MW = Annual average molecular weight of the gaseous fuel (kg per kg-mole). The annual average molecular weight shall be determined using the procedures specified in paragraphs (a)(3)(iii)(B)(*1*) and (*2*) of this section.

MVC = Molar volume conversion factor at standard conditions, as defined in § 98.6. Use 849.5 scf per kg mole if you select 68 °F as standard temperature and 836.6 scf per kg mole if you select 60 °F as standard temperature.

44/12 = Ratio of molecular weights, CO_2 to carbon.

0.001 = Conversion factor from kg to metric tons.

(A) The minimum required sampling frequency for determining the annual average carbon content (*e.g.,* monthly, quarterly, semi-annually, or by lot) is specified in § 98.34. The method for computing the annual average carbon content for equation C–5 to this section is a function of unit size and how frequently you perform or receive from the fuel supplier the results of fuel sampling for carbon content. The methods are specified in paragraphs (a)(3)(iii)(A)(*1*) and (*2*) of this section, as applicable.

(*1*) If the results of fuel sampling are received monthly or more frequently, then for each unit with a maximum rated heat input capacity greater than or equal to 100 mmBtu/hr (or for a group of units that includes at least one unit of that size), the annual average carbon content for equation C–5 shall be calculated using equation C–5A to this section. If multiple carbon content determinations are made in any month, average the values for the month arithmetically.

$$(\text{CC})_{\text{annual}} = \frac{\sum_{i=1}^{n} (\text{CC})_i * (\text{Fuel})_i * (\text{MW})_i / \text{MWC}}{\sum_{i=1}^{n} (\text{Fuel})_i * (\text{MW})_i / \text{MVC}}$$

(Eq. C–5A)

Where:

$(CC)_{annual}$ = Weighted annual average carbon content of the fuel (kg C per kg of fuel).

$(CC)_i$ = Measured carbon content of the fuel, for sample period ''i'' (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (kg C per kg of fuel).

$(Fuel)_i$ = Volume of the fuel (scf) combusted during the sample period ''i'' (*e.g.,* monthly, quarterly, semi-annually, or by lot) from company records.

$(MW)_i$ = Measured molecular weight of the fuel, for sample period ''i'' (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (kg per kg-mole).

MVC = Molar volume conversion factor at standard conditions, as defined in § 98.6. Use 849.5 scf per kg-mole if you select 68 °F as standard temperature and 836.6

scf per kg-mole if you select 60 °F as standard temperature.

n = Number of sample periods in the year.

(*2*) If the results of fuel sampling are received less frequently than monthly, or, for a unit with a maximum rated heat input capacity less than 100 mmBtu/hr (or a group of such units) regardless of the carbon content sampling frequency, the annual average carbon content for equation C–5 shall either be computed according to paragraph (a)(3)(iii)(A)(*1*) of this section or as the arithmetic average carbon content for all values for the year (including valid samples and substitute data values under § 98.35).

(B) The minimum required sampling frequency for determining the annual average molecular weight (*e.g.,* monthly, quarterly, semi-annually, or by lot) is specified in § 98.34. The method for computing the annual average molecular weight for equation C–5 is a function of unit size and how frequently you perform or receive from the fuel supplier the results of fuel sampling for molecular weight. The methods are specified in paragraphs (a)(3)(iii)(B)(*1*) and (*2*) of this section, as applicable.

(*1*) If the results of fuel sampling are received monthly or more frequently, then for each unit with a maximum rated heat input capacity greater than or equal to 100 mmBtu/hr (or for a group of units that includes at least one unit of that size), the annual average molecular weight for equation C–5 shall be calculated using equation C–5B to this section. If multiple molecular weight determinations are made in any month, average the values for the month arithmetically.

$$(MW)_{annual} = \frac{\sum_{i=1}^{n}(MW)_i * (Fuel)_i/MVC}{\sum_{i=1}^{n}(Fuel)_i/MVC}$$

(Eq. C–5B)

Where:

$(MW)_{annual}$ = Weighted annual average molecular weight of the fuel (kg per kg-mole).

$(MW)_i$ = Measured molecular weight of the fuel, for sample period ''i'' (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (kg per kg-mole).

$(Fuel)_i$ = Volume of the fuel (scf) combusted during the sample period ''i'' (*e.g.,* monthly, quarterly, semi-annually, or by lot) from company records.

MVC = Molar volume conversion factor at standard conditions, as defined in § 98.6. Use 849.5 scf per kg-mole if you select 68 °F as standard temperature and 836.6 scf per kg-mole if you select 60 °F as standard temperature.

n = Number of sample periods in the year.

(*2*) If the results of fuel sampling are received less frequently than monthly, or, for a unit with a maximum rated heat input capacity less than 100 mmBtu/hr (or a group of such units) regardless of the molecular weight sampling frequency, the annual average molecular weight for equation C–5 shall either be computed according to paragraph (a)(3)(iii)(B)(*1*) of this section or as the arithmetic average molecular weight for all values for the year (including valid samples and substitute data values under § 98.35).

* * * * *

(b) * * *

(1) * * *

(vii) May be used for the combustion of MSW and/or tires in a unit, provided that no more than 10 percent of the unit's annual heat input is derived from those fuels, combined.

* * * * *

(c) * * *

(4) * * *

EF = Fuel-specific emission factor for CH_4 or N_2O, from table C–2 to this subpart (kg CH_4 or N_2O per mmBtu).

* * * * *

(6) Calculate the annual CH_4 and N_2O mass emissions from the combustion of blended fuels as follows:

(i) If the mass, volume, or heat input of each component fuel in the blend is determined before the fuels are mixed and combusted, calculate and report CH_4 and N_2O emissions separately for each component fuel, using the applicable procedures in this paragraph (c).

(ii) If the mass, volume, or heat input of each component fuel in the blend is not determined before the fuels are mixed and combusted, a reasonable estimate of the percentage composition of the blend, based on best available information, is required. Perform the following calculations for each component fuel ''i'' that is listed in table C–2 to this subpart:

(A) Multiply (% Fuel)i, the estimated mass, volume, or heat input percentage of component fuel ''i'' (expressed as a decimal fraction), by the total annual mass, volume, or heat input of the blended fuel combusted during the reporting year, to obtain an estimate of the annual value for component ''i'';

(B) [Reserved]

(C) Calculate the annual CH_4 and N_2O emissions from component ''i'', using equation C–8 (fuel mass or volume) to this section, C–8a (fuel heat input) to this section, C–8b (fuel heat input) to this section, C–9a (fuel mass or volume) to this section, or C–10 (fuel heat input) to this section, as applicable;

(D) Sum the annual CH_4 emissions across all component fuels to obtain the annual CH_4 emissions for the blend. Similarly sum the annual N_2O emissions across all component fuels to obtain the annual N_2O emissions for the blend. Report these annual emissions totals.

(d) * * *

(1) * * *

R = The number of moles of CO_2 released per mole of sorbent used (R = 1.00 when the sorbent is $CaCO_3$ and the targeted acid gas species is SO_2).

* * * * *

(e) *Biogenic CO_2 emissions from combustion of biomass with other fuels.* Use the applicable procedures of this paragraph (e) to estimate biogenic CO_2 emissions from units that combust a combination of biomass and fossil fuels (*i.e.,* either co-fired or blended fuels). Separate reporting of biogenic CO_2 emissions from the combined combustion of biomass and fossil fuels is required for those biomass fuels listed in table C–1 to this subpart, MSW, and tires. In addition, when a biomass fuel that is not listed in table C–1 to this subpart is combusted in a unit that has a maximum rated heat input greater than 250 mmBtu/hr, if the biomass fuel accounts for 10% or more of the annual heat input to the unit, and if the unit does not use CEMS to quantify its annual CO_2 mass emissions, then, pursuant to paragraph (b)(3)(iii) of this section, Tier 3 must be used to determine the carbon content of the biomass fuel and to calculate the biogenic CO_2 emissions from combustion of the fuel. Notwithstanding these requirements, in accordance with § 98.3(c)(12), separate reporting of biogenic CO_2 emissions is optional for the 2010 reporting year for units subject to subpart D of this part and for units

that use the CO_2 mass emissions calculation methodologies in part 75 of this chapter, pursuant to paragraph (a)(5) of this section. However, if the owner or operator opts to report biogenic CO_2 emissions separately for these units, the appropriate method(s) in this paragraph (e) shall be used.

(1) You may use equation C–1 to this section to calculate the annual CO_2 mass emissions from the combustion of the biomass fuels listed in table C–1 to this subpart, in a unit of any size, including units equipped with a CO_2 CEMS, except when the use of Tier 2 is required as specified in paragraph (b)(1)(iv) of this section. Determine the quantity of biomass combusted using one of the following procedures in this paragraph (e)(1), as appropriate, and document the selected procedures in the Monitoring Plan under § 98.3(g):

* * * * *

(3) You must use the procedures in paragraphs (e)(3)(i) through (iii) of this section to determine the annual biogenic CO_2 emissions from the combustion of MSW, except as otherwise provided in paragraph (e)(3)(iv) of this section. These procedures also may be used for any unit that co-fires biomass and fossil fuels, including units equipped with a CO_2 CEMS.

* * * * *

(iv) In lieu of following the procedures in paragraphs (e)(3)(i) through (iii) of this section, the procedures of this paragraph (e)(3)(iv) may be used for the combustion of tires regardless of the percent of the annual heat input provided by tires. The calculation procedure in this paragraph (e)(3)(iv) may be used for the combustion of MSW if the combustion of MSW provides no more than 10 percent of the annual heat input to the unit or if a small, batch incinerator combusts no more than 1,000 tons per year of MSW.

(A) Calculate the total annual CO_2 emissions from combustion of MSW and/or tires in the unit, using the applicable methodology in paragraphs (a)(1) through (3) of this section for units using Tier 1, Tier 2, or Tier 3; otherwise use the Tier 1 calculation methodology in paragraph (a)(1) of this section for units using either the Tier 4 or Alternative Part 75 calculation methodologies to calculate total CO_2 emissions.

(B) Multiply the result from paragraph (e)(3)(iv)(A) of this section by the appropriate default factor to determine the annual biogenic CO_2 emissions, in metric tons. For MSW, use a default factor of 0.60 and for tires, use a default factor of 0.24.

* * * * *

■ 13. Amend § 98.34 by revising paragraphs (c)(6), (d) and (e) to read as follows:

§ 98.34 Monitoring and QA/QC requirements.

* * * * *

(c) * * *

(6) For applications where CO_2 concentrations in process and/or combustion flue gasses are lower or higher than the typical CO_2 span value for coal-based fuels (*e.g.,* 20 percent CO_2 for a coal fired boiler), cylinder gas audits of the CO_2 monitor under appendix F to part 60 of this chapter may be performed at 40–60 percent and 80–100 percent of CO_2 span, in lieu of the prescribed calibration levels of 5–8 percent and 10–14 percent CO_2 by volume.

* * * * *

(d) Except as otherwise provided in § 98.33(e)(3)(iv), when municipal solid waste (MSW) is either the primary fuel combusted in a unit or the only fuel with a biogenic component combusted in the unit, determine the biogenic portion of the CO_2 emissions using ASTM D6866–16 and ASTM D7459–08 (both incorporated by reference, see § 98.7). Perform the ASTM D7459–08 sampling and the ASTM D6866–16 analysis at least once in every calendar quarter in which MSW is combusted in the unit. Collect each gas sample during normal unit operating conditions for at least 24 total (not necessarily consecutive) hours, or longer if the facility deems it necessary to obtain a representative sample. Notwithstanding this requirement, if the types of fuels combusted and their relative proportions are consistent throughout the year, the minimum required sampling time may be reduced to 8 hours if at least two 8-hour samples and one 24-hour sample are collected under normal operating conditions, and arithmetic average of the biogenic fraction of the flue gas from the 8-hour samples (expressed as a decimal) is within ±5 percent of the biogenic fraction from the 24-hour test. There must be no overlapping of the 8-hour and 24-hour test periods. Document the results of the demonstration in the unit's monitoring plan. If the types of fuels and their relative proportions are not consistent throughout the year, an optional sampling approach that facilities may wish to consider to obtain a more representative sample is to collect an integrated sample by extracting a small amount of flue gas (*e.g.,* 1 to 5 cc) in each unit operating hour during the quarter. Separate the total annual CO_2 emissions into the biogenic and non-biogenic fractions using the average proportion of biogenic emissions of all samples analyzed during the reporting year. Express the results as a decimal fraction (*e.g.,* 0.30, if 30 percent of the CO_2 is biogenic). When MSW is the primary fuel for multiple units at the facility, and the units are fed from a common fuel source, testing at only one of the units is sufficient.

(e) For other units that combust combinations of biomass fuel(s) (or heterogeneous fuels that have a biomass component, *e.g.,* tires) and fossil (or other non-biogenic) fuel(s), in any proportions, ASTM D6866–16 and ASTM D7459–08 (both incorporated by reference, see § 98.7) may be used to determine the biogenic portion of the CO_2 emissions in every calendar quarter in which biomass and non-biogenic fuels are co-fired in the unit. Follow the procedures in paragraph (d) of this section. If multiple units at the facility are fed from a common fuel source, testing at only one of the units is sufficient.

* * * * *

■ 14. Amend § 98.36 by revising paragraphs (c)(1)(vi), (c)(3)(vi), (e)(2)(ii)(C) and (e)(2)(xi) to read as follows:

§ 98.36 Data reporting requirements.

* * * * *

(c) * * *

(1) * * *

(vi) Annual CO_2 mass emissions and annual CH_4, and N_2O mass emissions, aggregated for each type of fuel combusted in the group of units during the report year, expressed in metric tons of each gas and in metric tons of CO_2e. If any of the units burn biomass, report also the annual CO_2 emissions from combustion of all biomass fuels combined, expressed in metric tons.

* * * * *

(3) * * *

(vi) If any of the units burns biomass, the annual CO_2 emissions from combustion of all biomass fuels from the units served by the common pipe, expressed in metric tons.

* * * * *

(e) * * *

(2) * * *

(ii) * * *

(C) The annual average, and, where applicable, monthly high heat values used in the CO_2 emissions calculations for each type of fuel combusted during the reporting year, in mmBtu per short ton for solid fuels, mmBtu per gallon for

liquid fuels, and mmBtu per scf for gaseous fuels. Report an HHV value for each calendar month in which HHV determination is required. If multiple values are obtained in a given month, report the arithmetic average value for the month.

* * * * *

(xi) When ASTM methods D7459–08 and D6866–16 (both incorporated by reference, see § 98.7) are used in accordance with § 98.34(e) to determine the biogenic portion of the annual CO_2 emissions from a unit that co-fires biogenic fuels (or partly-biogenic fuels, including tires) and non-biogenic fuels, you shall report the results of each quarterly sample analysis, expressed as a decimal fraction (*e.g.,* if the biogenic fraction of the CO_2 emissions is 30 percent, report 0.30).

* * * * *

■ 15. Amend § 98.37 by revising and republishing paragraph (b) to read as follows:

§ 98.37 Records that must be retained.

* * * * *

(b) The applicable verification software records as identified in this paragraph (b). For each stationary fuel combustion source that elects to use the verification software specified in § 98.5(b) rather than report data specified in paragraphs (b)(9)(iii), (c)(2)(ix), (e)(2)(i), (e)(2)(ii)(A), (C), and (D), (e)(2)(iv)(A), (C), and (F), and (e)(2)(ix)(D) through (F) of this section, you must keep a record of the file generated by the verification software for the applicable data specified in paragraphs (b)(1) through (37) of this section. Retention of this file satisfies the recordkeeping requirement for the data in paragraphs (b)(1) through (37) of this section.

(1) Mass of each solid fuel combusted (tons/year) (equation C–1 to § 98.33).

(2) Volume of each liquid fuel combusted (gallons/year) (equation C–1 to § 98.33).

(3) Volume of each gaseous fuel combusted (scf/year) (equation C–1 to § 98.33).

(4) Annual natural gas usage (therms/year) (equation C–1a to § 98.33).

(5) Annual natural gas usage (mmBtu/year) (equation C–1b to § 98.33).

(6) Mass of each solid fuel combusted (tons/year) (equation C–2a to § 98.33).

(7) Volume of each liquid fuel combusted (gallons/year) (equation C–2a to § 98.33).

(8) Volume of each gaseous fuel combusted (scf/year) (equation C–2a to § 98.33).

(9) Measured high heat value of each solid fuel, for month (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (mmBtu per ton) (equation C–2b to § 98.33). Annual average HHV of each solid fuel (mmBtu per ton) (equation C–2a to § 98.33).

(10) Measured high heat value of each liquid fuel, for month (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (mmBtu per gallons) (equation C–2b to § 98.33). Annual average HHV of each liquid fuel (mmBtu per gallons) (equation C–2a to § 98.33).

(11) Measured high heat value of each gaseous fuel, for month (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (mmBtu per scf) (equation C–2b to § 98.33). Annual average HHV of each gaseous fuel (mmBtu per scf) (equation C–2a to § 98.33).

(12) Mass of each solid fuel combusted during month (tons) (equation C–2b to § 98.33).

(13) Volume of each liquid fuel combusted during month (gallons) (equation C–2b to § 98.33).

(14) Volume of each gaseous fuel combusted during month (scf) (equation C–2b, equation C–5A, equation C–5B to § 98.33).

(15) Total mass of steam generated by municipal solid waste or each solid fuel combustion during the reporting year (pounds steam) (equation C–2c to § 98.33).

(16) Ratio of the boiler's maximum rated heat input capacity to its design rated steam output capacity (MMBtu/pounds steam) (equation C–2c to § 98.33).

(17) Annual mass of each solid fuel combusted (short tons/year) (equation C–3 to § 98.33).

(18) Annual average carbon content of each solid fuel (percent by weight, expressed as a decimal fraction) (equation C–3 to § 98.33). Where applicable, monthly carbon content of each solid fuel (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (percent by weight, expressed as a decimal fraction) (equation C–2b to § 98.33—see the definition of ''CC'' in equation C–3 to § 98.33).

(19) Annual volume of each liquid fuel combusted (gallons/year) (equation C–4 to § 98.33).

(20) Annual average carbon content of each liquid fuel (kg C per gallon of fuel) (equation C–4 to § 98.33). Where applicable, monthly carbon content of each liquid fuel (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (kg C per gallon of fuel) (equation C–2b to § 98.33—see the definition of ''CC'' in equation C–3 to § 98.33).

(21) Annual volume of each gaseous fuel combusted (scf/year) (equation C–5 to § 98.33).

(22) Annual average carbon content of each gaseous fuel (kg C per kg of fuel) (equation C–5 to § 98.33). Where applicable, monthly carbon content of each gaseous (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (kg C per kg of fuel) (equation C–5A to § 98.33).

(23) Annual average molecular weight of each gaseous fuel (kg/kg-mole) (equation C–5 to § 98.33). Where applicable, monthly molecular weight of each gaseous (which may be the arithmetic average of multiple determinations), or, if applicable, an appropriate substitute data value (kg/kg-mole) (equation C–5B to § 98.33).

(24) Molar volume conversion factor at standard conditions, as defined in § 98.6 (scf per kg-mole) (equation C–5 to § 98.33).

(25) Identify for each fuel if you will use the default high heat value from table C–1 to this subpart, or actual high heat value data (equation C–8 to § 98.33).

(26) High heat value of each solid fuel (mmBtu/tons) (equation C–8 to § 98.33).

(27) High heat value of each liquid fuel (mmBtu/gallon) (equation C–8 to § 98.33).

(28) High heat value of each gaseous fuel (mmBtu/scf) (equation C–8 to § 98.33).

(29) Cumulative annual heat input from combustion of each fuel (mmBtu) (equation C–10 to § 98.33).

(30) Total quantity of each solid fossil fuel combusted in the reporting year, as defined in § 98.6 (pounds) (equation C–13 to § 98.33).

(31) Total quantity of each liquid fossil fuel combusted in the reporting year, as defined in § 98.6 (gallons) (equation C–13 to § 98.33).

(32) Total quantity of each gaseous fossil fuel combusted in the reporting year, as defined in § 98.6 (scf) (equation C–13 to § 98.33).

(33) High heat value of the each solid fossil fuel (Btu/lb) (equation C–13 to § 98.33).

(34) High heat value of the each liquid fossil fuel (Btu/gallons) (equation C–13 to § 98.33).

(35) High heat value of the each gaseous fossil fuel (Btu/scf) (equation C–13 to § 98.33).

(36) Fuel-specific carbon based F-factor per fuel (scf CO_2/mmBtu) (equation C–13 to § 98.33).

(37) Moisture content used to calculate the wood and wood residuals wet basis HHV (percent), if applicable (equations C–1 and C–8 to § 98.33).

Subpart G—Ammonia Manufacturing

■ 16. Amend § 98.72 by revising paragraph (a) to read as follows:

§ 98.72 GHGs to report.

* * * * *

(a) CO_2 process emissions from steam reforming of a hydrocarbon or the gasification of solid and liquid raw material, reported for each ammonia manufacturing unit following the requirements of this subpart.

* * * * *

■ 17. Amend § 98.73 by revising the introductory text and paragraph (b) to read as follows:

§ 98.73 Calculating GHG emissions.

You must calculate and report the annual CO_2 process emissions from each ammonia manufacturing unit using the procedures in either paragraph (a) or (b) of this section.

* * * * *

(b) Calculate and report under this subpart process CO_2 emissions using the procedures in paragraphs (b)(1) through (4) of this section, as applicable.

(1) *Gaseous feedstock.* You must calculate, from each ammonia manufacturing unit, the CO_2 process emissions from gaseous feedstock according to equation G–1 to this section:

$$CO_{2,G} = \left(\sum_{n=1}^{12} \frac{44}{12} * Fdstk_n * CC_n * \frac{MW}{MVC}\right) * 0.001 \quad \text{(Eq. G–1)}$$

Where:

$CO_{2,G}$ = Annual CO_2 emissions arising from gaseous feedstock consumption (metric tons).

$Fdstk_n$ = Volume of the gaseous feedstock used in month n (scf of feedstock).

CC_n = Carbon content of the gaseous feedstock, for month n (kg C per kg of feedstock), determined according to § 98.74(c).

MW = Molecular weight of the gaseous feedstock (kg/kg-mole).

MVC = Molar volume conversion factor (849.5 scf per kg-mole at standard conditions).

44/12 = Ratio of molecular weights, CO_2 to carbon.

0.001 = Conversion factor from kg to metric tons.

n = Number of month.

(2) *Liquid feedstock.* You must calculate, from each ammonia manufacturing unit, the CO_2 process emissions from liquid feedstock according to equation G–2 to this section:

$$CO_{2,L} = \left(\sum_{n=1}^{12} \frac{44}{12} * Fdstk_n * CC_n\right) * 0.001 \quad \text{(Eq. G–2)}$$

Where:

$CO_{2,L}$ = Annual CO_2 emissions arising from liquid feedstock consumption (metric tons).

$Fdstk_n$ = Volume of the liquid feedstock used in month n (gallons of feedstock).

CC_n = Carbon content of the liquid feedstock, for month n (kg C per gallon of feedstock) determined according to § 98.74(c).

44/12 = Ratio of molecular weights, CO_2 to carbon.

0.001 = Conversion factor from kg to metric tons.

n = Number of month.

(3) *Solid feedstock.* You must calculate, from each ammonia manufacturing unit, the CO_2 process emissions from solid feedstock according to equation G–3 to this section:

$$CO_{2,S} = \left(\sum_{n=1}^{12} \frac{44}{12} * Fdstk_n * CC_n\right) * 0.001 \quad \text{(Eq. G–3)}$$

Where:

$CO_{2,S}$ = Annual CO_2 emissions arising from solid feedstock consumption (metric tons).

$Fdstk_n$ = Mass of the solid feedstock used in month n (kg of feedstock).

CC_n = Carbon content of the solid feedstock, for month n (kg C per kg of feedstock), determined according to § 98.74(c).

44/12 = Ratio of molecular weights, CO_2 to carbon.

0.001 = Conversion factor from kg to metric tons.

n = Number of month.

(4) *CO_2 process emissions.* You must calculate the annual CO_2 process emissions at each ammonia manufacturing unit according to equation G–4 to this section:

$$CO_2 = \sum_{p=1}^{3} CO_{2,p} \quad \text{(Eq. G–4)}$$

Where:

CO_2 = Annual CO_2 process emissions from each ammonia manufacturing unit (metric tons).

$CO_{2,p}$ = Annual CO_2 process emissions arising from feedstock consumption based on feedstock type “p” (metric tons/yr) as calculated in paragraphs (b)(1) through (3) of this section.

p = Index for feedstock type; 1 indicates gaseous feedstock; 2 indicates liquid feedstock; and 3 indicates solid feedstock.

* * * * *

■ 18. Amend § 98.76 by revising the introductory text and paragraphs (b)(1) and (13) and adding paragraph (b)(16) to read as follows:

§ 98.76 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the information specified in paragraphs (a) and (b) of this section, as applicable for each ammonia manufacturing unit.

* * * * *

(b) * * *

(1) Annual CO_2 process emissions (metric tons) for each ammonia manufacturing unit.

* * * * *

(13) Annual amount of CO_2 (metric tons) collected from ammonia production and consumed on site for urea production and the method used to determine the CO_2 consumed in urea production.

* * * * *

(16) Annual quantity of excess hydrogen produced that is not consumed through the production of ammonia (metric tons).

Subpart H—Cement Production

■ 19. Amend § 98.83 by:

■ a. Revising paragraph (d)(1);

■ b. Revising parameters ''CKD_{CaO}'' and ''CKD_{MgO}'' of equation H–4 in paragraph (d)(2)(ii)(A); and

■ c. Revising paragraph (d)(3).

The revisions read as follows:

§ 98.83 Calculating GHG emissions.

* * * * *

(d) * * *

(1) Calculate CO_2 process emissions from all kilns at the facility using equation H–1 to this section:

$$CO_{2\,CMF} = \sum_{m=1}^{k}\left[CO_{2\,Cli,m} + CO_{2\,rm,m}\right] \qquad \text{(Eq. H–1)}$$

Where:

$CO_{2\,CMF}$ = Annual process emissions of CO_2 from cement manufacturing, metric tons.

$CO_{2\,Cli,m}$ = Total annual emissions of CO_2 from clinker production from kiln m, metric tons.

$CO_{2\,rm,m}$ = Total annual emissions of CO_2 from raw materials from kiln m, metric tons.

k = Total number of kilns at a cement manufacturing facility.

(2) * * *

(ii) * * *

(A) * * *

CKD_{ncCaO} = Quarterly non-calcined CaO content of CKD not recycled to the kiln, wt-fraction.

* * * * *

CKD_{ncMgO} = Quarterly non-calcined MgO content of CKD not recycled to the kiln, wt-fraction.

* * * * *

(3) *CO_2 emissions from raw materials from each kiln.* Calculate CO_2 emissions from raw materials using equation H–5 to this section:

$$CO_{2\,rm,m} = \sum_{i=1}^{M}\left[rm * TOC_{rm} * \frac{44}{12} * \frac{2000}{2205}\right] \qquad \text{(Eq. H–5)}$$

Where:

rm = The amount of raw material i consumed annually from kiln m, tons/yr (dry basis) or the amount of raw kiln feed consumed annually from kiln m, tons/yr (dry basis).

$CO_{2,rm,m}$ = Annual CO_2 emissions from raw materials from kiln m.

TOC_{rm} = Organic carbon content of raw material i from kiln m or organic carbon content of combined raw kiln feed (dry basis) from kiln m, as determined in § 98.84(c) or using a default factor of 0.2 percent of total raw material weight.

M = Number of raw materials or 1 if calculating emissions based on combined raw kiln feed.

44/12 = Ratio of molecular weights, CO_2 to carbon.

2000/2205 = Conversion factor to convert tons to metric tons.

* * * * *

■ 20. Amend § 98.86 by adding paragraphs (a)(4) through (8) and (b)(19) through (28) to read as follows:

§ 98.86 Data reporting requirements.

* * * * *

(a) * * *

(4) Annual arithmetic average of total CaO content of clinker at the facility, wt-fraction.

(5) Annual arithmetic average of non-calcined CaO content of clinker at the facility, wt-fraction.

(6) Annual arithmetic average of total MgO content of clinker at the facility, wt-fraction.

(7) Annual arithmetic average of non-calcined MgO content of clinker at the facility, wt-fraction.

(8) Annual facility CKD not recycled to the kiln(s), tons.

(b) * * *

(19) Annual arithmetic average of total CaO content of clinker at the facility, wt-fraction.

(20) Annual arithmetic average of non-calcined CaO content of clinker at the facility, wt-fraction.

(21) Annual arithmetic average of total MgO content of clinker at the facility, wt-fraction.

(22) Annual arithmetic average of non-calcined MgO content of clinker at the facility, wt-fraction.

(23) Annual arithmetic average of total CaO content of CKD not recycled to the kiln(s) at the facility, wt-fraction.

(24) Annual arithmetic average of non-calcined CaO content of CKD not recycled to the kiln(s) at the facility, wt-fraction.

(25) Annual arithmetic average of total MgO content of CKD not recycled to the kiln(s) at the facility, wt-fraction.

(26) Annual arithmetic average of non-calcined MgO content of CKD not recycled to the kiln(s) at the facility, wt-fraction.

(27) Annual facility CKD not recycled to the kiln(s), tons.

(28) The amount of raw kiln feed consumed annually at the facility, tons (dry basis).

Subpart I—Electronics Manufacturing

■ 21. Revise and republish § 98.91 to read as follows:

§ 98.91 Reporting threshold.

(a) You must report GHG emissions under this subpart if electronics manufacturing production processes, as defined in § 98.90, are performed at your facility and your facility meets the requirements of either § 98.2(a)(1) or (2). To calculate total annual GHG emissions for comparison to the 25,000 metric ton CO_2e per year emission threshold in § 98.2(a)(2), follow the requirements of § 98.2(b), with one exception. Rather than using the calculation methodologies in § 98.93 to calculate emissions from electronics manufacturing production processes, calculate emissions of each fluorinated GHG from electronics manufacturing production processes by using paragraph (a)(1), (2), or (3) of this section, as appropriate, and then sum

the emissions of each fluorinated GHG and account for fluorinated heat transfer fluid emissions by using paragraph (a)(4) of this section.

(1) If you manufacture semiconductors or MEMS you must calculate annual production process emissions resulting from the use of each input gas for threshold applicability purposes using either the default emission factors shown in table I–1 to this subpart and equation I–1A to this section, or the consumption of each input gas, the default emission factors shown in table I–2 to this subpart, and equation I–1B to this section.

$$E_i = S * EF_i * GWP_i * 0.001 \quad \text{(Eq. I–1A)}$$

Where:

E_i = Annual production process emissions of gas i for threshold applicability purposes (metric tons CO_2e).

S = 100 percent of annual manufacturing capacity of a facility as calculated using equation I–5 to this section (m^2).

EF_i = Emission factor for gas i (kg/m^2) shown in table I–1 to this subpart.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

0.001 = Conversion factor from kg to metric tons.

i = Emitted gas.

$$E_i = C_i * (GWP_i * (1 - U_i) + GWP_{CF4} * BCF_4 + GWP_{C2F6} * BC_2F_6) * 0.001 \quad \text{(Eq. I–1B)}$$

Where:

E_i = Annual production process emissions resulting from the use of input gas i for threshold applicability purposes (metric tons CO_2e).

C_i = Annual GHG (input gas i) purchases or consumption (kg). Only gases that are used in semiconductor or MEMS manufacturing processes listed at § 98.90(a)(1) through (4) must be considered for threshold applicability purposes.

$(1-U_i)$, BCF_4, and BC_2F_6 = Default emission factors for the gas consumption-based threshold applicability determination listed in table I–2 to this subpart.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

0.001 = Conversion factor from kg to metric tons.

i = Input gas.

(2) If you manufacture LCDs, you must calculate annual production process emissions resulting from the use of each input gas for threshold applicability purposes using either the default emission factors shown in table I–1 to this subpart and equation I–2A to this section or the consumption of each input gas, the default emission factors shown in table I–2 to this subpart, and equation I–2B to this section.

$$E_i = S * EF_i * GWP_i * 0.000001 \quad \text{(Eq. I–2A)}$$

Where:

E_i = Annual production process emissions of gas i for threshold applicability purposes (metric tons CO_2e).

S = 100 percent of annual manufacturing capacity of a facility as calculated using equation I–5 to this section (m^2).

EF_i = Emission factor for gas i (g/m^2).

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

0.000001 = Conversion factor from g to metric tons.

i = Emitted gas.

$$E_i = C_i * (GWP_i * (1 - U_i) + GWP_{CF4} * BCF_4 + GWP_{C2F6} * BC_2F_6) * 0.001 \quad \text{(Eq. I–2B)}$$

Where:

E_i = Annual production process emissions resulting from the use of input gas i for threshold applicability purposes (metric tons CO_2e).

C_i = Annual GHG (input gas i) purchases or consumption (kg). Only gases that are used in LCD manufacturing processes listed at § 98.90(a)(1) through (4) must be considered for threshold applicability purposes.

$(1-U_i)$, BCF_4, and BC_2F_6 = Default emission factors for the gas consumption-based threshold applicability determination listed in table I–2 to this subpart.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

0.001 = Conversion factor from kg to metric tons.

i = Input gas.

(3) If you manufacture PVs, you must calculate annual production process emissions resulting from the use of each input gas i for threshold applicability purposes using gas-appropriate GWP values shown in table A–1 to subpart A of this part, the default emission factors shown in table I–2 to this subpart, and equation I–3 to this section.

$$E_i = C_i * (GWP_i * (1 - U_i) + GWP_{CF4} * BCF_4 + GWP_{C2F6} * BC_2F_6) * 0.001 \quad \text{(Eq. I–3)}$$

Where:

E_i = Annual production process emissions resulting from the use of input gas i for threshold applicability purposes (metric tons CO_2e).

C_i = Annual fluorinated GHG (input gas i) purchases or consumption (kg). Only gases that are used in PV manufacturing processes listed at § 98.90(a)(1) through (4) must be considered for threshold applicability purposes.

$(1 - U_i)$, BCF_4, and BC_2F_6 = Default emission factors for the gas consumption-based threshold applicability determination listed in table I–2 to this subpart.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

0.001 = Conversion factor from kg to metric tons.

i = Input gas.

(4) You must calculate total annual production process emissions for threshold applicability purposes using equation I–4 to this section.

$$E_T = \delta * \sum_i E_i \quad \text{(Eq. I–4)}$$

Where:

E_T = Annual production process emissions of all fluorinated GHGs for threshold applicability purposes (metric tons CO_2e).

δ = Factor accounting for fluorinated heat transfer fluid emissions, estimated as 10 percent of total annual production process emissions at a semiconductor facility. Set equal to 1.1 when equation I–4 to this section is used to calculate total annual production process emissions from semiconductor manufacturing. Set equal to 1 when equation I–4 to this section is used to calculate total annual production process emissions from MEMS, LCD, or PV manufacturing.

E_i = Annual production process emissions of gas i for threshold applicability purposes (metric tons CO_2e), as calculated in equations I–1a, I–1b, I–2a, I–2b, or I–3 to this section.

i = Emitted gas.

(b) You must calculate annual manufacturing capacity of a facility using equation I–5 to this section.

$$S = \sum_x^{12} W_x \quad \text{(Eq. I–5)}$$

Where:

S = 100 percent of annual manufacturing capacity of a facility (m²).

W_x = Maximum substrate starts of fab f in month x (m² per month).

x = Month.

■ 22. Amend § 98.92 by revising paragraph (a) introductory text to read as follows:

§ 98.92 GHGs to report.

(a) You must report emissions of fluorinated GHGs (as defined in § 98.6), N_2O, and fluorinated heat transfer fluids (as defined in § 98.6). The fluorinated GHGs and fluorinated heat transfer fluids that are emitted from electronics manufacturing production processes include, but are not limited to, those listed in table I–21 to this subpart. You must individually report, as appropriate:

* * * * *

■ 23. Amend § 98.93 by:

■ a. Revising paragraph (a);

■ b. Revising the introductory text of paragraph (e);

■ c. Revising parameters ''UT_{ij}'' and ''Td_{ijp}'' of equation I–15 in paragraph (g); and

■ d. Revising paragraphs (h)(1) and (i).

The revisions read as follows:

§ 98.93 Calculating GHG emissions.

(a) You must calculate total annual emissions of each fluorinated GHG emitted by electronics manufacturing production processes from each fab (as defined in § 98.98) at your facility, including each input gas and each by-product gas. You must use either default gas utilization rates and by-product formations rates according to the procedures in paragraph (a)(1), (2), (6), or (7) of this section, as appropriate, or the stack test method according to paragraph (i) of this section, to calculate emissions of each input gas and each by-product gas.

(1) If you manufacture semiconductors, you must adhere to the procedures in paragraphs (a)(1)(i) through (iii) of this section. You must calculate annual emissions of each input gas and of each by-product gas using equations I–6, I–7, and I–9 to this section. If your fab uses less than 50 kg of a fluorinated GHG in one reporting year, you may calculate emissions as equal to your fab's annual consumption for that specific gas as calculated in equation I–11 to this section, plus any by-product emissions of that gas calculated under paragraph (a) of this section.

$$ProcesstypeE_i = \sum_{j=1}^{N} E_{ij} \quad \text{(Eq. I–6)}$$

Where:

$ProcesstypeE_i$ = Annual emissions of input gas i from the process type on a fab basis (metric tons).

E_{ij} = Annual emissions of input gas i from process sub-type or process type j as calculated in equation I–8A to this section (metric tons).

N = The total number of process sub-types j that depends on the electronics manufacturing fab and emission calculation methodology. If E_{ij} is calculated for a process type j in equation I–8A to this section, N = 1.

i = Input gas.

j = Process sub-type or process type.

$$ProcesstypeBE_k = \sum_{j=1}^{N} \sum_i BE_{kij} \quad \text{(Eq. I–7)}$$

Where:

$ProcesstypeBE_k$ = Annual emissions of by-product gas k from the processes type on a fab basis (metric tons).

BE_{kij} = Annual emissions of by-product gas k formed from input gas i used for process sub-type or process type j as calculated in equation I–8B to this section (metric tons).

N = The total number of process sub-types j that depends on the electronics manufacturing fab and emission calculation methodology. If BE_{kij} is calculated for a process type j in equation I–8B to this section, N = 1.

i = Input gas.

j = Process sub-type, or process type.

k = By-product gas.

(i) You must calculate annual fab-level emissions of each fluorinated GHG used for the plasma etching/wafer cleaning process type using default utilization and by-product formation rates as shown in table I–3 or I–4 to this subpart, and by using equations I–8A and I–8B to this section.

$$E_{ij} = C_{ij} * (1 - U_{ij}) * (1 - (a_{ij} * d_{ij} * UT_{ij})) * 0.001 \quad \text{(Eq. I–8A)}$$

Where:

E_{ij} = Annual emissions of input gas i from process sub-type or process type j, on a fab basis (metric tons).

C_{ij} = Amount of input gas i consumed for process sub-type or process type j, as calculated in equation I–13 to this section, on a fab basis (kg).

U_{ij} = Process utilization rate for input gas i for process sub-type or process type j (expressed as a decimal fraction).

a_{ij} = Fraction of input gas i used in process sub-type or process type j with abatement systems, on a fab basis (expressed as a decimal fraction).

d_{ij} = Fraction of input gas i destroyed or removed when fed into abatement systems by process tools where process sub-type, or process type j is used, on a fab basis, calculated by taking the tool weighted average of the claimed DREs for input gas i on tools that use process type or process sub-type j (expressed as a decimal fraction). This is zero unless the facility adheres to the requirements in § 98.94(f).

UT_{ij} = The average uptime factor of all abatement systems connected to process tools in the fab using input gas i in process sub-type or process type j, as calculated in equation I–15 to this section, on a fab basis (expressed as a decimal fraction).

0.001 = Conversion factor from kg to metric tons.

i = Input gas.

j = Process sub-type or process type.

$$BE_{kij} = B_{kij} * C_{ij} * (1 - (a_{kij} * d_{kij} * UT_{kij})) * 0.001 \quad \text{(Eq. I–8B)}$$

Where:

BE_{kij} = Annual emissions of by-product gas k formed from input gas i from process sub-type or process type j, on a fab basis (metric tons).

B_{kij} = By-product formation rate of gas k created as a by-product per amount of input gas i (kg) consumed by process sub-type or process type j (kg). If all input gases consumed by a chamber cleaning process sub-type are non-carbon containing input gases, this is zero when the combination of the non-carbon containing input gas and chamber cleaning process sub-type is never used to clean chamber walls on equipment that process carbon-containing films during the year (*e.g.,* when NF_3 is used in remote plasma cleaning processes to only clean chambers that never process carbon-containing films during the year). If all input gases consumed by an etching and wafer cleaning process sub-type are non-carbon containing input gases, this is zero when the combination of the non-carbon containing input gas and etching and wafer cleaning process sub-type is never used to etch or wafer clean carbon-containing films during the year.

C_{ij} = Amount of input gas i consumed for process sub-type, or process type j, as calculated in equation I–13 to this section, on a fab basis (kg).

a_{kij} = Fraction of input gas i used for process sub-type, or process type j with abatement systems, on a fab basis (expressed as a decimal fraction).

d_{kij} = Fraction of by-product gas k destroyed or removed in when fed into abatement systems by process tools where process sub-type or process type j is used, on a fab basis, calculated by taking the tool weighted average of the claimed DREs for by-product gas k on tools that use input gas i in process type or process sub-type j (expressed as a decimal fraction). This is zero unless the facility adheres to the requirements in § 98.94(f).

UT_{kij} = The average uptime factor of all abatement systems connected to process tools in the fab emitting by-product gas k, formed from input gas i in process sub-type or process type j, on a fab basis (expressed as a decimal fraction). For this equation, UT_{kij} is assumed to be equal to UT_{ij} as calculated in equation I–15 to this section.

0.001 = Conversion factor from kg to metric tons.

i = Input gas.

j = Process sub-type or process type.

k = By-product gas.

(ii) You must calculate annual fab-level emissions of each fluorinated GHG used for each of the process sub-types associated with the chamber cleaning process type, including in-situ plasma chamber clean, remote plasma chamber clean, and in-situ thermal chamber clean, using default utilization and by-product formation rates as shown in table I–3 or I–4 to this subpart, and by using equations I–8A and I–8B to this section.

(iii) If default values are not available for a particular input gas and process type or sub-type combination in tables I–3 or I–4, you must follow the procedures in paragraph (a)(6) of this section.

(2) If you manufacture MEMS or PVs and use semiconductor tools and processes, you may use § 98.3(a)(1) to calculate annual fab-level emissions for those processes. For all other tools and processes used to manufacture MEMs, LCD and PV, you must calculate annual fab-level emissions of each fluorinated GHG used for the plasma etching and chamber cleaning process types using default utilization and by-product formation rates as shown in table I–5, I–6, or I–7 to this subpart, as appropriate, and by using equations I–8A and I–8B to this section. If default values are not available for a particular input gas and process type or sub-type combination in tables I–5, I–6, or I–7 to this subpart, you must follow the procedures in paragraph (a)(6) of this section. If your fab uses less than 50 kg of a fluorinated GHG in one reporting year, you may calculate emissions as equal to your fab's annual consumption for that specific gas as calculated in equation I–11 to this section, plus any by-product emissions of that gas calculated under this paragraph (a).

(3)–(5) [Reserved]

(6) If you are required, or elect, to perform calculations using default emission factors for gas utilization and by-product formation rates according to the procedures in paragraph (a)(1) or (2) of this section, and default values are not available for a particular input gas and process type or sub-type combination in tables I–3, I–4, I–5, I–6, or I–7 to this subpart, you must use a utilization rate (U_{ij}) of 0.2 (*i.e.,* a 1–U_{ij} of 0.8) and by-product formation rates of 0.15 for CF_4 and 0.05 for C_2F_6 and use equations I–8A and I–8B to this section.

(7) If your fab employs hydrocarbon-fuel-based combustion emissions control systems (HC fuel CECS), including, but not limited to, abatement systems as defined at § 98.98, that were purchased and installed on or after January 1, 2025, to control emissions from tools that use either NF_3 in remote plasma cleaning processes or F_2 as an input gas in any process type or sub-type, you must calculate the amount CF_4 produced within and emitted from such systems using equation I–9 to this section using default utilization and by-product formation rates as shown in table I–3 or I–4 to this subpart. A HC fuel CECS is assumed not to form CF_4 from F_2 if the electronics manufacturer can certify that the rate of conversion from F_2 to CF_4 is <0.1% for that HC fuel CECS.

$$EAB_{CF_4} = \sum_j C_{F_2,j} \bullet (1 - U_{F_2,j}) \bullet a_{F_2,j} \bullet UT_{F_2,j} \bullet AB_{CF_4,F_2} + C_{NF_3,RPC} \bullet B_{F_2,NF_3} \bullet a_{NF_3,RPC} \bullet UT_{NF_3,RPC,F2} \bullet AB_{CF_4,F_2} \quad \text{(Eq. I–9)}$$

Where:

EAB_{CF4} = Emissions of CF_4 from HC fuel CECS when direct reaction between hydrocarbon fuel and F_2 is not certified not to occur by the emissions control system manufacturer or electronics manufacturer, kg.

$C_{F2,j}$ = Amount of F_2 consumed for process type or sub-type j, as calculated in equation I–13 to this section, on a fab basis (kg).

$U_{F2,j}$ = Process utilization rate for F_2 for process type or sub-type j (expressed as a decimal fraction).

$a_{F2,j}$ = Within process sub-type or process type j, fraction of F_2 used in process tools with HC fuel CECS that are not certified not to form CF_4, on a fab basis, where the numerator is the number of tools that are equipped with HC fuel CECS that are not certified not to form CF_4 that use F_2 in process type j and the denominator is the total number of tools in the fab that use F_2 in process type j (expressed as a decimal fraction).

$UT_{F2,j}$ = The average uptime factor of all HC fuel CECS connected to process tools in the fab using F_2 in process sub-type or process type j (expressed as a decimal fraction).

$AB_{CF4,F2}$ = Mass fraction of F_2 in process exhaust gas that is converted into CF_4 by direct reaction with hydrocarbon fuel in a HC fuel CECS. The default value of $AB_{CF4,F2}$ = 0.116.

$C_{NF3,RPC}$ = Amount of NF_3 consumed in remote plasma cleaning processes, as calculated in equation I–13 to this section, on a fab basis (kg).

$B_{F2,NF3}$ = By-product formation rate of F_2 created as a by-product per amount of NF_3 (kg) consumed in remote plasma cleaning processes (kg).

$a_{NF3,RPC}$ = Within remote plasma cleaning processes, fraction of NF_3 used in process tools with HC fuel CECS that are not certified not to form CF_4, where the numerator is the number of tools running remote plasma cleaning processes that are equipped with HC fuel CECS that are not certified not to form CF_4 that use NF_3 and the denominator is the total number of tools that run remote plasma clean processes in the fab that use NF_3 (expressed as decimal fraction).

$UT_{NF3,RPC,F2}$ = The average uptime factor of all HC fuel CECS connected to process tools in the fab emitting by-product gas F_2, formed from input gas NF_3 in remote plasma cleaning processes, on a fab basis (expressed as a decimal fraction). For this equation, $UT_{NF3,RPC,F2}$ is assumed to be equal to $UT_{NF3,RPC}$ as calculated in equation I–15 to this section.

j = Process type or sub-type.

* * * * *

(e) You must calculate the amount of input gas i consumed, on a fab basis, for each process sub-type or process type j, using equation I–13 to this section. Where a gas supply system serves more than one fab, equation I–13 to this section is applied to that gas which has been apportioned to each fab served by that system using the apportioning factors determined in accordance with § 98.94(c). If you elect to calculate emissions using the stack test method in paragraph (i) of this section and to use this paragraph (e) to calculate the fraction each fluorinated input gas i exhausted from tools with abatement systems and the fraction of each by-product gas k exhausted from tools with abatement systems, you may substitute ‘‘The set of tools with abatement systems’’ for ‘‘Process sub-type or process type’’ in the definition of ‘‘j’’ in equation I–13 to this section.

* * * * *

(g) * * *

UT_{ij} = The average uptime factor of all abatement systems connected to process tools in the fab using input gas i in process sub-type or process type j (expressed as a decimal fraction). The average uptime factor may be set to one (1) if all the abatement systems for the relevant input gas i and process sub-type or type j are interlocked with all the tools using input gas i in process sub-type or type j and feeding the abatement systems such that no gas can flow to the tools if the abatement systems are not in operational mode.

Td_{ijp} = The total time, in minutes, that abatement system p, connected to process tool(s) in the fab using input gas i in process sub-type or process type j, is not in operational mode, as defined in § 98.98, when at least one of the tools connected to abatement system p is in operation. If your fab uses redundant abatement systems, you may account for Td_{ijp} as specified in § 98.94(f)(4)(vi).

* * * * *

(h) * * *

(1) If you use a fluorinated chemical both as a fluorinated heat transfer fluid and in other applications, you may calculate and report either emissions from all applications or from only those specified in the definition of fluorinated heat transfer fluids in § 98.6.

* * * * *

(i) *Stack test method.* As an alternative to the default emission factor method in paragraph (a) of this section, you may calculate fab-level fluorinated GHG emissions using fab-specific emission factors developed from stack testing. In this case, you must comply with the stack test method specified in paragraph (i)(3) of this section.

(1)–(2) [Reserved]

(3) *Stack system stack test method.* For each stack system in the fab, measure the emissions of each fluorinated GHG from the stack system by conducting an emission test. In addition, measure the fab-specific consumption of each fluorinated GHG by the tools that are vented to the stack systems tested. Measure emissions and consumption of each fluorinated GHG as specified in § 98.94(j). Develop fab-specific emission factors and calculate fab-level fluorinated GHG emissions using the procedures specified in paragraphs (i)(3)(i) through (viii) of this section. All emissions test data and procedures used in developing emission factors must be documented and recorded according to § 98.97.

(i) You must measure the fab-specific fluorinated GHG consumption of the tools that are vented to the stack systems during the emission test as specified in § 98.94(j)(3). Calculate the consumption for each fluorinated GHG for the test period.

(ii) You must calculate the emissions of each fluorinated GHG consumed as an input gas using equation I–17 to this section and each fluorinated GHG formed as a by-product gas using equation I–18 to this section and the procedures specified in paragraphs (i)(3)(ii)(A) through (E) of this section. If a stack system is comprised of multiple stacks, you must sum the emissions from each stack in the stack system when using equation I–17 or equation I–18 to this section.

$$E_{is} = MW_i * Q_s * \frac{1}{SV} * \frac{1}{10^3} * \sum_{m=1}^{N} \frac{X_{ism}}{10^9} * \Delta t_m \quad \text{(Eq. I–17)}$$

Where:

E_{is} = Total fluorinated GHG input gas i, emitted from stack system s, during the sampling period (kg).

X_{ism} = Average concentration of fluorinated GHG input gas i in stack system s, during the time interval m (ppbv).

MW_i = Molecular weight of fluorinated GHG input gas i (g/g-mole).

Q_s = Flow rate of the stack system s, during the sampling period (m^3/min).

SV = Standard molar volume of gas (0.0240 m^3/g-mole at 68 °F and 1 atm).

Δt_m = Length of time interval m (minutes). Each time interval in the FTIR sampling period must be less than or equal to 60 minutes (for example an 8 hour sampling period would consist of at least 8 time intervals).

$1/10^3$ = Conversion factor (1 kilogram/1,000 grams).

i = Fluorinated GHG input gas.

s = Stack system.

N = Total number of time intervals m in sampling period.

m = Time interval.

$$E_{ks} = MW_k * Q_s * \frac{1}{SV} * \frac{1}{10^3} * \sum_{m=1}^{N} \frac{X_{ksm}}{10^9} * \Delta t_m \qquad \text{(Eq. I–18)}$$

Where:

E_{ks} = Total fluorinated GHG by-product gas k, emitted from stack system s, during the sampling period (kg).

X_{ks} = Average concentration of fluorinated GHG by-product gas k in stack system s, during the time interval m (ppbv).

MW_k = Molecular weight of the fluorinated GHG by-product gas k (g/g-mole).

Q_s = Flow rate of the stack system s, during the sampling period (m^3/min).

SV = Standard molar volume of gas (0.0240 m^3/g-mole at 68 °F and 1 atm).

Δt_m = Length of time interval m (minutes). Each time interval in the FTIR sampling period must be less than or equal to 60 minutes (for example an 8 hour sampling period would consist of at least 8 time intervals).

$1/10^3$ = Conversion factor (1 kilogram/1,000 grams).

k = Fluorinated GHG by-product gas.

s = Stack system.

N = Total number of time intervals m in sampling period.

m = Time interval.

(A) If a fluorinated GHG is consumed during the sampling period, but emissions are not detected, use one-half of the field detection limit you determined for that fluorinated GHG according to § 98.94(j)(2) for the value of ''X_{ism}'' in equation I–17 to this section.

(B) If a fluorinated GHG is consumed during the sampling period and detected intermittently during the sampling period, use the detected concentration for the value of ''X_{ism}'' in equation I–17 to this section when available and use one-half of the field detection limit you determined for that fluorinated GHG according to § 98.94(j)(2) for the value of ''X_{ism}'' when the fluorinated GHG is not detected.

(C) If an expected or possible by-product, as listed in table I–17 to this subpart, is detected intermittently during the sampling period, use the measured concentration for ''X_{ksm}'' in equation I–18 to this section when available and use one-half of the field detection limit you determined for that fluorinated GHG according to § 98.94(j)(2) for the value of ''X_{ksm}'' when the fluorinated GHG is not detected.

(D) If a fluorinated GHG is not consumed during the sampling period and is an expected by-product gas as listed in table I–17 to this subpart and is not detected during the sampling period, use one-half of the field detection limit you determined for that fluorinated GHG according to § 98.94(j)(2) for the value of ''X_{ksm}'' in equation I–18 to this section.

(E) If a fluorinated GHG is not consumed during the sampling period and is a possible by-product gas as listed in table I–17 to this subpart, and is not detected during the sampling period, then assume zero emissions for that fluorinated GHG for the tested stack system.

(iii) You must calculate a fab-specific emission factor for each fluorinated GHG input gas consumed (in kg of fluorinated GHG emitted per kg of input gas i consumed) in the tools that vent to stack systems, as applicable, using equations I–19A and I–19B to this section or equations I–19A and I–19C to this section. Use equation I–19A to this section to calculate the controlled emissions for each carbon-containing fluorinated GHG that would result during the sampling period if the utilization rate for the input gas were equal to 0.2 ($E_{imax,f}$). If $\Sigma_s E_{i,s}$ (the total measured emissions of the fluorinated GHG across all stack systems, calculated based on the results of equation I–17 to this section) is less than or equal to $E_{imax,f}$ calculated in equation I–19A to this section, use equation I–19B to this section to calculate the emission factor for that fluorinated GHG. If $\Sigma_s E_{i,s}$ is larger than the $E_{imax,f}$ calculated in equation I–19A to this section, use equation I–19C to this section to calculate the emission factor and treat the difference between the total measured emissions $\Sigma_s E_{i,s}$ and the maximum expected controlled emissions $E_{imax,f}$ as a by-product of the other input gases, using equation I–20 to this section. For all fluorinated GHGs that do not contain carbon, use equation I–19B to this section to calculate the emission factor for that fluorinated GHG.

$$E_{imax,f} = 0.8 \bullet Activity_{if} \bullet (1 - UT_f \bullet a_{if} \bullet d_{if}) \qquad \text{(Eq. I–19A)}$$

Where:

$E_{imax,f}$ = Maximum expected controlled emissions of gas i from its use an input gas during the stack testing period, from fab f (max kg emitted).

$Activity_{if}$ = Consumption of fluorinated GHG input gas i, for fab f, in the tools vented to the stack systems being tested, during the sampling period, as determined following the procedures specified in § 98.94(j)(3) (kg consumed).

UT_f = The total uptime of all abatement systems for fab f, during the sampling period, as calculated in equation I–23 to this section (expressed as decimal fraction). If the stack system does not have abatement systems on the tools vented to the stack system, the value of this parameter is zero.

a_{if} = Fraction of input gas i emitted from tools with abatement systems in fab f (expressed as a decimal fraction), as calculated in equation I–24C to this section.

d_{if} = Fraction of fluorinated GHG input gas i destroyed or removed when fed into abatement systems by process tools in fab f, as calculated in equation I–24A to this section (expressed as decimal fraction).

f = Fab.

i = Fluorinated GHG input gas.

$$EF_{if} = \frac{\sum_s (E_{is})}{Activity_{if} * \left(UT_f + \left(\frac{1-UT_f}{1-(a_{if} \bullet d_{if})}\right)\right)} \quad \text{(Eq. I–19B)}$$

Where:

EF_{if} = Emission factor for fluorinated GHG input gas i, from fab f, representing 100 percent abatement system uptime (kg emitted/kg input gas consumed).

E_{is} = Mass emission of fluorinated GHG input gas i from stack system s during the sampling period (kg emitted).

$Activity_{if}$ = Consumption of fluorinated GHG input gas i, for fab f during the sampling period, as determined following the procedures specified in § 98.94(j)(3) (kg consumed).

UT_f = The total uptime of all abatement systems for fab f, during the sampling period, as calculated in equation I–23 to this section (expressed as decimal fraction). If the stack system does not have abatement systems on the tools vented to the stack system, the value of this parameter is zero.

a_{if} = Fraction of fluorinated GHG input gas i exhausted from tools with abatement systems in fab f (expressed as a decimal fraction), as calculated in equation I–24C to this section.

d_{if} = Fraction of fluorinated GHG input gas i destroyed or removed when fed into abatement systems by process tools in fab f, as calculated in equation I–24A to this section (expressed as decimal fraction). If the stack system does not have abatement systems on the tools vented to the stack system, the value of this parameter is zero.

f = Fab.

i = Fluorinated GHG input gas.

s = Stack system.

$$EF_{if} = 0.8 \bullet (1 - a_{if} \bullet d_{if}) \quad \text{(Eq. I–19C)}$$

EF_{if} = Emission factor for input gas i, from fab f, representing a 20-percent utilization rate and a 100-percent abatement system uptime (kg emitted/kg input gas consumed).

a_{if} = Fraction of input gas i emitted from tools with abatement systems in fab f (expressed as a decimal fraction), as calculated in equation I–24C to this section.

d_{if} = Fraction of fluorinated GHG input gas i destroyed or removed when fed into abatement systems by process tools in fab f, as calculated in equation I–24A to this section (expressed as decimal fraction).

f = Fab.

i = Fluorinated GHG input gas.

(iv) You must calculate a fab-specific emission factor for each fluorinated GHG formed as a by-product (in kg of fluorinated GHG per kg of total fluorinated GHG consumed) in the tools vented to stack systems, as applicable, using equation I–20 to this section. When calculating the by-product emission factor for an input gas for which $\Sigma_s E_{i,s}$ equals or exceeds $E_{imax,f}$, exclude the consumption of that input gas from the term "$\Sigma(Activity_{if})$."

$$EF_{kf} = \frac{\sum_s (E_{ks})}{\sum_i Activity_{if} * \left(UT_f + \left(\frac{1-UT_f}{1-(a_{kif} * d_{kif})}\right)\right)} \quad \text{(Eq. I–20)}$$

Where:

EF_{kf} = Emission factor for fluorinated GHG by-product gas k, from fab f, representing 100 percent abatement system uptime (kg emitted/kg of all input gases consumed in tools vented to stack systems).

E_{ks} = Mass emission of fluorinated GHG by-product gas k, emitted from stack system s, during the sampling period (kg emitted).

$Activity_{if}$ = Consumption of fluorinated GHG input gas i for fab f in tools vented to stack systems during the sampling period as determined following the procedures specified in § 98.94(j)(3) (kg consumed).

UT_f = The total uptime of all abatement systems for fab f, during the sampling period, as calculated in equation I–23 to this section (expressed as decimal fraction).

a_{kif} = Fraction of by-product k emitted from tools using input gas i with abatement systems in fab f (expressed as a decimal fraction), as calculated using equation I–24D to this section.

d_{kif} = Fraction of fluorinated GHG by-product gas k generated from input gas i destroyed or removed when fed into abatement systems by process tools in fab f, as calculated in equation I–24B to this section (expressed as decimal fraction).

f = Fab.

i = Fluorinated GHG input gas.

k = Fluorinated GHG by-product gas.

s = Stack system.

(v) You must calculate annual fab-level emissions of each fluorinated GHG consumed using equation I–21 to this section.

$$E_{if} = EF_{if} \bullet C_{if} \bullet UT_f + \frac{EF_{if}}{(1-(a_{if} \bullet d_{if}))} \bullet C_{if} \bullet (1 - UT_f) \quad \text{(Eq. I–21)}$$

Where:

E_{if} = Annual emissions of fluorinated GHG input gas i (kg/year) from the stack systems for fab f.

EF_{if} = Emission factor for fluorinated GHG input gas i emitted from fab f, as calculated in equation I–19 to this section (kg emitted/kg input gas consumed).

C_{if} = Total consumption of fluorinated GHG input gas i in tools that are vented to stack systems, for fab f, for the reporting year, as calculated using equation I–13 to this section (kg/year).

UT_f = The total uptime of all abatement systems for fab f, during the reporting year, as calculated using equation I–23 to this section (expressed as a decimal fraction).

a_{if} = Fraction of fluorinated GHG input gas i emitted from tools with abatement systems in fab f (expressed as a decimal fraction), as calculated using equation I–24C or I–24D to this section.

d_{if} = Fraction of fluorinated GHG input gas i destroyed or removed when fed into abatement systems by process tools in fab f that are included in the stack testing option, as calculated in equation I–24A to this section (expressed as decimal fraction).

f = Fab.

i = Fluorinated GHG input gas.

(vi) You must calculate annual fab-level emissions of each fluorinated GHG

by-product formed using equation I–22 to this section.

$$E_{kf} = EF_{kf} \bullet \sum_i C_{if} \bullet UT_f + EF_{kf} \bullet \sum_i \frac{C_{if} \bullet (1-UT_f)}{1-a_{kif} \bullet d_{kif}} \quad \text{(Eq. I–22)}$$

Where:

E_{kf} = Annual emissions of fluorinated GHG by-product gas k (kg/year) from the stack for fab f.

EF_{kf} = Emission factor for fluorinated GHG by-product gas k, emitted from fab f, as calculated in equation I–20 to this section (kg emitted/kg of all fluorinated input gases consumed).

C_{if} = Total consumption of fluorinated GHG input gas i in tools that are vented to stack systems, for fab f, for the reporting year, as calculated using equation I–13 to this section.

UT_f = The total uptime of all abatement systems for fab f, during the reporting year as calculated using equation I–23 to this section (expressed as a decimal fraction).

a_{kif} = Estimate of fraction of fluorinated GHG by-product gas k emitted in fab f from tools using input gas i with abatement systems (expressed as a decimal fraction), as calculated using equation I–24D to this section.

d_{kif} = Fraction of fluorinated GHG by-product k generated from input gas i destroyed or removed when fed into abatement systems by process tools in fab f that are included in the stack testing option, as calculated in equation I–24B to this section (expressed as decimal fraction).

f = Fab.

i = Fluorinated GHG input gas.

k = Fluorinated GHG by-product.

(vii) When using the stack testing method described in this paragraph (i), you must calculate abatement system uptime on a fab basis using equation I–23 to this section. When calculating abatement system uptime for use in equation I–19 and I–20 to this section, you must evaluate the variables ''Tdpf'' and ''UTpf'' for the sampling period instead of the reporting year.

$$UT_f = 1 - \frac{\sum_p Td_{pf}}{\sum_p UT_{pf}} \quad \text{(Eq. I–23)}$$

Where:

UT_f = The average uptime factor for all abatement systems in fab f (expressed as a decimal fraction). The average uptime factor may be set to one (1) if all the abatement systems in fab f are interlocked with all the tools feeding the abatement systems such that no gas can flow to the tools if the abatement systems are not in operational mode.

Td_{pf} = The total time, in minutes, that abatement system p, connected to process tool(s) in fab f, is not in operational mode as defined in § 98.98. If your fab uses redundant abatement systems, you may account for Tdpf as specified in § 98.94(f)(4)(vi).

UT_{pf} = Total time, in minutes per year, in which the tool(s) connected at any point during the year to abatement system p, in fab f could be in operation. For determining the amount of tool operating time, you may assume that tools that were installed for the whole of the year were operated for 525,600 minutes per year. For tools that were installed or uninstalled during the year, you must prorate the operating time to account for the days in which the tool was not installed; treat any partial day that a tool was installed as a full day (1,440 minutes) of tool operation. For an abatement system that has more than one connected tool, the tool operating time is 525,600 minutes per year if there was at least one tool installed at all times throughout the year. If you have tools that are idle with no gas flow through the tool, you may calculate total tool time using the actual time that gas is flowing through the tool.

f = Fab.

p = Abatement system.

(viii) When using the stack testing option described in this paragraph (i) and when using more than one DRE for the same input gas i or by-product gas k, you must calculate the weighted-average fraction of each fluorinated input gas i and each fluorinated by-product gas k that has more than one DRE and that is destroyed or removed in abatement systems for each fab f, as applicable, by using equation I–24A to this section (for input gases) and equation I–24B to this section (for by-product gases) and table I–18 to this subpart. If default values are not available in table I–18 for a particular input gas, you must use a value of 10.

$$D_{if} = \frac{\sum_p (\gamma_{i,p} \cdot \sum_{DREy} n_{i,p,DREy} \cdot DRE_y) + \sum_{DREz} DRE_z \cdot m_{i,q,DREz}}{\sum_p \gamma_{i,p} \cdot n_{i,p,a} + m_{i,q,a}} \quad \text{(Eq. I–24A)}$$

$$D_{kif} = \frac{\sum_p (\gamma_{k,i,p} \cdot \sum_{DREy} n_{k,i,p,DREy} \cdot DRE_y) + \sum_{DREz} DRE_z \cdot m_{k,i,q,DREz}}{\sum_p \gamma_{k,i,p} \cdot n_{k,i,p,a} + m_{k,i,q,a}} \quad \text{(Eq. I–24B)}$$

Where:

d_{if} = The average weighted fraction of fluorinated GHG input gas i destroyed or removed when fed into abatement systems by process tools in fab f (expressed as a decimal fraction).

d_{kif} = The average weighted fraction of fluorinated GHG by-product gas k generated from input gas i that is destroyed or removed when fed into abatement systems by process tools in fab f (expressed as a decimal fraction).

$n_{i,p,DREy}$ = Number of tools that use gas i, that run chamber cleaning process p, and that are equipped with abatement systems for gas i that have the DRE DREy.

$m_{i,q,DREz}$ = Number of tools that use gas i, that run etch and/or wafer cleaning processes, and that are equipped with abatement systems for gas i that have the DRE DREz.

$n_{i,p,a}$ = Total number of tools that use gas i, run chamber cleaning process type p, and that are equipped with abatement systems for gas i.

$m_{i,q,a}$ = Total number of tools that use gas i, run etch and/or wafer cleaning processes, and that are equipped with abatement systems for gas i.

$n_{k,i,p,DREy}$ = Number of tools that use gas i, generate by-product k, that run chamber cleaning process p, and that are equipped with abatement systems for gas i that have the DRE DREy.

$m_{k,i,q,DREz}$ = Number of tools that use gas i, generate by-product k, that run etch and/or wafer cleaning processes, and that are equipped with abatement systems for gas i that have the DRE DREz.
$n_{k,i,p,a}$ = Total number of tools that use gas i, generate by-product k, run chamber cleaning process type p, and that are equipped with abatement systems for gas i.
$m_{k,i,q,a}$ = Total number of tools that use gas i, generate by-product k, run etch and/or wafer cleaning processes, and that are equipped with abatement systems for gas i.
$\gamma_{i,p}$ = Default factor reflecting the ratio of uncontrolled emissions per tool of input gas i from tools running process sub-type p processes to uncontrolled emissions per tool of input gas i from process tools running process type q processes.
$\gamma_{k,i,p}$ = Default factor reflecting the ratio of uncontrolled emissions per tool of input gas i from tools running process sub-type p processes to uncontrolled emissions per tool of input gas i from process tools running process type q processes.
DRE_y = Default or alternative certified DRE for gas i for abatement systems connected to CVD tool.
DRE_z = Default or alternative certified DRE for gas i for abatement systems connected to etching and/or wafer cleaning tool.
p = Chamber cleaning process sub-type.
q = Reference process type. There is one process type q that consists of the combination of etching and/or wafer cleaning processes.
f = Fab.
i = Fluorinated GHG input gas.

(ix) When using the stack testing method described in this paragraph (i), you must calculate the fraction each fluorinated input gas i exhausted in fab f from tools with abatement systems and the fraction of each by-product gas k exhausted from tools with abatement systems, as applicable, by following either the procedure set forth in paragraph (i)(3)(ix)(A) of this section or the procedure set forth in paragraph (i)(3)(ix)(B) of this section.

(A) Use equation I–24C to this section (for input gases) and equation I–24D to this section (for by-product gases) and table I–18 to this subpart. If default values are not available in table I–18 for a particular input gas, you must use a value of 10.

$$A_{i,f} = \frac{\sum_p \gamma_{i,p} \cdot n_{i,p,a} + m_{i},q,a}{\sum_p \gamma_{i,p} \cdot n_{i,p} + m_{i,q}} \qquad \text{(Eq. I–24C)}$$

Where:
a_{if} = Fraction of fluorinated input gas i exhausted from tools with abatement systems in fab f (expressed as a decimal fraction).
$n_{i,p,a}$ = Number of tools that use gas i, that run chamber cleaning process sub-type p, and that are equipped with abatement systems for gas i.
$m_{i,q,a}$ = Number of tools that use gas i, that run etch and/or wafer cleaning processes, and that are equipped with abatement systems for gas i.
$n_{i,p}$ = Total number of tools using gas i and running chamber cleaning process sub-type p.
$m_{i,q}$ = Total number of tools using gas i and running etch and/or wafer cleaning processes.
$\gamma_{i,p}$ = Default factor reflecting the ratio of uncontrolled emissions per tool of input gas i from tools running process type p processes to uncontrolled emissions per tool of input gas i from process tools running process type q processes.
p = Chamber cleaning process sub-type.
q = Reference process type. There is one process type q that consists of the combination of etching and/or wafer cleaning processes.

$$A_{k,i,f} = \frac{\sum_p \gamma_{k,i,p} \cdot n_{k,i,p,a} + m_{k,i,q,a}}{\sum_p \gamma_{k,i,p} \cdot n_{k,i,p} + m_{k,i,q}} \qquad \text{Eq. I–24D}$$

Where:
$a_{k,i,f}$ = Fraction of by-product gas k exhausted from tools using input gas i with abatement systems in fab f (expressed as a decimal fraction).
$n_{k,i,p,a}$ = Number of tools that exhaust by-product gas k from input gas i, that run chamber cleaning process p, and that are equipped with abatement systems for gas k.
$m_{k,i,q,a}$ = Number of tools that exhaust by-product gas k from input gas i, that run etch and/or wafer cleaning processes, and that are equipped with abatement systems for gas k.
$n_{k,i,p}$ = Total number of tools emitting by-product k from input gas i and running chamber cleaning process p.
$m_{k,i,q}$ = Total number of tools emitting by-product k from input gas i and running etch and/or wafer cleaning processes.
$\gamma_{k,i,p}$ = Default factor reflecting the ratio of uncontrolled emissions per tool of by-product gas k from input gas i from tools running chamber cleaning process p to uncontrolled emissions per tool of by-product gas k from input gas i from process tools running etch and/or wafer cleaning processes.
p = Chamber cleaning process sub-type.
q = Reference process type. There is one process type q that consists of the combination of etching and/or wafer cleaning processes.

(B) Use paragraph (e) of this section to apportion consumption of gas i either to tools with abatement systems and tools without abatement systems or to each process type or sub-type, as applicable. If you apportion consumption of gas i to each process type or sub-type, calculate the fractions of input gas i and by-product gas k formed from gas i that are exhausted from tools with abatement systems based on the numbers of tools with and without abatement systems within each process type or sub-type.

(4) *Method to calculate emissions from fluorinated GHGs that are not tested.* Calculate emissions from consumption of each intermittent low-use fluorinated GHG as defined in § 98.98 of this subpart using the default utilization and by-product formation rates provided in table I–11, I–12, I–13, I–14, or I–15 to this subpart, as applicable, and by using equations I–8A, I–8B, I–9, and I–13 to this section. If a fluorinated GHG was not being used during the stack testing and does not meet the definition of intermittent low-use fluorinated GHG in § 98.98, then you must test the stack systems associated with the use of that fluorinated GHG at a time when that gas is in use at a magnitude that would allow you to determine an emission factor for that gas according to the procedures specified in paragraph (i)(3) of this section.

(5) [Reserved]

■ 24. Amend § 98.94 by:
■ a. Revising paragraph (c) introductory text;
■ b. Adding paragraph (e);
■ c. Revising paragraphs (f)(3), (f)(4) introductory text, (f)(4)(iii), (j)(1) introductory text, (j)(1)(i), (j)(3) introductory text, and (j)(5); and
■ d. Removing and reserving paragraphs (j)(6) and (j)(8)(v).

The revisions and addition read as follows:

§ 98.94 Monitoring and QA/QC requirements.

* * * * *

(c) You must develop apportioning factors for fluorinated GHG and N_2O consumption (including the fraction of gas consumed by process tools connected to abatement systems as in equations I–8A, I–8B, I–9, and I–10 to § 98.93), to use in the equations of this subpart for each input gas i, process sub-type, process type, stack system, and fab as appropriate, using a fab-specific engineering model that is documented in your site GHG Monitoring Plan as required under § 98.3(g)(5). This model must be based on a quantifiable metric, such as wafer passes or wafer starts, or direct measurement of input gas consumption as specified in paragraph (c)(3) of this section. To verify your model, you must demonstrate its precision and accuracy by adhering to the requirements in paragraphs (c)(1) and (2) of this section.

* * * * *

(e) If you use HC fuel CECS purchased and installed on or after January 1, 2025 to control emissions from tools that use either NF_3 as an input gas in remote plasma cleaning processes or F_2 as an input gas in any process, and if you use a value less than 1 for either $a_{F2,j}$ or $a_{NF3,RPC}$ in equation I–9 to § 98.93, you must certify and document that the model for each of the systems for which you are claiming that it does not form CF_4 from F_2 has been tested and verified to produce less than 0.1% CF_4 from F_2 and that each of the systems is installed, operated, and maintained in accordance with the directions of the HC fuel CECS manufacturer. Hydrocarbon-fuel-based combustion emissions control systems include but are not limited to abatement systems as defined in § 98.98 that are hydrocarbon-fuel-based. The rate of conversion from F_2 to CF_4 must be measured using a scientifically sound, industry-accepted method that accounts for dilution through the abatement device, such as EPA 430–R–10–003 (incorporated by reference, see § 98.7), adjusted to calculate the rate of conversion from F_2 to CF_4 rather than the DRE. Either the HC fuel CECS manufacturer or the electronics manufacturer may perform the measurement. The flow rate of F_2 into the tested HC fuel CECS may be metered using a calibrated mass flow controller.

(f) * * *

(3) If you use default destruction and removal efficiency values in your emissions calculations under § 98.93(a), (b), and/or (i), you must certify and document that the abatement systems at your facility for which you use default destruction or removal efficiency values are specifically designed for fluorinated GHG or N_2O abatement, as applicable, and provide the abatement system manufacturer-verified DRE value that meets (or exceeds) the default destruction or removal efficiency in table I–16 to this subpart for the fluorinated GHG or N_2O. For abatement systems purchased and installed on or after January 1, 2025, you must also certify and document that the abatement system has been tested by the abatement system manufacturer based on the methods specified in paragraph (f)(3)(i) of this section and verified to meet (or exceed) the default destruction or removal efficiency in table I–16 for the fluorinated GHG or N_2O under worst-case flow conditions as defined in paragraph (f)(3)(ii) of this section. If you use a verified destruction and removal efficiency value that is lower than the default in table I–16 to this subpart in your emissions calculations under § 98.93(a), (b), and/or (i), you must certify and document that the abatement systems at your facility for which you use the verified destruction or removal efficiency values are specifically designed for fluorinated GHG or N_2O abatement, as applicable, and provide the abatement system manufacturer-verified DRE value that is lower than the default destruction or removal efficiency in table I–16 for the fluorinated GHG or N_2O. For abatement systems purchased and installed on or after January 1, 2025, you must also certify and document that the abatement system has been tested by the abatement system manufacturer based on the methods specified in paragraph (f)(3)(i) of this section and verified to meet or exceed the destruction or removal efficiency value used for that fluorinated GHG or N_2O under worst-case flow conditions as defined in paragraph (f)(3)(ii) of this section. If you elect to calculate fluorinated GHG emissions using the stack test method under § 98.93(i), you must also certify that you have included and accounted for all abatement systems designed for fluorinated GHG abatement and any respective downtime in your emissions calculations under § 98.93(i)(3).

(i) For purposes of paragraph (f)(3) of this section, destruction and removal efficiencies for abatement systems purchased and installed on or after January 1, 2025, must be measured using a scientifically sound, industry-accepted measurement methodology that accounts for dilution through the abatement system, such as EPA 430–R–10–003 (incorporated by reference, see § 98.7).

(ii) Worst-case flow conditions are defined as the highest total fluorinated GHG or N_2O flows through each model of emissions control systems (gas by gas and process type by process type across the facility) and the highest total flow scenarios (with N_2 dilution accounted for) across the facility during which the abatement system is claimed to be in operational mode.

(4) If you calculate and report controlled emissions using neither the default destruction or removal efficiency values in table I–16 to this subpart nor an abatement system manufacturer-verified lower destruction or removal efficiency value per paragraph (f)(3) of this section, you must use an average of properly measured destruction or removal efficiencies for each gas and process sub-type or process type combination, as applicable, determined in accordance with procedures in paragraphs (f)(4)(i) through (vi) of this section. This includes situations in which your fab employs abatement systems not specifically designed for fluorinated GHG or N_2O abatement or for which your fab operates abatement systems outside the range of parameters specified in the documentation supporting the certified DRE and you elect to reflect emission reductions due to these systems. You must not use a default value from table I–16 to this subpart for any abatement system not specifically designed for fluorinated GHG and N_2O abatement, for any abatement system not certified to meet the default value from table I–16, or for any gas and process type combination for which you have measured the destruction or removal efficiency according to the requirements of paragraphs (f)(4)(i) through (vi) of this section.

* * * * *

(iii) If you elect to take credit for abatement system destruction or removal efficiency before completing testing on 20 percent of the abatement systems for that gas and process sub-type or process type combination, as applicable, you must use default destruction or removal efficiencies or a verified destruction or removal efficiency, if verified at a lower value, for a gas and process type combination. You must not use a default value from table I–16 to this subpart for any abatement system not specifically designed for fluorinated GHG and N_2O abatement, and must not take credit for abatement system destruction or removal efficiency before completing testing on 20 percent of the abatement systems for that gas and process sub-

type or process type combination, as applicable. Following testing on 20 percent of abatement systems for that gas and process sub-type or process type combination, you must calculate the average destruction or removal efficiency as the arithmetic mean of all test results for that gas and process sub-type or process type combination, until you have tested at least 30 percent of all abatement systems for each gas and process sub-type or process type combination. After testing at least 30 percent of all systems for a gas and process sub-type or process type combination, you must use the arithmetic mean of the most recent 30 percent of systems tested as the average destruction or removal efficiency. You may include results of testing conducted on or after January 1, 2011 for use in determining the site-specific destruction or removal efficiency for a given gas and process sub-type or process type combination if the testing was conducted in accordance with the requirements of paragraph (f)(4)(i) of this section.

* * * * *

(j) * * *

(1) Stack system testing. Conduct an emissions test for each stack system according to the procedures in paragraphs (j)(1)(i) through (iv) of this section.

(i) You must conduct an emission test during which the fab is operating at a representative operating level, as defined in § 98.98, and with the abatement systems connected to the stack system being tested operating with at least 90-percent uptime, averaged over all abatement systems, during the 8-hour (or longer) period for each stack system, or at no less than 90 percent of the abatement system uptime rate measured over the previous reporting year, averaged over all abatement systems. Hydrocarbon-fuel-based combustion emissions control systems that were purchased and installed on or after January 1, 2025, that are used to control emissions from tools that use either NF_3 in remote plasma cleaning processes or F_2 as an input gas in any process type or sub-type, and that are not certified not to form CF_4, must operate with at least 90-percent uptime during the test.

* * * * *

(3) *Fab-specific fluorinated GHG consumption measurements.* You must determine the amount of each fluorinated GHG consumed by each fab during the sampling period for all process tools connected to the stack systems under § 98.93(i)(3), according to the procedures in paragraphs (j)(3)(i) and (ii) of this section.

* * * * *

(5) *Emissions testing frequency.* You must conduct emissions testing to develop fab-specific emission factors on a frequency according to the procedures in paragraph (j)(5)(i) or (ii) of this section.

(i) *Annual testing.* You must conduct an annual emissions test for each stack system unless you meet the criteria in paragraph (j)(5)(ii) of this section to skip annual testing. Each set of emissions testing for a stack system must be separated by a period of at least 2 months.

(ii) *Criteria to test less frequently.* After the first 3 years of annual testing, you may calculate the relative standard deviation of the emission factors for each fluorinated GHG included in the test and use that analysis to determine the frequency of any future testing. As an alternative, you may conduct all three tests in less than 3 calendar years for purposes of this paragraph (j)(5)(ii), but this does not relieve you of the obligation to conduct subsequent annual testing if you do not meet the criteria to test less frequently. If the criteria specified in paragraphs (j)(5)(ii)(A) and (B) of this section are met, you may use the arithmetic average of the three emission factors for each fluorinated GHG and fluorinated GHG byproduct for the current year and the next 4 years with no further testing unless your fab operations are changed in a way that triggers the re-test criteria in paragraph (j)(8) of this section. In the fifth year following the last stack test included in the previous average, you must test each of the stack systems and repeat the relative standard deviation analysis using the results of the most recent three tests (*i.e.* , the new test and the two previous tests conducted prior to the 4-year period). If the criteria specified in paragraphs (j)(5)(ii)(A) and (B) of this section are not met, you must use the emission factors developed from the most recent testing and continue annual testing. You may conduct more than one test in the same year, but each set of emissions testing for a stack system must be separated by a period of at least 2 months. You may repeat the relative standard deviation analysis using the most recent three tests, including those tests conducted prior to the 4-year period, to determine if you are exempt from testing for the next 4 years.

(A) The relative standard deviation of the total CO_2e emission factors calculated from each of the three tests (expressed as the total CO_2e fluorinated GHG emissions of the fab divided by the total CO_2e fluorinated GHG use of the fab) is less than or equal to 15 percent.

(B) The relative standard deviation for all single fluorinated GHGs that individually accounted for 5 percent or more of CO_2e emissions were less than 20 percent.

* * * * *

■ 25. Amend § 98.96 by:

■ a. Revising paragraphs (c)(1) and (2);

■ b. Adding paragraph (o); and

■ c. Revising paragraphs (p)(2), (q)(2) and (3), (r)(2), (w)(2), (y) introductory text, (y)(1), (y)(2)(i) and (iv), and (y)(4).

The revisions and addition read as follows:

§ 98.96 Data reporting requirements.

* * * * *

(c) * * *

(1) When you use the procedures specified in § 98.93(a), each fluorinated GHG emitted from each process type for which your fab is required to calculate emissions as calculated in equations I–6, I–7, and I–9 to § 98.93.

(2) When you use the procedures specified in § 98.93(a), each fluorinated GHG emitted from each process type or process sub-type as calculated in equations I–8A and I–8B to § 98.93, as applicable.

* * * * *

(o) For all HC fuel CECS that were purchased and installed on or after January 1, 2025, that are used to control emissions from tools that use either NF_3 as an input gas in remote plasma clean processes or F_2 as an input gas in any process type or sub-type and for which you are not calculating emissions under equation I–9 to § 98.93, certification that the rate of conversion from F_2 to CF_4 is <0.1% and that the systems are installed, operated, and maintained in accordance with the directions of the HC fuel CECS manufacturer. Hydrocarbon-fuel-based combustion emissions control systems include but are not limited to abatement systems as defined in § 98.98 that are hydrocarbon-fuel-based. If you make the certification based on your own testing, you must certify that you tested the model of the system according to the requirements specified in § 98.94(e). If you make the certification based on testing by the HC fuel CECS manufacturer, you must provide documentation from the HC fuel CECS manufacturer that the rate of conversion from F_2 to CF_4 is <0.1% when tested according to the requirements specified in § 98.94(e).

(p) * * *

(2) The basis of the destruction or removal efficiency being used (default, manufacturer-verified, or site-specific measurement according to

§ 98.94(f)(4)(i)) for each process sub-type or process type and for each gas.

(q) * * *

(2) If you use default destruction or removal efficiency values in your emissions calculations under § 98.93(a), (b), or (i), certification that the site maintenance plan for abatement systems for which emissions are being reported contains the manufacturer's recommendations and specifications for installation, operation, and maintenance for each abatement system. To use the default or lower manufacturer-verified destruction or removal efficiency values, operation of the abatement system must be within manufacturer's specifications, which may include, for example, specifications on vacuum pumps' purges, fuel and oxidizer settings, supply and exhaust flows and pressures, and utilities to the emissions control equipment including fuel gas flow and pressure, calorific value, and water quality, flow and pressure.

(3) If you use default destruction or removal efficiency values in your emissions calculations under § 98.93(a), (b), and/or (i), certification that the abatement systems for which emissions are being reported were specifically designed for fluorinated GHG or N_2O abatement, as applicable. You must support this certification by providing abatement system supplier documentation stating that the system was designed for fluorinated GHG or N_2O abatement, as applicable, and supply the destruction or removal efficiency value at which each abatement system is certified for the fluorinated GHG or N_2O abated, as applicable. You may only use the default destruction or removal efficiency value if the abatement system is verified to meet or exceed the destruction or removal efficiency default value in table I–16 to this subpart. If the system is verified at a destruction or removal efficiency value lower than the default value, you may use the verified value.

* * * * *

(r) * * *

(2) Use equation I–28 to this section to calculate total unabated emissions, in metric ton CO_2e, of all fluorinated GHG emitted from electronics manufacturing processes whose emissions of fluorinated GHG you calculated according to the stack testing procedures in § 98.93(i)(3). For each set of processes, use the same input gas consumption (C_{if}), input gas emission factors (EF_{if}), by-product gas emission factors (EF_{kf}), fractions of tools abated (a_{if} and a_{kif}), and destruction efficiencies (d_{if} and d_{ik}) to calculate unabated emissions as you used to calculate emissions.

$$SFGHG = \sum_i \left[\frac{EF_{if}}{(1-(a_{if}*d_{if}))} * C_{if} * GWP_i\right] + \sum_k \left[EF_{kf} * \sum_i \frac{C_{if}}{1-(a_{kif} \bullet d_{ik})} * GWP_k\right] \quad \text{Eq. I–28}$$

Where:

SFGHG = Total unabated emissions of fluorinated GHG emitted from electronics manufacturing processes in the fab, expressed in metric ton CO_2e for which you calculated total emission according to the procedures in § 98.93(i)(3).

EF_{if} = Emission factor for fluorinated GHG input gas i, emitted from fab f, as calculated in equation I–19 to § 98.93 (kg emitted/kg input gas consumed).

a_{if} = Fraction of fluorinated GHG input gas i used in fab f in tools with abatement systems (expressed as a decimal fraction).

d_{if} = Fraction of fluorinated GHG i destroyed or removed in abatement systems connected to process tools in fab f, as calculated from equation I–24A to § 98.93, which you used to calculate total emissions according to the procedures in § 98.93(i)(3) (expressed as a decimal fraction).

C_{if} = Total consumption of fluorinated GHG input gas i, of tools vented to stack systems, for fab f, for the reporting year, expressed in metric ton CO_2e, which you used to calculate total emissions according to the procedures in § 98.93(i)(3) (expressed as a decimal fraction).

EF_{kf} = Emission factor for fluorinated GHG by-product gas k, emitted from fab f, as calculated in equation I–20 to § 98.93 (kg emitted/kg of all input gases consumed in tools vented to stack systems).

a_{kif} = Fraction of fluorinated GHG by-product gas k emitted in fab f from tools using input gas i with abatement systems (expressed as a decimal fraction), as calculated using equation I–24D to § 98.93.

d_{ik} = Fraction of fluorinated GHG byproduct k destroyed or removed in abatement systems connected to process tools in fab f, as calculated from equation I–24B to § 98.93, which you used to calculate total emissions according to the procedures in § 98.93(i)(3) (expressed as a decimal fraction).

GWP_i = GWP of emitted fluorinated GHG i from table A–1 to subpart A of this part.

GWP_k = GWP of emitted fluorinated GHG by-product k from table A–1 to subpart A of this part.

i = Fluorinated GHG.

k = Fluorinated GHG by-product.

* * * * *

(w) * * *

(2) An inventory of all stack systems from which process fluorinated GHG are emitted.

* * * * *

(y) If your semiconductor manufacturing facility manufactures wafers greater than 150 mm and emits more than 40,000 metric ton CO_2e of GHG emissions, based on your most recently submitted annual report as required in paragraph (c) of this section, from the electronics manufacturing processes subject to reporting under this subpart, you must prepare and submit a technology assessment report every five years to the Administrator (or an authorized representative) that meets the requirements specified in paragraphs (y)(1) through (6) of this section. Any other semiconductor manufacturing facility may voluntarily submit this report to the Administrator. If your semiconductor manufacturing facility manufactures only 150 mm or smaller wafers, you are not required to prepare and submit a technology assessment report, but you are required to prepare and submit a report if your facility begins manufacturing wafers 200 mm or larger during or before the calendar year preceding the year the technology assessment report is due. If your semiconductor manufacturing facility is no longer required to report to the GHGRP under subpart I due to the cessation of semiconductor manufacturing as described in § 98.2(i)(3), you are not required to submit a technology assessment report.

(1) The first technology assessment report due after January 1, 2025, is due on March 31, 2028, and subsequent reports must be delivered every 5 years no later than March 31 of the year in which it is due.

(2) * * *

(i) It must describe how the gases and technologies used in semiconductor manufacturing using 200 mm and 300 mm wafers in the United States have changed in the past 5 years and whether any of the identified changes are likely to have affected the emissions characteristics of semiconductor manufacturing processes in such a way that the default utilization and by-product formation rates or default destruction or removal efficiency factors of this subpart may need to be updated.

* * * * *

(iv) It must provide any utilization and byproduct formation rates and/or destruction or removal efficiency data that have been collected in the previous 5 years that support the changes in semiconductor manufacturing processes described in the report. Any utilization or byproduct formation rate data submitted must be reported using both of the methods specified in paragraphs (y)(2)(iv)(A) and (B) of this section if multiple fluorinated input gases are used, unless one of the input gases does not have a reference process utilization rate in table I–19 or I–20 to this subpart for the process type and wafer size whose emission factors are being measured, in which case the data must be submitted using the method specified in paragraph (y)(2)(iv)(A) of this section. If only one fluorinated input gas is fed into the process, you must use equations I–29A and I–29B to this section. In addition to using the methods specified in paragraphs (y)(2)(iv)(A) and (B) of this section, you have the option to calculate and report the utilization or byproduct formation rate data using any alternative calculation methodology. The report must include the input gases used and measured, the utilization rates measured, the byproduct formation rates measured, the process type, the process subtype for chamber clean processes, the wafer size, and the methods used for the measurements. The report must also specify the method used to calculate each reported utilization and by-product formation rate, and provide a unique record number for each data set. For any destruction or removal efficiency data submitted, the report must include the input gases used and measured, the destruction and removal efficiency measured, the process type, the methods used for the measurements, and whether the abatement system is specifically designed to abate the gas measured under the operating conditions used for the measurement. If you choose to use an additional alternative calculation methodology to calculate and report the input gas emission factors and by-product formation rates, you must provide a complete, mathematical description of the alternative method used (including the equation used to calculate each reported utilization and by-product formation rate) and include the information in this paragraph (y)(2)(iv).

(A) *All-input gas method.* Use equation I–29A to this section to calculate the input gas emission factor $(1 - U_{ij})$ for each input gas in a single test. If the result of equation I–29A exceeds 0.8 for an F–GHG that contains carbon, you must use equation I–29C to this section to calculate the input gas emission factor for that F–GHG and equation I–29D to this section to calculate the by-product formation rate for that F–GHG from the other input gases. Use equation I–29B to this section to calculate the by-product formation rates from each input gas for F–GHGs that are not input gases. If a test uses a cleaning or etching gas that does not contain carbon in combination with a cleaning or etching gas that does contain carbon and the process chamber is not used to etch or deposit carbon-containing films, you may elect to assign carbon containing by-products only to the carbon-containing input gases. If you choose to assign carbon containing by-products only to carbon-containing input gases, remove the input mass of the non-carbon containing gases from the sum of $Mass_i$ and the sum of $Mass_g$ in equations I–29B and I–29D to this section, respectively.

$$\left(1 - U_{ij}\right) = \frac{(E_i)}{(Mass_i)} \quad \text{(Eq. I–29A)}$$

Where:

U_{ij} = Process utilization rate for fluorinated GHG i, process type j.

E_i = The mass emissions of input gas i.

$Mass_i$ = The mass of input gas i fed into the process.

i = Fluorinated GHG.

j = Process type.

$$BEF_{kji} = \frac{(E_k)}{\sum_i Mass_i} \quad \text{(Eq. I–29B)}$$

Where:

BEF_{kji} = By-product formation rate for gas k from input gas i, for process type j, where gas k is not an input gas.

E_k = The mass emissions of by-product gas k.

$Mass_i$ = The mass of input gas i fed into the process.

i = Fluorinated GHG.

j = Process type.

k = Fluorinated GHG by-product.

$$\left(1 - U_{ij}\right) = 0.8 \quad \text{(Eq. I–29C)}$$

Where:

U_{ij} = Process utilization rate for fluorinated GHG i, process type j.

$$BEF_{ijg} = \frac{(E_i - 0.8 * Mass_i)}{\sum_g Mass_g} \quad \text{(Eq. I–29D)}$$

Where:

BEF_{ijg} = By-product formation rate for gas i from input gas g for process type j.

E_i = The mass emissions of input gas i.

$Mass_i$ = The mass of input gas i fed into the process.

$Mass_g$ = The mass of input gas g fed into the process, where g does not equal input gas i.

i = Fluorinated GHG.

g = Fluorinated GHG input gas, where gas g is not equal to gas i.

j = Process type.

(B) *Reference emission factor method.* Calculate the input gas emission factors and by-product formation rates from a test using equations I–30A, I–30B, and I–29B to this section, and table I–19 or I–20 to this subpart. In this case, use

equation I–30A to this section to calculate the input gas emission factors and use equation I–30B and I–29B to this section to calculate the by-product formation rates.

$$(1 - U_{ij}) = (1 - U_{ijr}) * \left[\frac{E_i}{(Mass_i * (1 - U_{ijr}) + \sum_g Mass_g BEF_{ijgr})}\right] \quad \text{(Eq. I–30A)}$$

Where:

U_{ij} = Process utilization rate for fluorinated GHG i, process type j.

U_{ijr} = Reference process utilization rate for fluorinated GHG i, process type j, for input gas i, using table I–19 or I–20 to this subpart as appropriate.

E_i = The mass emissions of input gas i.

$Mass_i$ = The mass of gas i fed into the process.

$Mass_g$ = The mass of input gas g fed into the process, where g does not equal input gas i.

BEF_{ijgr} = Reference by-product formation rate for gas i from input gas g for process type j, using table I–19 or I–20 to this subpart as appropriate.

i = Fluorinated GHG.

g = Fluorinated GHG input gas, where gas g is not equal to gas i.

r = Reference data.

$$BEF_{ijg} = BEF_{ijgr} * \left[\frac{E_i}{(Mass * (1 - U_{ijr}) + \sum_g Mass_g BEF_{ijgr})}\right] \quad \text{(Eq. I–30B)}$$

Where:

BEF_{ijg} = By-product formation rate for gas i from input gas g for process type j, where gas i is also an input gas.

BEF_{ijgr} = Reference by-product formation rate for gas i from input gas g for process type j from table I–19 or I–20 to this subpart, as appropriate.

U_{ijr} = Reference process utilization rate for fluorinated GHG i, process type j, for input gas i, using table I–19 or I–20 to this subpart, as appropriate.

E_i = The mass emissions of input gas i.

$Mass_i$ = The mass of gas i fed into the process.

$Mass_g$ = The mass of input gas g fed into the process, where g does not equal input gas i.

i = Fluorinated GHG.

j = Process type.

g = Fluorinated GHG input gas, where gas g is not equal to gas i.

r = Reference data.

* * * * *

(4) Multiple semiconductor manufacturing facilities may submit a single consolidated technology assessment report as long as the facility identifying information in § 98.3(c)(1) and the certification statement in § 98.3(c)(9) is provided for each facility for which the consolidated report is submitted.

* * * * *

■ 26. Amend § 98.97 by:

■ a. Adding paragraph (b);

■ b. Revising paragraphs (d)(1)(iii), (d)(3), (d)(5)(i), (d)(6) and (7), and (d)(9)(i);

■ c. Removing and reserving paragraph (i)(1); and

■ d. Revising paragraphs (i)(5) and (9) and (k).

The addition and revisions read as follows:

§ 98.97 Records that must be retained.

* * * * *

(b) If you use HC fuel CECS purchased and installed on or after January 1, 2025, to control emissions from tools that use either NF_3 as an input gas in remote plasma cleaning processes or F_2 as an input gas in any process, and if you use a value less than 1 for either $a_{F2,j}$ or $a_{NF3,RPC}$ in equation I–9 to § 98.93, certification and documentation that the model for each of the systems that you claim does not form CF_4 from F_2 has been tested and verified to produce less than 0.1% CF_4 from F_2, and certification that the site maintenance plan includes the HC fuel CECS manufacturer's recommendations and specifications for installation, operation, and maintenance of those systems. If you are relying on your own testing to make the certification that the model produces less than 0.1% CF_4 from F_2, the documentation must include the model tested, the method used to perform the testing (*e.g.,* EPA 430–R–10–003, modified to calculate the formation rate of CF_4 from F_2 rather than the DRE), complete documentation of the results of any initial and subsequent tests, and a final report similar to that specified in EPA 430–R–10–003 (incorporated by reference, see § 98.7), with appropriate adjustments to reflect the measurement of the formation rate of CF_4 from F_2 rather than the DRE. If you are relying on testing by the HC fuel CECS manufacturer to make the certification that the system produces less than 0.1% CF_4 from F_2, the documentation must include the model tested, the method used to perform the testing, and the results of the test.

* * * * *

(d) * * *

(1) * * *

(iii) If you use either default destruction or removal efficiency values or certified destruction or removal efficiency values that are lower than the default values in your emissions calculations under § 98.93(a), (b), and/or (i), certification that the abatement systems for which emissions are being reported were specifically designed for fluorinated GHG and N_2O abatement, as required under § 98.94(f)(3), certification that the site maintenance plan includes the abatement system manufacturer's recommendations and specifications for installation, operation, and maintenance, and the certified destruction and removal efficiency values for all applicable abatement systems. For abatement systems purchased and installed on or after January 1, 2025, also include records of the method used to measure the destruction and removal efficiency values.

* * * * *

(3) Where either the default destruction or removal efficiency value or a certified destruction or removal efficiency value that is lower than the default is used, documentation from the abatement system supplier describing the equipment's designed purpose and emission control capabilities for fluorinated GHG and N_2O.

* * * * *

(5) * * *

(i) The number of abatement systems of each manufacturer, and model numbers, and the manufacturer's certified fluorinated GHG and N_2O destruction or removal efficiency, if any.

* * * * *

(6) Records of all inputs and results of calculations made accounting for the uptime of abatement systems used during the reporting year, in accordance with equations I–15 or I–23 to § 98.93, as applicable. The inputs should

include an indication of whether each value for destruction or removal efficiency is a default value, lower manufacturer-verified value, or a measured site-specific value.

(7) Records of all inputs and results of calculations made to determine the average weighted fraction of each gas destroyed or removed in the abatement systems for each stack system using equations I–24A and I–24B to § 98.93, if applicable. The inputs should include an indication of whether each value for destruction or removal efficiency is a default value, lower manufacturer-verified value, or a measured site-specific value.

* * * * *

(9) * * *

(i) The site maintenance plan for abatement systems must be based on the abatement system manufacturer's recommendations and specifications for installation, operation, and maintenance if you use default or lower manufacturer-verified destruction and removal efficiency values in your emissions calculations under § 98.93(a), (b), and/or (i). If the manufacturer's recommendations and specifications for installation, operation, and maintenance are not available, you cannot use default destruction and removal efficiency values or lower manufacturer-verified value in your emissions calculations under § 98.93(a), (b), and/or (i). If you use an average of properly measured destruction or removal efficiencies determined in accordance with the procedures in § 98.94(f)(4)(i) through (vi), the site maintenance plan for abatement systems must be based on the abatement system manufacturer's recommendations and specifications for installation, operation, and maintenance, where available. If you deviate from the manufacturer's recommendations and specifications, you must include documentation that demonstrates how the deviations do not negatively affect the performance or destruction or removal efficiency of the abatement systems.

* * * * *

(i) * * *

(5) The fab-specific emission factor and the calculations and data used to determine the fab-specific emission factor for each fluorinated GHG and by-product, as calculated using equations I–19A, I–19B, I–19C and I–20 to § 98.93(i)(3).

* * * * *

(9) The number of tools vented to each stack system in the fab and all inputs and results for the calculations accounting for the fraction of gas exhausted through abatement systems using equations I–24C and I–24D to § 98.93.

* * * * *

(k) Annual gas consumption for each fluorinated GHG and N_2O as calculated in equation I–11 to § 98.93, including where your fab used less than 50 kg of a particular fluorinated GHG or N_2O used at your facility for which you have not calculated emissions using equations I–6, I–7, I–8A, I–8B, I–9, I–10, I–21, or I–22 to § 98.93, the chemical name of the GHG used, the annual consumption of the gas, and a brief description of its use.

* * * * *

■ 27. Amend § 98.98 by:

■ a. Removing the definition ''Fluorinated heat transfer fluids'';

■ b. Adding the definition ''Hydrocarbon-fuel based combustion emission control systems (HC fuel CECs)'' in alphabetical order; and

■ c. Revising the definition ''Operational mode''.

The revisions and addition read as follows:

§ 98.98 Definitions.

* * * * *

Hydrocarbon-fuel based combustion emission control system (HC fuel CECS) means a hydrocarbon fuel-based combustion device or equipment that is designed to destroy or remove gas emissions in exhaust streams via combustion from one or more electronics manufacturing production processes, and that is connected to manufacturing tools that have the potential to emit F_2 or fluorinated greenhouse gases. HC fuel CECs include both emission control systems that are and are not designed to destroy or remove fluorinated GHGs or N_2O.

* * * * *

Operational mode means the time in which an abatement system is properly installed, maintained, and operated according to the site maintenance plan for abatement systems as required in § 98.94(f)(1) and defined in § 98.97(d)(9). This includes being properly operated within the range of parameters as specified in the site maintenance plan for abatement systems. For abatement systems purchased and installed on or after January 1, 2025, this includes being properly operated within the range of parameters specified in the DRE certification documentation. An abatement system is considered to not be in operational mode when it is not operated and maintained according to the site maintenance plan for abatement systems or, for abatement systems purchased and installed on or after January 1, 2025, not operated within the range of parameters as specified in the DRE certification documentation.

* * * * *

■ 28. Revise table I–1 to subpart I to read as follows:

TABLE I–1 TO SUBPART I OF PART 98—DEFAULT EMISSION FACTORS FOR MANUFACTURING CAPACITY-BASED THRESHOLD APPLICABILITY DETERMINATION

Product type	Emission factors EF_i

■ 39. Add table I–21 to subpart I to read as follows:

TABLE I–21 TO SUBPART I OF PART 98—EXAMPLES OF FLUORINATED GHGS USED BY THE ELECTRONICS INDUSTRY

Product type	Fluorinated GHGs used during manufacture
Electronics	CF_4, C_2F_6, C_3F_8, c-C_4F_8, c-C_4F_8O, C_4F_6, C_5F_8, CHF_3, CH_2F_2, NF_3, SF_6, and fluorinated HTFs (CF_3-(O-CF(CF_3)-CF_2)n-(O-CF_2)m-O-CF_3, $C_nF_{2n}+_2$, $C_nF_{2n}+_1$(O)$C_mF_{2m}+_1$, $C_nF_{2n}O$, ($C_nF_{2n}+_1$)$_{3N}$).

Subpart N—Glass Production

■ 40. Revise and republish § 98.146 to read as follows:

§ 98.146 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the information specified in paragraphs (a) and (b) of this section, as applicable.

(a) If a CEMS is used to measure CO_2 emissions, then you must report under this subpart the relevant information required under § 98.36 for the Tier 4 Calculation Methodology and the following information specified in paragraphs (a)(1) through (3) of this section:

(1) Annual quantity of each carbonate-based raw material (tons) charged to each continuous glass melting furnace and for all furnaces combined.

(2) Annual quantity of glass produced (tons), by glass type, from each continuous glass melting furnace and from all furnaces combined.

(3) Annual quantity (tons), by glass type, of recycled scrap glass (cullet) charged to each continuous glass melting furnace and for all furnaces combined.

