estimated Number of Annual Respondents: 7,500.

Total Estimated Number of Annual Responses: 33,621.

Estimated Completion Time per Response: Varies from 4 to 32 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 260,928.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion; One-time; and Monthly.

Annual Burden Cost: $35,400,000.

2. Changes Impacting OMB Control Number 1004–0162

Currently, there are 68 annual responses, 26 annual burden hours, and $25 annual non-hour cost burdens inventoried under OMB Control Number 1004–0162. It is not anticipated that the final rule will change the results to the annual responses, annual burden hours, or non-hour cost burdens under this OMB Control Number. The revised information collection requirement is described as follows.

43 CFR 3151.30—Collection and submission of data. The final rule adds a new requirement for the permittee to provide the BLM with all data and

information obtained in carrying out the exploration plan, matching the requirement for geophysical exploration permits in Alaska. This does not change the existing burden for what applicants to submit to the BLM.

Title of Collection: Onshore Geophysical Exploration (43 CFR part 3150 and 36 CFR parts 228 and 251).

OMB Control Number: 1004–0162.

Form Number: BLM 3150–4/FS 2800–16; BLM 3150–5/FS 2816a (these forms will not change).

Type of Review: Revision of a currently approved collection of information.

Respondents/Affected Public: The respondents for this collection of information are businesses that seek to conduct geophysical exploration on Federal lands.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: On occasion.

Estimated Completion Time per Response: Varies from 20 minutes to 1 hour, depending on activity.

Number of Respondents: 68.

Annual Responses: 68.

Annual Burden Hours: 26.

Annual Burden Cost: $1,150.

3. Changes Impacting OMB Control Number 1004–0185

Currently, there are 9,132 annual responses, 37,695 annual burden hours, and $751,415 annual non-hour cost burdens inventoried under OMB Control Number 1004–0185. This final rule is estimated to result in 16,340 annual responses, 29,410 annual burden hours, $3,766,184, non-hour cost burdens under this OMB Control Number. The final rule will result in new, revised, and removed information collection requirements. Additionally, as discussed earlier, the BLM will also be transferring certain information collection requirements, along with the associated burdens from OMB Control Number 1004–0034 to OMB Control Number 1004–0185. These changes are discussed blow.

Revised Information Collection Requirements

43 CFR 3100.31(b)—Option Enforceability. The final rule revises this requirement to clarify that a statement of the number of acres and the type and percentage of interest to be conveyed and retained by the parties to the option. This does not change the burden requirement. The existing regulation already states the interest to be conveyed and retained in exercise of the option. The BLM needs to understand if the type of interest is referring to record title or operating rights and the percentage to be conveyed and retained by the option holder.

43 CFR 3105.21—Where to File Communitization Agreements. The final rule removes the triplicate filing requirement. The final rule adds a new paragraph (b) to this section to require that all applications to form a CA be filed with a statement as to whether the proposed CA deviates from the BLM's current model CA form, and a certification that the applicant received the required signatures. Further, all applications to form a CA shall include an Exhibit A displaying a map of the agreement and the separate agreement tracts and all applications to form a CA shall include an Exhibit B displaying the separate tracts and ownership. The new paragraph (c) states that all applications to form a CA should be submitted at least 90 calendar days prior to first production to ensure correct reporting to the ONRR. These requirements codify existing policy requirements and does not change the existing burden for what applicants to submit to the BLM. The information is needed to understand all the parties that share in the production of a well due to State spacing orders.

43 CFR 3105.31—Where filed. (Operating, Drilling or Development Contracts). The final rule removes the requirement for five copies of an operating, drilling or development contract to be submitted when these contracts are submitted to the BLM for approval. This reduces the burden to respondents.

43 CFR 3105.41—Where filed. (Subsurface storage application (previously, 3105.5)). The final rule designates the existing 43 CFR 3105.5 for gas storage agreements to the redesignated 43 CFR 3105.41. This redesignation is due to the elimination of the section on the combination for joint operations or for transportation of oil. The final rule updates paragraph (a) to include designation of successor operators for gas storage agreements among the applications to be filed in the proper BLM office. The final rule updates paragraph (b) to remove the requirement for five copies of a gas storage agreement to be submitted when these are filed with the BLM. A new paragraph (c) requires that all applications for a gas storage agreement or a designation of a successor operator must include the new processing fee found in the fee schedule in 43 CFR 3000.120. The new processing fee is intended to reimburse the BLM for processing the applications.

43 CFR 3105.50—Consolidation of Leases (formerly, 3105.6). Leases may be consolidated upon written request of the lessee filed with the proper BLM identify each lease involved by serial number and shall explain the factors that justify the consolidation and requires that each request for a consolidation of leases the processing fee found in the fee schedule in 43 CFR 3000.120. The final rule splits the single paragraph under this section into several paragraphs for clarity, however these are not new requirements and does not change the existing burden.

43 CFR 3106.81—Heirs and devisees. The updates this information collection requirement to state that the lease interest will be transferred to the heirs, devisees, executor or administrator of the estate, as appropriate, upon the filing of a court order, death certificate, or other legal document demonstrating that transferee is to be recognized as the successor of the deceased. These requirements codify existing policy requirements and does not change the existing burden for what applicants currently submit to the BLM to show proof on how the lease interest transferred to another party.

43 CFR 3106.82—Change of name. The current regulation requires a notice of the name change to be accompanied by a list of the serial numbers of the leases affected by the name change. This requirement is removed as it is outdated and unenforceable. This lessens the burden to respondents. In practice, the BLM generates a report of the leases affected by the name change and returns that list to the lessee with a notice that recognizes the name change that occurred through operation of law. This section is updated to require that, for a corporate name change, the request should include the Secretary of State's Certificate of Name Change along with the Articles of Incorporation, or Amendment, if available. This is consistent with the BLM's current approach for processing these types of documents. These requirements codify existing policy requirements and does not change the existing burden for what applicants currently submit to the BLM to show proof on how the lease interest transferred to another party.

43 CFR 3106.83—Corporate mergers and dissolution of corporations, partnerships and trusts. The final rule updates the title of this section from ''Corporate merger'' to ''Corporate mergers and dissolution of corporations, partnerships and trust''. The goal of the renaming of this section is to incorporate these other types of transfers that have the same process. The current regulation requires a notification of merger to be accompanied by a list of the serial numbers of the leases affected by the

merger. This requirement is eliminated as it is outdated and unenforceable. This lessens the burden to respondents. In practice, the BLM does not rely on a list of leases provided by a lessee and instead generates its own report of the leases affected by the merger. The BLM returns that list to the lessee with a notice that recognizes the merger that occurred through operation of State law. This section is updated to require that, for a merger, the request should include the Secretary of State's Certificate of Merger along with the Articles of Incorporation, or Amendment, if available. This is consistent with the BLM's current approach for processing these types of documents. These requirements codify existing policy requirements and does not change the existing burden for what applicants currently submit to the BLM to show proof on how the lease interest transferred to another party.

43 CFR 3108.23—Reinstatement at higher rental and royalty rates: Class II reinstatements. The final rule eliminates the existing paragraph (b)(1) in its entirety. This provision addresses the timeliness of Class II reinstatement petitions for leases that terminated on or before August 8, 2005, and is no longer applicable. This does not change an existing burden since a petition to reinstate a lease that terminated on or before August 8, 2005, would have already been received by an applicant.

43 CFR 3109.12—Application. The final rule also adds a new requirement that the applicant must include a map of the applicable lands which will support the bidding process related to the lease or compensatory royalty agreement. These requirements codify existing policy requirements and does not change the existing burden for what applicants to submit to the BLM.

New Information Collection Requirements

43 CFR 3106.84—Sheriff's sale/deed. The final rule adds a new section under other types of transfers to include sheriff's sales. The BLM accepts these types of transfers to recognize lease interests transferred to other parties through foreclosure actions. The final rule states that where a notice of sale of the leasehold interest is published pursuant to State law applicable to the execution of sales of real property, the purchaser shall submit a copy of the Sheriff's Certificate of Sale after any redemption period has passed to the proper BLM office. Additional paragraphs under this new section include a filing fee requirement, a qualification statement, and bonding requirements. These requirements are consistent with the BLM's current approach for processing these types of documents. These documents are already submitted and recognized by the BLM when changes in ownership of interests in Federal oil and gas leases occur without any intention by the holder of interest to assign or transfer interest. The addition of this information collection will result in an addition of 1 annual response, 1 annual burden hour, and $55.80 annual non-hour cost burdens.

43 CFR 3120.31—Expression of Interest (EOI) Process. The final rule adds a new section titled ''Expression of Interest'' to codify the current process of receiving EOIs for competitive leasing to the BLM's online leasing system. An EOI is a description of lands that an applicant seeks to include in a competitive auction. The expression must provide a description of the lands identified by legal land description and identify the U.S. mineral ownership percentage. This information collection will result in an addition of 395 annual responses (average of 1,000 acres per response), 3,160 annual burden hours, and $1,975,000 annual non-hour cost burdens (calculated by average acreage per response).

Removed Information Collection Requirements

43 CFR 3101.2–6—Ad Hoc Acreage Statement. At any time, the BLM may require a lessee or operator to file a statement showing as of the specified date, the serial number and the date of each lease in which the lessee or operator has any interest, in the particular State, setting forth the acreage covered thereby. The BLM uses the information to determine whether or not a lessee is in compliance with the law with respect to statutory acreage limitations. This revision results in the reduction of 1 response and 1 burden hour, annually.

43 CFR 3105.4—Combination for joint operations or for transportation of oil. The final rule eliminates the section on the combination for joint operations or for transportation of oil. These provisions are not used by the BLM or operators and are outdated. This revision results in the reduction of 1 response and 1 burden hour, annually.

43 CFR 3107.8—Renewal leases. The final rule eliminates the provisions on renewal leases in their entirety because they are outdated. Renewal leases that had an expiration date after November 15, 1990, were eligible for one last renewal under the provisions of the November 15, 1990, Act, *i.e.,* for 10 years, and for so long thereafter as oil and gas is produced in paying quantities. If a lease was renewed after the 1990 amendment and was not producing oil or gas at the end of its 10-year renewal term, the lease expired with no further option for renewal. The removal of this information collection will result in a reduction of 1 annual response, 1 annual burden hour, and $475 annual non-hour cost burdens.

Class III reinstatement petition (43 CFR 3108.2–4). The requirement is removed from the final rule resulting in a reduction of one annual response and one burden hour as well as $651 in non-hour cost burden.

Information Collection Requirements Transferred From OMB Control Number 1004–0034

The following two information collections will be moved into OMB Control Number 1004–0185 to keep information collection requirements in subpart 3106 under the same OMB Control Number:

1. *43 CFR 3106.41, Transfers of record title and of operating rights (subleases) and 3106.42, Transfers of other interests, including royalty interests and production payments.* This transfer will result in 3,852 annual responses, 1,926 annual burden hours, and $404,460 non-hours cost burdens being added to this OMB Control Number.

2. *43 CFR 3106.43 Mass transfers.* This transfer will result in 4,944 annual responses, 2,472 annual burden hours, and $519,120 non-hours cost burdens being added to this OMB Control Number.

The resulting new estimated total burdens for OMB Control Number 1004–0185 are provided as follows.

Title of Collection: Onshore Oil and Gas Leasing, and Drainage Protection (43 CFR parts 3100, 3120, and 3150, and subpart 3162).

OMB Control Number: 1004–0185.

Form Number: None.

Type of Review: Revision of a currently approved collection of information.

Respondents/Affected Public: Holders of onshore oil and gas lease and public lands and Indian lands (except on the Osage Reservation), operators of such leases, and holders of operating rights on such leases.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: Varies from 1 hour to 24 hours per response, depending on activity.

Number of Respondents: 16,339.

Annual Responses: 16,340.

Annual Burden Hours: 29,410.

Annual Burden Cost: $3,766,184.

4. Changes Impacting OMB Control Number 1004–0196

Currently, there are there are 21 annual responses and 220 annual burden hours associated with this OMB control number. There are also no non-hours cost burden currently associated with this OMB control number. The final rule is not projected to result in any new annual responses. The additional requirements in 43 CFR 3170.80(b) include description of the anticipated PA(s) size and define the proposed PAs in the unit designation agreements required by 43 CFR 3137.21, and 3137.23 is not projected to result in additional burden for that information collection.

43 CFR 3000.120 introduces new filing fees for the following information collections, resulting in a new total estimated annual non-hour burden cost of $1,320;

- $120 for Statement of change of unit operator (43 CFR 3137.61); and
- $1,200 for Application for storage agreement (43 CFR 3138.11);

Additionally, the existing 43 CFR 3137.86, New information demonstrating that the participating area should be larger or smaller than previously determined, contains the following three information collection requirements for which the burden has not been previously captured in this OMB control number:

- Information demonstrating that a participating area should be larger than previously determined (43 CFR 3137.86(a)(1));
- Application to enlarge participating area outside of existing boundaries (43 CFR 3137.86(a)(2)); and
- Statement for additional committed tract or tracts are added to the unit under paragraph (a)(2) (43 CFR 3137.86(a)(3)).

The resulting new estimated total burdens for OMB Control Number 1004–0196 are provided as follows.

Title of Collection: Oil and Gas Leasing: National Petroleum Reserve—Alaska (43 CFR part 3130).

OMB Control Number: 1004–0196.

Form Number: None.

Type of Review: Revision of a currently approved collection of information.

Respondents/Affected Public: Participants within the oil and gas leasing program within the National Petroleum Reserve—Alaska.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: On occasion.

Estimated Completion Time per Response: Varies from 15 minutes to 80 hours, depending on activity.

Number of Respondents: 24.

Annual Responses: 24.

Annual Burden Hours: 223.

Annual Burden Cost: $1,320.

If you want to comment on the information-collection requirements in this rule, please send your comments and suggestions on this information-collection request within 30 days of publication of this final rule in the **Federal Register** to OMB at *www.reginfo.gov.* Click on the link, ''Currently under Review—Open for Public Comments.''

J. National Environmental Policy Act

The BLM received comments on this section. One commenter stated the BLM properly issues the rule pursuant to a categorical exclusion. Other comments recommended that the BLM use an environmental assessment for the rule. Commenters stated the rule affects decisions in RMPs, because the preference criteria would guide the BLM's decision making and direct oil and gas leasing to appropriate locations. Another commenter stated that the economic burden that the proposed rule would cause for oil and gas operators and State economies would require the BLM to perform a NEPA analysis on the portions of the proposed rule that are beyond the scope of changes required by Congress in the IRA. As previously stated, this rule does not close additional lands for oil and gas leasing and the MLA has vested the Secretary with broad discretion to decide, up until the time of lease issuance, whether particular parcels of Federal land ''may be leased'' for oil and gas development, see 30 U.S.C. 226(a). The BLM completed an RIA and an extraordinary circumstances review and determined that the BLM can issue this rule under the applicable Departmental categorical exclusion.

A detailed environmental analysis under NEPA is not required, because the final rule is covered by a categorical exclusion (see 43 CFR 46.205). This final rule meets the criteria set forth at 43 CFR 46.210(i) for a Departmental categorical exclusion in that this final rule is ''of an administrative, financial, legal, technical, or procedural nature.'' The BLM also has determined that the final rule does not involve any of the extraordinary circumstances listed in 43 CFR 46.215 that would require further analysis under NEPA.

K. Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use (E.O. 13211)

Under E.O. 13211, agencies are required to prepare and submit to OMB a Statement of Energy Effects for significant energy actions. This statement is to include a detailed statement of ''any adverse effects on energy supply, distribution, or use (including a shortfall in supply, price increases, and increase use of foreign supplies)'' for the action and reasonable alternatives and their effects.

Section 4(b) of E.O. 13211 defines a ''significant energy action'' as ''any action by an agency (normally published in the **Federal Register**) that promulgates or is expected to lead to the promulgation of a final rule or regulation, including notices of inquiry, advance notices of proposed rulemaking, and notices of proposed rulemaking: (1)(i) that is a significant regulatory action under E.O. 12866 or any successor order, and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) that is designated by OIRA as a significant energy action.''

The BLM believes that the final rule may affect the locations that operators choose for future oil or gas development but will have little impact on an entity's decision to invest in energy development, the size of that development, or the production from that development. As a result of this rule, an entity holding existing nonproducing leases may choose to shift more future development to those existing leases or to develop non-Federal acreage instead of securing new Federal leases, and some entities may be relatively less likely to choose a new Federal lease to a comparable non-Federal lease. Also, any incremental changes in oil or gas production estimated to result from the rule's enactment would constitute a small fraction of total U.S. gas production, and any potential and temporary deferred production of oil would likewise constitute a small fraction of total U.S. oil production. Some commenters disagreed and pointed to the preference criteria as increasing the risk for litigation, which could shift development off Federal land and increase the cost to produce gas or oil. The BLM disagrees. The preference criteria under § 3120.32 support the BLM's existing policy and direction to make a public interest determination, which has existed at least since 1988. *See* 53 FR 22828 (June 17, 1988) (''It is Bureau policy prior to offering the lands to determine whether leasing will be in the public interest and to identify stipulation requirements, obtain surface management agency leasing recommendations and consent where applicable and required by law''). It will not have the impact stated in these comments. For these reasons, we do not

expect that the final rule will significantly impact the supply, distribution, or use of energy. As such, the rulemaking is not a ''significant energy action'' as defined in E.O. 13211.

VI. Authors

The principal authors of this final rule include: Peter Cowan, Senior Mineral Leasing Specialist in BLM Headquarters; Jennifer Spencer, Mineral Leasing Specialist in BLM Headquarters; William Lambert, Petroleum Engineer in BLM Headquarters; Natalie Eades, Attorney Advisor in DOI Office of the Solicitor. Technical support provided by: Scott Rickard, Economist in BLM Headquarters; Travis Kern, Program Analyst in BLM Headquarters; and Erik Vernon, Air Resources Program Lead in BLM Utah State Office. Assisted by: Duane Spencer, Deputy State Director of Minerals and Land in BLM Wyoming State Office; JulieAnn Serrano, Supervisory Land Law Examiner in BLM New Mexico State Office; and Darrin King, Senior Regulatory Analyst in BLM Headquarters.

List of Subjects

43 CFR Part 3000

Public lands-mineral resources, Reporting and recordkeeping requirements.

43 CFR Part 3100

Government contracts, Mineral royalties, Oil and gas reserves, Public lands-mineral resources, Reporting and recordkeeping requirements, Surety bonds.

43 CFR Part 3110

Government contracts, Oil and gas exploration, Public lands-mineral resources, Reporting and recordkeeping requirements.

43 CFR Part 3120

Government contracts, Oil and gas exploration, Public lands-mineral resources, Reporting and recordkeeping requirements.

43 CFR Part 3130

Alaska, Government contracts, Mineral royalties, Oil and gas exploration, Oil and gas reserves, Public lands-mineral resources, Reporting and recordkeeping requirements, Surety bonds.

43 CFR Part 3140

Government contracts, Hydrocarbons, Mineral royalties, Oil and gas exploration, Public lands-mineral resources, Reporting and recordkeeping requirements.

43 CFR Part 3150

Administrative practice and procedure, Alaska, Oil and gas exploration, Public lands-mineral resources, Reporting and recordkeeping requirements, Surety bonds.

43 CFR Part 3160

Administrative practice and procedure, Government contracts, Indians-lands, Mineral royalties, Oil and gas exploration, Penalties, Public lands-mineral resources, Reporting and recordkeeping requirements.

43 CFR Part 3170

Administrative practice and procedure, Flaring, Immediate assessments, Indians-lands, Mineral royalties, Oil and gas exploration, Oil and gas measurement, Public lands-mineral resources, Reporting and record keeping requirements, Royalty-free use, Venting.

43 CFR Part 3180

Government contracts, Mineral royalties, Oil and gas exploration, Public lands-mineral resources, Reporting and recordkeeping requirements.

For the reasons set out in the preamble, the Bureau of Land Management amends 43 CFR parts 3000, 3100, 3110, 3120, 3130, 3140, 3150, 3160, 3170, and 3180 as follows:

■ 1. Revise part 3000 to read as follows:

PART 3000—MINERALS MANAGEMENT: GENERAL

Sec.

PART 3000—MINERALS MANAGEMENT: GENERAL

Authority: 16 U.S.C. 3101 *et seq.;* 30 U.S.C. 181 *et seq.,* 301–306, 351–359, and 601 *et seq.;* 31 U.S.C. 9701; 40 U.S.C. 471 *et seq.;* 42 U.S.C. 6508; 43 U.S.C. 1701 *et seq.;* and Pub. L. 97–35, 95 Stat. 357.

§ 3000.5 Definitions.

As used in 43 CFR parts 3000 and 3100, the term:

Acquired lands means lands which the United States obtained by deed through purchase or gift, or through condemnation proceedings, including lands previously disposed of under the public land laws including the mining laws.

Acreage for which expressions of interest have been submitted means acreage that is identified in an expression of interest received by the BLM, that has not been proposed for leasing in any pending sale or other expression of interest pending BLM disposition, and for which the BLM may lawfully issue an oil and gas lease.

Acres offered for lease means all acres that the BLM has offered for oil and gas lease, regardless of whether those acres are acreage for which expressions of interest have been submitted.

Act or *MLA* means the Mineral Leasing Act of 1920, as amended and supplemented (30 U.S.C. 181 *et seq.*).

Anniversary date means the same day and month in succeeding years as that on which the lease became effective.

Authorized officer means any BLM employee authorized to perform the duties described in parts 3000 and 3100.

BLM or *Bureau* means the Bureau of Land Management.

Director means the Director of the Bureau of Land Management.

Gas means any fluid, either combustible or noncombustible, which is produced in a natural state from the earth and which maintains a gaseous or rarefied state at ordinary temperatures and pressure conditions.

Interest means ownership in a lease, or prospective lease, of all or a portion of the record title, working interest, operating rights, overriding royalty, payments out of production, carried interests, net profit share or similar instrument for participation in the benefit derived from a lease. An *interest* may be created by direct or indirect ownership, including options. *Interest* does not mean stock ownership, stockholding or stock control in an application, offer, competitive bid or lease, except for purposes of acreage limitations in 43 CFR 3101.20 and qualifications of lessees in 43 CFR subpart 3102.

Oil means all nongaseous hydrocarbon substances other than those substances leasable as coal, oil shale or gilsonite (including all vein-type solid hydrocarbons).

ONRR means the Office of Natural Resources Revenue.

Party in interest means a party who is or will be vested with any interest under

the lease as defined in this section. No one is a sole party in interest with respect to an application, offer, competitive bid or lease in which any other party has an interest.

Person means any individual, firm, corporation, association, partnership, consortium, or joint venture.

Proper BLM office means the Bureau of Land Management state office having jurisdiction over the lands subject to the regulations in parts 3000 and 3100.

(See 43 CFR 1821.10 for office location and area of jurisdiction of Bureau of Land Management offices.)

Properly filed means a document or form submitted to the proper BLM office with all necessary information and payments, as provided in 43 CFR subpart 1822.

Public domain lands means lands, including mineral estates, which never left the ownership of the United States, lands which were obtained by the United States in exchange for public domain lands, lands which have reverted to the ownership of the United States through the operation of the public land laws and other lands specifically identified by the Congress as part of the public domain.

Secretary means the Secretary of the Interior.

Surface managing agency means any Federal agency, other than the BLM, having management responsibility for the surface resources that overlay federally owned minerals.

§ 3000.10 Nondiscrimination.

Any person acquiring a lease under this chapter must comply fully with the equal opportunity provisions of Executive Order 11246 dated September 24, 1965, as amended, and the rules, regulations and relevant orders of the Secretary of Labor (41 CFR part 60 and 43 CFR part 17).

§ 3000.20 False statements.

As provided in 18 U.S.C. 1001, it is a crime punishable by imprisonment or a fine, or both, for any person knowingly and willfully to submit or cause to be submitted to any agency of the United States any false or fraudulent statement(s) as to any matter within the agency's jurisdiction.

§ 3000.30 Unlawful interests.

No member of, or delegate to, Congress, or Resident Commissioner, and no employee of the Department of the Interior, except as provided in 43 CFR part 20, is allowed or entitled to acquire or hold any Federal lease, or interest therein. (Officer, agent or employee of the Department—see 43 CFR part 20; Member of Congress—see R.S. 3741; 41 U.S.C. 22; 18 U.S.C. 431–433.)

§ 3000.40 Appeals.

Except as provided in 43 CFR 3000.120, 3101.53(b), 3103.1, 3165.4, and 3427.2, any party adversely affected by a decision of the authorized officer made pursuant to the provisions of 43 CFR parts 3000 or 3100 has a right of appeal pursuant to 43 CFR part 4.

§ 3000.41 Severability.

If a court holds any section or its paragraphs of the regulations in parts 3000 through 3180 or their applicability to any person or circumstance invalid, the remainder of these rules and their applicability to other persons or circumstances will not be affected.

§ 3000.50 Limitations on time to institute suit to challenge a decision of the Secretary.

No action challenging a decision of the Secretary involving any oil or gas lease (including decisions on offers or applications to lease) can be maintained unless such action is commenced or taken within 90 days after the final decision of the Secretary relating to such matter.

§ 3000.60 Filing of documents.

All necessary documents must be filed in the proper BLM office. Documents may be submitted to the BLM using hard-copy delivery services, in-person delivery, or by electronic filing. When using hard-copy delivery services or in-person delivery, the document will be considered filed only when received during regular business hours in the proper BLM office. See 43 CFR part 1820, subpart 1822.

§ 3000.70 Multiple development.

The granting of a permit or lease for the prospecting, development or production of deposits of any one mineral does not preclude the issuance of other permits or leases for the same lands for deposits of other minerals with suitable stipulations for simultaneous operation, nor the allowance of applicable entries, locations or selections of leased lands with a reservation of the mineral deposits to the United States.

§ 3000.80 Management of Federal minerals from reserved mineral estates.

Where nonmineral public land disposal statutes provide that in conveyances of title all or certain minerals are reserved to the United States together with the right to prospect for, mine and remove the minerals under applicable law and regulations as the Secretary may prescribe, the lease or sale, and administration and management of the use of such minerals will be accomplished under the regulations of 43 CFR parts 3000 and 3100. Such mineral estates include, but are not limited to, those that have been or will be reserved under the authorities of the Small Tract Act of June 1, 1938, as amended (43 U.S.C. 682(b)) and the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 *et seq.*).

§ 3000.90 Enforcement actions under the United States Code.

The United States Department of Justice is the agency responsible for the enforcement actions described in 30 U.S.C. 195, which makes it unlawful for any person to organize or participate in any scheme, arrangement, plan, or agreement to circumvent or defeat the provisions of the MLA or its implementing regulations; or to seek to obtain or to obtain any money or property by means of false statements of material facts or by failing to state materials facts concerning the:

(a) Value of any lease or portion thereof issued or to be issued under the MLA;

(b) Availability of any land for leasing under the MLA;

(c) Ability of any person to obtain leases under the MLA; or

(d) Provisions of the MLA and its implementing regulations.

§ 3000.100 Fees in general.

(a) *Setting fees.* Fees may be statutorily set fees, relatively nominal filing fees, or processing fees intended to reimburse the BLM for its reasonable processing costs. For processing fees, the BLM takes into account the factors in section 304(b) of the Federal Land Policy and Management Act of 1976 (FLPMA) (43 U.S.C. 1734(b)) before deciding a fee. The BLM considers the factors for each type of document when the processing fee is a fixed fee and for each individual document when the fee is decided on a case-by-case basis, as explained in *§ 3000.*110.

(b) *Conditions for filing.* The BLM will not accept a document that the applicant submits without the proper filing or processing fee amounts except for documents where the BLM sets the fee on a case-by-case basis. Fees are not refundable except as provided for case-by-case fees in *§ 3000.*110. The BLM will keep the fixed filing or processing fee as a service charge even if the BLM does not approve the application or the applicant withdraws it completely or partially.

(c) *Periodic adjustment.* The BLM will periodically adjust fees established in this subchapter according to changes in

the Implicit Price Deflator for Gross Domestic Product, which is published quarterly by the U.S. Department of Commerce. Because the fee recalculations are simply based on a mathematical formula, the BLM will change the fees in final rules without opportunity for notice and comment.

(d) *Timing of fee applicability.* (1) For a document that the BLM received before June 22, 2024, the BLM will not charge a fixed fee or a case-by-case fee under this subchapter for processing that document, except for fees applicable under then-existing regulations.

(2) For a document that the BLM receives on or after June 22, 2024, the applicant must include the required fixed fees with the documents filed, as provided in § 3000.120(a) of this chapter, and the applicant is subject to case-by-case processing fees as provided in § 3000.110 and under other provisions of this chapter.

§ 3000.110 Processing fees on a case-by-case basis.

(a) Fees in this subchapter are designated either as case-by-case fees or as fixed fees. The fixed fees are established in this subchapter for specified types of documents. However, if the BLM decides at any time that a particular document designated for a fixed fee will have a unique processing cost, such as the preparation of an Environmental Impact Statement, the BLM may set the fee under the case-by-case procedures in this section.

(b) For case-by-case fees, the BLM measures the ongoing processing cost for each individual document and considers the factors in section 304(b) of FLPMA on a case-by-case basis according to the following procedures:

(1) The applicant may request the BLM's approval to do all or part of any study or other activity according to standards the BLM specifies, thereby reducing the BLM's costs for processing the document, in accordance with all other applicable laws and regulations.

(2) Before performing any case processing, the BLM will give the applicant a written estimate of the proposed fee for reasonable processing costs after the BLM considers the FLPMA section 304(b) factors.

(3) The applicant may comment on the proposed fee.

(4) The BLM will then give the applicant the final estimate of the processing fee amount after considering the applicant's comments and any BLM-approved work that the applicant will do.

(i) If the BLM encounters higher or lower processing costs than anticipated, the BLM will re-estimate the reasonable processing costs following the procedure in *paragraphs (b)(1) through (4)* of this section, but the BLM will not stop ongoing processing unless the applicant does not pay in accordance with *paragraph (b)(5)* of this section.

(ii) If the fee the applicant would pay under this *paragraph (b)(4)* is less than the BLM's actual costs as a result of consideration of the FLPMA section 304(b) factors, and the BLM is not able to process the document promptly because of the unavailability of funding or other resources, the applicant will have the option to pay the BLM's actual costs to process the document.

(iii) Once processing is complete, the BLM will refund to the applicant any money that the BLM did not spend on processing costs.

(5)(i) The BLM will periodically estimate what its reasonable processing costs will be for a specific period and will bill the applicant for that period. Payment is due to the BLM 30 days after the applicant receives its bill. The BLM will stop processing the document if the applicant does not pay the bill by the date payment is due.

(ii) If a periodic payment turns out to be more or less than the BLM's reasonable processing costs for the period, the BLM will adjust the next billing accordingly or make a refund. Do not deduct any amount from a payment without the BLM's prior written approval.

(6) The applicant must pay the entire fee before the BLM will issue the final document.

(7) The applicant may appeal the BLM's estimated processing costs in accordance with the regulations in 43 CFR part 4, subpart E. The applicant may also appeal any determination the BLM makes under *paragraph (a)* of this section that a document designated for a fixed fee will be processed as a case-by-case fee. The BLM will not process the document further until the appeal is resolved, in accordance with *paragraph (b)(5)(i)* of this section, unless the applicant pays the fee under protest while the appeal is pending. If the appeal results in a decision changing the proposed fee, the BLM will adjust the fee in accordance with *paragraph (b)(5)(ii)* of this section.

§ 3000.120 Fee schedule for fixed fees.

(a) The table in this section lists the services that require payment of fixed fees to the BLM. The fixed fee amounts are posted on the BLM website (*https://www.blm.gov*) and published in a **Federal Register** notice. These fees are nonrefundable and must be included with documents filed under this chapter. Fees will be adjusted annually according to the change in the Implicit Price Deflator for Gross Domestic Product since the previous adjustment and will subsequently be posted on the BLM website (*https://www.blm.gov*) and announced annually in the **Federal Register** before October 1 each year. Revised fees are effective each year on October 1.

TABLE 1 TO PARAGRAPH (a)—PROCESSING AND FILING FEE TABLE

Document/action
Oil & Gas (parts 3100, 3110, 3120, 3130, 3150, 3160, and 3180):
Competitive lease application
Leasing and compensatory royalty agreements under right-of-way pursuant to subpart 3109.
Lease consolidation
Assignment and transfer of record title or operating rights
Overriding royalty transfer, payment out of production
Name change; corporate merger; sheriff's deed; dissolution of corporation, partnership, or trust; or transfer to heir/devisee
Lease reinstatement, Class I
Geophysical exploration permit application—all states
Renewal of exploration permit—Alaska
Final application for Federal unit agreement approval, Federal unit agreement expansion, and Federal subsurface gas storage application
Designation of successor operator for all Federal agreements, except for contracted unit agreements that contain no Federal lands.
Geothermal (part 3200):
Noncompetitive lease application
Competitive lease application
Assignment and transfer of record title or operating rights

TABLE 1 TO PARAGRAPH (a)—PROCESSING AND FILING FEE TABLE—Continued

Document/action
Name change, corporate merger or transfer to heir/devisee
Lease consolidation
Lease reinstatement
Nomination of lands
plus per acre nomination fee
Site license application
Assignment or transfer of site license
Coal (parts 3400, 3470):
License to mine application
Exploration license application
Lease or lease interest transfer
Leasing of Solid Minerals Other Than Coal and Oil Shale (parts 3500, 3580):
Applications other than those listed below
Prospecting permit application amendment
Extension of prospecting permit
Lease modification or fringe acreage lease
Lease renewal
Assignment, sublease, or transfer of operating rights
Transfer of overriding royalty
Use permit
Shasta and Trinity hardrock mineral lease
Renewal of existing sand and gravel lease in Nevada
Public Law 359; Mining in Powersite Withdrawals: General (part 3730):
Notice of protest of placer mining operations
Mining Law Administration (parts 3800, 3810, 3830, 3860, 3870):
Application to open lands to location
Notice of location *
Amendment of location
Transfer of mining claim/site
Recording an annual FLPMA filing
Deferment of assessment work
Recording a notice of intent to locate mining claims on Stockraising Homestead Act lands
Mineral patent adjudication
Adverse claim
Protest
Oil Shale Management (parts 3900, 3910, 3930):
Exploration license application
Application for assignment or sublease of record title or overriding royalty
Onshore Oil and Gas Operations and Production (parts 3160, 3170):
Application for Permit to Drill

* To record a mining claim or site location, this processing fee along with the initial maintenance fee and the one-time location fee required by statute 43 CFR part 3833 must be paid.

(b) The amount of a fixed fee is not subject to appeal to the Interior Board of Land Appeals pursuant to 43 CFR part 4, subpart E.

■ 2. Revise part 3100 to read as follows:

PART 3100—OIL AND GAS LEASING

Subpart 3100—Oil and Gas Leasing: General

Subpart 3101—Issuance of Leases

Subpart 3102—Qualifications of Lessees

Subpart 3103—Fees, Rentals, and Royalty

Authority: 25 U.S.C. 396d and 2107; 30 U.S.C. 189, 306, 359, and 1751; 43 U.S.C. 1701 *et seq.;* and 42 U.S.C. 15801.

Subpart 3100—Onshore Oil and Gas Leasing: General

§ 3100.3 Authority.

(a)(1) *Public domain.* Oil and gas in public domain lands and lands returned to the public domain under 43 CFR part 2370 are subject to lease under the Mineral Leasing Act of 1920, as amended and supplemented (30 *U.S.C. 181 et seq.*), by acts, including, but not limited to, section 1009 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3148).

(2) *Exceptions.* The following lands are not subject to lease.

(i) Units of the National Park System, including lands withdrawn by section 206 of the Alaska National Interest Lands Conservation Act, except as provided in paragraph (g)(4) of this section;

(ii) Indian reservations;

(iii) Incorporated cities, towns and villages;

(iv) Naval petroleum and oil shale reserves;

(v) Lands north of 68 degrees north latitude and east of the western boundary of the National Petroleum Reserve—Alaska;

(vi) Lands recommended for wilderness allocation by the surface managing agency;

(vii) Lands within the BLM's wilderness study areas;

(viii) Lands designated by Congress as wilderness study areas, except where oil and gas leasing is specifically allowed to continue by the statute designating the study area;

(ix) Lands within areas allocated for wilderness or further planning in Executive Communication 1504, Ninety-Sixth Congress (House Document numbered 96–119), unless such lands are allocated to uses other than wilderness by a land and resource management plan or have been released to uses other than wilderness by an Act of Congress;

(x) Lands within the National Wilderness Preservation System, subject to valid existing rights under section 4(d)(3) of the Wilderness Act (16 U.S.C. 1133) established before midnight, December 31, 1983, unless otherwise provided by law;

(xi) Subject to valid existing rights, lands within the National Wild and Scenic Rivers System and that constitute the bed or bank or are situated within one-quarter mile of the bank of any river designated as a wild river under the Wild and Scenic Rivers Act (16 U.S.C. 1280), lands within the National Wild and Scenic Rivers System that constitute the bed or bank or are situated within one-quarter mile of the bank of certain rivers designated as scenic or recreational, and in some cases, designating legislation may apply a different boundary extent. Lands within the National Wild and Scenic Rivers System that constitute the bed or bank or are situated within one-half mile of the bank of any river designated a wild river by the Alaska National Interest Lands Conservation Act (16 U.S.C. 3148); and

(xii) Wildlife refuge lands, which are those lands embraced in a withdrawal of lands of the United States for the protection of all species of wildlife within a particular area. Sole and complete jurisdiction over such lands for wildlife conservation purposes is vested in the Fish and Wildlife Service even though such lands may be subject to prior rights for other public purposes or, by the terms of the withdrawal order, may be subject to mineral leasing. No expressions of interest covering wildlife refuge lands will be considered for oil and gas leasing, except as provided by applicable law.

(b)(1) *Acquired lands.* Oil and gas in acquired lands are subject to lease under the Mineral Leasing Act for Acquired Lands of August 7, 1947, as amended (30 U.S.C. 351 *et seq.*).

(2) *Exceptions.* The following lands are not subject to lease.

(i) Units of the National Park System, except as provided in paragraph (g)(4) of this section;

(ii) Incorporated cities, towns and villages;

(iii) Naval petroleum and oil shale reserves;

(iv) Tidelands or submerged coastal lands within the continental shelf adjacent or littoral to lands within the jurisdiction of the United States;

(v) Lands acquired by the United States for development of helium, fissionable material deposits or other minerals essential to the defense of the country, except oil, gas and other minerals subject to leasing under the Act;

(vi) Lands reported as excess under the Federal Property and Administrative Services Act of 1949;

(vii) Lands acquired by the United States by foreclosure or otherwise for resale;

(viii) Lands recommended for wilderness allocation by the surface managing agency;

(ix) Lands within the BLM's wilderness study areas;

(x) Lands designated by Congress as wilderness study areas, except where oil and gas leasing is specifically allowed to continue by the statute designating the study area;

(xi) Lands within areas allocated for wilderness or further planning in Executive Communication 1504, Ninety-Sixth Congress (House Document numbered 96–119), unless such lands are allocated to uses other than wilderness by a land and resource management plan or have been released to uses other than wilderness by an Act of Congress;

(xii) Lands within the National Wilderness Preservation System, subject to valid existing rights under section 4(d)(3) of the Wilderness Act (16 U.S.C. 1133) established before midnight, December 31, 1983, unless otherwise provided by law;

(xiii) Subject to valid existing rights, lands within the National Wild and Scenic Rivers System and that constitute the bed or bank or are situated within one-quarter mile of the bank of any river designated as a wild river under the Wild and Scenic Rivers Act (16 U.S.C. 1280), lands within the National Wild and Scenic Rivers System that constitute the bed or bank or are situated within one-quarter mile of the bank of certain rivers designated as scenic or recreational, and in some cases, designating legislation may apply a different boundary extent. Lands within the National Wild and Scenic Rivers System that constitute the bed or bank or are situated within one-half mile of the bank of any river designated a wild river by the Alaska National Interest Lands Conservation Act (16 U.S.C. 3148); and

(xiv) Wildlife refuge lands, which are those lands embraced in a withdrawal of lands of the United States for the protection of all species of wildlife within a particular area. Sole and complete jurisdiction over such lands for wildlife conservation purposes is vested in the Fish and Wildlife Service even though such lands may be subject to prior rights for other public purposes or, by the terms of the withdrawal order, may be subject to mineral leasing. No expressions of interest for wildlife refuge lands will be considered except as provided in applicable law.

(c) National Petroleum Reserve—Alaska is subject to lease under the Department of the Interior Appropriations Act, Fiscal Year 1981 (42 U.S.C. 6508).

(d) Where oil or gas is being drained from lands otherwise unavailable for leasing, there is implied authority in the agency having jurisdiction of those lands to grant authority to the BLM to lease such lands (see *43 U.S.C. 1457;* also Attorney General's Opinion of April 2, 1941 (Vol. 40 Op. Atty. Gen. 41)).

(e) Where lands previously withdrawn or reserved from the public domain are no longer needed by the agency for which the lands were withdrawn or reserved and such lands are retained by the General Services Administration, or where acquired lands are declared as excess to or surplus by the General Services Administration, authority to lease such lands may be transferred to the Department in accordance with the Federal Property and Administrative Services Act of 1949 and the Mineral Leasing Act for Acquired Lands, as amended.

(f) The Act of May 21, 1930 (*30 U.S.C. 301–306*), authorizes the leasing of oil and gas deposits under certain rights-of-way to the owner of the right-of-way or any assignee.

(g)(1) *Certain lands in Nevada.* The Act of May 9, 1942 (56 Stat. 273), as amended by the Act of October 25, 1949 (63 Stat. 886), authorizes leasing on certain lands in Nevada.

(2) *Lands patented to the State of California.* The Act of March 3, 1933 (47 Stat. 1487), as amended by the Act of June 5, 1936 (49 Stat. 1482) and the Act of June 29, 1936 (49 Stat. 2026), authorizes leasing on certain lands patented to the State of California.

(3) *National Forest Service Lands in Minnesota.* The Act of June 30, 1950 (16 U.S.C. 508(b)) authorizes leasing on certain National Forest Service Lands in Minnesota.

(4) *Units of the National Park System.* The Secretary is authorized to permit mineral leasing in the following units of the National Park System if the Secretary finds that such disposition would not have significant adverse effects on the administration of the area and if lease operations can be conducted in a manner that will preserve the scenic, scientific and historic features contributing to public enjoyment of the area, pursuant to the following authorities:

(i) *Lake Mead National Recreation Area*—The Act of October 8, 1964 (16 U.S.C. 460n *et seq.*).

(ii) *Whiskeytown Unit of the Whiskeytown-Shasta-Trinity National Recreation Area*—The Act of November 8, 1965 (79 Stat. 1295; 16 U.S.C. 460q *et seq.*).

(iii) *Ross Lake and Lake Chelan National Recreation Areas*—The Act of October 2, 1968 (82 Stat. 926; 16 U.S.C. 90 *et seq.*).

(iv) *Glen Canyon National Recreation Area*—The Act of October 27, 1972 (86 Stat. 1311; 16 U.S.C. 460dd *et seq.*).

(5) *Shasta and Trinity Units of the Whiskeytown-Shasta-Trinity National Recreation Area.* Section 6 of the Act of November 8, 1965 (Pub. L. 89–336; 79 Stat. 1295), authorizes the Secretary of the Interior to permit the removal of leasable minerals from lands (or interest in lands) within the recreation area under the jurisdiction of the Secretary of Agriculture in accordance with the Mineral Leasing Act of February 25, 1920, as amended (30 U.S.C. 181 *et seq.*), or the Acquired Lands Mineral Leasing Act of August 7, 1947 (30 U.S.C. 351 *et seq.*), if the Secretary finds that such disposition would not have

significant adverse effects on the purpose of the Central Valley project or the administration of the recreation area.

(h) Under the Recreation and Public Purposes Act, as amended (43 U.S.C. 869 *et seq.*), all lands within Recreation and Public Purposes leases and patents are subject to lease under the provisions of this part, subject to such conditions as the Secretary deems appropriate.

(i)(1) Coordination lands are those lands withdrawn or acquired by the United States and made available to the States by cooperative agreements entered into between the Fish and Wildlife Service and the game commissions of the various States, in accordance with the Fish and Wildlife Coordination Act (16 U.S.C. 661), or by long-term leases or agreements between the Department of Agriculture and the game commissions of the various States pursuant to the Bankhead-Jones Farm Tenant Act (50 Stat. 525), as amended, where such lands were subsequently transferred to the Department of the Interior, with the Fish and Wildlife Service as the custodial agency of the United States.

(2) Representatives of the BLM and the Fish and Wildlife Service will, in cooperation with the authorized members of the various State game commissions, confer for the purpose of determining by agreement those coordination lands which will not be subject to oil and gas leasing. Coordination lands not closed to oil and gas leasing may be subject to leasing on the imposition of such stipulations as are agreed upon by the State Game Commission, the Fish and Wildlife Service and the BLM.

(j) No lands within a refuge in Alaska open to leasing will be available until the Fish and Wildlife Service has first completed compatibility determinations.

§ 3100.5 Definitions.

As used in this part, the term:

Actual drilling operations includes not only the physical drilling of a well, but also the testing, completing or equipping of such well for production.

Assignment means a transfer of all or a portion of the lessee's record title interest in a lease.

Bid means an amount of remittance offered as partial compensation for a lease equal to or in excess of the national minimum acceptable bonus bid set by statute or by the Secretary, submitted by a person for a lease parcel in a competitive lease sale. For leases or compensatory royalty agreements issued under 43 CFR subpart 3109, ''bid'' means an amount or percent of royalty or compensatory royalty that the owner or lessee must pay for the extraction of the oil and gas underlying the right-of-way.

Competitive auction means an in-person or internet-based bidding process where leases are offered to the highest bidder.

Exception means (as used for lease stipulations) a limited exemption, for a particular site within the leasehold, to a stipulation.

Lessee means a person holding record title in a lease issued by the United States.

Modification means (as used for lease stipulations) a change to the provisions of a lease stipulation for some or all sites within the leasehold and either temporarily or for the term of the lease.

National Wildlife Refuge System Lands means lands and water, or interests therein, administered by the Secretary as wildlife refuges, areas for the protection and conservation of fish and wildlife that are threatened with extinction; wildlife management areas; or waterfowl production areas.

Oil and gas agreement means an agreement between lessees and the BLM to govern the development and allocation of production for existing leases and unleased lands, including, but not limited to, communitization agreements, compensatory royalty agreements, unit agreements, secondary recovery agreements, and gas storage agreements.

Operating right (working interest) means the interest created out of a lease authorizing the holder of that right to enter upon the leased lands to conduct drilling and related operations, including production of oil or gas from such lands in accordance with the terms of the lease. Operating rights include the obligation to comply with the terms of the original lease, as it applies to the area or horizons for the interest acquired, including the responsibility to plug and abandon all wells that are no longer capable of producing, reclaim the lease site, and remedy environmental problems.

Operating rights owner means a person holding operating rights in a lease issued by the United States. A lessee also may be an operating rights owner if the operating rights in a lease or portion thereof have not been severed from record title.

Operator means any person, including, but not limited to, the lessee or operating rights owner, who has stated in writing to the authorized officer that it is responsible under the terms and conditions of the lease for the operations conducted on the leased lands or a portion thereof.

Primary term of lease subject to section 4(d) of the Act prior to the revision of 1960 (30 U.S.C. 226–1(d)) means all periods of the life of the lease prior to its extension by reason of production of oil and gas in paying quantities; and

Primary term of all other leases means the initial term of the lease, which is 10 years.

Qualified bidder means any person in compliance with the laws and regulations governing a bid.

Qualified lessee means any person in compliance with the laws and regulations governing the BLM issued leases held by that person.

Record title means a lessee's interest in a lease, which includes the obligation to pay rent and the ability to assign and relinquish the lease. Record title includes the obligation to comply with the lease terms, including requirements relating to well operations and abandonment. Overriding royalty and operating rights are severable from record title interests.

Responsible bidder means any person who has not defaulted on the payment of winning bids for BLM-issued oil and gas leases, is capable of fulfilling the requirements of onshore BLM oil and gas leases, and is in compliance with statutes and regulations applicable to oil and gas development or with the terms of a BLM-issued oil and gas lease. The term ''responsible bidder'' does not include persons who bid with no intention of paying a winning bid or persons who default on a winning bid.

Responsible lessee means any person who has not defaulted on previous winning bids, is capable of fulfilling the requirements of onshore Federal oil and gas leases, and is in compliance with statutes applicable to oil and gas development or the terms of a BLM-issued oil and gas lease.

Sublease means a transfer of a non-record title interest in a lease, *i.e.,* a transfer of operating rights is normally a sublease, and a sublease also is a subsidiary arrangement between the lessee (sublessor) and the sublessee, but a sublease does not include a transfer of a purely financial interest, such as overriding royalty interest or payment out of production, nor does it affect the relationship imposed by a lease between the lessee(s) and the United States.

Transfer means any conveyance of an interest in a lease by assignment, sublease or otherwise. This definition includes the terms: *Assignment* and *Sublease.*

Unit operator means the person authorized under the unit agreement approved by the Department of the

Interior to conduct operations within the unit.

Waiver means (as used for lease stipulations) a permanent exemption from a lease stipulation.

§ 3100.9 Information collection.

(a) *Authority:* 44 U.S.C. 3501–3520

(b)(1) *Purpose.* The Paperwork Reduction Act of 1995 generally provides that an agency may not conduct or sponsor, and notwithstanding any other provision of law, a person is not required to respond to a collection of information, unless the collection displays a currently valid Office of Management and Budget (OMB) Control Number. This part displays OMB control numbers assigned to information collection requirements contained in the BLM's regulations at 43 CFR part 3100. This section aids in fulfilling the requirements of the Paperwork Reduction Act to display current OMB Control Numbers for these information collection requirements. Interested persons should consult *https://www.reginfo.gov* for the most current information on these OMB control numbers; including among other things, the justification for the information collection requirements, description of likely respondents, estimated burdens, and current expiration dates.

(2) *Table 1 to Paragraph (b)—OMB control number assigned pursuant to the Paperwork Reduction Act.*

43 CFR part or section	OMB control No.
§§ 3100, 3103.41, 3120, and Subpart 3162	1004–0185
§§ 3106, 3135, and 3216	1004–0034
Part 3130	1004–0196
Subpart 3195	1004–0179
§ 3150	1004–0162
§§ 3160,* 3171, 3176, and 3177	1004–0220
§§ 3172, 3173, 3174, 3175	1004–0137
§§ 3162.3–1, 3178.5, 3178.7, 3178.8, 3178.9 and Subpart 3179*	1004–0211

* Information collection requirements for onshore oil and gas operations are generally accounted for under OMB Control Number 1004–0220; however, information collection requirements pertaining to particular to waste prevention, production subject to royalties, and resource conservation are accounted for under OMB Control Number 1004–0211.

§ 3100.10 Helium.

The ownership of and the right to extract helium from all gas produced from lands leased or otherwise disposed of under the Act have been reserved to the United States.

Drainage

§ 3100.21 Compensation for drainage.

Upon a determination by the authorized officer that lands owned by the United States are being drained of oil or gas by wells drilled on adjacent lands, the authorized officer may execute agreements with the owners of adjacent lands whereby the United States and its lessees will be compensated for such drainage. Such agreements must be made with the consent of any lessee affected by an agreement. Such lands may also be offered for lease in accordance with 43 CFR part 3120.

§ 3100.22 Drilling and production or payment of compensatory royalty.

Where lands in any leases are being drained of their oil or gas content by wells either on a Federal lease issued at a lower rate of royalty or on non-Federal lands, the lessee must both drill and produce all wells necessary to protect the leased lands from drainage. In lieu of drilling necessary wells, the lessee may, with the consent of the authorized officer, pay compensatory royalty in accordance with 43 CFR 3162.2–4.

Options

§ 3100.31 Enforceability.

(a) No option to acquire any interest in a lease is enforceable if entered into for a period of more than 3 years (including any renewal period that may be provided for in the option).

(b) No option or renewal thereof is enforceable until a signed copy or notice of the option has been filed in the proper BLM office. Each such signed copy or notice must include:

(1) The names and addresses of the parties thereto;

(2) The serial number of the lease to which the option is applicable;

(3) A statement of the number of acres and the type and percentage of interests to be conveyed and retained by the parties to the option, including the date and expiration date of the option.

(c) The signatures of all parties to the option or their duly authorized agents. The signed copy or notice of the option required by this paragraph must contain or be accompanied by a signed statement by the holder of the option that entity is the sole party in interest in the option; if not, the entity must set forth the names and provide a description of the interest therein of the other interested parties, and provide a description of the agreement between them, if oral, and a copy of such agreement, if written.

§ 3100.32 Effect of option on acreage.

The acreage to which the option is applicable will be charged both to the grantor of the option and the option holder. The acreage covered by an unexercised option remains charged during its term until notice of its relinquishment or surrender has been filed in the proper BLM office.

§ 3100.33 Option statements.

Each option holder must file in the proper BLM office within 90 days after June 30 and December 31 of each year a statement showing:

(a) Any changes to the statements submitted under § 3100.31(b); and

(b) The number of acres covered by each option and the total acreage of all options held in each State.

§ 3100.40 Public availability of information.

(a) All data and information concerning Federal and Indian minerals submitted under this part 3100 and parts 3120 through 3190 of this chapter are subject to 43 CFR part 2, except as provided in paragraph (c) of this section. 43 CFR part 2 includes the regulations of the Department of the Interior covering the public disclosure of data and information contained in Department of the Interior records. Certain mineral information not protected from public disclosure under 43 CFR part 2 may be made available for inspection without a Freedom of Information Act (FOIA) (5 U.S.C. 552) request.

(b) When you submit data and information under this part 3100 and parts 3120 through 3190 of this chapter that you believe to be exempt from disclosure to the public, you must clearly mark each page that you believe includes confidential information. The BLM will keep all such data and information confidential to the extent allowed by 43 CFR 2.26.

(c) Under the Indian Mineral Development Act of 1982 (IMDA) (25 U.S.C. 2101 *et seq.*), the Department of the Interior will hold as privileged proprietary information of the affected Indian or Indian Tribe—

(1) All findings forming the basis of the Secretary's intent to approve or disapprove any Minerals Agreement under IMDA; and

(2) All projections, studies, data, or other information concerning a Minerals Agreement under IMDA, regardless of the date received, related to:

(i) The terms, conditions, or financial return to the Indian parties;

(ii) The extent, nature, value, or disposition of the Indian mineral resources; or

(iii) The production, products, or proceeds thereof.

(d) For information concerning Indian minerals not covered by paragraph (c) of this section:

(1) The BLM will withhold such records as may be withheld under an exemption to FOIA when it receives a request for information related to tribal or Indian minerals held in trust or subject to restrictions on alienation;

(2) The BLM will notify the Indian mineral owner(s) identified in the records of the Bureau of Indian Affairs (BIA) and give them a reasonable period of time to state objections to disclosure, using the standards and procedures of 43 CFR 2.28, before making a decision about the applicability of FOIA exemption 4 to:

(i) Information obtained from a person outside the United States Government; when

(ii) Following consultation with a submitter under 43 CFR 2.28, the BLM determines that the submitter does not have an interest in withholding the records that can be protected under FOIA; but

(iii) The BLM has reason to believe that disclosure of the information may result in commercial or financial injury to the Indian mineral owner(s) but is uncertain that such is the case.

Subpart 3101—Issuance of Leases

Lease Terms and Conditions

§ 3101.11 Lease form.

A lease will be issued only on the standard form approved by the Director.

§ 3101.12 Surface use rights.

A lessee will have the right to use only so much of the leased lands as is necessary to explore for, drill for, mine, extract, remove and dispose of all the leased resource in a leasehold subject to applicable requirements, including stipulations attached to the lease, restrictions deriving from nondiscretionary statutes, and such reasonable measures as may be required and detailed by the authorized officer to mitigate adverse impacts to other resource values, land uses or users, federally recognized Tribes, and underserved communities. Such reasonable measures may include, but are not limited to, relocation or modification to siting or design of facilities, timing of operations, specification of interim and final reclamation measures, and specification of rates of development and production in the public interest. At a minimum, modifications that are consistent with lease rights include, but are not limited to, requiring relocation of proposed operations by up to 800 meters and prohibiting new surface disturbing operations for a period of up to 90 days in any lease year.

§ 3101.13 Stipulations and information notices.

(a) The BLM may consider the sensitivity and importance of potentially affected resources and any uncertainty concerning the present or future condition of those resources and will assess whether a resource is adequately protected by stipulation while considering the restrictiveness of the stipulation on operations.

(b) The authorized officer may require stipulations as conditions of lease issuance. Stipulations will become part of the lease and will supersede inconsistent provisions of the standard lease form. Any party submitting a bid under part 3120 will be deemed to have agreed to stipulations applicable to the specific parcel as indicated in the Notice of Competitive Lease Sale available from the proper BLM office.

(c) The BLM may attach an information notice to the lease. An information notice has no legal consequences, except to give notice of existing requirements, and may be attached to a lease by the authorized officer at the time of lease issuance to convey certain operational, procedural or administrative requirements relative to lease management within the terms and conditions of the standard lease form. Information notices may not be a basis for denial of lease operations.

(d) Where the surface managing agency is the Fish and Wildlife Service, leases will be issued subject to stipulations prescribed by the Fish and Wildlife Service as to the time, place, nature and condition of such operations in order to minimize impacts to fish and wildlife populations and habitat and other refuge resources on the areas leased. The specific conduct of lease activities on any refuge lands will be subject to site-specific stipulations prescribed by the Fish and Wildlife Service.

§ 3101.14 Modification, waiver, or exception.

(a) If the authorized officer determines that a change to a lease term or stipulation is substantial or a stipulation involves an issue of major concern to the public, except for changes to stipulations governing time of year restrictions (such as those related to protected species) supported by data showing that the restrictions are unnecessary, the changes will be subject to public review for at least 30 calendar days.

(b) Prior to lease issuance, if the BLM determines that an additional stipulation will be added to the lease or a modification to an existing stipulation is required, the potential lessee must be given an opportunity to accept the additional or modified stipulation. If the potential lessee does not accept the additional or modified stipulation, the BLM may reject the bid, and may include the lands in the next Notice of Competitive Lease Sale. If the change in stipulation(s) increases the value of the parcel, the BLM will reject the bid, and will include the lands in the next Notice of Competitive Lease Sale.

(c) After lease issuance, if a lessee does not accept an additional or modified stipulation, that additional or modified stipulation is not binding on the lessee and is without effect. When a stipulation is required by the relevant Resource Management Plan, or surface management agency land management plan, and was inadvertently omitted, a lessee's failure to sign and accept changes in the stipulations when requested by the authorized officer may subject the lease to cancellation.

(d) A stipulation included in an oil and gas lease will be subject to modification, waiver, or exception if the authorized officer determines, in conjunction with the applicable surface management agency, that the factors leading to its inclusion in the lease have changed sufficiently to make the specific protections provided by the stipulation no longer justified.

Acreage Limitations

§ 3101.21 Public domain lands.

(a) No person may take, hold, own or control more than 246,080 acres of Federal oil and gas leases on public domain lands in any one State at any one time. No more than 200,000 acres of such acres may be held under option.

(b) In Alaska, the acreage that can be taken, held, owned or controlled is limited to 300,000 acres in the northern leasing district and 300,000 acres in the southern leasing district, of which no more than 200,000 acres may be held under option in each of the two leasing districts. The boundary between the two leasing districts in Alaska begins at the northeast corner of the Tetlin National Wildlife Refuge as established by section 302(8) of the Alaska National Interest Lands Conservation Act, at a point on the boundary between the United States and Canada, then northwesterly along the northern boundary of the refuge to the left limit of the Tanana River (63°9′38″ north latitude, 142°20′52″ west longitude), then westerly along the left limit to the confluence of the Tanana and Yukon Rivers, and then along the left limit of

the Yukon River from said confluence to its principal southern mouth.

§ 3101.22 Acquired lands.

Separate from, and in addition to, the limitation for public domain lands, no person may take, hold, own or control more than 246,080 acres of Federal oil and gas leases on acquired lands in any one State at any one time. No more than 200,000 acres of such acres may be held under option. Where the United States owns only a fractional interest in the mineral resources of the lands involved in a lease, only that part owned by the United States will be charged as acreage holdings. The acreage embraced in a future interest lease will not be charged as acreage holdings until the lease for the future interest becomes effective.

§ 3101.23 Excepted acreage.

(a) The following acreage will not be included in computing acreage limitations:

(1) Acreage under any lease any portion of which is committed to any federally approved oil and gas agreement;

(2) Acreage under any lease for which royalty (including compensatory royalty or royalty in-kind) was paid in the preceding calendar year; and

(3) Acreage under leases subject to an operating, drilling or development contract approved by the Secretary, as provided in 43 CFR 3105.30.

(b) Acreage subject to offers to lease, overriding royalties and payments out of production will not be included in computing acreage limitations.

§ 3101.24 Excess acreage.

(a) Where, as the result of the termination or contraction of an oil and gas agreement or the elimination of a lease from an operating, drilling, or development contract, a party holds or controls excess accountable acreage, that party will have 90 calendar days from the date of termination, contraction or elimination, to reduce the holdings to the prescribed limitation and to file proof of the reduction in the proper BLM office. Where, as a result of a merger or the purchase of the controlling interest in a corporation, a party acquired acreage in excess of the amount permitted, the party holding the excess acreage will have 180 calendar days from the date of the merger or purchase to divest the excess acreage. If additional time is required to complete the divestiture of the excess acreage, a petition requesting additional time, along with a full justification for the additional time, may be filed with the authorized officer prior to the termination of the 180 days provided herein.

(b) If any person is found to hold accountable acreage in violation of the provisions of these regulations, lease(s) or interests therein will be subject to cancellation or forfeiture in their entirety, until sufficient acreage has been eliminated to comply with the acreage limitation. Excess acreage or interest will be cancelled in the inverse order of acquisition.

§ 3101.25 Computation.

The accountable acreage of a party owning an undivided interest in a lease will be the party's proportionate part of the total lease acreage.

§ 3101.30 Leases within unit areas, joinder evidence required.

Before issuance of a lease for lands within an approved unit, the lease offeror must file evidence with the proper BLM office that it has joined in the unit agreement and unit operating agreement or a statement giving satisfactory reasons for its failure to enter into such agreement. If such statement is satisfactory to the authorized officer, the lessee may be permitted to operate independently but will be required to conform to the terms and provisions of the unit agreement with respect to such operations.

§ 3101.40 Terminated leases.

(a) The authorized officer will not issue a lease for lands which have been covered by a lease which terminated automatically until 90 calendar days after the date of termination.

(b) The authorized officer will not, after the receipt of a petition for reinstatement, issue a new lease affecting any of the lands covered by the terminated lease until all action on the petition is final.

Federal Lands Administered by an Agency Other Than the Bureau of Land Management

§ 3101.51 General requirements.

Public domain and acquired lands will be leased only after seeking concurrence from the surface managing agency, which, upon receipt of a description of the lands from the authorized officer, may report to the authorized officer that it consents to leasing with stipulations, if any, or withholds consent or objects to leasing.

§ 3101.52 Action by the Bureau of Land Management.

(a) Where the surface managing agency has consented to leasing with required stipulations, and the Secretary decides to issue a lease, the authorized officer will incorporate the stipulations into any lease which it may issue. The authorized officer may add other appropriate stipulations.

(b) The authorized officer will not issue a lease on lands to which the surface managing agency objects or withholds consent and for which consent or concurrence is required by law.

(c) The authorized officer will review all recommendations of the surface managing agency and will accept all reasonable recommendations.

(d) Where the surface managing agency is the Fish and Wildlife Service, there will be no drilling or prospecting under any lease heretofore or hereafter issued on lands within a wildlife refuge, except with the consent and approval of the Secretary with the concurrence of the Fish and Wildlife Service as to the time, place and nature of such operations in order to give complete protection to wildlife populations and wildlife habitat on the areas leased, and all such operations must be conducted in accordance with BLM stipulations.

§ 3101.53 Appeals.

(a) The decision of the authorized officer to reject an offer to lease or to issue a lease with stipulations recommended by the surface managing agency may be appealed to the Interior Board of Land Appeals under 43 CFR part 4.

(b) Where, as provided by statute, the surface managing agency has required that certain stipulations be included in a lease or has consented, or objected or refused to consent to leasing, any appeal by an affected lease offeror will be subject to the administrative remedies if provided for by the particular surface managing agency.

§ 3101.60 State's or charitable organization's ownership of surface overlying federally owned minerals.

Where the United States has conveyed title to, or otherwise transferred the control of the surface of lands to any State or political subdivision, agency, or instrumentality thereof, or a college or any other educational corporation or association, or a charitable or religious corporation or association, with reservation of the oil and gas rights to the United States, such party will be given an opportunity to suggest any lease stipulations deemed necessary for the protection of existing surface improvements or uses, to set forth the facts supporting the necessity of the stipulations and also to file any objections it may have to the issuance of a lease. Where a party controlling the surface opposes the issuance of a lease

or wishes to place such restrictive stipulations upon the lease that it could not be operated upon or become part of a drilling unit and hence is without mineral value, the facts submitted in support of the opposition or request for restrictive stipulations may be given consideration and each case will be decided on its merits. The opposition to lease or necessity for restrictive stipulations expressed by the party controlling the surface affords no legal basis or authority to refuse to issue the lease or to issue the lease with the requested restrictive stipulations for the reserved minerals in the lands; in such case, the final determination whether to issue and with what stipulations, or not to issue the lease depends upon whether or not the interests of the United States would best be served by the issuance of the lease.

Subpart 3102—Qualifications of Lessees

§ 3102.10 Who may hold leases.

Leases or interests therein may be acquired and held only by citizens of the United States; associations (including partnerships and trusts) of such citizens; corporations organized under the laws of the United States or of any State or Territory thereof; and municipalities.

§ 3102.20 Non-U.S. Citizens.

(a) Leases or interests therein may be acquired and held by non-U.S. Citizens only through stock ownership, holding or control in a present or potential lessee that is incorporated under the laws of the United States or of any State or territory thereof, and only if the laws, customs or regulations of their country do not deny similar or like privileges to citizens or corporations of the United States. If it is determined that a country has denied similar or like privileges to citizens or corporations of the United States, it would be placed on a list available from any BLM State office.

(b) The Committee on Foreign Investment in the United States is authorized to review covered real estate transactions and to mitigate any risk to the national security of the United States that arises as a result of such transactions. Covered real estate transactions may include certain transactions involving the Federal mineral estate (see 31 CFR part 802).

§ 3102.30 Minors.

Leases must not be acquired or held by someone considered to be a minor under the laws of the State in which the lands are located, but leases may be acquired and held by legal guardians or trustees of minors on their behalf. Such legal guardians or trustees must be citizens of the United States or otherwise meet the provisions of 43 CFR 3102.10.

§ 3102.40 Signature.

Signatures on all applications and BLM forms certify acceptance of lease terms and stipulations, as well as compliance with the regulations under 43 CFR part 3100. Refer to § 3102.50 for certification of compliance and evidence. The BLM also accepts electronic signatures and submissions.

(a) A bid to lease must be made on a current form approved by the Director. Copies must be exact reproductions of the official approved form, without additions, omissions, or other changes. When the bid is filed in person at the proper BLM office, the bid must be typed or printed plainly, signed, and dated by the offeror or an authorized agent on behalf of the present or potential lessee. Bids may be made to the BLM by other arrangements, such as electronically signed and filed, when specifically authorized by the BLM.

(b) Documents signed by any party other than the present or potential lessee must be rendered in a manner to reveal the name of the present or potential lessee, the name of the signatory and their relationship. A signatory who is a member of the organization that constitutes the present or potential lessee (*e.g.,* officer of a corporation, partner of a partnership, etc.) may be requested by the authorized officer to clarify his/her relationship, when the relationship is not shown on the documents filed.

Compliance, Certification of Compliance and Evidence

§ 3102.51 Compliance.

Only responsible and qualified bidders and lessees may own, hold, or control an interest in a lease or prospective lease. Responsible and qualified bidders and lessees, including corporations, and all members of associations, including partnerships of all types, will, without exception, be qualified and in compliance with the Act. Compliance means that the persons are:

(a) Citizens of the United States (see § 3102.10) or non-U.S. citizens who own stock in a corporation organized under State or Federal law (see § 3102.20);

(b) In compliance with the Federal acreage limitations (see § 3101.20);

(c) Not minors (see § 3102.30);

(d) Except for an assignment or transfer under 43 CFR subpart 3106, in compliance with section 2(a)(2)(A) of the Act (30 U.S.C. 201(2)(A)), in which case the signature on a bid or lease constitutes evidence of compliance. A lease issued to any person in violation of this paragraph (d) will be subject to the cancellation provisions of 43 CFR 3108.30.