(b) If a CEMS is not used to determine CO_2 emissions from continuous glass melting furnaces, and process CO_2 emissions are calculated according to the procedures specified in § 98.143(b), then you must report the following information as specified in paragraphs (b)(1) through (9) of this section:

(1) Annual process emissions of CO_2 (metric tons) for each continuous glass melting furnace and for all furnaces combined.

(2) Annual quantity of each carbonate-based raw material charged (tons) to all furnaces combined.

(3) Annual quantity of glass produced (tons), by glass type, from each continuous glass melting furnace and from all furnaces combined.

(4) Annual quantity (tons), by glass type, of recycled scrap glass (cullet) charged to each continuous glass melting furnace and for all furnaces combined.

(5) Results of all tests, if applicable, used to verify the carbonate-based mineral mass fraction for each carbonate-based raw material charged to a continuous glass melting furnace, as specified in paragraphs (b)(5)(i) through (iii) of this section.

(i) Date of test.

(ii) Method(s) and any variations used in the analyses.

(iii) Mass fraction of each sample analyzed.

(6) [Reserved]

(7) Method used to determine decimal fraction of calcination, unless you used the default value of 1.0.

(8) Total number of continuous glass melting furnaces.

(9) The number of times in the reporting year that missing data procedures were followed to measure monthly quantities of carbonate-based raw materials, recycled scrap glass (cullet), or mass fraction of the carbonate-based minerals for any continuous glass melting furnace (months).

■ 41. Amend § 98.147 by revising and republishing paragraphs (a) and (b) to read as follows:

§ 98.147 Records that must be retained.

* * * * *

(a) If a CEMS is used to measure emissions, then you must retain the records required under § 98.37 for the Tier 4 Calculation Methodology and the following information specified in paragraphs (a)(1) through (3) of this section:

(1) Monthly glass production rate for each continuous glass melting furnace, by glass type (tons).

(2) Monthly amount of each carbonate-based raw material charged to each continuous glass melting furnace (tons).

(3) Monthly amount (tons) of recycled scrap glass (cullet) charged to each continuous glass melting furnace, by glass type.

(b) If process CO_2 emissions are calculated according to the procedures specified in § 98.143(b), you must retain the records in paragraphs (b)(1) through (6) of this section.

(1) Monthly glass production rate for each continuous glass melting furnace, by glass type (tons).

(2) Monthly amount of each carbonate-based raw material charged to each continuous glass melting furnace (tons).

(3) Monthly amount (tons) of recycled scrap glass (cullet) charged to each continuous glass melting furnace, by glass type.

(4) Data on carbonate-based mineral mass fractions provided by the raw material supplier for all raw materials consumed annually and included in calculating process emissions in equation N–1 to § 98.143, if applicable.

(5) Results of all tests, if applicable, used to verify the carbonate-based mineral mass fraction for each carbonate-based raw material charged to a continuous glass melting furnace, including the data specified in paragraphs (b)(5)(i) through (v) of this section.

(i) Date of test.

(ii) Method(s), and any variations of the methods, used in the analyses.

(iii) Mass fraction of each sample analyzed.

(iv) Relevant calibration data for the instrument(s) used in the analyses.

(v) Name and address of laboratory that conducted the tests.

(6) The decimal fraction of calcination achieved for each carbonate-based raw material, if a value other than 1.0 is used to calculate process mass emissions of CO_2.

* * * * *

Subpart P—Hydrogen Production

■ 42. Revise § 98.160 to read as follows:

§ 98.160 Definition of the source category.

(a) A hydrogen production source category consists of facilities that produce hydrogen gas as a product.

(b) This source category comprises process units that produce hydrogen by reforming, gasification, oxidation, reaction, or other transformations of feedstocks except the processes listed in paragraph (b)(1) or (2) of this section.

(1) Any process unit for which emissions are reported under another subpart of this part. This includes, but is not necessarily limited to:

(i) Ammonia production units for which emissions are reported under subpart G.

(ii) Catalytic reforming units at petroleum refineries that transform

naphtha into higher octane aromatics for which emissions are reported under subpart Y.

(iii) Petrochemical process units for which emissions are reported under subpart X.

(2) Any process unit that only separates out diatomic hydrogen from a gaseous mixture and is not associated with a unit that produces hydrogen created by transformation of one or more feedstocks, other than those listed in paragraph (b)(1) of this section.

(c) This source category includes the process units that produce hydrogen and stationary combustion units directly associated with hydrogen production (*e.g.* , reforming furnace and hydrogen production process unit heater).

■ 43. Amend § 98.162 by revising paragraph (a) to read as follows:

§ 98.162 GHGs to report.

* * * * *

(a) CO_2 emissions from each hydrogen production process unit, including fuel combustion emissions accounted for in the calculation methodologies in § 98.163.

* * * * *

■ 44. Amend § 98.163 by revising the introductory text, paragraph (b) introductory text, and paragraph (c) to read as follows:

§ 98.163 Calculating GHG emissions.

You must calculate and report the annual CO_2 emissions from each hydrogen production process unit using the procedures specified in paragraphs (a) through (c) of this section, as applicable.

* * * * *

(b) Fuel and feedstock material balance approach. Calculate and report CO_2 emissions as the sum of the annual emissions associated with each fuel and feedstock used for each hydrogen production process unit by following paragraphs (b)(1) through (3) of this section. The carbon content and molecular weight shall be obtained from the analyses conducted in accordance with § 98.164(b)(2), (3), or (4), as applicable, or from the missing data procedures in § 98.165. If the analyses are performed annually, then the annual value shall be used as the monthly average. If the analyses are performed more frequently than monthly, use the arithmetic average of values obtained during the month as the monthly average.

* * * * *

(c) If GHG emissions from a hydrogen production process unit are vented through the same stack as any combustion unit or process equipment that reports CO_2 emissions using a CEMS that complies with the Tier 4 Calculation Methodology in subpart C of this part, then the owner or operator shall report under this subpart the combined stack emissions according to the Tier 4 Calculation Methodology in § 98.33(a)(4) and all associated requirements for Tier 4 in subpart C of this part. If GHG emissions from a hydrogen production process unit using a CEMS that complies with the Tier 4 Calculation Methodology in subpart C of this part does not include combustion emissions from the hydrogen production unit (*i.e.* , the hydrogen production unit has separate stacks for process and combustion emissions), then the calculation methodology in paragraph (b) of this section shall be used considering only fuel inputs to calculate and report CO_2 emissions from fuel combustion related to the hydrogen production unit.

■ 45. Amend § 98.164 by:

■ a. Revising the introductory text, paragraphs (b)(2) through (4), and (b)(5) introductory text; and

■ b. Adding paragraphs (b)(5)(xix) and (c).

The revisions and additions read as follows:

§ 98.164 Monitoring and QA/QC requirements.

The GHG emissions data for hydrogen production process units must be quality-assured as specified in paragraph (a) or (b) of this section, as appropriate for each process unit, except as provided in paragraph (c) of this section:

* * * * *

(b) * * *

(2) Determine the carbon content and the molecular weight annually of standard gaseous hydrocarbon fuels and feedstocks having consistent composition (*e.g.,* natural gas) according to paragraph (b)(5) of this section. For gaseous fuels and feedstocks that have a maximum product specification for carbon content less than or equal to 0.00002 kg carbon per kg of gaseous fuel or feedstock, you may instead determine the carbon content and the molecular weight annually using the product specification's maximum carbon content and molecular weight. For other gaseous fuels and feedstocks (*e.g.,* biogas, refinery gas, or process gas), sample and analyze no less frequently than weekly to determine the carbon content and molecular weight of the fuel and feedstock according to paragraph (b)(5) of this section.

(3) Determine the carbon content of fuel oil, naphtha, and other liquid fuels and feedstocks at least monthly, except annually for standard liquid hydrocarbon fuels and feedstocks having consistent composition, or upon delivery for liquid fuels and feedstocks delivered by bulk transport (*e.g.,* by truck or rail) according to paragraph (b)(5) of this section. For liquid fuels and feedstocks that have a maximum product specification for carbon content less than or equal to 0.00006 kg carbon per gallon of liquid fuel or feedstock, you may instead determine the carbon content annually using the product specification's maximum carbon content.

(4) Determine the carbon content of coal, coke, and other solid fuels and feedstocks at least monthly, except annually for standard solid hydrocarbon fuels and feedstocks having consistent composition, or upon delivery for solid fuels and feedstocks delivered by bulk transport (*e.g.,* by truck or rail) according to paragraph (b)(5) of this section.

(5) Except as provided in paragraphs (b)(2) and (3) of this section for fuels and feedstocks with a carbon content below the specified levels, you must use the following applicable methods to determine the carbon content for all fuels and feedstocks, and molecular weight of gaseous fuels and feedstocks. Alternatively, you may use the results of chromatographic analysis of the fuel and feedstock, provided that the chromatograph is operated, maintained, and calibrated according to the manufacturer's instructions; and the methods used for operation, maintenance, and calibration of the chromatograph are documented in the written monitoring plan for the unit under § 98.3(g)(5).

* * * * *

(xix) For fuels and feedstocks with a carbon content below the specified levels in paragraphs (b)(2) and (3) of this section, if the methods listed in paragraphs (b)(5)(i) through (xviii) of this section are not appropriate because the relevant compounds cannot be detected, the quality control requirements are not technically feasible, or use of the method would be unsafe, you may use modifications of the methods listed in paragraphs (b)(5)(i) through (xviii) or use other methods that are applicable to your fuel or feedstock.

(c) You may use best available monitoring methods as specified in paragraph (c)(2) of this section for measuring the fuel used by each stationary combustion unit directly associated with hydrogen production (*e.g.,* reforming furnace and hydrogen production process unit heater) that

meets the criteria specified in paragraph (c)(1) of this section. Eligibility to use best available monitoring methods ends upon the completion of any planned process unit or equipment shutdown after January 1, 2025.

(1) To be eligible to use best available monitoring methods, you must meet all criteria in paragraphs (c)(1)(i) through (iv) of this section.

(i) The stationary combustion unit must be directly associated with hydrogen production (*e.g.,* reforming furnace and hydrogen production process unit heater).

(ii) A measurement device meeting the requirements in paragraph (b)(1) of this section is not installed to measure the fuel used by each stationary combustion unit as of January 1, 2025.

(iii) The hydrogen production unit and associated stationary combustion unit are operated continuously.

(iv) Installation of a measurement device to measure the fuel used by each stationary combustion unit that meets the requirements in paragraph (b)(1) of this section must require a planned process equipment or unit shutdown or can only be done through a hot tap.

(2) Best available monitoring methods means any of the following methods:

(i) Monitoring methods currently used by the facility that do not meet the specifications of this subpart.

(ii) Supplier data.

(iii) Engineering calculations.

(iv) Other company records.

■ 46. Revise § 98.166 to read as follows:

§ 98.166 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the following information for each hydrogen production process unit:

(a) The unit identification number.

(b) If a CEMS is used to measure CO_2 emissions, then you must report the relevant information required under § 98.36 for the Tier 4 Calculation Methodology. If the CEMS measures emissions from either a common stack for multiple hydrogen production units or a common stack for hydrogen production unit(s) and other source(s), you must also report the estimated decimal fraction of the total annual CO_2 emissions attributable to this hydrogen production process unit (estimated using engineering estimates or best available data).

(c) If a material balance is used to calculate emissions using equations P–1 through P–3 to § 98.163, as applicable, report the total annual CO_2 emissions (metric tons) and the name and annual quantity (metric tons) of each carbon-containing fuel and feedstock.

(d) The information specified in paragraphs (d)(1) through (10):

(1) The type of hydrogen production unit (steam methane reformer (SMR) only, SMR followed by water gas shift reaction (WGS), partial oxidation (POX) only, POX followed by WGS, autothermal reforming only, autothermal reforming followed by WGS, water electrolysis, brine electrolysis, other (specify)).

(2) The type of hydrogen purification method (pressure swing adsorption, amine adsorption, membrane separation, other (specify), none).

(3) Annual quantity of hydrogen produced by reforming, gasification, oxidation, reaction, or other transformation of feedstocks (metric tons).

(4) Annual quantity of hydrogen that is purified only (metric tons). This quantity may be assumed to be equal to the annual quantity of hydrogen in the feedstocks to the hydrogen production unit.

(5) Annual quantity of ammonia intentionally produced as a desired product, if applicable (metric tons).

(6) Quantity of CO_2 collected and transferred off site in either gas, liquid, or solid forms, following the requirements of subpart PP of this part.

(7) Annual quantity of carbon other than CO_2 or methanol collected and transferred off site or transferred to a separate process unit within the facility for which GHG emissions associated with this carbon is being reported under other provisions of this part, in either gas, liquid, or solid forms (metric tons carbon).

(8) Annual quantity of methanol intentionally produced as a desired product, if applicable, (metric tons) for each process unit.

(9) Annual net quantity of steam consumed by the unit, (metric tons). Include steam purchased or produced outside of the hydrogen production unit. If the hydrogen production unit is a net producer of steam, enter the annual net quantity of steam consumed by the unit as a negative value.

(10) An indication (yes or no) if best available monitoring methods were used, in accordance with § 98.164(c), to determine fuel flow for each stationary combustion unit directly associated with hydrogen production (*e.g.,* reforming furnace and hydrogen production process unit heater). If yes, report:

(i) The beginning date of using best available monitoring methods, in accordance with § 98.164(c), to determine fuel flow for each stationary combustion unit directly associated with hydrogen production (*e.g.,* reforming furnace and hydrogen production process unit heater).

(ii) The anticipated or actual end date of using best available monitoring methods, as applicable, in accordance with § 98.164(c), to determine fuel flow for each stationary combustion unit directly associated with hydrogen production (*e.g.,* reforming furnace and hydrogen production process unit heater).

■ 47. Amend § 98.167 by:

■ a. Revising paragraphs (a) and (b);

■ b. Removing and reserving paragraph (c); and

■ c. Revising paragraphs (d) and (e) introductory text.

The revisions read as follows:

§ 98.167 Records that must be retained.

* * * * *

(a) If a CEMS is used to measure CO_2 emissions, then you must retain under this subpart the records required for the Tier 4 Calculation Methodology in § 98.37, and, if the CEMS measures emissions from a common stack for multiple hydrogen production units or emissions from a common stack for hydrogen production unit(s) and other source(s), records used to estimate the decimal fraction of the total annual CO_2 emissions from the CEMS monitoring location attributable to each hydrogen production unit.

(b) You must retain records of all analyses and calculations conducted to determine the values reported in § 98.166(b).

* * * * *

(d) The owner or operator must document the procedures used to ensure the accuracy of the estimates of fuel and feedstock usage in § 98.163(b), including, but not limited to, calibration of weighing equipment, fuel and feedstock flow meters, and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded, and the technical basis for these estimates must be provided.

(e) The applicable verification software records as identified in this paragraph (e). You must keep a record of the file generated by the verification software specified in § 98.5(b) for the applicable data specified in paragraphs (e)(1) through (12) of this section. Retention of this file satisfies the recordkeeping requirement for the data in paragraphs (e)(1) through (12) of this section for each hydrogen production unit.

* * * * *

Subpart Q—Iron and Steel Production

■ 48. Amend § 98.173 by revising equation Q–5 in paragraph (b)(1)(v) to read as follows:

§ 98.173 Calculating GHG emissions.

* * * * *

(b) * * *

(1) * * *

(v) * * *

$$CO_2 = \frac{44}{12} * \Big[(Iron) * (C_{iron}) + (Scrap) * (C_{scrap}) + (Flux) * (C_{Flux}) + (Electrode) * (C_{Electrode}) + (Carbon) * (C_{Carbon}) - (Steel) * (C_{Steel}) + (F_g) * (C_{gf}) * \frac{MW}{MVC} * 0.001 - (Slag) * (C_{Slag}) - (R) * (C_R)\Big] \quad \text{(Eq. Q–5)}$$

* * * * *

■ 49. Amend § 98.174 by:

■ a. Revising paragraph (b)(2) introductory text;

■ b. Redesignating paragraph (b)(2)(vi) as paragraph (b)(2)(vii); and

■ c. Adding new paragraph (b)(2)(vi).

The revision and addition read as follows:

§ 98.174 Monitoring and QA/QC requirements.

* * * * *

(b) * * *

(2) Except as provided in paragraph (b)(4) of this section, determine the carbon content of each process input and output annually for use in the applicable equations in § 98.173(b)(1) based on analyses provided by the supplier, analyses provided by material recyclers who manage process outputs for sale or use by other industries, or by the average carbon content determined by collecting and analyzing at least three samples each year using the standard methods specified in paragraphs (b)(2)(i) through (vii) of this section as applicable.

* * * * *

(vi) ASTM E415–17, Standard Test Method for Analysis of Carbon and Low-Alloy Steel by Spark Atomic Emission Spectrometry (incorporated by reference, see § 98.7) as applicable for steel.

* * * * *

■ 50. Amend § 98.176 by revising paragraphs (e)(2) and adding paragraph (g) to read as follows:

§ 98.176 Data reporting requirements.

* * * * *

(e) * * *

(2) Whether the carbon content was determined from information from the supplier, material recycler, or by laboratory analysis, and if by laboratory analysis, the method used in § 98.174(b)(2).

* * * * *

(g) For each unit, the type of unit, the annual production capacity, and annual operating hours.

* * * * *

Subpart S—Lime Manufacturing

■ 51. Amend § 98.193 by revising equation S–4 in paragraph (b)(2)(iv) to read as follows:

§ 98.193 Calculating GHG emissions.

* * * * *

(b) * * *

(2) * * *

(iv) * * *

$$E_{CO2,net} = \sum_{i=1}^{t}\sum_{n=1}^{12}(EF_{LIME,i,n} * M_{LIME,i,n}) + \sum_{i=1}^{b}\sum_{n=1}^{12}(EF_{LKD,i,n} * M_{LKD,i,n}) + \sum_{i=1}^{z} E_{waste,i} \quad \text{(Eq. S–4)}$$

* * * * *

■ 52. Amend § 98.196 by:

■ a. Revising paragraph (a) introductory text;

■ b. Adding paragraphs (a)(9) through (14);

■ c. Revising paragraphs (b) introductory text and (b)(17); and

■ d. Adding paragraphs (b)(22) and (23).

The revisions and additions read as follows:

§ 98.196 Data reporting requirements.

* * * * *

(a) If a CEMS is used to measure CO_2 emissions, then you must report under this subpart the relevant information required by § 98.36 and the information listed in paragraphs (a)(1) through (14) of this section.

* * * * *

(9) Annual arithmetic average of calcium oxide content for each type of lime product produced (metric tons CaO/metric ton lime).

(10) Annual arithmetic average of magnesium oxide content for each type of lime product produced (metric tons MgO/metric ton lime).

(11) Annual arithmetic average of calcium oxide content for each type of calcined lime byproduct/waste sold (metric tons CaO/metric ton lime).

(12) Annual arithmetic average of magnesium oxide content for each type of calcined lime byproduct/waste sold (metric tons MgO/metric ton lime).

(13) Annual arithmetic average of calcium oxide content for each type of calcined lime byproduct/waste not sold (metric tons CaO/metric ton lime).

(14) Annual arithmetic average of magnesium oxide content for each type of calcined lime byproduct/waste not sold (metric tons MgO/metric ton lime)

(b) If a CEMS is not used to measure CO_2 emissions, then you must report the information listed in paragraphs (b)(1) through (23) of this section.

* * * * *

(17) Indicate whether CO_2 was captured and used on-site (*e.g.,* for use in a purification process, the manufacture of another product). If CO_2 was captured and used on-site, provide the information in paragraphs (b)(17)(i) and (ii) of this section.

(i) The annual amount of CO_2 captured for use in all on-site processes.

(ii) The method used to determine the amount of CO_2 captured.

* * * * *

(22) Annual average results of chemical composition analysis of all lime byproducts or wastes not sold.

(23) Annual quantity (tons) of all lime byproducts or wastes not sold.

Subpart U—Miscellaneous Uses of Carbonate

■ 53. Amend § 98.210 by revising paragraph (b) to read as follows:

§ 98.210 Definition of the source category.

* * * * *

(b) This source category does not include equipment that uses carbonates or carbonate containing minerals that are consumed in the production of cement, glass, ferroalloys, iron and steel, lead, lime, phosphoric acid, pulp and paper, soda ash, sodium bicarbonate, sodium hydroxide, zinc, or ceramics.

* * * * *

Subpart X-Petrochemical Production

■ 54. Amend § 98.243 by revising paragraphs (b)(3) and (d)(5) to read as follows:

§ 98.243 Calculating GHG emissions.

* * * * *

(b) * * *

(3) For each flare, calculate CO_2, CH_4, and N_2O emissions using the methodology specified in § 98.253(b).

* * * * *

(d) * * *

(5) For each flare, calculate CO_2, CH_4, and N_2O emissions using the methodology specified in § 98.253(b).

■ 55. Amend § 98.244 by revising paragraph (b)(4)(iii) to read as follows:

§ 98.244 Monitoring and QA/QC requirements.

* * * * *

(b) * * *

(4) * * *

(iii) ASTM D2505–88 (Reapproved 2004)e1 (incorporated by reference, see § 98.7).

* * * * *

■ 56. Amend § 98.246 by revising paragraphs (a) introductory text, (a)(2), (5), (13) and (15), (b)(7) and (8), and (c) to read as follows:

§ 98.246 Data reporting requirements.

* * * * *

(a) If you use the mass balance methodology in § 98.243(c), you must report the information specified in paragraphs (a)(1) through (15) of this section for each type of petrochemical produced, reported by process unit.

* * * * *

(2) The type of petrochemical produced.

* * * * *

(5) Annual quantity of each type of petrochemical produced from each process unit (metric tons). If you are electing to consider the petrochemical process unit to be the entire integrated ethylene dichloride/vinyl chloride monomer process, the portion of the total amount of ethylene dichloride (EDC) produced that is used in vinyl chloride monomer (VCM) production may be a measured quantity or an estimate that is based on process knowledge and best available data. The portion of the total amount of EDC produced that is not utilized in VCM production must be measured in accordance with § 98.244(b)(2) or (3). Sum the amount of EDC used in the production of VCM plus the amount of separate EDC product to report as the total quantity of EDC petrochemical from an integrated EDC/VCM petrochemical process unit.

* * * * *

(13) Name and annual quantity (in metric tons) of each product included in equations X–1, X–2, and X–3 to § 98.243. If you are electing to consider the petrochemical process unit to be the entire integrated ethylene dichloride/vinyl chloride monomer process, the reported quantity of EDC product should include only that which was not used in the VCM process.

* * * * *

(15) For each gaseous feedstock or product for which the volume was used in equation X–1 to § 98.243, report the annual average molecular weight of the measurements or determinations, conducted according to § 98.243(c)(3) or (4). Report the annual average molecular weight in units of kg per kg mole.

(b) * * *

(7) Information listed in § 98.256(e) for each flare that burns process off-gas. Additionally, provide estimates based on engineering judgment of the fractions of the total CO_2, CH_4 and N_2O emissions that are attributable to combustion of off-gas from the petrochemical process unit(s) served by the flare.

(8) Annual quantity of each type of petrochemical produced from each process unit (metric tons).

* * * * *

(c) If you comply with the combustion methodology specified in § 98.243(d), you must report under this subpart the information listed in paragraphs (c)(1) through (6) of this section.

(1) The ethylene process unit ID or other appropriate descriptor.

(2) For each stationary combustion unit that burns ethylene process off-gas (or group of stationary sources with a common pipe), except flares, the relevant information listed in § 98.36 for the applicable Tier methodology. For each stationary combustion unit or group of units (as applicable) that burns ethylene process off-gas, provide an estimate based on engineering judgment of the fraction of the total emissions that is attributable to combustion of off-gas from the ethylene process unit.

(3) Information listed in § 98.256(e) for each flare that burns ethylene process off-gas. Additionally, provide estimates based on engineering judgment of the fractions of the total CO_2, CH_4 and N_2O emissions that are attributable to combustion of off-gas from the ethylene process unit(s) served by the flare.

(4) Name and annual quantity of each carbon-containing feedstock (metric tons).

(5) Annual quantity of ethylene produced from each process unit (metric tons).

(6) Name and annual quantity (in metric tons) of each product produced in each process unit.

Subpart Y—Petroleum Refineries

■ 57. Amend § 98.250 by revising paragraph (c) to read as follows:

§ 98.250 Definition of source category.

* * * * *

(c) This source category consists of the following sources at petroleum refineries: Catalytic cracking units; fluid coking units; delayed coking units; catalytic reforming units; asphalt blowing operations; blowdown systems; storage tanks; process equipment components (compressors, pumps, valves, pressure relief devices, flanges, and connectors) in gas service; marine vessel, barge, tanker truck, and similar loading operations; flares; and sulfur recovery plants.

§ 98.252 [Amended]

■ 58. Amend § 98.252 by removing and reserving paragraphs (e) and (i).

■ 59. Amend § 98.253 by:

■ a. Revising the introductory text of paragraphs (b) and (c);

■ b. Revising and republishing paragraphs (c)(4) and (5);

■ c. Revising paragraph (e) introductory text;

■ d. Removing and reserving paragraph (g); and

■ e. Revising and republishing paragraphs (i)(2) and (5).

The revisions read as follows:

§ 98.253 Calculating GHG emissions.

* * * * *

(b) For flares, calculate GHG emissions according to the requirements in paragraphs (b)(1) through (3) of this section. All gas discharged through the flare stack must be included in the flare

GHG emissions calculations with the exception of the following, which may be excluded as applicable: gas used for the flare pilots, and if using the calculation method in paragraph (b)(1)(iii) of this section, the gas released during start-up, shutdown, or malfunction events of 500,000 scf/day or less.

* * * * *

(c) For catalytic cracking units and traditional fluid coking units, calculate the GHG emissions from coke burn-off using the applicable methods described in paragraphs (c)(1) through (5) of this section.

* * * * *

(4) Calculate CH_4 emissions using either unit specific measurement data, a unit-specific emission factor based on a source test of the unit, or equation Y–9 to this section.

$$CH_4 = \left(CO_2 * \frac{EmF_2}{EmF_1}\right) \quad \text{(Eq. Y–9)}$$

Where:

CH_4 = Annual methane emissions from coke burn-off (metric tons CH4/year).

CO_2 = Emission rate of CO_2 from coke burn-off calculated in paragraphs (c)(1), (c)(2), (e)(1), or (e)(2) of this section, as applicable (metric tons/year).

EmF_1 = Default CO_2 emission factor for petroleum coke from table C–1 to subpart C of this part (kg CO_2/MMBtu).

EmF_2 = Default CH_4 emission factor for ''PetroleumProducts'' from table C–2 to subpart C of this part (kg CH_4/MMBtu).

(5) Calculate N_2O emissions using either unit specific measurement data, a unit-specific emission factor based on a source test of the unit, or equation Y–10 to this section.

$$N_2O = \left(CO_2 * \frac{EmF_3}{EmF_1}\right) \quad \text{(Eq. Y–10)}$$

Where:

N_2O = Annual nitrous oxide emissions from coke burn-off (mt N_2O/year).

CO_2 = Emission rate of CO_2 from coke burn-off calculated in paragraphs (c)(1), (c)(2), (e)(1), or (e)(2) of this section, as applicable (metric tons/year).

EmF_1 = Default CO_2 emission factor for petroleum coke from table C–1 to subpart C of this part (kg CO_2/MMBtu).

EmF_3 = Default N_2O emission factor for ''PetroleumProducts'' from table C–2 to subpart C of this part (kg N_2O/MMBtu).

* * * * *

(e) For catalytic reforming units, calculate the CO_2 emissions from coke burn-off using the applicable methods described in paragraphs (e)(1) through (3) of this section and calculate the CH_4 and N_2O emissions using the methods described in paragraphs (c)(4) and (5) of this section, respectively.

* * * * *

(i) * * *

(2) Determine the typical mass of water in the delayed coking unit vessel at the end of the cooling cycle prior to venting to the atmosphere using equation Y–18b to this section.

$$M_{water} = \rho_{water} \times \left((H_{water}) \times \frac{\pi \times D^2}{4} - \frac{f_{coke} \times M_{coke}}{\rho_{particle}}\right) \quad \text{(Eq. Y–18b)}$$

Where:

M_{water} = Mass of water in the delayed coking unit vessel at the end of the cooling cycle just prior to atmospheric venting or draining (metric tons/cycle).

ρ_{water} = Density of water at average temperature of the delayed coking unit vessel at the end of the cooling cycle just prior to atmospheric venting (metric tons per cubic feet; mt/ft^3). Use the default value of 0.0270 mt/ft^3.

H_{water} = Typical distance from the bottom of the coking unit vessel to the top of the water level at the end of the cooling cycle just prior to atmospheric venting or draining (feet) from company records or engineering estimates.

f_{coke} = Fraction of the coke-filled bed that is covered by water at the end of the cooling cycle just prior to atmospheric venting or draining. Use 1 if the water fully covers coke-filled portion of the coke drum.

M_{coke} = Typical dry mass of coke in the delayed coking unit vessel at the end of the coking cycle (metric tons/cycle) as determined in paragraph (i)(1) of this section.

$\rho_{particle}$ = Particle density of coke (metric tons per cubic feet; mt/ft^3). Use the default value of 0.0382 mt/ft^3.

D = Diameter of delayed coking unit vessel (feet).

* * * * *

(5) Calculate the CH_4 emissions from decoking operations at each delayed coking unit using equation Y–18f to this section.

$$CH_4 = M_{steam} \times EmF_{DCU} \times N \times 0.001 \quad \text{(Eq. Y–18f)}$$

Where:

CH_4 = Annual methane emissions from the delayed coking unit decoking operations (metric ton/year).

M_{steam} = Mass of steam generated and released per decoking cycle (metric tons/cycle) as determined in paragraph (i)(4) of this section.

EmF_{DCU} = Methane emission factor for delayed coking unit (kilograms CH_4 per metric ton of steam; kg CH_4/mt steam) from unit-specific measurement data. If you do not have unit-specific measurement data, use the default value of 7.9 kg CH_4/metric ton steam.

N = Cumulative number of decoking cycles (or coke-cutting cycles) for all delayed coking unit vessels associated with the delayed coking unit during the year.

0.001 = Conversion factor (metric ton/kg).

* * * * *

■ 60. Amend § 98.254 by:

■ a. Revising the introductory text of paragraphs (d) and (e); and

■ b. Removing and reserving paragraphs (h) and (i).

The revisions read as follows:

§ 98.254 Monitoring and QA/QC requirements.

* * * * *

(d) Except as provided in paragraph (g) of this section, determine gas composition and, if required, average molecular weight of the gas using any of the following methods. Alternatively, the results of chromatographic or direct mass spectrometer analysis of the gas may be used, provided that the gas chromatograph or mass spectrometer is operated, maintained, and calibrated according to the manufacturer's instructions; and the methods used for operation, maintenance, and calibration of the gas chromatograph or mass spectrometer are documented in the written Monitoring Plan for the unit under § 98.3(g)(5).

* * * * *

(e) Determine flare gas higher heating value using any of the following methods. Alternatively, the results of chromatographic analysis of the gas may be used, provided that the gas chromatograph is operated, maintained, and calibrated according to the manufacturer's instructions; and the methods used for operation, maintenance, and calibration of the gas chromatograph are documented in the written Monitoring Plan for the unit under § 98.3(g)(5).

* * * * *

§ 98.255 [Amended]

■ 61. Amend § 98.255 by removing and reserving paragraph (d).

■ 62. Amend § 98.256 by:

■ a. Removing and reserving paragraphs (b) and (i);

■ b. Adding paragraph (j)(2); and

■ c. Revising paragraph (k)(6).

The addition and revision read as follows:

§ 98.256 Data reporting requirements.

* * * * *

(j) * * *

(2) Maximum rated throughput of the unit, in metric tons asphalt/stream day.

* * * * *

(k) * * *

(6) The basis for the typical dry mass of coke in the delayed coking unit vessel at the end of the coking cycle (mass measurements from company records or calculated using equation Y–18a to § 98.253). If you use mass measurements from company records to determine the typical dry mass of coke in the delayed coking unit vessel at the end of the coking cycle, you must also report:

(i) Internal height of delayed coking unit vessel (feet) for each delayed coking unit.

(ii) Typical distance from the top of the delayed coking unit vessel to the top of the coke bed (*i.e.* , coke drum outage) at the end of the coking cycle (feet) from company records or engineering estimates for each delayed coking unit.

* * * * *

■ 63. Amend § 98.257 by:

■ a. Revising paragraphs (b)(16) through (19);

■ b. Removing and reserving paragraphs (b)(27) through (31);

■ c. Revising paragraphs (b)(45), (46), and (53); and

■ d. Removing and reserving paragraphs (b)(54) through (56).

The revisions read as follows:

§ 98.257 Records that must be retained.

* * * * *

(b) * * *

(16) Value of unit-specific CH_4 emission factor, including the units of measure, for each catalytic cracking unit, traditional fluid coking unit, and catalytic reforming unit (calculation method in § 98.253(c)(4)).

(17) Annual activity data (*e.g.* , input or product rate), including the units of measure, in units of measure consistent with the emission factor, for each catalytic cracking unit, traditional fluid coking unit, and catalytic reforming unit (calculation method in § 98.253(c)(4)).

(18) Value of unit-specific N_2O emission factor, including the units of measure, for each catalytic cracking unit, traditional fluid coking unit, and catalytic reforming unit (calculation method in § 98.253(c)(5)).

(19) Annual activity data (*e.g.* , input or product rate), including the units of measure, in units of measure consistent with the emission factor, for each catalytic cracking unit, traditional fluid coking unit, and catalytic reforming unit (calculation method in § 98.253(c)(5)).

* * * * *

(45) Mass of water in the delayed coking unit vessel at the end of the cooling cycle prior to atmospheric venting or draining (metric ton/cycle) (equations Y–18b and Y–18e to § 98.253) for each delayed coking unit.

(46) Typical distance from the bottom of the coking unit vessel to the top of the water level at the end of the cooling cycle just prior to atmospheric venting or draining (feet) from company records or engineering estimates (equation Y–18b to § 98.253) for each delayed coking unit.

* * * * *

(53) Fraction of the coke-filled bed that is covered by water at the end of the cooling cycle just prior to atmospheric venting or draining (equation Y–18b to § 98.253) for each delayed coking unit.

* * * * *

Subpart AA—Pulp and Paper Manufacturing

■ 64. Revise and republish § 98.273 to read as follows:

§ 98.273 Calculating GHG emissions.

(a) For each chemical recovery furnace located at a kraft or soda facility, you must determine CO_2, biogenic CO_2, CH_4, and N_2O emissions using the procedures in paragraphs (a)(1) through (4) of this section. CH4 and N2O emissions must be calculated as the sum of emissions from combustion of fuels and combustion of biomass in spent liquor solids.

(1) Calculate CO_2 emissions from fuel combustion using direct measurement of fuels consumed and default emissions factors according to the Tier 1 methodology for stationary combustion sources in § 98.33(a)(1). Tiers 2 or 3 from § 98.33(a)(2) or (3) may be used to calculate CO_2 emissions if the respective monitoring and QA/QC requirements described in § 98.34 are met.

(2) Calculate CH_4 and N_2O emissions from fuel combustion using direct measurement of fuels consumed, default or site-specific HHV, and default emissions factors and convert to metric tons of CO_2 equivalent according to the methodology for stationary combustion sources in § 98.33(c).

(3) Calculate biogenic CO_2 emissions and emissions of CH_4 and N_2O from biomass using measured quantities of spent liquor solids fired, site-specific HHV, and default emissions factors, according to equation AA–1 to this section:

$$CO_2, CH_4, \text{or } N_2O \text{ from biomass} = (0.90718) * \text{Solids} * \text{HHV} * \text{EF} \qquad \text{(Eq. AA–1)}$$

Where:

CO_2, CH_4, or N_2O, from Biomass = Biogenic CO_2 emissions or emissions of CH_4 or N_2O from spent liquor solids combustion (metric tons per year).

Solids = Mass of spent liquor solids combusted (short tons per year) determined according to § 98.274(b).
HHV = Annual high heat value of the spent liquor solids (mmBtu per kilogram) determined according to § 98.274(b).
EF = Default emission factor for CO_2, CH_4, or N_2O, from table AA–1 to this subpart (kg CO_2, CH_4, or N_2O per mmBtu).
0.90718 = Conversion factor from short tons to metric tons.

(4) Calculate biogenic CO_2 emissions from combustion of biomass (other than spent liquor solids) with other fuels according to the applicable methodology for stationary combustion sources in § 98.33(e).

(b) For each chemical recovery combustion unit located at a sulfite or stand-alone semichemical facility, you must determine CO_2, CH_4, and N_2O emissions using the procedures in paragraphs (b)(1) through (5) of this section:

(1) Calculate CO_2 emissions from fuel combustion using direct measurement of fuels consumed and default emissions factors according to the Tier 1 Calculation Methodology for stationary combustion sources in § 98.33(a)(1). Tiers 2 or 3 from § 98.33(a)(2) or (3) may be used to calculate CO_2 emissions if the respective monitoring and QA/QC requirements described in § 98.34 are met.

(2) Calculate CH_4 and N_2O emissions from fuel combustion using direct measurement of fuels consumed, default or site-specific HHV, and default emissions factors and convert to metric tons of CO_2 equivalent according to the methodology for stationary combustion sources in § 98.33(c).

(3) Calculate biogenic CO_2 emissions using measured quantities of spent liquor solids fired and the carbon content of the spent liquor solids, according to equation AA–2 to this section:

$$\text{Biogenic } CO_2 = \frac{44}{12} * \text{Solids} * CC * (0.90718) \qquad \text{(Eq. AA–2)}$$

Where:
Biogenic CO_2 = Annual CO_2 mass emissions for spent liquor solids combustion (metric tons per year).
Solids = Mass of the spent liquor solids combusted (short tons per year) determined according to § 98.274(b).
CC = Annual carbon content of the spent liquor solids, determined according to § 98.274(b) (percent by weight, expressed as a decimal fraction, *e.g.* , 95% = 0.95).
44/12 = Ratio of molecular weights, CO_2 to carbon.
0.90718 = Conversion from short tons to metric tons.

(4) Calculate biogenic CO_2 emissions from combustion of biomass (other than spent liquor solids) with other fuels according to the applicable methodology for stationary combustion sources in § 98.33(e).

(c) For each pulp mill lime kiln located at a kraft or soda facility, you must determine CO_2, CH_4, and N_2O emissions using the procedures in paragraphs (c)(1) through (4) of this section:

(1) Calculate CO_2 emissions from fuel combustion using direct measurement of fuels consumed and default HHV and default emissions factors, according to the Tier 1 Calculation Methodology for stationary combustion sources in § 98.33(a)(1). Tiers 2 or 3 from § 98.33(a)(2) or (3) may be used to calculate CO_2 emissions if the respective monitoring and QA/QC requirements described in § 98.34 are met.

(2) Calculate CH_4 and N_2O emissions from fuel combustion using direct measurement of fuels consumed, default or site-specific HHV, and default emissions factors and convert to metric tons of CO_2 equivalent according to the methodology for stationary combustion sources in § 98.33(c); use the default HHV listed in table C–1 to subpart C of this part and the default CH_4 and N_2O emissions factors listed in table AA–2 to this subpart.

(3) Biogenic CO_2 emissions from conversion of $CaCO_3$ to CaO are included in the biogenic CO_2 estimates calculated for the chemical recovery furnace in paragraph (a)(3) of this section.

(4) Calculate biogenic CO_2 emissions from combustion of biomass with other fuels according to the applicable methodology for stationary combustion sources in § 98.33(e).

(d) For makeup chemical use, you must calculate CO_2 emissions by using direct or indirect measurement of the quantity of chemicals added and ratios of the molecular weights of CO_2 and the makeup chemicals, according to equation AA–3 to this section:

$$CO_2 = \left[M_{(CaCO_3)} * \frac{44}{100} + M_{(NaCO_3)} * \frac{44}{105.99}\right] * 1000 \text{ kg/metric ton} \qquad \text{(Eq. AA–3)}$$

Where:
CO_2 = CO_2 mass emissions from makeup chemicals (kilograms/yr).
M ($CaCO_3$) = Make-up quantity of $CaCO_3$ used for the reporting year (metric tons per year).
M ($NaCO_3$) = Make-up quantity of Na_2CO_3 used for the reporting year (metric tons per year).
44 = Molecular weight of CO_2.
100 = Molecular weight of $CaCO_3$.
105.99 = Molecular weight of Na_2CO_3.

■ 65. Amend § 98.276 by revising paragraph (a) to read as follows:

§ 98.276 Data reporting requirements.

* * * * *

(a) Annual emissions of CO_2, biogenic CO_2, CH_4, and N_2O (metric tons per year).

* * * * *

■ 66. Amend § 98.277 by revising paragraph (d) to read as follows:

§ 98.277 Records that must be retained.

* * * * *

(d) Annual quantity of spent liquor solids combusted in each chemical recovery furnace and chemical recovery combustion unit, and the basis for determining the annual quantity of the spent liquor solids combusted (whether based on T650 om-05 Solids Content of Black Liquor, TAPPI (incorporated by reference, see § 98.7) or an online measurement system). If an online measurement system is used, you must retain records of the calculations used to determine the annual quantity of spent liquor solids combusted from the continuous measurements.

* * * * *

Subpart BB—Silicon Carbide Production

■ 67. Amend § 98.286 by revising the introductory text and adding paragraph (c) to read as follows:

§ 98.286 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the information specified

in paragraph (a) or (b) of this section, and paragraph (c) of this section, as applicable for each silicon carbide production facility.

* * * * *

(c) If methane abatement technology is used at the silicon carbide production facility, you must report the information in paragraphs (c)(1) through (3) of this section. Upon reporting this information once in an annual report, you are not required to report this information again unless the information changes during a reporting year, in which case, the reporter must include any updates in the annual report for the reporting year in which the change occurred.

(1) Type of methane abatement technology used on each silicon carbide process unit or production furnace, and date of installation for each.

(2) Methane destruction efficiency for each methane abatement technology (percent destruction). You must either use the manufacturer's specified destruction efficiency or the destruction efficiency determined via a performance test. If you report the destruction efficiency determined via a performance test, you must also report the test method that was used during the performance test.

(3) Percentage of annual operating hours that methane abatement technology was in use for all silicon carbide process units or production furnaces combined.

■ 68. Amend § 98.287 by revising the introductory text and adding paragraph (d) to read as follows:

§ 98.287 Records that must be retained.

In addition to the records required by § 98.3(g), you must retain the records specified in paragraphs (a) through (d) of this section for each silicon carbide production facility.

* * * * *

(d) Records of all information reported as required under § 98.286(c).

■ 69. Revise and republish subpart DD consisting of §§ 98.300 through 98.308 to read as follows:

Subpart DD—Electrical Transmission and Distribution Equipment Use

Sec.

98.300 Definition of the source category.
98.301 Reporting threshold.
98.302 GHGs to report.
98.303 Calculating GHG emissions.
98.304 Monitoring and QA/QC requirements.
98.305 Procedures for estimating missing data.
98.306 Data reporting requirements.
98.307 Records that must be retained.
98.308 Definitions.

§ 98.300 Definition of the source category.

(a) The electrical transmission and distribution equipment use source category consists of all electric transmission and distribution equipment and servicing inventory insulated with or containing fluorinated GHGs, including but not limited to sulfur hexafluoride (SF_6) and perfluorocarbons (PFCs), used within an electric power system. Electric transmission and distribution equipment and servicing inventory includes, but is not limited to:

(1) Gas-insulated substations.

(2) Circuit breakers.

(3) Switchgear, including closed-pressure and hermetically sealed-pressure switchgear and gas-insulated lines containing fluorinated GHGs, including but not limited to SF_6 and PFCs.

(4) Gas containers such as pressurized cylinders.

(5) Gas carts.

(6) Electric power transformers.

(7) Other containers of fluorinated GHG, including but not limited to SF_6 and PFCs.

(b) [Reserved]

§ 98.301 Reporting threshold.

(a) You must report GHG emissions under this subpart if you are an electric power system as defined in § 98.308 and your facility meets the requirements of § 98.2(a)(1). To calculate total annual GHG emissions for comparison to the 25,000 metric ton CO_2e per year emission threshold in table A–3 to subpart A to this part, you must calculate emissions of each fluorinated GHG that is a component of a reportable insulating gas and then sum the emissions of each fluorinated GHG resulting from the use of electrical transmission and distribution equipment for threshold applicability purposes using equation DD–1 to this section.

$$E = \sum_j \sum_i NC_{EPS,j} * GHG_{i,w} * GWP_i * EF * 0.000453592 \qquad \text{(Eq. DD–1)}$$

Where:

E = Annual emissions for threshold applicability purposes (metric tons CO_2e).

$NC_{EPS,j}$ = the total nameplate capacity of equipment containing reportable insulating gas j (excluding hermetically sealed-pressure equipment) located within the facility plus the total nameplate capacity of equipment containing reportable insulting gas j (excluding hermetically sealed-pressure equipment) that is not located within the facility but is under common ownership or control (lbs).

$GHG_{i,w}$ = The weight fraction of fluorinated GHG i in reportable insulating gas j in the gas insulated equipment included in the total nameplate capacity $NC_{EPS,j}$, expressed as a decimal fraction. If fluorinated GHG i is not part of a gas mixture, use a value of 1.0.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

EF = Emission factor for electrical transmission and distribution equipment (lbs emitted/lbs nameplate capacity). For all gases, use an emission factor or 0.1.

i = Fluorinated GHG contained in the electrical transmission and distribution equipment.

0.000453592 = Conversion factor from lbs to metric tons.

(b) A facility other than an electric power system that is subject to this part because of emissions from any other source category listed in table A–3 or A–4 to subpart A of this part is not required to report emissions under subpart DD of this part unless the total estimated emissions of fluorinated GHGs that are components of reportable insulating gases, as calculated in equation DD–2 to this section, equals or exceeds 25,000 tons CO_2e.

$$E = \sum_j \sum_i NC_{other,j} * GHG_{i,w} * GWP_i * EF * 0.000453592 \qquad \text{(Eq. DD–2)}$$

Where:

E = Annual emissions for threshold applicability purposes (metric tons CO_2e).

$NC_{other,j}$ = For a facility other than an electric power system, the total nameplate capacity of equipment containing reportable insulating gas j (excluding hermetically sealed-pressure equipment) located within the facility (lbs).

$GHG_{i,w}$ = The weight fraction of fluorinated GHG i in reportable insulating gas j in the gas insulated equipment included in

the total nameplate capacity $NC_{other,j}$, expressed as a decimal fraction. If fluorinated GHG i is not part of a gas mixture, use a value of 1.0.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

EF = Emission factor for electrical transmission and distribution equipment (lbs emitted/lbs nameplate capacity). For all gases, use an emission factor or 0.1.

i = Fluorinated GHG contained in the electrical transmission and distribution equipment.

0.000453592 = Conversion factor from lbs to metric tons.

§ 98.302 GHGs to report.

You must report emissions of each fluorinated GHG, including but not limited to SF_6 and PFCs, from your facility (including emissions from fugitive equipment leaks, installation, servicing, equipment decommissioning and disposal, and from storage cylinders) resulting from the transmission and distribution servicing inventory and equipment listed in § 98.300(a), except you are not required to report emissions of fluorinated GHGs that are components of insulating gases whose weighted average GWPs, as calculated in equation DD–3 to this section, are less than or equal to one. For acquisitions of equipment containing or insulated with fluorinated GHGs, you must report emissions from the equipment after the title to the equipment is transferred to the electric power transmission or distribution entity.

$$GWP_j = \sum_i GHG_{i,w} * GWP_i \qquad \text{(Eq. DD–3)}$$

Where:

GWP_j = Weighted average GWP of insulating gas j.

$GHG_{i,w}$ = The weight fraction of GHG i in insulating gas j, expressed as a decimal. fraction. If GHG i is not part of a gas mixture, use a value of 1.0.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

i = GHG contained in the electrical transmission and distribution equipment.

§ 98.303 Calculating GHG emissions.

(a) *Calculating GHG emissions.* Calculate the annual emissions of each fluorinated GHG that is a component of any reportable insulating gas using the mass-balance approach in equation DD–4 to this section:

$$\text{User Emissions}_i = \Sigma_j\, GHG_{i,w} * [(\text{Decrease in Inventory of Reportable Insulating Gas j}) + (\text{Acquisitions of Reportable Insulating Gas j}) - (\text{Disbursements of Reportable Insulating Gas j}) - (\text{Net Increase in Total Nameplate Capacity of Equipment Operated Containing Reportable Insulating Gas j})] \qquad \text{(Eq. DD–4)}$$

Where:

User Emissions_i = Emissions of fluorinated GHG i from the facility (pounds).

$GHG_{i,w}$ = The weight fraction of fluorinated GHG i in reportable insulating gas j if reportable insulating gas j is a gas mixture, expressed as a decimal fraction. If fluorinated GHG i is not part of a gas mixture, use a value of 1.0.

Decrease in Inventory of Reportable Insulating Gas j = (Pounds of reportable insulating gas j stored in containers, but not in energized equipment, at the beginning of the year) − (Pounds of reportable insulating gas j stored in containers, but not in energized equipment, at the end of the year). Reportable insulating gas inside equipment that is not energized is considered to be ‘‘stored in containers.’’

Acquisitions of Reportable Insulating gas j = (Pounds of reportable insulating gas j purchased or otherwise acquired from chemical producers, chemical distributors, or other entities in bulk) + (Pounds of reportable insulating gas j purchased or otherwise acquired from equipment manufacturers, equipment distributors, or other entities with or inside equipment, including hermetically sealed-pressure switchgear, while the equipment was not in use) + (Pounds of each SF_6 insulating gas j returned to facility after off-site recycling) + (Pounds of reportable insulating gas j acquired inside equipment, except hermetically sealed-pressure switchgear, that was transferred while the equipment was in use, *e.g.,* through acquisition of all or part of another electric power system).

Disbursements of Reportable Insulating gas j = (Pounds of reportable insulating gas j returned to suppliers) + (Pounds of reportable insulating gas j sent off site for recycling) + (Pounds of reportable insulating gas j sent off-site for destruction) + (Pounds of reportable insulating gas j that was sold or transferred to other entities in bulk) + (Pounds of reportable insulating gas j contained in equipment, including hermetically sealed-pressure switchgear, that was sold or transferred to other entities while the equipment was not in use) + (Pounds of reportable insulating gas j inside equipment, except hermetically sealed-pressure switchgear, that was transferred while the equipment was in use, *e.g.,* through sale of all or part of the electric power system to another electric power system).

Net Increase in Total Nameplate Capacity of Equipment Operated containing reportable insulating gas j = (The Nameplate Capacity of new equipment, as defined at § 98.308, containing reportable insulating gas j in pounds) − (Nameplate Capacity of retiring equipment, as defined at § 98.308, containing reportable insulating gas j in pounds). (Note that Nameplate Capacity refers to the full and proper charge of equipment rather than to the actual charge, which may reflect leakage).

(b) *Nameplate capacity adjustments.* Users of closed-pressure electrical equipment with a voltage capacity greater than 38 kV may measure and adjust the nameplate capacity value specified by the equipment manufacturer on the nameplate attached to that equipment, or within the equipment manufacturer's official product specifications, by following the requirements in paragraphs (b)(1) through (10) of this section. Users of other electrical equipment are not permitted to adjust the nameplate capacity value of the other equipment.

(1) If you elect to measure the nameplate capacity value(s) of one or more pieces of electrical equipment with a voltage capacity greater than 38 kV, you must measure the nameplate capacity values of all the electrical

equipment in your facility that has a voltage capacity greater than 38 kV and that is installed or retired in that reporting year and in subsequent reporting years.

(2) You must adopt the measured nameplate capacity value for any piece of equipment for which the absolute value of the difference between the measured nameplate capacity value and the nameplate capacity value most recently specified by the manufacturer equals or exceeds two percent of the nameplate capacity value most recently specified by the manufacturer.

(3) You may adopt the measured nameplate capacity value for equipment for which the absolute value of the difference between the measured nameplate capacity value and the nameplate capacity value most recently specified by the manufacturer is less than two percent of the nameplate capacity value most recently specified by the manufacturer, but if you elect to adopt the measured nameplate capacity for that equipment, then you must adopt the measured nameplate capacity value for all of the equipment for which the difference between the measured nameplate capacity value and the nameplate capacity value most recently specified by the manufacturer is less than two percent of the nameplate capacity value most recently specified by the manufacturer. This applies in the reporting year in which you first adopt the measured nameplate capacity for the equipment and in subsequent reporting years.

(4) Users of electrical equipment measuring the nameplate capacity of any new electrical equipment must:

(i) Record the amount of insulating gas in the equipment at the time the equipment was acquired (pounds), either per information provided by the manufacturer, or by transferring insulating gas from the equipment to a gas container and measuring the amount of insulating gas transferred. The equipment user is responsible for ensuring the gas is accounted for consistent with the methodologies specified in paragraphs (b)(4)(ii) through (iii) and (b)(5) of this section. If no insulating gas was in the device when it was acquired, record this value as zero.

(ii) If insulating gas is added to the equipment subsequent to the acquisition of the equipment to energize it the first time, transfer the insulating gas to the equipment to reach the temperature-compensated design operating pressure per manufacturer specifications. Follow the manufacturer-specified procedure to ensure that the measured temperature accurately reflects the temperature of the insulating gas, *e.g.,* by measuring the insulating gas pressure and vessel temperature after allowing appropriate time for the temperature of the transferred gas to equilibrate with the vessel temperature. Measure and calculate the total amount of reportable insulating gas added to the device using one of the methods specified in paragraphs (b)(4)(ii)(A) and (B) of this section.

(A) To determine the amount of reportable insulating gas transferred to the electrical equipment, weigh the gas container being used to fill the device prior to, and after, the addition of the reportable insulating gas to the electrical equipment, and subtract the second value (after-transfer gas container weight) from the first value (prior-to-transfer gas container weight). Account for any gas contained in hoses before and after the transfer.

(B) Connect a mass flow meter between the electrical equipment and a gas cart. Transfer gas to the equipment to reach the temperature-compensated design operating pressure per manufacturer specifications. During gas transfer, you must keep the mass flow rate within the range specified by the mass flow meter manufacturer to assure an accurate and precise mass flow meter reading. Close the connection to the GIE from the mass flow meter hose and ensure that the gas trapped in the filling hose returns through the mass flow meter. Calculate the amount of gas transferred from the mass reading on the mass flow meter.

(iii) Sum the results of paragraphs (b)(4)(i) and (ii) to obtain the measured nameplate capacity for the new equipment.

(5) Electrical equipment users measuring the nameplate capacity of any retiring electrical equipment must:

(i) Measure and record the initial system pressure and vessel temperature prior to removing any insulating gas.

(ii) Compare the initial system pressure and temperature to the equipment manufacturer's temperature/pressure curve for that equipment and insulating gas.

(iii) If the temperature-compensated initial system pressure of the electrical equipment does not match the temperature-compensated design operating pressure specified by the equipment manufacturer, you may either:

(A) Add or remove insulating gas to/from the electrical equipment until the manufacturer-specified value is reached, or

(B) If the temperature-compensated initial system pressure of the electrical equipment is no higher than the temperature-compensated design operating pressure specified by the manufacturer and no lower than five pounds per square inch (5 psi) less than the temperature-compensated design operating pressure specified by the manufacturer, use equation DD–5 to this section to calculate the nameplate capacity based on the mass recorded under paragraph (b)(5)(vi) of this section.

(iv) Weigh the gas container being used to receive the gas and record this value.

(v) Recover insulating gas from the electrical equipment until five minutes after the pressure in the electrical equipment reaches a pressure of at most five pounds per square inch absolute (5 psia).

(vi) Record the amount of insulating gas recovered (pounds) by weighing the gas container that received the gas and subtracting the weight recorded pursuant to paragraph (b)(5)(iv)(B) of this section from this value. Account for any gas contained in hoses before and after the transfer. The amount of gas recovered shall be the measured nameplate capacity for the electrical equipment unless the final temperature-compensated pressure of the electrical equipment exceeds 0.068 psia (3.5 Torr) or the electrical equipment user is calculating the nameplate capacity pursuant to paragraph (b)(5)(iii)(B) of this section, in which cases the measured nameplate capacity shall be the result of equation DD–5 to this section.

(vii) If you are calculating the nameplate capacity pursuant to paragraph (b)(5)(iii)(B) of this section, use equation DD–5 to this section to do so.

$$NC_C = \frac{P_{NC}}{(P_i - P_f)} \times M_R \qquad \text{(Eq. DD–5)}$$

Where:

NC_C = Nameplate capacity of the equipment measured and calculated by the equipment user (pounds).

P_i = Initial temperature-compensated pressure of the equipment, based on the temperature-pressure curve for the insulating gas (psia).

P_f = Final temperature-compensated pressure of the equipment, based on the temperature-pressure curve for the insulating gas (psia). This may be equated to zero if the final temperature-compensated pressure of the equipment is equal to or lower than 0.068 psia (3.5 Torr).

P_{NC} = Temperature-compensated pressure of the equipment at the manufacturer-specified filling density of the equipment (*i.e.,* at the full and proper charge, psia).

M_R = Mass of insulating gas recovered from the equipment, measured in paragraph (b)(5)(vi) of this section (pounds).

(viii) Record the final system pressure and vessel temperature.

(6) Instead of measuring the nameplate capacity of electrical equipment when it is retired, users may measure the nameplate capacity of electrical equipment during maintenance activities that require opening the gas compartment, but they must follow the procedures set forth in paragraph (b)(5) of this section.

(7) If the electrical equipment will remain energized, and the electrical equipment user is adopting the user-measured nameplate capacity, the electrical equipment user must affix a revised nameplate capacity label, showing the revised nameplate value and the year the nameplate capacity adjustment process was performed, to the device by the end of the calendar year in which the process was completed. The manufacturer's previous nameplate capacity label must remain visible after the revised nameplate capacity label is affixed to the device.

(8) For each piece of electrical equipment whose nameplate capacity was adjusted during the reporting year, the revised nameplate capacity value must be used in all provisions wherein the nameplate capacity is required to be recorded, reported, or used in a calculation in this subpart unless otherwise specified herein.

(9) The nameplate capacity of a piece of electrical equipment may only be adjusted more than once if the physical capacity of the device has changed (*e.g.,* replacement of bushings) after the initial adjustment was performed, in which case the equipment user must adjust the nameplate capacity pursuant to the provisions of this paragraph (b).

(10) Measuring devices used to measure the nameplate capacity of electrical equipment under this paragraph (b) must meet the following accuracy and precision requirements:

(i) Flow meters must be certified by the manufacturer to be accurate and precise to within one percent of the largest value that the flow meter can, according to the manufacturer's specifications, accurately record.

(ii) Pressure gauges must be certified by the manufacturer to be accurate and precise to within 0.5% of the largest value that the gauge can, according to the manufacturer's specifications, accurately record.

(iii) Temperature gauges must be certified by the manufacturer to be accurate and precise to within +/−1.0 °F.

(iv) Scales must be certified by the manufacturer to be accurate and precise to within one percent of the true weight.

§ 98.304 Monitoring and QA/QC requirements.

(a) [Reserved]

(b) You must adhere to the following QA/QC methods for reviewing the completeness and accuracy of reporting:

(1) Review inputs to equation DD–4 to § 98.303 to ensure inputs and outputs to the company's system are included.

(2) Do not enter negative inputs and confirm that negative emissions are not calculated. However, the Decrease in fluorinated GHG Inventory and the Net Increase in Total Nameplate Capacity may be calculated as negative numbers.

(3) Ensure that beginning-of-year inventory matches end-of-year inventory from the previous year.

(4) Ensure that in addition to fluorinated GHG purchased from bulk gas distributors, fluorinated GHG purchased from Original Equipment Manufacturers (OEM) and fluorinated GHG returned to the facility from off-site recycling are also accounted for among the total additions.

(c) Ensure the following QA/QC methods are employed throughout the year:

(1) Ensure that cylinders returned to the gas supplier are consistently weighed on a scale that is certified to be accurate and precise to within 2 pounds of true weight and is periodically recalibrated per the manufacturer's specifications. Either measure residual gas (the amount of gas remaining in returned cylinders) or have the gas supplier measure it. If the gas supplier weighs the residual gas, obtain from the gas supplier a detailed monthly accounting, within ±2 pounds, of residual gas amounts in the cylinders returned to the gas supplier.

(2) Ensure that cylinders weighed for the beginning and end of year inventory measurements are weighed on a scale that is certified to be accurate and precise to within 2 pounds of true weight and is periodically recalibrated per the manufacturer's specifications. All scales used to measure quantities that are to be reported under § 98.306 must be calibrated using calibration procedures specified by the scale manufacturer. Calibration must be performed prior to the first reporting year. After the initial calibration, recalibration must be performed at the minimum frequency specified by the manufacturer.

(3) Ensure all substations have provided information to the manager compiling the emissions report (if it is not already handled through an electronic inventory system).

(d) GHG Monitoring Plans, as described in § 98.3(g)(5), must be completed by April 1, 2011.

§ 98.305 Procedures for estimating missing data.

A complete record of all measured parameters used in the GHG emissions calculations is required. Replace missing data, if needed, based on data from equipment with a similar nameplate capacity for fluorinated GHGs, and from similar equipment repair, replacement, and maintenance operations.

§ 98.306 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the following information for each electric power system, by chemical:

(a) Nameplate capacity of equipment (pounds) containing each insulating gas:

(1) Existing at the beginning of the year (excluding hermetically sealed-pressure switchgear).

(2) New hermetically sealed-pressure switchgear during the year.

(3) New equipment other than hermetically sealed-pressure switchgear during the year.

(4) Retired hermetically sealed-pressure switchgear during the year.

(5) Retired equipment other than hermetically sealed-pressure switchgear during the year.

(b) Transmission miles (length of lines carrying voltages above 35 kilovolts).

(c) Distribution miles (length of lines carrying voltages at or below 35 kilovolts).

(d) Pounds of each reportable insulating gas stored in containers, but not in energized equipment, at the beginning of the year.

(e) Pounds of each reportable insulating gas stored in containers, but not in energized equipment, at the end of the year.

(f) Pounds of each reportable insulating gas purchased or otherwise acquired in bulk from chemical producers, chemical distributors, or other entities.

(g) Pounds of each reportable insulating gas purchased or otherwise acquired from equipment manufacturers, equipment distributors, or other entities with or inside equipment, including hermetically sealed-pressure switchgear, while the equipment was not in use.

(h) Pounds of each reportable insulating gas returned to facility after off-site recycling.

(i) Pounds of each reportable insulating gas acquired inside equipment, except hermetically sealed-pressure switchgear, that was transferred while the equipment was in use, *e.g.,* through acquisition of all or part of another electric power system.

(j) Pounds of each reportable insulating gas returned to suppliers.

(k) Pounds of each reportable insulating gas that was sold or transferred to other entities in bulk.

(l) Pounds of each reportable insulating gas sent off-site for recycling.

(m) Pounds of each reportable insulating gas sent off-site for destruction.

(n) Pounds of each reportable insulating gas contained in equipment, including hermetically sealed-pressure switchgear, that was sold or transferred to other entities while the equipment was not in use.

(o) Pounds of each reportable insulating gas disbursed inside equipment, except hermetically sealed-pressure switchgear, that was transferred while the equipment was in use, *e.g.,* through sale of all or part of the electric power system to another electric power system.

(p) State(s) or territory in which the facility lies.

(q) The number of reportable-insulating-gas-containing pieces of equipment in each of the following equipment categories:

(1) New hermetically sealed-pressure switchgear during the year.

(2) New equipment other than hermetically sealed-pressure switchgear during the year.

(3) Retired hermetically sealed-pressure switchgear during the year.

(4) Retired equipment other than hermetically sealed-pressure switchgear during the year.

(r) The total of the nameplate capacity values most recently assigned by the electrical equipment manufacturer(s) to each of the following groups of equipment:

(1) All new equipment whose nameplate capacity values were measured by the user under this subpart and for which the user adopted the user-measured nameplate capacity value during the year.

(2) All retiring equipment whose nameplate capacity values were measured by the user under this subpart and for which the user adopted the user-measured nameplate capacity value during the year.

(s) The total of the nameplate capacity values measured by the electrical equipment user for each of the following groups of equipment:

(1) All new equipment whose nameplate capacity values were measured by the user under this subpart and for which the user adopted the user-measured nameplate capacity value during the year.

(2) All retiring equipment whose nameplate capacity values were measured by the user under this subpart and for which the user adopted the user-measured nameplate capacity value during the year.

(t) For each reportable insulating gas reported in paragraphs (a), (d) through (o), and (q) of this section, an ID number or other appropriate descriptor that is unique to that reportable insulating gas.

(u) For each ID number or descriptor reported in paragraph (t) of this section for each unique insulating gas, the name (as required in § 98.3(c)(4)(iii)(G)(1)) and weight percent of each fluorinated gas in the insulating gas.

§ 98.307 Records that must be retained.

(a) In addition to the information required by § 98.3(g), you must retain records of the information reported and listed in § 98.306.

(b) For each piece of electrical equipment whose nameplate capacity is measured by the equipment user, retain records of the following:

(1) Equipment manufacturer name.

(2) Year equipment was manufactured. If the date year the equipment was manufactured cannot be determined, report a best estimate of the year of manufacture and record how the estimated year was determined.

(3) Manufacturer serial number. For any piece of equipment whose serial number is unknown (*e.g.,* the serial number does not exist or is not visible), another unique identifier must be recorded as the manufacturer serial number. The electrical equipment user must retain documentation that allows for each electrical equipment to be readily identifiable.

(4) Equipment type (*i.e.,* closed-pressure vs. hermetically sealed-pressure).

(5) Equipment voltage capacity (in kilovolts).

(6) The name and GWP of each insulating gas used.

(7) Nameplate capacity value (pounds), as specified by the equipment manufacturer. The value must reflect the latest value specified by the manufacturer during the reporting year.

(8) Nameplate capacity value (pounds) measured by the equipment user.

(9) The date the nameplate capacity measurement process was completed.

(10) The measurements and calculations used to calculate the value in paragraph (b)(8) of this section.

(11) The temperature-pressure curve and/or other information used to derive the initial and final temperature-adjusted pressures of the equipment.

(12) Whether or not the nameplate capacity value in paragraph (b)(8) of this section has been adopted for the piece of electrical equipment.

§ 98.308 Definitions.

Except as specified in this section, all terms used in this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

Facility, with respect to an electric power system, means the electric power system as set out in this definition. An electric power system is comprised of all electric transmission and distribution equipment insulated with or containing fluorinated GHGs that is linked through electric power transmission or distribution lines and functions as an integrated unit, that is owned, serviced, or maintained by a single electric power transmission or distribution entity (or multiple entities with a common owner), and that is located between:

(1) The point(s) at which electric energy is obtained from an electricity generating unit or a different electric power transmission or distribution entity that does not have a common owner; and

(2) The point(s) at which any customer or another electric power transmission or distribution entity that does not have a common owner receives the electric energy. The facility also includes servicing inventory for such equipment that contains fluorinated GHGs.

Electric power transmission or distribution entity means any entity that transmits, distributes, or supplies electricity to a consumer or other user, including any company, electric cooperative, public electric supply corporation, a similar Federal department (including the Bureau of Reclamation or the Corps of Engineers), a municipally owned electric department offering service to the

public, an electric public utility district, or a jointly owned electric supply project.

Energized, for the purposes of this subpart, means connected through busbars or cables to an electrical power system or fully-charged, ready for service, and being prepared for connection to the electrical power system. Energized equipment does not include spare gas insulated equipment (including hermetically-sealed pressure switchgear) in storage that has been acquired by the facility, and is intended for use by the facility, but that is not being used or prepared for connection to the electrical power system.

Insulating gas, for the purposes of this subpart, means any fluorinated GHG or fluorinated GHG mixture, including but not limited to SF_6 and PFCs, that is used as an insulating and/or arc-quenching gas in electrical equipment.

New equipment, for the purposes of this subpart, means either any gas insulated equipment, including hermetically-sealed pressure switchgear, that is not energized at the beginning of the reporting year but is energized at the end of the reporting year, or any gas insulated equipment other than hermetically-sealed pressure switchgear that has been transferred while in use, meaning it has been added to the facility's inventory without being taken out of active service (*e.g.,* when the equipment is sold to or acquired by the facility while remaining in place and continuing operation).

Operator, for the purposes of this subpart, means any person who operates or supervises a facility, excluding a person whose sole responsibility is to ensure reliability, balance load or otherwise address electricity flow.

Reportable insulating gas, for purposes of this subpart, means an insulating gas whose weighted average GWP, as calculated in equation DD–3 to § 98.302, is greater than one. A fluorinated GHG that makes up either part or all of a reportable insulating gas is considered to be a component of the reportable insulating gas.

Retired equipment, for the purposes of this subpart, means either any gas insulated equipment including hermetically-sealed pressure switchgear, that is energized at the beginning of the reporting year but is not energized at the end of the reporting year, or any gas insulated equipment other than hermetically-sealed pressure switchgear that has been transferred while in use, meaning it has been removed from the facility's inventory without being taken out of active service (*e.g.,* when the equipment is acquired by a new facility while remaining in place and continuing operation).

Subpart FF—Underground Coal Mines

■ 70. Amend § 98.323 by revising parameter ''MCFi'' of equation FF–3 in paragraph (b) introductory text to read as follows:

§ 98.323 Calculating GHG emissions.

* * * * *

(b) * * *

MCF_i = Moisture correction factor for the measurement period, volumetric basis.

= 1 when V_i and C_i are measured on a dry basis or if both are measured on a wet basis.

= $1 - (fH2O)_i$ when V_i is measured on a wet basis and C_i is measured on a dry basis.

= $1/[1 - (fH2O)_i]$ when V_i is measured on a dry basis and C_i is measured on a wet basis.

* * * * *

■ 71. Amend § 98.326 by revising paragraph (t) to read as follows:

§ 98.326 Data reporting requirements.

* * * * *

(t) Mine Safety and Health Administration (MSHA) identification number for this coal mine.

Subpart GG—Zinc Production

■ 72. Amend § 98.333 by revising paragraph (b)(1) introductory text to read as follows:

§ 98.333 Calculating GHG emissions.

* * * * *

(b) * * *

(1) For each Waelz kiln or electrothermic furnace at your facility used for zinc production, you must determine the mass of carbon in each carbon-containing material, other than fuel, that is fed, charged, or otherwise introduced into each Waelz kiln and electrothermic furnace at your facility for each year and calculate annual CO_2 process emissions from each affected unit at your facility using equation GG–1 to this section. For electrothermic furnaces, carbon containing input materials include carbon electrodes and carbonaceous reducing agents. For Waelz kilns, carbon containing input materials include carbonaceous reducing agents. If you document that a specific material contributes less than 1 percent of the total carbon into the process, you do not have to include the material in your calculation using equation R–1 to § 98.183.

* * * * *

■ 73. Amend § 98.336 by adding paragraphs (a)(6) and (b)(6) to read as follows:

§ 98.336 Data reporting requirements.

* * * * *

(a) * * *

(6) Total amount of electric arc furnace dust annually consumed by all Waelz kilns at the facility (tons).

(b) * * *

(6) Total amount of electric arc furnace dust annually consumed by all Waelz kilns at the facility (tons).

* * * * *

Subpart HH—Municipal Solid Waste Landfills

■ 74. Amend § 98.343 by revising paragraphs (a)(2) and (c)(3) to read as follows:

§ 98.343 Calculating GHG emissions.

(a) * * *

(2) For years when material-specific waste quantity data are available, apply equation HH–1 to this section for each waste quantity type and sum the CH_4 generation rates for all waste types to calculate the total modeled CH_4 generation rate for the landfill. Use the appropriate parameter values for k, DOC, MCF, DOC_F, and F shown in table HH–1 to this subpart. The annual quantity of each type of waste disposed must be calculated as the sum of the daily quantities of waste (of that type) disposed. You may use the uncharacterized MSW parameters for a portion of your waste materials when using the material-specific modeling approach for mixed waste streams that cannot be designated to a specific material type. For years when waste composition data are not available, use the bulk waste parameter values for k and DOC in table HH–1 to this subpart for the total quantity of waste disposed in those years.

* * * * *

(c) * * *

(3) For landfills with landfill gas collection systems, calculate CH_4 emissions using the methodologies specified in paragraphs (c)(3)(i) and (ii) of this section.

(i) Calculate CH_4 emissions from the modeled CH_4 generation and measured CH_4 recovery using equation HH–6 to this section.

$$\text{Emissions} = \left[\left(G_{CH4} - \sum_{n=1}^{N} R_n\right) \times (1 - OX) + \sum_{n=1}^{N}\left\{R_n \times \left(1 - \left(DE_n \times F_{Dest,n}\right)\right)\right\}\right] \quad \text{(Eq. HH–6)}$$

Where:

Emissions = Methane emissions from the landfill in the reporting year (metric tons CH_4).

G_{CH4} = Modeled methane generation rate in reporting year from equation HH–1 to this section or the quantity of recovered CH_4 from equation HH–4 to this section, whichever is greater (metric tons CH_4).

N = Number of landfill gas measurement locations (associated with a destruction device or gas sent off-site). If a single monitoring location is used to monitor volumetric flow and CH_4 concentration of the recovered gas sent to one or multiple destruction devices, then N = 1.

R_n = Quantity of recovered CH_4 from equation HH–4 to this section for the nth measurement location (metric tons CH_4).

OX = Oxidation fraction. Use the appropriate oxidation fraction default value from table HH–4 to this subpart.

DE_n = Destruction efficiency (lesser of manufacturer's specified destruction efficiency and 0.99) for the nth measurement location. If the gas is transported off-site for destruction, use DE = 1. If the volumetric flow and CH_4 concentration of the recovered gas is measured at a single location providing landfill gas to multiple destruction devices (including some gas destroyed on-site and some gas sent off-site for destruction), calculate DE_n as the arithmetic average of the DE values determined for each destruction device associated with that measurement location.

$f_{Dest,n}$ = Fraction of hours the destruction device associated with the nth measurement location was operating during active gas flow calculated as the annual operating hours for the destruction device divided by the annual hours flow was sent to the destruction device. The annual operating hours for the destruction device should include only those periods when flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter indicative of effective operation. For flares, times when there is no flame present must be excluded from the annual operating hours for the destruction device. If the gas is transported off-site for destruction, use $f_{Dest,n}$ = 1. If the volumetric flow and CH_4 concentration of the recovered gas is measured at a single location providing landfill gas to multiple destruction devices (including some gas destroyed on-site and some gas sent off-site for destruction), calculate $f_{Dest,n}$ as the arithmetic average of the f_{Dest} values determined for each destruction device associated with that measurement location.

(ii) Calculate CH_4 generation and CH_4 emissions using measured CH_4 recovery and estimated gas collection efficiency and equations HH–7 and HH–8 to this section.

$$MG = \left[\frac{1}{CE}\sum_{c=1}^{C}\left[\frac{\sum_{x=1}^{X} R_{x,c}}{f_{Rec,c}}\right] \times (1 - OX)\right] \quad \text{(Eq. HH–7)}$$

$$\text{Emissions} = \left[\left(\frac{1}{CE}\sum_{c=1}^{C}\left[\frac{\sum_{x=1}^{X} R_{x,c}}{f_{Rec,c}}\right] - \sum_{n=1}^{N} R_n\right) \times (1 - OX) + \sum_{n=1}^{N}\left\{R_n \times \left(1 - \left(DE_n \times f_{Dest,n}\right)\right)\right\}\right] \quad \text{(Eq. HH–8)}$$

Where:

MG = Methane generation, adjusted for oxidation, from the landfill in the reporting year (metric tons CH_4).

Emissions = Methane emissions from the landfill in the reporting year (metric tons CH_4).

C = Number of landfill gas collection systems operated at the landfill.

X = Number of landfill gas measurement locations associated with landfill gas collection system "c".

N = Number of landfill gas measurement locations (associated with a destruction device or gas sent off-site). If a single monitoring location is used to monitor volumetric flow and CH_4 concentration of the recovered gas sent to one or multiple destruction devices, then N = 1. Note that $N = \Sigma_{(c=1)}{}^{C}[\Sigma_{(x=1)}{}^{X}[1]]$.

$R_{x,c}$ = Quantity of recovered CH_4 from equation HH–4 to this section for the xth measurement location for landfill gas collection system "c" (metric tons CH_4).

R_n = Quantity of recovered CH_4 from equation HH–4 to this section for the nth measurement location (metric tons CH_4).

CE = Collection efficiency estimated at landfill, taking into account system coverage, operation, measurement practices, and cover system materials from table HH–3 to this subpart. If area by soil cover type information is not available, use applicable default value for CE4 in table HH–3 to this subpart for all areas under active influence of the collection system.

$f_{Rec,c}$ = Fraction of hours the landfill gas collection system "c" was operating normally (annual operating hours/8760 hours per year or annual operating hours/8784 hours per year for a leap year). Do not include periods of shutdown or poor operation, such as times when pressure, temperature, or other parameters indicative of operation are outside of normal variances, in the annual operating hours.

OX = Oxidation fraction. Use appropriate oxidation fraction default value from table HH–4 to this subpart.

DE_n = Destruction efficiency, (lesser of manufacturer's specified destruction efficiency and 0.99) for the nth measurement location. If the gas is transported off-site for destruction, use DE = 1. If the volumetric flow and CH_4 concentration of the recovered gas is measured at a single location providing landfill gas to multiple destruction devices (including some gas destroyed on-site and some gas sent off-site for destruction), calculate DE_n as the arithmetic average of the DE values determined for each destruction device associated with that measurement location.

$f_{Dest,n}$ = Fraction of hours the destruction device associated with the nth measurement location was operating during active gas flow calculated as the annual operating hours for the destruction device divided by the annual hours flow was sent to the destruction device. The annual operating hours for the destruction device should include only those periods when flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter indicative of effective operation. For flares, times when there is no flame present must be excluded from the annual operating hours for the destruction device. If the gas is transported off-site for destruction, use $f_{Dest,n}$ = 1. If the volumetric flow and CH_4 concentration of the recovered gas is measured at a single location providing landfill gas to multiple destruction devices (including some gas destroyed on-site and some gas sent off-site for destruction), calculate $f_{Dest,n}$ as the arithmetic average of the f_{Dest} values determined for each destruction device

associated with that measurement location.

■ 75. Amend § 98.346 by:

■ a. Redesignating paragraphs (h) and (i) as paragraphs (i) and (j), respectively.

■ b. Adding new paragraph (h); and

■ c. Revising newly redesignated paragraphs (j)(5) through (7).

The addition and revisions read as follows:

§ 98.346 Data reporting requirements.

* * * * *

(h) An indication of the applicability of part 60 or part 62 of this chapter requirements to the landfill (part 60, subparts WWW and XXX of this chapter, approved state plan implementing part 60, subparts Cc or Cf of this chapter, Federal plan as implemented at part 62, subparts GGG or OOO of this chapter, or not subject to part 60 or part 62 of this chapter municipal solid waste landfill rules), and if the landfill is subject to a part 60 or part 62 of this chapter municipal solid waste landfill rule, an indication of whether the landfill gas collection system is required under part 60 or part 62 of this chapter.

* * * * *

(j) * * *

(5) The number of gas collection systems at the landfill facility.

(6) For each gas collection system at the facility report:

(i) A unique name or ID number for the gas collection system.

(ii) A description of the gas collection system (manufacturer, capacity, and number of wells).

(iii) The annual hours the gas collection system was operating normally. Do not include periods of shut down or poor operation, such as times when pressure, temperature, or other parameters indicative of operation are outside of normal variances, in the annual operating hours.

(iv) The number of measurement locations associated with the gas collection system.

(v) For each measurement location associated with the gas collection system, report:

(A) A unique name or ID number for the measurement location.

(B) Annual quantity of recovered CH_4 (metric tons CH_4) calculated using equation HH–4 to § 98.343.

(C) An indication of whether destruction occurs at the landfill facility, off-site, or both for the measurement location.

(D) If destruction occurs at the landfill facility for the measurement location (in full or in part), also report the number of destruction devices associated with the measurement location that are located at the landfill facility and the information in paragraphs (j)(6)(v)(D)(1) through (6) of this section for each destruction device located at the landfill facility.

(*1*) A unique name or ID number for the destruction device.

(*2*) The type of destruction device (flare, a landfill gas to energy project (*i.e.,* engine or turbine), off-site, or other (specify)).

(*3*) The destruction efficiency (decimal).

(*4*) The total annual hours where active gas flow was sent to the destruction device.

(*5*) The annual operating hours where active gas flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter indicative of effective operation. For flares, times when there is no flame present must be excluded from the annual operating hours for the destruction device.

(*6*) The estimated fraction of the recovered CH4 reported for the measurement location directed to the destruction device based on best available data or engineering judgement (decimal, must total to 1 for each measurement location).

(*7*) The following information about the landfill.

(i) The surface area (square meters) and estimated waste depth (meters) for each area specified in table HH–3 to this subpart.

(ii) The estimated gas collection system efficiency for the landfill.

(iii) An indication of whether passive vents and/or passive flares (vents or flares that are not considered part of the gas collection system as defined in § 98.6) are present at the landfill.

* * * * *

■ 76. Revise table HH–1 to subpart HH to read as follows:

TABLE HH–1 TO SUBPART HH OF PART 98—EMISSIONS FACTORS, OXIDATION FACTORS AND METHODS

Factor	Default value	Units
DOC and k values—Bulk waste option:		
DOC (bulk waste) for disposal years prior to 2010	0.20	Weight fraction, wet basis.
DOC (bulk waste) for disposal years 2010 and later	0.17	Weight fraction, wet basis.
k (precipitation plus recirculated leachate [a] <20 inches/year) for disposal years prior to 2010.	0.02	yr^{-1}.
k (precipitation plus recirculated leachate [a] <20 inches/year) for disposal years 2010 and later.	0.033	yr^{-1}.
k (precipitation plus recirculated leachate [a] 20–40 inches/year) for disposal years prior to 2010.	0.038	yr^{-1}.
k (precipitation plus recirculated leachate [a] 20–40 inches/year) for disposal years 2010 and later.	0.067	yr^{-1}.
k (precipitation plus recirculated leachate [a] >40 inches/year) for disposal years prior to 2010.	0.057	yr^{-1}.
k (precipitation plus recirculated leachate [a] >40 inches/year) for disposal years 2010 and later.	0.098	yr^{-1}.
DOC and k values—Modified bulk MSW option:		
DOC (bulk MSW, excluding inerts and C&D waste) for disposal years prior to 2010.	0.31	Weight fraction, wet basis.
DOC (bulk MSW, excluding inerts and C&D waste) for disposal years 2010 and later.	0.27	Weight fraction, wet basis.
DOC (inerts, *e.g.,* glass, plastics, metal, concrete)	0.00	Weight fraction, wet basis.
DOC (C&D waste)	0.08	Weight fraction, wet basis.
k (bulk MSW, excluding inerts and C&D waste) for disposal years prior to 2010.	0.02 to 0.057 [b]	yr^{-1}.
k (bulk MSW, excluding inerts and C&D waste) for disposal years 2010 and later.	0.033 to 0.098 [b]	yr^{-1}.

TABLE HH–1 TO SUBPART HH OF PART 98—EMISSIONS FACTORS, OXIDATION FACTORS AND METHODS—Continued

Factor	Default value	Units
k (inerts, *e.g.,* glass, plastics, metal, concrete)	0.00	yr^{-1}.
k (C&D waste)	0.02 to 0.04 [b]	yr^{-1}.
DOC and k values—Waste composition option:		
DOC (food waste)	0.15	Weight fraction, wet basis.
DOC (garden)	0.2	Weight fraction, wet basis.
DOC (paper)	0.4	Weight fraction, wet basis.
DOC (wood and straw)	0.43	Weight fraction, wet basis.
DOC (textiles)	0.24	Weight fraction, wet basis.
DOC (diapers)	0.24	Weight fraction, wet basis.
DOC (sewage sludge)	0.05	Weight fraction, wet basis.
DOC (inerts, *e.g.,* glass, plastics, metal, cement)	0.00	Weight fraction, wet basis.
DOC (Uncharacterized MSW	0.32	Weight fraction, wet basis.
k (food waste)	0.06 to 0.185 [c]	yr^{-1}.
k (garden)	0.05 to 0.10 [c]	yr^{-1}.
k (paper)	0.04 to 0.06 [c]	yr^{-1}.
k (wood and straw)	0.02 to 0.03 [c]	yr^{-1}.
k (textiles)	0.04 to 0.06 [c]	yr^{-1}.
k (diapers)	0.05 to 0.10 [c]	yr^{-1}.
k (sewage sludge)	0.06 to 0.185 [c]	yr^{-1}.
k (inerts, *e.g.,* glass, plastics, metal, concrete)	0.00	yr^{-1}.
k (uncharacterized MSW)	0.033 to 0.098 [b]	yr^{-1}.
Other parameters—All MSW landfills:		
MCF	1.	
DOC_F	0.5.	
F	0.5.	
OX	See table HH–4 to this subpart.	
DE	0.99.	

[a] Recirculated leachate (in inches/year) is the total volume of leachate recirculated from company records or engineering estimates divided by the area of the portion of the landfill containing waste with appropriate unit conversions. Alternatively, landfills that use leachate recirculation can elect to use the k value of 0.098 rather than calculating the recirculated leachate rate.

[b] Use the lesser value when precipitation plus recirculated leachate is less than 20 inches/year. Use the greater value when precipitation plus recirculated leachate is greater than 40 inches/year. Use the average of the range of values when precipitation plus recirculated leachate is 20 to 40 inches/year (inclusive). Alternatively, landfills that use leachate recirculation can elect to use the greater value rather than calculating the recirculated leachate rate.

[c] Use the lesser value when the potential evapotranspiration rate exceeds the mean annual precipitation rate plus recirculated leachate. Use the greater value when the potential evapotranspiration rate does not exceed the mean annual precipitation rate plus recirculated leachate. Alternatively, landfills that use leachate recirculation can elect to use the greater value rather than assessing the potential evapotranspiration rate or recirculated leachate rate.

■ 77. Revise table HH–3 to subpart HH to read as follows:

TABLE HH–3 TO SUBPART HH OF PART 98—LANDFILL GAS COLLECTION EFFICIENCIES

Description	Term ID	Landfill gas collection efficiency
A1: Area with no waste in-place	Not applicable; do not use this area in the calculation.	
A2: Area without active gas collection, regardless of cover type	CE2	0%.
A3: Area with daily soil cover and active gas collection	CE3	50%.
A4: Area with an intermediate soil cover, or a final soil cover not meeting the criteria for A5 below, and active gas collection.	CE4	65%.
A5: Area with a final soil cover of 3 feet or thicker of clay or final cover (as approved by the relevant agency) and/or geomembrane cover system and active gas collection.	CE5	85%.
Area weighted average collection efficiency for landfills	CEave1 = (A2*CE2 + A3*CE3 + A4*CE4 + A5*CE5)/(A2 + A3 + A4 + A5).	

■ 78. Revise footnote ''b'' to table HH–4 to subpart HH to read as follows:

TABLE HH–4 TO SUBPART HH OF PART 98—LANDFILL METHANE OXIDATION FRACTIONS

Under these conditions:	Use this landfill methane oxidation fraction:
* * * * * * *	

* * * * * * *

[b] Methane flux rate (in grams per square meter per day; g/m²/d) is the mass flow rate of methane per unit area at the bottom of the surface soil prior to any oxidation and is calculated as follows:

For equation HH–5 to § 98.343, or for equation TT–6 to § 98.463,

$MF = K \times G_{CH4}/SArea$

For equation HH–6 to § 98.343,

$$MF = K \times \left(G_{CH4} - \sum_{n=1}^{N} R_n\right) \Big/ SArea$$

For equation HH–7 to § 98.343,

$$MF = K \times \left(\frac{1}{CE} \sum_{c=1}^{C} \left[\frac{\sum_{x=1}^{X} R_{x,c}}{f_{Rec,c}}\right]\right) \Big/ Sarea$$

For equation HH–8 to § 98.343,

$$MF = K \times \left(\frac{1}{CE} \sum_{c=1}^{C} \left[\frac{\sum_{x=1}^{X} R_{x,c}}{f_{Rec,c}}\right] - \sum_{n=1}^{N} R_n\right) \Big/ Sarea$$

Where:

MF = Methane flux rate from the landfill in the reporting year (grams per square meter per day, g/m²/d).

K = unit conversion factor = $10^6/365$ (g/metric ton per days/year) or $10^6/366$ for a leap year.

SArea = The surface area of the landfill containing waste at the beginning of the reporting year (square meters, m²).

G_{CH4} = Modeled methane generation rate in reporting year from equation HH–1 to § 98.343 or equation TT–1 to § 98.463, as applicable, except for application with equation HH–6 to § 98.343 (metric tons CH_4). For application with equation HH–6 to § 98.343, the greater of the modeled methane generation rate in reporting year from equation HH–1 to § 98.343 or equation TT–1 to § 98.463, as applicable, and the quantity of recovered CH_4 from equation HH–4 to § 98.343 (metric tons CH_4).

CE = Collection efficiency estimated at landfill, taking into account system coverage, operation, measurement practices, and cover system materials from table HH–3 to this subpart. If area by soil cover type information is not available, use applicable default value for CE4 in table HH–3 to this subpart for all areas under active influence of the collection system.

C = Number of landfill gas collection systems operated at the landfill.

X = Number of landfill gas measurement locations associated with landfill gas collection system ''c''.

N = Number of landfill gas measurement locations (associated with a destruction device or gas sent off-site). If a single monitoring location is used to monitor volumetric flow and CH_4 concentration of the recovered gas sent to one or multiple destruction devices, then N = 1. Note that $N = \Sigma_{c=1}{}^{C}[\Sigma_{x=1}{}^{X}[1]]$.

$R_{x,c}$ = Quantity of recovered CH_4 from equation HH–4 to § 98.343 for the xth measurement location for landfill gas collection system ''c'' (metric tons CH_4).

R_n = Quantity of recovered CH_4 from equation HH–4 to § 98.343 for the nth measurement location (metric tons CH_4).

$f_{Rec,c}$ = Fraction of hours the landfill gas collection system ''c'' was operating normally (annual operating hours/8,760 hours per year or annual operating hours/8,784 hours per year for a leap year). Do not include periods of shutdown or poor operation, such as times when pressure, temperature, or other parameters indicative of operation are outside of normal variances, in the annual operating hours.

Subpart OO—Suppliers of Industrial Greenhouse Gases

■ 79. Amend § 98.416 by revising paragraphs (c) introductory text, (c)(6) and (7), (d) introductory text, and (d)(4), and adding paragraph (k) to read as follows:

§ 98.416 Data reporting requirements.

* * * * *

(c) Each bulk importer of fluorinated GHGs, fluorinated heat transfer fluids (HTFs), or nitrous oxide shall submit an annual report that summarizes its imports at the corporate level, except importers may exclude shipments including less than twenty-five kilograms of fluorinated GHGs, fluorinated HTFs, or nitrous oxide; transshipments if the importer also excludes transshipments from reporting of exports under paragraph (d) of this section; and heels that meet the conditions set forth at § 98.417(e) if the importer also excludes heels from any reporting of exports under paragraph (d) of this section. The report shall contain

the following information for each import:

* * * * *

(6) Harmonized tariff system (HTS) code of the fluorinated GHGs, fluorinated HTFs, or nitrous oxide shipped.

(7) Customs entry number and importer number for each shipment.

* * * * *

(d) Each bulk exporter of fluorinated GHGs, fluorinated HTFs, or nitrous oxide shall submit an annual report that summarizes its exports at the corporate level, except reporters may exclude shipments including less than twenty-five kilograms of fluorinated GHGs, fluorinated HTFs, or nitrous oxide; transshipments if the exporter also excludes transshipments from reporting of imports under paragraph (c) of this section; and heels if the exporter also excludes heels from any reporting of imports under paragraph (c) of this section. The report shall contain the following information for each export:

* * * * *

(4) Harmonized tariff system (HTS) code of the fluorinated GHGs, fluorinated HTFs, or nitrous oxide shipped.

* * * * *

(k) For nitrous oxide, saturated perfluorocarbons, sulfur hexafluoride, and fluorinated heat transfer fluids as defined at § 98.6, report the end use(s) for which each GHG or fluorinated HTF is transferred and the aggregated annual quantity of that GHG or fluorinated HTF in metric tons that is transferred to that end use application, if known.

Subpart PP—Suppliers of Carbon Dioxide

■ 80. Amend § 98.420 by adding paragraph (a)(4) to read as follows:

§ 98.420 Definition of the source category.

(a) * * *

(4) Facilities with process units, including but not limited to direct air capture (DAC), that capture a CO_2 stream from ambient air for purposes of supplying CO_2 for commercial applications or that capture and maintain custody of a CO_2 stream in order to sequester or otherwise inject it underground.

* * * * *

■ 81. Amend § 98.422 by adding paragraph (e) to read as follows:

§ 98.422 GHGs to report.

* * * * *

(e) Mass of CO_2 captured from DAC process units.

(1) Mass of CO_2 captured from ambient air.

(2) Mass of CO_2 captured from any on-site heat and/or electricity generation, where applicable.

■ 82. Amend § 98.423 by revising paragraphs (a)(3)(i) introductory text and (a)(3)(ii) introductory text to read as follows:

§ 98.423 Calculating CO_2 supply.

(a) * * *

(3) * * *

(i) For facilities with production process units, DAC process units, or production wells that capture or extract a CO_2 stream and either measure it after segregation or do not segregate the flow, calculate the total CO_2 supplied in accordance with equation PP–3a to paragraph (a)(3)(i) of this section.

* * * * *

(ii) For facilities with production process units or DAC process units that capture a CO_2 stream and measure it ahead of segregation, calculate the total CO_2 supplied in accordance with equation PP–3b to paragraph (a)(3)(ii) of this section.

* * * * *

■ 83. Amend § 98.426 by:

■ a. Redesignating paragraphs (f)(12) and (13) as paragraphs (f)(13) and (14), respectively;

■ b. Adding new paragraph (f)(12);

■ c. Revising paragraph (h); and

■ d. Adding paragraph (i).

The additions and revision read as follows:

§ 98.426 Data reporting requirements.

* * * * *

(f) * * *

(12) Geologic sequestration of carbon dioxide with enhanced oil recovery that is covered by subpart VV of this part.

* * * * *

(h) If you capture a CO_2 stream from a facility that is subject to this part and transfer CO_2 to any facilities that are subject to subpart RR or VV of this part, you must:

(1) Report the facility identification number associated with the annual GHG report for the facility that is the source of the captured CO_2 stream;

(2) Report each facility identification number associated with the annual GHG reports for each subpart RR and subpart VV facility to which CO_2 is transferred; and

(3) Report the annual quantity of CO_2 in metric tons that is transferred to each subpart RR and subpart VV facility.

(i) If you capture a CO_2 stream at a facility with a DAC process unit, report the annual quantity of on-site and off-site electricity and heat generated for each DAC process unit as specified in paragraphs (i)(1) through (3) of this section. The quantities specified in paragraphs (i)(1) through (3) of this section must be provided per energy source if known and must represent the electricity and heat used for the DAC process unit starting with air intake and ending with the compressed CO_2 stream (*i.e.,* the CO_2 stream ready for supply for commercial applications or, if maintaining custody of the stream, sequestration or injection of the stream underground).

(1) *Electricity excluding combined heat and power (CHP).* If electricity is provided to a dedicated meter for the DAC process unit, report the annual quantity of electricity consumed, in megawatt hours (MWh), and the information in paragraph (i)(1)(i) or (ii) of this section.

(i) If the electricity is sourced from a grid connection, report the following information:

(A) State where the facility with the DAC process unit is located.

(B) County where the facility with the DAC process unit is located.

(C) Name of the electric utility company that supplied the electricity as shown on the last monthly bill issued by the utility company during the reporting period.

(D) Name of the electric utility company that delivered the electricity. In states with regulated electric utility markets, this will generally be the same utility reported under paragraph (i)(1)(i)(C) of this section, but in states with deregulated electric utility markets, this may be a different utility company.

(E) Annual quantity of electricity consumed in MWh, calculated as the sum of the total energy usage values specified in all billing statements received during the reporting year. Most customers will receive 12 monthly billing statements during the reporting year. Many utilities bill their customers per kilowatt-hour (kWh); usage values on bills that are based on kWh should be divided by 1,000 to report the usage in MWh as required under this paragraph (i)(1)(i)(E).

(ii) If electricity is sourced from on-site or through a contractual mechanism for dedicated off-site generation, for each applicable energy source specified in paragraphs (i)(1)(ii)(A) through (G) of this section, report the annual quantity of electricity consumed, in MWh. If the on-site electricity source is natural gas, oil, or coal, also indicate whether flue gas is also captured by the DAC process unit.

(A) Non-hydropower renewable sources including solar, wind, geothermal and tidal.

(B) Hydropower.

(C) Natural gas.
(D) Oil.
(E) Coal.
(F) Nuclear.
(G) Other.

(2) *Heat excluding CHP.* For each applicable energy source specified in paragraphs (i)(2)(i) through (vii) of this section, report the annual quantity of heat, steam, or other forms of thermal energy sourced from on-site or through a contractual mechanism for dedicated off-site generation, in megajoules (MJ). If the on-site heat source is natural gas, oil, or coal, also indicate whether flue gas is also captured by the DAC process unit.

(i) Solar.
(ii) Geothermal.
(iii) Natural gas.
(iv) Oil.
(v) Coal.
(vi) Nuclear.
(vii) Other.

(3) *CHP—(i) Electricity from CHP.* If electricity from CHP is sourced from on-site or through a contractual mechanism for dedicated off-site generation, for each applicable energy source specified in paragraphs (i)(3)(i)(A) through (G) of this section, report the annual quantity consumed, in MWh. If the on-site electricity source for CHP is natural gas, oil, or coal, also indicate whether flue gas is also captured by the DAC process unit.

(A) Non-hydropower renewable sources including solar, wind, geothermal and tidal.
(B) Hydropower.
(C) Natural gas.
(D) Oil.
(E) Coal.
(F) Nuclear.
(G) Other.

(ii) *Heat from CHP.* For each applicable energy source specified in paragraphs (i)(3)(ii)(A) through (G) of this section, report the quantity of heat, steam, or other forms of thermal energy from CHP sourced from on-site or through a contractual mechanism for dedicated off-site generation, in MJ. If the on-site heat source is natural gas, oil, or coal, also indicate whether flue gas is also captured by the DAC process unit.

(A) Solar.
(B) Geothermal.
(C) Natural gas.
(D) Oil.
(E) Coal.
(F) Nuclear.
(G) Other.

■ 84. Amend § 98.427 by revising paragraph (a) to read as follows:

§ 98.427 Records that must be retained.

* * * * *

(a) The owner or operator of a facility containing production process units or DAC process units must retain quarterly records of captured or transferred CO_2 streams and composition.

* * * * *

Subpart QQ—Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment or Closed-Cell Foams

■ 85. Amend § 98.436 by adding paragraphs (a)(7) and (b)(7) to read as follows:

§ 98.436 Data reporting requirements.

(a) * * *

(7) The Harmonized tariff system (HTS) code for each type of pre-charged equipment or closed-cell foam imported.

(b) * * *

(7) The Schedule B code for each type of pre-charged equipment or closed-cell foam exported.

Subpart RR—Geologic Sequestration of Carbon Dioxide

■ 86. Amend § 98.449 by adding the definition ''Offshore'' in alphabetical order to read as follows:

§ 98.449 Definitions.

* * * * *

Offshore means seaward of the terrestrial borders of the United States, including waters subject to the ebb and flow of the tide, as well as adjacent bays, lakes or other normally standing waters, and extending to the outer boundaries of the jurisdiction and control of the United States under the Outer Continental Shelf Lands Act.

* * * * *

■ 87. Revise subpart SS consisting of §§ 98.450 through 98.458 to read as follows:

Subpart SS—Electrical Equipment Manufacture or Refurbishment

Sec.

98.450 Definition of the source category.
98.451 Reporting threshold.
98.452 GHGs to report.
98.453 Calculating GHG emissions.
98.454 Monitoring and QA/QC requirements.
98.455 Procedures for estimating missing data.
98.456 Data reporting requirements.
98.457 Records that must be retained.
98.458 Definitions.

§ 98.450 Definition of the source category.

The electrical equipment manufacturing or refurbishment category consists of processes that manufacture or refurbish gas-insulated substations, circuit breakers, other switchgear, gas-insulated lines, or power transformers (including gas-containing components of such equipment) containing fluorinated GHGs, including but not limited to sulfur-hexafluoride (SF_6) and perfluorocarbons (PFCs). The processes include equipment testing, installation, manufacturing, decommissioning and disposal, refurbishing, and storage in gas cylinders and other containers.

§ 98.451 Reporting threshold.

You must report GHG emissions under this subpart if your facility contains an electrical equipment manufacturing or refurbishing process and the facility meets the requirements of § 98.2(a)(2). To calculate total annual GHG emissions for comparison to the 25,000 metric ton CO_2e per year emission threshold in § 98.2(a)(2), follow the requirements of § 98.2(b), with one exception. Instead of following the requirement of § 98.453 to calculate emissions from electrical equipment manufacture or refurbishment, you must calculate emissions of each fluorinated GHG that is a component of a reportable insulating gas and then sum the emissions of each fluorinated GHG resulting from manufacturing and refurbishing electrical equipment using equation SS–1 to this section.

$$E = \sum_j \sum_i P_j * GHG_{i,w} * GWP_i * EF * 0.000453592 \qquad \text{(Eq. SS–1)}$$

Where:

E = Annual production process emissions for threshold applicability purposes (metric tons CO_2e).

P_j = Total annual purchases of reportable insulating gas j (lbs).

$GHG_{i,w}$ = The weight fraction of fluorinated GHG i in reportable insulating gas j if reportable insulating gas j is a gas mixture. If not a mixture, use 1.

GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.

EF = Emission factor for electrical transmission and distribution equipment (lbs emitted/lbs purchased). For all gases, use an emission factor of 0.1.

i = Fluorinated GHG contained in the electrical transmission and distribution equipment.
0.000453592 = Conversion factor from lbs to metric tons.

§ 98.452 GHGs to report.

(a) You must report emissions of each fluorinated GHG, including but not limited to SF6 and PFCs, at the facility level, except you are not required to report emissions of fluorinated GHGs that are components of insulating gases whose weighted average GWPs, as calculated in equation SS–2 to this section, are less than or equal to one. You are, however, required to report certain quantities of insulating gases whose weighted average GWPs are less than or equal to one as specified in § 98.456(f), (g), (k) and (q) through (s). Annual emissions from the facility must include fluorinated GHG emissions from equipment that is installed at an off-site electric power transmission or distribution location whenever emissions from installation activities (*e.g.,* filling) occur before the title to the equipment is transferred to the electric power transmission or distribution entity.

$$GWP_j = \sum_i GHG_{i,w} * GWP_i \qquad \text{(Eq. SS–2)}$$

Where:
GWP_j = Weighted average GWP of insulating gas j.
$GHG_{i,w}$ = The weight fraction of GHG i in insulating gas j, expressed as a decimal. fraction. If GHG i is not part of a gas mixture, use a value of 1.0.
GWP_i = Gas-appropriate GWP as provided in table A–1 to subpart A of this part.
i = GHG contained in the electrical transmission and distribution equipment.

(b) You must report CO_2, N_2O and CH_4 emissions from each stationary combustion unit. You must calculate and report these emissions under subpart C of this part by following the requirements of subpart C of this part.

§ 98.453 Calculating GHG emissions.

(a) For each electrical equipment manufacturer or refurbisher, estimate the annual emissions of each fluorinated GHG that is a component of any reportable insulating gas using the mass-balance approach in equation SS–3 to this section:

$$\text{User emissions}_i = \Sigma_j GHG_{i,w} * [(\text{Decrease in Inventory of Reportable Insulating Gas j Inventory}) + (\text{Acquisitions of Reportable Insulating Gas j}) - (\text{Disbursements of Reportable Insulating Gas j})] \qquad \text{(Eq. SS–3)}$$

Where:
User emissions_i = Annual emissions of each fluorinated GHG i (pounds).
$GHG_{i,w}$ = The weight fraction of fluorinated GHG i in reportable insulating gas j if insulating gas j is a gas mixture, expressed as a decimal fraction. If fluorinated GHG i is not part of a gas mixture, use a value of 1.0.
Decrease in Inventory of Reportable Insulating Gas j Inventory = (Pounds of reportable insulating gas j stored in containers at the beginning of the year)—(Pounds of reportable insulating gas j stored in containers at the end of the year).
Acquisitions of Reportable Insulating Gas j = (Pounds of reportable insulating gas j purchased from chemical producers or suppliers in bulk) + (Pounds of reportable insulating gas j returned by equipment users) + (Pounds of reportable insulating gas j returned to site after off-site recycling).
Disbursements of Reportable Insulating Gas j = (Pounds of reportable insulating gas j contained in new equipment delivered to customers) + (Pounds of reportable insulating gas j delivered to equipment users in containers) + (Pounds of reportable insulating gas j returned to suppliers) + (Pounds of reportable insulating gas j sent off site for recycling) + (Pounds of reportable insulating gas j sent off-site for destruction).