(e) Not in violation of the provisions of section 41 of the Act (30 U.S.C. 195); and

(f) In compliance with section 17(g) of the Act (30 U.S.C. 226(g)), in which case the signature on an offer, lease, assignment, or transfer constitutes evidence of compliance that the signatory and any subsidiary, affiliate, or person, association, or corporation controlled by or under common control with the signatory, as defined in 43 CFR 3400.0–5(rr), has not failed or refused to comply with reclamation requirements with respect to all leases and operations thereon in which such person has an interest. A person is noncompliant with section 17(g) of the Act when they fail to comply with their reclamation obligations or other standards established under 30 U.S.C. 226 in the time specified in a notice from the BLM. A lease issued, or an assignment or transfer approved, to any such person in violation of this paragraph (f) may be subject to the cancellation provisions of 43 CFR 3108.30, notwithstanding any administrative or judicial appeals that may be pending with respect to violations or penalties assessed for failure to comply with the prescribed reclamation standards on any lease holdings. Noncompliance will end upon a determination by the authorized officer that all required reclamation has been completed and that the United States has been fully reimbursed for any costs incurred due to the required reclamation.

(g) In compliance with 43 CFR 3106.10(d) and section 30A of the Act (30 U.S.C. 187(a)). The authorized officer may accept the signature on a request for approval of an assignment of less than 640 acres outside of Alaska (2,560 acres within Alaska) as acceptable certification that the assignment would further the development of oil and gas, or the authorized officer may apply the provisions of 43 CFR 3102.53.

(h) Not excluded or disqualified from participating in a transaction covered by Federal non-procurement debarment and suspension (2 CFR parts 180 and 1400), unless the Department explicitly approves an exception for a transaction pursuant to the regulations in those parts.

§ 3102.52 Certification of compliance.

Any party(s) seeking to obtain an interest in a lease must certify that it is

in compliance with the Act as set forth in 43 CFR 3102.51. A corporation or publicly traded association, including a publicly traded partnership, must certify that constituent members of the corporation, association or partnership holding or controlling more than 10 percent of the instruments of ownership of the corporation, association or partnership are in compliance with the Act. Execution and submission of a competitive bid form or request for approval of a transfer of record title or of operating rights (sublease), constitutes certification of compliance.

§ 3102.53 Evidence of compliance.

The authorized officer may request at any time further evidence of compliance and qualification from any party holding or seeking to hold an interest in a lease. Failure to comply with the request of the authorized officer will result in adjudication of the action based on the incomplete submission.

Subpart 3103—Fees, Rentals and Royalty

§ 3103.1 Fiscal terms.

(a) The table in this section shows the fiscal terms, that the BLM will adjust every 4 years by a final rule. The BLM will adjust the amounts according to the change in the Implicit Price Deflator for Gross Domestic Product since the previous adjustment. The fiscal terms displayed below are effective on June 22, 2024. Per the Inflation Reduction Act, the BLM will not adjust the rental nor the minimum bonus bids until after August 16, 2032.

TABLE 1 TO PARAGRAPH (a)—FISCAL TERMS TABLE

Oil and gas (parts 3100, 3110, 3120, 3130, 3140):	Fiscal term
Competitive oil and gas, tar sand, and combined hydrocarbon leases	Rental of $3 per acre, or fraction thereof, per year during the first 2-year period beginning upon lease issuance, $5 per acre per year, or fraction thereof, for the following 6 years, and then $15 per acre, or fraction thereof, per year thereafter.
Competitive lease reinstatement, Class II	Rental of $20 per acre, or fraction thereof.
Competitive combined hydrocarbon leases	Minimum bonus bids of $25 per acre, or fraction thereof.
Competitive oil and gas and tar sand leases	Minimum bonus bids of $10 per acre, or fraction thereof.
Expression of interest filing fee	$5 per acre.

(b) The amounts in the fiscal terms table are not subject to appeal to the Interior Board of Land Appeals pursuant to 43 CFR part 4, subpart E.

Payments

§ 3103.11 Form of remittance.

All remittances must be by personal check, cashier's check, certified check, or money order, and must be made payable to the Department of the Interior—Bureau of Land Management or the Department of the Interior—Office of Natural Resources Revenue, as appropriate. Payments made to the BLM may be made by other arrangements such as by electronic funds transfer or credit card when specifically authorized by the BLM. In the case of payments made to the ONRR, such payments may also be made by electronic funds transfer.

§ 3103.12 Where remittance is submitted.

(a)(1) All processing fees for the respective lease applications, nominations, or requests for approval of a transfer found in the fee schedule in § 3000.120 of this chapter and all first-year rentals and bonuses for leases issued under 43 CFR part 3100 must be paid to the proper BLM office.

(2) All second year and subsequent rentals, except for leases specified in paragraph (b) of this section, must be paid to the ONRR, refer to 30 CFR 1218.51.

(b) All rentals and royalties on producing leases, communitized leases in producing spacing units, unitized leases in producing unit areas, leases on which compensatory royalty is payable and all payments under subsurface storage agreements must be paid to the ONRR.

Rentals

§ 3103.21 Rental requirements.

(a) Each competitive bid submitted in response to a Notice of Competitive Lease Sale must be accompanied by full payment of the first year's rental based on the total acreage for that lease in the Notice of Competitive Lease Sale.

(b) If the acreage is incorrectly indicated in a Notice of Competitive Lease Sale, payment of the rental based on the error is curable within 15 calendar days of receipt of notice from the authorized officer of the error.

(c) Rental will not be prorated for any lands in which the United States owns an undivided fractional interest and must be paid for the full acreage in such lands.

§ 3103.22 Annual rental payments.

Rentals must be paid on or before the lease anniversary date. A full year's rental must be submitted even when less than a full year remains in the lease term, except as provided in 43 CFR 3103.42(d). Failure to make the required payment on or before the lease anniversary date will cause a lease to terminate automatically by operation of law. If the designated ONRR office is not open on the anniversary date, payment received on the next day the designated ONRR office is open to the public will be deemed to be timely made. Payments made to an improper BLM or ONRR office will be returned and will not be forwarded to the designated ONRR office. Rental must be paid at the following rates:

(a) The annual rental for all leases is as stated in the lease, and the annual rental for all new leases will be as specified in 43 CFR 3103.1;

(b) Rental will not be due on acreage for which royalty or minimum royalty is being paid, except on nonproducing leases when compensatory royalty has been assessed in which case annual rental as established in the lease will be due in addition to compensatory royalty;

(c) For leases that are reinstated under § 3108.23, the annual rental will be as specified in 43 CFR 3103.1 beginning with the termination date upon the filing of a petition to reinstate a lease; and

(d) Each succeeding time a specific lease is reinstated under § 3108.23, the annual rental on that lease will increase by an additional $10 per acre or fraction thereof.

Royalties

§ 3103.31 Royalty on production.

(a) Royalty on production will be payable only on the mineral interest owned by the United States. Royalty must be paid in the amount or value of the production removed or sold as follows:

(1) For leases issued before August 16, 2022, the rate prescribed in the lease or in applicable regulations at the time of lease issuance;

(2) For leases issued between August 16, 2022, and August 16, 2032, the royalty rate will be 16.67 percent;

(3) For leases issued on or after August 16, 2032, a rate of not less than 16.67 percent on all leases issued under the Act;

(4) A minimum of 16.67 percent on all leases issued under 43 CFR subpart 3109;

(5) For reinstated leases, the rate used for royalty determination that applies to new leases at the time of the reinstatement plus 4 percentage points, plus an additional 2 percentage points for each succeeding reinstatement. In no case will royalties on the reinstated lease be less than 20 percent.

(b) Leases that qualify under specific provisions of the Act of August 8, 1946 (30 U.S.C. 226c) may apply for a limitation of a 12½ percent royalty rate.

(c) The average production per well per day for oil and gas will be determined pursuant to 43 CFR 3162.7–4.

(d) Payment of a royalty on the helium component of gas will not convey the right to extract the helium from the gas stream. Applications for the right to extract helium from the gas stream will be made under 43 CFR part 16.

§ 3103.32 Minimum royalties.

(a) A minimum royalty must be paid at the expiration of each lease year beginning on or after a discovery of oil or gas in paying quantities on the lands leased, except on unitized leases that lack production, the minimum royalty must be paid only on the participating acreage, at the following rates:

(1) On leases issued on or after August 8, 1946, and on those issued prior thereto if the lessee files an election under section 15 of the Act of August 8, 1946, a minimum royalty of $1 per acre or fraction thereof in lieu of rental, except as provided in paragraph (a)(2) of this section; and

(2) On leases issued from offers filed after December 22, 1987, and on competitive leases issued after December 22, 1987, a minimum royalty in lieu of rental of not less than the amount of rental which otherwise would be required for that lease year.

(b) Minimum royalties will not be prorated for any lands in which the United States owns a fractional interest and must be paid on the full acreage of the lease.

(c) Minimum royalties and rentals on non-participating acreage must be paid to the ONRR.

(d) The minimum royalty provisions of this section are applicable to leases reinstated under 43 CFR 3108.23.

(e) If the royalty paid during any year aggregates to less than the minimum royalty, then the lessee must pay the difference at the end of the lease year.

Production Incentives

§ 3103.41 Royalty reductions.

(a) In order to encourage the greatest ultimate recovery of oil or gas and in the interest of conservation, the Secretary, upon a determination that it is necessary to promote development or that the leases cannot be produced in paying quantities under the terms provided therein, may waive, suspend or reduce the rental or minimum royalty or reduce the royalty on an entire leasehold, or any portion thereof.

(b)(1) An application for the benefits under paragraph (a) of this section must be filed by the operator/payor in the proper BLM office. The application must contain the serial number of the leases, the names of the record title holders, operating rights owners (sublessees), and operators for each lease, the description of lands by legal subdivision and a description of the relief requested.

(2) Each application must show the number, location and status of each well drilled, a tabulated statement for each month covering a period of not less than 6 months prior to the date of filing the application of the aggregate amount of oil or gas subject to royalty, the number of wells counted as producing each month and the average production per well per day.

(3) Every application must contain a detailed statement of expenses and costs of operating the entire lease, the income from the sale of any production and all facts tending to show whether the wells can be produced in paying quantities upon the fixed royalty or rental. Where the application is for a reduction in royalty, complete information must be furnished as to whether overriding royalties, payments out of production, or similar interests are paid to others than the United States, the amounts so paid and efforts made to reduce them. The applicant must also file agreements of the holders to a reduction of all other royalties or similar payments from the leasehold to an aggregate not in excess of one-half the royalties due the United States.

(c) Petition may be made for a reduction of royalty for leases reinstated under 43 CFR 3108.23. Petitions to waive, suspend or reduce rental or minimum royalty for leases reinstated under 43 CFR 3108.23 may be made under this section.

§ 3103.42 Suspension of operations and/or production.

(a) A suspension of all operations and production may be directed or consented to by the authorized officer only in the interest of conservation of natural resources. A suspension of operations only or a suspension of production only may be directed or consented to by the authorized officer in cases where the lessee is prevented from operating on the lease or producing from the lease, despite the exercise of due care and diligence, by reason of *force majeure,* that is, by matters beyond the reasonable control of the lessee. Applications for any suspension must be filed in the proper BLM office. Complete information showing the necessity of such relief must be furnished.

(b) The term of any lease will be adjusted to account for the suspension. Beginning on the date the suspension is lifted, the term will be extended by the time that was remaining on the term of the lease on the effective date of the suspension. No lease will expire during any suspension.

(c) A suspension will take effect as of the time specified in the direction or assent of the authorized officer, in accordance with the provisions of 43 CFR 3165.1.

(d) Rental and minimum royalty payments will be suspended during any period of suspension of all operations and production directed or assented to by the authorized officer beginning with the first day of the lease month in which the suspension of all operations and production becomes effective, or if the suspension of all operations and production becomes effective on any date other than the first day of a lease month, beginning with the first day of

the lease month following such effective date. However, if there is any production sold or removed during the suspension, the lessee must pay royalty on that production.

(e) Rental and minimum royalty payments will resume on the first day of the lease month in which the suspension of all operations and production is lifted. Where rentals are creditable against royalties and have been paid in advance, proper credit may be allowed on the next rental or royalty due under the terms of the lease.

(f) Rental and minimum royalty payments will not be suspended during any period of suspension of operations only or suspension of production only.

(g) Where all operations and production are suspended on a lease on which there is a well capable of producing in paying quantities and the authorized officer approves resumption of operations and production, such resumption will be regarded as lifting the suspension, including the suspension of rental and minimum royalty payments, as provided in paragraph (e) of this section.

(h) The relief authorized under this section also may be obtained for any Federal lease included within an approved oil and gas agreement. Oil and gas agreement obligations will not be suspended by relief obtained under this section but will be suspended only in accordance with the terms and conditions of the specific agreement.

Subpart 3104—Bonds

§ 3104.1 Bond amounts.

(a) The table in this section shows the minimum bond amounts, that the BLM will adjust every 10 years by a final rule. The BLM will adjust the amounts according to the change in the Implicit Price Deflator for Gross Domestic Product since the previous adjustment. The minimum bond amounts displayed below are effective on June 22, 2024.

TABLE 1 TO PARAGRAPH (a)—MINIMUM BOND AMOUNT TABLE

Oil and gas (parts 3100, 3110, 3120, 3130, 3140):	Minimum bond amount
Lease Bond	$150,000
Statewide Bond	500,000

(b) The Minimum Bond Amount are not subject to appeal to the Interior Board of Land Appeals pursuant to 43 CFR part 4, subpart E.

(c) Principals must increase or replace all bonds not meeting the appropriate minimum bond amount in paragraph (a) by:

(1) June 22, 2026, for statewide; and

(2) June 22, 2027, for lease bonds.

(d) Failure to increase or replace an existing bond that does not meet the minimum bond amount may:

(1) Subject all wells covered by the bond(s) to shut down under the provisions of 43 CFR 3163.1(a)(3);

(2) Subject all leases covered by the bond(s) to cancellation under the provisions of 43 CFR 3108.30; and

(3) Result in the BLM referring the bond obligor or principal to the Department's Suspension and Debarment Program under 2 CFR part 1400 to determine if the person will be suspended or debarred from doing business with the Federal Government.

§ 3104.10 Bond obligations.

(a) Prior to the commencement of surface disturbing activities related to drilling operations, the lessee, operating rights owner (sublessee), or operator must submit a surety or a personal bond, conditioned upon compliance with all of the terms and conditions of the entire leasehold(s) covered by the bond, as described in this subpart. The bond amounts must be not less than the minimum amounts described in this subpart in order to ensure compliance with the Act, including complete and timely plugging of the well(s), reclamation of the lease area(s), and the restoration of any lands or surface waters adversely affected by lease operations after the abandonment or cessation of oil and gas operations on the lease(s) in accordance with, but not limited to, the standards and requirements set forth in 43 CFR 3162.3 and 3162.5 and orders issued by the authorized officer.

(b) Surety bonds must be issued by qualified surety companies approved by the Department of the Treasury (see Department of the Treasury Circular No. 570).

(c) Personal bonds must be accompanied by a:

(1) Certificate of deposit issued by a financial institution, the deposits of which are federally insured, explicitly granting the Secretary full authority to demand immediate payment in case of default in the performance of the terms and conditions of the lease. The certificate will explicitly indicate on its face, or through assignment, that Secretarial approval is required prior to redemption of the certificate of deposit by any party;

(2) Cashier's check;

(3) Certified check; or

(4) Negotiable Treasury securities of the United States of a value equal to the amount specified in the bond. Negotiable Treasury securities must be accompanied by a proper conveyance to the Secretary of full authority to sell such securities in case of default in the performance of the terms and conditions of a lease.

(5) Irrevocable letter of credit issued by a financial institution, for a specific term, identifying the secretary as sole payee with full authority to demand immediate payment in the case of default in the performance of the terms and conditions of a lease. Letters of credit must be subject to the following conditions:

(i) The letter of credit must be issued only by a financial institution organized or authorized to do business in the United States;

(ii) The letter of credit must be irrevocable during its term. A letter of credit used as security for any lease upon which drilling has taken place and final approval of all abandonment has not been given, or as security for an individual lease or statewide bond, will be forfeited and will be collected by the authorized officer if not replaced by other suitable bond or letter of credit at least 30 days before its expiration date;

(iii) The letter of credit must be payable to the Bureau of Land Management upon demand, in part or in full, upon receipt from the authorized officer of a notice of collection stating the basis therefore, *e.g.,* default in compliance with the lease terms and conditions or failure to file a replacement in accordance with paragraph (c)(5)(ii) of this section;

(iv) The initial expiration date of the letter of credit must be at least 1 year following the date it is filed in the proper BLM office; and

(v) The letter of credit must contain a provision for automatic renewal for periods of not less than 1 year in the absence of notice to the proper BLM office at least 90 days prior to the

originally stated or any extended expiration date. In the event the BLM is notified of the financial institution's intent not to renew the letter of credit, the principal must extend the letter of credit or provide an adequate replacement bond with an assumption of liability rider. If the BLM does not receive an adequate notice or replacement bond with rider, the BLM will collect the letter of credit within 30 days of the expiration without further notification to the obligor.

§ 3104.20 Lease bond.

The operator, a lessee, or an owner of operating rights (sublessee) must be covered by a bond in its own name as principal or obligor in an amount of not less than the amount specified in 43 CFR 3104.1 for each lease conditioned upon compliance with all of the terms of the lease. Where two or more lease interest holders have interests in different formations or portions of the lease, separate bonds may be posted. The operator shall be covered by a bond in his/her own name as principal, or a bond in the name of the lessee or sublessee, provided that a consent of the surety, or the obligor in the case of a personal bond, to include the operator under the coverage of the bond is furnished to the BLM office maintaining the bond.

§ 3104.30 Statewide bonds.

In lieu of lease bonds, lessees, owners of operating rights (sublessees), or operators may furnish a bond in an amount of not less than the amount specified in 43 CFR 3104.1 covering all leases and operations in any one State.

§ 3104.40 Surface owner protection bond.

(a) If a good-faith effort by the Federal lessee, its operator, or representatives has not resulted in an agreement with the surface owner under 43 CFR 3171.19, the authorized officer will require an adequate surface owner protection bond in an amount sufficient to indemnify the surface owner against the reasonable and foreseeable damages to crops and tangible improvements from the proposed operations that would not otherwise be covered by a bond held by the BLM. This surface owner protection bond is not part of the bond obligations under lease or statewide bonds.

(b) The surface owner protection bond must be provided on a BLM-approved form.

(c) The surface owner protection bond may be a personal or surety bond and must be not less than $1,000.

(d) The BLM will notify the surface owner of the proposed surface owner protection bond amount.

(e) If the surface owner objects to the sufficiency of the surface owner protection bond, the BLM authorized officer will determine the sufficiency of the bond necessary to indemnify the surface owner for the reasonable and foreseeable damages to crops and tangible improvements.

§ 3104.50 Increased amount of bonds.

(a) When an operator desiring approval of an APD has caused the BLM, or a surface management agency, to make a demand for payment under a bond or other financial guarantee within the 5-year period prior to submission of the APD, due to failure to plug a well or reclaim lands completely in a timely manner, the authorized officer will require, prior to approval of the APD, a bond in an amount equal to the costs, when higher than the minimum bond amounts, as estimated by the authorized officer of plugging the well and reclaiming the disturbed area involved in the proposed operation, or in the minimum amount as prescribed in this subpart, whichever is greater.

(b) The authorized officer may require an increase in the amount of any bond whenever it is determined that the operator poses a risk due to factors, including, but not limited to, a history of previous violations, a notice from the ONRR that there are uncollected royalties due, or the total cost of plugging existing wells and reclaiming lands exceeds the present bond amount based on the estimates determined by the authorized officer. The increase in bond amount may be to any level specified by the authorized officer, but in no circumstances will it exceed the total of the estimated costs of plugging and reclamation, the amount of uncollected royalties due to the ONRR, plus the amount of money owed to the lessor due to previous violations remaining outstanding.

§ 3104.60 Where filed and number of copies.

All bonds must be filed in the proper BLM office on a current form approved by the Director. A single copy executed by the principal or, in the case of surety bonds, by both the principal and an acceptable surety is sufficient. A bond filed on a form not currently in use will be acceptable, unless such form has been declared obsolete by the Director prior to the filing of such bond. For purposes of 43 CFR 3104.20 and 3104.30, bonds or bond riders must be filed in the BLM State office having jurisdiction over the lease or operations covered by the bond or rider.

§ 3104.70 Default.

(a) Where, upon a default, the surety makes a payment to the United States of an obligation incurred under a lease, the face amount of the surety bond or personal bonds and the surety's liability thereunder will be reduced by the amount of such payment.

(b) After default, where the obligation in default equals or is less than the face amount of the bond(s), the principal must either post a new bond or restore the existing bond(s) to the amount previously held or a larger amount as determined by the authorized officer. In lieu thereof, the principal may file separate bonds for each lease covered by the deficient bond(s). Where the obligation incurred exceeds the face amount of the bond(s), the principal must make full payment to the United States for all obligations incurred that are in excess of the face amount of the bond(s) and must post a new bond in the amount previously held or such larger amount as determined by the authorized officer. The restoration of a bond or posting of a new bond must be made within 6 months or less after receipt of notice from the authorized officer. Failure to comply with these requirements may:

(1) Subject all leases covered by such bond(s) to cancellation under the provisions of 43 CFR 3108.30; and

(2) Result in the bond obligor or principal being referred to the Department's Suspension and Debarment Program under 2 CFR part 1400 to determine if the person will be suspended or debarred from doing business with the Federal Government.

§ 3104.80 Termination of period of liability.

The authorized officer will not give consent to termination of the period of liability of any bond unless an acceptable replacement bond has been filed or until all the terms and conditions of the lease have been met.

§ 3104.90 Unit Operator and nationwide bonds held prior to June 22, 2024.

Unit operator and nationwide bonds accepted by the BLM prior to June 22, 2024, must be replaced with individual lease or statewide bonds by June 22, 2025. The BLM will not accept any new unit operator or nationwide bonds.

Subpart 3105—Cooperative Conservation Provisions

§ 3105.10 Cooperative or unit agreement.

(a) The suggested contents of such an agreement and the procedures for

obtaining approval are contained in 43 CFR part 3180.

(b) An application to form a unit agreement, a unit expansion, or a designation of a successor operator must include the processing fee found in the fee schedule in § 3000.120 of this chapter.

Communitization Agreements

§ 3105.21 Where filed.

(a) An application to form a communitization agreement or modify an existing agreement must be filed with the proper BLM office for final approval.

(b) An application for a communitization agreement must include:

(1) A statement as to whether the proposed communitization agreement deviates from the BLM's current model communitization agreement form, and a certification that the applicant received the required signatures;

(2) An Exhibit A displaying a map of the area covered by the proposed agreement and the separate agreement tracts; and

(3) An Exhibit B displaying the separate tracts and ownership;

(c) To ensure accurate reporting to ONRR, an application for a communitization agreement should be submitted at least 90 calendar days prior to first production.

(d) An application for designations of successor operator for a communitization agreement must include the processing fee found in the fee schedule in § 3000.120 of this chapter.

§ 3105.22 Purpose.

When a lease or a portion thereof cannot be independently developed and operated in conformity with an established well-spacing or well-development program, the authorized officer may approve a communitization agreement for such lands with other lands, whether or not owned by the United States, upon a determination that it is in the public interest. Operations or production under such an agreement will be deemed to be operations or production as to each lease committed thereto.

§ 3105.23 Requirements.

(a) The communitization agreement must describe the separate tracts comprising the drilling or spacing unit, must show the apportionment of the production or royalties to the several parties, the name of the operator, and contain adequate provisions for the protection of the interests of the United States. The agreement must be signed by or on behalf of all necessary parties and must be filed prior to the expiration of the Federal lease(s) involved in order to confer the benefits of the agreement upon such lease(s).

(b) The agreement will be effective as to the Federal lease(s) involved only if approved by the authorized officer. Approved communitization agreement are considered effective from the date of the agreement or from the date of the onset of production from the communitized formation, whichever is earlier, except when the spacing unit is subject to a State pooling order after the date of first sale, then the effective date of the agreement will be the effective date of the order.

(c) The public interest requirement for an approved communitization agreement will be satisfied only if the well dedicated thereto has been completed for production in the communitized formation at the time the agreement is approved or, if not, that the operator thereafter commences and/or diligently continues drilling operations to a depth sufficient to test the communitized formation or establishes to the satisfaction of the authorized officer that further drilling of the well would be unwarranted or impracticable. If an application is received for voluntary termination of a communitization agreement during its fixed term or such an agreement automatically expires at the end of its fixed term without the public interest requirement having been satisfied, the approval of that agreement by the authorized officer will be invalid and no Federal lease included in the communitization agreement will be eligible for an extension under 43 CFR 3107.40.

§ 3105.24 Communitization agreement terms.

The communitization agreement will remain in effect for a period of 2 years from the effective date or approval date, whichever is later, and so long thereafter as communitized substances may be produced in paying quantities, or as otherwise specified in the agreement.

Operating, Drilling, or Development Contracts

§ 3105.31 Where filed.

A contract submitted for approval under this section must be filed with the proper BLM office.

§ 3105.32 Purpose.

Approval of operating, drilling or development contracts will be granted only to permit operators or pipeline companies to enter into contracts with a number of lessees sufficient to justify operations on a scale large enough to justify the discovery, development, production or transportation of oil or gas and to finance the same.

§ 3105.33 Requirements.

The contract must be accompanied by a statement showing all the interests held by the contractor in the area or field and the proposed or agreed plan for development and operation of the field. All the contracts held by the same contractor in the area or field must be submitted for approval at the same time and full disclosure of the projects made.

Subsurface Storage of Oil and Gas

§ 3105.41 Where filed.

(a) Applications for subsurface storage or designations of successor operator must be filed in the proper BLM office.

(b) The final gas storage agreement signed by all the parties in interest must be submitted to the BLM.

(c) Applications for subsurface storage agreements or designations of successor operator must include the processing fee found in the fee schedule in § 3000.120 of this chapter.

§ 3105.42 Purpose.

To avoid waste and to promote conservation of natural resources, the Secretary, upon application by the interested parties, may authorize the subsurface storage of oil and gas, whether or not produced from lands owned by the United States. Such authorization will provide for the payment of such storage fee or rental on the stored oil or gas as may be determined adequate in each case, or, in lieu thereof, for a royalty other than that prescribed in the lease when such stored oil or gas is produced in conjunction with oil or gas not previously produced. The BLM will require a bond as provided under § 3104 for operations conducted in a subsurface storage agreement.

§ 3105.43 Requirements.

The agreement must disclose the ownership of the lands involved, the parties in interest, the storage fee, rental or royalty offered to be paid for such storage and all information demonstrating such storage would avoid waste and promote the conservation of natural resources.

§ 3105.44 Extension of lease term.

Any lease used for the storage of oil or gas will be extended for the period of storage under an approved agreement. The obligation to pay annual lease rent continues during the extended period.

§ 3105.50 Consolidation of leases.

(a) Leases may be consolidated upon written request of the lessee filed with the proper BLM office. The request must identify each lease involved by serial number and justify the consolidation. Each request for a consolidation of leases must include the processing fee found in the fee schedule in § 3000.120 of this chapter.

(b) All parties holding any undivided interest in any lease involved in the consolidation must agree to enter into the same lease consolidation.

(c) Leases containing different types of lands (public domain lands vs. acquired lands), mixed fractional mineral interest, or provisions required by law that cannot be reconciled, will not be consolidated.

(d) Consolidation of leases will not exceed acreage limits of 2,560 acres for competitive leases and 10,240 acres for noncompetitive leases.

(e) The effective date, the anniversary date, and the primary term of the consolidated lease will be those of the oldest original lease included in the consolidation. The term of a consolidated lease may be extended beyond the primary lease term under subpart 3107.

(f) The highest royalty and rental rates of the each of the leases to be consolidated will apply to the consolidated lease.

(g) Lease stipulations and other terms and conditions of each original lease, except as noted in paragraphs (e) and (f) of this section, will continue to apply to that lease or any portion thereof regardless of the lease becoming a part of a consolidated lease.

Subpart 3106—Transfers by Assignment, Sublease, or Otherwise

§ 3106.10 Transfers, general.

(a) Leases may be transferred by assignment or sublease as to all or part of the acreage in the lease or as to either a divided or undivided interest therein.

(b) An assignment of the record title conveys both record title and operating rights, unless operating rights have been severed from the record title through an approved transfer of operating rights. Thereafter, the operating rights and record title may each be subject to further transfers.

(c) An assignment of a separate zone, deposit, depth, formation, specific well, or of part of a legal subdivision, will be denied.

(d) Within the boundaries of a Federal lease, operating rights may only be divided with respect to legal subdivisions, depth ranges, and formations.

(e) An assignment of less than 640 acres outside Alaska or of less than 2,560 acres within Alaska will be denied unless the assignment constitutes the entire lease or is demonstrated to further the development of oil and gas to the satisfaction of the authorized officer. Reference 43 CFR 3102.51(g) for certification of compliance.

(f) The rights of the transferee to a lease or an interest therein will not be recognized by the Department until the transfer has been approved by the authorized officer.

(g) A transfer may be withdrawn in writing, signed by the transferor and the transferee, if the transfer has not been approved by the authorized officer.

(h) A request for approval of a transfer of a lease or interest in a lease must be filed within 90 days from the date of its execution. The 90-day filing period will begin on the date the transferor signs and dates the transfer. If the transfer is filed after the 90th day, the authorized officer may require verification that the transfer is still in force and effect.

(i) A transfer of production payments or overriding royalty or other similar payments, arrangements, or interests must be filed in the proper BLM office but will not require approval.

(j) No transfer of an offer to lease or interest in a lease will be approved prior to the issuance of the lease.

§ 3106.20 Qualifications of assignees and transferees.

Assignees and transferees must comply with the provisions of 43 CFR subpart 3102 and post any bond that may be required. Only responsible and qualified lessees may own, hold, or control an interest in a lease.

§ 3106.30 Fees.

(a) Each transfer of record title or of operating rights (sublease) for each lease must include payment of the processing fee for assignments and transfers found in the fee schedule in § 3000.120 of this chapter.

(b) Each transfer of overriding royalty or payment out of production must include payment of the processing fee for overriding royalty transfers or payments out of productions found in the fee schedule in § 3000.120 of this chapter for each lease to which it applies.

Forms

§ 3106.41 Transfers of record title and of operating rights (subleases).

Each transfer of record title or of an operating right (sublease) must be filed with the proper BLM office on a current form approved by the Director. A separate form for each transfer, in triplicate, must be filed for each lease out of which a transfer is made. The BLM does not require triplicate copies of the assignment or transfer when it is electronically submitted. Copies of documents other than the current form approved by the Director must not be submitted. However, reference(s) to other documents containing information affecting the terms of the transfer may be made on the submitted form.

§ 3106.42 Transfers of other interests, including royalty interests and production payments.

(a) Each transfer of overriding royalty interest, payment out of production or similar interests created or reserved must be described for each lease on the current assignment or transfer form when filed.

(b) A single executed copy of each such transfer of other interests for each lease must be filed with the proper BLM office.

§ 3106.43 Mass transfers.

(a) A mass transfer may be utilized in lieu of the provisions of 43 CFR 3106.41 and 3106.42 when an assignor or transferor transfers interests of any type in more than one Federal lease to the same assignee or transferee.

(b) The mass transfer must be filed with each proper BLM office administering any lease affected by the mass transfer. The transfer must be on a current form approved by the Director with an exhibit attached to each copy listing the following for each lease:

(1) The serial number;

(2) The type and percent of interest being conveyed; and

(3) A description of the lands affected by the transfer in accordance with 43 CFR 3106.50.

(c)(1) One duplicate copy of the form must be filed with the proper BLM office for each lease involved in the mass transfer. A copy of the exhibit for each lease may be limited to line items pertaining to individual leases as long as that line item includes the information required by paragraph (b) of this section. The BLM does not require a duplicate copy of the assignment or transfer when it is electronically submitted.

(2) When the BLM does not receive the requisite number of copies, the applicant must reimburse the BLM for the full costs incurred to make the required number of copies. The BLM will waive fees under one dollar.

(d) A mass transfer must include the processing fee for assignments and transfers found in the fee schedule in § 3000.120 of this chapter for each such interest transferred for each lease.

§ 3106.50 Description of lands.

Each assignment of record title must describe the lands involved in the same manner as the lands are described in the lease, except no land description is required when 100 percent of the entire area encompassed within a lease is conveyed.

§ 3106.60 Bond requirements.

Where the lessee or operating rights owner (sublessee) maintains a bond covering the lease, the assignee of record title interest or transferee of operating rights in such lease must furnish, if bond coverage continues to be required, a proper bond that will cover any obligations arising under the lease to the same extent as the assignor's or transferor's bond.

Approval of Transfer or Assignment

§ 3106.71 Failure to qualify.

The BLM will not approve any assignment of record title or transfer of operating rights (sublease) if any party in interest is not a qualified lessee, or if the bond is insufficient. The BLM approves assignments and transfers for administrative purposes only. Approval does not warrant or certify that either party to a transfer holds legal or equitable title to a lease.

§ 3106.72 Continuing obligation of an assignor or transferor.

(a) The lessee or sublessee remains responsible for performing all obligations under the lease until the date the BLM approves an assignment of record title interest or transfer of operating rights.

(b) After the BLM approves the assignment or transfer, the assignor or transferor will continue to be responsible for lease obligations that accrued before the approval date, whether or not such obligations were identified at the time of the assignment or transfer. This includes paying compensatory royalties for drainage. It also includes responsibility for plugging wells drilled and removing facilities installed or used before the effective date of the assignment or transfer.

§ 3106.73 Lease account status.

The BLM will not approve a transfer if the lease account is delinquent with respect to: royalty payments; lease obligations, such as, but not limited to, rent and minimum royalty; or production reporting to ONRR for a lease in non-terminable status.

§ 3106.74 Effective date of transfer.

The signature of the authorized officer on the official form will constitute approval of the assignment of record title or transfer of operating rights (sublease) which will take effect as of the first day of the lease month following the date of filing in the proper BLM office of all documents and statements required by this subpart and an appropriate bond, if one is required.

§ 3106.75 Effect of transfer.

An assignment of record title to 100 percent of a portion of the lease segregates the transferred portion and the retained portion into separate leases. Each resulting lease retains the anniversary date and the terms and conditions of the original lease. An assignment of record title to less than 100 percent of a portion of the lease or a transfer of operating rights (sublease) will not segregate the transferred and retained portions into separate leases.

§ 3106.76 Obligations of assignee or transferee.

(a) The assignee of record title agrees to comply with the terms of the original lease during the lease tenure. The assignee assumes the responsibility to plug and abandon all wells which are no longer capable of producing, reclaim the lease site, and remedy all environmental problems in existence and that a purchaser exercising reasonable diligence should have known existed at the time of the transfer. When required, the record title holder must also maintain an adequate bond to ensure performance of these responsibilities.

(b) The transferee of operating rights agrees to comply with the terms of the original lease as it applies to the area or horizons for the interest acquired. The transferee assumes the responsibility to plug and abandon all wells that are no longer capable of producing, reclaim the lease site, and remedy all environmental problems in existence and that a purchaser exercising reasonable diligence should have known existed at the time of the transfer. When required, the operating rights holder must also maintain an adequate bond to ensure performance of these responsibilities.

Other Types of Transfers

§ 3106.81 Heirs and devisees.

(a) If an offeror, applicant, lessee or transferee dies, their rights would be assigned or transferred to the heirs, devisees, executor or administrator of the estate, as appropriate, upon the filing of legal documents demonstrating that the assignee or transferee is recognized as the successor of the deceased.

(b) The filing must include the processing fee for the transfer to an heir/devisee found in the fee schedule in § 3000.120 of this chapter with the request to assign lease rights.

(c) The filing must include a qualification statement demonstrating qualification to hold an interest in a lease in accordance with 43 CFR subpart 3102. Any ownership or interest otherwise forbidden by the regulations in this part which may be acquired by descent, will, judgment or decree may be held for a period not to exceed 2 years after its acquisition. Any such forbidden ownership or interest held for a period of more than 2 years after acquisition may be subject to cancellation.

(d) A bond rider or replacement bond may be required for any bond(s) previously furnished by the decedent.

§ 3106.82 Change of name.

(a) A legally recognized change of name of a lessee or sublessee must be reported to the proper BLM office. The notice of name change must be submitted in writing with adequate information concerning the name change. For a corporate name change, the request must include the Secretary of State's Certificate of Name Change, along with the Articles of Incorporation, or Amendment, if available.

(b) An entity must include with the notice of name change the required processing fee listed in the fee schedule in § 3000.120 of this chapter.

(c) If a bond(s) has been furnished, a change of name on the bond may be made by surety consent or a rider to the original bond or by a replacement bond.

§ 3106.83 Corporate mergers and dissolution of corporations, partnerships, and trusts.

(a) In the event a corporate merger affects leases where property of the dissolving corporation to the surviving corporation is accomplished by operation of law, an assignment of any affected lease interest is not required. An entity must notify the BLM of the merger and provide copies of the Secretary of State's Certificate of Merger, along with the Articles of Incorporation, or Amendment, if available, to the BLM.

(b) The BLM will not recognize any transfers provided by the Articles of Dissolution unless an entity has filed with the BLM a Certificate of Dissolution of an incorporated entity, certified as accepted by the State where the entity was incorporated.

(c) An entity must file with the BLM a dissolution of a partnership or trust through an order or decree that authorizes settlement, discharge, and distribution of the lease holdings and/or interests for official recognition of the assignment of lease interests.

(d) An entity must include the processing fee for corporate merger or dissolution of corporation, partnership, or trust found in the fee schedule in § 3000.120 of this chapter.

(e) The authorized officer may require a bond rider or replacement bond for all affected corporations, partnerships or trusts.

§ 3106.84 Sheriff's sale/deed.

(a) Where a notice of sale of the leasehold interest is published pursuant to State law applicable to the execution of sales of real property, the purchaser must submit a copy of the Sheriff's Certificate of Sale to the proper BLM office after any redemption period has passed.

(b) When submitting the certificate described in paragraph (a), an entity must include the processing fee for sheriff's deed found in the fee schedule in § 3000.120 of this chapter.

(c) The purchaser(s) must file a qualification statement to hold an interest in a lease in accordance with 43 CFR subpart 3102. Failure to provide a qualification statement after 2 years will result in the BLM cancelling the lease or interest.

(d) If a bond has been furnished by the previous interest holder, the authorized officer may require a new bond.

Subpart 3107—Continuation and Extension

§ 3107.10 Extension by drilling.

(a) Any lease on which actual drilling operations were commenced prior to the end of its primary term and are being diligently prosecuted at the end of the primary term or any lease which is part of an approved oil and gas agreement upon which such drilling takes place, will be extended for 2 years subject to the rental being timely paid as required by 43 CFR 3103.20, and subject to the provisions of 43 CFR 3105.23 and appendix A to part 3180, if applicable. The BLM will not grant a drilling extension for a lease in its extended term.

(b) Actual drilling operations must be conducted in a manner that a reasonable person seriously looking for oil or gas could be expected to make in that particular area, given the existing knowledge of geologic and other pertinent facts. In drilling a new well on a lease or for the benefit of a lease under the terms of an approved agreement, it must be taken to a depth sufficient to penetrate at least one formation recognized in the area as potentially productive of oil or gas, or where an existing well is reentered, it must be taken to a depth sufficient to penetrate at least one new and deeper formation recognized in the area as potentially productive of oil or gas. The authorized officer may determine that further drilling is unwarranted or impracticable.

(c) When a BLM-approved directional or horizontal well is drilled within the leased area from an off-lease location with the intent to produce from the leased area, the BLM will consider drilling to have commenced on the leased area when drilling is commenced at the off-lease location.

Production

§ 3107.21 Continuation by production.

A lease will be extended so long as oil or gas is being produced in paying quantities.

§ 3107.22 Cessation of production.

A lease in its extended term because of production (and lacking a well capable of production in paying quantities) will not expire upon cessation of production, if, within 60 calendar days of cessation of production, reworking or drilling operations on the leasehold are commenced and are thereafter conducted with reasonable diligence during the period of nonproduction. If these reworking or drilling operations fail to result in production in paying quantities, the lease will expire by operation of law, effective as of the date paying production ceased.

§ 3107.23 Leases capable of production.

No lease for lands on which there is a well capable of producing oil or gas in paying quantities will expire because the lessee fails to produce the same, unless the lessee fails to place the lease in production within a period of not less than 60 calendar days as specified by the authorized officer after receipt of notice by certified mail from the authorized officer to do so. Such production must be continued unless and until suspension of production is granted by the authorized officer.

Extension of Leases Within Agreements

§ 3107.31 Leases committed to an agreement.

(a) Any lease or portion of a lease committed to an oil and gas agreement that contains a general provision for allocation of oil or gas will continue in effect so long as the lease or portion thereof remains subject to the agreement; *provided,* that there is production of oil or gas in paying quantities under the agreement prior to the expiration date of such lease.

(b) A well that is drilled and completed on a lease committed to a unit agreement, and that is capable of production in paying quantities on a lease basis, will extend the term of all expiring Federal leases committed to the unit agreement for the term of the unit agreement and so long as the well is capable of production in paying quantities.

§ 3107.32 Segregation of leases committed in part.

(a) Any lease committed after July 29, 1954, to any unit agreement, which covers lands within and lands outside the area covered by the agreement, will be segregated, as of the effective date of commitment to the unit, into separate leases; one covering the lands committed to the agreement, the other lands not committed to the agreement. For unproven areas, such segregation will occur only when the public interest requirement is satisfied pursuant to 43 CFR 3183.4(b). Upon satisfaction of the public interest requirement, the BLM will deem the segregation to have been effective as of the date of commitment of the lands to the unit.

(b)(1) The segregated lease covering the non-unitized portion of the lands will continue in force and effect for the term of the lease or for 2 years from the date of segregation, whichever is longer.

(2) If a partially committed lease is in an extended term because of production, the segregated, non-producing lease will continue in effect so long as the producing lease exists and rentals are paid, and so long thereafter as oil or gas is produced from the committed lease.

§ 3107.40 Extension by elimination.

Any lease eliminated from any approved or prescribed oil and gas agreement authorized by the Act and any lease in effect at the termination of such agreement, unless relinquished, will continue in effect for the original term of the lease or for 2 years after its elimination from the agreement or after the termination of the plan or agreement, whichever is longer, and for so long thereafter as oil or gas is produced in paying quantities. No lease will be extended if the public interest requirement for an approved oil and gas agreement has not been satisfied, as determined by the authorized officer.

Extension of Leases Segregated by Assignment

§ 3107.51 Extension after discovery on other segregated portions.

Any lease segregated by assignment, including the retained portion, will continue in effect for the primary term

of the original lease, or for 2 years after the date a well capable of production in paying quantities is established upon any other portion of the original lease, whichever is the longer period.

§ 3107.52 Undeveloped parts of leases in their extended term.

Undeveloped parts of leases retained or assigned out of leases which are in their extended term will continue in effect for 2 years after the effective date of assignment, provided the parent lease was issued prior to September 2, 1960.

§ 3107.53 Undeveloped parts of producing leases.

Undeveloped parts of leases retained or assigned out of leases which are extended by production, actual or suspended, or the payment of compensatory royalty will continue in effect for 2 years after the effective date of assignment and for so long thereafter as oil or gas is produced in paying quantities.

§ 3107.60 Extension of reinstated leases.

Where a reinstatement of a terminated lease is granted under 43 CFR 3108.20 and the authorized officer finds that the reinstatement will not afford the lessee a reasonable opportunity to continue operations under the lease, the authorized officer may extend the term of such lease for a period sufficient to give the lessee such an opportunity. Any extension will be subject to the following conditions:

(a) No extension will exceed a period equal to the unexpired portion of the lease or any extension thereof remaining at the date of termination.

(b) When the reinstatement occurs after the expiration of the term or extension thereof, the lease may be extended from the date the authorized officer grants the petition, but in no event for more than 2 years from the date the reinstatement is authorized and so long thereafter as oil or gas is produced in paying quantities.

Other Extension Types

§ 3107.71 Payment of compensatory royalty.

The payment of a compensatory royalty will extend the term of any lease for the period during which such compensatory royalty is paid and for a period of 1 year from the discontinuance of such payments.

§ 3107.72 Subsurface storage of oil and gas.

Any lease used for the storage of oil or gas will be extended for the period of storage under an approved agreement.

Subpart 3108—Relinquishment, Termination, Cancellation

§ 3108.10 Relinquishment.

The lessee(s) may relinquish the lease or any legal subdivision of the lease at any time. The lessee(s) must file a written relinquishment with the BLM State Office with jurisdiction over the lease. All lessees holding record title interests in the lease must sign the relinquishment. A relinquishment takes effect on the date the lessee filed it with the BLM. However, the lessee(s) and the party that issued the bond will continue to be obligated to:

(a) Make payments of all accrued rentals and royalties, including payments of compensatory royalty due for all drainage that occurred before the relinquishment;

(b) Place all wells to be relinquished in condition for suspension or abandonment as the BLM requires; and

(c) Complete reclamation of the leased sites after stopping or abandoning oil and gas operations on the lease, under a plan approved by the BLM or the appropriate surface management agency.

Termination by Operation of Law and Reinstatement

§ 3108.21 Automatic termination.

(a) Except as provided in paragraph (b) of this section, any lease on which there is no well capable of producing oil or gas in paying quantities will automatically terminate by operation of law (30 U.S.C. 188) if the lessee fails to pay the rental at the designated ONRR office on or before the lease anniversary date. However, if the designated ONRR office is closed on the anniversary date, a rental payment received on the next business day the ONRR office is open to the public will be considered timely made.

(b) If the rental payment due under a lease is paid on or before its anniversary date but the amount of the payment is deficient and the deficiency is nominal as defined in this section, or the amount of payment made was determined in accordance with the rental or acreage figure stated in a decision rendered by the authorized officer, and such figure is found to be in error resulting in a deficiency, such lease will not have automatically terminated unless the lessee fails to pay the deficiency within the period prescribed in the Notice of Deficiency provided for in this section. A deficiency will be considered nominal if it is not more than $100 or more than 5 percent of the total payment due, whichever is less. The designated ONRR office will send a Notice of Deficiency to the lessee. The Notice will allow the lessee 15 days from the date of receipt or until the due date, whichever is later, to submit the full balance due to the designated ONRR office. If the payment required by the Notice is not paid within the time allowed, the lease will have terminated by operation of law as of its anniversary date.

(c) The automatic termination provision does not apply where, due to other contingencies, additional rental is due on a date other than the lease anniversary date and where the lessee did not receive notice that the obligation had accrued, unless the lessee fails to pay the rental within the period prescribed in the BLM Notice.

§ 3108.22 Reinstatement at existing rental and royalty rates: Class I reinstatements.

(a) Except as hereinafter provided, the authorized officer may reinstate a lease which has terminated for failure to pay on or before the anniversary date the full amount of rental due, provided that:

(1) Such rental was paid or tendered within 20 days after the anniversary date; and

(2) It is shown to the satisfaction of the authorized officer that the failure to timely submit the full amount of the rental due was either justified or not due to a lack of reasonable diligence on the part of the lessee (reasonable diligence includes a rental payment that is paid to the ONRR on or before the lease anniversary date. If the designated ONRR office or payment system is not operational on the anniversary date, payment received on the next business day in which the designated ONRR office or payment system is operational to the public will be deemed timely); and

(3) A petition for reinstatement and the processing fee for lease reinstatement, Class I, found in the fee schedule in § 3000.120 of this chapter, are filed with the proper BLM office within 60 days after receipt of Notice of Termination of Lease due to late payment of rental. If a terminated lease becomes productive prior to the time the lease is reinstated, all required royalty that has accrued must be paid to the ONRR.

(b) The burden of showing that the failure to pay on or before the anniversary date was justified or not due to lack of reasonable diligence is on the lessee.

(c) Under no circumstances will a terminated lease be reinstated if:

(1) A valid oil and gas lease has been issued prior to the filing of a petition for reinstatement affecting any of the lands covered by that terminated lease; or

(2) The oil and gas interests of the United States in the lands have been disposed of or otherwise have become unavailable for leasing.

§ 3108.23 Reinstatement at higher rental and royalty rates: Class II reinstatements.

(a) The authorized officer may, if the requirements of this section are met, reinstate a competitive oil and gas lease which was terminated by operation of law for failure to pay rental timely when the rental was not paid or tendered within 20 calendar days of the termination date, and it is shown to the satisfaction of the authorized officer that such failure was justified or not due to a lack of reasonable diligence, or no matter when the rental was paid, it is shown to the satisfaction of the authorized officer that such failure was inadvertent.

(b)(1) Such leases may be reinstated if the required back rental and royalty at the increased rates accruing from the date of termination, together with a petition for reinstatement, are filed on or before the earlier of:

(i) Sixty calendar days after the last date that any lessee of record received Notice of Termination by certified mail; or

(ii) Twenty-four months after termination of the lease.

(2) After determining that the requirements for filing of the petition for reinstatement have been timely met, the authorized officer may reinstate the lease if:

(i) No valid lease has been issued prior to the filing of the petition for reinstatement affecting any of the lands covered by the terminated lease, whether such lease is still in effect or not;

(ii) The oil and gas interests of the United States in the lands have not been disposed of or have not otherwise become unavailable for leasing;

(iii) Payment of all back rentals and royalties at the rates established for the reinstated lease has been made;

(iv) An agreement has been signed by the lessee and attached to and made a part of the lease specifying future rentals at the applicable rates specified for reinstated leases in 43 CFR 3103.22 and future royalties at the rates set in 43 CFR 3103.31 for all production removed or sold from such lease or shared by such lease from production allocated to the lease by virtue of its participation in an oil and gas agreement;

(v) A notice of the proposed reinstatement of the terminated lease and the terms and conditions of reinstatement has been published in the **Federal Register** at least 30 days prior to the date of reinstatement for which the lessee must reimburse the BLM for the full costs incurred in the publishing of said notice; and

(vi) The lessee has paid the BLM a nonrefundable administrative fee of $500.

(c) The authorized officer will furnish to the Chairpersons of the Committee on Natural Resources of the House of Representatives and of the Committee on Energy and Natural Resources of the Senate, at least 30 days prior to the date of reinstatement, a copy of the notice, together with information concerning rental, royalty, volume of production, if any, and any other matter which the authorized officer considers significant in making the determination to reinstate.

(d) If the authorized officer reinstates the lease, the reinstatement will be effective as of the date of termination, for the unexpired portion of the original lease or any extension thereof remaining on the date of termination, and so long thereafter as oil or gas is produced in paying quantities. Where a lease is reinstated under this section and the authorized officer finds that the reinstatement of such lease either:

(1) Occurs after the expiration of the primary term or any extension thereof; or

(2) Will not afford the lessee a reasonable opportunity to continue operations under the lease, the authorized officer may extend the term of the reinstated lease for such period as determined reasonable, but in no event for more than 2 years from the date of the reinstatement and so long thereafter as oil or gas is produced in paying quantities.

§ 3108.30 Cancellation.

(a) Whenever the lessee fails to comply with any of the provisions of the law, the regulations issued thereunder, or the lease, the lease may be canceled by the Secretary, if the leasehold does not contain a well capable of production of oil or gas in paying quantities, or if the lease is not committed to an approved oil and gas agreement that contains a well capable of production of unitized substances in paying quantities. The lease may be canceled only if the default continues for 30 calendar days after a notice of default has been delivered in accordance with 43 CFR 1810.2.

(b) Whenever the lessee fails to comply with any of the provisions of the law, the regulations issued thereunder, or the lease, and if the leasehold contains a well capable of production of oil or gas in paying quantities, or if the lease is committed to an approved oil and gas agreement that contains a well capable of production of unitized substances in paying quantities, the lease may be canceled only by court order in the manner provided by section 31(a) of the Act (30 U.S.C. 188).

(c) If any interest in any lease is owned or controlled, directly or indirectly, by means of stock or otherwise, in violation of any of the provisions of the Act, the lease may be canceled, or the interest so owned may be forfeited, or the person so owning or controlling the interest may be compelled to dispose of the interest, only by court order in the manner provided by section 27(h)(1) of the Act (30 U.S.C. 184).

(d) Leases will be subject to cancellation if improperly issued.

§ 3108.40 Bona fide purchasers.

A lease or interest therein may not be cancelled to the extent that such action adversely affects the title or interest of a *bona fide* purchaser even though such lease or interest, when held by a predecessor in title, may have been subject to cancellation. All purchasers will be charged with constructive notice as to all pertinent regulations and all BLM records pertaining to the lease and the lands covered by the lease. Prompt action may be taken to dismiss as a party to any proceedings with respect to a violation by a predecessor of any provisions of the Act, any person who shows the holding of an interest as a *bona fide* purchaser without having violated any provisions of the Act. No hearing will be necessary upon such showing unless prima facie evidence is presented that the purchaser is not a *bona fide* purchaser.

§ 3108.50 Waiver or suspension of lease rights.

If, during any proceeding with respect to a violation of any provision of the regulations in 43 CFR parts 3000 and 3100 or the Act, a party thereto files a waiver of his/her rights under the lease to drill or to assign his/her lease interests, or if such rights are suspended by order of the Secretary pending a decision, payments of rentals and the running of time against the term of the lease involved will be suspended as of the first day of the month following the filing of the waiver or the Secretary's suspension until the first day of the month following the final decision in the proceeding or the revocation of the waiver or suspension.

Subpart 3109—Leasing under Special Acts

Rights-of-Way

§ 3109.11 Generally.

The Act of May 21, 1930 (30 U.S.C. 301–306), authorizes either the leasing of oil and gas deposits under railroad and other rights-of-way to the owner of the right-of-way or the entering of a compensatory royalty agreement with adjoining landowners. This authority will be exercised only with respect to railroad rights-of-way and easements issued pursuant either to the Act of March 3, 1875 (43 U.S.C.934 *et seq.*), or pursuant to earlier railroad right-of-way statutes, and with respect to rights-of-way and easements issued pursuant to the Act of March 3, 1891 (43 U.S.C. 946 *et seq.*). The oil and gas underlying any other right-of-way or easement is included within any oil and gas lease issued pursuant to the Act which covers the lands within the right-of-way, subject to the limitations on use of the surface, if any, set out in the statute under which, or permit by which, the right-of-way or easement was issued, and such oil and gas will not be leased under the Act of May 21, 1930.

§ 3109.12 Application.

(a) No approved form is required for an application to lease oil and gas deposits underlying a right-of-way.

(b) The right-of-way owner or his/her transferee must file the application in the proper BLM office.

(c) Include the processing fee for leasing under right-of-way found in the fee schedule in § 3000.120 of this chapter.

(d) An application must include:

(1) Facts as to the ownership of the right-of-way, and of the transfer if the application is filed by a transferee;

(2) An executed transfer of the right to obtain a lease, if necessary;

(3) A description of the development of oil or gas in adjacent or nearby lands, the location and depth of the wells, the production and the probability of drainage of the deposits in the right-of-way;

(4) A description of each legal subdivision through which a portion of the right-of-way desired to be leased traverses; however, a description by metes and bounds of the right-of-way is not required; and

(5) A map of the applicable lands.

§ 3109.13 Notice.

After the BLM has determined that a lease of a right-of-way or any portion thereof is consistent with the public interest, either upon consideration of an application for lease or on its own motion, the authorized officer will serve notice on the owner or lessee of the oil and gas rights of the adjoining lands. The adjoining landowner or lessee will be allowed a reasonable time, as provided in the notice, within which to submit a bid for the percent of compensatory royalty, the owner or lessee must pay for the extraction of the oil and gas underlying the right-of-way through wells on such adjoining lands. The owner of the right-of-way will be given the same time period to submit a bid for the lease.

§ 3109.14 Award of lease or compensatory royalty agreement.

Award of lease to the owner of the right-of-way, or a contract for the payment of compensatory royalty by the owner or lessee of the adjoining lands will be made to the bidder whose offer is determined by the authorized officer to be to the best advantage of the United States, considering the amount of royalty to be received and the better development under the respective means of production and operation.

§ 3109.15 Compensatory royalty agreement or lease.

(a) The lease or compensatory royalty agreement will be on a form approved by the Director.

(b) The primary term of the lease will be for a period of 10 years.

(c) The following provisions of 43 CFR part 3100 apply to the issuance and administration of leases for oil and gas deposits underlying a right-of-way issued under this part:

(1) All of subpart 3101, except §§ 3101.21, 3101.22, 3101.23, 3101.24, and 3101.25; and

(2) All of subparts 3102 through 3108;

§ 3109.20 Units of the National Park System.

(a) Oil and gas leasing in units of the National Park System will be governed by 43 CFR part 3100 and all operations conducted on a lease or permit in such units will be governed by 43 CFR parts 3160 and 3180.

(b) Any lease or permit respecting minerals in units of the National Park System may be issued or renewed only with the consent of the Regional Director, National Park Service. Such consent will only be granted upon a determination by the Regional Director that the activity permitted under the lease or permit will not have significant adverse effect upon the resources or administration of the unit pursuant to the authorizing legislation of the unit. Any lease or permit issued will be subject to such conditions as may be prescribed by the Regional Director to protect the surface and significant resources of the unit, to preserve their use for public recreation, and to the condition that site specific approval of any activity on the lease will only be given upon concurrence by the Regional Director. All lease applications received for reclamation withdrawn lands will also be submitted to the Bureau of Reclamation for review.

(c) The units subject to the regulations in this part are those units of land and water which are shown on the following maps on file and available for public inspection in the office of the Director of the National Park Service and in the Superintendent's Office of each unit. The boundaries of these units may be revised by the Secretary as authorized in the Acts.

(1) Lake Mead National Recreation Area—The map identified as ''boundary map, 8360–80013B, revised February 1986.

(2) Whiskeytown Unit of the Whiskeytown-Shasta-Trinity National Recreation Area—The map identified as ''Proposed Whiskeytown-Shasta-Trinity National Recreation Area,'' numbered BOR–WST 1004, dated July 1963.

(3) Ross Lake and Lake Chelan National Recreation Areas—The map identified as ''Proposed Management Units, North Cascades, Washington,'' numbered NP–CAS–7002, dated October 1967.

(4) Glen Canyon National Recreation Area—the map identified as ''boundary map, Glen Canyon National Recreation Area,'' numbered GLC–91,006, dated August 1972.

(d) The following excepted units will not be open to mineral leasing:

(1) *Lake Mead National Recreation Area.* (i) All waters of Lakes Mead and Mohave and all lands within 300 feet of those lakes measured horizontally from the shoreline at maximum surface elevation;

(ii) All lands within the unit of supervision of the Bureau of Reclamation around Hoover and Davis Dams and all lands outside of resource utilization zones as designated by the Superintendent on the map (602–2291B, dated October 1987) of Lake Mead National Recreation Area which is available for inspection in the Office of the Superintendent.

(2) *Whiskeytown Unit of the Whiskeytown-Shasta-Trinity National Recreation Area.* (i) All waters of Whiskeytown Lake and all lands within 1 mile of that lake measured from the shoreline at maximum surface elevation;

(ii) All lands classified as high-density recreation, general outdoor recreation, outstanding natural and historic, as shown on the map numbered 611–20,004B, dated April

1979, entitled ''Land Classification, Whiskeytown Unit, Whiskeytown-Shasta-Trinity National Recreation Area.'' This map is available for public inspection in the Office of the Superintendent;

(iii) All lands within section 34 of Township 33 north, Range 7 west, Mt. Diablo Meridian.

(3) *Ross Lake and Lake Chelan National Recreation Areas.* (i) All of Lake Chelan National Recreation Area;

(ii) All lands within ½ mile of Gorge, Diablo and Ross Lakes measured from the shoreline at maximum surface elevation;

(iii) All lands proposed for or designated as wilderness;

(iv) All lands within ½ mile of State Highway 20;

(v) Pyramid Lake Research Natural Area and all lands within ½ mile of its boundaries.

(4) *Glen Canyon National Recreation Area.* Those units closed to mineral disposition within the natural zone, development zone, cultural zone and portions of the recreation and resource utilization zone as shown on the map numbered 80,022A, dated March 1980, entitled ''Mineral Management Plan—Glen Canyon National Recreation Area.'' This map is available for public inspection in the Office of the Superintendent and the office of the BLM State Offices, Arizona and Utah.

§ 3109.30 Shasta and Trinity Units of the Whiskeytown-Shasta-Trinity National Recreation Area.

Section 6 of the Act of November 8, 1965 (Pub. L. 89–336), authorizes the Secretary to permit the removal of oil and gas from lands within the Shasta and Trinity Units of the Whiskeytown-Shasta-Trinity National Recreation Area in accordance with the Act or the Mineral Leasing Act for Acquired Lands. Subject to the determination by the Secretary of Agriculture that removal will not have significant adverse effects on the purposes of the Central Valley project or the administration of the recreation area.

PART 3110 [REMOVED]

■ 3. Under the authority of 30 U.S.C. 189, part 3110 is removed.

■ 4. Revise part 3120 to read as follows:

PART 3120—COMPETITIVE LEASES

Sec.

PART 3120—COMPETITIVE LEASES

Authority: 16 U.S.C. 3101 *et seq.;* 30 U.S.C. 181 *et seq.* and 351–359; 40 U.S.C. 471 *et seq.;* 43 U.S.C. 1701 *et seq.;* Pub. L. 113–291, 128 Stat. 3762; and the Attorney General's Opinion of April 2, 1941 (40 Op. Atty. Gen. 41).

General

§ 3120.11 Lands available for competitive leasing.

All lands eligible and available for leasing may be offered for competitive auction under this subpart, including but not limited to:

(a) Lands that were covered by previously issued oil and gas leases that have terminated, expired, been cancelled or relinquished;

(b) Lands for which authority to lease has been delegated from the General Services Administration;

(c) If, in proceeding to cancel a lease, interest in a lease, option to acquire a lease or an interest therein, acquired in violation of any of the provisions of the Act, an underlying lease, interest or option in the lease is cancelled or forfeited through a bankruptcy or otherwise to the United States and there are valid interests therein that are not subject to cancellation, forfeiture, or compulsory disposition, such underlying lease, interest, or option may be sold to the highest responsible and qualified bidder by competitive bidding under this subpart, subject to all outstanding valid interests therein and valid options pertaining thereto. If less than the whole interest in the lease, interest, or option is cancelled or forfeited, such partial interest may likewise be sold by competitive bidding. If no satisfactory bid is obtained as a result of the competitive offering of such whole or partial interests, such interests may be sold in accordance with 30 U.S.C. 184(h)(2) by such other methods as the authorized officer deems appropriate, but on terms no less favorable to the United States than those of the best competitive bid received. Interest in outstanding leases(s) so sold will be subject to the terms and conditions of the existing lease(s);

(d) Lands which are otherwise unavailable for leasing but which are subject to drainage (protective leasing);

(e) Lands included in any expression of interest submitted to the authorized officer;

(f) Lands selected by the authorized officer; and

(g) Lands that were offered on a previous sale for which no bid was accepted or received.

§ 3120.12 Requirements.

(a) Each BLM state office will hold sales at least quarterly if eligible lands are available for competitive leasing.

(b) Lease sales will be conducted by a competitive auction process.

(c) The BLM may issue a lease only to the highest responsible and qualified bidder. If a person does not pay the minimum monies owed the day of the sale, the BLM may refer that person to the Department of the Interior's Office of the Inspector General, Administrative Remedies Division, for appropriate action, including potential suspension and debarment.

(d) The national minimum acceptable bid will be as specified in § 3103.1 of this chapter and payable on the gross acreage and will not be prorated for any lands in which the United States owns a fractional interest.

§ 3120.13 Protests.

(a) No action pursuant to the regulations in this subpart will be suspended under 43 CFR 4.21(a) due to a protest from a notice by the authorized officer to hold a lease sale.

(b) Notwithstanding paragraph (a) of this section, the authorized officer may suspend the offering of a specific parcel while considering a protest against its inclusion in a Notice of Competitive Lease Sale.

(c) Only the Assistant Secretary for Land and Minerals Management may suspend a lease sale for good cause after reviewing the reason(s) for a protest.

Lease Terms

§ 3120.21 Duration of lease.

Competitive leases will be issued for a primary term of 10 years.

§ 3120.22 Dating of leases.

All competitive leases will be considered issued when signed by the authorized officer. Competitive leases, except future interest leases issued under § 3120.80, will be effective as of the first day of the month following the date the leases are signed on behalf of the United States. A lease may be made effective on the first day of the month within which it is issued if a written request is made prior to the date of signature of the authorized officer. Leases for future interest will be effective as of the date the mineral interests vest in the United States.

§ 3120.23 Lease size.

Lands may be offered in leasing units of not more than 2,560 acres outside Alaska, or 5,760 acres within Alaska, which may be as nearly compact in form as possible.

Expressions of Interest

§ 3120.31 Expression of interest process.

(a) A party submitting an expression of interest in leasing land available for disposition under section 17 of the Mineral Leasing Act must include the submitter's name and address and must submit the expression of interest through the BLM's online leasing system.

(b) The expression must provide a description of the lands identified by legal land description, as follows:

(1) For lands surveyed under the public land survey system, describe the lands to the nearest aliquot part within the legal subdivision, section, township, range, and meridian;

(2) For unsurveyed lands, describe the lands by metes and bounds, giving courses and distances, and tie this information to an official corner of the public land surveys, or to a prominent topographic feature;

(3) For approved protracted surveys, include an entire section, township, range, and meridian. Do not divide protracted sections into aliquot parts;

(4) For lands that have water boundaries, describe the lands based on the initial survey or deed acquiring ownership;

(5) For fractional interest lands, identify the United States mineral ownership by percentage;

(6) For split estate lands, where the surface rights are in private ownership and the rights to develop the oil and gas are managed by the Federal Government, submit the private surface owner's name and address.

(7) For lands where the acquiring agency has assigned an acquisition or tract number covering the lands applied, submit the number in addition to any description otherwise required by this section. If the authorized officer determines that the acquisition or tract number, together with identification of the State and county, constitutes an adequate description, the authorized officer may allow the description in this manner in lieu of other descriptions required by this section.

(c) A submitter may submit more than one expression of interest, so long as each expression separately satisfies the requirements of paragraph (b) of this section.

(d) Each expression of interest must include a filing fee, as found in the fee schedule in § 3103.1 of this chapter.

(e) The BLM may offer for sale all or some of the lands specified in an expression of interest and may offer those lands as part of a parcel that includes lands not specified in the expression of interest.

§ 3120.32 Expression of interest leasing preference.

When determining whether the BLM should offer lands specified in an expression of interest at lease sales, the BLM will evaluate the Secretary's obligations to manage public lands for multiple use and sustained yield and to take any action required to prevent unnecessary or undue degradation of the lands and their resources, along with other applicable legal requirements. In evaluating the lands to be offered, as part of the scoping process, the BLM will consider, at minimum:

(a) Proximity to oil and gas development existing at the time of the BLM's evaluation, giving preference to lands upon which a prudent operator would seek to expand existing operations;

(b) The presence of important fish and wildlife habitats or connectivity areas, giving preference to lands that would not impair the proper functioning of such habitats or corridors;

(c) The presence of historic properties, sacred sites, and other high value cultural resources, giving preference to lands that would not impair the cultural significance of such resources;

(d) The presence of recreation and other important uses or resources, giving preference to lands that would not impair the value of such uses or resources; and

(e) The potential for oil and gas development, giving preference to lands with high potential for development.

§ 3120.33 Agency inventory of leasing.

Until August 16, 2032, the BLM will from time to time calculate, for the preceding 1-year period before it issues a wind or solar energy right-of-way, the acreage for which expressions of interest have been submitted to the BLM and the sum total of acres offered for lease.

Notice of Competitive Lease Sale

§ 3120.41 General.

(a) The lands available for competitive lease sale under this subpart will be described in a Notice of Competitive Lease Sale.

(b) The time, date, and place of the competitive lease sale will be stated in the notice.

(c) The notice will include an identification of, and a copy of, stipulations applicable to each parcel.

§ 3120.42 Posting timeframes.

(a) After identifying a preliminary list of lands for a lease sale, the BLM will provide a scoping period, of not less than 30 calendar days, for public comment on the preliminary parcel list for the upcoming lease sale. The preliminary parcel list is not subject to protests or appeals.

(b) After drafting a National Environmental Policy Act document for a lease sale, the BLM will provide a comment period, of not less than 30 calendar days, for public comment on the National Environmental Policy Act document for the upcoming lease sale. The draft National Environmental Policy Act document is not subject to protests or appeals.

(c) At least 60 calendar days prior to conducting a competitive auction, the BLM will make available to the public a list of lands to be offered for competitive lease sale in a Notice of Competitive Lease Sale.

(d) After posting the Notice of Competitive Lease Sale notice, the BLM will provide a protest period, of not less than 30 calendar days, for public input on the upcoming lease sale.

(e) The BLM will make available the final National Environmental Policy Act compliance documents prior to issuing a lease from the lease sale.

Competitive Auction

§ 3120.51 Competitive auction.

(a) Parcels will be offered by competitive auction.

(b) A winning bid will be the highest bid by a responsible and qualified bidder, equal to or exceeding the national minimum acceptable bid. The decision of the auctioneer will be final.

§ 3120.52 Payments required.

(a) Payments must be made in accordance with 43 CFR 3103.11.

(b) Each winning bidder must submit, by the close of official business hours on

the day of the sale for the parcel, or such other time as may be specified by the authorized officer:

(1) The minimum bonus bid as specified in § 3103.1 of this chapter;

(2) The total amount of the first year's rental; and

(3) The processing fee for competitive lease applications found in the fee schedule in § 3000.120 of this chapter for each parcel.