(b) [Reserved]

(c) Estimate the disbursements of reportable insulating gas j sent to customers in new equipment or cylinders or sent off-site for other purposes including for recycling, for destruction or to be returned to suppliers using equation SS–4 to this section:

$$D_{GHG} = \sum_{p=1}^{n} Q_p \qquad \text{(Eq. SS–4)}$$

Where:
D_{GHG} = The annual disbursement of reportable insulating gas j sent to customers in new equipment or cylinders or sent off-site for other purposes including for recycling, for destruction or to be returned to suppliers.
Q_p = The mass of reportable insulating gas j charged into equipment or containers over the period p sent to customers or sent off-site for other purposes including for recycling, for destruction or to be returned to suppliers.
n = The number of periods in the year.

(d) Estimate the mass of each insulating gas j disbursed to customers in new equipment or cylinders over the period p by monitoring the mass flow of each insulating gas j into the new equipment or cylinders using a flowmeter, or by weighing containers before and after gas from containers is used to fill equipment or cylinders, or by using the nameplate capacity of the equipment.

(e) If the mass of insulating gas j disbursed to customers in new equipment or cylinders over the period p is estimated by weighing containers before and after gas from containers is used to fill equipment or cylinders, estimate this quantity using equation SS–5 to this section:

$$Q_p = M_B - M_E - E_L \quad \text{(Eq. SS–5)}$$

Where:

Q_p = The mass of insulating gas j charged into equipment or containers over the period p sent to customers or sent off-site for other purposes including for recycling, for destruction or to be returned to suppliers.

M_B = The mass of the contents of the containers used to fill equipment or cylinders at the beginning of period p.

M_E = The mass of the contents of the containers used to fill equipment or cylinders at the end of period p.

E_L = The mass of insulating gas j emitted during the period p downstream of the containers used to fill equipment or cylinders and in cases where a flowmeter is used, downstream of the flowmeter during the period p (*e.g.,* emissions from hoses or other flow lines that connect the container to the equipment or cylinder that is being filled).

(f) If the mass of insulating gas j disbursed to customers in new equipment or cylinders over the period p is determined using a flowmeter, estimate this quantity using equation SS–6 to this section:

$$Q_p = M_{mr} - E_L \quad \text{(Eq. SS–6)}$$

Where:

Q_p = The mass of insulating gas j charged into equipment or containers over the period p sent to customers or sent off-site for other purposes including for recycling, for destruction or to be returned to suppliers.

M_{mr} = The mass of insulating gas j that has flowed through the flowmeter during the period p.

E_L = The mass of insulating gas j emitted during the period p downstream of the containers used to fill equipment or cylinders and in cases where a flowmeter is used, downstream of the flowmeter during the period p (*e.g.,* emissions from hoses or other flow lines that connect the container to the equipment that is being filled).

(g) Estimate the mass of insulating gas j emitted during the period p downstream of the containers used to fill equipment or cylinders (*e.g.,* emissions from hoses or other flow lines that connect the container to the equipment or cylinder that is being filled) using equation SS–7 to this section:

$$E_L = \sum_{j=0}^{n} F_{Ci} * EF_{Ci} \quad \text{(Eq. SS–7)}$$

Where:

E_L = The mass of insulating gas j emitted during the period p downstream of the containers used to fill equipment or cylinders and in cases where a flowmeter is used, downstream of the flowmeter during the period p (*e.g.,* emissions from hoses or other flow lines that connect the container to the equipment or cylinder that is being filled).

FC_i = The total number of fill operations over the period p for the valve-hose combination Ci.

EF_{Ci} = The emission factor for the valve-hose combination Ci.

n=The number of different valve-hose combinations C used during the period p.

(h) If the mass of insulating gas j disbursed to customers in new equipment or cylinders over the period p is determined by using the nameplate capacity, or by using the nameplate capacity of the equipment and calculating the partial shipping charge, use the methods in either paragraph (h)(1) or (2) of this section.

(1) Determine the equipment's actual nameplate capacity, by measuring the nameplate capacities of a representative sample of each make and model and calculating the mean value for each make and model as specified at § 98.454(f).

(2) If equipment is shipped with a partial charge, calculate the partial shipping charge by multiplying the nameplate capacity of the equipment by the ratio of the densities of the partial charge to the full charge.

(i) Estimate the annual emissions of reportable insulating gas j from the equipment that is installed at an off-site electric power transmission or distribution location before the title to the equipment is transferred by using equation SS–8 to this section:

$$EI = GHG_{i,w} * (M_F + M_C - N_I) \quad \text{Eq. SS–8}$$

Where:

EI = Total annual emissions of reportable insulating gas j from equipment installation at electric transmission or distribution facilities.

$GHG_{i,w}$ = The weight fraction of fluorinated GHG i in reportable insulating gas j if reportable insulating gas j is a gas mixture, expressed as a decimal fraction. If the GHG i is not part of a gas mixture, use a value of 1.0.

M_F = The total annual mass of reportable insulating gas j, in pounds, used to fill equipment during equipment installation at electric transmission or distribution facilities.

M_C = The total annual mass of reportable insulating gas j, in pounds, used to charge the equipment prior to leaving the electrical equipment manufacturer facility.

N_I = The total annual nameplate capacity of the equipment, in pounds, installed at electric transmission or distribution facilities.

§ 98.454 Monitoring and QA/QC requirements.

(a) [Reserved]

(b) Ensure that all the quantities required by the equations of this subpart have been measured using either flowmeters with an accuracy and precision of ±1 percent of full scale or better or scales with an accuracy and precision of ±1 percent of the filled weight (gas plus tare) of the containers of each reportable insulating gas that are typically weighed on the scale. For scales that are generally used to weigh cylinders containing 115 pounds of gas when full, this equates to ±1 percent of the sum of 115 pounds and approximately 120 pounds tare, or slightly more than ±2 pounds. Account for the tare weights of the containers. You may accept gas masses or weights provided by the gas supplier (*e.g.,* for the contents of cylinders containing

new gas or for the heels remaining in cylinders returned to the gas supplier) if the supplier provides documentation verifying that accuracy standards are met; however, you remain responsible for the accuracy of these masses and weights under this subpart.

(c) All flow meters, weigh scales, and combinations of volumetric and density measures that are used to measure or calculate quantities under this subpart must be calibrated using calibration procedures specified by the flowmeter, scale, volumetric or density measure equipment manufacturer. Calibration must be performed prior to the first reporting year. After the initial calibration, recalibration must be performed at the minimum frequency specified by the manufacturer.

(d) For purposes of equation SS–7 to § 98.453, the emission factor for the valve-hose combination (EFC) must be estimated using measurements and/or engineering assessments or calculations based on chemical engineering principles or physical or chemical laws or properties. Such assessments or calculations may be based on, as applicable, the internal volume of hose or line that is open to the atmosphere during coupling and decoupling activities, the internal pressure of the hose or line, the time the hose or line is open to the atmosphere during coupling and decoupling activities, the frequency with which the hose or line is purged and the flow rate during purges. You must develop a value for EFc (or use an industry-developed value) for each combination of hose and valve fitting, to use in equation SS–7 to § 98.453. The value for EFC must be determined for each combination of hose and valve fitting of a given diameter or size. The calculation must be recalculated annually to account for changes to the specifications of the valves or hoses that may occur throughout the year.

(e) Electrical equipment manufacturers and refurbishers must account for emissions of each reportable insulating gas that occur as a result of unexpected events or accidental losses, such as a malfunctioning hose or leak in the flow line, during the filling of equipment or containers for disbursement by including these losses in the estimated mass of each reportable insulating gas emitted downstream of the container or flowmeter during the period p.

(f) If the mass of each reportable insulating gas j disbursed to customers in new equipment over the period p is determined by assuming that it is equal to the equipment's nameplate capacity or, in cases where equipment is shipped with a partial charge, equal to its partial shipping charge, equipment samples for conducting the nameplate capacity tests must be selected using the following stratified sampling strategy in this paragraph (f). For each make and model, group the measurement conditions to reflect predictable variability in the facility's filling practices and conditions (*e.g.,* temperatures at which equipment is filled). Then, independently select equipment samples at random from each make and model under each group of conditions. To account for variability, a certain number of these measurements must be performed to develop a robust and representative average nameplate capacity (or shipping charge) for each make, model, and group of conditions. A Student T distribution calculation should be conducted to determine how many samples are needed for each make, model, and group of conditions as a function of the relative standard deviation of the sample measurements. To determine a sufficiently precise estimate of the nameplate capacity, the number of measurements required must be calculated to achieve a precision of one percent of the true mean, using a 95 percent confidence interval. To estimate the nameplate capacity for a given make and model, you must use the lowest mean value among the different groups of conditions, or provide justification for the use of a different mean value for the group of conditions that represents the typical practices and conditions for that make and model. Measurements can be conducted using SF6, another gas, or a liquid. Re-measurement of nameplate capacities should be conducted every five years to reflect cumulative changes in manufacturing methods and conditions over time.

(g) Ensure the following QA/QC methods are employed throughout the year:

(1) Procedures are in place and followed to track and weigh all cylinders or other containers at the beginning and end of the year.

(2) [Reserved]

(h) You must adhere to the following QA/QC methods for reviewing the completeness and accuracy of reporting:

(1) Review inputs to equation SS–3 to § 98.453 to ensure inputs and outputs to the company's system are included.

(2) Do not enter negative inputs and confirm that negative emissions are not calculated. However, the decrease in the inventory for each reportable insulating gas may be calculated as negative.

(3) Ensure that for each reportable insulating gas, the beginning-of-year inventory matches the end-of-year inventory from the previous year.

(4) Ensure that for each reportable insulating gas, in addition to the reportable insulating gas purchased from bulk gas distributors, the reportable insulating gas returned from equipment users with or inside equipment and the reportable insulating gas returned from off-site recycling are also accounted for among the total additions.

§ 98.455 Procedures for estimating missing data.

A complete record of all measured parameters used in the GHG emissions calculations is required. Replace missing data, if needed, based on data from similar manufacturing operations, and from similar equipment testing and decommissioning activities for which data are available.

§ 98.456 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the following information for each chemical at the facility level:

(a) Pounds of each reportable insulating gas stored in containers at the beginning of the year.

(b) Pounds of each reportable insulating gas stored in containers at the end of the year.

(c) Pounds of each reportable insulating gas purchased in bulk.

(d) Pounds of each reportable insulating gas returned by equipment users with or inside equipment.

(e) Pounds of each reportable insulating gas returned to site from off site after recycling.

(f) Pounds of each insulating gas inside new equipment delivered to customers.

(g) Pounds of each insulating gas delivered to equipment users in containers.

(h) Pounds of each reportable insulating gas returned to suppliers.

(i) Pounds of each reportable insulating gas sent off site for destruction.

(j) Pounds of each reportable insulating gas sent off site to be recycled.

(k) The nameplate capacity of the equipment, in pounds, delivered to customers with each insulating gas inside, if different from the quantity in paragraph (f) of this section.

(l) A description of the engineering methods and calculations used to determine emissions from hoses or other flow lines that connect the container to the equipment that is being filled.

(m) The values for EF_{ci} of equation SS–7 to § 98.453 for each hose and valve combination and the associated valve fitting sizes and hose diameters.

(n) The total number of fill operations for each hose and valve combination, or, FC_i of equation SS–7 to § 98.453.

(o) If the mass of each reportable insulating gas disbursed to customers in new equipment over the period p is determined according to the methods required in § 98.453(h), report the mean value of nameplate capacity in pounds for each make, model, and group of conditions.

(p) If the mass of each reportable insulating gas disbursed to customers in new equipment over the period p is determined according to the methods required in § 98.453(h), report the number of samples and the upper and lower bounds on the 95-percent confidence interval for each make, model, and group of conditions.

(q) Pounds of each insulating gas used to fill equipment at off-site electric power transmission or distribution locations, or MF, of equation SS–8 to § 98.453.

(r) Pounds of each insulating gas used to charge the equipment prior to leaving the electrical equipment manufacturer or refurbishment facility, or MC, of equation SS–8 to § 98.453.

(s) The nameplate capacity of the equipment, in pounds, installed at off-site electric power transmission or distribution locations used to determine emissions from installation, or N_I, of equation SS–8 to § 98.453.

(t) For any missing data, you must report the reason the data were missing, the parameters for which the data were missing, the substitute parameters used to estimate emissions in their absence, and the quantity of emissions thereby estimated.

(u) For each insulating gas reported in paragraphs (a) through (j) and (o) through (r) of this section, an ID number or other appropriate descriptor unique to that insulating gas.

(v) For each ID number or descriptor reported in paragraph (u) of this section for each unique insulating gas, the name (as required in § 98.3(c)(4)(iii)(G)(*1*)) and weight percent of each fluorinated gas in the insulating gas.

§ 98.457 Records that must be retained.

In addition to the information required by § 98.3(g), you must retain the following records:

(a) All information reported and listed in § 98.456.

(b) Accuracy certifications and calibration records for all scales and monitoring equipment, including the method or manufacturer's specification used for calibration.

(c) Certifications of the quantity of gas, in pounds, charged into equipment at the electrical equipment manufacturer or refurbishment facility as well as the actual quantity of gas, in pounds, charged into equipment at installation.

(d) Check-out and weigh-in sheets and procedures for cylinders.

(e) Residual gas amounts, in pounds, in cylinders sent back to suppliers.

(f) Invoices for gas purchases and sales.

(g) GHG Monitoring Plans, as described in § 98.3(g)(5), must be completed by April 1, 2011.

§ 98.458 Definitions.

Except as specified in this section, all terms used in this subpart have the same meaning given in the CAA and subpart A of this part.

Insulating gas, for the purposes of this subpart, means any fluorinated GHG or fluorinated GHG mixture, including but not limited to SF_6 and PFCs, that is used as an insulating and/or arc-quenching gas in electrical equipment.

Reportable insulating gas, for purposes of this subpart, means an insulating gas whose weighted average GWP, as calculated in equation SS–2 to § 98.452, is greater than one. A fluorinated GHG that makes up either part or all of a reportable insulating gas is considered to be a component of the reportable insulating gas.

Subpart UU—Injection of Carbon Dioxide

■ 88. Revise and republish § 98.470 to read as follows:

§ 98.470 Definition of the source category.

(a) The injection of carbon dioxide (CO_2) source category comprises any well or group of wells that inject a CO_2 stream into the subsurface.

(b) If you report under subpart RR of this part for a well or group of wells, you shall not report under this subpart for that well or group of wells.

(c) If you report under subpart VV of this part for a well or group of wells, you shall not report under this subpart for that well or group of wells. If you previously met the source category definition for subpart UU of this part for a project where CO_2 is injected in enhanced recovery operations for oil and other hydrocarbons (CO_2–EOR) and then began using the standard designated as CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7) such that you met the definition of the source category for subpart VV during a reporting year, you must report under subpart UU for the portion of the year before you began using CSA/ANSI ISO 27916:19 and report under subpart VV for the portion of the year after you began using CSA/ANSI ISO 27916:19.

(d) A facility that is subject to this part only because it is subject to subpart UU of this part is not required to report emissions under subpart C of this part or any other subpart listed in § 98.2(a)(1) or (2).

■ 89. Add subpart VV consisting of §§ 98.480 through 98.489, subpart WW consisting of §§ 98.490 through 98.498, subpart XX consisting of §§ 98.500 through 98.508, subpart YY consisting of §§ 98.510 through 98.518, and subpart ZZ consisting of §§ 98.520 through 98.528 to part 98 to read as follows:

Subpart VV—Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916

Sec.

98.480 Definition of the source category.
98.481 Reporting threshold.
98.482 GHGs to report.
98.483 Calculating CO_2 geologic sequestration.
98.484 Monitoring and QA/QC requirements.
98.485 Procedures for estimating missing data.
98.486 Data reporting requirements.
98.487 Records that must be retained.
98.488 EOR Operations Management Plan.
98.489 Definitions.

§ 98.480 Definition of the source category.

(a) This source category pertains to carbon dioxide (CO_2) that is injected in enhanced recovery operations for oil and other hydrocarbons (CO_2–EOR) in which all of the following apply:

(1) You are using the standard designated as CSA/ANSI ISO 27916:19, (incorporated by reference, see § 98.7) as a method of quantifying geologic sequestration of CO_2 in association with EOR operations.

(2) You are not reporting under subpart RR of this part.

(b) This source category does not include wells permitted as Class VI under the Underground Injection Control program.

(c) If you are subject to only this subpart, you are not required to report emissions under subpart C of this part or any other subpart listed in § 98.2(a)(1) or (2).

§ 98.481 Reporting threshold.

(a) You must report under this subpart if your CO_2–EOR project uses CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7) as a method of quantifying geologic sequestration of CO_2 in association with CO_2–EOR operations. There is no threshold for reporting.

(b) The requirements of § 98.2(i) do not apply to this subpart. Once a CO_2–EOR project becomes subject to the

requirements of this subpart, you must continue for each year thereafter to comply with all requirements of this subpart, including the requirement to submit annual reports until the facility has met the requirements of paragraphs (b)(1) and (2) of this section and submitted a notification to discontinue reporting according to paragraph (b)(3) of this section.

(1) Discontinuation of reporting under this subpart must follow the requirements set forth under Clause 10 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

(2) CO_2–EOR project termination is completed when all of the following occur:

(i) Cessation of CO_2 injection.

(ii) Cessation of hydrocarbon production from the project reservoir; and

(iii) Wells are plugged and abandoned unless otherwise required by the appropriate regulatory authority.

(3) You must notify the Administrator of your intent to cease reporting and provide a copy of the CO_2–EOR project termination documentation.

(c) If you previously met the source category definition for subpart UU of this part for your CO_2–EOR project and then began using CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7) as a method of quantifying geologic sequestration of CO_2 in association with CO_2–EOR operations during a reporting year, you must report under subpart UU of this part for the portion of the year before you began using CSA/ANSI ISO 27916:19 and report under subpart VV for the portion of the year after you began using CSA/ANSI ISO 27916:19.

§ 98.482 GHGs to report.

You must report the following from Clause 8 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7):

(a) The mass of CO_2 received by the CO_2–EOR project.

(b) The mass of CO_2 loss from the CO_2–EOR project operations.

(c) The mass of native CO_2 produced and captured.

(d) The mass of CO_2 produced and sent off-site.

(e) The mass of CO_2 loss from the EOR complex.

(f) The mass of CO_2 stored in association with CO_2–EOR.

§ 98.483 Calculating CO_2 geologic sequestration.

You must calculate CO_2 sequestered using the following quantification principles from Clause 8.2 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

(a) You must calculate the mass of CO_2 stored in association with CO_2–EOR (m_{stored}) in the reporting year by subtracting the mass of CO_2 loss from operations and the mass of CO_2 loss from the EOR complex from the total mass of CO_2 input (as specified in equation 1 to this paragraph (a)).

Equation 1 to paragraph (a)

$$m_{stored} = m_{input} - m_{loss\ operations} - m_{loss\ EOR\ complex}$$

Where:

m_{stored} = The annual quantity of associated storage in metric tons of CO_2 mass.

m_{input} = The total mass of CO_2 $m_{received}$ by the EOR project plus m_{native} (see Clause 8.3 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7) and paragraph (c) of this section), metric tons. Native CO_2 produced and captured in the CO_2–EOR project (m_{native}) can be quantified and included in m_{input}.

$m_{loss\ operations}$ = The total mass of CO_2 loss from project operations (see Clauses 8.4.1 through 8.4.5 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7) and paragraph (d) of this section), metric tons.

$m_{loss\ EOR\ complex}$ = The total mass of CO_2 loss from the EOR complex (see Clause 8.4.6 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)), metric tons.

(b) The manner by which associated storage is quantified must assure completeness and preclude double counting. The annual mass of CO_2 that is recycled and reinjected into the EOR complex must not be quantified as associated storage. Loss from the CO_2 recycling facilities must be quantified.

(c) You must quantify the total mass of CO_2 input (m_{input}) in the reporting year according to paragraphs (g)(1) through (3) of this section.

(1) You must include the total mass of CO_2 received at the custody transfer meter by the CO_2–EOR project ($m_{received}$).

(2) The CO_2 stream received (including CO_2 transferred from another CO_2–EOR project) must be metered.

(i) The native CO_2 recovered and included as m_{native} must be documented.

(ii) CO_2 delivered to multiple CO_2–EOR projects must be allocated among those CO_2–EOR projects.

(3) The sum of the quantities of allocated CO_2 must not exceed the total quantities of CO_2 received.

(d) You must calculate the total mass of CO_2 from project operations ($m_{loss\ operations}$) in the reporting year as specified in equation 2 to this paragraph (d).

Equation 2 to paragraph (d)

$$m_{\text{loss operations}} = m_{\text{loss leakage facilites}} + m_{\text{loss}\frac{\text{vent}}{\text{flare}}} + m_{\text{loss entrained}} + m_{\text{loss transfer}}$$

Where:

$m_{loss\ leakage\ facilities}$ = Loss of CO_2 due to leakage from production, handling, and recycling CO_2–EOR facilities (infrastructure including wellheads), metric tons.

$m_{loss\ vent/flare}$ = Loss of CO_2 from venting/flaring from production operations, metric tons.

$m_{loss\ entrained}$ = Loss of CO_2 due to entrainment within produced gas/oil/water when this CO_2 is not separated and reinjected, metric tons.

$m_{loss\ transfer}$=Loss of CO_2 due to any transfer of CO_2 outside the CO_2–EOR project, metric tons. You must quantify any CO_2 that is subsequently produced from the EOR complex and transferred offsite.

§ 98.484 Monitoring and QA/QC requirements.

You must use the applicable monitoring and quality assurance requirements set forth in Clause 6.2 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

§ 98.485 Procedures for estimating missing data.

Whenever the value of a parameter is unavailable or the quality assurance procedures set forth in § 98.484 cannot be followed, you must follow the procedures set forth in Clause 9.2 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

§ 98.486 Data reporting requirements.

In addition to the information required by § 98.3(c), the annual report shall contain the following information, as applicable:

(a) The annual quantity of associated storage in metric tons of CO_2 (m_{stored}).

(b) The density of CO_2 if volumetric units are converted to mass in order to be reported for annual quantity of CO_2 stored.

(c) The annual quantity of CO_2 input (m_{input}) and the information in paragraphs (c)(1) and (2) of this section.

(1) The annual total mass of CO_2 received at the custody transfer meter by the CO_2–EOR project, including CO_2

transferred from another CO_2–EOR project ($m_{received}$).

(2) The annual mass of native CO_2 produced and captured in the CO_2–EOR project (m_{native}).

(d) The annual mass of CO_2 that is recycled and reinjected into the EOR complex.

(e) The annual total mass of CO_2 loss from project operations ($m_{loss\ operations}$), and the information in paragraphs (e)(1) through (4) of this section.

(1) Loss of CO_2 due to leakage from production, handling, and recycling CO_2–EOR facilities (infrastructure including wellheads) ($m_{loss\ leakage\ facilities}$).

(2) Loss of CO_2 from venting/flaring from production operations ($m_{loss\ vent/flare}$).

(3) Loss of CO_2 due to entrainment within produced gas/oil/water when this CO2 is not separated and reinjected ($m_{loss\ entrained}$).

(4) Loss of CO_2 due to any transfer of CO_2 outside the CO_2–EOR project ($m_{loss\ transfer}$).

(f) The total mass of CO_2 loss from the EOR complex ($m_{loss\ EOR\ complex}$).

(g) Annual documentation that contains the following components as described in Clause 4.4 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7):

(1) The formulas used to quantify the annual mass of associated storage, including the mass of CO_2 delivered to the CO_2–EOR project and losses during the period covered by the documentation (see Clause 8 and Annex B of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(2) The methods used to estimate missing data and the amounts estimated as described in Clause 9.2 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

(3) The approach and method for quantification utilized by the operator, including accuracy, precision, and uncertainties (see Clause 8 and Annex B of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(4) A statement describing the nature of validation or verification including the date of review, process, findings, and responsible person or entity.

(5) Source of each CO_2 stream quantified as associated storage (see Clause 8.3 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(6) A description of the procedures used to detect and characterize the total CO_2 leakage from the EOR complex.

(7) If only the mass of anthropogenic CO_2 is considered for mstored, a description of the derivation and application of anthropogenic CO_2 allocation ratios for all the terms described in Clauses 8.1 to 8.4.6 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

(8) Any documentation provided by a qualified independent engineer or geologist, who certifies that the documentation provided, including the mass balance calculations as well as information regarding monitoring and containment assurance, is accurate and complete.

(h) Any changes made within the reporting year to containment assurance and monitoring approaches and procedures in the EOR operations management plan.

§ 98.487 Records that must be retained.

You must follow the record retention requirements specified by § 98.3(g). In addition to the records required by § 98.3(g), you must comply with the record retention requirements in Clause 9.1 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

§ 98.488 EOR Operations Management Plan.

(a) You must prepare and update, as necessary, a general EOR operations management plan that provides a description of the EOR complex and engineered system (see Clause 4.3(a) of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)), establishes that the EOR complex is adequate to provide safe, long-term containment of CO_2, and includes site-specific and other information including:

(1) Geologic characterization of the EOR complex.

(2) A description of the facilities within the CO_2–EOR project.

(3) A description of all wells and other engineered features in the CO_2–EOR project.

(4) The operations history of the project reservoir.

(5) The information set forth in Clauses 5 and 6 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

(b) You must prepare initial documentation at the beginning of the quantification period, and include the following as described in the EOR operations management plan:

(1) A description of the EOR complex and engineered systems (see Clause 5 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(2) The initial containment assurance (see Clause 6.1.2 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(3) The monitoring program (see Clause 6.2 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(4) The quantification method to be used (see Clause 8 and Annex B of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(5) The total mass of previously injected CO_2 (if any) within the EOR complex at the beginning of the CO_2–EOR project (see Clause 8.5 and Annex B of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7)).

(c) The EOR operation management plan in paragraph (a) of this section and initial documentation in paragraph (b) of this section must be submitted to the Administrator with the annual report covering the first reporting year that the facility reports under this subpart. In addition, any documentation provided by a qualified independent engineer or geologist, who certifies that the documentation provided is accurate and complete, must also be provided to the Administrator.

(d) If the EOR operations management plan is updated, the updated EOR management plan must be submitted to the Administrator with the annual report covering the first reporting year for which the updated EOR operation management plan is applicable.

§ 98.489 Definitions.

Except as provided in paragraphs (a) and (b) of this section, all terms used in this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

Additional terms and definitions are provided in Clause 3 of CSA/ANSI ISO 27916:19 (incorporated by reference, see § 98.7).

Subpart WW—Coke Calciners

Sec.

98.490 Definition of the source category.
98.491 Reporting threshold.
98.492 GHGs to report.
98.493 Calculating GHG emissions.
98.494 Monitoring and QA/QC requirements.
98.495 Procedures for estimating missing data.
98.496 Data reporting requirements.
98.497 Records that must be retained.
98.498 Definitions.

§ 98.490 Definition of the source category.

(a) A coke calciner is a process unit that heats petroleum coke to high temperatures for the purpose of removing impurities or volatile substances in the petroleum coke feedstock.

(b) This source category consists of rotary kilns, rotary hearth furnaces, or similar process units used to calcine petroleum coke and also includes afterburners or other emission control systems used to treat the coke calcining unit's process exhaust gas.

§ 98.491 Reporting threshold.

You must report GHG emissions under this subpart if your facility contains a coke calciner and the facility meets the requirements of either § 98.2(a)(1) or (2).

§ 98.492 GHGs to report.

You must report:

(a) CO_2, CH_4, and N_2O emissions from each coke calcining unit under this subpart.

(b) CO_2, CH_4, and N_2O emissions from auxiliary fuel used in the coke calcining unit and afterburner, if applicable, or other control system used to treat the coke calcining unit's process off-gas under subpart C of this part by following the requirements of subpart C.

§ 98.493 Calculating GHG emissions.

(a) Calculate GHG emissions required to be reported in § 98.492(a) using the applicable methods in paragraph (b) of this section.

(b) For each coke calcining unit, calculate GHG emissions according to the applicable provisions in paragraphs (b)(1) through (4) of this section.

(1) If you operate and maintain a CEMS that measures CO_2 emissions according to subpart C of this part, you must calculate and report CO_2 emissions under this subpart by following the Tier 4 Calculation Methodology specified in § 98.33(a)(4) and all associated requirements for Tier 4 in subpart C of this part. Auxiliary fuel use CO_2 emissions should be calculated in accordance with subpart C of this part and subtracted from the CO_2 CEMS emissions to determine process CO_2 emissions. Other coke calcining units must either install a CEMS that complies with the Tier 4 Calculation Methodology in subpart C of this part or follow the requirements of paragraph (b)(2) of this section.

(2) Calculate the CO_2 emissions from the coke calcining unit using monthly measurements and equation 1 to this paragraph (b)(2).

Equation 1 to paragraph (b)(2)

$$CO_2 = \frac{44}{12} \times \sum_{m=1}^{12}\left(M_{in,m} \times CC_{GC,m} - \left(M_{out,m} + M_{dust,m}\right) \times CC_{MPC,m}\right)$$

Where:

CO_2 = Annual CO_2 emissions (metric tons CO_2/year).

m = Month index.

$M_{in,m}$ = Mass of green coke fed to the coke calcining unit in month ''m'' from facility records (metric tons/year).

$CC_{GC,m}$ = Mass fraction carbon content of green coke fed to the coke calcining unit from facility measurement data in month ''m'' (metric ton carbon/metric ton green coke). If measurements are made more frequently than monthly, determine the monthly average as the arithmetic average for all measurements made during the calendar month.

$M_{out,m}$ = Mass of marketable petroleum coke produced by the coke calcining unit in month ''m'' from facility records (metric tons petroleum coke/year).

$M_{dust,m}$ = Mass of petroleum coke dust removed from the process through the dust collection system of the coke calcining unit in month ''m'' from facility records (metric ton petroleum coke dust/year). For coke calcining units that recycle the collected dust, the mass of coke dust removed from the process is the mass of coke dust collected less the mass of coke dust recycled to the process.

$CC_{MPC,m}$ = Mass fraction carbon content of marketable petroleum coke produced by the coke calcining unit in month ''m'' from facility measurement data (metric ton carbon/metric ton petroleum coke). If measurements are made more frequently than monthly, determine the monthly average as the arithmetic average for all measurements made during the calendar month.

44 = Molecular weight of CO_2 (kg/kg-mole).

12 = Atomic weight of C (kg/kg-mole).

(3) Calculate CH4 emissions using equation 2 to this paragraph (b)(3).

Equation 2 to paragraph (b)(3)

$$CH_4 = \left(CO_2 \times \frac{EmF_2}{EmF_1}\right)$$

Where:

CH_4 = Annual methane emissions (metric tons CH_4/year).

CO_2 = Annual CO_2 emissions calculated in paragraph (b)(1) or (2) of this section, as applicable (metric tons CO_2/year).

EmF_1 = Default CO_2 emission factor for petroleum coke from table C–1 to subpart C of this part (kg CO_2/MMBtu).

EmF_2 = Default CH_4 emission factor for ''Petroleum Products (All fuel types in table C–1)'' from table C–2 to subpart C of this part (kg CH_4/MMBtu).

(4) Calculate N_2O emissions using equation 3 to this paragraph (b)(4).

Equation 3 to paragraph (b)(4)

$$N_2O = \left(CO_2 \times \frac{EmF_3}{EmF_1}\right)$$

Where:

N_2O = Annual nitrous oxide emissions (metric tons N_2O/year).

CO_2 = Annual CO_2 emissions calculated in paragraph (b)(1) or (2) of this section, as applicable (metric tons CO_2/year).

EmF_1 = Default CO_2 emission factor for petroleum coke from table C–1 to subpart C of this part (kg CO_2/MMBtu).

EmF_3 = Default N_2O emission factor for ''Petroleum Products (All fuel types in table C–1)'' from table C–2 to subpart C of this part (kg N_2O/MMBtu).

§ 98.494 Monitoring and QA/QC requirements.

(a) Flow meters, gas composition monitors, and heating value monitors that are associated with sources that use a CEMS to measure CO_2 emissions according to subpart C of this part or that are associated with stationary combustion sources must meet the applicable monitoring and QA/QC requirements in § 98.34.

(b) Determine the mass of petroleum coke monthly as required by equation 1 to § 98.493(b)(2) using mass measurement equipment meeting the requirements for commercial weighing equipment as described in NIST HB 44–2023 (incorporated by reference, see § 98.7). Calibrate the measurement device according to the procedures specified by NIST HB 44–2023 (incorporated by reference, see § 98.7) or the procedures specified by the

manufacturer. Recalibrate either biennially or at the minimum frequency specified by the manufacturer.

(c) Determine the carbon content of petroleum coke as required by equation 1 § 98.493(b)(2) using any one of the following methods. Calibrate the measurement device according to procedures specified by the method or procedures specified by the measurement device manufacturer.

(1) ASTM D3176–15 (incorporated by reference, see § 98.7).

(2) ASTM D5291–16 (incorporated by reference, see § 98.7).

(3) ASTM D5373–21 (incorporated by reference, see § 98.7).

(d) The owner or operator must document the procedures used to ensure the accuracy of the monitoring systems used including but not limited to calibration of weighing equipment, flow meters, and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded.

§ 98.495 Procedures for estimating missing data.

A complete record of all measured parameters used in the GHG emissions calculations is required (*e.g.,* concentrations, flow rates, fuel heating values, carbon content values). Therefore, whenever a quality-assured value of a required parameter is unavailable (*e.g.,* if a CEMS malfunctions during unit operation or if a required sample is not taken), a substitute data value for the missing parameter must be used in the calculations.

(a) For missing auxiliary fuel use data, use the missing data procedures in subpart C of this part.

(b) For each missing value of mass or carbon content of coke, substitute the arithmetic average of the quality-assured values of that parameter immediately preceding and immediately following the missing data incident. If the ''after'' value is not obtained by the end of the reporting year, you may use the ''before'' value for the missing data substitution. If, for a particular parameter, no quality-assured data are available prior to the missing data incident, the substitute data value must be the first quality-assured value obtained after the missing data period.

(c) For missing CEMS data, you must use the missing data procedures in § 98.35.

§ 98.496 Data reporting requirements.

In addition to the reporting requirements of § 98.3(c), you must report the information specified in paragraphs (a) through (i) of this section for each coke calcining unit.

(a) The unit ID number (if applicable).

(b) Maximum rated throughput of the unit, in metric tons coke calcined/stream day.

(c) The calculated CO_2, CH_4, and N_2O annual process emissions, expressed in metric tons of each pollutant emitted.

(d) A description of the method used to calculate the CO_2 emissions for each unit (*e.g.,* CEMS or equation 1 to § 98.493(b)(2)).

(e) Annual mass of green coke fed to the coke calcining unit from facility records (metric tons/year).

(f) Annual mass of marketable petroleum coke produced by the coke calcining unit from facility records (metric tons/year).

(g) Annual mass of petroleum coke dust removed from the process through the dust collection system of the coke calcining unit from facility records (metric tons/year) and an indication of whether coke dust is recycled to the unit (*e.g.,* all dust is recycled, a portion of the dust is recycled, or none of the dust is recycled).

(h) Annual average mass fraction carbon content of green coke fed to the coke calcining unit from facility measurement data (metric tons C per metric ton green coke).

(i) Annual average mass fraction carbon content of marketable petroleum coke produced by the coke calcining unit from facility measurement data (metric tons C per metric ton petroleum coke).

§ 98.497 Records that must be retained.

In addition to the records required by § 98.3(g), you must retain the records specified in paragraphs (a) and (b) of this section.

(a) The records of all parameters monitored under § 98.494.

(b) The applicable verification software records as identified in this paragraph (b). You must keep a record of the file generated by the verification software specified in § 98.5(b) for the applicable data specified in paragraphs (b)(1) through (5) of this section. Retention of this file satisfies the recordkeeping requirement for the data in paragraphs (b)(1) through (5) of this section.

(1) Monthly mass of green coke fed to the coke calcining unit from facility records (metric tons/year) (equation 1 to § 98.493(b)(2)).

(2) Monthly mass of marketable petroleum coke produced by the coke calcining unit from facility records (metric tons/year) (equation 1 to § 98.493(b)(2)).

(3) Monthly mass of petroleum coke dust removed from the process through the dust collection system of the coke calcining unit from facility records (metric tons/year) (equation 1 to § 98.493(b)(2)).

(4) Average monthly mass fraction carbon content of green coke fed to the coke calcining unit from facility measurement data (metric tons C per metric ton green coke) (equation 1 to § 98.493(b)(2)).

(5) Average monthly mass fraction carbon content of marketable petroleum coke produced by the coke calcining unit from facility measurement data (metric tons C per metric ton petroleum coke) (equation 1 to § 98.493(b)(2)).

§ 98.498 Definitions.

All terms used in this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

Subpart XX—Calcium Carbide Production

Sec.

98.500 Definition of the source category.
98.501 Reporting threshold.
98.502 GHGs to report.
98.503 Calculating GHG emissions.
98.504 Monitoring and QA/QC requirements.
98.505 Procedures for estimating missing data.
98.506 Data reporting requirements.
98.507 Records that must be retained.
98.508 Definitions.

§ 98.500 Definition of the source category.

The calcium carbide production source category consists of any facility that produces calcium carbide.

§ 98.501 Reporting threshold.

You must report GHG emissions under this subpart if your facility contains a calcium carbide production process and the facility meets the requirements of either § 98.2(a)(1) or (2).

§ 98.502 GHGs to report.

You must report:

(a) Process CO_2 emissions from each calcium carbide process unit or furnace used for the production of calcium carbide.

(b) CO_2, CH_4, and N_2O emissions from each stationary combustion unit following the requirements of subpart C of this part. You must report these emissions under subpart C of this part by following the requirements of subpart C.

§ 98.503 Calculating GHG emissions.

You must calculate and report the annual process CO_2 emissions from each calcium carbide process unit not subject to paragraph (c) of this section using the procedures in either paragraph (a) or (b) of this section.

(a) Calculate and report under this subpart the combined process and

combustion CO_2 emissions by operating and maintaining CEMS according to the Tier 4 Calculation Methodology in § 98.33(a)(4) and all associated requirements for Tier 4 in subpart C of this part.

(b) Calculate and report under this subpart the annual process CO_2 emissions from the calcium carbide process unit using the carbon mass balance procedure specified in paragraphs (b)(1) and (2) of this section.

(1) For each calcium carbide process unit, determine the annual mass of carbon in each carbon-containing input and output material for the calcium carbide process unit and estimate annual process CO_2 emissions from the calcium carbide process unit using equation 1 to this paragraph (b)(1). Carbon-containing input materials include carbon electrodes and carbonaceous reducing agents. If you document that a specific input or output material contributes less than 1 percent of the total carbon into or out of the process, you do not have to include the material in your calculation using equation 1.

Equation 1 to paragraph (b)(1)

$$E_{CO2} = \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^i \left(M_{reducing\ agent_i} \times C_{reducing\ agent_i}\right)$$

$$+ \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^m \left(M_{electrode_m} \times C_{electrode_m}\right)$$

$$- \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^k \left(M_{product\ outgoing_k} \times C_{product\ outgoing_k}\right)$$

$$- \frac{44}{12} \times \frac{2000}{2205} \times \sum_1^l \left(M_{non-product\ outgoing_l} \times C_{non-product\ outgoing_l}\right)$$

Where:

E_{CO2} = Annual process CO_2 emissions from an individual calcium carbide process unit (metric tons).

44/12 = Ratio of molecular weights, CO_2 to carbon.

2000/2205 = Conversion factor to convert tons to metric tons.

$M_{reducing\ agent_i}$ = Annual mass of reducing agent i fed, charged, or otherwise introduced into the calcium carbide process unit (tons).

$C_{reducing\ agent_i}$ = Carbon content in reducing agent i (percent by weight, expressed as a decimal fraction).

$M_{electrode_m}$ = Annual mass of carbon electrode m consumed in the calcium carbide process unit (tons).

$C_{electrode_m}$ = Carbon content of the carbon electrode m (percent by weight, expressed as a decimal fraction).

$M_{product\ outgoing_k}$ = Annual mass of alloy product k tapped from the calcium carbide process unit (tons).

$C_{product\ outgoing_k}$ = Carbon content in alloy product k (percent by weight, expressed as a decimal fraction).

$M_{non-product\ outgoing_l}$ = Annual mass of non-product outgoing material l removed from the calcium carbide unit (tons).

$C_{non-product\ outgoing}$ = Carbon content in non-product outgoing material l (percent by weight, expressed as a decimal fraction).

(2) Determine the combined annual process CO_2 emissions from the calcium carbide process units at your facility using equation 2 to this paragraph (b)(2).

Equation 2 to paragraph (b)(2)

$$CO_2 = \Sigma 1^k E_{CO2_k}$$

Where:

CO_2 = Annual process CO_2 emissions from calcium carbide process units at a facility used for the production of calcium carbide (metric tons).

E_{CO2_k} = Annual process CO_2 emissions calculated from calcium carbide process unit k calculated using equation 1 to paragraph (b)(1) of this section (metric tons).

k = Total number of calcium carbide process units at facility.

(c) If all GHG emissions from a calcium carbide process unit are vented through the same stack as any combustion unit or process equipment that reports CO_2 emissions using a CEMS that complies with the Tier 4 Calculation Methodology in subpart C of this part, then the calculation methodology in paragraph (b) of this section must not be used to calculate process emissions. The owner or operator must report under this subpart the combined stack emissions according to the Tier 4 Calculation Methodology in § 98.33(a)(4) and all associated requirements for Tier 4 in subpart C of this part.

§ 98.504 Monitoring and QA/QC requirements.

If you determine annual process CO_2 emissions using the carbon mass balance procedure in § 98.503(b), you must meet the requirements specified in paragraphs (a) and (b) of this section.

(a) Determine the annual mass for each material used for the calculations of annual process CO_2 emissions using equation 1 to § 98.503(b)(1) by summing the monthly mass for the material determined for each month of the calendar year. The monthly mass may be determined using plant instruments used for accounting purposes, including either direct measurement of the quantity of the material placed in the unit or by calculations using process operating information.

(b) For each material identified in paragraph (a) of this section, you must determine the average carbon content of the material consumed, used, or produced in the calendar year using the methods specified in either paragraph (b)(1) or (2) of this section. If you document that a specific process input or output contributes less than one percent of the total mass of carbon into or out of the process, you do not have to determine the monthly mass or annual carbon content of that input or output.

(1) Information provided by your material supplier.

(2) Collecting and analyzing at least three representative samples of the material inputs and outputs each year. The carbon content of the material must be analyzed at least annually using the standard methods (and their QA/QC procedures) specified in paragraphs (b)(2)(i) and (ii) of this section, as applicable.

(i) ASTM D5373–08 (incorporated by reference, see § 98.7), for analysis of carbonaceous reducing agents and carbon electrodes.

(ii) ASTM C25–06 (incorporated by reference, see § 98.7) for analysis of materials such as limestone or dolomite.

§ 98.505 Procedures for estimating missing data.

A complete record of all measured parameters used in the GHG emissions

calculations in § 98.503 is required. Therefore, whenever a quality-assured value of a required parameter is unavailable, a substitute data value for the missing parameter must be used in the calculations as specified in the paragraphs (a) and (b) of this section. You must document and keep records of the procedures used for all such estimates.

(a) If you determine CO_2 emissions for the calcium carbide process unit at your facility using the carbon mass balance procedure in § 98.503(b), 100 percent data availability is required for the carbon content of the input and output materials. You must repeat the test for average carbon contents of inputs according to the procedures in § 98.504(b) if data are missing.

(b) For missing records of the monthly mass of carbon-containing inputs and outputs, the substitute data value must be based on the best available estimate of the mass of the inputs and outputs from all available process data or data used for accounting purposes, such as purchase records.

§ 98.506 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the information specified in paragraphs (a) through (h) of this section, as applicable:

(a) Annual facility calcium carbide production capacity (tons).

(b) The annual facility production of calcium carbide (tons).

(c) Total number of calcium carbide process units at facility used for production of calcium carbide.

(d) Annual facility consumption of petroleum coke (tons).

(e) Each end use of any calcium carbide produced and sent off site.

(f) If the facility produces acetylene on site, provide the information in paragraphs (f)(1) through (3) of this section.

(1) The annual production of acetylene at the facility (tons).

(2) The annual quantity of calcium carbide used for the production of acetylene at the facility (tons).

(3) Each end use of any acetylene produced on-site.

(g) If a CEMS is used to measure CO_2 emissions, then you must report under this subpart the relevant information required by § 98.36 for the Tier 4 Calculation Methodology and the information specified in paragraphs (g)(1) and (2) of this section.

(1) Annual CO_2 emissions (in metric tons) from each CEMS monitoring location measuring process emissions from the calcium carbide process unit.

(2) Identification number of each process unit.

(h) If a CEMS is not used to measure CO_2 process emissions, and the carbon mass balance procedure is used to determine CO_2 emissions according to the requirements in § 98.503(b), then you must report the information specified in paragraphs (h)(1) through (3) of this section.

(1) Annual process CO_2 emissions (in metric tons) from each calcium carbide process unit.

(2) List the method used for the determination of carbon content for each input and output material included in the calculation of annual process CO_2 emissions for each calcium carbide process unit (*i.e.,* supplier provided information, analyses of representative samples you collected).

(3) If you use the missing data procedures in § 98.505(b), you must report for each calcium carbide production process unit how monthly mass of carbon-containing inputs and outputs with missing data were determined and the number of months the missing data procedures were used.

§ 98.507 Records that must be retained.

In addition to the records required by § 98.3(g), you must retain the records specified in paragraphs (a) through (d) of this section for each calcium carbide process unit, as applicable.

(a) If a CEMS is used to measure CO_2 emissions according to the requirements in § 98.503(a), then you must retain under this subpart the records required for the Tier 4 Calculation Methodology in § 98.37 and the information specified in paragraphs (a)(1) through (3) of this section.

(1) Monthly calcium carbide process unit production quantity (tons).

(2) Number of calcium carbide processing unit operating hours each month.

(3) Number of calcium carbide processing unit operating hours in a calendar year.

(b) If the carbon mass balance procedure is used to determine CO_2 emissions according to the requirements in § 98.503(b)(2), then you must retain records for the information specified in paragraphs (b)(1) through (5) of this section.

(1) Monthly calcium carbide process unit production quantity (tons).

(2) Number of calcium carbide process unit operating hours each month.

(3) Number of calcium carbide process unit operating hours in a calendar year.

(4) Monthly material quantity consumed, used, or produced for each material included for the calculations of annual process CO_2 emissions (tons).

(5) Average carbon content determined and records of the supplier provided information or analyses used for the determination for each material included for the calculations of annual process CO_2 emissions.

(c) You must keep records that include a detailed explanation of how company records of measurements are used to estimate the carbon input and output to each calcium carbide process unit, including documentation of specific input or output materials excluded from equation 1 to § 98.503(b)(1) that contribute less than 1 percent of the total carbon into or out of the process. You also must document the procedures used to ensure the accuracy of the measurements of materials fed, charged, or placed in a calcium carbide process unit including, but not limited to, calibration of weighing equipment and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded, and the technical basis for these estimates must be provided.

(d) The applicable verification software records as identified in this paragraph (d). You must keep a record of the file generated by the verification software specified in § 98.5(b) for the applicable data specified in paragraphs (d)(1) through (8) of this section. Retention of this file satisfies the recordkeeping requirement for the data in paragraphs (d)(1) through (8) of this section.

(1) Carbon content in reducing agent (percent by weight, expressed as a decimal fraction) (equation 1 to § 98.503(b)(1)).

(2) Annual mass of reducing agent fed, charged, or otherwise introduced into the calcium carbide process unit (tons) (equation 1 to § 98.503(b)(1)).

(3) Carbon content of carbon electrode (percent by weight, expressed as a decimal fraction) (equation 1 to § 98.503(b)(1)).

(4) Annual mass of carbon electrode consumed in the calcium carbide process unit (tons) (equation 1 to § 98.503(b)(1)).

(5) Carbon content in product (percent by weight, expressed as a decimal fraction) (equation 1 to § 98.503(b)(1)).

(6) Annual mass of product produced/tapped in the calcium carbide process unit (tons) (equation 1 to § 98.503(b)(1)).

(7) Carbon content in non-product outgoing material (percent by weight, expressed as a decimal fraction) (equation 1 to § 98.503(b)(1)).

(8) Annual mass of non-product outgoing material removed from calcium carbide process unit (tons) (equation 1 to § 98.503(b)(1)).

§ 98.508 Definitions.

All terms used of this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

Subpart YY—Caprolactam, Glyoxal, and Glyoxylic Acid Production

Sec.
98.510 Definition of the source category.
98.511 Reporting threshold.
98.512 GHGs to report.
98.513 Calculating GHG emissions.
98.514 Monitoring and QA/QC requirements.
98.515 Procedures for estimating missing data.
98.516 Data reporting requirements.
98.517 Records that must be retained.
98.518 Definitions.
Table 1 to Subpart YY of Part 98—N_2O Generation Factors

§ 98.510 Definition of the source category.

This source category includes any facility that produces caprolactam, glyoxal, or glyoxylic acid. This source category excludes the production of glyoxal through the LaPorte process (*i.e.,* the gas-phase catalytic oxidation of ethylene glycol with air in the presence of a silver or copper catalyst).

§ 98.511 Reporting threshold.

You must report GHG emissions under this subpart if your facility meets the requirements of either § 98.2(a)(1) or (2) and the definition of source category in § 98.510.

§ 98.512 GHGs to report.

(a) You must report N_2O process emissions from the production of caprolactam, glyoxal, and glyoxylic acid as required by this subpart.

(b) You must report under subpart C of this part the emissions of CO_2, CH_4, and N_2O from each stationary combustion unit by following the requirements of subpart C of this part.

§ 98.513 Calculating GHG emissions.

(a) You must determine annual N_2O process emissions from each caprolactam, glyoxal, and glyoxylic acid process line using the appropriate default N_2O generation factor(s) from table 1 to this subpart, the site-specific N_2O destruction factor(s) for each N_2O abatement device, and site-specific production data according to paragraphs (b) through (e) of this section.

(b) You must determine the total annual amount of product *i* (caprolactam, glyoxal, or glyoxylic acid) produced on each process line *t* (metric tons product), according to § 98.514(b).

(c) If process line *t* exhausts to any N_2O abatement technology *j*, you must determine the destruction efficiency for each N_2O abatement technology according to paragraph (c)(1) or (2) of this section.

(1) Use the control device manufacturer's specified destruction efficiency.

(2) Estimate the destruction efficiency through process knowledge. Examples of information that could constitute process knowledge include calculations based on material balances, process stoichiometry, or previous test results provided the results are still relevant to the current vent stream conditions. You must document how process knowledge (if applicable) was used to determine the destruction efficiency.

(d) If process line *t* exhausts to any N_2O abatement technology *j*, you must determine the abatement utilization factor for each N_2O abatement technology according to paragraph (d)(1) or (2) of this section.

(1) If the abatement technology *j* has no downtime during the year, use 1.

(2) If the abatement technology *j* was not operational while product *i* was being produced on process line *t*, calculate the abatement utilization factor according to equation 1 to this paragraph (d)(2).

Equation 1 to paragraph (d)(2)

$$AF_j = \frac{T_{i,j}}{T_i}$$

Where:

AF_j = Monthly abatement utilization factor of N_2O abatement technology *j* from process unit *t* (fraction of time that abatement technology is operating).

$T_{i,j}$ = Total number of hours during month that product *i* (caprolactam, glyoxal, or glyoxylic acid), was produced from process unit *t* during which N_2O abatement technology *j* was operational (hours).

T_i = Total number of hours during month that product *i* (caprolactam, glyoxal, or glyoxylic acid), was produced from process unit *t* (hours).

(e) You must calculate N_2O emissions for each product *i* from each process line *t* and each N_2O control technology *j* according to equation 2 to this paragraph (e).

Equation 2 to paragraph (e)

$$E_{N2Ot} = \sum_{i,j}\left[EF_i * P_i * \left(1 - \left(DE_j * AF_j\right)\right)\right] * 0.001$$

Where:

E_{N2Ot} = Monthly process emissions of N_2O, metric tons from process line *t*.

EF_i = N_2O generation factor for product *i* (caprolactam, glyoxal, or glyoxylic acid), kg N_2O/metric ton of product produced, as shown in table 1 to this subpart.

P_i = Monthly production of product *i*, (caprolactam, glyoxal, or glyoxylic acid), metric tons.

DE_j = Destruction efficiency of N_2O abatement technology type *j*, fraction (decimal fraction of N_2O removed from vent stream).

AF_j = Monthly abatement utilization factor for N_2O abatement technology type *j*, fraction, calculated using equation 1 to paragraph (d)(2) of this section.

0.001 = Conversion factor from kg to metric tons.

(f) You must determine the annual emissions combined from each process line at your facility using equation 3 to this paragraph (f):

Equation 3 to paragraph (f)

$$N_2O = \sum_{1}^{12} E_{N2Ot}$$

Where:

N_2O = Annual process N_2O emissions from each process line for product *i* (caprolactam, glyoxal, or glyoxylic acid) (metric tons).

E_{N2Ot} = Monthly process emissions of N_2O from each process line for product *i* (caprolactam, glyoxal, or glyoxylic acid) (metric tons).

§ 98.514 Monitoring and QA/QC requirements.

(a) You must determine the total monthly amount of caprolactam, glyoxal, and glyoxylic acid produced. These monthly amounts are determined according to the methods in paragraph (a)(1) or (2) of this section.

(1) Direct measurement of production (such as using flow meters, weigh scales, etc.).

(2) Existing plant procedures used for accounting purposes (*i.e.,* dedicated tank-level and acid concentration measurements).

(b) You must determine the annual amount of caprolactam, glyoxal, and glyoxylic acid produced. These annual amounts are determined by summing the respective monthly quantities determined in paragraph (a) of this section.

§ 98.515 Procedures for estimating missing data.

A complete record of all measured parameters used in the GHG emissions calculations is required. Therefore, whenever a quality-assured value of a required parameter is unavailable, a substitute data value for the missing parameter must be used in the calculations as specified in paragraphs (a) and (b) of this section.

(a) For each missing value of caprolactam, glyoxal, or glyoxylic acid production, the substitute data must be the best available estimate based on all available process data or data used for accounting purposes (such as sales records).

(b) For missing values related to the N_2O abatement device, assuming that the operation is generally constant from year to year, the substitute data value should be the most recent quality-assured value.

§ 98.516 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the information specified in paragraphs (a) through (j) of this section.

(a) Process line identification number.

(b) Annual process N_2O emissions from each process line according to paragraphs (b)(1) through (3) of this section.

(1) N_2O from caprolactam production (metric tons).

(2) N_2O from glyoxal production (metric tons).

(3) N_2O from glyoxylic acid production (metric tons).

(c) Annual production quantities from all process lines at the caprolactam, glyoxal, or glyoxylic acid production facility according to paragraphs (c)(1) through (3) of this section.

(1) Caprolactam production (metric tons).

(2) Glyoxal production (metric tons).

(3) Glyoxylic acid production (metric tons).

(d) Annual production capacity from all process lines at the caprolactam, glyoxal, or glyoxylic acid production facility, as applicable, in paragraphs (d)(1) through (3) of this section.

(1) Caprolactam production capacity (metric tons).

(2) Glyoxal production capacity (metric tons).

(3) Glyoxylic acid production capacity (metric tons).

(e) Number of process lines at the caprolactam, glyoxal, or glyoxylic acid production facility, by product, in paragraphs (e)(1) through (3) of this section.

(1) Total number of process lines producing caprolactam.

(2) Total number of process lines producing glyoxal.

(3) Total number of process lines producing glyoxylic acid.

(f) Number of operating hours in the calendar year for each process line at the caprolactam, glyoxal, or glyoxylic acid production facility (hours).

(g) N_2O abatement technologies used (if applicable) and date of installation of abatement technology at the caprolactam, glyoxal, or glyoxylic acid production facility.

(h) Monthly abatement utilization factor for each N_2O abatement technology for each process line at the caprolactam, glyoxal, or glyoxylic acid production facility.

(i) Number of times in the reporting year that missing data procedures were followed to measure production quantities of caprolactam, glyoxal, or glyoxylic acid (months).

(j) Annual percent N_2O emission reduction per chemical produced at the caprolactam, glyoxal, or glyoxylic acid production facility, as applicable, in paragraphs (j)(1) through (3) of this section.

(1) Annual percent N_2O emission reduction for all caprolactam production process lines.

(2) Annual percent N_2O emission reduction for all glyoxal production process lines.

(3) Annual percent N_2O emission reduction for all glyoxylic acid production process lines.

§ 98.517 Records that must be retained.

In addition to the information required by § 98.3(g), you must retain the records specified in paragraphs (a) through (d) of this section for each caprolactam, glyoxal, or glyoxylic acid production facility:

(a) Documentation of how accounting procedures were used to estimate production rate.

(b) Documentation of how process knowledge was used to estimate abatement technology destruction efficiency (if applicable).

(c) Documentation of the procedures used to ensure the accuracy of the measurements of all reported parameters, including but not limited to, calibration of weighing equipment, flow meters, and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded, and the technical basis for these estimates must be provided.

(d) The applicable verification software records as identified in this paragraph (d). You must keep a record of the file generated by the verification software specified in § 98.5(b) for the applicable data specified in paragraphs (d)(1) through (4) of this section. Retention of this file satisfies the recordkeeping requirement for the data in paragraphs (d)(1) through (4) of this section.

(1) Monthly production quantity of caprolactam from each process line at the caprolactam, glyoxal, or glyoxylic acid production facility (metric tons).

(2) Monthly production quantity of glyoxal from each process line at the caprolactam, glyoxal, or glyoxylic acid production facility (metric tons).

(3) Monthly production quantity of glyoxylic acid from each process line at the caprolactam, glyoxal, or glyoxylic acid production facility (metric tons).

(4) Destruction efficiency of N_2O abatement technology from each process line, fraction (decimal fraction of N_2O removed from vent stream).

Table 1 to Subpart ZZ of Part 98—CO_2 Emission Factors for Carbonate-Based Raw Materials

§ 98.520 Definition of the source category.

(a) The ceramics manufacturing source category consists of any facility that uses nonmetallic, inorganic materials, many of which are clay-based, to produce ceramic products such as bricks and roof tiles, wall and floor tiles, table and ornamental ware (household ceramics), sanitary ware, refractory products, vitrified clay pipes, expanded clay products, inorganic bonded abrasives, and technical ceramics (*e.g.,* aerospace, automotive, electronic, or biomedical applications). For the purposes of this subpart, ceramics manufacturing processes include facilities that annually consume at least 2,000 tons of carbonates, either as raw materials or as a constituent in clay, which is heated to a temperature sufficient to allow the calcination reaction to occur, and operate a ceramics manufacturing process unit.

(b) A ceramics manufacturing process unit is a kiln, dryer, or oven used to calcine clay or other carbonate-based materials for the production of a ceramics product.

§ 98.521 Reporting threshold.

You must report GHG emissions under this subpart if your facility contains a ceramics manufacturing process and the facility meets the requirements of either § 98.2(a)(1) or (2).

§ 98.522 GHGs to report.

You must report:

(a) CO_2 process emissions from each ceramics process unit (*e.g.,* kiln, dryer, or oven).

(b) CO_2 combustion emissions from each ceramics process unit.

(c) CH_4 and N_2O combustion emissions from each ceramics process unit. You must calculate and report these emissions under subpart C of this part by following the requirements of subpart C of this part.

(d) CO_2, CH_4, and N_2O combustion emissions from each stationary fuel combustion unit other than kilns, dryers, or ovens. You must report these emissions under subpart C of this part by following the requirements of subpart C of this part.

§ 98.523 Calculating GHG emissions.

You must calculate and report the annual process CO_2 emissions from each ceramics process unit using the procedures in paragraphs (a) through (c) of this section.

(a) For each ceramics process unit that meets the conditions specified in § 98.33(b)(4)(ii) or (iii), you must calculate and report under this subpart the combined process and combustion CO_2 emissions by operating and maintaining a CEMS to measure CO_2 emissions according to the Tier 4 Calculation Methodology specified in § 98.33(a)(4) and all associated requirements for Tier 4 in subpart C of this part.

(b) For each ceramics process unit that is not subject to the requirements in paragraph (a) of this section, calculate and report the process and combustion CO_2 emissions from the ceramics process unit separately by using the procedures specified in paragraphs (b)(1) through (6) of this section, except as specified in paragraph (c) of this section.

(1) For each carbonate-based raw material (including clay) charged to the ceramics process unit, either obtain the mass fractions of any carbonate-based minerals from the supplier of the raw material or by sampling the raw material, or use a default value of 1.0 as the mass fraction for the raw material.

(2) Determine the quantity of each carbonate-based raw material charged to the ceramics process unit.

(3) Apply the appropriate emission factor for each carbonate-based raw material charged to the ceramics process unit. Table 1 to this subpart provides emission factors based on stoichiometric ratios for carbonate-based minerals.

(4) Use equation 1 to this paragraph (b)(4) to calculate process mass emissions of CO_2 for each ceramics process unit:

Equation 1 to paragraph (b)(4)

$$E_{CO2} = \sum_j \left[\left(M_j \bullet \frac{2000}{2205} \right) \bullet \sum_i (MF_i \bullet EF_i \bullet F_i) \right]$$

Where:

E_{CO2} = Annual process CO_2 emissions (metric tons/year).

M_j = Annual mass of the carbonate-based raw material *j* consumed (tons/year).

2000/2205 = Conversion factor to convert tons to metric tons.

MF_i = Annual average decimal mass fraction of carbonate-based mineral *i* in carbonate-based raw material *j*.

EF_i = Emission factor for the carbonate-based mineral *i*, (metric tons CO_2/metric ton carbonate, see table 1 to this subpart).

F_i = Decimal fraction of calcination achieved for carbonate-based mineral *i*, assumed to be equal to 1.0.

i = Index for carbonate-based mineral in each carbonate-based raw material.

j = Index for carbonate-based raw material.

(5) Determine the combined annual process CO_2 emissions from the ceramic process units at your facility using equation 2 to this paragraph (b)(5):

Equation 2 to paragraph (b)(5)

$$CO_2 = \Sigma^{k}{}_{1}\, E_{CO2_k}$$

Where:

CO_2 = Annual process CO_2 emissions from ceramic process units at a facility (metric tons).

E_{CO2_k} = Annual process CO_2 emissions calculated from ceramic process unit k calculated using equation 1 to paragraph (b)(4) of this section (metric tons).

k = Total number of ceramic process units at facility.

(6) Calculate and report under subpart C of this part the combustion CO_2 emissions in the ceramics process unit according to the applicable requirements in subpart C of this part.

(c) A value of 1.0 can be used for the mass fraction (MF_i) of carbonate-based mineral i in each carbonate-based raw material *j* in equation 1 to paragraph (b)(4) of this section. The use of 1.0 for the mass fraction assumes that the carbonate-based raw material comprises 100% of one carbonate-based mineral. As an alternative to the default value, you may use data provided by either the raw material supplier or a lab analysis.

§ 98.524 Monitoring and QA/QC requirements.

(a) You must measure annual amounts of carbonate-based raw materials charged to each ceramics process unit from monthly measurements using plant instruments used for accounting purposes, such as calibrated scales or weigh hoppers. Total annual mass charged to ceramics process units at the facility must be compared to records of raw material purchases for the year.

(b) You must use the default value of 1.0 for the mass fraction of a carbonate-based mineral, or you may opt to obtain the mass fraction of any carbonate-based materials from the supplier of the raw material or by sampling the raw material. If you opt to obtain the mass fractions of any carbonate-based minerals from the supplier of the raw material or by sampling the raw material, you must measure the carbonate-based mineral mass fractions at least annually to verify the mass fraction data. You may conduct the sampling and chemical analysis using any x-ray fluorescence test, x-ray diffraction test, or other enhanced testing method published by an industry consensus standards organization (*e.g.,* ASTM, ASME, API). If it is determined that the mass fraction of a carbonate based raw material is below the detection limit of available industry testing standards, you may use a default value of 0.005.

(c) You must use the default value of 1.0 for the mass fraction of a carbonate-based mineral, or you may opt to obtain the mass fraction of any carbonate-based materials from the supplier of the raw material or by sampling the raw material. If you obtain the mass fractions of any carbonate-based minerals from the supplier of the raw material or by sampling the raw material, you must determine the annual average mass fraction for the carbonate-based mineral in each carbonate-based raw material at least annually by calculating an arithmetic average of the data obtained from raw material suppliers or sampling and chemical analysis.

(d) You must use the default value of 1.0 for the calcination fraction of a carbonate-based mineral. Alternatively, you may opt to obtain the calcination fraction of any carbonate-based mineral by sampling. If you opt to obtain the calcination fraction of any carbonate-based minerals from sampling, you must determine on an annual basis the calcination fraction for each carbonate-based mineral consumed based on sampling and chemical analysis. You may conduct the sampling and chemical analysis using any x-ray fluorescence test, x-ray diffraction test, or other enhanced testing method published by an industry consensus standards organization (*e.g.,* ASTM, ASME, API).

§ 98.525 Procedures for estimating missing data.

A complete record of all measured parameters used in the GHG emissions calculations in § 98.523 is required. If the monitoring and quality assurance procedures in § 98.524 cannot be followed and data is unavailable, you must use the most appropriate of the missing data procedures in paragraphs (a) and (b) of this section in the calculations. You must document and keep records of the procedures used for all such missing value estimates.

(a) If the CEMS approach is used to determine combined process and combustion CO_2 emissions, the missing data procedures in § 98.35 apply.

(b) For missing data on the monthly amounts of carbonate-based raw materials charged to any ceramics process unit, use the best available estimate(s) of the parameter(s) based on all available process data or data used for accounting purposes, such as purchase records.

(c) For missing data on the mass fractions of carbonate-based minerals in the carbonate-based raw materials, assume that the mass fraction of a carbonate-based mineral is 1.0, which assumes that one carbonate-based mineral comprises 100 percent of the carbonate-based raw material.

§ 98.526 Data reporting requirements.

In addition to the information required by § 98.3(c), each annual report must contain the information specified in paragraphs (a) through (c) of this section, as applicable:

(a) The total number of ceramics process units at the facility and the number of units that operated during the reporting year.

(b) If a CEMS is used to measure CO_2 emissions from ceramics process units, then you must report under this subpart the relevant information required under § 98.36 for the Tier 4 Calculation Methodology and the following information specified in paragraphs (b)(1) through (3) of this section.

(1) The annual quantity of each carbonate-based raw material (including clay) charged to each ceramics process unit and for all units combined (tons).

(2) Annual quantity of each type of ceramics product manufactured by each ceramics process unit and by all units combined (tons).

(3) Annual production capacity for each ceramics process unit (tons).

(c) If a CEMS is not used to measure CO_2 emissions from ceramics process units and process CO_2 emissions are calculated according to the procedures specified in § 98.523(b), then you must report the following information specified in paragraphs (c)(1) through (7) of this section.

(1) Annual process emissions of CO_2 (metric tons) for each ceramics process unit and for all units combined.

(2) The annual quantity of each carbonate-based raw material (including clay) charged to each ceramics process unit and for all units combined (tons).

(3) Results of all tests used to verify each carbonate-based mineral mass fraction for each carbonate-based raw material charged to a ceramics process unit, as specified in paragraphs (c)(3)(i) through (iii) of this section.

(i) Date of test.

(ii) Method(s) and any variations used in the analyses.

(iii) Mass fraction of each sample analyzed.

(4) Method used to determine the decimal mass fraction of carbonate-based mineral, unless you used the default value of 1.0 (*e.g.,* supplier provided information, analyses of representative samples you collected, or use of a default value of 0.005 as specified by § 98.524(b)).

(5) Annual quantity of each type of ceramics product manufactured by each ceramics process unit and by all units combined (tons).

(6) Annual production capacity for each ceramics process unit (tons).

(7) If you use the missing data procedures in § 98.525(b), you must report for each applicable ceramics process unit the number of times in the reporting year that missing data procedures were followed to measure monthly quantities of carbonate-based raw materials or mass fraction of the carbonate-based minerals (months).

§ 98.527 Records that must be retained.

In addition to the records required by § 98.3(g), you must retain the records specified in paragraphs (a) through (d) of this section for each ceramics process unit, as applicable.

(a) If a CEMS is used to measure CO_2 emissions according to the requirements in § 98.523(a), then you must retain under this subpart the records required under § 98.37 for the Tier 4 Calculation Methodology and the information specified in paragraphs (a)(1) and (2) of this section.

(1) Monthly ceramics production rate for each ceramics process unit (tons).

(2) Monthly amount of each carbonate-based raw material charged to each ceramics process unit (tons).

(b) If process CO_2 emissions are calculated according to the procedures

specified in § 98.523(b), you must retain the records in paragraphs (b)(1) through (6) of this section.

(1) Monthly ceramics production rate for each ceramics process unit (metric tons).

(2) Monthly amount of each carbonate-based raw material charged to each ceramics process unit (metric tons).

(3) Data on carbonate-based mineral mass fractions provided by the raw material supplier for all raw materials consumed annually and included in calculating process emissions in equation 1 to § 98.523(b)(4), if applicable.

(4) Results of all tests, if applicable, used to verify the carbonate-based mineral mass fraction for each carbonate-based raw material charged to a ceramics process unit, including the data specified in paragraphs (b)(4)(i) through (v) of this section.

(i) Date of test.

(ii) Method(s), and any variations of methods, used in the analyses.

(iii) Mass fraction of each sample analyzed.

(iv) Relevant calibration data for the instrument(s) used in the analyses.

(v) Name and address of laboratory that conducted the tests.

(5) Each carbonate-based mineral mass fraction for each carbonate-based raw material, if a value other than 1.0 is used to calculate process mass emissions of CO_2.

(6) Number of annual operating hours of each ceramics process unit.

(c) All other documentation used to support the reported GHG emissions.

(d) The applicable verification software records as identified in this paragraph (d). You must keep a record of the file generated by the verification software specified in § 98.5(b) for the applicable data specified in paragraphs (d)(1) through (3) of this section. Retention of this file satisfies the recordkeeping requirement for the data in paragraphs (d)(1) through (3) of this section.

(1) Annual average decimal mass fraction of each carbonate-based mineral in each carbonate-based raw material for each ceramics process unit (specify the default value, if used, or the value determined according to § 98.524) (percent by weight, expressed as a decimal fraction) (equation 1 to § 98.523(b)(4)).

(2) Annual mass of each carbonate-based raw material charged to each ceramics process unit (tons) (equation 1 to § 98.523(b)(4)).

(3) Decimal fraction of calcination achieved for each carbonate-based raw material for each ceramics process unit (specify the default value, if used, or the value determined according to § 98.524) (percent by weight, expressed as a decimal fraction) (equation 1 to § 98.523(b)(4)).

§ 98.528 Definitions.

All terms used of this subpart have the same meaning given in the Clean Air Act and subpart A of this part.

TABLE 1 TO SUBPART ZZ OF PART 98—CO_2 EMISSION FACTORS FOR CARBONATE-BASED RAW MATERIALS

Carbonate	Mineral name(s)	CO_2 emission factor [a]
$BaCO_3$	Witherite, Barium carbonate	0.223
$CaCO_3$	Limestone, Calcium Carbonate, Calcite, Aragonite	0.440
$Ca(Fe,Mg,Mn)(CO_3)_2$	Ankerite [b]	0.408–0.476
$CaMg(CO_3)_2$	Dolomite	0.477
$FeCO_3$	Siderite	0.380
K_2CO_3	Potassium carbonate	0.318
Li_2CO_3	Lithium carbonate	0.596
$MgCO_3$	Magnesite	0.522
$MnCO_3$	Rhodochrosite	0.383
Na_2CO_3	Sodium carbonate, Soda ash	0.415
$SrCO_3$	Strontium carbonate, Strontianite	0.298

[a] Emission factors are in units of metric tons of CO_2 emitted per metric ton of carbonate-based material.
[b] Ankerite emission factors are based on a formula weight range that assumes Fe, Mg, and Mn are present in amounts of at least 1.0 percent.

Child Nutrition Programs: Meal Patterns Consistent With the 2020–2025 Dietary Guidelines for Americans

AGENCY: Food and Nutrition Service (FNS), Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: This rulemaking finalizes long-term school nutrition requirements based on the goals of the *Dietary Guidelines for Americans, 2020–2025,* robust stakeholder input, and lessons learned from prior rulemakings. Notably, this rulemaking gradually phases in added sugars limits for the school lunch and breakfast programs and in the Child and Adult Care Food Program, updates total sugars limits for breakfast cereals and yogurt to added sugars limits. As a reflection of feedback from stakeholders, this final rule implements a single sodium reduction in the school lunch and breakfast programs and commits to studying the potential associations between sodium reduction and student participation in the school lunch and breakfast programs. This rulemaking addresses a variety of other school meal requirements, including establishing long-term milk and whole grain requirements. Finally, this rule includes provisions that strengthen Buy American requirements. While this rulemaking takes effect school year 2024–2025, the Department is gradually phasing in required changes over time. Program operators are not required to make any changes to their menus as a result of this rulemaking until school year 2025–2026 at the earliest.

DATES: This final rule is effective July 1, 2024. Phased-in implementation dates for required changes are addressed in the **SUPPLEMENTARY INFORMATION** section of this rule.

ADDRESSES: *Docket:* Go to the Federal eRulemaking Portal at *https://www.regulations.gov* for access to the rulemaking docket, including any background documents.

FOR FURTHER INFORMATION CONTACT: Andrea Farmer, Director, School Meals Policy Division—4th floor, Food and Nutrition Service, 1320 Braddock Place, Alexandria, VA 22314; telephone: 703–305–2054.

Section 1: Background

On February 7, 2023, the U.S. Department of Agriculture (USDA) published *Child Nutrition Programs: Revisions to Meal Patterns Consistent With the 2020 Dietary Guidelines for Americans* [1] (''2023 proposed rule'') to update the school meal pattern requirements based on a comprehensive review of the *Dietary Guidelines for Americans, 2020–2025* (Dietary Guidelines), robust stakeholder input on the school meal patterns, and lessons learned from prior rulemakings.[2] USDA is finalizing that proposed rule, with some modifications based on public input. This final rule is the next step in an ongoing effort toward healthier school meals that USDA and the broader school meals community have been partnering on for well over a decade.

Separately, on January 23, 2020, USDA published a proposed rule, *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs* (''the 2020 proposed rule'').[3] As noted in the 2023 proposed meal pattern rule, based on public comment, USDA is finalizing certain meal pattern provisions from the 2020 proposed rule in this final rule.[4] The following sections address rule provisions that were included in the 2020 proposed rule:

- Section 6: Meats/Meat Alternates at Breakfast
- Section 12: Beans, Peas, and Lentils at Lunch
- Section 14: Meal Modifications
- Section 15: Clarification on Potable Water Requirements
- Section 16: Synthetic *Trans* Fats

Through this rulemaking, USDA is exercising broad discretion authorized by Congress to administer the school

Available at: *https://www.federalregister.gov/documents/2020/01/23/2020-00926/simplifying-meal-service-and-monitoring-requirements-in-the-national-school-lunch-and-school.*

[4] Other provisions of the 2020 proposed rule related to program monitoring were finalized in *Child Nutrition Program Integrity* (88 FR 57792, August 23, 2023). Available at: *https://www.federalregister.gov/documents/2023/08/23/2023-17992/child-nutrition-program-integrity.*

lunch and breakfast programs and ensure meal patterns ''are consistent with the goals of the most recent'' *Dietary Guidelines.*[5] See 42 U.S.C. 1752, 1758(a)(1)(B), 1758(k)(1)(B), 1758(f)(1)(A), and 1758(a)(4)(B). Consistent with its historical position, USDA interprets ''consistent with the goals of'' the *Dietary Guidelines* to be a broad, deferential phrase that requires consistency with the ultimate objectives of *Dietary Guidelines* but not necessarily the adoption of the specific consumption requirements or specific quantitative recommendations in the *Dietary Guidelines.* Accordingly, through this final rule, USDA is working to ensure an appropriate degree of consistency between school meal patterns and the *Dietary Guidelines* by considering operational feasibility and the ongoing recovery from the impacts of COVID–19, while also ensuring schools can plan appealing meals that encourage consumption and intake of key nutrients that are essential for children's growth and development.

This rulemaking updates current meal pattern requirements, which were most recently updated in SY 2022–2023 through the final rule, *Child Nutrition Programs: Transitional Standards for Milk, Whole Grains, and Sodium* (''the transitional standards rule''). USDA intended for the transitional standards rule to serve as a bridge, providing immediate relief as schools returned to traditional school meal service following extended use of COVID–19 meal pattern flexibilities. A detailed overview of the transitional standards rule, USDA's stakeholder engagement campaign, and other factors considered in the proposed rule development can be found in the 2023 proposed rule preamble.[6] With this rule, USDA intends to further align school meal nutrition requirements with the goals of the *Dietary Guidelines, 2020–2025.* This effort is described in greater detail, as informed by public comments on the proposed rule, throughout this preamble.

Phased-In Implementation

For most children, school meals are the healthiest meals they consume in a day,[7] and USDA research has found that school meals contribute positively to the diet quality of all participating students.[8] However, there is still room for improvement. For example, the *Dietary Guidelines for Americans, 2020–2025* indicates that about 70 to 80 percent of school children exceed the recommended daily limit of added sugars.[9] Research suggests that among adolescents, certain poor dietary behaviors—such as skipping breakfast and infrequent consumption of fruits and vegetables—worsened during the COVID–19 pandemic.[10] Updating the school meal patterns is one strategy to increase healthy dietary behaviors among school children for the long term. Many children rely on school meals for more than half of their food each school day, so even small nutritional improvements can make a difference.[11]

At the same time, USDA understands that changes to the meal patterns need to be gradual and predictable to give child nutrition program operators and children time to adapt, and to allow industry time to develop new products. This final rule responds to stakeholder input by building in plenty of time for State agencies, school nutrition professionals, and other program operators to successfully implement the required changes. For example, as discussed in *Section 2: Added Sugars,* USDA is gradually phasing in the product-based and weekly limits for added sugars in the school meal programs. As discussed in *Section 5: Sodium,* this final rule gives schools and manufacturers even more time to reduce sodium compared to the proposed rule. As recommended by numerous stakeholders, it also commits to examining sodium reduction in school meals and assessing the potential impact of these reductions on program operations and student participation. This rulemaking does not make changes to the current whole grain requirements for school meals and continues to allow schools to offer flavored milk, subject to new added sugars limits, to all K–12 students. Although USDA considered alternatives for the whole grain and flavored milk requirements, based on stakeholder input, USDA determined that maintaining the current requirements would best position schools and students for success.

Other changes in this rule simplify program regulations and provide child nutrition program operators more flexibility to successfully plan and prepare meals. These changes will be implemented on a quicker timeline, as they provide optional administrative or operational flexibilities but do not require operators to change menus or operations. For example, this rulemaking makes it easier for schools to offer meats/meat alternates at breakfast by removing the minimum grains requirement. It removes the limit for nut and seed crediting at breakfast, lunch, and supper in the child nutrition programs, making it easier for operators to offer vegetarian meals. This rulemaking also makes it easier for program operators to purchase local foods for the child nutrition programs by allowing ''locally grown, raised, or caught'' to be used as procurement specifications for unprocessed or minimally processed food items.

Each provision of this rule, along with its implementation date, is discussed in greater detail throughout this preamble. A chart outlining each regulatory change and its implementation date is included in *Section 21: Summary of Changes.*

[5] The *Dietary Guidelines, 2020–2025* provide four overarching recommendations: (1) Follow a healthy dietary pattern at every life stage. (2) Customize and enjoy nutrient-dense food and beverage choices to reflect personal preferences, cultural traditions, and budgetary considerations. (3) Focus on meeting food group needs with nutrient-dense foods and beverages and stay within calorie limits. (4) Limit foods and beverages higher in added sugars, saturated fat, and sodium, and limit alcoholic beverages.

USDA Support for Child Nutrition Programs

USDA is incredibly grateful for the dedication of child nutrition program operators who serve children healthy meals with kindness and care. USDA understands that some program operators continue to face high food costs and supply chain issues. The Department is committed to continuing to provide program operators with support to help them succeed.

USDA is making a $100 million [12] investment in the Healthy Meals Incentives (HMI) Initiative, which is dedicated to improving the nutritional quality of school meals through food systems transformation, school food authority recognition and technical assistance, the generation and sharing of innovative ideas and tested practices, and grants. As part of a cooperative agreement to develop and implement USDA's HMI Initiative, Action for Healthy Kids (AFHK) has awarded nearly $30 million in grants to 264 small and/or rural school food authorities across 44 States and the District of Columbia. These school food authorities will use funding to modernize their operations and provide more nutritious meals to students. Additionally, AFHK is offering Recognition Awards to celebrate and spotlight school food authorities who use innovative practices, student and community engagement activities, and other strategies to provide meals that are consistent with the *Dietary Guidelines for Americans, 2020–2025.*

USDA also provides support to schools through its annual Patrick Leahy Farm to School Grant Program. These funds support a wide range of farm to school activities designed to improve access to local foods in eligible schools from training, planning, and developing partnerships to creating new menu items, expanding local supply chains, offering taste tests to children, purchasing equipment, planting school gardens, and organizing field trips to agricultural operations.

Finally, USDA will continue to provide technical assistance to State agencies, schools, and other program operators to ensure they have the guidance and support they need to successfully implement this rule. USDA will release updated policy guidance and will host a series of webinars to provide a detailed overview of this rulemaking. In addition, communications resources related to this rulemaking are available on the USDA Food and Nutrition Service website.[13]

Federal Strategies To Reduce Sodium and Added Sugars in the Food Supply

USDA recognizes that schools and child and adult care institutions are part of the broader food environment. In order to successfully make improvements to the child nutrition program meal patterns, stakeholders have emphasized that similar improvements must be made to the broader food environment. For example, stakeholders have suggested that children are more likely to accept lower sodium school meals if the meals they consume outside of school are lower in sodium. Research has shown that consumer preferences and expectations for salty tastes can adjust as dietary intake changes.[14]

To that end, other Federal agencies are supporting efforts to improve dietary behaviors among the U.S. population. For example, the Food and Drug Administration (FDA) is taking an iterative approach to gradually reduce sodium in the U.S. food supply that includes establishing voluntary sodium targets for industry, monitoring and evaluating progress, and engaging with stakeholders. The FDA is especially encouraging adoption of the voluntary targets by food manufacturers whose products make up a significant proportion of national sales in one or more food categories and restaurant chains that are national and regional in scope.[15] These efforts are discussed in greater detail in *Section 5: Sodium.*

The FDA is also committed to reducing added sugars in the U.S. food supply and in individual's diets. In 2016, FDA issued a final rule [16] updating the Nutrition Facts label, which requires, in part, a declaration of the added sugars in a serving of a product and the percent Daily Value (% DV) for added sugars. Manufacturers with $10 million or more in annual sales were required to update their labels by January 1, 2020; manufacturers with less than $10 million in annual food sales were required to update their labels by January 1, 2021.

Additionally, following the 2022 White House Conference on Hunger, Nutrition, and Health, the White House released a National Strategy [17] that highlighted that the intake of added sugars for most Americans is higher than what is recommended by the *Dietary Guidelines* and included several FDA initiatives to accelerate efforts to empower individuals with information and create a healthier food supply. In November 2023, FDA, in collaboration with USDA and the U.S. Department of Health and Human Services, held a virtual public meeting and listening sessions entitled, ''Strategies to Reduce Added Sugars Consumption in the United States.'' This public meeting was a commitment made in the National Strategy and connected Federal agencies, communities, and private industry to explore different tactics for reducing added sugars in the U.S. food supply and in individuals diets. Presentations during this meeting provided a background on added sugars, discussed strategies for reducing added sugars by other countries, and highlighted approaches to increase engagement and education on added sugars. This meeting was accompanied by two days of facilitated listening sessions where participants offered feedback and recommendations for next steps on proposed strategies.

The U.S. Department of Health and Human Service's Office of Disease Prevention and Health Promotion's Healthy People 2030 initiative also includes a focus on reducing consumption of added sugars and sodium in individuals aged 2 years and older.[18] As detailed in *Section 2: Added Sugars* and *Section 5: Sodium,* the *Dietary Guidelines,* which are updated and jointly released by the USDA and the Department of Health and Human Services, recommend limiting foods and beverages higher in added sugars and sodium. Specifically, the *Dietary Guidelines* recommend that added sugars make up less than 10 percent of calories per day for individuals age 2 years and older. The *Dietary Guidelines* also recommend consuming less than 2,300 milligrams of sodium per day—

and even less for children younger than age 14.[19]

In addition, the historic White House Conference on Hunger, Nutrition, and Health inspired actions to support a whole of society approach to improving nutrition and health. Over $8 billion in public- and private-sector commitments were made to improve food and nutrition security, promote healthy choices, and improve physical activity. USDA expects that, when carried through, the commitments made as part of the White House Conference will support improvements to the broader food environment, thereby supporting efforts to improve nutrition in school and child and adult care settings.

For example, the private sector made the following commitments in fall 2022:[20]

- Danone North America committed to prioritizing new reduced-sugar, low-sugar, and no-added-sugar options in its children's products and pledged that 95 percent of these products will contain less than 10 grams of total sugar per 100 grams of food product by 2030.
- The National Restaurant Association committed to expand its Kids Live Well program to 45,000 additional restaurants and food service locations. Kids Live Well is a voluntary initiative to help restaurants offer healthier meal options for children that meet added sugars, sodium, and calories thresholds established by the latest nutrition science.
- Tyson Foods committed to reformulating and improving the nutritional value of its prepared foods portfolio, with a focus on reducing sodium.
- Walgreens committed to increasing the selection of fresh food in its stores by 20 percent, including a greater variety of fresh produce, and implementing new solutions to highlight healthy ingredients and further reduce harmful ones.

The strides made in school nutrition over the past decade demonstrate that healthier school meals are possible when everyone who plays a part—food industry, school nutrition professionals, USDA, and others—work together toward the common goal of improving children's health. This includes USDA continuing to do its part to ensure schools and other child nutrition program operators have the support they need to successfully implement this rulemaking. USDA recognizes that child nutrition program operators have a challenging job and appreciates their tireless dedication to the children in their care. USDA is continually looking for ways to better support program operators who provide our Nation's children with nutritious meals and snacks. The Department welcomes input from stakeholders on what additional guidance and support State agencies, schools, and other program operators will need to successfully implement this rulemaking.

Overview of Public Comments and USDA Response

USDA appreciates public interest in the proposed rule. USDA initially provided a 60-day public comment period (February 7, 2023, through April 10, 2023). Based on stakeholder requests[21] for additional time to review the rule and assess its impact, USDA extended the public comment period by 30 days. During the 90-day comment period (February 7, 2023, through May 10, 2023), USDA received more than 136,000 comments. Of the total, about 125,000 were form letters from 46 form letter campaigns, and about 5,000 were unique submissions. An additional 6,400 were duplicate or non-germane submissions. USDA received public comments from State agencies, school nutrition professionals, advocacy groups, industry respondents, professional associations, school districts, CACFP sponsoring organizations, dietitians, and individuals, including students, parents and guardians, grandparents, and other caregivers. Overall, over 23,000 respondents, including over 700 unique submissions, supported the proposed rule in its entirety. Over 6,000 respondents, including over 1,000 unique submissions, opposed the proposed rule in its entirety.

Many school nutrition professionals supported provisions of the rule that provide menu planners more flexibility, and provisions that maintain requirements that menu planners have already successfully implemented. For example, a national organization representing tens of thousands of school nutrition professionals offered support for the following provisions that USDA ultimately finalized or committed to in this final rule:

- Maintaining the current requirement allowing all schools to offer fat-free and low-fat milk, flavored and unflavored, to K–12 students.
- Maintaining the current requirement that at least 80 percent of weekly grains offered in school meals are whole grain-rich.
- Committing to conducting a study on potential associations between sodium reduction and student participation.
- Allowing schools more flexibility to offer meats/meat alternates in place of grains at breakfast.
- Allowing tribally operated schools, schools operated by the Bureau of Indian Education, and schools serving primarily American Indian or Alaska Native children to serve vegetables to meet the grains requirement.
- Codifying in regulation that traditional Indigenous foods may be served in reimbursable school meals.
- Allowing nuts and seeds to credit for the full meats/meat alternates component in all child nutrition programs and meals.
- Exempting bean dip from the total fat standard in Smart Snacks regulations.
- Allowing State agencies discretion to make exceptions to the degree requirement for school nutrition directors hired in medium and large districts.

USDA worked in collaboration with a data analysis company to code and analyze the public comments using a commercial, web-based software product. The Summary of Public Comments report is available under the Browse Documents tab in docket FNS–2022–0043. All comments are posted online at *https://www.regulations.gov*.[22]

The following paragraphs describe general themes from the public comments. Many respondents also provided feedback on the specific proposals. This specific feedback is included in the subsequent sections of the preamble, as applicable.

Public Comments: Dedication of School Nutrition Professionals

Several respondents expressed appreciation for the efforts of school

nutrition professionals. An advocacy group noted that school nutrition professionals provide balanced, nutritious meals to children, promoting academic success and supporting the entire school community's efforts to enrich the lives of students. Another respondent emphasized that school nutrition professionals are deeply caring people who are invested in children's health and wellbeing. An advocacy group agreed, noting that school nutrition professionals go ''above and beyond'' to keep children nourished; as an example, one respondent described efforts at their school to create menus that are nutritionally balanced, flavorful, and cater to student preferences. When considering options for the final rule, one dietitian urged USDA to listen to the school nutrition professionals who ''do the work'' every day by providing meals to children.

Respondents also commended successful implementation of school meal pattern improvements established under the Healthy Hunger-Free Kids Act. For example, one advocacy group reported that the updated nutrition standards enhanced the nutritional quality of meals and increased student participation. Another advocacy group noted that school nutrition professionals have worked tirelessly to reduce sodium, calories, and fat; to introduce students to whole grain foods; and to increase fruits and vegetables in school meals. Another respondent was proud of efforts made by school nutrition professionals thus far, emphasizing that school meals are the healthiest meals that most students receive each day. A joint response from several elected officials stated that strong school nutrition requirements are ''one of the most important public health achievements in a generation.'' This response also noted that school cafeterias across the country are ''leading the way to serving healthy, delicious, and culturally relevant foods'' to children.

USDA Response: USDA appreciates and agrees with public comments that cited the important work of school nutrition professionals. The Department values the vital work that school nutrition professionals and other child nutrition program operators do every day to keep our Nation's children nourished and healthy. In this final rule, USDA incorporated feedback from individuals with firsthand experience operating the child nutrition programs. For example, this feedback is reflected in *Section 3A: Flavored Milk,* where USDA considered operational challenges that respondents raised in response to the proposal that would have applied different milk requirements across grade levels. USDA also considered child nutrition program operator feedback when determining implementation dates for the provisions of this rule, including in *Section 5: Sodium.*

Public Comments: Nutrition and Health

Over 11,000 respondents cited the need for strong nutrition requirements. For example, an advocacy group suggested that aligning the school meal nutrition requirements with the goals of the *Dietary Guidelines* ''sets our students up for lifelong success.'' Other respondents emphasized the importance of strong nutrition requirements to children's academic achievement and overall wellbeing. A form letter campaign stated that strong nutrition requirements can help to address health disparities and improve nutrition equity. Another respondent agreed, maintaining that the child nutrition programs are important tools in addressing health disparities and advancing nutrition security among communities of color. An advocacy group emphasized the importance of nutritious meals in schools and child care settings, noting that these meals often represent a significant portion of children's food intake. This respondent argued that continued improvement in the meal patterns could reduce children's risk for diet-related diseases. Another advocacy group agreed, stating that the school meal programs provide more than half of some students' calories and are often the healthiest sources of food for school children. An industry respondent described school meals as a nutrition ''success story'' and stated that good nutrition is essential to children's growth, learning, and development. An advocacy group emphasized that the proposed evidence-based standards will ''make school meals even healthier.''

Some respondents, including a form letter campaign, encouraged USDA to go further; for example, by implementing sodium reductions beyond those proposed in the rule. Respondents also encouraged USDA to strengthen the whole grains proposal, by requiring all grains offered in school meals to be whole grain-rich.[23] Others urged USDA to adopt a swifter timeline for implementation; for example, one advocacy group recommended that USDA ''implement the strongest nutrition standards on the fastest timeline possible.'' A few respondents, including an advocacy group, encouraged USDA to update the Summer Food Service Program meal patterns to more closely align with the goals of the *Dietary Guidelines,* including by serving more fruits, vegetables, and whole grains. These respondents emphasized the importance of providing children with healthy, high-quality meals year-round.

USDA Response: USDA appreciates public comments that discussed the importance of strong, science-based nutrition requirements and the positive impact on children's health. The Department agrees with respondents that asserted that meals served in child nutrition programs contribute to healthy dietary patterns and improved dietary outcomes. In this final rule, USDA has considered these important factors, along with the importance of ensuring that the meal patterns are practical and achievable for schools. For example, this final rule will continue to reduce sodium in school meals, while taking a gradual approach to implementation to give schools, students, and the food industry time to adapt to the changes. The Department also acknowledges comments that requested more whole grains in school meals; instead, this final rule continues the requirement that the majority of grains offered be whole grain-rich, while providing schools some flexibility to offer other grains. USDA remains committed to its statutory obligation to establish nutrition requirements for school meals that are consistent with the goals of the *Dietary Guidelines* in efforts to improve the nutritional quality of program meals serve to the Nation's children. While USDA appreciates public comments regarding the Summer Food Service Program, extensive updates to the Summer Food Service Program meal pattern are outside the scope of this rulemaking.

Public Comments: Student Participation

Many respondents expressed concern that the proposed changes could negatively impact student participation and consumption of meals. Some respondents suggested that, if the proposed rule was finalized, students would choose to consume a lunch from home or elsewhere instead of participating in the school meal programs. These respondents argued that this would result in non-participating students consuming a meal that is less nutritious than school meals offered under the current requirements. Other respondents maintained that school nutrition programs would suffer if student participation declines.

[23] To meet USDA's whole grain-rich criteria, a product must contain at least 50 percent whole grains, and the remaining grain content of the product must be enriched.

Respondents also raised concerns that the proposed limits for added sugars and sodium could make school meals less appealing to students. For example, an industry respondent asserted that the proposed added sugars and sodium limits would negatively impact the taste of foods that children enjoy. However, an advocacy group noted that students and families support improving the nutritional quality of school meals, citing the role school meals play in student academic achievement and health. A joint comment from several elected officials suggested that children enjoy healthier school meals, and that the amount of food wasted in schools has not changed since the nutrition requirements were updated in 2012.

USDA Response: Although USDA does not expect that updated nutrition requirements would negatively impact student participation in the school meal programs,[24] the Department acknowledges respondent concerns about the importance of maintaining student participation. The Department strives to advance nutrition security while also ensuring that school meals are appealing and enjoyable to students. The changes finalized in this rule thoughtfully consider both concerns by gradually phasing in required changes, such as the added sugars limits and sodium reduction. This phased-in approach will give program operators and children time to implement and adapt to the changes. Additionally, as noted in *Section 5: Sodium,* as part of this rulemaking, USDA has committed to conducting a study on potential associations between sodium reduction and student participation.

Public Comments: Product Availability

Numerous respondents argued that the proposed meal pattern changes would force vendors out of the child nutrition market, making it more difficult for schools to find products needed to comply with USDA meal requirements. Several respondents expressed concern about increased costs, procurement challenges, and reduced options for school breakfast under the proposed rule. A joint comment from a group of elected officials agreed, arguing that the proposed changes could lead to ''increased complexity'' in school food purchasing, decreasing the number of options available to schools and forcing schools to compete for a limited supply of specialized foods. Respondents also expressed concern about ongoing supply chain issues and food-price inflation. One industry respondent suggested that rather than implementing new requirements, USDA should maintain the current requirements and teach students how to make healthy choices through nutrition education.

A school food service director stated that procurement would be a challenge under the proposed rule and suggested that it takes ''a few years'' for manufacturers to catch up with new regulations. This respondent also suggested manufacturers do not dedicate as much space to school-specific items in their warehouses, which impacts product availability. An advocacy group argued that it takes industry three to five years, and a significant amount of money, to reformulate ''any given product.'' This respondent also pointed out that the K–12 sector tends to be the least lucrative market for the food industry. Another advocacy group agreed, arguing that the cost of producing and stocking specialized K–12 menu items is ''too high,'' and the demand for these products on the commercial market is ''too low.'' A State agency also expressed concern about proposed implementation timeframes, noting that manufacturer and distributor capabilities have not yet returned to pre-pandemic levels. A form letter campaign encouraged USDA to work with the food industry to ensure product availability, particularly for lower sodium products. One respondent stated that school kitchens are understaffed, and school nutrition professionals rely heavily on food manufacturers to provide meals for students. A school district raised concerns about increased pressure for scratch cooking; while this respondent acknowledged they would ''love for more scratch options to be served,'' they did not view this as a realistic option given current staffing challenges.

Respondents also cited the importance of supporting local farmers and producers and helping children learn about where their food comes from. One advocacy group cited the benefits of local food systems, which they argued stimulate local economies and provide reliable product availability during supply chain disruptions. Respondents encouraged USDA to consider equity and inclusion in establishing regulatory requirements; for example, an advocacy group suggested that USDA consider the broader food system and supply chains, including farm workers and other people employed in the food system. This respondent supported efforts to create a fair and sustainable agricultural economy. Another respondent advocated for policies that encourage child nutrition operators to source from socially disadvantaged producers. An advocacy group suggested that purchases made through the child nutrition programs should prioritize respect, equity, and inclusion across the food supply chain. This respondent asserted that supporting local and regional foods systems, including by strengthening support for locally owned agricultural and food processing operations, may create more diversified and resilient supply chains. While offering support for the proposed geographic preference provision, some respondents suggested operators would need more financial support to purchase local foods, especially in the CACFP.

USDA Response: USDA recognizes that many stakeholders expressed concerns about product availability and understands the impact of product availability and cost on the operation of the child nutrition programs, as well as challenges posed by staffing constraints. At the same time, the Department appreciates public comments that cited continuous industry efforts to develop nutritious foods for child nutrition programs, and many of the provisions of this rule incorporate input from industry respondents. For example, USDA agrees with public comments that stated there are products already available that meet the product-based limits for added sugars, which aligns with data collected by USDA.[25] USDA expects that ongoing industry efforts to develop nutritious foods will support product availability for child nutrition programs. USDA considered each of these factors when developing this final rule; for example, by moving forward with important changes while providing ample time for implementation. As detailed in *Section 2: Added Sugars* and *Section 5: Sodium,* USDA is providing about three years for implementation of the weekly added sugars limit and sodium reduction in response to public comments that suggested it takes about

[24] According to USDA research conducted following implementation of the 2012 final rule, ''There was a positive and statistically significant association between student participation in the NSLP and the nutritional quality of NSLP lunches, as measured by the HEI–2010. Rates of student participation were significantly higher in schools with HEI–2010 scores in the third and highest quartiles (that is, the top half) of the distribution compared to the lowest quartile.'' See page 38. U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *School Nutrition and Meal Cost Study Summary of Findings.* Available at: *https://www.fns.usda.gov/school-nutrition-and-meal-cost-study.*

[25] U.S. Department of Agriculture Food and Nutrition Service, Office of Policy Support data collection of nutrition label information from major cereal and yogurt manufacturer K–12 and food service catalogs. Data were collected on 191 total cereal products and 110 total yogurt products. See *Regulatory Impact Analysis.*

three years for manufacturers to reformulate products.

Public Comments: Financial Challenges

Many respondents emphasized the importance of investing in school nutrition programs financially. For example, respondents cited concerns about food cost, inflation, meal debt, and supply chain challenges. An advocacy group noted that many stakeholder concerns about the proposed rule are related to resource constraints. This respondent suggested financial pressures undermine the program's goals. Another advocacy group expressed appreciation for the HMI Initiative to support small and rural schools, and supported USDA's plans to provide technical assistance, share best practices, and encourage collaboration with the food industry. One State agency supported increased meal reimbursements, investments in kitchen equipment and infrastructure, and more training opportunities. Another respondent agreed, stating that the program reimbursement rates are ''simply not enough'' to cover food and labor costs, while others suggested schools would need extra supplies or funding to implement the updated meal patterns.

USDA Response: USDA acknowledges public comments from program operators that emphasized that financial sustainability is critical for successful child nutrition program operations. USDA understands that schools and other program operators need support to succeed in implementing updated requirements. As part of this effort, USDA continues to provide high-quality, cost-effective foods through USDA Foods and various grant-funded opportunities. USDA has also provided significant additional financial resources to address specific needs, such as the $3.8 billion in supply chain assistance funds provided in fiscal years 2021, 2022, and 2023 to address product shortages and price increases experienced after the pandemic.[26] While increasing the Federal reimbursement rates is beyond USDA's authority and would require Congressional action, the Department remains committed to providing support to child nutrition program operators.

Public Comments: Practical and Durable Standards

Numerous respondents discussed the need for attainable nutrition requirements. Some respondents asserted that certain proposals are impractical, or that the school nutrition programs cannot move beyond current meal pattern requirements. A handful of respondents suggested maintaining the transitional standards as the permanent school nutrition requirements, suggesting the transitional standards represent a ''middle ground.'' Many respondents recommended that USDA study the impact of the current meal pattern requirements prior to making any further changes.

Respondents cited concerns about the broader food environment, arguing that schools are not solely to blame for children's excess consumption of added sugars and sodium. One respondent pointed out that when considering the full calendar year, many children consume more meals outside of school than in school. This respondent agreed that school meals contribute to children's health but emphasized the importance of improving food choices in other settings. Another respondent recommended that USDA focus on the ''food system as a whole'' and engage in a public health initiative to reduce added sugars and sodium in grocery store foods.

Regarding implementation dates, one dietitian recommended that USDA delay implementation of any new requirements until 2027. This respondent suggested that additional time would allow school nutrition directors to educate staff on upcoming changes and allow industry to develop new food products. A school district agreed, describing the implementation timeframes for added sugars and sodium as ''a little rushed.'' Several respondents specifically recommended delaying implementation of any provisions that would impact CACFP. These respondents raised concerns about a lack of CACFP stakeholder engagement and the importance of providing the CACFP community ample time to prepare for the changes.

Other respondents felt the proposed implementation timeframes were adequate. An advocacy group argued that the food industry could adapt to incremental implementation, which they noted was built into the proposed rule. A State agency agreed, suggesting that the proposed phased-in implementation would provide the opportunity to revise menu offerings, manage inventory, and offer technical assistance. A second State agency affirmed that the proposed implementation dates provide adequate lead time; however, this respondent also noted that timely publication of the final rule would be ''critical'' to allow for product reformulation, procurement, and menu planning. An advocacy group described USDA's phased-in approach as ''reasonable,'' stating that the proposed rule would improve school meals ''in a practical way.'' This respondent suggested that the proposed sodium limits, for example, would give schools time to plan, source, and test meals that meet the proposed limits. Another advocacy group that described the rule as ''scientifically sound and practical'' argued that the proposed rule would give schools time to implement the new requirements while also prioritizing children's health. A joint response from several elected officials maintained that the proposed rule included a ''common-sense incremental approach to implementation, making it feasible for schools and the food industry to have success.'' An advocacy group supported the phased-in implementation for sodium but noted it would be ''incumbent'' upon manufacturers to reformulate products to ensure the limits would be effective.

USDA Response: USDA recognizes that meaningful improvement in the nutritional quality of school meals is best achieved by nutrition requirements that are both ambitious and feasible. The Department also acknowledges public comments that suggested child nutrition program operators need time to successfully implement new requirements, and that feedback is reflected in this final rule. For example, this final rule gradually phases in certain requirements, such as the added sugars limits, to provide program operators time to make menu changes. Additionally, this final rule includes several provisions that provide menu planners with more options to create healthy meals; for example, by making it easier for schools to offer meats/meat alternates at breakfast (see *Section 6: Meats/Meat Alternates at Breakfast*). By incorporating valuable feedback from stakeholders into this final rule, the Department continues to put children's health at the forefront while also ensuring that the program requirements are achievable and set up schools and child and adult care institutions for success.

Public Comments: Other School Nutrition Comments

Some respondents recommended other meal pattern requirements or offered suggestions for USDA to consider. One respondent suggested adding a requirement for ''healthy fats'' in school meals, while another recommended establishing a minimum fiber standard. Another respondent encouraged USDA to provide recipes, training, and nutrition education to

[26] U.S. Department of Agriculture. *FNS Actions to Address COVID–19 Related Supply Chain Disruptions.* Available at: *https://www.fns.usda.gov/supply-chain.*

encourage schools to offer more seafood in school meals. Numerous respondents recommended that USDA restrict or limit the use of artificial or non-nutritive sweeteners in school meals. Others encouraged USDA to provide incentives for fresh fruits and vegetables, rather than restricting certain foods. A form letter campaign and numerous other respondents supported expanding access to vegetarian, vegan, or plant-based school meals. One respondent suggested implementing a plant-based protein requirement in school meals, while another encouraged schools to adopt a ''meat-free day.'' A few respondents noted that Black, Indigenous, and other People of Color (BIPOC) are three times as likely to follow a plant-based diet than white people and suggested that providing more plant-based meals would support equity in the school meal programs. Respondents also cited the importance of meeting cultural food preferences. For example, one advocacy group noted that food is ''socially and emotionally nurturing'' and emphasized the importance of meeting nutrition requirements as well as food preferences. Another advocacy group cited a research brief that suggested that ''enhancing the palatability and cultural appropriateness of meals'' offered would improve meal consumption.