(c) The winning bidder must submit the balance of the bonus bid to the proper BLM office within 10 business days after the last day of the competitive auction.

§ 3120.53 Award of lease.

(a) A bid will not be withdrawn and will constitute a legally binding commitment to execute the lease bid form and accept a lease, including the obligation to pay the bonus bid, first year's rental, and processing fee. Execution by the high bidder of a competitive lease bid form approved by the Director constitutes certification of compliance with 43 CFR subpart 3102, will constitute a binding lease offer, including all terms and conditions applicable thereto, and must be submitted when payment is made in accordance with § 3120.62(b). Failure to comply with § 3120.62(c) will result in rejection of the bid and forfeiture of the monies submitted under § 3120.62(b).

(b) A lease will be awarded to the highest responsible and qualified bidder. A copy of the lease will be provided to the lessee after signature by the authorized officer.

(c) If a bid is rejected, the land may be reoffered competitively under this subpart.

(d) The BLM will not issue a lease until it resolves all protests covering the lands to be leased.

(e) Leases will be issued within 60 calendar days, following payment by the successful bidder of the remainder of the bonus bid, if any, and the annual rental for the first lease year. If the BLM cannot issue the lease within 60 days, the BLM, with the consent of the bidder, may reject the offer.

§ 3120.60 Parcels not bid on at auction.

Lands offered at the competitive auction that received no bids may be offered in a future competitive auction.

Future Interest

§ 3120.71 Expression of interest to make lands available for competitive lease.

An expression of interest for a future interest lease must be filed in accordance with this subpart.

§ 3120.72 Future interest terms and conditions.

(a) No rental or royalty will be due to the United States prior to the vesting of the oil and gas rights in the United States. However, the future interest lessee must agree that if, he/she is or becomes the holder of any present interest operating rights in the lands:

(1) The future interest lessee transfers all or a part of the lessee's present oil and gas interests, such lessee must file in the proper BLM office an assignment or transfer, in accordance with 43 CFR subpart 3106, of the future interest lease of the same type and proportion as the transfer of the present interest; and

(2) The future interest lessee's present lease interests are relinquished, cancelled, terminated, or expired, the future interest lease rights with the United States also will cease and terminate to the same extent.

(b) Upon vesting of the oil and gas rights in the United States, the future interest lease rental and royalty will be as for any competitive lease issued under this subpart, as provided in 43 CFR subpart 3103, and the acreage will be chargeable in accordance with 43 CFR 3101.20.

§ 3120.73 Compensatory royalty agreements.

The terms and conditions of compensatory royalty agreements involving acquired lands in which the United States owns a future or fractional interest will be established on an individual case basis. Such agreements may be required when leasing is not possible in situations where the interest of the United States in the oil and gas deposit includes both a present and a future fractional interest in the same tract containing a producing well.

PART 3130—OIL AND GAS LEASING: NATIONAL PETROLEUM RESERVE ALASKA

■ 5. The authority citation for part 3130 continues to read as follows:

Authority: 42 U.S.C. 6508, 43 U.S.C. 1733 and 1740.

■ 6. Revise § 3137.23 to read as follows:

§ 3137.23 NPR–A unitization application.

The unitization application must include:

(a) The proposed unit agreement;

(b) A map showing the proposed unit area;

(c) A list of committed tracts including, for each tract, the:

(1) Legal land description and acreage;

(2) Names of persons holding record title interest;

(3) Names of persons owning operating rights; and

(4) Name of the unit operator.

(d) A statement certifying:

(1) The operator invited all owners of oil and gas rights (leased or unleased) and lease interests (record title and operating rights) within the external boundary of the unit area described in the application to join the unit;

(2) That there are sufficient tracts committed to the unit agreement to reasonably operate and develop the unit area;

(3) The commitment status of all tracts within the area proposed for unitization; and

(4) The operator accepts unit obligations under § 3137.60 of this subpart.

(e) Evidence of acceptable bonding;

(f) A discussion of reasonably foreseeable and significantly adverse effects on the surface resources of the NPR–A and how unit operations may reduce impacts compared to individual lease operations;

(g) A discussion of the proposed methodology for allocating production among the committed tracts. If the unit includes non-Federal oil and gas mineral estate, you must explain how the methodology takes into account reservoir heterogeneity and area variation in reservoir producibility; and

(h) Other documentation that the BLM may request. The BLM may require additional copies of maps, plats, and other similar exhibits.

(i) The processing fee found in the fee schedule in § 3000.120 of this chapter.

■ 7. Revise § 3137.61 to read as follows:

§ 3137.61 Change in unit operators.

(a) To change unit operators, the new unit operator must submit to the BLM:

(1) Statements that:

(i) The new operator accepts unit obligations; and

(ii) The percentage of required interest owners consented to a change of unit operator;

(2) Evidence of acceptable bonding (*see* § 3137.60(b)); and

(3) The processing fee found in the fee schedule in § 3000.120 of this chapter.

(b) The effective date of the change in unit operator is the date the BLM approves the new unit operator.

■ 8. Revise § 3138.11 to read as follows:

§ 3138.11 Applications for a subsurface storage agreement.

(a) An application for a subsurface storage agreement must include:

(1) The reason for forming a subsurface storage agreement;

(2) A description of the area to be included in the subsurface storage agreement;

(3) A description of the formation to be used for storage;

(4) The proposed storage fees or rentals. The fees or rentals must be based on the value of the subsurface storage, injection, and withdrawal volumes, and rental income or other income generated by the operator for letting or subletting the storage facilities;

(5) The payment of royalty for native oil or gas (oil or gas that exists in the formation before injection and that is produced when the stored oil or gas is withdrawn);

(6) A description of how often and under what circumstances the operator and the BLM intend to renegotiate fees and payments;

(7) The proposed effective date and term of the subsurface storage agreement;

(8) Certification that all owners of mineral rights (leased or unleased) and lease interests have consented to the gas storage agreement in writing;

(9) An ownership schedule showing lease or land status;

(10) A schedule showing the participation factor for all parties to the subsurface storage agreement;

(11) Supporting data (geologic maps showing the storage formation, reservoir data, etc.) demonstrating the capability of the reservoir for storage; and

(12) The processing fee found in the fee schedule in § 3000.120 of this chapter.

(b) The BLM will negotiate the terms of a subsurface storage agreement with the operator, including bonding, and reservoir management.

(c) The BLM may request documentation in addition to that which the operator provides under paragraph (a) of this section.

■ 9. Revise part 3140 to read as follows:

PART 3140—LEASING IN SPECIAL TAR SAND AREAS

Subpart 3140—Conversion of Existing Oil and Gas Leases and Valid Claims Based on Mineral Locations

Sec.

PART 3140—LEASING IN SPECIAL TAR SAND AREAS

Authority: 30 U.S.C. 181 *et seq.;* 30 U.S.C. 351–359; 43 U.S.C. 1701 *et seq.;* Pub. L. 97–78, 95 Stat. 1070; 42 U.S.C. 15801, unless otherwise noted.

Subpart 3140—Conversion of Existing Oil and Gas Leases and Valid Claims Based on Mineral Locations

§ 3140.1 Purpose.

The purpose of this subpart is to provide for the conversion of existing oil and gas leases and valid claims based on mineral locations within Special Tar Sand Areas to combined hydrocarbon leases.

§ 3140.3 Authority.

These regulations are issued under the authority of the Mineral Lands Leasing Act of February 25, 1920 (30 U.S.C. 181 *et seq.*), the Mineral Leasing Act for Acquired Lands (30 U.S.C. 351 *et seq.*), and the Combined Hydrocarbon Leasing Act of 1981 (Pub. L. 97–78).

§ 3140.5 Definitions.

As used in this subpart, the term:

Combined hydrocarbon lease means a lease issued in a Special Tar Sand Area for the removal of gas and nongaseous hydrocarbon substances other than coal, oil shale or gilsonite.

Complete plan of operations means a plan of operations that is in substantial compliance with the information requirements of 43 CFR part 3592 for both exploration plans and mining plans, as well as any additional information required in this part and under 43 CFR part 3593, as may be appropriate.

Owner of an oil and gas lease means all of the record title holders of an oil and gas lease.

Owner of a valid claim based on a mineral location means all parties appearing on the title records recognized as official under State law as having the right to sell or transfer any part of the mining claim, which was located within a Special Tar Sand Area prior to January 21, 1926, for any hydrocarbon resource, except coal, oil shale or gilsonite, leasable under the Combined Hydrocarbon Leasing Act.

Special Tar Sand Area means an area designated by the Department of the Interior's orders of November 20, 1980 (45 FR 76800), and January 21, 1981 (46 FR 6077) referred to in those orders as Designated Tar Sand Areas, as containing substantial deposits of tar sand.

Unitization means unitization as that term is defined in 43 CFR part 3180.

General Provisions

§ 3140.11 Existing rights.

(a) The owner of an oil and gas lease issued prior to November 16, 1981, or the owner of a valid claim based on a mineral location situated within a Special Tar Sand Area may convert that portion of the lease or claim so situated to a combined hydrocarbon lease, provided that such conversion is consistent with the provisions of this subpart. The application time period ended on November 15, 1983.

(b) Owners of oil and gas leases in Special Tar Sand Areas who elect not to convert their leases to a combined hydrocarbon lease do not acquire the rights to any hydrocarbon resource except oil and gas as those terms were defined prior to the enactment of the Combined Hydrocarbon Leasing Act of 1981. The failure to file an application to convert a valid claim based on a mineral location within the time herein provided will have no effect on the validity of the mining claim nor the right to maintain that claim.

§ 3140.12 Notice of intent to convert.

(a) Owners of oil and gas leases in Special Tar Sand Areas which were scheduled to expire prior to November 15, 1983, could have preserved the right to convert their leases to combined hydrocarbon leases by filing a Notice of Intent to Convert with the BLM Utah State Office.

(b) A letter, submitted by the lessee, notifying the BLM of the lessee's intention to submit a plan of operations constituted a notice of intent to convert a lease. The Notice of Intent must have contained the lease number.

(c) The Notice of Intent must have been filed prior to the expiration date of the lease. The notice would have preserved the lessee's conversion rights only until November 15, 1983.

§ 3140.13 Exploration plans.

(a) The authorized officer may grant permission to holders of existing oil and gas leases to gather information to develop, perfect, complete or amend a plan of operations required for conversion upon the approval of the authorized officer of an exploration plan developed in accordance with 43 CFR 3592.1.

(b) The approval of an exploration plan in units of the National Park System requires the consent of the Regional Director of the National Park Service in accordance with § 3140.70.

(c) The filing of an exploration plan alone will be insufficient to meet the requirements of a complete plan of operations as set forth in § 3140.23.

§ 3140.14 Other provisions.

(a) A combined hydrocarbon lease will be for no more than 5,760 acres. Acreage held under a combined hydrocarbon lease in a Special Tar Sand Area is not chargeable to State oil and gas limitations allowable in 43 CFR 3101.21 or 3101.22.

(b) The annual rental rate for all combined hydrocarbon leases will be as stated in the lease, and the annual rental for all new leases will be as specified in 43 CFR 3103.1. The rental rate for a combined hydrocarbon lease will be payable upon conversion and annually, in advance, thereafter.

(c)(1) The royalty rate for a combined hydrocarbon lease converted from an oil and gas lease will be that provided for in the original oil and gas lease.

(2) The royalty rate for a combined hydrocarbon lease converted from a valid claim based on a mineral location will be 16.67 percent.

(3) A reduction of royalties may be granted either as provided in § 3103.40 or, at the request of the lessee and upon a review of information provided by the lessee, prior to commencement of commercial operations if the purpose of the request is to promote development and the maximum production of tar sand. A reduction of royalties for the tar sand will not apply to the oil and gas resource. A reduction of royalties for the oil and gas will not apply to the tar sand resource.

(d)(1) Existing oil and gas leases and valid claims based on mineral locations may be unitized prior to or after the lease or claim has been converted to a combined hydrocarbon lease. The requirements of 43 CFR part 3180 will provide the procedures and general guidelines for unitization of combined hydrocarbon leases. For leases within units of the National Park System, unitization requires the consent of the Regional Director of the National Park Service in accordance with § 3140.41(b).

(2) If the plan of operations submitted for conversion is designed to cover a unit, a fully executed unit agreement will be approved before the plan of operations applicable to the unit may be approved under § 3140.20. The proposed plan of operations and the proposed unit agreement may be reviewed concurrently. The approved unit agreement will be effective after the leases or claims subject to it are converted to combined hydrocarbon leases. The plan of operations will explain how and when each lease included in the unit operation will be developed.

(e) Except as provided for in this subpart, the regulations set out in 43 CFR part 3100 are applicable, as appropriate, to all combined hydrocarbon leases issued under this subpart.

Applications

§ 3140.21 Forms.

No special form is required for a conversion application.

§ 3140.22 Who may apply.

Only owners of oil and gas leases issued within Special Tar Sands Areas, on or before November 16, 1981, and owners of valid claims based on mineral locations within Special Tar Sands Areas, are eligible to convert leases or claims to combined hydrocarbon leases in Special Tar Sands Areas.

§ 3140.23 Application requirements.

(a) The BLM stopped accepting conversion applications on November 15, 1983. The applicant must have submitted to the BLM Utah State Office, a written request for a combined hydrocarbon lease signed by the owner of the lease or valid claim which must be accompanied by three copies of a plan of operations which must meet the requirements of 43 CFR 3592.1 and which must have provided for reasonable protection of the environment and diligent development of the resources requiring enhanced recovery methods of development or mining.

(b) A plan of operations may be modified or amended before or after conversion of a lease or valid claim to reflect changes in technology, slippages in schedule beyond the control of the lessee, new information about the resource or the economic or environmental aspects of its development, changes to or initiation of applicable unit agreements or for other purposes. To obtain approval of a modification or amended plan, the applicant must submit a written statement of the proposed changes or supplements and the justification for the changes proposed. Any modifications will be in accordance with 43 CFR 3592.1(c). The approval of the modification or amendment is the responsibility of the authorized officer. Changes or modification to the plan of operations will have no effect on the primary term of the lease. The authorized officer will, prior to approving any amendment or modification, review the modification or amendment with the appropriate surface management agency. For leases within units of the National Park System, no amendment or modification will be approved without the consent of the Regional Director of the National Park Service in accordance with § 3140.70.

(c) The plan of operations may be for a single existing oil and gas lease or valid claim or for an area of proposed unit operation.

(d) The plan of operations must identify by lease number all Federal oil and gas leases proposed for conversion and identify valid claims proposed for conversion by the recordation number of the mining claim.

(e) The plan of operations must include any proposed designation of

operator or proposed operating agreement.

(f) The plan of operations may include an exploration phase, if necessary, but it must include a development phase. Such a plan can be approved even though it may indicate work under the exploration phase is necessary to perfect the proposed plan for the development phase as long as the overall plan demonstrates reasonable protection of the environment and diligent development of the resources requiring enhanced recovery methods of mining.

(g)(1) Upon determination that the plan of operations is complete, the authorized officer will suspend the term of the Federal oil and gas lease(s) as of the date that the complete plan was filed until the plan is finally approved or rejected. Only the term of the oil and gas lease will be suspended, not any operation and production requirements thereunder.

(2) If the authorized officer determines that the plan of operations is not complete, the applicant will be notified that the plan is subject to rejection if not completed within the period specified in the notice.

(3) The authorized officer may request additional data after the plan of operations has been determined to be complete. This request for additional information will have no effect on the suspension of the running of the oil and gas lease.

Time Limitations

§ 3140.31 Conversion applications.

A plan of operations to convert an existing oil and gas lease or valid claim based on a mineral location to a combined hydrocarbon lease must have been filed on or before November 15, 1983, or prior to the expiration of the oil and gas lease, whichever was earlier, except as provided in § 3140.12.

§ 3140.32 Action on an application.

The authorized officer will take action on an application for conversion within 15 months of receipt of a proposed plan of operations.

Conversion

§ 3140.41 Approval of plan of operations (and unit and operating agreements).

(a) The owner of an oil and gas lease, or the owner of a valid claim based on a mineral location will have such lease or claim converted to a combined hydrocarbon lease when the plan of operations, filed under § 3140.23, is deemed acceptable and is approved by the authorized officer.

(b) The conversion of a lease within a unit of the National Park System will be approved only with the consent of the Regional Director of the National Park Service in accordance with § 3140.70.

(c) A plan of operations may not be approved in part but may be approved where it contains an appropriately staged plan of exploration and development operations.

§ 3140.42 Issuance of the combined hydrocarbon lease.

(a) After a plan of operations is found acceptable, and is approved, the authorized officer will prepare and submit to the owner, for execution, a combined hydrocarbon lease containing all appropriate terms and conditions, including any necessary stipulations that were part of the oil and gas lease being converted, as well as any additional stipulations, such as those required to ensure compliance with the plan of operations.

(b) The authorized officer will not sign the combined hydrocarbon lease until it has been executed by the conversion applicant and the lease or claim to be converted has been formally relinquished to the United States.

(c) The effective date of the combined hydrocarbon lease will be the first day of the month following the date that the authorized officer signs the lease.

(d) The authorized officer will issue one combined hydrocarbon lease to cover the existing contiguous oil and gas leases or valid claims based on mineral locations which have been approved for conversion within the special tar sand area.

§ 3140.50 Duration of the lease.

A combined hydrocarbon lease will be for a primary term of 10 years and for so long thereafter as oil or gas is produced in paying quantities. If the applicant withdraws the combined hydrocarbon lease application or the BLM denies the conversion application, the suspension on the oil and gas lease will be lifted and the term will be extended by the time remaining on the term of the lease.

§ 3140.60 Use of additional lands.

(a) The authorized officer may noncompetitively lease additional lands for ancillary facilities in a Special Tar Sand Area that are needed to support any operations necessary for the recovery of tar sand. Such uses include, but are not limited to, mill site or waste disposal. Application for a lease or permit to use additional lands must be filed under the provisions of 43 CFR part 2920 with the proper BLM office having jurisdiction of the lands. The application for additional lands may be filed at the time a plan of operations is filed.

(b) A lease for the use of additional lands will not be issued when the use can be authorized under 43 CFR parts 2800 and 2880. Such uses include, but are not limited to, reservoirs, pipelines, electrical generation systems, transmission lines, roads, and railroads.

(c) Within units of the National Park System, permits or leases for additional lands will only be issued by the National Park Service. Applications for such permits or leases must be filed with the Regional Director of the National Park Service.

§ 3140.70 Lands within the National Park System.

The BLM stopped accepting conversion applications on November 15, 1983. Conversions of existing oil and gas leases and valid claims based on mineral locations to combined hydrocarbon leases within units of the National Park System will be allowed only where mineral leasing is permitted by law and where the lands covered by the lease or claim proposed for conversion are open to mineral resource disposition in accordance with any applicable minerals management plan. (See 43 CFR 3100.3(h)(4)). In order to consent to any conversion or any subsequent development under a combined hydrocarbon lease requiring further approval, the Regional Director of the National Park Service must find that there will be no resulting significant adverse impacts on the resources and administration of such areas or on other contiguous units of the National Park System in accordance with 43 CFR 3109.20(b).

Subpart 3141—Leasing in Special Tar Sand Areas

§ 3141.1 Purpose.

The purpose of this subpart is to provide for the competitive leasing of lands and issuance of combined hydrocarbon leases, oil and gas leases, or tar sand leases within special tar sand areas.

§ 3141.3 Authority.

The regulations in this subpart are issued under the authority of the Mineral Leasing Act of February 25, 1920 (30 U.S.C. 181 *et seq.*), the Mineral Leasing Act for Acquired Lands (30 U.S.C. 351 *et seq.*), the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 *et seq.*), the Combined Hydrocarbon Leasing Act of 1981 (95 Stat. 1070), and the Energy Policy Act of 2005 (Pub. L. 109–58).

§ 3141. 5 Definitions.

As used in this subpart, the term:

Combined hydrocarbon lease means a lease issued in a Special Tar Sand Area for the removal of any gas and nongaseous hydrocarbon substance other than coal, oil shale or gilsonite.

Oil and gas lease means a lease issued in a Special Tar Sand Area for the exploration and development of oil and gas resources other than tar sand.

Special Tar Sand Area means an area designated by the Department of the Interior's Orders of November 20, 1980 (45 FR 76800), and January 21, 1981 (46 FR 6077), and referred to in those orders as Designated Tar Sand Areas, as containing substantial deposits of tar sand.

Tar sand means any consolidated or unconsolidated rock (other than coal, oil shale or gilsonite) that either:

(1) Contains a hydrocarbonaceous material with a gas-free viscosity, at original reservoir temperature greater than 10,000 centipoise, or

(2) contains a hydrocarbonaceous material and is produced by mining or quarrying.

Tar sand lease means a lease issued in a Special Tar Sand area exclusively for the exploration for and extraction of tar sand.

§ 3141.8 Other applicable regulations.

(a) *Combined hydrocarbon leases.* (1) The following provisions of 43 CFR part 3100, as they relate to competitive leasing, apply to the issuance and administration of combined hydrocarbon leases issued under this part.

(i) All of 43 CFR subpart 3100;

(ii) All of 43 CFR subpart 3101, with the exception of §§ 3101.21, 3101.22, 3101.23, 3101.24, and 3101.25;

(iii) All of 43 CFR subpart 3102;

(iv) All of 43 CFR subpart 3103, with the exception of §§ 3103.21, and 3103.31(a), (b), and (c);

(v) All of 43 CFR subpart 3104;

(vi) All of 43 CFR subpart 3105;

(vii) All of 43 CFR subpart 3106, with the exception of § 3106.10(j);

(viii) All of 43 CFR subpart 3107;

(ix) All of 43 CFR subpart 3108; and

(x) All of 43 CFR subpart 3109, with special emphasis on § 3109.20(b).

(2) Prior to commencement of operations, the lessee must develop either a plan of operations as described in 43 CFR 3592.1 which ensures reasonable protection of the environment or file an application for a permit to drill as described in 43 CFR part 3160, whichever is appropriate.

(3) The provisions of 43 CFR part 3180 will serve as general guidance to the administration of combined hydrocarbon leases issued under this part to the extent they may be included in unit or cooperative agreements.

(b) *Oil and gas leases.* (1) All of the provisions of 43 CFR parts 3100, and 3120 apply to the issuance and administration of oil and gas leases issued under this part.

(2) All of the provisions of 43 CFR parts 3160 and 3170 apply to operations on an oil and gas lease issued under this part.

(3) The provisions of 43 CFR part 3180 apply to the administration of oil and gas leases issued under this part.

(c) *Tar sand leases.* (1) The following provisions of 43 CFR part 3100, as they relate to competitive leasing, apply to the issuance of tar sand leases issued under this part.

(i) All of 43 CFR subpart 3102;

(ii) All of 43 CFR subpart 3103 with the exception of §§ 3103.21, 3103.22(d), 3103.31, and 3103.32;

(iii) All of 43 CFR 3120.50; and

(iv) All of 43 CFR 3120.60.

(2) Prior to commencement of operations, the lessee must develop a plan of operations as described in 43 CFR 3592.1 which ensures reasonable protection of the environment.

§ 3141.10 General.

(a) Combined hydrocarbons or tar sands within a Special Tar Sand Area will be leased only by competitive bonus bidding.

(b) Oil and gas within a Special Tar Sand Area will be leased by competitive bonus bidding as described in 43 CFR part 3120.

(c) The authorized officer may issue either combined hydrocarbon leases, or oil and gas leases for oil and gas within such areas.

(d) The rights to explore for or develop tar sand deposits in a Special Tar Sand Area may be acquired through either a combined hydrocarbon lease or a tar sand lease.

(e) An oil and gas lease in a Special Tar Sand Area does not include the rights to explore for or develop tar sand.

(f) A tar sand lease in a Special Tar Sand Area does not include the rights to explore for or develop oil and gas.

(g) The minimum acceptable bid for a lease issued for tar sand will be as specified in § 3103.1 of this chapter.

(h) The acreage of combined hydrocarbon leases or tar sand leases held within a Special Tar Sand Area will not be charged against acreage limitations for the holding of oil and gas leases as provided in 43 CFR 3101.21.

(i)(1) The authorized officer may noncompetitively lease additional lands for ancillary facilities in a Special Tar Sand Area that are shown by an applicant to be needed to support any operations necessary for the recovery of tar sand. Such uses include, but are not limited to, mill siting or waste disposal. An application for a lease or permit to use additional lands must be filed under the provisions of 43 CFR part 2920 with the proper BLM office having jurisdiction of the lands. The application for additional lands may be filed at the time a plan of operations is filed.

(2) A lease for the use of additional lands will not be issued under this part when the use can be authorized under 43 CFR part 2800. Such uses include, but are not limited to, reservoirs, pipelines, electrical generation systems, transmission lines, roads and railroads.

(3) Within units of the National Park System, permits or leases for additional lands for any purpose will be issued only by the National Park Service. Applications for such permits or leases must be filed with the Regional Director of the National Park Service.

Prelease Exploration Within Special Tar Sand Areas

§ 3141.21 Geophysical exploration.

Geophysical exploration in Special Tar Sand Areas will be governed by 43 CFR part 3150. Information obtained under a permit must be made available to the BLM upon request.

§ 3141.22 Exploration licenses.

(a) Any person(s) responsible and qualified to hold a lease under the provisions of 43 CFR subpart 3102 and this subpart may obtain an exploration license to conduct core drilling and other exploration activities to collect geologic, environmental and other data concerning tar sand resources only on lands, the surface of which are under the jurisdiction of the BLM, within or adjacent to a Special Tar Sand Area. The application for such a license must be submitted to the proper BLM office having jurisdiction over the lands. No drilling for oil or gas will be allowed under an exploration license issued under this subpart. No specific form is required for an application for an exploration license.

(b) The application for an exploration license will be subject to the following requirements:

(1) Each application must contain the name and address of the applicant(s);

(2) Each application must be accompanied by a nonrefundable filing fee based on the coal exploration license application fee found in the fee schedule in § 3000.120 of this chapter;

(3) Each application must contain a description of the lands covered by the application according to section,

township and range in accordance with the official survey;

(4) Each application must include an exploration plan which complies with the requirements of 43 CFR 4392.1(a); and

(5) An application must cover no more than 5,760 acres, which will be as compact as possible. The authorized officer may grant an exploration license covering more than 5,760 acres only if the application contains a justification for an exception to the normal limitation.

(c) The authorized officer may, if the authorized officer determines it necessary to avoid impacts resulting from duplication of exploration activities, require applicants for exploration licenses to provide an opportunity for other parties to participate in exploration under the license on a pro rata cost sharing basis. If joint participation is determined necessary, it will be conducted according to the following:

(1) Immediately upon the notification of a determination that parties will be given an opportunity to participate in the exploration license, the applicant must publish a ''Notice of Invitation,'' approved by the authorized officer, once every week for 2 consecutive weeks in at least one newspaper of general circulation in the area where the lands covered by the exploration license are situated. This notice must contain an invitation to the public to participate in the exploration license on a pro rata cost sharing basis. Copies of the ''Notice of Invitation'' must be filed with the authorized officer at the time of publication by the applicant for posting in the proper BLM office having jurisdiction over the lands covered by the application for at least 30 days prior to the issuance of the exploration license.

(2) Any person seeking to participate in the exploration program described in the Notice of Invitation must notify the authorized officer and the applicant in writing of such intention within 30 days after posting in the proper BLM office having jurisdiction over the lands covered by the Notice of Invitation. The authorized officer may require modification of the original exploration plan to accommodate the legitimate exploration needs of the person(s) seeking to participate and to avoid the duplication of exploration activities in the same area, or that the person(s) should file a separate application for an exploration license.

(3) An application to conduct exploration which could have been conducted under an existing or recent exploration license issued under this paragraph may be rejected.

(d) The authorized officer may accept or reject an exploration license application. An exploration license will become effective on the date specified by the authorized officer as the date when exploration activities may begin. The exploration plan approved by the BLM will be attached and made a part of each exploration license.

(e) An exploration license will be subject to these terms and conditions:

(1) The license will be for a term of not more than 2 years;

(2) The annual rental rate for an exploration license will be as stated in the license;

(3) The licensee must provide a bond in an amount determined by the authorized officer, but not less than $5,000. The authorized officer may accept bonds furnished under 43 CFR subpart 3104, if adequate. The period of liability under the bond will be terminated only after the authorized officer determines that the terms and conditions of the license, the exploration plan and the regulations have been met;

(4) The licensee must provide to the BLM, upon request, all required information obtained under the license. Any information provided will be treated as confidential and proprietary, if appropriate, at the request of the licensee, and will not be made public until the areas involved have been leased or if the BLM determines that public access to the data will not damage the competitive position of the licensee.

(5) Operations conducted under a license will not unreasonably interfere with or endanger any other lawful activity on the same lands, must not damage any improvements on the lands, and will not result in any substantial disturbance to the surface of the lands and their resources;

(6) The authorized officer will include in each license requirements and stipulations to protect the environment and associated natural resources, and to ensure reclamation of the land disturbed by exploration operations;

(7) When unforeseen conditions are encountered that could result in an action prohibited by paragraph (e)(5) of this section, or when warranted by geologic or other physical conditions, the authorized officer may adjust the terms and conditions of the exploration license and may direct adjustment in the exploration plan;

(8) The licensee may submit a request for modification of the exploration plan to the authorized officer. Any modification will be subject to the regulations in this section and the terms and conditions of the license. The authorized officer may approve the modification after any necessary adjustments to the terms and conditions of the license that are accepted in writing by the licensee; and

(9) The license will be subject to termination or suspension as provided in 43 CFR 2920.9–3.

§ 3141.30 Land use plans.

No lease will be issued under this subpart unless the lands have been included in a land use plan which meets the requirements under 43 CFR part 1600 or an approved Minerals Management Plan of the National Park Service. The decision to hold a lease sale and issue leases will be in conformance with the appropriate plan.

Consultation

§ 3141.41 Consultation with the Governor.

The Secretary will consult with the Governor of the State in which any tract proposed for sale is located. The Secretary will give the Governor 30 days to comment before determining whether to conduct a lease sale. The Secretary will seek the recommendations of the Governor of the State in which the lands proposed for lease are located as to whether or not to lease such lands and what alternative actions are available and what special conditions could be added to the proposed lease(s) to mitigate impacts. The Secretary will accept the recommendations of the Governor if the Secretary determines that they provide for a reasonable balance between the national interest and the State's interest. The Secretary will communicate to the Governor in writing and publish in the **Federal Register** the reasons for his/her determination to accept or reject such Governor's recommendations.

§ 3141.42 Consultation with others.

(a) Where the surface is administered by an agency other than the BLM, including lands patented or leased under the provisions of the Recreation and Public Purposes Act, as amended (43 U.S.C. 869 *et seq.*), all leasing under this subpart will be in accordance with the consultation requirements of 43 CFR subpart 3100.

(b) The issuance of combined hydrocarbon leases, oil and gas leases, and tar sand leases within special tar sand areas in units of the National Park System will be allowed only where mineral leasing is permitted by law and where the lands are open to mineral resource disposition in accordance with any applicable Minerals Management Plan. In order to consent to any issuance

of a combined hydrocarbon lease, oil and gas lease, tar sand lease, or subsequent development of hydrocarbon resources within a unit of the National Park System, the Regional Director of the National Park Service will find that there will be no resulting significant adverse impacts to the resources and administration of the unit or other contiguous units of the National Park System in accordance with 43 CFR 3109.20(b).

Leasing Procedures

§ 3141.51 Economic evaluation.

Prior to any lease sale for a combined hydrocarbon lease, the authorized officer will request an economic evaluation of the total hydrocarbon resource on each proposed lease tract exclusive of coal, oil shale, or gilsonite.

§ 3141.52 Term of lease.

(a) Oil and gas leases in special tar sand areas will have a primary term of 10 years and will remain in effect so long thereafter as oil or gas is produced in paying quantities.

(b) Tar Sand leases will have a primary term of 10 years and will remain in effect so long thereafter as tar sand is produced in paying quantities.

§ 3141.53 Royalties and rentals.

(a) The royalty rate on all combined hydrocarbon leases or tar sand leases is 16.67 percent of the value of production removed or sold from a lease. The ONRR will be responsible for collecting and administering royalties.

(b) The lessee may request the Secretary to reduce the royalty rate applicable to a tar sand lease prior to commencement of commercial operations in order to promote development and maximum production of the tar sand resource in accordance with procedures established by the BLM for oil shale leases and may request a reduction in the royalty after commencement of commercial operations in accordance with 43 CFR 3103.41.

(c) The annual rental rate for a combined hydrocarbon lease will be as stated in the lease.

(d) The annual rental rate for a tar sand lease will be as stated in the lease.

(e) Except as explained in paragraphs (a) through (c) of this section, all other provisions of 43 CFR 3103.20 and 3103.30 apply to combined hydrocarbon leasing.

§ 3141.54 Lease size.

Combined hydrocarbon leases or tar sand leases in Special Tar Sand Areas will not exceed 5,760 acres.

§ 3141.55 Dating of lease.

A combined hydrocarbon lease will be effective as of the first day of the month following the date the lease is signed on behalf of the United States, except where a prior written request is made, a lease may be made effective on the first of the month in which the lease is signed.

Sale Procedures

§ 3141.61 Initiation of competitive lease offering.

The BLM may, on its own motion, offer lands through competitive bidding. A request or expression(s) of interest in tract(s) for competitive lease offerings must be submitted in writing to the proper BLM office.

§ 3141.62 Publication of a notice of competitive lease offering.

Combined Hydrocarbon Leases, Tar Sand Leases or Oil and Gas Leases. At least 45 days prior to conducting a competitive auction, lands to be offered for a competitive lease sale, as in a Notice of Competitive Lease Sale, will be made available to the public. The notice will specify the time and place of sale; the manner in which the bids may be submitted; the description of the lands; the terms and conditions of the lease, including the royalty and rental rates; the amount of the minimum bid; and will state that the terms and conditions of the leases are available for inspection and designate the proper BLM office where bid forms may be obtained.

§ 3141.63 Conduct of sales.

(a) *Oil and gas leases.* Lease sales for oil and gas leases will be conducted using the procedures for oil and gas leases in 43 CFR 3120.60.

(b) *Combined hydrocarbon leases and tar sand leases.* (1) Parcels will be offered by competitive auction.

(2) The winning bid will be the highest bid by a responsible and qualified bidder, equal to the minimum bonus bid amount as specified in § 3103.1 of this chapter or for hydrocarbon leases, the minimum bonus bid amount determined under § 3141.51, whichever is larger.

(3) Payments must be made as provided in 43 CFR 3120.62.

§ 3141.64 Qualifications.

Each bidder must submit with the bid a statement over the bidder's signature with respect to compliance with 43 CFR subpart 3102.

§ 3141.65 Rejection of bid.

If the high bid is rejected for failure by the successful bidder to execute the lease forms and pay the balance of the bonus bid, or otherwise to comply with the regulations of this subpart, the minimum bonus payment accompanying the bid will be forfeited.

§ 3141.66 Consideration of next highest bid.

The Department reserves the right to accept the next highest bid if the highest bid is rejected. In no event will an offer be made to the next highest bidder if the difference between that bid and the bid of the rejected successful bidder is greater than the minimum bonus payment forfeited by the rejected successful bidder.

§ 3141.70 Award of lease.

After determining the highest responsible and qualified bidder, the authorized officer will send the lease on a form approved by the Director, and any necessary stipulations, to the successful bidder. The successful bidder must, not later than the 30th calendar day after receipt of the lease, execute the lease, pay the balance of the bid and the first year's rental, and file a bond as required in 43 CFR subpart 3104. Failure to comply with this section will result in rejection of the lease.

Subpart 3142—Paying Quantities/ Diligent Development for Combined Hydrocarbon and Tar Sand Leases

§ 3142.1 Purpose.

This subpart provides definitions and procedures for meeting the production in paying quantities and the diligent development requirements for tar sand in all combined hydrocarbon leases and tar sand leases.

§ 3142.3 Authority.

These regulations are issued under the authority of the Mineral Leasing Act of 1920, as amended and supplemented (30 U.S.C. 181 *et seq.*), the Mineral Leasing Act for Acquired Lands (30 U.S.C. 351–359), the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 *et seq.*) and the Combined Hydrocarbon Leasing Act of 1981 (95 Stat. 1070).

§ 3142.5 Definitions.

As used in this subpart, the term:

Production in paying quantities for combined hydrocarbon leases means:

(1) Production, in compliance with an approved plan of operations and by nonconventional methods, of oil and gas which can be marketed; or

(2) Production of oil or gas by conventional methods as the term is currently used in 43 CFR part 3160.

Production in paying quantities for oil and gas leases means production of oil

or gas by conventional methods that meets the definition of ''production in paying quantities'' in 43 CFR 3160.0–5.

Production in paying quantities for tar sand leases means production of shale oil quantities that provide a positive return after all costs of production have been met, including the amortized costs of the capital investment.

§ 3142.10 Diligent development.

A lessee will have met its diligent development obligation if:

(a) The lessee is conducting activity on the lease in accordance with an approved plan of operations; and

(b) The lessee files with the authorized officer, not later than the end of the eighth lease year, a supplement to the approved plan of operations which must include the estimated recoverable tar sand reserves and a detailed development plan for the next stage of operations;

(c) The lessee has achieved production in paying quantities, as that term is defined in § 3142.5(a), by the end of the primary term; and

(d) The lessee annually produces the minimum amount of tar sand established by the authorized officer under the lease in the minimum production schedule which will be made part of the plan of operations or pays annually advance royalty in lieu of this minimum production.

Minimum Production Levels

§ 3142.21 Minimum production schedule.

(a) Upon receipt of the supplement to the plan of operations described in § 3142.10(b), the authorized officer will examine the information furnished by the lessee and determine if the estimate of the recoverable tar sand reserves is adequate and reasonable. In making this determination, the authorized officer may request, and the lessee must furnish, any information that is the basis of the lessee's estimate of the recoverable tar sand reserves. As part of the authorized officer's determination that the estimate of the recoverable tar sand reserves is adequate and reasonable, the authorized officer may consider, but is not limited to, the following: ore grade, strip ratio, vertical and horizontal continuity, extract process recoverability, and proven or unproven status of extraction technology, terrain, environmental mitigation factors, marketability of products and capital operations costs. The authorized officer will then establish as soon as possible, but prior to the beginning of the eleventh year, based upon the estimate of the recoverable tar sand reserves, a minimum annual tar sand production schedule for the lease or unit operations which will start in the eleventh year of the lease. This minimum production level will escalate in equal annual increments to a maximum of 1 percent of the estimated recoverable tar sand reserves in the twentieth year of the lease and remain at 1 percent each year thereafter.

(b) The minimum annual tar sand production schedule for the lease or unit operations will be set at a level for paying quantities. If the operator or lessee cannot establish production in paying quantities, the lease will terminate at the end of the lease's primary term.

§ 3142.22 Advance royalties in lieu of production.

(a) Failure to meet the minimum annual tar sand production schedule level in any year will result in the assessment of an advance royalty in lieu of production which will be credited to future production royalty assessments applicable to the lease or unit.

(b) If there is no production during the lease year, and the lessee has reason to believe that there will be no production during the remainder of the lease year, the lessee must submit to the authorized officer a request for suspension of production at least 90 days prior to the end of that lease year and a payment sufficient to cover any advance royalty due and owing as a result of the failure to produce. Upon receipt of the request for suspension of production and the accompanying payment, the authorized officer may approve a suspension of production for that lease year and the lease will not expire during that year for lack of production.

(c) If there is production on the lease or unit during the lease year, but such production fails to meet the minimum production schedule required by the plan of operations for that lease or unit, the lessee must pay an advance royalty within 60 days of the end of the lease year in an amount sufficient to cover the difference between such actual production and the production schedule required by the plan of operations for that lease or unit and the authorized officer may direct a suspension of production for those periods during which no production occurred.

§ 3142.30 Expiration.

Failure of the lessee to pay advance royalty within the time prescribed by the authorized officer, or failure of the lessee to comply with any other provisions of this subpart following the end of the primary term of the lease, will result in the automatic expiration of the lease as of the first of the month following notice to the lessee of its failure to comply. The lessee will remain subject to the requirement of applicable laws, regulations and lease terms which have not been met at the expiration of the lease.

PART 3150—ONSHORE OIL AND GAS GEOPHYSICAL EXPLORATION

■ 10. The authority citation for part 3150 continues to read as follows:

Authority: 16 U.S.C. 3150(b) and 668dd; 30 U.S.C. 189 and 359; 42 U.S.C. 6508; 43 U.S.C. 1201, 1732(b), 1733, 1734, 1740.

■ 11. Revise subpart 3151 to read as follows:

Subpart 3151—Exploration Outside of Alaska

Subpart 3151—Exploration Outside of Alaska

§ 3151.10 Notice of intent to conduct oil and gas geophysical exploration operations.

Parties wishing to conduct oil and gas geophysical exploration outside of the State of Alaska must file a Notice of Intent to Conduct Oil and Gas Exploration Operations, referred to herein as a notice of intent. The notice of intent must include the filing fee required by 43 CFR 3000.120 and must be filed with the authorized officer of the proper BLM office on the form approved by the Director. Within 5 business days of the filing date, the authorized officer will process the notice of intent and notify the operator of practices and procedures to be followed. If the notice of intent cannot be processed within 5 business days of the filing date, the authorized officer will promptly notify the operator as to when processing will be completed, giving the reason for the delay. The operator must, within 5 business days of the filing date, or such other time as may be convenient for the operator, participate in a field inspection if requested by the authorized officer. Signing of the notice of intent by the operator will signify agreement to comply with the terms and conditions contained therein and in this part, and with all practices and procedures specified at any time by the authorized officer.

§ 3151.20 Notice of completion of operations.

Upon completion of exploration, the permittee must file with the District

Manager a Notice of Completion of Oil and Gas Exploration Operations. Within 30 days after this filing, the authorized officer will notify the permittee whether rehabilitation of the lands is satisfactory or whether additional rehabilitation is necessary, specifying the nature and extent of actions to be taken by the permittee.

§ 3151.30 Collection and submission of data.

(a) The permittee must submit to the authorized officer all data and information obtained in carrying out the exploration plan.

(b) All information submitted under this section is presumptively confidential business information and is subject to 43 CFR part 2, which sets forth the rules of the Department of the Interior relating to public availability of information contained in Departmental records, as provided at § 3100.40 of this chapter.

PART 3160—ONSHORE OIL AND GAS OPERATIONS

■ 12. The authority citation for part 3160 continues to read as follows:

Authority: 25 U.S.C. 396d and 2107; 30 U.S.C. 189, 306, 359, and 1751; 43 U.S.C. 1732(b), 1733, 1740; and Sec. 107, Pub. L. 114–74, 129 Stat. 599, unless otherwise noted.

■ 13. Revise § 3160.0–5 to read as follows:

§ 3160.0–5 Definitions.

As used in this part, the term:

Authorized representative means any entity or individual authorized by the Secretary to perform duties by cooperative agreement, delegation or contract.

Drainage means the migration of hydrocarbons, inert gases (other than helium), or associated resources caused by production from other wells.

Federal lands means all lands and interests in lands owned by the United States which are subject to the mineral leasing laws, including mineral resources or mineral estates reserved to the United States in the conveyance of a surface or nonmineral estate.

Fresh water means water containing not more than 1,000 ppm of total dissolved solids, provided that such water does not contain objectionable levels of any constituent that is toxic to animal, plant or aquatic life, unless otherwise specified in applicable notices or orders.

Knowingly or willfully means a violation that constitutes the voluntary or conscious performance of an act that is prohibited or the voluntary or conscious failure to perform an act or duty that is required. It does not include performances or failures to perform that are honest mistakes or merely inadvertent. It includes, but does not require, performances or failures to perform that result from a criminal or evil intent or from a specific intent to violate the law. The knowing or willful nature of conduct may be established by plain indifference to or reckless disregard of the requirements of the law, regulations, orders, or terms of the lease. A consistent pattern of performance or failure to perform also may be sufficient to establish the knowing or willful nature of the conduct, where such consistent pattern is neither the result of honest mistakes or mere inadvertency. Conduct that is otherwise regarded as being knowing or willful is rendered neither accidental nor mitigated in character by the belief that the conduct is reasonable or legal.

Lease means any contract, profit-share arrangement, joint venture or other agreement issued or approved by the United States under a mineral leasing law that authorizes exploration for, extraction of, or removal of oil or gas.

Lease site means any lands, including the surface of a severed mineral estate, on which exploration for, or extraction and removal of, oil or gas is authorized under a lease.

Lessee means any person holding record title or owning operating rights in a lease issued or approved by the United States.

Lessor means the party to a lease who holds legal or beneficial title to the mineral estate in the leased lands.

Major violation means noncompliance that causes or threatens immediate, substantial, and adverse impacts on public health and safety, the environment, production accountability, or royalty income.

Maximum ultimate economic recovery means the recovery of oil and gas from leased lands which a prudent operator could be expected to make from that field or reservoir given existing knowledge of reservoir and other pertinent facts and utilizing common industry practices for primary, secondary, or tertiary recovery operations.

Minor violation means noncompliance that does not rise to the level of a *major violation.*

New or resumed production under section 102(b)(3) of the Federal Oil and Gas Royalty Management Act means the date on which a well commences production, or resumes production after having been off production for more than 90 days, and is to be construed as follows:

(1) For an oil well, the date on which liquid hydrocarbons are first sold or shipped from a temporary storage facility, such as a test tank, or the date on which liquid hydrocarbons are first produced into a permanent storage facility, whichever first occurs; and

(2) For a gas well, the date on which gas is first measured through sales metering facilities or the date on which associated liquid hydrocarbons are first sold or shipped from a temporary storage facility, whichever first occurs.

Notice to lessees and operators (NTL) means a written notice issued by the authorized officer. NTLs implement the regulations in this part and operating orders, and serve as instructions on specific item(s) of importance within a State, District, or Area.

Onshore oil and gas order means a formal numbered order issued by the Director that implements and supplements the regulations in this part.

Operating rights owner means a person who owns operating rights in a lease. A record title holder may also be an operating rights owner in a lease if it did not transfer all of its operating rights.

Operator means any person or entity including but not limited to the lessee or operating rights owner, who has stated in writing to the authorized officer that it is responsible under the terms and conditions of the lease for the operations conducted on the leased lands or a portion thereof.

Paying well means a well that is capable of producing oil or gas of sufficient value to exceed direct operating costs and the costs of lease rentals or minimum royalty.

Person means any individual, firm, corporation, association, partnership, consortium or joint venture.

Production in paying quantities means production from a lease of oil and/or gas of sufficient value to exceed direct operating costs and the cost of lease rentals or minimum royalties.

Protective well means a well drilled or modified to prevent or offset drainage of oil and gas resources from its Federal or Indian lease.

Record title holder means the person(s) to whom the BLM or an Indian lessor issued a lease or approved the assignment of record title in a lease.

Shut-in well means a nonoperational well that can physically and mechanically operate by opening valves or activating existing equipment.

Superintendent means the superintendent of an Indian Agency, or other officer authorized to act in matters of record and law with respect to oil and gas leases on restricted Indian lands.

Surface use plan of operations means a plan for surface use, disturbance, and reclamation.

Temporarily abandoned well means a nonoperational well that is not physically or mechanically capable of production or injection without additional equipment or without servicing the well, but that may have future beneficial use.

Waste of oil or gas means any act or failure to act by the operator that is not sanctioned by the authorized officer as necessary for proper development and production and which results in:

(1) A reduction in the quantity or quality of oil and gas ultimately producible from a reservoir under prudent and proper operations; or

(2) Avoidable surface loss of oil or gas.

■ 14. Revise § 3162.3–4 to read as follows:

§ 3162.3–4 Well abandonment.

(a) The operator must promptly plug and abandon, in accordance with a plan first approved in writing or prescribed by the authorized officer, each newly completed or recompleted well in which oil or gas is not encountered in paying quantities or which, after being completed as a producing well, is demonstrated to the satisfaction of the authorized officer to be no longer capable of producing oil or gas in paying quantities, unless the authorized officer approves the use of the well as a service well for injection to recover additional oil or gas or for subsurface disposal of produced water. In the case of a newly drilled or recompleted well, the approval to abandon may be written or oral with written confirmation.

(b) Completion of a well as plugged and abandoned may also include conditioning the well as a water supply source for lease operations or for use by the surface owner or appropriate Government Agency, when authorized by the authorized officer. All costs over and above the normal plugging and abandonment expense will be paid by the party accepting the water well.

(c) Upon the removal of drilling or production equipment from the well site which is to be permanently abandoned, the surface of the lands disturbed in connection with the conduct of operations must be reclaimed in accordance with a plan first approved or prescribed by the authorized officer.

(d) Operators of temporarily abandoned wells must:

(1) Receive prior approval from the authorized officer for any well temporarily abandoned for more than 30 days. The authorized officer may authorize a delay in the permanent abandonment of a well for a period of up to 1 year. The operator must provide:

(i) Adequate and detailed justification for the temporary abandonment;

(ii) Verification of the mechanical integrity of the well; and

(iii) Isolate the completed interval(s) prior to temporary abandonment.

(2) Receive prior approval from the authorized officer for any additional delays to permanently abandon a well beyond 1 year. The authorized officer may authorize additional delays, none of which may exceed an additional 1-year period. Each request for additional delay must provide adequate and detailed justification for continued temporary abandonment.

(3) Within 4 years of temporary abandonment of a well, complete one of the following actions:

(i) Permanently abandon the well;

(ii) Resume production in paying quantities or commence using the well for injection or disposal;

(iii) Provide the authorized officer with a detailed plan and timeline for future beneficial use of the well. If the authorized officer determines that there is a legitimate future beneficial use for the well, the officer may allow the operator to delay permanent abandonment by 1 additional year. The authorized officer may grant additional delays in 1-year increments, provided that the operator confirms the future beneficial use of the well and is making verifiable progress on returning the well to a beneficial use.

(e) Operators of shut-in wells must:

(1) Notify the authorized officer of the well's shut-in status, if the well will be shut-in for 90 or more consecutive days, and provide the date the well was shut-in within 90 days of well shut-in;

(2) Within 3 years of well shut-in, provide the authorized officer with verification of the mechanical integrity of the well and confirmation that the well remains capable of producing in paying quantities; and

(3) Within 4 years of well shut-in, complete one of the following actions:

(i) Permanently abandon the well;

(ii) Resume production in paying quantities; or

(iii) Provide the authorized officer with a detailed plan and timeline for future beneficial use of the well. If the authorized officer determines that there is a legitimate future beneficial use for the well, the officer may allow the operator to delay permanent abandonment by 1 year. The authorized officer may grant additional delays in 1-year increments, provided that the operator confirms the future beneficial use of the well and is making verifiable progress on returning the well to a beneficial use.

(f) All wells that are temporarily abandoned or shut-in must have mechanical integrity verified as required in paragraphs (d)(1) and (e)(2) of this section and must ensure that mechanical integrity is verified every 3 years thereafter. The operator must submit the results of each verification of mechanical integrity to the authorized officer within 30 days of the mechanical integrity test.

■ 15. Revise § 3164.1 to read as follows:

§ 3164.1 Onshore Oil and Gas Orders.

(a) The Director is authorized to issue Onshore Oil and Gas Orders when necessary to implement and supplement the regulations in the part. All orders will be published in final form in the **Federal Register**.

(b) These Orders are binding on operating rights owners and operators, as appropriate, of Federal and restricted Indian oil and gas leases which have been, or may hereafter be, issued. There are no current Onshore Oil and Gas Orders currently in effect.

Note: Numbers to be assigned sequentially by the Washington Office as proposed Orders are prepared for publication.

■ 16. Revise § 3165.1 to read as follows:

§ 3165.1 Relief from operating and/or producing requirements.

(a) Applications for relief from either the operating or the producing requirements of a lease, or both, must be filed with the authorized officer, and must include a full statement of the circumstances that render such relief necessary.

(b) The authorized officer will act on applications submitted for a suspension of operations or production, or both, filed pursuant to 43 CFR 3103.42. The application for suspension must be filed with the authorized officer prior to the expiration date of the lease; must be executed by all operating rights owners or by the operator on behalf of the operating rights owners; and must include a full statement of the circumstances that makes such relief necessary.

(c) The authorized officer will not approve an application for a suspension of a lease where the applicant only cites, as the basis for the suspension, a pending application for permit to drill filed less than 90 calendar days prior to the expiration date of the lease.

(d) If approved, a suspension of operations and production will be effective on the first of the month in which the completed application was

filed or the date specified by the authorized officer in the approval. Approved suspensions will not exceed 1 year. If the circumstances warrant all operating rights owners, or the operator on behalf of the operating rights owners, may submit a request to extend the suspension prior to the end of the suspension.

(e) BLM-directed suspensions may exceed 1 year.

(f) Suspensions will lift when the basis provided for the suspension no longer exists, when lifting the suspension is in the public interest, or as otherwise stated by the authorized officer in the approval letter.

PART 3170—ONSHORE OIL AND GAS PRODUCTION

■ 17. The authority citation for part 3170 continues to read as follows:

Authority: 25 U.S.C. 396d and 2107; 30 U.S.C. 189, 306, 359, and 1751; and 43 U.S.C. 1732(b), 1733, and 1740.

■ 18. Revise § 3171.6 to read as follows:

§ 3171.6 Components of a complete APD package.

Operators are encouraged to consider and incorporate Best Management Practices into their APDs because Best Management Practices can result in reduced processing times and reduced number of Conditions of Approval. An APD package must include the following information that will be reviewed by technical specialists of the appropriate agencies to determine the technical adequacy of the package:

(a) A completed Form 3160–3; and

(b) A well plat. Operators must include in the APD package a well plat and geospatial database prepared by a registered surveyor depicting the proposed location of the well and identifying the points of control and datum used to establish the section lines or metes and bounds. The purpose of this plat is to ensure that operations are within the boundaries of the lease or agreement and that the depiction of these operations is accurately recorded both as to location (latitude and longitude) and in relation to the surrounding lease or agreement boundaries (public land survey corner and boundary ties). The registered surveyor should coordinate with the cadastral survey division of the appropriate BLM state office, particularly where the lands have not been surveyed under the Public Land Survey System.

(1) The plat and geospatial database must describe the location of operations in:

(i) Geographical coordinates generated by an electronic navigation system, and document the datum referenced to generate these coordinates; and

(ii) In feet and direction from the nearest two adjacent section lines, or, if not within the Rectangular Survey System, the nearest two adjacent property lines, generated from the BLM's current Geographic Coordinate Data Base.

(2) The surveyor who prepared the plat must sign it, certifying that the location has been staked on the ground as shown on the plat.

(3) Surveying and staking are necessary casual uses, typically involving negligible surface disturbance. The operator is responsible for making access arrangements with the appropriate Surface Managing Agency (other than the BLM and the FS) or private surface owner. On tribal or allotted lands, the operator must contact the appropriate office of the BIA to make access arrangements with the Indian surface owners. In the event that not all of the Indian owners consent or may be located, but a majority of those who can be located consent, or the owners of interests are so numerous that it would be impracticable to obtain their consent and the BIA finds that the issuance of the APD will cause no substantive injury to the land or any owner thereof, the BIA may approve access. Typical off-road vehicular use, when conducted in conjunction with these activities, is a necessary action for obtaining a permit and may be done without advance approval from the Surface Managing Agency, except for:

(i) Lands administered by the Department of Defense;

(ii) Other lands used for military purposes;

(iii) Indian lands; or

(iv) Where more than negligible surface disturbance is likely to occur or is otherwise prohibited.

(4) No entry on split estate lands for surveying and staking should occur without the operator first making a good faith effort to notify the surface owner. Also, operators are encouraged to notify the BLM or the FS, as appropriate, before entering private lands to stake for Federal mineral estate locations.

■ 19. Revise § 3171.14 to read as follows:

§ 3171.14 Valid Period of Approved APD.

(a) For APDs approved after June 22, 2024, an APD approval is valid for 3 years from the date that it is approved, or until lease expiration, whichever occurs first.

(b) Notwithstanding paragraph (a) of this section, if an APD approval expires by reason other than lease expiration, the APD approval shall remain valid if the operator or lessee:

(1) Has drilled the well to the approximate total measured depth in the approved APD, including wells drilled to the approximate total measured depth and not yet completed;

(2) Is drilling the well with a rig capable of drilling the well to the proposed total measured depth in the approved APD; or

(3) Has set the surface casing for the well and has submitted a plan, approved by the BLM prior to expiration of the APD approval, for continuously drilling the well to reach the proposed total measured depth in the approved APD. The plan must include the timeframe for continuously drilling and completing the well and any extenuating circumstances that may delay the continuous drilling and completion of the well.

(c) If, upon expiration of the approved APD, the operator created surface disturbance or began drilling the well under the approved APD, the operator or lessee must either comply with all applicable plugging, abandonment, and reclamation requirements or submit a new APD covering the existing disturbance.

(d) The operator is responsible for reclaiming any surface disturbance that resulted from its actions, even if a well was not drilled. Earthwork for reclamation must be completed within 6 months of APD expiration (weather permitting).

(e) The valid period for an approved APD on a lease suspended under subpart 3103 will be adjusted to account for the suspension. Beginning on the date the suspension is lifted, the valid period of the approved APD will be extended by the time that was remaining on the term of the approved APD on the effective date of the suspension.

PART 3180—ONSHORE OIL AND GAS UNIT AGREEMENTS: UNPROVEN AREAS

■ 20. The authority citation for part 3180 continues to read as follows:

Authority: 30 U.S.C. 189.

§ 3181.1 [Amended]

■ 21. Amend § 3181.1 by removing the phrase ''§ 3186.1 of this title'' wherever it appears and adding in its place the phrase ''appendix A to this part''.

■ 22. Revise § 3181.5 to read as follows:

§ 3181.5 Compensatory royalty payment for unleased Federal land.

The unit agreement submitted by the unit proponent for approval by the authorized officer will provide for payment to the Federal Government of the current royalty percentage for leases offered on onshore oil and gas lease sales on production that would be attributable to unleased Federal lands in a PA of the unit if said lands were leased and committed to the unit agreement. The value of production subject to compensatory royalty payment will be determined pursuant to 30 CFR part 206, provided that no additional royalty will be due on any production subject to compensatory royalty under this provision.

§ 3183.4 [Amended]

■ 23. Amend § 3183.4 in paragraph (a) by removing the phrase ''§ 3186.1 of this title'' and adding in its place the phrase ''appendix A to this part''.

§ 3186.1 [Redesignated as Appendix A to Part 3180]

■ 24. Redesignate § 3186.1 as appendix A to part 3180 and revise it to read as follows:

Appendix A to Part 3180—Model onshore unit agreement for unproven areas.

Introductory Section

Unit Agreement for the Development and Operation of the

Unit area _____
County of _____
State of _____
No. _____

This agreement, entered into as of the ____ day of _____ , 19____ by and between the parties subscribing, ratifying, or consenting hereto, and herein referred to as the ''parties hereto,''

Witnesseth:

Whereas, the parties hereto are the owners of working, royalty, or other oil and gas interests in the unit area subject to this agreement; and

Whereas, the Mineral Leasing Act of February 25, 1920, 41 Stat. 437, as amended, 30 U.S.C. 181 *et seq.,* authorizes Federal lessees and their representatives to unite with each other, or jointly or separately with others, in collectively adopting and operating under a unit plan of development or operations of any oil and gas pool, field, or like area, or any part thereof for the purpose of more properly conserving the natural resources thereof whenever determined and certified by the Secretary of the Interior to be necessary or advisable in the public interest; and

Whereas, the parties hereto hold sufficient interests in the ____ Unit Area covering the land hereinafter described to give reasonably effective control of operations therein; and

Whereas, it is the purpose of the parties hereto to conserve natural resources, prevent waste, and secure other benefits obtainable through development and operation of the area subject to this agreement under the terms, conditions, and limitations herein set forth;

Now, therefore, in consideration of the premises and the promises herein contained, the parties hereto commit to this agreement their respective interests in the below-defined unit area, and agree severally among themselves as follows:

1. ENABLING ACT AND REGULATIONS. The Mineral Leasing Act of February 25, 1920, as amended, supra, and all valid pertinent regulations including operating and unit plan regulations, heretofore issued thereunder or valid, pertinent, and reasonable regulations hereafter issued thereunder are accepted and made a part of this agreement as to Federal lands, provided such regulations are not inconsistent with the terms of this agreement; and as to non-Federal lands, the oil and gas operating regulations in effect as of the effective date hereof governing drilling and producing operations, not inconsistent with the terms hereof or the laws of the State in which the non-Federal land is located, are hereby accepted and made a part of this agreement.

2. UNIT AREA. The area specified on the map attached hereto marked Exhibit A is hereby designated and recognized as constituting the unit area, containing ____ acres, more or less.

Exhibit A shows, in addition to the boundary of the unit area, the boundaries and identity of tracts and leases in said area to the extent known to the Unit Operator. Exhibit B attached hereto is a schedule showing to the extent known to the Unit Operator, the acreage, percentage, and kind of ownership of oil and gas interests in all lands in the unit area. However, nothing herein or in Exhibits A or B shall be construed as a representation by any party hereto as to the ownership of any interest other than such interest or interests as are shown in the Exhibits as owned by such party. Exhibits A and B shall be revised by the Unit Operator whenever changes in the unit area or in the ownership interests in the individual tracts render such revision necessary, or when requested by the Authorized Officer, hereinafter referred to as AO and not less than four copies of the revised Exhibits shall be filed with the proper BLM office.

The above-described unit area shall when practicable be expanded to include therein any additional lands or shall be contracted to exclude lands whenever such expansion or contraction is deemed to be necessary or advisable to conform with the purposes of this agreement. Such expansion or contraction shall be effected in the following manner:

(a) Unit Operator, on its own motion (after preliminary concurrence by the AO), or on demand of the AO, shall prepare a notice of proposed expansion or contraction describing the contemplated changes in the boundaries of the unit area, the reasons therefor, any plans for additional drilling, and the proposed effective date of the expansion or contraction, preferably the first day of a month subsequent to the date of notice.

(b) Said notice shall be delivered to the proper BLM office, and copies thereof mailed to the last known address of each working interest owner, lessee and lessor whose interests are affected, advising that 30 days will be allowed for submission to the Unit Operator of any objections.

(c) Upon expiration of the 30-day period provided in the preceding item (b) hereof, Unit Operator shall file with the AO evidence of mailing of the notice of expansion or contraction and a copy of any objections thereto which have been filed with Unit Operator, together with an application in triplicate, for approval of such expansion or contraction and with appropriate joinders.

(d) After due consideration of all pertinent information, the expansion or contraction shall, upon approval by the AO, become effective as of the date prescribed in the notice thereof or such other appropriate date.

(e) All legal subdivisions of lands (*i.e.,* 40 acres by Government survey or its nearest lot or tract equivalent; in instances of irregular surveys, unusually large lots or tracts shall be considered in multiples of 40 acres or the nearest aliquot equivalent thereof), no parts of which are in or entitled to be in a participating area on or before the fifth anniversary of the effective date of the first initial participating area established under this unit agreement, shall be eliminated automatically from this agreement, effective as of said fifth anniversary, and such lands shall no longer be a part of the unit area and

shall no longer be subject to this agreement, unless diligent drilling operations are in progress on unitized lands not entitled to participation on said fifth anniversary, in which event all such lands shall remain subject hereto for so long as such drilling operations are continued diligently, with not more than 90-days time elapsing between the completion of one such well and the commencement of the next such well. All legal subdivisions of lands not entitled to be in a participating area within 10 years after the effective date of the first initial participating area approved under this agreement shall be automatically eliminated from this agreement as of said tenth anniversary. The Unit Operator shall, within 90 days after the effective date of any elimination hereunder, describe the area so eliminated to the satisfaction of the AO and promptly notify all parties in interest. All lands reasonably proved productive of unitized substances in paying quantities by diligent drilling operations after the aforesaid 5-year period shall become participating in the same manner as during said first 5-year period. However, when such diligent drilling operations cease, all nonparticipating lands not then entitled to be in a participating area shall be automatically eliminated effective as the 91st day thereafter.

Any expansion of the unit area pursuant to this section which embraces lands theretofore eliminated pursuant to this subsection 2(e) shall not be considered automatic commitment or recommitment of such lands. If conditions warrant extension of the 10-year period specified in this subsection, a single extension of not to exceed 2 years may be accomplished by consent of the owners of 90 percent of the working interest in the current nonparticipating unitized lands and the owners of 60 percent of the basic royalty interests (exclusive of the basic royalty interests of the United States) in nonparticipating unitized lands with approval of the AO, provided such extension application is submitted not later than 60 days prior to the expiration of said 10-year period.

3. UNITIZED LAND AND UNITIZED SUBSTANCES. All land now or hereafter committed to this agreement shall constitute land referred to herein as ''unitized land'' or ''land subject to this agreement.'' All oil and gas in any and all formations of the unitized land are unitized under the terms of this agreement and herein are called ''unitized substances.''

4. UNIT OPERATOR. _____ is hereby designated as Unit Operator and by signature hereto as Unit Operator agrees and consents to accept the duties and obligations of Unit Operator for the discovery, development, and production of unitized substances as herein provided. Whenever reference is made herein to the Unit Operator, such reference means the Unit Operator acting in that capacity and not as an owner of interest in unitized substances, and the term ''working interest owner'' when used herein shall include or refer to Unit Operator as the owner of a working interest only when such an interest is owned by it.

5. RESIGNATION OR REMOVAL OF UNIT OPERATOR. Unit Operator shall have the right to resign at any time prior to the establishment of a participating area or areas hereunder, but such resignation shall not become effective so as to release Unit Operator from the duties and obligations of Unit Operator and terminate Unit Operator's rights as such for a period of 6 months after notice of intention to resign has been served by Unit Operator on all working interest owners and the AO and until all wells then drilled hereunder are placed in a satisfactory condition for suspension or abandonment, whichever is required by the AO, unless a new Unit Operator shall have been selected and approved and shall have taken over and assumed the duties and obligations of Unit Operator prior to the expiration of said period.

Unit Operator shall have the right to resign in like manner and subject to like limitations as above provided at any time after a participating area established hereunder is in existence, but in all instances of resignation or removal, until a successor Unit Operator is selected and approved as hereinafter provided, the working interest owners shall be jointly responsible for performance of the duties of Unit Operator, and shall not later than 30 days before such resignation or removal becomes effective appoint a common agent to represent them in any action to be taken hereunder.

The resignation of Unit Operator shall not release Unit Operator from any liability for any default by it hereunder occurring prior to the effective date of its resignation.

The Unit Operator may, upon default or failure in the performance of its duties or obligations hereunder, be subject to removal by the same percentage vote of the owners of working interests as herein provided for the selection of a new Unit Operator. Such removal shall be effective upon notice thereof to the AO.

The resignation or removal of Unit Operator under this agreement shall not terminate its right, title, or interest as the owner of working interest or other interest in unitized substances, but upon the resignation or removal of Unit Operator becoming effective, such Unit Operator shall deliver possession of all wells, equipment, materials, and appurtenances used in conducting the unit operations to the new duly qualified successor Unit Operator or to the common agent, if no such new Unit Operator is selected to be used for the purpose of conducting unit operations hereunder. Nothing herein shall be construed as authorizing removal of any material, equipment, or appurtenances needed for the preservation of any wells.

6. SUCCESSOR UNIT OPERATOR. Whenever the Unit Operator shall tender his or its resignation as Unit Operator or shall be removed as hereinabove provided, or a change of Unit Operator is negotiated by the working interest owners, the owners of the working interests according to their respective acreage interests in all unitized land shall, pursuant to the Approval of the Parties requirements of the unit operating agreement, select a successor Unit Operator. Such selection shall not become effective until:

(a) a Unit Operator so selected shall accept in writing the duties and responsibilities of Unit Operator, and

(b) the selection shall have been approved by the AO.

If no successor Unit Operator is selected and qualified as herein provided, the AO at his election may declare this unit agreement terminated.

7. ACCOUNTING PROVISIONS AND UNIT OPERATING AGREEMENT. If the Unit Operator is not the sole owner of working interests, costs and expenses incurred by Unit Operator in conducting unit operations hereunder shall be paid and apportioned among and borne by the owners of working interests, all in accordance with the agreement or agreements entered into by and between the Unit Operator and the owners of working interests, whether one or more, separately or collectively. Any agreement or agreements entered into between the working interest owners and the Unit Operator as provided in this section, whether one or more, are herein referred to as the ''unit operating agreement.'' Such unit operating agreement shall also provide the manner in which the working interest owners shall be entitled to receive their respective proportionate and allocated share of the benefits accruing hereto in conformity with their underlying operating agreements, leases, or other independent contracts, and such other rights and obligations as between Unit Operator and the working interest owners as may be agreed upon by Unit Operator and the working interest owners; however, no such unit operating agreement shall be deemed either to modify any of the terms and conditions of this unit agreement or to relieve the Unit Operator of any right or obligation established under this unit agreement, and in case of any inconsistency or conflict between this agreement and the unit operating agreement, this agreement shall govern. Two copies of any unit operating agreement executed pursuant to this section shall be filed in the proper BLM office prior to approval of this unit agreement.