A few respondents, particularly those who operate multiple child nutrition programs, supported stronger alignment of the nutrition requirements for all program meal patterns. A student encouraged USDA to seek student perspectives on meal pattern requirements. This respondent suggested students who participate in the school meal programs would provide important perspectives on food waste, cultural relevance, and nutrition. Although outside the scope of this rulemaking, several respondents supported expanding access to free school meals and providing students with more time to eat school lunch. For example, one respondent noted that studies have shown that even modest increases in time to eat result in ''improved consumption, particularly of fruit and vegetables, and reduced food waste.''

USDA Response: USDA appreciates public comments that provided additional feedback and suggestions for new requirements beyond what was proposed. Certain suggestions, such as adjusting the eligibility requirements for free meals or providing more time for children to eat their meals, are beyond USDA's authority. While USDA does not have authority to regulate the length of school meal periods, USDA encourages schools to provide children adequate seat time to consume their meals. USDA acknowledges public comments encouraging more plant-based meals as a strategy to support equity in school meals. Meal pattern requirements are established to provide the foundation of well-balanced meals, and USDA encourages program operators to develop menus that meet the needs of their diverse communities. This rulemaking provides more opportunities for schools to offer plant-based meals. In response to requests to streamline program requirements, USDA has endeavored to better align child nutrition program requirements in this rulemaking; for example, by aligning nut and seed crediting across all child nutrition programs and meals (see *Section 11: Nuts and Seeds*). While other suggestions outside the scope of this rulemaking, such as developing requirements for ''healthy fats'' and artificial sweeteners, are not included in the final rule, the Department remains committed to providing the technical assistance needed to enable schools to serve diverse, culturally diverse meals to meet the unique needs and preferences of their students.

Public Comments: Child and Adult Care Food Program

Although the proposed rule primarily focused on revisions to the school meal patterns, the following proposals applied to CACFP:

• *Added Sugars:* USDA proposed updating the current CACFP *total* sugars limits for breakfast cereals and yogurt to *added* sugars limits, consistent with the proposed limits for breakfast cereals and yogurt in the school meal programs.

• *Whole grains definition:* USDA proposed adding a definition of ''whole grain-rich'' to CACFP regulations, consistent with the definition USDA proposed adding in school meal regulations.

• *Menu Planning Options for American Indian and Alaska Native Students:* USDA proposed to allow CACFP institutions and facilities serving primarily American Indian or Alaska Native children to substitute vegetables for grains. This proposal also applied to NSLP, SBP, and SFSP.

• *Nuts and Seeds:* USDA proposed to allow nuts and seeds to credit for the full meats/meat alternates component in all child nutrition program meals and snacks. This proposal applied to NSLP, SBP, SFSP, and CACFP.

• *Geographic Preference:* USDA proposed to expand geographic preference options by allowing ''locally grown, raised, or caught'' as procurement specifications for unprocessed or minimally processed food items in the child nutrition programs. This proposal applied to NSLP, SBP, SFSP, and CACFP.

• *Miscellaneous Changes:* USDA proposed to change the name of the ''meats/meat alternates'' meal component to ''protein sources'' in CACFP, consistent with the proposed change in NSLP and SBP. USDA also proposed a few other minor terminology changes and meal pattern table revisions that impact CACFP.

• *Proposals from Prior USDA Rulemaking:* USDA signaled its intent to finalize a prior proposal that would update meal modification regulations for disability and non-disability reasons, impacting NSLP, SBP, and CACFP. USDA signaled its intent to finalize a prior proposal regarding a technical correction for nutrient requirements for fluid milk substitutes, impacting NSLP, SMP, SBP, and CACFP.

With the exception of the proposal to change the name of the ''meats/meat alternates'' meal component to ''protein sources'' in CACFP, which is not finalized, all of the proposed changes to CACFP are finalized in this rulemaking.

USDA received over 90 comments from CACFP sponsoring organizations. USDA also received comments from advocacy groups representing the CACFP community, and hundreds of form letters from individuals who are a part of the CACFP community. An advocacy group recommended that USDA engage CACFP stakeholders before finalizing and implementing the rule. This respondent argued such engagement is necessary to understand the rule's impacts on CACFP, including costs, product availability, and nutritional quality. Another advocacy group emphasized the importance of supporting efforts to stabilize the CACFP workforce. This respondent recommended delaying implementation to ensure that the CACFP community has time to prepare for implementation and provide input on the proposed changes.

Specific feedback from the CACFP community is detailed in the relevant sections throughout this preamble. At a high level, concerns raised by the CACFP community include:

• Potential impact on training, technical assistance, and resource development, especially related to the proposed terminology change for the meats/meat alternates component.

• Potential costs associated with updating websites, materials, menus, and recipes.

• The need for implementation support for the proposed changes, such as the need for tools and resources to

successfully implement the proposed added sugars limits for yogurt and cereal. Specifically, one advocacy group recommended USDA develop an ''approved'' list of products that could be offered under the added sugars limits.

- An overall concern that the proposed rule lacked a ''CACFP lens,'' and therefore did not adequately consider its potential impact on the CACFP community.

The CACFP community also raised concerns about other challenges facing operators that were outside the scope of the proposed rule. For example, respondents noted ongoing pandemic recovery, staff shortages, and vendor losses, and the loss of pandemic-era funding and flexibilities. Respondents emphasized the importance of supporting CACFP, which one advocacy group described as a ''financial and nutritional lifeline'' for many children and families. Other respondents agreed, noting that CACFP plays a ''vital role in supporting good nutrition'' and providing ''quality affordable child care'' for families.

USDA Response: USDA appreciates public comments received on behalf of the CACFP community and agrees that CACFP operators play a vital role in supporting the goals of child nutrition programs. USDA acknowledges that the listening sessions conducted prior to the development of the proposed rule were primarily focused on nutrition requirements for school meal programs, given that the majority of the provisions in the proposed rule relate to NSLP and SBP. However, many of the organizations that USDA engaged with through these listening sessions also advocate on behalf of CACFP and/or SFSP operators, in addition to school meals. USDA also received over 8,000 comments on the transitional standards rule, including comments related to CACFP, which were considered in the development of the proposed rule. Public comments submitted in response to the 2023 proposed rule, including those submitted by the CACFP community, were also crucially important to the development of this final rule. As emphasized throughout the proposed rule, USDA greatly values this feedback. USDA has responded to the CACFP community's feedback in the subsequent sections of the rule, especially *Section 2: Added Sugars* and *Section 20: Miscellaneous Changes.*

Public Comments: Supplemental Nutrition Assistance Program

Several respondents raised concerns about the Supplemental Nutrition Assistance Program, or SNAP, a USDA Federal assistance program. While comments related to SNAP are outside the scope of this rulemaking, USDA is providing a summary of the comments here. Respondents were concerned that SNAP does not impose the same nutrition requirements as USDA's child nutrition programs. These respondents asserted that students, including those participating in SNAP, are exposed to unhealthy food outside of school. Some respondents argued that all Federal nutrition programs, including SNAP, should have the same nutrition requirements. For example, a dietitian suggested that if USDA finalizes added sugars limits for school meals, those limits should also apply to SNAP.

USDA Response: USDA appreciates public comments about SNAP and its relation to the Department's other Federal assistance programs, including the child nutrition programs. USDA's mission is to increase food security and reduce hunger by providing children and income eligible people access to food, a healthful diet, and nutrition education in a way that supports American agriculture and inspires public confidence. Within that mission, USDA administers 16 critical nutrition assistance programs, one of which is SNAP, the Nation's largest domestic food and nutrition assistance program for income eligible Americans. SNAP is the primary source of nutrition assistance for millions of people each month, and SNAP participants can purchase a variety of eligible foods items, as defined by statute.[27] USDA is committed to helping SNAP participants and all Americans make healthier food choices through evidenced-based nutrition education. SNAP-Ed is an evidenced-based, federally funded grant program that supports SNAP participants with nutrition education to help participants maximize benefits and make healthy food choices to promote nutrition security. In USDA's most recent analysis of food purchases by SNAP and non-SNAP households,[28] SNAP households and non-SNAP households purchased similar types of foods, such as fruit, vegetables, and milk. This affirms that SNAP households are purchasing similar types of nutrient-dense foods compared to non-SNAP households. Additionally, USDA encourages healthy eating for SNAP participants through incentive programs, which provide additional ways to make healthy choices, such as purchasing fruits and vegetables, easier for SNAP participants. Recent research [29] shows that participants of the Gus Schumacher Nutrition Incentive Program (GusNIP) reported greater fruit and vegetable intake and improvements in food security. Similarly, in a Healthy Incentive Pilot (HIP) report,[30] participants spent more SNAP benefits on fruits and vegetables than non-HIP households. SNAP incentive programs, along with all USDA Federal nutrition assistance programs, play an important role in making nutritious foods more accessible and affordable. While there are differences across the programs, each of USDA's Federal nutrition assistance programs are critical to advancing nutrition security and promoting healthy dietary patterns.

Section 2: Added Sugars

Current Requirement

Currently, there are no added sugars limits in the school meal programs. Under the current regulations, schools may choose to serve some menu items and meals that are high in added sugars, provided they meet average weekly calorie limits (7 CFR 210.10(f)(1) and 220.8(f)(1)).

The *Dietary Guidelines for Americans, 2020–2025* recommends limiting intake of added sugars to less than 10 percent of calories per day. School meal data from school year (SY) 2014–2015 found that the average percentage of calories from added sugars in school meals was approximately 11 percent in school lunch and 17 percent in school breakfast.[31] The *Dietary Guidelines* further indicate that 70 to 80 percent of all school-aged children exceed the recommended limit for added sugars.[32] The current calorie requirements for the school meal programs are intended to encourage schools to choose nutrient-dense foods and beverages. However,

USDA determined that a specific added sugars requirement would more effectively reduce added sugars in school meals, consistent with the goals of the *Dietary Guidelines.*

Proposed Rule

USDA proposed to reduce added sugars in school meals through a gradual, phased-in, two-step approach: *product-based limits* followed by a *weekly dietary limit.* First, beginning in SY 2025–2026, USDA proposed to implement quantitative limits for leading sources of added sugars in school meals. The proposed product-based limits were as follows:

- *Grain-based desserts:* would be limited to no more than 2 ounce equivalents per week in school breakfast, consistent with the current limit for school lunch. Examples of grain-based desserts include cereal bars, doughnuts, sweet rolls, toaster pastries, coffee cakes, and fruit turnovers.[33]
- *Breakfast cereals:* would be limited to no more than 6 grams of added sugars per dry ounce.
- *Yogurt:* would be limited to no more than 12 grams of added sugars per 6 ounces.
- *Flavored milk:* would be limited to no more than 10 grams of added sugars per 8 fluid ounces or, for flavored milk sold as a competitive food[34] for middle and high schools, 15 grams of added sugars per 12 fluid ounces.[35]

For the second step, beginning in SY 2027–2028, USDA proposed to implement a dietary specification for added sugars. The dietary specification would limit added sugars to less than 10 percent of calories per week in the school lunch and breakfast programs. This weekly limit would be in addition to the product-based limits described above.

USDA requested public input on both steps as well as the following questions:

- USDA is proposing product-specific limits on the following foods to improve the nutritional quality of meals served to children: grain-based desserts, breakfast cereals, yogurt, and flavored milk. Do stakeholders have input on the products and specific limits included in this proposal?
- Do the proposed implementation timeframes provide appropriate lead time for food manufacturers and schools to successfully implement the new added sugars standards? Why or why not?
- What impact will the proposed added sugars standards have on school meal menu planning and the foods schools serve at breakfast and lunch, including the overall nutrition of meals served to children?

For consistency across child nutrition programs, USDA also proposed to apply the product-based added sugars limits to breakfast cereals and yogurt served in the CACFP; under the proposed rule, the *added* sugars limits would replace the current *total* sugars limits for breakfast cereals and yogurt in CACFP. The proposed product-based limits for CACFP aligned with the proposed limits for school breakfast and lunch, and were as follows:

- *Breakfast cereals:* would be limited to no more than 6 grams of added sugars per dry ounce.
- *Yogurt:* would be limited to no more than 12 grams of added sugars per 6 ounces.

Public Comments

USDA received tens of thousands of comments on added sugars, with most in support of reducing added sugars in school meals. State agencies, school nutrition professionals, advocacy groups, industry respondents, professional organizations, CACFP sponsoring organizations, dietitians, and individual respondents, such as parents and students, provided input on the proposals for added sugars. At a high-level, respondents provided the following feedback on added sugars requirements:

- Limiting added sugars in school meals is important for children's health and academic performance.
- Product-based limits would incentivize the food industry to reformulate products to help schools meet the weekly added sugars limit.
- Many respondents expressed a preference for one type of limit over the other:
- Some respondents suggested that product-based limits would be easier and less burdensome for program operators to implement compared to the weekly limit.
- Other respondents asserted that weekly limits align with recommendations from the *Dietary Guidelines* and would allow more flexibility for menu planners compared to the product-based limits.

The following paragraphs describe specific feedback on the proposal as well as feedback on each step of the proposal: product-based limits and weekly limits.

Reducing Added Sugars and Children's Health

Numerous respondents, including advocacy groups, school districts, school nutrition professionals, parents, and a few form letter campaigns, supported added sugars limits in school meals. Several advocacy groups justified limits on added sugars based on the recommendations from the *Dietary Guidelines.* One advocacy group asserted that reducing added sugars is "urgent" because children's current intake of added sugars is high. Other proponents reasoned that implementing added sugars limits in school meals would be beneficial to children's health. An advocacy group applauded the proposal because it makes a distinction between naturally occurring and added sugars and creates an incentive to reduce added sugars in "hyper-processed products." A few parents emphasized that reducing added sugars is a top health priority. One parent strongly supported the proposed limits, stating that currently, "children who rely on school meals [have] no option but to eat sugary breakfasts." An individual cited multiple studies demonstrating the negative impacts of added sugars on health, and an advocacy group noted that consuming too many added sugars can increase the risk of type 2 diabetes and heart disease. A few individuals and a form letter campaign affirmed that reducing added sugars may help address health disparities by improving the overall nutritional quality of school meals.

Challenges With Reducing Added Sugars

Other respondents cited challenges with reducing added sugars in school meals. A school district appreciated USDA's efforts but voiced concerns that an added sugars limit would drastically reduce schools' buying options. One school food service director claimed that school meals are already low in sugar and that tracking added sugars would be another standard to monitor. An industry respondent noted that if the proposed rule is finalized, added sugars would be the only element in the meal pattern "with two prongs of compliance monitoring," as it would be subject to both product-based and weekly limits. A dietitian expressed concern about the palatability of meals, adding that

[33] U.S. Department of Agriculture, *Food Buying Guide for Child Nutrition Programs.* Available at: *https://foodbuyingguide.fns.usda.gov/Appendix/DownLoadFBG.* See: Section 4—Grains, Exhibit A: Grain Requirements for Child Nutrition Programs, for a list of grain-based desserts.

[34] Competitive food is a term to define all food and beverages that are available for sale to students on the school campus during the school day. (7 CFR 210.11(a)(2))

[35] For clarification, USDA proposed a higher added sugars limit for flavored milk sold as a competitive food in middle and high schools due to the larger serving size. The serving size for milk offered as part of a reimbursable meal is 8 fluid ounces. Milks sold to middle and high school students as a competitive food may be up to 12 fluid ounces.

limiting added sugars could negatively impact student participation. One individual supported reducing added sugars, but expressed concern that students will not like the food, which could increase food waste.

One industry respondent argued that the existing calorie ranges ''adequately control for sugar'' and schools ''should not be further regulated'' with added sugars limits. Another industry respondent opposed the proposed added sugars limits due to the cost of product reformulation. An advocacy group also raised concerns about product reformulation, noting that each time a food producer needs to change the specifications of a product, it can take up to three years and cost as much as $750,000 per item. This respondent was concerned that some manufacturers may choose to stop making school-specific items instead of reformulating their products.

Proposed Approach: Product-Based Limits

Over 86,000 respondents, including 96 unique comments, supported the proposed product-based limits in general; comment counts specific to each product-based limit are detailed in each product-based comment summary section, below. A school district suggested that product-based limits would provide helpful benchmarks for initial added sugars reductions. An industry respondent asserted that product-based limits would help reduce added sugars in breakfast items. An individual agreed, stating that limiting high-sugar breakfast items would support children in the classroom as well. This respondent explained that breakfasts that are high in sugar do not provide sustainable energy for students to focus in the classroom. A professional organization stated that product-based limits would promote ''progress toward more nutrient dense'' foods, and that the phased-in approach would allow schools and manufacturers time to ''learn and adapt.''

Other respondents supported the product-based limits but did not support the weekly limit. For example, an advocacy group affirmed that the product-based limits would be easier for schools operationally, noting that CACFP sponsoring organizations have successfully implemented product-based limits for breakfast cereals and yogurt. This advocacy group stated that product-based limits would better align child nutrition program requirements and reduce administrative burden. A State agency suggested that the proposed product-based limits would help to educate the public about the health impacts of added sugars. However, this State agency did not support the weekly limit, asserting that it may be burdensome for schools. A school district also preferred the product-based limits over the weekly limit, suggesting that product-based limits would be easier to implement after schools overcome the initial burden of identifying compliant products. An advocacy group agreed, maintaining that the product-based limits are necessary to reduce added sugars at breakfast, but noting that the weekly limit would ''negatively impact school meal menu planning.'' An industry respondent described the product-based limits as ''appropriate tools to reduce consumption of added sugars,'' and argued that an additional weekly limit would be ''duplicative.''

About 100 respondents, including 81 unique comments, opposed proposed product-based limits in general; comment counts specific to each product-based limit are detailed in each product-based comment summary section, below. A food service director opposed the proposed limits for school breakfast specifically, describing breakfast as an important meal and suggesting that some added sugar encourages students to eat breakfast. An individual stated that product-based limits would decrease the availability of grab-and-go meals and would reduce overall breakfast participation. Several respondents, including industry respondents, school districts, and dietitians, added that product-based limits would hinder alternative breakfast models (*e.g.,* breakfast in the classroom) because pre-packaged, grain-based desserts are more commonly offered in these models. A dietitian claimed that even though some popular whole grain products served at breakfast contain added sugars, the nutritional benefits of these foods ''outweigh the sugar content.'' A State agency agreed that breakfast cereals, yogurt, and flavored milks provide ''numerous essential nutrients'' and raised concerns about the potential negative impacts of decreased consumption under the product-based limits. A few school districts expressed concerns about increased costs. An industry respondent asserted that product-based limits are ''too prescriptive and unnecessarily complicate the nutrition standards.'' Instead of requiring the product-based limits, a State agency suggested USDA partner with K–12 food manufacturers to work toward implementation of voluntary, product-based added sugars limits.

Proposed Product-Based Limit: Grain-Based Desserts at Breakfast

Over 900 respondents supported the proposed limit for grain-based desserts in school breakfast, including 20 unique comments. A parent applauded limits for grain-based desserts at breakfast, suggesting that they would ''encourage more nutrient-dense choices.'' An individual supported limits on grain-based desserts, asserting that schools can ''find healthier ways to serve breakfast.'' A school nutrition professional agreed, supporting a limit on ''desserts [and] sweet entrées during breakfast.'' An advocacy group explained that applying the current school lunch limit for grain-based desserts to school breakfasts (*i.e.,* the ability to offer up to 2 ounce equivalents of grain-based desserts per week) would help simplify menu requirements.

Over 700 respondents opposed the proposed limit for grain-based desserts in school breakfast, including 85 unique comments. Many opponents stated that grain-based desserts are popular among students and that limiting these foods may impact student breakfast participation. An individual raised concerns that schools have few options at breakfast and reducing grain-based desserts would further limit menus. An advocacy group noted that currently, schools offer a variety of grain items at breakfast to promote participation, for example, by including whole grain-rich toaster pastries and whole grain-rich cereal bars daily, along with whole grain donuts and whole grain cinnamon rolls on occasion. This respondent maintained that the proposed rule would severely limit schools' ability to serve these popular items at breakfast. A school district noted that convenient, on-the-go grain items are important options for students who attend morning tutoring to recover from learning loss following the COVID–19 pandemic.

Several respondents cited confusion about the definition of ''grain-based dessert'' as described in *Exhibit A: Grain Requirements for Child Nutrition Programs* of the *Food Buying Guide.*[36] An industry respondent argued that under current policy, grain-based desserts are a ''list of foods with no explanation of what sets them apart from other grain foods.'' This respondent noted this list includes a wide range of foods that can differ

[36] U.S. Department of Agriculture, *Food Buying Guide for Child Nutrition Programs.* Available at: *https://foodbuyingguide.fns.usda.gov/Appendix/DownLoadFBG.* See: Section 4—Grains, Exhibit A: Grain Requirements for Child Nutrition Programs, for a list of grain-based desserts.

vastly in added sugars content. Additionally, this respondent suggested that under the proposed rule, manufacturers would have little incentive to reduce added sugars in grain-based desserts, since these products would still face ''strict limitations,'' regardless of their added sugars content. A State agency noted that items such as cereal bars are not typically identified as ''desserts'' outside of the child nutrition programs and encouraged USDA to reevaluate the food items that are considered grain-based desserts. A form letter campaign agreed, pointing out that many items considered to be grain-based desserts are offered as part of a balanced breakfast at school or at home. A State agency requested clarification on what the proposed grain-based dessert limit for school breakfast would mean for preschool meals, noting that the meal pattern currently does not allow any grain-based desserts to be offered to preschoolers.

Proposed Product-Based Limit: Breakfast Cereals

Over 900 respondents supported the proposed product-based added sugars limit for breakfast cereals, including 20 unique comments. Many respondents supported the proposal for breakfast cereals without providing additional rationale. A State agency affirmed that there are plenty of breakfast cereals that already meet the proposed product-based limit. This State agency also suggested that the implementation date would provide sufficient time for manufacturers to decrease added sugars in non-compliant breakfast cereals. Another State agency supported limiting added sugars in breakfast cereals but recommended increasing the limit to 8 or 9 grams per dry ounce, instead of the proposed 6 grams per dry ounce.

About 50 respondents opposed the proposed product-based limit for breakfast cereals, including 33 unique comments. A school nutrition professional and several school districts expressed concern that the product-based limit for breakfast cereals would severely limit variety. An industry respondent claimed that they provide numerous breakfast cereal options that are inexpensive, convenient, and popular with students, and argued that the product-based limit is not necessary because the weekly limit would effectively limit breakfast cereals that are high in added sugars. This respondent stated that their school breakfast cereals provide less than 8 grams of added sugars per serving, but that the product-based limit would limit their options for schools to only two cereals. A school district argued that the breakfast cereals that meet the proposed product-based limit are not preferred by students.

Proposed Product-Based Limit: Yogurt

Nearly 1,000 respondents supported the proposed product-based added sugars limit for yogurt, including 24 unique comments. An industry respondent suggested that ''many options on the market meet the proposed limit'' for yogurt (12 grams of added sugars per 6 ounces). This respondent noted that manufacturers have greater ability to formulate yogurts that meet a product-based limit, as opposed to a weekly limit. Another industry respondent suggested that some yogurts would meet the proposed product-based limit, while others would not, potentially requiring reformulation. A parent who supported the product-based limit suggested that yogurt could be sweetened with fruit instead of added sugars. A professional organization noted that most yogurt served in their program already meets the proposed product-based limit and described it as ''realistic for manufacturers and programs.''

Forty respondents opposed the proposed product-based added sugars limit for yogurt, including 21 unique comments. A CACFP sponsoring organization asserted that it would limit the yogurt that program operators can offer and only allow varieties that ''children will not want to eat.'' A State agency described the proposed limit as ''confusing,'' noting that most yogurt comes in 4-ounce packages and schools would need to ''do culinary math'' to determine how to apply the limit, which was for 6-ounce packages. An industry respondent suggested that yogurt products should be allowed to have various levels of sugars so that schools have more flexibility in selecting products. One school district shared that yogurt varieties that are currently popular with students at breakfast would not meet the product-based limit. This respondent raised concerns that, under the proposed limit, certain varieties of yogurt would be eliminated from their menus and there would be ''limited choices for replacements.''

Proposed Product-Based Limit: Flavored Milk

Over 900 respondents supported the proposed product-based limit for flavored milks, including 44 unique comments. A State agency maintained that they did not expect the flavored milk limit to be an issue, as dairy suppliers are already working to reduce added sugars in flavored milks. Another State agency and two professional associations also supported the proposed limits, and one of these professional associations noted that most milk producers already meet the proposed limit. A school district confirmed that flavored milks currently offered in their district meet the proposed added sugars limit. An industry respondent suggested that the proposed product-based limit for flavored milks is ''likely achievable'' but cautioned that some reformulation efforts to reduce added sugars have started to impact palatability. An advocacy group recommended applying the added sugars limits for flavored milks to SMP and CACFP ''to ensure maximum positive impact on child health.''

Fifty respondents opposed the proposed product-based limit for flavored milks, all of which were unique comments. A State agency suggested that the product-based limit for flavored milks ''may not be necessary and may cause difficulties for schools lacking access to multiple options.'' This State agency pointed to existing efforts in the dairy industry to reduce added sugars in flavored milks, including the International Dairy Foods Association's recent commitment to lower added sugars in flavored milks available in schools.[37] While acknowledging the great improvement, the State agency noted that, depending on their location, some rural schools may not have access to flavored milk options that meet the proposed limit. Another State agency expressed concern about the proposed limit, noting that producers in their State currently offer a fat-free, flavored milk with 11 grams of added sugars per 8 fluid ounces. This State agency questioned whether it would be worth the financial burden for this producer to reformulate their product to reduce added sugars by 1 gram and meet the proposed 10 grams of added sugars per 8 fluid ounces limit. Another State agency mentioned a milk distributor

[37] In April 2023, the International Dairy Foods Association announced its ''Healthy School Milk Commitment.'' According to a press release from the International Dairy Foods Association, ''[b]eginning with the 2025–2026 school year, 37 school milk processors representing more than 90% of the school milk volume in the United States commit to provide healthy, nutritious school milk options with no more than 10 grams of added sugar per 8 fluid ounce serving.'' See: International Dairy Foods Association. *IDFA Announces 'Healthy School Milk Commitment' to Provide Nutritious Milk with Less Added Sugar for Students in Public Schools, Surpassing USDA Standards.* April 5, 2023. Available at: *https://www.idfa.org/news/idfa-announces-healthy-school-milk-commitment-to-provide-nutritious-milk-with-less-added-sugar-for-students-in-public-schools-surpassing-usda-standards.*

that currently has a flavored milk option with 13 grams of added sugars per 8 fluid ounces. Numerous respondents provided additional input on flavored milks, which is detailed in *Section 3A: Flavored Milk.*

Product-Based Limits: Impact on Child and Adult Care Food Program

USDA also received feedback from the CACFP community about how the proposed product-based limits for breakfast cereals and yogurt would affect CACFP. Several respondents opposed any changes to current CACFP total sugars limits, citing the potential burden of implementing the change and the operational differences between school meals and CACFP. For example, an advocacy group suggested that USDA's review of breakfast cereals and yogurt, which focused on products for K–12 schools, did not necessarily reflect the yogurt products available to CACFP operators. An industry respondent agreed, adding that there may be ''little to no demand for these products in grocery stores,'' and products that are commonly served in schools may not be available in the broader food supply. Another industry respondent suggested that the proposed change for yogurt could impact the type of yogurt available in CACFP, resulting in ''less preferred yogurt types'' offered in the Program.

An advocacy group asserted that making major changes to CACFP nutrition requirements to ''streamline'' work for schools is ''a mistake'' and recommended USDA further engage the CACFP community prior to finalizing the proposed breakfast cereal and yogurt added sugars limits in CACFP. This respondent added that CACFP providers use other Federal assistance programs, rather than school meals, as their point of reference. Another advocacy group noted that for breakfast cereals, the proposed change from 6 grams of *total* sugars per dry ounce to 6 grams of *added* sugars per dry ounce would effectively increase the total sugar allowance. This respondent raised concerns about children's health and did not support what they considered to be a more lenient requirement. A State agency suggested applying the current CACFP total sugars limits for breakfast cereals and yogurt to school meals, instead of finalizing the proposed changes.

Other respondents supported applying the added sugars limits for breakfast cereals and yogurt to CACFP. An industry respondent supported transitioning total sugars limits to added sugars limits, arguing that it ''appropriately reflects updated nutrition guidance.'' A dietitian noted that CACFP operators have successfully implemented total sugars limits and supported updating to added sugars limits because added sugars are now consistently listed on the Nutrition Facts label. An advocacy group agreed, suggesting that the updated Nutrition Facts label provides the information CACFP providers would need to select products, adding that there are numerous products in the marketplace that meet the proposed added sugars limits. Another advocacy group suggested that applying the proposed change to CACFP ''will simplify standards for both industry and program operators.''

A form letter campaign supported the product-based limit for breakfast cereals only if CACFP providers can continue to use a list of allowable products provided by the Women, Infant and Children (WIC) Program to identify breakfast cereals that are allowed in the CACFP. Respondents explained that each State agency administering the WIC program provides a list of allowable foods (WIC list) that meet program nutrition requirements. A few advocacy groups highlighted the importance of the WIC list, with one noting that the majority of CACFP providers shop in retail stores and use the WIC list to easily identify cereals that meet CACFP total sugars requirements. A State agency agreed, describing the WIC list of approved breakfast cereals as ''an important resource used by both the State agency and CACFP sponsoring organizations.'' An advocacy group also highlighted the importance of collaboration between CACFP and WIC, including shared materials and messaging. An individual suggested that USDA develop its own ''approved list'' of breakfast cereals and yogurt that child care providers participating in CACFP could use to easily identify compliant products.

Respondents also offered additional suggestions for how USDA could support the CACFP community in implementing the proposed changes, if finalized. An advocacy group recommended that USDA provide tools and resources to help CACFP providers identify allowable products. A CACFP sponsoring organization encouraged USDA to provide flexibility to operators and sites as they transition from current total sugars limits to the proposed added sugars limits. An advocacy group noted that CACFP sponsoring organizations would need ample time to retrain providers and suggested that USDA provide additional funding to support nutrition education, training, and material revisions at the local level. Another advocacy group noted that family child care providers often run small programs where they take on multiple roles including owner, caregiver, meal preparer, and more. This respondent suggested that child care providers may need additional time to implement the added sugars limits for breakfast cereals and yogurt, noting that the changes will require time, training, money, and technical assistance. However, a State agency suggested that the proposed rule would provide adequate lead time for CACFP operators to successfully implement the changes, noting that the State would have time to train sponsoring organizations and update technical assistance resources. However, the State agency recommended that USDA implement the CACFP changes at the beginning of the fiscal year, rather than the beginning of the school year, to match the start of the CACFP program year.

Proposed Approach: Weekly Limits

Over 76,000 respondents, including 114 unique comments, supported a weekly added sugars limit in the school lunch and breakfast programs—the second step of USDA's proposal to reduce added sugars. A dietitian supported the weekly limit, stating that it gives ''menu planners creative freedom'' to develop a menu that incorporates foods that are currently available in the K–12 market. Another respondent explained that the weekly limit would give schools flexibility to occasionally offer foods that are higher in added sugars, provided they are balanced with foods that are lower in added sugars throughout the week.

Some respondents supported a weekly limit only and did not support the product-based limits. For example, an advocacy group suggested that a weekly limit would be easier to monitor, require less training, and provide more flexibility for operators, while still reducing overall intake of added sugars. This respondent suggested that all foods can fit into a healthy diet, just in different amounts and frequencies. An industry respondent also supported the weekly limit only, claiming that product-based limits would cause additional burden to monitor and limit student choice, which could reduce participation. Another industry respondent agreed, suggesting that a 10 percent weekly limit in lunch and breakfast programs provides flexibility for operators, maintains options for students, and gives manufacturers time to reformulate. This respondent argued that the product-based limits would ''reduce opportunities for whole grain intake'' due to the limitation of popular

grains items that contain added sugars, such as granola bars. A school district indicated that the weekly limit would be easier to implement and track and allow schools to decide ''where to spend'' their added sugars in lunch and breakfast menus. An advocacy group supported the weekly limit and suggested the two-step approach would ''cause a lot of confusion and be difficult to manage and document.''

Forty-eight respondents opposed the weekly limit, the majority of which were unique comments. A school district argued that the weekly limit would ''significantly increase administrative burden.'' A State agency agreed, citing specific concern about the potential burden on small, rural districts that do not use menu planning software and may not have the staff capacity to calculate additional dietary specifications. An industry respondent suggested that a weekly limit may ''inadvertently lower the amount of yogurt and dairy'' offered in school meals, which they asserted could decrease ''the nutritiousness of meals.''

Two-Step Approach: Product-Based and Weekly Limits

Some respondents supported both steps of USDA's phased-in approach to reduce added sugars in school meals and emphasized the importance of the product-based and weekly limits. An advocacy group strongly supported both proposals, noting that product-based limits alone would not achieve dietary recommendations for added sugars. This respondent emphasized the importance of implementing a weekly limit, while also pointing out the benefits of product-based added sugars limits—particularly for foods that are commonly served in school meals. A professional association also supported the two-step approach, suggesting that it would allow ''schools, food manufacturers, and distributors time to learn and adapt.'' An advocacy group supported both added sugars proposals, but acknowledged that between the two, a weekly limit would be ''more effective'' to meet the *Dietary Guidelines* recommendations. Another advocacy group described USDA's two-step approach as ''balanced and practical'' and supported phasing in the product-based limits, followed by the weekly limit. A group of Federal elected officials applauded USDA's proposed ''gradual, phased-in approach'' to reducing added sugars in school meals. An advocacy group added that the ''combination of product-based and weekly limits are especially important'' given children's current, excessive intake of added sugars.

Proposed Implementation Timeframes

Over 300 respondents addressed the proposed implementation timeframes, including 96 unique comments. Several respondents suggested that USDA provide schools and industry more time for implementation. A dietitian and a school nutrition director asserted that the product-based limits do not provide manufacturers enough lead time and emphasized that reformulating products takes time and money. A school district stated that they ''have faith'' that manufacturers can reduce added sugars over time and students will adapt, but they do not think two years is adequate. This respondent was concerned about the potential impact on student participation, noting the importance of providing breakfast cereals and other food items that students enjoy. A respondent who supported the proposals expressed concern that the implementation timeline may not be long enough for small or rural school districts that rely on smaller food distributors. One State agency conducted a survey of child nutrition directors and NSLP stakeholders and found that 75 percent of respondents did not feel the proposed implementation dates were sufficient due to limited product availability, supply chain challenges, and student acceptance.

A dietitian recommended lengthening the implementation timeline and providing funding to manufacturers. This respondent was concerned that manufacturers would ''quit the K–12 segment if they cannot comply'' with the limits. An industry respondent argued that, if manufacturers do not have additional lead time, student participation may decrease due to ''inadequate options.'' This respondent added that ''the school nutrition ecosystem is simply too fragile'' to follow the proposed timeline. A joint response from three industry respondents argued that the proposed implementation dates would not provide enough time for reformulation that ensures product quality and safety, given the functional role sugar plays as an ingredient (*e.g.,* preventing spoilage, improving texture, and adding bulk). This response raised concerns about student acceptability, student participation, and food waste under the proposed implementation timeline. A dietitian suggested that if manufacturers are not able to create products to meet the proposed product-based limits, then the implementation dates should be delayed.

An industry respondent maintained that added sugar reductions must be tailored for each individual product, suggesting that timelines can range from 12 to 16 months. This respondent added that schools typically solicit bids for products one year in advance, adding at least 12 months to the process. This industry respondent noted that additional time for implementation would allow schools to update meal planning databases, provide time to develop menu planning tools, and help students gradually adjust to foods containing less added sugars. A State agency relayed that manufacturers have expressed that SY 2027–2028 would be a more realistic timeframe to implement breakfast cereal and yogurt limits. An advocacy group acknowledged that timelines for research and development vary and suggested that K–12 food companies typically report needing 3 years to reformulate products. A State agency also recommended providing at least 3 years after release of the final rule to allow adequate time to update trainings, materials, product formulations, and school menus. An individual suggested that industry would need a minimum of 3–5 years to reformulate or develop food items that meet the proposed limits. A State agency and an industry respondent expected product reformulation to take up to 5 years. Another industry respondent asserted that the proposed implementation dates for added sugars are too short and suggested the reductions occur more gradually over the next 20 years or more.

Other respondents suggested the proposed implementation timeframes were adequate, and some recommended accelerating timeframes in the interest of children's health. An advocacy group affirmed that phased-in implementation would allow adequate time to implement the new requirements. Another advocacy group recommended implementing the weekly added sugars limit alongside the product-based limits in SY 2025–2026. A State agency also suggested implementing the product-based limits and the weekly limit at the same time, suggesting that 12–18 months would be a reasonable amount of time for industry and schools to prepare for changes. A parent suggested implementing the added sugars limits on a quicker timeframe, suggesting that the limits ''need to happen now'' due to what they consider to be an excessive amount of sugar in school meals. An advocacy group agreed, suggesting that USDA implement the added sugars limits ''as soon as is feasible,'' noting that these updates will be beneficial to children's health. Similarly, a second advocacy group stated that USDA

should implement the weekly limit in the school year immediately following release of the final rule. A local government supported both added sugars limits and the proposed implementation timeline; this respondent did not recommend extensions ''due to the urgency needed in reducing consumption of added sugars among children.'' An advocacy group and a few individuals asserted that ''there is no credible reason for USDA to delay achieving the reduction in sugar consumption,'' requesting implementation of the added sugars limits by fall 2023.

A school nutrition professional suggested that the proposed implementation date for the product-based limits would provide ''plenty of time'' but claimed the weekly limit would be ''much harder'' to achieve. This respondent noted that many rural districts currently do not have nutrition software to facilitate implementation of a weekly limit for added sugars. Similarly, a dietitian suggested that the implementation date for product-based limits is achievable, provided that the final rule is published at least one year in advance of implementation (by July 1, 2024). The respondent suggested that this timing would allow USDA and State agencies to provide technical assistance and training. However, this respondent recommended delaying implementation of the weekly added sugars limit to allow additional time for product reformulation and menu revisions.

One respondent encouraged USDA to remove the product-based limits and implement the weekly limit no later than 2025. By accelerating implementation of the weekly limit in school lunch and breakfast programs, this respondent suggested USDA could support healthier meals for children who are currently in school. An industry respondent also recommended removing the product-based limits while maintaining the proposed implementation of SY 2027–2028 for the weekly limit.

Alternative Approaches Suggested by Comments

Some respondents offered alternatives to the proposals, or suggested changes. For example, an industry respondent suggested that USDA determine the product-based limits using the average added sugars content of currently available products. A professional organization recommended that USDA establish total sugars limits, rather than added sugars limits, for breakfast cereals and yogurt because of the naturally occurring sugar content of those foods.

An individual suggested that USDA reduce sugar content in school breakfast by following Smart Snacks in School requirements for sugar.[38] A few advocacy groups suggested USDA require or recommend product-based limits for condiments and toppings, noting that these products contribute to children's intake of added sugars, especially at breakfast.

Some respondents suggested alternatives to the proposed limit on grain-based desserts in school breakfasts. A professional organization and another respondent suggested that USDA prohibit (rather than limit) grain-based desserts in the school meal programs to promote more nutrient dense foods. A State agency recommended phasing in the grain-based dessert limit by age/grade group, starting with K–5 children. This State agency suggested this could help prevent a drastic drop in participation among older students. A school nutrition professional suggested that grain-based desserts should not be defined by the product name, but by the amount of added sugars in the product. An advocacy group also encouraged USDA to establish a quantitative added sugars limit for grain-based desserts and suggested further reducing the proposed added sugars limit for breakfast cereals.

An industry respondent suggested that if yogurt and flavored milks are subject to product-based limits, they should be excluded from the overall weekly limit. This respondent expressed concern that counting yogurt and flavored milks in the overall weekly limit could create ''perverse and unintended incentives'' to remove these items from meals. Another industry respondent suggested that USDA exempt the added sugars in dried cranberries from the weekly added sugars limit. This respondent argued that not providing an exemption for cranberry products could discourage the consumption of products like cranberries that include added sugar for processing and palatability.

A few respondents offered alternative suggestions for the weekly added sugars limit. For example, a school nutrition director suggested starting with a higher weekly dietary specification, such as 15 percent, and adjusting the percentage down as needed. This respondent stated that a more gradual approach for the weekly limit would mirror the proposed sodium reductions. Similarly, an advocacy group recommended removing the product-based limits and instead, gradually phasing in the weekly limit for lunch and breakfast meals. This respondent recommended starting in SY 2025–2026 with a dietary specification limiting meals to less than 25 percent of calories from added sugars, and then implementing a 10 percent limit in SY 2027–2028. A school district supported finalizing a 25 percent weekly limit in SY 2026–2027 and did not recommend further reductions. Another school district recommended a weekly dietary limit of 35 percent of calories from added sugars, with no product-based limits, beginning SY 2025–2026.

However, an advocacy group stated that USDA ''should reject any calls to set a limit higher than 10 percent'' because most children would benefit from a diet with even fewer added sugars, as low as 4 to 8 percent. Another respondent argued that the proposed 10 percent limit is ''still very high.'' An advocacy group agreed, recommending that USDA take ''swifter and more far-reaching action'' by implementing a 6 percent weekly limit for added sugars. A local government recommended that USDA apply the limit to both meals together (breakfast and lunch) instead of applying the 10 percent weekly limit to each meal separately. This respondent suggested this would increase the feasibility of implementation, since breakfast foods typically contribute larger amounts of added sugars. A school nutrition professional suggested incentivizing—but not requiring—schools to meet the 10 percent weekly limit.

Several respondents, including a national organization representing tens of thousands of school nutritional professionals, recommended that USDA make it easier for schools to offer meats/meat alternates in place of grains at breakfast, which they argued would support reducing added sugars in school breakfasts. This includes options suitable for grab-and-go breakfast, such as protein-rich breakfast sandwiches and wraps. A school district suggested many schools ''would love to be able to offer eggs and sausage, or fruit and yogurt parfaits for breakfast,'' and requested that USDA remove the requirement to offer a minimum amount of grains daily for breakfast. A dietitian recommended that USDA require a meat/meat alternate at breakfast. A few industry respondents maintained that the added sugars limit would ''create a drive in the market to increase the protein content of breakfast items,'' noting that the current grain minimum and cost constraints present a barrier to offering meats/meat alternates at breakfast. Additional comments on this topic, received in response to a prior

[38] Regulations for competitive food service and standards are found at 7 CFR 210.11.

rulemaking, can be found in *Section 6: Meats/Meat Alternates at Breakfast.*

Other Comments About Added Sugars

Respondents also submitted other comments about added sugars, including comments related to sweeteners, which respondents used a variety of terms to describe. A school nutrition professional raised concerns that manufacturers would replace added sugars with ''artificial sweeteners'' when reformulating products to meet the proposed limits. Similarly, a dietitian stated that while they support reducing added sugars, food manufacturers would face challenges to meet this requirement without using ''sugar substitutes.'' A school nutrition professional suggested prohibiting ''non-caloric sweeteners (both natural and artificial)'' in school meals, noting that there is limited research on their long-term effects and expressed concern these additives may cause stomach problems in young children. An individual voiced similar concerns about ''low calorie sweeteners'' and suggested prohibiting or labeling products so that parents or students can avoid those food items, if desired.

A school district requested that the added sugars limits be accompanied by an increase in reimbursement rates. This respondent anticipated an increase in product costs as added sugars are replaced with more expensive and healthier ingredients. One industry respondent also shared financial concerns, suggesting that schools would need to adjust menus by adding food items or increasing portion sizes to meet calorie ranges if added sugars are reduced. This respondent suggested one solution to this challenge would be to increase Federal funding. Another industry respondent described the ''chronic underfunding of school breakfasts'' and encouraged adequate resources to facilitate schools offering nutritious breakfast items, such as fresh fruits and vegetables. Although this respondent acknowledged their comment was outside the scope of this rulemaking, they emphasized that funding plays an important role in the types of foods that schools can offer students.

A few advocacy groups encouraged USDA to provide sufficient time, menu planning resources, and technical assistance to support implementation of the added sugars limits. Specifically, some respondents suggested USDA update its Team Nutrition resources for reducing sugars in CACFP, if this requirement is finalized. A State agency requested that USDA update Administrative Review guidance and assessment tools, along with guidance on how schools can assess compliance with the weekly limit. An advocacy group recommended that, during implementation, schools should not be penalized and suggested that USDA prioritize additional technical assistance and training for schools that are struggling with compliance. A State agency provided similar input, suggesting that USDA provide schools a ''grace period'' for corrective actions during the first Administrative Review cycle, following implementation of the added sugars limits.

Final Rule

This final rule codifies the proposed added sugars limits in the school lunch and breakfast programs, as follows:

• *Product-based limits:* By SY 2025–2026, schools must implement quantitative limits for breakfast cereals, yogurt, and flavored milks. As explained below, this rule does not finalize the proposed product-based limit for grain-based desserts at breakfast. The product-based limits that are finalized in this rule are as follows:

• *Breakfast cereals* are limited to no more than 6 grams of added sugars per dry ounce.

• *Yogurt* is limited to no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).

• *Flavored milk* is limited to no more than 10 grams of added sugars per 8 fluid ounces. Flavored milk sold as a competitive food for elementary school students will follow the 10 grams of added sugars per 8 fluid ounce limit, while flavored milk sold as a competitive food for middle and high school students will be limited to 15 grams of added sugars per 12 fluid ounces.[39]

• *Weekly dietary limit:* By SY 2027–2028, schools must implement a dietary specification limiting added sugars to less than 10 percent of calories per week in the school lunch and breakfast programs; this weekly limit will be in addition to the product-based limits described above.

As proposed, this final rule also updates CACFP total sugar limits for breakfast cereals and yogurt to align with the product-based added sugars limits established for NSLP and SBP as stated above. Because CACFP operates on a fiscal year calendar, these changes must be implemented by October 1, 2025. For CACFP, the product-based added sugars limits are as follows:

• *Breakfast cereals* are limited to no more than 6 grams of added sugars per dry ounce.

• *Yogurt* is limited to no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).

The existing total sugars limits for breakfast cereals and yogurt in CACFP will remain in place until October 1, 2025, when the new added sugars limits must be implemented. With State agency approval, CACFP operators may choose to implement the added sugars limits for breakfast cereals and yogurt early.

Two-Step Approach To Reduce Added Sugars in School Meals

USDA is committed to improving the nutritional quality of school meals by establishing requirements that align with the goals of the most recent *Dietary Guidelines.* USDA also acknowledges stakeholders' concerns about added sugars in school meals and the harmful effects on children's health. The two-step approach to reducing added sugars finalized in this rule is expected to set schools up for success by gradually decreasing added sugars over the next several years. USDA acknowledges that, as noted in public comments, program operators need sufficient time to prepare and plan menus to meet the new added sugars limits. By first phasing in the product-specific limits for breakfast cereals, yogurt, and flavored milk, USDA expects that schools will be better positioned to successfully meet the weekly limits for added sugars, which will take effect two school years after the effective date of the product-based limits.

USDA intends for the product-based limits for breakfast cereals, yogurt, and flavored milk to have a meaningful impact on the added sugars offered in school meals. However, USDA recognizes that there are other foods offered in school meals that contribute to children's overall intake of added sugars, which makes the weekly dietary limit an important second step to align school meals more closely with the goals of the *Dietary Guidelines.* For example, USDA expects that added sugars in condiments and toppings will be addressed through the weekly added sugars limit, upon implementation. While USDA appreciates public comments recommending product-based limits for condiments and toppings, such limits were not included in the proposed rule and this final rule does not establish product-based added

[39] For clarification, the added sugars limit for flavored milk sold as a competitive food in middle and high schools due to the larger serving size. The serving size for milk offered as part of a reimbursable meal is 8 fluid ounces. Milks sold to middle and high school students as a competitive food may be up to 12 fluid ounces. Milks sold to elementary school students as a competitive food may be up to 8 fluid ounces, and so will follow the 10 grams of added sugars per 8 fluid ounce limit.

sugars limits for these items. USDA expects that the overall weekly limit will help to reduce the amount of added sugars offered in condiments and toppings. Additionally, although this rule does not finalize the grain-based dessert limit at breakfast, USDA expects that schools will select grains with less added sugars to meet the weekly added sugars limit at breakfast and, as explained below, USDA will provide resources to support more nutrient-dense choices at breakfast. USDA is also interested in additional stakeholder input on how to improve and simplify its grain-based desserts requirements and will solicit stakeholder input on grain-based desserts in the coming months.

USDA also acknowledges respondent concerns regarding the palatability of meals with less added sugars and related concerns about plate waste and student participation. However, USDA expects that gradually phasing in these requirements will give schools time to adjust menus and help children gradually adapt to meals with fewer added sugars over time.

Added Sugars in the Child and Adult Care Food Program

For consistency, this final rule applies the product-based added sugars limits for breakfast cereals and yogurt to the CACFP. Based on public comment, USDA has adjusted the implementation date for CACFP to follow the program calendar, which operates on a fiscal year rather than a school year. Effective October 1, 2025, the *added* sugars limits will replace the current *total* sugar limits for breakfast cereals and yogurt in CACFP. The existing total sugars limits for breakfast cereals and yogurt in CACFP will remain in place until October 1, 2025, when the new added sugars limits take effect. However, with State agency approval, CACFP operators may choose to implement the added sugars limits for breakfast cereals and yogurt early.

As mentioned in public comments, CACFP operators have successfully implemented product-based sugar limits, and this rule updates these limits from total sugars to added sugars based on *Dietary Guidelines* recommendations. Although some public comments recommended continuing with total sugars limits, that approach would not be consistent with the *Dietary Guidelines* recommendations. And, as noted, added sugars information is now available on the Nutrition Facts label.[40] USDA recognizes that many stakeholders would like more consistent requirements across child nutrition programs; this final rule supports USDA's efforts to better align program requirements. Additionally, in response to public comments, USDA clarifies that the per-ounce limit for yogurt will be 2 grams of added sugars. While this clarification applies to NSLP, SBP, and CACFP, it is most relevant to CACFP, where smaller portions may be offered to younger participants and operators will more often need to assess compliance with the added sugars limit in serving sizes that are smaller than 6 ounces.

CACFP operators provide vital nutrition that contributes to the wellness of child and adult participants. USDA recognizes and appreciates the important role CACFP operators play in helping child and adult participants develop and sustain healthy habits in all stages of life. USDA is committed to ensuring that CACFP operators have the technical assistance and resources they need to be successful, including implementing the changes in this rule.

Alignment With WIC Food Package Standards

In April 2024, USDA finalized revisions to the WIC food packages to incorporate recommendations from the National Academies of Science, Engineering, and Medicine (NASEM) in its 2017 scientific report, ''Review of WIC Food Packages: Improving Balance and Choice,'' and to align the food packages with the *Dietary Guidelines for Americans, 2020–2025.* The WIC final rule, *Special Supplemental Nutrition Program for Women, Infants and Children (WIC): Revisions in the WIC Food Packages,*[41] updated limits on total sugars, consistent with recommendations in the NASEM report. This included establishing limits on added sugars in breakfast cereals and yogurt that are consistent with the limits in this final rule. CACFP operators may use any State's WIC list to identify breakfast cereals and yogurt that may be offered in CACFP. Both the WIC final rule and this final rule share the common goal of reducing added sugars intake among child and adult participants and promoting healthy dietary patterns. This cross-program alignment of product-based limits for breakfast cereals and yogurt responds to public comments that highlighted the benefits of allowing use of the WIC list in CACFP by allowing CACFP providers to use the WIC list to identify allowable breakfast cereals and yogurt. It also responds to public feedback requesting that USDA streamline requirements across its nutrition assistance programs.

Additional Feedback Received in Public Comments

USDA appreciates public comments on alternative approaches for reducing added sugars in school meals. A few respondents suggested a stepwise approach for the weekly added sugars limit; for example, by starting with 15 percent and then moving to a 10 percent weekly limit. The intent of the product-based limit is to provide schools with a path toward reaching the 10 percent weekly limit. Other respondents recommended a weekly limit below 10 percent; however, a weekly limit below 10 percent would go beyond recommendations in the current *Dietary Guidelines*. In this final rule, USDA maintains the proposed weekly added sugars limit of 10 percent of calories per week, averaged over the week for lunch and breakfast programs, respectively. In public comments, some respondents recommended combining lunch and breakfast menus under the weekly limit. However, because other school meal pattern requirements (including the other dietary specifications for calories, saturated fat, and sodium) currently apply by program, USDA does not view this as an operationally feasible suggestion. Regarding exemption for certain foods from the weekly limit, USDA has determined that establishing exemptions may impose unintended burden and challenges in calculating and monitoring dietary specifications for the entire menu. This final rule does not exempt any foods from the weekly added sugars limit for school lunch or breakfast. USDA also acknowledges comments that recommended adjusting other meal pattern requirements, such as the calorie limits, as part of this change. However, USDA did not propose changes to the calorie limits in school meals and this final rule does not make changes to the calorie limits for school meals.

Product-Based Limits for Breakfast Cereals, Yogurt, and Flavored Milk

USDA received hundreds of comments regarding the product-based limits for breakfast cereals, yogurt, and flavored milks. For example, some respondents recommended increasing the product-based added sugars limit for breakfast cereals and raised concerns

[40] *Food Labeling: Revision of the Nutrition and Supplement Facts Labels* (81 FR 33741, May 27, 2016). Available at: *https://www.federalregister.gov/documents/2016/05/27/2016-11867/food-labeling-revision-of-the-nutrition-and-supplement-facts-labels*. See also: 21 CFR 101.9(c)(6)(iii).

[41] *Special Supplemental Nutrition Program for Women, Infants, and Children (WIC):* Revisions in the WIC Food Packages (April 2024). Available at: *https://www.fns.usda.gov/wic/fr-041824*.

about the availability of breakfast cereals that meet the proposed limit that children enjoy. Similarly, USDA acknowledges respondent concerns about product availability and the palatability of yogurt and flavored milks that meet the product-based added sugars limits. However, USDA agrees with respondents who stated that the added sugars limits are realistic and that many breakfast cereals, yogurts, and flavored milks that meet the final limits are or will be available to schools. As discussed in the *Regulatory Impact Analysis,* based on data that USDA collected in 2022, 50 percent of breakfast cereals and 57 percent of yogurts already met the added sugars limits finalized in this rule in 2022.[42] Regarding flavored milk, as noted in public comments, the milk industry has committed to reducing added sugars in flavored milk to levels that meet the limits finalized in this rule.[43] USDA appreciates public comments from industry that noted significant progress in product reformulation and a variety of products available in the market that already meet the product-based limits finalized in this rule. Additionally, the gradual, phased-in approach used in this rule will provide schools time to implement the changes.

Product-Based Limit for Grain-Based Desserts at Breakfast [Not Finalized]

As noted above, USDA is not finalizing the proposed limit for grain-based desserts at breakfast. Public comments raised concerns about potential negative impacts of the proposal to the SBP, especially to alternative breakfasts that often contain grab-and-go friendly items, including grain-based desserts such as breakfast bars and toaster pastries. Respondents were concerned about the availability and student acceptance of alternative items that can readily be served in grab-and-go and other alternative breakfast models. In addition, many respondents raised questions about the definition of grain-based desserts as currently used in the NSLP and CACFP[44] or suggested alternative approaches to current requirements for those programs. Under current requirements, which define grain-based desserts by product type, some grain items that are not classified as grain-based desserts are higher in added sugars than items that are classified as grain-based desserts. Some respondents suggested that rather than defining grain-based desserts by product type, USDA should instead define grain-based desserts based on the amount of added sugars in specific products. For these reasons, many respondents recommended that USDA reconsider the proposal. Therefore, in response to stakeholder input, USDA is not finalizing the grain-based dessert limit for school breakfast.

USDA is committed to supporting alternative breakfast models, such as breakfast in the classroom and grab-and-go breakfast, which support student participation[45] by making school breakfast more accessible. USDA also appreciates concerns that the current definition of ''grain-based dessert'' does not target grain products high in added sugar as effectively as possible. Although some respondents raised concerns about product-based limits for breakfast cereals, yogurt, and flavored milk, those comments did not cite operational constraints for alternative breakfast models under the proposed limits. Further, as detailed above, USDA has determined adequate products will be available to meet the product-based limits for breakfast cereals, yogurt, and flavored milk finalized in this rule upon implementation.

USDA recognizes that reducing grain items that are high in added sugars is one important strategy to support the phased-in implementation of the weekly added sugars limit. USDA will continue to support implementation of alternative breakfast models by highlighting popular grain items that are low in added sugars and that are grab-and-go friendly. Schools may also consider offering savory grab-and-go breakfast items, such as breakfast sandwiches and wraps, to reduce the overall added sugars content of school breakfasts. As discussed in *Section 6: Meats/Meat Alternates at Breakfast,* this rule removes the minimum grains requirement at breakfast, making it easier for schools to offer meats/meat alternates at breakfast. In the absence of a grain-based dessert limit at breakfast, schools may need additional support and guidance to reduce added sugars at breakfast and meet the weekly limit upon implementation in SY 2027–2028.

As discussed below, USDA will provide technical assistance to ensure that schools have the resources they need to reduce added sugars at breakfast, including meeting the weekly added sugars limit at breakfast upon implementation. USDA also seeks to support industry in producing breakfast grains which can be part of menus under the weekly added sugars limit. The Department will provide voluntary guideposts for schools and industry to use to assist them in transitioning to the weekly added sugars limits in SY 2027–2028. This will include resources that schools may use to identify grain items that are low in added sugars.

USDA is very interested in and will solicit additional stakeholder input on improving guidance around grain-based breakfast items. As part of this effort, USDA will seek stakeholder input on the current grain-based desserts requirements, alternative approaches to defining and identifying grains that are high in added sugars, and other creative ideas for how to address grain-based desserts in the child nutrition programs. USDA looks forward to receiving stakeholder feedback on this topic in the coming months.

Sweeteners

This final rule is focused on limits for added sugars, not other sweeteners used as sugar substitutes or sugar alternatives. USDA acknowledges respondent concerns regarding sweeteners in child nutrition programs, referred to in public comments in a variety of ways, including ''artificial sweeteners,'' ''non-nutritive sweeteners,'' and ''sugar substitutes.''[46]

[42] USDA Food and Nutrition Service, Office of Policy Support data collection of nutrition label information from major cereal and yogurt manufacturer K–12 and food service catalogs. Data were collected on 191 total cereal products and 110 total yogurt products.

[43] In April 2023, the International Dairy Foods Association announced its ''Healthy School Milk Commitment.'' According to a press release from the International Dairy Foods Association, ''[b]eginning with the 2025–2026 school year, 37 school milk processors representing more than 90% of the school milk volume in the United States commit to provide healthy, nutritious school milk options with no more than 10 grams of added sugar per 8 fluid ounce serving.'' See: International Dairy Foods Association. *IDFA Announces 'Healthy School Milk Commitment' to Provide Nutritious Milk with Less Added Sugar for Students in Public Schools, Surpassing USDA Standards.* April 5, 2023. Available at: *https://www.idfa.org/news/idfa-announces-healthy-school-milk-commitment-to-provide-nutritious-milk-with-less-added-sugar-for-students-in-public-schools-surpassing-usda-standards.*

[44] For NSLP, according to 7 CFR 210.10(c)(2)(iii)(C) (previously 7 CFR 210.10(c)(2)(iv)(C), schools may count up to two ounce equivalents of grain-based desserts per week toward meeting the grains requirement at school lunch. For CACFP, according to 7 CFR 226.20(a)(4)(iii), grain-based desserts do not count toward meeting the grains requirement. The grain-based dessert requirements for NSLP and CACFP remain in effect under this final rule.

[45] Amelie A. Hecht, Deborah A. Olarte, Gabriella M. McLoughlin, Juliana F.W. Cohen, *Strategies to Increase Student Participation in School Meals in the United States: A Systematic Review,* Journal of the Academy of Nutrition and Dietetics, Volume 123, Issue 7, 2023, Pages 1075–1096.e1, ISSN 2212–2672, *https://doi.org/10.1016/j.jand.2023.02.016.* Available at: *https://www.sciencedirect.com/science/article/pii/S221226722300103X.*

[46] Although respondents used a variety of terms in public comments, USDA will refer to ''sweeteners'' in this final rule, consistent with FDA terminology. U.S. Food and Drug Administration, *How Sweet It Is: All About Sweeteners,* June 9, 2023.

Continued

Sweeteners, like all other ingredients added to food in the U.S. food supply, must be safe for consumption under the Federal Food, Drug and Cosmetic Act.[47] FDA determines if food additives, such as sweeteners, are safe for their intended use. FDA has approved six sweeteners as food additives through an extensive evidence-based research process.[48] In addition to the six sweeteners approved as food additives, there are three additional sweeteners that are Generally Recognized as Safe (GRAS). USDA relies on FDA expertise to safeguard the food supply because FDA is the Federal agency responsible for assessing the safety of food additives, food ingredients, and sweeteners, including artificial sweeteners and nonnutritive sweeteners. Therefore, under this final rule, there are no restrictions on sweeteners in school meals, such as the use of sugar substitutes and nonnutritive sweeteners; this approach aligns with current FDA guidance for sweeteners. However, at the local level, schools or districts may opt to limit or remove sweeteners from their school lunch and breakfast menus, which USDA recognizes that some localities have chosen to do. Further, in response to stakeholder concerns about sweeteners, in upcoming studies, USDA will include questions regarding school policies relating to the use of sweeteners in school meals and will continue to monitor FDA research and guidance on this issue.

Ongoing Support

USDA is committed to ensuring that child nutrition program operators have ongoing support and will provide additional technical assistance and resources to assist schools and child care institutions and facilities as they prepare to implement and monitor new or updated requirements. USDA appreciates public comments requesting guidance and support for monitoring these changes and will update the nutrient analysis software approved for use in Administrative Reviews so that it includes a dietary specification for added sugars. As noted above, USDA will provide resources to support schools and industry in transitioning to the weekly added sugars limit in SY 2027–2028 and will make these resources available in time to support procurement for SY 2025–2026. USDA has already highlighted strategies that schools can use to reduce added sugars in *Best Practices for Reducing Added Sugars at School Breakfast.*[49] For example, schools can:

- Reduce how often high-sugar foods and beverages are offered during the week.
- Use fruit to sweeten smoothies and yogurt instead of added sugars.
- Use cinnamon, vanilla, and other spices or extracts to enhance recipes with less added sugars.

In public comments, many respondents suggested that meats/meat alternates be allowed in place of grains to help reduce added sugars in breakfasts. As discussed in *Section 6: Meats/Meat Alternates at Breakfast,* schools may consider this option as a strategy to reduce added sugars at breakfast, since some grain foods commonly offered in school breakfasts tend to be higher in added sugars. Schools now have the option to offer grains, meats/meat alternates, or a combination of both, to meet the combined food component requirement in the SBP. This change gives program operators greater flexibility in menu planning and increases the variety of food items that can be served at school breakfast, helping to address respondent concerns about meeting the added sugars limits at breakfast. Local educational agencies may also consider updating their local school wellness policies with strategies to reduce added sugars in school meals and snacks. USDA also commends industry efforts to reduce added sugars in their products, including in flavored milk. For example, USDA understands that flavored milk processors have already reduced the average amount of added sugars per serving of flavored milk since announcing their ''Healthy School Milk Commitment'' in April 2023.[50] As suggested by comments, support from industry is crucial to schools' efforts to continue to offer foods that are popular with children and also fit within the product-based and weekly limits phased in under this rulemaking.

USDA acknowledges public comments that requested increased funding to support implementation of the added sugars limits. USDA does not have authority to increase the Federal reimbursement rates for school meals.[51] However, USDA launched the HMI Initiative to improve the nutritional quality of school meals through food systems transformation, recognition, and technical assistance; the generation and sharing of innovative ideas and tested practices; and grants. As part of a cooperative agreement to develop and implement USDA's HMI Initiative, AFHK is offering Recognition Awards for school food authorities, including the Breakfast Trailblazer Recognition Award, that will recognize school food authorities who implement specific strategies to reduce added sugars in school breakfast menus, implement an alternative meal service delivery model for breakfast, and use student engagement techniques and/or culinary techniques to prepare breakfasts that students enjoy. Public comments noted the importance of student preferences and participation. Developing healthy dietary patterns and taste preferences begins at a young age, and gradually decreasing added sugars in school meals can contribute to developing student preferences for more nutrient-dense foods, with less added sugars, as recommended by the *Dietary Guidelines.* As part of the HMI Initiative, AFHK will host Healthy Meals Summits, where award recipients and grantees will share best practices and strategies for sustaining their nutritional achievements, including successful strategies to reduce added sugars. The summits will celebrate and showcase creative strategies for serving healthy, appealing meals and the best practices will serve as a blueprint for school food authorities nationwide. USDA will also share strategies and success stories for reducing added sugars in its communications materials and will provide guidance and resources to schools working to reduce

added sugars in school meals in the months ahead.

Assessing Impact of Added Sugars Limits

USDA recognizes the importance of monitoring progress toward the new added sugars limits and assessing the effectiveness of the two-step approach. USDA has a long history of examining the nutritional quality of school meals through studies such as the *School Nutrition and Meal Cost Study* and the *School Nutrition Dietary Assessment Study* series. The 2024–2025 *National School Foods Study* will incorporate added sugars into this assessment, which is based on an extensive menu survey, designed to determine the food and nutrient content of school meals and afterschool snacks, examine compliance with nutrition requirements, and understand the characteristics of foods and beverages in reimbursable meals.

These studies also assess actual student dietary intake and overall diet quality through 24-hour dietary recall interviews. The 2024–2025 study will establish a ''baseline year'' (SY 2024–2025) for examining the impact of the added sugars and sodium limits included in this rulemaking.

In accordance with its commitment to regularly monitor how consistent school meals are with the goals of the *Dietary Guidelines,* USDA conducts the *School Nutrition and Meal Cost Study* on a five-year cycle, which will provide another comprehensive assessment in SY 2029–2030, after both the updated sodium limits and added sugars limits have been fully implemented.

However, to monitor progress and provide data on the effectiveness of product-based limits as a step toward meeting the overall weekly added sugars limit, USDA will invest in an additional menu assessment in SY 2026–2027, between the two *School Nutrition and Meal Cost Study* cycles. This nationally representative survey will focus on the foods and beverages that make up reimbursable meals and allow USDA to examine the effect of the product-based added sugars limits, which will take effect in SY 2025–2026. Additionally, this survey will allow USDA to estimate both added sugars and sodium content of reimbursable school meals.

Together these studies will provide USDA with critical evidence about rule implementation, effects, and potential barriers and help monitor changes in nutrient content of foods over time. This data will provide invaluable insight into school meal nutrient composition and student dietary outcomes. In addition, USDA will continue current practice of using existing data sources—such as the National Health and Nutrition Examination Survey—to periodically examine other outcomes, including the relationship between estimated school meal program participation, diet quality, indicators of nutrition and health, food consumption patterns, and nutrient intakes. This in turn can inform future policy and rulemaking.

Accordingly, this final rule codifies the product-based added sugars limits for breakfast cereals, yogurt, and flavored milk, and codifies the weekly dietary specification for added sugars in NSLP and SBP regulations found at 7 CFR 210.10(b)(2)(iii), (c), (d)(1)(iii), (f)(3), and (h) and 220.8(b)(2)(iii), (c), (d), and (f)(3). These amendments must be implemented by July 1, 2025, except for the weekly dietary specification, which must be implemented by July 1, 2027. This final rule also replaces total sugar limits for breakfast cereals and yogurt with added sugars limits in CACFP regulations found at 7 CFR 226.20(a)(4)(ii), (a)(5)(iii)(B), (b)(5), and (c). The CACFP amendments must be implemented by October 1, 2025.

Section 3: Milk

This section includes the following sub-sections:

- *Section 3A* discusses requirements for flavored milk in the NSLP, SMP, SBP, and CACFP, and for milk sold à la carte (*i.e.,* as a Smart Snack in School).
- *Section 3B* provides an overview of comments that USDA received in response to the proposed rule's request for input on fluid milk substitutes in the child nutrition programs.
- *Section 3C* discusses the nutrient requirements for fluid milk substitutes.

Section 3A: Flavored Milk

Current Requirement

The National School Lunch Act (42 U.S.C. 1758(a)(2)(i)) requires schools to offer students a variety of fluid milk at lunch; such milk must be consistent with the most recent *Dietary Guidelines.* The Child Nutrition Act (42 U.S.C. 1773(e)(1)(A)) requires school breakfasts to meet the same terms and conditions set forth for school lunches in the National School Lunch Act (42 U.S.C. 1758), including the requirements for fluid milk. Current regulations at 7 CFR 210.10(d)(1)(i), 220.8(d), and 210.11(m) allow schools to offer fat-free and low-fat (1 percent fat) milk, flavored and unflavored, in reimbursable school lunches and breakfasts, and for sale à la carte. The current regulations also require that unflavored milk be offered at each school meal service. Fat-free and low-fat milk, flavored and unflavored, may also be offered to participants ages 6 and older in the SMP and CACFP (7 CFR 215.7a(a) and 226.20(a)(1)(iii)). Lactose-free and reduced-lactose milk meet the meal pattern requirements for fluid milk (7 CFR 210.10(d)(1)(i), 215.7a(a), 220.8(d), and 226.20(a)(1)). The current milk requirements took effect on July 1, 2022.

Proposed Rule

USDA proposed the following two alternatives for milk requirements in the school lunch and breakfast programs and invited public comment on both:

- *Alternative A:* Allow flavored milk (fat-free and low-fat) at school lunch and breakfast for high school children only, effective SY 2025–2026. Under this alternative, USDA proposed that children in grades K–8 would be limited to a variety of unflavored milk. USDA also requested public input on whether to allow flavored milk for children in grades 6–8 as well as high school children (grades 9–12). Children in grades K–5 would again be limited to a variety of unflavored milk. Under both Alternative A scenarios, flavored milk would be subject to the new proposed added sugars limit (10 grams of added sugars per 8 fluid ounces).
- *Alternative B:* Continue to allow all K–12 schools to offer fat-free and low-fat milk, flavored and unflavored, with the new proposed added sugars limit for flavored milk (10 grams of added sugars per 8 fluid ounces).

USDA also proposed a minor technical change to the regulatory text for milk sold à la carte. Instead of repeating the allowable milk types in 7 CFR 210.11(m), which describes the beverages that schools can sell à la carte, USDA proposed to cross-reference 7 CFR 210.10(d). This change was intended to clarify that the NSLP milk requirements apply to milk sold à la carte.

Public Comments

USDA received over 1,600 comments on flavored milk, including almost 600 unique comments. Of these, over 1,500 supported flavored milk, including about 375 unique comments. About 70 opposed flavored milk, including about 50 unique comments. Additionally, specific comment counts regarding Alternative A and Alternative B proposals are described in more detail below. A wide range of stakeholders, including State agencies, school nutrition professionals, advocacy groups, industry respondents, professional associations, dietitians, parents, and students commented on the proposed milk alternatives. At a high

level, respondents provided the following feedback on flavored milk:

- Flavored milk is the leading source of added sugars in school meals.
- Offering flavored milk, which is a more palatable option for some children, improves children's milk consumption and reduces milk waste.
- Milk is an important source of calcium, protein, and other micronutrients.
- USDA should consider operational constraints, such as a lack of storage space for flavored milk, when determining which milk alternative to finalize.

More detailed respondent feedback, including respondent input on the two alternatives, is discussed below.

Alternative A: Allow Flavored Milk for Older Students Only

Fifty-five respondents, including 36 unique comments, representing school nutrition professionals, parents, and advocacy groups, supported Alternative A. A school nutrition professional suggested that Alternative A would help transition students away from flavored milk and reduce their consumption of added sugars. This respondent suggested that after students who are currently in grades K–5 transition to middle and high school, USDA could apply the limit to older children, too. A parent agreed, asserting that water and unflavored milk are the only beverages that young children should consume. A school nutrition professional stated that, although flavored milk is the most popular choice, the amount of added sugars in flavored milk is ''unnecessary for our student's diets.'' This respondent argued that students are already exposed to too much added sugars outside of school meals. Another Alternative A proponent stated that flavored milk should be a treat for younger students, not an everyday choice. An advocacy group noted that flavored milk is a top contributor to added sugars intake and that younger children overconsume added sugars at a higher rate than older children.

Some respondents opposed flavored milk in school meals entirely. Several advocacy groups recommended that USDA limit flavored milk options for all grade levels. Many respondents urged USDA to limit flavored milk to the greatest extent possible, citing that nutrients found in milk are also found in other foods that are lower in added sugars. An individual argued that flavored milk should not be served in school meals because the added sugars ''cancels out any potential benefits of consuming milk.'' A school district opposed flavored milk and mentioned that flavored milk is not offered at any of their schools. An advocacy group urged USDA to prohibit flavored milk in school meals due to the harmful public health impacts of added sugars consumption.

A few respondents addressed concerns about Alternative A's potential impact on children's milk consumption. An advocacy group cited research that found a ''modest decrease'' in student milk consumption when flavored milk was removed from schools but noted that the same study found ''no significant reductions in average per-student intake of calcium, protein, or vitamin D from milk.'' The respondent added that the same study found a decline in added sugars intake from removing flavored milk. However, this advocacy group recommended that USDA periodically monitor milk consumption and intake of milk-related nutrients if Alternative A is implemented.

In addition to general feedback, USDA requested public input on the following questions related to Alternative A:

- Do respondents that support Alternative A have specific input on whether USDA should limit flavored milk to high schools only (grades 9–12) or to middle schools and high schools only (grades 6–12)?
- If Alternative A is finalized with restrictions on flavored milk for grades K–8 or K–5 in NSLP and SBP, should USDA also pursue a similar change in SMP and CACFP?
- Are there any special considerations USDA should keep in mind for SMP and CACFP operators, given the differences in these programs compared to school meal program operators?

In response to the first question, one industry respondent supported limiting grades K–8 to unflavored milks only, if this change is accompanied by a reduction in minimum required calories or an increase in program funding. This respondent explained that when omitting flavored milk, menus are significantly higher in cost due to adding calories from other food groups to meet the required minimum calories. A school district and a dietitian each supported removing flavored milk from the school meal programs entirely but stated that if USDA maintains flavored milk for some students, it should be limited to grades 9–12 only. A few advocacy groups also supported limiting elementary and middle schools to offering unflavored milk only. A few other advocacy groups supported allowing flavored milk for grades 6–12 and limiting grades K–5 to unflavored milk only; one suggested that this approach would give middle schools students, who are old enough to make healthy food choices, the option to choose flavored or unflavored milk.

Regarding the second question, over 100 respondents, including 34 unique comments, addressed whether USDA should pursue a similar change in SMP and CACFP, if Alternative A is finalized for school meals. One CACFP sponsoring organization did not support further restricting flavored milk options in CACFP. A few advocacy groups representing CACFP sponsoring organizations stated they ''categorically oppose'' Alternative A and that ''USDA should not pursue a similar change in CACFP.'' Another advocacy group opposed limiting flavored milk to older children only in the CACFP, asserting that ''acceptance of milk would decrease'' if flavored milk is not permitted. A State agency also opposed limiting flavored milk to older children only in the CACFP, noting that some children participating in the afterschool component of CACFP engage in physical activities, where flavored milk could be a suitable recovery beverage. A CACFP sponsoring organization agreed, suggesting that children who participate in their afterschool care program prefer flavored milk.

However, a State agency supported implementing similar changes in SMP and CACFP to support consistency in program requirements, if Alternative A is finalized for school meals. An individual also supported similar changes in SMP and CACFP, arguing that this would help reduce added sugars intake and help establish healthy eating patterns for young children. This respondent stated that special considerations for these programs are ''unnecessary.'' A school district also supported similar changes in SMP and CACFP ''for consistent messaging and implementation.''

Alternative B: Continue To Allow Flavored Milk for All K–12 Students

About 800 respondents, including 180 unique comments, including State agencies, school nutrition professionals, industry respondents, and individuals, supported Alternative B. Many cited children's preference for flavored milk as a key reason for supporting Alternative B. For example, a school district shared that they serve 90 percent flavored milk and 10 percent unflavored milk, and a dietitian asserted that 95 percent of the children at their school drink flavored milk and the children ''won't drink milk anymore'' if they only offer unflavored milk. A school food service professional supported Alternative B because a

majority of the milk they purchase (97 percent) is flavored milk and they would ''rather students take some form of milk than none at all.'' Numerous other respondents agreed, claiming that flavored milk is associated with higher milk consumption and student participation. One respondent emphasized the importance of allowing choice and teaching students how to consume all foods and beverages in moderation.

A national organization representing tens of thousands of school nutrition professionals supported Alternative B, acknowledging that ''milk processers have significantly reduced added sugar[s]'' in flavored milk served in schools. A school nutrition professional, a parent, and other respondents also recognized the importance of reducing added sugars, but maintained that student participation should be a priority; thus, these respondents supported Alternative B. Respondents also noted that flavored milk is an important source of nutrients such as calcium and protein. A dietitian asserted that a small amount of added sugars in milk helps students receive the nutritional benefits of milk. One respondent claimed that children not drinking milk is more ''detrimental to [student] health than added sugars in flavored milk,'' and therefore supported continuing to allow flavored milk for all K–12 students. Another respondent supported lowering added sugars in flavored milks, but not restricting flavored milks. Respondents also stated that restricting flavored milk may cause students to consume other beverages, including sugary beverages like soda and energy drinks.

Several respondents that supported Alternative B raised operational concerns regarding Alternative A. A State agency suggested that many rural schools have one building and may only have one milk cooler for grades K–12. The State agency also noted that many schools serve meals to students across grades in the same meal service (for example, grades 5–7 or grades 7–9) and it would be difficult for students to understand if one grade can have flavored milk and others cannot. Similarly, another State agency mentioned that some of their schools have grades 6–12 in one building, and ''changing out the milk adds one more task to a busy lunch period.'' This respondent added that some schools do not have extra refrigeration space to remove flavored milk from their milk cooler during the meal service. A third State agency also noted that schools in their State have many unique grade configurations, including grades K–6, K–12, and 7–12. This State agency noted that it would be ''very burdensome'' for schools to move milk in and out of coolers between meal services for different grades, and that the challenges of implementing Alternative A would be even more difficult when different grades are served during the same meal periods.

An individual noted that implementing Alternative A could be difficult for school employees, who would be responsible for explaining the change to families. A dietitian agreed, suggesting that Alternative A would send a ''confusing message.'' A State agency cited concerns about supply chain issues and prices, arguing that schools already have limited choices, and further restrictions would negatively impact price and availability. A school district raised purchasing concerns, noting that purchasing for a large district is ''complicated'' and that Alternative A could create more confusion for vendors. A State agency suggested Alternative A would increase monitoring requirements. A different State agency raised similar concerns, especially when multiple grades share meal services. For example, this State agency noted that differing milk requirements by grade level could create challenges during an Administrative Review, as a reviewer would have to inquire about a student's grade level when they are passing through the lunch line, to ensure the student received a compliant milk.

Other Comments on Flavored Milk

Some respondents offered their own alternatives or suggested changes to the milk requirements. For example, instead of finalizing Alternative A, several respondents suggested limiting flavored milk to lunch only and requiring unflavored milk at breakfast. One respondent supported Alternative A, but for a different approach, suggested allowing flavored milk only once per week for grades 9–12. A few respondents, including an advocacy group and school districts, recommended that USDA allow schools to choose which alternative to implement.

Other respondents encouraged USDA to expand milk options beyond fat-free and low-fat milk. For example, one school district suggested USDA allow reduced-fat (2 percent), unflavored milk, arguing that this option is more palatable for students. One respondent suggested allowing whole milk in school meals, while another agreed and specifically suggested allowing whole, flavored milk. A State elected official encouraged USDA to allow reduced-fat and whole milk options, asserting that this would increase milk consumption and reduce milk waste. An industry respondent agreed, stating that they are confident that the next edition of the *Dietary Guidelines* will ''look more favorably on dairy at all fat levels.'' This respondent urged USDA to allow reduced-fat and whole milk in school meals in anticipation of what the industry respondent expects in the next *Dietary Guidelines.* A dietitian suggested USDA consider ''increasing the allowable fat and calories'' in milk options.

A State agency urged USDA to reconsider the requirement to provide a variety of fluid milks (*i.e.,* at least two options) with each meal service. This respondent argued that the variety requirement leads to a lot of waste. A school food service professional agreed, suggesting that providing variety contributes to waste. This respondent stated that ''skim [milk] is almost never chosen and ends up wasted.'' A professional organization cautioned that limiting flavored milk options could potentially effect meal participation and financial viability for schools. A school district respondent requested that USDA increase funding for Farm to School and equipment grant projects to support more locally produced milk and bulk milk dispensers.

Final Rule

This final rule codifies the proposal to maintain the current milk regulations, with minor technical changes, at 7 CFR 210.10(d), 220.8(d), and 210.11(l).[52] Under this final rule, all schools continue to have the option to offer fat-free and low-fat milk, flavored and unflavored, to K–12 students, and to sell fat-free and low-fat milk, flavored and unflavored, à la carte. Consistent with current requirements, unflavored milk must be offered at each school breakfast and lunch meal service. SMP and CACFP operators may continue to offer fat-free and low-fat milk, flavored and unflavored, to participants ages 6 and older. Additionally, as a reminder, lactose-free and reduced-lactose milk will continue to meet the meal pattern requirements for fluid milk under this final rule (7 CFR 210.10(d)(1)(i), 215.7a(a), 220.8(d), and 226.20(a)(1)).

Under requirements established in this final rule for added sugars, as discussed in *Section 2: Added Sugars,* flavored milk offered to K–12 students

[52] This final rule redesignates the paragraph outlining requirements for competitive beverages, which was previously 7 CFR 210.11(m) to instead be 7 CFR 210.11(l). Under this final rule, the requirements for milk sold as a competitive beverage are outlined at 7 CFR 210.11(l).

in the NSLP and SBP and sold to students à la carte during the school day must comply with the product-based added sugars limit. Under this product-based limit requirement, effective SY 2025–2026, flavored milk must contain no more than 10 grams of added sugars per 8 fluid ounces, or for flavored milk sold à la carte in middle and high schools, 15 grams of added sugars per 12 fluid ounces.

USDA is committed to ensuring that school meals provide children with nutrient-dense foods and beverages that are consistent with the goals of the most recent *Dietary Guidelines.* USDA recognizes that dairy products, including fluid milk, provide a variety of essential nutrients—some of which are underconsumed among school-aged children. The decision to allow flavored, low-fat milk acknowledges concerns expressed in public comments about declining milk consumption among school-aged children. It also acknowledges the nutrients that milk provides (*e.g.,* calcium, vitamin D, and potassium), which remain nutrients of public health concern for the general U.S. population because they are underconsumed.[53] Respondents expressed the importance of considering milk palatability and acceptability when establishing long-term requirements.

Many stakeholders raised concerns about the potential impact on milk consumption if flavored milk options were limited under Alternative A. USDA recognizes that both flavored and unflavored milk provide children with key nutrients. Flavored milk has been shown to encourage milk consumption among school-aged children,[54] and public comments from school nutrition professionals suggest that children may select and consume flavored milk more often than unflavored milk. For example, USDA research from SY 2014–2015 found that about 18 percent of low-fat, flavored milk offered with school lunch was wasted, compared to 35 percent of low-fat, unflavored milk.[55] USDA acknowledges the benefit of allowing flavored milk to be offered as a strategy to promote milk consumption, a beverage that provides several nutrients that are underconsumed during childhood and adolescence. Additionally, many respondents stated that flavored milk is purchased in higher quantities compared to unflavored milk, affirming that flavored milk is a popular choice among students. Offering both flavored and unflavored varieties of milk as part of a nutritious school meal may help to minimize the gap between current and recommended intakes of key nutrients among school-aged children and adolescents. For example, a USDA study found that K–12 students who participated in NSLP were significantly more likely to consume milk compared to students who did not participate.[56] Thus, the school meal programs remain a contributing factor in influencing milk consumption among children. USDA acknowledges the importance of allowing schools the option to offer milk varieties that children will consume and enjoy.

USDA recognizes that some stakeholders supported limiting flavored milk options under Alternative A. USDA appreciates public input on Alternative A, which would have limited flavored milk offerings to older students, in grades 9–12 or grades 6–12. Several respondents acknowledged that Alternative A would help reduce the intake of beverages with added sugars, especially for younger children. Advocacy groups and parents also supported this alternative as a way to transition students from flavored to unflavored milk and reduce their consumption of added sugars. Conversely, other respondents raised important concerns about the operational feasibility if Alternative A were finalized. For example, one school district explained that some schools serve multiple grades in a single meal service, and students from grades K–12 may be in the cafeteria at the same time. These schools may not have the opportunity or capacity to limit milk options as children from different grade levels pass through the serving lines, and would have to monitor student milk selections by grade level to ensure compliance with Alternative A. A few State agencies added that limiting flavored milk options by grade levels could be challenging to monitor during Administrative Reviews. USDA acknowledges respondent concerns that Alternative A could be difficult to implement and monitor, especially for small schools or schools where students from different grade levels share the same meal service. Due to the variability in school size, grade level configurations, storage and cafeteria space, and overall operations, USDA recognizes that Alternative A could cause unintended operational and administrative challenges for both schools and State agencies. USDA appreciates the important concerns raised by stakeholders, particularly on behalf of small schools, and considered this input in the final rule.

USDA recognizes that under this final rule, flavored milk will continue to contribute to added sugars in school meals. However, as noted in *Section 2: Added Sugars,* this rulemaking also finalizes a product-based added sugars limit for flavored milk. By SY 2025–2026, schools must implement a product-based limit for flavored milk of no more than 10 grams of added sugars per 8 fluid ounces or, for flavored milk sold as a competitive food for middle and high schools, 15 grams of added sugars per 12 fluid ounces. In SY 2027–2028, this rule will also implement an overall weekly limit for added sugars of less than 10 percent of calories per week. USDA expects that these actions, as well as the other product-based added sugars limits finalized in this rulemaking, will support an overall decrease in the added sugars content of school meals. Additionally, as noted above, this final rule maintains that NSLP and SBP operators who choose to offer flavored milk must also offer unflavored milk (fat-free or low-fat) to students in the same meal service. This requirement ensures that milk variety in the NSLP and SBP is not limited to flavored milk choices, and that a nutrient-dense form of milk that is lower in added sugars (*i.e.,* unflavored milk) is always available for students to select. USDA is committed to advancing the nutritional quality of school meals and reducing added sugars to safeguard children's health and align with the goals of the most recent *Dietary Guidelines.*

USDA appreciates respondent feedback on additional approaches to

reduce added sugars intake from flavored milk. For example, respondents suggested that schools can limit flavored milk options to lunch only, procure flavored milks with the least amount of added sugars, or limit flavored milk to one day per school week. Additionally, there is no requirement that schools offer flavored milk, and schools may choose to remove all flavored milk from school meal menus as long as the school continues to offer a variety of fluid milk. For example, one school district commented that they have removed flavored milk from their menus to support school wellness. USDA encourages schools to consider these strategies to further reduce added sugars in school meals and to choose options that work best for their unique communities.

Respondents also raised other ideas and suggestions related to milk requirements. For example, some respondents encouraged USDA to remove the milk variety requirement. The requirement to offer a variety of milk options is mandated by statute, and USDA does not have the authority to change this statutory requirement (42 U.S.C. 1758(a)(2)(i)). Schools have several options to meet the milk variety requirement, such as offering unflavored fat-free and unflavored low-fat milk. Schools may also offer lactose-free or reduced-lactose milk (fat-free or low-fat) to meet the milk variety requirement. Other respondents recommended USDA allow schools to offer milk with a higher fat content. While USDA appreciates comments suggesting schools be allowed to offer reduced fat and whole milk, allowing these milk options in the school meal programs would not be consistent with the goals of the most recent *Dietary Guidelines* as required by the NSLA and would make it difficult for menu planners to achieve weekly dietary specifications without exceeding calorie and saturated fat limits. Statutory requirements state that milk offered in reimbursable school meals must be consistent with the most recent *Dietary Guidelines,* and the *Dietary Guidelines, 2020–2025* recommends unsweetened, fat-free or low-fat milk for school-aged children. Therefore, USDA does not permit reduced-fat or whole milk in the school meal programs (7 CFR 210.10(d)(1)(i) and 220.8(d)).

As mentioned above, this final rule does not change any milk requirements in CACFP. Many respondents requested that milk standards established in school meal programs be consistent with the CACFP. USDA recognizes that regulatory consistency across programs, a long-time goal at USDA, facilitates program administration and operation at the State and local levels, fosters support, and meets stakeholder expectations.

Accordingly, this final rule makes minor technical changes to the requirements found in 7 CFR 210.10(d)(1), 210.11(l)(1)(ii), (l)(2)(ii), and (l)(3)(ii),[57] and 220.8(d). This final rule continues to allow NSLP and SBP operators to offer unflavored or flavored, fat-free or low-fat milk as part of a reimbursable meal and for sale à la carte, and to allow flavored, low-fat milk in the SMP and in the CACFP for participants ages 6 and older. Because this rule finalizes the current flavored milk requirements, child nutrition program operators will not need to make changes to their menus to comply with this provision, beyond those changes described in *Section 2: Added Sugars*.

Section 3B: Fluid Milk Substitutes: Responses To Request for Input

Current Requirement

As noted in *Section 3A: Flavored Milk,* the National School Lunch Act requires fluid milk (cow's milk) to be offered with every school breakfast and lunch. The statute is also very specific about allowable fluid milk substitutes for non-disability reasons. To provide a substitute for cow's milk in the school meal programs, the statute requires:

- That the fluid milk substitute is nutritionally equivalent to fluid milk and meets nutritional standards established by the Secretary, which must include fortification of calcium, protein, vitamin A, and vitamin D to levels found in cow's milk (42 U.S.C. 1758(a)(2)(B)(i)). This requirement also applies to the CACFP (42 U.S.C. 1766(g)(4)(B)).
- That the substitution is requested in writing by a medical authority or the child's parent or legal guardian (42 U.S.C. 1758(a)(2)(B)(ii)). This requirement also applies to CACFP (42 U.S.C. 1766(g)(4)(C)(i)(II)).
- That the school notify the State agency if it is providing fluid milk substitutes for non-disability reasons (42 U.S.C. 1758(a)(2)(B)(ii)).
- That the school cover any expenses related to providing fluid milk substitutes in excess of program reimbursements (42 U.S.C. 1758(a)(2)(B)(iii)). This requirement also applies to institutions or facilities in the CACFP (42 U.S.C. 1766(g)(4)(D)).

Under current school meal regulations, the statutory requirements for fluid milk substitutes for non-disability reasons are codified in two places:

- Current 7 CFR 210.10(d)(3) details the nutrition requirements for fluid milk substitutes for non-disability reasons.
- Current 7 CFR 210.10(m)(2)(i) through (iii) detail additional requirements for fluid milk substitutes for non-disability reasons, such as the process for requesting a fluid milk substitute on behalf of a student.

Under current CACFP regulations, the statutory requirements for fluid milk substitutes are codified at 7 CFR 226.20(g)(3).

As a point of clarification, the statute and program regulations require schools, institutions, and facilities to provide meal modifications for participants with a disability that restricts their diet. Lactose intolerance may be considered a disability. For example, a child whose digestion is impaired due to lactose intolerance may be considered a person with a disability who requires a substitution for cow's milk. In this example, if a student cannot consume cow's milk due to a disability, and the school food authority obtains a written medical statement as documentation of the student's disability, the school is required to provide a substitution for cow's milk. Further, when providing a meal modification for a participant's disability, the substitution for cow's milk does not need to meet the *non-disability* fluid milk substitute requirements. When providing a meal modification for a participant's disability, the school, institution, or facility would review the participant's medical statement which must include a recommended alternative to accommodate the participant with a disability,[58] and the substitution would not be required to meet the nutrition requirements for *non-disability* fluid milk substitutes. The nutrition requirements for *non-disability* fluid milk substitutes apply only in *non-disability* situations. This section will focus on non-disability fluid milk substitute requirements. Please see *Section 14: Meal Modifications* for a more detailed overview of meal modifications for disability reasons,

---

[57] This final rule redesignates the paragraph outlining requirements for competitive beverages, which was previously 7 CFR 210.11(m) to instead be 7 CFR 210.11(l). Under this final rule, the requirements for milk sold as a competitive beverage are outlined at 7 CFR 210.11(l).

[58] However, Program operators should not deny or delay a requested modification because the medical statement does not provide recommended alternatives. When necessary, Program operators should work with the participant's parent or guardian to obtain a supplemental medical statement. See Question 17. U.S. Department of Agriculture, *Accommodating Disabilities in the School Meal Programs: Guidance and Questions and Answers (Q&As)*. April 25, 2017. Available at: *https://www.fns.usda.gov/cn/accommodating-disabilities-school-meal-programs-guidance-qas*.

including updates made by this rulemaking.

Proposed Rule

USDA proposed to reorganize the NSLP regulatory text related to fluid milk substitutes for non-disability reasons to clarify the requirements for requesting and providing non-disability fluid milk substitutes in the school meal programs. The rule proposed to move the NSLP regulatory text explaining the non-disability fluid milk substitute requirements from paragraph (m) of 7 CFR 210.10—which currently discusses exceptions and variations allowed in reimbursable meals—to paragraph (d) of 7 CFR 210.10—which discusses the fluid milk requirements.

USDA did not propose substantive changes to the requirements for non-disability fluid milk substitutes. As noted in the proposed rule, USDA does not have the authority to change the statutory requirements for non-disability fluid milk substitutes. However, USDA requested public input on the current fluid milk substitute process, particularly from parents and guardians with firsthand experience requesting a non-disability fluid milk substitute on behalf of their child, and program operators with firsthand experience processing a request.

Public Comments

USDA received 390 comments with feedback about the current fluid milk substitute process, including 194 unique comments. Several respondents encouraged USDA to make the process of requesting and providing fluid milk substitutes less cumbersome so that participants can more easily access substitutes. These respondents offered a variety of suggestions for USDA, State agencies, schools, institutions, and facilities to consider to improve access to fluid milk substitutes. For example, respondents suggested:

- Pursuing a public education campaign to encourage medical screening of children with possible lactose intolerance and milk allergies.
- Developing informational fliers with basic facts about lactose intolerance and milk allergies to be posted in school cafeterias and community clinics and sent home with children.
- Improving awareness of the process of requesting fluid milk substitutes among school food service professionals, parents, guardians, and students, for example, by:
- Clarifying that schools are authorized and encouraged to provide fluid milk substitutes for non-disability reasons based on a parent or guardian request.
- Issuing guidance with examples of reasons students may request a non-disability fluid milk substitute, such as following a vegan diet.
- Simplifying the process of requesting a fluid milk substitute for a participant, for example, by:
- Including in registration materials a simple way for parents and guardians to request a fluid milk substitute, such as a form with a checkbox.
- Providing a model notice and form parents and guardians may use to request a fluid milk substitute that schools, institutions, or facilities can post on their website and mail to families.
- Providing a list or database of allowable fluid milk substitutes, such as fortified soy beverages or pea protein milk.
- Identifying more shelf-stable fluid milk substitute options, especially for small schools, institutions, and facilities where only a few participants request a fluid milk substitute.
- Clarifying the differences between meal modifications for disability reasons and fluid milk substitutes for non-disability reasons.
- Creating a focus group of students, school nutrition professionals, district officials, and parents and guardians from across the country to further understand the barriers students face in accessing fluid milk substitutes.
- Providing additional reimbursement or funding to schools that offer non-disability fluid milk substitutes.

Several respondents had additional feedback on the process of identifying products that meet the nutrition requirements for fluid milk substitutes. One advocacy group and a few other respondents encouraged USDA to modify the process of identifying acceptable fluid milk substitutes so that program operators can refer to the Nutrition Facts label, noting that currently, some of the required nutrients are not always listed on the label. A State agency observed that when a required nutrient is not included on the Nutrition Facts label, schools need to contact the manufacturer to obtain nutrition information. Another State agency and an advocacy group argued that the current process makes it difficult for program operators to offer fluid milk substitutes. Further, a State agency suggested the requirement for micronutrients in fluid milk substitutes is ''excessive,'' suggesting that requiring substitutes to match the micronutrient profiles of milk discounts the other nutrition benefits of fluid milk substitutes.

A few respondents offered suggestions that would conflict with the statutory requirements for fluid milk substitutes, as detailed in the ''Current Requirements'' section above. For example, respondents suggested that USDA:

- Make non-dairy milk options available to all children and allow more beverages to be offered as fluid milk substitutes.
- Remove the requirement for parents, guardians, or a medical authority to request the fluid milk substitute.
- Remove the requirement that school food authorities notify the State agency if any of its schools choose to offer fluid milk substitutes for non-disability reasons.
- Make broader changes to the meal pattern requirements, such as removing the requirement to offer fluid milk altogether.

A few respondents offered suggestions related to other proposals included in the rule. An industry respondent and an advocacy group suggested that if USDA finalizes added sugars limits for flavored cow's milk, the same limits should apply to fluid milk substitutes. However, another respondent recommended that if USDA applies a sugar limit to fluid milk substitutes, that the limit be for total sugars (rather than added sugars). One State agency requested clarification about whether flavored milk restrictions for K–5 or K–8 students would apply to fluid milk substitutes, if they are finalized for cow's milk. Other respondents supported and recommended maintaining the current non-disability fluid milk substitute process. An industry respondent affirmed that it is important for non-dairy fluid milk substitutes to provide nutrients similar to cow's milk. An advocacy group agreed, noting that except for fortified soy beverages and soy yogurt, the *Dietary Guidelines* do not include plant-based beverages as part of the dairy group. This respondent supported maintaining the statutory requirement that fluid milk substitutes be nutritionally comparable to cow's milk. Another industry respondent affirmed that USDA developed the nutritional requirements for fluid milk substitutes ''on the basis of nutrition science and in accordance with statutory requirements.'' An advocacy group supported the current process for fluid milk substitutes, arguing that it ''works well for school meal program operators'' and provides clear guidelines. A State agency agreed, suggesting that soy milk

and lactose-free milk are ''readily available'' and are nutritious options for children.

One industry respondent appeared to misunderstand the types of fluid milk substitutes that are permitted for non-disability reasons. This respondent argued that certain non-dairy milks are not nutritionally equivalent to cow's milk and that students should either drink cow's milk or water. To clarify, to be allowed as a non-disability fluid milk substitute, a product must meet nutritional requirements outlined in regulation. These statutory requirements ensure that fluid milk substitutes are nutritionally equivalent to fluid milk (42 U.S.C. 1758(a)(2)(B)(i) and 42 U.S.C. 1766(g)(4)(B)). Non-dairy milks that do not meet the nutritional requirements outlined in regulation are not allowable fluid milk substitutes. Another industry respondent confirmed that most plant-based milks, such as almond, coconut, and rice milks, do not currently meet the nutrient standards to qualify as fluid milk substitutes.

Some respondents provided input on lactose-free or reduced-lactose milk. Low-fat or fat-free lactose-free and reduced-lactose milk are milk under the statute and program regulations (42 U.S.C. 1758(a)(2)(A)(ii) and 7 CFR 210.10(d)(1)(i), 220.8(d), and 226.20(a)(1)). This means that schools, institutions, and facilities may offer lactose-free and reduced-lactose milk toward the milk requirements without obtaining a request from a parent or guardian or a medical authority. A few industry respondents encouraged USDA to provide incentives to schools that opt to offer lactose-free milk on a routine basis to all students who want it, and to work with industry to facilitate more extensive offerings of lactose-free milk in schools. For example, these respondents suggested that USDA design a specification for 8-ounce, lactose-free milk and offer it through USDA Foods. Similarly, a State agency noted that it would be helpful if processors packaged 8-ounce, lactose-free or reduced-lactose milks to make these options more accessible to operators.

Several respondents raised concerns on behalf of children who cannot consume, or have difficulty consuming, cow's milk. For example, a group of State Attorneys General mentioned that children of color have markedly higher rates of lactose intolerance, citing a 2013 study [59] that found that Black children were twice as likely as non-Hispanic white children to have allergic sensitization to milk. Similarly, a letter from Members of Congress noted that ''most Black, Indigenous, and other People of Color (BIPOC) are lactose intolerant.'' An advocacy group cited the National Institutes of Health website, which states that about 68 percent of the world's population has lactose malabsorption.[60] A few individuals shared their personal experiences facing digestive issues as a child, which they attributed to drinking cow's milk with their school lunch. These respondents suggested improved access to fluid milk substitutes could help students avoid experiencing the same discomfort today. To help address these issues, a form letter campaign suggested that USDA clarify in the final rule that lactose intolerance may be considered a disability. As noted, a participant whose digestion is impaired due to lactose intolerance may be a person with a disability that requires a menu substitution for fluid milk, and the statute and regulation require schools, institutions, and facilities to provide meal modifications for participants with a disability that restricts their diet. As emphasized by these and numerous other comments, USDA appreciates the importance of clarifying the requirements for meal modifications for disability reasons and fluid milk substitutes for non-disability reasons. USDA is committed to providing guidance to help ensure participants who require a substitution for cow's milk due to a disability receive a meal modification.

Final Rule

This final rule reorganizes the NSLP regulatory text related to fluid milk substitutes for non-disability reasons. This rule moves the regulatory text explaining the non-disability fluid milk substitute requirements from 7 CFR 210.10(m), which discusses exceptions and variations allowed in reimbursable meals, to 7 CFR 210.10(d), which discusses the fluid milk requirements. As noted in the proposed rule, USDA does not have the authority to change the statutory requirements for non-disability fluid milk substitutes,[61] such as the statutory requirement that fluid milk substitutes meet specific nutrition requirements and that fluid milk substitutes must be requested in writing. Therefore, this final rule does not make any substantive changes to the non-disability fluid milk substitute request process outlined in regulation. However, USDA greatly appreciates input that respondents provided on the request process, including their advice on best practices to improve the process for program operators, families, and participants. USDA will consider including this input in future best practice resources.

USDA also encourages State agencies, schools, institutions, facilities, and other stakeholders to consider this input in their State and local processes. For example, community organizations could partner with institutions and facilities to provide families with information about lactose intolerance. USDA reminds schools, institutions, and facilities that lactose-free and reduced-lactose milk meet the meal pattern requirements for fluid milk (7 CFR 210.10(d)(1)(i), 215.7a(a), 220.8(d), and 226.20(a)(1)). Schools, institutions, and facilities may choose to provide lactose-free and reduced-lactose milk to participants without needing to obtain a written request from a parent or guardian.

Regarding fluid milk substitutes that require a written request from a parent or guardian, school food authorities could provide a simple form that parents and guardians could use to request a substitute when sending student registration materials. For its part, USDA remains committed to providing guidance to clarify the differences between meal modifications for disability reasons and fluid milk substitutes for non-disability reasons and will consider ways to improve guidance related to the fluid milk substitutes process. Please see *Section 14: Meal Modifications* for a more detailed overview of meal modifications

[59] The public comment cited the following study: Wegienka et al., *Racial Differences in Allergic Sensitization: Recent Findings and Future Directions,* Current Allergy and Asthma Reports, June 2013, *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4888051.*

[60] The public comment cited the following web page: National Institutes of Health. *How common is lactose malabsorption?* Available at: *https://www.niddk.nih.gov/health-information/digestive-diseases/lactose-intolerance/definition-facts#:~:text=While%20most%20infants%20can%20digest,world%27s%20population%20has%20lactose%20malabsorption.*

[61] As detailed in the Current Requirements section, the following requirements related to fluid milk substitutes are statutory, meaning that USDA does not have discretion to change them: that the fluid milk substitute is nutritionally equivalent to fluid milk and meets nutritional standards established by the Secretary, which must include fortification of calcium, protein, vitamin A, and vitamin D to levels found in cow's milk (42 U.S.C. 1758(a)(2)(B)(i)); that the substitution is requested in writing by a medical authority or the child's parent or legal guardian (42 U.S.C. 1758(a)(2)(B)(ii)); that the school notify the State agency if it is providing fluid milk substitutes for non-disability reasons (42 U.S.C. 1758(a)(2)(B)(ii)); and that the school cover any expenses related to providing fluid milk substitutes in excess of program reimbursements (42 U.S.C. 1758(a)(2)(B)(iii)). This requirement also applies to institutions or facilities in the CACFP (42 U.S.C. 1766(g)(4)(D)).

for disability reasons, including updates made by this rulemaking.

USDA appreciates requests for clarification about whether fluid milk substitutes offered in the NSLP and SBP are impacted by the added sugars provision of this rule. USDA did not propose to apply the product-based added sugars limit for flavored milk to fluid milk substitutes; that proposal was specific to cow's milk. Therefore, fluid milk substitutes are not required to meet the product-based added sugars limit for flavored cow's milk. However, effective SY 2027–2028, all meals offered during a school week—including meals containing fluid milk substitutes—will be required to, on average, meet the weekly added sugars limit (*i.e.,* no more than 10 percent of calories from added sugars).

Accordingly, this final rule amends 7 CFR 210.10(d) and (m) to reorganize the regulatory text related to fluid milk substitutes for non-disability reasons in the school meal programs. Schools are not required to change menus or operations as a result of this technical change.

Section 3C: Fluid Milk Substitutes: Nutrient Requirements

Current Requirements and Proposed Rule

As detailed above, the statute and regulations specify nutrition requirements for fluid milk substitutes (42 U.S.C. 1758(a)(2)(B)(i), 42 U.S.C. 1766(g)(4)(B), 7 CFR 210.10(d)(3), and 226.20(g)(4)(B)). Currently, the vitamin A and vitamin D requirements are specified in International Units, or IUs. However, in 2016, the FDA published a final rule that changed the labeling requirements for vitamins A and D to micrograms (mcg) rather than IUs.[62]

To align with the labeling requirements in the FDA's rule, USDA proposed to update the regulatory nutrition requirements for fluid milk substitutes in the 2020 proposed rule. This proposal applied to NSLP, SMP, and CACFP regulations for fluid milk substitutes.