8. RIGHTS AND OBLIGATIONS OF UNIT OPERATOR. Except as otherwise specifically provided herein, the exclusive right, privilege, and duty of exercising any and all rights of the parties hereto which are necessary or convenient for prospecting for, producing, storing, allocating, and distributing the unitized substances are hereby delegated to and shall be exercised by the Unit Operator as herein provided. Acceptable evidence of title to said rights shall be deposited with Unit Operator and, together with this agreement, shall constitute and define the rights, privileges, and obligations of Unit Operator. Nothing herein, however, shall be construed to transfer title to any land or to any lease or operating agreement, it being understood that under this agreement the Unit Operator, in its capacity as Unit Operator, shall exercise the rights of possession and use vested in the parties hereto only for the purposes herein specified.

9. DRILLING TO DISCOVERY. Within 6 months after the effective date hereof, the Unit Operator shall commence to drill an

adequate test well at a location approved by the AO, unless on such effective date a well is being drilled in conformity with the terms hereof, and thereafter continue such drilling diligently until the ____ formation has been tested or until at a lesser depth unitized substances shall be discovered which can be produced in paying quantities (to wit: quantities sufficient to repay the costs of drilling, completing, and producing operations, with a reasonable profit) or the Unit Operator shall at any time establish to the satisfaction of the AO that further drilling of said well would be unwarranted or impracticable, provided, however, that Unit Operator shall not in any event be required to drill said well to a depth in excess of ____ feet. Until the discovery of unitized substances capable of being produced in paying quantities, the Unit Operator shall continue drilling one well at a time, allowing not more than 6 months between the completion of one well and the commencement of drilling operations for the next well, until a well capable of producing unitized substances in paying quantities is completed to the satisfaction of the AO or until it is reasonably proved that the unitized land is incapable of producing unitized substances in paying quantities in the formations drilled hereunder. Nothing in this section shall be deemed to limit the right of the Unit Operator to resign as provided in Section 5, hereof, or as requiring Unit Operator to commence or continue any drilling during the period pending such resignation becoming effective in order to comply with the requirements of this section.

The AO may modify any of the drilling requirements of this section by granting reasonable extensions of time when, in his opinion, such action is warranted.

[2] 9a. MULTIPLE WELL REQUIREMENTS. Notwithstanding anything in this unit agreement to the contrary, except Section 25, UNAVOIDABLE DELAY, ____ wells shall be drilled with not more than 6-months time elapsing between the completion of the first well and commencement of drilling operations for the second well and with not more than 6-months time elapsing between completion of the second well and the commencement of drilling operations for the third well, . . . regardless of whether a discovery has been made in any well drilled under this provision. Both the initial well and the second well must be drilled in compliance with the above specified formation or depth requirements in order to meet the dictates of this section; and the second well must be located a minimum of ____ miles from the initial well in order to be accepted by the AO as the second unit test well, within the meaning of this section. The third test well shall be diligently drilled, at a location approved by the AO, to test the ____ formation or to a depth of ____ feet, whichever is the lesser, and must be located a minimum of ____ miles from both the initial and the second test wells. Nevertheless, in the event of the discovery of unitized substances in paying quantities by any well, this unit agreement shall not terminate for failure to complete the ____ well program, but the unit area shall be contracted automatically, effective the first day of the month following the default, to eliminate by subdivisions (as defined in Section 2(e) hereof) all lands not then entitled to be in a participating area.

Until the establishment of a participating area, the failure to commence a well subsequent to the drilling of the initial obligation well, or in the case of multiple well requirements, if specified, subsequent to the drilling of those multiple wells, as provided for in this (these) section(s), within the time allowed including any extension of time granted by the AO, shall cause this agreement to terminate automatically. Upon failure to continue drilling diligently any well other than the obligation well(s) commenced hereunder, the AO may, after 15-days' notice to the Unit Operator, declare this unit agreement terminated. Failure to commence drilling the initial obligation well, or the first of multiple obligation wells, on time and to drill it diligently shall result in the unit agreement approval being declared invalid *ab initio* by the AO. In the case of multiple well requirements, failure to commence drilling the required multiple wells beyond the first well, and to drill them diligently, may result in the unit agreement approval being declared invalid *ab initio* by the AO;

10. PLAN OF FURTHER DEVELOPMENT AND OPERATION. Within 6 months after completion of a well capable of producing unitized substances in paying quantities, the Unit Operator shall submit for the approval of the AO an acceptable plan of development and operation for the unitized land which, when approved by the authorized officer, shall constitute the further drilling and development obligations of the Unit Operator under this agreement for the period specified therein. Thereafter, from time to time before the expiration of any existing plan, the Unit Operator shall submit for the approval of the AO a plan for an additional specified period for the development and operation of the unitized land. Subsequent plans should normally be filed on a calendar year basis not later than March 1 each year. Any proposed modification or addition to the existing plan should be filed as a supplement to the plan.

Any plan submitted pursuant to this section shall provide for the timely exploration of the unitized area, and for the diligent drilling necessary for determination of the area or areas capable of producing unitized substances in paying quantities in each and every productive formation. This plan shall be as complete and adequate as the AO may determine to be necessary for timely development and proper conservation of the oil and gas resources in the unitized area and shall:

(a) Specify the number and locations of any wells to be drilled and the proposed order and time for such drilling; and

(b) Provide a summary of operations and production for the previous year.

Plans shall be modified or supplemented when necessary to meet changed conditions or to protect the interests of all parties to this agreement. Reasonable diligence shall be exercised in complying with the obligations of the approved plan of development and operation. The AO is authorized to grant a reasonable extension of the 6-month period herein prescribed for submission of an initial plan of development and operation where such action is justified because of unusual conditions or circumstances.

After completion of a well capable of producing unitized substances in paying quantities, no further wells, except such as may be necessary to afford protection against operations not under this agreement and such as may be specifically approved by the AO, shall be drilled except in accordance with an approved plan of development and operation.

11. PARTICIPATION AFTER DISCOVERY. Upon completion of a well capable of producing unitized substances in paying quantities, or as soon thereafter as required by the AO, the Unit Operator shall submit for approval by the AO, a schedule, based on subdivisions of the public-land survey or aliquot parts thereof, of all land then regarded as reasonably proved to be productive of unitized substances in paying quantities. These lands shall constitute a participating area on approval of the AO, effective as of the date of completion of such well or the effective date of this unit agreement, whichever is later. The acreages of both Federal and non-Federal lands shall be based upon appropriate computations from the courses and distances shown on the last approved public-land survey as of the effective date of each initial participating area. The schedule shall also set forth the percentage of unitized substances to be allocated, as provided in Section 12, to each committed tract in the participating area so established, and shall govern the allocation of production commencing with the effective date of the participating area. A different participating area shall be established for each separate pool or deposit of unitized substances or for any group thereof which is produced as a single pool or zone, and any two or more participating areas so established may be combined into one, on approval of the AO. When production from two or more participating areas is subsequently found to be from a common pool or deposit, the participating areas shall be combined into one, effective as of such appropriate date as may be approved or prescribed by the AO. The participating area or areas so established shall be revised from time to time, subject to the approval of the AO, to include additional lands then regarded as reasonably proved to be productive of unitized substances in paying quantities or which are necessary for unit operations, or to exclude lands then regarded as reasonably proved not to be productive of unitized substances in paying quantities, and the schedule of allocation percentages shall be revised accordingly. The effective date of any revision shall be the first of the month in which the knowledge or information is obtained on which such revision is predicated; provided, however, that a more appropriate effective date may be used if justified by Unit Operator and approved by the AO. No land shall be excluded from a participating area on account of depletion of its unitized substances, except that any participating area established under the provisions of this unit agreement shall terminate automatically whenever all

completions in the formation on which the participating area is based are abandoned.

It is the intent of this section that a participating area shall represent the area known or reasonably proved to be productive of unitized substances in paying quantities or which are necessary for unit operations; but, regardless of any revision of the participating area, nothing herein contained shall be construed as requiring any retroactive adjustment for production obtained prior to the effective date of the revision of the participating area.

In the absence of agreement at any time between the Unit Operator and the AO as to the proper definition or redefinition of a participating area, or until a participating area has, or areas have, been established, the portion of all payments affected thereby shall, except royalty due the United States, be impounded in a manner mutually acceptable to the owners of committed working interests. Royalties due the United States shall be determined by the AO and the amount thereof shall be deposited, as directed by the AO, until a participating area is finally approved and then adjusted in accordance with a determination of the sum due as Federal royalty on the basis of such approved participating area.

Whenever it is determined, subject to the approval of the AO, that a well drilled under this agreement is not capable of production of unitized substances in paying quantities and inclusion in a participating area of the land on which it is situated is unwarranted, production from such well shall, for the purposes of settlement among all parties other than working interest owners, be allocated to the land on which the well is located, unless such land is already within the participating area established for the pool or deposit from which such production is obtained. Settlement for working interest benefits from such a nonpaying unit well shall be made as provided in the unit operating agreement.

12. ALLOCATION OF PRODUCTION. All unitized substances produced from a participating area established under this agreement, except any part thereof used in conformity with good operating practices within the unitized area for drilling, operating, and other production or development purposes, or for repressuring or recycling in accordance with a plan of development and operations that has been approved by the AO, or unavoidably lost, shall be deemed to be produced equally on an acreage basis from the several tracts of unitized land and unleased Federal land, if any, included in the participating area established for such production. Each such tract shall have allocated to it such percentage of said production as the number of acres of such tract included in said participating area bears to the total acres of unitized land and unleased Federal land, if any, included in said participating area. There shall be allocated to the working interest owner(s) of each tract of unitized land in said participating area, in addition, such percentage of the production attributable to the unleased Federal land within the participating area as the number of acres of such unitized tract included in said participating area bears to the total acres of unitized land in said participating area, for the payment of the compensatory royalty specified in section 17 of this agreement. Allocation of production hereunder for purposes other than for settlement of the royalty, overriding royalty, or payment out of production obligations of the respective working interest owners, including compensatory royalty obligations under section 17, shall be prescribed as set forth in the unit operating agreement or as otherwise mutually agreed by the affected parties. It is hereby agreed that production of unitized substances from a participating area shall be allocated as provided herein, regardless of whether any wells are drilled on any particular part or tract of the participating area. If any gas produced from one participating area is used for repressuring or recycling purposes in another participating area, the first gas withdrawn from the latter participating area for sale during the life of this agreement shall be considered to be the gas so transferred, until an amount equal to that transferred shall be so produced for sale and such gas shall be allocated to the participating area from which initially produced as such area was defined at the time that such transferred gas was finally produced and sold.

13. DEVELOPMENT OR OPERATION OF NONPARTICIPATING LAND OR FORMATIONS. Any operator may with the approval of the AO, at such party's sole risk, costs, and expense, drill a well on the unitized land to test any formation provided the well is outside any participating area established for that formation, unless within 90 days of receipt of notice from said party of his intention to drill the well, the Unit Operator elects and commences to drill the well in a like manner as other wells are drilled by the Unit Operator under this agreement.

If any well drilled under this section by a non-unit operator results in production of unitized substances in paying quantities such that the land upon which it is situated may properly be included in a participating area, such participating area shall be established or enlarged as provided in this agreement and the well shall thereafter be operated by the Unit Operator in accordance with the terms of this agreement and the unit operating agreement.

If any well drilled under this section by a non-unit operator that obtains production in quantities insufficient to justify the inclusion of the land upon which such well is situated in a participating area, such well may be operated and produced by the party drilling the same, subject to the conservation requirements of this agreement. The royalties in amount or value of production from any such well shall be paid as specified in the underlying lease and agreements affected.

14. ROYALTY SETTLEMENT. The United States and any State and any royalty owner who is entitled to take in kind a share of the substances now unitized hereunder shall be hereafter be entitled to the right to take in kind its share of the unitized substances, and Unit Operator, or the non-unit operator in the case of the operation of a well by a non-unit operator as herein provided for in special cases, shall make deliveries of such royalty share taken in kind in conformity with the applicable contracts, laws, and regulations. Settlement for royalty interest not taken in kind shall be made by an operator responsible therefor under existing contracts, laws and regulations, or by the Unit Operator on or before the last day of each month for unitized substances produced during the preceding calendar month; provided, however, that nothing in this section shall operate to relieve the responsible parties of any land from their respective lease obligations for the payment of any royalties due under their leases.

If gas obtained from lands not subject to this agreement is introduced into any participating area hereunder, for use in repressuring, stimulation of production, or increasing ultimate recovery, in conformity with a plan of development and operation approved by the AO, a like amount of gas, after settlement as herein provided for any gas transferred from any other participating area and with appropriate deduction for loss from any cause, may be withdrawn from the formation into which the gas is introduced, royalty free as to dry gas, but not as to any products which may be extracted therefrom; provided that such withdrawal shall be at such time as may be provided in the approved plan of development and operation or as may otherwise be consented to by the AO as conforming to good petroleum engineering practice; and provided further, that such right of withdrawal shall terminate on the termination of this unit agreement.

Royalty due the United States shall be computed as provided in 30 CFR Group 200 and paid in value or delivered in kind as to all unitized substances on the basis of the amounts thereof allocated to unitized Federal land as provided in Section 12 at the rates specified in the respective Federal leases, or at such other rate or rates as may be authorized by law or regulation and approved by the AO; provided, that for leases on which the royalty rate depends on the daily average production per well, said average production shall be determined in accordance with the operating regulations as though each participating area were a single consolidated lease.

15. RENTAL SETTLEMENT. Rental or minimum royalties due on leases committed hereto shall be paid by the appropriate parties under existing contracts, laws, and regulations, provided that nothing herein contained shall operate to relieve the responsible parties of the land from their respective obligations for the payment of any rental or minimum royalty due under their leases. Rental or minimum royalty for lands of the United States subject to this agreement shall be paid at the rate specified in the respective leases from the United States unless such rental or minimum royalty is waived, suspended, or reduced by law or by approval of the Secretary or his duly authorized representative.

With respect to any lease on non-Federal land containing provisions which would terminate such lease unless drilling operations are commenced upon the land covered thereby within the time therein specified or rentals are paid for the privilege

of deferring such drilling operations, the rentals required thereby shall, notwithstanding any other provision of this agreement, be deemed to accrue and become payable during the term thereof as extended by this agreement and until the required drilling operations are commenced upon the land covered thereby, or until some portion of such land is included within a participating area.

16. CONSERVATION. Operations hereunder and production of unitized substances shall be conducted to provide for the most economical and efficient recovery of said substances without waste, as defined by or pursuant to State or Federal law or regulation.

17. DRAINAGE. (a) The Unit Operator shall take such measures as the AO deems appropriate and adequate to prevent drainage of unitized substances from unitized land by wells on land not subject to this agreement, which shall include the drilling of protective wells and which may include the payment of a fair and reasonable compensatory royalty, as determined by the AO.

(b) Whenever a participating area approved under section 11 of this agreement contains unleased Federal lands, the value of ____ *(current royalty for leases offered on Federal onshore oil and gas lease sales)* ____ percent of the production that would be allocated to such Federal lands under section 12 of this agreement, if such lands were leased, committed, and entitled to participation, shall be payable as compensatory royalties to the Federal Government. Parties to this agreement holding working interests in committed leases within the applicable participating area shall be responsible for such compensatory royalty payment on the volume of production reallocated from the unleased Federal lands to their unitized tracts under section 12. The value of such production subject to the payment of said royalties shall be determined pursuant to 30 CFR part 206. Payment of compensatory royalties on the production reallocated from unleased Federal land to the committed tracts within the participating area shall fulfill the Federal royalty obligation for such production, and said production shall be subject to no further royalty assessment under section 14 of this agreement. Payment of compensatory royalties as provided herein shall accrue from the date the committed tracts in the participating area that includes unleased Federal lands receive a production allocation, and shall be due and payable monthly by the last day of the calendar month next following the calendar month of actual production. If leased Federal lands receiving a production allocation from the participating area become unleased, compensatory royalties shall accrue from the date the Federal lands become unleased. Payment due under this provision shall end when the unleased Federal tract is leased or when production of unitized substances ceases within the participating area and the participating area is terminated, whichever occurs first.

18. LEASES AND CONTRACTS CONFORMED AND EXTENDED. The terms, conditions, and provisions of all leases, subleases, and other contracts relating to exploration, drilling, development or operation for oil or gas on lands committed to this agreement are hereby expressly modified and amended to the extent necessary to make the same conform to the provisions hereof, but otherwise to remain in full force and effect; and the parties hereto hereby consent that the Secretary shall and by his approval hereof, or by the approval hereof by his duly authorized representative, does hereby establish, alter, change, or revoke the drilling, producing, rental, minimum royalty, and royalty requirements of Federal leases committed hereto and the regulations in respect thereto to conform said requirements to the provisions of this agreement, and, without limiting the generality of the foregoing, all leases, subleases, and contracts are particularly modified in accordance with the following:

(a) The development and operation of lands subject to this agreement under the terms hereof shall be deemed full performance of all obligations for development and operation with respect to each and every separately owned tract subject to this agreement, regardless of whether there is any development of any particular tract of this unit area.

(b) Drilling and producing operations performed hereunder upon any tract of unitized lands will be accepted and deemed to be performed upon and for the benefit of each and every tract of unitized land, and no lease shall be deemed to expire by reason of failure to drill or produce wells situated on the land therein embraced.

(c) Suspension of drilling or producing operations on all unitized lands pursuant to direction or consent of the AO shall be deemed to constitute such suspension pursuant to such direction or consent as to each and every tract of unitized land. A suspension of drilling or producing operations limited to specified lands shall be applicable only to such lands.

(d) Each lease, sublease, or contract relating to the exploration, drilling, development, or operation for oil or gas of lands other than those of the United States committed to this agreement which, by its terms might expire prior to the termination of this agreement, is hereby extended beyond any such term so provided therein so that it shall be continued in full force and effect for and during the term of this agreement.

(e) Any Federal lease committed hereto shall continue in force beyond the term so provided therein or by law as to the land committed so long as such lease remains subject hereto, provided that production of unitized substances in paying quantities is established under this unit agreement prior to the expiration date of the term of such lease, or in the event actual drilling operations are commenced on unitized land, in accordance with provisions of this agreement, prior to the end of the primary term of such lease and are being diligently prosecuted at that time, such lease shall be extended for 2 years, and so long thereafter as oil or gas is produced in paying quantities in accordance with the provisions of the Mineral Leasing Act, as amended.

(f) Each sublease or contract relating to the operation and development of unitized substances from lands of the United States committed to this agreement, which by its terms would expire prior to the time at which the underlying lease, as extended by the immediately preceding paragraph, will expire is hereby extended beyond any such term so provided therein so that it shall be continued in full force and effect for and during the term of the underlying lease as such term is herein extended.

(g) The segregation of any Federal lease committed to this agreement is governed by the following provision in the fourth paragraph of sec. 17(m) of the Mineral Leasing Act, as amended by the Act of September 2, 1960 (74 Stat. 781–784) (30 U.S.C. 226(m)):

''Any [Federal] lease heretofore or hereafter committed to any such [unit] plan embracing lands that are in part within and in part outside of the area covered by any such plan shall be segregated into separate leases as to the lands committed and the lands not committed as of the effective date of unitization: *Provided, however,* That any such lease as to the nonunitized portion shall continue in force and effect for the term thereof but for not less than 2 years from the date of such segregation and so long thereafter as oil or gas is produced in paying quantities.''

If the public interest requirement is not satisfied, the segregation of a lease and/or extension of a lease pursuant to 43 CFR 3107.32 and 43 CFR 3107.40, respectively, shall not be effective.

[3] (h) Any lease, other than a Federal lease, having only a portion of its lands committed hereto shall be segregated as to the portion committed and the portion not committed, and the provisions of such lease shall apply separately to such segregated portions commencing as of the effective date hereof. In the event any such lease provides for a lump-sum rental payment, such payment shall be prorated between the portions so segregated in proportion to the acreage of the respective tracts.

19. COVENANTS RUN WITH LAND. The covenants herein shall be construed to be covenants running with the land with respect to the interests of the parties hereto and their successors in interest until this agreement terminates, and any grant, transfer or conveyance of interest in land or leases subject hereto shall be and hereby is conditioned upon the assumption of all privileges and obligations hereunder by the grantee, transferee, or other successor in interest. No assignment or transfer of any working interest, royalty, or other interest subject hereto shall be binding upon Unit Operator until the first day of the calendar month after Unit Operator is furnished with the original, photostatic, or certified copy of the instrument of transfer.

20. EFFECTIVE DATE AND TERM. This agreement shall become effective upon approval by the AO and shall automatically terminate 5 years from said effective date unless:

(a) Upon application by the Unit Operator such date of expiration is extended by the AO, or

(b) It is reasonably determined prior to the expiration of the fixed term or any extension

thereof that the unitized land is incapable of production of unitized substances in paying quantities in the formations tested hereunder, and after notice of intention to terminate this agreement on such ground is given by the Unit Operator to all parties in interest at their last known addresses, this agreement is terminated with the approval of the AO, or

(c) A valuable discovery of unitized substances in paying quantities has been made or accepted on unitized land during said initial term or any extension thereof, in which event this agreement shall remain in effect for such term and so long thereafter as unitized substances can be produced in quantities sufficient to pay for the cost of producing same from wells on unitized land within any participating area established hereunder. Should production cease and diligent drilling or reworking operations to restore production or new production are not in progress within 60 days and production is not restored or should new production not be obtained in paying quantities on committed lands within this unit area, this agreement will automatically terminate effective the last day of the month in which the last unitized production occurred, or

(d) It is voluntarily terminated as provided in this agreement. Except as noted herein, this agreement may be terminated at any time prior to the discovery of unitized substances which can be produced in paying quantities by not less than 75 per centum, on an acreage basis, of the working interest owners signatory hereto, with the approval of the AO. The Unit Operator shall give notice of any such approval to all parties hereto. If the public interest requirement is not satisfied, the approval of this unit by the AO shall be invalid.

21. RATE OF PROSPECTING, DEVELOPMENT, AND PRODUCTION. The AO is hereby vested with authority to alter or modify from time to time, in his discretion, the quantity and rate of production under this agreement when such quantity and rate are not fixed pursuant to Federal or State law, or do not conform to any Statewide voluntary conservation or allocation program which is established, recognized, and generally adhered to by the majority of operators in such State. The above authority is hereby limited to alteration or modifications which are in the public interest. The public interest to be served and the purpose thereof, must be stated in the order of alteration or modification. Without regard to the foregoing, the AO is also hereby vested with authority to alter or modify from time to time, in his discretion, the rate of prospecting and development and the quantity and rate of production under this agreement when such alteration or modification is in the interest of attaining the conservation objectives stated in this agreement and is not in violation of any applicable Federal or State law.

Powers is the section vested in the AO shall only be exercised after notice to Unit Operator and opportunity for hearing to be held not less than 15 days from notice.

22. APPEARANCES. The Unit Operator shall, after notice to other parties affected, have the right to appear for and on behalf of any and all interests affected hereby before the Department of the Interior and to appeal from orders issued under the regulations of said Department, or to apply for relief from any of said regulations, or in any proceedings relative to operations before the Department, or any other legally constituted authority; provided, however, that any other interested party shall also have the right at its own expense to be heard in any such proceeding.

23. NOTICES. All notices, demands, or statements required hereunder to be given or rendered to the parties hereto shall be in writing and shall be personally delivered to the party or parties, or sent by postpaid registered or certified mail, to the last-known address of the party or parties.

24. NO WAIVER OF CERTAIN RIGHTS. Nothing contained in this agreement shall be construed as a waiver by any party hereto of the right to assert any legal or constitutional right or defense as to the validity or invalidity of any law of the State where the unitized lands are located, or of the United States, or regulations issued thereunder in any way affecting such party, or as a waiver by any such party of any right beyond his or its authority to waive.

25. UNAVOIDABLE DELAY. All obligations under this agreement requiring the Unit Operator to commence or continue drilling, or to operate on, or produce unitized substances from any of the lands covered by this agreement, shall be suspended while the Unit Operator, despite the exercise of due care and diligence, is prevented from complying with such obligations, in whole or in part, by strikes, acts of God, Federal, State, or municipal law or agencies, unavoidable accidents, uncontrollable delays in transportation, inability to obtain necessary materials or equipment in the open market, or other matters beyond the reasonable control of the Unit Operator, whether similar to matters herein enumerated or not.

26. NONDISCRIMINATION. In connection with the performance of work under this agreement, the Unit Operator agrees to comply with all the provisions of section 202 (1) to (7) inclusive, of E.O. 11246 (30 FR 12319), as amended, which are hereby incorporated by reference in this agreement.

27. LOSS OF TITLE. In the event title to any tract of unitized land shall fail and the true owner cannot be induced to join in this unit agreement, such tract shall be automatically regarded as not committed hereto, and there shall be such readjustment of future costs and benefits as may be required on account of the loss of such title. In the event of a dispute as to title to any royalty, working interest, or other interests subject thereto, payment or delivery on account thereof may be withheld without liability for interest until the dispute is finally settled; provided, that, as to Federal lands or leases, no payments of funds due the United States shall be withheld, but such funds shall be deposited as directed by the AO, to be held as unearned money pending final settlement of the title dispute, and then applied as earned or returned in accordance with such final settlement.

Unit Operator as such is relieved from any responsibility for any defect or failure of any title hereunder.

28. NONJOINDER AND SUBSEQUENT JOINDER. If the owner of any substantial interest in a tract within the unit area fails or refuses to subscribe or consent to this agreement, the owner of the working interest in that tract may withdraw the tract from this agreement by written notice delivered to the proper BLM office and the Unit Operator prior to the approval of this agreement by the AO. Any oil or gas interests in lands within the unit area not committed hereto prior to final approval may thereafter be committed hereto by the owner or owners thereof subscribing or consenting to this agreement, and, if the interest is a working interest, by the owner of such interest also subscribing to the unit operating agreement. After operations are commenced hereunder, the right of subsequent joinder, as provided in this section, by a working interest owner is subject to such requirements or approval(s), if any, pertaining to such joinder, as may be provided for in the unit operating agreement. After final approval hereof, joinder by a nonworking interest owner must be consented to in writing by the working interest owner committed hereto and responsible for the payment of any benefits that may accrue hereunder in behalf of such nonworking interest. A nonworking interest may not be committed to this unit agreement unless the corresponding working interest is committed hereto. Joinder to the unit agreement by a working interest owner, at any time, must be accompanied by appropriate joinder to the unit operating agreement, in order for the interest to be regarded as committed to this agreement. Except as may otherwise herein be provided, subsequent joinders to this agreement shall be effective as of the date of the filing with the AO of duly executed counterparts of all or any papers necessary to establish effective commitment of any interest and/or tract to this agreement.

29. COUNTERPARTS. This agreement may be executed in any number of counterparts, no one of which needs to be executed by all parties, or may be ratified or consented to by separate instrument in writing specifically referring hereto and shall be binding upon all those parties who have executed such a counterpart, ratification, or consent hereto with the same force and effect as if all such parties had signed the same document, and regardless of whether or not it is executed by all other parties owning or claiming an interest in the lands within the above-described unit area.

[4] 30. SURRENDER. Nothing in this agreement shall prohibit the exercise by any working interest owner of the right to surrender vested in such party by any lease, sublease, or operating agreement as to all or any part of the lands covered thereby, provided that each party who will or might acquire such working interest by such surrender or by forfeiture as hereafter set forth, is bound by the terms of this agreement.

If as a result of any such surrender, the working interest rights as to such lands become vested in any party other than the fee owner of the unitized substances, said party may forfeit such rights and further benefits from operations hereunder as to said land to

the party next in the chain of title who shall be and become the owner of such working interest.

If as the result of any such surrender or forfeiture working interest rights become vested in the fee owner of the unitized substances, such owner may:

(a) Accept those working interest rights subject to this agreement and the unit operating agreement; or

(b) Lease the portion of such land as is included in a participating area established hereunder subject to this agreement and the unit operating agreement; or

(c) Provide for the independent operation of any part of such land that is not then included within a participating area established hereunder.

If the fee owner of the unitized substances does not accept the working interest rights subject to this agreement and the unit operating agreement or lease such lands as above provided within 6 months after the surrendered or forfeited, working interest rights become vested in the fee owner; the benefits and obligations of operations accruing to such lands under this agreement and the unit operating agreement shall be shared by the remaining owners of unitized working interests in accordance with their respective working interest ownerships, and such owners of working interests shall compensate the fee owner of unitized substances in such lands by paying sums equal to the rentals, minimum royalties, and royalties applicable to such lands under the lease in effect when the lands were unitized.

An appropriate accounting and settlement shall be made for all benefits accruing to or payments and expenditures made or incurred on behalf of such surrendered or forfeited working interests subsequent to the date of surrender or forfeiture, and payment of any moneys found to be owing by such an accounting shall be made as between the parties within 30 days.

The exercise of any right vested in a working interest owner to reassign such working interest to the party from whom obtained shall be subject to the same conditions as set forth in this section in regard to the exercise of a right to surrender.

[4] 31. TAXES. The working interest owners shall render and pay for their account and the account of the royalty owners all valid taxes on or measured by the unitized substances in and under or that may be produced, gathered and sold from the land covered by this agreement after its effective date, or upon the proceeds derived therefrom. The working interest owners on each tract shall and may charge the proper proportion of said taxes to royalty owners having interests in said-tract, and may currently retain and deduct a sufficient amount of the unitized substances or derivative products, or net proceeds thereof, from the allocated share of each royalty owner to secure reimbursement for the taxes so paid. No such taxes shall be charged to the United States or the State of _____ or to any lessor who has a contract with his lessee which requires the lessee to pay such taxes.

[4] 32. NO PARTNERSHIP. It is expressly agreed that the relation of the parties hereto is that of independent contractors and nothing contained in this agreement, expressed or implied, nor any operations conducted hereunder, shall create or be deemed to have created a partnership or association between the parties hereto or any of them.

In witness whereof, the parties hereto have caused this agreement to be executed and have set opposite their respective names the date of execution.

Unit Operator _____

Working Interest Owners _____

Other Interest Owners _____

General Guidelines

1. Executed agreement to be legally complete.

2. Agreement submitted for approval must contain Exhibit A and B in accordance with models shown in Appendix B to part 3180 and Appendix C to part 3180.

3. Consents should be identified (in pencil) by tract numbers as listed in Exhibit B and assembled in that order as far as practical. Unit agreements submitted for approval shall include a list of the overriding royalty interest owners who have executed ratifications of the unit agreement. Subsequent joinders by overriding royalty interest owners shall be submitted in the same manner, except each must include or be accompanied by a statement that the corresponding working interest owner has consented in writing to such joinder. Original ratifications of overriding royalty owners will be kept on file by the Unit Operator or his designated agent.

4. All leases held by option should be noted on Exhibit B with an explanation as to the type of option, *i.e.,* whether for operating rights only, for full leasehold record title, or for certain interests to be earned by performance. In all instances, optionee committing such interests is expected to exercise option promptly.

5. All owners of oil and gas interests must be invited to join the unit agreement, and statement to that effect must accompany executed agreement, together with summary of results of such invitations. A written reason for all interest owners who have not joined shall be furnished by the unit operator.

6. In the event fish and wildlife lands are included, add the following as a separate section:

''Wildlife Stipulation. Nothing in this unit agreement shall modify the special Federal lease stipulations applicable to lands under the jurisdiction of the United States Fish and Wildlife Service.''

7. In the event National Forest System lands are included within the unit area, add the following as a separate section:

''Forest Land Stipulation. Notwithstanding any other terms and conditions contained in this agreement, all of the stipulations and conditions of the individual leases between the United States and its lessees or their successors or assigns embracing lands within the unit area included for the protection of lands or functions under the jurisdiction of the Secretary of Agriculture shall remain in full force and effect the same as though this agreement had not been entered into, and no modification thereof is authorized except with the prior consent in writing of the Regional Forester, United States Forest Service, ____, _____.''

8. In the event National Forest System lands within the Jackson Hole Area of Wyoming are included within the unit area, additional ''special'' stipulations may be required to be included in the unit agreement by the U.S. Forest Service, including the Jackson Hole Special Stipulation.

9. In the event reclamation lands are included, add the following as a new separate section:

''Reclamation Lands. Nothing in this agreement shall modify the special, Federal lease stipulations applicable to lands under the jurisdiction of the Bureau of Reclamation.''

10. In the event a powersite is embraced in the proposed unit area, the following section should be added:

''Powersite. Nothing in this agreement shall modify the special, Federal lease stipulations applicable to lands under the jurisdiction of the Federal Energy Regulatory Commission.''

11. In the event special surface stipulations have been attached to any of the Federal oil and gas leases to be included, add the following as a separate section:

''Special surface stipulations. Nothing in this agreement shall modify the special Federal lease stipulations attached to the individual Federal oil leases.''

12. In the event State lands are included in the proposed unit area, add the appropriate State Lands Section as separate section. (See § 3181.4(a)).

13. In the event restricted Indian lands are involved, consult the AO regarding appropriate requirements under § 3181.4(b).

Certification—Determination

Pursuant to the authority vested in the Secretary of the Interior, under the Act approved February 25, 1920, 41 Stat. 437, as amended, 30 U.S.C. 181, *et seq.,* and delegated to (the appropriate Name and Title of the authorized officer, BLM) under the authority of 43 CFR part 3180, I do hereby:

A. Approve the attached agreement for the development and operation of the ____, Unit Area, State of _____. This approval shall be invalid *ab initio* if the public interest requirement under § 3183.4(b) is not met.

B. Certify and determine that the unit plan of development and operation contemplated in the attached agreement is necessary and advisable in the public interest for the purpose of more properly conserving the natural resources.

C. Certify and determine that the drilling, producing, rental, minimum royalty, and royalty requirements of all Federal leases committed to said agreement are hereby established altered, changed, or revoked to conform with the terms and conditions of this agreement.

Dated _____.

(Name and Title of authorized officer of the Bureau of Land Management)

Notes

[1] Optional sections (in addition the penultimate paragraph of Section 9 is to be included only when more than one

obligation well is required and paragraph (h) of section 18 is to be used only when applicable).

[2] Provisions to be included only when a multiple well obligation is required.

[3] Optional paragraph to be used only when applicable.

[4] Optional sections and subsection. (Agreements submitted for final approval should not identify section or provision as ''optional.'')

§ 3186.1–1 [Redesignated as Appendix B to Part 3180]

■ 25. Redesignate § 3186.1–1 as appendix B to part 3180.

§ 3186.1–2 [Redesignated as Appendix C to Part 3180]

■ 26. Redesignate § 3186.1–2 as appendix C to part 3180.

§ 3186.2 [Removed]

■ 27. Remove § 3186.2.

§ 3186.3 [Redesignated as Appendix D to part 3180]

■ 28. Redesignate § 3186.3 as appendix D to part 3180.

§ 3186.4 [Redesignated as Appendix E to part 3180]

■ 29. Redesignate § 3186.4 as appendix E to part 3180.

This action by the Principal Deputy Assistant Secretary is taken pursuant to an existing delegation of authority.

Steven H. Feldgus,

Principal Deputy Assistant Secretary, Land and Minerals Management.

Part V

Department of Commerce

National Oceanic and Atmospheric Administration

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Phase 2 Construction of the Vineyard Wind 1 Offshore Wind Project Off Massachusetts; Notice

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD687]

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Phase 2 Construction of the Vineyard Wind 1 Offshore Wind Project Off Massachusetts

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request for comments on proposed authorization.

SUMMARY: NMFS has received a request from Vineyard Wind LLC (Vineyard Wind) for authorization to take marine mammals incidental to the completion of the construction of a commercial wind energy project offshore Massachusetts in the northern portion of Lease Area OCS–A 0501. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an incidental harassment authorization (IHA) to incidentally take marine mammals during the specified activities; which consists of a subset of activities for which take was authorized previously, but which Vineyard Wind did not complete within the effective dates of the previous IHA. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorization and agency responses will be summarized in the final notice of our decision. The IHA would be valid for 1 year from date of issuance.

DATES: Comments and information must be received no later than May 23, 2024.

ADDRESSES: Comments should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources (OPR), NMFS and should be submitted via email to *ITP.taylor@noaa.gov.* Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable.* In case of problems accessing these documents, please call the contact listed below (see **FOR FURTHER INFORMATION CONTACT**).

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments, including all attachments, must not exceed a 25-megabyte file size. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Jessica Taylor, OPR, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed IHA is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the mitigation, monitoring and reporting of the takings are set forth. The definitions of all applicable MMPA statutory terms cited above are included in the relevant sections below.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment. NMFS participated as a cooperating agency on the Bureau of Ocean Energy Management (BOEM) 2021 Environmental Impact Statement (EIS) for the Vineyard Wind 1 Offshore Wind Project.

NMFS' proposal to issue Vineyard Wind the requested IHA constitutes a federal action subject to NEPA (42 U.S.C. 4321 *et seq.*). On May 10, 2021, NMFS adopted the Bureau of Ocean Energy Management's (BOEM) Vineyard Wind 1Final Environmental Impact Statement (FEIS), published on March 12, 2021 and available at: *https://www.boem.gov/renewable-energy/state-activities/vineyard-wind-1.* NMFS is currently evaluating if supplementation of the Vineyard Wind 1 EIS is required per 40 CFR 1502.9(d). We will review all comments submitted in response to this notice prior to concluding our NEPA process or making a final decision on the IHA request.

Summary of Request

On December 15, 2023, NMFS received a request from Vineyard Wind for an IHA to take marine mammals incidental to Phase 2 construction of the Vineyard Wind Offshore Wind Project off Massachusetts, specifically wind turbine generator (WTG) monopile foundation installation, in the northern portion of Lease Area OCS–A 0501. Vineyard Wind completed installation of 47 WTG monopiles and 1 electrical service platform (ESP) jacket foundation in 2023 under an IHA issued by NMFS on June 25, 2021 (86 FR 33810) with effective dates from May 1, 2023, through April 30, 2024. Due to unexpected delays, Vineyard Wind was not able to complete pile driving activities before the expiration date of the current IHA (April 30, 2024); thus, Vineyard Wind is requesting take of marine mammals incidental to installing the remaining 15 monopiles to complete foundation installation for the Project. In total, the Project will consist of 62 WTG monopiles and 1 offshore substation.

Following NMFS' review of the December 2023 application, Vineyard Wind submitted multiple revised versions of the application, and it was deemed adequate and complete on March 13, 2024. Vineyard Wind's request is for take of 14 species of marine mammals, by Level B harassment and, for 6 of these species, Level A harassment. Neither Vineyard

Wind nor NMFS expect serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

Vineyard Wind previously conducted high resolution geophysical (HRG) site characterization surveys within the Lease Area and associated export cable corridor in 2016, 2018–2021, and June–December 2023 (ESS Group *Inc.,* 2016; Vineyard Wind 2018, 2019; EPI Group, 2021; RPS, 2022; Vineyard Wind 2023a–f). During the 2023 construction season, NMFS coordinated closely with Vineyard Wind to ensure compliance with their IHA. In a few instances, NMFS raised concerns with Vineyard Wind regarding their implementation of certain required measures. NMFS worked closely with Vineyard Wind throughout the construction season to course correct, where needed, and ensure compliance with the requirements (*e.g.,* mitigation, monitoring, and reporting) of the previous IHA, and information regarding their monitoring results may be found in the Estimated Take of Marine Mammals section.

Description of Proposed Activity

Overview

Vineyard Wind proposes to construct and operate an 800-megawatt (MW) wind energy facility, the Project, in the Atlantic Ocean in Lease area OCS–A 0501, offshore of Massachusetts. The project would consist of up to 62 offshore wind turbine generators (WTGs), 1 electrical service platform (ESP), an onshore substation, offshore and onshore cabling, and onshore operations and maintenance facilities. The onshore substation and ESP are now complete. Installation of 47 monopile foundations was completed under a current IHA (86 FR 33810, June 25, 2021), effective from May 1, 2023, through April 30, 2024. However, due to unexpected, Vineyard Wind will not be able to complete pile driving activities before the expiration date of the current IHA (April 30, 2024). Take of marine mammals, in the form of behavioral harassment and limited instances of auditory injury, may occur incidental to the installation of the remaining 15 WTG monopile foundations due to in-water noise exposure resulting from impact pile driving. The remaining 15 monopile foundations would occur within a Limited Installation Area (LIA) (64.3 square kilometers (km^2; 15,888.9 acres)) within the Lease Area (264.4 km^2 (65,322.4 acres)). Installation of the remaining 15 monopile foundations is expected to occur in 2024.

Dates and Duration

The proposed pile driving activities are planned to occur in 2024 after the IHA is issued and, while not planned, may occur in June or July in 2025. Pile driving activities are estimated to require approximately 15 nonconsecutive days (30 nonconsecutive hours of pile driving). Given vessel availability, weather delay, and logistical constraints, these 15 days for installation of the remaining monopile foundations could occur close in time or spread out over months.

Although installation of a single monopile may last for several hours, active pile driving for installation of a single monopile is expected to last for a maximum of 2 hours. Up to 1 monopile may be installed per day, based upon the average pile driving time (up to 2 hours) for the installation of the currently installed 47 monopiles. Monopile foundations would be installed in batches of three to six monopiles at a time as this represents the maximum batch size that the installation vessel can carry to the LIA. After installation of a batch of three to six monopiles, there would be a 4 to 7 day pause in monopile installation to allow time for the installation vessel to return with a new batch of monopiles. No concurrent monopile installation is proposed. Vineyard Wind has proposed, and NMFS would require, that pile driving activities be prohibited from January 1 through May 31 due to the increased presence of North Atlantic right whales (NARWs) in the LIA and the timing of the project (*i.e.,* pile driving in May is not practicable). NMFS is also proposing to restrict pile driving in December to the maximum extent practicable.

Specific Geographic Region

Vineyard Wind's would construct the Project in within Federal waters off Massachusetts, in the northern portion of the Vineyard Wind Lease Area OCS–A 0501 (figure 1). This area is also referred to as the Wind Development Area (WDA). The 15 remaining monopiles would be installed in a LIA within a portion of the southwest corner of the WDA. The LIA is approximately 70.5 km^2 (17,420.9 acres) in size, as compared to the overall size of the Lease Area (264.4 km^2 (63,322.4 acres)). At its nearest point, the LIA is approximately 29 kilometers (km; 18.1 miles (mi)) from the southeast corner of Martha's Vineyard and a similar distance from Nantucket. Water depths in the WDA range from approximately 37 to 49.5 meters (m; 121–162 feet (ft)). Water depth and bottom habitat are similar throughout the Lease Area (Pyc *et al.,* 2018).

Vineyard Wind's specified activities would occur in the Northeast U.S. Continental Shelf Large Marine Ecosystem (NES LME), an area of approximately 260,000 km^2 from Cape Hatteras in the south to the Gulf of Maine in the north. Specifically, the LIA is located within the Mid-Atlantic Bight subarea of the NES LME, which extends between Cape Hatteras, North Carolina, and Martha's Vineyard, Massachusetts, extending westward into the Atlantic to the 100-m isobath. The specific geographic region includes the LIA as well as the crew transfer vessel transit corridors (see Proposed Mitigation section) and cable laying routes. The installation vessel and support vessels would conduct approximately three trips to Canada during the period of the IHA, transiting from New Bedford and nearby ports. Figure 1 shows the LIA and planned locations for the remaining 15 monopiles to be installed.

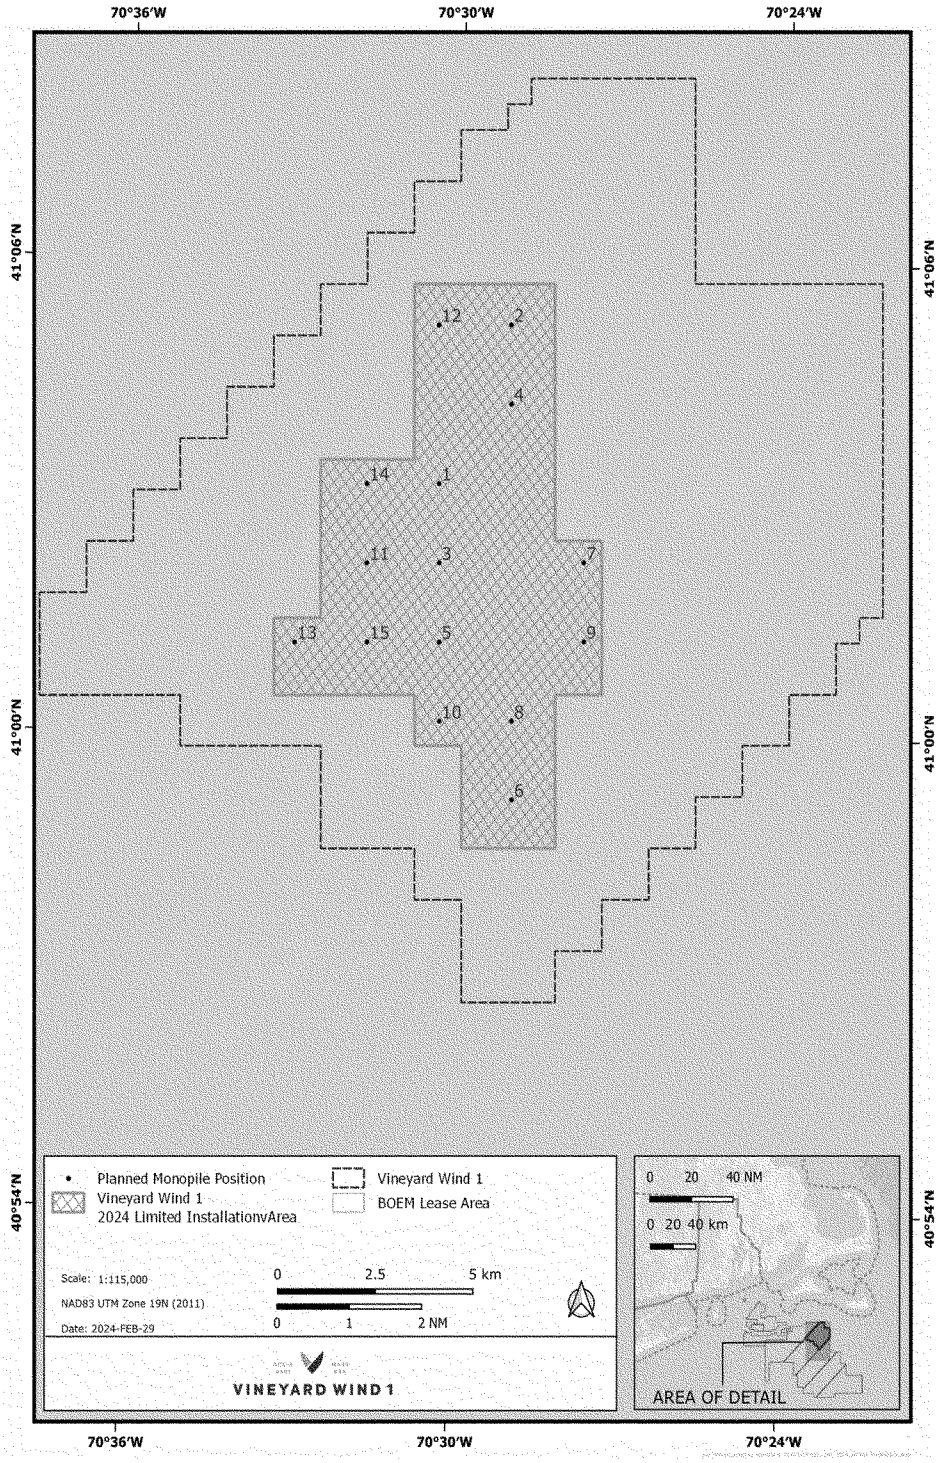

Figure 1 -- Vineyard Wind Limited Installation Area

Detailed Description of the Specified Activity

Monopile Installation

Vineyard Wind proposes to install 15 monopile WTG foundations in the LIA (figure 1) to complete the Vineyard Wind Offshore Wind Project (84 FR 18346, April 30, 2019; 86 FR 33810, June 25, 2021). Vineyard Wind assumes all monopile foundations would be installed using an impact hammer. Individual monopile installation would be sequenced according to the numbers in the cross-hatched area in figure 1.

A WTG monopile foundation typically consists of a coated single steel tubular section, with several sections of rolled steel plate welded together. Each 13–MW monopile would have a maximum diameter of 9.6 m (31.5 ft). WTGs would be arranged in a grid-like pattern within the LIA with spacing of

1.9 km (1 nautical mile (nmi)) between turbines, and driven to a maximum penetration depth of 28 m (92 ft) to 35 m (115 ft) below the seafloor (Vineyard Wind, 2023). Monopile foundations would consist of a monopile with a separate transition piece.

Monopile foundations would be installed by a heavy lift vessel. The installation vessel would upend the monopile with a crane and place it in a gripper frame before lowering the monopile foundation to the seabed (see figure 4 in IHA application). Vineyard Wind would use a Monopile Installation Tool (MPIT) to seat the monopile foundation and protect against pile gripper damage as well as risks to human safety associated with pile run. The MPIT creates buoyancy within the monopile foundation using air pressure to control lowering the monopile through the pile run risk zone (Vineyard Wind, 2023). As the monopile foundation is lowered, air is released from the top of the foundation above the water surface until the pile is stabilized within the seabed. Once the monopile is lowered to the seabed, the crane hook would be released. A hydraulic impact hammer would be placed on top of the monopile and used to drive the monopile into the seabed to the target penetration depth (28–35 m). Monopile foundations would be installed using a maximum hammer energy of 4,000 kilojoules (kJ) (table 1). Pile driving would begin with a 20-minute soft-start at reduced hammer energy (see Proposed Mitigation). The hammer energy would gradually be increased based upon resistance experienced from sediments. Prior to pile driving, the MPIT process may last from 6 to 15 hours and is dependent upon local soil conditions at each monopile foundation (Vineyard Wind, 2023). Vineyard Wind anticipates that one monopile would be installed per day at a rate of approximately 2 hours of active pile driving time per monopile (table 1). Rock scour protection would be applied after foundation installation. The scour protection would be 1–2 m high (3–6 ft), with stone or rock sizes of approximately 10–30 centimeters (4–12 inches).

While post-piling activities could be ongoing at one foundation position as pile driving is occurring at another position, no concurrent/simultaneous pile driving of foundations would occur (see *Dates and Duration* section). Installation of monopile foundations is anticipated to result in the take of marine mammals due to noise generated during pile driving. Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation and Proposed Monitoring and Reporting).

TABLE 1—IMPACT PILE DRIVING SCHEDULE

Pile type	Project component	Max hammer energy (kJ)	Number of hammer strikes	Max piling time duration per pile (min)	Max piling time duration per day (min)	Number piles/day
9.6-m monopile	WTG	[a] 4000	[b] 2,884	117	117	1

[a] Maximum hammer energy for representative monopiles installed during the 2023 Vineyard Wind Offshore Wind Project construction ranged from 3,227 to 3,831 kJ.

[b] Number of hammer strikes based upon the AU–38 representative monopile installed during the 2023 Vineyard Wind Offshore Wind Project construction period at a maximum hammer energy of 3,825 kJ.

After monopile installation, transition pieces, containing work platforms and other ancillary structures, and WTGs, consisting of a tower and the energy-generating components of the turbine, would be installed. Transition pieces and WTGs would be installed on top of monopile foundations using jack-up vessels. However, installation of transition pieces and WTGS on monopile foundations is not expected to result in take of marine mammals and, therefore, are not discussed further.

Vineyard Wind has developed a sequencing plan for installation of monopiles throughout the LIA, as shown in figure 1. The sequencing plan will allow for several of the monopiles located in the northeast corner of the LIA and highest density area of NARWs, to be installed first.

Vineyard Wind anticipates that it is possible for the 15 WTGs to become operational within the effective period of the IHA. Nine of the 47 WTGs previously installed in 2023 are currently operational.

Vessel Operation

Vineyard Wind would use various types of vessels over the course of the 1-year proposed IHA for foundation installation and transporting monopile batches between ports and the LIA (table 2). Construction-related vessel activity is anticipated to include approximately 20 vessels operating throughout the specified geographic area on any given work day. Many of these vessels would remain in the LIA for days or weeks at a time, making infrequent trips to port for bunkering and provisioning, as needed. Table 2 shows the type and number of vessels Vineyard Wind would use for various construction activities as well as the associated ports. Vineyard Wind would utilize ports in New London, Connecticut and New Bedford, Massachusetts (table 2) to support offshore construction, crew transfer and logistics, and other operational activities. In addition, monopile foundations would come from a Canadian port in Halifax. Monopile foundations would be transported on an installation vessel to the LIA from Canada, and would be installed in batches of three to six monopiles at a time. Upon completion of installation of a batch of monopiles, the installation vessel would return to Canada to load an additional batch of monopiles (Vineyard Wind, 2023). For the proposed activities, it is expected that the installation vessel would need to make a maximum of three trips between Canada and the LIA.

As part of vessel-based construction activities, dynamic positioning thrusters would be utilized to hold vessels in position or move slowly during monopile installation. Sound produced through use of dynamic positioning thrusters is similar to that produced by transiting vessels, and dynamic positioning thrusters are typically operated either in a similarly predictable manner or used for short durations around stationary activities. Construction-related vessel activity, including the use of dynamic positioning thrusters, is not expected to result in take of marine mammals. While a vessel strike could cause injury or mortality of a marine mammal, Vineyard Wind proposed and NMFS is proposing to require, extensive vessel strike avoidance measures that would avoid vessel strikes from occurring (see Proposed Mitigation and Proposed Monitoring and Reporting). Vineyard Wind did not request, and NMFS

neither anticipates nor proposes to authorize, take associated with vessel activity, and this activity is not analyzed further.

TABLE 2—TYPE AND NUMBER OF VESSELS ANTICIPATED DURING CONSTRUCTION

Vessel type	Vessel role	Maximum number of vessels	Expected maximum number of transits per month	Port
Heavy lift vessel	Pile driving	1	2	Halifax, Canada.
Trans-shipment vessel	Bubble curtain	2	4	New London, CT.
Fishing vessel	PSO support vessel	2	3	New Bedford, MA.
	Service operations vessel	1	4	
	Safety vessel	4	2	
Motor vessel	Crew transfer vessel	2	12	

Inter-Array Cable Laying

Inter-array cables would be installed to connect WTGs to the ESP. In 2023, Vineyard Wind completed approximately 40 percent of the installation of inter-array cables in the Lease Area. Vineyard Wind anticipates approximately 50 percent of the inter-array cable laying to take place during the effective period of the IHA. Vineyard Wind would perform a pre-lay grapnel run to remove any obstructions, such as fishing gear, from the seafloor. The cable would be laid on the seafloor and buried using a jet trencher with scour added for cable protection near the transition pieces and ESPs. The sounds associated with cable laying are consistent with those of routine vessel operations and not expected to result in take of marine mammals. Inter-array cable laying activities are, therefore, not discussed further.

Other Activities

Vineyard Wind would not conduct high-resolution geophysical (HRG) surveys, UXO/MEC detonation, or fishery research surveys under this IHA.

Description of Marine Mammals in the Area of Specified Activities

Thirty-eight marine mammal species, comprising 39 stocks, under NMFS' jurisdiction have geographic ranges within the western North Atlantic OCS (Hayes *et al.,* 2023). However, for reasons described below, Vineyard Wind has requested, and NMFS proposes to authorize, take of only 14 species (comprising 14 stocks) of marine mammals. Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS fully considered all of this information, and we refer the reader to these descriptions, instead of reprinting the information. See **ADDRESSES**. Additional information regarding population trends and threats may be found in NMFS' Stock Assessment Reports (SARs; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS' website (*https://www.fisheries.noaa.gov/find-species*).

Table 3 lists all species or stocks for which take is expected and proposed to be authorized for this activity and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS' SARs; 16 U.S.C. 1362(20)). While no serious injury or mortality is anticipated or proposed to be authorized here, PBR and annual serious injury and mortality from anthropogenic sources are included here as gross indicators of the status of the species or stocks and other threats. Four of the marine mammal species for which take is requested are listed as endangered under the ESA, including the NARW, fin whale, sei whale, and sperm whale.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS' stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprise that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS' U.S. 2023 draft SARs and NMFS' U.S. 2022 SARs. For the majority of species potentially present in the specific geographic region, NMFS has designated only a single generic stock (*e.g.,* ''western North Atlantic'') for management purposes. This includes the ''Canadian east coast'' stock of minke whales, which includes all minke whales found in United States waters and is also a generic stock for management purposes. For humpback and sei whales, NMFS defines stocks on the basis of feeding locations (*i.e.,* Gulf of Maine and Nova Scotia, respectively). However, references to humpback whales and sei whales in this document refer to any individuals of the species that are found in the specific geographic region. All values presented in table 3 are the most recent available at the time of publication and are available online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.*

TABLE 3—MARINE MAMMAL SPECIES THAT MAY OCCUR IN THE LIA AND BE TAKEN BY HARASSMENT

Common name [a]	Scientific name	Stock	ESA/ MMPA status; strategic (Y/N) [b]	Stock abundance (CV, N_{min}, most recent abundance survey) [c]	PBR	Annual M/SI [d]
Order Artiodactyla—Cetacea—Mysticeti (baleen whales)						
Family Balaenidae:						
NARW	*Eubalaena glacialis*	Western Atlantic	E, D, Y	340 (0; 337; 2021) [e]	0.7	27.2 [f]
Family Balaenopteridae (rorquals):						
Fin whale	*Balaenoptera physalus*	Western North Atlantic	E, D, Y	6,802 (0.24, 5,573, 2021)	11	2.05
Sei whale	*Balaenoptera borealis*	Nova Scotia	E, D, Y	6,292 (1.02, 3098, 2021)	6.2	0.6
Minke whale	*Balaenoptera acutorostrata.*	Canadian Eastern Coastal	-, -, N	21,968 (0.31, 17,002, 2021).	170	9.4
Humpback whale	*Megaptera novaeangliae*	Gulf of Maine	-, -, Y	1,396 (0, 1,380, 2016)	22	12.15
Superfamily Odontoceti (toothed whales, dolphins, and porpoises)						
Family Physeteridae:						
Sperm whale	*Physeter macrocephalus*	North Atlantic	E, D, Y	5,895 (0.29, 4,639, 2021)	9.28	0.2
Family Delphinidae:						
Long-finned pilot whale	*Globicephala melas*	Western North Atlantic	-, -, N	39,215 (0.3, 30,627, 2021).	306	5.7
Bottlenose dolphin	*Tursiops truncatus*	Western North Atlantic Offshore	-, -, N	64,587 (0.24, 52,801, 2021) [g].	507	28
Common dolphin	*Delphinus delphis*	Western North Atlantic	-, -, N	93,100 (0.56, 59,897, 2021).	1,452	414
Risso's dolphin	*Grampus griseus*	Western North Atlantic	-, -, N	44,067 (0.19, 30,662, 2021).	307	18
Atlantic white-sided dolphin	*Lagenorhynchus acutus*	Western North Atlantic	-, -, N	93,233 (0.71, 54,443, 2021).	544	28
Family Phocoenidae (porpoises):						
Harbor porpoise	*Phocoena phocoena*	Gulf of Maine/Bay of Fundy	-, -, N	85,765 (0.53, 56,420, 2021).	649	145
Order Carnivora—Pinnipedia						
Family Phocidae (earless seals):						
Harbor seal	*Phoca vitulina*	Western North Atlantic	-, -, N	61,336 (0.08, 57,637, 2018).	1,729	339
Gray seal [h]	*Halichoerus grypus*	Western North Atlantic	-, -, N	27,911 (0.2, 23,924, 2021).	1,512	4,570

[a] Information on the classification of marine mammal species can be found on the web page for The Society for Marine Mammalogy's Committee on Taxonomy (*https://marinemammalscience.org/science-and-publications/list-marine-mammal-species-subspecies;* Committee on Taxonomy, 2023).

[b] ESA status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR, or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[c] NMFS 2022 marine mammal SARs online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.* CV is the coefficient of variation; N_{min} is the minimum estimate of stock abundance.

[d] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike).

[e] The draft 2023 SAR includes an estimated population (N_{best} 340) based on sighting history through December 2021 (89 FR 5495, January 29, 2024). In October 2023, NMFS released a technical report identifying that the NARW population size based on sighting history through 2022 was 356 whales, with a 95 percent credible interval ranging from 346 to 363 (Linden, 2023).

[f] Total annual average observed NARW mortality during the period 2017–2021 was 7.1 animals and annual average observed fishery mortality was 4.6 animals. Numbers presented in this table (27.2 total mortality and 17.6 fishery mortality) are 2016–2020 estimated annual means, accounting for undetected mortality and serious injury.

[g] As noted in the draft 2023 SAR (89 FR 5495, January 29, 2024), abundance estimates may include sightings of the coastal form.

[h] NMFS' stock abundance estimate (and associated PBR value) applies to the U.S. population only. Total stock abundance (including animals in Canada) is approximately 394,311. The annual M/SI value given is for the total stock.

As indicated above, all 14 species (with 14 managed stocks) in table 3 temporally and spatially co-occur with the activity to the degree that take is expected to occur. The following species are not expected to occur in the LIA due to their known distributions, preferred habitats, and/or known temporal and spatial occurrences: the blue whale (*Balaenoptera musculus*), northern bottlenose whale (*Hyperoodon ampullatus*), false killer whale (*Pseudorca crassidens*), pygmy killer whale (*Feresa attenuata*), melon-headed whale (*Peponocephala electra*), dwarf and pygmy sperm whales (*Kogia* spp.), killer whale (*Orcinus orca*), Cuvier's beaked whale (*Ziphius cavirostris*), four species of Mesoplodont whale (*Mesoplodon densitostris, M. europaeus, M. mirus,* and *M. bidens*), Fraser's dolphin (*Lagenodelphis hosei*), Clymene dolphin (*Stenella clymene*), spinner dolphin (*Stenella longirostris*), rough-toothed dolphin (*Steno bredanensis*), Atlantic spotted dolphin (*Stenella frontalis*), pantropical spotted dolphin (*Stenella attenuata*), short-finned pilot whale (*Globicephala macrorhynchus*), striped dolphin (*Stenella coeruleoalba*), white-beaked dolphin (*Lagenorhynchus albirostris*), and hooded seal (*Crysophora cristata*). None of these species were observed during the 2023 construction season or during previous site assessment/characterization surveys (Vineyard Wind, 2018, 2019, 2023a–f). Due to the lack of sightings of these species in the MA Wind Energy Area (WEA) (Kenney and Vigness-Raposa, 2010; ESS Group, *Inc.,* 2016; Kraus *et al.,* 2016; Vineyard Wind, 2018; 2019; O'Brien *et al.,* 2020, 2021, 2022, 2023; EPI Group, 2021; Palka *et al.,* 2017 2021; RPS, 2022; Vineyard Wind, 2023a–f; Hayes *et al.,* 2023) as well as documented habitat preferences and distributions, we have determined that

each of these species will not be considered further. Furthermore, the northern limit of the northern migratory coastal stock of the common bottlenose dolphin (*Tursiops truncatus*) does not extend as far north as the LIA. Thus, take is only proposed for the offshore stock which may occur within the LIA. Although harp seals (*Pagophilus groenlandicus*) are expected to occur within the WDA, no harp seals were observed by Protected Species Observers (PSOs) during Vineyard Wind's site characterization surveys (2016, 2018–2021; ESS Group, *Inc.,* 2016; Vineyard Wind, 2018, 2019) nor during the 2023 construction campaign (Vineyard Wind, 2023a-f). Thus, Vineyard Wind did not request, and NMFS is not proposing to authorize, take for this species.

In addition to what is included in sections 3 and 4 of Vineyard Wind's ITA application (Vineyard Wind, 2023), the SARs (*https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*), and NMFS' website (*https://www.fisheries.noaa.gov/species-directory/marine-mammals*), we provide further detail below informing the baseline for select species (*e.g.,* information regarding current unusual mortality events (UMEs) and known important habitat areas, such as biologically important areas (BIAs; *https://oceannoise.noaa.gov/biologically-important-areas*) (Van Parijs, 2015)). There are no ESA-designated critical habitats for any species within the LIA (*https://www.fisheries.noaa.gov/resource/map/national-esa-critical-habitat-mapper*). Any areas of known biological importance (including the BIAs identified in LaBrecque *et al.,* 2015) that overlap spatially (or are adjacent) with the LIA are addressed in the species sections below.

Under the MMPA, a UME is defined as ''a stranding that is unexpected; involves a significant die-off of any marine mammal population; and demands immediate response'' (16 U.S.C. 1421h(6)). As of January 2024, three UMEs are occurring along the U.S. Atlantic coast for NARWs, humpback whales, and minke whales. Of these, the most relevant to the LIA are the NARW and humpback whale UMEs given the prevalence of these species in Southern New England (SNE). Below, we include information for a subset of the species that presently have an active or recently closed UME occurring along the Atlantic coast or for which there is information available related to areas of biological significance. More information on UMEs, including all active, closed, or pending, can be found on NMFS' website at *https://www.fisheries.noaa.gov/national/marine-life-distress/active-and-closed-unusual-mortality-events.*

North Atlantic Right Whale

The NARW has been listed as Endangered since the ESA's enactment in 1973. The species was recently uplisted from Endangered to Critically Endangered on the International Union for Conservation of Nature Red List of Threatened Species (Cooke, 2020). The uplisting was due to a decrease in population size (Pace *et al.,* 2017), an increase in vessel strikes and entanglements in fixed fishing gear (Daoust *et al.,* 2017; Davis & Brillant, 2019; Knowlton *et al.,* 2012; Knowlton *et al.,* 2022; Moore *et al.,* 2021; Sharp *et al.,* 2019), and a decrease in birth rate (Pettis *et al.,* 2022; Reed *et al.,* 2022). The western Atlantic stock is considered depleted under the MMPA (Hayes *et al.,* 2023). There is a recovery plan (NMFS, 2005) for the NARW, and NMFS completed 5-year reviews of the species in 2012, 2017, and 2022, which concluded no change to the listing status is warranted.

The NARW population had only a 2.8-percent recovery rate between 1990 and 2011 and an overall abundance decline of 23.5 percent from 2011 to 2019 (Hayes *et al.,* 2023). Since 2011, the NARW population has been in decline; however, the sharp decrease observed from 2015 to 2020 appears to have slowed, though the right whale population continues to experience annual mortalities above recovery thresholds (Pace *et al.,* 2017; Pace *et al.,* 2021; Linden, 2023). NARW calving rates dropped from 2017 to 2020 with zero births recorded during the 2017–2018 season. The 2020–2021 calving season had the first substantial calving increase in 5 years with 20 calves born (including 2 mortalities) followed by 15 calves during the 2021–2022 calving season and 12 births (including 1 mortality) in 2022–2023 calving season. These data demonstrate that birth rates are increasing. However, mortalities continue to outpace births (Linden, 2023). Best estimates indicate fewer than 70 reproductively active females remain in the population and adult females experience a lower average survival rate than males (Linden, 2023). In 2023, the total annual average observed NARW mortality increased from 8.1 (which represents 2016–2020) to 31.2 (which represents 2015–2019), however, this updated estimate also accounts for undetected mortality and serious injury (Hayes *et al.,* 2023). Although the predicted number of deaths from the population are lower in recent years (2021–2022) when compared to the high number of deaths from 2014 to 2020, suggesting a short-term increase in survival, annual mortality rates still exceed PBR (Linden, 2023).

NMFS' regulations at 50 CFR 224.105 designated Seasonal Management Areas (SMAs) for NARWs in 2008 (73 FR 60173, October 10, 2008). SMAs were developed to reduce the threat of collisions between vessels and NARWs. A portion of the Block Island SMA, which occurs off Block Island, Rhode Island, is near the LIA (approximately 4.3 km (2.7 mi) southwest of the OCS–A 0501 Lease Area at the closest point), but does not overlap spatially with the Lease Area or LIA. This SMA is active from November 1 through April 30 of each year, and may be used by NARWs for migrating and/or feeding. As noted below, NMFS is proposing changes to the NARW speed rule (87 FR 46921, August 1, 2022). NMFS has designated critical habitat for NARWs (81 FR 4838, January 27, 2016), along the U.S. southeast coast for calving as well as in the northeast, just east of the LIA. The LIA both spatially and temporally overlaps a portion of a migratory corridor BIA (LaBrecque *et al.,* 2015). Due to the current status of NARWs and the spatial proximity of the proposed project with areas of biological significance, (*i.e.,* a migratory corridor, SMA), the potential impacts of the proposed project on NARWs warrant particular attention.

NARWs range from calving grounds in the southeastern United States to feeding grounds in New England waters and into Canadian waters (Hayes *et al.,* 2023). Surveys have demonstrated the existence of seven areas where NARWs congregate seasonally in Georges Bank, off Cape Cod, and in Massachusetts Bay (Hayes *et al.,* 2023). In late fall (*i.e.,* November), a portion of the NARW population (including pregnant females) typically departs the feeding grounds in the North Atlantic, moves south along the migratory corridor BIA, including through the LIA, to calving grounds off Georgia and Florida. This movement is followed by a northward migration (primarily mothers with young calves) into northern feeding areas in March and April (LaBrecque *et al.,* 2015; Van Parijs, 2015). Recent research indicates our understanding of their movement patterns remains incomplete and not all of the population undergoes a consistent annual migration (Davis *et al.,* 2017; Gowan *et al.,* 2019; Krzystan *et al.,* 2018). Non-calving females may remain in the feeding grounds during the winter in the years preceding and following the

birth of a calf to increase their energy stores (Gowen *et al.,* 2019). NARWs may migrate through the LIA to access more northern feeding grounds or southern calving grounds.