Public Comments

USDA received 46 of the comments on this provision of the 2020 proposed rule, including 22 unique comments; all supported this change. Several proponents suggested that this change could reduce burden and make it easier for child nutrition program operators to identify fluid milk substitutes. A State agency offered support for aligning regulations with current packaging information, agreeing that this could reduce burden. Another State agency noted that the current inconsistency creates additional work and strongly supported the proposed change.

Final Rule

As a conforming amendment, this final rule changes the units for vitamin A and vitamin D requirements for fluid milk substitutes. Instead of 500 IUs, the unit for the vitamin A requirement is now 150 mcg retinol activity equivalents (RAE) per 8 fluid ounces. Instead of 100 IUs, the unit for the vitamin D requirement is now 2.5 mcg per 8 fluid ounces. These requirements, along with the other nutrition requirements for fluid milk substitutes, are shown in the table below.

Nutrition Requirements for Fluid Milk Substitutes

Nutrient	Per Cup (8 fl. oz.)
Calcium	276 mg.
Protein	8g.
Vitamin A	150 mcg. retinol activity equivalents (RAE)
Vitamin D	2.5 mcg.
Magnesium	24 mg.
Phosphorous	222 mg.
Potassium	349 mg.
Riboflavin	0.44 mg.
Vitamin B-12	1.1 mcg.

The amount of vitamin A and vitamin D required in fluid milk substitutes does not change; only the unit of measurement has changed to conform to FDA labeling requirements.

Accordingly, this final rule amends 7 CFR 210.10(d)(2)(ii), 215.7a(b)(2), and 226.20(g)(3)(ii). Child nutrition program operators are not required to change menus or operations as a result of this technical change.

Section 4: Whole Grains

Current Requirement

Current regulations at 7 CFR 210.10(c)(2)(iv) and 220.8(c)(2)(iv) require that at least 80 percent of the weekly grains offered in the school lunch and breakfast programs must be whole grain-rich. The remaining grain items offered must be enriched. To meet USDA's whole grain-rich criteria, a product must contain 50 to 100 percent whole grains; any grain ingredients that are not whole grain must be enriched, bran, or germ. The current whole grain-rich requirement took effect on July 1, 2022.

Proposed Rule

The proposed rule included two options for offering whole grains in the school lunch and breakfast programs and requested public input on both. The rule:

- Proposed to maintain the current whole grains requirement that at least 80 percent of the weekly grains offered are whole grain-rich, based on ounce equivalents.
- Requested public input on an alternative whole grains option, which

[62] Food and Drug Administration. *Food Labeling: Revision of the Nutrition and Supplement Facts Labels* (81 FR 33742, May 27, 2016). Available at: *https://www.federalregister.gov/documents/2016/05/27/2016-11867/food-labeling-revision-of-the-nutrition-and-supplement-facts-labels.*

would require that all grains offered must be whole grain-rich, except that one day each school week, schools may offer enriched grains.

USDA requested public input on both approaches as well as the following questions:

- Which option would be simplest for menu planners to implement, and why?
- Which option would be simplest to monitor, and why?

In addition, USDA proposed to codify the definition of ''whole grain-rich'' for clarity. The proposed regulatory definition reads as follows: *Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.* This proposed definition would not change the meaning of whole grain-rich, which has previously been communicated in USDA guidance. USDA proposed codifying the definition in NSLP, SBP, and CACFP regulations.

Finally, USDA proposed to update the definition of ''entrée item'' in the competitive food service and standards regulations (7 CFR 210.11(a)(3)).[63] These proposed changes sought to update the whole grain-rich requirements for entrée items sold as Smart Snacks in School for consistency with school meal requirements.

Public Comments

USDA received over 80,000 comments on the whole grains provision of the proposed rule, a majority of which were coded as ''mixed'' or ''other'' comments. Overall, about 3,800 comments supported whole grains, including 47 unique comments, while 49 comments opposed whole grains, including 44 unique comments. State agencies, school nutrition professionals, advocacy groups, professional organizations, industry respondents, dietitians, school nutrition professionals, and individuals provided comments on the proposals. At a high level, respondents provided the following feedback on whole grains:

- Whole grains are an important source of fiber and other nutrients.
- Whole grain-rich varieties of certain foods are less palatable to students, and some whole grain-rich products are less widely available than enriched products.
- USDA should establish a whole grain-rich requirement that allows flexibility for schools to occasionally offer enriched grains.

More detailed respondent feedback, including respondent feedback on the proposal to maintain the current requirement, as well as the alternative days-per-week model, is included below.

Importance of Whole Grains

Many respondents highlighted the importance of whole grains to children's diets. An advocacy group supported whole grain consumption for children's health, reasoning that whole grain foods are wholesome, nutrient-dense, and high quality. An industry respondent mentioned that whole grain-rich requirements in school meals allow students to benefit from whole grain foods, which provide important nutrients. An individual agreed, adding that whole grains are a good source of dietary fiber. Similarly, another respondent asserted that whole grain consumption should be encouraged because of the ''well documented'' positive health effects.

Proposed Approach: Maintain 80 Percent Whole Grain-Rich Requirement, Based on Ounce Equivalents

About 4,800 respondents supported maintaining the current whole grain-rich requirement, including 291 unique comments. Several respondents, including a State agency and a few dietitians, stated that maintaining the current, 80 percent requirement would provide a balanced approach throughout the week and allow menu planners and students continued flexibility. An array of respondents supported maintaining the current requirement because of the nutritional benefits of whole grains and fiber consumption. Many respondents, including school nutrition professionals, agreed that the current requirement helps to increase students' whole grain consumption while allowing flexibility to offer some enriched grains, such as pasta. A State agency, professional organizations, school districts, and form letter campaigns noted that maintaining the current requirement would encourage whole grain consumption while allowing schools the opportunity to serve culturally relevant enriched grain items.

One respondent appreciated the current 80 percent whole grain-rich requirement and mentioned that their school menu usually offers about 90 percent whole grain-rich grains. This respondent stated that the 80 percent requirement provides ''wiggle room'' if a product they normally buy as whole grain-rich is not available and they have to buy the enriched option. A school nutrition professional explained that while it took several years to adjust to whole grain-rich products, students at their school now mostly accept them. Another school district shared that its schools implement a 100 percent whole grain-rich requirement, but still supported the 80 percent requirement because it allows flexibility for schools to occasionally offer enriched grains.

A State agency supported maintaining the current requirement because schools have successfully implemented, and are comfortable with, the requirement. Similarly, another State agency noted that schools can rely on existing menu planning software for implementation and monitoring. A national organization, representing tens of thousands of school nutrition professionals supported the current requirement, emphasizing that this approach would be the ''simplest'' for menu planners to implement and State agencies to monitor. One State agency and two professional organizations suggested that maintaining the current requirement would not require staff retraining or menu changes, and would prevent confusion in menu planning, for example, during shortened school weeks.

Twenty-one respondents, all unique comments, opposed the current whole grain-rich requirement or raised concerns about implementation. For example, a State agency expressed concern that the 80 percent threshold may contribute to administrative burden for both menu planning and Administrative Reviews. This State agency noted that calculating 80 percent whole grain-rich offerings across weekly menus could be complex, time-consuming, and error prone. Another respondent mentioned that the current requirement is easier to monitor with nutrition software but acknowledged that the days-per-week model would be easier for schools that do not have software.

Alternative Approach: Days-Per-Week Model

About 9,100 respondents supported the alternative days-per-week model, including 47 unique comments. A State agency reasoned that the alternative option would simplify menu planning and reduce non-compliance and monitoring burden. Other respondents, including a professional association, a few school nutrition professionals, and a dietitian, agreed, and gave examples of how the alternative approach could be easier to implement. For example, respondents suggested that the days-per-week requirement would be easier to understand, would eliminate the need to calculate percentages, and would

[63] For more information on Smart Snacks in Schools, see: U.S. Department of Agriculture, *Tools for Schools—Focusing on Smart Snacks.* Available at: *https://www.fns.usda.gov/cn/tools-schools-focusing-smart-snacks.*

simplify reviews for State agencies. A school nutrition professional stated that they are implementing the current whole grain-rich requirement using a days-per-week model and asserted that they find this approach simple to plan and monitor.

Other proponents added that the alternative whole grain-rich approach is nutritionally sound. For example, a form letter campaign claimed that the days-per-week model supports a strong whole grain standard. An industry respondent mentioned that allowing enriched grains one day per week would ensure that students are exposed to whole grains in most of their school meals.

Fifty-six respondents, including 37 unique comments, opposed the alternative days-per-week model or raised concerns about implementation. A dietitian expressed concern that the alternative model would limit menu planning flexibility. A State agency shared concerns that schools could potentially offer a larger amount of enriched grains one day each school week, which could reduce the overall percentage of whole grain-rich items offered during the week. A few State agencies requested USDA provide implementation guidance for the days-per-week model, particularly for schools with alternative schedules (such as four- or seven-day school weeks) and for school weeks that are shortened due to holidays, vacations, unexpected closures, and emergencies. Some respondents cautioned that during shortened school weeks, an even larger amount of overall grain offerings could be enriched.

Other Approaches Suggested by Comments

Several respondents provided mixed responses on the two approaches or suggested their own alternatives. Many respondents, including professional organizations, advocacy groups, and a school district encouraged USDA to allow school districts to choose which of the whole grain-rich approaches they would like to implement, reasoning that doing so would provide greater flexibility in program operations. A few professional organizations added that some school districts may find it easier to implement one option over the other, depending on their unique supply chain, staffing, and menu planning considerations. Some highlighted that providing a choice between both options would be considerate of the operational differences between school districts of varying sizes as well as differences between rural and urban school districts.

An advocacy group expressed concern that while both approaches would encourage whole grain consumption, they do not fully align with the *Dietary Guidelines* recommendation that at least half of grains are whole grains.[64] Several advocacy groups urged USDA to require 100 percent of grain products offered in school meals to be whole-grain rich. A State agency emphasized that they have maintained a 100 percent whole grain-rich requirement, suggesting that their schools experience minimal issues complying with their statewide requirement and are successful in procuring products to meet that requirement. Another individual recommended USDA require all grains to be *whole grains* (rather than having a *whole grain-rich* requirement) and expressed concern that whole grain-rich items are only required to contain at least 50 percent whole grains. For clarity, USDA proposed codifying the definition of whole grain-rich to explain that products containing 50 to 100 percent whole grain, such as whole grain oatmeal, are whole grain-rich.

An advocacy group supported strengthening the whole grain-rich requirement reasoning that it could improve schools' environmental sustainability. Instead of permanently maintaining the current requirement, this respondent recommended that USDA transition to requiring all grains offered to be whole grain-rich by SY 2027–2028. Or, if USDA opted to finalize the days-per-week model, this advocacy group recommended that USDA add a requirement that schools ''balance'' the enriched grain day with a 100 percent whole grains day. A form letter suggested that USDA adopt a 100 percent whole grain-rich requirement or increase the whole grain-rich threshold to 90 percent and adopt an additional requirement for fiber. An industry respondent supported the 80 percent threshold for NSLP, but suggested USDA require that 100 percent of grains offered in the SBP be whole grain-rich. Additionally, this respondent suggested that all breakfast cereal offered in child nutrition programs should be whole grain-rich, noting that there are a wide variety of whole grain-rich breakfast cereals available.

Some respondents provided suggestions or questions for USDA to consider. A parent suggested adjusting the proposed whole grain-rich definition by emphasizing more whole (100 percent) grains. One respondent asked if schools can receive ''credit'' if they offer 100 percent whole grains (which exceed the 50 percent threshold to qualify as whole grain-rich) in order to offer more enriched grains. A school district urged USDA to consider an approach that would require schools to offer more whole grains, such as brown rice and bread from whole wheat flour, as opposed to ''processed and manufactured products.'' A form letter suggested USDA consider developing a requirement for fiber, noting that grains are a top source of fiber in school meals. Similarly, one advocacy group suggested a carbohydrate-to-fiber ratio standard to help schools identify more healthful grain products.

Conversely, other respondents suggested that USDA decrease the current 80 percent whole grain-rich threshold. A school nutrition director opposed both whole grain proposals asserting that there is no significant difference between the two options. This respondent suggested USDA instead lower the current whole grain-rich threshold from 80 to 50 percent. A State agency advocated for a 50 to 75 percent whole grain-rich threshold, suggesting that the current 80 percent threshold is challenging to meet for grades K–5 based on the minimum grain amount required for the week. A few other respondents, including a State agency, professional association, school district, and individual, argued that the 80 percent threshold limits menu options and claimed that implementing a 50 percent whole grain-rich requirement would yield higher student participation and more menu planning flexibility. A dietitian agreed, stating that a 50 percent whole grain-rich requirement would provide an ''ideal balance'' between providing whole grains and enriched grains in school meals.

Some respondents who supported a lower whole grain-rich threshold cited specific challenges with offering whole grain-rich foods in school meals, including ongoing supply chain issues and concerns about the taste of certain whole grain-rich products. One respondent mentioned that schools continue to experience supply chain issues and production disruptions on a weekly basis. In recent years, this respondent stated that schools have experienced limited availability of whole grain-rich items and vendors have substituted enriched grain products. When commenting on the whole grains proposal, a food industry respondent explained that product development, reformulation, and recipe adjustments are time-consuming activities. This respondent stated that

[64] See page 18. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at: *https://www.dietaryguidelines.gov/.*

rapid reformulation could increase prices and interfere with consumer testing. Dietitians from a State agency noted that identifying whole grain-rich items is challenging for small school districts that purchase foods from consumer markets and small distributors, which do not have crediting information readily available.

Relatedly, a few respondents shared examples of whole grain-rich products that they asserted are not palatable or do not work well in school cafeteria operations, such as egg noodles, pasta, tortillas, grits, and biscuits. An individual claimed that students do not like certain foods manufactured with whole grain ingredients, and a school nutrition professional asserted that students refuse to consume whole grain-rich biscuits and snack crackers. A school district claimed that offering enriched grains is necessary for student participation in school meals. Another respondent expressed that it is critical for USDA to allow schools to occasionally offer enriched grains, adding that some schools encounter strong regional and cultural preferences for specific items, such as flour tortillas and white rice.

Comments on Other Whole Grain-Rich Proposals

Respondents also provided feedback on the proposal to codify the definition of ''whole grain-rich'' in NSLP, SBP, and CACFP regulations and the proposal to update the definition of ''entrée item'' in the competitive food service and standards regulations. One respondent stated that the proposed regulatory definition for the term ''whole grain-rich'' would allow school nutrition professionals to make more informed decisions when implementing the whole grain-rich requirement. An advocacy group suggested using a minimum of 51 percent in the definition to emphasize that a product should have more whole grains than enriched grains to qualify as whole grain-rich. A professional organization shared concerns that adding the term ''whole grain-rich'' in regulation will require administrative costs for printing materials and training CACFP operators and suggested one year to phase-in implementation. A State agency inquired about what impact, if any, this definition would have on how CACFP program operators identify whole grain-rich items.

Regarding the proposal to update the definition of ''entrée item,'' a few advocacy groups opposed the change and encouraged USDA to maintain the whole grain-rich requirement for Smart Snacks in School entrée items to ensure students purchasing food à la carte receive whole grains. Another advocacy group agreed, stating that while they understood the intent of the change, they were concerned about the impact of schools selling enriched grain entrees à la carte. Other respondents, including a State agency and advocacy groups, supported the proposed change. One advocacy group noted that maintaining the current definition would require entrées sold à la carte to be whole grain-rich, which would prevent schools from selling certain enriched grain NSLP and SBP entrées à la carte. This respondent felt the proposed change would simplify the rules, support consistency within the school meal programs, and improve compliance. Another advocacy group agreed, stating this change would be beneficial to the school meal programs.

Final Rule

Maintain 80 Percent Whole Grain-Rich Requirement, Based on Ounce Equivalents

This final rule maintains the current whole grains requirement that at least 80 percent of the weekly grains offered in the school lunch and breakfast programs are whole grain-rich, based on ounce equivalents. This final rule is based on stakeholder feedback, which emphasized the importance of offering meals that meet local and cultural preferences by ensuring nutrition requirements occasionally allow schools to offer enriched grains. For example, this final rule allows schools the flexibility to occasionally serve white rice or non-whole grain-rich tortillas, while still promoting whole grain-rich foods throughout the school week. The requirement that at least 80 percent of the weekly grains offered in reimbursable school lunch and breakfast programs are whole grain-rich is a minimum standard, not a maximum. Schools may choose to increase whole grain-rich offerings beyond this minimum standard. It reflects a practical and feasible way to work toward the *Dietary Guidelines'* recommendation to increase whole grain consumption. USDA encourages schools to incorporate whole grains in their menus as often as possible to support children's health.

This final rule also supports USDA's commitment to advancing nutrition security by improving the nutritional quality of school meals. Research has demonstrated the importance of school meals in improving children's overall diets, including their whole grain consumption. For example, USDA research published in April 2023 found that after 2013, following implementation of the initial whole grain-rich requirements for school meals, school food became the most whole grain-dense food source in children's diets.[65] USDA expects the Healthy Eating Index (HEI) component score for whole grains will remain high under this final standard. For reference, in SY 2014–2015, USDA found the HEI component score for whole grains was 95 percent of the maximum score at school breakfast and at lunch.[66] In SY 2014–2015, all grains offered in the NSLP and SBP were required to be whole grain-rich; however, school food authorities that demonstrated a hardship in meeting this requirement had the option to request an exemption that allowed them to meet a reduced whole grain-rich requirement: at least 50 percent of all grains offered had to be whole grain-rich.

USDA acknowledges that some respondents asserted that the 80 percent weekly whole grain-rich requirement does not align with the *Dietary Guidelines* recommendations. It is important to acknowledge that schools may offer whole grain-rich foods more often than required throughout the school week and may choose to offer individual items that exceed the minimum threshold to qualify as whole grain-rich. For example, 100 percent whole grain bread and brown rice are examples of foods that exceed the 50 percent minimum criteria to be whole grain-rich. When schools exceed the weekly 80 percent requirement or offer 100 percent whole grain food items, students have greater access to the nutritional benefits of whole grains, further aligning school meals with the goals of the *Dietary Guidelines,* while still maintaining some flexibility for schools to offer enriched grains. USDA appreciates respondent feedback and continues to encourage schools to offer more whole grain-rich foods, including 100 percent whole grain products. Maintaining the option for schools to occasionally offer enriched grains responds to stakeholders who advocated

Project Officer: John Endahl. Alexandria, VA: April 2019. Available at: *https://www.fns.usda.gov/school-nutrition-and-meal-cost-study.* (OMB Control Number 0584–0596, expiration date 07/31/2017.)

for USDA to allow some menu planning flexibility to provide a variety of grain offerings, including student, regional, and cultural favorites.

USDA appreciates comments received on the alternative days-per-week model and acknowledges respondents' concerns that this approach could be difficult to implement and monitor, particularly during school weeks that are shortened due to emergency school closures, holidays, or scheduled breaks. USDA also acknowledges that the days-per-week model would require special consideration for schools with four-day schedules, or other alternative schedules. Due to this variability, under a days-per-week model, there is potential that the overall amount of whole grain-rich items offered could decrease, which could reduce children's overall whole grain consumption. Therefore, USDA has determined that maintaining the current 80 percent whole grain-rich requirement is a more practical approach, as it supports children's consumption of whole grains and has already been operationally successful in schools nationwide.

Some respondents mentioned that they implement the current 80 percent whole grain-rich requirement using a days-per-week model. Schools may choose to use this approach under the final rule, provided they continue to offer at least 80 percent of all grains as whole grain-rich, calculated by ounce equivalents. USDA encourages schools to implement a strategy that best meets their operational needs and that meets the required 80 percent whole grain-rich threshold.

USDA recognizes that some schools are concerned about product availability due to supply chain challenges. USDA appreciates the importance of maintaining strong, long-term nutrition standards and incentivizing the food industry to develop products that support schools' efforts to provide children with nutritious school meals. In public comments, industry respondents and schools shared progress made toward expanding whole grain-rich offerings that children enjoy. For example, industry respondents mentioned a wide variety of whole grain-rich products that are currently available in the K–12 market. One industry respondent stated that they offer more than 25 entrée items containing whole grain-rich pasta or breading and suggested that these items are accepted by students. Another industry respondent stated that manufacturers ''have made great strides'' in developing whole grain-rich breakfast options. In addition, USDA Foods in Schools offers whole grain and whole grain-rich products available to schools in the yearly *USDA Foods Available List*.[67] For example, whole grain-rich USDA Foods available to schools for SY 2023–2024 included 100 percent white whole wheat flour, rolled oats, pancakes, brown rice, tortillas, and breaded fish sticks.

USDA technical assistance resources also support efforts to offer whole grain-rich foods in the child nutrition programs. USDA developed the *Whole Grain Resource for the National School Lunch and Breakfast Programs*[68] as well as three separate tip sheets on grains in the *Crediting in the Child Nutrition Programs*[69] series that assist school nutrition professionals with selecting appropriate whole grain-rich products for their programs. For CACFP program operators, USDA developed the *Crediting Handbook for the Child and Adult Care Food Program*[70] that includes technical assistance for identifying and serving whole grain-rich foods served in child and adult care centers. Additionally, USDA develops and shares recipes with whole grain-rich ingredients for child nutrition programs that are published on the *Team Nutrition Recipes*[71] web page.

Definition of Whole Grain-Rich

This final rule codifies the definition of ''whole grain-rich'' in NSLP, SBP, and CACFP regulations. The term ''whole grain-rich'' was originally coined by the National Academy of Medicine (formerly known as the Institute of Medicine) in their 2010 report, *School Meals: Building Blocks for Healthy Children*,[72] and was previously communicated in USDA guidance. This final rule defines the term in regulation for clarity. The intent of this change is to codify the existing definition in NSLP, SBP, and CACFP regulations. The definition in regulation reads as follows: *Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.* This definition does not change the meaning of whole grain-rich, and program operators can continue to identify whole grain-rich products as described in current guidance. For example, CACFP program operators may continue to use training resources, such as *Identifying Whole Grain-Rich Foods for CACFP*,[73] to credit whole grain-rich foods.

USDA appreciates one respondent's suggestion to adjust the definition to require at least 51 percent of a product to be whole grain in order to qualify as whole grain-rich. However, USDA will finalize the definition as proposed. The definition codified in this final rule was originally used in the National Academy of Medicine's 2010 report and has been in place through policy guidance for more than a decade. Program operators and the food industry have worked diligently to comply with this longstanding definition. For example, the food industry has worked to develop products that comply with the existing definition. While USDA acknowledges that while the respondent's suggested change is minor, finalizing the proposed definition will avoid any unintended consequences that could impact products that comply with the longstanding definition of whole grain-rich. Further, the definition of whole grain-rich finalized in this rulemaking derives from the *Dietary Guidelines*, which recommends at least half, or 50 percent, of total grains be whole grains.

Entrée Items Sold à la Carte

As proposed, this final rule also updates the definition of ''entrée item'' in the competitive food standards regulations at 7 CFR 210.11(a) to clarify that both whole grain-rich and enriched grain entrées offered as part of a reimbursable school meal may qualify as an ''entrée item'' when sold à la carte as a ''Smart Snack.'' USDA acknowledges concerns raised in public comments about how this change could result in schools selling enriched grains to students. However, USDA agrees with public comments that noted that this

change would benefit school programs by simplifying and improving consistency in regulations, acknowledging that both whole grain-rich and enriched grain entrées may be offered at school lunch and breakfast under the current requirements. Additionally, USDA clarifies that as proposed, this change is limited to school lunch and breakfast program entrées sold à la carte; this change does not impact the general standards for competitive foods for all other items sold à la carte. The current whole grain-rich requirements for all other items remain in effect under this final rule; this change is limited to school lunch and breakfast program entrées sold à la carte on the day of, and the school day after, they are included on the school lunch or breakfast menu.

For context, 7 CFR 210.11(c)(3) states that any entrée item offered as part of a reimbursable school meal is exempt from all competitive food standards if it is sold à la carte on the day of, or the school day after, the entrée is offered on a school lunch or breakfast menu. This exemption helps school nutrition professionals prevent food waste and manage their programs. It also helps to reduce potential confusion about whether an entrée served to some students as part of a school meal can be purchased à la carte by other students. The current definition of ''entrée item'' in the competitive food service and standards regulations specifies that grain entrées must be whole grain-rich; however, under the current requirements and this final rule, schools may offer up to 20 percent of their total grains as enriched grains at school lunch and breakfast each week. Therefore, under this final rule, USDA is finalizing the proposed definition of ''entrée item'' so it only references ''grain'' and therefore includes entrées offered with both whole grain-rich and enriched grains. This change updates regulations at 7 CFR 210.11(c)(3) to clarify that whole grain-rich and enriched grain entrées offered in a reimbursable lunch or breakfast may qualify for the competitive foods entrée exemption on the day of, or the school day after, they are offered on the school lunch or breakfast menu. For clarity, this change only applies to grain items sold as entrées in reimbursable school lunches or breakfasts and which qualify for an exemption to the competitive food standards. All other grain items sold à la carte must comply with the general standards for competitive foods at 7 CFR 210.11, which require that grain items sold à la carte must meet USDA's whole grain-rich criteria.

Accordingly, this final rule amends 7 CFR 210.2, 210.10(c)(2)(iii), 210.11(a)(3), 220.2, 220.8(c)(2)(iii), and 226.2 to codify the definition of the term ''whole grain-rich,'' to maintain the current 80 percent whole grain-rich requirement for the school lunch and breakfast programs, and to update the definition of ''entrée item'' to account for the whole grain-rich and enriched grain requirements in school meals. Because this rule finalizes the current whole grain-rich requirements and terminology, as proposed, child nutrition program operators will not need to make changes to comply with this provision of this rule.

Section 5: Sodium

Current Requirement

Current regulations at 7 CFR 210.10(f)(3) and 220.8(f) required schools to meet Sodium Target 1 for school lunch and breakfast in SY 2022–2023. For school lunch only, schools were required to meet Sodium Target 1A in SY 2023–2024. These limits are shown in the tables below:

National School Lunch Program Transitional Sodium Limits:

Age/Grade Group	Sodium Target 1: Effective July 1, 2022	Sodium Target 1A: Effective July 1, 2023
Grades K-5	≤ 1,230 mg	≤ 1,110 mg
Grades 6-8	≤ 1,360 mg	≤ 1,225 mg
Grades 9-12	≤ 1,420 mg	≤ 1,280 mg

School Breakfast Program Transitional Sodium Limits:

Age/Grade Group	Sodium Target 1: Effective July 1, 2022
Grades K-5	≤ 540 mg
Grades 6-8	≤ 600 mg
Grades 9-12	≤ 640 mg

Proposed Rule

USDA proposed to gradually reduce sodium in the school lunch and breakfast programs. For school lunch, USDA proposed three reductions, to be phased in as follows and as shown in the chart below:

- SY 2025–2026: Schools would implement a 10 percent reduction from SY 2024–2025 school lunch sodium limits.
- SY 2027–2028: Schools would implement a 10 percent reduction from SY 2026–2027 school lunch sodium limits.
- SY 2029–2030: Schools would implement a 10 percent reduction from SY 2028–2029 school lunch sodium limits.

Proposed National School Lunch Program Sodium Limits:

Age/Grade Group	Sodium Limit: Effective July 1, 2025	Sodium Limit: Effective July 1, 2027	Sodium Limit: Effective July 1, 2029
Grades K-5	≤ 1,000 mg	≤ 900 mg	≤ 810 mg
Grades 6-8	≤ 1,105 mg	≤ 990 mg	≤ 895 mg
Grades 9-12	≤ 1,150 mg	≤ 1,035 mg	≤ 935 mg

For school breakfast, USDA proposed two reductions, to be phased in as follows and as shown in the chart below:

• SY 2025–2026: Schools would implement a 10 percent reduction from SY 2024–2025 school breakfast sodium limits.

• SY 2027–2028: Schools would implement a 10 percent reduction from SY 2026–2027 school breakfast sodium limits.

Proposed School Breakfast Program Sodium Limits:

Age/Grade Group	Sodium Limit: Effective July 1, 2025	Sodium Limit: Effective July 1, 2027
Grades K-5	≤ 485 mg	≤ 435 mg
Grades 6-8	≤ 540 mg	≤ 485 mg
Grades 9-12	≤ 575 mg	≤ 520 mg

Public Comments

USDA received over 95,000 comments on the proposed sodium limits, a majority of which (about 90,000 comments, including about 400 unique comments) were categorized as ''mixed'' or ''other'' comments. Overall, about 4,900 comments supported sodium reduction as proposed, including about 180 unique comments, 565 comments opposed sodium reductions, including almost 500 unique comments, and over 85,000 comments, nearly all of which were form letters, supported sodium reduction beyond what was proposed. Comments were submitted by State agencies, school nutrition professionals, advocacy groups, industry respondents, professional organizations, school districts, dietitians, and individuals, including parents. At a high level, respondents provided the following feedback on sodium:

• Lower sodium school meals are important to children's health, and some respondents recommended more aggressive reductions, such as 15 percent reductions between sodium limits instead of 10 percent reductions.

• Sodium reduction in school meals is dependent on product availability, and product reformulation takes time and resources.

• Students' consumption of higher sodium foods outside of school impacts their acceptance of lower sodium school meals.

• USDA should research the impact of sodium reduction on school meal menu planning, student participation, and student health prior to finalizing further sodium reductions.

Of the ''mixed'' comments, several form letters with over 85,000 combined submissions supported the sodium proposals but urged USDA to finalize additional reductions, beyond the proposed reductions. Two other ''mixed'' form letters with over 3,600 submissions recommended that USDA retain the current sodium limits instead of moving forward with the proposed limits. Other comments in this category offered suggestions, which are described in more detail below.

Importance of Reducing Sodium

Several respondents discussed the importance of sodium reduction for promoting health across the U.S. population. Advocacy groups mentioned that proposed limits represent progress toward improving children's health and that reducing sodium helps prevent chronic disease. Similarly, a form letter campaign stated that sodium reduction would ''benefit all students and further reduce diet-related diseases.'' A parent agreed, emphasizing the importance of preventative measures to protect children's health. An individual asserted that too much sodium increases children's risk of elevated blood pressure and other chronic health conditions. An advocacy group stated that aligning the proposed rule with the *Dietary Guidelines,* including phasing in sodium reductions, ''sets students up for lifelong success.''

Reducing Sodium in School Meals and Proposed Sodium Limits

As noted, approximately 4,900 respondents supported sodium reduction, including about 180 unique comments. A professional organization and an advocacy group supported the proposed sodium limits because they align with FDA's voluntary reduction goals for the broader food supply. An industry respondent appreciated the sodium proposal because it promotes the use of more herbs and spices in place of sodium, which has the ''potential to shift taste preferences.'' A few school districts supported the proposed limits, with one claiming that manufacturers add an ''unacceptable and unnecessary'' amount of sodium to foods to enhance flavor.

Several respondents provided feedback on the sodium limit proposed for SY 2025–2026, or the other proposed limits. A few school districts and school nutrition professionals supported the initial 10 percent sodium reduction for school lunch and breakfast. A school nutrition director described the initial reduction as ''manageable'' for schools and manufacturers. An industry respondent agreed that USDA should finalize the initial reduction for both programs and expressed their commitment to implement FDA's

voluntary sodium reduction goals to reduce sodium in their K–12 products. Additional respondent feedback on the proposed implementation dates and number of sodium reduction limits is described below.

Over 500 comments opposed sodium reductions, the majority of which were unique comments. Some respondents claimed that, due to student taste preferences, it would be difficult to maintain student acceptance of meals under the proposed sodium reductions. A form letter campaign and other respondents asserted school meals are not to blame for students' excessive sodium intake, pointing instead to meals students consume at home and at other food service establishments. This form letter added that students' taste preferences would not adjust to school meals with less sodium without sodium reductions in the foods that students consume outside of school. Other respondents suggested that school nutrition staffing challenges and reliance on pre-packaged foods make sodium reduction challenging. For example, a dietitian suggested that lower sodium meals may be possible with more scratch cooking, but many districts do not have the time or resources for scratch cooking. Other respondents, including school districts and school nutrition professionals, explained that some schools do not have a full kitchen or adequate staffing to prepare meals with less sodium. A few school districts raised concerns that further sodium reductions would lead manufacturers to replace sodium with chemical preservatives or artificial flavorings.

Approximately 90,000 comments, including about 400 unique comments, provided mixed or other feedback on sodium reduction. A majority of the mixed comments fell into two main categories: those that suggested that USDA maintain the existing sodium limits, or more often, those that suggested that the proposed limits do not go far enough. For example, two ''mixed'' form letters with over 3,600 submissions recommended that USDA retain the existing sodium limits and expressed concern about the proposed reductions. A few school nutrition professionals expressed concerns about the palatability of lower sodium foods and manufacturers' ability to reduce sodium in their products. A professional association encouraged USDA to delay sodium reductions until after conducting listening sessions with school nutrition professionals to determine feasible approaches for lowering sodium.

However, other respondents, including several form letters with over 85,000 combined submissions, suggested that additional sodium reduction is needed, asserting that the proposed limits do not reduce sodium enough. A form letter campaign mentioned that the proposed limits represent progress but stated that the final limits in the proposed rule do not fully align with the *Dietary Guidelines.* A professional organization and a school district recommended providing development opportunities to help school nutrition professionals prepare lower sodium meals, offering financial support for menu changes, and educating students and families on the importance of sodium limits.

Product Availability and Industry Input

Numerous respondents shared input on the availability and development of lower sodium products. An industry respondent asserted that the food industry continues to work to reduce sodium through ''innovation, reformulation, and the use of sodium substitutes'' but that these changes take time. Another industry respondent noted that many manufacturers have already reformulated under the existing sodium limits, asserting that some manufacturers have reduced sodium in their products by up to 80 percent. A third industry respondent asserted that it takes ''on average, three years for manufacturers to innovate and reformulate foods and participate in the school bidding process.'' A State agency suggested that industry ''will not be willing or able'' to reduce sodium in their products.

Other respondents raised concerns about competing priorities within the food industry. For example, one industry respondent explained that resources for reformulation are limited and manufacturers cannot reformulate all of their products at the same time. Another respondent emphasized that manufacturers continue to face supply chain and labor challenges and need time to plan for further sodium reductions. An industry respondent affirmed that product reformulations to reduce sodium can take several months and involve ''trade-offs'' such as reduced shelf-life and increased price. Another industry respondent added that during the reformulation process to reduce sodium content in products, manufacturers may need to use added sugars to maintain palatability, suggesting that a ''careful balance'' is needed when targeting these two ingredients.

Some respondents raised concerns about sodium levels and naturally occurring or ''functional'' sodium in foods commonly offered in school meals. For example, a form letter campaign, as well as other respondents, mentioned that naturally occurring sodium is found in foods such as bread, milk, cheese, and celery. Regarding milk, a school nutrition professional shared that one serving of milk contains 110–125 milligrams of sodium. A few State agencies and school nutrition directors asserted that naturally occurring sodium should be excluded from the weekly sodium limits. An industry respondent mentioned that ''salt and sodium provide significant functionality and [food] safety'' in products like cheese. Another industry respondent expressed that the sodium limits proposed for implementation in SY 2027–2028 and beyond would make it hard for schools to offer plant-based alternatives that are currently available in the school meals market, such as vegetable crumbles and bean patties. This respondent stated that many plant-based products ''require added sodium for food quality, palatability, and shelf-life purposes.'' An individual suggested that condiments be excluded from weekly sodium limits because not all students use them.

Other Alternatives Received From Public Comments

Respondents provided other suggestions or recommendations for USDA to consider. A professional organization suggested allowing sodium limits to be ''optional'' and that USDA encourage schools to meet optional limits by providing a financial incentive. Several other respondents, including school nutrition professionals and industry respondents, encouraged USDA to research the impact of sodium reductions on product availability, menu planning, food waste, student acceptance, student health, and student participation in the school meal programs. An industry respondent added that the study should carefully consider the impacts across all age groups and at schools of varying sizes.

Proposed Implementation Dates and Number of Reductions

USDA requested public input on the following questions about sodium limits and the proposed implementation timeframe:

- Does the proposed implementation timeframe provide appropriate lead time for manufacturers and schools to successfully implement the new sodium limits?
- Do commenters agree with USDA's proposed schedule for incremental sodium reductions, including both the

number and level of sodium reductions and the timeline, or suggest an alternative? Why?

About 300 respondents addressed the proposed implementation timeframe, including 66 unique comments. Some respondents suggested that the proposed implementation timeframe was appropriate. One respondent stated that the gradual approach to sodium reduction would allow time for innovation. An advocacy group agreed, asserting that a gradual approach is ''feasible for schools and the food industry.'' A State agency affirmed that the proposed implementation dates would allow time for student engagement, inventory management, and technical assistance. Another State agency agreed the proposed implementation dates provide adequate lead time for food manufacturers and schools; however, this respondent also emphasized that timely publication of the final rule would be key to successful implementation. An advocacy group asserted that the proposed sodium limits and timeline ''allow schools to plan, source, and test meals that are nutritious, palatable to students and abide by new guidelines.''

Other respondents expressed that the timeframe would not provide schools sufficient time to successfully implement the proposed limits. A State agency suggested USDA reconsider the proposed schedule due to concern about student acceptance. An industry respondent suggested that sodium reduction needs to ''occur more gradually over the next 20 years or more.'' This respondent recommended there be five years between each sodium limit to ''allow technology to catch up to the requirements'' and to allow students to become accustomed to lower sodium meals. A school nutrition professional recommended extending the timeframe for sodium reduction over 10 to 15 years. A school district mentioned that the proposed school breakfast limits are achievable but the proposed school lunch limits are ''too aggressive for manufacturers to implement.'' An individual stated that industry would need at least 3 to 5 years to develop food items to meet the proposed sodium limits. Respondents also provided feedback on the number and levels of sodium limits included in the proposed rule. For example, a few school districts and an advocacy group recommended that USDA maintain the current sodium limits, without any further reductions. A State agency supported only the initial 10 percent reduction, asserting that industry and the U.S. food supply should ''catch up'' before sodium reduction beyond the initial reduction occurs in school meals. A few industry respondents agreed, supporting the initial sodium reduction but recommending that USDA pause on implementation of subsequent limits until research is ''completed and understood.'' Another State agency suggested removing the third proposed sodium limit at lunch and adding more time in between each reduction. Several respondents referenced sodium targets from prior USDA rulemakings, including Sodium Target 2, which falls between the first and second proposed sodium reduction limits.[74] For example, some respondents suggested that Sodium Target 2 levels would be achievable for schools, but that sodium reductions beyond Sodium Target 2 would be too challenging for schools. One advocacy group suggested implementing larger, 15 to 20 percent reductions every two years, instead of 10 percent reductions, or adding a fourth or fifth sodium reduction to align with the recommendations from the *Dietary Guidelines.*

Suggestions for Best Practice Product-Based Sodium Limits

In addition to feedback on the sodium limits and implementation dates, USDA requested public input on the following questions about developing best practices for specific products:

- USDA plans to recommend (but not require) sodium limits for certain products, such as condiments and sandwiches, to further support schools' efforts to procure lower sodium products and meet the weekly limits.
- For which products should USDA develop best practice sodium limits?
- What limits would be achievable for schools and industry, while still supporting lower-sodium meals for children?

State agencies, advocacy groups, and other respondents recommended that USDA develop best practice sodium limits for the following products:

- Broths and soups
- Breaded chicken
- Condiments and sauces
- Canned vegetables and pickles
- Deli meat and sandwiches
- Pizza, pasta dishes, and tacos

A State agency supported USDA's plans to develop best practice product sodium limits for certain foods and encouraged USDA to work with the food industry to develop the voluntary limits. This State agency mentioned that best practice product limits would help State agencies provide technical assistance and support to schools working to reduce sodium. Several respondents, including a form letter campaign, opposed best practice product sodium limits for specific foods; others suggested that developing best practice product limits would not be a good use of time and resources. Some respondents were concerned that best practice product sodium limits would be the ''first stop to product-specific limit requirements'' or appeared to be confused about the intent of the request for input. To clarify, USDA's request for input was intended to inform recommended (not required) best practice product sodium limits for technical assistance purposes. USDA does not intend to require product-based sodium limits.

Final Rule

In response to feedback from stakeholders, this final rule provides schools even more time to gradually reduce sodium in school meals and commits to conducting a study on potential associations between sodium reduction and student participation. As recommended by stakeholders, including a professional organization representing school nutritional professionals in the Nation's largest school districts, this final rule reduces sodium in school lunch and breakfast by approximately 15 percent and 10 percent, respectively. The sodium reduction finalized in this rule falls between the first and second sodium reduction included in the proposed rule and reflect the Sodium Target 2 levels established in the 2012 final rule,[75] a level many stakeholders commented was familiar and achievable. This final rule codifies the following sodium limits in the school lunch and breakfast programs:

- For the next three school years, through SY 2026–2027, schools will maintain current sodium limits (Sodium Target 1A for lunch and Sodium Target 1 for breakfast).
- By SY 2027–2028, schools must implement an approximate 10 percent reduction for breakfast and an approximate 15 percent reduction for

[74] Sodium Target 2 was established by the 2012 rule. Under the 2012 rule, Sodium Target 2 would have been implemented in SY 2017–2018; however, legislative and administrative action prevented implementation of sodium targets beyond Sodium Target 1. To view the Sodium Target 2 limits as established by the 2012 rule, see: U.S. Department of Agriculture. *Nutrition Standards in the National School Lunch and School Breakfast Programs.* (77 FR 4088, January 26, 2012). Available at: *https://www.federalregister.gov/d/2012-1010/p-138.*

[75] U.S. Department of Agriculture. *Nutrition Standards in the National School Lunch and School Breakfast Programs.* (77 FR 4088, January 26, 2012). Available at: *https://www.federalregister.gov/documents/2012/01/26/2012-1010/nutrition-standards-in-the-national-school-lunch-and-school-breakfast-programs.*

lunch from current sodium limits, depending on the age/grade group.

The current sodium limit and the sodium reduction finalized in this rulemaking are shown in the charts below. The current sodium limits for school lunch and breakfast will remain in place through June 30, 2027. Through the end of SY 2026–2027, schools will be able to maintain Sodium Target 1A at lunch and Sodium Target 1 at breakfast. By July 1, 2027, schools must implement the sodium reduction shown in the chart below. The sodium reduction for school lunch, which generally contains higher amounts of sodium than breakfast, will be slightly larger compared to the sodium reduction for school breakfast. This approach allows school nutrition professionals to focus their sodium reduction efforts on lunch.

National School Lunch Program Sodium Limits

Age/Grade Group	Current Sodium Limit: In place through June 30, 2027	Sodium Limit: Must be implemented by July 1, 2027
Grades K-5	≤ 1,110 mg	≤ 935 mg
Grades 6-8	≤ 1,225 mg	≤ 1,035 mg
Grades 9-12	≤ 1,280 mg	≤ 1,080 mg

School Breakfast Program Sodium Limits

Age/Grade Group	Current Sodium Limit: In place through June 30, 2027	Sodium Limit: Must be implemented by July 1, 2027
Grades K-5	≤ 540 mg	≤ 485 mg
Grades 6-8	≤ 600 mg	≤ 535 mg
Grades 9-12	≤ 640 mg	≤ 570 mg

These sodium limits apply, on average, to lunches and breakfasts offered during a school week. Sodium limits do not apply per day, per meal, or per menu item. A weekly average allows flexibility for menu planners to occasionally offer higher sodium meals or menu items, provided they are balanced with lower sodium meals and menu items throughout the week.

While schools are not required to reduce sodium in school meals until SY 2027–2028, USDA encourages schools to gradually reduce sodium at lunch and breakfast prior to the required reduction. USDA encourages school nutrition professionals to adjust food preparation methods, gradually incorporate more lower sodium foods throughout the school week and make menu adjustments to support eventual implementation of the sodium reduction codified by this rulemaking.

As detailed in the *Public Comments* section, many respondents suggested that USDA take a more gradual approach to sodium reduction than proposed. For example, a professional organization representing over 112,000 credentialed nutrition and dietetics practitioners acknowledged the importance of reducing children's sodium intake but recommended a smaller overall reduction at lunch compared to the proposed rule and suggested providing additional time for implementation. USDA agrees with comments that noted the importance of gradually moving toward lower sodium meals in a way that is achievable for schools and the food industry and has incorporated this feedback into the sodium limits established by this final rule. USDA also considered current sodium levels in the U.S. food supply and time needed for product reformulation and for student palates to adjust. The *Dietary Guidelines, 2020–2025* also recognize that ''multiple strategies should be implemented to reduce sodium intake'' across the U.S. population.[76] For example, the *Dietary Guidelines* acknowledge that most sodium comes from salt added during commercial food processing and preparation, and note that ''reducing sodium consumption will require a joint effort by individuals, the food and beverage industry, and food service and retail establishments.'' [77] As a reflection of feedback received from schools and industry partners, the sodium reduction for school lunch and breakfast established by this final rule takes a more gradual approach to lowering sodium compared to the proposed series of limits. By finalizing a single sodium reduction for both school lunch and breakfast, this rule gives schools and industry a clear endpoint to work toward in the near-term.

School nutrition professionals emphasized that sodium reductions need to be gradual for schools to be successful and for students to accept lower sodium meals and numerous respondents suggested that at least three years are needed for product reformulation. USDA incorporated this feedback into the sodium reduction implementation date of July 1, 2027—over three years after the publication of this final rule. Additionally, school

[76] See page 46. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at: *https://www.dietaryguidelines.gov/.*

[77] See page 46 and page 102. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at: *https://www.dietaryguidelines.gov/.*

nutrition professionals, advocacy groups, and other respondents encouraged USDA to study the impact of sodium reductions on student participation in the school lunch and breakfast programs. Respondents were concerned, for example, that students would choose to bring meals from home instead of participating in the school lunch and breakfast programs if sodium is further reduced in the programs. Therefore, in response to requests from stakeholders, USDA will examine school meal sodium reduction efforts and monitor student participation data.

As noted above, USDA received numerous comments referencing sodium requirements from prior rulemakings—specifically, the 2012 final rule. USDA considered these comments, as well as implementation of prior rulemakings, to inform the sodium limits in this final rule. A professional organization representing school nutrition professionals in the Nation's largest school districts suggested that Sodium Target 2 from the 2012 rule could be achievable if food manufacturers have an endpoint to work toward. This respondent did not recommend going beyond Sodium Target 2 limits in this rulemaking. Another respondent cited data suggesting that in SY 2014–2015, prior to the pandemic and related supply chain challenges, the average school lunch was ''already well below'' Sodium Target 1 and the average school breakfast was already meeting Sodium Target 2. This is similar to findings discussed in FNS' *Successful Approaches to Reduce Sodium in School Meals* study, conducted prior to the pandemic in 2016 and 2017, which described ''a high rate of success in meeting the Target 1 sodium standards,'' with many school food authorities ''making significant progress toward or reaching [Sodium] Target 2.'' [78] A school district commenting on the proposed rule maintained that they ''would be fine with the [Sodium] Target 2 guidelines,'' adding that Sodium Target 2 was ''achievable and students enjoyed the food we provided prior to COVID.'' Another school district agreed, suggesting that its ''sodium averages are currently at or below [Sodium] Target 2 for both lunch and breakfast.'' However, this school district noted that student feedback and product availability have prevented decreases beyond Sodium Target 2. In response to prior rulemakings stakeholders have also encouraged USDA to allow more time for gradual sodium reduction, including recommending that USDA not go beyond Sodium Target 2. Based on this feedback, USDA expects that gradually phasing in limits that reflect the Sodium Target 2 will be achievable for schools. This rulemaking gives schools and industry a clear endpoint to work toward in the near-term, while providing sufficient time for all stakeholders to prepare for implementation. It also responds to proposed rule comments that suggested that Sodium Target 2 levels are achievable, but that USDA not go beyond the Sodium Target 2 limits in this rulemaking.

USDA also appreciates comments that supported sodium reduction in school meals to benefit children's overall health. While this final rule does not go as far as the proposed rule in reducing sodium, the sodium limits finalized in this rulemaking represent significant progress. The proposed sodium limits, which were informed by FDA's voluntary sodium reduction goals, would have reduced sodium in school lunches by 30 percent and school breakfasts by 20 percent. As detailed in the proposed rule, to develop the proposed limits, USDA used the average short-term FDA targets for foods commonly served in school lunch and breakfast to calculate a baseline menu goal for weekly sodium limits for each meal; this calculation resulted in an initial 10 percent reduction from the transitional sodium limits. The proposed rule built on this initial reduction with two additional reductions at lunch and one additional reduction at breakfast. USDA acknowledges that many respondents supported sodium reduction beyond what was proposed. However, many stakeholders, including school nutrition professionals and industry, expressed concern about meeting sodium levels beyond Sodium Target 2. The sodium limits finalized in this rule respond to stakeholder feedback by considering concerns that respondents raised around student acceptance of meals and the need for product reformulation, which many respondents suggested takes about three years.

This final rule reduces sodium in school lunch and breakfast by approximately 15 percent and 10 percent, respectively, achieving or surpassing the first proposed reduction informed by FDA's voluntary sodium reduction goals while incorporating stakeholder input. The sodium reduction finalized in this rule falls between the first and second sodium reduction included in the proposed rule, and this final rule gives school nutrition professionals additional time to reach the new limits. The sodium limits finalized in this rulemaking also reflect a prior limit that school nutrition professionals and industry are familiar with and have worked toward in the past. As noted above, in SY 2014–2015, many school food authorities were making significant progress toward meeting Sodium Target 2. A single sodium reduction for the school lunch and breakfast programs responds to stakeholders who suggested that one reduction for each program would be more attainable for schools and industry compared to the proposed series of reductions that would have spanned several years. Further, the implementation date for sodium reduction aligns with the weekly dietary limit for added sugars finalized in this rulemaking, allowing school nutrition professionals to implement both changes at the same time, rather than tracking multiple implementation dates.

USDA recognizes that continuing to reduce sodium in school meals is important to improve nutrition security, and USDA will use information from its forthcoming study to inform future sodium reduction efforts. While schools and industry partners have made progress in sodium reduction over the years, USDA acknowledges that there are opportunities for improvement. The *Dietary Guidelines* also acknowledge the importance of reducing sodium intake in achieving a healthy dietary pattern.[79] According to the *Dietary Guidelines,* over 95 percent of children ages 2–18 exceed recommended sodium levels.[80] Consistent with the goals of the *Dietary Guidelines,* this final rule supports efforts to improve children's dietary patterns by gradually reducing sodium limits in school meals. Importantly, this final rule also considers operational feasibility, such as the need for manufacturers to reformulate products to support implementation of reduced sodium limits. As detailed above, the *Dietary Guidelines* acknowledge that most sodium consumed in the United States comes from salt added during

[80] See page 77. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at: *https://www.dietaryguidelines.gov/.*

commercial processing, meaning that ''multiple strategies should be implemented to reduce sodium intake to recommended limits.'' [81] This final rule represents a step toward that gradual, ongoing improvement; USDA agrees with public comments that noted the importance of continual progress toward reducing sodium in American's diets. Additionally, the gradual approach to sodium reduction finalized in this rule aligns with FDA goals and government-wide efforts to reduce sodium intake for the U.S. population. USDA understands that complementary efforts to reduce sodium across the entire U.S. food supply are important to the success of school meal sodium reductions; these efforts are discussed in more detail below, under *Food and Drug Administration Voluntary Sodium Reduction Goals.* USDA is committed to supporting schools' efforts to lower sodium, recognizing that reducing sodium intake is critical for chronic disease prevention and children's health as they grow into adulthood.

Food and Drug Administration Voluntary Sodium Reduction Goals

To develop the proposed rule and this final rule, USDA considered FDA's voluntary sodium reduction goals, which aim to reduce sodium across the U.S. food supply, in the context of school meals. FDA is taking an iterative approach to sodium reduction, which involves establishing sodium targets, monitoring progress, evaluating progress, and engaging stakeholders. FDA recommended voluntary targets, issued in October 2021, be met in 2.5 years and expects to issue revised subsequent targets in the next few years to facilitate a gradual, iterative process to reduce sodium intake. Similar in some respects to FDA's short term sodium reduction targets, this final rule establishes a single limit sodium reduction for both the school lunch and breakfast programs for the near-term. Like FDA's efforts to monitor and evaluate progress, as mentioned above, USDA will examine sodium reduction efforts in school meals assess the potential impacts of these reductions on program operations and participation.

USDA expects that the gradual approach to sodium reduction finalized in this rule will set schools and students up for success, as research [82] indicates gradual sodium reductions are more acceptable to consumers. Aligning school meal sodium limits with FDA's voluntary sodium reduction goals may help support children's acceptance of school lunches and breakfasts with less sodium, as the school meal reductions will occur alongside sodium reductions in the broader U.S. food supply.

Naturally Occurring and ''Functional'' Sodium

In public comments, several respondents raised concerns about naturally occurring sodium in foods such as bread, milk, and celery. As noted above and in the proposed rule, the sodium limits in this rulemaking are informed by FDA's voluntary sodium reduction goals. In developing these goals, FDA ''carefully studied the range of popular foods in today's marketplace to see what reductions are possible'' and considered ''the many functions of sodium in food, including taste, texture, microbial safety and stability.'' [83] This means that FDA's goals are not intended to focus on foods (*e.g.,* milk) that contain only naturally occurring sodium, but rather, to focus on foods where actionable reductions in sodium are feasible. USDA appreciates public comments about naturally occurring sodium in school meals. The sodium limits in this final rule, which are informed by FDA's voluntary sodium reduction goals, account for naturally occurring sodium levels in foods and beverages in the current food supply.

In addition to public comments about naturally occurring sodium, USDA appreciates public comments about ''functional'' sodium. Many respondents requested that USDA account for ''functional'' sodium in this rulemaking. This is similar to feedback included in *Successful Approaches to Reduce Sodium in School Meals,* where manufacturers raised concerns about ''functional'' sodium which plays a role in food shelf life and spoilage.[84] In particular, manufacturers worried that Sodium Target 3 may be so low in sodium that it would affect their ability to produce products such as bakery items, where sodium serves a functional purpose (*e.g.,* salt to strengthen gluten). As noted in the study, while Sodium Target 2 seemed to be ''achievable'' by some manufacturers, Sodium Target 3 was considered ''infeasible'' by nearly all manufacturers, who raised concerns about the impact on food preparation and storage.[85] The *Dietary Reference Intakes for Sodium and Potassium* [86] also acknowledge the functional role sodium plays in the food supply, indicating that ''the major sources of sodium in the diet come from foods in which sodium chloride serves a functional purpose, including baked goods, processed meats, and cheese.'' Similar to examples cited in public comments, the *Dietary Reference Intakes for Sodium and Potassium* point out that sodium plays a role in preserving and fermenting foods, altering the texture of foods, and enhancing flavor. However, based on the evidence available, the Dietary Reference Intakes conclude that continued efforts to reduce sodium intake in the population are warranted.

USDA appreciates the concerns that respondents raised regarding functional sodium. Respondents noted the role sodium plays in food safety, texture, and flavor, and emphasized the importance of considering these factors when determining sodium limits in the school meal programs. USDA considered and accounted for these comments when developing this final rule. Because the sodium limits finalized in this rulemaking are higher than those included in the proposed rule, USDA has concluded that the sodium limits in this final rule adequately account for ''functional'' sodium content in foods offered in school meals while still supporting efforts to reduce sodium intake among children. Further, the sodium limits in this rule do not approach Sodium Target 3, which manufacturers expressed

Dietary Reference Intakes for Sodium and Potassium. Washington (DC): National Academies Press (US); 2019 Mar 5. 11, Sodium Dietary Reference Intakes: Risk Characterization and Special Considerations for Public Health. Available at: *https://www.ncbi.nlm.nih.gov/books/NBK545448/#sec_ch11_2.*

particular concern within the study *Successful Approaches to Reduce Sodium in School Meals,* as noted above. Finally, as noted, these sodium limits are informed by FDA's voluntary sodium reduction goals which account for functional sodium levels in foods and beverages in the current food supply. With these higher sodium limits, school nutrition professionals will have room to include foods with naturally occurring or ''functional'' sodium on their menus, including foods that are popular among children.

In summary, the overall weekly sodium limits for school meals finalized in this rule take into account levels of sodium needed to accommodate continued service of healthful foods with naturally occurring and functional sodium. Therefore, foods and beverages containing naturally occurring and functional sodium are not exempt from these sodium limits; rather, the sodium limits in this final rule account for such forms of sodium. USDA estimates that under this rule, schools will continue to be able to serve popular foods and beverages containing naturally occurring and functional sodium with similar frequency as they do currently. While this rulemaking gradually reduces the overall weekly sodium levels in school meals, the limits finalized in this rule allow for foods and beverages with naturally occurring and functional sodium. USDA anticipates that manufacturers will continue to explore all avenues of sodium reduction, including product reformulation and new technologies to reduce sodium, and encourages these efforts. As detailed below, USDA also expects that menu planners will play an important role in gradually reducing sodium levels in school meals over time. USDA anticipates that this gradual reduction in weekly average sodium limits will continue to allow menu planners flexibility to offer meals and menu items that children enjoy.

Ongoing Support for Sodium Reduction Implementation

Successfully reducing sodium in school meals will require the commitment and dedication of all school meals stakeholders. For its part, USDA remains committed to ensuring that menu planners receive the support and technical assistance needed to offer students meals that comply with the sodium limits in this rulemaking. USDA will evaluate progress toward reducing sodium in school meals, as well as in the broader food supply, on an ongoing basis. School nutrition professionals advocated for more gradual sodium reductions to allow menu planners time to modify menus and to give children's palates time to adapt; this rule provides that additional time. Additionally, USDA is committed to providing ongoing support to schools through efforts like the HMI Initiative, Team Nutrition grants, Farm to School grants, and tailored technical assistance. USDA welcomes stakeholder input on successful strategies to reduce sodium in school meals, and the additional assistance and guidance needed from USDA to support these efforts. Further, USDA expects that planned research on sodium reduction in school meals will help to inform future sodium reductions.

Best Practice Product-Based Sodium Limits

USDA appreciates comments that provided suggestions for best practice product-based sodium limits. Consistent with the proposed rule, this final rule does not require product-based sodium limits for specific foods and beverages; however, USDA will issue guidance on best practice product limits for high contributors of sodium in school meals and will incorporate FDA's voluntary sodium reduction goals. This guidance is intended to help schools procure lower sodium products for their weekly lunch and breakfast menus. Best practice limits provided in future guidance will be recommendations, not required limits.

Accordingly, this final rule establishes sodium limits found at 7 CFR 210.10(c) and (f)(4) and 7 CFR 220.8(c) and (f)(4) of the regulations. As noted, schools will maintain existing sodium limits (Sodium Target 1A at lunch and Sodium Target 1 at breakfast) through June 30, 2027. Schools will not need to make any changes to comply with the sodium provision of this final rule until July 1, 2027, when the sodium reduction included in this final rule must be implemented.

Section 6: Meats/Meat Alternates at Breakfast

Current Requirement

Current regulations at 7 CFR 220.8(c)(2) require three food components for a complete school breakfast: fruits, grains, and fluid milk. There is no meats/meat alternates component required at breakfast; therefore, under the current SBP meal pattern, a meat/meat alternate offered at breakfast credits toward the weekly grains requirement. Under current regulations, schools may substitute a 1.0 ounce equivalent of meat/meat alternate for a 1.0 ounce equivalent of grains, after meeting the daily minimum grains requirement.[87] Meats/meat alternates[88] may also be offered as ''extra'' food items at breakfast. ''Extra'' food items are not part of the reimbursable school meal, but do count toward the weekly dietary specifications for calories, saturated fat, sodium, and *trans* fat.

Proposed Rule

In the 2020 proposed rule, USDA set forth a combined meats/meat alternates and grains component. Under the proposal, schools would have the option to serve meats/meat alternates, grains, or a combination of both, depending on school and student preferences. The 2020 proposed rule also proposed to remove the requirement for schools to offer 1.0 ounce equivalent of grains each day at breakfast. Instead, the daily and weekly ounce equivalency requirements for the combined component could be met with meats/meat alternates, grains, or a combination of both.

Public Comments on 2020 Proposed Rule

USDA received 556 comments on the 2020 proposed rule about the combined meats/meat alternates and grains component at breakfast, a majority of which were categorized as ''mixed'' or ''other'' comments. Overall, 95 comments supported the proposal, including 86 unique comments, and 41 comments were opposed, including 38 unique comments.

Proponents, including State agencies, industry respondents, advocacy groups, and school districts, asserted that a combined meats/meat alternates and grains component would increase the variety of appealing breakfast options available to schools. Proponents maintained that this change would deliver protein-rich breakfasts that students enjoy, which they argued could encourage student participation and reduce food waste. One school district noted that parents and guardians often request school breakfasts with more protein and less added sugars. Other respondents agreed, noting that this change could decrease the added sugars in school breakfasts.

Proponents maintained that the proposal would simplify regulations and menu planning. Industry and advocacy groups that supported this change asserted that the current minimum grains requirement is burdensome and prevents some schools from offering meats/meat alternates at

[87] Under current regulations, the minimum daily grains requirement for each age/grade group at breakfast is 1.0 ounce equivalent.

[88] ''Meat alternates'' include cheese, eggs, yogurt, nuts and seeds, tofu and soy products, and beans and peas.

breakfast. One school district suggested this change would allow for more creative menu planning. Others, including State agencies and advocacy groups, provided examples of foods that schools could offer more easily under this change, such as yogurt parfaits, turkey sausage, and vegetable omelets. One respondent mentioned that protein-rich breakfast sandwiches could be offered as grab-and-go items for students. Another respondent noted that protein foods are ''a great way to start the day'' and an option that students enjoy.

Some respondents, including advocacy groups and individuals, were concerned that this change could lead to an increase in schools offering meat products that are high in saturated fat and sodium. Opponents suggested that consuming too much meat has adverse health effects, and some advised USDA that ''processed meats should be very limited or not consumed at all'' in school meals. Other respondents, including industry respondents, cautioned against removing the minimum grains requirement, citing the health benefits of grains and noting that grains are an important source of fiber. However, proponents emphasized that a wide variety of nutritious meats/meat alternates may be offered in school breakfasts. Further, one advocacy group emphasized that the current weekly saturated fat and sodium restrictions would limit the amount of processed meat items. A school district agreed, suggesting that the dietary specifications for calories, sodium, and saturated fat already constrain the amount of animal fats that can be offered each school week.

Some respondents offered modifications to the proposal. For example, an individual argued that each school breakfast should require grains *and* meats/meat alternates, while a State agency suggested USDA allow schools to serve meats/meat alternates without a grain three times per week, so that two times per week, schools must meet a minimum grains requirement. An industry respondent suggested a minimum weekly (rather than daily) grains requirement. Advocacy groups and individuals suggested placing specific calorie and sodium limits on meats served at breakfast; presumably, in addition to the weekly calorie and sodium limits already in place for school breakfasts. While several respondents noted that this proposal would help address concerns about added sugars in school breakfast, some respondents, including a State agency, recommended that USDA also place limits on specific grain items that are high in added sugars.

Final Rule

This final rule codifies the combined grains and meats/meat alternates meal component at breakfast and removes the requirement for schools to offer 1.0 ounce equivalent of grains each day at breakfast. Schools may offer grains, meats/meat alternates, or a combination of both to meet this combined component requirement, based on ounce equivalents. The minimum daily requirement (1.0 ounce equivalent) and minimum weekly requirements (7.0–9.0 ounce equivalents, depending on the age/grade group) for the combined component remains the same; however, this rule allows schools to meet the daily and weekly requirements by offering grains, meats/meat alternates, or a combination of both to meet minimum ounce equivalents.

Schools are not required to make any changes to menus under this provision. However, this change gives menu planners more flexibility and options to plan breakfast menus that meet student preferences and are compatible with meal service models, cost considerations, and other local factors. Schools have discretion to decide what combination of grains and/or meats/meat alternates to offer at breakfast to meet the minimum ounce equivalents. The *Dietary Guidelines* recommend including both grains and protein foods in healthy eating patterns.[89] As such, USDA encourages schools to offer a mix of grains and meats/meat alternates at breakfast throughout the school week.

USDA appreciates comments submitted in response to the 2020 proposed rule that highlighted the importance of reducing added sugars in school meals. This feedback, and later feedback gathered through USDA's stakeholder engagement campaign in summer 2022, informed USDA's proposals to limit added sugars in school meals. USDA agrees with respondents that allowing schools more flexibility to offer meats/meat alternates at breakfast will support implementation of the new added sugars limits outlined in *Section 2: Added Sugars.*

As discussed in *Section 4: Whole Grains,* at least 80 percent of the weekly grains offered at school breakfast must be whole grain-rich, and the remaining grain items offered may be whole grain-rich or enriched. Schools that choose to offer a mix of grains and meats/meat alternates at breakfast will calculate the required whole grain-rich offerings based on the total amount of grains offered at breakfast during the week, by ounce equivalents.

According to USDA's *School Nutrition and Meal Cost Study,*[90] among children who participate in the SBP as opposed to skipping breakfast or eating at home, appealing food was among the top three reasons for student participation. Relative to school lunch, current school breakfast participation is low. As suggested by respondents, providing school nutrition professionals with more flexibility to offer a variety of breakfast foods that students enjoy could encourage student participation. For example, this rule allows schools to offer scrambled eggs, a fruit cup, and low-fat milk as a complete breakfast.

USDA understands concerns raised by some respondents regarding meat products that are high in saturated fat and sodium. The dietary specifications for calories, saturated fat, and sodium remain in place under this rule, and as detailed in *Section 5: Sodium,* this rule implements an additional sodium reduction in school meals. USDA agrees with respondents that suggested that the dietary specifications encourage schools to choose options that are low in saturated fat and sodium. According to USDA's *School Nutrition and Meal Cost Study,* the most common categories of meats/meat alternates offered in school breakfasts in SY 2014–2015 were cheese and yogurt.[91] USDA encourages schools

[89] The *Dietary Guidelines* include recommendations for ''food groups—vegetables, fruits, grains, dairy, and protein foods—eaten at an appropriate calorie level and in forms with limited amounts of added sugars, saturated fat, and sodium''. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *Dietary Guidelines for Americans, 2020–2025.* 9th Edition. December 2020. Available at: *https://www.dietaryguidelines.gov/.*

[90] See Table 5.2. Mean Percentage of Observed Trays including Specific Foods and Mean Percentage of Food Wasted in SBP Breakfasts. U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *School Nutrition and Meal Cost Study, Final Report Volume 4: Student Participation, Satisfaction, Plate Waste, and Dietary Intakes* by Mary Kay Fox, Elizabeth Gearan, Charlotte Cabili, Dallas Dotter, Katherine Niland, Liana Washburn, Nora Paxton, Lauren Olsho, Lindsay LeClair, and Vinh Tran. Project Officer: John Endahl. Alexandria, VA: April 2019. Available at: *https://www.fns.usda.gov/school-nutrition-and-meal-cost-study.*

[91] The most common categories of meat/meat alternates offered at breakfast in SY 2014–2015 were cheese (offered on 5.4 percent of observed trays) and yogurt (offered on 5.0 percent of observed trays). U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *School Nutrition and Meal Cost Study, Final Report Volume 2: Nutritional Characteristics of School Meals* by Elizabeth Gearan, Mary Kay Fox, Katherine Niland, Dallas Dotter, Liana Washburn, Patricia Connor, Lauren Olsho, and Tara Wommak. Project Officer: John Endahl. Alexandria, VA: April 2019. Available at: *https://www.fns.usda.gov/school-nutrition-and-meal-cost-study.*

opting to serve meats/meat alternates at breakfast to offer a wide variety of nutrient-dense options, including vegetarian options such as yogurt low in added sugars;[92] breakfast bean burritos; and eggs. USDA acknowledges respondent requests to limit ''processed meats'' in the SBP. However, the dietary specifications for calories, saturated fat, and sodium already limit the amount of meats with added salt that are offered in school breakfasts. Schools must plan all meals to meet the dietary specifications, and these limits provide schools with flexibility to choose foods that meet student preferences while staying within a framework that results in nutritious meals. USDA will not restrict the types of meats permitted at breakfast, beyond existing food crediting guidelines.

This provision does not change the breakfast meal pattern requirements for preschool students. Under 7 CFR 220.8(o), schools serving breakfasts to children ages 1 through 4 may substitute meats/meat alternates for the entire grains component up to three times per week. However, schools are reminded of the existing co-mingling flexibilities, permitted in USDA guidance.[93] Schools that serve meals to preschoolers and K–5 students in the same meal service area at the same time may choose to serve the K–5 breakfast meal pattern under 7 CFR 220.8 to both groups of children.

Accordingly, this final rule amends 7 CFR 220.8(c) introductory text and (c)(2), to codify the combined grains and meats/meat alternates component at breakfast and to remove the requirement for schools to offer 1.0 ounce equivalent of grains each day at breakfast. This change provides schools with more menu planning flexibility at breakfast. Schools are not required to change menus or operations as a result of this provision.

Section 7: Substituting Vegetables for Grains in Tribal Communities

Current Requirement

Current regulations at 7 CFR 210.10(c)(3), 220.8(c)(3), 225.16(f)(3), and 226.20(f) allow program operators in American Samoa, Puerto Rico, and the U.S. Virgin Islands to serve vegetables such as yams, plantains, or sweet potatoes to meet the grains or breads component.[94] Additionally, this option is currently available to SFSP and CACFP sponsors, institutions, and facilities in Guam. The option to substitute vegetables for grains or breads is intended to accommodate cultural food preferences and to address product availability and cost concerns in these outlying areas.

As detailed in *Section 1: Background,* USDA sought stakeholder input when developing the proposed rule. As part of this effort, USDA conducted listening sessions with Tribal leaders, nutritionists, and schools in summer 2022. During these listening sessions, Tribal nutritionists and schools expressed concern that the grains requirements are a poor nutritional match for Indigenous children because grains, such as wheat and flour, were not traditionally a part of their ancestors' diets. Tribal nutritionists and schools requested Indigenous starchy vegetables be allowed as a grain substitute, similar to the current option available for child nutrition program operators in American Samoa, Puerto Rico, and the U.S. Virgin Islands, and for SFSP and CACFP sponsors, institutions, and facilities in Guam.

Proposed Rule

In response to stakeholder input, USDA proposed to add tribally operated schools, schools operated by the Bureau of Indian Education, and schools serving primarily American Indian or Alaska Native children to the list of schools at 7 CFR 210.10(c)(3) and 220.8(c)(3) that may serve vegetables to meet the grains requirements. For SFSP and CACFP, USDA proposed to revise 7 CFR 225.16(f)(3) and 226.20(f) to allow sponsors, institutions, and facilities, as applicable, that serve primarily American Indian or Alaska Native children to substitute vegetables for breads or grains. USDA also proposed to revise the current regulatory text for NSLP, SBP, SFSP, and CACFP to clarify that this provision allows the substitution of traditional Indigenous vegetables, such as prairie turnips. In the proposed SFSP regulatory text, USDA also removed outdated references to the Trust Territory of the Pacific Islands and the Northern Mariana Islands. Finally, USDA proposed to allow all schools, sponsors, institutions, and facilities in Guam and Hawaii to substitute vegetables for grains or breads, to reflect cultural food preferences.

Public Comments

USDA received 264 comments on this proposal, including 143 unique comments. Of these, 104 supported the proposal, including 65 unique comments, none were opposed, and 154 were mixed, including 78 unique comments. School nutrition professionals, advocacy groups, professional organizations, State agencies, and individuals submitted comments on the proposal.

Several respondents, including a national organization representing tens of thousands of school nutrition professionals, an advocacy group, State agencies, individuals, and a form letter campaign, supported the proposal. One individual emphasized the importance of recognizing children's personal, cultural, and traditional dietary preferences. Another individual stated that offering diverse and inclusive meal options promotes belonging and contributes to children's overall wellbeing. This respondent further emphasized the importance of ''taking steps toward embracing our differences, celebrating our diversity, and providing meals that mirror the rich tapestry of cultures represented within our school communities.'' One advocacy group supported the proposal, suggesting that it would ''provide equitable access and outcomes to American Indian and Alaska Native communities and children.'' A State agency described the proposal as a ''nutritional benefit.'' A professional organization affirmed that serving culturally responsive meals and snacks is an equitable practice that may improve meal consumption and strengthen relationships between providers, families, and participants.

Some respondents provided feedback about USDA's proposal to allow program operators in Guam and Hawaii to substitute vegetables for grains or breads. An advocacy group applauded USDA for expanding this option to program operators in Guam and Hawaii. One professional organization encouraged USDA to further accommodate the cultural food preferences of Native Hawaiians. A few other respondents expressed confusion about how the proposal for Guam and Hawaii would interact with the proposal for child nutrition program operators on the mainland that serve primarily American Indian and Alaska Native children. To clarify, USDA proposed to expand this option to all schools, sponsors, institutions, and facilities in Guam and Hawaii. Under the proposed rule, the option to substitute vegetables for grains or breads would be available to any child nutrition program operator

[92] Please see Section 2: Added Sugars, for information on the new added sugars limit for yogurt, which will take effect in SY 2025–2026.

[93] U.S. Department of Agriculture. *Flexibility for Co-Mingled Preschool Meals: Questions and Answers,* June 30, 2017. Available at: *https://www.fns.usda.gov/school-meals/flexibility-co-mingled-preschool-meals-questions-and-answers.*

[94] Current SFSP regulations at 7 CFR 225.15(f)(3) also allow sponsors in Trust Territory of the Pacific Islands, and the Northern Mariana Islands to substitute vegetables for breads. However, these references are outdated.

located in Guam or Hawaii. In addition, under the proposed rule, program operators on the mainland that serve primarily American Indian or Alaska Native children would be eligible to use this option.

Several respondents suggested expanding the proposal, in most cases, advocating for all schools, sponsors, institutions, and facilities to be allowed to substitute vegetables for grains or breads, regardless of their location or participant demographics. One advocacy group suggested expanding the menu planning option to participants from other demographic groups who consume starchy vegetables in place of grains. Going further, a dietitian suggested that expanding the option to all schools, sponsors, institutions, and facilities would eliminate confusion in menu planning. An advocacy group agreed, asserting that vegetable consumption is lacking among all children and that allowing this option for all sites would help reduce sugar, especially at breakfast. A professional organization supported expanding this provision to all schools to avoid excluding any students. An advocacy group agreed, noting that the vast majority of American Indian and Alaska Native children attend public schools that are not tribally operated or majority American Indian or Alaska Native. This respondent concluded that, as proposed, the option may not have its intended impact. A few other respondents raised concerns about the limited focus of the provision, but instead of expanding it, recommended not finalizing it. For example, a State agency acknowledged the importance of offering culturally appropriate foods in the child nutrition programs but raised equity concerns given the narrow focus of the provision; this State agency cautioned against finalizing the proposal. A school nutrition professional claimed that, as proposed, this menu planning option would create division and confusion regarding who can implement the provision. A few respondents offered other suggestions. A form letter suggested that USDA require vegetables offered in place of grains to be prepared in ways that align with traditional preparations, such as baking or boiling. A professional organization suggested that USDA limit substitutions under this provision to starchy vegetables only. This respondent also advocated for more prescriptive language on this provision's eligibility criteria to preserve program integrity and ensure the intended populations are served.

Some respondents requested clarification or additional support. A few respondents, including a State agency and professional organization, requested guidance to support implementation of this provision, including guidance on determining whether a program operator qualifies to use this option. A professional organization expressed concerns about possible administrative burden, specifically for enrolled CACFP sites, further advocating for this provision to be expanded to all program operators. This respondent argued that expanding this option to all operators would prevent administrative burden and promote inclusivity. A form letter campaign did not cite any specific concerns, but asked USDA to ensure that the administrative burden associated with enacting the change will be minimal. A State agency asked for clarification on whether the menu planning option applies to the infant meal pattern. This respondent did not support allowing this option for infants, explaining that allowing vegetables to substitute for other food sources in the infant meal pattern, such as infant cereal, may reduce critical sources of iron in an infant's diet. Another State agency asserted that USDA would need to provide clear guidance about the serving sizes of vegetables that would be required to meet the grains requirements.

In the proposed rule, USDA explained that the list of vegetables included in the proposed regulatory text was not exhaustive. However, USDA encouraged public input on any other vegetables that should be listed as examples in the regulatory text, and some respondents shared feedback. Several advocacy groups suggested that squash, cassava (yuca), and taro would be suitable substitutions for grains and recommended including them as examples. A State agency suggested that Native Hawaiian traditional vegetables such as taro, poi, breadfruit, Okinawan sweet potato, and Molokai sweet potato be included in the regulatory text as examples of vegetables that may be substituted for grains. One professional organization asked USDA to clarify whether all vegetables can be substituted for grains. Another proponent recommended that instead of allowing any vegetable to substitute for grains, as proposed, that USDA set standards about which vegetable subgroups can be substituted for grains to ensure that the vegetables are nutritionally comparable to grains.

In addition to general feedback on the proposal, USDA requested public input on additional menu planning options that would improve the school meal programs for American Indian and Alaska Native children by asking the following question:

- Are there other specific areas of the school meal pattern that present challenges to serving culturally appropriate meals for American Indian and Alaska Native children, specifically regarding any regulatory requirements in 7 CFR 210.10 and 220.8?

A few respondents provided input on specific areas of the school meal patterns that present challenges to serving culturally appropriate meals. One State agency identified that barriers to serving hunted game meats make it challenging to serve culturally appropriate meals to American Indian and Alaska Native children. This respondent also mentioned that milk is not a part of the traditional eating pattern for American Indian and Alaska Native communities. Similarly, an individual stated the milk requirement is challenging to implement due to the high prevalence of lactose intolerance among American Indian and Alaska Native populations. Other respondents mentioned challenges with food crediting. A State agency encouraged USDA to "simplify the crediting process for scratch-cooked meals" to incentivize schools to scratch cook culturally relevant meals. Similarly, an advocacy group suggested USDA consider a "simplified" crediting model that would facilitate scratch cooking and procurement of minimally processed products. Lastly, a form letter campaign voiced concerns about the potential for additional, case-by-case menu planning options due to the administrative burden of such a process. Instead, this form letter recommended that USDA address any barriers to serving culturally appropriate meals through comprehensive changes to the meal patterns.

Final Rule

The final rule amends 7 CFR 210.10(c)(3) and 220.8(c)(3) to allow school food authorities and schools that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children to serve vegetables to meet the grains requirement in NSLP and SBP. For SFSP and CACFP, USDA finalizes the proposal to revise 7 CFR 225.16(f)(3) and 226.20(f) to allow sponsors, institutions, and facilities, as applicable, that serve primarily American Indian or Alaska Native participants to substitute vegetables for grains or breads. Additionally, this final rule allows all schools, sponsors, institutions, and facilities in Guam and Hawaii to serve vegetables to meet the grains or breads

requirement, and in the SFSP regulatory text, removes outdated references to the Trust Territory of the Pacific Islands and the Northern Mariana Islands. Lastly, for all child nutrition programs applicable to this provision, this final rule clarifies that any creditable vegetable can be substituted for grains or breads.

While the proposed rule only listed ''schools'' in the NSLP and SBP regulatory text, this final rule clarifies that this option is available to ''school food authorities and schools'' that qualify. This change responds to comments that encouraged USDA to ensure that the administrative burden associated with enacting the change is minimal. By allowing implementation at the school food authority level, this final rule simplifies use of this option for school food authorities that qualify and reduces the documentation burden. Instead of maintaining documentation for all qualifying schools, school food authorities that qualify would maintain documentation at the school food authority level.

Program operators in Guam and Hawaii are not required to submit a request for approval to use this menu planning option; it is automatically available to any school, sponsor, institution, or facility in Guam or Hawaii that chooses to use it. Therefore, upon implementation of this final rule, all schools, sponsors, institutions, and facilities located in American Samoa, Guam, Hawaii, Puerto Rico, or the U.S. Virgin Islands are eligible for this option; it is not necessary for program operators in these specific areas to maintain documentation to demonstrate eligibility for this option. However, school food authorities or schools that are tribally operated, operated by the Bureau of Indian Education, or program operators that serve primarily American Indian or Alaska Native children must maintain documentation to demonstrate that they qualify if they choose to use this option.

For the NSLP and SBP, the school food authority is responsible for maintaining documentation to demonstrate that the school food authority or its schools qualify to use this option. If the school food authority is tribally operated, is operated by the Bureau of Indian Education, or serves primarily American Indian or Alaska Native students, then the school food authority would maintain school food authority-level documentation of eligibility. If individual schools within the school food authority qualify for this option, then the school food authority would maintain documentation for its qualifying schools, as applicable. As described in the proposed rule, school food authorities or schools ''serving primarily American Indian or Alaska Native children'' include school food authorities or schools where American Indian or Alaska Native children represent the largest demographic group of enrolled children. USDA will issue guidance on acceptable data that can be used to report student demographics, which may include participant self-reporting, school data, or census data. School food authorities must maintain this documentation for program reviews. For example:

- For school food authorities that are tribally operated or operated by the Bureau of Indian Education, an example of documentation is a certifying statement indicating the school food authority is tribally operated or operated by the Bureau of Indian Education.
- For schools serving primarily American Indian or Alaska Native children, an example of documentation may be aggregate data of student demographics, such as participant self-reporting, school data, or census data.

For the SFSP and CACFP, a sponsor, institution, or facility that chooses to use this menu planning option must maintain documentation demonstrating that the site serves primarily American Indian or Alaska Native participants. USDA will issue guidance on acceptable data that can be used to report participant demographics, which may include participant self-reporting, school data, or census data. For example:

- For enrolled sites, the sponsor, institution, or facility determines, based on participant self-reporting, that American Indian or Alaska Native participants represent the largest demographic group of enrolled participants.
- For enrolled sites, the sponsor, institution, or facility provides a certifying statement indicating that the site primarily serves American Indian or Alaska Native participants.
- For non-enrolled sites, the sponsor, institution, or facility determines that American Indian or Alaska Native participants represent the largest demographic group of participants served by the site, based on school or census data.

This final rule allows any vegetable to substitute for the grains or bread component. However, USDA emphasizes the importance of traditional and culturally relevant vegetables, and this final rule provides examples of traditional and cultural vegetables, such as prairie turnips and breadfruit, in the revised regulatory text at 7 CFR 210.10(c)(3), 220.8(c)(3), 225.16(f)(3), and 226.20(f). Respondents provided examples such as squash, cassava (yuca), and taro, all of which would be traditional and culturally relevant vegetables that may substitute for grains or breads under the final rule.

Some respondents asked USDA to establish vegetable subgroup requirements for the provision, or to limit this provision to vegetables prepared in specific ways. USDA is not requiring specific vegetable subgroups or types of preparation in this final rule to minimize burden for program operators that choose to use this flexibility. This approach is imperative for program operators of the SFSP and CACFP because SFSP and CACFP meal patterns do not require vegetable subgroups and a vegetable subgroup requirement for this provision could create barriers to implementation in these programs. Allowing program operators the flexibility to offer vegetables from any subgroup in place of grains or breads allows for a variety of vegetables to be offered, many of which are underconsumed among all populations.[95]

A few respondents requested clarification on specific questions. A State agency requested clarification on whether this option would be applicable to the infant meal pattern. This rule does extend the option to the infant meal pattern. Extending the option to substitute vegetables for grains in the infant meal pattern allows infants to also consume foods, and develop taste preferences, aligned with an Indigenous diet. USDA recognizes the concern that allowing this flexibility for infants could result in a reduced consumption of critical nutrients, such as iron. However, the infant meal pattern allows a variety of foods to meet the required food components for meals and snacks, and only currently requires a grain item at snack when a child is developmentally ready to accept those foods. Allowing sponsors, institutions, and facilities to serve culturally responsive meals and snacks can improve meal consumption and strengthen relationships between providers, families, and participants.

[95] According to the *Dietary Guidelines,* ''Almost 90 percent of the U.S. population does not meet the recommendation for vegetables. In addition, with few exceptions, the U.S. population does not meet intake recommendations for any of the vegetable subgroups.'' Further, according to the *Dietary Guidelines,* ''For most individuals, following a healthy eating pattern will require an increase in total vegetable intake and from all vegetable subgroups, shifting to nutrient-dense forms, and an increase in the variety of different vegetables consumed over time.'' See page 31. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans.* 9th Edition. December 2020. Available at: *https://www.dietaryguidelines.gov/.*

USDA appreciates public feedback on the menu planning options for American Indian and Alaska Native children. Overall, respondents expressed appreciation for USDA's efforts to improve the child nutrition programs for American Indian or Alaska Native children. In addition to these supportive comments, several respondents recommended that USDA expand the proposed menu planning option to more, or even all, child nutrition program operators. USDA acknowledges that additional schools, sponsors, institutions, and facilities may benefit from this provision and appreciates this feedback. However, as proposed, this provision was intended for certain schools, sponsors, institutions, and facilities. Other program operators that were not covered by the proposal, as well as State agencies responsible for program monitoring, did not have the opportunity to provide public comment on a potential broader change. With the exception of clarifying that this option may be applied at the school food authority level, this final rule does not expand this option to additional program operators, beyond those covered by the proposed rule.

This final rule is intended to support American Indian or Alaska Native participants in child nutrition programs and to uphold USDA's commitment to advancing equity, as detailed in the Department's Equity Action Plan.[96] In this plan, USDA outlines its commitment to advancing equity, including a focus on increasing Tribal trust. The Equity Action Plan highlights the importance of considering policy design and implementation to ensure Tribal communities have equitable access to Federal programs and services, including incorporating Indigenous values and perspectives in program design and delivery. While this final rule does not have as broad of a reach as some respondents requested, USDA remains committed to promoting equitable access to the child nutrition programs. USDA will continue to work with its partners to make the child nutrition programs more inclusive for all child and adult participants.

Accordingly, this final rule amends 7 CFR 210.10(c)(3) and 220.8(c)(3), to allow school food authorities and schools that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children to the list of schools[97] that may serve vegetables to meet the grains requirement. For SFSP and CACFP, this final rule amends 7 CFR 225.16(f)(3) and 226.20(f) to allow sponsors, institutions, and facilities, as applicable, that serve primarily American Indian or Alaska Native participants to substitute vegetables for grains or breads. This final rule also amends 7 CFR 210.10(c)(3), 220.8(c)(3), 225.16(f)(3), and 226.20(f) to allow all schools, sponsors, institutions, and facilities in Guam and Hawaii to serve vegetables to meet the grains or breads requirement. These changes provide child nutrition program operators an optional menu planning flexibility. Program operators are not required to change menus or operations as a result of this provision.

Section 8: Traditional Indigenous Foods

Current Requirement

Information about crediting foods in the school meal programs is primarily shared with program operators through USDA guidance, not through regulation. While traditional Indigenous foods are not explicitly mentioned in the school lunch and breakfast program regulations, they may be served in reimbursable school meals in accordance with USDA guidance.

USDA does not define the term ''traditional foods;'' however, the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)) defines traditional food as ''food that has traditionally been prepared and consumed by an [American] Indian tribe'' and includes the following example foods in its definition: wild game meat, fish, seafood, marine mammals, plants, and berries. USDA acknowledges that there are 574 federally recognized Tribes in the U.S. and appreciates the importance of recognizing the diversity of American Indian and Alaska Native cultures and traditions, including food traditions.

In 2015, USDA issued policy guidance[98] about serving traditional Indigenous foods in the child nutrition programs. This guidance explained that if a food is served as part of a reimbursable meal, but not listed in the *Food Buying Guide for Child Nutrition Programs (Food Buying Guide),* the yield information of a similar food or in-house yield[99] may be used to determine a food's contribution toward meal pattern requirements. The 2015 guidance also explained how to credit certain traditional foods, such as wild rice, blue cornmeal, and ground buffalo. In 2023, this guidance, titled *Crediting Traditional Indigenous Foods in Child Nutrition Programs,* was revised to further clarify how to credit traditional Indigenous foods and to expand the list of traditional Indigenous foods that credit similarly to products already listed in the *Food Buying Guide.* Additional resources, such as USDA's fact sheet, *Bringing Tribal Foods and Traditions into Cafeterias, Classrooms, and Gardens*[100] encourage schools to incorporate traditional Indigenous foods in school menus.

Proposed Rule

USDA proposed to explicitly state in regulation that traditional foods may be served in reimbursable school meals. The intent of this proposal was to emphasize USDA's support for integrating traditional Indigenous foods into the school meal programs. While many traditional Indigenous foods may already be served in the programs under existing USDA guidance, USDA expected that this regulatory change would help to address the perception that traditional foods are not creditable, draw attention to the option to serve traditional Indigenous foods, and support local efforts to incorporate traditional Indigenous foods into school meals.

Public Comments

USDA received over 200 comments on the proposal to add ''traditional foods'' to the regulatory text. Of these, 168 supported the proposal, including 68 unique comments. While only one respondent requested no changes, 70 respondents, including 50 unique comments, provided additional feedback on the proposal.

Many respondents, including State agencies, advocacy groups, a national organization representing tens of thousands of school nutrition professionals, school districts, a form letter campaign, and individuals, expressed support for the traditional foods provision and including traditional Indigenous foods in school meals. One proponent explained that including traditional foods in school

[96] U.S. Department of Agriculture, *USDA Equity Action Plan in Support of Executive Order (E.O.) 13985 Advancing Racial Equity and Support for Underserved Communities through the Federal Government,* February 10, 2022. Available at: *https://www.usda.gov/equity/action-plan.*

[97] As noted above, USDA currently allows schools in American Samoa, Puerto Rico, and the U.S. Virgin Islands to serve vegetables such as yams, plantains, or sweet potatoes to meet the grains component. See 7 CFR 210.10(c)(3) and 220.8(c)(3).

[98] U.S. Department of Agriculture, *Child Nutrition Programs and Traditional Foods,* July 15, 2015. Available at: *https://www.fns.usda.gov/cn/child-nutrition-programs-and-traditional-foods.*

[99] Information on calculating in-house yield data may be found on page I–5 of the *Food Buying Guide.*

[100] U.S. Department of Agriculture, *Bringing Tribal Foods and Traditions Into Cafeterias, Classrooms, and Gardens,* August 2017. Available at: *https://www.fns.usda.gov/f2s/tribal-foods.*

meals allows Indigenous children to meet their nutritional needs in a way that connects them with their culture. Another proponent emphasized the importance of connecting children with traditional foods and supported greater inclusion of traditional foods to help address health disparities. An advocacy group suggested the proposal would provide clarity and support to schools that want to incorporate traditional foods into their menus. An individual stated the proposal is important because ''school meals should reflect the cultural heritage and values of the students they serve.'' Similarly, an advocacy group suggested that the proposal would encourage schools to offer more traditional foods, which can increase school meal participation and honor students' cultural traditions. Another advocacy group stated the proposal represents ''progress toward making school meals standards more equitable.''

Several respondents recommended that USDA broaden the scope of this provision. For example, a school district and an advocacy group recommended that USDA encourage all schools to offer foods considered traditional to all cultures, not just American Indian and Alaska Native communities. Similarly, several advocacy groups suggested that USDA consider additional ways meal pattern requirements can be more inclusive of all students' ethnicities and cultural backgrounds. One advocacy group encouraged USDA to provide training and technical assistance, such as guidance, menus, and recipes, to support the inclusion of foods traditional to a variety of cultures. Another advocacy group stated that more culturally relevant menu planning resources would ''support the breadth of diverse traditions and cultures across our nation.''

A few proponents offered suggestions to help schools fully realize the intent of this change. An advocacy group suggested that USDA seek broad input from community members to ensure culturally relevant foods are included in the school meal programs without unnecessary barriers. A form letter campaign encouraged USDA to engage American Indian and Alaska Native communities when implementing this provision and stated that the expansion of traditional and cultural meal options would advance racial equity. An advocacy group suggested USDA ensure that ''traditional foods are readily available in USDA foods, particularly through Tribal producers.''

In addition to requesting general feedback on the proposal, USDA requested public input on the following questions:

- USDA has provided guidance [101] on crediting certain traditional foods. Are there any other traditional foods that schools would like to serve, but are having difficulty serving? If so, what specific challenges are preventing schools from serving these foods?
- Which traditional foods should USDA provide yield information for and incorporate into the *Food Buying Guide?*
- Is ''traditional foods,'' as described in the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)), an appropriate term to use, or do stakeholders recommend a different term?

A few respondents provided input on the first question regarding traditional foods that are challenging to serve. A State agency noted that hunted game, foraged fruits, and freshly caught fish are challenging to serve due to local, State, and Federal food safety requirements. Another State agency provided feedback from a Tribal school in their State; the Tribal school explained that they cannot purchase venison from their local vendor and cited challenges serving maple syrup harvested by community members. One school nutrition professional mentioned that they have no difficulty serving traditional foods in their local area.

Several respondents provided input on the second question, asking which traditional foods USDA should consider adding to the *Food Buying Guide.* A professional organization suggested USDA add wild game including moose, reindeer, and caribou; plants such as kelp and Eskimo potatoes; and fruits such as salmonberries. This respondent described these foods as nutritious and affirmed that these specific foods are important cultural foods for Alaska Native students. A State agency listed whitefish, walleye, and hickory nuts as traditional foods to be added to the *Food Buying Guide.* In a few cases, respondents recommended adding items that are already included in the *Food Buying Guide,* such as cranberries, chestnuts, venison, and bison.

Some respondents suggested adding foods traditional to other cultures to the *Food Buying Guide.* One advocacy group recommended USDA expand the definition of traditional foods to include all cultures and provided several suggestions of foods to add, including bacalao (dried and salted codfish), broccoflower, chorizo, crowder peas, huckleberries, naan, smoked eel, and ulu. A school nutrition professional suggested adding Caribbean, Indian, and Asian foods to the *Food Buying Guide.* A few advocacy groups recommended adding bone broth, nori (dried, edible seaweed), pupusas, arepas, yucca, and curry dishes. Another respondent suggested that USDA credit breadfruit and taro as grains and cited their nutritional benefits. An individual and an advocacy group provided a list of native Hawaiian foods to include, such as purple sweet potato, taro, poi, seaweed, and coconut. For clarification, coconut, seaweed, poi, breadfruit, and taro are already included in the *Food Buying Guide.*

A few respondents provided input on the third question, which asked whether ''traditional foods,'' as defined in the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)), is an appropriate term to use in regulation. An advocacy group and a few State agencies expressed support for the term ''traditional foods'' as defined in the Agricultural Improvement Act of 2014. Another State agency acknowledged the importance of cultural foods in school meals but noted that foods considered to be ''traditional'' may have changed over time and questioned use of this term in the regulation. An individual recommended that foods traditional to Native Hawaiians be considered ''traditional foods'' for the purpose of the regulation. A professional organization encouraged USDA to expand its use of the term ''traditional foods'' to include other cultures, stating that ''traditional foods should not be limited to those consumed by an American Indian Tribe but be inclusive of other diverse cultures.'' A State agency supported inclusion of traditional foods and emphasized the importance of a clear explanation of what qualifies as a traditional food.

Oral comments were submitted during a Tribal Consultation conducted by USDA with Tribal leaders in spring 2023. During this session, many participants expressed support for the term ''traditional foods'' as defined in the Agricultural Improvement Act of 2014 and as used in this provision. One Tribal leader mentioned that this term is recognizable among many Tribes. Consultation participants provided additional input on school meals. One Tribal leader acknowledged the challenge in establishing nutrition requirements that accommodate all communities because all Tribes are different. Another participant expressed concerns about added sugars and risk for diabetes and other chronic diseases among the American Indian and Alaska

[101] U.S. Department of Agriculture, *Child Nutrition Programs and Traditional Foods,* July 15, 2015. Available at: *https://www.fns.usda.gov/cn/child-nutrition-programs-and-traditional-foods.*

Native populations. This participant claimed that in their view, improving the nutritional quality of school meals is a greater concern than serving traditional foods. Additionally, Tribal leaders cited meal costs and reimbursement rates as barriers to including more traditional foods in school menus.

Final Rule

This final rule codifies the proposal to explicitly state in regulation that traditional Indigenous foods may be served in reimbursable school meals. Regulations at 7 CFR 210.10(c)(7) and 220.8(c)(4) will include the definition of traditional foods from the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)), which defines traditional food as ''food that has traditionally been prepared and consumed by an [American] Indian tribe,'' including wild game meat, fish, seafood, marine mammals, plants, and berries. As with all other foods offered in school meals, traditional Indigenous foods will continue to be subject to meal pattern requirements, including the weekly dietary specifications. While the proposed rule used the term ''traditional foods,'' in this final rule, USDA uses the term ''traditional Indigenous foods'' to better communicate the focus of this provision.

USDA appreciates public comments received in response to this provision and feedback that stakeholders provided on serving traditional Indigenous foods in school meals. USDA recognizes that stakeholders support diversity in the child nutrition programs, including offering foods that are significant to students of all cultural backgrounds. As discussed in *Section 14: Meal Modifications,* USDA supports efforts to consider participant preferences when planning and preparing meals, including cultural food preferences. However, for this specific provision, USDA will use the term ''traditional Indigenous foods'' and use the definition of ''traditional foods'' from the Agriculture Improvement Act of 2014 and as referenced in the proposed rule. Food sovereignty and traditional foodways are critical in empowering Tribal communities' self-determination and incorporating American Indian and Alaska Native perspectives into USDA's nutrition assistance programs. USDA will continue to encourage program operators to develop menus that are culturally appropriate for all populations and that meet the needs of their communities. USDA's partnership with the Institute of Child Nutrition offers resources, such as the *Child Nutrition Recipe Box* and additional training materials, to support the integration of cultural foods in child nutrition programs. Additionally, USDA Foods in Schools provides a list of Available Foods each school year for program operators to purchase locally grown and produced foods.[102]

USDA appreciates stakeholder suggestions for traditional Indigenous foods, as well as other cultural foods, that should be added to the *Food Buying Guide.* In 2023, USDA added new yield data for highly requested foods such as chokecherries and taro to the *Food Buying Guide.* Additional traditional Indigenous foods that respondents suggested, such as kelp, are described in the *Food Buying Guide* as similar to other food items with comparable yield information; this information can be used when crediting similar foods for a reimbursable meal. Input provided through public comment will be beneficial as USDA continues its long-term initiative to identify more traditional foods to incorporate into the *Food Buying Guide.* USDA also appreciates the importance of continuing to engage with Tribal leaders and community members to fully realize the intent of this change. Tribal stakeholders and leaders provided USDA with valuable input on this rulemaking through listening sessions and through Tribal Consultation. USDA greatly appreciates this input and recognizes the importance of continuing to work together on other initiatives to improve the child nutrition programs for American Indian and Alaska Native children.

Some respondents suggested that foods from other cultures be added to the *Food Buying Guide.* Many cultural foods, such as arepas and pupusas, are creditable in school meal programs if made with creditable ingredients, such as corn masa, masa harina, nixtamalized corn flour, and nixtamalized cornmeal. Respondents also suggested foods like curry dishes, which are often prepared with vegetables and meats/meat alternates that are already listed in the *Food Buying Guide.* USDA appreciates respondent feedback and continues to encourage program operators to develop diverse menus that meet the needs and preferences of the students they serve.

USDA understands that this change is just one part of a larger effort to support the service of traditional Indigenous foods in school meals and remains committed to promoting traditional foodways through its policies and guidance. USDA's website, *Serving Traditional Indigenous Foods in Child Nutrition Programs,*[103] hosts a collection of resources to support program operators working to incorporate traditional Indigenous foods in reimbursables meals, including fact sheets, recipes, crediting tip sheets, and other resources. This web page provides guidance on sourcing locally grown and raised traditional foods. USDA will continue to update this web page with additional tools and resources as they are developed.

Accordingly, this final rule amends 7 CFR 210.10(c)(7) and 220.8(c)(4) to explicitly state in regulation that traditional Indigenous foods, in accordance with current meal pattern requirements, may be served in reimbursable school meals. Schools are not required to change menus or operations as a result of this technical change.

Section 9: Afterschool Snacks

Current Requirement

Afterschool snacks may be offered to children through the NSLP (''NSLP snacks'') or through the CACFP (''CACFP snacks''). According to the National School Lunch Act (NSLA, 42 U.S.C. 1766a(d)), the nutrition requirements for CACFP snacks[104] also apply to NSLP snacks. However, current regulations at 7 CFR 210.10(o)(2) that outline the nutrition requirements for NSLP snacks served to K–12 children are outdated and do not reflect current statutory requirements. This preamble will refer to afterschool snacks served by schools under 7 CFR part 210 as ''NSLP snacks.''

Proposed Rule

USDA proposed to align the nutrition requirements for NSLP snacks served to K–12 children (ages 6 through 18) at 7 CFR 210.10(o) with the CACFP snack requirements, consistent with statute. Under the proposed rule, the existing nutrition requirements for NSLP snacks served to preschoolers and infants, which already follow CACFP requirements, would remain in effect. The proposed rule also included a terminology change, to remove all references to ''meal supplements'' in 7 CFR part 210 and replace them with the term ''afterschool snacks.''

Additionally, in the 2020 proposed rule, *Simplifying Meal Service and*

[102] U.S. Department of Agriculture. *USDA Foods Available Foods List for SY 2024.* January 9, 2023. Available at: *https://www.fns.usda.gov/usda-fis/usda-foods-available.*

[103] U.S. Department of Agriculture, *Serving Traditional Indigenous Foods in Child Nutrition Programs.* Available at: *https://www.fns.usda.gov/cn/serving-traditional-indigenous-foods.*

[104] The nutrition requirements for snacks served through the CACFP are found at 7 CFR 226.20(c)(3).

Monitoring Requirements in the National School Lunch and School Breakfast Programs,[105] USDA proposed to revise the definition of *Child* in 7 CFR 210.2, to clarify that children through the age of 18 may receive NSLP snacks. The proposal to update the definition of *Child* also sought to align program regulations with statutory requirements (NSLA, 42 U.S.C. 1766a(b)).

Public Comments

USDA received 117 comments on the NSLP snacks proposal in the 2023 rule, including 111 unique comments. Of these, 58 supported the proposal, 3 were opposed, and 56 were mixed. State agencies, advocacy groups, dietitians, and individuals submitted comments in response to this proposal. In addition, USDA received five comments in response to the 2020 proposal to revise the definition of *Child;* all five respondents supported the proposed change.

Regarding the NSLP snacks provision in the 2023 proposed rule, one dietitian suggested the proposal would streamline program requirements, describing it as a positive change. Another proponent agreed, noting the change would align two similar programs without creating administrative burden. A third respondent affirmed the benefits of aligning program requirements, stating that the proposed change would be beneficial for multi-program sponsors, and a school district that currently participates in multiple child nutrition programs agreed. An advocacy group supported the proposal and described the CACFP meal pattern as ''nutritious.'' Another advocacy group supported changing the term ''meal supplements'' to ''afterschool snacks,'' arguing that ''afterschool snacks'' is easier to understand. One proponent supported applying the product-based added sugars limits for yogurt and breakfast cereals to NSLP snacks; these limits are discussed further in *Section 2: Added Sugars.* While not directly related to the proposal, an advocacy group emphasized the importance of afterschool programs in general, noting that children need nutritional support during the hours after school.

One respondent questioned why it is necessary to align the NSLP snacks meal patterns with CACFP. An advocacy group opposed eliminating grain-based desserts from NSLP snacks, which they argued would greatly decrease options for schools. A few respondents raised concerns about specific items that are identified as grain-based desserts and are commonly served as afterschool snacks, such as granola and cereal bars. Several other respondents agreed, noting that schools could experience ''menu fatigue'' due to limited options if grain-based desserts are no longer permitted as NSLP snacks. A State agency cautioned that the proposal to serve at least one whole grain-rich grain each day may be challenging for NSLP snacks operators, given that there is already a whole grain-rich requirement for school meals. Similarly, another State agency questioned how the proposed NSLP snacks whole grain-rich requirement would interact with the existing whole grain-rich requirements for school lunch and breakfast. This State agency maintained that while they usually support efforts to align regulations, some of the differences between the school meal programs and CACFP—such as the whole grain-rich requirements—could lead to confusion. An industry respondent also encouraged USDA to reconsider the proposed NSLP snacks whole grain-rich requirement, citing concerns about requirements that are ''complicated'' and ''hard to follow.''

Other respondents requested clarification or offered suggestions. An advocacy group recommended that USDA reconsider the serving size requirements for fruits and vegetables in afterschool programs, especially for younger children. This respondent suggested that the current serving size for fruits and vegetables (3/4 cup) is too large for elementary schoolchildren. Another advocacy group encouraged USDA to provide ''an adequate timeline'' for implementation, while an industry respondent supported training and technical assistance for schools.

Final Rule

This final rule updates NSLP snacks meal pattern requirements for K–12 children to reflect CACFP snack requirements, consistent with the intent of the National School Lunch Act (NSLA, 42 U.S.C. 1766a(d)). This change must be implemented by July 1, 2025. Program operators have the option, but are not required, to implement this change early. Additionally, this rule finalizes the provision from the 2020 proposed rule to revise the definition of *Child.* This change clarifies that children who are age 18 and under at the start of the school year may receive reimbursable NSLP snacks, consistent with statute (NSLA, 42 U.S.C. 1766a(b)). As with the proposed rule, this final rule changes all regulatory references in 7 CFR part 210 from ''meal supplements'' to ''afterschool snacks.'' This rule does not change requirements for NSLP snacks served to preschoolers and infants; existing requirements for NSLP snacks served to preschoolers and infants remain in effect.