NARWs may occur year-round in SNE, near Martha's Vineyard and Nantucket Shoals as well as throughout the Massachusetts and Rhode Island/Massachusetts Wind Energy Areas (MA and RI/MA WEAs) (Quintan-Rizzo *et al.,* 2021; O'Brien *et al.,* 2023; Van Parijs *et al.,* 2023). Kraus *et al.* (2016) found acoustic detections in SNE to peak during the winter and early spring (January through March). Visual surveys (Quintana-Rizzo *et al.,* 2021) have also confirmed the abundance of NARWs in SNE to be the highest during the winter and spring (January through May), although peaks in acoustic detections may vary seasonally across years (Quintana-Rizzo *et al.,* 2021; Estabrook *et al.,* 2022). Distribution throughout SNE may vary seasonally with NARW occurrence being closest to the LIA during the spring (Quintana-Rizzo *et al.,* 2021). Van Parijs *et al.* (2023) monitored acoustic detections of baleen whales throughout SNE and detected NARWs near the LIA from January through May. Acoustic detections began to increase near the LIA in November and further increased into December (Van Parijs *et al.,* 2023).

An 8-year analysis of NARW sightings within SNE showed that the NARW distribution has been shifting (Quintana-Rizzo *et al.,* 2021). NARWs feed primarily on the copepod, *Calanus finmarchicus,* a species whose availability and distribution has changed both spatially and temporally over the last decade due to an oceanographic regime shift that has been ultimately linked to climate change (Meyer-Gutbrod *et al.,* 2021; Record *et al.,* 2019; Sorochan *et al.,* 2019). This distribution change in prey availability has led to shifts in NARW habitat-use patterns over the same time period (Davis *et al.,* 2020; Meyer-Gutbrod *et al.,* 2022; Quintano-Rizzo *et al.,* 2021; O'Brien *et al.,* 2022; Pendleton *et al.,* 2022; Van Parijs *et al.,* 2023), with reduced use of foraging habitats in the Great South Channel and Bay of Fundy and increased use of habitats within Cape Cod Bay and a region south of Martha's Vineyard and Nantucket Islands (Stone *et al.,* 2017; Mayo *et al.,* 2018; Ganley *et al.,* 2019; Record *et al.,* 2019; Meyer-Gutbrod *et al.,* 2021; Van Parijs *et al.,* 2023). Pendleton *et al.* (2022) observed shifts in the timing of NARW peak habitat use in Cape Cod Bay during the spring, likely in response to changing seasonal conditions, and characterized SNE as a ''waiting room'' for NARWs in the spring, providing sufficient, although sub-optimal, prey choices while the NARWs wait for foraging conditions in Cape Cod Bay (and other primary foraging grounds such as the Great South Channel) to optimize as seasonal primary and secondary production progresses.

While Nantucket Shoals is not designated as critical NARW habitat, its importance as a foraging habitat is well established (Leiter *et al.,* 2017; Quintana-Rizzo *et al.,* 2021; Estabrook *et al.,* 2022; O'Brien *et al.,* 2022). Nantucket Shoals' unique oceanographic and bathymetric features, including a persistent tidal front, help sustain year-round elevated phytoplankton biomass, and aggregate zooplankton prey for NARWs (Quintana-Rizzo *et al.,* 2021). SNE serves as a foraging habitat throughout the year, although not to the extent provided seasonally in more well-understood feeding habitats like Cape Cod Bay in late spring, the Great South Channel, and the Gulf of St. Lawrence (O'Brien *et al.,* 2022). A BIA for foraging (LaBrecque *et al.,* 2015) within Cape Cod Bay is approximately 71 km (44.1 mi) north of the LIA, while critical habitat northeast of Martha's Vineyard and Nantucket Island is within 56 km (34.8 mi). SNE also represents socializing habitat for NARWs as Leiter *et al.* (2017) documented surface active groups (SAGs), indicative of socializing behavior, year-round in SNE.

Observations of NARW transitions in habitat use, variability in seasonal presence in identified core habitats, and utilization of habitat outside of previously focused survey effort prompted the formation of a NMFS' Expert Working Group, which identified current data collection efforts, data gaps, and provided recommendations for future survey and research efforts (Oleson *et al.,* 2020). In addition, extensive data gaps that were highlighted in a recent report by the National Academy of Sciences (NAS, 2023) have prevented development of a thorough understanding of NARW foraging ecology in the Nantucket Shoals region. However, it is clear that the habitat was historically valuable to the species, given that the whaling industry capitalized on consistent NARW occurrence there, and has again become increasingly so over the last decade.

Since 2017, 125 dead, seriously injured, or sublethally injured or ill NARWs along the United States and Canadian coasts have been documented, necessitating a UME declaration in 2017 and subsequent investigation. The leading category for the cause of death for this ongoing UME is ''human interaction,'' specifically from entanglements or vessel strikes. As of April 9, 2024, there have been 39 confirmed mortalities, 1 pending mortality (dead, stranded, or floaters), and 34 seriously injured free-swimming whales for a total of 73 whales. Beginning on October 14, 2022, the UME also considers animals with sublethal injury or illness bringing the total number of whales in the UME to 125. Approximately 42 percent of the population is known to be in reduced health (Hamilton *et al.,* 2021) likely contributing to smaller body sizes at maturation, making them more susceptible to threats and reducing fecundity (Moore *et al.,* 2021; Reed *et al.,* 2022; Stewart *et al.,* 2022; Pirotta *et al.,* 2024). Pirotta *et al.* (2024) found an association between the decreased mean length of female NARWs and reduced calving probability. More information about the NARW UME is available online at *https://www.fisheries.noaa.gov/national/marine-life-distress/2017-2024-north-atlantic-right-whale-unusual-mortality-event.*

On August 1, 2022, NMFS announced proposed changes to the existing NARW vessel speed regulations to further reduce the likelihood of mortalities and serious injuries to endangered right whales from vessel collisions, which are a leading cause of the species' decline and a primary factor in the ongoing Unusual Mortality Event (87 FR 46921, August 1, 2022). Should a final vessel speed rule be issued and become effective during the effective period of this IHA (or any other MMPA incidental take authorization), the authorization holder would be required to comply with any and all applicable requirements contained within the final rule. Specifically, where measures in any final vessel speed rule are more protective or restrictive than those in this or any other MMPA authorization, authorization holders would be required to comply with the requirements of the rule. Alternatively, where measures in this or any other MMPA authorization are more restrictive or protective than those in any final vessel speed rule, the measures in the MMPA authorization would remain in place. These changes would become effective immediately upon the effective date of any final vessel speed rule and would not require any further action on NMFS's part.

Humpback Whale

Humpback whales were listed as endangered under the Endangered Species Conservation Act (ESCA) in June 1970. In 1973, the ESA replaced the ESCA, and humpbacks continued to

be listed as endangered. On September 8, 2016, NMFS divided the once single species into 14 distinct population segments (DPS), removed the species-level listing, and, in its place, listed four DPSs as endangered and one DPS as threatened (81 FR 62259, September 8, 2016). The remaining nine DPSs were not listed. The West Indies DPS, which is not listed under the ESA, is the only DPS of humpback whales that is expected to occur in the LIA. Bettridge *et al.* (2015) estimated the size of the West Indies DPS population at 12,312 (95 percent confidence interval 8,688–15,954) whales in 2004–2005, which is consistent with previous population estimates of approximately 10,000–11,000 whales (Stevick *et al.,* 2003; Smith *et al.,* 1999) and the increasing trend for the West Indies DPS (Bettridge *et al.,* 2015).

In New England waters, feeding is the principal activity of humpback whales, and their distribution in this region has been largely correlated to abundance of prey species, although behavior and bathymetry are factors influencing foraging strategy (Payne *et al.,* 1986, 1990). Humpback whales are frequently piscivorous when in New England waters, feeding on herring (*Clupea harengus*), sand lance (*Ammodytes* spp.), and other small fishes, as well as euphausiids in the northern Gulf of Maine (Paquet *et al.,* 1997). During winter, the majority of humpback whales from North Atlantic feeding areas (including the Gulf of Maine) mate and calve in the West Indies, where spatial and genetic mixing among feeding groups occurs, though significant numbers of animals are found in mid- and high-latitude regions at this time and some individuals have been sighted repeatedly within the same winter season, indicating that not all humpback whales migrate south every winter (Hayes *et al.,* 2018).

Kraus *et al.* (2016) conducted aerial surveys from 2011–2015 in SNE and observed humpback whales during all seasons, yet humpback whales were observed most often during the spring and summer. The greatest number of sightings occurred during the month of April (*n*=33) (Kraus *et al.,* 2016). Calves, feeding behavior, and courtship behavior were observed as well. More recent studies (O'Brien *et al.,* 2020, 2021, 2022, 2023) confirm that humpback whales peak in abundance in the LIA during spring and summer, with the majority of sightings year-round occurring in the eastern portion of the MA and RI/MA WEAs and near the Nantucket Shoals area (O'Brien *et al.,* 2020). O'Brien *et al.* (2022) identified seasonal distribution patterns of humpback whales throughout SNE with more concentrated sightings near Nantucket Shoals in the fall and sightings being distributed more evenly across the MA and RI/MA WEAs during spring and summer. As observed during the 2011–2015 surveys, O'Brien *et al.* (2023) also observed feeding behavior and mother/calf pairs throughout the spring and summer. Van Parijs *et al.* (2023) detected humpback whales near the LIA mainly from November through June. During the Vineyard Wind 2023 construction campaign, visual and acoustic detections of humpback whales occurred mainly from June through October, with the greatest detections occuring in October (Vineyard Wind, 2023).

The LIA does not overlap with any BIAs or other important areas for the humpback whales. A humpback whale feeding BIA extends throughout the Gulf of Maine, Stellwagen Bank, and Great South Channel from May through December, annually (LaBrecque *et al.,* 2015). This BIA is located approximately 73 km (45.5 mi) northeast of the Lease Area and would not likely be impacted by project activities.

Since January 2016, elevated humpback whale mortalities along the Atlantic coast from Maine to Florida led to the declaration of a UME in April 2017. As of April 9, 2024, 218 humpback whales have stranded as part of this UME. Partial or full necropsy examinations have been conducted on approximately 90 of the known cases. Of the whales examined, about 40 percent had evidence of human interaction, either ship strike or entanglement. While a portion of the whales have shown evidence of pre-mortem vessel strike, this finding is not consistent across all whales examined and more research is needed. Since January 1, 2023, 43 humpbacks have stranded along the east coast of the United States (7 of these whales have stranded off Massachusetts). These whales may have been following their prey (small fish) which were reportedly close to shore this past winter. These prey also attract fish that are targeted by recreational and commercial fishermen, which increases the number of boats in these areas. More information is available at *https://www.fisheries.noaa.gov/national/marine-life-distress/active-and-closed-unusual-mortality-events.*

Fin Whale

Fin whales frequently occur in the waters of the U.S. Atlantic Exclusive Economic Zone (EEZ), principally from Cape Hatteras, North Carolina northward and are distributed in both continental shelf and deep-water habitats (Hayes *et al.,* 2023). Although fin whales are present north of the 35-degree latitude north region in every season and are broadly distributed throughout the western North Atlantic for most of the year, densities vary seasonally (Edwards *et al.,* 2015; Hayes *et al.,* 2023). Fin whales typically feed in the Gulf of Maine and the waters surrounding New England, but their mating and calving (and general wintering) areas are largely unknown (Hain *et al.,* 1992; Hayes *et al.,* 2023). Acoustic detections of fin whale singers augment and confirm these visual sighting conclusions for males. Recordings from Massachusetts Bay, New York Bight, and deep-ocean areas have detected some level of fin whale singing from September through June (Watkins *et al.,* 1987; Clark and Gagnon, 2002; Morano *et al.,* 2012). These acoustic observations from both coastal and deep-ocean regions support the conclusion that male fin whales are broadly distributed throughout the western North Atlantic for most of the year (Hayes *et al.,* 2022).

New England waters represent a major feeding ground for fin whales, and fin whale feeding BIAs occur offshore of Montauk Point, New York, from March to October (2,933 km^2) (Hain *et al.,* 1992; LaBrecque *et al.,* 2015) and year-round in the southern Gulf of Maine (18,015 km^2). Aerial surveys conducted from 2011–2015 in SNE documented fin whale occurrence in every season, with the greatest numbers of sightings during the spring (*n*=35) and summer (*n*=49) months (Kraus *et al.,* 2016). Fin whale distribution varied seasonally, with fin whales occurring in the southern regions of the MA and RI/MA WEAs during spring and closer to northern regions of the WEAs during summer (Kraus *et al.,* 2016). More recent surveys have documented fin whales throughout winter, spring, and summer (O'Brien *et al.,* 2020, 2021, 2022, 2023) with the greatest abundance occurring during the summer and clustered in the western portion of the WEAs (O'Brien *et al.,* 2023). Acoustic detection of fin whales in SNE indicate fin whale presence in the area from August through April and, sporadically, from May through July (Parijs *et al.,* 2023). During the 2023 construction campaign, Vineyard Wind detected fin whales from June through December (with the exception of August), with the most detections occurring in October (Vineyard Wind, 2023). Based upon observations of feeding behavior and the close proximity of the Lease Area to the

feeding BIAs (8.0 km (5.0 mi) and 76.4 km (47.5 mi) to the Montauk Point and southern Gulf of Maine BIAs, respectively) fin whales may use the LIA for foraging as well as migrating.

Minke Whale

Minke whales are common and widely distributed throughout the U.S. Atlantic EEZ (Cetacean and Turtle Assessment Program (CETAP), 1982; Hayes *et al.,* 2022), although their distribution has a strong seasonal component. Individuals have often been detected acoustically in shelf waters from spring to fall and more often detected in deeper offshore waters from winter to spring (Risch *et al.,* 2013). Minke whales are abundant in New England waters from May through September (Pittman *et al.,* 2006; Waring *et al.,* 2014), yet largely absent from these areas during the winter, suggesting the possible existence of a migratory corridor (LaBrecque *et al.,* 2015). A migratory route for minke whales transiting between northern feeding grounds and southern breeding areas may exist to the east of the LIA, as minke whales may track warmer waters along the continental shelf while migrating (Risch *et al.,* 2014). Risch *et al.* (2014) suggests the presence of a minke whale breeding ground offshore of the southeastern US during the winter.

There are two minke whale feeding BIAs identified in the southern and southwestern section of the Gulf of Maine, including Georges Bank, the Great South Channel, Cape Cod Bay and Massachusetts Bay, Stellwagen Bank, Cape Anne, and Jeffreys Ledge from March through November, annually (LaBrecque *et al.,* 2015). The nearest BIA is approximately 44.0 km (27.3 mi) northeast of the Lease Area. Due to the close proximity of the BIA, minke whale feeding may occur within the LIA.

Although minke whales are sighted in every season in SNE (O'Brien *et al.,* 2022), minke whale use of the area is highest during the months of March through September (Kraus *et al.,* 2016; O'Brien *et al.,* 2023). Large feeding aggregations of humpback, fin, and minke whales have been observed during the summer (O'Brien *et al.,* 2023), suggesting the LIA may serve as a supplemental feeding grounds for these species. Acoustic detections data support visual sighting data, and indicate minke whale presence in SNE from March through June and August through late November/early December and, sporadically, in January (Parijs *et al.,* 2023). During the 2023 construction campaign, Vineyard Wind detected minke whales from June through August (Vineyard Wind, 2023).

From 2017 through 2024, elevated minke whale mortalities detected along the Atlantic coast from Maine through South Carolina resulted in the declaration of a UME in 2018. As of April 9, 2024, a total of 166 minke whale mortalities have occurred during this UME. Full or partial necropsy examinations were conducted on more than 60 percent of the whales. Preliminary findings in several of the whales have shown evidence of human interactions or infectious disease, but these findings are not consistent across all of the minke whales examined, so more research is needed. More information is available at *https://www.fisheries.noaa.gov/national/marine-life-distress/2017-2022-minke-whale-unusual-mortality-event-along-atlantic-coast.*

Sei Whale

The Nova Scotia stock of sei whales can be found in deeper waters of the continental shelf edge of the eastern United States and northeastward to south of Newfoundland (Mitchell, 1975; Hain *et al.,* 1985; Hayes *et al.,* 2022). During spring and summer, the stock is mainly concentrated in northern feeding areas, including the Scotian Shelf (Mitchell and Chapman, 1977), the Gulf of Maine, Georges Bank, the Northeast Channel, and south of Nantucket (CETAP, 1982; Kraus *et al.,* 2016; Roberts *et al.,* 2016; Palka *et al.,* 2017; Cholewiak *et al.,* 2018; Hayes *et al.,* 2022). Sei whales have been detected acoustically along the Atlantic Continental Shelf and Slope from south of Cape Hatteras, North Carolina to the Davis Strait, with acoustic occurrence increasing in the mid-Atlantic region since 2010 (Davis *et al.,* 2020). Sei whale migratory movements are not well understood. In June and July, sei whales are believed to migrate north from SNE to feeding areas in eastern Canada, and south in September and October to breeding areas (Mitchell, 1975; CETAP, 1982; Davis *et al.,* 2020). Sei whales generally occur offshore; however, individuals may also move into shallower, more inshore waters (Payne *et al.,* 1990; Halpin *et al.,* 2009; Hayes *et al.,* 2022). A sei whale feeding BIA occurs in New England waters from May through November, approximately 101.4 km (63 mi) east of the LIA (LaBrecque *et al.,* 2015).

Aerial surveys conducted from 2011–2015 in SNE observed sei whales between March and June, with the greatest number of sightings occurring in May (n=8) and June (n=13), and no sightings from July through January (Kraus *et al.,* 2016). Acoustic detections confirm peak occurrences of sei whales in SNE from early spring and through mid-summer (March through July) (Davis *et al.,* 2020). In addition, Van Parijs *et al.* (2023) acoustically detected sei whales near the LIA during the months of February and August. However, Davis *et al.* (2020) acoustically detected sei whales in SNE year-round, suggesting this area is an important habitat for sei whales. As sei whales are known to target the prey such as copepods (*C. finmarchicus*), which are abundant in SNE waters (Quintana-Rizzo *et al.,* 2018), SNE likely represents a supplemental foraging area for sei whales as well.

Phocid Seals

Harbor and gray seals have experienced multiple UMEs since 2018. From June through July 2022, elevated numbers of harbor seal and gray seal mortalities occurred across the southern and central coast of Maine. This event was declared a UME. During the event, 181 seals stranded. Based upon necropsy, histopathology, and diagnostic findings, this UME was attributed to spillover events of the highly pathogenic avian influenza from infected birds to harbor and gray seals. While the UME did not occur in the LIA, the populations that were affected by the UME are the same as those potentially affected by the project. This UME has recently been closed. Information on this UME is available online at *https://www.fisheries.noaa.gov/2022-2023-pinniped-unusual-mortality-event-along-maine-coast.*

The above event was preceded by a different UME, occurring from 2018 to 2020 (closure of the 2018–2020 UME is pending). Beginning in July 2018, elevated numbers of harbor seal and gray seal mortalities occurred across Maine, New Hampshire, and Massachusetts. Additionally, stranded seals have shown clinical signs as far south as Virginia, although not in elevated numbers, therefore the UME investigation encompassed all seal strandings from Maine to Virginia. A total of 3,152 reported strandings (of all species) occurred from July 1, 2018, through March 13, 2020. Full or partial necropsy examinations have been conducted on some of the seals and samples have been collected for testing. Based on tests conducted thus far, the main pathogen found in the seals is phocine distemper virus. NMFS is performing additional testing to identify any other factors that may be involved

in this UME, which is pending closure. Information on this UME is available online at: *https://www.fisheries.noaa.gov/new-england-mid-atlantic/marine-life-distress/2018-2020-pinniped-unusual-mortality-event-along.*

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995; Wartzok and Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007, 2019) recommended that marine mammals be divided into hearing groups based on directly measured (behavioral or auditory evoked potential techniques) or estimated hearing ranges (behavioral response data, anatomical modeling, *etc.*). Note that no direct measurements of hearing ability have been successfully completed for mysticetes (*i.e.,* low-frequency cetaceans). Subsequently, NMFS (2018) described generalized hearing ranges for these marine mammal hearing groups. Generalized hearing ranges were chosen based on the approximately 65-decibel (dB) threshold from the normalized composite audiograms, with the exception for lower limits for low-frequency cetaceans where the lower bound was deemed to be biologically implausible and the lower bound from Southall *et al.* (2007) retained. Marine mammal hearing groups and their associated hearing ranges are provided in table 4.

TABLE 4—MARINE MAMMAL HEARING GROUPS

[NMFS, 2018]

Hearing group	Generalized hearing range *
Low-frequency (LF) cetaceans (baleen whales)	7 Hz to 35 kHz.
Mid-frequency (MF) cetaceans (dolphins, toothed whales, beaked whales, bottlenose whales)	150 Hz to 160 kHz.
High-frequency (HF) cetaceans (true porpoises, *Kogia,* river dolphins, *Cephalorhynchid, Lagenorhynchus cruciger* & *L. australis*).	275 Hz to 160 kHz.
Phocid pinnipeds (PW) (underwater) (true seals)	50 Hz to 86 kHz.
Otariid pinnipeds (OW) (underwater) (sea lions and fur seals)	60 Hz to 39 kHz.

* Represents the generalized hearing range for the entire group as a composite (*i.e.,* all species within the group), where individual species' hearing ranges are typically not as broad. Generalized hearing range chosen based on the ~65-dB threshold from normalized composite audiogram, with the exception for lower limits for LF cetaceans (Southall *et al.,* 2007) and PW pinniped (approximation).

The pinniped functional hearing group was modified from Southall *et al.* (2007) on the basis of data indicating that phocid species have consistently demonstrated an extended frequency range of hearing compared to otariids, especially in the higher frequency range (Hemilä *et al.,* 2006; Kastelein *et al.,* 2009; Reichmuth *et al.,* 2013).

For more detail concerning these groups and associated frequency ranges, please see NMFS (2018) for a review of available information.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

This section provides a discussion of the ways in which components of the specified activity may impact marine mammals and their habitat. The Estimated Take of Marine Mammals section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take of Marine Mammals section, and the Proposed Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and whether those impacts are reasonably expected to, or reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Vineyard Wind has requested, and NMFS proposes to authorize, the take of marine mammals incidental to the construction activities associated with the LIA. In their application, Vineyard Wind presented their analyses of potential impacts to marine mammals from the acoustic sources. NMFS carefully reviewed the information provided by Vineyard Wind, as well as independently reviewed applicable scientific research and literature and other information to evaluate the potential effects of the Project's activities on marine mammals.

The proposed activities would result in the construction and placement of 15 permanent foundations to support WTGs. There are a variety of types and degrees of effects to marine mammals, prey species, and habitat that could occur as a result of the Project. Below we provide a brief description of the types of sound sources that would be generated by the project, the general impacts from these types of activities, and an analysis of the anticipated impacts on marine mammals from the project, with consideration of the proposed mitigation measures.

Description of Sound Sources

This section contains a brief technical background on sound, on the characteristics of certain sound types, and on metrics used in this proposal inasmuch as the information is relevant to the specified activity and to a discussion of the potential effects of the specified activity on marine mammals found later in this document. For general information on sound and its interaction with the marine environment, please see: Au and Hastings, 2008; Richardson *et al.,* 1995; Urick, 1983; as well as the Discovery of Sound in the Sea (DOSITS) website at *https://www.dosits.org.* Sound is a vibration that travels as an acoustic wave through a medium such as a gas, liquid, or solid. Sound waves alternately compress and decompress the medium as the wave travels. These compressions and decompressions are detected as changes in pressure by aquatic life and man-made sound receptors such as hydrophones (underwater microphones). In water, sound waves radiate in a manner similar to ripples on the surface of a pond and may be either directed in a beam (narrow beam or directional sources) or sound beams may radiate in all directions (omnidirectional sources).

Sound travels in water more efficiently than almost any other form of energy, making the use of acoustics ideal for the aquatic environment and its inhabitants. In seawater, sound

travels at roughly 1,500 meters per second (m/s). In-air, sound waves travel much more slowly, at about 340 m/s. However, the speed of sound can vary by a small amount based on characteristics of the transmission medium, such as water temperature and salinity. Sound travels in water more efficiently than almost any other form of energy, making the use of acoustics ideal for the aquatic environment and its inhabitants. In seawater, sound travels at roughly 1,500 m/s. In-air, sound waves travel much more slowly, at about 340 m/s. However, the speed of sound can vary by a small amount based on characteristics of the transmission medium, such as water temperature and salinity.

The basic components of a sound wave are frequency, wavelength, velocity, and amplitude. Frequency is the number of pressure waves that pass by a reference point per unit of time and is measured in hertz (Hz) or cycles per second. Wavelength is the distance between two peaks or corresponding points of a sound wave (length of one cycle). Higher frequency sounds have shorter wavelengths than lower frequency sounds, and typically attenuate (decrease) more rapidly, except in certain cases in shallower water.

The intensity (or amplitude) of sounds is measured in dB, which is a relative unit of measurement that is used to express the ratio of one value of a power or field to another. Decibels are measured on a logarithmic scale, so a small change in dB corresponds to large changes in sound pressure. For example, a 10-dB increase is a ten-fold increase in acoustic power. A 20-dB increase is then a hundred-fold increase in power and a 30-dB increase is a thousand-fold increase in power. However, a ten-fold increase in acoustic power does not mean that the sound is perceived as being 10 times louder. Decibels are a relative unit comparing two pressures; therefore, a reference pressure must always be indicated. For underwater sound, this is 1 microPascal (µPa). For in-air sound, the reference pressure is 20 microPascal (µPa). The amplitude of a sound can be presented in various ways; however, NMFS typically considers three metrics. In this proposed IHA, all decibel levels are referenced to (re) 1µPa.

Sound exposure level (SEL) represents the total energy in a stated frequency band over a stated time interval or event and considers both amplitude and duration of exposure (represented as dB re 1 μPa^2 -s). SEL is a cumulative metric; it can be accumulated over a single pulse (for pile driving this is often referred to as single-strike SEL; SEL_{ss}) or calculated over periods containing multiple pulses (SEL_{cum}). Cumulative SEL represents the total energy accumulated by a receiver over a defined time window or during an event. The SEL metric is useful because it allows sound exposures of different durations to be related to one another in terms of total acoustic energy. The duration of a sound event and the number of pulses, however, should be specified as there is no accepted standard duration over which the summation of energy is measured.

Root mean square (rms) is the quadratic mean sound pressure over the duration of an impulse. Root mean square is calculated by squaring all of the sound amplitudes, averaging the squares, and then taking the square root of the average (Urick, 1983). Root mean square accounts for both positive and negative values; squaring the pressures makes all values positive so that they may be accounted for in the summation of pressure levels (Hastings and Popper, 2005). This measurement is often used in the context of discussing behavioral effects, in part because behavioral effects, which often result from auditory cues, may be better expressed through averaged units than by peak pressures.

Peak sound pressure (also referred to as zero-to-peak sound pressure or 0-pk) is the maximum instantaneous sound pressure measurable in the water at a specified distance from the source and is represented in the same units as the rms sound pressure. Along with SEL, this metric is used in evaluating the potential for permanent threshold shift (PTS) and temporary threshold shift (TTS).

Sounds can be either impulsive or non-impulsive. The distinction between these two sound types is important because they have differing potential to cause physical effects, particularly with regard to hearing (*e.g.,* Ward, 1997 in Southall *et al.,* 2007). Please see NMFS *et al.* (2018) and Southall *et al.* (2007, 2019a) for an in-depth discussion of these concepts. Impulsive sound sources (*e.g.,* airguns, explosions, gunshots, sonic booms, impact pile driving) produce signals that are brief (typically considered to be less than 1 second), broadband, atonal transients (American National Standards Institute (ANSI), 1986; ANSI, 2005; Harris, 1998; National Institute for Occupational Safety and Health (NIOSH), 1998; International Organization for Standardization (ISO), 2003) and occur either as isolated events or repeated in some succession. Impulsive sounds are all characterized by a relatively rapid rise from ambient pressure to a maximal pressure value followed by a rapid decay period that may include a period of diminishing, oscillating maximal and minimal pressures, and generally have an increased capacity to induce physical injury as compared with sounds that lack these features. Impulsive sounds are typically intermittent in nature.

Non-impulsive sounds can be tonal, narrowband, or broadband, brief, or prolonged, and may be either continuous or intermittent (ANSI, 1995; NIOSH, 1998). Some of these non-impulsive sounds can be transient signals of short duration but without the essential properties of pulses (*e.g.,* rapid rise time). Examples of non-impulsive sounds include those produced by vessels, aircraft, machinery operations such as drilling or dredging, vibratory pile driving, and active sonar systems. Sounds are also characterized by their temporal component. Continuous sounds are those whose sound pressure level remains above that of the ambient sound with negligibly small fluctuations in level (NIOSH, 1998; ANSI, 2005) while intermittent sounds are defined as sounds with interrupted levels of low or no sound (NIOSH, 1998). NMFS identifies Level B harassment thresholds based on if a sound is continuous or intermittent.

Even in the absence of sound from the specified activity, the underwater environment is typically loud due to ambient sound, which is defined as environmental background sound levels lacking a single source or point (Richardson *et al.,* 1995). The sound level of a region is defined by the total acoustical energy being generated by known and unknown sources. These sources may include physical (*e.g.,* wind and waves, earthquakes, ice, atmospheric sound), biological (*e.g.,* sounds produced by marine mammals, fish, and invertebrates), and anthropogenic (*e.g.,* vessels, dredging, construction) sound. A number of sources contribute to ambient sound, including wind and waves, which are a main source of naturally occurring ambient sound for frequencies between 200 Hz and 50 kHz (International Council for the Exploration of the Sea (ICES), 1995). In general, ambient sound levels tend to increase with increasing wind speed and wave height. Precipitation can become an important component of total sound at frequencies above 500 Hz and possibly down to 100 Hz during quiet times. Marine mammals can contribute significantly to ambient sound levels as can some fish and snapping shrimp. The frequency band for biological contributions is from approximately 12 Hz to over 100 kHz. Sources of ambient sound related to

human activity include transportation (surface vessels), dredging and construction, oil and gas drilling and production, geophysical surveys, sonar, and explosions. Vessel noise typically dominates the total ambient sound for frequencies between 20 and 300 Hz. In general, the frequencies of anthropogenic sounds are below 1 kHz, and if higher frequency sound levels are created, they attenuate rapidly.

The sum of the various natural and anthropogenic sound sources that comprise ambient sound at any given location and time depends not only on the source levels (as determined by current weather conditions and levels of biological and human activity) but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor and is frequency-dependent. As a result of the dependence on a large number of varying factors, ambient sound levels can be expected to vary widely over both coarse and fine spatial and temporal scales. Sound levels at a given frequency and location can vary by 10–20 dB from day to day (Richardson *et al.,* 1995). The result is that, depending on the source type and its intensity, sound from a specified activity may be a negligible addition to the local environment or could form a distinctive signal that may affect marine mammals. Human-generated sound is a significant contributor to the acoustic environment in the project location.

Potential Effects of Underwater Sound on Marine Mammals

Anthropogenic sounds cover a broad range of frequencies and sound levels and can have a range of highly variable impacts on marine life from none or minor to potentially severe responses depending on received levels, duration of exposure, behavioral context, and various other factors. Broadly, underwater sound from active acoustic sources, such as those in the Project, can potentially result in one or more of the following: temporary or permanent hearing impairment, non-auditory physical or physiological effects, behavioral disturbance, stress, and masking (Richardson *et al.,* 1995; Gordon *et al.,* 2003; Nowacek *et al.,* 2007; Southall *et al.,* 2007; Götz *et al.,* 2009). Non-auditory physiological effects or injuries that theoretically might occur in marine mammals exposed to high level underwater sound or as a secondary effect of extreme behavioral reactions (*e.g.,* change in dive profile as a result of an avoidance reaction) caused by exposure to sound include neurological effects, bubble formation, resonance effects, and other types of organ or tissue damage (Cox *et al.,* 2006; Southall *et al.,* 2007; Zimmer and Tyack, 2007; Tal *et al.,* 2015).

In general, the degree of effect of an acoustic exposure is intrinsically related to the signal characteristics, received level, distance from the source, and duration of the sound exposure, in addition to the contextual factors of the receiver (*e.g.,* behavioral state at time of exposure, age class, *etc.*). In general, sudden, high-level sounds can cause hearing loss as can longer exposures to lower-level sounds. Moreover, any temporary or permanent loss of hearing will occur almost exclusively for noise within an animal's hearing range. We describe below the specific manifestations of acoustic effects that may occur based on the activities proposed by Vineyard Wind. Richardson *et al.* (1995) described zones of increasing intensity of effect that might be expected to occur in relation to distance from a source and assuming that the signal is within an animal's hearing range. First (at the greatest distance) is the area within which the acoustic signal would be audible (potentially perceived) to the animal but not strong enough to elicit any overt behavioral or physiological response. The next zone (closer to the receiving animal) corresponds with the area where the signal is audible to the animal and of sufficient intensity to elicit behavioral or physiological responsiveness. The third is a zone within which, for signals of high intensity, the received level is sufficient to potentially cause discomfort or tissue damage to auditory or other systems. Overlaying these zones to a certain extent is the area within which masking (*i.e.,* when a sound interferes with or masks the ability of an animal to detect a signal of interest that is above the absolute hearing threshold) may occur; the masking zone may be highly variable in size.

Below, we provide additional detail regarding potential impacts on marine mammals and their habitat from noise in general, starting with hearing impairment, as well as from the specific activities Vineyard Wind plans to conduct, to the degree it is available (noting that there is limited information regarding the impacts of offshore wind construction on marine mammals).

Hearing Threshold Shift

Marine mammals exposed to high-intensity sound or to lower-intensity sound for prolonged periods can experience hearing threshold shift (TS), which NMFS defines as a change, usually an increase, in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level expressed in decibels (NMFS, 2018). Threshold shifts can be permanent, in which case there is an irreversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range or temporary, in which there is reversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range and the animal's hearing threshold would fully recover over time (Southall *et al.,* 2019a). Repeated sound exposure that leads to TTS could cause PTS.

When PTS occurs, there can be physical damage to the sound receptors in the ear (*i.e.,* tissue damage) whereas TTS represents primarily tissue fatigue and is reversible (Henderson *et al.,* 2008). In addition, other investigators have suggested that TTS is within the normal bounds of physiological variability and tolerance and does not represent physical injury (*e.g.,* Ward, 1997; Southall *et al.,* 2019a). Therefore, NMFS does not consider TTS to constitute auditory injury.

Relationships between TTS and PTS thresholds have not been studied in marine mammals, and there is no PTS data for cetaceans. However, such relationships are assumed to be similar to those in humans and other terrestrial mammals. Noise exposure can result in either a permanent shift in hearing thresholds from baseline (a 40–dB threshold shift approximates a PTS onset; *e.g.,* Kryter *et al.,* 1966; Miller, 1974; Henderson *et al.,* 2008) or a temporary, recoverable shift in hearing that returns to baseline (a 6–dB threshold shift approximates a TTS onset; *e.g.,* Southall *et al.,* 2019a). Based on data from terrestrial mammals, a precautionary assumption is that the PTS thresholds, expressed in the unweighted peak sound pressure level metric (PK), for impulsive sounds (such as impact pile driving pulses) are at least 6 dB higher than the TTS thresholds and the weighted PTS cumulative sound exposure level thresholds are 15 (impulsive sound) to 20 (non-impulsive sounds) dB higher than TTS cumulative sound exposure level thresholds (Southall *et al.,* 2019a). Given the higher level of sound or longer exposure duration necessary to cause PTS as compared with TTS, PTS is less likely to occur as a result of these activities; however, it is possible, and a small amount has been proposed for authorization for several species.

TTS is the mildest form of hearing impairment that can occur during

exposure to sound, with a TTS of 6 dB considered the minimum threshold shift clearly larger than any day-to-day or session-to-session variation in a subject's normal hearing ability (Schlundt *et al.,* 2000; Finneran *et al.,* 2000; Finneran *et al.,* 2002). While experiencing TTS, the hearing threshold rises, and a sound must be at a higher level in order to be heard. In terrestrial and marine mammals, TTS can last from minutes or hours to days (in cases of strong TTS). In many cases, hearing sensitivity recovers rapidly after exposure to the sound ends. There is data on sound levels and durations necessary to elicit mild TTS for marine mammals, but recovery is complicated to predict and dependent on multiple factors.

Marine mammal hearing plays a critical role in communication with conspecifics, and interpretation of environmental cues for purposes such as predator avoidance and prey capture. Depending on the degree (elevation of threshold in dB), duration (*i.e.,* recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious depending on the degree of interference of marine mammals hearing. For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that occurs during a time where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical (*e.g.,* for successful mother/calf interactions, consistent detection of prey) could have more serious impacts.

Currently, TTS data only exist for four species of cetaceans (bottlenose dolphin, beluga whale (*Delphinapterus leucas*), harbor porpoise, and Yangtze finless porpoise (*Neophocaena asiaeorientalis*)) and six species of pinnipeds (northern elephant seal (*Mirounga angustirostris*), harbor seal, ring seal, spotted seal, bearded seal, and California sea lion (*Zalophus californianus*)) that were exposed to a limited number of sound sources (*i.e.,* mostly tones and octave-band noise with limited number of exposure to impulsive sources such as seismic airguns or impact pile driving) in laboratory settings (Southall *et al.,* 2019a). There is currently no data available on noise-induced hearing loss for mysticetes. For summaries of data on TTS or PTS in marine mammals or for further discussion of TTS or PTS onset thresholds, please see Southall *et al.* (2019a) and NMFS (2018).

Recent studies with captive odontocete species (bottlenose dolphin, harbor porpoise, beluga, and false killer whale) have observed increases in hearing threshold levels when individuals received a warning sound prior to exposure to a relatively loud sound (Nachtigall and Supin, 2013, 2015; Nachtigall *et al.,* 2016a–c, 2018; Finneran, 2018). These studies suggest that captive animals have a mechanism to reduce hearing sensitivity prior to impending loud sounds. Hearing change was observed to be frequency dependent and Finneran (2018) suggests hearing attenuation occurs within the cochlea or auditory nerve. Based on these observations on captive odontocetes, the authors suggest that wild animals may have a mechanism to self-mitigate the impacts of noise exposure by dampening their hearing during prolonged exposures of loud sound or if conditioned to anticipate intense sounds (Finneran, 2018; Nachtigall *et al.,* 2018).

Behavioral Effects

Exposure of marine mammals to sound sources can result in, but is not limited to, no response or any of the following observable responses: increased alertness; orientation or attraction to a sound source; vocal modifications; cessation of feeding; cessation of social interaction; alteration of movement or diving behavior; habitat abandonment (temporary or permanent); and in severe cases, panic, flight, stampede, or stranding, potentially resulting in death (Southall *et al.,* 2007). A review of marine mammal responses to anthropogenic sound was first conducted by Richardson (1995). More recent reviews address studies conducted since 1995 and focused on observations where the received sound level of the exposed marine mammal(s) was known or could be estimated (Nowacek *et al.,* 2007; DeRuiter *et al.,* 2013; Ellison *et al.,* 2012; Gomez *et al.,* 2016). Gomez *et al.* (2016) conducted a review of the literature considering the contextual information of exposure in addition to received level and found that higher received levels were not always associated with more severe behavioral responses and vice versa. Southall *et al.* (2021) states that results demonstrate that some individuals of different species display clear yet varied responses, some of which have negative implications while others appear to tolerate high levels and that responses may not be fully predictable with simple acoustic exposure metrics (*e.g.,* received sound level). Rather, the authors state that differences among species and individuals along with contextual aspects of exposure (*e.g.,* behavioral state) appear to affect response probability.

Behavioral responses to sound are highly variable and context-specific. Many different variables can influence an animal's perception of and response to (nature and magnitude) an acoustic event. An animal's prior experience with a sound or sound source affects whether it is less likely (habituation) or more likely (sensitization) to respond to certain sounds in the future (animals can also be innately predisposed to respond to certain sounds in certain ways) (Southall *et al.,* 2019a). Related to the sound itself, the perceived nearness of the sound, bearing of the sound (approaching vs. retreating), the similarity of a sound to biologically relevant sounds in the animal's environment (*i.e.,* calls of predators, prey, or conspecifics), and familiarity of the sound may affect the way an animal responds to the sound (Southall *et al.,* 2007; DeRuiter *et al.,* 2013). Individuals (of different age, gender, reproductive status, *etc.*) among most populations will have variable hearing capabilities, and differing behavioral sensitivities to sounds that will be affected by prior conditioning, experience, and current activities of those individuals. Often, specific acoustic features of the sound and contextual variables (*i.e.,* proximity, duration, or recurrence of the sound or the current behavior that the marine mammal is engaged in or its prior experience), as well as entirely separate factors, such as the physical presence of a nearby vessel, may be more relevant to the animal's response than the received level alone.

Overall, the variability of responses to acoustic stimuli depends on the species receiving the sound, the sound source, and the social, behavioral, or environmental contexts of exposure (*e.g.,* DeRuiter and Doukara, 2012). For example, Goldbogen *et al.* (2013a) demonstrated that individual behavioral state was critically important in determining response of blue whales to sonar, noting that some individuals engaged in deep (greater than 50 m) feeding behavior had greater dive responses than those in shallow feeding or non-feeding conditions. Some blue whales in the Goldbogen *et al.* (2013a) study that were engaged in shallow feeding behavior demonstrated no clear changes in diving or movement even when received levels were high (~160 dB re 1µPa (microPascal)) for exposures to 3–4 kHz sonar signals, while deep feeding and non-feeding whales showed a clear response at exposures at lower

received levels of sonar and pseudorandom noise. Southall *et al.* (2011) found that blue whales had a different response to sonar exposure depending on behavioral state, more pronounced when deep feeding/travel modes than when engaged in surface feeding.

With respect to distance influencing disturbance, DeRuiter *et al.* (2013) examined behavioral responses of Cuvier's beaked whales to mid-frequency sonar and found that whales responded strongly at low received levels (89–127 dB re 1µPa) by ceasing normal fluking and echolocation, swimming rapidly away, and extending both dive duration and subsequent non-foraging intervals when the sound source was 3.4–9.5 km (2.1–5.9 mi) away. Importantly, this study also showed that whales exposed to a similar range of received levels (78–106 dB re 1µPa) from distant sonar exercises (118 km, or 73.3 mi, away) did not elicit such responses, suggesting that context may moderate reactions. Thus, distance from the source is an important variable in influencing the type and degree of behavioral response and this variable is independent of the effect of received levels (*e.g.,* DeRuiter *et al.,* 2013; Dunlop *et al.,* 2017a–b, 2018; Falcone *et al.,* 2017; Southall *et al.,* 2019a).

Ellison *et al.* (2012) outlined an approach to assessing the effects of sound on marine mammals that incorporates contextual-based factors. The authors recommend considering not just the received level of sound, but also the activity the animal is engaged in at the time the sound is received, the nature and novelty of the sound (*i.e.,* is this a new sound from the animal's perspective), and the distance between the sound source and the animal. They submit that this ''exposure context,'' as described, greatly influences the type of behavioral response exhibited by the animal. Forney *et al.* (2017) also point out that an apparent lack of response (*e.g.,* no displacement or avoidance of a sound source) may not necessarily mean there is no cost to the individual or population, as some resources or habitats may be of such high value that animals may choose to stay, even when experiencing stress or hearing loss. Forney *et al.* (2017) recommend considering both the costs of remaining in an area of noise exposure such as TTS, PTS, or masking, which could lead to an increased risk of predation or other threats or a decreased capability to forage, and the costs of displacement, including potential increased risk of vessel strike, increased risks of predation or competition for resources, or decreased habitat suitable for foraging, resting, or socializing. This sort of contextual information is challenging to predict with accuracy for ongoing activities that occur over large spatial and temporal expanses. However, distance is one contextual factor for which data exist to quantitatively inform a take estimate, and the method for predicting Level B harassment in this IHA does consider distance to the source. Other factors are often considered qualitatively in the analysis of the likely consequences of sound exposure where supporting information is available.

Behavioral change, such as disturbance manifesting in lost foraging time, in response to anthropogenic activities is often assumed to indicate a biologically significant effect on a population of concern. However, individuals may be able to compensate for some types and degrees of shifts in behavior, preserving their health and thus their vital rates and population dynamics. For example, New *et al.* (2013) developed a model simulating the complex social, spatial, behavioral, and motivational interactions of coastal bottlenose dolphins in the Moray Firth, Scotland, to assess the biological significance of increased rate of behavioral disruptions caused by vessel traffic. Despite a modeled scenario in which vessel traffic increased from 70 to 470 vessels a year (a six-fold increase in vessel traffic) in response to the construction of a proposed offshore renewables facility, the dolphins' behavioral time budget, spatial distribution, motivations, and social structure remained unchanged. Similarly, two bottlenose dolphin populations in Australia were also modeled over 5 years against a number of disturbances (Reed *et al.,* 2020) and results indicate that habitat/noise disturbance had little overall impact on population abundances in either location, even in the most extreme impact scenarios modeled. Friedlaender *et al.* (2016) provided the first integration of direct measures of prey distribution and density variables incorporated into across-individual analyses of behavior responses of blue whales to sonar and demonstrated a five-fold increase in the ability to quantify variability in blue whale diving behavior. These results illustrate that responses evaluated without such measurements for foraging animals may be misleading, which again illustrates the context-dependent nature of the probability of response.

The following subsections provide examples of behavioral responses that give an idea of the variability in behavioral responses that would be expected given the differential sensitivities of marine mammal species to sound, contextual factors, and the wide range of potential acoustic sources to which a marine mammal may be exposed. Behavioral responses that could occur for a given sound exposure should be determined from the literature that is available for each species, or extrapolated from closely related species when no information exists, along with contextual factors.

Avoidance and Displacement

Avoidance is the displacement of an individual from an area or migration path as a result of the presence of a sound or other stressors and is one of the most obvious manifestations of disturbance in marine mammals (Richardson *et al.,* 1995). For example, gray whales (*Eschrichtius robustus*) and humpback whales are known to change direction—deflecting from customary migratory paths—in order to avoid noise from airgun surveys (Malme *et al.,* 1984; Dunlop *et al.,* 2018). Avoidance is qualitatively different from the flight response but also differs in the magnitude of the response (*i.e.,* directed movement, rate of travel, *etc.*). Avoidance may be short-term with animals returning to the area once the noise has ceased (*e.g.,* Malme *et al.,* 1984; Bowles *et al.,* 1994; Goold, 1996; Stone *et al.,* 2000; Morton and Symonds, 2002; Gailey *et al.,* 2007; Dähne *et al.,* 2013; Russel *et al.,* 2016). Longer-term displacement is possible, however, which may lead to changes in abundance or distribution patterns of the affected species in the affected region if habituation to the presence of the sound does not occur (*e.g.,* Blackwell *et al.,* 2004; Bejder *et al.,* 2006; Teilmann *et al.,* 2006; Forney *et al.,* 2017). Avoidance of marine mammals during the construction of offshore wind facilities (specifically, impact pile driving) has been documented in the literature with some significant variation in the temporal and spatial degree of avoidance and with most studies focused on harbor porpoises as one of the most common marine mammals in European waters (*e.g.,* Tougaard *et al.,* 2009; Dähne *et al.,* 2013; Thompson *et al.,* 2013; Russell *et al.,* 2016; Brandt *et al.,* 2018).

Available information on impacts to marine mammals from pile driving associated with offshore wind is limited to information on harbor porpoises and seals, as the vast majority of this research has occurred at European offshore wind projects where large whales and other odontocete species are uncommon. Harbor porpoises and harbor seals are considered to be

behaviorally sensitive species (*e.g.,* Southall *et al.,* 2007) and the effects of wind farm construction in Europe on these species have been well documented. These species have received particular attention in European waters due to their abundance in the North Sea (Hammond *et al.,* 2002; Nachtsheim *et al.,* 2021). A summary of the literature on documented effects of wind farm construction on harbor porpoise and harbor seals is described below.

Brandt *et al.* (2016) summarized the effects of the construction of eight offshore wind projects within the German North Sea (*i.e.,* Alpha Ventus, BARD Offshore I, Borkum West II, DanTysk, Global Tech I, Meerwind Süd/Ost, Nordsee Ost, and Riffgat) between 2009 and 2013 on harbor porpoises, combining passive acoustic monitoring (PAM) data from 2010 to 2013 and aerial surveys from 2009 to 2013 with data on noise levels associated with pile driving. Results of the analysis revealed significant declines in porpoise detections during pile driving when compared to 25–48 hours before pile driving began, with the magnitude of decline during pile driving clearly decreasing with increasing distances to the construction site. During the majority of projects, significant declines in detections (by at least 20 percent) were found within at least 5–10 km (3.1–6.2 mi) of the pile driving site, with declines at up to 20–30 km (12.4–18.6 mi) of the pile driving site documented in some cases. Similar results demonstrating the long-distance displacement of harbor porpoises (18–25 km; 11.1–15.5 mi) and harbor seals (up to 40 km (24.9 mi)) during impact pile driving have also been observed during the construction at multiple other European wind farms (Tougaard *et al.,* 2009; Bailey *et al.,* 2010; Dähne *et al.,* 2013; Lucke *et al.,* 2012; Haelters *et al.,* 2015).

While harbor porpoises and seals tend to move several kilometers away from wind farm construction activities, the duration of displacement has been documented to be relatively temporary. In two studies at Horns Rev II using impact pile driving, harbor porpoise returned within 1 to 2 days following cessation of pile driving (Tougaard *et al.,* 2009; Brandt *et al.,* 2011). Similar recovery periods have been noted for harbor seals off England during the construction of four wind farms (Brasseur *et al.,* 2012; Hamre *et al.,* 2011; Hastie *et al.,* 2015; Russell *et al.,* 2016). In some cases, an increase in harbor porpoise activity has been documented inside wind farm areas following construction (*e.g.,* Lindeboom *et al.,* 2011). Other studies have noted longer term impacts after impact pile driving. Near Dogger Bank in Germany, harbor porpoises continued to avoid the area for over 2 years after construction began (Gilles *et al.,* 2009). Approximately 10 years after construction of the Nysted wind farm, harbor porpoise abundance had not recovered to the original levels previously seen, although the echolocation activity was noted to have been increasing when compared to the previous monitoring period (Teilmann and Carstensen, 2012). However, overall, there are no indications for a population decline of harbor porpoises in European waters (*e.g.,* Brandt *et al.,* 2016). Notably, where significant differences in displacement and return rates have been identified for these species, the occurrence of secondary project-specific influences such as use of mitigation measures (*e.g.,* bubble curtains, acoustic deterrent devices), or the manner in which species use the habitat in the LIA, are likely the driving factors of this variation.

NMFS notes that the aforementioned European studies involved installing much smaller monopiles than Vineyard Wind proposes to install (Brandt *et al.,* 2016) and, therefore we anticipate noise levels from impact pile driving to be louder. However, we do not anticipate any greater severity of response due to harbor porpoise and harbor seal habitat use off Massachusetts or population-level consequences similar to European findings. In many cases, harbor porpoises and harbor seals are resident to the areas where European wind farms have been constructed. However, off Massachusetts, harbor porpoises and seals are more transient, and a very small percentage of the harbor seal population are only seasonally present with no rookeries established (Hayes *et al.,* 2022). In summary, we anticipate that harbor porpoise and harbor seals will likely respond to pile driving by moving several kilometers away from the source but return to typical habitat use patterns when pile driving ceases.

Some avoidance behavior of other marine mammal species has been documented to be dependent on distance from the source. As described above, DeRuiter *et al.* (2013) noted that distance from a sound source may moderate marine mammal reactions in their study of Cuvier's beaked whales (an acoustically sensitive species), which showed the whales swimming rapidly and silently away when a sonar signal was 3.4–9.5 km (2.1–5.9 mi) away while showing no such reaction to the same signal when the signal was 118 km (73.3 mi) away even though the received levels were similar. Tyack *et al.* (1983) conducted playback studies of Surveillance Towed Array Sensor System (SURTASS) low-frequency active (LFA) sonar in a gray whale migratory corridor off California. Similar to NARWs, gray whales migrate close to shore (approximately +2 km (+1.2 mi)) and are low-frequency hearing specialists. The LFA sonar source was placed within the gray whale migratory corridor (approximately 2 km (1.2 mi) offshore) and offshore of most, but not all, migrating whales (approximately 4 km (2.5 mi) offshore). These locations influenced received levels and distance to the source. For the inshore playbacks, not unexpectedly, the louder the source level of the playback (*i.e.,* the louder the received level), whale avoided the source at greater distances. Specifically, when the source levels were 170 and 178 dB rms, whales avoided the inshore source at ranges of several hundred meters, similar to avoidance responses reported by Malme *et al.* (1983, 1984). Whales exposed to source levels of 185 dB rms demonstrated avoidance levels at ranges of +1 km (+0.6 mi). Responses to the offshore source broadcasting at source levels of 185 and 200 dB, avoidance responses were greatly reduced. While there was observed deflection from course, in no case did a whale abandon its migratory behavior.

The signal context of the noise exposure has been shown to play an important role in avoidance responses. In a 2007–2008 Bahamas study, playback sounds of a potential predator—a killer whale—resulted in a similar but more pronounced reaction in beaked whales (an acoustically sensitive species), which included longer inter-dive intervals and a sustained straight-line departure of more than 20 km (12.4 mi) from the area (Boyd *et al.,* 2008; Southall *et al.,* 2009; Tyack *et al.,* 2011). In contrast, the sounds produced by pile driving activities do not have signal characteristics similar to predators. Therefore, we would not expect such extreme reactions to occur. Southall *et al.* (2011) found that blue whales had a different response to sonar exposure depending on behavioral state, more pronounced when deep feeding/travel modes than when engaged in surface feeding.

One potential consequence of behavioral avoidance is the altered energetic expenditure of marine mammals because energy is required to move and avoid surface vessels or the sound field associated with active sonar (Frid and Dill, 2002). Most animals can avoid that energetic cost by swimming away at slow speeds or speeds that

minimize the cost of transport (Miksis-Olds, 2006), as has been demonstrated in Florida manatees (Miksis-Olds, 2006). Those energetic costs increase, however, when animals shift from a resting state, which is designed to conserve an animal's energy, to an active state that consumes energy the animal would have conserved had it not been disturbed. Marine mammals that have been disturbed by anthropogenic noise and vessel approaches are commonly reported to shift from resting to active behavioral states, which would imply that they incur an energy cost.

Forney *et al.* (2017) detailed the potential effects of noise on marine mammal populations with high site fidelity, including displacement and auditory masking, noting that a lack of observed response does not imply absence of fitness costs and that apparent tolerance of disturbance may have population-level impacts that are less obvious and difficult to document. Avoidance of overlap between disturbing noise and areas and/or times of particular importance for sensitive species may be critical to avoiding population-level impacts because (particularly for animals with high site fidelity) there may be a strong motivation to remain in the area despite negative impacts. Forney *et al.* (2017) stated that, for these animals, remaining in a disturbed area may reflect a lack of alternatives rather than a lack of effects.

A flight response is a dramatic change in normal movement to a directed and rapid movement away from the perceived location of a sound source. The flight response differs from other avoidance responses in the intensity of the response (*e.g.,* directed movement, rate of travel). Relatively little information on flight responses of marine mammals to anthropogenic signals exist, but observations of flight responses to the presence of predators have occurred (Connor and Heithaus, 1996; Frid and Dill, 2002). The result of a flight response could range from brief, temporary exertion and displacement from the area where the signal provokes flight to, in extreme cases, beaked whale strandings (Cox *et al.,* 2006; D'Amico *et al.,* 2009). However, it should be noted that response to a perceived predator does not necessarily invoke flight (Ford and Reeves, 2008), and whether individuals are solitary or in groups may influence the response. Flight responses of marine mammals have been documented in response to mobile high intensity active sonar (*e.g.,* Tyack *et al.,* 2011; DeRuiter *et al.,* 2013; Wensveen *et al.,* 2019), and more severe responses have been documented when sources are moving towards an animal or when they are surprised by unpredictable exposures (Watkins, 1986; Falcone *et al.,* 2017). Generally speaking, however, marine mammals would be expected to be less likely to respond with a flight response to stationery pile driving (which they can sense is stationery and predictable), unless they are within the area ensonified above behavioral harassment thresholds at the moment the pile driving begins (Watkins, 1986; Falcone *et al.,* 2017).

Diving and Foraging

Changes in dive behavior in response to noise exposure can vary widely. They may consist of increased or decreased dive times and surface intervals as well as changes in the rates of ascent and descent during a dive (*e.g.,* Frankel and Clark, 2000; Costa *et al.,* 2003; Ng and Leung, 2003; Nowacek *et al.,* 2004; Goldbogen *et al.,* 2013a; Goldbogen *et al.,* 2013b). Variations in dive behavior may reflect interruptions in biologically significant activities (*e.g.,* foraging) or they may be of little biological significance. Variations in dive behavior may also expose an animal to potentially harmful conditions (*e.g.,* increasing the chance of ship-strike) or may serve as an avoidance response that enhances survivorship. The impact of a variation in diving resulting from an acoustic exposure depends on what the animal is doing at the time of the exposure, the type and magnitude of the response, and the context within which the response occurs (*e.g.,* the surrounding environmental and anthropogenic circumstances).

Nowacek *et al.* (2004) reported disruptions of dive behaviors in foraging NARWs when exposed to an alerting stimulus, an action, they noted, that could lead to an increased likelihood of ship strike. The alerting stimulus was in the form of an 18-minute exposure that included three 2-minute signals played three times sequentially. This stimulus was designed with the purpose of providing signals distinct to background noise that serve as localization cues. However, the whales did not respond to playbacks of either right whale social sounds or vessel noise, highlighting the importance of the sound characteristics in producing a behavioral reaction. Although source levels for the proposed pile driving activities may exceed the received level of the alerting stimulus described by Nowacek *et al.* (2004), proposed mitigation strategies (further described in the Proposed Mitigation section) will reduce the severity of response to proposed pile driving activities. Converse to the behavior of NARWs, Indo-Pacific humpback dolphins have been observed to dive for longer periods of time in areas where vessels were present and/or approaching (Ng and Leung, 2003). In both of these studies, the influence of the sound exposure cannot be decoupled from the physical presence of a surface vessel, thus complicating interpretations of the relative contribution of each stimulus to the response. Indeed, the presence of surface vessels, their approach, and speed of approach, seemed to be significant factors in the response of the Indo-Pacific humpback dolphins (Ng and Leung, 2003). Low-frequency signals of the Acoustic Thermometry of Ocean Climate (ATOC) sound source were not found to affect dive times of humpback whales in Hawaiian waters (Frankel and Clark, 2000) or to overtly affect elephant seal dives (Costa *et al.,* 2003). They did, however, produce subtle effects that varied in direction and degree among the individual seals, illustrating the equivocal nature of behavioral effects and consequent difficulty in defining and predicting them.

Disruption of feeding behavior can be difficult to correlate with anthropogenic sound exposure, so it is usually inferred by observed displacement from known foraging areas, the cessation of secondary indicators of foraging (*e.g.,* bubble nets or sediment plumes), or changes in dive behavior. As for other types of behavioral response, the frequency, duration, and temporal pattern of signal presentation, as well as differences in species sensitivity, are likely contributing factors to differences in response in any given circumstance (*e.g.,* Croll *et al.,* 2001; Nowacek *et al.,* 2004; Madsen *et al.,* 2006; Yazvenko *et al.,* 2007; Southall *et al.,* 2019b). An understanding of the energetic requirements of the affected individuals and the relationship between prey availability, foraging effort and success, and the life history stage of the animal can facilitate the assessment of whether foraging disruptions are likely to incur fitness consequences (Goldbogen *et al.,* 2013b; Farmer *et al.,* 2018; Pirotta *et al.,* 2018a; Southall *et al.,* 2019a; Pirotta *et al.,* 2021).

Impacts on marine mammal foraging rates from noise exposure have been documented, though there is little data regarding the impacts of offshore turbine construction specifically. Several broader examples follow, and it is reasonable to expect that exposure to noise produced during the year that the proposed IHA would be effective could have similar impacts. Visual tracking, passive acoustic monitoring, and movement recording tags were used to

quantify sperm whale behavior prior to, during, and following exposure to airgun arrays at received levels in the range 140–160 dB at distances of 7–13 km (4.3–8.1 mi), following a phase-in of sound intensity and full array exposures at 1–13 km (0.6–8.1 mi) (Madsen *et al.,* 2006; Miller *et al.,* 2009). Sperm whales did not exhibit horizontal avoidance behavior at the surface. However, foraging behavior may have been affected. The sperm whales exhibited 19 percent less vocal (buzz) rate during full exposure relative to post exposure, and the whale that was approached most closely had an extended resting period and did not resume foraging until the airguns had ceased firing. The remaining whales continued to execute foraging dives throughout exposure; however, swimming movements during foraging dives were 6 percent lower during exposure than during control periods (Miller *et al.,* 2009). Miller *et al.* (2009) noted that more data are required to understand whether the differences were due to exposure or natural variation in sperm whale behavior. Balaenopterid whales exposed to moderate low-frequency signals similar to the ATOC sound source demonstrated no variation in foraging activity (Croll *et al.,* 2001), whereas five out of six NARWs exposed to an acoustic alarm interrupted their foraging dives (Nowacek *et al.,* 2004). Although the received SPLs were similar in the latter two studies, the frequency, duration, and temporal pattern of signal presentation were different. These factors, as well as differences in species sensitivity, are likely contributing factors to the differential response. The noise generated by Vineyard Wind's proposed activities would at least partially overlap in frequency with signals described by Nowacek *et al.* (2004) and Croll *et al.* (2001). Blue whales exposed to mid-frequency sonar in the Southern California Bight were less likely to produce low-frequency calls usually associated with feeding behavior (Melcón *et al.,* 2012). However, Melcón *et al.* (2012) were unable to determine if suppression of low-frequency calls reflected a change in their feeding performance or abandonment of foraging behavior and indicated that implications of the documented responses are unknown. Further, it is not known whether the lower rates of calling actually indicated a reduction in feeding behavior or social contact since the study used data from remotely deployed, passive acoustic monitoring buoys. Results from the 2010–2011 field season of a behavioral response study of tagged blue whales in Southern California waters indicated that, in some cases and at low received levels, the whales responded to mid-frequency sonar but that those responses were mild and there was a quick return to their baseline activity (Southall *et al.,* 2011, 2012b, 2019).

Information on or estimates of the energetic requirements of the individuals and the relationship between prey availability, foraging effort and success, and the life history stage of the animal will help better inform a determination of whether foraging disruptions incur fitness consequences. Foraging strategies may impact foraging efficiency, such as by reducing foraging effort and increasing success in prey detection and capture, in turn promoting fitness and allowing individuals to better compensate for foraging disruptions. Surface feeding blue whales did not show a change in behavior in response to mid-frequency simulated and real sonar sources with received levels between 90 and 179 dB re 1 µPa, but deep feeding and non-feeding whales showed temporary reactions including cessation of feeding, reduced initiation of deep foraging dives, generalized avoidance responses, and changes to dive behavior (DeRuiter *et al.,* 2017; Goldbogen *et al.,* 2013b; Sivle *et al.,* 2015). Goldbogen *et al.* (2013b) indicate that disruption of feeding and displacement could impact individual fitness and health. However, for this to be true, we would have to assume that an individual whale could not compensate for this lost feeding opportunity by either immediately feeding at another location, by feeding shortly after cessation of acoustic exposure, or by feeding at a later time. There is no indication that individual fitness and health would be impacted by an activity that influences foraging disruption, particularly since unconsumed prey would likely still be available in the environment in most cases following the cessation of acoustic exposure.

Similarly, while the rates of foraging lunges decrease in humpback whales due to sonar exposure, there was variability in the response across individuals, with one animal ceasing to forage completely and another animal starting to forage during the exposure (Sivle *et al.,* 2016). In addition, almost half of the animals that demonstrated avoidance were foraging before the exposure, but the others were not; the animals that avoided while not feeding responded at a slightly lower received level and greater distance than those that were feeding (Wensveen *et al.,* 2017). These findings indicate the behavioral state of the animal and foraging strategies play a role in the type and severity of a behavioral response. For example, when the prey field was mapped and used as a covariate in examining how behavioral state of blue whales is influenced by mid-frequency sound, the response in blue whale deep-feeding behavior was even more apparent, reinforcing the need for contextual variables to be included when assessing behavioral responses (Friedlaender *et al.,* 2016).

Vocalizations and Auditory Masking

Marine mammals vocalize for different purposes and across multiple modes, such as whistling, production of echolocation clicks, calling, and singing. Changes in vocalization behavior in response to anthropogenic noise can occur for any of these modes and may result directly from increased vigilance or a startle response, or from a need to compete with an increase in background noise (see Erbe *et al.,* 2016 review on communication masking), the latter of which is described more below.

For example, in the presence of potentially masking signals, humpback whales and killer whales have been observed to increase the length of their songs (Miller *et al.,* 2000; Fristrup *et al.,* 2003; Foote *et al.,* 2004) and blue whales increased song production (Di Iorio and Clark, 2009), while NARWs have been observed to shift the frequency content of their calls upward while reducing the rate of calling in areas of increased anthropogenic noise (Parks *et al.,* 2007). In some cases, animals may cease or reduce sound production during production of aversive signals (Bowles *et al.,* 1994; Thode *et al.,* 2020; Cerchio *et al.,* 2014; McDonald *et al.,* 1995). Blackwell *et al.* (2015) showed that whales increased calling rates as soon as airgun signals were detectable before ultimately decreasing calling rates at higher received levels.

Sound can disrupt behavior through masking, or interfering with, an animal's ability to detect, recognize, or discriminate between acoustic signals of interest (*e.g.,* those used for intraspecific communication and social interactions, prey detection, predator avoidance, or navigation) (Richardson *et al.,* 1995; Erbe and Farmer, 2000; Tyack, 2000; Erbe *et al.,* 2016; Sorensen *et al.,* 2023). Masking occurs when the receipt of a sound is interfered with by another coincident sound at similar frequencies and at similar or higher intensity and may occur whether the sound is natural (*e.g.,* snapping shrimp, wind, waves, precipitation) or anthropogenic (*e.g.,* shipping, sonar, seismic exploration) in origin. The ability of a noise source to

mask biologically important sounds depends on the characteristics of both the noise source and the signal of interest (*e.g.,* signal-to-noise ratio, temporal variability, direction), in relation to each other and to an animal's hearing abilities (*e.g.,* sensitivity, frequency range, critical ratios, frequency discrimination, directional discrimination, age, or TTS hearing loss), and existing ambient noise and propagation conditions.

Masking these acoustic signals can disturb the behavior of individual animals, groups of animals, or entire populations. Masking can lead to behavioral changes including vocal changes (*e.g.,* Lombard effect, increasing amplitude, or changing frequency), cessation of foraging or lost foraging opportunities, and leaving an area, to both signalers and receivers, in an attempt to compensate for noise levels (Erbe *et al.,* 2016) or because sounds that would typically have triggered a behavior were not detected. Even when animals attempt to compensate for masking, such as by increasing the amplitude or duration of their signals, this may still be insufficient to maintain behavioral coordination between individuals necessary for complex behaviors, foraging, and navigation (Sorensen *et al.,* 2023). In humans, significant masking of tonal signals occurs as a result of exposure to noise in a narrow band of similar frequencies. As the sound level increases, the detection of frequencies above those of the masking stimulus decreases. This principle is expected to apply to marine mammals as well because of common biomechanical cochlear properties across taxa.

Therefore, when the coincident (masking) sound is man-made, it may be considered harassment when disrupting behavioral patterns. It is important to distinguish TTS and PTS, which persist after the sound exposure, from masking, which only occurs during the sound exposure. Because masking (without resulting in threshold shift) is not associated with abnormal physiological function, it is not considered a physiological effect, but rather a potential behavioral effect.

The frequency range of the potentially masking sound is important in determining any potential behavioral impacts. For example, low-frequency signals may have less effect on high-frequency echolocation sounds produced by odontocetes but are more likely to affect detection of mysticete communication calls and other potentially important natural sounds such as those produced by surf and some prey species. The masking of communication signals by anthropogenic noise may be considered as a reduction in the communication space of animals (*e.g.,* Clark *et al.,* 2009; Matthews, 2017) and may result in energetic or other costs as animals change their vocalization behavior (*e.g.,* Miller *et al.,* 2000; Foote *et al.,* 2004; Parks *et al.,* 2007; Di Iorio and Clark, 2009; Holt *et al.,* 2009). Masking can be reduced in situations where the signal and noise come from different directions (Richardson *et al.,* 1995), through amplitude modulation of the signal, or through other compensatory behaviors (Houser and Moore, 2014). Masking can be tested directly in captive species (*e.g.,* Erbe, 2008), but in wild populations it must be either modeled or inferred from evidence of masking compensation. There are few studies addressing real-world masking sounds likely to be experienced by marine mammals in the wild (*e.g.,* Branstetter *et al.,* 2013; Cholewiak *et al.,* 2018).