In a public comment, one respondent asked why it is necessary for NSLP snacks meal pattern requirements to follow CACFP requirements. As noted in the proposed rule and above, this change is required by statute. According to the National School Lunch Act (NSLA, 42 U.S.C. 1766a(d)), the nutritional requirements for snacks served through the CACFP also apply to afterschool snacks served by schools. Consistent with statutory requirements, this final rule updates regulations at 7 CFR 210.10(o)(2) outlining the nutrition requirements for afterschool snacks served to K–12 children.

Under the final rule, by July 1, 2025, NSLP snacks served to K–12 children must include two of the following five components:

- Milk
- Meats/meat alternates
- Vegetables
- Fruits
- Grains

The following CACFP snack requirements for children 6 years and older also apply to NSLP snacks served to K–12 children. These requirements for NSLP snacks must be implemented by July 1, 2025:

- Only one of the two components served at snack may be a beverage.
- Milk must be fat-free or low-fat and may be unflavored or flavored.
- Grain-based desserts do not count toward the grains requirement.
- Foods that are deep-fat fried on-site are not reimbursable NSLP snacks.
- As detailed in *Section 2: Added Sugars,* breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.[106]
- As detailed in *Section 2: Added Sugars,* yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).[107]

[105] *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs* (85 FR 4094, January 23, 2020). Available at: *https://www.federalregister.gov/documents/2020/01/23/2020-00926/simplifying-meal-service-and-monitoring-requirements-in-the-national-school-lunch-and-school.*

[106] While existing CACFP regulations limit breakfast cereals to no more than 6 grams of *total* sugars per dry ounce, in this final rule, USDA has opted to delay implementation of the breakfast cereals limit in NSLP snacks to SY 2025–2026, when USDA will implement the *added* sugars limit for NSLP, SBP, CACFP, and NSLP snacks.

[107] While existing CACFP regulations limit yogurt to no more than 23 grams of *total* sugars per 6 ounces, in this final rule, USDA has opted to delay implementation of the yogurt limit in NSLP snacks to SY 2025–2026, when USDA will implement the *added* sugars limit for NSLP, SBP, CACFP, and NSLP snacks.

In the proposed rule, USDA proposed to apply the per day juice limit and the per day whole grain-rich requirement used in the CACFP to NSLP snacks served to K–12 children. USDA is not finalizing the proposed per day juice limit or the proposed per day whole grain-rich requirement for NSLP snacks served to K–12 children. Instead, this final rule applies the weekly juice limit and the weekly whole grain-rich requirement used in the school meal programs to NSLP snacks. This change, which results in NSLP snacks that are nutritionally similar to snacks offered through the CACFP, is due to operational differences in the requirements for lunches and breakfasts served to K–12 children compared to preschool children. For K–12 children, the NSLP and SBP require that no more than half of the weekly fruit or vegetable offerings may be in the form of juice. As discussed in *Section 4: Whole Grains,* the whole grain-rich requirements for NSLP and SBP meals served to K–12 students also apply on a weekly, rather than daily, basis. As pointed out in public comments, implementing an additional per day requirement, when existing juice limitations and whole grain-rich requirements for NSLP and SBP already apply per week, would be confusing for schools that offer students school meals and NSLP snacks. Therefore, this final rule instead applies the following weekly requirements to NSLP snacks:

- No more than half of the weekly fruit or vegetable offerings at NSLP snacks may be in the form of juice.
- At least 80 percent of the grains offered weekly in NSLP snacks must be whole grain-rich, based on ounce equivalents of grains offered.

USDA has determined that this approach will result in NSLP snacks that are nutritionally comparable to snacks offered through the CACFP, consistent with the intent of the statute, while avoiding operational complexity. For example, under this final rule, NSLP snacks may include juice, but will be required to offer fruits and vegetables in other forms. Regarding fruit juice, the final rule *Child and Adult Care Food Program: Meal Pattern Revisions Related to the Healthy, Hunger-Free Kids Act of 2010* noted that, ''The *Dietary Guidelines* recommends that at least half of fruits should come from whole fruits and found that children age 1 to 3 years consume the highest proportion of juice to whole fruits.'' [108] The NSLP snacks juice limit finalized in this rulemaking incorporates *Dietary Guidelines* [109] recommendations for K–12 students and considers operational factors specific to NSLP snacks, as suggested by public comments. Specifically, this final rule considers that NSLP snacks operates alongside the school lunch and breakfast programs, which have weekly juice limits. Additionally, similar to CACFP requirements, this final rule includes a whole grain-rich requirement for NSLP snacks, while permitting enriched grains, provided that the whole grain-rich threshold is met. The intent of the CACFP whole grain-rich requirement is to ensure that participants receive at least one serving of whole grain-rich grains per day, across all eating occasions. When considering grain offerings at school lunch and breakfast, USDA expects that on most school days, K–12 children receiving school meals and NSLP snacks would meet or exceed one whole grain-rich grain per day. Consistent with statutory intent, the weekly whole grain-rich requirement finalized in this rule improves the nutritional quality of NSLP snacks and will result in snacks that are nutritionally comparable to those offered in the CACFP. It also responds to public comments that raised concerns with the operational feasibility of implementing a per day whole grain-rich requirement in NSLP snacks.

The changes for NSLP snacks served to K–12 children are reflected in the NSLP snacks meal pattern chart for K–12 children (ages 6 through 18) now included at 7 CFR 210.10(o)(2) of this final rule. Unlike the NSLP and SBP, which include three separate age/grade groups (K–5, 6–8, and 9–12), schools offering NSLP snacks to K–12 children will follow a single NSLP snacks meal pattern for all children ages 6 through 18. Schools are encouraged to serve larger portions to older children to meet their increased nutritional needs.

USDA appreciates public input regarding the serving sizes for fruits and vegetables in afterschool snacks. This final rule does not change the serving sizes for fruits and vegetables in the snack meal patterns. In CACFP snacks, for children ages 6 and older, the serving size for fruits and vegetables served as part of a snack will continue to be ¾ cup. In NSLP snacks, for children in grades K–12, the serving size for fruits and vegetables served as part of a snack will also continue to be ¾ cup. Schools are not required to serve fruits or vegetables as part of a reimbursable snack; these components are just two of five options available to schools. Schools offering NSLP snacks may choose to serve any combination of at least two of the five components (milk, meats/meat alternates, vegetables, fruits, and/or grains).

In response to requests for clarification about the changes in this final rule, the following chart summarizes the prior regulatory requirements for NSLP snacks served to K–12 children compared to the requirements implemented by this final rule:

[108] U.S. Department of Agriculture, *Child and Adult Care Food Program: Meal Pattern Revisions Related to the Healthy, Hunger-Free Kids Act of 2010,* April 25, 2016. Available at: *https://www.federalregister.gov/documents/2016/04/25/2016-09412/child-and-adult-care-food-program-meal-pattern-revisions-related-to-the-healthy-hunger-free-kids-act.*

[109] ''Although 100% fruit juice without added sugars can be part of a healthy dietary pattern, it is lower in dietary fiber than whole fruit. Dietary fiber is a dietary component of public health concern. With the recognition that fruit should mostly be consumed in whole forms, the amount of fruit juice in the USDA Food Patterns ranges from 4 fluid ounces at the lower calorie levels and no more than 10 fluid ounces at the highest calorie levels.'' See page 87: U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at: *https://www.dietaryguidelines.gov/.*

Topic	OLD NSLP Snacks Requirements for K-12 Children	NEW NSLP Snacks Requirements for K-12 Children (Must be Implemented July 1, 2025)
Total number of snack components	Snacks must contain two different components out of four total components	Snacks must contain two different components out of five total components
Milk	No regulatory requirements for fat or flavoring in NSLP snacks	Milk must be fat-free or low-fat and may be unflavored or flavored
Fruit and vegetable	Fruits and vegetables are part of a single component	Fruits and vegetables are two separate components
Juice	No regulatory juice limits in NSLP snacks	No more than half (50 percent) of the weekly fruit and vegetable offerings in NSLP snacks are in the form of juice
Whole grain-rich	No regulatory requirements to offer whole grain-rich grains in NSLP snacks	At least 80 percent of the weekly grains offered in NSLP snacks must be whole grain-rich, based on ounce equivalents of grains offered
Grain-based desserts	No regulatory requirements for grain-based desserts in NSLP snacks	Grain-based desserts do not count toward the grains requirement
Deep-fat fried foods	No regulatory requirements for deep-fat fried foods in NSLP snacks	Foods that are deep-fat fried on-site are not reimbursable NSLP snacks
Added sugars	No regulatory added sugars limits in NSLP snacks	Breakfast cereals must contain no more than 6 grams of added sugars per dry ounce and yogurt must contain no more than 12 grams of added sugars per 6 ounces[110]

There are a few differences to point out for NSLP snacks served to *preschoolers:* [111]

• Milk fat requirements and flavoring limitations: milk must be unflavored whole milk for children age one and must be unflavored low-fat or unflavored fat-free milk for children ages two through five.

• Juice limitations: full-strength juice may only be offered to meet the vegetable or fruit requirement at one preschool meal or snack per day. For example, a school serves breakfast, lunch, and NSLP snack to preschoolers using the preschool meal patterns for all meals and snacks. If the school opts to serve juice to preschoolers at breakfast, juice may not be served to the preschoolers during the lunch or NSLP snack service on the same day.

• Whole grain-rich requirement: at least one serving of grains per day must be whole grain-rich. For example, a school serves a whole grain-rich item to preschoolers at lunch and chooses to serve a grain at NSLP snack. In this example, the grain served for NSLP snack would not be required to be whole grain-rich. However, schools that provide NSLP snacks to preschoolers may choose to serve additional whole grain-rich items, beyond the one serving per day requirement.

Accordingly, this final rule amends 7 CFR 210.2 to revise the definition of *Child* for consistency with statute. This final rule also amends 7 CFR 210.10(o) to align NSLP snacks meal pattern requirements for K–12 children with CACFP snack requirements, consistent with the intent of the statute. The updates to NSLP snack meal pattern requirements must be implemented by July 1, 2025.

[110] While existing CACFP regulations include *total* sugars limits for breakfast cereals and yogurt, in this final rule, USDA has opted to delay implementation of these limits for NSLP snacks to SY 2025–2026, when USDA will implement the *added* sugars limit for NSLP, SBP, CACFP, and NSLP snacks.

[111] Consistent with existing policy guidance, schools may choose to follow the K–5 NSLP snack meal pattern when preschoolers and K–5 students are co-mingled at meal service. See *Flexibility for Co-Mingled Preschool Meals: Questions and Answers,* June 30, 2017. Available at: *https://www.fns.usda.gov/cn/flexibility-co-mingled-preschool-meals-questions-and-answers.*

Section 10: Substituting Vegetables for Fruits at Breakfast

Current Requirement

Current regulations at 7 CFR 220.8(c) and (c)(2)(ii) allow schools to substitute vegetables for fruits at breakfast, provided that the first two cups per week are from specific vegetable subgroups: dark green, red/orange, beans and peas (legumes), or ''other'' vegetable subgroups.[112] However, in recent years, through Federal appropriations, Congress has provided schools the option to substitute any vegetable—including starchy vegetables—for fruits at breakfast, with no vegetable subgroup requirements. This Congressional flexibility has been offered on a temporary basis and has left schools without long-term certainty regarding menu planning options. For example, in calendar year 2019, schools were initially granted the flexibility to offer any vegetables in place of fruit at breakfast from February 15 through September 30. This flexibility was extended by Congress through a subsequent appropriations bill but was not granted permanently.[113] Most recently, Congress provided schools the same flexibility in SY 2022–2023 and SY 2023–2024, allowing any vegetable to credit in place of fruits in weekly breakfast menus.[114]

Proposed Rule

In the proposed rule, USDA acknowledged that it is confusing for State agencies and schools to have a requirement in regulation that is changed periodically through Federal appropriations. To permanently address this issue, USDA sought to establish a durable standard that continues to encourage vegetable variety at breakfast. USDA proposed to continue to allow schools to substitute vegetables for fruits at breakfast but to change the vegetable variety requirement. Under the proposal, schools choosing to offer vegetables in place of fruits at breakfast one day per school week would have the option to offer any vegetables, including a starchy vegetable. Schools that choose to substitute vegetables for fruits at breakfast on two or more days per school week would be required to offer at least two different vegetable subgroups during that weekly menu cycle. In other words, the requirement to offer a second, different vegetable subgroup would only apply in cases where schools choose to substitute vegetables for fruits at breakfast more than one day per school week.

In the proposed rule, USDA proposed to change the name of the ''legumes (beans and peas)'' vegetable subgroup to ''beans, peas, and lentils'' for consistency with the *Dietary Guidelines.* As discussed in *Section 20: Miscellaneous Changes* of this final rule, USDA is finalizing this proposed terminology change. Therefore, in the final rule portion of this section, USDA will refer to the ''beans, peas, and lentils'' vegetable subgroup.

Public Comments

USDA received hundreds of comments on the proposal to change the vegetable variety requirement when substituting vegetables for fruits at breakfast. Of these, 722 supported the proposal, including 51 unique comments. Seventeen respondents opposed the proposal, and 89 respondents provided mixed feedback, including 58 unique comments. Comments were submitted by State agencies, advocacy groups, industry respondents, school districts, and dietitians.

Several respondents, including school nutrition professionals and State agencies, supported this change, suggesting that it would allow greater menu flexibility at breakfast compared to the current regulatory requirement. One proponent noted that offering two different vegetable subgroups at breakfast during a weekly menu cycle is achievable and provided examples of how the proposal could be implemented during a school week. A couple of school nutrition professional organizations stated that this change would simplify regulations for menu planners and eliminate confusion. A State agency agreed and mentioned that this change would help school nutrition staff better understand when more than one vegetable subgroup is required at breakfast. An advocacy group supported the proposal and emphasized the importance of maintaining variety in vegetable subgroups offered at breakfast, particularly the inclusion of non-starchy vegetables. A professional organization supported the proposal, arguing that requiring a variety of vegetable subgroups at breakfast will prevent schools from offering the same vegetable every day. An advocacy group supported the proposal, describing it as a ''durable standard that encourages vegetable variety.''

Some respondents opposed the proposal, asserting that it would allow too much flexibility compared to the current regulatory requirement. One advocacy group did not agree with the proposal, suggesting it would allow schools to serve vegetables from a single subgroup up to four days per school week. For example, this respondent shared that if a school chose to substitute vegetables for fruits every day, the ''school could offer an omelet with spinach on Monday, but then serve hash browns, tater tots, or home fries the other four days of the week.'' While it is accurate that under the proposal, a school substituting vegetables for fruits at breakfast more than once per school week would only need to offer two vegetable subgroups, schools would still be required to meet the dietary specifications for calories, saturated fat, and sodium at breakfast.

Conversely, other respondents felt that the proposal was too restrictive and argued that schools should be able to offer any vegetable in place of fruit at breakfast, without any vegetable subgroup requirements. Some respondents suggested that fruits would continue to be a popular offering at breakfast, and when opting to substitute vegetables, schools should have maximum flexibility in planning their menus. One school nutrition professional organization asserted that having to monitor vegetable subgroups adds complexity to the program. This respondent maintained that when offering vegetables, schools should have the option to offer any vegetable without meeting a variety requirement. Other food service directors agreed, suggesting that USDA allow any vegetable to substitute for fruit at breakfast. A dietitian cautioned that requiring schools to offer a variety of vegetable subgroups throughout the week ''may disincentivize schools from the offering of vegetables at breakfast.'' One industry respondent expressed that all vegetables should be permitted to substitute for fruits at breakfast without limitations or restrictions, further stating that this flexibility would ''address the issue long-term, prevent confusion, and increase overall vegetable intake within the program.'' An individual stated that continuing to require vegetable variety would result in schools offering vegetables that children do not like at breakfast, increasing plate waste.

[112] See: ''Vegetables'' page 31. U.S. Department of Agriculture and U.S. Department of Health and Human Services. 2020–2025 Dietary Guidelines for Americans. 9th Edition. December 2020. Available at: *https://www.dietaryguidelines.gov/.*

[113] See: U.S. Department of Agriculture, *School Breakfast Program: Substitution of Vegetables for Fruit,* March 18, 2019. Available at: *https://www.fns.usda.gov/sbp/substitution-vegetables-fruit* See also: U.S. Department of Agriculture, *School Breakfast Program: Continuation of the Substitution of Vegetables for Fruit Flexibility,* January 22, 2020. Available at: *https://www.fns.usda.gov/sbp/school-breakfast-program-continuation-substitution-vegetables-fruit-flexibility.*

[114] See: U.S. Department of Agriculture, *Consolidated Appropriations Act, 2023: Effect on Child Nutrition Programs,* March 3, 2023. Available at: *https://www.fns.usda.gov/cn/consolidated-appropriations-act-2023-effect-programs.*

However, this respondent also maintained that the most popular vegetables at breakfast are potatoes and sweet potatoes, which USDA notes are from two different subgroups: starchy and red/orange. Therefore, a school that chooses to substitute vegetables for fruits could meet the proposed variety requirement for the school week by offering these two popular vegetable options.

Other respondents recommended alternative approaches or requested clarification. For example, a professional organization supported the proposal to require a variety of vegetables at breakfast, when schools choose to substitute vegetables for fruits, but suggested that USDA limit starchy vegetables to avoid increasing sodium. A few advocacy groups recommended that, in addition to the proposed variety requirement, USDA should also require that a single vegetable subgroup cannot make up more than half of the vegetable offerings at breakfast per week. These respondents asserted that this alternative standard would be less restrictive than the current regulatory standard, continue to encourage a variety of vegetable subgroups, and ensure that no single vegetable dominates SBP menus. An industry respondent opposed allowing any vegetables to substitute for fruits at breakfast, arguing that ''fruits contribute different nutrients than vegetables.'' Another respondent requested clarification about the requirements for vegetable offerings after a school meets the variety requirement. This respondent shared that their school usually offers vegetables as an ''extra item'' at breakfast and requested that this continue to be an option.

A few respondents provided other comments on the potential impact of the proposal. For example, an advocacy group suggested that substituting vegetables for fruits could help to reduce the overall sugar content of school breakfasts. A State agency noted that school menu planners and State agency staff would need guidance, training, and monitoring resources if this proposal is finalized. Similarly, an individual suggested that USDA provide sample menus with ideas to incorporate a variety of vegetables into the breakfast program. One respondent raised concerns that the proposed change would add paperwork for school nutrition staff. Conversely, one State agency maintained that they do not expect the change to be administratively burdensome.

Final Rule

This final rule continues to allow schools to substitute vegetables for fruits in the SBP and codifies the proposal to simplify the vegetable variety requirement. Under this final rule, schools choosing to offer vegetables at breakfast one day per school week have the option to offer any vegetable, including a starchy vegetable. Schools that choose to substitute vegetables for fruits at breakfast on two or more days per school week are required to offer vegetables from at least two different subgroups. The vegetable subgroups that schools may choose from include the following, a defined at 7 CFR 210.10(c)(2)(iii):

- Dark green
- Red/orange
- Beans, peas, and lentils
- Starchy
- ''Other'' vegetables

USDA acknowledges that some stakeholders preferred a different approach. A few respondents requested that USDA limit how often any one vegetable subgroup could be offered at breakfast, with some advocating for a specific limit on starchy vegetables. Other respondents encouraged USDA to remove the vegetable variety requirement altogether. However, USDA has determined that it is important to continue to encourage vegetable variety when schools choose to offer vegetables at breakfast. As noted in the proposed rule, while the *Dietary Guidelines* recommend increasing consumption of vegetables in general, they note that starchy vegetables are more frequently consumed by children and adolescents than the red/orange, dark green, or beans, peas, and lentils vegetable subgroups, underscoring the need for variety. The proposed requirement, finalized in this rulemaking, provides a straightforward and durable approach to support children consuming a variety of vegetables.

USDA appreciates respondent requests for clarification about implementation of this provision, such as one respondent who requested that USDA explain what vegetable subgroup requirements would apply after a school offers two different subgroups at breakfast. Under this final rule, after a school offers vegetables from two different subgroups, the school can choose to offer any vegetables at breakfast—including vegetables from a subgroup the school has already offered that school week. For example, a school can substitute a starchy vegetable for fruit at breakfast on Monday, then substitute a dark green vegetable for fruit at breakfast on Tuesday. The rest of the week the school may choose to substitute any vegetables, including a dark green or a starchy vegetable, for fruit at breakfast, since it would have met the variety requirement by Tuesday. As requested by comments, USDA will provide guidance and resources to support successful implementation of this provision and to assist schools in their efforts to offer a variety of vegetables as part of nutritious school breakfasts.

This final rule continues to require schools opting to serve vegetables at breakfast to offer a variety of subgroups, and in a way that is less restrictive compared to the previous regulatory standard. Consistent with current regulations, schools are not required to offer vegetables at breakfast and may choose to offer only fruits at breakfast to meet this component requirement. Schools may also continue to offer vegetables at breakfast as an extra item, subject to the weekly dietary specifications for calories, saturated fat, sodium, and upon implementation, added sugars. As suggested by comments, USDA expects that fruit will continue to be a popular offering in reimbursable school breakfasts. While USDA acknowledges feedback received about potential administrative burden, this final requirement does not add any additional administrative requirements beyond menu documentation and production records required for Administrative Reviews, for schools that choose to substitute vegetables for fruits at breakfast.

Accordingly, this final rule amends 7 CFR 220.8(c)(2)(i) and (ii) to change the vegetable variety requirement for substituting vegetables for fruits at breakfast. This change provides schools with more menu planning flexibility at breakfast when compared to the current regulation. Schools that are following the current regulatory requirement are not required to change menus or operations as a result of this provision. Schools that are using the Congressional flexibility [115] will need to offer at least two vegetable subgroups at breakfast, if offering vegetables in place of fruit at breakfast more than once per week.

Section 11: Nuts and Seeds

Current Requirement

Current regulations allow nuts and seeds, and nut and seed butters, as a meat alternate in the child nutrition programs. In all child nutrition

[115] See: U.S. Department of Agriculture, *Consolidated Appropriations Act, 2023: Effect on Child Nutrition Programs,* March 3, 2023. Available at: *https://www.fns.usda.gov/cn/consolidated-appropriations-act-2023-effect-programs.*

programs, nut and seed butters may credit for the full meats/meat alternates component. However, current regulations limit the crediting of whole nuts and seeds (or nut and seed pieces) in some child nutrition programs. Current lunch and supper regulations limit nut and seed crediting to 50 percent of the meats/meat alternates component (7 CFR 210.10(c)(2)(i)(B), 225.16(d)(2) and (e)(5), 226.20(a)(5)(ii) and (c)(2)). SBP regulations include the same limit (7 CFR 220.8(c)(2)(i)(B)). CACFP regulations for breakfast do not explicitly include the 50 percent limit for nuts and seeds, but refer to USDA guidance, which includes the 50 percent limit (7 CFR 226.20(a)(5)(ii)). Snack regulations and USDA guidance on snacks do not include the 50 percent limit; nuts and seeds may credit for the full meats/meat alternates component when offered as part of a snack (7 CFR 210.10(o)(2)(ii), 225.16(e)(5), and 226.20(c)(3). For programs where nut and seed crediting is limited to 50 percent of the meats/meat alternates component, program operators choosing to serve nuts and seeds must serve them alongside another meat/meat alternate to fully meet the component requirement.

Proposed Rule

USDA proposed to allow nuts and seeds to credit for the full meat/meat alternate component in all child nutrition programs and meals. This proposal would remove the 50 percent crediting limit for nuts and seeds at breakfast, lunch, and supper.

Public Comments

USDA received 389 comments on the proposed change to allow nuts and seeds to credit for the full meats/meat alternates component, including 217 unique comments. Of these, 310 supported the proposal, including 158 unique comments, 10 were opposed, and 69 were mixed, including 49 unique comments. State agencies, advocacy groups, industry respondents, school districts, dietitians, and individuals provided input on this proposal.

Several respondents supported the proposal, including a national organization representing tens of thousands of school nutrition professionals. One proponent applauded the proposal, noting that nuts and seeds are good sources of protein, vitamin E, fiber, and many minerals. A dietitian agreed, maintaining that nuts and seeds are healthy proteins that would provide variety throughout the week. An advocacy group added that nuts and seeds provide healthy fats. Another advocacy group representing the CACFP community indicated that 85 percent of its members supported the proposal. Several respondents, including dietitians, school districts, and a State agency, suggested that this change would allow more vegan and vegetarian options in child nutrition program meals. An advocacy group described plant-based entrées that operators could serve under this change, such as walnut and mushroom-based ''taco meat,'' rice pilaf with pistachios, and salad with sunflower seeds. In addition to plant-based options, an advocacy organization and a State agency noted that this proposal would allow more shelf-stable foods to be served in afterschool and summer meals. Another State agency suggested that this proposed change would allow program operators to offer healthier versions of popular bistro or snack boxes. An individual stated that the proposal would allow operators greater latitude to develop menus that reflect participant preferences; other respondents agreed, citing increased demand for vegetarian meals.

One opponent argued that nuts and seeds are not adequate to meet the full meats/meat alternates component requirement. A few industry respondents also opposed the proposal, arguing that in their view, animal products are more nutritious than vegetarian foods. However, this respondent also supported greater menu planning flexibility and opposed ''mandatory federal limits'' in the meal patterns. Another respondent raised concern about oils in nuts and seeds and the potential for nuts and seeds to cause ''digestive distress'' among some participants. One respondent suggested students at their school would not be interested in meals that include nuts and seeds as the full meats/meat alternates component.

Other respondents requested clarification or offered alternatives to the proposal. One respondent asked if nuts would be mandatory, citing food allergy concerns. Another respondent supported the change, but recommended capping the number of times per week operators could offer nuts and seeds to promote variety. One advocacy group suggested that USDA update its crediting guidance for nuts and seeds and nut and seed butters, asserting that the current requirements are too high. For example, this respondent argued that the current requirements result in sandwiches filled with an inedible amount of nut butter, making them difficult to chew and swallow. A State agency recommended targeting this provision to older children, citing concerns about choking hazards for young children. Similarly, an advocacy group raised concerns about the safety and appropriateness of offering nuts and seeds to very young children. This respondent also noted that nut and seed products may be glazed or sugar coated. An industry respondent noted that offering nuts may create menu planning complications due to the sodium content of some nuts. However, this respondent still supported the proposal. Another respondent requested sample menus and recipe ideas to support implementation of this change.

Final Rule

This final rule codifies the proposal to allow nuts and seeds to credit for the full meats/meat alternates component in all child nutrition programs and meals, removing the 50 percent crediting limit for nuts and seeds at breakfast, lunch, and supper. USDA expects this change to reduce complexity by making the requirements consistent across programs and to provide more menu planning options for program operators.

Child nutrition operators are not required to make any changes to their menus to comply with this standard. Nuts and seeds are not required in child nutrition program meals, but rather, continue to be an option for operators. When offering nuts and seeds, child nutrition operators may offer them to meet the full meats/meat alternates component but are not required to; operators may choose to offer nuts and seeds toward only a portion of the component, alongside another meat/meat alternate. Although USDA recognizes that many child nutrition program operators will continue to offer nuts and seeds in snacks, or in small amounts in meals alongside other meats/meat alternates, this final rule gives operators increased flexibility to offer nuts and seeds for the full meats/meat alternates component in all meals and snacks.

USDA appreciates comments regarding the importance of variety in meals and snacks and expects that operators will continue to offer a variety of foods toward the meats/meat alternates meal component. Additionally, according to the *Dietary Guidelines,* more than half of Americans do not meet the recommendations for the nuts, seeds, and soy products subgroup.[116] Therefore, USDA has

[116] See ''Protein Foods,'' page 34. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at *https://www.dietaryguidelines.gov/.*

determined that it is not necessary to limit the number of times nuts and seeds may be served per week in order to promote variety within the meats/meat alternates meal component. As suggested in public comments, USDA expects that this change will expand options for vegetarian and vegan meals that include nuts, seeds, and nut and seed butters. As noted in the *Dietary Guidelines,* a healthy vegetarian dietary pattern can be achieved by incorporating protein foods from plants, including nuts and seeds; beans, peas, and lentils; tofu and other soy products; and whole grains.[117]

USDA appreciates input regarding the serving sizes for nuts, seeds, and their butters. Many factors are considered when determining crediting amounts for foods in the child nutrition programs, including the FDA *Standards of Identity, Dietary Guidelines,* and the USDA Food Safety and Inspection Service *Food Standards and Labeling Policy.* USDA's *Food Buying Guide for Child Nutrition Programs* also assists in determining the contribution that each food makes toward meal pattern requirements. In this final rule and corresponding guidance, USDA will maintain current crediting amounts for nuts and seeds and their butters. In cases where an operator determines a portion is too large for a child or adult participant, it is recommended that nuts and seeds and their butters be served in combination with another meat/meat alternate to meet the full component requirement.

USDA is mindful of respondent concerns about choking hazards and has provided guidance on reducing the risk of choking in young children.[118] As noted in the proposed rule, nuts and seeds are generally not recommended to be served to children ages 1 to 3 because they present a choking hazard. If served to very young children, nuts and seeds should be finely minced. Program operators should also be aware of food allergies among participants and take the necessary steps to prevent exposure. *Section 14: Meal Modifications* provides more information about requirements to provide meal modifications for participants with disabilities, which may include food allergies. Finally, as noted in the proposed rule, USDA encourages program operators to offer nuts, seeds, and their butters in their most nutrient-dense form, without added sugars and salt, and schools must consider the contribution of these foods to the weekly limits for calories, saturated fat, and sodium.

Accordingly, this final rule amends 7 CFR 210.10(c)(2)(iv)(B), 220.8(c)(2)(iv)(B), 225.16(d)(2) and (e)(5), 226.20(a)(5)(ii) and (c)(2) to allow nuts and seeds to credit for the full meats/meat alternates component in all child nutrition program meals, removing the 50 percent crediting limit for nuts and seeds at breakfast, lunch, and supper. This change provides child nutrition program operators more menu planning flexibility. Program operators are not required to change menus or operations as a result of this provision.

Section 12: Beans, Peas, and Lentils at Lunch

Current Requirement

Consistent with the *Dietary Guidelines,* the school lunch meal pattern includes five vegetable subgroups: dark green, red/orange, beans and peas (legumes), starchy, and "other" vegetables. Current NSLP regulations at 7 CFR 210.10(c)(2)(iii) require school food authorities to offer vegetables from all five subgroups each school week. Specifically for the beans and peas (legumes) vegetable subgroup, schools must offer ½ cup over the course of the week at lunch to meet the vegetable subgroup requirement.

In addition to crediting toward the vegetable meal component, legumes may also credit toward the meats/meat alternates meal component (7 CFR 210.10(c)(2)(i)(E)). Legumes may count toward either the vegetable meal component or meats/meat alternates meal component, but not both components in the same meal (7 CFR 210.10(c)(2)(iii)). This limit applies when legumes are offered in a single dish. When a school offers legumes in two separate dishes as part of the same meal, one serving may count toward the vegetable meal component and one serving may count toward the meats/meat alternates meal component, at menu planners' discretion.[119]

Proposed Rule

In the 2020 proposed rule, USDA proposed to allow legumes offered toward the meats/meat alternates meal component to also count toward the weekly requirement to offer ½ cup of the legumes vegetable subgroup per week at lunch, while maintaining the total vegetables requirement. As with the current requirement, under the proposal, legumes would not count toward two meal components (vegetable component and meats/meat alternates component) at the same time. If a school opts to count legumes toward the meats/meat alternates meal component, the school would need to serve another vegetable to count toward the daily and weekly vegetable meal component requirements. However, under the proposal, legumes could count toward the legumes *vegetable subgroup requirement* when offered toward the meats/meat alternates meal component.

Later, in the 2023 proposed rule, USDA proposed to change the name of the beans and peas (legumes) vegetable subgroup in school meal and CACFP regulations to align with the *Dietary Guidelines, 2020–2025,* which changed the terminology for the vegetable subgroup to "beans, peas, and lentils."[120] As discussed in *Section 20: Miscellaneous Changes,* USDA is finalizing this proposed terminology change. Therefore, when discussing the final standard in this section, USDA will use the term "beans, peas, and lentils" in place of "beans and peas (legumes)."

Public Comments on 2020 Proposed Rule

USDA received 103 comments on the 2020 proposed rule about the proposal to allow beans and peas (legumes) offered toward the meats/meat alternates meal component to count toward the weekly legumes subgroup requirement, all of which were unique comments. Of these, 61 supported the proposal, 28 were opposed, and 14 were mixed.

One proponent emphasized that the proposal would not reduce the total amount of vegetables at lunch, but would instead help schools offer legumes. A school district suggested that this change would allow more

[119] See Question 35. U.S. Department of Agriculture. *Meal Requirements Under the National School Lunch Program and School Breakfast Program: Questions and Answers for Program Operators Updated to Support the Transitional Standards for Milk, Whole Grains, and Sodium Effective July 1, 2022,* March 2, 2022. Available at: *https://www.fns.usda.gov/cn/sp052022-questions-answers-program-operators.*

[120] The *Dietary Guidelines, 2020–2025,* changed the terminology for the "legumes (beans and peas)" vegetable subgroup to "beans, peas, and lentils." The foods within this vegetable subgroup did not change. See "About Beans, Peas, and Lentils," page 31. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition.* December 2020. Available at: *https://www.dietaryguidelines.gov/.*

menu planning flexibility. Other proponents agreed, saying this proposal would help schools offer legumes as part of an entrée, as opposed to a side dish. Some proponents, including an advocacy group, maintained that legumes offered as entrées are more appealing to children and help reduce food waste. For example, one dietitian advised that children may be more likely to consume a bean and cheese burrito, and less likely to consume a scoop of beans from a salad bar. Similarly, a school district noted that students at their school prefer bean dishes such as pupusas, tacos, and chilis (which they offer as meats/meat alternates) compared to side dishes like baked beans and bean salads.

Some opponents seemed to misunderstand the proposal, assuming that it would lessen the overall amount of vegetables offered in school lunch. To be clear, schools would be required to offer a separate vegetable to count toward the daily and weekly vegetable component requirements when offering legumes as a meat/meat alternate. One State agency opposed the proposal, arguing that it could decrease the total amount of legumes offered in cases where schools are currently offering legumes as a meat/meat alternate in an entrée, along with offering legumes in a side dish as a vegetable. A few State agencies expressed concern that this proposal could lead to confusion among schools, resulting in meal pattern errors. Several respondents, including State agencies and an advocacy group, emphasized that training and technical assistance would be critical to ensure this provision is implemented correctly.

One proponent emphasized the benefits of legumes, which they described as versatile, inexpensive, sustainable, and nutritious. Other respondents, including industry respondents, agreed, suggesting legumes are a good source of several important nutrients, including dietary fiber and potassium. In general, many respondents expressed support for increasing consumption of legumes, which are currently underconsumed by children and adolescents (and all other age groups).[121]

Final Rule

This final rule codifies the option for schools to count beans, peas, and lentils offered as a meat alternate at lunch toward the weekly beans, peas, and lentils vegetable subgroup requirement. Under this option, as with the current requirement, schools would determine which overall meal component the beans, peas, and lentils would count toward: the vegetable meal component, or the meats/meat alternates meal component. This new option will permit beans, peas, and lentils offered as a meat alternate to count toward the weekly beans, peas, and lentils vegetable subgroup requirement. However, beans, peas, and lentils offered as a meat alternate would not also count toward the *daily* or *weekly* overall vegetable meal component requirements; schools using this option would be required to offer additional vegetables to meet the daily and weekly vegetable meal component requirements.

For example, a school offers a wrap with chickpeas, fresh tomatoes, and lettuce. In this example, the menu planner opts to count the chickpeas toward the meats/meat alternates meal component. In addition to counting toward the daily and weekly meats/meat alternates meal component requirements, the menu planner could also count the chickpeas toward meeting the weekly vegetable subgroup requirement to offer at least ½ cup of beans, peas, and lentils; the school would not need to offer another vegetable from this subgroup during that week. However, during this meal, because the chickpeas are already counting toward the meats/meat alternates meal component, they cannot also count toward the vegetable meal component. The menu planner would instead count the other vegetables offered in the wrap (tomatoes and lettuce) toward the daily and weekly total vegetable meal component requirements and their respective vegetable subgroups.

In a different example, a school offers a black bean and cheese quesadilla. In this example, the menu planner opts to count the cheese toward the meats/meat alternates meal component, and to count the black beans toward the vegetable meal component. In this case, the black beans could count toward the weekly requirement to offer ½ cup of beans, peas, and lentils (vegetable subgroup requirement), as well as the daily and weekly total vegetable meal component requirements, since the school is offering the beans as a vegetable and not as a meat alternate.

USDA is mindful of concerns, particularly from State agencies, that this provision could be implemented incorrectly. Public comments from State agencies expressed concern that when implementing this provision, schools may incorrectly double-count beans, peas, and lentils toward both the meats/meat alternates component and vegetable component in the same meal, resulting in a missing meal component at lunch. USDA recognizes the importance of providing thorough training and technical assistance to support implementation of this provision. Additionally, schools are not required to use this option and may instead continue with their current menu planning approach for beans, peas, and lentils. This new option is intended to support schools that wish to offer more plant-based and vegetarian options toward the meats/meat alternates meal component.

Accordingly, this final rule amends 7 CFR 210.10(c)(2)(ii)(C) and (c)(2)(iv)(E) to allow beans, peas, and lentils offered toward the meats/meat alternates meal component to also count toward the requirement to offer ½ cup of the beans, peas, and lentils vegetable subgroup each week. Beans, peas, and lentils offered toward the meats/meat alternates meal component would not count toward the daily or weekly overall vegetable meal component requirements. This change provides schools with more menu planning flexibility at lunch. Schools are not required to change menus or operations as a result of this provision.

Section 13: Competitive Foods: Bean Dip Exemption

Current Requirement

Current regulations at 7 CFR 210.11 establish requirements for all foods sold in schools outside of the school meal programs. These requirements, known as competitive food standards, or ''Smart Snacks in School'' standards, help to promote healthy food choices throughout the school day. To comply with these standards, hereafter referred to as the Smart Snacks standards, foods must meet nutrition standards, including the standards for total fat established at 7 CFR 210.11(f).

Proposed Rule

USDA proposed to add hummus to the list of foods exempt from the total fat standard in the Smart Snacks regulations. Hummus would continue to be subject to all other Smart Snacks standards, including limits for saturated fat, total sugars (by weight of product), calories, and sodium. This change would allow hummus, which is already permitted as a contributing (creditable) part of a reimbursable school meal, to be sold as a Smart Snack to students on campus throughout the school day, provided all other Smart Snacks nutrition standards are met.

[121] U.S. Department of Agriculture and U.S. Department of Health and Human Services. *Dietary Guidelines for Americans, 2020–2025.* 9th Edition. December 2020. Available at: *https://www.dietaryguidelines.gov/.*

Because there is currently no FDA standard of identity for hummus, USDA proposed to add the following definition of ''hummus'' to the Smart Snacks regulations: *Hummus means, for the purpose of competitive food standards implementation, a spread made from ground pulses (beans, peas, and lentils), and ground nut/seed butter (such as tahini [ground sesame], peanut butter, etc.) mixed with a vegetable oil (such as olive oil, canola oil, soybean oil, etc.), seasoning (such as salt, citric acid, etc.), vegetables and juice for flavor (such as olives, roasted pepper, garlic, lemon juice, etc.). Manufactured hummus may also contain certain ingredients necessary as preservatives and/or to maintain freshness.*

Public Comments

USDA received 200 comments on the proposal to exempt hummus from the Smart Snacks total fat standard, including 174 unique comments. Of these, 145 supported the proposal, including 119 unique comments, 1 was opposed, and 54 were mixed. Comments were submitted by State agencies, advocacy groups, industry respondents, school districts, and individuals.

Respondents, including a national organization representing tens of thousands of school nutrition professionals, overwhelmingly supported the proposal. One proponent noted that hummus provides many nutrients, including fiber, protein, iron, and magnesium. Another proponent described hummus as a nutritious snack option and maintained that hummus is filling and high in protein. An advocacy group noted that hummus provides healthy fats and is often served alongside other nutrient-dense foods, such as vegetables or whole grains, while other respondents, including a State agency, maintained this proposal would help children incorporate more legumes into their diets. Another State agency asserted that this proposal would allow schools to add a healthy à la carte option to their cafeterias. An advocacy group suggested this proposal would expand à la carte options for vegans and vegetarians.

A few proponents sought confirmation that the proposed exemption was limited to the total fat standard and that other Smart Snacks standards would continue to apply to hummus. For example, an advocacy group supported the proposal, provided that hummus would continue to be subject to the saturated fat standard for Smart Snacks. A State agency requested clarification that the Smart Snacks sodium limits would continue to apply to hummus. To clarify, under the proposed rule, hummus would continue to be subject to all other Smart Snacks standards, including limits for saturated fat, total sugars (by weight of product), calories, and sodium.

A few respondents opposed the proposal or provided other comments. One opponent cited concerns about processed foods, especially those containing soybean or canola oil. An advocacy group did not oppose the change, but suggested children would not eat hummus. One respondent wondered if schools could serve carrots with hummus as a Smart Snacks compliant combination food.

Although not directly related to the hummus proposal, other respondents recommended that USDA exempt other foods from the Smart Snacks total fat standard. For example, a few respondents encouraged USDA to provide an exception for avocados or guacamole. Another encouraged an exemption for salads with dressings, arguing that salad dressing has a high percentage of calories from fat, even if the overall calories in the salad are low. An industry respondent recommended that USDA exempt other condiments from Smart Snacks standards, suggesting that condiments promote the consumption of nutrient-dense foods. One school district suggested that USDA exempt nut butters from the total fat standard; to clarify, nuts and seeds and nut/seed butters are already exempt from the total fat and saturated fat Smart Snacks standards (7 CFR 210.11(f)(3)(ii)). This exemption does not apply to combination foods that contain nuts and seeds or nut/seed butters with other ingredients, such as peanut butter and crackers, trail mix, or chocolate covered peanuts.

A few respondents provided feedback on the proposed definition of hummus. A State agency described the proposed definition as ''reasonable.'' Another respondent pointed out that the word ''hummus'' has a culturally significant meaning and suggested USDA use a different term, such as ''ground bean-based dip.'' An advocacy group noted that some types of hummus do not include ground nut or seed butters. This respondent noted schools may prefer to sell hummus without nut or seed butter as an ingredient, given the potential for nut or seed allergies. Because of this, the advocacy group recommended making nut or seed butter an optional ingredient in the definition of hummus. A school district requested that USDA clarify whether the definition applies only to hummus made from chickpeas, or alternatively, if dips that include other types of beans would qualify for the exemption.

Final Rule

In this final rule, USDA is revising the terminology for this provision based on public comment. Instead of referring to ''hummus'' in regulation, this final rule will refer to ''bean dip.'' This change reflects input received through a public comment, which noted that the word ''hummus'' already has a culturally significant meaning and is traditionally made from chickpeas (rather than any variety of beans, peas, or lentils). The change also addresses a school district's question about whether this exemption is limited to hummus made with chickpeas, or if it can include products made from other types of beans. Based on these comments, USDA has determined a more general term is preferred. Therefore, this final rule adds *bean dip* to the list of foods exempt from the total fat standard in the Smart Snacks regulations. This exemption applies to products marketed as hummus, as well as bean dips made from any variety of beans, peas, or lentils. Bean dip would continue to be subject to the saturated fat standard for Smart Snacks, as well as all other Smart Snacks requirements.

This final rule also codifies the following definition of ''bean dip'' in the Smart Snacks regulations. Under this definition, bean dip can be made from chickpeas as well as other varieties of beans, peas, and lentils: *Bean dip means, for the purpose of competitive food standards, a spread made from ground pulses (beans, peas, and/or lentils) along with one or more of the following optional ingredients:*

- *Ground nut/seed butter (such as tahini [ground sesame] or peanut butter;*
- *Vegetable oil (such as olive oil, canola oil, soybean oil);*
- *Seasoning (such as salt, citric acid);*
- *Vegetables and juice for flavor (such as olives, roasted peppers, garlic, lemon juice); and*
- *For manufactured bean dip, ingredients necessary as preservatives and/or to maintain freshness.*

USDA appreciates input that stakeholders provided on the proposed definition. In this final rule, USDA has adjusted the definition to clarify that bean dip does not need to include all of the ingredients listed in the definition to qualify for this exemption. To qualify for the exemption, a bean dip must include ground pulses (beans, peas, and/or lentils), but the remaining ingredients listed in the definition are not required. The final definition clarifies that these remaining ingredients are *optional.* A bean dip may include any combination of one or more of the remaining optional

ingredients listed in the definition. For example, hummus made with chickpeas, water, tahini, sunflower oil, lemon juice, and spices (such as garlic, salt, and crushed red pepper) could be sold a la carte as a bean dip under this final rule provided that the product as packaged meets the Smart Snacks standards for calories, sodium, saturated fat, and total sugars by weight.

This change applies to bean dip as a standalone product; it does not apply to combination foods that include bean dip. For example, the exemption does not apply to hummus packaged with pretzels, pita, or other snack-type foods. Applying this exemption only to bean dip as a standalone product ensures that the other foods that are offered for sale to children at school alongside the bean dip remain subject to the Smart Snacks total fat standard, as well as all other Smart Snacks standards. Under this change, schools have the option to sell bean dip as a standalone product, or along with other standalone products that also meet the Smart Snacks standards, such as carrots or celery. As detailed at 7 CFR 210.11(d)(2), fresh vegetables, such as carrots and celery, with no added ingredients are exempt from Smart Snacks standards. Schools may also sell bean dip along with whole grain-rich pita bread, whole grain-rich crackers, or other products, provided those products meet the Smart Snacks standards.

As a reminder, when a product that is exempt from the Smart Snacks standards is paired with another product that is exempt, both exemptions are maintained when the products are paired and no other ingredients are added. For example, the celery, peanut butter, and raisins included in ''ants on a log'' sold a la carte would maintain their respective exemptions when paired together with no other ingredients. Additionally, combination foods with at least ¼ cup of fruit and/or vegetable (for example, ¼ cup of grapes with enriched pretzels) can be sold to students on campus throughout the day, provided the combination food, as packaged, meets all Smart Snacks standards for calories, sodium, total fat, saturated fat, and total sugars (by weight of product).

USDA appreciates public input on other foods and products that stakeholders would like to exempt from the Smart Snacks total fat standard. However, this new exemption is limited to bean dips, as defined at 7 CFR 210.11(a)(7). As noted, certain other products already have an exemption to the total fat standard, or the total fat and saturated fat standards, for Smart Snacks. These exemptions remain in place under this rule and are listed at 7 CFR 210.11(f).

Accordingly, this final rule amends 7 CFR 210.11(a)(7) to codify the definition of ''bean dip'' and 7 CFR 210.11(f)(2)(ii) to exempt bean dip, including hummus, from the total fat standard in the Smart Snacks regulations. This change provides schools the option to sell bean dip as a Smart Snack. Schools are not required to change operations as result of this provision.

Section 14: Meal Modifications

Current Requirement

Current regulations require schools, institutions, and facilities to make meal modifications to ensure participants with disabilities have an equal opportunity to participate in, and benefit from, the NSLP, SBP, and CACFP (7 CFR 210.10(m)(1), 220.8(m), and 226.20(g)(1)). The regulations allow, but do not require, schools, institutions, and facilities to make substitutions for ''medical or other special dietary needs'' that are not disabilities but that prevent a participant from consuming the regular reimbursable meal or snack. Under current NSLP and SBP regulations, substitutions for disability reasons must be supported by a written statement signed by a licensed physician. Under current CACFP regulations, the written statement must be signed by a licensed physician or licensed healthcare professional who is authorized by State law to write medical prescriptions. Under the current NSLP, SBP, and CACFP regulations, substitutions for ''medical or other special dietary needs'' must be supported by a written statement signed by a recognized medical authority (7 CFR 210.10(m)(2), 220.8(m), and 226.20(g)(2)). An exception is fluid milk substitutes for ''medical or special dietary needs'' that are not disabilities. Fluid milk substitutes for ''medical or special dietary needs'' must be supported by a written request; however, the written request may come from a parent or guardian or from a medical authority (7 CFR 210.10(m)(2)(ii)(B) and 226.20(g)(3)).[122] Fluid milk substitutes are discussed in greater detail in *Section 3B: Fluid Milk Substitutes: Responses to Request for Input* and *Section 3C: Fluid Milk Substitutes: Nutrient Requirements.*

Current NSLP and SBP regulations also encourage schools to consider ''ethnic, religious, or economic'' factors when planning or preparing meals, provided the variations meet the meal pattern requirements (7 CFR 210.10(m)(3) and 220.8(m)). CACFP regulations allow institutions and facilities—with USDA approval—to vary meal components on an experimental or continuing basis, if the variations are nutritionally sound and necessary to meet ''ethnic, religious, economic, or physical'' needs (7 CFR 226.20(h)).

In September 2016, USDA updated its school meal modification policy guidance[123] to reflect passage of The Americans with Disabilities Act (ADA) Amendments Act of 2008. Later, in June 2017, USDA issued updated CACFP and SFSP meal modification policy guidance.[124] The ADA Amendments Act clarified the meaning and interpretation of the ADA definition of ''disability'' to ensure that it would be broadly construed and applied without extensive analysis. Therefore, rather than focusing on if a child or adult participant has a disability, USDA's updated policy guidance stated that program operators should focus on working collaboratively with parents, guardians, participating adults, or a person acting on behalf of an adult participant to ensure equal opportunity to benefit from the programs. Notably, USDA's updated policy guidance[125] allowed a State licensed healthcare professional, such as a nurse practitioner or physician's assistant, to submit a medical statement on behalf of a child or adult participant with a disability. It also clarified that program operators may accommodate requests related to a disability that are not supported by a medical statement if the requested modification can be accomplished within the program meal patterns and encouraged operators to use this option when possible. At the

[122] As noted in the proposed rule, based on statutory requirements, USDA regulations include several other requirements for fluid milk substitutions for non-disability reasons, such as specific nutrition standards. See page 8061: *Child Nutrition Programs: Revisions to Meal Patterns Consistent With the 2020 Dietary Guidelines for Americans* (88 FR 8050, February 7, 2023). [125] See Question 16. U.S. Department of Agriculture, Accommodating Disabilities in the School Meal Programs: Guidance and Questions and Answers (Q&As). April 25, 2017. Available at: *https://www.fns.usda.gov/cn/accommodating-disabilities-school-meal-programs-guidance-qas.*

same time, the updated policy guidance explained that program operators may choose to obtain a written medical statement for all disability meal modifications, even those that fall within the meal patterns. This updated guidance addressed modifications required to accommodate disabilities that restrict a participant's diet; it did not address dietary preferences or other non-disability requests, which program operators are encouraged—but not required—to meet.

Proposed Rule

In the 2020 rule, USDA proposed a variety of regulatory changes to reflect the updated policy guidance and to improve access to modified meals for participants who need them. The rule proposed to codify in regulation that State licensed healthcare professionals may write medical statements to request modifications on behalf of participants with disabilities in the school meal programs and CACFP. It also proposed to define a State licensed healthcare professional as an individual authorized to write medical prescriptions under State law. Regarding child and adult participant food preferences, the 2020 rule proposed to revise existing regulatory text to encourage schools, institutions, and facilities to meet participants' cultural, ethical, Tribal, or religious preferences when preparing meals in the school meal programs and CACFP.[126] The rule also proposed reorganizing the regulatory text to distinguish between disability and non-disability requests more clearly. The 2020 rule did not propose changes to SFSP regulations.

Public Comments on 2020 Proposed Rule

USDA received 120 comments on the meal modifications provision of the 2020 proposed rule, including 83 unique comments. Of these, 69 supported the proposed changes, including 32 unique comments, 6 were opposed, and 45 were mixed.

Many respondents supported USDA's proposal to codify the existing policy guidance in regulation and appreciated the clarification that a medical statement is only required for modifications that fall outside the meal patterns. Respondents also emphasized the importance of ensuring participants who need meal modifications can easily access them and encouraged USDA to take steps to minimize burden for families in the modification request process.

Respondents provided input on the requirement for program operators to obtain a medical statement when the meal modification does not meet the meal pattern requirements. One State agency maintained that the meal patterns provide enough flexibility to meet a variety of needs and preferences. In cases where a child or adult participant requires a modification outside the scope of the meal patterns, this State agency agreed it should be supported by formal documentation. A few other State agencies asserted that requiring a medical statement protects children's health and is not too burdensome. Another State agency agreed, adding that the medical statement helps program staff ensure that a child or adult participant's health needs are met. Similarly, an advocacy organization noted that child nutrition professionals work diligently to meet non-disability dietary requests and preferences, and when making a disability-related meal modification, they benefit from a complete written medical statement. An individual suggested that program operators obtain a medical statement for all meal modifications, regardless of whether they fall within or outside of the meal patterns.

USDA requested specific input on the proposed definition of State licensed healthcare professional, and whether additional healthcare professionals should be permitted to submit a medical statement on behalf of a child or adult participant with a disability. Most respondents supported USDA's proposal to codify in regulation the authority allowing State licensed healthcare professionals to submit a medical statement on behalf of a participant with a disability. However, respondents shared a variety of perspectives on whether this authority should be expanded further. For example, one State agency did not support expanding the scope of who can submit a medical statement beyond State licensed healthcare professionals, noting that obtaining the medical statement is an important step in ensuring that all participant's needs are met with professionalism and sound medical guidance. An advocacy group agreed, stating that they do not support expanding the definition to include additional professionals; this respondent maintained that ''State licensed healthcare professional'' as defined in the proposed rule is the appropriate level of authority to ensure a child or adult participant's health.

One State agency suggested that allowing registered and licensed dietitians to write medical statements to support meal modifications seems very reasonable given this is their field of expertise. A second State agency agreed, noting that dietitians may be more accessible to families, reducing the burden of obtaining the necessary documentation for a meal modification, while a third State agency argued that dietitians may be better suited than the currently approved professionals to determine whether a child or adult participant has a disability that affects their ability to consume certain foods. Another respondent noted that dietitians tend to be available at the district level working directly with schoolchildren who could benefit from disability-related meal modifications. However, several respondents noted that dietitians are not licensed in all States.

One State agency recommended accepting medical statements from registered dietitians, speech pathologists, licensed clinical social workers, and psychologists. Another State agency agreed, noting that registered dietitians and speech pathologists have extensive training and are often consulted to develop modification requests for children with disabilities. Others, including school districts and individuals who work in schools, agreed, noting expanding the scope of who can submit a medical statement would facilitate access to meal modifications for children who need them. However, a few State agencies expressed concern that adding additional titles would confuse non-disability preferential requests with medically necessary requests. Others agreed, cautioning against expanding this authority to professionals who are not trained in science-based nutrition therapy. One State agency noted that, within their State, at least 10 types of professionals already meet the definition of ''State licensed healthcare professionals.'' This State agency maintained that program operators have not struggled to obtain the required documentation needed to provide meal modifications for disability-related needs.

Final Rule

This final rule codifies in regulation that State licensed healthcare professionals may write medical statements to request modifications on behalf of child or adult participants with disabilities in the school meal programs and CACFP. It also defines a

[126] For comparison, current regulations at 7 CFR 210.10(m)(3) state that, ''Schools should consider ethnic and religious preferences when planning and preparing meals . . . Any variations must be consistent with the food and nutrition requirements specified under this section and needed to meet ethnic, religious, or economic needs.''

State licensed healthcare professional as an individual authorized to write medical prescriptions under State law. Based on public input, this final rule also permits registered dietitians to write medical statements to request modifications on behalf of child and adult participants with disabilities in the school meal programs and in CACFP. The requirement to accept medical statements from registered dietitians must be implemented by July 1, 2025, for NSLP and SBP, and by October 1, 2025, for CACFP. Schools, institutions, and facilities have the option, but are not required, to implement this change prior to the implementation date. This final rule also encourages schools, institutions, and facilities to meet participants' non-disability dietary preferences when planning and preparing school and CACFP meals.

This final rule updates and reorganizes the regulatory text to distinguish between disability and non-disability requests more clearly. Because a dietary need that restricts a participant's diet could be considered a disability, this final rule removes the regulatory language regarding participants ''without disabilities who cannot consume the regular lunch or afterschool snack because of medical or other special dietary needs.'' [127] This change reflects that participant requests for modifications or variations would fall into one of two categories: disability or non-disability requests. Additionally, in NSLP regulations, the final rule moves the regulatory text related to fluid milk substitutes for non-disability reasons to the section of the regulation that discusses fluid milk requirements (7 CFR 210.10(d)). This change is expected to help clarify the requirements for fluid milk substitutions for non-disability reasons. The final rule also adjusts the regulatory language regarding written requests for fluid milk substitutes, replacing ''medical authority'' with ''State licensed healthcare professional or registered dietitian.'' This reflects the approach used for fluid milk substitutes in the proposed rule, which changed ''medical authority'' to ''State licensed healthcare professional,'' except that this final rule also includes registered dietitians. This supports USDA's efforts to use consistent terminology across program regulations. As with prior regulations and the proposed rule, a child or adult participant's parent or guardian may also submit a written request for a non-disability fluid milk substitute in NSLP, SBP, or CACFP. Lastly, this final rule updates the regulatory definitions of *Child* in NSLP and SBP regulations, *Child with a disability* in NSLP regulations, and *Persons with disabilities* in CACFP regulations.

Along with State licensed healthcare professionals, USDA is authorizing registered dietitians to submit medical statements for disability meal modifications in response to public comment, and due to the specific education and training requirements they receive. Registered dietitians are not required to have a State license to submit medical statements for meal modifications under this rule. USDA agrees that registered dietitians are well-positioned to determine specific, nutritionally sound meal modifications to support participants with disabilities. Registered dietitians are credentialed professionals, and according to the Commission on Dietetic Registration, registered dietitians are food and nutrition experts who have met the Commission on Dietetic Registration's (CDR) criteria to earn the registered dietitian credential.[128] USDA acknowledges that other skilled professionals—such as speech therapists, psychologists, and social workers—have extensive knowledge in their fields and serve critical roles in the care of children and adults. While USDA does not authorize acceptance of medical statements for disability meal modifications beyond State licensed healthcare professionals and registered dietitians, USDA expects that State licensed healthcare professionals and registered dietitians will continue to coordinate with other key professionals, depending on the specific needs of participants with disabilities. With this rule, USDA is balancing the importance of improving participant access to meals that meet their individual needs with the importance of ensuring that schools, institutions, and facilities have the information they need to keep participants with disabilities that restrict their diet safe.

USDA recognizes that some respondents are concerned about dietary requests that are not medically necessary. Schools, institutions, and facilities are not obligated to meet requests that are not related to a participant's disability. Additionally, USDA reminds schools, institutions, and facilities that their obligation is to provide a meal modification to accommodate a participant's disability, not to provide an exact product listed on the medical statement. For example, if a medical statement lists an expensive, brand-name product as a substitution for a participant with a disability, the school, institution, or facility should engage in an interactive process with the participant's parent or guardian to see if it would be safe and appropriate to provide a lower-cost, generic brand item. In most instances, a generic brand is sufficient, unless the brand name item is medically necessary. In general, if a school, institution, or facility has concerns about a request, they are responsible for working with the parent or guardian to develop an appropriate modification and, as applicable, suitable alternatives.

This final rule also codifies changes related to non-disability meal variations in the school meal programs and CACFP. The prior NSLP regulations encouraged schools to consider variations for ''ethnic, religious, or economic reasons.'' In CACFP, the prior regulations noted potential variations for ''ethnic, religious, economic, or physical needs'' at the institution or facility level but did not encourage variations to meet participant preferences. This final rule changes the school meal and CACFP regulations to encourage program operators to meet child and adult participant preferences when planning and preparing meals. As noted in the proposed rule, meeting non-disability dietary preferences is encouraged, but not required. Although the proposed rule specifically listed several categories of non-disability dietary preferences, in the final rule, USDA has instead opted to refer to ''preferences'' generally. This is not intended to diminish the importance of the dietary preferences listed in the proposed rule, but rather, to allow the regulation to be applied broadly to the range of child and adult participant dietary preferences. These preferences include, but are not limited to, the non-disability dietary preferences included in the proposed rule: cultural, ethical, Tribal, and religious preferences. The *Dietary Guidelines* emphasize the importance of considering dietary preferences and cultural traditions and provide a framework to be customized to reflect the foodways of the diverse

[127] This language reflects regulatory language formerly included in NSLP regulations at 7 CFR 210.10(m)(2). Similar language was also previously included in CACFP regulations at 7 CFR 226.20(g)(2).

[128] The Commission on Dietetic Registration is the credentialing agency for the Academy of Nutrition and Dietetics. See: Commission on Dietetic Registration. *Registered Dietitian (RD) or Registered Dietitian Nutritionist (RDN) Certification.* Available at: *https://www.cdrnet.org/RDN.*

cultures in the U.S.[129] Similarly, the NSLP, SBP, and CACFP allow schools, institutions, and facilities to choose specific foods to offer at each meal, provided the meal meets the overarching meal pattern requirements. USDA acknowledges that, due to operational and budgetary constraints, program operators may not be able to meet all participant preferences at each meal service; however, USDA encourages program operators to strive for an inclusive meal service.

Consistent with the proposed rule, these changes do not apply to SFSP. USDA acknowledges that many stakeholders would like to see SFSP included with these changes. However, USDA instead intends to address SFSP meal pattern requirements separately and comprehensively in future rulemaking. The existing policy guidance[130] for SFSP meal modifications for disabilities remains in effect.

Accordingly, this final rule amends 7 CFR 210.2, 210.10(d)(2) and (m), 215.7a(b), 220.8(m), 226.2, and 226.20(g) to revise regulatory requirements for meal modifications for disability and non-disability reasons for the school meal programs and CACFP. The change requiring program operators to accept medical statements from registered dietitians must be implemented by July 1, 2025, for NSLP and SBP, and by October 1, 2025, for CACFP.

Section 15: Clarification on Potable Water Requirements

Current Requirement

Current NSLP regulations at 7 CFR 210.10(a)(1)(i) require schools to make potable water available and accessible without restriction to children at no charge in the places where lunches are served during the meal service. When breakfast is served in the cafeteria, current SBP regulations at 7 CFR 220.8(a)(1) require schools to make potable water available and accessible without restriction to children at no charge. USDA issued policy guidance to support implementation of this provision in July 2011. In that policy guidance, USDA specified that schools must serve *plain* water to meet the potable water requirement.[131]

Proposed Rule

In the 2020 proposed rule, USDA proposed to allow schools to offer calorie-free, naturally flavored, noncarbonated water to meet the potable water requirement. Under the proposed rule, schools would have the option to continue to offer plain water to meet the potable water requirement but could also meet the requirement by offering naturally flavored water.

Public Comments on 2020 Proposed Rule

USDA received 85 comments on the potable water provision of the 2020 proposed rule; all were unique comments. Of these, 37 supported the proposal, 29 were opposed, and 19 were mixed.

Proponents, including State agencies, school districts, and industry respondents, argued that offering naturally flavored water would increase water appeal and consumption. For example, one advocacy group suggested that water infused with lemons, berries, cucumbers, or mint would boost student water consumption. A State agency agreed that water with cucumber, lemon, or herbs would be a low-cost way to improve the palatability of water.

A few respondents supported expanding potable water options, but only to water flavored with fresh or frozen fruits or vegetables. Other respondents argued that this provision should not permit water with food additives or sweeteners. Some respondents requested clarification on the type of water schools could offer to meet the potable water requirement under this provision.

One opponent argued children's mealtime beverage options should be limited to plain water, milk, and limited amounts of 100 percent fruit or vegetable juice. Another opponent suggested consuming flavored water would adapt children's palates toward sweeter beverages, moving them away from the natural taste of water. Several respondents were opposed to water flavored with certain ingredients, such as ''artificial sweeteners'' and other additives. One advocacy group argued that the goal of the potable water provision is to ensure clean drinking water for children and maintained there is no reason to revise the current standard.

Some respondents offered alternatives or suggestions for implementation. For example, one State agency did not oppose allowing water flavored with fruits, vegetables, and herbs, but emphasized this option should be in addition to plain potable water. This State agency was concerned about food allergies and indicated that maintaining plain potable water during mealtimes would be important for children who cannot consume water with fruits, vegetables, or herbs. Regarding water with fruits or vegetables added, a few advocacy groups suggested clarifying that fruits or vegetables used to flavor water may not count toward the meal pattern requirements. Several respondents, including proponents and opponents, noted the importance of following food safety guidelines when offering fruit- or vegetable-infused water.

Respondents also highlighted the importance of water consumption and hydration. One advocacy group emphasized the importance of ensuring schools have safe drinking water. Another respondent suggested investing in basic plumbing, as well as installing water bottle filling stations in schools. A few advocacy organizations stated support for policies and efforts that expand safe water options for students.

Final Rule

This final rule will not adopt the 2020 proposal to allow schools to offer calorie-free, naturally flavored, noncarbonated water to meet the potable water requirement. This decision is supported by public comments, which noted that some children may have food allergies that prevent them from consuming water with fruits, vegetables, or herbs. It is also responsive to public comments that raised concerns about other ingredients, such as sweeteners or additives. Under this final rule, schools will continue to be required to make plain potable water available and accessible without restriction to children at no charge during the meal service. To clarify this requirement, this final rule adds the word ''plain'' to the regulations requiring potable water to be offered with school meals at 7 CFR 210.10(a)(1)(i) and 220.8(a)(1). As with current regulations, this requirement applies in places where lunches are served during the meal service, including lunches served outside of the cafeteria. For breakfast, as with current regulations, this requirement applies when breakfast is served in the cafeteria.

[129] According to page ix of the *Dietary Guidelines,* ''A healthy dietary pattern can benefit all individuals regardless of age, race, or ethnicity, or current health status. The *Dietary Guidelines* provides a framework intended to be customized to individual needs and preferences, as well as the foodways of the diverse cultures in the United States.'' U.S. Department of Agriculture and U.S. Department of Health and Human Services. *Dietary Guidelines for Americans, 2020–2025.* 9th Edition. December 2020. Available at: *DietaryGuidelines.gov.*

[130] U.S. Department of Agriculture, *Policy Memorandum on Modifications to Accommodate Disabilities in the Child and Adult Care Food Program and Summer Food Service Program,* June 22, 2017. Available at:*https://www.fns.usda.gov/cn/modifications-accommodate-disabilities-cacfp-and-sfsp.*

[131] U.S. Department of Agriculture. *Water Availability During NSLP Meal Service.* July 12, 2011. Available at: *https://www.fns.usda.gov/cn/water-availability-during-nslp-meal-service.*

Maintaining the requirement to offer plain potable water responds to public comments that emphasized the importance of prioritizing access to plain water for children who prefer it, or who cannot consume water with fruits, vegetables, or herbs due to food allergies. However, USDA wishes to clarify that the requirement to offer plain potable water does not limit schools' ability to also offer potable water with fruits, vegetables, and herbs added, in addition to the required plain water. For example, a school may offer fruit-infused water at lunch provided children also have access to plain potable water during the meal service. State agencies and schools are reminded that reasonable costs associated with providing potable water are an allowable cost to the nonprofit school food service account. Additionally, based on public comment, USDA clarifies that fruits, vegetables, and herbs added to plain potable water do not count toward the meal pattern requirements for fruits or vegetables. Schools also are not required to count the negligible calorie content of water infused with fruits, vegetables, or herbs toward the weekly calorie limits.

USDA also appreciates public comments regarding the importance of food safety when offering water with fruits, vegetables, or herbs. Regulations at 7 CFR 210.13(a) require school food authorities to ensure that food storage, preparation, and service is in accordance with the sanitation and health standards established under State and local law and regulations. School food authorities must also develop a written food safety program that covers any facility or part of a facility where food is stored, prepared, or served (7 CFR 210.13(c)). Schools opting to offer water with fruits, vegetables, or herbs must continue to follow the food safety requirements as detailed in 7 CFR 210.13(c), as well as applicable State and local requirements.

Accordingly, this final rule amends 7 CFR 210.10(a)(1)(i), 210.18(h)(2)(v), and 220.8(a)(1) to add the word ''plain'' to the potable water requirements. Schools are not required to change menus or operations as a result of this technical change.

Section 16: Synthetic Trans Fats

Current Requirement

Current regulations prohibit synthetic *trans* fat in the school lunch and school breakfast programs, and in foods sold to children on campus during the school day (7 CFR 210.10(f)(4), 220.8(f)(4), and 210.11(g)). This requirement was included in *Nutrition Standards in the National School Lunch and School Breakfast Programs* [132] and in *National School Lunch Program and School Breakfast Program: Nutrition Standards for All Foods Sold in School as Required by the Healthy, Hunger-Free Kids Act of 2010.*[133] The synthetic *trans* fat prohibition was phased in, beginning with the NSLP, in SY 2012–2013.

In 2015, the FDA determined that partially hydrogenated oils, the major source of artificial (synthetic) *trans* fat in the food supply, were no longer ''Generally Recognized as Safe,'' or GRAS. Based on this determination, the FDA took regulatory action to eliminate partially hydrogenated oils (and, therefore, synthetic *trans* fats) from the United States food supply. While the compliance date for certain uses was extended, the compliance date for most uses of partially hydrogenated oils was June 18, 2018.[134] As of January 2020, food manufacturers were no longer allowed to sell foods containing *trans* fats. This FDA action effectively banned *trans* fats from being added to foods made or sold in the U.S., making additional regulations prohibiting synthetic *trans* fats in school meals unnecessary.

Proposed Rule

In the 2020 proposed rule, USDA proposed to remove the synthetic *trans* fat prohibition for NSLP, SBP, and foods sold to children on campus during the school day. The proposed rule stated that under this change, schools would not have to comply with, and State agencies would not have to monitor, synthetic *trans* fat requirements. As noted in the proposed rule, based on the FDA's action to remove synthetic *trans* fat from the United States food supply, USDA determined that school meal regulations prohibiting synthetic *trans* fat were no longer necessary. Because FDA took action to remove synthetic *trans* fats from the food supply, USDA concluded that maintaining additional regulations to prohibit synthetic *trans* fats in school meals was unnecessary.

Public Comments on 2020 Proposed Rule

USDA received 29 comments on the synthetic *trans* fat provision of the 2020 proposed rule; all were unique comments. Of these, 14 supported the proposal, 14 were opposed, and 1 was mixed.

Proponents, including industry respondents and advocacy groups, supported removing the synthetic *trans* fat prohibition due to the FDA's actions to remove synthetic *trans* fat from the food supply. One industry respondent supported the change but questioned how *trans* fat that occurs naturally in foods would be monitored. However, another industry respondent noted that naturally occurring *trans* fat, which is present in some meat and dairy products, occurs at very low levels. A few State agencies supported the proposal. One State agency noted that synthetic *trans* fat would not be a concern in school meals after its elimination from the U.S. food supply. Another State agency agreed but noted that the FDA's compliance date could be extended; this State agency recommended that USDA delay implementation of its regulation until synthetic *trans* fat is fully eliminated from the food supply.

A few opponents cited general health concerns related to synthetic *trans* fat consumption, without acknowledging the elimination of synthetic *trans* fat from the food supply. Several other opponents, including State agencies and Attorneys General from several States, cited concerns about the FDA's compliance date for the elimination of synthetic *trans* fat. One State agency provided mixed feedback, recommending that USDA align its final standard with the FDA's compliance date. Another State agency opponent cited concerns about synthetic *trans* fat in non-domestic foods.

Final Rule

This final rule removes the dietary specification prohibiting synthetic *trans* fat in the school lunch and breakfast programs and in foods sold to children on campus during the school day. Under this change, schools will no longer need to include the synthetic *trans* fat prohibition in their procurement documentation, and State agencies will no longer need to review product labels or manufacturer specifications for compliance with the synthetic *trans* fat dietary specification. This change reduces burden by

[132] U.S. Department of Agriculture. *Nutrition Standards in the National School Lunch and School Breakfast Programs.* (77 FR 4088, January 26, 2012). Available at: *https://www.federalregister.gov/documents/2012/01/26/2012-1010/nutrition-standards-in-the-national-school-lunch-and-school-breakfast-programs.*

[133] U.S. Department of Agriculture. *National School Lunch Program and School Breakfast Program: Nutrition Standards for All Foods Sold in School as Required by the Healthy, Hunger-Free Kids Act of 2010.* (81 FR 50132, July 29, 2016). Available at: *https://www.federalregister.gov/documents/2016/07/29/2016-17227/national-school-lunch-program-and-school-breakfast-program-nutrition-standards-for-all-foods-sold-in.*

[134] U.S. Food and Drug Administration. *Final Determination Regarding Partially Hydrogenated Oils (Removing Trans Fat).* Available at: *https://www.fda.gov/food/food-additives-petitions/final-determination-regarding-partially-hydrogenated-oils-removing-trans-fat.*

eliminating a requirement that USDA determined is no longer necessary due to the FDA's actions to eliminate synthetic *trans* fat from the U.S. food supply.

USDA acknowledges respondent concerns about the compliance date for the FDA's order eliminating synthetic *trans* fat from the U.S. food supply. While implementation of the FDA's order began in June 2018, at the time the 2020 proposed rule published, the compliance date for certain uses of partially hydrogenated oils had been extended. The final compliance date of January 2021, which extended the compliance date for specific, limited petitioned uses of partially hydrogenated oils, has now been in effect for several years.[135]

USDA appreciates concerns one respondent raised regarding synthetic *trans* fat in non-domestic foods. The elimination of synthetic *trans* fat applies to all foods sold in the U.S food supply, including non-domestic foods. Additionally, school food authorities are required by law to purchase domestic commodities or products to the maximum extent practicable. This rulemaking strengthens the existing Buy American requirements and establishes a new threshold limit for non-domestic food purchases (see *Section 18: Buy American*). Further, USDA data from SY 2017–2018 found that fruits and vegetables are by far the most common non-domestic food purchases for school food authorities.[136] Therefore, USDA does not expect the limited use of non-domestic foods in the NSLP and SBP to result in an increase in synthetic *trans* fats in school meals.

Finally, USDA acknowledges public comments about naturally occurring *trans* fat. The FDA notes that *trans* fat occurs naturally in small amounts in some meat and dairy products and is present at very low levels in other edible oils.[137] In the 2012 rule, USDA clarified that the *trans* fat prohibition for school meals would not apply to naturally occurring *trans* fat present in some meat and dairy products. Rather, it would apply to synthetic *trans* fat, which the 2012 rule preamble noted "are found in partially hydrogenated oils used in some margarines, snack foods, and prepared desserts." [138] This final rule does not impact naturally occurring *trans* fat, which continue to be permitted in school meals.

Accordingly, this final rule amends 7 CFR 210.10(a)(3), (b)(1), (c), (f), (g), (h), and (j), 210.11(f) and (g)(2), 210.18(l)(2)(iii), and 220.8(a)(3), (b)(1), (c), (f) through (h), and (j). This change reduces burden on State agencies and schools. Schools are not required to change menus or operations as a result of this change.

Section 17: Professional Standards: Hiring Exception for Medium and Large Local Educational Agencies

Current Requirement

Current regulations at 7 CFR 210.30(b)(1) describe the hiring standards for school nutrition program directors; the standards vary for directors operating in small, medium, and large local educational agencies. Specifically, the hiring requirements for school nutrition program directors in medium (2,500 to 9,999 students) and large (10,000 or more students) local educational agencies are as follows:

- According to 7 CFR 210.30(b)(1)(ii), school nutrition program directors with local educational agency enrollment of 2,500 to 9,999 students (*i.e.,* a medium local educational agency) must have:
- A bachelor's degree, or equivalent educational experience, with an academic major or concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field;
- A bachelor's degree, or equivalent educational experience, with any academic major or area of concentration, and a State-recognized certificate for school nutrition directors;
- A bachelor's degree in any academic major and at least two years of relevant experience in school nutrition programs; or
- An associate's degree, or equivalent educational experience, with an academic major or area of concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field and at least two years of relevant school nutrition program experience.
- According to 7 CFR 210.30(b)(1)(iii), school nutrition program directors with local educational agency enrollment of 10,000 or more students (*i.e.,* a large local educational agency) must have:
- A bachelor's degree, or equivalent educational experience, with an academic major or area of concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field;
- A bachelor's degree, or equivalent educational experience, with any academic major or area of concentration, and a State-recognized certificate for school nutrition directors; or
- A bachelor's degree in any major and at least five years of experience in management of school nutrition programs.

Proposed Rule

USDA proposed to allow State agency discretion to approve the hiring of an individual to serve as a school nutrition program director in a medium or large local educational agency, for individuals who have 10 or more years of school nutrition program experience but who do not hold a bachelor's or an associate's degree. Additionally, USDA proposed to clarify in regulation that State agencies may determine what counts as "equivalent educational experience" for the hiring standards. The proposed rule suggested that this change would allow highly experienced individuals to advance their careers in school food service. Additionally, the proposal could help to ease hiring challenges that USDA understands some medium and large local educational agencies experience.

Public Comments

USDA received 297 comments on the proposed changes for professional standards including 169 unique comments. Of these, 173 supported the proposal, including 106 unique comments, 23 were opposed, all of which were unique comments, and 101 were mixed, including 40 unique comments. State agencies, school nutrition professionals, advocacy groups, industry respondents, school

[135] See: "Implementation." U.S. Food and Drug Administration. *Final Determination Regarding Partially Hydrogenated Oils (Removing Trans Fat).* Available at: *https://www.fda.gov/food/food-additives-petitions/final-determination-regarding-partially-hydrogenated-oils-removing-trans-fat.*

[136] Of the 26 percent of school food authorities that reported using exceptions to the Buy American provision in SY 2017–2018, 93 percent reported using them to purchase fruit, while 53 percent reported using them to purchase vegetables. By comparison, 18 percent reported using them to purchase "other" foods, such as yeast, oils, and spices, and less than 10 percent each reported using them to purchase grains or meat/meat alternates. See *Exhibit 4: Among SFAs that Reported Using an Exception to the Buy American Provision, Reasons for Using an Exception and Products Purchased.* U.S Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *Child Nutrition Program Operations Study (CN–OPS–II): SY 2017–18.* Beyler, Nick, Jim Murdoch, and Charlotte Cabili. districts, dietitians, and individuals submitted comments.

One school district proponent described the proposal as a ''solid move'' that would benefit capable professionals with relevant work experience; this proponent affirmed such individuals are an asset to school nutrition programs. Another school district agreed, stating that the leadership and achievements of experienced candidates should be valued. Several respondents suggested that this proposal would allow knowledgeable professionals to use their skills to benefit schools and students, with some citing their personal experiences in the field of school nutrition. An individual maintained this change would be especially useful in rural communities with small applicant pools and limited ability to hire directors that meet the current education requirements. A school district agreed, stating that any change to expand the pool of candidates would be welcome.

An individual proponent affirmed that the proposal would expand opportunity for school districts to hire qualified candidates from within their district. Similarly, an industry respondent suggested the proposal would allow candidates in assistant director positions to advance in their careers. A State agency agreed, asserting that this change would allow school districts to promote experienced employees who may be the best candidate for the job. A school district suggested the proposal would allow a path for growth in the field of child nutrition while still requiring the experience needed to do the job.

An advocacy group cited a Congressional Research Service report which indicated that 94 percent of foodservice employees in U.S. elementary and secondary schools are women. This respondent suggested that the degree requirement creates an inequity to advancement in school nutrition, citing the cost of obtaining a degree as an example of a barrier. While this respondent supported the proposal, they also urged USDA to promote greater economic opportunity for the school nutrition workforce, including support for professional development. Similarly, a State agency acknowledged that the ability to obtain a degree is ''often a benefit of class and economic privilege'' and supported valuing experience equally. One respondent, citing their personal experience, described working toward an advanced degree as ''time consuming and extremely expensive.'' This respondent also raised concerns about student loan debt, particularly for individuals who have already been working in child nutrition for decades. A school district agreed, stating that experience should matter just as much as a degree, particularly given barriers many people face in obtaining a degree.

A national organization representing tens of thousands of school nutrition professionals noted that the professional standards requirements ensure that school nutrition directors have the education and skills necessary to excel in their roles and to work alongside principals, superintendents, and other highly credentialed individuals. At the same time, this organization supported allowing a minimum of 10 years of school nutrition program experience to substitute for a degree due to hiring and recruitment issues that some schools are experiencing. Similarly, another respondent cited concerns about staffing and workload challenges, and suggested the proposal would benefit schools. An advocacy group emphasized that this proposal could help to address hiring issues by expanding access to promotion opportunities within school nutrition. A State agency agreed, suggesting this proposal would reward dedicated school nutrition staff and encourage career growth.

Other respondents opposed the proposal. One school district argued that a college degree is necessary for the director position in medium and large districts. This respondent noted that this position requires knowledge of food safety, personnel management, and how to ''run a business.'' A few other school districts agreed, arguing higher education is necessary to succeed as a director in medium and large districts. A dietitian maintained that years of experience should not substitute for a degree; along with formal education, this respondent emphasized the importance of ongoing learning. Another opponent argued that the requirements placed on school nutrition professionals have not lessened; therefore, USDA should not provide flexibility to the hiring standards. A school district opponent described their education credentials, maintaining that their advanced degree provided them with skills to balance budgets and develop menus for students with special diets. This respondent urged USDA to uphold the current standards. Another school district argued that the current degree requirement gives school nutrition directors credibility when interacting with school administrators, staff, and families.

In addition to general feedback on the proposed changes, USDA requested public input on the following questions:

- Is it reasonable to allow medium and large local educational agencies to substitute 10 years of school nutrition program experience for a bachelor's or an associate's degree when hiring a school nutrition program director?
- Should USDA also consider allowing medium and large local educational agencies to substitute other types of experience, such as experience in other food service sectors?
- How often do State agencies and school districts anticipate using the hiring exception?
- What strategies do local educational agencies currently use to recruit qualified school nutrition program directors?

A handful of respondents provided feedback in response to the first question, which was about the number of years of experience that USDA should allow to substitute for a degree when hiring a director in a medium or large local educational agency. A dietitian argued that 10 years of real-world experience would provide an individual the knowledge needed to succeed as a director. An advocacy group asserted that a school nutrition professional with 10 years of experience would have participated in many hours of training, in addition to their regular job duties, making them ''very capable of doing an excellent job as a director.'' An industry respondent agreed that 10 or more years of child nutrition program experience ''is a suitable alternative to traditional education.'' One respondent suggested 10 years of experience is appropriate for large school districts and suggested 5 to 7 years could be appropriate for medium school districts, provided the candidate had experience with procurement, menu planning, and personnel management. A few school districts suggested that USDA consider lowering the number of years from 10 to 5 years for medium and large school districts. A State agency agreed, maintaining that allowing 5 years of school nutrition program experience to substitute for a degree would further ease hiring challenges faced by some school districts. Another State agency suggested that it would be reasonable to require 4 years of child nutrition program experience, rather than 10 years, given it typically takes about 4 years to complete a bachelor's degree. A school district respondent did not provide a specific number of years of experience needed, but emphasized the value of institutional knowledge, which they conveyed is the result of ''many years spent doing the work.''

Respondents also addressed whether USDA should allow other types of experience, such as experience in other

food service sectors, to substitute for a degree. One school district encouraged USDA to allow other food service experience, including military food service, to count when assessing a candidate's potential. A State agency agreed, provided the work experience includes duties similar in size and scope to the role of a school nutrition program director. This State agency noted that other food service sectors may provide similar experience in procurement, menu planning, ordering, receiving, invoicing, and inventory control. Conversely, given the specific requirements of school meal programs, a national organization representing tens of thousands of school nutrition professionals maintained that only school nutrition program experience should be allowed to substitute for a degree. This organization further suggested that this experience should include managing or supervising personnel and overseeing school meal programs at the district level for multiple sites. A school district proponent also emphasized the importance of child nutrition program experience, as opposed to commercial food service experience. A State agency agreed, noting that other sectors are not as regulated as USDA food service programs, which may make the transition from another area of food service to school nutrition difficult for a new director.

A few respondents provided input on the third question regarding how often the proposed hiring exception would be used. One State agency noted that they receive at least two requests for hiring exceptions for medium and large school districts per year; this respondent supported the proposal. A second State agency proponent expected to receive about four requests for an exception per year, with the potential for more, should the proposal be finalized. A third State agency did not directly address the question, but shared one real-world example where this exception could have been used to hire a highly qualified candidate with 20 years of experience in their State. This State agency supported the proposal, describing it as ''reasonable.'' On the other hand, one State agency did not anticipate the flexibility would be used often, suggesting that medium and large school districts would opt to require a bachelor's or an associate's degree for director positions.

A few respondents shared strategies that school districts use to recruit qualified school nutrition program directors. One State agency noted that school districts recruit qualified candidates through advertisements on websites, search engines, and social media, and by holding job fairs. Another State agency suggested that partnerships with career tech centers and college programs have helped some school districts, while acknowledging that recruiting directors can be a challenge. One respondent stated that school districts post position openings through ''normal recruitment channels.''

Some respondents offered alternatives to the proposal, or suggested changes. For example, a few respondents recommended that USDA outline specific types of experience candidates must have to qualify for the hiring exception, in addition to their years of experience. A school district emphasized the importance of understanding finances, which they argued is crucial for making strategic decisions. An advocacy group suggested that USDA require experience in a supervisory role and in counting, claiming, menu development, and other areas of program administration. This respondent also suggested requiring a certain number of technical school or college credits to qualify for this exception. A dietitian recommended requiring management skills and emphasized the importance of ensuring directors can interpret regulations, plan menus, oversee a budget, and coach staff. Another respondent suggested that USDA specify whether the years of experience would need to be consecutive for a candidate to qualify for the exception.

Other respondents suggested that USDA narrow the scope of the proposed change or add other requirements to the process. One respondent recommended that medium and large school districts should only be allowed to use this exception if they implement a plan for the candidate to earn a degree. A State agency recommended limiting this exception to instances when there is documentation that no candidates who applied for the position met the education criteria. An advocacy group recommended the exception only be allowed in rural areas, arguing that urban school districts can find candidates that meet the existing standards. However, another advocacy group acknowledged differences in local needs based on school district size and urbanicity, and suggested State agencies should have discretion to approve the hiring of a director based on specific local context. Going further, an individual recommended that it should be the school district's decision whether to use the hiring exception, presumably as opposed to requiring State agency approval. Another respondent suggested eliminating the education requirements entirely, arguing if someone can do the job based on their skills, they should be eligible. A form letter campaign supported the proposal but suggested that USDA seek guidance from school nutrition professionals to make sure the change is implemented in a way that is ''as helpful as possible.''

A few respondents provided feedback on school nutrition hiring and training requirements in general. One advocacy group acknowledged the importance of the professional standards requirements, noting that they ensure school nutrition program personnel have the knowledge and skills they need to operate the programs successfully. This respondent suggested that the professional standards have supported improvements in meal quality in their State and nationwide. A few respondents noted the value of mentoring for a successful career in school nutrition. Another emphasized the important role of their State agency, adding that they feel well supported by their State agency in their continued learning.

Final Rule

This final rule codifies the proposal to allow State agency discretion to approve the hiring of an individual to serve as a school nutrition program director in a medium or large local educational agency, for individuals who have 10 or more years of school nutrition program experience but who do not hold a bachelor's or an associate's degree. Directors hired under this exception must have a high school diploma or GED. USDA expects that this change will allow highly experienced and qualified individuals to advance their careers in school nutrition. This change is also expected to ease hiring challenges which USDA understands are experienced by some medium and large local educational agencies.

USDA appreciates public input on the number of years of experience, and the type of experience, that should qualify a candidate for this exception. Several respondents acknowledged the importance of experience in school nutrition, including experience developing menus that meet the regulatory meal pattern requirements, counting and claiming meals, and maintaining compliance with other program rules. USDA agrees with public comments that suggested a candidate should have school nutrition experience to qualify for this exception. Further, USDA agrees with public comments stating that 10 years is an appropriate amount of time to substitute for a degree. The candidate's experience does not need to be in consecutive years; a

candidate only needs to accrue a total of 10 years of experience in school nutrition to qualify for this exception.

This final rule also codifies in regulation that State agencies may determine what counts as ''equivalent educational experience'' for the hiring standards. USDA provided the following examples in the proposed rule, which were supported by a national organization representing tens of thousands of school nutrition professionals:

- If a candidate for a director position in a medium local educational agency does not have an associate's degree, but has more than 60 college credits in a relevant field, the State agency would have the discretion to approve the hiring of that candidate.
- If a candidate for a director position in a large local educational agency does not have a bachelor's degree, but has an associate's degree, is a School Nutrition Specialist certified by the School Nutrition Association, and is a Nutrition and Dietetics Technician, Registered (NDTR)[139] certified by the Academy of Nutrition and Dietetics, then the State agency has the discretion to approve the hiring of that candidate.

These are just two possible scenarios where a State agency may choose to count a candidate's experience toward the hiring requirements as ''equivalent educational experience.'' State agencies have discretion to determine that other types of experience should count toward ''equivalent educational experience'' on case-by-case basis.

As described in 7 CFR 210.15(b)(7), school food authorities must maintain records to demonstrate compliance with the professional standards for school nutrition program directors, managers, and personnel, including the hiring requirements. This final rule does not change the overall recordkeeping requirements for professional standards. However, to demonstrate compliance when using this exception, the school food authority and State agency would need to maintain documentation of the exception. For example, the school food authority and State agency could maintain documentation of the school food authority's request for the exception, and documentation of the State agency's approval. Similarly, this final rule does not change the Administrative Review requirements for professional standards. Professional standards will continue to be evaluated as part of the General Areas of Review, as described at 7 CFR 210.18(h)(2)(ix).

USDA appreciates respondent feedback about the importance of ensuring school nutrition program directors in medium and large districts have the skills needed to succeed in their jobs. Respondents emphasized that obtaining a bachelor's or an associate's degree is an effective way for candidates to demonstrate they have the knowledge and skills needed to succeed as a director, which respondents stressed can be a challenging position. Directors hired under this provision are encouraged, but not required, to work toward a degree in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field. While USDA acknowledges the value in obtaining a degree, USDA has determined that hands-on experience in the school nutrition programs is also an effective way for candidates to demonstrate they have the knowledge and skills needed to succeed as a director in a medium or large school district. USDA also recognizes the importance of providing an alternative option for school nutrition professionals to advance in their careers, even if they are unable to obtain a degree due to financial or other barriers. This exception is available at the discretion of the State agency. School districts and State agencies are encouraged to work together to apply this exception on case-by-case basis as needed and as deemed appropriate.

In public comments, respondents recommended that USDA require candidates to meet specific criteria, in addition to the candidate's years of experience, to qualify for this exception. In this final rule, USDA will not require candidates to meet specific criteria, beyond the required years of experience. However, school districts and State agencies may choose to require candidates to have specific types of experience in order to qualify under this exception. For example, a school district could require candidates to have experience managing a budget or supervising staff to qualify for the director position. As this exception is available at the State agency's discretion, State agencies may also apply additional criteria when using the exception.

As proposed, this final rule removes the existing table at 7 CFR 210.30(b)(2), which provided a summary of the school nutrition program director hiring standards. USDA determined the amount of information within the table was excessive, and instead of maintaining the table in regulations, will develop a more user-friendly table summarizing the hiring standards to be posted on the USDA Food and Nutrition Service public website. The hiring standards remain in regulation at 7 CFR 210.30(b)(1); therefore, this change—which only removes the summary table—is not substantive. In this final rule, USDA also made corrections to current paragraph leveling in 7 CFR 210.30 and reprinted the table summarizing required annual training with non-substantive changes to improve usability.

USDA acknowledges and appreciates public comments from school nutrition directors and staff regarding the importance of their job duties. School nutrition professionals are incredibly hardworking individuals who care deeply about the children they serve. Many school nutrition professionals, some of whom have worked in school nutrition for decades, submitted public comments describing the great pride they take in their work. USDA also recognizes that school nutrition professionals have faced many challenges in their work over the past several years, including serving as essential, front-line workers during the COVID–19 pandemic and more recently, responding to supply chain disruptions and high food costs. USDA remains committed to supporting school nutrition professionals throughout implementation of this final rule and beyond. Additionally, Team Nutrition's Professional Standards Resources website[140] provides a variety of resources which support school nutrition professionals with implementing and meeting the professional standards requirements. These include the Guide to Professional Standards, the Professional Standards Training Database, and the Professional Standards Training Tracker Tool, among others. More information regarding USDA's efforts to support schools and school nutrition professionals may be found in *Section 1: Background* of this preamble.

Accordingly, this final rule amends 7 CFR 210.30(b)(1) to allow State agency discretion to approve the hiring of an individual to serve as a school nutrition program director in a medium or large local educational agency, for individuals who have 10 years or more of school nutrition program experience but who do not hold a bachelor's or an

[139] Nutrition and dietetics technicians, registered (NDTRs) are educated and trained at the technical level of nutrition and dietetics practice for the delivery of safe, culturally competent, quality food and nutrition services. associate's degree. At the discretion of the State agency, this change provides local educational agencies an optional hiring flexibility. Schools are not required to change menus or operations as a result of this provision.

Section 18: Buy American

This section includes the following sub-sections:

- Section 18A describes limited exceptions to the Buy American requirement.
- Section 18B details Buy American exception documentation and reporting requirements.
- Section 18C explains procurement procedures.
- Section 18D defines the term ''substantially'' as it relates to the Buy American requirements.
- Section 18E clarifies requirements for harvested farmed and wild caught fish.

Section 18A: Limited Exceptions to the Buy American Requirement

Current Requirement

The Buy American provision established under the National School Lunch Act (NSLA, 42 U.S.C. 1760(n)) and program regulations at 7 CFR 210.21(d)(2) and 220.16(d)(2) requires school food authorities to purchase domestic commodities or products ''to the maximum extent practicable.'' This provision supports the mission of the child nutrition programs, which is to serve children nutritious meals and support American agriculture. Through policy guidance, USDA has detailed limited exceptions to the Buy American requirements.[141] These limited exceptions apply when the purchase of domestic foods is not practicable and include the following:

- The product is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or
- Competitive bids reveal the costs of a U.S. product are significantly higher than the non-domestic product.

Currently, no regulations establish a definition of ''significantly higher'' when using an exception to the Buy American provision. The school food authority is responsible for determining the dollar amount or percentage which constitutes a significantly higher cost for a domestic product, thus permitting the use of an exception.

The Buy American provision is applicable to school food authorities located in the 48 contiguous United States. Although Alaska, Hawaii, and the U.S. territories are exempt from the Buy American provision, school food authorities in Hawaii and Puerto Rico are required to purchase food products produced in their respective State or territory in sufficient quantities, as determined by the school food authority, to meet school meal program needs, per 7 CFR 210.21(d)(3) and 42 U.S.C. 1760(n)(4)).

Proposed Rule

USDA proposed to strengthen the Buy American requirement by maintaining the current limited exceptions and establishing a new threshold limit for school food authorities that use these exceptions. USDA proposed to codify the following exceptions, previously issued through guidance, for when non-domestic foods may be purchased by school food authorities:

- The product is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or
- Competitive bids reveal the costs of a U.S. product are significantly higher than the non-domestic product.

Additionally, USDA proposed to institute a 5 percent ceiling on the non-domestic commercial foods a school food authority may purchase per school year, based on total commercial food costs. Section 12 of the NSLA (42 U.S.C. 1760) mandates that the Secretary require school food authorities to ''purchase, to the maximum extent practicable, domestic commodities or products.'' Under the statute, this requirement applies to school food authorities located in the contiguous United States and a purchase of a domestic commodity or product for the school lunch or school breakfast program. By proposing a cap on when school food authorities may procure non-domestic commercial foods, USDA is balancing the statutory mandate to Buy American and the intent of the Buy American provision at Section 2 of the NSLA (42 U.S.C. 1751) to ''. . . encourage the domestic consumption of nutritious agricultural commodities and other foods . . .'' while also recognizing that there are times when purchasing domestic foods is not practicable for schools. Finally, consistent with current guidance, USDA proposed to clarify in regulation that school food authorities have discretion to determine whether an exception applies.

Public Comments

USDA received 138 comments on the proposed limited exceptions to the Buy American requirement. Of these, 20 supported the proposed standard, 72 were opposed, and 46 were mixed. Most respondents supported codifying the current exceptions for products not available domestically, but some requested that the significant cost differential be defined or eliminated. Most expressed concern that the 5 percent cap on non-domestic commercial foods is too restrictive.

Importance of Supporting American Agriculture

Several respondents, including, State agencies, Federal elected officials, advocacy groups, and individuals, supported strengthening the Buy American provision. One respondent stated that the proposal supports local farmers and the economy while also protecting the environment by reducing emissions from transporting food long distances. Another respondent affirmed that strengthening the Buy American provision would increase sourcing from local and regional producers. Other respondents supported the proposal for economic reasons. For example, a trade association stated that the 5 percent cap would disincentivize the use of U.S. taxpayer dollars to purchase non-domestic food products. An advocacy group stated that strengthening the provision would maximize public dollars spent on our nation's food and farm economy.

Implementation Challenges: Loss of Variety for Students

Some respondents opposed the proposal, including professional organizations, school districts, dietitians, and individuals. One professional organization asserted that the proposed 5 percent of total costs per school year ceiling on non-domestic commercial foods is too restrictive and could limit students' access to a wide variety of fresh and appealing produce throughout the school year. This respondent mentioned that the proposed changes may place a significant administrative burden on school meal programs and complicate an already complex, challenging procurement process. A State agency agreed, adding that the proposed changes may cause unnecessary stress for menu planners. This State agency expressed that the proposal would affect States located in the north that have shorter growing seasons.

Implementation Challenges: Supply Chain Issues

Some respondents discussed the current supply chain issues, stating that the proposal would make the procurement process more difficult and

[141] U.S. Department of Agriculture. SP 38–2017 *Compliance with and Enforcement of the Buy American Provision in the NSLP.* June 2017. Available at: *https://www.fns.usda.gov/nslp/compliance-enforcement-buy-american.*

burdensome while decreasing variety for students. One respondent asserted that the droughts in California, damaged grain crops in the Midwest, and unseasonably cold weather in the south have impacted the availability of domestic food. A respondent mentioned that the Buy American provision states that schools should purchase domestic products to the maximum extent ''practicable,'' but with the current supply chain challenges, purchasing 95 percent of food domestically is not ''practicable.'' One respondent stated that the 5 percent ceiling is not reasonable while another questioned if the 5 percent ceiling is possible to maintain.

Implementation Challenges: Administrative Burden

Some respondents raised concerns about tracking non-domestic costs. A State agency asserted that maintaining documentation would be burdensome for schools and State agencies, especially for small school food authorities with limited staff. Another State agency agreed with the intent of the proposal but argued that the proposed limitation of 5 percent on non-domestic food purchases, is too restrictive. This State agency said as proposed, this provision will place significant administrative burden on school meal operators and State agencies, adding to an already complex, challenging Federal procurement process.

Alternative Approaches Suggested by Comments

A few trade associations appreciated USDA's efforts to strengthen the Buy American provision for school nutrition programs and supported the proposed 5 percent of total costs cap for non-domestic food. However, these respondents suggested that USDA apply the 5 percent cap to categories and/or product type,[142] established by the USDA's Agricultural Marketing Service, instead of total commercial food purchases. Some of these trade associations suggested that USDA eliminate or define the ''significant cost differential'' exception, stating that it is a vague standard with inconsistent application and that it creates a loophole for distributors.

[142] AMS used the following list as product types: Beef, Cotton, Dairy Products, Eggs, Fish & Seafood, Flowers & Plants, Fruits, Goat, Grain, Lamb, Nuts, Pork, Organic, Poultry, Rabbits, Rice & Pulses, Vegetables, Specialty Products, Tobacco, Wool & Mohair. Also available at: *https://www.ams.usda.gov/grades-standards.*

In addition to general feedback on the proposal, USDA requested input on the following questions:

- Is the proposed 5 percent of total costs per school year ceiling on the non-domestic commercial foods a school food authority may purchase a reasonable ceiling, or should a different percentage be used? Would the 5 percent cap encourage those school food authorities using exceptions to reduce the amount of non-domestic products they purchase? USDA requests that respondents include justification and reasons behind their response.
- How feasible would tracking and documenting the total amount of non-domestic food purchases be? Would purchasing and record keeping processes need to be altered? Does the documentation of total non-domestic purchases alleviate burden associated with documenting each limited exception that is used? And any additional information about how school food authorities would document the total amount of non-domestic food purchases versus total annual food purchases.

About 34 respondents provided input on the first question, regarding the 5 percent of total costs per school year ceiling on non-domestic purchasing. Many respondents stated the proposed 5 percent cap is too restrictive and that the data used to determine the proposed cap is outdated. One respondent stated that there have been supply chain disruptions, inflation, increased procurement challenges due to natural disasters that impact school meal programs, and a pandemic. Due to these factors, this respondent did not feel the proposed 5 percent cap accurately represents the current procurement landscape and does not apply lessons learned from the pandemic. This respondent also stated that the 5 percent cap is significantly lower than current procurement trends. In developing this new requirement, FNS used the most recent data available which was collected in SY 2017–2018 and showed school food authorities spent, on average, 8.5 percent of food costs on non-domestic products.

An individual asserted that the proposed 5 percent cap would increase burden for school nutrition professionals. State agencies suggested that the 5 percent cap would make procurement more cumbersome and add complexity to the oversight process. State agency respondents also argued that mandating a 5 percent cap on non-domestic food products would create additional burden on schools.

Some respondents provided alternatives to the 5 percent cap for non-domestic food purchases. For example, one individual suggested a 10 percent cap. A State agency recommended an exemption list for items like bananas, in addition to the 5 percent cap. Another State agency urged USDA to require school food authorities to develop a system to track non-domestic food products but noted that this would take time. This State agency suggested that USDA create an exception list of food products that have been determined as not produced in the U.S. in sufficient and reasonable available commercial quantities of satisfactory quality, such as canned oranges, canned pineapple, and fresh bananas.

Regarding the second question, 27 respondents provided input on the feasibility of the proposed recordkeeping process. Some respondents affirmed that tracking non-domestic food purchases would be an administrative burden. One individual argued that the recordkeeping process would contribute to administrative burden because items would need separate invoices for a successful audit and tracking purposes. Another respondent asserted maintaining documentation would require vendors and distributors to provide information about non-domestic food products.

A State agency agreed, asserting that school food authorities do not have adequate time and resources for additional paperwork.

Final Rule

This final rule changes the current limited exceptions for the Buy American provision and codifies the two limited circumstances when school food authorities may purchase non-domestic foods:

1. The product is listed on the Federal Acquisitions Regulations (FAR) 25.104 Nonavailable articles list and/or is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or

2. Competitive bids reveal the costs of a U.S. product are significantly higher than the non-domestic product.

USDA notes that when a school food authority purchases a food item found on the FAR 25.104 Nonavailable articles list, no further documentation is required. The Nonavailable articles list is a list of items that have been deemed not available in the U.S. and excepted from the Buy American statute.[143] The

[143] 41 U.S.C chapter 83 is the Buy American statute that requires public agencies to procure articles, materials, and supplies that were mined, produced, or manufactured in the United States, substantially all from domestic components. Available at: *https://www.acquisition.gov/far/part-25.*

list of items on the FAR 25.104 is non exhaustive. Food products from the FAR Nonavailable articles list must be included in the calculation of the non-domestic cap.

This rulemaking does not define ''significantly higher'' for the definition exception and instead USDA maintains that the definition of ''significantly higher'' is at the discretion of school food authorities. Allowing school food authority discretion acknowledges that school food authorities of various sizes have different resources, and reflects the appropriate flexibility needed for purchases given the diverse needs of school food authorities.

USDA acknowledges that some respondents requested such an exemption list of non-domestic foods to help reduce administrative burden associated with documenting the two exceptions to the Buy American requirements. USDA expects that the inclusion of the FAR 25.104 Nonavailable articles will reduce administrative burden. This list is readily available, reliable, and widely used by the other Federal agencies. Additionally, the inclusion of this list will improve procurement practices, support American agriculture, and contribute toward increased Program integrity.

In response to public comments that suggested a 5 percent cap is too restrictive under current procurement conditions and that FNS data is not representative of current procurement practices, USDA will use a phased approach to gradually reach the proposed 5 percent of total costs per school year cap on non-domestic food purchases. USDA agrees with other respondents who were in support of the 5 percent cap, because it will help support American agriculture and industry, and will use 5 percent as the final cap on non-domestic food costs. The cap on non-domestic food costs is for total commercial food costs purchased. Through a phased-in implementation, USDA intends to help schools, State agencies, and other stakeholders adjust to the new requirement and achieve compliance with the Buy American provision. This phased-in approach will allow schools to gradually adjust to the new requirement and will allow USDA to continue to collect data on use of the Buy American exceptions.

In the proposed rule, USDA asked respondents if the proposed 5 percent cap was too restrictive or if a different cap should be used. Through public comment a 10 percent cap was suggested as an alternative to the 5 percent cap. Using this suggestion, the phased approach will be as follows:

- Beginning in SY 2025–2026, the non-domestic food cost cap will be 10 percent.
- Beginning in SY 2028–2029, the non-domestic food cost cap will be 8 percent.
- Beginning in SY 2031–2032, the non-domestic food cost cap will be 5 percent.