The echolocation calls of toothed whales are subject to masking by high-frequency sound. Human data indicate low-frequency sound can mask high-frequency sounds (*i.e.,* upward masking). Studies on captive odontocetes by Au *et al.* (1974, 1985, 1993) indicate that some species may use various processes to reduce masking effects (*e.g.,* adjustments in echolocation call intensity or frequency as a function of background noise conditions). There is also evidence that the directional hearing abilities of odontocetes are useful in reducing masking at the high-frequencies these cetaceans use to echolocate, but not at the low-to-moderate frequencies they use to communicate (Zaitseva *et al.,* 1980). A study by Nachtigall and Supin (2008) showed that false killer whales adjust their hearing to compensate for ambient sounds and the intensity of returning echolocation signals.

Impacts on signal detection, measured by masked detection thresholds, are not the only important factors to address when considering the potential effects of masking. As marine mammals use sound to recognize conspecifics, prey, predators, or other biologically significant sources (Branstetter *et al.,* 2016), it is also important to understand the impacts of masked recognition thresholds (often called ''informational masking''). Branstetter *et al.* (2016) measured masked recognition thresholds for whistle-like sounds of bottlenose dolphins and observed that they are approximately 4 dB above detection thresholds (energetic masking) for the same signals. Reduced ability to recognize a conspecific call or the acoustic signature of a predator could have severe negative impacts. Branstetter *et al.* (2016) observed that if ''quality communication'' is set at 90 percent recognition the output of communication space models (which are based on 50 percent detection) would likely result in a significant decrease in communication range.

As marine mammals use sound to recognize predators (Allen *et al.,* 2014; Cummings and Thompson, 1971; Curé *et al.,* 2015; Fish and Vania, 1971), the presence of masking noise may also prevent marine mammals from responding to acoustic cues produced by their predators, particularly if it occurs in the same frequency band. For example, harbor seals that reside in the coastal waters off British Columbia are frequently targeted by mammal-eating killer whales. The seals acoustically discriminate between the calls of mammal-eating and fish-eating killer whales (Deecke *et al.,* 2002), a capability that should increase survivorship while reducing the energy required to attend to all killer whale calls. Similarly, sperm whales (Curé *et al.,* 2016; Isojunno *et al.,* 2016), long-finned pilot whales (Visser *et al.,* 2016), and humpback whales (Curé *et al.,* 2015) changed their behavior in response to killer whale vocalization playbacks; these findings indicate that some recognition of predator cues could be missed if the killer whale vocalizations were masked. The potential effects of masked predator acoustic cues depend on the duration of the masking noise and the likelihood of a marine mammal encountering a predator during the time that detection and recognition of predator cues are impeded.

Redundancy and context can also facilitate detection of weak signals. These phenomena may help marine mammals detect weak sounds in the presence of natural or manmade noise. Most masking studies in marine mammals present the test signal and the masking noise from the same direction. The dominant background noise may be highly directional if it comes from a particular anthropogenic source such as a ship or industrial site. Directional hearing may significantly reduce the masking effects of these sounds by improving the effective signal-to-noise ratio.

Masking affects both senders and receivers of acoustic signals and, at higher levels and longer duration, can potentially have long-term chronic effects on marine mammals at the population level as well as at the individual level. Low-frequency ambient sound levels have increased by as much as 20 dB (more than three times

in terms of sound pressure level (SPL)) in the world's ocean from pre-industrial periods, with most of the increase from distant commercial shipping (Hildebrand, 2009; Cholewiak *et al.,* 2018). All anthropogenic sound sources, but especially chronic and lower-frequency signals (*e.g.,* from commercial vessel traffic), contribute to elevated ambient sound levels, thus intensifying masking.

In addition to making it more difficult for animals to perceive and recognize acoustic cues in their environment, anthropogenic sound presents separate challenges for animals that are vocalizing. When they vocalize, animals are aware of environmental conditions that affect the ''active space'' (or communication space) of their vocalizations, which is the maximum area within which their vocalizations can be detected before it drops to the level of ambient noise (Brenowitz, 2004; Brumm *et al.,* 2004; Lohr *et al.,* 2003). Animals are also aware of environmental conditions that affect whether listeners can discriminate and recognize their vocalizations from other sounds, which is more important than simply detecting that a vocalization is occurring (Brenowitz, 1982; Brumm *et al.,* 2004; Dooling, 2004; Marten and Marler, 1977; Patricelli and Blickley, 2006). Most species that vocalize have evolved with an ability to adjust their vocalizations to increase the signal-to-noise ratio, active space, and recognizability/distinguishability of their vocalizations in the face of temporary changes in background noise (Brumm *et al.,* 2004; Patricelli and Blickley, 2006). Vocalizing animals can adjust their vocalization characteristics such as the frequency structure, amplitude, temporal structure, and temporal delivery (repetition rate), or ceasing to vocalize.

Many animals will combine several of these strategies to compensate for high levels of background noise. Anthropogenic sounds that reduce the signal-to-noise ratio of animal vocalizations; increase the masked auditory thresholds of animals listening for such vocalizations; or reduce the active space of an animal's vocalizations impair communication between animals. Most animals that vocalize have evolved strategies to compensate for the effects of short-term or temporary increases in background or ambient noise on their songs or calls. Although the fitness consequences of these vocal adjustments are not directly known in all instances, like most other trade-offs animals must make, some of these strategies likely come at a cost (Patricelli and Blickley, 2006; Noren *et al.,* 2017; Noren *et al.,* 2020). Shifting songs and calls to higher frequencies may also impose energetic costs (Lambrechts, 1996).

Marine mammals are also known to make vocal changes in response to anthropogenic noise. In cetaceans, vocalization changes have been reported from exposure to anthropogenic noise sources such as sonar, vessel noise, and seismic surveying (*e.g.,* Gordon *et al.,* 2003; Di Iorio and Clark, 2009; Hatch *et al.,* 2012; Holt *et al.,* 2009, 2011; Lesage *et al.,* 1999; McDonald *et al.,* 2009; Parks *et al.,* 2007; Risch *et al.,* 2012; Rolland *et al.,* 2012), as well as changes in the natural acoustic environment (Dunlop *et al.,* 2014). Vocal changes can be temporary or can be persistent. For example, model simulation suggests that the increase in starting frequency for the NARW upcall over the last 50 years resulted in increased detection ranges between right whales. The frequency shift, coupled with an increase in call intensity by 20 dB, led to a call detectability range of less than 3 km (1.9 mi) to over 9 km (5.6 mi) (Tennessen and Parks, 2016). Holt *et al.* (2009) measured killer whale call source levels and background noise levels in the 1 to 40 kHz band and reported that the whales increased their call source levels by 1-dB SPL for every 1-dB SPL increase in background noise level. Similarly, another study on St. Lawrence River belugas reported a similar rate of increase in vocalization activity in response to passing vessels (Scheifele *et al.,* 2005). Di Iorio and Clark (2009) showed that blue whale calling rates vary in association with seismic sparker survey activity, with whales calling more on days with surveys than on days without surveys. They suggested that the whales called more during seismic survey periods as a way to compensate for the elevated noise conditions.

In some cases, these vocal changes may have fitness consequences, such as an increase in metabolic rates and oxygen consumption, as observed in bottlenose dolphins when increasing their call amplitude (Holt *et al.,* 2015). A switch from vocal communication to physical, surface-generated sounds such as pectoral fin slapping or breaching was observed for humpback whales in the presence of increasing natural background noise levels, indicating that adaptations to masking may also move beyond vocal modifications (Dunlop *et al.,* 2010).

While these changes all represent possible tactics by the sound-producing animal to reduce the impact of masking, the receiving animal can also reduce masking by using active listening strategies such as orienting to the sound source, moving to a quieter location, or reducing self-noise from hydrodynamic flow by remaining still. The temporal structure of noise (*e.g.,* amplitude modulation) may also provide a considerable release from masking through comodulation masking release (a reduction of masking that occurs when broadband noise, with a frequency spectrum wider than an animal's auditory filter bandwidth at the frequency of interest, is amplitude modulated) (Branstetter and Finneran, 2008; Branstetter *et al.,* 2013). Signal type (*e.g.,* whistles, burst-pulse, sonar clicks) and spectral characteristics (*e.g.,* frequency modulated with harmonics) may further influence masked detection thresholds (Branstetter *et al.,* 2016; Cunningham *et al.,* 2014).

Masking is more likely to occur in the presence of broadband, relatively continuous noise sources, such as vessels. Several studies have shown decreases in marine mammal communication space and changes in behavior as a result of the presence of vessel noise. For example, right whales were observed to shift the frequency content of their calls upward while reducing the rate of calling in areas of increased anthropogenic noise (Parks *et al.,* 2007) as well as increasing the amplitude (intensity) of their calls (Parks, 2009, 2011). Clark *et al.* (2009) observed that right whales' communication space decreased by up to 84 percent in the presence of vessels due to an increase in ambient noise from vessels in proximity to the whales. Cholewiak *et al.* (2018) also observed loss in communication space in Stellwagen National Marine Sanctuary for NARWs, fin whales, and humpback whales with increased ambient noise and shipping noise. Although humpback whales off Australia did not change the frequency or duration of their vocalizations in the presence of ship noise, their source levels were lower than expected based on source level changes to wind noise, potentially indicating some signal masking (Dunlop, 2016). Multiple delphinid species have also been shown to increase the minimum or maximum frequencies of their whistles in the presence of anthropogenic noise and reduced communication space (*e.g.,* Holt *et al.,* 2009, 2011; Gervaise *et al.,* 2012; Williams *et al.,* 2013; Hermannsen *et al.,* 2014; Papale *et al.,* 2015; Liu *et al.,* 2017). While masking impacts are not a concern from lower intensity, higher frequency HRG surveys, some degree of masking would be expected in the vicinity of turbine pile driving and concentrated support vessel operation.

However, pile driving is an intermittent sound and would not be continuous throughout the day.

Habituation and Sensitization

Habituation can occur when an animal's response to a stimulus wanes with repeated exposure, usually in the absence of unpleasant associated events (Wartzok *et al.,* 2003). Habituation is considered a ''progressive reduction in response to stimuli that are perceived as neither aversive nor beneficial,'' rather than as, more generally, moderation in response to human disturbance having a neutral or positive outcome (Bejder *et al.,* 2009). Animals are most likely to habituate to sounds that are predictable and unvarying. The opposite process is sensitization, when an unpleasant experience leads to subsequent responses, often in the form of avoidance, at a lower level of exposure.

Both habituation and sensitization require an ongoing learning process. As noted, behavioral state may affect the type of response. For example, animals that are resting may show greater behavioral change in response to disturbing sound levels than animals that are highly motivated to remain in an area for feeding (Richardson *et al.,* 1995; National Research Council (NRC), 2003; Wartzok *et al.,* 2003; Southall *et al.,* 2019b). Controlled experiments with captive marine mammals have shown pronounced behavioral reactions, including avoidance of loud sound sources (*e.g.,* Ridgway *et al.,* 1997; Finneran *et al.,* 2003; Houser *et al.,* 2013a–b; Kastelein *et al.,* 2018). Observed responses of wild marine mammals to loud impulsive sound sources (typically airguns or acoustic harassment devices) have been varied but often consist of avoidance behavior or other behavioral changes suggesting discomfort (Morton and Symonds, 2002; Richardson *et al.,* 1995; Nowacek *et al.,* 2007; Tougaard *et al.,* 2009; Brandt *et al.,* 2011, 2012, 2014, 2018; Dähne *et al.,* 2013; Russell *et al.,* 2016).

Stone (2015) reported data from at-sea observations during 1,196 airgun surveys from 1994 to 2010. When large arrays of airguns (considered to be 500 cubic inches (in^3) or more) were firing, lateral displacement, more localized avoidance, or other changes in behavior were evident for most odontocetes. However, significant responses to large arrays were found only for the minke whale and fin whale. Behavioral responses observed included changes in swimming or surfacing behavior with indications that cetaceans remained near the water surface at these times. Behavioral observations of gray whales during an airgun survey monitored whale movements and respirations before, during, and after seismic surveys (Gailey *et al.,* 2016). Behavioral state and water depth were the best ''natural'' predictors of whale movements and respiration, and after accounting for natural variation, none of the response variables were significantly associated with survey or vessel sounds. Many delphinids approach low-frequency airgun source vessels with no apparent discomfort or obvious behavioral change (*e.g.,* Barkaszi *et al.,* 2012), indicating the importance of frequency output in relation to the species' hearing sensitivity.

Physiological Responses

An animal's perception of a threat may be sufficient to trigger stress responses consisting of some combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses (*e.g.,* Selye, 1950; Moberg and Mench, 2000). In many cases, an animal's first, and sometimes most economical response (in terms of energetic costs) is behavioral avoidance of the potential stressor. Autonomic nervous system responses to stress typically involve changes in heart rate, blood pressure, and gastrointestinal activity. These responses have a relatively short duration and may or may not have a significant long-term effect on an animal's fitness.

Neuroendocrine stress responses often involve the hypothalamus-pituitary-adrenal system. Virtually all neuroendocrine functions that are affected by stress—including immune competence, reproduction, metabolism, and behavior—are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction, altered metabolism, reduced immune competence, and behavioral disturbance (*e.g.,* Moberg, 1987; Blecha, 2000). Increases in the circulation of glucocorticoids are also equated with stress (Romano *et al.,* 2004).

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and ''distress'' is the cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other functions. This state of distress will last until the animal replenishes its energetic reserves sufficiently to restore normal function.

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well studied through controlled experiments and for both laboratory and free-ranging animals (*e.g.,* Holberton *et al.,* 1996; Hood *et al.,* 1998; Jessop *et al.,* 2003; Krausman *et al.,* 2004; Lankford *et al.,* 2005). Stress responses due to exposure to anthropogenic sounds or other stressors and their effects on marine mammals have also been reviewed (Fair and Becker, 2000; Romano *et al.,* 2002b) and, more rarely, studied specifically in wild populations (*e.g.,* Lusseau and Bejder, 2007; Romano *et al.,* 2002a; Rolland *et al.,* 2012). For example, Rolland *et al.* (2012) found that noise reduction from reduced ship traffic in the Bay of Fundy was associated with decreased stress in NARWs.

These and other studies lead to a reasonable expectation that some marine mammals will experience physiological stress responses upon exposure to acoustic stressors and that it is possible that some of these would be classified as ''distress.'' In addition, any animal experiencing TTS would likely also experience stress responses (NRC, 2003, 2017). Respiration naturally varies with different behaviors, and variations in respiration rate as a function of acoustic exposure can be expected to co-occur with other behavioral reactions, such as a flight response or an alteration in diving. However, respiration rates in and of themselves may be representative of annoyance or an acute stress response. Mean exhalation rates of gray whales at rest and while diving were found to be unaffected by seismic surveys conducted adjacent to the whale feeding grounds (Gailey *et al.,* 2007). Studies with captive harbor porpoises show increased respiration rates upon introduction of acoustic alarms (Kastelein *et al.,* 2001, 2006a) and emissions for underwater data transmission (Kastelein *et al.,* 2005). However, exposure of the same acoustic alarm to a striped dolphin under the same conditions did not elicit a response (Kastelein *et al.,* 2006a), again highlighting the importance in understanding species differences in the tolerance of underwater noise when determining the potential for impacts resulting from anthropogenic sound exposure.

Stranding

The definition for a stranding under the MMPA is that: (A) a marine mammal is dead and is (i) on a beach or shore

of the United States, or (ii) in waters under the jurisdiction of the United States (including any navigable waters); or (B) a marine mammal is alive and is (i) on a beach or shore of the United States and is unable to return to the water, (ii) on a beach or shore of the United States and, although able to return to the water, is in need of apparent medical attention, or (iii) in the waters under the jurisdiction of the United States (including any navigable waters), but is unable to return to its natural habitat under its own power or without assistance (16 U.S.C. 1421h).

Marine mammal strandings have been linked to a variety of causes, such as illness from exposure to infectious agents, biotoxins, or parasites; starvation; unusual oceanographic or weather events; or anthropogenic causes including fishery interaction, ship strike, entrainment, entrapment, sound exposure, or combinations of these stressors sustained concurrently or in series. There have been multiple events worldwide in which marine mammals (primarily beaked whales, or other deep divers) have stranded coincident with relatively nearby activities utilizing loud sound sources (primarily military training events), and five in which mid-frequency active sonar has been more definitively determined to have been a contributing factor.

There are multiple theories regarding the specific mechanisms responsible for marine mammal strandings caused by exposure to loud sounds. One primary theme is the behaviorally mediated responses of deep-diving species (odontocetes), in which their startled response to an acoustic disturbance: (1) affects ascent or descent rates, the time they stay at depth or the surface, or other regular dive patterns that are used to physiologically manage gas formation and absorption within their bodies, such that the formation or growth of gas bubbles damages tissues or causes other injury; or (2) results in their flight to shallow areas, enclosed bays, or other areas considered ''out of habitat,'' in which they become disoriented and physiologically compromised. For more information on marine mammal stranding events and potential causes, please see the Stranding and Mortality discussion in NMFS' proposed rule for the Navy's Training and Testing Activities in the Hawaii-Southern California Training and Testing Study Area (83 FR 29872, 29928; June 26, 2018).

The construction activities proposed by Vineyard Wind (*i.e.,* pile driving) are not expected to result in marine mammal strandings. Of the strandings documented to date worldwide, NMFS is not aware of any being attributed to pile driving. While vessel strikes could kill or injure a marine mammal (which may then eventually strand), the required mitigation measures would reduce the potential for take from these activities to de minimis levels (see Proposed Mitigation section for more details). As described above, no mortality or serious injury is anticipated or proposed to be authorized from any Project activities.

Potential Effects of Disturbance on Marine Mammal Fitness

The different ways that marine mammals respond to sound are sometimes indicators of the ultimate effect that exposure to a given stimulus will have on the well-being (survival, reproduction, *etc.*) of an animal. There are numerous data relating the exposure of terrestrial mammals from sound to effects on reproduction or survival, and data for marine mammals continues to grow. Several authors have reported that disturbance stimuli may cause animals to abandon nesting and foraging sites (Sutherland and Crockford, 1993); may cause animals to increase their activity levels and suffer premature deaths or reduced reproductive success when their energy expenditures exceed their energy budgets (Daan *et al.,* 1996; Feare, 1976; Mullner *et al.,* 2004); or may cause animals to experience higher predation rates when they adopt risk-prone foraging or migratory strategies (Frid and Dill, 2002). Each of these studies addressed the consequences of animals shifting from one behavioral state (*e.g.,* resting or foraging) to another behavioral state (*e.g.,* avoidance or escape behavior) because of human disturbance or disturbance stimuli.

Attention is the cognitive process of selectively concentrating on one aspect of an animal's environment while ignoring other things (Posner, 1994). Because animals (including humans) have limited cognitive resources, there is a limit to how much sensory information they can process at any time. The phenomenon called ''attentional capture'' occurs when a stimulus (usually a stimulus that an animal is not concentrating on or attending to) ''captures'' an animal's attention. This shift in attention can occur consciously or subconsciously (for example, when an animal hears sounds that it associates with the approach of a predator) and the shift in attention can be sudden (Dukas, 2002; van Rij, 2007). Once a stimulus has captured an animal's attention, the animal can respond by ignoring the stimulus, assuming a ''watch and wait'' posture, or treat the stimulus as a disturbance and respond accordingly, which includes scanning for the source of the stimulus or ''vigilance'' (Cowlishaw *et al.,* 2004).

Vigilance is an adaptive behavior that helps animals determine the presence or absence of predators, assess their distance from conspecifics, or to attend cues from prey (Bednekoff and Lima, 1998; Treves, 2000). Despite those benefits, however, vigilance has a cost of time; when animals focus their attention on specific environmental cues, they are not attending to other activities such as foraging or resting. These effects have generally not been demonstrated for marine mammals, but studies involving fish and terrestrial animals have shown that increased vigilance may substantially reduce feeding rates (Saino, 1994; Beauchamp and Livoreil, 1997; Fritz *et al.,* 2002; Purser and Radford, 2011). Animals will spend more time being vigilant, which may translate to less time foraging or resting, when disturbance stimuli approach them more directly, remain at closer distances, have a greater group size (*e.g.,* multiple surface vessels), or when they co-occur with times that an animal perceives increased risk (*e.g.,* when they are giving birth or accompanied by a calf).

The primary mechanism by which increased vigilance and disturbance appear to affect the fitness of individual animals is by disrupting an animal's time budget and, as a result, reducing the time they might spend foraging and resting (which increases an animal's activity rate and energy demand while decreasing their caloric intake/energy). In a study of northern resident killer whales off Vancouver Island, exposure to boat traffic was shown to reduce foraging opportunities and increase traveling time (Holt *et al.,* 2021). A simple bioenergetics model was applied to show that the reduced foraging opportunities equated to a decreased energy intake of 18 percent while the increased traveling incurred an increased energy output of 3–4 percent, which suggests that a management action based on avoiding interference with foraging might be particularly effective.

On a related note, many animals perform vital functions, such as feeding, resting, traveling, and socializing, on a diel cycle (24-hour cycle). Behavioral reactions to noise exposure (such as disruption of critical life functions, displacement, or avoidance of important habitat) are more likely to be significant for fitness if they last more than one diel cycle or recur on subsequent days (Southall *et al.,* 2007). Consequently, a behavioral response lasting less than 1

day and not recurring on subsequent days is not considered particularly severe unless it could directly affect reproduction or survival (Southall *et al.,* 2007). It is important to note the difference between behavioral reactions lasting or recurring over multiple days and anthropogenic activities lasting or recurring over multiple days. For example, just because certain activities last for multiple days does not necessarily mean that individual animals will be either exposed to those activity-related stressors (*i.e.,* sonar) for multiple days or further exposed in a manner that would result in sustained multi-day substantive behavioral responses. However, special attention is warranted where longer-duration activities overlay areas in which animals are known to congregate for longer durations for biologically important behaviors.

There are few studies that directly illustrate the impacts of disturbance on marine mammal populations. Lusseau and Bejder (2007) present data from three long-term studies illustrating the connections between disturbance from whale-watching boats and population-level effects in cetaceans. In Shark Bay, Australia, the abundance of bottlenose dolphins was compared within adjacent control and tourism sites over three consecutive 4.5-year periods of increasing tourism levels. Between the second and third time periods, in which tourism doubled, dolphin abundance decreased by 15 percent in the tourism area and did not change significantly in the control area. In Fiordland, New Zealand, two populations (Milford and Doubtful Sounds) of bottlenose dolphins with tourism levels that differed by a factor of seven were observed and significant increases in traveling time and decreases in resting time were documented for both. Consistent short-term avoidance strategies were observed in response to tour boats until a threshold of disturbance was reached (average of 68 minutes between interactions), after which the response switched to a longer-term habitat displacement strategy. For one population, tourism only occurred in a part of the home range. However, tourism occurred throughout the home range of the Doubtful Sound population and once boat traffic increased beyond the 68-minute threshold (resulting in abandonment of their home range/preferred habitat), reproductive success drastically decreased (increased stillbirths) and abundance decreased significantly (from 67 to 56 individuals in a short period).

In order to understand how the effects of activities may or may not impact species and stocks of marine mammals, it is necessary to understand not only what the likely disturbances are going to be but how those disturbances may affect the reproductive success and survivorship of individuals, and then how those impacts to individuals translate to population-level effects. Following on the earlier work of a committee of the U.S. NRC (NRC, 2005), New *et al.* (2014), in an effort termed the Potential Consequences of Disturbance (PCoD), outlined an updated conceptual model of the relationships linking disturbance to changes in behavior and physiology, health, vital rates, and population dynamics. This framework is a four-step process progressing from changes in individual behavior and/or physiology, to changes in individual health, then vital rates, and finally to population-level effects. In this framework, behavioral and physiological changes can have direct (acute) effects on vital rates, such as when changes in habitat use or increased stress levels raise the probability of mother-calf separation or predation; indirect and long-term (chronic) effects on vital rates, such as when changes in time/energy budgets or increased disease susceptibility affect health, which then affects vital rates; or no effect to vital rates (New *et al.,* 2014).

Since the PCoD general framework was outlined and the relevant supporting literature compiled, multiple studies developing state-space energetic models for species with extensive long-term monitoring (*e.g.,* southern elephant seals, NARWs, Ziphiidae beaked whales, and bottlenose dolphins) have been conducted and can be used to effectively forecast longer-term, population-level impacts from behavioral changes. While these are very specific models with very specific data requirements that cannot yet be applied broadly to project-specific risk assessments for the majority of species, they are a critical first step towards being able to quantify the likelihood of a population level effect. Since New *et al.* (2014), several publications have described models developed to examine the long-term effects of environmental or anthropogenic disturbance of foraging on various life stages of selected species (*e.g.,* sperm whale, Farmer *et al.,* 2018; California sea lion, McHuron *et al.,* 2018; blue whale, Pirotta *et al.,* 2018a; humpback whale, Dunlop *et al.,* 2021). These models continue to add to refinement of the approaches to the PCoD framework. Such models also help identify what data inputs require further investigation. Pirotta *et al.* (2018b) provides a review of the PCoD framework with details on each step of the process and approaches to applying real data or simulations to achieve each step.

Despite its simplicity, there are few complete PCoD models available for any marine mammal species due to a lack of data available to parameterize many of the steps. To date, no PCoD model has been fully parameterized with empirical data (Pirotta *et al.,* 2018a) due to the fact they are data intensive and logistically challenging to complete. Therefore, most complete PCoD models include simulations, theoretical modeling, and expert opinion to move through the steps. For example, PCoD models have been developed to evaluate the effect of wind farm construction on the North Sea harbor porpoise populations (*e.g.,* King *et al.,* 2015; Nabe-Nielsen *et al.,* 2018). These models include a mix of empirical data, expert elicitation (King *et al.,* 2015) and simulations of animals' movements, energetics, and/or survival (New *et al.,* 2014; Nabe-Nielsen *et al.,* 2018).

PCoD models may also be approached in different manners. Dunlop *et al.* (2021) modeled migrating humpback whale mother-calf pairs in response to seismic surveys using both a forwards and backwards approach. While a typical forwards approach can determine if a stressor would have population-level consequences, Dunlop *et al.* demonstrated that working backwards through a PCoD model can be used to assess the most unfavorable scenario for an interaction of a target species and stressor. This method may be useful for future management goals when appropriate data becomes available to fully support the model. In another example, harbor porpoise PCoD model investigating the impact of seismic surveys on harbor porpoise included an investigation on underlying drivers of vulnerability. Harbor porpoise movement and foraging were modeled for baseline periods and then for periods with seismic surveys as well; the models demonstrated that temporal (*i.e.,* seasonal) variation in individual energetics and their link to costs associated with disturbances was key in predicting population impacts (Gallagher *et al.,* 2021).

Behavioral change, such as disturbance manifesting in lost foraging time, in response to anthropogenic activities is often assumed to indicate a biologically significant effect on a population of concern. However, as described above, individuals may be able to compensate for some types and degrees of shifts in behavior, preserving their health and thus their vital rates and population dynamics. For example,

New *et al.* (2013) developed a model simulating the complex social, spatial, behavioral, and motivational interactions of coastal bottlenose dolphins in the Moray Firth, Scotland, to assess the biological significance of increased rate of behavioral disruptions caused by vessel traffic. Despite a modeled scenario in which vessel traffic increased from 70 to 470 vessels a year (a six-fold increase in vessel traffic) in response to the construction of a proposed offshore renewables' facility, the dolphins' behavioral time budget, spatial distribution, motivations, and social structure remain unchanged. Similarly, two bottlenose dolphin populations in Australia were also modeled over 5 years against a number of disturbances (Reed *et al.,* 2020), and results indicated that habitat/noise disturbance had little overall impact on population abundances in either location, even in the most extreme impact scenarios modeled.

By integrating different sources of data (*e.g.,* controlled exposure data, activity monitoring, telemetry tracking, and prey sampling) into a theoretical model to predict effects from sonar on a blue whale's daily energy intake, Pirotta *et al.* (2021) found that tagged blue whales' activity budgets, lunging rates, and ranging patterns caused variability in their predicted cost of disturbance. This method may be useful for future management goals when appropriate data becomes available to fully support the model. Harbor porpoise movement and foraging were modeled for baseline periods and then for periods with seismic surveys as well; the models demonstrated that the seasonality of the seismic activity was an important predictor of impact (Gallagher *et al.,* 2021).

In their table 1, Keen *et al.* (2021) summarize the emerging themes in PCoD models that should be considered when assessing the likelihood and duration of exposure and the sensitivity of a population to disturbance (see table 1 from Keen *et al.,* 2021, below). The themes are categorized by life history traits (movement ecology, life history strategy, body size, and pace of life), disturbance source characteristics (overlap with biologically important areas, duration and frequency, and nature and context), and environmental conditions (natural variability in prey availability and climate change). Keen *et al.* (2021) then summarize how each of these features influence an assessment, noting, for example, that individual animals with small home ranges have a higher likelihood of prolonged or year-round exposure, that the effect of disturbance is strongly influenced by whether it overlaps with biologically important habitats when individuals are present, and that continuous disruption will have a greater impact than intermittent disruption.

Nearly all PCoD studies and experts agree that infrequent exposures of a single day or less are unlikely to impact individual fitness, let alone lead to population level effects (Booth *et al.,* 2016; Booth *et al.,* 2017; Christiansen and Lusseau, 2015; Farmer *et al.,* 2018; Wilson *et al.,* 2020; Harwood and Booth, 2016; King *et al.,* 2015; McHuron *et al.,* 2018; National Academies of Sciences, Engineering, and Medicine (NAS), 2017; New *et al.,* 2014; Pirotta *et al.,* 2018a; Southall *et al.,* 2007; Villegas-Amtmann *et al.,* 2015). As described through this notice for the proposed IHA, NMFS expects that any behavioral disturbance that would occur due to animals being exposed to construction activity would be of a relatively short duration, with behavior returning to a baseline state shortly after the acoustic stimuli ceases or the animal moves far enough away from the source. Given this, and NMFS' evaluation of the available PCoD studies, and the required mitigation discussed later, any such behavioral disturbance resulting from Vineyard Wind's activities is not expected to impact individual animals' health or have effects on individual animals' survival or reproduction, thus no detrimental impacts at the population level are anticipated. Marine mammals may temporarily avoid the immediate area but are not expected to permanently abandon the area or their migratory or foraging behavior. Impacts to breeding, feeding, sheltering, resting, or migration are not expected nor are shifts in habitat use, distribution, or foraging success.

Potential Effects From Vessel Strike

Vessel collisions with marine mammals, also referred to as vessel strikes or ship strikes, can result in death or serious injury of the animal. Wounds resulting from ship strike may include massive trauma, hemorrhaging, broken bones, or propeller lacerations (Knowlton and Kraus, 2001). An animal at the surface could be struck directly by a vessel, a surfacing animal could hit the bottom of a vessel, or an animal just below the surface could be cut by a vessel's propeller. Superficial strikes may not kill or result in the death of the animal. Lethal interactions are typically associated with large whales, which are occasionally found draped across the bulbous bow of large commercial ships upon arrival in port. Although smaller cetaceans are more maneuverable in relation to large vessels than are large whales, they may also be susceptible to strike. The severity of injuries typically depends on the size and speed of the vessel (Knowlton and Kraus, 2001; Laist *et al.,* 2001; Vanderlaan and Taggart, 2007; Conn and Silber, 2013), although Kelley *et al.* (2020) found, through the use of a simple biophysical model, that large whales can be seriously injured or killed by vessels of all sizes. Impact forces increase with speed, as does the probability of a strike at a given distance (Silber *et al.,* 2010; Gende *et al.,* 2011).

The most vulnerable marine mammals are those that spend extended periods of time at the surface in order to restore oxygen levels within their tissues after deep dives (*e.g.,* the sperm whale). In addition, some baleen whales seem generally unresponsive to vessel sound, making them more susceptible to vessel collisions (Nowacek *et al.,* 2004). These species are primarily large, slow-moving whales. Marine mammal responses to vessels may include avoidance and changes in dive pattern (NRC, 2003).

An examination of all known ship strikes from all shipping sources (civilian and military) indicates vessel speed is a principal factor in whether a vessel strike occurs and, if so, whether it results in injury, serious injury, or mortality (Knowlton and Kraus, 2001; Laist *et al.,* 2001; Jensen and Silber, 2003; Pace and Silber, 2005; Vanderlaan and Taggart, 2007; Conn and Silber, 2013). In assessing records in which vessel speed was known, Laist *et al.* (2001) found a direct relationship between the occurrence of a whale strike and the speed of the vessel involved in the collision. The authors concluded that most deaths occurred when a vessel was traveling in excess of 13 kn.

Jensen and Silber (2003) detailed 292 records of known or probable ship strikes of all large whale species from 1975 to 2002. Of these, vessel speed at the time of collision was reported for 58 cases. Of these 58 cases, 39 (or 67 percent) resulted in serious injury or death (19 of those resulted in serious injury as determined by blood in the water, propeller gashes or severed tailstock, and fractured skull, jaw, vertebrae, hemorrhaging, massive bruising, or other injuries noted during necropsy and 20 resulted in death). Operating speeds of vessels that struck various species of large whales ranged from 2 to 51 kn. The majority (79 percent) of these strikes occurred at speeds of 13 kn or greater. The average speed that resulted in serious injury or death was 18.6 kn. Pace and Silber (2005) found that the probability of death or serious injury increased rapidly with increasing vessel speed.

Specifically, the predicted probability of serious injury or death increased from 45 to 75 percent as vessel speed increased from 10 to 14 kn and exceeded 90 percent at 17 kn. Higher speeds during collisions result in greater force of impact and also appear to increase the chance of severe injuries or death. While modeling studies have suggested that hydrodynamic forces pulling whales toward the vessel hull increase with increasing speed (Clyne, 1999; Knowlton *et al.,* 1995), this is inconsistent with Silber *et al.* (2010), which demonstrated that there is no such relationship (*i.e.,* hydrodynamic forces are independent of speed).

In a separate study, Vanderlaan and Taggart (2007) analyzed the probability of lethal mortality of large whales at a given speed, showing that the greatest rate of change in the probability of a lethal injury to a large whale as a function of vessel speed occurs between 8.6 and 15 kn. The chances of a lethal injury decline from approximately 80 percent at 15 kn to approximately 20 percent at 8.6 kn. At speeds below 11.8 kn, the chances of lethal injury drop below 50 percent, while the probability asymptotically increases toward 100 percent above 15 kn.

The Jensen and Silber (2003) report notes that the Large Whale Ship Strike Database represents a minimum number of collisions, because the vast majority probably goes undetected or unreported. In contrast, the Project's personnel are likely to detect any strike that does occur because of the required personnel training and lookouts, along with the inclusion of PSOs (as described in the Proposed Mitigation section), and they are required to report all ship strikes involving marine mammals.

There are no known vessel strikes of marine mammals by any offshore wind energy vessel in the United States. Given the extensive mitigation and monitoring measures (see the Proposed Mitigation and Proposed Monitoring and Reporting section) that would be required of Vineyard Wind, NMFS believes that a vessel strike is not likely to occur.

Potential Effects to Marine Mammal Habitat

Vineyard Wind's proposed activities could potentially affect marine mammal habitat through impacts on the prey species of marine mammals (through noise, oceanographic processes, or reef effects), acoustic habitat (sound in the water column), water quality, and biologically important habitat for marine mammals.

Effects on Prey

Sound may affect marine mammals through impacts on the abundance, behavior, or distribution of prey species (*e.g.,* crustaceans, cephalopods, fish, and zooplankton). Marine mammal prey varies by species, season, and location and, for some, is not well documented. Here, we describe studies regarding the effects of noise on known marine mammal prey.

Fish utilize the soundscape and components of sound in their environment to perform important functions such as foraging, predator avoidance, mating, and spawning (*e.g.,* Zelick and Mann, 1999; Fay, 2009). The most likely effects on fishes exposed to loud, intermittent, low-frequency sounds are behavioral responses (*i.e.,* flight or avoidance). Short duration, sharp sounds (such as pile driving or airguns) can cause overt or subtle changes in fish behavior and local distribution. The reaction of fish to acoustic sources depends on the physiological state of the fish, past exposures, motivation (*e.g.,* feeding, spawning, migration), and other environmental factors. Key impacts to fishes may include behavioral responses, hearing damage, barotrauma (pressure-related injuries), and mortality. While it is clear that the behavioral responses of individual prey, such as displacement or other changes in distribution, can have direct impacts on the foraging success of marine mammals, the effects on marine mammals of individual prey that experience hearing damage, barotrauma, or mortality is less clear, though obviously population scale impacts that meaningfully reduce the amount of prey available could have more serious impacts.

Fishes, like other vertebrates, have a variety of different sensory systems to glean information from ocean around them (Astrup and Mohl, 1993; Astrup, 1999; Braun and Grande, 2008; Carroll *et al.,* 2017; Hawkins and Johnstone, 1978; Ladich and Popper, 2004; Ladich and Schulz-Mirbach, 2016; Mann, 2016; Nedwell *et al.,* 2004; Popper *et al.,* 2003, 2005). Depending on their hearing anatomy and peripheral sensory structures, which vary among species, fishes hear sounds using pressure and particle motion sensitivity capabilities and detect the motion of surrounding water (Fay *et al.,* 2008) (terrestrial vertebrates generally only detect pressure). Most marine fishes primarily detect particle motion using the inner ear and lateral line system while some fishes possess additional morphological adaptations or specializations that can enhance their sensitivity to sound pressure, such as a gas-filled swim bladder (Braun and Grande, 2008; Popper and Fay, 2011).

Hearing capabilities vary considerably between different fish species with data only available for just over 100 species out of the 34,000 marine and freshwater fish species (Eschmeyer and Fong, 2016). In order to better understand acoustic impacts on fishes, fish hearing groups are defined by species that possess a similar continuum of anatomical features, which result in varying degrees of hearing sensitivity (Popper and Hastings, 2003). There are four hearing groups defined for all fish species (modified from Popper *et al.,* 2014) within this analysis, and they include: fishes without a swim bladder (*e.g.,* flatfish, sharks, rays, *etc.*); fishes with a swim bladder not involved in hearing (*e.g.,* salmon, cod, pollock, *etc.*); fishes with a swim bladder involved in hearing (*e.g.,* sardines, anchovy, herring, *etc.*); and fishes with a swim bladder involved in hearing and high-frequency hearing (*e.g.,* shad and menhaden). Most marine mammal fish prey species would not be likely to perceive or hear mid- or high-frequency sonars. While hearing studies have not been done on sardines and northern anchovies, it would not be unexpected for them to have hearing similarities to Pacific herring (up to 2–5 kHz) (Mann *et al.,* 2005). Currently, less data are available to estimate the range of best sensitivity for fishes without a swim bladder.

In terms of physiology, multiple scientific studies have documented a lack of mortality or physiological effects to fish from exposure to low- and mid-frequency sonar and other sounds (Halvorsen *et al.,* 2012a; Jørgensen *et al.,* 2005; Juanes *et al.,* 2017; Kane *et al.,* 2010; Kvadsheim and Sevaldsen, 2005; Popper *et al.,* 2007, 2016; Watwood *et al.,* 2016). Techer *et al.* (2017) exposed carp in floating cages for up to 30 days to low-power 23 and 46 kHz source without any significant physiological response. Other studies have documented either a lack of TTS in species whose hearing range cannot perceive sonar (such as Navy sonar), or for those species that could perceive sonar-like signals, any TTS experienced would be recoverable (Halvorsen *et al.,* 2012a; Ladich and Fay, 2013; Popper and Hastings, 2009a, 2009b; Popper *et al.,* 2014; Smith, 2016). Only fishes that have specializations that enable them to hear sounds above about 2,500 Hz (2.5 kHz), such as herring (Halvorsen *et al.,* 2012a; Mann *et al.,* 2005; Mann, 2016; Popper *et al.,* 2014), would have the potential to receive TTS or exhibit behavioral responses from exposure to

mid-frequency sonar. In addition, any sonar induced TTS to fish whose hearing range could perceive sonar would only occur in the narrow spectrum of the source (*e.g.,* 3.5 kHz) compared to the fish's total hearing range (*e.g.,* 0.01 to 5 kHz).

In terms of behavioral responses, Juanes *et al.* (2017) discuss the potential for negative impacts from anthropogenic noise on fish, but the authors' focus was on broader based sounds, such as ship and boat noise sources. Watwood *et al.* (2016) also documented no behavioral responses by reef fish after exposure to mid-frequency active sonar. Doksaeter *et al.* (2009, 2012) reported no behavioral responses to mid-frequency sonar (such as naval sonar) by Atlantic herring; specifically, no escape reactions (vertically or horizontally) were observed in free swimming herring exposed to mid-frequency sonar transmissions. Based on these results (Doksaeter *et al.,* 2009, 2012; Sivle *et al.,* 2012), Sivle *et al.* (2014) created a model in order to report on the possible population-level effects on Atlantic herring from active sonar. The authors concluded that the use of sonar poses little risk to populations of herring regardless of season, even when the herring populations are aggregated and directly exposed to sonar. Finally, Bruintjes *et al.* (2016) commented that fish exposed to any short-term noise within their hearing range might initially startle but would quickly return to normal behavior.

Pile driving noise during construction is of particular concern as the very high sound pressure levels could potentially prevent fish from reaching breeding or spawning sites, finding food, and acoustically locating mates. A playback study in west Scotland revealed that there was a significant movement response to the pile driving stimulus in both species at relatively low received sound pressure levels (sole: 144–156 dB re 1µPa Peak; cod: 140–161 dB re 1 µPa Peak, particle motion between 6.51×10^3 and 8.62×10^4 m/s^2 peak) (Mueller-Blenkle *et al.,* 2010). The swimming speed of sole increased significantly during the playback of construction noise when compared to the playbacks of before and after construction. While not statistically significant, cod also displayed a similar behavioral response during before, during, and after construction playbacks. However, cod demonstrated a specific and significant freezing response at the onset and cessation of the playback recording. In both species, indications were present displaying directional movements away from the playback source. During wind farm construction in the eastern Taiwan Strait, type 1 soniferous fish chorusing showed a relatively lower intensity and longer duration while type 2 chorusing exhibited higher intensity and no changes in its duration. Deviation from regular fish vocalization patterns may affect fish reproductive success, cause migration, augmented predation, or physiological alterations.

Occasional behavioral reactions to activities that produce underwater noise sources are unlikely to cause long-term consequences for individual fish or populations. The most likely impact to fish from impact and vibratory pile driving activities at the LIAs would be temporary behavioral avoidance of the area. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity. The duration of fish avoidance of an area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated. In general, impacts to marine mammal prey species are expected to be minor and temporary due to the expected short daily duration of individual pile driving events and the relatively small areas being affected.

Occasional behavioral reactions to activities that produce underwater noise sources are unlikely to cause long-term consequences for individual fish or populations. The most likely impact to fish from impact pile driving activities at the LIA would be temporary behavioral avoidance of the area. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity. The duration of fish avoidance of an area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated. In general, impacts to marine mammal prey species are expected to be minor and temporary due to the expected short daily duration of individual pile driving events and the relatively small areas being affected.

As described in the Proposed Mitigation section below, Vineyard Wind would utilize a sound attenuation device which would reduce potential for injury to marine mammal prey. Other fish that experience hearing loss as a result of exposure to impulsive sound sources may have a reduced ability to detect relevant sounds such as predators, prey, or social vocalizations. However, PTS has not been known to occur in fishes and any hearing loss in fish may be as temporary as the timeframe required to repair or replace the sensory cells that were damaged or destroyed (Popper *et al.,* 2005, 2014; Smith, 2006). It is not known if damage to auditory nerve fibers could occur, and if so, whether fibers would recover during this process. In addition, most acoustic effects, if any, are expected to be short-term and localized. Long-term consequences for fish populations, including key prey species within the LIA, would not be expected.

Required soft-starts would allow prey and marine mammals to move away from the source prior to any noise levels that may physically injure prey and the use of the noise attenuation devices would reduce noise levels to the degree any mortality or injury of prey is also minimized. Use of bubble curtains, in addition to reducing impacts to marine mammals, for example, is a key mitigation measure in reducing injury and mortality of ESA-listed salmon on the U.S. west coast. However, we recognize some mortality, physical injury and hearing impairment in marine mammal prey may occur, but we anticipate the amount of prey impacted in this manner is minimal compared to overall availability. Any behavioral responses to pile driving by marine mammal prey are expected to be brief. We expect that other impacts, such as stress or masking, would occur in fish that serve as marine mammals prey (Popper *et al.,* 2019); however, those impacts would be limited to the duration of impact pile driving, and, if prey were to move out the area in response to noise, these impacts would be minimized.

In addition to fish, prey sources such as marine invertebrates could potentially be impacted by noise stressors as a result of the proposed activities. However, most marine invertebrates' ability to sense sounds is limited. Invertebrates appear to be able to detect sounds (Pumphrey, 1950; Frings and Frings, 1967) and are most sensitive to low-frequency sounds (Packard *et al.,* 1990; Budelmann and Williamson, 1994; Lovell *et al.,* 2005; Mooney *et al.,* 2010). Data on response of invertebrates such as squid, another marine mammal prey species, to anthropogenic sound is more limited (de Soto, 2016; Sole *et al.,* 2017). Data suggest that cephalopods are capable of sensing the particle motion of sounds and detect low frequencies up to 1–1.5 kHz, depending on the species, and so are likely to detect airgun noise (Kaifu *et al.,* 2008; Hu *et al.,* 2009; Mooney *et al.,* 2010; Samson *et al.,* 2014). Sole *et al.* (2017) reported physiological injuries to cuttlefish in cages placed at-sea when exposed during a controlled exposure experiment to low-frequency sources (315 Hz, 139 to 142 dB re 1 µPa^2; 400 Hz, 139 to 141 dB re 1 µPa^2).

Fewtrell and McCauley (2012) reported squids maintained in cages displayed startle responses and behavioral changes when exposed to seismic airgun sonar (136–162 re 1 $\mu Pa^2 \times s$). Jones *et al.* (2020) found that when squid (*Doryteuthis pealeii*) were exposed to impulse pile driving noise, body pattern changes, inking, jetting, and startle responses were observed and nearly all squid exhibited at least one response. However, these responses occurred primarily during the first eight impulses and diminished quickly, indicating potential rapid, short-term habituation.

Cephalopods have a specialized sensory organ inside the head called a statocyst that may help an animal determine its position in space (orientation) and maintain balance (Budelmann, 1992). Packard *et al.* (1990) showed that cephalopods were sensitive to particle motion, not sound pressure, and Mooney *et al.* (2010) demonstrated that squid statocysts act as an accelerometer through which particle motion of the sound field can be detected. Auditory injuries (lesions occurring on the statocyst sensory hair cells) have been reported upon controlled exposure to low-frequency sounds, suggesting that cephalopods are particularly sensitive to low-frequency sound (Andre *et al.,* 2011; Sole *et al.,* 2013). Behavioral responses, such as inking and jetting, have also been reported upon exposure to low-frequency sound (McCauley *et al.,* 2000; Samson *et al.,* 2014). Squids, like most fish species, are likely more sensitive to low-frequency sounds and may not perceive mid- and high-frequency sonars.

With regard to potential impacts on zooplankton, McCauley *et al.* (2017) found that exposure to airgun noise resulted in significant depletion for more than half the taxa present and that there were two to three times more dead zooplankton after airgun exposure compared with controls for all taxa, within 1 km (0.6 mi) of the airguns. However, the authors also stated that in order to have significant impacts on r-selected species (*i.e.,* those with high growth rates and that produce many offspring) such as plankton, the spatial or temporal scale of impact must be large in comparison with the ecosystem concerned, and it is possible that the findings reflect avoidance by zooplankton rather than mortality (McCauley *et al.,* 2017). In addition, the results of this study are inconsistent with a large body of research that generally finds limited spatial and temporal impacts to zooplankton as a result of exposure to airgun noise (*e.g.,* Dalen and Knutsen, 1987; Payne, 2004; Stanley *et al.,* 2011). Most prior research on this topic, which has focused on relatively small spatial scales, has showed minimal effects (*e.g.,* Kostyuchenko, 1973; Booman *et al.,* 1996; Sætre and Ona, 1996; Pearson *et al.,* 1994; Bolle *et al.,* 2012).

A modeling exercise was conducted as a follow-up to the McCauley *et al.* (2017) study (as recommended by McCauley *et al.,* 2017), in order to assess the potential for impacts on ocean ecosystem dynamics and zooplankton population dynamics (Richardson *et al.,* 2017). Richardson *et al.* (2017) found that a full-scale airgun survey would impact copepod abundance within the survey area, but that effects at a regional scale were minimal (2 percent decline in abundance within 150 km (93.2 mi) of the survey area and effects not discernible over the full region). The authors also found that recovery within the survey area would be relatively quick (3 days following survey completion) and suggest that the quick recovery was due to the fast growth rates of zooplankton, and the dispersal and mixing of zooplankton from both inside and outside of the impacted region. The authors also suggest that surveys in areas with more dynamic ocean circulation in comparison with the study region and/or with deeper waters (*i.e.,* typical offshore wind locations) would have less net impact on zooplankton.

Notably, a recently described study produced results inconsistent with those of McCauley *et al.* (2017). Researchers conducted a field and laboratory study to assess if exposure to airgun noise affects mortality, predator escape response, or gene expression of the copepod *Calanus finmarchicus* (Fields *et al.,* 2019). Immediate mortality of copepods was significantly higher, relative to controls, at distances of 5 m or less from the airguns. Mortality 1 week after the airgun blast was significantly higher in the copepods placed 10 m from the airgun but was not significantly different from the controls at a distance of 20 m from the airgun. The increase in mortality, relative to controls, did not exceed 30 percent at any distance from the airgun. Moreover, the authors caution that even this higher mortality in the immediate vicinity of the airguns may be more pronounced than what would be observed in free-swimming animals due to increased flow speed of fluid inside bags containing the experimental animals. There were no sub-lethal effects on the escape performance, or the sensory threshold needed to initiate an escape response, at any of the distances from the airgun that were tested. Whereas McCauley *et al.* (2017) reported an SEL of 156 dB at a range of 509–658 m, with zooplankton mortality observed at that range, Fields *et al.* (2019) reported an SEL of 186 dB at a range of 25 m, with no reported mortality at that distance.

Airguns and impact pile driving are similar in that they both produce impulsive and intermittent noise and typically have higher source levels than other sources (*e.g.,* vibratory driving). We anticipate marine mammal prey exposed to impact pile driving would demonstrate similar physical consequences and behavioral impacts compared to exposure to airguns; however, the spatial extent of these impacts during impact pile driving is dependent upon source levels and use of noise attenuation systems (NAS) such as double bubble curtains, such that lower source levels and use of NAS are expected to further minimize impacts that would occur otherwise.

The presence of large numbers of turbines has been shown to impact meso- and sub-meso-scale water column circulation, which can affect the density, distribution, and energy content of zooplankton and thereby, their availability as marine mammal prey. Topside, atmospheric wakes result in wind speed reductions influencing upwelling and downwelling in the ocean while underwater structures such as WTG and ESP foundations may cause turbulent current wakes, which impact circulation, stratification, mixing, and sediment resuspension (Daewel *et al.,* 2022). Overall, the presence of structures such as wind turbines is, in general, likely to result in certain oceanographic effects in the marine environment and may alter marine mammal prey, such as aggregations and distribution of zooplankton through changing the strength of tidal currents and associated fronts, changes in stratification, primary production, the degree of mixing, and stratification in the water column (Chen *et al.,* 2021; Johnson *et al.,* 2021; Christiansen *et al.,* 2022; Dorrell *et al.,* 2022).

Turbine operations for the previously installed 47 WTG monopile foundations commenced in 2023. Vineyard Wind intends to install 15 WTG monopile foundations, and it is possible that turbines would become operational by the end of the IHA effective period. As described below (see *Potential Effects from Offshore Wind Farm Operational Noise* section), there is scientific uncertainty around the scale of oceanographic impacts (meters to kilometers) associated with turbine operation. The Project is located offshore of Massachusetts, and although the LIA does overlap with key winter

foraging grounds for NARWs (Leiter *et al.,* 2017; Quintana-Rizzo *et al.,* 2021; O'Brien *et al.,* 2022; Pendleton *et al.,* 2022), nearby habitat may provide higher foraging value should NARW prey be affected in the LIA during construction, and the amount of pile driving time with only 15 piles remaining to be installed is expected to be limited, thereby limiting potential impacts on prey aggregation. In addition, the proposed seasonal restriction on pile driving from January through May would reduce impacts to NARW prey during the time that they are more likely to be foraging. The LIA does not overlap but is in proximity to seasonal foraging grounds for fin whales, minke whales, and sei whales. Generally speaking, and depending on the extent, impacts on prey could impact the distribution of marine mammals in an area, potentially necessitating additional energy expenditure to find and capture prey. However, at the temporal and spatial scales anticipated for this activity, any such impacts on prey are not expected to impact the reproduction or survival of any individual marine mammals. Although studies assessing the impacts of offshore wind development on marine mammals are limited, the repopulation of wind energy areas by harbor porpoises (Brandt *et al.,* 2016; Lindeboom *et al.,* 2011) and harbor seals (Lindeboom *et al.,* 2011; Russell *et al.,* 2016) following the installation of wind turbines are promising. Overall, any impacts to marine mammal foraging capabilities due to effects on prey aggregation from the turbine presence and operation during the effective period of the proposed IHA is likely to be limited. In general, impacts to marine mammal prey species are expected to be relatively minor and temporary due to the expected short daily duration of individual pile driving events and the relatively small areas being affected.

Reef Effects

The presence of monopile foundations and scour protection will result in a conversion of the existing sandy bottom habitat to a hard bottom habitat with areas of vertical structural relief. This could potentially alter the existing habitat by creating an ''artificial reef effect'' that results in colonization by assemblages of both sessile and mobile animals within the new hard-bottom habitat (Wilhelmsson *et al.,* 2006; Reubens *et al.,* 2013; Bergström *et al.,* 2014; Coates *et al.,* 2014). This colonization by marine species, especially hard-substrate preferring species, can result in changes to the diversity, composition, and/or biomass of the area thereby impacting the trophic composition of the site (Wilhelmsson *et al.,* 2010; Krone *et al.,* 2013; Bergström *et al.,* 2014; Hooper *et al.,* 2017; Raoux *et al.,* 2017; Harrison and Rousseau, 2020; Taormina *et al.,* 2020; Buyse *et al.,* 2022a; ter Hofstede *et al.,* 2022).

Artificial structures can create increased habitat heterogeneity important for species diversity and density (Langhamer, 2012). The monopile WTG foundations will extend through the water column, which may serve to increase settlement of meroplankton or planktonic larvae on the structures in both the pelagic and benthic zones (Boehlert and Gill, 2010). Fish and invertebrate species are also likely to aggregate around the foundations and scour protection which could provide increased prey availability and structural habitat (Boehlert and Gill, 2010; Bonar *et al.,* 2015). Further, instances of species previously unknown, rare, or nonindigenous to an area have been documented at artificial structures, changing the composition of the food web and possibly the attractability of the area to new or existing predators (Adams *et al.,* 2014; de Mesel, 2015; Bishop *et al.,* 2017; Hooper *et al.,* 2017; Raoux *et al.,* 2017; van Hal *et al.,* 2017; Degraer *et al.,* 2020; Fernandez-Betelu *et al.,* 2022). Notably, there are examples of these sites becoming dominated by marine mammal prey species, such as filter-feeding species and suspension-feeding crustaceans (Andersson and Öhman, 2010; Slavik *et al.,* 2019; Hutchison *et al.,* 2020; Pezy *et al.,* 2020; Mavraki *et al.,* 2022).

Numerous studies have documented significantly higher fish concentrations including species like cod and pouting (*Trisopterus luscus*), flounder (*Platichthys flesus*), eelpout (*Zoarces viviparus*), and eel (*Anguilla anguilla*) near in-water structures than in surrounding soft bottom habitat (Langhamer and Wilhelmsson, 2009; Bergström *et al.,* 2013; Reubens *et al.,* 2013). In the German Bight portion of the North Sea, fish were most densely congregated near the anchorages of jacket foundations, and the structures extending through the water column were thought to make it more likely that juvenile or larval fish encounter and settle on them (Rhode Island Coastal Resources Management Council, 2010; Krone *et al.,* 2013). In addition, fish can take advantage of the shelter provided by these structures while also being exposed to stronger currents created by the structures, which generate increased feeding opportunities and decreased potential for predation (Wilhelmsson *et al.,* 2006). The presence of the foundations and resulting fish aggregations around the foundations is expected to be a long-term habitat impact, but the increase in prey availability could potentially be beneficial for some marine mammals.

Water Quality

Temporary and localized reduction in water quality will occur as a result of pile driving activities. These activities will disturb bottom sediments and may cause a temporary increase in suspended sediment in the LIA. Currents should quickly dissipate any raised total suspended sediment (TSS) levels, and levels should return to background levels once the project activities in that area cease. No direct impacts on marine mammals are anticipated due to increased TSS and turbidity; however, turbidity within the water column has the potential to reduce the level of oxygen in the water and irritate the gills of prey fish species in the LIA. However, turbidity plumes associated with the project would be temporary and localized, and fish in the LIA would be able to move away from and avoid the areas where plumes may occur. Therefore, it is expected that the impacts on prey fish species from turbidity, and therefore on marine mammals, would be minimal and temporary.

Equipment used by Vineyard Wind within the LIA, including ships and other marine vessels, potentially aircrafts, and other equipment, are also potential sources of by-products (*e.g.,* hydrocarbons, particulate matter, heavy metals). All equipment is properly maintained in accordance with applicable legal requirements. All such operating equipment meets Federal water quality standards, where applicable. Given these requirements, impacts to water quality are expected to be minimal.

Acoustic Habitat

Acoustic habitat is the soundscape, which encompasses all of the sound present in a particular location and time, as a whole when considered from the perspective of the animals experiencing it. Animals produce sound for, or listen for sounds produced by, conspecifics (communication during feeding, mating, and other social activities), other animals (finding prey or avoiding predators), and the physical environment (finding suitable habitats, navigating). Together, sounds made by animals and the geophysical environment (*e.g.,* produced by earthquakes, lightning, wind, rain, waves) make up the natural

contributions to the total acoustics of a place. These acoustic conditions, termed acoustic habitat, are one attribute of an animal's total habitat.

Soundscapes are defined and influenced by the total contribution of anthropogenic sound. This may include incidental emissions from sources such as vessel traffic or may be intentionally introduced to the marine environment for data acquisition purposes (as in the use of airgun arrays) or for Navy training and testing purposes (as in the use of sonar and explosives and other acoustic sources). Anthropogenic noise varies widely in its frequency, content, duration, and loudness. These characteristics greatly influence the potential habitat-mediated effects to marine mammals (please also see the previous discussion on Masking), which may range from local effects for brief periods of time to chronic effects over large areas and for long durations. Depending on the extent of effects to habitat, animals may alter their communications signals (thereby potentially expending additional energy) or miss acoustic cues (either conspecific or adventitious). Problems arising from a failure to detect cues are more likely to occur when noise stimuli are chronic and overlap with biologically relevant cues used for communication, orientation, and predator/prey detection (Francis and Barber, 2013). For more detail on these concepts, see: Barber *et al.,* 2009; Pijanowski *et al.,* 2011; Francis and Barber, 2013; Lillis *et al.,* 2014.

The term ''listening area'' refers to the region of ocean over which sources of sound can be detected by an animal at the center of the space. Loss of communication space concerns the area over which a specific animal signal, used to communicate with conspecifics in biologically important contexts (*e.g.,* foraging, mating), can be heard, in noisier relative to quieter conditions (Clark *et al.,* 2009). Lost listening area concerns the more generalized contraction of the range over which animals would be able to detect a variety of signals of biological importance, including eavesdropping on predators and prey (Barber *et al.,* 2009). Such metrics do not, in and of themselves, document fitness consequences for the marine animals that live in chronically noisy environments. Long-term population-level consequences mediated through changes in the ultimate survival and reproductive success of individuals are difficult to study, and particularly so underwater. However, it is increasingly well documented that aquatic species rely on qualities of natural acoustic habitats, with researchers quantifying reduced detection of important ecological cues (*e.g.,* Francis and Barber, 2013; Slabbekoorn *et al.,* 2010) as well as survivorship consequences in several species (*e.g.,* Simpson *et al.,* 2014; Nedelec *et al.,* 2014).

Potential Effects From Offshore Wind Farm Operational Noise

Although this proposed IHA primarily covers the noise produced from construction activities relevant to the Vineyard Wind Offshore Wind Project offshore wind facility, operational noise was a consideration in NMFS' analysis of the project, as turbines may become operational within the effective dates of the IHA (if issued).

In both newer, quieter, direct-drive systems and older generation, geared turbine designs, recent scientific studies indicate that operational noise from turbines is on the order of 110 to 125 dB re 1 µPa root-mean-square sound pressure level (SPL_{rms}) at an approximate distance of 50 m (Tougaard *et al.,* 2020). Recent measurements of operational sound generated from wind turbines (direct drive, 6 MW, jacket foundations) at Block Island wind farm (BIWF) indicate average broadband levels of 119 dB at 50 m from the turbine, with levels varying with wind speed (HDR, *Inc.,* 2019). Interestingly, measurements from BIWF turbines showed operational sound had fewer tonal components compared to European measurements of turbines with gear boxes.

Tougaard *et al.* (2020) further stated that the operational noise produced by WTGs is static in nature and lower than noise produced by passing ships. This is a noise source in this region to which marine mammals are likely already habituated. Furthermore, operational noise levels are likely lower than those ambient levels already present in active shipping lanes, such that operational noise would likely only be detected in very close proximity to the WTG (Thomsen *et al.,* 2006; Tougaard *et al.,* 2020). Similarly, recent measurements from a wind farm (3–MW turbines) in China found that above 300 Hz, turbines produced sound that was similar to background levels (Zhang *et al.,* 2021). Other studies by Jansen and de Jong (2016) and Tougaard *et al.* (2009) determined that, while marine mammals would be able to detect operational noise from offshore wind farms (again, based on older 2–MW models) for several kilometers, they expected no significant impacts on individual survival, population viability, marine mammal distribution, or the behavior of the animals considered in their study (harbor porpoises and harbor seals). In addition, Madsen *et al.* (2006) found the intensity of noise generated by operational wind turbines to be much less than the noises present during construction, although this observation was based on a single turbine with a maximum power of 2 MW.

More recently, Stöber and Thomsen (2021) used monitoring data and modeling to estimate noise generated by more recently developed, larger (10–MW) direct-drive WTGs. Their findings, similar to Tougaard *et al.* (2020), demonstrate that there is a trend that operational noise increases with turbine size. Their study predicts broadband source levels could exceed 170-dB SPL_{rms} for a 10–MW WTG; however, those noise levels were generated based on geared turbines whereas newer turbines operate with direct drive technology. The shift from using gear boxes to direct drive technology is expected to reduce the levels by 10 dB. The findings in the Stöber and Thomsen (2021) study have not been experimentally validated, though the modeling (using largely geared turbines) performed by Tougaard *et al.* (2020) yields similar results for a hypothetical 10–MW WTG.

Recently, Holme *et al.* (2023) cautioned that the Tougaard *et al.* (2020) and Stöber and Thomsen (2021) studies extrapolated levels for larger turbines should be interpreted with caution since both studies relied on data from smaller turbines (0.45 to 6.15 MW) collected over a variety of environmental conditions. Holme et al. (2023) demonstrated that the model presented in Tougaard *et al.* (2020) tends to potentially overestimate levels (up to approximately 8 dB) measured to those in the field, especially with measurements closer to the turbine for larger turbines. Holme *et al.* (2023) measured operational noise from larger turbines (6.3 and 8.3 MW) associated with three wind farms in Europe and found no relationship between turbine activity (power production, which is proportional to the blade's revolutions per minute) and noise level, though it was noted that this missing relationship may have been masked by the area's relatively high ambient noise sound levels. Sound levels (rms) of a 6.3–MW direct-drive turbine were measured to be 117.3 dB at a distance of 70 m. However, measurements from 8.3 MW turbines were inconclusive as turbine noise was deemed to have been largely masked by ambient noise.

Finally, operational turbine measurements are available from the Coastal Virginia Offshore Wind (CVOW)

pilot pile project, where two 7.8 m monopile WTGs were installed (HDR, 2023). Compared to BIWF, levels at CVOW were higher (10–30 dB) below 120 Hz, believed to be caused by the vibrations associated with the monopile structure, while above 120 Hz levels were consistent among the two wind farms.

Overall, noise from operating turbines would raise ambient noise levels in the immediate vicinity of the turbines; however, the spatial extent of increased noise levels would be limited. Vineyard Wind did not request, and NMFS is not proposing to authorize, take incidental to operational noise from WTGs. Therefore, the topic is not discussed or analyzed further herein. However, NMFS proposes to require Vineyard Wind to measure operational noise levels.

Estimated Take of Marine Mammals

This section provides an estimate of the number of incidental takes proposed for authorization through the IHA, which will inform NMFS' consideration of ''small numbers,'' the negligible impact determinations, and impacts on subsistence uses.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance, which: (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Proposed takes would primarily be by Level B harassment, as noise from pile driving has the potential to result in disruption of marine mammal behavioral patterns. Impacts such as masking and TTS can contribute to the disruption of behavioral patterns and are accounted for within those takes proposed for authorization. There is also some potential for high frequency species (harbor porpoise) and phocids (harbor seal and gray seal) to experience a limited amount of auditory injury (PTS; Level A harassment) primarily because predicted auditory injury zones are large enough and these species are cryptic enough that the potential for PTS cannot be fully discounted. For mysticetes, the Level A harassment $ER95_{percent}$ ranges are also large (0.0043 km to 3.191 km); however, the extensive marine mammal mitigation and monitoring proposed by Vineyard Wind, and which would be required by NMFS, as well as natural avoidance behaviors is expected to reduce the potential for PTS to discountable levels. Nevertheless, Vineyard Wind has requested, and NMFS proposes to authorize a small amount of Level A harassment incidental to installing piles (table 11). Auditory injury is unlikely to occur for mid-frequency species as thresholds are higher and PTS zones are very close to the pile such that PTS is unlikely to occur. While NMFS is proposing to authorize Level A harassment and Level B harassment, the proposed mitigation and monitoring measures are expected to, in some cases, avoid,and minimize overall the severity of the taking to the extent practicable (see Proposed Mitigation and Proposed Monitoring and Reporting sections).

As described previously, no serious injury or mortality is anticipated or proposed to be authorized incidental to the specified activity. Even without mitigation, pile driving activities are unlikely to directly cause marine mammal mortality or serious injury. There is no documented case wherein pile driving resulted in marine mammal mortality or stranding and the scientific literature demonstrates that the most likely behavioral response to pile driving (or similar stimulus source) is avoidance and temporary cessation of behaviors such as foraging or socialization (see *Avoidance and Displacement* in Potential Effects of Specified Activities on Marine Mammals and Their Habitat section). While, in general, there is a low probability that mortality or serious injury of marine mammals could occur from vessel strikes, the mitigation and monitoring measures contained within this proposed rule are expected to avoid vessel strikes (see Proposed Mitigation section). No other activities have the potential to result in mortality or serious injury.

For acoustic impacts, we estimate take by considering: (1) acoustic thresholds above which NMFS believes the best available science indicates marine mammals will be behaviorally harassed or incur some degree of permanent hearing impairment; (2) the area or volume of water that will be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) the number of days of activities. We note that while these factors can contribute to a basic calculation to provide an initial prediction of potential takes, additional information that can qualitatively inform take estimates is also sometimes available (*e.g.,* previous monitoring results or average group size). Below, we describe the factors considered here in more detail and present the proposed take estimates.

As described below, there are multiple methods available to estimate the density or number of a given species in the area appropriate to inform the take estimate. For each species and activity, the largest value resulting from the three take estimation methods described below (*i.e.,* density-based, PSO-based, or mean group size) was carried forward as the amount of take proposed for authorization, by Level B harassment. The amount of take proposed for authorization, by Level A harassment, reflects the density-based exposure estimates and, for some species and activities, consideration of other data such as mean group size.

Below, we describe NMFS' acoustic thresholds, acoustic and exposure modeling methodologies, marine mammal density calculation methodology, occurrence information, and the modeling and methodologies applied to estimate take for the Project's proposed construction activities. NMFS considered all information and analysis presented by Vineyard Wind, as well as all other applicable information and, based on the best available science, concurs that the estimates of the types and amounts of take for each species and stock are reasonable, and is proposing to authorize the amount requested. NMFS notes the take estimates described herein for foundation installation can be considered conservative because the estimates do not reflect the implementation of clearance and shutdown zones for any marine mammal species or stock.

Acoustic Thresholds

NMFS recommends the use of acoustic thresholds that identify the received level of underwater sound above which exposed marine mammals are likely to be behaviorally harassed (Level B harassment) or to incur PTS of some degree (Level A harassment). A summary of all NMFS' thresholds can be found at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance.*

Level B Harassment

Though significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed to varying degrees by other factors related to the source or exposure context (*e.g.,* frequency, predictability, duty cycle, duration of the exposure, signal-to-noise

ratio, distance to the source, ambient noise, and the receiving animal's hearing, motivation, experience, demography, behavior at time of exposure, life stage, depth) and can be difficult to predict (*e.g.,* Southall *et al.,* 2007, 2021; Ellison *et al.,* 2012). Based on what the available science indicates and the practical need to use a threshold based on a metric that is both predictable and measurable for most activities, NMFS typically uses a generalized acoustic threshold based on received level to estimate the onset of behavioral harassment.

NMFS generally predicts that marine mammals are likely to be taken in a manner considered to be Level B harassment when exposed to underwater anthropogenic noise above root-mean-squared pressure received levels (RMS SPL) of 120 dB (referenced to 1 micropascal (re 1 μPa)) for continuous (*e.g.,* vibratory pile driving, drilling) and above RMS SPL 160 dB re 1 μPa for non-explosive impulsive (*e.g.,* seismic airguns) or intermittent (*e.g.,* scientific sonar) sources. Generally speaking, Level B harassment take estimates based on these thresholds are expected to include any likely takes by TTS as, in most cases, the likelihood of TTS occurs at closer distances from the source. TTS of a sufficient degree can manifest as behavioral harassment, as reduced hearing sensitivity and the potential reduced opportunities to detect important signals (conspecific communication, predators, prey) may result in changes in behavior patterns that would not otherwise occur.

The proposed Project's construction activities include the use of impulsive sources (*e.g.,* impact pile driving), and therefore the 160-dB re 1 μPa (rms) threshold is applicable to our analysis.

Level A Harassment

NMFS' Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 2.0, Technical Guidance; NMFS, 2018) identifies dual criteria to assess auditory injury (Level A harassment) to five different marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). As dual metrics, NMFS considers onset of PTS (Level A harassment) to have occurred when either one of the two metrics is exceeded (*i.e.,* metric resulting in the largest isopleth). As described above, Vineyard Wind's proposed activities include the use of impulsive sources. NMFS' thresholds identifying the onset of PTS are provided in table 5. The references, analysis, and methodology used in the development of the thresholds are described in NMFS' 2018 Technical Guidance, which may be accessed at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance.*

TABLE 5—PTS ONSET THRESHOLDS

[NMFS, 2018]

Hearing group	PTS onset thresholds * (received level)	
	Impulsive	Non-impulsive
Low-Frequency (LF) Cetaceans	$L_{p,0\text{-}pk,flat}$: 219 dB; $L_{E,p,\ LF,24h}$: 183 dB	$L_{E,p,\ LF,24h}$: 199 dB.
Mid-Frequency (MF) Cetaceans	$L_{p,0\text{-}pk,flat}$: 230 dB; $L_{E,p,\ MF,24h}$: 185 dB	$L_{E,p,\ MF,24h}$: 198 dB.
High-Frequency (HF) Cetaceans	$L_{p,0\text{-}pk,flat}$: 202 dB; $L_{E,p,HF,24h}$: 155 dB	$L_{E,p,\ HF,24h}$: 173 dB.
Phocid Pinnipeds (PW) (Underwater)	$L_{p,0\text{-}pk,flat}$: 218 dB; $L_{E,p,PW,24h}$: 185 dB	$L_{E,p,PW,24h}$: 201 dB.
Otariid Pinnipeds (OW) (Underwater)	$L_{p,0\text{-}pk,flat}$: 232 dB; $L_{E,p,OW,24h}$: 203 dB	$L_{E,p,OW,24h}$: 219 dB.

* Dual metric thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds are recommended for consideration.

Note: Peak sound pressure level ($L_{p,0\text{-}pk}$) has a reference value of 1 μPa, and weighted cumulative sound exposure level ($L_{E,p}$) has a reference value of 1μPa^2s. In this table, thresholds are abbreviated to be more reflective of International Organization for Standardization standards (ISO, 2017). The subscript ''flat'' is being included to indicate peak sound pressure are flat weighted or unweighted within the generalized hearing range of marine mammals (*i.e.,* 7 Hz to 160 kHz). The subscript associated with cumulative sound exposure level thresholds indicates the designated marine mammal auditory weighting function (LF, MF, and HF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The weighted cumulative sound exposure level thresholds could be exceeded in a multitude of ways (*i.e.,* varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these thresholds will be exceeded.

Below, we describe the assumptions and methodologies used to estimate take, in consideration of acoustic thresholds and appropriate marine mammals density and occurrence information, for WTG monopile installation. Resulting distances to thresholds, densities and occurrence (*i.e.,* PSO sightings, group size) data used, exposure estimates (as relevant to the analysis), and activity-specific take estimates can be found below.

Acoustic and Exposure Modeling

During the 2023 Vineyard Wind pile installation activities, Vineyard Wind conducted a sound field verification (SFV) study to compare with model results of the 2018 modeling (Küsel *et al.,* 2024). The SFV study included acoustic monitoring of the impact installation of 12 monopile foundations from June 6 through September 7, 2023. Five of the 12 acoustically monitored monopiles were determined to be representative of the noise attenuation system (NAS) configuration and maintenance schedule that would be proposed for the remaining 15 monopiles to be installed in 2024. These five representative monopiles (piles 7, 8, 10, 11, and 12 in the Vineyard Wind SFV Monitoring Report) were monitored using a double bubble curtain (DBBC) and Hydrosound Damper System (HSD), which has been proposed for use as the noise attenuation system setup for the remaining 15 monopiles. Vineyard Wind also followed an enhanced bubble curtain maintenance schedule for these five monopiles; this maintenance schedule would also be used for the remaining 15 monopiles to be installed in 2024 (see the Vineyard Wind Enhanced BBC Technical Memo). Peak (pk), SEL, and RMS SPL received distances for each acoustically monitored pile are reported in the VW1 SFV Final Report Appendix A (Küsel *et al.,* 2024) For additional details on how acoustic ranges were derived from SFV measurements, see the VW1 SFV Final Report sections 2.3 and 3.3 (Küsel *et al.,* 2024). JASCO modeled a maximum

range to the Level A harassment threshold of 3.191 km (1.99 mi) with 6-dB attenuation (for low-frequency cetaceans) (Küsel *et al.,* 2024).

In addition to the 15 piles being installed under the same noise attenuation scenario as the 5 aforementioned representative piles, they are also anticipated to be installed under similar pile driving specifications and in a similar acoustic environment. Table 6 describes the key piling assumptions and proposed impact pile driving schedule for 2024. These assumptions and schedule are based upon the 2023 piling and hammer energy schedule for installing monopiles. Vineyard Wind expects installation of the 15 remaining piles will necessitate similar operations. Further, as described in detail in section 6.1 of Vineyard Wind's application, the water depth and bottom type are similar throughout the Lease Area and therefore sound propagation in the LIA is not expected to differ from where the SFV data were collected in 2023.

TABLE 6—KEY PILING ASSUMPTIONS AND HAMMER ENERGY SCHEDULE FOR MONOPILE INSTALLATION

Pile type	Project component	Max hammer energy (kJ)	Number of hammer strikes	Max piling time duration per pile (min)	Number piles/day
9.6-m monopile	WTG	4,000	2,884–4,329 (average 3,463) [a]	117	1

[a] The number of hammer strikes represent the range of strikes needed to install the 12 monopiles for which SFV was conducted in 2023.

Vineyard Wind compared the acoustic ranges to the Level A harassment and Level B harassment thresholds derived from the 2018 acoustic modeling (Pyć *et al.,* 2018) to the maximum ranges with absorption for the five representative monopiles acoustically monitored in 2023. They applied the greater results to the analysis in their application and NMFS has included that approach in this proposed IHA. The maximum measured range to PTS thresholds of the five representative monopiles was less than the maximum 2018 modeled ranges for all hearing groups, assuming 6 dB of attenuation (table 7), with the exception of high-frequency cetaceans (although Vineyard Wind attributes this extended range to non-piling noise (Vineyard Wind, 2023)). Therefore, Vineyard Wind based the expected distance to the Level A harassment threshold and associated estimated take analysis on the 2018 modeled data.

TABLE 7—MODELED AND MEASURED RANGES TO SEL_{cum} PTS THRESHOLDS FOR MARINE MAMMAL HEARING GROUPS

Marine mammal hearing group	Modeled range to SEL_{cum} PTS threshold (km) [a]	Measured maximum range to SEL_{cum} PTS threshold (km) [b]
Low-frequency cetaceans	3.191	2.37
Mid-frequency cetaceans	0.043	0.01
High-frequency cetaceans	0.071	0.2
Phocid pinnipeds	0.153	0.1

[a] Based upon modeling conducted for the 2023 IHA (Pyć *et al.,* 2018)
[b] Based upon the five representative monopiles from the Vineyard Wind 2023 construction campaign (Küsel *et al.,* 2024).

The maximum range with absorption to the Level B harassment threshold for acoustically monitored piles was 5.72 km (3.6 mi) (pile 13, AU–38; Küsel *et al.,* 2024), which was greater than the 2018 modeled distance to the Level B harassment threshold of 4.1 km (2.5 mi) (Pyć *et al.,* 2018). Therefore, Vineyard Wind based the expected distance to the Level B harassment threshold and associated estimated take analysis on the 5.72-km acoustically monitored distance.

In 2018, Vineyard Wind conducted animat modeling to estimate take, by Level A harassment (PTS), incidental to the project. In order to best evaluate the SEL_{cum} harassment thresholds for PTS, it is necessary to consider animal movement, as the results are based on how sound moves through the environment between the source and the receiver. Applying animal movement and behavior within the modeled noise fields provides the exposure range, which allows for a more realistic indication of the distances at which PTS acoustic thresholds are reached that considers the accumulation of sound over different durations (note that in all cases the distance to the peak threshold is less than the SEL-based threshold). As described above, Vineyard Wind based the Level A harassment estimated take analysis on the modeled Level A harassment acoustic ranges and therefore appropriately used the results of the JASCO's Animal Simulation Model Including Noise Exposure (JASMINE) animal movement modeling conducted for the 2023 IHA (86 FR 33810, June 25, 2021). Sound exposure models like JASMINE use simulated animals (also known as ''animats'') to forecast behaviors of animals in new situations and locations based upon previously documented behaviors of those animals. The predicted 3D sound fields (*i.e.,* the output of the acoustic modeling process described earlier) are sampled by animats using movement rules derived from animal observations. The output of the simulation is the exposure history for each animat within the simulation. The precise location of animats and their pathways are not known prior to a project; therefore, a repeated random sampling technique (*i.e.,* Monte Carlo) is used to estimate exposure probability with many animats and randomized starting positions. The combined exposure history of all animats gives a probability density function of exposure during the Project.

Since the time that the JASMINE animal movement modeling was conducted for the 2023 IHA (86 FR 33810, June 25, 2021), no new behavior data is available that would have changed how animats move in time and space in that model and, therefore, NMFS has determined that the JASMINE outputs from the 2018 modeling effort are reasonable for application here. However, the post processing calculations used more recent density data (table 8). The mean

number of modeled animats exposed per day with installation of one 9.6-m monopile were scaled by the maximum monthly density for the LIA (Roberts *et al.,* 2023) for each species (table 8) to estimate the real-world number of animats of each species that could be exposed per day in the LIA. This real-world number of animals was multiplied by the expected number of days of pile installation (15 days) to derive a total take estimate by Level A harassment for each species. The number of potential exposures by Level A harassment was estimated for each species using the following equation:

Density-based exposure estimate of Level A harassment = number of animats exposed above the Level A harassment threshold× ((mean maximum monthly density (animals/km^2)/modeled 2018 density (animats/km^2))×number of days (15).

To estimate the amount of take by Level B harassment incidental to installing the remaining 15 piles, Vineyard Wind applied a static method (*i.e.,* did not conduct animal movement modeling). Vineyard Wind calculated the Level B harassment ensonified area using the following equation:

$A = 3.14 \times r^2$,

where A is equal to the ensonified area and r is equal to the radial distance to the Level B harassment threshold from the pile driving source ($r_{\text{Level B harassment}}$ = 5.72 km).

The ensonified area (102.7 km^2) was multiplied by the mean maximum monthly density estimate (table 8) and expected number of days of pile driving (15 days) to determine a density-based take estimate for each species. The number of potential exposures by Level B harassment was estimated for each species using the following equation:

Density-based exposure estimate of Level B harassment = ensonified area (km^2) × maximum mean monthly density estimate (animals/km^2) × number of days (15).

Density and Occurrence and Take Estimation

In this section we provide information about marine mammal density, presence, and group dynamics that informed the take calculations for the proposed activities. Vineyard Wind applied the 2022 Duke University Marine Geospatial Ecology Laboratory Habitat-based Marine Mammal Density Models for the U.S. Atlantic (Duke Model-Roberts *et al.,* 2016, 2023) to estimate take from foundation installation. The models estimate absolute density (individuals/km^2) by statistically correlating sightings reported on shipboard and aerial surveys with oceanographic conditions. For most marine mammal species, densities are provided on a monthly basis. Where monthly densities are not available (*e.g.,* pilot whales), annual densities are provided. Moreover, some species are represented as guilds (*e.g.,* seals (representing *Phocidae* spp., primarily harbor and gray seals) and pilot whales (representing short-finned and long-finned pilot whales)).

The Duke habitat-based density models delineate species' density into 5 × 5 km (3.1 × 3.1 mi) grid cells. Vineyard Wind calculated mean monthly densities by using a 10-km buffered polygon around the remaining WTG foundations to be installed and overlaying this buffered polygon on the density maps. The 10-km buffer defines the area around the LIA used to calculate mean species density. Mean monthly density for each species was determined by calculating the unweighted mean of all 5 × 5 km grid cells (partially or fully) within the buffered polygon. The unweighted mean refers to using the entire 5 × 5 km (3.1 × 3.1 mi) grid cell for each cell used in the analysis, and was not weighted by the proportion of the cell overlapping with the density perimeter if the entire grid cell was not entirely within the buffer zone polygon. Vineyard Wind calculated densities for each month, except for species for which annual density data only was available (*e.g.,* long-finned pilot whale). Vineyard Wind used maximum monthly density from June to December for density-based calculations.

The density models (Roberts *et al.,* 2023) provided density for pilot whales and seals as guilds. Based upon habitat and ranging patterns (Hayes *et al.,* 2023), all pilot whales occurring in the LIA are expected to be long-finned pilot whales. Therefore, all pilot whale density estimates are assumed to represent long-finned pilot whales. Seal guild density was divided into species-specific densities based upon the proportions of each species observed by PSOs during 2016 and 2018–2021 site characterizations surveys within SNE (ESS Group, 2016; Vineyard Wind 2018, 2019, 2023a–f). Of the 181 seals identified to species and sighted within the WDA, 162 were gray seals and 19 were harbor seals. The equation below shows how the proportion of each seal species sighted was calculated to compute density for seals.

$P_{\text{seal species}} = N_{\text{seal species}}/\text{Number}_{\text{total seals identified}}$,

where P represents density and N represents number of seals.

These calculations resulted in proportions of 0.895 for gray seals and 0.105 for harbor seals. The proportion for each species was then multiplied by the maximum monthly density for the seal guild (table 8) to determine the species-specific densities used in take calculations.

The density models (Roberts *et al.,* 2023) also do not distinguish between bottlenose dolphin stocks and only provide densities for bottlenose dolphins as a species. However, as described above, based upon ranging patterns (Hayes *et al.,* 2023), only the Western North Atlantic offshore stock of bottlenose dolphins is expected to occur in the LIA. Therefore, it is expected that the bottlenose dolphin density estimate is entirely representative of this stock. Maximum mean monthly density estimates and month of the maximum estimate is provided in table 8 below.

TABLE 8—MAXIMUM MEAN MONTHLY MARINE MAMMAL DENSITY ESTIMATES (ANIMALS PER km^2) CONSIDERING A 10-km BUFFER AROUND THE LIMITED INSTALLATION AREA

Species	Maximum mean density	Maximum density month
NARW *	0.0043	December.
Fin whale *	0.0036	July.
Humpback whale	0.0022	June.
Minke whale	0.018	June.
Sei whale *	0.0008	November.
Sperm whale *	0.0008	September.
Atlantic white-sided dolphin	0.0204	June.
Bottlenose dolphin [a]	0.008	August.
Common dolphin	0.1467	September.
Long-finned pilot whale [b]	0.001	N/A.

TABLE 8—MAXIMUM MEAN MONTHLY MARINE MAMMAL DENSITY ESTIMATES (ANIMALS PER km^2) CONSIDERING A 10-km BUFFER AROUND THE LIMITED INSTALLATION AREA—Continued

Species	Maximum mean density	Maximum density month
Risso's dolphin	0.0013	December.
Harbor porpoise	0.0713	December.
Seals (gray and harbor) [c]	0.1745	May.

Note: * denotes species listed under the ESA.
[a] Density estimate represents the Northwestern Atlantic offshore stock of bottlenose dolphins.
[b] Only annual densities were available for the pilot whale guild.
[c] Gray and harbor seals represented as a guild.

For some species, PSO survey and construction data for SNE (ESS Group, 2016; Vineyard Wind, 2018, 2019, 2023a–f) and mean group size data compiled from the Atlantic Marine Assessment Program for Protected Species (AMAPPS) (Palka *et al.,* 2017, 2021) indicate that the density-based exposure estimates may be insufficient to account for the number of individuals of a species that may be encountered during the planned activities. Hence, consideration of local PSO and AMAPPS data is required to ensure the potential for take is adequately assessed.

In cases where the density-based Level B harassment exposure estimate for a species was less than the mean group size-based exposure estimate, the take request was increased to the mean group size (in some cases multiple groups were assumed) and rounded to the nearest integer (table 9). For all cetaceans, with the exception of NARWs, Vineyard Wind used the mean of the spring, summer, and fall AMAPPS group sizes for each species for the RI/MA WEA as shown in tables 2–2, 2–3, and 2–4 in Palka *et al.* (2021) appendix III. These seasons were selected as they would represent the time period in which pile driving activities would take place. Mean group sizes for cetacean species derived from RI/WEA AMAPPS data is shown below in table 9. However, NARW seasonal group sizes for the RI/MA WEA were not available through the AMAPPS dataset (Palka *et al.,* 2021). Vineyard Wind calculated mean group size for NARWs using data from the northeast (NE) shipboard surveys as provided in table 6–5 of Palka *et al.* (2021). Vineyard Wind calculated mean group size by dividing the number of individual right whales sighted (4) by the number of right whale groups (2) (Palka *et al.,* 2021). The NE shipboard surveys were conducted during summer (June 1 through August 31) and fall (September 1 through November 30) seasons (Palka *et al.,* 2021).

For seals, mean group size data was also not available for the RI/MA WEA through AMAPPS (Palka *et al.,* 2021). Vineyard Wind used 2010–2013 AMAPPS NE shipboard and aerial survey at-sea seal sightings for gray and harbor seals, as well as unidentified seal sightings from spring, summer, and fall to calculate mean group size for gray and harbor seals (table 19–1, Palka *et al.,* 2017). To calculate mean group size for seals, Vineyard Wind divided the total number of animals sighted by the total number of sightings. As the majority of the sightings were not identified to species, Vineyard Wind calculated a single group size for all seal species (table 9).

Additional detail regarding the density and occurrence as well as the assumptions and methodology used to estimate take is included below and in section 6.2 of the ITA application. Mean group sizes used in take estimates, where applicable, for all activities are provided in table 9.

TABLE 9—MEAN MARINE MAMMAL GROUP SIZES USED IN TAKE ESTIMATE CALCULATIONS

Species	Mean group size	Source
NARW *	2	Table 6–5 of Palka *et al.,* 2021.
Fin whale *	1.2	Palka *et al.,* 2021.
Humpback whale	1.2	Palka *et al.,* 2021.
Minke whale	1.4	Palka *et al.,* 2021.
Sei whale *	1	Palka *et al.,* 2021.
Sperm whale *	2	Palka *et al.,* 2021.
Atlantic white-sided dolphin	21.7	Palka *et al.,* 2021.
Bottlenose dolphin	11.7	Palka *et al.,* 2021.
Common dolphin	30.8	Palka *et al.,* 2021.
Long-finned pilot whale	12.3	Palka *et al.,* 2021.
Risso's dolphin	1.8	Palka *et al.,* 2021.
Harbor porpoise	2.9	Palka *et al.,* 2021.
Seals (gray and harbor)	1.4	Table 19–1 of Palka *et al.,* 2017.

Note: * denotes species listed under the ESA.

Vineyard Wind also looked at PSO survey data (June through October 2023) in the LIA collected during Vineyard Wind I construction activities and calculated a daily sighting rate for species to compare with density-based take estimates and average group size estimates from AMAPPS (table 9). The number of animals of each species sighted from all survey vessels with active PSOs was divided by the sum of all PSO monitoring days (77 days) to calculate the mean number of animals of each species sighted (see table 11 in the ITA application). However, for each species, the PSO data-based exposure estimate was less than the density-based exposure estimate (see table 14 in the ITA application) and, therefore, density-based exposure estimates were not adjusted according to PSO data-based exposure estimates.

Here we present the amount of take requested by Vineyard Wind and proposed to be authorized. To estimate take, Vineyard Wind use the pile installation construction schedule

shown in table 6, assuming 15 total days of monopile installation. NMFS has reviewed these methods to estimate take and agrees with this approach. The proposed take numbers in table 11, appropriately consider SFV measurements collected in 2023 and represent the maximum amount of take that is reasonably expected to occur.

TABLE 10—MODELED LEVEL A HARASSMENT AND LEVEL B HARASSMENT ACOUSTIC EXPOSURE ESTIMATES

Species	Density-based exposure estimate	
	Level A harassment	Level B harassment
NARW * [a]	0.503	6.6
Fin whale *	0.598	5.5
Humpback whale	1.11	3.4
Minke whale	0.372	27.7
Sei whale *	0.144	1.2
Sperm whale *	0	1.2
Atlantic white-sided dolphin	0	31.4
Bottlenose dolphin	0	12.3
Common dolphin	0	226
Long-finned pilot whale	0	1.5
Risso's dolphin	0	2
Harbor porpoise	2.758	109.8
Gray Seal	0	240.8
Harbor seal	0.028	28.2

Note: * denotes species listed under the ESA.
[a] Although modeling shows a very low but non-zero exposure estimate for take by Level A harassment, mitigation measures will be applied to ensure there is no take by Level A harassment of this species.

TABLE 11—PROPOSED AUTHORIZED TAKES

[by Level A harassment and Level B harassment]

Species	NMFS stock abundance	Proposed take by Level A harassment	Proposed take by Level B harassment	Total proposed take	Percent of stock abundance
NARW * [a]	338	0	7	7	2.07
Fin whale *	6,802	1	6	7	0.1
Humpback whale	1,396	2	4	6	0.43
Minke whale	21,968	1	28	29	0.13
Sei whale *	6,292	1	2	3	0.05
Sperm whale *	4,349	0	2	2	0.05
Atlantic white-sided dolphin	93,233	0	32	32	0.03
Bottlenose dolphin	62,851	0	13	13	0.02
Common dolphin [b c]	172,974	0	462	462	0.27
Long-finned pilot whale [b]	39,215	0	13	13	0.03
Risso's dolphin	35,215	0	2	2	0.001
Harbor porpoise	95,543	3	110	113	0.19
Gray Seal	27,300	0	241	241	0.88
Harbor seal	61,336	1	29	30	0.05

Note: * denotes species listed under the ESA.
[a] Although modeling shows a very low but non-zero exposure estimate for take by Level A harassment, mitigation measures will be applied to ensure there is no take by Level A harassment of this species.
[b] Proposed take by Level B harassment adjusted according to mean group size.
[c] Proposed take by Level B harassment is based upon the assumption that one group of common dolphins (30.8 dolphins; see table 9) would be encountered per each of the 15 days of pile driving.

Proposed Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to effect the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, NMFS considers two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned); and

(2) The practicability of the measures for applicant implementation, which may consider such things as cost and impact on operations.

The mitigation strategies described below are consistent with those required and successfully implemented under previous incidental take authorizations issued in association with in-water construction activities (*e.g.,* soft-start, establishing shutdown zones). Additional measures have also been incorporated to account for the fact that the proposed construction activities would occur offshore. In addition, several measures proposed for this IHA (*i.e.,* seasonal restrictions, vessel strike avoidance, and clearance and shutdown zones) are more rigorous than measures previously incorporated into the 2023 IHA.

Generally speaking, the mitigation measures considered and proposed to be required here fall into three categories: (1) temporal (seasonal and daily) work restrictions, (2) real-time measures (shutdown, clearance, and vessel strike avoidance), and (3) noise attenuation/reduction measures. Seasonal work restrictions are designed to avoid or minimize operations when marine mammals are concentrated or engaged in behaviors that make them more susceptible or make impacts more likely, in order to reduce both the number and severity of potential takes, and are effective in reducing both chronic (longer-term) and acute effects. Real-time measures, such as implementation of shutdown and clearance zones, as well as vessel strike avoidance measures, are intended to reduce the probability or severity of harassment by taking steps in real time once a higher-risk scenario is identified (*e.g.,* once animals are detected within an impact zone). Noise attenuation measures, such as bubble curtains, are intended to reduce the noise at the source, which reduces both acute impacts, as well as the contribution to aggregate and cumulative noise that may result in longer-term chronic impacts. Below, we also describe the required training, coordination, and vessel strike avoidance measures that apply to foundation installation and vessel use.

Training and Coordination

NMFS requires all Vineyard Wind's employees and contractors conducting activities on the water, including, but not limited to, all vessel captains and crew, to be trained in marine mammal detection and identification, communication protocols, and all required measures to minimize impacts on marine mammals and support Vineyard Wind's compliance with the IHA, if issued. Additionally, all relevant personnel and the marine mammal species monitoring team(s) are required to participate in joint, onboard briefings prior to the beginning of project activities. The briefing must be repeated whenever new relevant personnel (*e.g.,* new PSOs, construction contractors, relevant crew) join the project before work commences. During this training, Vineyard Wind is required to instruct all project personnel regarding the authority of the marine mammal monitoring team(s). For example, pile driving personnel are required to immediately comply with any call for a delay or shut down by the Lead PSO. Any disagreement between the Lead PSO and the project personnel must only be discussed after delay or shutdown has occurred. In particular, all captains and vessel crew must be trained in marine mammal detection and vessel strike avoidance measures to ensure marine mammals are not struck by any project or project-related vessel.

Prior to the start of in-water construction activities, Vineyard Wind would conduct training for construction and vessel personnel and the marine mammal monitoring team (PSO and PAM operators) to explain responsibilities, communication procedures, marine mammal detection and identification, mitigation, monitoring, and reporting requirements, safety and operational procedures, and authorities of the marine mammal monitoring team(s). A description of the training program must be provided to NMFS at least 60 days prior to the initial training before in-water activities begin. Vineyard Wind would provide confirmation of all required training documented on a training course log sheet and reported to NMFS OPR prior to initiating project activities.

NARW Awareness Monitoring

Vineyard Wind would be required to use available sources of information on NARW presence, including daily monitoring of the Right Whale Sightings Advisory System, U.S. Coast Guard very high-frequency (VHF) Channel 16, WhaleAlert, and the PAM system throughout each day to receive notifications of any Slow Zones (*i.e.,* Dynamic management areas (DMAs) and/or acoustically-triggered slow zones) to provide situational awareness for vessel operators, PSOs, and PAM operators. The marine mammal monitoring team must monitor these systems at least every 4 hours. Maintaining daily awareness and coordination affords increased protection of NARWs by understanding NARW presence in the area through ongoing visual and passive acoustic monitoring efforts and opportunities (outside of Vineyard Wind's efforts), and allows for planning of construction activities, when practicable, to minimize potential impacts on NARWs.

Vessel Strike Avoidance Measures

This proposed IHA contains numerous vessel strike avoidance measures that reduce the risk that a vessel and marine mammal could collide. While the likelihood of a vessel strike is generally low, they are one of the most common ways that marine mammals are seriously injured or killed by human activities. Therefore, enhanced mitigation and monitoring measures are required to avoid vessel strikes, to the extent practicable. While many of these measures are proactive, intending to avoid the heavy use of vessels during times when marine mammals of particular concern may be in the area, several are reactive and occur when a project personnel sights a marine mammal. Vineyard Wind would be required to comply with these measures except under circumstances when doing so would create an imminent and serious threat to a person or vessel or to the extent that a vessel is unable to maneuver and, because of the inability to maneuver, the vessel cannot comply.

While underway, Vineyard Wind's personnel would be required to monitor for and maintain a minimum separation distance from marine mammals and operate vessels in a manner that reduces the potential for vessel strike. Regardless of the vessel's size or speed, all vessel operators, crews, and dedicated visual observers (*i.e.,* PSO or trained crew member) must maintain a vigilant watch for all marine mammals and slow down, stop their vessel, or alter course (as appropriate) to avoid striking any marine mammal. The dedicated visual observer, required on all transiting vessels and equipped with suitable monitoring technology (*e.g.,* binoculars, night vision devices), must be located at an appropriate vantage point for ensuring vessels are maintaining required vessel separation distances from marine mammals (*e.g.,* 500 m from NARWs).

All of the project-related vessels would be required to comply with existing NMFS vessel speed restrictions for NARWs, and additional speed and approach restrictions measures within this IHA. All vessels must reduce speed to 10 kn or less when traveling in a DMA, Slow Zone or when a NARW is observed or acoustically detected. Reducing vessel speed is one of the most effective, feasible options available

to reduce the likelihood of and effects from a vessel strike. Numerous studies have indicated that slowing the speed of vessels reduces the risk of lethal vessel collisions, particularly in areas where right whales are abundant and vessel traffic is common and otherwise traveling at high speeds (Vanderlaan and Taggart, 2007; Conn and Silber, 2013; Van der Hoop *et al.,* 2014; Martin *et al.,* 2015; Crum *et al.,* 2019).

When NMFS vessel speed restrictions are not in effect and a vessel is traveling at greater than 10 kn (18.5 km/hr), in addition to the required dedicated visual observer, Vineyard Wind would be required to monitor the crew transfer vessel transit corridor (the path crew transfer vessels take from port to any work area) in real-time with PAM prior to and during transits.

All project vessels, regardless of size, must maintain the following minimum separation zones: 500 m from NARWs; 100 m from sperm whales and non-NARW baleen whales; and 50 m from all delphinid cetaceans and pinnipeds (an exception is made for those species that approach the vessel such as bow-riding dolphins) (table 12). All reasonable steps must be taken to not violate minimum separation distances. If any of these species are sighted within their respective minimum separation zone, the underway vessel must turn away from the animal and shift its engine to neutral (if safe to do so) and the engines must not be engaged until the animal(s) have been observed to be outside of the vessel's path and beyond the respective minimum separation zone. If a NARW is observed at any distance by any project personnel or acoustically detected, project vessels must reduce speeds to 10 kn and turn away from the animal. Additionally, in the event that any project-related vessel, regardless of size, observes any large whale (other than a NARW) within 500 m of an underway vessel, the vessel is required to immediately reduce speeds to 10 kn or less and turn away from the animal.

TABLE 12—VESSEL STRIKE AVOIDANCE SEPARATION ZONES

Marine mammal species	Vessel separation zone (m)
NARW	500
Other ESA-listed species and non-NARW large whales	100
Other marine mammals [a]	50

[a] With the exception of seals and delphinid(s) from the genera *Delphinus, Lagenorhynchus, Stenella,* or *Tursiops,* as described below.

Any marine mammal observed by project personnel must be immediately communicated to any on-duty PSOs, PAM operator(s), and all vessel captains. Any NARW or large whale observation or acoustic detection by PSOs or PAM operators must be conveyed to all vessel captains. All vessels would be equipped with an AIS and Vineyard Wind must report all Maritime Mobile Service Identity (MMSI) numbers to NMFS OPR prior to initiating in-water activities. Vineyard Wind has submitted an updated NMFS-approved NARW Vessel Strike Avoidance Plan, which NMFS is reviewing for alignment with the measures proposed herein.

Given the extensive vessel strike avoidance measures coupled with the limited amount of work associated with the project, NMFS has determined that Vineyard Wind's compliance with these proposed measures would reduce the likelihood of vessel strike to discountable levels.

Seasonal and Daily Restrictions

Temporal restrictions in places where marine mammals are concentrated, engaged in biologically important behaviors, and/or present in sensitive life stages are effective measures for reducing the magnitude and severity of human impacts. The temporal restrictions proposed here are built around NARW protection. Based upon the best scientific information available (Roberts *et al.,* 2023), the highest densities of NARWs in the specified geographic region are expected during the months of January through May, with an increase in density starting in December. However, NARWs may be present in the specified geographic region throughout the year.

NMFS is proposing to require seasonal work restrictions to minimize risk of noise exposure to the NARWs incidental to pile driving activities to the extent practicable. These seasonal work restrictions are expected to reduce the number of takes of NARWs and further reduce vessel strike risk. These seasonal restrictions also afford protection to other marine mammals that are known to use the LIA with greater frequency during winter months, including other baleen whales. As described previously, no impact pile driving activities may occur January 1 through May 31, and pile driving in December must be avoided to the maximum extent practicable and only if enhanced monitoring is undertaken and NMFS approves.

Vineyard Wind proposed to install no more than one pile per day and only initiate impact pile driving during daylight hours. Vineyard Wind would not be able to initiate pile driving later than 1.5 hours after civil sunset or continue pile driving after or 1 hour before civil sunrise. However, if Vineyard Wind determines that they must initiate pile driving after the aforementioned time frame, they must submit a sufficient nighttime pile driving plan for NMFS review and approval to do so. A sufficient nighttime pile driving plan would demonstrate that proposed detection systems would be capable of detecting marine mammals, particularly large whales, at distances necessary to ensure mitigation measures are effective.

Noise Attenuation Systems

Vineyard Wind would be required to employ noise abatement systems (NAS), also known as noise attenuation systems, during all foundation installation activities to reduce the sound pressure levels that are transmitted through the water in an effort to reduce acoustic ranges to the Level A harassment and Level B harassment acoustic thresholds and minimize, to the extent practicable, any acoustic impacts resulting from these activities. Vineyard Wind proposes and NMFS is proposing to require Vineyard Wind to use a double bubble curtain (DBBC) and Hydro Sound damper (HSD) in addition to an enhanced big bubble curtain (BBC) maintenance schedule. The refined NAS design (DBBC + HSD + enhanced bubble curtain (BC) maintenance schedule) used during the 2023 construction activities would be used on the 15 remaining piles to minimize noise levels. A single bubble curtain, alone or in combination with another NAS device, may not be used for pile driving as received SFV data reveals this approach is unlikely to attenuate sound sufficiently to be

consistent with the target sound reduction of 6 dB, in which the expected ranges to the Level A harassment and Level B harassment isopleths are based upon.

Two categories of NAS exist: primary and secondary. A primary NAS would be used to reduce the level of noise produced by foundation installation activities at the source, typically through adjustments to the equipment (*e.g.,* hammer strike parameters). Primary NAS are still evolving and will be considered for use during mitigation efforts when the NAS has been demonstrated as effective in commercial projects. However, as primary NAS are not fully effective at eliminating noise, a secondary NAS would be employed. The secondary NAS is a device or group of devices that would reduce noise as it is transmitted through the water away from the pile, typically through a physical barrier that would reflect or absorb sound waves and therefore reduce the distance the higher energy sound propagates through the water column. Together, these systems must reduce noise levels to those not exceeding expected ranges to Level A harassment and Level B harassment isopleths corresponding to those modeled assuming 6-dB sound attenuation, pending results of SFV (see *Sound Field Verification* section below).

Noise abatement systems, such as bubble curtains, are used to decrease the sound levels radiated from a source. Bubbles create a local impedance change that acts as a barrier to sound transmission. The size of the bubbles determines their effective frequency band, with larger bubbles needed for lower frequencies. There are a variety of bubble curtain systems, confined or unconfined bubbles, and some with encapsulated bubbles or panels. Attenuation levels also vary by type of system, frequency band, and location. Small bubble curtains have been measured to reduce sound levels, but effective attenuation is highly dependent on depth of water, current, and configuration and operation of the curtain (Austin *et al.,* 2016; Koschinski and Lüdemann, 2013). Bubble curtains vary in terms of the sizes of the bubbles; those with larger bubbles tend to perform a bit better and more reliably, particularly when deployed with two separate rings (Bellmann, 2014; Koschinski and Lüdemann, 2013; Nehls *et al.,* 2016). Encapsulated bubble systems (*i.e.,* HSDs) can be effective within their targeted frequency ranges (*e.g.,* 100–800 Hz) and when used in conjunction with a bubble curtain appear to create the greatest attenuation. The literature presents a wide array of observed attenuation results for bubble curtains. The variability in attenuation levels is the result of variation in design as well as differences in site conditions and difficulty in properly installing and operating in-water attenuation devices.

For example, Dähne *et al.* (2017) found that single bubble curtains that reduce sound levels by 7 to 10 dB reduced the overall sound level by approximately 12 dB when combined as a double bubble curtain for 6-m steel monopiles in the North Sea. During installation of monopiles (consisting of approximately 8-m in diameter) for more than 150 WTGs in comparable water depths (>25 m) and conditions in Europe indicate that attenuation of 10 dB is readily achieved (Bellmann, 2019; Bellmann *et al.,* 2020) using single BBCs for noise attenuation. When a DBBC is used (noting a single BC is not allowed), Vineyard Wind would be required to maintain numerous operational performance standards, including the enhanced BBC maintenance protocol (Vineyard Wind Enhanced BBC Technical Memo, 2023). These standards are defined in the proposed IHA and include, but are not limited to, a requirement that construction contractors train personnel in the proposed balancing of airflow to the bubble ring; and a requirement that Vineyard Wind submit a performance test and maintenance report to NMFS within 72 hours following the performance test. Corrections to the attenuation device to meet regulatory requirements must occur prior to use during foundation installation activities. In addition, a full maintenance check (*e.g.,* manually clearing holes) must occur prior to each pile being installed.

The HSD system Vineyard Wind proposes to use would be employed, in coordination with the DBBC, as a near-field attenuation device close to the monopiles (Küsel *et al.,* 2024). Vineyard Wind has also proposed to follow a DBBC enhanced maintenance protocol, which was used during the 2023 Vineyard Wind pile installation activities. The DBBC enhanced maintenance protocol includes an adjustment from typical bubble curtain operations to drill hoses after every deployment to maximize performance in siltier sediments which are present in the Lease Area. The DBBC enhanced maintenance protocol also includes DBBC hose inspection and clearance, pressure testing of DBBC hoses, visual inspection of DBBC performance, and minimizing disturbance of the DBBC hoses on the seafloor.

Should SFV identify that distances to NMFS harassment isopleths are louder than expected, Vineyard Wind would be required to adjust the NAS, or conduct other measures to reduce noise levels, such that distances to thresholds are not exceeded.

Clearance and Shutdown Zones

NMFS is proposing to require the establishment of both clearance and shutdown zones during impact pile driving. The purpose of ''clearance'' of a particular zone is to minimize potential instances of auditory injury and more severe behavioral disturbances by delaying the commencement of an activity if marine mammals are near the activity. The purpose of a ''shutdown'' is to prevent a specific acute impact, such as auditory injury or severe behavioral disturbance of sensitive species, by halting the activity. Due to the increased density of NARWs during the months of November and December, more stringent clearance and shutdown mitigation measures are proposed for these months.

All relevant clearance and shutdown zones during project activities would be monitored by NMFS-approved PSOs and PAM operators. PAM would be conducted at least 24 hours in advance of any pile driving activities. At least one PAM operator would review data from at least 24 hours prior to foundation installation (to increase situational awareness) and actively monitor hydrophones for 60 minutes prior to commencement of these activities. Any sighting or acoustic detection of a NARW would trigger a delay to commencing pile driving and shutdown.

Prior to the start of pile driving activities, Vineyard Wind would be required to ensure designated areas (*i.e.,* clearance zones, table 13) are clear of marine mammals before commencing activities to minimize the potential for and degree of harassment. Three on-duty PSOs would monitor from the pile driving support vessel and two PSO support vessels, each with three PSOs on board, before (60 minutes), during, and after (30 minutes) all pile driving. PSOs must visually monitor clearance zones for marine mammals for a minimum of 60 minutes, where the zone must be confirmed free of marine mammals at least 30 minutes directly prior to commencing these activities. The minimum visibility zone, defined as the area over which PSOs must be able to visually detect marine mammals, would extend 4,000 m for monopile installation from the pile being driven (table 13), and must be visible for 60 minutes. The minimum visibility zone corresponds to the modeled Level A harassment distance for low-frequency cetaceans plus twenty percent, and

rounded up to the nearest 0.5 km. The minimum visibility zone must be visually cleared of marine mammals. If this zone is obscured to the degree that effective monitoring cannot occur, pile driving must be delayed. Minimum visibility zone and clearance zones are defined and provided in table 13 for all species.

From December 1 to 31, a vessel-based survey would be used to confirm the clearance zone (10 km PAM clearance zone (6.2 mi); table 13) is clear of NARWs prior to pile driving. The survey would be supported by a team of nine PSOs coordinating visual monitoring across two PSO support vessels and the pile driving platform. The two PSO support vessels, each with three active on-duty PSOs, would be positioned at the same distance on either side of the pile driving vessel. Each PSO support vessel would transit along a steady course along parallel track lines in opposite directions. Each transect line would be surveyed at a similar speed, not to exceed 10 kn, and would last for approximately 30 minutes to 1 hour. If a NARW is sighted at any distance during the vessel-based survey, pile driving would be delayed until the following day unless an additional vessel-based survey with additional transects are conducted to determine the clearance zone is clear of NARWs. Further details on PSO support vessel monitoring efforts are described in the Vineyard Wind application section 11, table 17.

Once pile driving activity begins, any marine mammal entering their respective shutdown zone would trigger the activity to cease. In the case of pile driving, the shutdown requirement may be waived if is not practicable due to imminent risk of injury or loss of life to an individual or risk of damage to a vessel that creates risk of injury or loss of life for individuals, or if the lead engineer determines there is pile refusal or pile instability.

In situations when shutdown is called for, but Vineyard Wind determines shutdown is not practicable due to aforementioned emergency reasons, reduced hammer energy must be implemented when the lead engineer determines it is practicable. Specifically, pile refusal or pile instability could result in the inability to shut down pile driving immediately. Pile refusal occurs when the pile driving sensors indicate the pile is approaching refusal, and a shut-down would lead to a stuck pile which then poses an imminent risk of injury or loss of life to an individual, or risk of damage to a vessel that creates risk for individuals. Pile instability occurs when the pile is unstable and unable to stay standing if the piling vessel were to ''let go.'' During these periods of instability, the lead engineer may determine a shut-down is not feasible because the shut-down combined with impending weather conditions may require the piling vessel to ''let go'' which then poses an imminent risk of injury or loss of life to an individual, or risk of damage to a vessel that creates risk for individuals. Vineyard Wind must document and report to NMFS all cases where the emergency exemption is taken.

After shutdown, impact pile driving may be reinitiated once all clearance zones are clear of marine mammals for the minimum species-specific periods, or, if required to maintain pile stability, impact pile driving may be reinitiated but must be used to maintain stability. From June 1 to October 31, if pile driving has been shut down due to the presence of a NARW, pile driving must not restart until the NARW has not been visually or acoustically detected for 30 minutes. Upon re-starting pile driving, soft-start protocols must be followed if pile driving has ceased for 30 minutes or longer. From November 1 to December 31, if pile driving has been shut down or delayed due to the presence of three or more NARWs, pile driving will be postponed until the next day. Shutdown zones vary by species and are shown in table 13 below.

TABLE 13—MINIMUM VISIBILITY, CLEARANCE, SHUTDOWN, AND LEVEL B HARASSMENT ZONES, IN METERS (m), DURING IMPACT PILE DRIVING

Monitoring zones	NARWs [a]	Other mysticetes/ sperm whales (m) [b]	Pilot whales, harbor porpoises, and delphinids (m) [b]	Pinnipeds (m) [b]
Minimum Visibility Zone [c]	4,000			
Visual Clearance Zone	Any distance from PSOs	500	160	160
PAM Clearance Zone	10,000	500	160	160
Visual Shutdown Zone	Any distance	500	160	160
PAM Monitoring Zone [d]	10,000	500	160	160
Distance to Level B Harassment Threshold	5,720			

[a] From December 1 to December 31, vessel based surveys using two PSO support vessels would confirm that the 10-km (6.2-mi) PAM clearance zone is clear of NARWs. If three or more NARWs are sighted in November or December, pile driving will be delayed for 24 hours.

[b] Pile driving may commence when either the marine mammal has voluntarily left the respective clearance zone and has been visually confirmed beyond that clearance zone, or when 30 minutes (NARWs (June-October), other non-NARW mysticetes, sperm whales, pilot whales, Risso's dolphins) or 15 minutes (all other delphinids and pinnipeds)have elapsed without re-detection.

[c] Minimum visibility zone is the minimum distance that must be visible prior to initiating pile driving, as determined by the lead PSO. The minimum visibility zone corresponds to the Level A harassment distance for low-frequency cetaceans plus twenty percent, and rounded up to the nearest 0.5 km

[d] The PAM system must be capable of detecting NARWs at 10 km during pile driving. The system should also be designed to detect other marine mammals to the maximum extent practicable; however, it is not required these other species be detected out to 10 km given higher frequency calls and echolocation clicks are not typically detectable at large distances.

For any other in-water construction heavy machinery activities (*e.g.,* trenching, cable laying, *etc.*), if a marine mammal is on a path towards or comes within 10 m (32.8 ft) of equipment, Vineyard Wind would be required to delay or cease operations until the marine mammal has moved more than 10 m on a path away from the activity to avoid direct interaction with equipment.

Soft-start

The use of a soft-start procedure is believed to provide additional protection to marine mammals by warning them or providing them with a chance to leave the area prior to the

hammer operating at full capacity. Soft-start typically involves initiating hammer operation at a reduced energy level (relative to full operating capacity) followed by a waiting period. Vineyard Wind would be required to utilize a soft-start protocol for impact pile driving of monopiles by performing four to six single hammer strikes at less than 40 percent of the maximum hammer energy followed by at least a 1-minute delay before the subsequent hammer strikes. This process shall be conducted at least tjree times (*e.g.,* four to six single strikes, delay, four to six single strikes, delay, four to six single strikes, delay) for a minimum of 20 minutes. NMFS notes that it is difficult to specify a reduction in energy for any given hammer because of variation across drivers and installation conditions. Vineyard Wind will reduce energy based on consideration of site-specific soil properties and other relevant operational considerations.

Soft start would be required at the beginning of each day's activity and at any time following a cessation of activity of 30 minutes or longer. Prior to soft-start, the operator must receive confirmation from the PSO that the clearance zone is clear of any marine mammals.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered by NMFS, NMFS has preliminarily determined that the proposed mitigation measures provide the means of effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. NMFS' MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for authorization must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present while conducting the activities. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.,* presence, abundance, distribution, density);
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the activity; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);
- Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;
- How anticipated responses to stressors impact either: (1) long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;
- Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and,
- Mitigation and monitoring effectiveness.

Separately, monitoring is also regularly used to support mitigation implementation, which is referred to as mitigation monitoring, and monitoring plans typically include measures that both support mitigation implementation and increase our understanding of the impacts of the activity on marine mammals.

Protected Species Observer and PAM Operator Requirements

PSOs are trained professionals who are tasked with visual monitoring for marine mammals during pile driving activities. The primary purpose of a PSO is to carry out the monitoring, collect data, and, when appropriate, call for the implementation of mitigation measures. Visual monitoring by NMFS-approved PSOs would be conducted at a minimum of 60 minutes before, during, and 30 minutes after all proposed impact pile driving activities. In addition to visual observations, NMFS would require Vineyard Wind to conduct PAM using NMFS-approved PAM operators during impact pile driving and vessel transit. PAM would also be conducted for 24 hours in advance and during impact pile driving activities. Visual observations and acoustic detections would be used to support the mitigation measures (*e.g.,* clearance zones). To increase understanding of the impacts of the activity on marine mammals, PSOs must record all incidents of marine mammal occurrence at any distance from the piling locations. PSOs would document all behaviors and behavioral changes, in concert with distance from an acoustic source.

NMFS proposes to require PAM conducted by NMFS-approved PAM operators, following a standardized measurement, processing methods, reporting metrics, and metadata standards for offshore wind. PAM alongside visual data collection is valuable to provide the most accurate record of species presence as possible, and these two monitoring methods are well understood to provide best results when combined together (*e.g.,* Barlow and Taylor, 2005; Clark *et al.,* 2010; Gerrodette *et al.,* 2011; Van Parijs *et al.,* 2021). Acoustic monitoring (in addition to visual monitoring) increases the likelihood of detecting marine mammals within the shutdown and clearance zones of project activities, which when applied in combination with required shutdowns helps to further reduce the risk of marine mammals being exposed to sound levels that could otherwise result in acoustic injury or more intense behavioral harassment.

The exact configuration and number of PAM systems depends on the size of the zone(s) being monitored, the amount of noise expected in the area, and the characteristics of the signals being monitored. More closely spaced hydrophones would allow for more directionality, and perhaps, range to the vocalizing marine mammals; although, this approach would add additional costs and greater levels of complexity to the project. Larger baleen cetacean species (*i.e.,* mysticetes), which produce loud and lower-frequency vocalizations, may be able to be heard with fewer hydrophones spaced at greater distances. However, smaller cetaceans (such as mid-frequency delphinids or odontocetes) may necessitate more hydrophones and to be spaced closer together given the shorter range of the shorter, mid-frequency acoustic signals (*e.g.,* whistles and echolocation clicks). The configuration for collecting the required marine mammal data will be based upon the acoustic data acquisition methods used during the 2023 Vineyard Wind construction campaign (Küsel *et al.,* 2024).

NMFS does not formally administer any PSO or PAM operator training program or endorse specific providers but would approve PSOs and PAM

operators that have successfully completed courses that meet the curriculum and trainer requirements. All PSOs and PAM operators must have successfully attained a bachelor's degree from an accredited college or university with a major in one of the natural sciences, a minimum of 30 semester hours or equivalent in the biological sciences, and at least one undergraduate course in math or statistics. The educational requirements may be waived if the PSO or PAM operator has acquired the relevant skills through alternate experience. Requests for such a waiver shall be submitted to NMFS and must include written justification. Alternate experience that may be considered includes, but is not limited to: (1) secondary education and/or experience comparable to PSO and/or PAM operator duties; (2) previous work experience conducting academic, commercial, or government-sponsored marine mammal surveys; and (3) previous work experience as a PSO/PAM operator (PSOs/PAM operators must be in good standing and demonstrate good performance of PSO/PAM operator duties). All PSOs and PAM operators must have successfully completed a relevant training course within the last 5 years, including obtaining a certificate of course completion that would be submitted to NMFS.

For prospective PSOs and PAM operators not previously approved, or for PSOs and PAM operators whose approval is not current, NMFS must review and approve PSO and PAM operator qualifications. Vineyard Wind would be required to submit PSO and PAM operator resumes for approval at least 60 days prior to PSO and PAM operator use. Resumes must include information related to relevant education, experience, and training, including dates, duration, location, and description of prior PSO and/or PAM experience, and be accompanied by relevant documentation of successful completion of necessary training. Should Vineyard Wind require additional PSOs or PAM operators throughout the project, Vineyard Wind must submit a subsequent list of pre-approved PSOs and PAM operators to NMFS at least 15 days prior to planned use of that PSO or PAM operator. PSOs and PAM operators must have previous experience observing marine mammals and must have the ability to work with all required and relevant software and equipment.

PAM operators are responsible for obtaining NMFS approval. To be approved as a PAM operator, the person must meet the following qualifications: The PAM operator must demonstrate that they have prior experience with real-time acoustic detection systems and/or have completed specialized training for operating PAM systems and detecting and identifying Atlantic Ocean marine mammal sounds, in particular, NARW sounds, humpback whale sounds, and how to deconflict them from similar NARW sounds, and other co-occurring species' sounds in the area including sperm whales. The PAM operator must be able to distinguish between whether a marine mammal or other species sound is detected, possibly detected, or not detected, and similar terminology must be used across companies/projects. Where localization of sounds or deriving bearings and distance are possible, the PAM operators need to have demonstrated experience in using this technique. PAM operators must be independent observers (*i.e.,* not construction personnel), and must demonstrate experience with relevant acoustic software and equipment. PAM operators must have the qualifications and relevant experience/training to safely deploy and retrieve equipment and program the software, as necessary. PAM operators must be able to test software and hardware functionality prior to operation, and PAM operators must have evaluated their acoustic detection software using the PAM Atlantic baleen whale annotated data set available at National Centers for Environmental Information (NCEI) and provide evaluation/performance metric. PAM operators must also be able to review and classify acoustic detections in real-time (prioritizing NARWs and noting detection of other cetaceans) during the real-time monitoring periods.

NMFS may approve PSOs and PAM operators as conditional or unconditional. An unconditionally approved PSO or PAM operator is one who has completed training within the last 5 years and attained the necessary experience (*i.e.,* demonstrate experience with monitoring for marine mammals at clearance and shutdown zone sizes similar to those produced during the respective activity). A conditionally approved PSO or PAM operator may be one who has completed training in the last 5 years but has not yet attained the requisite field experience.

Conditionally approved PSOs and PAM operators would be paired with an unconditionally approved PSO (or PAM operator, as appropriate) to ensure that the quality of marine mammal observations and data recording is kept consistent. Additionally, impact pile driving activities would require PSOs and/or PAM operator monitoring to have a lead on duty. The visual PSO field team, in conjunction with the PAM team (*i.e.,* marine mammal monitoring team) would have a lead member (designated as the ''Lead PSO'' or ''Lead PAM operator'') who would be required to meet the unconditional approval standard. Lead PSO or PAM operators must also have a minimum of 90 days in a northwestern Atlantic Ocean offshore environment performing the role (either visual or acoustic), with the conclusion of the most recent relevant experience not more than 18 months previous. A PSO may be trained and/or experienced as both a PSO and PAM operator and may perform either duty, pursuant to scheduling requirements (and vice versa).

PSOs must have visual acuity in both eyes (with correction of vision being permissible) sufficient enough to discern moving targets on the water's surface with the ability to estimate the target size and distance (binocular use is allowable), ability to conduct field observations and collect data according to the assigned protocols, and the ability to communicate orally, by radio, or in-person, with project personnel to provide real-time information on marine mammals observed in the area. All PSOs must be trained in northwestern Atlantic Ocean marine mammal identification and behaviors and must be able to conduct field observations and collect data according to assigned protocols. Additionally, PSOs must have the ability to work with all required and relevant software and equipment necessary during observations.

Vineyard Wind must work with the selected third-party PSO and PAM operator provider to ensure PSOs and PAM operators have all equipment (including backup equipment) needed to adequately perform necessary tasks. For PSOs, this includes, but is not limited to, accurate determination of distance and bearing to observed marine mammals, and to ensure that PSOs are capable of calibrating equipment as necessary for accurate distance estimates and species identification. PSO equipment, at a minimum, shall include:

- At least one thermal (infrared) imaging device suited for the marine environment;
- Reticle binoculars (*e.g.,* 7×50) of appropriate quality (at least one per PSO, plus backups);
- Global positioning units (GPS) (at least one plus backups);
- Digital cameras with a telephoto lens that is at least 300 mm or equivalent on a full-frame single lens reflex (SLR) (at least one plus backups).

The camera or lens should also have an image stabilization system;

- Equipment necessary for accurate measurement of distances to marine mammal;
- Compasses (at least one plus backups);
- Means of communication among vessel crew and PSOs; and,
- Any other tools deemed necessary to adequately and effectively perform PSO tasks.

At least two PSOs on the pile driving vessel must be equipped with functional Big Eye binoculars (*e.g.,* 25 × 150; 2.7 view angle; individual ocular focus; height control), Big Eye binocular would be pedestal mounted on the deck at the best vantage point that provides for optimal sea surface observation and PSO safety. PAM operators must have the appropriate equipment (*i.e.,* a computer station equipped with a data collection software system available wherever they are stationed) and use a NMFS-approved PAM system to conduct monitoring. The equipment specified above may be provided by an individual PSO, the third-party PSO provider, or the operator, but Vineyard Wind is responsible for ensuring PSOs have the proper equipment required to perform the duties specified in the IHA. Reference materials must be available aboard all project vessels for identification of protected species.

PSOs and PAM operators would not be permitted to exceed 4 consecutive watch hours on duty at any time, would have a 2-hour (minimum) break between watches, and would not exceed a combined watch schedule of more than 12 hours in a 24-hour period. If the schedule includes PSOs and PAM operators on-duty for 2-hour shifts, a minimum 1-hour break between watches would be allowed.

The PSOs would be responsible for monitoring the waters surrounding the pile driving site to the farthest extent permitted by sighting conditions, including pre-start clearance and shutdown zones, prior to, during, and following foundation installation activities. Monitoring must be done while free from distractions and in a consistent, systematic, and diligent manner. If PSOs cannot visually monitor the minimum visibility zone of 4 km (2.5 mi) prior to foundation pile driving at all times using the required equipment, pile driving operations must not commence or must shutdown if they are currently active. All PSOs must be located at the best vantage point(s) on any platform, as determined by the Lead PSO, in order to obtain 360-degree visual coverage of the entire clearance and shutdown zones, and as much of the Level B harassment zone as possible. PAM operators may be located on a vessel or remotely on-shore, and must assist PSOs in ensuring full coverage of the clearance and shutdown zones. The PAM operator must monitor to and past the clearance zones for large whales.

All on-duty PSOs must remain in real-time contact with the on-duty PAM operator(s). PAM operators must immediately communicate all acoustic detections of marine mammals to PSOs, including any determination regarding species identification, distance, and bearing (where relevant) relative to the pile being driven and the degree of confidence (*e.g.,* possible, probable detection) in the determination. The PAM operator must inform the Lead PSO(s) on duty of animal detections approaching or within applicable ranges of interest to the activity occurring via the data collection software system (*i.e.,* Mysticetus or similar system) who must be responsible for requesting that the designated crewmember implement the necessary mitigation procedures (*i.e.,* delay). All on-duty PSOs and PAM operator(s) must remain in contact with the on-duty construction personnel responsible for implementing mitigations (*e.g.,* delay to pile driving) to ensure communication on marine mammal observations can easily, quickly, and consistently occur between all on-duty PSOs, PAM operator(s), and on-water Project personnel. It would be the responsibility of the PSO(s) on duty to communicate the presence of marine mammals as well as to communicate the action(s) that are necessary to ensure mitigation and monitoring requirements are implemented as appropriate.

At least three PSOs (on the pile driving vessel) and one PAM operator would be on-duty and actively monitoring for marine mammals 60 minutes before, during, and 30 minutes after foundation installation in accordance with a NMFS-approved PAM Plan. PAM would also be conducted for at least 24 hours prior to foundation pile driving activities, and the PAM operator must review all detections from the previous 24-hour period prior to pile driving activities to increase situational awareness. Throughout the year (June through December), at least three PSOs would also be on-duty and actively monitoring from PSO support vessels. There would be at least two PSO support vessels with on-duty PSOs during any pile driving activities from June through December.

In addition to monitoring duties, PSOs and PAM operators are responsible for data collection. The data collected by PSO and PAM operators and subsequent analysis provide the necessary information to inform an estimate of the amount of take that occurred during the project, better understand the impacts of the project on marine mammals, address the effectiveness of monitoring and mitigation measures, and to adaptively manage activities and mitigation in the future. Data reported includes information on marine mammal sightings, activity occurring at time of sighting, monitoring conditions, and if mitigative actions were taken.

For all visual monitoring efforts and marine mammal sightings, NMFS proposes that the following information must be collected and reported to NMFS OPR: the date and time that monitored activity begins or ends, the construction activities occurring during each observation period, the watch status (*i.e.,* sighting made by PSO on/off effort, opportunistic, crew, alternate vessel/platform), the PSO who sighted the animal, the time of sighting; the weather parameters (*e.g.,* wind speed, percent cloud cover, visibility), the water conditions (*e.g.,* Beaufort sea state, tide state, water depth); all marine mammal sightings, regardless of distance from the construction activity; species (or lowest possible taxonomic level possible), the pace of the animal(s), the estimated number of animals (minimum/maximum/high/low/best), the estimated number of animals by cohort (*e.g.,* adults, yearlings, juveniles, calves, group composition, *etc.*), the description (*i.e.,* as many distinguishing features as possible of each individual seen, including length, shape, color, pattern, scars or markings, shape and size of dorsal fin, shape of head, and blow characteristics), the description of any marine mammal behavioral observations (*e.g.,* observed behaviors such as feeding or traveling) and observed changes in behavior, including an assessment of behavioral responses thought to have resulted from the specific activity, the animal's closest distance and bearing from the pile being driven and estimated time entered or spent within the Level A harassment and/or Level B harassment zone(s), use of noise attenuation device(s), and specific phase of activity (*e.g.,* soft-start for pile driving, active pile driving, *etc.*), the marine mammal occurrence in Level A harassment or Level B harassment zones, the description of any mitigation-related action implemented, or mitigation-related actions called for but not implemented, in response to the sighting (*e.g.,* delay, shutdown, *etc.*) and time and location of the action, and other human activity in the area.

On May 19, 2023, Vineyard Wind submitted a Pile Driving Monitoring

Plan for the 2023 IHA, including an Alternative Monitoring Plan, which was approved by NMFS. The Plan included details regarding PSO and PAM monitoring protocols and equipment proposed for use. More specifically, the PAM portion of the plan included a description of all proposed PAM equipment, addressed how the proposed passive acoustic monitoring must follow standardized measurement, processing methods, reporting metrics, and metadata standards for offshore wind as described in ''NOAA and BOEM Minimum Recommendations for Use of Passive Acoustic Listening Systems in Offshore Wind Energy Development Monitoring and Mitigation Programs'' (Van Parijs *et al.,* 2021). This plan also identified the efficacy of the technology at detecting marine mammals in the clearance and shutdown zones under all of the various conditions anticipated during construction, including varying weather conditions, sea states, and in consideration of the use of artificial lighting. Vineyard Wind would be required to submit an updated Foundation Installation Pile Driving Marine Mammal Monitoring Plan to NMFS Office of Protected Resources for review, and the Plan must be approved by NMFS prior to the start of foundation pile driving.

Sound Field Verification

Vineyard Wind would be required to conduct thorough SFV measurements during impact pile driving activity associated with the installation of, at minimum, the first monopile foundation and abbreviated SFV measurements during impact installation of the remaining monopiles to demonstrate noise levels are at or below those measured during the 2023 Vineyard Wind construction campaign (Küsel *et al.,* 2024). NMFS recognizes that the SFV data collected in 2023 occurred in warmer weather months and that water temperature can affect the sound speed profile and, thus, propagation rates. Therefore, if impact pile driving takes place in December, thorough SFV measurements must be conducted during impact pile driving activity associated with the installation of, at minimum, the first monopile foundation. Subsequent SFV measurements would also be required should larger piles be installed or if additional piles are driven that are anticipated to produce louder sound fields than those previously measured (*e.g.,* higher hammer energy, greater number of strikes, *etc.*). The measurements and reporting associated with SFV can be found in the IHA. The proposed requirements are extensive to ensure monitoring is conducted appropriately and the reporting frequency is such that Vineyard Wind would be required to make adjustments quickly (*e.g.,* add additional sound attenuation) to ensure marine mammals are not experiencing noise levels above those considered in this analysis. For recommended SFV protocols for impact pile driving, please consult ISO 18406 ''Underwater acoustics—Measurement of radiated underwater sound from percussive pile driving'' (2017). Vineyard Wind would be required to submit an updated SFV plan to NMFS Office of Protected Resources for review, and the Plan must be approved by NMFS prior to the start of foundation pile driving.

For any pile driving activities, they would also be required to submit interim and final SFV data results to NMFS and make corrections to the noise attenuation systems in the case that any SFV measurements demonstrate noise levels are above those expected assuming 6 dB of attenuation. These frequent and immediate reports would allow NMFS to better understand the sound fields to which marine mammals are being exposed and require immediate corrective action should they be misaligned with anticipated noise levels within our analysis.

Reporting

Prior to any construction activities occurring, Vineyard Wind would provide a report to NMFS OPR that demonstrates that all Vineyard Wind personnel, which includes the vessel crews, vessel captains, PSOs, and PAM operators have completed all required training. NMFS would require standardized and frequent reporting from Vineyard Wind during the active period of the IHA. All data collected relating to the Project would be recorded using industry-standard software (*e.g.,* Mysticetus or a similar software) installed on field laptops and/or tablets. Vineyard Wind would be required to submit weekly, monthly, annual, and situational reports. Vineyard Wind must review SFV results within 24 hours to determine whether measurements exceeded modeled (Level A harassment) and expected (Level B harassment) thresholds.

Vineyard Wind must provide the initial results of the SFV measurements to NMFS OPR in an interim report after each foundation installation event as soon as they are available and prior to a subsequent foundation installation, but no later than 48 hours after each completed foundation installation event. The report must include, at minimum: hammer energies/schedule used during pile driving, including the total number of strikes and the maximum hammer energy, peak sound pressure level (SPL_{pk}), root-mean-square sound pressure level that contains 90 percent of the acoustic energy (SPL_{rms}), and sound exposure level (SEL, in single strike for pile driving, SEL_{ss}), for each hydrophone, including at least the maximum, arithmetic mean, minimum, median (L50) and L5 (95 percent exceedance) statistics for each metric; estimated marine mammal Level A harassment and Level B harassment isopleths, calculated using the maximum-over-depth L5 (95 percent exceedance level, maximum of both hydrophones) of the associated sound metric, comparison of 2023 measured results against the measured marine mammal Level A harassment and Level B harassment acoustic isopleths, estimated transmission loss coefficients, pile identifier name, location of the pile and each hydrophone array in latitude/longitude, depths of each hydrophone, one-third-octave band single strike SEL spectra, if filtering is applied, full filter characteristics, and hydrophone specifications including the type, model, and sensitivity. Vineyard Wind would also be required to report any immediate observations which are suspected to have a significant impact on the results including but not limited to: observed noise mitigation system issues, obstructions along the measurement transect, and technical issues with hydrophones or recording devices. If any in-situ calibration checks for hydrophones reveal a calibration drift greater than 0.75 dB, pistonphone calibration checks are inconclusive, or calibration checks are otherwise not effectively performed, Vineyard Wind would be required to indicate full details of the calibration procedure, results, and any associated issues in the 48-hour interim reports.

Vineyard Wind must review abbreviated SFV results for each pile within 24 hours of completion of the foundation installation (inclusive of pile driving and any drilling), and, assuming measured levels at 750 m did not exceed the thresholds defined during thorough SFV, does not need to take any additional action. Results of abbreviated SFV must be submitted with the weekly pile driving report.

The final results of SFV measurements from each foundation installation must be submitted as soon as possible, but no later than 90 days following completion of each event's SFV measurements. The final reports must include all details prescribed above for the interim report as well as, at minimum, the following: the peak

sound pressure level (SPL_{pk}), the root-mean-square sound pressure level that contains 90 percent of the acoustic energy (SPL_{rms}), the single strike sound exposure level (SEL_{ss}), the integration time for SPL_{rms}, the spectrum, and the 24-hour cumulative SEL extrapolated from measurements at all hydrophones. The final report must also include at least the maximum, mean, minimum, median (L_{50}) and L_5 (95 percent exceedance) statistics for each metric, the SEL and SPL power spectral density and/or one-third octave band levels (usually calculated as decidecade band levels) at the receiver locations should be reported, the sound levels reported must be in median, arithmetic mean, and L_5 (95 percent exceedance) (*i.e.,* average in linear space), and in dB, range of transmission loss coefficients, the local environmental conditions, such as wind speed, transmission loss data collected on-site (or the sound velocity profile), baseline pre- and post-activity ambient sound levels (broadband and/or within frequencies of concern), a description of depth and sediment type, as documented in the Construction and Operation Plan (COP), at the recording and foundation installation locations, the extents of the measured Level A harassment and Level B harassment zone(s), hammer energies required for pile installation and the number of strikes per pile, the hydrophone equipment and methods (*i.e.,* recording device, bandwidth/sampling rate; distance from the pile where recordings were made; the depth of recording device(s)), a description of the SFV measurement hardware and software, including software version used, calibration data, bandwidth capability and sensitivity of hydrophone(s), any filters used in hardware or software, any limitations with the equipment, and other relevant information; the spatial configuration of the noise attenuation device(s) relative to the pile, a description of the noise abatement system and operational parameters (*e.g.,* bubble flow rate, distance deployed from the pile, *etc.*), and any action taken to adjust the noise abatement system. A discussion which includes any observations which are suspected to have a significant impact on the results including but not limited to: observed noise mitigation system issues, obstructions along the measurement transect, and technical issues with hydrophones or recording devices.

If at any time during the project Vineyard Wind becomes aware of any issue(s) that may (to any reasonable subject-matter expert, including the persons performing the measurements and analysis) call into question the validity of any measured Level A harassment or Level B harassment isopleths to a significant degree, which were previously transmitted or communicated to NMFS OPR, Vineyard Wind must inform NMFS OPR within 1 business day of becoming aware of this issue or before the next pile is driven, whichever comes first.