School food authorities will be required to maintain documentation supporting the use of an exception, except when the item is found on the FAR 25.104 Nonavailable articles list. USDA recognizes that the addition of the cap may pose issues for some school food authorities as it requires additional burden to assess the amount of non-domestic purchases. However, USDA notes that the Buy American requirement is mandated by the statute as discussed above. It is also an important aspect of the school meal programs to ''. . . encourage the domestic consumption of nutritious agricultural commodities and other foods . . .'' (42 U.S.C. 1751). In response to comments, USDA has carefully considered how that requirement can be appropriately balanced with when the purchase of domestic foods is not practicable for schools as well as the associated administrative burden. There still may be individual school food authorities that cannot meet the threshold. USDA will work in concert with State agencies during implementation to provide needed technical assistance and guidance, and if appropriate, an accommodation for temporary relief from the requirement as the State agency works with the school food authority on increasing their domestic purchases.

Compliance with the non-domestic cap will be reviewed by State agencies in line with 7 CFR 210.18 during the school meal programs Administrative Review process. Regulations were recently updated through the *Child Nutrition Program Integrity* final rule [144] to specifically add the Buy American requirements in 7 CFR 210.21(d) and 220.16(d) to the General Areas of Review requirements. The process for the General Areas during the review is first technical assistance, followed by corrective action if there are instances of non-compliance. The review of the Buy American requirement will follow this process that is already familiar to State agencies and schools and is meant to simplify administrative burden in response to comments. This process will allow school food authorities and States to work together to achieve compliance. As indicated in the proposed rule, the primary mechanism for collecting information on the Buy American provision is via the Child Nutrition Operations (CN–OPS) study. USDA notes that the CN–OPS study showed that the vast majority of exceptions were used for fruit and technical assistance may center around helping school food authorities to better monitor their contracts and/or track their non-domestic expenses; an example of corrective action is to modify future menus to replace non-domestic items with domestic items. There may be circumstances outside of the school food authority's control that make compliance with the Buy American requirements challenging. These could include nationwide supply chain issues or another pandemic, and USDA will provide guidance and direction with respect to the Buy American requirements.

In addition, in response to respondent concerns about burden, USDA notes that in accordance with a recent Government Accountability Office audit,[145] USDA is committed to creating a template for documenting Buy American exceptions. USDA plans to provide guidance and technical assistance to support school food authority implementation of the cap and tracking of expenses.

Lastly in response to comments suggesting that the non-domestic expenditure cap be based on food categories (*e.g.,* fruit, etc.) already established by the USDA's Agriculture Marketing Service instead of total commercial food purchases, USDA has concluded that this would only add administrative burden for school food authorities. Given the feedback received in public comments, in this final rule USDA is clarifying that the cap will apply to total commercial food costs.

Accordingly, this final rule amends 7 CFR 210.21(d)(5) and 220.16(d)(5) to codify the two limited circumstances when school food authorities may purchase non-domestic foods and to gradually phase in a cap on when school food authorities may procure non-domestic food. Additionally, this final rule amends 7 CFR 210.21(d)(8) and 220.16(d)(8) to codify an

[144] *Child Nutrition Program Integrity* (88 FR 162, August 23, 2023). Available at *https://www.govinfo.gov/content/pkg/FR-2023-02-07/pdf/2023-02102.pdf.*

[145] U.S Government Accountability Office. *USDA Could Enhance Implementation of the Buy American Provision.* April 2023. Available at: *https://www.gao.gov/assets/gao-23-105884.pdf.*

accommodation for schools unable to meet the phased-in cap.

Section 18B: Exception Documentation and Reporting Requirements

Current Requirement

Currently, the primary mechanism for collecting information on the Buy American provision is via the CN–OPS study. The CN–OPS study is a multi-year study that provides USDA with current information on various aspects of school meals programs operations. USDA uses results from this study to help inform program management practices and policy development.

School food authorities document each use of an exception to the Buy American requirements.[146] However, there is no requirement for school food authorities to request a waiver from the State agency or USDA in order to purchase a non-domestic food product.

Proposed Rule

USDA proposed to require school food authorities to maintain documentation supporting use of one of the two limited exceptions and documentation to demonstrate that no more than 5 percent of total annual commercial food costs per school year are for non-domestic foods.

Public Comments

USDA received 24 comments on the proposed Buy American exception documentation and reporting requirements. Of these, one supported the proposal, 21 were opposed, and two were mixed. State agencies, trade agencies, vendors, school food authorities, and individuals submitted comments on the proposal.

The supportive comment came from a trade agency. This respondent stated that they agreed with the proposal and that the proposal would make food distributors more aware of the Buy American requirements.

Many respondents stated that requiring school food authorities to maintain documentation showing no more than 5 percent of their total annual commercial food costs were spent on non-domestic foods will add to administrative burden and stated that school food authorities are already overwhelmed with documentation requirements. Another respondent asserted that the documentation requirement would require time-consuming activities such as reviewing all invoices to determine the total costs and non-domestic costs and calculating the percentage on a regular basis, on top of all the other program requirements that must be monitored.

Respondents stated that they did not see any issues with the current Buy American requirements and suggested USDA leave the provision as is. One State agency claimed that the Buy American provision has not been excessively abused and that adding an additional layer of recordkeeping to an already overwhelmed staff would create unnecessary burden. One respondent mentioned that their vendor is already documenting their use of the Buy American exception, and it only would add another layer of tracking for them. Another respondent recommended that USDA leave the provision as is, asserting that schools understand the importance of limiting non-domestic purchases to special circumstances.

Some respondents provided alternatives or asked for clarification about the proposed documentation and tracking requirements. A State agency noted that while the provision is not difficult to comprehend, if USDA has specific expectations for how tracking and maintenance of documentation should occur, those expectations should be established in the rulemaking. This respondent also suggested that USDA should include what fiscal action, if any, would result if those expectations are not met. Another respondent suggested that schools could meet the documentation and tracking requirements, but it would be difficult.

USDA requested public input on the following questions related to the proposals for exception documentation and reporting requirements of the Buy American requirements:

- Is the proposal to require school food authorities to maintain documentation showing that no more than 5 percent of their total commercial food costs per school year were for non-domestic foods feasible and is the regulatory language clear enough for school food authorities and State agencies to implement and follow?
- For oversight purposes, USDA is considering requiring school food authorities to maintain an attestation statement to attest that any non-domestic foods purchased under the 5 percent cap met one of the two limited exceptions. Would this approach assist school food authorities with the burden associated with documentation requirements? Does it help ensure that any non-domestic food purchase under the 5 percent cap was only a result of utilizing one of the current limited exceptions that USDA proposes to codify through this rulemaking?

About five respondents provided input on the first question about the feasibility of the proposal for documentation showing 5 percent cap for non-domestic food purchases. One respondent stated that the proposed rule would increase administrative burden by imposing additional tracking requirements for school food authorities. This respondent suggested that the documentation requirements would especially impact large school districts.

Regarding the second question, nine respondents, including State agencies, trade associations, and individuals provided input on the possible approach of maintaining an attestation statement that non-domestic food purchases were less than the 5 percent cap. Respondents provided mixed feedback on this question. A State agency and a few individuals expressed that the attestation would help with the documentation burden. However, some respondents were confused on who the attestation statement is intended for, and whether school food authorities or distributors would attest that any non-domestic foods purchased under the 5 percent cap met one of the two limited exceptions.

A State agency suggested that the use of an attestation statement, without backup documentation, is not an effective method of ensuring compliance. This State agency argued that the attestation statement would create additional paperwork that would not actually impact school food authorities' purchasing practices. Lastly, one respondent stated the attestation seems unnecessary.

Final Rule

This final rule requires school food authorities to maintain documentation to demonstrate use of one of the two limited exceptions and institutes a phased-in cap on non-domestic food purchases. In response to public comments, USDA is exempting products found on the FAR 25.104 Nonavailable articles list from the documentation requirement. School food authorities may use this list to deem a product as not domestically available without further documentation. Food products that are found on the FAR Nonavailable articles list will be included in the non-domestic expenditure ceiling calculation. While this was not included in the proposed rule, USDA requested public comment on the feasibility of a non-domestic cap, tracking of purchases, and documentation requirements, and gave notice to the

[146] U.S. Department of Agriculture, *Compliance with and Enforcement of the Buy American Provision in the National School Lunch Program*, June 30, 2017. Available at: *https://www.fns.usda.gov/nslp/compliance-enforcement-buy-american.*

public that changes may be incorporated into a final rule based on public input. Public comments requested that USDA develop a non-domestic product exception list. Allowing the exception of products on the FAR 25.104 Nonavailable articles list from the Buy American documentation requirement addresses these public comments and reduces administrative burden for schools.

In addition, as stated above, in response to respondent concerns about burden, USDA notes that in accordance with a recent Government Accountability Office audit, *USDA Could Enhance Implementation of the Buy American Provision (April 2023),*[147] USDA has committed to creating a template for documenting Buy American exceptions. USDA will also explore any technical assistance resources that will better help school food authorities document non-domestic food purchases.

Accordingly, this final rule amends 7 CFR 210.21(d)(5)(iii) and 220.16(d)(5)(iii) to require school food authorities to maintain documentation to demonstrate use of one of the two limited exceptions to the Buy American provision.

Section 18C: Procurement Procedures

Current Requirement

School lunch and breakfast program regulations do not currently require school food authorities to include any Buy American provisions in required documented procurement procedures,[148] solicitations, or contracts. However, USDA guidance has strongly advised school food authorities to include safeguards in solicitation and contract language to ensure Buy American requirements are followed.[149] Additionally, school food authorities are required to monitor solicitation and contract language to ensure that contractors perform in accordance with the terms, conditions, and specifications of their contracts or purchase orders (2 CFR 200.318(b)).[150]

Proposed Rule

USDA proposed to require school food authorities to include the Buy American provision in documented procurement procedures, solicitations, and contracts for foods and food products procured using informal and formal procurement methods, and in awarded contracts.

Public Comments

USDA received 30 comments on the proposals to include Buy American requirements in procurement procedures. Of these, 14 supported the proposal and 16 were mixed. State agencies, school districts, advocacy groups, trade associations, dietitians, and individuals submitted comments on the proposal.

Many respondents supported the proposal requiring school food authorities to include the Buy American provision in documented procurement procedures, solicitations, and contracts. Some respondents affirmed that they have these proposed requirements in their procurement procedures.

Other respondents provided mixed feedback. While these respondents agreed with the proposed provision, some suggested expanding it. For example, one respondent suggested that solicitations and contracts require distributors to attest to the domestic or non-domestic origin of delivered products. A professional organization stated that all Federal nutrition assistance programs should adopt the Buy American provision. Another respondent suggested that USDA bar distributors who substitute non-domestic products for domestic products without justification.

Final Rule

USDA agrees with respondents that Buy American provisions should be included in all procurement procedures. This final rule requires school food authorities to include the Buy American requirements in documented procurement procedures, solicitations, and contracts for foods and food products procured for school breakfast and school lunch programs using informal and formal procurement methods, and in awarded contracts.

State agencies are required to verify the inclusion of this language when conducting Procurement oversight and Administrative Reviews. USDA expects that this requirement will ensure vendors are aware of expectations at all stages of the procurement process, in addition to providing contractual protection for school food authorities if vendors fail to meet Buy American obligations.

Accordingly, this final rule amends 7 CFR 210.21(d)(3) and 220.16(d)(3) to require that Buy American provisions be included in all procurement procedures.

Section 18D: Definition of ''Substantially''

Current Requirement

The National School Lunch Act (NSLA, 42 U.S.C. 1760(n)(1)(B)) defines a domestic product as ''[a] food product that is processed in the United States substantially using agricultural commodities that are produced in the United States.'' The current regulatory language at 7 CFR 210.21(d)(1) and 220.16(d)(1) is identical to the statutory language. To satisfy the statutory and regulatory requirements, food products purchased for child nutrition programs must be processed in the United States.[151] However, USDA understands that the meaning of the term ''substantially'' is not clearly defined.

Congressional report language accompanying the original legislation noted that ''substantially means over 51 percent from American products.''[152] Therefore, USDA has stated in guidance that ''substantially'' means over 51 percent of the final processed product (by weight or volume) consists of agriculture commodities that were grown domestically, as determined by the school food authority.[153] The guidance also states that products ''from Guam, American Samoa, Virgin Islands, Puerto Rico, and the Northern Mariana Islands are considered domestic products under this provision as these products are from the territories of the U.S.''

Proposed Rule

USDA proposed to codify a definition of the statutory phrase ''substantially using agriculture commodities.'' The

[153] U.S. Department of Agriculture, *Compliance with and Enforcement of the Buy American Provision in the National School Lunch Program,* June 30, 2017. Available at: *https://www.fns.usda.gov/nslp/compliance-enforcement-buy-american*.

definition, which USDA would codify at 7 CFR 210.21(d)(1)(ii)(A) and 220.16(d)(1)(ii)(A), was proposed as follows: ''*Substantially using agriculture commodities that are produced in the United States*'' *means over 51 percent of a food product must consist of agricultural commodities that were grown domestically*.

Public Comments

USDA received 11 comments on the proposal to codify the definition of ''substantially using agriculture commodities.'' Of these, six supported the proposal, one was opposed, and four were mixed. State agencies, advocacy groups, professional organizations, dietitians, and individuals submitted comments on the proposal.

Most respondents supported the clarification. Some respondents stated that the proposed clarification made sense to them, and that the language provided was welcome. One State agency already requires school food authorities to use this definition based on its use in USDA guidance.

One State agency opposed the proposal and stated that the proposed definition does not meet the intent of other Federal agencies' Buy American requirements as it allows for up to 49 percent of a food product to be non-domestic.

Mixed comments were generally supportive but wanted USDA to go further than the proposed 51 percent threshold. A few respondents wanted the threshold to be raised higher, potentially up to 80 or 90 percent instead of 51 percent. One respondent wanted USDA to clarify that domestic water does not count toward the 51 percent. Another respondent requested that USDA consider that the term ''substantial'' is relative, open to interpretation, and should be further clarified in order to achieve desired results.

USDA requested public input on the following question related to codifying the definition of substantially:

• Does the proposed definition of ''substantially using agriculture commodities that are produced in the United States'' meet the intent of the Buy American requirements? If not, what other suggestions do stakeholders have for the definition?

Approximately three respondents provided input on this question regarding the intent of the Buy American requirements. Respondents generally agreed that the proposed definition is consistent with the intent of Buy American requirements.

Final Rule

This final rule codifies the proposed definition of ''substantially'' in the Buy American provision at 7 CFR 210.21(d)(1)(ii)(A) and 220.16(d)(1)(ii)(A). Consistent with the proposed rule, this definition reads as follows: ''*Substantially using agriculture commodities that are produced in the United States*'' *means over 51 percent of a food product must consist of agricultural commodities that were grown domestically*.

Although USDA acknowledges that some respondents recommended a threshold higher than 51 percent, this definition reflects the Congressional report language and USDA guidance as mentioned above. USDA agrees with supportive respondents and codifies the proposed definition for ''substantially'' in this final rule.

Accordingly, this final rule amends 7 CFR 210.21(d)(1)(ii) and 220.16(d)(1)(ii) to codify the definition of ''substantially'' in the Buy American regulations.

Section 18E: Clarification of Requirements for Harvested Farmed and Wild Caught Fish

Current Requirement

Current regulations do not include language specific to the applicability of the Buy American requirements to fish or fish products. However, in 2019, section 4207 of the Agriculture Improvement Act of 2018 (Pub. L. 115–334) clarified the Buy American provision applies to fish harvested ''within the Exclusive Economic Zone of the United States, as described in Presidential Proclamation 5030 (48 FR 10605; March 10, 1983), or . . . by a United States flagged vessel.'' USDA published *Buy American and the Agricultural Improvement Act of 2018* [154] and explained how to treat harvested fish under the Buy American requirement. The guidance stated that, ''[i]n order to be compliant:

• Farmed fish must be harvested within the United States or any territory or possession of the United States.

• Wild caught fish must be harvested within the Exclusive Economic Zone of the United States or by a United States flagged vessel.''

Prior to the publication of the 2019 guidance, the Buy American provision applied to fish as it would to any other food.

[154] U.S. Department of Agriculture. *Buy American and the Agriculture Improvement Act of 2018*. August 15, 2019. Available at: *https://www.fns.usda.gov/cn/buy-american-and-agriculture-improvement-act*.

Proposed Rule

USDA proposed to add language to the regulations to codify how Buy American applies to fish and fish products in the school lunch and breakfast programs. The proposed change would be consistent with current statutory requirements and existing USDA policy guidance. USDA expects that codifying these existing requirements in regulation will improve awareness of, and compliance with, program requirements.

Public Comments

USDA received 11 comments on the proposal to codify how Buy American applies to fish and fish products in the school lunch and breakfast programs. Of these, four supported the proposed standards and seven were mixed. State agencies, professional associations, industry respondents, and dietitians submitted comments on the proposal.

Proponents generally stated the clarification is acceptable to add to the regulations. Other respondents appreciated the clarification on what criteria must be met for fish and fish products to meet the Buy American requirements but were concerned with the challenges of identifying whether fish were harvested within the Exclusive Economic Zone and/or whether the vessel used to catch the fish was a ''United States flagged vessel.''

Final Rule

USDA agrees with respondents that making the proposed change will improve the understanding of program requirements. This final rule codifies language in regulations regarding how the Buy American requirements apply to fish and fish products offered in the school lunch and breakfast programs. In order to be compliant with Buy American requirements, under this final rule:

• Farmed fish must be harvested within the United States or any territory or possession of the United States.

• Wild caught fish must be harvested within the Exclusive Economic Zone of the United States or by a United States flagged vessel.

This change is consistent with current statutory requirements and existing USDA policy guidance.

Accordingly, this final rule amends 7 CFR 210.21(d)(6) and 220.16(d)(6) to codify language regarding how the Buy American requirements apply to fish and fish products offered in the school lunch and breakfast programs.

Section 19: Geographic Preference

Current Requirement

Section 4302 of the Food, Conservation, and Energy Act of 2008 (Pub. L. 110–246) [155] amended the National School Lunch Act to direct the Secretary of Agriculture to encourage institutions operating child nutrition programs to purchase unprocessed locally grown and locally raised agricultural products. Effective October 1, 2008, institutions receiving funds through the child nutrition programs could apply an optional geographic preference for the procurement of unprocessed locally grown or locally raised agricultural products. This provision applies to institutions operating any of the child nutrition programs, including the NSLP, SMP, SBP, Fresh Fruit and Vegetable Program, SFSP, and CACFP, as well as to purchases made for these programs by the USDA Department of Defense Fresh Fruit and Vegetable Program. The provision also applies to State agencies making purchases on behalf of any of the aforementioned child nutrition program operators.

The *Geographic Preference Option for the Procurement of Unprocessed Agricultural Products in Child Nutrition Programs* final rule (75 FR 20316, April 4, 2011) [156] went into effect on May 23, 2011. This final rule incorporated the geographic preference option in program regulations and defined the term ''unprocessed locally grown or locally raised agricultural products,'' which does allow for some minimal processing, food handling, and preservation techniques as defined, to facilitate implementation by institutions operating the child nutrition programs. Language included in that final rule indicates that ''local'' cannot be used as a procurement specification (a written description of the product or service that the vendor must meet to be considered responsive and responsible).

Currently, Federal regulations do not prescribe the way that geographic preference should be applied, or how much preference can be given to local products. Federal regulations also do not define ''local'' for the purpose of procuring local foods for use in child nutrition programs. However, producers located in a specified geographic area can be provided additional points or credit calculated during a program operator's evaluation of proposals or bids received in response to a solicitation.[157]

Proposed Rule

USDA proposed to expand the geographic preference option by allowing locally grown, raised, or caught as procurement specifications for unprocessed or minimally processed food items in the child nutrition programs. This proposal intended to increase the procurement of local foods by child nutrition program operators and ease procurement challenges for operators interested in sourcing food from local producers.

Public Comments

USDA received 389 comments referencing the geographic preference proposal, including 176 unique comments. Of the total comments, 351 supported the proposal, including 138 unique comments, one was opposed, and 37 were mixed. State agencies, school nutrition professionals, advocacy groups, industry respondents, dietitians, elected officials, and individuals submitted comments. Many respondents mentioned that the geographic preference proposal would support local producers. Comments from advocacy groups, State agencies, and an academic institution indicated that the proposal would allow local producers to be more competitive and encourage local and smaller-scale producers to submit bids to sell local foods to child nutrition program operators. A State agency noted that the proposal would help larger school districts and cooperatives of smaller school districts coordinate with small-scale producers to procure locally without relying on the micro-purchase procurement method. A couple of advocacy groups and an individual mentioned that the proposal would be economically beneficial for local producers and communities. Similarly, a professional association suggested the proposal would stimulate local economies and keep money in school communities. Advocacy groups, State agencies, a professional organization, and a dietitian expressed that the proposal would make it easier for child nutrition program operators to procure local products for their meal programs and reduce administrative barriers.

Some respondents shared other potential benefits of the proposal, such as mitigating supply chain disruptions and fostering healthier communities. A food manufacturer and an advocacy group stated that they received positive feedback from child nutrition operators about the proposal. A few advocacy groups also noted that schools that had pre-existing relationships with local suppliers reported fewer supply chain disruptions and more reliable product availability during the COVID–19 pandemic. One advocacy group and one individual suggested that the proposal would support more nutritious school meals and foster connections between students, local producers, and communities. An individual stated that local food procurement can also support schools offering foods that better reflect students' food cultures and heritage. A group of Federal elected officials stated that the proposal would improve domestic sourcing, relieve procurement challenges, and allow more local foods to be incorporated into school meals.

Some respondents provided mixed feedback on the proposal or provided suggestions. One State agency noted that the proposal would make it easier for program operators to procure local foods but recommended that USDA provide guidance on using a definition of ''local'' that does not reduce the number of potential vendors that can respond to a solicitation to a non-competitive level. This respondent also recommended guidance to support program operators in conducting market research and requests for information prior to issuing solicitations. A State agency affirmed this guidance would help program operators avoid delays in awarding contracts to qualified local vendors and prevent program operators from having to reissue solicitations. Another State agency requested that USDA define the term ''local'' in a way that clarifies ''local'' should be based on the source of the agricultural product being procured rather than the bidder's location. Multiple advocacy groups and an individual recommended that the proposed geographic preference language be updated to allow for, or encourage, other procurement specifications to support varied procurement values such as organic certification, independent animal welfare certifications, products produced by historically underserved producers, and more.

Several respondents supported the proposal but raised concerns about the potential increased costs of local foods. An individual noted that the cost of procuring local foods could be a barrier for smaller schools and school districts. Another respondent warned that a lack of locally produced food in their area,

[155] *The Food, Conservation, and Energy Act of 2008* (Pub. L. 110–246). June 18, 2008. Available at: *https://www.congress.gov/110/plaws/publ246/PLAW-110publ246.pdf*.

[156] *Geographic Preference Option for the Procurement of Unprocessed Agricultural Products in Child Nutrition Programs* (75 FR 20316, April 4, 2011). Available at: *https://www.federalregister.gov/documents/2011/04/22/2011-9843/geographic-preference-option-for-the-procurement-of-unprocessed-agricultural-products-in-child*.

[157] U.S. Department of Agriculture. *Procurement Geographic Preference Q&As*. February 1, 2011. Available at: *https://www.fns.usda.gov/cn/procurement-geographic-preference-qas*.

and food safety concerns, would hinder local purchasing. An advocacy group stated that vendors should be required to substantiate that local production requirements are met and recommended that cost incentives be provided to support procurement of local food products. A union, school food service staff member, and an advocacy group agreed that additional funding is needed to make local procurement viable for many program operators, especially in certain States and territories. A State agency and an advocacy group expressed concerns about cost as a barrier to local procurement among CACFP operators.

USDA requested public input on the following questions related to the geographic preference expansion proposal:

- Do respondents agree that this approach would ease procurement challenges for child nutrition program operators interested in sourcing food from local producers?
- Do respondents agree that this approach would encourage smaller-scale producers to submit bids to sell local foods to child nutrition programs?

Several respondents provided input on the first question, regarding whether the proposed approach would ease procurement challenges. Many respondents indicated that expanding school food authorities' options for geographic preference in procurement would streamline local purchasing for child nutrition program operators. Advocacy groups, a trade association, and a State agency noted that the proposal would remove uncertainties and facilitate clear, predictable procurement processes. An academic institution stated that not all program operators are willing and able to apply geographic preference in its current form due to its complexity. This respondent noted that the proposal would ease procurement challenges and enable program operators to spend less time on the administrative aspects of the procurement process and more time incorporating local foods into program menus. A professional organization and dietitian expressed that the proposal would help program operators that operate smaller-scale programs more easily purchase local products.

In response to the second question, many respondents agreed that the proposed approach would encourage smaller-scale producers to submit bids to sell foods to child nutrition programs. Respondents emphasized that expanding geographic preference options would make local and small-scale producers more competitive in the bidding process. A couple of advocacy groups and a State agency asserted that the proposal would simplify bid writing. One advocacy group suggested that local and smaller food producers have a hard time competing against larger producers and distributors, and multiple individuals and advocacy groups emphasized that the proposal could provide smaller local producers a ''competitive edge''. An academic institution stated that the proposal would encourage local producers to submit bids and provide a steady market for smaller-scale producers.

Final Rule

This final rule codifies, without changes, USDA's proposal to expand the geographic preference option by allowing child nutrition program operators to use ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications (a written description of the product or service that the vendor must meet to be considered responsive and responsible) for unprocessed or minimally processed food items in the child nutrition programs. The definition of unprocessed, and the minimal food handling and processing techniques allowed within that definition, remains unchanged in this final rule (7 CFR 210.21(g)(2), 220.16(f)(2), 225.17(e)(2), and 226.22(c)(1). USDA agrees with comments that suggested this provision will support increased procurement of local foods by child nutrition program operators. This change may encourage smaller-scale producers to submit bids to sell local foods to child nutrition programs and may ease procurement challenges for program operators interested in sourcing food locally.

USDA will provide guidance and resources on implementing this final standard, including but not limited to: updating the geographic preference section of the *Procuring Local Foods for the Child Nutrition Programs* guide,[158] *the Geographic Preference Fact Sheet,*[159] and *Geographic Preference Q&As Part I*[160] and *Part II.*[161] These resources and guidance respond to comments citing the need for program operators to adopt a definition of ''local'' that will support fair and open competition in the procurement and bidding process. Updates to these resources will also help program operators choose appropriate procurement methods; conduct market research, requests for information, and producer outreach as needed; and retain appropriate documentation while implementing this final standard. USDA will continue to allow State agencies and program operators to adopt their own definition of ''local'' and will not prescribe a Federal definition for the purpose of procuring local foods for child nutrition programs. Program operators are encouraged to adopt definitions of ''local'' that best suit their distinct needs and goals, for example based on their community's unique geography and climate, the availability of local producers and manufacturers, and program participants' interest in local products.

In response to comments requesting that USDA allow procurement values beyond local, such as certified organic or certified by an independent animal welfare program as procurement specifications, USDA will clarify in updated guidance and resources that these and other similar production standards are already allowable as specifications in program operators' procurement solicitations as long as they do not overly restrict competition. USDA will also continue to provide training, technical assistance, and, under certain circumstances as available, financial support, to program operators to help them mitigate costs and other barriers to local food procurement. Since January 2021, USDA has provided:

- $200 million for States to purchase local foods for schools through the Local Food for Schools Cooperative Agreement Program;
- Nearly $3.8 billion in Supply Chain Assistance funds for schools to purchase domestic foods, including $1.3 billion for SY 2023–2024;
- $140 million for Equipment Assistance Grants to help schools buy kitchen equipment, which can help them process local foods; and
- $94 million to provide children with nutritious, local foods and agricultural education through expanded Farm to School engagement.[162]

Accordingly, this final rule amends 7 CFR 210.21(g)(1), 215.14a(e),

220.16(f)(1), 225.17(e)(1), and 226.22(c)(1), to codify the expansion of the geographic preference option to allow ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications. Program operators may begin implementing the expanded geographic preference option in their procurement processes immediately following this rule's effective date. Program operators remain responsible for complying with all Federal, State, and local procurement regulations. NSLP and SBP program operators' compliance with Federal procurement regulations will continue to be monitored through State agency oversight of procurement.

Section 20: Miscellaneous Changes

In addition to the major provisions of this rulemaking, USDA is finalizing a variety of miscellaneous changes to the child nutrition program regulations. The miscellaneous changes update terminology used in the regulations, remove outdated information, and correct cross references. However, as detailed below, this rule does not finalize the proposed terminology change for the meats/meat alternates component. Additionally, USDA is finalizing a severability clause in this rulemaking, as detailed below. In the event any changes made by this rulemaking are to be held invalid or unenforceable, USDA intends that the other changes will remain. USDA has further specified what requirement would replace the invalidated change.

Terminology Change: Protein Sources Component [Not Finalized]

Current child nutrition program regulations use the term ''meats/meat alternates'' for the meal component that includes beans and peas, whole eggs, tofu, tempeh, meat, poultry, fish, cheese, yogurt, soy yogurt, peanut butter and other nut or seed butters, and nuts and seeds. USDA proposed to change the name of the meats/meat alternates meal component in the NSLP, SBP, and CACFP regulations to ''protein sources.'' Under this proposal, all references in 7 CFR parts 210, 220, and 226 to ''meats/meat alternates'' would change to ''protein sources.'' The foods within this meal component would remain unchanged.

Public Comments

USDA received 240 comments on this proposed terminology change, including 131 unique comments. Of these, 57 supported the proposal, all of which were unique comments, 120 were opposed, including 31 unique comments, and 63 were mixed, including 43 unique comments. Comments were submitted by State agencies, school nutrition professionals, advocacy groups, industry respondents, dietitians, and CACFP sponsoring organizations.

A dietitian argued that the proposed meal component name of ''protein sources'' sounded ''much more appealing'' than meats/meat alternates. Another respondent suggested protein sources ''makes more sense'' as a meal component name compared to meats/meat alternates. An advocacy group supported the change, maintaining that the term ''meats/meat alternates'' creates a negative perception of plant-based foods and is confusing to child nutrition operators, families, and students. A school district agreed, suggesting the proposed terminology change would help in communications with families. Similarly, an advocacy group suggested that ''terminology has changed'' and renaming the component would improve understanding for school nutrition professionals and families. A school district noted that children struggle to understand the current term and maintained that ''protein'' is a universally understood term that better describes the component. A State agency supported the change, but requested USDA consider the burden some States may face to revise and reprint resources due to the change.

Opponents argued that the change would require costly updates to materials, would require significant retraining, and would make it difficult to determine which foods are creditable under the protein source meal component. For example, an industry respondent stated that renaming the meats/meat alternates component to the protein sources component is akin to renaming the milk component to the calcium component, describing the proposal as inaccurate and misleading. An advocacy group agreed, citing concerns about potential confusion with protein-labeled food items, or specific products such as protein bars and protein shakes, which do not credit toward the meats/meat alternates component (and would not credit toward the protein sources component, if the change is finalized). This respondent argued that implementing this change would require significant technical assistance. Further, the same advocacy group maintained that the proposed terminology change would create financial burden for retraining providers and developing new documents and materials. A State agency provided similar feedback, asserting that the proposed terminology change would require a ''tremendous'' number of staff hours to update documents. Another State agency also cited concerns about the burden of implementing this change and noted that they have not encountered problems with the current terminology.

Conversely, one school district acknowledged that updating and reprinting materials may be costly, but still supported the change. This respondent saw renaming the component as an opportunity to ''update and refresh'' the program with terms participants would understand. An industry respondent suggested that phasing in the change over several years would allow industry to plan label inventories and resource allocation to minimize the anticipated impact of making the terminology change.

A few respondents offered mixed feedback or alternative suggestions. One State agency recommended keeping the meal component names ''simple'' and suggested aligning with MyPlate, which includes the following food groups: fruits, vegetables, grains, protein foods, and dairy. However, this respondent noted that, due to the requirement to offer milk with school meals, the MyPlate dairy group would need to be replaced with a milk group. An industry respondent suggested that USDA name the meal component ''proteins'' instead of ''protein sources'' for brevity. An advocacy group recommended that USDA allow quinoa to credit toward the protein sources component. Additionally, this respondent recommended that tofu and soy products and beans, peas, and lentils be allowed to credit as protein sources even if they are not visually recognizable. An advocacy group encouraged USDA to provide ''a national list of definitive protein sources'' for child nutrition program operators. A different advocacy group stated that making this change in some child nutrition programs, but not SFSP, would create confusion for operators that participate in multiple programs. A State agency, school district, and another respondent strongly encouraged USDA to prioritize making similar changes in SFSP to address inconsistencies and align terminology across all child nutrition programs.

Final Rule

In response to public comments, USDA is not finalizing the proposal to change the name of the meats/meat alternates meal component in the NSLP, SBP, and CACFP regulations to ''protein sources.'' USDA appreciates concerns that respondents raised with the proposed terminology change, including the challenge of updating State and

local materials to reflect the change. Although these changes could have been accomplished over time, and State and local operators would not have been penalized for using the prior terminology, USDA will not finalize this proposed change given respondent concerns. In addition, many respondents from the CACFP community recommended that USDA assess the potential impacts of terminology changes on all child nutrition program operators prior to making them. USDA will consider this suggestion when considering potential terminology changes in the future.

USDA also appreciates comments regarding potential confusion about foods that would credit toward the ''protein sources'' component. Although the proposed terminology change would not have changed current guidelines regarding foods that may credit toward the existing meats/meat alternates component,[163] [164] USDA appreciates that use of the word ''source'' in the proposed component name could have created confusion for operators. The child nutrition programs use a food-based menu planning approach, which helps to ensure that children are offered (and learn to build) meals that include key food groups recommended by the *Dietary Guidelines*. In the near term, based on input from respondents, USDA has determined the meats/meat alternates component name better reflects the food-based menu planning approach.

USDA appreciates respondent suggestions for other potential component names, such as ''proteins'' and ''protein foods.'' USDA also appreciates respondent feedback on other changes USDA could make to the meal components, including which meal component certain foods credit toward. However, for the reasons detailed above, this final rule maintains the meats/meat alternates component name and does not make any changes to food crediting guidelines for this component.

[163] For information on crediting the meat/meat alternate component, see the *Food Buying Guide for Child Nutrition Programs,* available at: *https://www.fns.usda.gov/tn/food-buying-guide-for-child-nutrition-programs*.

[164] Exceptions include certain smoothie ingredients and pasta products made from vegetable flours. See Question 104: U.S. Department of Agriculture, *Meal Requirements Under the NSLP & SBP: Q&A for Program Operators Updated to Support the Transitional Standards Effective July 1, 2022,* March 2, 2022. Available at: *https://www.fns.usda.gov/cn/sp052022-questions-answers-program-operators*.

Terminology Change: Beans, Peas, and Lentils

The *Dietary Guidelines, 2020–2025,* changed the terminology for the ''legumes (beans and peas)'' vegetable subgroup to ''beans, peas, and lentils.'' [165] The foods within this vegetable subgroup did not change. USDA proposed to change the name of the ''legumes (beans and peas)'' vegetable subgroup in the school meal pattern regulations to align with the *Dietary Guidelines*. Under this proposal, all references in 7 CFR parts 210 and 220 to ''legumes (beans and peas)'' would change to ''beans, peas, and lentils'' for consistency with the terminology used in the *Dietary Guidelines*. The foods within this vegetable subgroup and the related requirements would remain unchanged. USDA also proposed to change references to ''beans and peas (legumes)'' in 7 CFR part 226 to ''beans, peas, and lentils''.

Public Comments

USDA received 134 comments on this proposed terminology change, including 45 unique comments. Comments were submitted by State agencies, advocacy groups, and individuals. An advocacy group stated that the proposed change ''brings the school nutrition language into alignment with the language used in the *Dietary Guidelines*.'' A State agency agreed, suggesting that this change would improve ''consistency with terminology used in the *Dietary Guidelines*.'' A few other respondents, including advocacy groups and individuals, expressed support for the terminology change.

While fewer respondents opposed the ''beans, peas, and lentils'' terminology change compared to the ''protein sources'' terminology change, those who did gave similar reasons for their opposition. For example, a State agency opposed the change, suggesting that terminology changes would require all materials that use the terms to be redone and redistributed which would be costly and time consuming. A few respondents, including a State agency, did not oppose the change, but suggested adding ''dry'' in ''beans, peas, and lentils'' to avoid confusing vegetables in this subgroup with fresh green beans and peas, which count toward the ''other'' vegetable subgroup and the starchy vegetable subgroup, respectively.

[165] See ''About Beans, Peas, and Lentils,'' page 31. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition*. December 2020. Available at: *https://www.dietaryguidelines.gov/*.

Final Rule

USDA is finalizing the proposal to change the name of the ''legumes (beans and peas)'' vegetable subgroup in the school meal pattern regulations and to change references to ''beans and peas (legumes)'' in CACFP regulations. This final rule will instead refer to ''beans, peas, and lentils,'' consistent with the terminology used in the *Dietary Guidelines*. Additionally, USDA is extending this change to SFSP based on public input encouraging consistent terminology across child nutrition programs.

USDA acknowledges that some respondents recommended including the word ''dry'' before the NSLP vegetable subgroup name ''beans, peas, and lentils,'' to differentiate from green peas and green beans. However, USDA has opted to maintain the proposed terminology change without modification. As noted, the vegetable subgroup name in the *Dietary Guidelines* is ''beans, peas, and lentils.'' Therefore, the terminology for the NSLP vegetable subgroup name finalized in this rule aligns with the *Dietary Guidelines*. To clarify, the vegetables that count toward this subgroup in the school meal programs have not changed; only the name of the subgroup has changed. Green peas will continue to count toward the starchy vegetable subgroup, and fresh green beans will continue to count toward the ''other'' vegetable subgroup.[166]

While USDA encourages stakeholders to update materials to reflect this change, USDA anticipates a transition period and does not expect these updates to happen immediately. State and local operators will not be penalized for using the prior terminology.

Accordingly, this final rule amends 7 CFR parts 210, 220, 225, and 226 to change references to ''legumes (beans and peas)'' and ''beans and peas (legumes)'' to ''beans, peas, and lentils.'' Child nutrition program operators are not required to change menus or

[166] According to the *Dietary Guidelines,* ''Green peas and green (string) beans are not counted in the beans, peas, and lentils subgroup because the nutrient content of these vegetables is more similar to vegetables in other subgroups.'' The *Dietary Guidelines* consider green peas to be a starchy vegetable, and green beans to be part of the ''other'' vegetable subgroup. NSLP regulations for the vegetable subgroups reflect the *Dietary Guidelines*. See ''About Beans, Peas, and Lentils,'' page 31. U.S. Department of Agriculture and U.S. Department of Health and Human Services. *2020–2025 Dietary Guidelines for Americans. 9th Edition*. December 2020. Available at: *https://www.dietaryguidelines.gov/*.

operations as a result of this terminology change, but are encouraged to proactively transition to the new terminology.

Technical Corrections

This final rule makes several additional technical corrections to the regulations, which are outlined by regulatory section below. These proposed technical corrections would not make substantive changes to the child nutrition programs. Instead, the proposed corrections, which are reflected in the proposed amendatory language, generally fall into the following categories:

- Removing outdated terminology or updating terminology and definitions for consistency across regulations.
- Removing outdated implementation dates.
- Removing requirements that are no longer in effect.
- Reordering the school meal pattern meal component paragraphs to reflect the order used in the meal pattern tables.
- Revising meal pattern tables to improve usability.
- Correcting erroneous cross-references.

Please see *Note about Amendatory Instructions,* below, for information about how these changes are addressed in the amendatory instructions.

7 CFR part 210: National School Lunch Program

7 CFR 210.2 Definitions

- Remove definition of *CND,* which is no longer in use.
- Replace the definition of *Food component* with the definition of *Meal component*.
- Redesignate paragraphs to use numbers instead of letters (*e.g.,* (1) and (2) instead of (a) and (b)) in the definitions of *Reduced price lunch, School, State agency,* and *State educational agency*.
- Remove outdated language in the definition of *Residential child care institution*.
- Revise the definition of *Yogurt* to reflect changes to the FDA standard of identity of yogurt.

7 CFR 210.3 Administration

- 7 CFR 210.3(a): Remove sentence referring to ''the CND,'' a term no longer in use.

7 CFR 210.4 Cash and Donated Food Assistance to States

- 7 CFR 210.4(b)(3): Remove incorrect cross-reference to afterschool snacks section of regulations (§ 210.10(n)) and add the correct cross-reference (§ 210.10(o)).

7 CFR 210.7 Reimbursement for School Food Authorities

- 7 CFR 210.7(d): Remove erroneous cross-reference to § 220.23, which is no longer in effect.
- 7 CFR 210.7(e): Correct erroneous cross-reference to afterschool snacks section of regulation (from § 210.10(n)(1) to § 210.10(o)(1)).

7 CFR 210.9 Agreement With State Agency

- 7 CFR 210.9(b)(21): Remove outdated implementation date.
- 7 CFR 210.9(c): Remove incorrect cross-reference to afterschool snacks section of regulations (§ 210.10(n)(1)) and add the correct cross-reference (§ 210.10(o)(1)).

7 CFR 210.10 Meal Requirements for Lunches and Requirements for Afterschool Snacks

- Change all references from ''food components'' to ''meal components''.
- 7 CFR 210.10(c): Add minimum creditable amount for all meal components in meal pattern table footnotes.
- In meal pattern tables, add or revise titles for clarity.
- In meal pattern tables, change footnotes to use numbers instead of letters and combine related footnotes to improve readability.

7 CFR 210.11 Competitive Food Service and Standards

- 7 CFR 210.11(m) (redesignated to paragraph (l)): Combine fluid milk and milk alternatives paragraphs and cross-reference § 210.10(d)(1) and (2) instead of repeating milk standards in § 210.11.
- 7 CFR 210.11(m) (redesignated to paragraph (l)): Adjust punctuation to improve readability.
- 7 CFR 210.11(i) and (n): Remove outdated implementation dates.

7 CFR 210.12 Student, Parent, and Community Involvement

- 7 CFR 210.12(e): Correct erroneous cross-reference to local school wellness policies by replacing § 210.30(d) with § 210.31(d).

7 CFR 210.14 Resource Management

- 7 CFR 210.14(e): Remove outdated implementation date.
- 7 CFR 210.14(e)(5)(ii)(D): Remove outdated implementation date.
- 7 CFR 210.14(e)(6)(iii): Remove outdated language.
- 7 CFR 210.14(f): Remove outdated implementation date.

7 CFR 210.15 Reporting and Recordkeeping

- 7 CFR 210.15(b)(9): Correct erroneous cross-reference to local school wellness policies by replacing § 210.30(f) with § 210.31(f).

7 CFR 210.18 Administrative Reviews

- 7 CFR 210.18(h)(2)(x): Correct erroneous cross-reference to local school wellness policies by replacing § 210.30 with § 210.31.

7 CFR 210.19 Additional Responsibilities

- 7 CFR 210.19(f): Remove outdated implementation date.

7 CFR 210.20 Reporting and Recordkeeping

- 7 CFR 210.20(a)(6) and (7): Remove requirements that are no longer in effect.
- 7 CFR 210.20(b)(10): Remove requirement that is no longer in effect.

7 CFR 210.29 Management Evaluations

- 7 CFR 210.29(d)(3): Remove incorrect physical address for the Food and Nutrition Service.

7 CFR Part 220: School Breakfast Program

7 CFR 220.2 Definitions

- Remove erroneous cross-references to § 220.23, which is no longer in effect.
- Remove definitions of *CND, OA,* and *OI,* which are no longer in use.
- Revise definitions of *Department, Distributing agency, Fiscal year, FNS, FNSRO, Free breakfast, Reduced price breakfast, Reimbursement, School Food Authority,* and *State agency* for consistency with definitions in 7 CFR 210.2.
- Remove the definition of *Food component* and instead add the definition of *Meal component*.
- Remove the definitions of *Menu item* and *Nutrient Standard Menu Planning/Assisted Nutrient Standard Menu Planning,* which are no longer in use under food-based menu planning.
- Remove the second definition of *Non-profit,* which is duplicative and outdated.
- Remove outdated language in the definition of *Residential child care institution.*
- Revise the definition of *Yogurt* to reflect changes to the FDA standard of identity of yogurt.

7 CFR 220.3 Administration

- 7 CFR 220.3(a): Remove sentence referring to ''the CND,'' a term no longer in use.

7 CFR 220.7 Requirements for Participation

- 7 CFR 220.7(e)(2), (4), (5), (9), and (13): Revise language for clarity and remove outdated references.
- 7 CFR 220.7(h): Correct erroneous cross-reference to local school wellness policies by replacing § 210.30 with § 210.31.

7 CFR 220.8 Meal Requirements for Breakfasts

- Change all references from ''food components'' to ''meal components''.
- 7 CFR 220.8(a)(2): Change reference from ''reimbursable lunch'' to ''reimbursable breakfast''.
- 7 CFR 210.10(c): Add minimum creditable amount for all meal components in meal pattern table footnotes.
- In meal pattern tables, add or revise titles for clarity.
- In meal pattern tables, change footnotes to use numbers instead of letters and combine related footnotes to improve readability.
- 7 CFR 210.10(c)(2)(i)(A): Remove reference to crediting enriched macaroni at lunch.
- 7 CFR 210.10(c)(2)(v): Add fluid milk as a listed meal component in paragraph (c)(2).

7 CFR 220.13 Special Responsibilities of State Agencies

- 7 CFR 220.13(b)(3): Remove requirements that are no longer in effect.
- 7 CFR 220.13(c): Remove outdated references to ''OI''.
- 7 CFR 220.13(f)(3): Remove erroneous cross-reference to § 220.23, which is no longer in effect.
- 7 CFR 220.13(l): Remove requirement that is no longer in effect.

7 CFR 220.14 Claims Against School Food Authorities

- Remove references to the term ''CND'', which is no longer in use.

7 CFR Part 225: Summer Food Service Program

7 CFR 225.16 Meal Service Requirements

- Change all references from ''food components'' to ''meal components''.

7 CFR part 226: Child and Adult Care Food Program

7 CFR 226.2 Definitions

- Remove outdated language in the definition of ''Functionally impaired adult''.
- Add definition for ''meal component''.

7 CFR 226.20 Requirements for Meals

- Change all references from ''food components'' to ''meal components''.
- Change all references from ''grains'' to ''grain items'' within the footnotes to meal pattern tables.
- Update the meats/meat alternates row at 7 CFR 226.20(c) in the Meal Patterns for Children Age 1 through 18 and Adult Participants to use ounce equivalents and refer to meats/meat alternates sources generally, instead of listing specific foods within the category.
- In meal pattern tables, revise certain footnotes for clarity and combine related footnotes to improve readability.

Note About Amendatory Instructions

As detailed above, USDA is making a variety of minor technical changes in this rulemaking. For example, this rule removes outdated implementation dates and makes minor wording changes throughout the school meal program regulations to reflect current terminology. At the direction of the Office of the Federal Register,[167] instead of drafting the specific and targeted amendatory instructions to make these individual changes, USDA is providing full context for these changes by including not only the revised content, but also the unchanged content that appears adjacent to the changed text. As such, large sections of the existing regulations are reprinted in the amendatory instructions of this rule without change, beyond the minor technical corrections detailed above. All substantive changes made by this rulemaking are explained in this preamble.

Severability

USDA is finalizing a severability clause for changes to the meal pattern requirements made by this rulemaking. In the event any changes made by this rulemaking were to be held invalid or unenforceable, USDA intends the remainder of the changes to remain in place. USDA further specifies what requirement would replace the invalidated change. This final rule adds a new paragraph (r) to 7 CFR 210.10 (NSLP meal pattern requirements) providing that if any provision of such section is held to be invalid or unenforceable by its terms, or as applied to any person or circumstances, it shall be severable from that section and not affect the remainder thereof. In the event of such holding of invalidity or unenforceability of a provision, the regulations provide that the meal pattern requirement covered by that provision would revert to the version that immediately preceded the invalidated provision. This final rule adds similar paragraphs to 7 CFR 220.8 (SBP meal pattern requirements), and 7 CFR 226.20 (CACFP meal pattern requirements).

[167] Office of the Federal Register. *Amendatory instruction: Revise and Republish.* Available at: *https://www.archives.gov/federal-register/write/ddh/revise-republish.*

Section 21: Summary of Changes

This section provides a high-level overview of the provisions finalized in this rulemaking. It includes:

- A descriptive summary of changes; and
- A table detailing the changes, including the child nutrition program or programs that the changes apply to, and their implementation dates.

21A: Descriptive Summary of Changes

This section provides a narrative summary of the changes finalized in this rulemaking, including the implementation dates.

Section 2: Added Sugars

This rulemaking finalizes the following added sugars limits in the school lunch and breakfast programs:

- *Product-based limits:* this rulemaking implements the following product-based limits for school meals; these limits must be implemented by SY 2025–2026:
- *Breakfast cereals:* limited to no more than 6 grams of added sugars per dry ounce.
- *Yogurt:* limited to no more than 12 grams of added sugars per 6 ounces.
- Flavored milk: limited to no more than 10 grams of added sugars per 8 fluid ounces or, for flavored milk sold as a competitive food for middle and high schools, 15 grams of added sugars per 12 fluid ounces.
- *Weekly dietary limit:* this rulemaking implements a dietary specification limiting added sugars to less than 10 percent of calories per week in the school lunch and breakfast programs; this weekly limit, which must be implemented by SY 2027–2028, is in addition to the product-based limits described above.

This rulemaking also extends the product-based added sugars limits for breakfast cereals and yogurt to CACFP; this change must be implemented by October 1, 2025. These added sugars limits replace the existing total sugars limits for breakfast cereals and yogurt in CACFP.

Section 3: Milk

Section 3A: Flavored Milk

This final rule maintains the current regulation allowing all schools to offer fat-free and low-fat milk, flavored and unflavored, to K–12 students, with the new proposed added sugars limit for flavored milk. This final rule also continues to allow SMP and CACFP operators to offer fat-free and low-fat milk, flavored and unflavored, to participants ages 6 and older. Because this rule finalizes the current flavored milk requirements, child nutrition program operators will not need to make changes to their menus to comply with this provision, beyond complying with the product-based added sugars limit for flavored milk in *Section 2: Added Sugars* upon implementation.

Section 3B: Fluid Milk Substitutes: Responses to Request for Input

This final rule reorganizes the NSLP regulatory text related to fluid milk substitutes for non-disability reasons. This rule moves the regulatory text explaining the non-disability fluid milk substitute requirements from paragraph (m) of 7 CFR 210.10—which discusses exceptions and variations allowed in reimbursable meals—to paragraph (d) of 7 CFR 210.10—which discusses the fluid milk requirements. Schools are not required to change menus or operations as a result of this technical change.

This final rule does not make any substantive changes to the non-disability fluid milk substitute request process outlined in regulation; USDA does not have the authority to change the statutory requirements for non-disability fluid milk substitutes.

Section 3C: Fluid Milk Substitutes: Nutrient Requirements

As a conforming amendment, this final rule changes the units for vitamin A and vitamin D requirements for fluid milk substitutes in all child nutrition programs. Instead of 500 IUs, the unit for the vitamin A requirement is now 150 mcg retinol activity equivalents (RAE) per 8 fluid ounces. Instead of 100 IUs, the unit for the vitamin D requirement is now 2.5 mcg per 8 fluid ounces. Child nutrition program operators are not required to change menus or operations as a result of this technical change.

Section 4: Whole Grains

This final rule maintains the current whole grains requirement that at least 80 percent of the weekly grains offered in the school lunch and breakfast programs are whole grain-rich, based on ounce equivalents of grains offered. It also codifies the definition of ''whole grain-rich'' in NSLP, SBP, and CACFP regulations, to mean that the grain content of a product is between 50 and 100 percent whole grain. Lastly, this final rule updates the definition of ''entrée item'' in the competitive food service regulations to clarify that both whole-grain rich and enriched grain entrées offered as part of a reimbursable school meal may qualify as an ''entrée item'' when sold à la carte as a ''Smart Snack.'' Because this rule finalizes the current whole grain-rich requirements and whole grain-rich definition, child nutrition program operators will not need to make changes to comply with the whole grain-rich provision of this rule.

Section 5: Sodium

This final rule maintains current sodium limits at school lunch and breakfast through June 30, 2027, and implements one reduction in school lunch and breakfast sodium limits that schools must implement by July 1, 2027. As suggested by numerous stakeholders, this final rule also commits to conducting a study on potential associations between sodium reduction and student participation in school meals.

Section 6: Meats/Meat Alternates at Breakfast

This final rule codifies the combined grains and meats/meat alternates meal component at K–12 breakfast and removes the requirement for schools to offer 1.0 ounce equivalent of grains each day at breakfast. Schools may offer grains, meats/meat alternates, or a combination of both to meet the minimum ounce equivalents in this combined component requirement. This change provides schools with more menu planning flexibility at breakfast. Schools are not required to change menus or operations as a result of this provision.

Section 7: Substituting Vegetables for Grains in Tribal Communities

The final rule codifies the proposal to add school food authorities and schools that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children to the list of schools at 7 CFR 210.10(c)(3) and 220.8(c)(3) that may serve vegetables to meet the grains requirement in NSLP and SBP. For SFSP and CACFP, USDA finalizes the proposal to revise 7 CFR 225.16(f)(3) and 226.20(f) to allow sponsors, institutions, and facilities, as applicable, that serve primarily American Indian or Alaska Native participants to substitute vegetables for grains or breads. Additionally, this final rule allows all schools, sponsors, institutions, and facilities in Guam and Hawaii to serve vegetables to meet the grains or breads requirement. These changes provide child nutrition program operators an optional menu planning flexibility. Program operators are not required to change menus or operations as a result of this provision.

Section 8: Traditional Indigenous Foods

This final rule codifies the proposal to explicitly state in regulation that traditional Indigenous foods may be served in reimbursable school meals. Regulations at 7 CFR 210.10(c)(7) and 220.8(c)(4) will include the definition of traditional foods from the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)), which defines traditional food as ''food that has traditionally been prepared and consumed by an [American] Indian tribe,'' including wild game meat, fish, seafood, marine mammals, plants, and berries. Schools are not required to change menus or operations as a result of this technical change.

Section 9: Afterschool Snacks

This final rule aligns NSLP snack meal pattern requirements for K–12 children with the CACFP snack meal pattern requirements, as required by the National School Lunch Act (NSLA, 42 U.S.C. 1766a(d)). Additionally, this rule finalizes the provision from the 2020 proposed rule to revise the definition of *Child.* This change clarifies that children who are age 18 and under at the start of the school year may receive reimbursable NSLP snacks, consistent with statute (NSLA, 42 U.S.C. 1766a(b)). As with the proposed rule, this final rule changes all regulatory references in 7 CFR part 210 from ''meal supplements'' to ''afterschool snacks.'' The change to NSLP snack meal pattern requirements must be implemented by July 1, 2025.

Section 10: Substituting Vegetables for Fruits at Breakfast

This final rule continues to allow schools to substitute vegetables for fruits in the SBP and simplifies the vegetable variety requirement. Under this final rule, schools choosing to offer vegetables at breakfast one day per school week have the option to offer any vegetable, including a starchy vegetable. Schools that choose to substitute vegetables for fruits at breakfast on two or more days per school week are required to offer vegetables from at least two different subgroups. The vegetable subgroups that schools may choose from

include dark green, red/orange, beans, peas, and lentils, starchy, and ''other'' vegetables.

Section 11: Nuts and Seeds

This final rule codifies the proposal to allow nuts and seeds to credit for the full meats/meat alternates component in all child nutrition programs and meals, removing the 50 percent crediting limit for nuts and seeds at breakfast, lunch, and supper. This change provides child nutrition program operators more menu planning flexibility. Program operators are not required to change menus or operations as a result of this provision.

Section 12: Beans, Peas, and Lentils at Lunch

This final rule codifies the option for schools to count beans, peas, and lentils offered as a meat alternate at lunch toward the weekly beans, peas, and lentils vegetable subgroup requirement. Under this option, as with the current requirement, menu planners would determine which overall meal component beans, peas, and lentils would count toward: the vegetable meal component, or the meats/meat alternates meal component. Beans, peas, and lentils offered to students as either vegetables or meat alternates can count toward the weekly requirement to offer ½ cup of beans, peas, and lentils. This change provides schools with more menu planning flexibility at lunch. Schools are not required to change menus or operations as a result of this provision.

Section 13: Competitive Foods: Bean Dip Exemption

This final rule adds *bean dip* to the list of foods exempt from the total fat standard in the Smart Snacks regulations. This exemption applies to products marketed as hummus, as well as bean dips made from any variety of beans, peas, or lentils. Bean dip will continue to be subject to the saturated fat standard for Smart Snacks, as well as all other Smart Snacks requirements. This change provides schools the option to sell bean dip as a Smart Snack. Schools are not required to change operations as result of this provision.

Section 14: Meal Modifications

This final rule codifies in regulation that State licensed healthcare professionals and registered dietitians may write medical statements to request meal modifications on behalf of child or adult participants with disabilities in the school meal programs and CACFP. It also defines a State licensed healthcare professional as an individual authorized to write medical prescriptions under State law. The change requiring schools, institutions, and facilities to accept medical statements from registered dietitians must be implemented by July 1, 2025, for the school meal programs, and by October 1, 2025, for CACFP. This final rule also updates and reorganizes the regulatory text to distinguish between disability and non-disability requests more clearly. Regarding non-disability requests, this final rule also encourages schools, institutions, and facilities to meet participants' non-disability dietary preferences when planning and preparing school and CACFP meals.

Section 15: Clarification on Potable Water Requirements

This final rule maintains the requirement that schools make plain potable water available and accessible without restriction to children at no charge during the meal service. To clarify this requirement, this final rule adds the word ''plain'' to the potable water regulations. Schools are not required to change menus or operations as a result of this technical change.

Section 16: Synthetic Trans Fats

This final rule removes the dietary specification prohibiting synthetic *trans* fat in the school lunch and breakfast programs, and in foods sold to children on campus during the school day. Under this change, schools will no longer need to include the synthetic *trans* fat prohibition in their procurement documentation, and State agencies will no longer need to review product labels or manufacturer specifications during Administrative Reviews for compliance with the synthetic *trans* fat dietary specification.

Section 17: Professional Standards: Hiring Exception for Medium and Large Local Educational Agencies

This final rule codifies the proposal to allow State agency discretion to approve the hiring of an individual to serve as a school nutrition program director in a medium or large local educational agency, for individuals who have 10 years or more of school nutrition program experience but who do not hold a bachelor's or an associate's degree. Directors hired under this exception must have a high school diploma or GED. At the discretion of the State agency, this change provides local educational agencies an optional hiring flexibility. Schools are not required to change menus or operations as a result of this provision.

Section 18: Buy American

18A: Limited Exceptions to the Buy American Requirement

This final rule maintains the following limited exceptions for the Buy American provision and codifies them in regulation. The two limited circumstances when school food authorities may purchase non-domestic foods are when:

• The product is listed on the FAR 25.104 Nonavailable articles list and/or is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or

• Competitive bids reveal the costs of a U.S. product are significantly higher than the non-domestic product.

This final rule will also gradually phase in a cap on non-domestic food costs. This cap applies to total commercial food costs. The non-domestic food costs cap will be phased in as follows:

• Beginning in SY 2025–2026, the non-domestic food cost cap will be 10 percent.

• Beginning in SY 2028–2029, the non-domestic food cost cap will be 8 percent.

• Beginning in SY 2031–2032, the non-domestic food cost cap will be 5 percent.

18B: Exception Documentation and Reporting Requirements

This final rule requires school food authorities to maintain documentation to demonstrate use of one of the two limited exceptions for non-domestic food purchases, as detailed in Section 18A. In response to public comments, this final rule exempts products on the FAR 25.104 Nonavailable articles lists from the documentation requirement.

18C: Procurement Procedures

This final rule requires school food authorities to include the Buy American requirements in documented procurement procedures, solicitations, and contracts for foods and food products procured for the school lunch and breakfast programs.

18D: Definition of ''Substantially''

This final rule codifies the following definition of ''substantially'' in the Buy American regulations: ''Substantially using agriculture commodities that are produced in the United States means over 51 percent of a food product must consist of agricultural commodities that were grown domestically.'' This change is consistent with existing USDA policy guidance. Therefore, schools are not expected to need to change menus or

operations as a result of this technical change.

18E: Clarification of Requirements for Harvested Farmed and Wild Caught Fish

This final rule codifies language in regulations regarding how the Buy American requirements apply to fish and fish products offered in the school lunch and breakfast programs. In order to be compliant with Buy American requirements, under this final rule:

- Farmed fish must be harvested within the United States or any territory or possession of the United States.
- Wild caught fish must be harvested within the Exclusive Economic Zone of the United States or by a United States flagged vessel.

This change is consistent with statutory requirements and existing USDA policy guidance. Therefore, schools are not required to change menus or operations as a result of this technical change.

Section 19: Geographic Preference

This final rule expands the geographic preference option by allowing ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications (a written description of the product or service that the vendor must meet to be considered responsive and responsible) for unprocessed or minimally processed food items in the child nutrition programs. The definition of unprocessed, and the minimal food handling and processing techniques allowed within that definition, remains unchanged in this final rule. This final rule continues to allow State agencies and program operators to adopt their own definition of ''local'' and does not prescribe a Federal definition of ''local'' for the purpose of procuring local foods for child nutrition programs.

Section 20: Miscellaneous Changes

This final rule makes a variety of miscellaneous changes to the child nutrition program regulations. This rule:

- Removes outdated terminology and updates terminology and definitions for consistency across regulations.
- Removes outdated implementation dates and requirements that are no longer in effect.
- Makes a variety of other technical corrections and changes to the regulations, as detailed in *Section 20: Miscellaneous Changes.*

Child nutrition program operators are not required to change menus or operations as a result of the miscellaneous changes in this rulemaking.

21B: Table of Changes by Program

The chart below details each provision of the rule, the section of the rule that covers the provision, the programs impacted, and the implementation date. For ease of reference, the acronyms used in the chart below are:

- NSLP—National School Lunch Program (7 CFR part 210)
- SMP—Special Milk Program (7 CFR part 215)
- SBP—School Breakfast Program (7 CFR part 220)
- SFSP—Summer Food Service Program (7 CFR part 225)
- CACFP—Child and Adult Care Food Program (7 CFR part 226)

As noted in the *Implementation Dates* column, certain provisions of this rule address requirements that are already in effect. This rulemaking provides an implementation date for these provisions to account for minor corrections and reorganization of the regulatory text. Child nutrition program operators will not need to make any changes to comply with requirements that are already in effect. Additionally, many provisions of this rule provide optional administrative or operational flexibilities. Child nutrition program operators are not required to change menus or operations to comply with provisions that provide optional administrative or operational flexibilities. These provisions are noted in the *Implementation Dates* column.

BILLING CODE 3410–30–P

Provision	Rule Section	Programs Impacted	Implementation Date
Added Sugars: Product-based Limits for Breakfast Cereals	Section 2	NSLP, SBP, CACFP	NSLP/SBP: July 1, 2025 CACFP: October 1, 2025 *Note: CACFP total sugars limits remain in place through September 30, 2025*
Added Sugars: Product-based Limits for Yogurt	Section 2	NSLP, SBP, CACFP	NSLP/SBP: July 1, 2025 CACFP: October 1, 2025 *Note: CACFP total sugars limits remain in place through September 30, 2025*
Added Sugars: Product-based Limits for Flavored Milks	Section 2	NSLP, NSLP Smart Snacks in School, SBP	July 1, 2025
Added Sugars: Weekly Limit	Section 2	NSLP, SBP	July 1, 2027
Milk: Flavored Milk	Section 3A	NSLP, NSLP Smart Snacks in School, SMP, SBP, CACFP	July 1, 2024 *Note: this rule finalizes the current flavored milk requirements; child nutrition operators will not need to make changes to comply with this requirement, beyond those changes described in Section 2: Added Sugars*
Milk: Fluid Milk Substitutes: Responses to Request for Input	Section 3B	NSLP, SBP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Milk: Fluid Milk Substitutes: Nutrient Requirements	Section 3C	NSLP, SMP, SBP, CACFP	July 1, 2024 *Note: child nutrition program operators are not required to change menus or operations as a result of this provision*
Whole Grains: Whole Grain-rich Requirement	Section 4	NSLP, SBP	July 1, 2024 *Note: this rule finalizes the current whole grain-rich requirements; child nutrition operators will not need to make changes to comply with this requirement*
Whole Grains: Whole Grain-rich Definition	Section 4	NSLP, SBP, CACFP	July 1, 2024 *Note: this rule codifies existing whole grain-rich*

			definition; child nutrition operators will not need to make changes to comply with this requirement
Sodium	Section 5	NSLP, SBP	July 1, 2024 *Note: this rule maintains the current sodium limits for the first three years of implementation; schools will not be required to implement further sodium reductions until July 1, 2027*
Meats/Meat Alternates at Breakfast	Section 6	SBP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Substituting Vegetables for Grains in Tribal Communities	Section 7	NSLP, SBP, SFSP, CACFP	July 1, 2024 *Note: child nutrition program operators are not required to change menus or operations as a result of this provision*
Traditional Indigenous Foods	Section 8	NSLP, SBP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Afterschool Snacks: NSLP Snacks Meal Pattern Requirements	Section 9	NSLP Snacks	July 1, 2025
Afterschool Snacks: All Other Changes	Section 9	NSLP Snacks	July 1, 2024 *Note: schools following the current regulatory requirement are not required to change menus or operations as a result of this provision*
Substituting Vegetables for Fruits at Breakfast	Section 10	SBP	July 1, 2024 *Note: schools following the current regulatory requirement are not required to change menus or operations as a result of this provision*
Nuts and Seeds	Section 11	NSLP, SBP, SFSP, CACFP	July 1, 2024 *Note: child nutrition program operators are not required to change menus or operations as a result of this provision*
Beans, Peas, and Lentils at Lunch	Section 12	NSLP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Competitive Foods: Bean Dip Exemption	Section 13	NSLP Smart Snacks in Schools	July 1, 2024

			Note: schools are not required to change menus or operations as a result of this provision
Meal Modifications: Requirement to Accept Medical Statements from Registered Dietitians	Section 14	NSLP, SBP, CACFP	NSLP/SBP: July 1, 2025 CACFP: October 1, 2025
Meal Modifications: All Other Changes	Section 14	NSLP, SBP, CACFP	July 1, 2024 *Note: child nutrition program operators are not required to change menus or operations as a result of this provision*
Clarification on Potable Water Requirements	Section 15	NSLP, SBP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Synthetic Trans Fat	Section 16	NSLP, NSLP Smart Snacks in School, SBP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Professional Standards: Hiring Exception for Medium and Large Local Educational Agencies	Section 17	NSLP, SBP	July 1, 2024 *Note: schools are not required to change menus or operations as a result of this provision*
Buy American	Section 18A-18E	NSLP, SBP	July 1, 2024 *Note: the cap for non-domestic food purchases will be gradually phased in over time*
Geographic Preference	Section 19	NSLP, SMP, SBP, SFSP, CACFP	July 1, 2024 *Note: child nutrition program operators are not required to change menus or operations as a result of this provision*
Terminology Change: Beans, Peas, and Lentils	Section 20	NSLP, SBP, SFSP, CACFP	July 1, 2024 *Note: child nutrition program operators are not required to change menus or operations as a result of this provision*

BILLING CODE 3410–30–C

Section 22: Procedural Matters

Executive Orders 12866, 13563, and 14094

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and

equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rulemaking has been determined to be significant under section 3(f)(1) of Executive Order 12866, as amended by Executive Order 14094, and was reviewed by the Office of Management and Budget in conformance with Executive Order 12866.

Regulatory Impact Analysis

As required for all rules that have been designated as significant under section 3(f)(1) Executive Order 12866 by the Office of Management and Budget, a Regulatory Impact Analysis was developed for this rule. It follows this rule as an Appendix. The following summarizes the conclusions of the regulatory impact analysis:

Need for Action: This rule establishes requirements that align school meals with the goals of the *Dietary Guidelines for Americans, 2020–2025,* and that support the continued provision of nutritious school meals. To develop this rule, USDA considered broad stakeholder input, including written comments received in response to the 2023 proposed rule, oral comments submitted during listening sessions, and a comprehensive review of the *Dietary Guidelines for Americans, 2020–2025.* The proposed rule included a focus on sodium, whole grains, milk, and added sugars. This rule represents the next stage of the rulemaking process to permanently update and improve school meal pattern requirements. In response to public comments, this rule revises the proposed implementation of sodium reductions and maintains current milk requirements allowing schools to offer flavored milk to all K–12 children. Further, this rule finalizes a variety of changes to school meal requirements from the 2020 proposed rule, *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs.* Updates for the Child and Adult Care Food Program (CACFP) and Summer Food Service Program (SFSP) are also included in certain provisions of this rule. Finally, this rulemaking will strengthen Buy American requirements.

Benefits: Making the changes outlined in this rule can lead to improved health outcomes in the long-term. The Regulatory Impact Analysis details potential health benefits because of sodium reductions and added sugars limits over time, as well as information regarding the methodology for selecting specific limits. Sections of this rule on traditional Indigenous foods may have some potential health benefits for American Indian and Alaska Native children and allow for schools to serve more culturally relevant ingredients. This rule maintains the current milk requirements from the transitional standards rule, allowing all schools to offer flavored or unflavored milks to K–12 children. USDA also maintains the requirements that at least 80 percent of the weekly grain offerings in school meals each week are whole grain-rich. This rule builds on the progress schools have already made in improving school meals to support healthy diets for school children while also allowing for operational or administrative flexibilities for geographic preference, meats/meat alternates at breakfast, nuts and seeds, and beans, peas and lentils at lunch. Minor shifts and technical corrections are included in other provisions, such as updating definitions and terminology in the regulations.

Costs: USDA estimates this rule would cost schools between $0.02 and $0.04 per meal or an average of $206 million annually including both the SBP and NSLP starting in SY 2024–2025, accounting for the fact that the requirements will be implemented gradually and adjusting for annual inflation.[168] While some changes—such as aligning the NSLP snack meal pattern with that of CACFP or simplifying requirements for schools that choose to substitute vegetables for fruits at breakfast—are estimated to reduce school food costs or have no cost impact, others are estimated to increase food costs. The costs to schools are mainly due to a shift in purchasing patterns and increased labor costs. An increase in cost due to the Buy American final rule is a result of additional labor and food costs. The changes in this rulemaking are gradual, achievable, and realistic for schools and recognize the need for strong nutrition requirements in school meals. There are no estimated changes in Federal costs due to the changes in this final rule, as the rule does not impact the Federal reimbursement rate for school meals and is not expected to significantly impact baseline participation.

Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601–612) requires Agencies to analyze the impact of rulemaking on small entities and consider alternatives that would minimize any significant impacts on a substantial number of small entities. This rule would have a significant impact on a substantial number of small entities.

The requirements established by this rule apply to school districts, which meet the definitions of ''small governmental jurisdiction'' and ''small entity'' in the Regulatory Flexibility Act. Overall, about 60 percent of school food authorities operating child nutrition programs are considered ''small,'' or having less than 999 students.[169] Under the National School Lunch Act (NSLA, 42 U.S.C. 1758(f)), schools participating in the school lunch or breakfast program are required to serve meals that are consistent with the goals of the most recent *Dietary Guidelines* and that consider the nutrient needs of children who may be at risk for inadequate food intake and food insecurity. This final rule amends 7 CFR parts 210 and 220 that govern school lunch and breakfast program requirements, including the nutrition requirements that schools are required to meet to receive Federal reimbursement for program meals. The changes in this final rule further align school nutrition requirements with the goals of the *Dietary Guidelines for Americans, 2020–2025,* consistent with statute.

Significant Alternatives

As discussed in *Section 3A: Flavored Milk* and *Section 4: Whole Grains,* USDA considered two proposals for the milk provision and a proposal and alternative for the whole grains provision.

For milk, the proposed rule included two alternatives:

- Alternative A: Proposed to allow flavored milk (fat-free and low-fat) at school lunch and breakfast for high school children only, effective SY 2025–2026. Under this alternative, USDA proposed that children in grades K–8 would be limited to a variety of unflavored milk. The proposed regulatory text for Alternative A would allow flavored milk for high school children only (grades 9–12). Flavored milk would be subject to the new proposed added sugars limit.
- Alternative B: Proposed to continue to allow all schools to offer fat-free and low-fat milk, flavored and unflavored, to K–12 children, with the new proposed added sugars limit for flavored milk.

[168] Using 2023 dollars and not adjusting for annual inflation results in $1.256 billion dollars over eight school years (over nine fiscal years) or $52 to $227 million annually ($0.03 per meal), see appendix.

[169] See Appendix A. U.S. Department of Agriculture. *Results of USDA's Food and Nutrition Service-Administered School Food Authority Survey II on Supply Chain Disruption and Student Participation.* July 2023. Available at: *https://fns-prod.azureedge.us/sites/default/files/resource-files/SFASurvey-II-Supply-Chain-072523.pdf.*

For whole grains, the proposed rule included a proposal and an alternative:

- The rule proposed to maintain the current requirement that at least 80 percent of the weekly grains offered in the school lunch and breakfast programs are whole grain-rich, based on ounce equivalents.
- The rule requested public input on an alternative that would require that all grains offered in the school lunch and breakfast programs be whole grain-rich, except that one day each school week, schools may offer enriched grains.

USDA encouraged public input on the options provided for the milk and whole grains provisions, as well as all other aspects of the proposed rule. In some cases, USDA posed specific questions for public input to help inform the final rule. For example, as noted in *Section 2: Added Sugars,* USDA requested public input on whether the proposed implementation dates would provide appropriate lead time to successfully implement the proposed added sugars limits. As noted in *Section 4: Sodium,* USDA requested input on what sodium limits would be achievable for schools and industry, while supporting lower-sodium meals for children. USDA also requested public input on the proposed implementation schedule, as well as the number and level of sodium reductions proposed in the rule. USDA indicated that the Department would use public input received in response to the proposed rule to help inform the final rule.

USDA received 130 public comments from school districts or schools, as well as about 340 comments from school nutrition professionals. Some of these respondents provided details about their school type, and several addressed specific concerns of small or rural schools. For example, one respondent indicated that they work in a ''small school district'' with no central kitchen ''and not enough staff,'' and suggested that these factors make it very hard to do scratch cooking. Another respondent who noted they work at a small charter school also raised concerns about meal preparation, noting that they ''do not have the space, equipment and staff to cook meals from scratch.'' An advocacy group representing small and rural schools added that schools would need to prepare more meals from scratch to further limit sodium. The same respondent noted that smaller schools may not have the funds to hire registered dietitians to assist with menu planning. A school food service professional noted that ''small school systems will struggle to make menu adjustments'' to meet the proposed sodium reductions. Another school food service professional noted that in small schools, staff ''wear many hats'' and have limited time and resources. This respondent was especially concerned about further sodium reductions. While they expressed support for reducing sodium, they suggested USDA consider the impact to student participation and consumption of meals when determining further reductions. An advocacy group representing State rural education associations asserted that the proposed sodium limits would reduce compliant products available to rural schools, which would make it difficult to meet the updated sodium limits.

Regarding the proposed added sugars limits, a State agency suggested that requiring product-based limits and a weekly limit would make it more difficult to successfully administer the programs, especially for smaller schools. An advocacy group representing rural schools asserted that the proposed added sugars limits and sodium reductions would reduce student participation, increase costs, and make it harder for rural schools to procure compliant products. An industry respondent maintained that rural schools may have an easier time implementing the proposed product-based added sugars limits, compared to the proposed weekly added sugars limit. However, a State agency argued that small and rural schools often face limited product options and may not have access to products that meet the proposed product-based added sugars limits. Regarding the proposed limit on grain-based desserts at breakfast, a respondent who works at a small charter school asserted that USDA would need to ''come up with some solutions for what to serve for breakfast grains'' if grain-based desserts, such as toaster pastries and fruit turnovers, are limited at breakfast under the final rule.

A few respondents provided input on the milk and whole grain proposals from the small or rural school perspective. A State agency noted that they have several schools where students from grades 6–12 attend school in the same building. This State agency noted that these smaller schools would face challenges implementing milk Alternative A. For example, smaller schools may not have extra refrigeration space to store flavored milk during the K–5 meal service. Other State agencies raised similar concerns, noting that in some smaller schools, elementary and middle school students may share one breakfast or lunch period, and it would be difficult to restrict flavored milk for some students but not others. An advocacy group representing small and rural schools raised concerns about the potential decrease in student consumption of milk, if flavored milk is restricted.

Regarding whole grains, one school food service professional who stated that they work at a ''small school with limited access to distributors'' supported the proposal to maintain the 80 percent whole grain-rich requirement. This respondent suggested the 80 percent whole grain-rich requirement allows them to occasionally offer enriched tortillas and egg noodles. A respondent that identified as a small and rural school agreed, stating support for the 80 percent whole-grain rich requirement. Another respondent representing small and rural schools suggested that USDA not ''confuse menu planners by changing the whole grain-rich requirements'' and supported maintaining the current 80 percent whole grain-rich requirement.

As discussed throughout the preamble, this rulemaking is based on a comprehensive review of the *Dietary Guidelines,* robust stakeholder input on school nutrition requirements, and lessons learned from prior rulemakings. With this rule, USDA aims to integrate each of these factors in a way that prioritizes children's health while ensuring that the nutrition requirements are achievable for all schools. USDA recognizes that small school districts, like all school districts, will face increased costs and potential challenges in implementing this rule. These costs are not significantly greater for small school districts than for larger ones, as implementation costs are driven primarily by factors other than school district size. Additionally, as noted, about 60 percent of school food authorities operating child nutrition programs are considered ''small,'' or having less than 999 students.[170] Considering that the majority of school food authorities are small, USDA expects the cost impact data presented in the Regulatory Impact Analysis reflects small school food authorities and that there would not be significant differential impacts on them as a result of this rule. Nevertheless, USDA does not discount the special challenges that some smaller school districts may face. As a group, small school districts may have less flexibility to adjust resources in response to immediate budgetary needs. As noted in public comments, some respondents cited challenges that

[170] See appendix A. U.S. Department of Agriculture. *Results of USDA's Food and Nutrition Service-Administered School Food Authority Survey II on Supply Chain Disruption and Student Participation.* July 2023. Available at: *https://fns-prod.azureedge.us/sites/default/files/resource-files/SFASurvey-II-Supply-Chain-072523.pdf.*

small school districts face with limited time and resources, which could make making menu changes at a rapid pace challenging. Therefore, USDA expects that the phased-in implementation period for meal pattern changes finalized in this rule will provide these school districts opportunity for advance planning.

In addition, USDA considered public comments from small and rural school districts, and organizations representing them when determining the final requirements. For example, as discussed in *Section 3A: Flavored Milk,* USDA recognized that implementing Alternative A would be operationally challenging for small schools, where children from many grade levels may share cafeteria space. USDA also appreciates concerns that respondents raised regarding a lack of refrigerated storage space for flavored milk in small schools. This rule finalizes milk Alternative B, which maintains the current requirement allowing all schools to offer fat-free and low-fat milk, flavored and unflavored, to K–12 children. As discussed in *Section 4: Whole Grains,* this final rule maintains the current requirement that at least 80 percent of the weekly grains offered by ounce equivalent are whole grain-rich, which respondents noted has been successfully implemented by many schools. USDA also considered respondent input on other provisions in this rulemaking. For example, based on stakeholder feedback, this rule does not finalize the proposed limit on grain-based desserts offered at breakfast. Additionally, based on public input, this final rule allows schools more time to gradually reduce sodium and includes a commitment from USDA to conduct a study on the potential associations between sodium reduction and student participation. USDA expects that this change from the proposed rule will make the sodium limits more achievable for schools, including small schools, as it will allow more time for menu adjustments and product reformulation. With this rule, USDA intends to improve the school meal nutrition requirements in a way that is practical and attainable for all schools.

More detailed information about the costs associated with provisions of this rulemaking may be found in the Regulatory Impact Analysis.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local and Tribal governments and the private sector. Under section 202 of the UMRA, the Department generally must prepare a written statement, including a cost benefit analysis, for proposed and final rules with ''Federal mandates'' that may result in expenditures by State, local or Tribal governments, in the aggregate, or the private sector, of $146 million or more (when adjusted for inflation; GDP deflator source: Table 1.1.9 at *http://www.bea.gov/iTable*) in any one year. When such a statement is needed for a rule, section 205 of the UMRA generally requires the Department to identify and consider a reasonable number of regulatory alternatives and adopt the most cost effective or least burdensome alternative that achieves the objectives of the rule. This rule has UMRA impacts, discussed in the Regulatory Impact Analysis conducted by USDA in connection with this rule which includes a cost/benefit analysis and explains the options considered to update the school meal patterns based on the *Dietary Guidelines for Americans, 2020–2025.*

Executive Order 12372

The NSLP, SMP, SBP, SFSP, and CACFP are listed in the Catalog of Federal Domestic Assistance under NSLP No. 10.555, SMP No. 10.556, SBP No. 10.553, SFSP No. 10.559, and CACFP No. 10.558, respectively, and are subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials (see 2 CFR chapter IV). Since the child nutrition programs are State-administered, USDA's FNS Regional Offices have formal and informal discussions with State and local officials, including representatives of Indian Tribal Organizations, on an ongoing basis regarding program requirements and operations. This provides USDA with the opportunity to receive regular input from program administrators and contributes to the development of feasible program requirements.

Federalism Summary Impact Statement

Executive Order 13132 requires Federal agencies to consider the impact of their regulatory actions on State and local governments. Where such actions have federalism implications, agencies are directed to provide a statement for inclusion in the preamble to the regulations describing the agency's considerations in terms of the three categories called for under section (6)(b)(2)(B) of Executive Order 13132. This rule has federalism impacts which are discussed below.

Prior Consultation With State Officials

As detailed in the proposed rule, USDA received input from various stakeholders through listening sessions and public comments prior to drafting the proposed rule. USDA held over 50 listening sessions with stakeholder groups that represent national, State, and local interests.[171] USDA also received over 8,000 public comments on the transitional standards final rule prior to drafting the proposed rule. These comments, from State agencies, advocacy groups, school districts, and other stakeholders, helped to inform the proposed rule. To develop this rule, USDA considered over 136,000 public comments received on the proposed rule. State agencies, school nutrition professionals, advocacy groups, industry respondents, professional associations, school districts, CACFP sponsoring organizations, dietitians, and individuals submitted public comments on the proposed rule.

Nature of Concerns and the Need To Issue This Rule

As noted in *Section 1: Background,* child nutrition program stakeholders that commented on the proposed rule raised concerns that changes to the school meal patterns could negatively impact student participation and consumption of meals. Stakeholders also cited issues with product availability, suggesting that the proposed added sugars limits and sodium reductions would cause vendors to leave the school nutrition market and make it more difficult for schools to procure products for meals. The proposed implementation timeframes were also a concern for some stakeholders, who argued that schools would need more time to successfully implement the changes. Stakeholders also raised concerns about school food finances. For example, a school district respondent suggested that transitioning to new or updated requirements would involve purchasing new products, which they asserted would be more expensive. This respondent also raised concerns about the potential for reduced student participation under the updated requirements, which they noted could

[171] As detailed in the proposed rule, USDA held listening sessions with Academy of Nutrition and Dietetics, American Beverage Association, American Commodity Distribution Association, American Heart Association, Center for Science in the Public Interest, Education Trust, FoodCorps, Friends of the Earth, International Dairy Foods Association, National Congress of American Indians, National Indian Education Association, School Nutrition Association, State agencies, Urban School Food Alliance, Whole Grains Council members, and local school districts, including tribally-run schools, and others.

negatively impact school food finances. Another respondent raised similar concerns in connection to the sodium proposal, suggesting that reduced sodium could result in less palatable meals. This respondent suggested that less palatable meals could lead to reduced student participation in school meals, which could negatively impact school food finances. Other respondents suggested that schools are still dealing with high food costs and supply chain issues or provided general comments asserting that more nutritious foods (such as foods with less added sugars) could be more expensive compared to foods that schools currently offer. Stakeholders from the CACFP community expressed concern that USDA did not adequately engage the CACFP community prior to publishing the proposed rule.

USDA greatly appreciates input that child nutrition program stakeholders provided in advance of the proposed rule and through the public comment process. In developing this rule, USDA considered the *Dietary Guidelines,* robust stakeholder input, and lessons learned from prior rulemakings. Further, according to the National School Lunch Act (NSLA, 42 U.S.C. 1758(f)), schools participating in the school lunch or breakfast program are required to serve lunches and breakfasts that are consistent with the goals of the most recent *Dietary Guidelines* and that consider the nutrient needs of children who may be at risk for inadequate food intake and food insecurity. This rulemaking also advances the mission of USDA, which includes a focus on providing effective, science-based public policy leadership in food and nutrition.[172]

Extent To Which We Meet Those Concerns

Through this rulemaking, USDA is updating the school meal patterns in a practical and durable manner for the long-term. USDA has considered the impact of this rulemaking on State agencies, schools, and other child nutrition program operators. This rule aims to update the meal patterns to align with the goals of the *Dietary Guidelines for Americans, 2020–2025* in the most effective and least burdensome manner. For example, while USDA considered a more restrictive milk alternative in the proposed rule, this rule will continue to allow schools to offer all K–12 students flavored milk. Similarly, while USDA considered an alternative approach in the proposed rule, this rule will maintain the current whole grains requirement for school meals, preventing State agencies and schools from needing to implement a new whole grains requirement. When compared to the proposed rule, this rule also allows schools even more time to gradually reduce sodium in school meals and does not go as far as the proposed rule. USDA has also committed to conducting a study on potential associations between sodium reduction and student participation in the school meal programs. Further, this rulemaking includes changes that simplify program operations, for example, by easing restrictions around substituting vegetables for fruits at breakfast; aligning crediting for nuts and seeds, and nut and seed butters, across child nutrition programs; allowing schools to more easily offer meats/meat alternates at breakfast; and providing an additional exception to the professional standards hiring requirements for medium and large local educational agencies. This rulemaking retains other existing regulatory provisions to the extent possible.

Executive Order 12988, Civil Justice Reform

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is intended to have preemptive effect with respect to any State or local laws, regulations or policies which conflict with its provisions or which would otherwise impede its full and timely implementation. This rule permits State or local agencies operating the school lunch or breakfast programs to establish more rigorous nutrition requirements or additional requirements for school meals that are not inconsistent with the nutritional provisions of the rulemaking. Such additional requirements are permissible as part of an effort by a State or local agency to enhance school meals or the school nutrition environment. To illustrate, State or local agencies are permitted to establish more restrictive sodium limits. The sodium limits are stated as maximums (*e.g.,* ≤) and could not be exceeded; however, lesser amounts than the maximum could be served. Likewise, State or local agencies are permitted to accelerate implementation of the dietary specification for added sugars in an effort to reduce added sugars in school meals at an earlier date. However, State or local agencies cannot, for example, allow schools to exceed the added sugars limits in this rulemaking as that would be inconsistent with the rulemaking's provisions. This rule is not intended to have retroactive effect. Prior to any judicial challenge to the provisions of the final rule, all applicable administrative procedures must be exhausted.

Civil Rights Impact Analysis

FNS has reviewed the rule, in accordance with Departmental Regulation 4300–004, ''Civil Rights Impact Analysis,'' to identify and address any major civil rights impacts the rule might have on participants on the basis of age, race, color, national origin, sex (including gender identity and sexual orientation), or disability. Due to the unavailability of data, FNS is unable to determine whether this rule will have an adverse or disproportionate impact on protected classes among entities that administer and participate in Child Nutrition Programs. However, the FNS Civil Rights Division finds that the current mitigation and outreach strategies outlined in the regulations and this Civil Rights Impact Analysis (CRIA) provide ample consideration to applicants' and participants' ability to participate in the NSLP, SBP, SMP, and CACFP. The promulgation of this rule will impact school food authorities and CACFP institutions and facilities by updating certain program requirements, including nutrition requirements.

Participants in the NSLP, SMP, SBP, and CACFP may be impacted when the requirements under the rule are implemented by school food authorities and CACFP institutions and facilities. The changes are expected to provide participants in NSLP, SBP, SMP, and CACFP wholesome and appealing meals that reflect the goals of the *Dietary Guidelines* and meet their needs and preferences.

Executive Order 13175

Executive Order 13175 requires Federal agencies to consult and coordinate with Tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. What follows is a summary of Tribal

[172] USDA's mission is: ''To serve all Americans by providing effective, innovative, science-based public policy leadership in agriculture, food and nutrition, natural resource protection and management, rural development, and related issues with a commitment to deliverable equitable and climate-smart opportunities that inspire and help America thrive.'' See: U.S. Department of Agriculture. *Strategic Plan Fiscal Years 2022–2026.* Available at: *https://www.usda.gov/sites/default/files/documents/usda-fy-2022-2026-strategic-plan.pdf.*

implications are present and consultation/coordination taken to date.

This regulation has Tribal implications. As noted in the proposed rule, USDA held listening sessions with Tribal stakeholders in summer 2022, and took feedback received during those listening session into account when developing the proposed rule. USDA held a Tribal consultation on May 23, 2023, during which Tribal leaders provided feedback and input on the proposed rule. Tribal leaders supported improving children's health and nutrition, for example, by reducing sugars in children's diets. Regarding the term ''traditional foods,'' Tribal leaders supported use of the term as detailed in Section 8: Traditional Indigenous Foods and confirmed that it is a recognizable term. Tribal leaders maintained that traditional Indigenous foods can be more expensive to procure compared to other foods and requested additional reimbursement to provide traditional Indigenous foods in school meals. Although USDA does not have the authority to provide additional reimbursement, USDA appreciates Tribal leaders sharing this concern. If a Tribe requests additional consultation in the future, USDA's Office of Tribal Relations will ensure meaningful consultation is provided.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. Chap. 35; 5 CFR 1320) requires that the Office of Management and Budget (OMB) approve all collection of information requirements by a Federal agency before they can be implemented. Respondents are not required to respond to any collection of information unless it displays a current, valid OMB Control Number. This rulemaking finalizes long-term school nutrition requirements based on the goals of the *Dietary Guidelines for Americans, 2020–2025,* robust stakeholder input, and lessons learned from prior rulemakings. Notably, this rulemaking gradually phases in added sugars limits for the school lunch and breakfast programs and in the Child and Adult Care Food Program (CACFP), updates total sugars limits for breakfast cereals and yogurt to added sugars limits. As a reflection of feedback from stakeholders, this rule implements a single sodium reduction in the school lunch and breakfast programs and commits to studying the potential associations between sodium reduction and student participation. This rulemaking addresses a variety of other school meal requirements, including establishing long-term milk and whole grain requirements. Finally, this rulemaking strengthens Buy American requirements. While this rulemaking takes effect school year (SY) 2024–2025, the Department is gradually phasing in required changes over time.

In accordance with the PRA, this rule contains new information collection requirements, which are subject to review and approval by OMB. These new requirements will be added into the following information collections: OMB Control Number 0584–0006 7 CFR part 210 National School Lunch Program (expiration date September 30, 2026), OMB Control Number 0584–0012 7 CFR part 220 (expiration date August 31, 2025), OMB Control Number 0584–0055 Child and Adult Care Food Program (expiration date August 31, 2025), and OMB Control Number 0584–0280 7 CFR part 225, Summer Food Service Program (expiration date September 30, 2025). This rulemaking finalizes new reporting and recordkeeping requirements for State agencies and school food authorities administering the National School Lunch Program (NSLP) and School Breakfast Program (SBP). This rulemaking also finalizes one recordkeeping requirement on Summer Food Service Program (SFSP) and CACFP operators. The final rule contains existing information collections in the form of recordkeeping requirements that have been approved by OMB under OMB Control Number 0584–0006 7 CFR part 210 National School Lunch Program (expiration date September 30, 2026) and OMB Control Number 0584–0012 7 CFR part 220 School Breakfast Program (expiration date August 31, 2025); however, the provisions in this rule do not impact these requirements or their associated burden. Therefore, they are not included in the discussion concerning the burden impact resulting from the provisions in this rulemaking. This rulemaking does not impact existing and approved information collection requirements.

USDA is submitting for public comment the information collection burden that will result from adoption of the new recordkeeping and reporting requirements finalized in the rulemaking. The establishment of the information requirements in the rule is contingent upon OMB approval. When the rulemaking information collection request is approved, the Department will publish a separate notice in the **Federal Register** announcing OMB's approval.

Comments on the information collection requirements addressed in the rule may be submitted. Comments must be received by June 24, 2024. Send comments to Office of Information and Regulatory Affairs, OMB, Attention: Desk Officer for FNS, Washington, DC 20403, Fax: 202–395–7285, or email to *oira_submission@omb.eop.gov.* Please also send a copy of your comments to School Meals Policy Division, Food and Nutrition Service, 1320 Braddock Place, Alexandria, VA 22314. For further information, please contact Marlana Bates at *marlana.bates@usda.gov.*

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

USDA published a proposed rule on February 7, 2023 (88 FR 8050), and received comments from the public concerning the reporting and recordkeeping requirements and their associated burden. Consequently, USDA has revised certain provisions in the rule, and therefore has updated the reporting and recordkeeping information requirement burden estimates from the estimates reported in the proposed rule. In response to public input, USDA made changes to the Buy American provision which impacts the information collection. The rule will now gradually phase in the proposed non-domestic food cap of 5 percent. USDA will introduce a 10 percent cap in SY 2025–2026, an 8 percent cap in SY 2028–2029, and a 5 percent cap in SY 2031–2032. Additionally, USDA is including in this rule that when a school food authority purchases a food item found on the Federal Acquisition Regulations (FAR) 25.104 Nonavailable articles list, no further documentation is required. Food products from the FAR Nonavailable articles list must be included in the non-domestic food cap calculation. Despite the changes to the Buy American provision, the hourly burden calculations are unlikely to decrease substantially from a quarter of an hour per record. For the menu planning options for substituting vegetables for grains in Tribal communities, the estimated burden has

been extended by a quarter of an hour per record for SFSP and CACFP operators in response to public comment that the estimate in the proposed rule was too low. USDA originally estimated that it would take an hour to complete this requirement. Based on the public comment and further evaluation of the requirement and comparison to other similar menu planning requirements, USDA now estimates it will take an additional 15 minutes to complete this requirement. The revised time estimate for this requirement is now one hour and 15 minutes.

The estimated numbers of responses, and burden hours for the information collection requirements that were included in the February 7, 2023, proposed rule are being revised in the final rule. In addition, the baseline for one of the affected collections (OMB Control Number 0584–0006) has been revised since the issuance of the proposed rule. These revisions are based on updating previous information collections rather than creating a new collection as was in the proposed rule. Between the publication of the proposed rule and the final rule, the following ICR expired: OMB Control Number 0584–0006. Because this collection has since been renewed and updated with an expiration date of September 30, 2026, the decision was made to switch to revisions of previous collections rather than a new information collection. The number of respondents now align with those in the four previous information collections. Burden was also added to account for the changes in the NSLP and SBP, instead of a combined estimate for both programs for the three applicable provisions. Additionally, burden was added to account for menu development, which had not been considered in previous information collections. As a result, the number of responses and burden hours for this rule have increased over those estimated for the proposed rule.

USDA now estimates that this rule will have an estimated 19,705 respondents, 763,892 responses, and 635,196 burden hours. This is the same number of respondents, an increase of 549,934 responses, and an increase of 204,897 burden hours in comparison to the estimations included in the proposed rule. These estimates are totaled from four information collections, each of which is detailed in sections below. First, an overview of each part of the rule that adds burden is below, including professional standards exception, Buy American, substituting vegetables for grains in Tribal communities, menu planning options, and annualized costs.

Professional Standards Exception

This rulemaking codifies the proposed hiring exception to allow State agencies to approve the hiring of an individual to serve as a school nutrition program director in medium (2,500 to 9,999 students) or large (10,000 or more students) local educational agencies, for individuals who have 10 years or more of school nutrition program experience but who do not hold a bachelor's or associate's degree.

Buy American

The National School Lunch Act (NSLA, 42 U.S.C. 1760(n)) and program regulations at 7 CFR 210.21(d)(2)(i) and 220.16(d)(2)(i), require school food authorities to purchase domestic commodities or products "to the maximum extent practicable." This provision, known as the Buy American provision, was initially implemented in 1998 and supports the mission of the child nutrition programs, which is to serve children nutritious meals and support American agriculture. There are two limited exceptions to the Buy American provision that school food authorities may implement when purchasing domestic foods is not feasible. The exceptions apply when a product is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality, or when competitive bids reveal the costs of a U.S. product are significantly higher than the non-domestic product.

The final rule maintains the current two limited exceptions to the Buy American provision and clarifies in regulation that it is the responsibility of the school food authority to determine whether an exception applies. In addition, in response to public comment, USDA is including in this rule that when a school food authority purchases a food item found on the Federal Acquisition Regulations (FAR) 25.104 Nonavailable articles list, no further documentation is required. The Nonavailable articles list is a list of items that have been deemed not available in the U.S. and excepted from the Buy American statute.[173] Food products from the FAR Nonavailable articles list must be included in the non-domestic food cap calculation. Also, in response to public comments that suggested a 5 percent cap is too restrictive under current procurement conditions, USDA will use a phased approach to gradually reach the proposed 5 percent of total costs per school year cap on non-domestic food purchases.

The phased approach will be as follows:

- Beginning in SY 2025–2026, the non-domestic food cost cap will be 10 percent.
- Beginning in SY 2028–2029, the non-domestic food cost cap will be 8 percent.
- Beginning in SY 2031–2032, the non-domestic food cost cap will be 5 percent.

For oversight purposes, the final rule codifies a recordkeeping requirement for school food authorities to maintain documentation to demonstrate that their non-domestic food purchases do not exceed the above specified annual threshold by year. This recordkeeping requirement would codify a requirement to maintain documentation for use of exceptions to the Buy American provision. While school food authorities may already maintain documentation to demonstrate compliance with the Buy American provision in accordance with guidance made available by USDA, the need to maintain this documentation is currently not discussed in the regulations governing the Buy American provisions. Therefore, the rule element to codify recordkeeping requirements to document compliance with the Buy American provision, including the use of exceptions to the provision, and their associated burden are addressed as a revision in the information collection request for the rule.

Lastly, the rule requires school food authorities to include the Buy American provision in procurement procedures, solicitations, and contracts for foods and food products procured using informal and formal procurement methods, and in awarded contracts. These recordkeeping requirements are being added to the information collection associated with the rule.

Substituting Vegetables for Grains in Tribal Communities

The rulemaking codifies the proposal to allow school food authorities that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children to serve vegetables to meet the grains requirement in NSLP and SBP. In addition, the rulemaking codifies the proposal to extend this menu planning option to SFSP and CACFP sponsors,

[173] 41 U.S.C chapter 83 is the Buy American statute that requires public agencies to procure articles, materials, and supplies that were mined, produced, or manufactured in the United States, substantially all from domestic components. Available at: *https://www.acquisition.gov/far/part-25*.

institutions, and facilities that serve primarily American Indian or Alaska Native participants. Additionally, this rule allows all schools, sponsors, institutions, and facilities in Guam and Hawaii to serve vegetables to meet the grains or breads requirement. The menu planning option aims to improve the child nutrition programs for American Indian and Alaska Native children and build on USDA's commitment to support traditional foodways.

Menu Planning Options

This rulemaking makes a variety of changes to school meal nutrition requirements, including to implement quantitative limits for the following leading sources of added sugars in school meals: breakfast cereals, yogurt, and flavored milk. The rulemaking will also implement a dietary specification limiting added sugars to less than 10 percent of calories per week in the school lunch and breakfast programs. USDA acknowledges these changes will be reflected in schools' production and menu records that show how meals offered at school contribute to the required food components and food quantities for each age/grade group every day.

Longstanding recordkeeping requirements established at 7 CFR 210.10(a)(3) and 7 CFR 220.8(a)(3) require schools to maintain menu records for the meals produced and served in schools participating in the NSLP and SBP, but additional burden must be addressed for developing menus. This includes developing menus that meet existing and updated USDA menu specifications, including but not limited to, whole grains, milk, sodium, and added sugars. USDA expects there to be additional burden in this information collection from the requirements to limit added sugars in the NSLP and SBP or any other changes to school meal nutrition requirements included in this rulemaking, affecting OMB Control Number 0584–0006 7 CFR part 210 National School Lunch Program and OMB Control Number 0584–0012 7 CFR part 220 School Breakfast Program.

Annualized Costs

As a result of the implementation of the provisions in this rule, there will be some start-up and maintenance costs. In public comments, these included costs such as extra supplies or funding to implement the updated meal patterns, as well as updating costs to update websites, materials, menus, and recipes. Another potential cost for school food authorities detailed in public comments includes updating meal planning databases. Public comments also pointed to start-up costs for implementing the Buy American provision over time, mainly due to updated forms and labor associated with updating ordering procedures/documentation.

USDA estimates a cost of $50,000 per State agency to account for maintenance and start-up costs associated with the rule, and an additional $1000 per school food authority to account for maintenance of databases, menu planning, materials, and other rule related costs for the NSLP, under OMB Control Number 0584–0006. This would result in a total of $2,800,000 in costs for State agencies and $19,019,000 in costs for school food authorities, or $21,819,000 in total costs as a result of this final rule. This $21,819,000 would only be added to OMB Control Number 0584–0006 since these State agencies and school food authorities operate both the NSLP and SBP.

For CACFP OMB Control Number 0584–0055, an additional $305,000 should be added to account for the start-up costs associated with menu changes for CACFP operators. For SFSP OMB Control Number 0584–0280, an additional $10,000 should be added to account for the start-up costs associated with menu changes for SFSP operators. These totals result from an additional $500 per operator affected by the menu changes.

Information Collections

Title: 7 CFR part 210 National School Lunch Program

Form Number: None

OMB Control Number: 0584–0006

Expiration Date: September 30, 2026

Type of Request: Revision of a currently approved collection

Abstract: This is a revision of a currently approved information collection to add new reporting and recordkeeping information requirements that are discussed in the rule, into the collection. Below is a summary of the changes in the final rule and the accompanying reporting and recordkeeping requirements that will impact the burden that program requirements have on State governments and school food authorities. USDA has updated the number of responses and burden hours associated with the collection of information requirements included in the rule since publication of the proposed rule, *Child Nutrition Programs: Revisions to Meal Patterns Consistent with the 2020 Dietary Guidelines for Americans,* published on February 7, 2023. Revisions are based on adding in burden for menu development including the development resulting from the provisions in the new rule.

Reporting

The changes in this rule will add new reporting requirements related to professional standards to the existing requirements that are currently approved under OMB Control Number 0584–0006.

State Agencies

The hiring exception for professional standards introduces a reporting requirement at 7 CFR 210.30(b)(1)(iv) for State agencies, who would be required to review and respond to each request submitted on behalf of school food authorities. USDA estimates 56 State agencies would review and either approve or deny each approximately 17 requests received per each State agency, for a total of 951 responses, and that it takes approximately 30 minutes (.5 hours) to review and respond to each request, for a total of 476 hours. USDA estimates that this new requirement will add 476 burden hours and 951 responses to the currently approved burden for OMB Control Number 0584–0006.

School Food Authorities

The hiring exception for professional standards adds a new requirement for the school food authorities at 7 CFR 210.30(b)(1)(iv). USDA estimates 951 school food authorities would submit 1 request to their respective State agencies to hire an individual to serve as the school nutrition program director in medium or large local educational agencies each year, and that each respondent will take approximately 30 minutes (.5 hours) to develop and submit this request for a total of 476 hours. USDA estimates that this new requirement will add an estimated 476 burden hours and 951 responses into the currently approved burden for OMB Control Number 0584–0006.

Recordkeeping

The changes in this rule will add new recordkeeping requirements related to professional standards, Buy American, substituting vegetables for grains in Tribal communities, and menu planning options to the existing requirements that are currently approved under OMB Control Number 0584–0006.

State Agencies

In addition to the reporting requirements associated with the hiring exception to allow State agencies to approve the hiring of individuals who do not meet the educational criteria but have 10 years or more of school

nutrition program experience to serve as the school nutrition program director, State agencies would be required to maintain the requests that the school food authorities developed and submitted to them for review and approval, as stated in 7 CFR 210.30(b)(1)(iv). The new requirement would impact an estimated 56 State agencies, who will be reviewing an estimated 17 requests, for 951 responses. USDA estimates it takes the State agencies approximately 15 minutes (.25 hours) to maintain each record annually, for a total of 238 hours. USDA estimates that this new requirement will add 238 hours and 951 responses to the currently approved burden for OMB Control Number 0584–0006.

School Food Authorities

The new requirement at 7 CFR 210.30(b)(1)(iv) also requires school food authorities to maintain documentation of requests to hire individuals under the Professional Standards Exception provision. This requirement adds an estimated 238 burden hours and 951 responses into the collection. USDA estimates that the same burden estimates will be added to the existing burden approved for OMB Control Number 0584–0006 once these requirements are merged into that collection.