Weekly Report—During foundation installation activities, Vineyard Wind would be required to compile and submit weekly marine mammal monitoring reports for foundation installation pile driving to NMFS OPR that document the daily start and stop of all pile driving activities, the start and stop of associated observation periods by PSOs, details on the deployment of PSOs, a record of all detections of marine mammals (acoustic and visual), any mitigation actions (or if mitigation actions could not be taken, provide reasons why), and details on the noise abatement system(s) (*e.g.,* system type, distance deployed from the pile, bubble rate, *etc.*). Weekly reports will be due on Wednesday for the previous week (Sunday to Saturday). The weekly reports are also required to identify which turbines become operational and when (a map must be provided).

Monthly Report—Vineyard Wind would be required to compile and submit monthly reports to NMFS OPR that include a summary of all information in the weekly reports, including project activities carried out in the previous month, vessel transits (number, type of vessel, and route), number of piles installed, all detections of marine mammals, and any mitigative actions taken. Monthly reports would be due on the 15th of the month for the previous month. The monthly report would also identify which turbines become operational and when (a map must be provided).

Final Annual Reporting—Vineyard Wind would be required to submit its draft annual report to NMFS OPR on all visual and acoustic monitoring conducted under the IHA within 90 calendar days of the completion of activities occurring under the IHA. A final annual report must be prepared and submitted within 60 calendar days following receipt of any NMFS comments on the draft report. Information contained within this report is described at the beginning of this section.

Situational Reporting—Specific situations encountered during the Project would require immediate reporting. For instance, if a NARW is sighted with no visible injuries or entanglement at any time by project PSOs or project personnel, Vineyard Wind must immediately report the sighting to NMFS as soon as possible or within 24 hours after the initial sighting. All NARW acoustic detections within a 24-hour period should be collated into one spreadsheet and reported to NMFS as soon as possible but must be reported within 24 hours. Vineyard Wind should report sightings and acoustic detections by downloading and completing the Real-Time NARW Reporting Template spreadsheet found here: *https://www.fisheries.noaa.gov/resource/document/template-datasheet-real-time-north-atlantic-right-whale-acoustic-and-visual.* Vineyard Wind would save the completed spreadsheet as a ''.csv'' file and email it to NMFS Northeast Fisheries Science Center Protected Resources Division (NEFSC–PRD (*ne.rw.survey@noaa.gov*), NMFS Greater Atlantic Regional Fisheries Office (GARFO)-PRD (*nmfs.gar.incidental-take@noaa.gov*), and NMFS OPR (*pr.itp.monitoringreports@noaa.gov*). If the sighting is in the southeast (North Carolina through Florida), sightings should be reported via the template and to the Southeast Hotline 877–WHALE–HELP (877–942–5343) with the observation information provided below (PAM detections are not reported to the Hotline). If Vineyard Wind is unable to report a sighting through the spreadsheet within 24 hours, Vineyard Wind should call the relevant regional hotline (Greater Atlantic Region [Maine through Virginia] Hotline 866–755–6622; Southeast Hotline 877–WHALE–HELP) with the observation information provided below. Observation information would include: the time (note time format), date (MM/DD/YYYY), location (latitude/longitude in decimal degrees; coordinate system used) of the observation, number of whales, animal description/certainty of observation (follow up with photos/video if taken), reporter's contact information, and lease area number/project name, PSO/personnel name who made the observation, and PSO provider company (if applicable). If Vineyard Wind is unable to report via the template or the regional hotline, Vineyard Wind would enter the sighting via the WhaleAlert app (*https://www.whalealert.org/*). If this is not possible, the sighting should be reported to the U.S. Coast Guard via channel 16. The report to the Coast Guard must include the same information as would be reported to the hotline (see above). PAM detections would not be reported to WhaleAlert or the U.S. Coast Guard. If a non-NARW large whale is observed,

Vineyard Wind would be required to report the sighting via WhaleAlert app (*https://www.whalealert.org/*) as soon as possible but within 24 hours.

In the event that personnel involved in the Project discover a stranded, entangled, injured, or dead marine mammal, Vineyard Wind must immediately report the observation to NMFS. If in the Greater Atlantic Region (Maine through Virginia), call the NMFS Greater Atlantic Stranding Hotline (866–755–6622), and if in the Southeast Region (North Carolina through Florida) call the NMFS Southeast Stranding Hotline (877–WHALE–HELP, 877–942–5343). Separately, Vineyard Wind must report the incident within 24 hours to NMFS OPR (*PR.ITP.MonitoringReports@noaa.gov*) and, if in the Greater Atlantic Region to the NMFS GARFO (*nmfs.gar.incidental-take@noaa.gov*) or if in the Southeast Region, to the NMFS Southeast Regional Office (SERO; *secmammalreports@noaa.gov*). Note, the stranding hotline may request the report be sent to the local stranding network response team. The report must include contact information (*e.g.,* name, phone number, *etc.*), time, date, and location (*i.e.,* specify coordinate system) of the first discovery (and updated location information, if known and applicable), species identification (if known) or description of the animal(s) involved, condition of the animal(s) (including carcass condition if the animal is dead), observed behaviors of the animal(s) (if alive), photographs or video footage of the animal(s) (if available), and general circumstances under which the animal was discovered.

If the injury, entanglement, or death was caused by a project activity, Vineyard Wind would be required to immediately cease all activities until NMFS OPR is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHA. NMFS OPR may impose additional measures to minimize the likelihood of further prohibited take and ensure MMPA compliance consistent with the adaptive management provisions. Vineyard Wind could not resume their activities until notified by NMFS OPR.

In the event of a suspected or confirmed vessel strike of a marine mammal by any vessel associated with the Project or other means by which Project activities caused a non-auditory injury or death of a marine mammal, Vineyard Wind must immediately report the incident to NMFS. If in the Greater Atlantic Region (Maine through Virginia), call the NMFS Greater Atlantic Stranding Hotline (866–755–6622), and if in the Southeast Region (North Carolina through Florida) call the NMFS Southeast Stranding Hotline (877–WHALE–HELP, 877–942–5343). Separately, Vineyard Wind must immediately report the incident to NMFS OPR (*PR.ITP.MonitoringReports@noaa.gov*) and, if in the Greater Atlantic Region to the NMFS GARFO (*nmfs.gar.incidental-take@noaa.gov*) or if in the Southeast Region, to the NMFS SERO (*secmammalreports@noaa.gov*). The report must include time, date, and location (*i.e.,* specify coordinate system)) of the incident, species identification (if known) or description of the animal(s) involved (*i.e.,* identifiable features including animal color, presence of dorsal fin, body shape and size, *etc.*), vessel strike reporter information (name, affiliation, email for person completing the report), vessel strike witness (if different than reporter) information (*e.g.,* name, affiliation, phone number, platform for person witnessing the event, *etc.*), vessel name and/or MMSI number; vessel size and motor configuration (inboard, outboard, jet propulsion), vessel's speed leading up to and during the incident, vessel's course/heading and what operations were being conducted (if applicable), part of vessel that struck marine mammal (if known), vessel damage notes, status of all sound sources in use at the time of the strike, if the marine mammal was seen before the strike event, description of behavior of the marine mammal before the strike event (if seen) and behavior immediately following the strike, description of avoidance measures/requirements that were in place at the time of the strike and what additional measures were taken, if any, to avoid strike, environmental conditions (*e.g.,* wind speed and direction, Beaufort sea state, cloud cover, visibility, *etc.*) immediately preceding the strike, estimated (or actual, if known) size and length of marine mammal that was struck, if available, description of the presence and behavior of any other marine mammals immediately preceding the strike, other animal-specific details if known (*e.g.,* length, sex, age class), behavior or estimated fate of the marine mammal post-strike (*e.g.,* dead, injured but alive, injured and moving, external visible wounds (linear wounds, propeller wounds, non-cutting blunt-force trauma wounds), blood or tissue observed in the water, status unknown, disappeared), to the extent practicable, any photographs or video footage of the marine mammal(s), and, any additional notes the witness may have from the interaction. For any numerical values provided (*i.e.,* location, animal length, vessel length, *etc.*), please provide if values are actual or estimated.

Vineyard Wind would be required to immediately cease activities until the NMFS OPR is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHA. NMFS OPR may impose additional measures to minimize the likelihood of further prohibited take and ensure MMPA compliance. Vineyard Wind may not resume their activities until notified by NMFS OPR.

Sound Field Verification—Vineyard Wind would be required to submit interim SFV reports after each foundation installation within 48 hours. A final SFV report for all monopile foundation installation monitoring would be required within 90 days following completion of acoustic monitoring.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any impacts or responses (*e.g.,* intensity, duration), the context of any impacts or responses (*e.g.,* critical reproductive time or location, foraging impacts affecting energetics), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338, September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

In the Estimated Take section, we estimated the maximum number of takes by Level A harassment and Level B harassment that could occur from Vineyard Wind's specified activities based on the methods described. The impact that any given take would have is dependent on many case-specific factors that need to be considered in the negligible impact analysis (*e.g.,* the context of behavioral exposures such as duration or intensity of a disturbance, the health of impacted animals, the status of a species that incurs fitness-level impacts to individuals, *etc.*). In this notice of proposed IHA, we evaluate the likely impacts of the harassment takes that are proposed to be authorized in the context of the specific circumstances surrounding these predicted takes. We also collectively evaluate this information, as well as other more taxa-specific information and mitigation measure effectiveness, in group-specific discussions that support our negligible impact conclusions for each stock. As described above, no serious injury or mortality is expected or proposed to be authorized for any species or stock.

We base our analysis and preliminary negligible impact determination on the number of takes that are proposed to be authorized, and extensive qualitative consideration of other contextual factors that influence the degree of impact of the takes on the affected individuals and the number and context of the individuals affected.

To avoid repetition, we provide some general analysis in this Negligible Impact Analysis and Determination section that applies to all the species listed in table 3 given that some of the anticipated effects of Vineyard Wind's construction activities on marine mammals are expected to be relatively similar in nature. Where there are meaningful differences between species or stocks—as is the case of the NARW—they are included as separate subsections below.

Last, we provide a negligible impact determination for each species or stock, providing species or stock-specific information or analysis where appropriate, for example for NARWs given the population status. Organizing our analysis by grouping species or stocks that share common traits or that would respond similarly to effects of Vineyard Wind's activities, and then providing species- or stock-specific information allows us to avoid duplication while ensuring that we have analyzed the effects of the specified activities on each affected species or stock.

As described previously, no serious injury or mortality is anticipated or proposed to be authorized in this IHA. Any Level A harassment proposed to be authorized would be in the form of auditory injury (*i.e.,* PTS). For all species, the amount of take proposed to be authorized represents the maximum amount of Level A harassment and Level B harassment that is reasonably expected to occur.

Behavioral Disturbance

In general, NMFS anticipates that impacts on an individual that has been harassed are likely to be more intense when exposed to higher received levels and for a longer duration (though this is in no way a strictly linear relationship for behavioral effects across species, individuals, or circumstances) and less severe impacts result when exposed to lower received levels and for a brief duration. However, there is also growing evidence of the importance of contextual factors such as distance from a source in predicting marine mammal behavioral response to sound—*i.e.,* sounds of a similar level emanating from a more distant source have been shown to be less likely to evoke a response of equal magnitude (DeRuiter and Doukara, 2012; Falcone *et al.,* 2017). As described in the Potential Effects of Specified Activities on Marine Mammals and their Habitat section, the intensity and duration of any impact resulting from exposure to Vineyard Wind's activities is dependent upon a number of contextual factors including, but not limited to, sound source frequencies, whether the sound source is moving towards the animal, hearing ranges of marine mammals, behavioral state at time of exposure, status of individual exposed (*e.g.,* reproductive status, age class, health) and an individual's experience with similar sound sources. Southall *et al.* (2021), Ellison *et al.* (2012) and Moore and Barlow (2013), among others, emphasize the importance of context (*e.g.,* behavioral state of the animals, distance from the sound source) in evaluating behavioral responses of marine mammals to acoustic sources. Level B Harassment of marine mammals may consist of behavioral modifications (*e.g.,* avoidance, temporary cessation of foraging or communicating, changes in respiration or group dynamics, masking) and may include auditory impacts in the form of temporary hearing loss. In addition, some of the lower-level physiological stress responses (*e.g.,* change in respiration, change in heart rate) discussed previously would likely co-occur with the behavioral modifications, although these physiological responses are more difficult to detect, and fewer data exist relating these responses to specific received levels of sound. Take by Level B harassment, then, may have a stress-related physiological component as well; however, we would not expect Vineyard Wind's pile driving activities to produce conditions of long-term and continuous exposure to noise leading to long-term physiological stress responses in marine mammals that could affect reproduction or survival.

In the range of behavioral effects that might be expected to be part of a response that qualifies as an instance of Level B harassment (which by nature of the way it is modeled/counted, occurs within 1 day), the less severe end might include exposure to comparatively lower levels of a sound, at a greater distance from the animal, for a few or several minutes. A less severe exposure of this nature could result in a behavioral response such as avoiding an area that an animal would otherwise have chosen to move through or feed in for some amount of time or breaking off one or a few feeding bouts. More severe effects could occur if an animal gets close enough to the source to receive a comparatively higher level, is exposed continuously to one source for a longer time or is exposed intermittently to different sources throughout a day. Such effects might result in an animal having a more severe flight response and leaving a larger area for a day or more or potentially losing feeding opportunities for a day. However, such severe behavioral effects are expected to occur infrequently.

Many species perform vital functions, such as feeding, resting, traveling, and socializing on a diel cycle (24-hour cycle). Behavioral reactions to noise exposure, when taking place in a biologically important context, such as disruption of critical life functions, displacement, or avoidance of important habitat, are more likely to be significant if they last more than 1 day or recur on subsequent days (Southall *et al.,* 2007) due to diel and lunar patterns in diving and foraging behaviors observed in many cetaceans (Baird *et al.,* 2008; Barlow *et al.,* 2020; Henderson *et al.,* 2016; Schorr *et al.,* 2014). It is important to note the water depth in the LIA is shallow (ranging up to 37 to 49.5 m), so deep diving species such as sperm whales are not expected to be engaging in deep foraging dives when exposed to noise above NMFS harassment thresholds during the specified activities. Therefore, we do not anticipate impacts to deep foraging behavior to be impacted by the specified activities.

It is also important to identify that the estimated number of takes does not necessarily equate to the number of individual animals Vineyard Wind expects to harass (which is lower), but rather to the instances of take (*i.e.,* exposures above the Level B harassment thresholds) that may occur. Some individuals of a species may experience recurring instances of take over multiple days throughout the year while some members of a species or stock may experience one exposure as they move through an area, which means that the number of individuals taken is smaller than the total estimated takes. In short, for species that are more likely to be migrating through the area and/or for which only a comparatively smaller number of takes are predicted (*e.g.,* some of the mysticetes), it is more likely that each take represents a different individual whereas for non-migrating species with larger amounts of predicted take, we expect that the total anticipated takes represent exposures of a smaller number of individuals of which some would be taken across multiple days.

Impact pile driving for foundation installation is anticipated to have the greatest impacts. For these reasons, impacts are proposed to be minimized through implementation of mitigation measures, including use of a sound attenuation system, soft-starts, the implementation of clearance zones that would facilitate a delay to pile driving commencement, and implementation of shutdown zones. All these measures are designed to avoid or minimize harassment. For example, given sufficient notice through the use of soft-start, marine mammals are expected to move away from a sound source that is disturbing prior to becoming exposed to very loud noise levels. The requirement to couple visual monitoring and PAM before and during all foundation installation will increase the overall capability to detect marine mammals compared to one method alone.

Occasional, milder behavioral reactions are unlikely to cause long-term consequences for individual animals or populations, and even if some smaller subset of the takes is in the form of a longer (several hours or a day) and more severe response, if they are not expected to be repeated over numerous or sequential days, impacts to individual fitness are not anticipated. Also, the effect of disturbance is strongly influenced by whether it overlaps with biologically important habitats when individuals are present—avoiding biologically important habitats will provide opportunities to compensate for reduced or lost foraging (Keen *et al.,* 2021). Nearly all studies and experts agree that infrequent exposures of a single day or less are unlikely to impact an individual's overall energy budget (Farmer *et al.,* 2018; Harris *et al.,* 2017; King *et al.,* 2015; National Academy of Science, 2017; New *et al.,* 2014; Southall *et al.,* 2007; Villegas-Amtmann *et al.,* 2015).

Temporary Threshold Shift

TTS is one form of Level B harassment that marine mammals may incur through exposure to US Wind's activities and, as described earlier, the proposed takes by Level B harassment may represent takes in the form of direct behavioral disturbance, TTS, or both. As discussed in the Potential Effects of Specified Activities on Marine Mammals and their Habitat section, in general, TTS can last from a few minutes to days, be of varying degree, and occur across different frequency bandwidths, all of which determine the severity of the impacts on the affected individual, which can range from minor to more severe. Impact pile driving is a broadband noise sources but generates sounds in the lower frequency ranges (with most of the energy below 1–2 kHz, but with a small amount energy ranging up to 20 kHz); therefore, in general and all else being equal, we would anticipate the potential for TTS is higher in low-frequency cetaceans (*i.e.,* mysticetes) than other marine mammal hearing groups and would be more likely to occur in frequency bands in which they communicate. However, we would not expect the TTS to span the entire communication or hearing range of any species given that the frequencies produced by these activities do not span entire hearing ranges for any particular species. Additionally, though the frequency range of TTS that marine mammals might sustain would overlap with some of the frequency ranges of their vocalizations, the frequency range of TTS from Vineyard Wind's pile driving activities would not typically span the entire frequency range of one vocalization type, much less span all types of vocalizations or other critical auditory cues for any given species. In addition, the proposed mitigation measures further reduce the potential for TTS in mysticetes.

Generally, both the degree of TTS and the duration of TTS would be greater if the marine mammal is exposed to a higher level of energy (which would occur when the peak dB level is higher or the duration is longer). The threshold for the onset of TTS was discussed previously (see Estimated Take). An animal would have to approach closer to the source or remain in the vicinity of the sound source appreciably longer to increase the received SEL, which would be unlikely considering the proposed mitigation and the nominal speed of the receiving animal relative to the stationary sources such as impact pile driving. The recovery time of TTS is also of importance when considering the potential impacts from TTS. In TTS laboratory studies (as discussed in Potential Effects of Specified Activities on Marine Mammals and Their Habitat), some using exposures of almost an hour in duration or up to 217 SEL, almost all individuals recovered within 1 day (or less, often in minutes), and we note that while the pile driving activities last for hours a day, it is unlikely that most marine mammals would stay in the close vicinity of the source long enough to incur more severe TTS. Overall, given the few instances in which any individual might incur TTS, the low degree of TTS and the short anticipated duration, and the unlikely scenario that any TTS would overlap the entirety of an individual's critical hearing range, it is unlikely that TTS (of the nature expected to result from the project's activities) would result in behavioral changes or other impacts that would impact any individual's (of any hearing sensitivity) reproduction or survival.

Permanent Threshold Shift

NMFS proposes to authorize a very small amount of take by PTS to some marine mammal individuals. The numbers of proposed takes by Level A harassment are relatively low for all marine mammal stocks and species (table 11). We anticipate that PTS may occur from exposure to impact pile driving, which produces sounds that are both impulsive and primarily concentrated in the lower frequency ranges (below 1 kHz) (David, 2006; Krumpel *et al.,* 2021).

There are no PTS data on cetaceans and only one instance of PTS being induced in older harbor seals (Reichmuth *et al.,* 2019). However, available TTS data (of mid-frequency hearing specialists exposed to mid- or high-frequency sounds (Southall *et al.,* 2007, 2019; NMFS, 2018)) suggest that most threshold shifts occur in the frequency range of the source up to one octave higher than the source. We would anticipate a similar result for PTS. Further, no more than a small degree of PTS is expected to be associated with any of the incurred Level A harassment, given it is unlikely that animals would stay in the close vicinity of a source for a duration long enough to produce more than a small degree of PTS.

PTS would consist of minor degradation of hearing capabilities

occurring predominantly at frequencies one-half to one octave above the frequency of the energy produced by pile driving (*i.e.,* the low-frequency region below 2 kHz) (Cody and Johnstone, 1981; McFadden, 1986; Finneran, 2015), not severe hearing impairment. If hearing impairment occurs from impact pile driving, it is most likely that the affected animal would lose a few decibels in its hearing sensitivity, which in most cases is not likely to meaningfully affect its ability to forage and communicate with conspecifics. In addition, during impact pile driving, given sufficient notice through use of soft-start prior to implementation of full hammer energy during impact pile driving, marine mammals are expected to move away from a sound source that is disturbing prior to it resulting in severe PTS.

Auditory Masking or Communication Impairment

The potential impacts of masking on an individual are similar to those discussed for TTS (*e.g.,* decreased ability to communicate, forage effectively, or detect predators), but an important difference is that masking only occurs during the period of the signal, versus TTS, which continues beyond the duration of the signal. Also, though masking can result from the sum of exposure to multiple signals, none of these signals might individually cause TTS. Fundamentally, masking is referred to as a chronic effect because one of the key potential harmful components of masking is the fact that an animal would have reduced ability to hear or interpret critical cues. This becomes much more likely to cause a problem the longer it is occurring. Inherent in the concept of masking is the fact that the potential for the effect is only present during the times that the animal and the source are in close enough proximity for the effect to occur (and further, this time period would need to coincide with a time that the animal was utilizing sounds at the masked frequency).

As our analysis has indicated, we expect that impact pile driving may occur for several, albeit intermittent, hours per day, for multiple days. Masking is fundamentally more of a concern at lower frequencies (which are pile driving dominant frequencies), because low-frequency signals propagate significantly further than higher frequencies and because they are more likely to overlap both the narrower low-frequency calls of mysticetes, as well as many non-communication cues related to fish and invertebrate prey, and geologic sounds that inform navigation. As mentioned above (see Description of Marine Mammals in the Area of Specified Activities), the LIA does not overlap critical habitat or BIAs for any species, and temporary avoidance of the pile driving area by marine mammals would likely displace animals to areas of sufficient habitat. In summary, the nature of Vineyard Wind's activities, paired with habitat use patterns by marine mammals, does not support the likelihood of take due to masking effects or that masking would have the potential to affect reproductive success or survival, and are we not proposing to authorize such take.

Impact on Habitat and Prey

Construction activities may result in fish and invertebrate mortality or injury very close to the source, and Vineyard Wind's activities may cause some fish to leave the area of disturbance. It is anticipated that any mortality or injury would be limited to a very small subset of available prey and the implementation of mitigation measures such as the use of a noise attenuation system during impact pile driving would further limit the degree of impact. Behavioral changes in prey in response to construction activities could temporarily impact marine mammals' foraging opportunities in a limited portion of the foraging range but, because of the relatively small area of the habitat that may be affected at any given time (*e.g.,* around a pile being driven) and the temporary nature of the disturbance on prey species, the impacts to marine mammal habitat are not expected to cause significant or long-term negative consequences. There is no indication that displacement of prey would impact individual fitness and health, particularly since unconsumed prey would likely still be available in the environment in most cases following the cessation of acoustic exposure.

Cable presence is not anticipated to impact marine mammal habitat, as these would be buried, and any electromagnetic fields emanating from the cables are not anticipated to result in consequences that would impact marine mammals' prey to the extent they would be unavailable for consumption. Although many species of marine mammal prey can detect electromagnetic fields, previous studies have shown little impacts on habitat use (Hutchinson *et al.,* 2018). Burying the cables and the inclusion of protective shielding on cables will also minimize any impacts of electromagnetic fields on marine mammal prey.

The presence of wind turbines within the Lease Area could have longer-term impacts on marine mammal habitat, as the project would result in the persistence of the structures within marine mammal habitat for more than 30 years. For piscivorous marine mammal species, the presence of structures could result in a beneficial reef effect which may lead to increases in the availability of prey. However, turbine presence and operation is, generally likely to result in certain oceanographic effects in the marine environment, and may adversely alter aggregations and distribution of marine mammal zooplankton prey through changing the strength of tidal currents and associated fronts, changes in stratification, primary production, the degree of mixing, and stratification in the water column (Chen *et al.,* 2021; Johnson *et al.,* 2021; Christiansen *et al.,* 2022; Dorrell *et al.,* 2022). In the recently released BOEM and NOAA Fisheries North Atlantic Right Whale Strategy (BOEM *et al.,* 2024), the agencies identify the conceptual pathway by which changes to ocean circulation could potentially lead to fitness reduction of North Atlantic right whales, who primarily forage on copepods (see figure 2). As described in the *Potential Effects to Marine Mammal Habitat* section, there is uncertainty regarding the intensity (or magnitude) and spatial extent of turbine operation impacts on marine mammals habitat, including planktonic prey. Recently, a National Academy of Sciences, Engineering, and Medicine panel of independent experts concluded that the impacts of offshore wind operations on North Atlantic right whales and their habitat in the Nantucket Shoals region is uncertain due to the limited data available at this time and recognized what data is available is largely based on models from the North Sea that have not been validated by observations (NAS, 2023). The report also identifies that major oceanographic changes have occurred to the Nantucket Shoals region over the past 25 years and it will be difficult to isolate from the much larger variability introduced by natural and other anthropogenic sources (including climate change).

As discussed in the Description of the Specified Activity section, this IHA addresses the take incidental to the installation of 15 foundations, which will gradually become operational following construction completion. While there are likely to be oceanographic impacts from the presence of operating turbines, meaningful oceanographic impacts relative to stratification and mixing that would significantly affect marine

mammal foraging and prey over large areas in key foraging habitats, resulting in the reproduction or survival of any individual marine mammals, are not anticipated from the Vineyard Wind activities covered under this proposed IHA, yet are likely to be comparatively minor, if impacts do occur.

Mitigation To Reduce Impacts on All Species

The proposed IHA includes a variety of mitigation measures designed to minimize impacts on all marine mammals, with a focus on NARWs (the latter is described in more detail below). For impact pile driving of foundation piles, 10 overarching mitigation measures are proposed, which are intended to reduce both the number and intensity of marine mammal takes: (1) seasonal/time of day work restrictions; (2) use of multiple PSOs to visually observe for marine mammals (with any detection within specifically designated zones triggering a delay or shutdown); (3) use of PAM to acoustically detect marine mammals, with a focus on detecting baleen whales (with any detection within designated zones triggering delay or shutdown); (4) implementation of clearance zones; (5) implementation of shutdown zones; (6) use of soft-start; (7) use of noise attenuation technology; (8) maintaining situational awareness of marine mammal presence through the requirement that any marine mammal sighting(s) by Vineyard Wind's personnel must be reported to PSOs; (9) sound field verification monitoring; and (10) Vessel Strike Avoidance measures to reduce the risk of a collision with a marine mammal and vessel.

The Proposed Mitigation section discusses the manner in which the required mitigation measures reduce the magnitude and/or severity of the take of marine mammals, including the following. For activities with large harassment isopleths, Vineyard Wind would be required to reduce the noise levels generated to the lowest levels practicable. Use of a soft-start during impact pile driving will allow animals to move away from (*i.e.,* avoid) the sound source prior to applying higher hammer energy levels needed to install the pile (Vineyard Wind would not use a hammer energy greater than necessary to install piles). Clearance zone and shutdown zone implementation, which are required when marine mammals are within given distances associated with certain impact thresholds for all activities, would reduce the magnitude and severity of marine mammal take. Additionally, the use of multiple PSOs, PAM, and maintaining awareness of marine mammal sightings reported in the region would aid in detecting marine mammals that would trigger the implementation of the mitigation measures.

Mysticetes

Five mysticete species (comprising five stocks) of cetaceans (NARW, humpback whale, fin whale, sei whale, and minke whale) may be taken by harassment. These species, to varying extents, utilize the specific geographic region, including the LIA, for the purposes of migration, foraging, and socializing. Mysticetes are in the low-frequency hearing group.

Behavioral data on mysticete reactions to pile driving noise are scant. Kraus *et al.* (2019) predicted that the three main impacts of offshore wind farms on marine mammals would consist of displacement, behavioral disruptions, and stress. Broadly, we can look to studies that have focused on other noise sources such as seismic surveys and military training exercises, which suggest that exposure to loud signals can result in avoidance of the sound source (or displacement if the activity continues for a longer duration in a place where individuals would otherwise have been staying, which is less likely for mysticetes in this area), disruption of foraging activities (if they are occurring in the area), local masking around the source, associated stress responses, and impacts to prey, as well as TTS or PTS in some cases.

Mysticetes encountered in the LIA are expected to be migrating through and/or engaged in foraging behavior. The extent to which an animal engages in these behaviors in the area is species-specific and varies seasonally. Many mysticetes are expected to predominantly be migrating through the LIA towards or from primary feeding habitats (*e.g.,* Cape Cod Bay, Great South Channel, and Gulf of St. Lawrence). While we have acknowledged above that mortality, hearing impairment, or displacement of mysticete prey species may result locally from impact pile driving, given the very short duration of and broad availability of prey species in the area and the availability of alternative suitable foraging habitat for the mysticete species most likely to be affected, any impacts on mysticete foraging are expected to be minor. Whales temporarily displaced from the LIA are expected to have sufficient remaining feeding habitat available to them, and would not be prevented from feeding in other areas within the biologically important feeding habitats, including to the east near Nantucket Shoals. In addition, any displacement of whales or interruption of foraging bouts would be expected to be relatively temporary in nature.

The potential for repeated exposures of individuals is dependent upon their residency time, with migratory animals unlikely to be exposed on repeated occasions and animals remaining in the area more likely to be exposed more than once. For mysticetes, where relatively low numbers of species-specific take by Level B harassment are predicted (compared to the abundance of each mysticete species or stock; see table 11) and movement patterns suggest that individuals would not necessarily linger in a particular area for multiple days, each predicted take likely represents an exposure of a different individual; with perhaps a subset of takes for a few species potentially representing a few repeated of a limited number of individuals across multiple days. In other words, the behavioral disturbance to any individual mysticete would, therefore, be expected to most likely occur within a single day, or potentially across a few days, and therefore would not be expected to impact the animal's fitness for reproduction or survival.

In general, the duration of exposures would not be continuous throughout any given day and pile driving would not occur on all consecutive days due to weather delays or any number of logistical constraints Vineyard Wind has identified. Species-specific analysis regarding potential for repeated exposures and impacts is provided below.

Humpback whales, minke whales, fin whales and sei whales are the mysticete species for which PTS is anticipated and proposed to be authorized. As described previously, PTS for mysticetes from some project activities may overlap frequencies used for communication, navigation, or detecting prey. However, given the nature and duration of the activity, the mitigation measures, and likely avoidance behavior, any PTS is expected to be of a small degree, would be limited to frequencies where pile driving noise is concentrated (*i.e.,* only a small subset of their expected hearing range) and would not be expected to impact individuals' fitness for reproductive success or survival.

NARWs

NARWs are listed as endangered under the ESA and as both depleted and strategic under the MMPA. As described in the Potential Effects to Marine Mammals and Their Habitat section, NARWs are threatened by a low population abundance, higher than

average mortality rates, and lower than average reproductive rates. Recent studies have reported individuals showing high stress levels (*e.g.,* Corkeron *et al.,* 2017) and poor health, which has further implications on reproductive success and calf survival (Christiansen *et al.,* 2020; Stewart *et al.,* 2021, 2022). As described below, a UME has been designated for NARWs. Given this, the status of the NARW population is of heightened concern and, therefore, merits additional analysis and consideration.

This proposed IHA would authorize seven takes of NARW by Level B harassment only, which equates to approximately 2.1 percent of the stock's abundance, if each take were considered to be of a different individual. No Level A harassment, serious injury, or mortality is anticipated or proposed to be authorized for this species.

As described in the Description of Marine Mammals in the Area of Specified Activities section, NARWs are presently experiencing an ongoing UME (beginning in June 2017). Preliminary findings support human interactions, specifically vessel strikes and entanglements, as the cause of death for the majority of NARWs. Given the current status of the NARW, the loss of even one individual could significantly impact the population. Level B harassment of NARWs resulting from the Project's activities is expected to primarily be in the form of temporary avoidance of the immediate area of construction. Required mitigation measures will ensure the least practicable adverse impact and the proposed number of takes of NARWs would not exacerbate or compound the effects of the ongoing UME.

In general, NARWs in the LIA are expected to be engaging in migratory, feeding, and/or social behavior. Migrating NARWs would typically be moving through the LIA, rather than lingering for extended periods of time (thereby limiting the potential for repeat exposures); however, foraging whales may remain in the LIA, with an average residence time of 13 days between December and May (Quintana-Rizzo *et al.,* 2021). SNE, including the LIA, is part of a known migratory corridor for NARWs and may be a stopover site for migrating NARWs moving to or from southeastern calving grounds and northern foraging grounds. NARWs are primarily concentrated in the northeastern and southeastern sections of the Massachusetts Wind Energy Area (MA WEA) (*i.e.,* east of the LIA) during the summer (June-August) and winter (December-February) while distribution likely shifts to the west, closer to the LIA, into the Rhode Island/Massachusetts Wind Energy Area (RI/MA WEA) in the spring (March-May) (Quintana-Rizzo *et al.,* 2021). However, NARWs range outside of the LIA for their main feeding, breeding, and calving activities. It is important to note that there would be a restriction on impact pile driving activities from January through May, with pile driving only allowed in December with approval from NMFS and BOEM.

Foundation installation is of concern, given loud sound levels. However, as described above, foundation installation would only occur during times when, based on the best available scientific data, NARWs are less frequently encountered and less likely to be engaged in critical foraging behavior (although NMFS recognizes NARWs may forage year-round in SNE). The potential types, severity, and magnitude of impacts are also anticipated to mirror that described in the general *Mysticetes* section above, including avoidance (the most likely outcome), changes in foraging or vocalization behavior, masking, a small amount of TTS, and temporary physiological impacts (*e.g.,* change in respiration, change in heart rate). Importantly, the effects of the activities are expected to be sufficiently low-level and localized to specific areas as to not meaningfully impact important behaviors such as migration and foraging for NARWs. As noted above, for NARWs, this IHA would authorize up to seven takes, by Level B harassment. These takes are expected to be in the form of temporary behavioral disturbance, such as slight displacement (but not abandonment) of migratory habitat or temporary cessation of feeding. Further, given many of these exposures are generally expected to occur to different individual right whales migrating through (*i.e.,* many individuals would not be impacted on more than 1 day in a year), with some subset potentially being exposed on no more than a few days within the year, they are unlikely to result in energetic consequences that could affect reproduction or survival of any individuals.

Overall, NMFS expects that any behavioral harassment of NARWs incidental to the specified activities would not result in changes to their migration patterns or foraging success, as only temporary avoidance of an area during construction is expected to occur. As described previously, NARWs migrate, forage, or socialize in the LIA but are not expected to remain in this habitat for extensive durations relative to core foraging habitats to the east, south of Nantucket and Martha's Vineyard, Cape Cod Bay, or the Great South Channel (Quintana-Rizzo *et al.,* 2021). Any temporarily displaced animals would be able to return to or continue to travel through the LIA and subsequently utilize this habitat once activities have ceased.

Although acoustic masking may occur in the vicinity of the foundation installation activities, based on the acoustic characteristics of noise associated with pile driving (*e.g.,* frequency spectra, short duration of exposure, NMFS expects masking effects to be minimal during impact pile driving). In addition, masking would likely only occur during the period of time that a NARW is in the relatively close vicinity of pile driving, which is expected to be intermittent within a day and confined to the months in which NARWs are at lower densities and primarily moving through the area. TTS,could also occur in some of the exposed animals, making it more difficult for those individuals to hear or interpret acoustic cues within the frequency range (and slightly above) of sound produced during impact pile driving; however, any TTS would likely be of low amount, limited duration, and limited to frequencies where most construction noise is centered (below 2 kHz). NMFS expects that right whale hearing sensitivity would return to pre-exposure levels shortly after migrating through the area or moving away from the sound source.

As described in the Potential Effects to Marine Mammals and Their Habitat section of this notice, the distance of the receiver from the source influences the severity of response, with greater distances typically eliciting less severe responses. NMFS recognizes NARWs migrating could be pregnant females (in the fall) and cows with older calves (in spring) and that these animals may slightly alter their migration course in response to any foundation pile driving; however, we anticipate that course diversion would be of small magnitude. Hence, while some avoidance of the pile-driving activities may occur, we anticipate any avoidance behavior of migratory NARWs would be similar to that of gray whales (Tyack *et al.,* 1983), on the order of hundreds of meters up to 1 to 2 km. This diversion from a migratory path otherwise uninterrupted by the project's activities is not expected to result in meaningful energetic costs that would impact annual rates of recruitment of survival. NMFS expects that NARWs would be able to avoid areas during periods of active noise production while not being forced out of this portion of their habitat.

NARW presence in the LIA is year-round. However, abundance during summer months is lower compared to the winter months with spring and fall serving as ''shoulder seasons'' wherein abundance waxes (fall) or wanes (spring). Even in consideration of recent habitat use and distribution shifts, Vineyard Wind would still be installing monopile foundations when the presence of NARWs is expected to be lower.

Given this year-round habitat usage, in recognition that where and when whales may actually occur during project activities is unknown as it depends on the annual migratory behaviors, NMFS is requiring a suite of mitigation measures designed to reduce impacts to NARWs to the maximum extent practicable. These mitigation measures (*e.g.,* seasonal/daily work restrictions, vessel separation distances, and reduced vessel speed) would not only avoid the likelihood of vessel strikes but also would minimize the severity of behavioral disruptions (*e.g.,* through sound reduction using attenuation systems and reduced temporal overlap of project activities and NARWs). This would help further ensure that takes by Level B harassment that are estimated to occur would not affect reproductive success or survivorship of individuals through detrimental impacts to energy intake or cow/calf interactions during migratory transit.

As described in the Description of Marine Mammals in the Area of Specified Activities section, the Vineyard Wind Offshore Wind Project is being constructed within the NARW migratory corridor BIA, which represents areas and months within which a substantial portion of a species or population is known to migrate. The area over which NARWs may be harassed is relatively small compared to the width of the migratory corridor. The width of the migratory corridor in this area is approximately 210.1 km (while the width of the Lease Area, at the longest point at which it crosses the BIA, is approximately 14.5 km). NARWs may be displaced from their normal path and preferred habitat in the immediate activity area (primarily from pile driving activities), however, we do not anticipate displacement to be of high magnitude (*e.g.,* beyond a few kilometers); therefore, any associated bio-energetic expenditure is anticipated to be small. Although NARWs may forage in the LIA, there are no known breeding or calving areas within the LIA. Prey species are mobile (*e.g.,* calanoid copepods can initiate rapid and directed escape responses) and are broadly distributed throughout the LIA. Therefore, any impacts to prey that may occur are also unlikely to impact marine mammals.

The most significant measure to minimize impacts to individual NARWs is the seasonal moratorium on all foundation installation activities from January 1 through May 31 and the limitation on these activities in December (*e.g.,* only work with approval from NMFS) when NARW abundance in the LIA is expected to be highest. NMFS also expects this measure to greatly reduce the potential for mother-calf pairs to be exposed to impact pile driving noise above the Level B harassment threshold during their annual spring migration through SNE from calving grounds to primary foraging grounds (*e.g.,* Cape Cod Bay). NMFS expects that the severity of any take of NARWs would be reduced due to the mitigation measures that would ensure that any exposures above the Level B harassment threshold would result in only short-term effects to individuals exposed.

Foundation installation may only begin in the absence of NARWs (based on visual and passive acoustic monitoring). Once foundation installation activities have commenced, NMFS anticipates NARWs would avoid the area, utilizing nearby waters to carry on pre-exposure behaviors. However, foundation installation activities must be shut down if a NARW is sighted at any distance or acoustically detected at any distance within the PAM monitoring zone, unless a shutdown is not feasible due to risk of injury or loss of life. Shutdown would be required anywhere if NARWs are detected within or beyond the Level B harassment zone, further minimizing the duration and intensity of exposure. These measures are designed to avoid PTS and also reduce the severity of Level B harassment, including the potential for TTS. While some TTS could occur, given the mitigation measures (*e.g.,* delay pile driving upon a sighting or acoustic detection and shutting down upon a sighting or acoustic detection), the potential for TTS to occur is low. NMFS anticipates that if NARWs go undetected and they are exposed to foundation installation noise, it is unlikely a NARW would approach the sound source locations to the degree that they would expose themselves to very high noise levels. This is because typical observed whale behavior demonstrates likely avoidance of harassing levels of sound where possible (Richardson *et al.,* 1985).

The clearance and shutdown measures are most effective when detection efficiency is maximized, as the measures are triggered by a sighting or acoustic detection. To maximize detection efficiency, NMFS would require the combination of PAM and visual observers. NMFS also would require communication protocols with other project vessels and other heightened awareness efforts (*e.g.,* daily monitoring of NARW sighting databases) such that as a NARW approaches the source (and thereby could be exposed to higher noise energy levels), PSO detection efficacy would increase, the whale would be detected, and a delay to commencing foundation installation or shutdown (if feasible) would occur. In addition, the implementation of a soft-start for impact pile driving would provide an opportunity for whales to move away from the source if they are undetected, reducing received levels.

As described above, no serious injury or mortality, or Level A harassment of NARWs is anticipated or proposed to be authorized. Extensive NARW-specific mitigation measures (beyond the robust suite required for all species) are expected to further minimize the amount and severity of Level B harassment.

Given the documented habitat use within the LIA, the seven instances of take by Level B harassment could include seven whales disturbed on one day each within the year, or it could represent a smaller number of whales impacted on 2 or 3 days, should NARWs briefly use the LIA as a ''stopover'' site and stay or swim in and out of the LIA for more than day. At any rate, any impacts to NARWs are expected to be in the form of lower level behavioral disturbance, given the extensive mitigation measures.

Given the magnitude and severity of the impacts discussed above, and in consideration of the required mitigation and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take (by Level B harassment) anticipated and proposed to be authorized would have a negligible impact on the NARW.

Fin Whale

The fin whale is listed as endangered under the ESA, and the western North Atlantic stock is considered both depleted and strategic under the MMPA. No UME has been designated for this species or stock. No serious injury or

mortality is anticipated or proposed to be authorized for this species.

This IHA would authorize up to seven takes, by harassment only, over the 1 year period. The maximum allowable take by Level A harassment and Level B harassment, is one and six, respectively (which equates to approximately 0.10 percent of the stock abundance, if each take were considered to be of a different individual). Given the close proximity of a fin whale feeding BIA (2,933 km^2) from March through October, and that SNE is generally considered a feeding area, it is likely that the seven takes could represent a few whales taken 2–3 times annually.

Level B harassment is expected to be in the form of behavioral disturbance, primarily avoidance of the LIA where foundation installation is occurring and some low-level TTS and masking that may limit the detection of acoustic cues for relatively brief periods of time. We anticipate any potential PTS would be minor (limited to a few dB), and any PTS or TTS would be concentrated at half or one octave above the frequency band of pile driving noise (most sound is below 2 kHz) which does not include the full predicted hearing range of fin whales. If TTS is incurred, hearing sensitivity would likely return to pre-exposure levels relatively shortly after exposure ends. Any masking or physiological responses would also be of low magnitude and severity for reasons described above.

Fin whales are present in the waters off of New England year-round and are one of the most frequently observed large whales and cetaceans in continental shelf waters, principally from Cape Hatteras, North Carolina in the Mid-Atlantic northward to Nova Scotia, Canada (Sergeant, 1977; Sutcliffe and Brodie, 1977; CETAP, 1982; Hain *et al.,* 1992; Geo-Marine, 2010; BOEM 2012; Edwards *et al.,* 2015; Hayes *et al.,* 2023). In SNE, fin whales densities are highest in the spring and summer months (Kraus *et al.,* 2016; Roberts *et al.,* 2023) though detections do occur in spring and fall (Watkins *et al.,* 1987; Clark and Gagnon, 2002; Geo-Marine, 2010; Morano *et al.,* 2012; Van Parijs *et al.,* 2023). However, fin whales feed more extensively in waters in the Great South Channel north to the Gulf Maine into the Gulf of St. Lawrence, areas north and east of the LIA (Hayes *et al.,* 2023).

As described previously, the LIA is in close proximity (approximately 8.0 km; 5.0 mi) to a small fin whale feeding BIA (2,933 km^2) east of Montauk Point, New York (figure 2.3 in LaBrecque *et al.,* 2015) that is active from March to October. Foundation installations have seasonal work restrictions (*i.e.,* spatial and temporal) such that the temporal overlap between the specified activities and the active BIA timeframe would exclude the months of March, April, and May. A separate larger year-round feeding BIA (18,015 km^2) located to the east in the southern Gulf of Maine does not overlap with the LIA and is located substantially further away (approximately 76.4 km (47.5 mi)), and would thus not be impacted by project activities. We anticipate that if foraging is occurring in the LIA and foraging whales are exposed to noise levels of sufficient strength, they would avoid the LIA and move into the remaining area of the feeding BIA that would be unaffected to continue foraging without substantial energy expenditure or, depending on the time of year, travel to the larger year-round feeding BIA.

Given the documented habitat use within the area, some of the individuals taken would likely be exposed on multiple days. However, low level impacts are generally expected from any fin whale exposure. Given the magnitude and severity of the impacts discussed above (including no more than seven takes over the course of the IHA, and a maximum allowable take by Level A harassment and Level B harassment of one and six, respectively) and in consideration of the required mitigation and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on the western North Atlantic stock of fin whales.

Humpback Whale

The West Indies DPS of humpback whales is not listed as threatened or endangered under the ESA but the Gulf of Maine stock, which includes individuals from the West Indies DPS, is considered strategic under the MMPA. However, as described in the Description of Marine Mammals in the Area of Specified Activities section, humpback whales along the Atlantic Coast have been experiencing an active UME as elevated humpback whale mortalities have occurred along the Atlantic coast from Maine through Florida since January 2016. Of the cases examined, approximately 40 percent had evidence of human interaction (vessel strike or entanglement). Despite the UME, the relevant population of humpback whales (the West Indies breeding population, or DPS of which the Gulf of Maine stock is a part) remains stable at approximately 12,000 individuals and takes of humpback whales proposed for authorization would not exacerbate or compound the effects of the ongoing UME.

This IHA would authorize up to six takes by harassment only, over the 1 year period. The maximum allowable take by Level A harassment and Level B harassment is two and four, respectively (this equates to approximately 0.43 percent of the stock abundance, if each take were considered to be of a different individual). Given that feeding is considered the principal activity of humpback whales in SNE waters, these takes could represent a few whales exposed two or three times during the year.

In the western North Atlantic, humpback whales feed during spring, summer, and fall over a geographic range encompassing the eastern coast of the U.S. Feeding is generally considered to be focused in areas north of the LIA, including in a feeding BIA in the Gulf of Maine/Stellwagen Bank/Great South Channel, but has been documented off the coast of SNE and as far south as Virginia (Swingle *et al.,* 1993). Foraging animals tend to remain in the area for extended durations to capitalize on the food sources.

Assuming humpback whales who are feeding in waters within or surrounding the LIA behave similarly, we expect that the predicted instances of disturbance could consist of some individuals that may be exposed on multiple days if they are utilizing the area as foraging habitat. As with other baleen whales, if migrating, such individuals would likely be exposed to noise levels from the project above the harassment thresholds only once during migration through the LIA.

For all the reasons described in the *Mysticetes* section above, we anticipate any potential PTS and TTS would be concentrated at half or one octave above the frequency band of pile driving noise (most sound is below 2 kHz) which does not include the full predicted hearing range of baleen whales. If TTS is incurred, hearing sensitivity would likely return to pre-exposure levels relatively shortly after exposure ends. Any masking or physiological responses would also be of low magnitude and severity for reasons described above.

Given the magnitude and severity of the impacts discussed above (including no more than six takes over the course of the 1-year IHA, and a maximum allowable take by Level A harassment and Level B harassment of two and four, respectively), and in consideration of

the proposed mitigation measures and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on the Gulf of Maine stock of humpback whales.

Minke Whale

Minke whales are not listed under the ESA, and the Canadian East Coast stock is neither considered depleted nor strategic under the MMPA. There are no known areas of specific biological importance in or adjacent to the LIA. As described in the Description of Marine Mammals in the Area of Specified Activities section, a UME has been designated for this species but is pending closure. No serious injury or mortality is anticipated or proposed to be authorized for this species.

This IHA would authorize up to 1 take by Level A harassment and 28 takes by Level B harassment over the 1-year period (equating to approximately 0.13 percent of the stock abundance, if each take were considered to be of a different individual). As described in the Description of Marine Mammals in the Area of Specified Activities section, minke whales inhabit coastal waters during much of the year and are common offshore the U.S. eastern seaboard with a strong seasonal component in the continental shelf and in deeper, off-shelf waters (CETAP, 1982; Hayes *et al.,* 2022; Hayes *et al.,* 2023). Spring through fall are times of relatively widespread and common acoustic occurrence on the continental shelf. From September through April, minke whales are frequently detected in deep-ocean waters throughout most of the western North Atlantic (Clark and Gagnon, 2002; Risch *et al.,* 2014; Hayes *et al.,* 2023). Because minke whales are migratory and their known feeding areas are north and east of the LIA, including a feeding BIA in the southwestern Gulf of Maine and George's Bank, they would be more likely to be transiting through (with each take representing a separate individual), though it is possible that some subset of the individual whales exposed could be taken up to a few times during the effective period of the IHA.

As previously detailed in the Description of Marine Mammals in the Area of Specified Activities section, there is a UME for minke whales along the Atlantic coast, from Maine through South Carolina, with the highest number of deaths in Massachusetts, Maine, and New York. Preliminary findings in several of the whales have shown evidence of human interactions or infectious diseases. However, we note that the population abundance is greater than 21,000, and the take by harassment proposed to be authorized through this action is not expected to exacerbate the UME.

We anticipate the impacts of this harassment to follow those described in the general *Mysticetes* section above. Any potential PTS would be minor (limited to a few dB) and any PTS or TTS would be of short duration and concentrated at half or one octave above the frequency band of pile driving noise (most sound is below 2 kHz) which does not include the full predicted hearing range of minke whales. If TTS is incurred, hearing sensitivity would likely return to pre-exposure levels relatively shortly after exposure ends. Level B harassment would be temporary, with primary impacts being temporary displacement from the LIA but not abandonment of any migratory or foraging behavior.

Given the magnitude and severity of the impacts discussed above (including no more than 29 takes of the course of the 1-year IHA, and a maximum allowable take by Level A harassment and Level B harassment of 1 and 28, respectively), and in consideration of the proposed mitigation and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on the Canadian Eastern Coastal stock of minke whales.

Sei Whale

Sei whales are listed as endangered under the ESA, and the Nova Scotia stock is considered both depleted and strategic under the MMPA. There are no known areas of specific biological importance in or adjacent to the LIA, and no UME has been designated for this species or stock. No serious injury or mortality is anticipated or proposed to be authorized for this species.

The IHA would authorize up to three takes by harassment over the 1-year period. The maximum allowable take by Level A harassment and Level B harassment is one and two, respectively (combined, this annual take (n=3) equates to approximately 0.05 percent of the stock abundance, if each take were considered to be of a different individual). As described in the Description of Marine Mammals in the Area of Specified Activities section, most of the sei whale distribution is concentrated in Canadian waters and seasonally in northerly United States waters, although they can occur year-round in SNE. Because sei whales are migratory and their known feeding areas are east and north of the LIA (*e.g.,* there is a feeding BIA in the Gulf of Maine), they would be more likely to be moving through (*i.e.,* not foraging) and considering this and the very low number of total takes, it is unlikely that any individual would be exposed more than once within the effective period of the IHA.

With respect to the severity of those individual takes by Level B harassment, we anticipate impacts to be limited to low-level, temporary behavioral responses with avoidance and potential masking impacts in the vicinity of the WTG installation to be the most likely type of response. Any potential PTS and TTS would likely be concentrated at half or one octave above the frequency band of pile driving noise (most sound is below 2 kHz), which does not include the full predicted hearing range of sei whales. Moreover, any TTS would be of a small degree. Any avoidance of the LIA due to the Project's activities would be expected to be temporary.

Given the magnitude and severity of the impacts discussed above (including no more than three takes of the course of the 1-year IHA, and a maximum allowable take by Level A harassment and Level B harassment, of one and two, respectively), and in consideration of the required mitigation and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on the Nova Scotia stock of sei whales.

Odontocetes

In this section, we include information here that applies to all of the odontocete species and stocks addressed below. Odontocetes include dolphins, porpoises, and all other whales possessing teeth and we further divide them into the following subsections: sperm whales, dolphins and small whales, and harbor porpoises. These sub-sections include more specific information, as well as conclusions for each stock represented.

No serious injury or mortality is anticipated or proposed to be authorized. We anticipate that, given

ranges of individuals (*i.e.,* that some individuals remain within a small area for some period of time) and non-migratory nature of some odontocetes in general (especially as compared to mysticetes), a larger subset of these takes are more likely to represent multiple exposures of some number of individuals than is the case for mysticetes, though some takes may also represent one-time exposures of an individual. While we expect animals to avoid the area during foundation installation, their habitat range is extensive compared to the area ensonified during these activities. As such, NMFS expects any avoidance behavior to be limited to the area near the sound source.

As described earlier, Level B harassment may include direct disruptions in behavioral patterns (*e.g.,* avoidance, changes in feeding or vocalizations), as well as those associated with stress responses or TTS. While masking could also occur during foundation installation, it would only occur in the vicinity of and during the duration of the activity, and would not generally occur in a frequency range that overlaps most odontocete communication or any echolocation signals. The proposed mitigation measures (*e.g.,* use of sound attenuation systems, implementation of clearance and shutdown zones) would also minimize received levels such that the expected severity of any behavioral response would be less than exposure to unmitigated noise exposure.

Any masking or TTS effects are anticipated to be of low severity. First, while the frequency range of pile driving falls within a portion of the frequency range of most odontocete vocalizations, odontocete vocalizations span a much wider range than the low frequency construction activities planned for the project. Also, as described above, recent studies suggest odontocetes have a mechanism to self-mitigate the impacts of noise exposure (*i.e.,* reduce hearing sensitivity), which could potentially reduce TTS impacts. Any masking or TTS is anticipated to be limited and would typically only interfere with communication within a portion of an odontocete's range and as discussed earlier, the effects would only be expected to be of a short duration and for TTS, a relatively small degree. Furthermore, odontocete echolocation occurs predominantly at frequencies significantly higher than low frequency construction activities. Therefore, there is little likelihood that threshold shift would interfere with feeding behaviors.

The waters off the coast of Massachusetts are used by several odontocete species. However, none except the sperm whale are listed under the ESA and there are no known habitats of particular importance. In general, odontocete habitat ranges are far-reaching along the Atlantic coast of the U.S. and the waters off of New England, including the LIA, do not contain any particularly unique odontocete habitat features.

Sperm Whale

Sperm whales are listed as endangered under the ESA, and the North Atlantic stock is considered both depleted and strategic under the MMPA. The North Atlantic stock spans the east coast out into oceanic waters well beyond the U.S. EEZ. Although listed as endangered, the primary threat faced by the sperm whale across its range (*i.e.,* commercial whaling) has been eliminated. Current potential threats to the species globally include vessel strikes, entanglement in fishing gear, anthropogenic noise, exposure to contaminants, climate change, and marine debris. There is no currently reported trend for the stock and although the species is listed as endangered under the ESA, there are no current related issues or events associated with the status of the stock that cause particular concern (*e.g.,* no UMEs). There are no known areas of biological importance (*e.g.,* critical habitat or BIAs) in or near the LIA. No mortality or serious injury is anticipated or proposed to be authorized for this species.

The IHA would authorize up to two takes by Level B harassment over the 1-year period, which equates to approximately 0.05 percent of the stock abundance. If sperm whales are present in the LIA during any Project activities, they will likely be only transient visitors, although foraging and social behavior may occur in the shallow waters off SNE (Westell *et al.,* 2024). However, the potential for TTS is low for reasons described in the general Odontocete section. If it does occur, any hearing shift would be small and of a short duration. Because foraging is expected to be rare in the LIA, TTS is not expected to interfere with foraging behavior.

Given the magnitude and severity of the impacts discussed above (including no more than two takes by Level B harassment over the course of the 1-year IHA, and in consideration of the required mitigation and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by Level B harassment anticipated and proposed to be authorized will have a negligible impact on the North Atlantic stock of sperm whales.

Dolphins and Small Whales (Including Delphinids)

The five species and stocks included in this group (which are indicated in table 3 in the Delphinidae family) are not listed under the ESA, and nor are they listed as depleted or strategic under the MMPA. There are no known areas of specific biological importance in or around the LIA. As described above for any of these species and no UMEs have been designated for any of these species. No serious injury or mortality is anticipated or proposed to be authorized for these species.

The five delphinid species (constituting five stocks) with takes proposed to be authorized for the Project are Atlantic white-sided dolphin, bottlenose dolphin, long-finned pilot whale, Risso's dolphin, and common dolphin. The IHA would allow for the total authorization of 3 to 462 takes (depending on species) by Level B harassment, over the 1-year period. Overall, this annual take equates to approximately 0.01 (Risso's dolphin) to up to 0.27 (common dolphin) percent of the stock abundance (if each take were considered to be of a different individual, which is not likely the case), depending on the species.

The number of takes, likely movement patterns of the affected species, and the intensity of any Level B harassment, combined with the availability of alternate nearby foraging habitat suggests that the likely impacts would not impact the reproduction or survival of any individuals. While delphinids may be taken on several occasions, none of these species are known to have small home ranges within the LIA or known to be particularly sensitive to anthropogenic noise. Some TTS can occur, but it would be limited to the frequency ranges of the activity and any loss of hearing sensitivity is anticipated to return to pre-exposure conditions shortly after the animals move away from the source or the source ceases.

Across these species, the maximum number of incidental takes, by Level B harassment (no Level A harassment is anticipated or proposed to be authorized), proposed to be authorized ranges between 3 (Risso's dolphin) to 462 (common dolphin). Though the estimated numbers of take are comparatively higher than the numbers for mysticetes, we note that for all

species they are relatively low relative to the population abundance.

As described above for odontocetes broadly, given the number of estimated takes for some species and the behavioral patterns of odontocetes, we anticipate that some of these instances of take in a day represent multiple exposures of a smaller number of individuals, meaning the actual number of individuals taken is lower. Although some amount of repeated exposure to some individuals across a few days within the year is likely, the intensity of any Level B harassment combined with the availability of alternate nearby foraging habitat suggests that the likely impacts would not impact the reproduction or survival of any individuals.

Overall, the populations of all delphinid and small whale species and stocks for which we proposed to authorize take are stable (no declining population trends). None of these stocks are experiencing existing UMEs. No mortality, serious injury, or Level A harassment is anticipated or proposed to be authorized for any of these species. Given the magnitude and severity of the impacts discussed above and in consideration of the required mitigation and other information presented, as well as the status of these stocks, the specified activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on all of the following species and stocks: Atlantic white-sided dolphins, bottlenose dolphins, long-finned pilot whales, Risso's dolphins, and common dolphins.

Harbor Porpoise

Harbor porpoises are not listed as threatened or endangered under the ESA, and the Gulf of Maine/Bay of Fundy stock is neither considered depleted or strategic under the MMPA. The stock is found predominantly in northern United States coastal waters (less than 150 m depth) and up into Canada's Bay of Fundy (between New Brunswick and Nova Scotia). Although the population trend is not known, there are no UMEs or other factors that cause particular concern for this stock. No mortality or non-auditory injury are anticipated or proposed to be authorized for this stock.

The IHA would authorize up to 113 takes, by harassment only. The maximum allowable take by Level A harassment and Level B harassment would be 3 and 110, respectively (combined, this annual take (n=113) which equates to approximately 0.19 percent of the stock abundance, if each take were considered to be of a different individual). Given the number of takes, while many of the takes likely represent exposures of different individuals on 1 day a year, some subset of the individuals exposed could be taken up to a few times annually.

Regarding the severity of takes by Level A harassment and Level B harassment, because harbor porpoises are particularly sensitive to noise, it is likely that a fair number of the responses could be of a moderate nature, particularly to foundation installation. In response to foundation installation, harbor porpoises are likely to avoid the area during construction, as previously demonstrated in Tougaard *et al.* (2009) in Denmark, in Dahne *et al.* (2013) in Germany, and in Vallejo *et al.* (2017) in the United Kingdom, although a study by Graham *et al.* (2019) may indicate that the avoidance distance could decrease over time. However, foundation installation is scheduled to occur off the coast of Massachusetts and given alternative foraging areas, any avoidance of the area by individuals is not likely to impact the reproduction or survival of any individuals.

With respect to PTS and TTS, the effects on an individual are likely relatively low, given the frequency bands of pile driving (most energy below 2 kHz) compared to harbor porpoise hearing (150 Hz to 160 kHz, peaking around 40 kHz). Specifically, TTS is unlikely to impact hearing ability in their more sensitive hearing ranges or the frequencies in which they communicate and echolocate. We expect any PTS that may occur to be within the very low end of their hearing range where harbor porpoises are not particularly sensitive and any PTS would be of small magnitude. As such, any PTS would not interfere with key foraging or reproductive strategies necessary for reproduction or survival.

As discussed in Hayes *et al.* (2022), harbor porpoises are seasonally distributed. During fall (October through November) and spring (April through June), harbor porpoises are widely dispersed from New Jersey to Maine with lower densities farther north and south. During winter (January to March), intermediate densities of harbor porpoises can be found in waters off New Jersey to North Carolina and lower densities are found in waters off New York to New Brunswick, Canada. In non-summer months they have been seen from the coastline to deep waters (>1800 m; Westgate *et al.,* 1998), although the majority are found over the continental shelf. While harbor porpoises are likely to avoid the area during any of the project's construction activities, as demonstrated during European wind farm construction, the time of year in which most work would occur is when harbor porpoises are not in highest abundance, and any work that does occur would not result in the species' abandonment of the waters off of Massachusetts.

Given the magnitude and severity of the impacts discussed above, and in consideration of the required mitigation and other information presented, the specified activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on the Gulf of Maine/Bay of Fundy stock of harbor porpoises.

Phocids (Harbor Seals and Gray Seals)

The harbor seal and gray seal are not listed under the ESA, and neither the western North Atlantic stock of gray seal nor the western North Atlantic stock of harbor seal are considered depleted or strategic under the MMPA. There are no known areas of specific biological importance in or around the LIA. As described in the Description of Marine Mammals in the Area of Specified Activities section, a UME has been designated for harbor seals and gray seals and is described further below. No serious injury or mortality is anticipated or proposed to be authorized for this species.

For the 2 seal species, the IHA would authorize up to between 30 (harbor seals) and 241 (gray seals) takes, by harassment only. The maximum allowable take for harbor seals by Level A harassment and Level B harassment would be 1 and 29, respectively (combined, this take (n=30) equates to approximately 0.05 percent of the stock abundance, if each take were considered to be of a different individual). No takes by Level A harassment are anticipated or proposed to be authorized for gray seals. The maximum allowable take for gray seals by Level B harassment (241) equates to approximately 0.88 percent of the stock abundance, if each take were considered to be of a different individual). Though gray seals and harbor seals are considered migratory and no specific feeding areas have been defined for the area, while some of the takes likely represent exposures of different individuals on 1 day a year, it is likely that some subset of the

individuals exposed could be taken a few times annually.

Harbor and gray seals occur in SNE waters most often from December through April. Seals are more likely to be close to shore, such that exposure to foundation installation would be expected to be at low levels. Known haulouts for seals occur along the shores of Massachusetts.

As described in the Potential Effects to Marine Mammals and Their Habitat section, construction of wind farms in Europe resulted in pinnipeds temporarily avoiding construction areas but returning within short time frames after construction was complete (Carroll *et al.,* 2010; Hamre *et al.,* 2011; Hastie *et al.,* 2015; Russell *et al.,* 2016; Brasseur *et al.,* 2012). Effects on pinnipeds that are taken by Level B harassment in the LIA would likely be limited to avoidance of the area reactions such as increased swimming speeds, increased surfacing time, or decreased foraging (if such activity were occurring). Most likely, individuals would simply move away from the sound source and be temporarily displaced from those areas (Lucke *et al.,* 2006; Edren *et al.,* 2010; Skeate *et al.,* 2012; Russell *et al.,* 2016). Given the low anticipated magnitude of impacts from any given exposure (*e.g.,* temporary avoidance), even repeated Level B harassment across a few days of some small subset of individuals, which could occur, is unlikely to result in impacts on the reproduction or survival of any individuals. Moreover, pinnipeds would benefit from the mitigation measures described in the Proposed Mitigation section.

As described above, noise from pile driving is mainly low frequency, and while any PTS and TTS that does occur would fall within the lower end of pinniped hearing ranges (50 Hz to 86 kHz), PTS and TTS would not occur at frequencies around 5 kHz where pinniped hearing is most susceptible to noise-induced hearing loss (Kastelein *et al.,* 2018). In summary, any PTS and TTS would be of small degree and not occur across the entire, or even most sensitive, hearing range. Hence, any impacts from PTS and TTS are likely to be of low severity and not interfere with behaviors critical to reproduction or survival.

Elevated numbers of harbor seal and gray seal mortalities were first observed in July 2018 and occurred across Maine, New Hampshire, and Massachusetts until 2020. Based on tests conducted so far, the main pathogen found in the seals belonging to that UME was phocine distemper virus, although additional testing to identify other factors that may be involved in this UME are underway. In 2022, a pinniped UME occurred in Maine with some harbor and gray seals testing positive for highly pathogenic avian influenza (HPAI) H5N1. Neither UME (alone or in combination) provides cause for concern regarding population-level impacts to any of these stocks. For harbor seals, the population abundance is over 61,000 and annual mortality/serious injury (M/SI) (n=339) is well below PBR (1,729) (Hayes *et al.,* 2023). The population abundance for gray seals in the United States is over 27,000, with an estimated overall abundance, including seals in Canada, of approximately 366,400 (Hayes *et al.,* 2023). In addition, the abundance of gray seals is likely increasing in the U.S. Atlantic, as well as in Canada (Hayes *et al.,* 2023).

Given the magnitude and severity of the impacts of the Vineyard Wind Project discussed above, and in consideration of the required mitigation and other information presented, Vineyard Wind's activities are not expected to result in impacts on the reproduction or survival of any individuals, much less affect annual rates of recruitment or survival. For these reasons, we have determined that the take by harassment anticipated and proposed to be authorized will have a negligible impact on harbor and gray seals.

Negligible Impact Determination

No mortality or serious injury is anticipated to occur or proposed to be authorized. As described in the analysis above, the impacts resulting from the project's activities cannot be reasonably expected to, and are not reasonably likely to, adversely affect any of the species or stocks through effects on annual rates of recruitment or survival. Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and, taking into consideration the implementation of the proposed mitigation and monitoring measures, NMFS preliminarily finds that the marine mammal take from the proposed activities would have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted previously, only incidental take of small numbers of marine mammals may be authorized under sections 101(a)(5)(A) and (D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one-third of the species or stock abundance, the take is considered to be of small numbers. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

NMFS is authorizing incidental take by Level A harassment and/or Level B harassment of 14 species of marine mammals (with 14 managed stocks). The estimated number of instances of takes by combined Level A harassment and Level B harassment relative to the best available population abundance is less than one-third for all affected species and stocks. For 13 stocks, 1 percent or less of the stock abundance is proposed for take by harassment. Specific to the NARW, the estimated amount of take, which is by Level B harassment only (no Level A harassment is anticipated or authorized), is seven, or 2.07 percent of the stock abundance, assuming that each instance of take represents a different individual. Please see table 3 for information relating to this small numbers analysis.

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals would be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act

Section 7(a)(2) of the ESA of 1973 (16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of

IHAs, NMFS consults internally whenever we propose to authorize take for endangered or threatened species, in this case with NOAA GARFO.

There are four marine mammal species under NMFS jurisdiction that are listed as endangered or threatened under the ESA that may taken, by harassment, incidental to construction of the project: the North Atlantic right, sei, fin, and sperm whale. NMFS issued a Biological Opinion on September 11, 2020, concluding that the issuance of the 2023 Vineyard Wind IHA is not likely to jeopardize the continued existence of threatened and endangered species under NMFS' jurisdiction and is not likely to result in the destruction or adverse modification of designated or proposed critical habitat. The Biological Opinion is available at *https://repository.library.noaa.gov/view/noaa/37556.*

The Permit and Conservation Division requested re-initiation of section 7 consultation with GARFO on the issuance of the Vineyard Wind proposed IHA for Phase 2 of the Vineyard Wind Offshore Wind Project. NMFS will conclude the ESA consultation prior to reaching a determination regarding the proposed issuance of the authorization.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to Vineyard Wind for conducting impact pile driving of monopiles in the Vineyard Wind Offshore Wind Farm offshore of Massachusetts, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. A draft of the proposed IHA can be found at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable.*

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this notice of proposed IHA for the proposed pile driving activities. Please include with your comments any supporting data or literature citations to help inform decisions on the request for this IHA.

Dated: April 15, 2024.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at *https://www.archives.gov/federal-register/laws/current.html*.

The text of laws is not published in the **Federal Register** but may be ordered in ''slip law'' (individual pamphlet) form from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202–512–1808). The text is available at *https://www.govinfo.gov/app/collection/plaw*. Some laws may not yet be available.

S. 382/P.L. 118–48
Puyallup Tribe of Indians Land Into Trust Confirmation Act of 2023 (Apr. 19, 2024)
Last List March 26, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/pg/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