USDA estimates the recordkeeping requirement at 7 CFR 210.21(d)(5) for school food authorities to maintain documentation to demonstrate that their non-domestic food purchases do not exceed the proposed specified annual threshold will impact approximately 19,019 school food authorities. USDA estimates these 19,019 respondents will develop and maintain 10 records each year, for a total of 190,190 responses, and that it takes approximately 15 minutes (.25 hours) each month to complete the requirement for each record. This requirement adds a total of 47,548 annual burden hours and 190,190 responses into the information collection request for OMB Control Number 0584–0006. In addition, USDA estimates the final recordkeeping requirement at 7 CFR 210.21(d)(3) to include the Buy American provision in procurement procedures, solicitations, and contracts would impact approximately 19,019 school food authorities. USDA estimates these 19,019 respondents will revise their procurement procedures, solicitations, and contracts and maintain these records, and estimates they would spend approximately 10 hours each year meeting this requirement. This requirement would add a total of 190,190 annual burden hours and 19,019 responses into the information collection request for OMB Control Number 0584–0006.

Alongside the final provision is a requirement that the school food authorities using this option maintain documentation that they are tribally operated, are operated by the Bureau of Indian Education, or serve primarily American Indian or Alaska Native students. As described in the proposed rule, school food authorities and schools ‘‘serving primarily American Indian or Alaska Native children’’ include school food authorities and schools where American Indian or Alaska Native children represent the largest demographic group of enrolled children. This documentation would be maintained for program reviews. This recordkeeping requirement at 7 CFR 210.10(c)(3) establishes a collection of information for school food authorities that participate in the school meals programs and elect to implement the operational flexibility to serve vegetables in place of grains in school meals. USDA estimates 317 school food authorities operating the NSLP would maintain documentation each year to demonstrate schools using the menu planning option meet the criteria, and that it would take approximately 1 hour to collect and maintain such documentation annually. This requirement for school food authorities would add an estimated 317 annual burden hours and 317 responses into the currently approved burden for OMB Control Number 0584–0006.

Another requirement in the rule includes menu planning options, in which school food authorities develop menu records (beyond regular menu maintenance) that meet updated and new USDA specifications from the rule, under 7 CFR 210.10(a)(3). This also includes following all previous rule menu specifications. USDA estimates 19,019 school food authorities would develop menu records in 30 minutes (0.5 hours), 10 times per year. This requirement would add an estimated 95,095 annual burden hours and 190,190 responses into the currently approved burden for OMB Control Number 0584–0006.

Summary

USDA estimates that the burden for the new reporting and recordkeeping information requirements that are impacted by this final rule will have 19,075 respondents, 403,520 responses, and 334,576 burden hours. Once the information collection requests related to this rule is approved by OMB, USDA expects that the total information collection burden for OMB Control Number 0584–0006 7 CFR part 210 National School Lunch Program will be 115,935 respondents, 48,035,516 responses, and 10,143,277 burden hours. This is an estimated increase of 403,520 responses and 334,576 hours, with no increase in respondents, from the currently approved burden for this collection.

Respondents (Affected Public): State Agencies (State governments), and School Food Authorities (local governments).

Reporting

Estimated Number of Respondents: 1,007.

Estimated Number of Responses per Respondent: 1.89.

Estimated Total Annual Responses: 1,902.

Estimated Time per Response: 30 minutes (.50 hours).

Estimate Total Annual Burden on Respondents: 951 hours.

Recordkeeping

Estimated Number of Respondents: 19,075.

Estimated Number of Responses per Respondent: 21.05.

Estimated Total Annual Responses: 401,618.

Estimated Time per Response: Approximately 50 minutes (0.83 hours).

Estimate Total Annual Burden on Respondents: 333,625.

BILLING CODE 3410–30–C

Title: 7 CFR part 220, School Breakfast Program.

Form Number: None.

OMB Control Number: 0584–0012.

Expiration Date: August 31, 2025.

Type of Request: Revision of a currently approved collection.

Abstract: This is a revision of a currently approved information collection, that adds new recordkeeping information requirements that are discussed in the final rule into the collection. Below is a summary of the changes in the final rule and the accompanying recordkeeping requirements that will impact the burden that program requirements have on school food authorities. The burden was separated out for the SBP from the NSLP, and burden hours were added to account for menu development, both of which added additional recordkeeping burden hours.

Recordkeeping

The changes in this rule will add new recordkeeping requirements related to Buy American, substituting vegetables for grains in Tribal communities, and menu planning options to the existing requirements that are currently approved under OMB Control Number 0584–0012.

School Food Authorities

USDA estimates the requirement at 7 CFR 220.16(d)(5) for school food authorities to maintain documentation to demonstrate that their non-domestic food purchases do not exceed the proposed specified annual threshold will impact approximately 17,117 school food authorities. USDA estimates these 17,117 respondents will develop and maintain 10 records each year, for a total of 171,170 responses, and that it takes approximately 15 minutes (.25 hours) each month to complete the requirement for each record. This requirement adds a total of 42,793 annual burden hours and 171,170 responses into the currently approved burden for OMB Control Number 0584–0012.

USDA estimates the requirement at 7 CFR 220.16(d)(3) to include the Buy American provision in procurement procedures, solicitations, and contracts would impact approximately 17,117 school food authorities. USDA estimates these 17,117 respondents will revise their procurement procedures, solicitations, and contracts and maintain these records, and estimates they would spend approximately 10 hours each year meeting this requirement. This requirement would add a total of 171,170 annual burden hours and 17,117 responses into the currently approved burden for OMB Control Number 0584–0012.

This requirement at 7 CFR 220.8(c)(3) establishes a collection of information for school food authorities that participate in the school meals programs and elect to implement the operational flexibility to serve vegetables in place of grains in school meals. USDA estimates 285 school food authorities operating the SBP would maintain documentation each year to demonstrate schools using the menu planning option meet the criteria, and that it would take approximately 1 hour to collect and maintain such documentation annually. USDA estimates that this new requirement for school food authorities

would add an estimated 285 annual burden hours and 285 responses into the currently approved burden for OMB Control Number 0584–0012.

Another requirement in the rule, includes menu planning options, in which school food authorities develop menu records (beyond regular menu maintenance) that meet updated and new USDA specifications from the rule, under 7 CFR 220.8(a)(3). This also includes following all previous rule menu specifications. USDA estimates 17,117 school food authorities would develop breakfast menu records in 30 minutes (0.5 hours), 10 times per year. This requirement would add an estimated 85,585 annual burden hours and 171,170 responses into the currently approved burden for OMB Control Number 0584–0012.

Summary

USDA estimates that the burden for the new recordkeeping information requirements that are impacted by this final rule will have 17,117 respondents, 359,742 responses, and 299,833 burden hours. Once the information collection requests related to this rule is approved by OMB, USDA expects that the total information collection burden for OMB Control Number 0584–0012 7 CFR part 220 School Breakfast Program will be 105,700 respondents, 33,462,278 responses, and 4,036,508 burden hours. This is an estimated increase of 359,742 responses and 299,833 hours, with no increase in respondents, from the currently approved burden for this collection.

Respondents (Affected Public): School Food Authorities (local governments).

Recordkeeping

Estimated Number of Respondents: 17,117.

Estimated Number of Responses per Respondent: 21.02.

Estimated Total Annual Responses: 359,742.

Estimated Time per Response: Approximately 50 minutes (0.83 hours).

Estimate Total Annual Burden on Respondents: 299,833.

BILLING CODE 3410–30–C

Title: Child and Adult Care Food Program.

Form Number: None.

OMB Control Number: 0584–0055.

Expiration Date: August 31, 2025.

Type of Request: Revision of a currently approved collection.

Abstract: This is a revision of a currently approved information collection, that adds new recordkeeping information requirements that are discussed in the final rule into the collection. Below is a summary of the changes in the final rule and the accompanying recordkeeping requirements that will impact the burden that program requirements have on program operators in the CACFP. Burden was split up by institutions and facilities for the menu planning options, which is an update from the proposed rule, in which estimates were combined. In response to public comment, time to maintain documentation was added to estimates from the proposed rule.

Recordkeeping

The changes in this rule will add new recordkeeping requirements related to substituting vegetables for grains in Tribal communities to the existing requirements that are currently approved under OMB Control Number 0584–0055.

CACFP—Businesses

The provision for substituting grains for vegetables in Tribal communities adds a new requirement for CACFP businesses (facilities and institutions) serving primarily American Indian or Alaska Native participants and electing to implement this menu planning option. CACFP operators electing to serve vegetables to meet the grains requirement under this provision are also required to maintain documentation demonstrating that the site qualifies for the menu planning option.

Institutions

USDA estimates the recordkeeping requirement at 7 CFR 226.20(f) would require approximately 70 institutions to collect and maintain documentation each year to demonstrate that the site serves primarily American Indian or Alaska Native participants, and that it takes approximately 1.25 hours to collect and maintain such documentation. USDA estimates this collection of information would add an estimated 88 annual burden hours and 70 responses for CACFP operators and the information collection request associated with this provision under OMB Control Number 0584–0055.

Facilities

USDA estimates the recordkeeping requirement at 7 CFR 226.20(f) would require approximately 540 facilities to collect and maintain documentation each year to demonstrate that the site serves primarily American Indian or Alaska Native participants, and that it takes approximately 1.25 hours to collect and maintain such documentation. USDA estimates this collection of information would add an estimated 675 annual burden hours and 540 responses for CACFP operators and the information collection request associated with this provision under OMB Control Number 0584–0055.

Summary

USDA estimates that the burden related to the new recordkeeping information requirements that are discussed in this final rule will have 610 respondents, 610 responses, and 763 burden hours. Once the information collection requests related to this rule is approved by OMB, USDA expects that the total information collection burden for OMB Control Number 0584–0055 Child and Adult Care Food Program will be 3,794,949 respondents, 16,213,703 responses, and 4,213,973 burden hours. This is an estimated increase of 610 responses and 763 burden hours from the currently approved burden for this collection, with no change in the number of respondents.

Respondents (Affected Public): Child and Adult Care Food Program (businesses, which include institutions and facilities).

Recordkeeping

Estimated Number of Respondents: 610.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Responses: 610.

Estimated Time per Response: Approximately 75 minutes (1.25 hours).

Estimate Total Annual Burden on Respondents: 763.

BILLING CODE 3410–30–C

Title: 7 CFR part 225, Summer Food Service Program.

Form Number: None.

OMB Control Number: 0584–0280.

Expiration Date: September 30, 2025.

Type of Request: Revision of a currently approved collection.

Abstract: This is a revision of a currently approved information collection that adds a recordkeeping information requirement that is discussed in the final rule into the collection. Below is a summary of the changes in the final rule and the accompanying recordkeeping requirement that will impact the burden that program requirements have on the program operators in the SFSP. Substituting vegetables for grains in Tribal communities is the only provision in the final rule adding burden to this collection.

Recordkeeping

The changes in this rule will add a new recordkeeping requirement related to substituting vegetables for grains in Tribal communities to the existing requirements that are currently approved under OMB Control Number 0584–0280.

Businesses (Operators)

The provision to substitute grains for vegetable establishes a recordkeeping requirement for SFSP operators serving primarily American Indian or Alaska Native participants and electing to implement this menu planning option. SFSP operators electing to serve vegetables to meet the grains requirement under this provision are also required to maintain documentation demonstrating that the site qualifies for the menu planning option.

USDA estimates the recordkeeping requirement under 7 CFR 225.16(f)(3) would require approximately 20 SFSP operators to collect and maintain documentation each year to demonstrate that the site serves primarily American Indian or Alaska Native participants, and that it takes approximately 1.25 hours to collect and maintain such documentation, for 25 hours. USDA estimates that this new requirement would add 25 annual burden hours and 20 responses into the burden for OMB Control Number 0584–0280.

Summary

As a result of the changes outlined in this rulemaking, USDA estimates that the burden for rule-related requirements for OMB Control Number 0584–0280 will be 20 respondents, 20 responses, and 25 burden hours. Once the information collection requests related to this rule is approved by OMB, USDA expects that the total information collection burden for OMB Control Number 0584–0280 Summer Food Service Program will be 63,942 respondents, 391,815 responses, and 462,724 burden hours. This is an estimated increase of 20 responses and 25 burden hours from the currently approved burden for this collection, with no change in the number of respondents.

Respondents (Affected Public): Summer Food Service Program operators (non-profit institutions and camps).

Recordkeeping

Estimated Number of Respondents: 20.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Responses: 20.

Estimated Time per Response: Approximately 75 minutes (1.25 hours).

Estimate Total Annual Burden on Respondents: 25.

BILLING CODE 3410–30–C

E-Government Act Compliance

The Department is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects

7 CFR Part 210

Grant programs—education, Grant programs—health, Infants and children, Nutrition, Penalties, Reporting and recordkeeping requirements, School breakfast and lunch programs, Surplus agricultural commodities.

7 CFR Part 215

Food assistance programs, Grant programs—education, Grant program—health, Infants and children, Milk, Reporting and recordkeeping requirements.

7 CFR Part 220

Grant programs—education, Grant programs—health, Infants and children, Nutrition, Reporting and recordkeeping

requirements, School breakfast and lunch programs.

7 CFR Part 225

Food assistance programs, Grant programs—health, Infants and children, Labeling, Reporting and recordkeeping requirements.

7 CFR Part 226

Accounting, Aged, Day care, Food assistance programs, Grant programs, Grant programs—health, Individuals with disabilities, Infants and children, Intergovernmental relations, Loan programs, Reporting and recordkeeping requirements, Surplus agricultural commodities.

Accordingly, FNS amends 7 CFR parts 210, 215, 220, 225, and 226 as follows:

PART 210—NATIONAL SCHOOL LUNCH PROGRAM

■ 1. The authority citation for part 210 continues to read as follows:

Authority: 42 U.S.C. 1751–1760, 1779.

■ 2. Revise and republish § 210.2 to read as follows:

§ 210.2 Definitions.

For the purposes of this part:

2 CFR part 200, means the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards published by OMB. The part reference covers applicable: Acronyms and Definitions (subpart A), General Provisions (subpart B), Post Federal Award Requirements (subpart D), Cost Principles (subpart E), and Audit Requirements (subpart F). (NOTE: Pre-Federal Award Requirements and Contents of Federal Awards (subpart C) does not apply to the National School Lunch Program).

Act means the National School Lunch Act, as amended.

Afterschool care program means a program providing organized child care services to enrolled school-age children afterschool hours for the purpose of care and supervision of children. Those programs must be distinct from any extracurricular programs organized primarily for scholastic, cultural or athletic purposes.

Applicable credits shall have the meaning established in 2 CFR part 200 and USDA implementing regulations 2 CFR parts 400 and 415.

Attendance factor means a percentage developed no less than once each school year which accounts for the difference between enrollment and attendance. The attendance factor may be developed by the school food authority, subject to State agency approval, or may be developed by the State agency. In the absence of a local or State attendance factor, the school food authority will use an attendance factor developed FNS. When taking the attendance factor into consideration, school food authorities will assume that all children eligible for free and reduced price lunches attend school at the same rate as the general school population.

Average Daily Participation means the average number of children, by eligibility category, participating in the Program each operating day. These numbers are obtained by dividing:

(1) The total number of free lunches claimed during a reporting period by the number of operating days in the same period;

(2) The total number of reduced price lunches claimed during a reporting period by the number of operating days in the same period; and

(3) The total number of paid lunches claimed during a reporting period by the number of operating days in the same period.

Child means:

(1) A student of high school grade or under as determined by the State educational agency, who is enrolled in an educational unit of high school grade or under as described in paragraphs (1) and (2) of the definition of ''School'' in this section, including students with a disability who participate in a school program established for persons with disabilities;

(2) A person under 21 chronological years of age who is enrolled in an institution or center as described in paragraph (3) of the definition of ''School'' in this section; or

(3) For afterschool care programs, persons aged 18 and under at the start of the school year, and persons of any age with a disability who participate in a school program established for persons with disabilities.

Child with a disability means any child who has a physical or mental impairment that substantially limits one or more major life activities of such individual, has a record of such an impairment, or has been regarded as having such an impairment.

Commodity School Program means the Program under which participating schools operate a nonprofit lunch program in accordance with this part and receive donated food assistance in lieu of general cash assistance. Schools participating in the Commodity School Program will also receive special cash and donated food assistance in accordance with § 210.4(c).

Contractor means a commercial enterprise, public or nonprofit private organization or individual that enters into a contract with a school food authority.

Cost reimbursable contract means a contract that provides for payment of incurred costs to the extent prescribed in the contract, with or without a fixed fee.

Days means calendar days unless otherwise specified.

Department means the United States Department of Agriculture.

Distributing agency means a State agency which enters into an agreement with the Department for the distribution to schools of donated foods pursuant to part 250 of this chapter.

Donated foods means food commodities donated by the Department for use in nonprofit lunch programs.

Fiscal year means a period of 12 calendar months beginning October 1 of any year and ending with September 30 of the following year.

Fixed fee means an agreed upon amount that is fixed at the inception of the contract. In a cost reimbursable contract, the fixed fee includes the contractor's direct and indirect administrative costs and profit allocable to the contract.

Fixed-price contract means a contract that charges a fixed cost per meal, or a fixed cost for a certain time period. Fixed-price contracts may include an economic price adjustment tied to a standard index.

FNS means the Food and Nutrition Service, United States Department of Agriculture.

FNSRO means the appropriate Regional Office of the Food and Nutrition Service of the Department.

Food item means a specific food offered within a food component.

Food service management company means a commercial enterprise or a nonprofit organization which is or may be contracted with by the school food authority to manage any aspect of the school food service.

Free lunch means a lunch served under the Program to a child from a household eligible for such benefits under part 245 of this chapter and for which neither the child nor any member of the household pays or is required to work.

Local educational agency means a public board of education or other public or private nonprofit authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public or private nonprofit elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a State, or for a

combination of school districts or counties that is recognized in a State as an administrative agency for its public or private nonprofit elementary schools or secondary schools. The term also includes any other public or private nonprofit institution or agency having administrative control and direction of a public or private nonprofit elementary school or secondary school, including residential child care institutions, Bureau of Indian Affairs schools, and educational service agencies and consortia of those agencies, as well as the State educational agency in a State or territory in which the State educational agency is the sole educational agency for all public or private nonprofit schools.

Lunch means a meal service that meets the meal requirements in § 210.10 for lunches.

Meal component means one of the food groups which comprise reimbursable meals. The meal components are: fruits, vegetables, grains, meats/meat alternates, and fluid milk.

National School Lunch Program means the Program under which participating schools operate a nonprofit lunch program in accordance with this part. General and special cash assistance and donated food assistance are made available to schools in accordance with this part.

Net cash resources means all monies, as determined in accordance with the State agency's established accounting system, that are available to or have accrued to a school food authority's nonprofit school food service at any given time, less cash payable. Such monies may include, but are not limited to, cash on hand, cash receivable, earnings on investments, cash on deposit and the value of stocks, bonds or other negotiable securities.

Nonprofit means, when applied to schools or institutions eligible for the Program, exempt from income tax under section 501(c)(3) of the Internal Revenue Code of 1986.

Nonprofit school food service means all food service operations conducted by the school food authority principally for the benefit of schoolchildren, all of the revenue from which is used solely for the operation or improvement of such food services.

Nonprofit school food service account means the restricted account in which all of the revenue from all food service operations conducted by the school food authority principally for the benefit of school children is retained and used only for the operation or improvement of the nonprofit school food service. This account will include, as appropriate, non-Federal funds used to support paid lunches as provided in § 210.14(e), and proceeds from nonprogram foods as provided in § 210.14(f).

OIG means the Office of the Inspector General of the Department.

Paid lunch means a lunch served to children who are either not certified for or elect not to receive the free or reduced price benefits offered under part 245 of this chapter. The Department subsidizes each paid lunch with both general cash assistance and donated foods. The prices for paid lunches in a school food authority must be determined in accordance with § 210.14(e).

Point of Service means that point in the food service operation where a determination can accurately be made that a reimbursable free, reduced price, or paid lunch has been served to an eligible child.

Program means the National School Lunch Program and the Commodity School Program.

Reduced price lunch means a lunch served under the Program:

(1) To a child from a household eligible for such benefits under part 245 of this chapter;

(2) For which the price is less than the school food authority designated full price of the lunch and which does not exceed the maximum allowable reduced price specified under part 245 of this chapter; and

(3) For which neither the child nor any member of the household is required to work.

Reimbursement means Federal cash assistance including advances paid or payable to participating schools for lunches meeting the requirements of § 210.10 and served to eligible children.

Revenue, when applied to nonprofit school food service, means all monies received by or accruing to the nonprofit school food service in accordance with the State agency's established accounting system including, but not limited to, children's payments, earnings on investments, other local revenues, State revenues, and Federal cash reimbursements.

School means:

(1) An educational unit of high school grade or under, recognized as part of the educational system in the State and operating under public or nonprofit private ownership in a single building or complex of buildings;

(2) Any public or nonprofit private classes of preprimary grade when they are conducted in the aforementioned schools; or

(3) Any public or nonprofit private residential child care institution, or distinct part of such institution, which operates principally for the care of children, and, if private, is licensed to provide residential child care services under the appropriate licensing code by the State or a subordinate level of government, except for residential summer camps which participate in the Summer Food Service Program for Children, Job Corps centers funded by the Department of Labor, and private foster homes.

School food authority means the governing body which is responsible for the administration of one or more schools; and has the legal authority to operate the Program therein or be otherwise approved by FNS to operate the Program.

School nutrition program directors are those individuals directly responsible for the management of the day-to-day operations of school food service for all participating schools under the jurisdiction of the school food authority.

School nutrition program managers are those individuals directly responsible for the management of the day-to-day operations of school food service for a participating school(s).

School nutrition program staff are those individuals, without managerial responsibilities, involved in day-to-day operations of school food service for a participating school(s).

School week means the period of time used to determine compliance with the meal requirements in § 210.10. The period will be a normal school week of five consecutive days; however, to accommodate shortened weeks resulting from holidays and other scheduling needs, the period must be a minimum of three consecutive days and a maximum of seven consecutive days. Weeks in which school lunches are offered less than three times must be combined with either the previous or the coming week.

School year means a period of 12 calendar months beginning July 1 of any year and ending June 30 of the following year.

Seamless Summer Option means the meal service alternative authorized by Section 13(a)(8) of the Richard B. Russell National School Lunch Act, 42 U.S.C. 1761(a)(8), under which public or nonprofit school food authorities participating in the National School Lunch Program or School Breakfast Program offer meals at no cost to children during the traditional summer vacation periods and, for year-round schools, vacation periods longer than 10 school days.

Secretary means the Secretary of Agriculture.

State means any of the 50 States, District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and, as applicable, American Samoa and the Commonwealth of the Northern Marianas.

State agency means:

(1) The State educational agency;

(2) Any other agency of the State which has been designated by the Governor or other appropriate executive or legislative authority of the State and approved by the Department to administer the Program in schools, as specified in § 210.3(b) of this chapter; or

(3) The FNSRO, where the FNSRO administers the Program as specified in § 210.3(c) of this chapter.

State educational agency means, as the State legislature may determine,

(1) The chief State school officer (such as the State Superintendent of Public Instruction, Commissioner of Education, or similar officer), or

(2) A board of education controlling the State department of education.

State licensed healthcare professional means an individual who is authorized to write medical prescriptions under State law. This may include, but is not limited to, a licensed physician, nurse practitioner, or physician's assistant, depending on State law.

Tofu means a soybean-derived food, made by a process in which soybeans are soaked, ground, mixed with water, heated, filtered, coagulated, and formed into cakes. Basic ingredients are whole soybeans, one or more food-grade coagulants (typically a salt or an acid), and water. Tofu products must conform to FNS guidance to count toward the meats/meat alternates component.

USDA implementing regulations include the following: 2 CFR part 400, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards; 2 CFR part 415, General Program Administrative Regulations; 2 CFR part 416, General Program Administrative Regulations for Grants and Cooperative Agreements to State and Local Governments; and 2 CFR part 418, New Restrictions on Lobbying.

Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.

Whole grains means grains that consist of the intact, ground, cracked, or flaked grain seed whose principal anatomical components—the starchy endosperm, germ and bran—are present in the same relative proportions as they exist in the intact grain seed.

Yogurt means commercially prepared coagulated milk products obtained by the fermentation of specific bacteria, that meet milk fat or milk solid requirements and to which flavoring foods or ingredients may be added. These products are covered by the Food and Drug Administration's Definition and Standard of Identity for yogurt, 21 CFR 131.200, and low-fat yogurt and non-fat yogurt covered as a standardized food under 21 CFR 130.10.

■ 3. In § 210.3, revise and republish paragraph (a) to read as follows:

§ 210.3 Administration.

(a) *FNS.* FNS will act on behalf of the Department in the administration of the Program.

* * * * *

■ 4. In § 210.4, revise and republish paragraphs (a) and (b)(3) and (4) to read as follows:

§ 210.4 Cash and donated food assistance to States.

(a) *General.* To the extent funds are available, FNS will make cash assistance available in accordance with the provisions of this section to each State agency for lunches and afterschool snacks served to children under the National School Lunch and Commodity School Programs. To the extent donated foods are available, FNS will provide donated food assistance to distributing agencies for each lunch served in accordance with the provisions of this part and part 250 of this chapter.

(b) * * *

(3) *Cash assistance for afterschool snacks.* For those eligible schools (as defined in § 210.10(o)(1)) operating afterschool care programs and electing to serve afterschool snacks to enrolled children, funds will be made available to each State agency, each school year in an amount no less than the sum of the products obtained by multiplying:

(i) The number of afterschool snacks served in the afterschool care program within the State to children from families that do not satisfy the income standards for free and reduced price school meals by 2.75 cents;

(ii) The number of afterschool snacks served in the afterschool care program within the State to children from families that satisfy the income standard for free school meals by 30 cents; and

(iii) The number of afterschool snacks served in the afterschool care program within the State to children from families that satisfy the income standard for reduced price school meals by 15 cents.

(4) *Annual adjustments for cash assistance for afterschool snacks.* The rates in paragraph (b)(3) of this section are the base rates established in August 1981 for the Child and Adult Care Food Program (CACFP). FNS will prescribe annual adjustments to these rates in the same Notice as the National Average Payment Rates for lunches. These adjustments will ensure that the reimbursement rates for afterschool snacks served under this part are the same as those implemented for afterschool snacks in the CACFP.

* * * * *

■ 5. In § 210.7, revise and republish paragraphs (a), (c) introductory text, (c)(1), (d), and (e) to read as follows:

§ 210.7 Reimbursement for school food authorities.

(a) *General.* Reimbursement payments to finance nonprofit school food service operations will be made only to school food authorities operating under a written agreement with the State agency. Subject to the provisions of § 210.8(c), such payments may be made for lunches and afterschool snacks served in accordance with provisions of this part and part 245 of this chapter in the calendar month preceding the calendar month in which the agreement is executed. These reimbursement payments include general cash assistance for all lunches served to children under the National School Lunch Program and special cash assistance payments for free or reduced-price lunches served to children determined eligible for such benefits under the National School Lunch and Commodity School Programs. Reimbursement payments will also be made for afterschool snacks served to eligible children in afterschool care programs in accordance with the rates established in § 210.4(b)(3). Approval will be in accordance with part 245.

* * * * *

(c) *Reimbursement limitations.* To be entitled to reimbursement under this part, each school food authority must ensure that Claims for Reimbursement are limited to the number of free, reduced price, and paid lunches and afterschool snacks that are served to children eligible for free, reduced price, and paid lunches and afterschool snacks, respectively, for each day of operation.

(1) *Lunch count system.* To ensure that the Claim for Reimbursement accurately reflects the number of lunches and afterschool snacks served to eligible children, the school food authority must, at a minimum:

(i) Correctly approve each child's eligibility for free and reduced price lunches and afterschool snacks based on

the requirements prescribed under part 245 of this chapter;

(ii) Maintain a system to issue benefits and to update the eligibility of children approved for free or reduced price lunches and afterschool snacks. The system must:

(A) Accurately reflect eligibility status as well as changes in eligibility made after the initial approval process due to verification findings, transfers, reported changes in income or household size, etc.; and

(B) Make the appropriate changes in eligibility after the initial approval process on a timely basis so that the mechanism the school food authority uses to identify currently eligible children provides a current and accurate representation of eligible children. Changes in eligibility which result in increased benefit levels must be made as soon as possible but no later than 3 operating days of the date the school food authority makes the final decision on a child's eligibility status. Changes in eligibility which result in decreased benefit levels must be made as soon as possible but no later than 10 operating days of the date the school food authority makes the final decision on the child's eligibility status;

(iii) Base Claims for Reimbursement on lunch counts, taken daily at the point of service, which correctly identify the number of free, reduced price and paid lunches served to eligible children;

(iv) Correctly record, consolidate and report those lunch and afterschool snack counts on the Claim for Reimbursement; and

(v) Ensure that Claims for Reimbursement do not request payment for any excess lunches produced, as prohibited in § 210.10(a)(2), or non-Program lunches (*i.e.,* a la carte or adult lunches) or for more than one afterschool snack per child per day.

* * * * *

(d) *Performance-based cash assistance.* The State agency must provide performance-based cash assistance as authorized under § 210.4(b)(1) for lunches served in school food authorities certified by the State agency to be in compliance with meal pattern and nutrition requirements set forth in § 210.10 and, if the school food authority participates in the School Breakfast Program (part 220 of this chapter), § 220.8 of this chapter, as applicable. State agencies must establish procedures to certify school food authorities for performance-based cash assistance in accordance with guidance established by FNS. Such procedures must ensure State agencies:

(1) Make certification procedures readily available to school food authorities and provide guidance necessary to facilitate the certification process.

(2) Require school food authorities to submit documentation to demonstrate compliance with meal pattern requirements set forth in § 210.10 and § 220.8 of this chapter, as applicable. Such documentation must reflect meal service at or about the time of certification.

(3) State agencies must review certification documentation submitted by the school food authority to ensure compliance with meal pattern requirements set forth in § 210.10, or § 220.8 of this chapter, as applicable. For certification purposes, State agencies should consider any school food authority compliant:

(i) If when evaluating daily and weekly range requirements for grains and meat/meat alternates, the certification documentation shows compliance with the daily and weekly minimums for these two components, regardless of whether the school food authority has exceeded the maximums for the same components.

(ii) If when evaluating the service of frozen fruit, the school food authority serves products that contain added sugar.

(4) Certification procedures must ensure that no performance-based cash assistance is provided to school food authorities for meals served prior to October 1, 2012.

(5) Within 60 calendar days of a certification submission or as otherwise authorized by FNS, review submitted materials and notify school food authorities of the certification determination, the date that performance-based cash assistance is effective, and consequences for non-compliance,

(6) Disburse performance-based cash assistance for all lunches served beginning with the start of certification provided that documentation reflects meal service in the calendar month the certification materials are submitted or, in the month preceding the calendar month of submission.

(e) *Reimbursements for afterschool snacks.* The State agency will reimburse the school food authority for afterschool snacks served in eligible schools (as defined in § 210.10(o)(1)) operating afterschool care programs under the National School Lunch Program (NSLP) in accordance with the rates established in § 210.4(b).

■ 6. In § 210.8, revise and republish paragraphs (c) and (d) to read as follows:

§ 210.8 Claims for reimbursement.

* * * * *

(c) *Content of claim.* The Claim for Reimbursement must include data in sufficient detail to justify the reimbursement claimed and to enable the State agency to provide the Report of School Program Operations required under § 210.5(d). Such data must include, at a minimum, the number of free, reduced price, and paid lunches and afterschool snacks served to eligible children. The claim must be signed by a school food authority official.

(1) *Consolidated claim.* The State agency may authorize a school food authority to submit a consolidated Claim for Reimbursement for all schools under its jurisdiction, provided that, the data on each school's operations required in this section are maintained on file at the local office of the school food authority and the claim separates consolidated data for commodity schools from data for other schools. Unless otherwise approved by FNS, the Claim for Reimbursement for any month must include only lunches and afterschool snacks served in that month except if the first or last month of Program operations for any school year contains 10 operating days or less, such month may be combined with the Claim for Reimbursement for the appropriate adjacent month. However, Claims for Reimbursement may not combine operations occurring in two fiscal years. If a single State agency administers any combination of the Child Nutrition Programs, a school food authority will be able to use a common claim form with respect to claims for reimbursement for meals served under those programs.

(2) *October data.* For the month of October, the State agency must also obtain, either through the Claim for Reimbursement or other means, the total number of children approved for free lunches and afterschool snacks, the total number of children approved for reduced price lunches and afterschool snacks, and the total number of children enrolled in the school food authority as of the last day of operation in October. The school food authority must submit this data to the State agency no later than December 31 of each year. State agencies may establish shorter deadlines at their discretion. In addition, the State agency may require school food authorities to provide this data for a more current month if for use in the State agency claims review process.

(d) *Advance funds.* The State agency may advance funds available for the Program to a school food authority in an amount equal to the amount of reimbursement estimated to be needed for one month's operation. Following the receipt of claims, the State agency

will make adjustments, as necessary, to ensure that the total amount of payments received by the school food authority for the fiscal year does not exceed an amount equal to the number of lunches and afterschool snacks by reimbursement type served to children times the respective payment rates assigned by the State in accordance with § 210.7(b). The State agency must recover advances of funds to any school food authority failing to comply with the 60-day claim submission requirements in paragraph (b) of this section.

■ 7. In § 210.9, revise and republish paragraphs (b)(21) and (c) to read as follows:

§ 210.9 Agreement with State agency.

* * * * *

(b) * * *

(21) No later than December 31 of each year, provide the State agency with a list of all schools under its jurisdiction in which 50 percent or more of enrolled children have been determined eligible for free or reduced price meals as of the last operating day the preceding October. The State agency may designate a month other than October for the collection of this information, in which case the list must be provided to the State agency within 60 calendar days following the end of the month designated by the State agency. In addition, each school food authority must provide, when available for the schools under its jurisdiction, and upon the request of a sponsoring organization of day care homes of the Child and Adult Care Food Program, information on the boundaries of the attendance areas for the schools identified as having 50 percent or more of enrolled children certified eligible for free or reduced price meals.

(c) *Afterschool care requirements.* Those school food authorities with eligible schools (as defined in § 210.10(o)(1)) that elect to serve afterschool snacks during afterschool care programs, must agree to:

(1) Serve afterschool snacks which meet the minimum requirements prescribed in § 210.10;

(2) Price the afterschool snack as a unit;

(3) Serve afterschool snacks free or at a reduced price to all children who are determined by the school food authority to be eligible for free or reduced price school meals under part 245 of this chapter;

(4) If charging for meals, the charge for a reduced price afterschool snack must not exceed 15 cents;

(5) Claim reimbursement at the assigned rates only for afterschool snacks served in accordance with the agreement;

(6) Claim reimbursement for no more than one afterschool snack per child per day;

(7) Review each afterschool care program two times a year; the first review must be made during the first four weeks that the school is in operation each school year, except that an afterschool care program operating year round must be reviewed during the first four weeks of its initial year of operation, once more during its first year of operation, and twice each school year thereafter; and

(8) Comply with all requirements of this part, except that, claims for reimbursement need not be based on ''point of service'' afterschool snack counts (as required by § 210.9(b)(9)).

■ 8. In § 210.10:

■ a. Revise and republish paragraph (a)(1)(i);

■ b. Revise paragraphs (a)(3) and (b) through (f);

■ c. Revise and republish paragraph (g);

■ d. Revise paragraph (h);

■ e. Revise and republish paragraphs (i), (j), and (k)(2);

■ f. Revise paragraphs (m), (o), (p), and (q); and

■ g. Add paragraph (r).

The revisions and addition read as follows:

§ 210.10 Meal requirements for lunches and requirements for afterschool snacks.

(a) * * *

(1) * * *

(i) *Requirements for lunch.* School lunches offered to children age 5 or older must meet, at a minimum, the meal requirements in paragraph (b) of this section. Schools must follow a food-based menu planning approach and produce enough food to offer each child the quantities specified in the meal pattern established in paragraph (c) of this section for each age/grade group served in the school. In addition, school lunches must meet the dietary specifications in paragraph (f) of this section. Schools offering lunches to children ages 1 through 4 and infants must meet the meal pattern requirements in paragraphs (p) and (q) of this section, as applicable. Schools must make plain potable water available and accessible without restriction to children at no charge in the place(s) where lunches are served during the meal service.

* * * * *

(3) *Production and menu records.* Schools or school food authorities, as applicable, must keep production and menu records for the meals they produce. These records must show how the meals offered contribute to the required meal components and food quantities for each age/grade group every day. Schools or school food authorities must maintain records of the latest nutritional analysis of the school menus conducted by the State agency. Information on maintaining production and menu records may be found in FNS guidance.

(b) *Meal requirements for school lunches.* School lunches for children ages 5 and older must reflect food and nutrition requirements specified by the Secretary. Compliance with these requirements is measured as follows:

(1) On a daily basis:

(i) Meals offered to each age/grade group must include the meal components and food quantities specified in the meal pattern in paragraph (c) of this section; and

(ii) The meal selected by each student must have the number of meal components required for a reimbursable meal and include at least one fruit or vegetable.

(2) Over a 5-day school week:

(i) Average calorie content of meals offered to each age/grade group must be within the minimum and maximum calorie levels specified in paragraph (f) of this section;

(ii) Average saturated fat content of the meals offered to each age/grade group must be less than 10 percent of total calories;

(iii) By July 1, 2027, average added sugars content of the meals offered to each age/grade group must be less than 10 percent of total calories; and

(iv) Average sodium content of the meals offered to each age/grade group must not exceed the maximum level specified in paragraph (f) of this section.

(c) *Meal pattern for school lunches.* Schools must offer the meal components and quantities required in the lunch meal pattern established in the following table:

TABLE 1 TO PARAGRAPH (c) INTRODUCTORY TEXT—NATIONAL SCHOOL LUNCH PROGRAM MEAL PATTERN

Meal components	Amount of food[1] per week (minimum per day)		
	Grades K–5	Grades 6–8	Grades 9–12
Fruits (cups)[2]	2½ (½)	2½ (½)	5 (1)
Vegetables (cups)[2]	3¾ (¾)	3¾ (¾)	5 (1)
Dark Green Subgroup[3]	½	½	½
Red/Orange Subgroup[3]	¾	¾	1¼
Beans, Peas, and Lentils Subgroup[3]	½	½	½
Starchy Subgroup[3]	½	½	½
Other Vegetables Subgroup[3,4]	½	½	¾
Additional Vegetables from Any Subgroup to Reach Total	1	1	1½
Grains (oz. eq.)[5]	8–9 (1)	8–10 (1)	10–12 (2)
Meats/Meat Alternates (oz. eq.)[6]	8–10 (1)	9–10 (1)	10–12 (2)
Fluid Milk (cups)[7]	5 (1)	5 (1)	5 (1)
Dietary Specifications: Daily Amount Based on the Average for a 5-Day Week[8]			
Minimum-Maximum Calories (kcal)	550–650	600–700	750–850
Saturated Fat (% of total calories)	<10	<10	<10
Added Sugars (% of total calories)	<10	<10	<10
Sodium Limit: In place through June 30, 2027	≤1,110 mg	≤1,225 mg	≤1,280 mg
Sodium Limit: Must be implemented by July 1, 2027	≤935 mg	≤1,035 mg	≤1,080 mg

[1] Food items included in each group and subgroup and amount equivalents.
[2] Minimum creditable serving is ⅛ cup. One quarter-cup of dried fruit counts as ½ cup of fruit; 1 cup of leafy greens counts as ½ cup of vegetables. No more than half of the fruit or vegetable offerings may be in the form of juice. All juice must be 100 percent full-strength.
[3] Larger amounts of these vegetables may be served.
[4] This subgroup consists of "Other vegetables" as defined in paragraph (c)(2)(ii)(E) of this section. For the purposes of the NSLP, the "Other vegetables" requirement may be met with any additional amounts from the dark green, red/orange, and bean, peas, and lentils vegetable subgroups as defined in paragraph (c)(2)(ii) of this section.
[5] Minimum creditable serving is 0.25 oz. eq. At least 80 percent of grains offered weekly (by ounce equivalents) must be whole grain-rich as defined in § 210.2 and the remaining grains items offered must be enriched.
[6] Minimum creditable serving is 0.25 oz. eq.
[7] Minimum creditable serving is 8 fluid ounces. All fluid milk must be fat-free (skim) or low-fat (1 percent fat or less) and must meet the requirements in paragraph (d) of this section.
[8] By July 1, 2027, schools must meet the dietary specification for added sugars. Schools must meet the sodium limits by the dates specified in this chart. Discretionary sources of calories may be added to the meal pattern if within the dietary specifications.

(1) *Age/grade groups.* Schools must plan menus for students using the following age/grade groups: Grades K–5 (ages 5–10), grades 6–8 (ages 11–13), and grades 9–12 (ages 14–18). If an unusual grade configuration in a school prevents the use of these established age/grade groups, students in grades K–5 and grades 6–8 may be offered the same food quantities at lunch provided that the calorie and sodium standards for each age/grade group are met. No customization of the established age/grade groups is allowed.

(2) *Meal components.* Schools must offer students in each age/grade group the meal components specified in this paragraph (c).

(i) *Fruits component.* Schools must offer fruits daily as part of the lunch menu. Fruits that are fresh, frozen, or dried, or canned in light syrup, water or fruit juice may be offered to meet the requirements of this paragraph (c)(2)(i). All fruits are credited based on their volume as served, except that ¼ cup of dried fruit counts as ½ cup of fruit. Only pasteurized, full-strength fruit juice may be offered, and may be credited to meet no more than one-half of the fruits component.

(ii) *Vegetables component.* Schools must offer vegetables daily as part of the lunch menu. Fresh, frozen, or canned vegetables and dry beans, peas, and lentils may be offered to meet this requirement. All vegetables are credited based on their volume as served, except that 1 cup of leafy greens counts as ½ cup of vegetables and tomato paste and puree are credited based on calculated volume of the whole food equivalency. Pasteurized, full-strength vegetable juice may be offered to meet no more than one-half of the vegetables component. Vegetable offerings at lunch over the course of the week must include the following vegetable subgroups, as defined in this section in the quantities specified in the meal pattern in paragraph (c) of this section:

(A) *Dark green vegetables subgroup.* This subgroup includes vegetables such as bok choy, broccoli, collard greens, dark green leafy lettuce, kale, mesclun, mustard greens, romaine lettuce, spinach, turnip greens, and watercress;

(B) *Red/orange vegetables subgroup.* This subgroup includes vegetables such as acorn squash, butternut squash, carrots, pumpkin, tomatoes, tomato juice, and sweet potatoes;

(C) *Beans, peas, and lentils vegetable subgroup.* This subgroup includes vegetables such as black beans, black-eyed peas (mature, dry), garbanzo beans (chickpeas), kidney beans, lentils, navy beans pinto beans, soybeans, split peas, and white beans. Cooked dry beans, peas, and lentils may be counted as either a vegetable or as a meat alternate but not as both in the same dish. When offered toward the protein sources component, beans, peas, and lentils may count toward the weekly beans, peas, and lentils vegetable subgroup requirement, but may not count toward the daily or weekly vegetable component requirement;

(D) *Starchy vegetables subgroup.* This subgroup includes vegetables such as black-eyed peas (not dry), corn, cassava, green bananas, green peas, green lima beans, plantains, taro, water chestnuts, and white potatoes; and

(E) *Other vegetables subgroup.* This subgroup includes all other fresh, frozen, and canned vegetables, cooked or raw, such as artichokes, asparagus, avocados, bean sprouts, beets, Brussels sprouts, cabbage, cauliflower, celery, cucumbers, eggplant, green beans, green peppers, iceberg lettuce, mushrooms,

okra, onions, parsnips, turnips, wax beans, and zucchini.

(iii) *Grains component.* Schools must offer grains daily as part of the lunch menu.

(A) *Whole grain-rich requirement.* Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched. At least 80 percent of grains offered at lunch weekly must, based on ounce equivalents, meet the whole grain-rich criteria as defined in § 210.2, and the remaining grain items offered must be enriched.

(B) *Breakfast cereals.* By July 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.

(C) *Desserts.* Schools may count up to two ounce equivalents of grain-based desserts per week toward meeting the grains requirement at lunch. Information on crediting grain-based desserts may be found in FNS guidance.

(D) *Daily and weekly servings.* The grains component is based on minimum daily servings plus total servings over a 5-day school week. Schools serving lunch 6 or 7 days per week must increase the weekly grains quantity by approximately 20 percent (1⁄5) for each additional day. When schools operate less than 5 days per week, they may decrease the weekly quantity by approximately 20 percent (1⁄5) for each day less than 5.

(iv) *Meats/meat alternates component.* Schools must offer meats/meat alternates daily as part of the lunch meal pattern. The quantity of the meat/meat alternate must be the edible portion as served. This component must be served in a main dish or in a main dish and only one other food item. Schools without daily choices in this component should not serve any one meat/meat alternate or form of meat/meat alternate (for example, ground, diced, pieces) more than three times in the same week. If a portion size of this component does not meet the daily requirement for a particular age/grade group, schools may supplement it with another meat/meat alternate to meet the full requirement. Schools may adjust the daily quantities of this component provided that a minimum of one ounce is offered daily to students in grades K–8 and a minimum of two ounces is offered daily to students in grades 9–12, and the total weekly requirement is met over a 5-day period. Information on crediting meats/meat alternates may be found in FNS guidance.

(A) *Enriched macaroni.* Enriched macaroni with fortified protein as defined in appendix A to this part may be used to meet part of the meats/meat alternates requirement when used as specified in appendix A to this part. An enriched macaroni product with fortified protein as defined in appendix A to this part may be used to meet part of the meats/meat alternates component or the grains component but may not meet both food components in the same lunch.

(B) *Nuts and seeds.* Nuts and seeds and their butters are allowed as a meat alternate. Acorns, chestnuts, and coconuts do not credit as meat alternates because of their low protein and iron content. Nut and seed meals or flours may credit only if they meet the requirements for Alternate Protein Products established in appendix A to this part.

(C) *Yogurt.* Yogurt may be offered to meet all or part of the meats/meat alternates component. Yogurt may be plain or flavored, unsweetened or sweetened. By July 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Noncommercial and/or non-standardized yogurt products, such as frozen yogurt, drinkable yogurt products, homemade yogurt, yogurt flavored products, yogurt bars, yogurt covered fruits and/or nuts or similar products are not creditable. Four ounces (weight) or 1⁄2 cup (volume) of yogurt is one ounce equivalent of meats/meat alternates.

(D) *Tofu and soy products.* Commercial tofu and soy products may be offered to meet all or part of the meats/meat alternates component. Noncommercial and/or non-standardized tofu and soy products are not creditable.

(E) *Beans, peas, and lentils.* Cooked dry beans, peas, and lentils may be offered to meet all or part of the meats/meat alternates component. Beans, peas, and lentils are identified in this section and include foods such as black beans, garbanzo beans, lentils, kidney beans, mature lima beans, navy beans, pinto beans, and split peas. Cooked dry beans, peas, and lentils may be counted as either a vegetable or as a meat alternate but not as both in the same dish. When offered as a meat alternate, beans, peas, and lentils may count toward the weekly beans, peas, and lentils vegetable subgroup requirement, but may not count toward the daily or weekly vegetable component requirements.

(F) *Other meat alternates.* Other meat alternates, such as cheese and eggs, may be used to meet all or part of the meats/meat alternates component.

(v) *Fluid milk component.* Fluid milk must be offered daily in accordance with paragraph (d) of this section.

(3) *Grain substitutions.* (i) Schools in American Samoa, Guam, Hawaii, Puerto Rico, and the U.S. Virgin Islands may serve any vegetable, including vegetables such as breadfruit, prairie turnips, plantains, sweet potatoes, and yams, to meet the grains component.

(ii) School food authorities and schools that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children, may serve any vegetable, including vegetables such as breadfruit, prairie turnips, plantains, sweet potatoes, and yams, to meet the grains component.

(4) *Adjustments to school menus.* Schools must adjust future menu cycles to reflect production and how often food items are offered. Schools may need to change the foods offerings given students' selections and may need to modify recipes and other specifications to make sure that meal requirements are met.

(5) *Standardized recipes.* All schools must develop and follow standardized recipes. A standardized recipe is a recipe that was tested to provide an established yield and quantity using the same ingredients for both measurement and preparation methods. Standardized recipes developed by USDA/FNS are in the Child Nutrition Database. If a school has its own recipes, they may seek assistance from the State agency or school food authority to standardize the recipes. Schools must add any local recipes to their local databases. Additional information may be found in FNS guidance.

(6) *Processed foods.* The Child Nutrition Database includes a number of processed foods. Schools may use purchased processed foods that are not in the Child Nutrition Database. Schools or the State agency must add any locally purchased processed foods to their local database. The State agencies must obtain the levels of calories, saturated fat, added sugars, and sodium in the processed foods. Additional information may be found in FNS guidance.

(7) *Traditional Indigenous foods.* Traditional Indigenous foods may credit toward the required meal components. Information on food crediting may be found in FNS guidance. Schools are encouraged to serve traditional Indigenous foods as part of their lunch and afterschool snack service. Per the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)) traditional foods means food that has traditionally been prepared and

consumed by an American Indian tribe, including wild game meat; fish; seafood; marine mammals; plants; and berries.

(d) *Fluid milk requirements*—(1) *Types of fluid milk.* (i) Schools must offer students a variety (at least two different options) of fluid milk at lunch daily. All milk must be fat-free (skim) or low-fat (1 percent fat or less). Milk with higher fat content is not creditable. Low-fat or fat-free lactose-free and reduced-lactose fluid milk may also be offered.

(ii) All fluid milk served in the Program must be pasteurized fluid milk which meets State and local standards for such milk. All fluid milk must have vitamins A and D at levels specified by the Food and Drug Administration and must be consistent with State and local standards for such milk.

(iii) Milk varieties may be unflavored or flavored, provided that unflavored milk is offered at each meal service. By July 1, 2025, flavored milk must contain no more than 10 grams of added sugars per 8 fluid ounces, or for flavored milk sold as competitive food for middle and high schools, 15 grams of added sugars per 12 fluid ounces.

(2) *Fluid milk substitutes for non-disability reasons.* School food authorities may offer fluid milk substitutes to students with dietary needs that are not disabilities. For disability-related meal modifications, see paragraph (m) of this section.

(i) Prior to providing a fluid milk substitute for a non-disability reason, a school food authority must obtain a written request from the student's parent or guardian, a State licensed healthcare professional, or a registered dietitian that identifies the reason for the substitute. A school food authority choosing to offer fluid milk substitutes for a non-disability reason is not required to offer the specific fluid milk substitutes requested but may offer the fluid milk substitutes of its choice, provided the fluid milk substitutes offered meet the requirements of paragraph (d)(2)(ii) of this section. A school food authority must inform the State agency if any schools choose to offer fluid milk substitutes for non-disability reasons.

(ii) If a school food authority chooses to offer one or more fluid milk substitutes for non-disability reasons, the fluid milk substitutes must provide, at a minimum, the nutrients listed in the following table. Fluid milk substitutes must be fortified in accordance with fortification guidelines issued by the Food and Drug Administration.

TABLE 2 TO PARAGRAPH (d)(2)(ii)—NUTRIENT REQUIREMENTS FOR FLUID MILK SUBSTITUTES

Nutrient	Per cup (8 fl. oz.)
Calcium	276 mg.
Protein	8 g.
Vitamin A	150 mcg. retinol activity equivalents (RAE).
Vitamin D	2.5 mcg.
Magnesium	24 mg.
Phosphorus	222 mg.
Potassium	349 mg.
Riboflavin	0.44 mg.
Vitamin B–12	1.1 mcg.

(iii) Expenses incurred when providing fluid milk substitutes that exceed program reimbursements must be paid by the school food authority; costs may be paid from the nonprofit school food service account.

(iv) The fluid milk substitute approval must remain in effect until the student's parent or guardian, the State licensed healthcare professional, or the registered dietitian revokes the request in writing, or until the school food authority changes its fluid milk substitute policy.

(3) *Inadequate fluid milk supply.* If a school food authority cannot get a supply of fluid milk, it can still participate in the Program under the following conditions:

(i) If emergency conditions temporarily prevent a school food authority that normally has a supply of fluid milk from obtaining delivery of such milk, the State agency may allow the school food authority to serve meals during the emergency period with an alternate form of fluid milk or without fluid milk.

(ii) If a school food authority is unable to obtain a supply of any type of fluid milk on a continuing basis, the State agency may approve the service of meals without fluid milk if the school food authority uses an equivalent amount of canned milk or dry milk in the preparation of the meals. In Alaska, American Samoa, Guam, Hawaii, Puerto Rico, and the U.S. Virgin Islands, if a sufficient supply of fluid milk cannot be obtained, ''fluid milk'' includes reconstituted or recombined fluid milk, or as otherwise allowed by FNS through a written exception.

(4) *Restrictions on the sale of fluid milk.* A school food authority participating in the Program, or a person approved by a school food authority participating in the Program, must not directly or indirectly restrict the sale or marketing of fluid milk (as identified in paragraph (d)(1) of this section) at any time or in any place on school premises or at any school-sponsored event.

(e) *Offer versus serve for grades K through 12.* School lunches must offer daily the five meal components specified in the meal pattern in paragraph (c) of this section. Under offer versus serve, students must be allowed to decline two components at lunch, *except that* the students must select at least 1/2 cup of either the fruit or vegetable component. Senior high schools (as defined by the State educational agency) must participate in offer versus serve. Schools below the senior high level may participate in offer versus serve at the discretion of the school food authority.

(f) *Dietary specifications*—(1) *Calories.* School lunches offered to each age/grade group must meet, on average over the school week, the minimum and maximum calorie levels specified in the following table:

TABLE 3 TO PARAGRAPH (f)(1)—NATIONAL SCHOOL LUNCH PROGRAM CALORIE RANGES

	Grades K–5	Grades 6–8	Grades 9–12
Average Daily Minimum-Maximum Calories (kcal) [1]	550–650	600–700	750–850

[1] The average daily calories must fall within the minimum and maximum levels. Discretionary sources of calories may be added to the meal pattern if within the dietary specifications.

(2) *Saturated fat.* School lunches offered to all age/grade groups must, on average over the school week, provide less than 10 percent of total calories from saturated fat.

(3) *Added sugars.* By July 1, 2027, school lunches offered to all age/grade groups must, on average over the school week, provide less than 10 percent of total calories from added sugars.

(4) *Sodium.* School lunches offered to each age/grade group must meet, on average over the school week, the sodium limits specified in the following table within the established deadlines:

TABLE 4 TO PARAGRAPH (f)(4)—NATIONAL SCHOOL LUNCH PROGRAM SODIUM LIMITS

Age/grade group	Sodium limit: in place through June 30, 2027 (mg)	Sodium limit: must be implemented by July 1, 2027 (mg)
Grades K–5	≤1,110	≤935
Grades 6–8	≤1,225	≤1,035
Grades 9–12	≤1,280	≤1,080

(g) *Compliance assistance.* The State agency and school food authority must provide technical assistance and training to assist schools in planning lunches that meet the meal pattern in paragraph (c) of this section; the dietary specifications established in paragraph (f) of this section; and the meal pattern requirements in paragraphs (o) through (q) of this section, as applicable. Compliance assistance may be offered during trainings, onsite visits, and/or administrative reviews.

(h) *Monitoring dietary specifications.* When required by the Administrative Review process set forth in § 210.18, the State agency must conduct a weighted nutrient analysis to evaluate the average levels of calories, saturated fat, added sugars, and sodium of the lunches offered to students in grades K–12 during one week of the review period. The nutrient analysis must be conducted in accordance with the procedures established in paragraph (i)(3) of this section. If the results of the nutrient analysis indicate that school lunches do not meet the specifications for calories, saturated fat, added sugars, and sodium specified in paragraph (f) of this section, the State agency or school food authority must provide technical assistance and require the reviewed school to take corrective action to meet the requirements.

(i) *Nutrient analyses of school meals*—(1) *Conducting the nutrient analysis.* Any nutrient analysis, whether conducted by the State agency under § 210.18 or by the school food authority, must be performed in accordance with the procedures established in paragraph (i)(3) of this section. The purpose of the nutrient analysis is to determine the average levels of calories, saturated fat, added sugars, and sodium in the meals offered to each age grade group over a school week. The weighted nutrient analysis must be performed as required by FNS guidance.

(2) *Software elements*—(i) *The Child Nutrition Database.* The nutrient analysis is based on the USDA Child Nutrition Database. This database is part of the software used to do a nutrient analysis. Software companies or others developing systems for schools may contact FNS for more information about the database.

(ii) *Software evaluation.* FNS or an FNS designee evaluates any nutrient analysis software before it may be used in schools. FNS or its designee determines if the software, as submitted, meets the minimum requirements. The approval of software does not mean that FNS or USDA endorses it. The software must be able to perform a weighted average analysis after the basic data is entered. The combined analysis of the lunch and breakfast programs is not allowed.

(3) *Nutrient analysis procedures*—(i) *Weighted averages.* The nutrient analysis must include all foods offered as part of the reimbursable meals during one week within the review period. Foods items are included based on the portion sizes and serving amounts. They are also weighted based on their proportionate contribution to the meals offered. This means that food items offered more frequently are weighted more heavily than those not offered as frequently. The weighted nutrient analysis must be performed as required by FNS guidance.

(ii) *Analyzed nutrients.* The analysis determines the average levels of calories, saturated fat, added sugars, and sodium in the meals offered over a school week. It includes all food items offered by the reviewed school over a one-week period.

(4) *Comparing the results of the nutrient analysis.* Once the procedures in paragraph (i)(3) of this section are completed, State agencies must compare the results of the analysis to the calorie, saturated fat, added sugars, and sodium levels established in § 210.10 or § 220.8 of this chapter, as appropriate, for each age/grade group to evaluate the school's compliance with the dietary specifications.

(j) *Responsibility for monitoring meal requirements.* Compliance with the meal requirements in paragraph (b) of this section, including the dietary specifications, and paragraphs (o) through (q) of this section, as applicable, will be monitored by the State agency through administrative reviews authorized in § 210.18.

(k) * * *

(2) *Opportunity to select.* Schools that choose to offer a variety of reimbursable lunches, or provide multiple serving lines, must make all required meal components available to all students, on every lunch line, in at least the minimum required amounts.

* * * * *

(m) *Modifications and variations in reimbursable meals and afterschool snacks*—(1) *Modifications for disability reasons.* School food authorities must make meal modifications, including

substitutions in lunches and afterschool snacks, for children with a disability and whose disability restricts their diet. The modification requested must be related to the disability or limitations caused by the disability and must be offered at no additional cost to the child or household.

(i) In order to receive Federal reimbursement when a modified meal does not meet the meal pattern requirements specified in this section, the school food authority must obtain from the household a written medical statement signed by a State licensed healthcare professional. By July 1, 2025, school food authorities must also accept a medical statement signed by a registered dietitian. The medical statement must provide sufficient information about the child's dietary restrictions, such as foods to be omitted and recommended alternatives, if appropriate. Modified meals that meet the meal pattern requirements in this section are reimbursable with or without a medical statement.

(ii) School food authorities must ensure that parents, guardians, and children have notice of the procedure for requesting meal modifications for disabilities and the process for procedural safeguards related to meal modifications for disabilities. See §§ 15b.6(b) and 15b.25 of this title.

(iii) Expenses incurred when making meal modifications that exceed program reimbursement rates must be paid by the school food authority; costs may be paid from the nonprofit food service account.

(2) *Variations for non-disability reasons.* School food authorities should consider children's dietary preferences when planning and preparing meals and afterschool snacks. Any variations must be consistent with the meal pattern requirements specified under this section. Expenses incurred from meal pattern variations that exceed program reimbursement rates must be paid by the school food authority; costs may be paid from the nonprofit food service account.

(3) *Exceptions for natural disasters.* If there is a natural disaster or other catastrophe, FNS may temporarily allow school food authorities to serve meals for reimbursement that do not meet the requirements in this section.

* * * * *

(o) *Afterschool snacks.* Eligible schools operating afterschool care programs may be reimbursed for one afterschool snack served to a child (as defined in § 210.2) per day.

(1) *Eligible schools* means schools that:

(i) Operate the National School Lunch Program; and

(ii) Sponsor afterschool care programs as defined in § 210.2.

(2) *Afterschool snack requirements for K–12 children*—(i) *Afterschool snacks served to K through 12 children.* Schools serving afterschool snacks to K–12 children must serve the meal components and quantities required in the snack meal pattern established for the Child and Adult Care Food Program, under § 226.20 of this chapter. In addition, schools serving afterschool snacks to K–12 children must comply with the requirements set forth in paragraphs (a), (c)(3) and (4), (d)(2) through (4), (g), and (m) of this section, as applicable, and § 226.20(d) of this chapter.

(ii) *Afterschool snack meal pattern table for K through 12 children.* Through June 30, 2025, afterschool snacks must either follow the requirements outlined in the following table or must contain two different components from the following four: fluid milk, meats/meat alternates, vegetable or fruit, and/or grains. By July 1, 2025, the minimum amounts of meal components to be served at afterschool snack are as follows:

TABLE 5 TO PARAGRAPH (o)(2)(ii)—AFTERSCHOOL SNACK MEAL PATTERN FOR K–12 CHILDREN

[Ages 6–18]

[Select two of the five components for a reimbursable snack]

Meal components [1]	Minimum quantities [2]
Fluid milk [3]	8 fluid ounces.
Meats/meat alternates [4].	1 ounce equivalent.
Vegetables [5]	¾ cup.
Fruits [5]	¾ cup.
Grains [6]	1 ounce equivalent.

[1] Must serve two of the five components for a reimbursable afterschool snack. Only one of the two components may be a beverage.

[2] May need to serve larger portions to children ages 13 through 18 to meet their nutritional needs.

[3] Must be fat-free (skim) or low-fat (1 percent fat or less). Milk may be unflavored or flavored.

[4] Alternate protein products must meet the requirements in appendix A to part 226 of this chapter. Yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Information on crediting meats/meat alternates may be found in FNS guidance.

[5] Juice must be pasteurized, full-strength juice. No more than half of the weekly fruit or vegetable offerings may be in the form of juice.

[6] At least 80 percent of grains offered weekly (by ounce equivalents) must be whole grain-rich, as defined in § 210.2, and the remaining grains items offered must be enriched. Grain-based desserts may not be used to meet the grains requirement. Breakfast cereal must have no more than 6 grams of added sugars per dry ounce. Information on crediting grain items may be found in FNS guidance.

(3) *Afterschool snack requirements for preschoolers*—(i) *Afterschool snacks served to preschoolers.* Schools serving afterschool snacks to preschoolers must serve the food components and quantities required in the snack meal pattern established for the Child and Adult Care Food Program, under § 226.20 of this chapter. In addition, schools serving afterschool snacks to preschoolers must comply with the requirements set forth in paragraphs (a), (c)(3) and (4), (d)(2) through (4), (g), and (m) of this section, as applicable, and § 226.20(d) of this chapter.

(ii) *Preschooler afterschool snack meal pattern table.* The minimum amounts of food components to be served at afterschool snack are as follows:

TABLE 5 TO PARAGRAPH (o)(3)(ii)—AFTERSCHOOL SNACK MEAL PATTERN FOR PRESCHOOLERS

[Select two of the five components for a reimbursable snack]

Meal components [1]	Minimum quantities	
	Ages 1–2	Ages 3–5
Fluid milk [2]	4 fluid ounces	4 fluid ounces.
Meats/meat alternates [3]	½ ounce equivalent	½ ounce equivalent.
Vegetables [4]	½ cup	½ cup.
Fruits [4]	½ cup	½ cup.

TABLE 5 TO PARAGRAPH (o)(3)(ii)—AFTERSCHOOL SNACK MEAL PATTERN FOR PRESCHOOLERS—Continued

[Select two of the five components for a reimbursable snack]

Meal components [1]	Minimum quantities	
	Ages 1–2	Ages 3–5
Grains [5]	½ ounce equivalent	½ ounce equivalent.

[1] Must serve two of the five components for a reimbursable afterschool snack. Only one of the two components may be a beverage.
[2] Must be unflavored whole milk for children age one. Must be unflavored low-fat (1 percent) or unflavored fat-free (skim) milk for children two through five years old.
[3] Alternate protein products must meet the requirements in appendix A to part 226 of this chapter. Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Information on crediting meats/meat alternates may be found in FNS guidance.
[4] Pasteurized full-strength juice may only be offered to meet the vegetable or fruit requirement at one meal, including snack, per day.
[5] At least one serving per day, across all eating occasions, must be whole grain-rich. Grain-based desserts do not count toward meeting the grains requirement. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.

(4) *Afterschool snack requirements for infants*—(i) *Afterschool snacks served to infants.* Schools serving afterschool snacks to infants ages birth through 11 months must serve the meal components and quantities required in the snack meal pattern established for the Child and Adult Care Food Program, under § 226.20 of this chapter. In addition, schools serving afterschool snacks to infants must comply with the requirements set forth in paragraphs (a), (c)(3) and (4), (g), and (m) of this section, as applicable, and § 226.20(d) of this chapter.

(ii) *Infant afterschool snack meal pattern table.* The minimum amounts of meal components to be served at snack are as follows:

TABLE 6 TO PARAGRAPH (o)(4)(II)—INFANT AFTERSCHOOL SNACK MEAL PATTERN

Birth through 5 months	6 through 11 months
4–6 fluid ounces of breast milk [1] or formula [2]	2–4 fluid ounces breast milk [1] or formula; [2] and 0–½ ounce equivalent bread; [3 4] or 0–¼ ounce equivalent crackers; [3 4] or 0–½ ounce equivalent infant cereal; [2 4] or 0–¼ ounce equivalent ready-to-eat breakfast cereal; [3 4 5 6] and 0–2 tablespoons vegetable or fruit, or a combination of both. [6 7]

[1] Breast milk or formula, or portions of both, must be served; however, it is recommended that breast milk be served from birth through 11 months. For some breastfed infants who regularly consume less than the minimum amount of breast milk per feeding, a serving of less than the minimum amount of breast milk may be offered, with additional breast milk offered at a later time if the infant will consume more.
[2] Infant formula and dry infant cereal must be iron-fortified.
[3] A serving of grains must be whole grain-rich, enriched meal, enriched flour, bran, or germ.
[4] Information on crediting grain items may be found in FNS guidance.
[5] Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.
[6] A serving of this component is required when the infant is developmentally ready to accept it.
[7] Fruit and vegetable juices must not be served.

(5) *Monitoring afterschool snacks.* Compliance with the requirements of this paragraph (o)(5) is monitored by the State agency as part of the Administrative Review conducted under § 210.18. If snacks offered do not meet the requirements of this paragraph, the State agency or school food authority must provide technical assistance and require corrective action and when applicable, must take fiscal action, as authorized in §§ 210.18(l) and 210.19(c).

(p) *Lunch requirements for preschoolers*—(1) *Lunches served to preschoolers.* Schools serving lunches to preschoolers under the National School Lunch Program must serve the meal components and quantities required in the lunch meal pattern established for the Child and Adult Care Food Program, under § 226.20(a), (c)(2), and (d) of this chapter. In addition, schools serving lunches to this age group must comply with the requirements set forth in paragraphs (a), (c)(3) and (4), (d)(2) through (4), (g), and (k) through (m) of this section.

(2) *Preschooler lunch meal pattern table.* The minimum amounts of meal components to be served at lunch are as follows:

TABLE 7 TO PARAGRAPH (p)(2)—PRESCHOOL LUNCH MEAL PATTERN

[Select the appropriate components for a reimbursable meal]

Meal components and food items [1]	Minimum quantities	
	Ages 1–2	Ages 3–5
Fluid milk	4 fluid ounces [2]	6 fluid ounces [3].
Meats/meat alternates [4]	1 ounce equivalent	1½ ounce equivalents.
Vegetables [5]	⅛ cup	¼ cup.
Fruits [5]	⅛ cup	¼ cup.

TABLE 7 TO PARAGRAPH (p)(2)—PRESCHOOL LUNCH MEAL PATTERN—Continued

[Select the appropriate components for a reimbursable meal]

Meal components and food items [1]	Minimum quantities	
	Ages 1–2	Ages 3–5
Grains [6]	½ ounce equivalent	½ ounce equivalent.

[1] Must serve all five components for a reimbursable meal.

[2] Must serve unflavored whole milk to children age 1.

[3] Must serve unflavored milk to children 2 through 5 years old. The milk must be fat-free, skim, low-fat, or 1 percent or less.

[4] Alternate protein products must meet the requirements in appendix A to part 226 of this chapter. Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Information on crediting meats/meat alternates may be found in FNS guidance.

[5] Juice must be pasteurized. Full-strength juice may only be offered to meet the vegetable or fruit requirement at one meal or snack, per day. Vegetables may be offered to meet the entire fruits requirement. When two vegetables are served at lunch or supper, two different kinds of vegetables must be served.

[6] Must serve at least one whole grain-rich serving, across all eating occasions, per day. Grain-based desserts may not be offered to meet the grains requirement. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereal must have no more than 6 grams of added sugars per dry ounce. Information on crediting grain items may be found in FNS guidance.

(q) *Lunch requirements for infants*—(1) *Lunches served to infants.* Schools serving lunches to infants ages birth through 11 months under the National School Lunch Program must serve the meal components and quantities required in the lunch meal pattern established for the Child and Adult Care Food Program, under § 226.20(a), (b), and (d) of this chapter. In addition, schools serving lunches to infants must comply with the requirements set forth in paragraphs (a), (c)(3) and (4), (g), (l), and (m) of this section.

(2) *Infant lunch meal pattern table.* The minimum amounts of meal components to be served at lunch are as follows:

TABLE 8 TO PARAGRAPH (q)(2)—INFANT LUNCH MEAL PATTERN

Birth through 5 months	6 through 11 months
4–6 fluid ounces breast milk [1] or formula [2].	6–8 fluid ounces breast milk [1] or formula; [2] and 0–½ ounce equivalent infant cereal; [2 3] or 0–4 tablespoons meat, fish, poultry, whole egg, cooked dry beans, peas, or lentils; or 0–2 ounces of cheese; or 0–4 ounces (volume) of cottage cheese; or 0–4 ounces or ½ cup of yogurt; [4] or a combination of the above; [5] and 0–2 tablespoons vegetable or fruit, or a combination of both.[5 6]

[1] Breast milk or formula, or portions of both, must be served; however, it is recommended that breast milk be served from birth through 11 months. For some breastfed infants who regularly consume less than the minimum amount of breast milk per feeding, a serving of less than the minimum amount of breast milk may be offered, with additional breast milk offered at a later time if the infant will consume more.

[2] Infant formula and dry infant cereal must be iron-fortified.

[3] Information on crediting grain items may be found in FNS guidance.

[4] Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).

[5] A serving of this component is required when the infant is developmentally ready to accept it.

[6] Fruit and vegetable juices must not be served.

(r) *Severability.* If any provision of this section is held to be invalid or unenforceable by its terms, or as applied to any person or circumstances, it shall be severable from this section and not affect the remainder thereof. In the event of such holding of invalidity or unenforceability of a provision, the meal pattern requirement covered by that provision reverts to the version that immediately preceded the invalidated provision.

■ 9. In § 210.11:

■ a. Revise paragraph (a)(3);

■ b. Add paragraph (a)(7);

■ c. Revise paragraph (f)(2);

■ d. Revise and republish paragraph (f)(3);

■ e. Remove paragraph (g);

■ f. Redesignate paragraphs (h) through (m) as paragraphs (g) through (l);

■ g. Revise and republish newly redesignated paragraphs (g)(2)(i) and (ii) and (h);

■ h. Revise newly redesignated paragraph (l); and

■ i. Remove paragraph (n).

The revisions and addition read as follows:

§ 210.11 Competitive food service and standards.

(a) * * *

(3) *Entrée item* means an item that is intended as the main dish in a reimbursable meal and is either:

(i) A combination food of a meat/meat alternate and a grain;

(ii) A combination food of a vegetable or fruit and a meat/meat alternate;

(iii) A meat/meat alternate alone with the exception of yogurt, low-fat or reduced fat cheese, nuts, seeds and nut or seed butters, and meat snacks (such as dried beef jerky); or

(iv) A grain only entrée that is served as the main dish in a school breakfast.

* * * * *

(7) *Bean dip* means, for the purpose of competitive food standards, a spread made from ground pulses (beans, peas, and/or lentils), along with one or more of the following optional ingredients:

(i) Ground nut/seed butter (such as tahini [ground sesame] or peanut butter).

(ii) Vegetable oil (such as olive oil, canola oil, soybean oil).

(iii) Seasoning (such as salt, citric acid).

(iv) Vegetables and juice for flavor (such as olives, roasted pepper, garlic, lemon juice).

(v) For manufactured bean dip, contains ingredients necessary as

preservatives and/or to maintain freshness.

* * * * *

(f) * * *

(2) *Exemptions to the total fat requirement.* (i) Seafood with no added fat is exempt from the total fat requirement, but subject to the saturated fat, sugar, calorie, and sodium standards.

(ii) Bean dip (as defined in paragraph (a)(7) of this section), is exempt from the total fat standard, but subject to the saturated fat, sugar, calorie, and sodium standards. This exemption does not apply to combination products that contain bean dip with other ingredients such as crackers, pretzels, pita, manufactured, snack-type vegetable and/or fruit sticks.

(3) *Exemptions to the total fat and saturated fat requirements.* (i) Reduced fat cheese and part skim mozzarella cheese are exempt from the total fat and saturated fat standards, but subject to the sugar, calorie, and sodium standards. This exemption does not apply to combination foods.

(ii) Nuts and seeds and nut/seed butters are exempt from the total fat and saturated fat standards, but subject to the sugar, calorie, and sodium standards. This exemption does not apply to combination products that contain nuts, seeds, or nut/seed butters with other ingredients, such as peanut butter and crackers, trail mix, or chocolate covered peanuts.

(iii) Products that consist of only dried fruit with nuts and/or seeds with no added nutritive sweeteners or fat are exempt from the total fat, saturated fat, and sugar standards, but subject to the calorie and sodium standards.

(iv) Whole eggs with no added fat are exempt from the total fat and saturated fat standards, but subject to the calorie and sodium standards.

(g) * * *

(2) * * *

(i) Dried whole fruits or vegetables; dried whole fruit or vegetable pieces; and dehydrated fruits or vegetables with no added nutritive sweeteners are exempt from the sugar standard, but subject to the total fat, saturated fat, calorie, and sodium standards. There is also an exemption from the sugar standard for dried fruits with nutritive sweeteners that are required for processing and/or palatability purposes.

(ii) Products that consist of only dried fruit with nuts and/or seeds with no added nutritive sweeteners or fat are exempt from the total fat, saturated fat, and sugar standards, but subject to the calorie and sodium standards.

(h) *Calorie and sodium content for snack items and side dishes sold as competitive foods.* Snack items and side dishes sold as competitive foods must have not more than 200 calories and 200 mg of sodium per item as packaged or served, including the calories and sodium contained in any added accompaniments such as butter, cream cheese, salad dressing, etc., and must meet all of the other nutrient standards in this section. These snack items and side dishes must have not more than 200 calories and 200 mg of sodium per item as packaged or served.

* * * * *

(l) *Beverages*—(1) *Elementary schools.* Allowable beverages for elementary school-aged students are limited to:

(i) Plain water or plain carbonated water (no size limit);

(ii) Milk and fluid milk substitutes that meet the requirements outlined in § 210.10(d)(1) and (2) (no more than 8 fluid ounces); and

(iii) One hundred (100) percent fruit/vegetable juice, and 100 percent fruit/vegetable juice diluted with water, with or without carbonation and with no added sweeteners (no more than 8 fluid ounces).

(2) *Middle schools.* Allowable beverages for middle school-aged students are limited to:

(i) Plain water or plain carbonated water (no size limit);

(ii) Milk and fluid milk substitutes that meet the requirements outlined in § 210.10(d)(1) and (2) (no more than 12 fluid ounces); and

(iii) One hundred (100) percent fruit/vegetable juice, and 100 percent fruit/vegetable juice diluted with water, with or without carbonation and with no added sweeteners (no more than 12 fluid ounces).

(3) *High schools.* Allowable beverages for high school-aged students are limited to:

(i) Plain water or plain carbonated water (no size limit);

(ii) Milk and fluid milk substitutes that meet the requirements outlined in § 210.10(d)(1) and (2) (no more than 12 fluid ounces);

(iii) One hundred (100) percent fruit/vegetable juice, and 100 percent fruit/vegetable juice diluted with water, with or without carbonation and with no added sweeteners (no more than 12 fluid ounces);

(iv) Calorie-free, flavored water, with or without carbonation (no more than 20 fluid ounces);

(v) Other beverages that are labeled to contain less than 5 calories per 8 fluid ounces, or less than or equal to 10 calories per 20 fluid ounces (no more than 20 fluid ounces); and

(vi) Other beverages that are labeled to contain no more than 40 calories per 8 fluid ounces or 60 calories per 12 fluid ounces (no more than 12 fluid ounces).

■ 10. In § 210.12, revise and republish paragraph (e) to read as follows:

§ 210.12 Student, parent, and community involvement.

* * * * *

(e) *Local school wellness policies.* Local educational agencies must comply with the provisions of § 210.31(d) regarding student, parent, and community involvement in the development, implementation, and periodic review and update of the local school wellness policy.

■ 11. In § 210.14:

■ a. Revise and republish paragraphs (e) introductory text and (e)(5)(ii)(D);

■ b. Remove paragraph (e)(6)(iii); and

■ c. Revise and republish paragraph (f) introductory text.

The revisions read as follows:

§ 210.14 Resource management.

* * * * *

(e) *Pricing paid lunches.* For each school year, school food authorities must establish prices for paid lunches in accordance with this paragraph (e).

* * * * *

(5) * * *

(ii) * * *

(D) Any in-kind contributions converted to direct cash expenditures; and

* * * * *

(f) *Revenue from nonprogram foods.* School food authorities must ensure that the revenue generated from the sale of nonprogram foods complies with the requirements in this paragraph (f).

* * * * *

■ 12. In § 210.15, revise and republish paragraph (b)(9) to read as follows:

§ 210.15 Reporting and recordkeeping.

* * * * *

(b) * * *

(9) Records to document compliance with the local school wellness policy requirements as set forth in § 210.31(f).

■ 13. In § 210.18, revise and republish paragraphs (g)(2)(i) introductory text, (g)(2)(i)(B)(*1*) through (*3*), (h)(2)(v) and (x), (l)(2)(i), (l)(2)(ii)(A), and (l)(2)(iii) introductory text to read as follows:

§ 210.18 Administrative reviews.

* * * * *

(g) * * *

(2) * * *

(i) *Meal components and quantities.* For each school selected for review, the State agency must complete a USDA-approved menu tool, review documentation, and observe the meal service to ensure that meals offered by

the reviewed schools meet the meal patterns for each program. To review this area, the State agency must:

* * * * *

(B) * * *

(*1*) Observe a significant number of program meals, as described in the FNS Administrative Review Manual, at each serving line and review the corresponding documentation to determine whether all reimbursable meal service lines offer all of the required meal components/items and quantities for the age/grade groups being served, as required under § 210.10, as applicable, and § 220.8 of this chapter, as applicable. Observe meals at the beginning, middle and end of the meal service line, and confirm that signage or other methods are used to assist students in identifying the reimbursable meal. If the State agency identifies missing components or inadequate quantities prior to the beginning of the meal service, it must inform the school food authority and provide an opportunity to make corrections. Additionally, if visual observation suggests that quantities offered are insufficient or excessive, the State agency must require the reviewed schools to provide documentation demonstrating that the required amounts of each component were available for service for each day of the review period.

(*2*) Observe a significant number of the program meals counted at the point of service for each type of serving line to determine whether the meals selected by the students contain the meal components and food quantities required for a reimbursable meal under § 210.10, as applicable, and § 220.8 of this chapter, as applicable.

(*3*) If Offer versus Serve is in place, observe whether students select at least three meal components at lunch and at least three food items at breakfasts, and that the lunches and breakfasts include at least ½ cup of fruits or vegetables.

* * * * *

(h) * * *

(2) * * *

(v) *Water.* The State agency must ensure that plain potable water is available and accessible to children at no charge as specified in § 210.10(a)(1)(i) and § 220.8(a)(1) of this chapter.

* * * * *

(x) *Local school wellness.* The State agency must ensure the local educational agency complies with the local school wellness requirements set forth in § 210.31.

* * * * *

(l) * * *

(2) * * *

(i) For missing meal components or missing production records cited under paragraph (g)(2) of this section, the State agency must apply fiscal action.

(ii) * * *

(A) If the meals contain insufficient quantities of the required meal components, the deficient meals may be disallowed and reclaimed.

* * * * *

(iii) For repeated violations of the dietary specifications cited under paragraph (g)(2)(ii) of this section, the State agency has discretion to apply fiscal action to the reviewed school as follows:

* * * * *

■ 14. In § 210.19:

■ a. Revise and republish paragraph (c)(4); and

■ b. Revise paragraph (f).

The revisions read as follows:

§ 210.19 Additional responsibilities.

* * * * *

(c) * * *

(4) *Interest charge.* If an agreement cannot be reached with the State agency for payment of its debts or for offset of debts on its current Letter of Credit, interest will be charged against the State agency from the date the demand letter was sent, at the rate established by the Secretary of Treasury.

* * * * *

(f) *Cooperation with the Child and Adult Care Food Program.* On an annual basis, the State agency must provide the State agency which administers the Child and Adult Care Food Program with a list of all schools in the State participating in the National School Lunch Program in which 50 percent or more of enrolled children have been determined eligible for free or reduced price meals as of the last operating day of the previous October, or other month specified by the State agency. The lists must be provided by February 1 of each year or, if data is based on a month other than October, within 90 calendar days following the end of the month designated by the State agency. The State agency may provide updated free and reduced price enrollment data on individual schools to the State agency which administers the Child and Adult Care Food Program only when unusual circumstances render the initial data obsolete. In addition, the State agency must provide the current list, upon request, to sponsoring organizations of day care homes participating in the Child and Adult Care Food Program.

§ 210.20 [Amended]

■ 15. In § 210.20:

■ a. Remove paragraphs (a)(6) and (7);

■ b. Redesignate paragraphs (a)(8) and (9) as paragraphs (a)(6) and (7), respectively;

■ c. Remove paragraph (b)(10); and

■ d. Redesignate paragraphs (b)(11) through (14) as paragraphs (b)(10) through (13), respectively.

■ 16. In § 210.21, revise paragraphs (d) and (g)(1) to read as follows:

§ 210.21 Procurement.

* * * * *

(d) *Buy American*—(1) *Definitions.* For the purpose of this paragraph (d):

(i) *Domestic commodity or product* means:

(A) An agricultural commodity that is produced in the United States; and

(B) A food product that is processed in the United States substantially using agricultural commodities that are produced in the United States.

(ii) *Substantially using agriculture commodities that are produced in the United States* means over 51 percent of a food product must consist of agricultural commodities that were grown domestically.

(2) *In general.* Subject to paragraph (d)(4) of this section, a school food authority must purchase, to the maximum extent practicable, domestic commodities or products.

(3) *Required language.* School food authorities must include language requiring the purchase of foods that meet the Buy American requirements in paragraph (d)(1) of this section in all procurement procedures, solicitations, and contracts.

(4) *Limitations.* Paragraphs (d)(2) and (3) of this section apply only to:

(i) A school food authority located in the contiguous United States; and

(ii) A purchase of domestic commodity or product for the school lunch program under this part.

(5) *Exceptions.* The purchase of foods not meeting the definition in paragraph (d)(1) of this section is only permissible when the following criteria are met:

(i) The school food authority determines that one of the following limited exceptions is met:

(A) The product is listed in the Federal Acquisitions Regulations (FAR) at 48 CFR 25.104 and/or is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or

(B) Competitive bids reveal the cost of a United States product is significantly higher than the non-domestic product.

(ii) Non-domestic food purchases (those that do not meet the definition of domestic commodity or product, as defined in paragraph (d)(1) of this section) must not exceed the following caps by the established deadlines:

(A) By July 1, 2025, non-domestic food purchases must not exceed 10 percent of total annual commercial food costs that a school food authority purchases per school year.

(B) By July 1, 2028, non-domestic food purchases must not exceed 8 percent of total annual commercial food costs that a school food authority purchases per school year.

(C) By July 1, 2031, non-domestic food purchases must not exceed 5 percent of total annual commercial food costs that a school food authority purchases per school year.

(iii) School food authorities must maintain documentation, except when the item purchased is found on the FAR at 48 CFR 25.104 when using an exception under paragraph (d)(5)(i) of this section.

(iv) School food authorities must maintain documentation, to demonstrate that when using an exception under paragraph (d)(5)(i) of this section their non-domestic food purchases do not exceed the annual threshold specified in paragraph (d)(5)(ii) of this section.

(6) *Harvested fish.* To meet the definition of a domestic commodity or product, harvested fish must meet the following requirements:

(i) Farmed fish must be harvested within the United States or any territory or possession of the United States; and

(ii) Wild caught fish must be harvested within the Exclusive Economic Zone of the United States or by a United States flagged vessel.

(7) *Applicability to Hawaii.* Paragraph (d)(2) of this section applies to school food authorities in Hawaii with respect to domestic commodities or products that are produced in Hawaii in sufficient quantities to meet the needs of meals provided under the school lunch program under this part.

(8) *Temporary accommodation.* For school food authorities that demonstrate they cannot meet the threshold, State agencies may provide an accommodation for temporary relief from the requirement as the State agency works with the school food authority to increase domestic purchases.

* * * * *

(g) * * *

(1) A school food authority participating in the Program, as well as State agencies making purchases on behalf of such school food authorities, may apply a geographic preference when procuring unprocessed locally grown or locally raised agricultural products, including the use of ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications or selection criteria for unprocessed or minimally processed food items. When utilizing the geographic preference to procure such products, the school food authority making the purchase or the State agency making purchases on behalf of such school food authorities have the discretion to determine the local area to which the geographic preference option will be applied, so long as there are an appropriate number of qualified firms able to compete;

* * * * *

■ 17. In § 210.23, revise and republish paragraph (a) to read as follows:

§ 210.23 Other responsibilities.

(a) *Free and reduced price lunches and afterschool snacks.* State agencies and school food authorities must ensure that lunches and afterschool snacks are made available free or at a reduced price to all children who are determined by the school food authority to be eligible for such benefits. The determination of a child's eligibility for free or reduced price lunches and afterschool snacks must made in accordance with part 245 of this chapter.

* * * * *

■ 18. In § 210.29, revise paragraph (d)(3) introductory text to read as follows:

§ 210.29 Management evaluations.

* * * * *

(d) * * *

(3) *School food authority appeal of FNS findings.* When administrative or follow-up review activity conducted by FNS in accordance with the provisions of paragraph (d)(2) of this section results in the denial of all or part of a Claim for Reimbursement or withholding of payment, a school food authority may appeal the FNS findings by filing a written request with the Food and Nutrition Service in accordance with the appeal procedures specified in this paragraph (d)(3):

* * * * *

■ 19. Revise and republish § 210.30 to read as follows:

§ 210.30 School nutrition program professional standards.

(a) *General.* School food authorities that operate the National School Lunch Program, or the School Breakfast Program (part 220 of this chapter), must establish and implement professional standards for school nutrition program directors, managers, and staff, as defined in § 210.2.

(b) *Minimum standards for all school nutrition program directors.* Each school food authority must ensure that all newly hired school nutrition program directors meet minimum hiring standards and ensure that all new and existing directors have completed the minimum annual training/education requirements for school nutrition program directors, as set forth below:

(1) *Hiring standards.* All school nutrition program directors hired on or after July 1, 2015, must meet the following minimum educational requirements, as applicable:

(i) *School nutrition program directors with local educational agency enrollment of 2,499 students or fewer.* Directors must meet the requirements in paragraph (b)(1)(i)(A), (B), (C), or (D) of this section. However, a State agency may approve a school food authority to use the nonprofit school food service account to pay the salary of a school nutrition program director who does not meet the hiring standards herein so long as the school food authority is complying with a State agency-approved plan to ensure the director will meet the requirements.

(A) A bachelor's degree, or equivalent educational experience, as determined by the State agency, with an academic major or concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field;

(B) A bachelor's degree, or equivalent educational experience, as determined by the State agency, with any academic major or area of concentration, and either a State-recognized certificate for school nutrition directors, or at least one year of relevant food service experience. At the discretion of the State agency, and on an individual basis, documented relevant food service experience may be unpaid;

(C) An associate's degree, or equivalent educational experience, as determined by the State agency, with an academic major or area of concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field and at least one year of relevant food service experience. At the discretion of the State agency, and on an individual basis, documented relevant food service experience may be unpaid; or

(D) A high school diploma or equivalency (such as the general educational development diploma), and at least three years of relevant food service experience. At the discretion of the State agency, and on an individual basis, documented relevant food service experience may be unpaid. Directors hired under this criterion are strongly encouraged to work toward attaining an associate's degree in an academic major

in at least one of the fields listed in paragraph (b)(1)(i)(C) of this section.

(ii) *School nutrition program directors with local educational agency enrollment of 2,500 to 9,999 students.* Directors must meet the requirements in either paragraph (b)(1)(ii)(A), (B), (C), or (D) of this section.

(A) A bachelor's degree, or equivalent educational experience, as determined by the State agency, with an academic major or concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field;

(B) A bachelor's degree, or equivalent educational experience, as determined by the State agency, with any academic major or area of concentration, and a State-recognized certificate for school nutrition directors;

(C) A bachelor's degree in any academic major and at least two years of relevant experience in school nutrition programs; or

(D) An associate's degree, or equivalent educational experience, as determined by the State agency, with an academic major or area of concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field and at least two years of relevant school nutrition program experience. Directors hired with an associate's degree are strongly encouraged to work toward attaining a bachelor's degree in an academic major in the fields listed in this paragraph (b)(1)(ii)(D).

(iii) *School nutrition program directors with local educational agency enrollment of 10,000 or more students.* Directors must meet the requirements in either paragraph (b)(1)(iii)(A), (B), or (C) of this section.

(A) A bachelor's degree, or equivalent educational experience, as determined by the State agency, with an academic major or area of concentration in food and nutrition, food service management, dietetics, family and consumer sciences, nutrition education, culinary arts, business, or a related field;

(B) A bachelor's degree, or equivalent educational experience, as determined by the State agency, with any academic major or area of concentration, and a State-recognized certificate for school nutrition directors; or

(C) A bachelor's degree in any major and at least five years of experience in management of school nutrition programs.

(D) School food authorities are strongly encouraged to seek out individuals who possess a master's degree or are willing to work toward a master's degree in the fields listed in this paragraph. At least one year of management experience, preferably in school nutrition, is strongly recommended. It is also strongly recommended that directors have at least three credit hours at the university level in food service management and at least three credit hours in nutritional sciences at the time of hire.

(iv) *Exceptions to the hiring standards.* (A) For a local educational agency with less than 500 students, the State agency may approve the hire of a director who meets one of the educational criteria in paragraphs (b)(1)(i)(B) through (D) of this section but has less than the required years of relevant food service experience.

(B) For a local educational agency with 2,500 or more students, the State agency may approve the hire of a director who does not meet the educational criteria in paragraphs (b)(1)(ii)(A) through (D) or paragraphs (b)(1)(iii)(A) through (C) of this section, as applicable, but who has at least 10 years of school nutrition program experience.

(C) Acting school nutrition program directors are not required to meet the hiring standards established in this paragraph (b)(1) of this section; however, the State agency may require acting school nutrition program directors expected to serve for more than 30 business days to meet the hiring standards established in established in this paragraph (b)(1).

(v) *School nutrition program directors for all local educational agency sizes.* All school nutrition program directors, for all local educational agency sizes, must have completed at least eight hours of food safety training within five years prior to their starting date or complete eight hours of food safety training within 30 calendar days of their starting date. At the discretion of the State agency, all school nutrition program directors, regardless of their starting date, may be required to complete eight hours of food safety training every five years.

(2) [Reserved]

(c) *Continuing education/training standards for all school nutrition program directors.* Each school year, the school food authority must ensure that all school nutrition program directors (including acting directors, at the discretion of the State agency), complete 12 hours of annual continuing education/training. The annual training must include, but is not limited to, administrative practices (including training in application, certification, verification, meal counting, and meal claiming procedures), as applicable, and any other specific topics identified by FNS, as needed, to address Program integrity or other critical issues. Continuing education/training required under this paragraph (c) is in addition to the food safety training required in the first year of employment under paragraph (b)(1)(v) of this section.

(d) *Continuing education/training standards for all school nutrition program managers.* Each school year, the school food authority must ensure that all school nutrition program managers have completed 10 hours of annual continuing education/training. The annual training must include, but is not limited to, the following topics, as applicable:

(1) Administrative practices (including training in application, certification, verification, meal counting, and meal claiming procedures);

(2) The identification of reimbursable meals at the point of service;

(3) Nutrition;

(4) Health and safety standards; and

(5) Any specific topics identified by FNS, as needed, to address Program integrity or other critical issues.

(e) *Continuing education/training standards for all staff with responsibility for school nutrition programs.* Each school year, the school food authority must ensure that all staff with responsibility for school nutrition programs that work an average of at least 20 hours per week, other than school nutrition program directors and managers, completes 6 hours of annual training in areas applicable to their jobs. Part-time staff working an average of less than 20 hours per week must complete 4 hours of annual training. The annual training must include, but is not limited to, the following topics, as applicable to their positions and responsibilities:

(1) Free and reduced price eligibility;

(2) Application, certification, and verification procedures;

(3) The identification of reimbursable meals at the point of service;

(4) Nutrition;

(5) Health and safety standards; and

(6) Any specific topics identified by FNS, as needed, to address Program integrity or other critical issues.

(f) *Summary of required minimum continued education/training standards.* The annual training requirements for school nutrition program directors, managers, and staff are summarized in the following table.

TABLE 1 TO PARAGRAPH (f)—SUMMARY OF REQUIRED ANNUAL TRAINING [1 2]

School Nutrition Program Directors	Each year, at least 12 hours of annual education/training. Includes topics such as: • Administrative practices (including training in application, certification, verification, meal counting, and meal claiming procedures). • Any specific topics required by FNS, as needed, to address Program integrity and other critical issues. This required continuing education/training is in addition to the food safety training required in the first year of employment, or for all school nutrition program directors if determined by the State agency.
School Nutrition Program Managers	Each year, at least 10 hours of annual education/training. Includes topics such as: • Administrative practices (including training in application, certification, verification, meal counting, and meal claiming procedures). • The identification of reimbursable meals at the point of service. • Nutrition, health, and safety standards. • Any specific topics required by FNS, as needed, to address Program integrity or other critical issues.
School Nutrition Program Staff	Each year, at least 6 hours of annual education/training. Includes topics such as: • Free and reduced price eligibility. • Application, certification, and verification procedures. • The identification of reimbursable meals at the point of service. • Nutrition, health, and safety standards. • Any specific topics required by FNS, as needed, to address Program integrity or other critical issues. This requirement applies to staff, other than directors and managers, who work at least 20 hours per week.
Acting and Temporary Staff, Substitutes, and Volunteers.	At the discretion of the State agency, acting and temporary staff, substitutes, and volunteers must complete training in one or more of the following topics within 30 calendar days of their start date: • Free and reduced price eligibility. • Application, certification, and verification procedures. • The identification of reimbursable meals at the point of service. • Nutrition, health, and safety standards. • Any specific topics required by FNS, as needed, to address Program integrity or other critical issues.

[1] School nutrition program directors, managers, and staff may carry over excess annual training hours to an immediately previous or subsequent school year and demonstrate compliance with the training requirements over a period of two school years, provided that some training hours are completed each school year.

[2] Program directors, managers, and staff hired on or after January 1 of each school year must complete half of their required annual training hours by June 30 of the school year in which they were hired.

(g) *Use of food service funds for training costs.* Costs associated with annual continuing education/training required under paragraphs (b)(3), (c) and (d) of this section are allowed provided they are reasonable, allocable, and necessary in accordance with the cost principles set forth in 2 CFR part 225, Cost Principles for State, Local and Indian Tribal Governments (OMB Circular A–87). However, food service funds must not be used to pay for the cost of college credits incurred by an individual to meet the hiring requirements in paragraphs (b)(1)(i) through (iv) and (b)(2) of this section.

(h) *School food authority oversight.* Each school year, the school food authority director must document compliance with the requirements of this section for all staff with responsibility for school nutrition programs, including directors, managers, and staff. Documentation must be adequate to establish, to the State's satisfaction during administrative reviews, that employees are meeting the minimum professional standards. The school food authority must certify that:

(1) The school nutrition program director meets the hiring standards and training requirements set forth in paragraph (b) of this section.

(2) Each employee has completed the applicable training requirements in paragraphs (c) and (d) of this section no later than the end of each school year.

(3) Each employee tasked with Program procurement has completed annual procurement training, as required under § 210.21(h), by the end of each school year.

PART 215—SPECIAL MILK PROGRAM FOR CHILDREN

■ 20. The authority citation for part 215 continues to read as follows:

Authority: 42 U.S.C. 1772 and 1779.

■ 21. In § 215.7a, revise paragraph (b) to read as follows:

§ 215.7a Fluid milk and non-dairy milk substitute requirements.

* * * * *

(b) *Fluid milk substitutes for non-disability reasons.* (1) A school food authority or child care institution may offer fluid milk substitutes based on a written request from a child's parent or guardian, a State licensed healthcare professional, or registered dietitian. A school food authority or child care institution choosing to offer fluid milk substitutes for a non-disability reason is not required to offer the specific fluid milk substitutes requested but may offer the fluid milk substitutes of its choice, provided the fluid milk substitutes offered meet the requirements of paragraph (b)(2) of this section.

(2) If a school food authority or child care institution chooses to offer one or more fluid milk substitutes for non-disability reasons, the fluid milk substitutes must provide, at a minimum, the nutrients listed in the following table. Fluid milk substitutes must be fortified in accordance with fortification guidelines issued by the Food and Drug Administration.

TABLE 1 TO PARAGRAPH (b)(2)—NUTRIENT REQUIREMENTS FOR FLUID MILK SUBSTITUTES

Nutrient	Per cup (8 fl. oz.)
Calcium	276 mg.
Protein	8 g.
Vitamin A	150 mcg. retinol activity equivalents (RAE).
Vitamin D	2.5 mcg.
Magnesium	24 mg.
Phosphorus	222 mg.
Potassium	349 mg.
Riboflavin	0.44 mg.
Vitamin B–12	1.1 mcg.

(3) Expenses incurred when providing fluid milk substitutes that exceed program reimbursements must be paid by the school food authority or child care institution; costs may be paid from the nonprofit food service account.

■ 22. In § 215.14a, revise paragraph (e) to read as follows:

§ 215.14a Procurement standards.

* * * * *

(e) *Geographic preference.* A school food authority participating in the Program may apply a geographic preference when procuring milk, including the use of ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications or selection criteria for unprocessed or minimally processed food items. When utilizing the geographic preference to procure milk, the school food authority making the purchase has the discretion to determine the local area to which the geographic preference option will be applied, so long as there are an appropriate number of qualified firms able to compete.

PART 220—SCHOOL BREAKFAST PROGRAM

■ 23. The authority citation for part 220 continues to read as follows:

Authority: 42 U.S.C. 1773, 1779, unless otherwise noted.

■ 24. Revise and republish § 220.2 to read as follows:

§ 220.2 Definitions.

For the purpose of this part the term:

2 CFR part 200, means the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards published by OMB. The part reference covers applicable: Acronyms and Definitions (subpart A), General Provisions (subpart B), Post Federal Award Requirements (subpart D), Cost Principles (subpart E), and Audit Requirements (subpart F). (NOTE: Pre-Federal Award Requirements and Contents of Federal Awards (subpart C) does not apply to the National School Lunch Program).

Act means the Child Nutrition Act of 1966, as amended.

Applicable credits shall have the meaning established in 2 CFR part 200 and USDA implementing regulations 2 CFR parts 400 and 415.

Breakfast means a meal which meets the meal requirements set out in § 220.8, and which is served to a child in the morning hours. The meal must be served at or close to the beginning of the child's day at school.

Child means:

(1) A student of high school grade or under as determined by the State educational agency, who is enrolled in an educational unit of high school grade or under as described in paragraphs (1) and (2) of the definition of ''School'' in this section, including students with a disability who participate in a school program established for persons with disabilities; or

(2) A person under 21 chronological years of age who is enrolled in an institution or center as described in paragraph (3) of the definition of ''School'' in this section.

Contractor means a commercial enterprise, public or nonprofit private organization or individual that enters into a contract with a school food authority.

Cost reimbursable contract means a contract that provides for payment of incurred costs to the extent prescribed in the contract, with or without a fixed fee.

Department means the United States Department of Agriculture.

Distributing Agency means a State agency which enters into an agreement with the Department for the distribution to schools of donated foods pursuant to part 250 of this chapter.

Fiscal year means a period of 12 calendar months beginning on October 1 of any year and ending September 30 of the following year.

Fixed fee means an agreed upon amount that is fixed at the inception of the contract. In a cost reimbursable contract, the fixed fee includes the contractor's direct and indirect administrative costs and profit allocable to the contract.

Fixed-price contract means a contract that charges a fixed cost per meal, or a fixed cost for a certain time period. Fixed-price contracts may include an economic price adjustment tied to a standard index.

FNS means the Food and Nutrition Service, United States Department of Agriculture.

FNSRO means the appropriate Regional Office of the Food and Nutrition Service of the Department.

Food item means a specific food offered within a meal component.

Free breakfast means a breakfast served under the Program to a child from a household eligible for such benefits under part 245 of this chapter and for which neither the child nor any member of the household pays or is required to work.

Infant cereal means any iron fortified dry cereal especially formulated and generally recognized as cereal for infants that is routinely mixed with breast milk or iron-fortified infant formula prior to consumption.

Infant formula means any iron-fortified infant formula intended for dietary use solely as a food for normal healthy infants excluding those formulas specifically formulated for infants with inborn errors of metabolism or digestive or absorptive problems. Infant formula, as served, must be in liquid state at recommended dilution.

Local educational agency means a public board of education or other public or private nonprofit authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public or private nonprofit elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a State, or for a combination of school districts or counties that is recognized in a State as an administrative agency for its public or private nonprofit elementary schools or secondary schools. The term also includes any other public or private nonprofit institution or agency having administrative control and direction of a public or private nonprofit elementary school or secondary school, including residential child care institutions, Bureau of Indian Affairs schools, and educational service agencies and consortia of those agencies, as well as the State educational agency in a State or territory in which the State educational agency is the sole educational agency for all public or private nonprofit schools.

Meal component means one of the food groups which comprise reimbursable meals. The meal components are: fruits, vegetables, grains, meats/meat alternates, and fluid milk.

National School Lunch Program means the Program authorized by the National School Lunch Act.

Net cash resources means all monies as determined in accordance with the State agency's established accounting

system, that are available to or have accrued to a School Food Authority's nonprofit school food service at any given time, less cash payable. Such monies may include but are not limited to, cash on hand, cash receivable, earnings or investments, cash on deposit and the value of stocks, bonds or other negotiable securities.

Nonprofit means, when applied to schools or institutions eligible for the Program, exempt from income tax under section 501(c)(3) of the Internal Revenue Code of 1986.

Nonprofit school food service means all food service operations conducted by the school food authority principally for the benefit of school children, all of the revenue from which is used solely for the operation or improvement of such food service.

Nonprofit school food service account means the restricted account in which all of the revenue from all food service operations conducted by the school food authority principally for the benefit of school children is retained and used only for the operation or improvement of the nonprofit school food service.

OIG means the Office of the Inspector General of the Department.

Program means the School Breakfast Program.

Reduced price breakfast means a breakfast served under the Program:

(1) To a child from a household eligible for such benefits under part 245 of this chapter;

(2) For which the price is less than the school food authority designated full price of the breakfast and which does not exceed the maximum allowable reduced price specified under part 245 of this chapter; and

(3) For which neither the child nor any member of the household is required to work.

Reimbursement means Federal cash assistance including advances paid or payable to participating schools for breakfasts meeting the requirements of § 220.8 served to eligible children.

Revenue when applied to nonprofit school food service means all monies received by or accruing to the nonprofit school food service in accordance with the State agency's established accounting system including, but not limited to, children's payments, earnings on investments, other local revenues, State revenues, and Federal cash reimbursements.

School means:

(1) An educational unit of high school grade or under, recognized as part of the educational system in the State and operating under public or nonprofit private ownership in a single building or complex of buildings;

(2) Any public or nonprofit private classes of preprimary grade when they are conducted in the aforementioned schools; or

(3) Any public or nonprofit private residential child care institution, or distinct part of such institution, which operates principally for the care of children, and, if private, is licensed to provide residential child care services under the appropriate licensing code by the State or a subordinate level of government, except for residential summer camps which participate in the Summer Food Service Program for Children, Job Corps centers funded by the Department of Labor, and private foster homes.

School Breakfast Program means the program authorized by section 4 of the Child Nutrition Act of 1966.

School in severe need means a school determined to be eligible for rates of reimbursement in excess of the prescribed National Average Payment Factors, based upon the criteria set forth in § 220.9(d).

School food authority means the governing body which is responsible for the administration of one or more schools; and has legal authority to operate the Program therein *or* be otherwise approved by FNS to operate the Program.

School week means the period of time used to determine compliance with the meal requirements in § 220.8. The period must be a normal school week of five consecutive days; however, to accommodate shortened weeks resulting from holidays and other scheduling needs, the period must be a minimum of three consecutive days and a maximum of seven consecutive days. Weeks in which school breakfasts are offered less than three times must be combined with either the previous or the coming week.

Seamless Summer Option means the meal service alternative authorized by Section 13(a)(8) of the Richard B. Russell National School Lunch Act, 42 U.S.C. 1761(a)(8), under which public or nonprofit school food authorities participating in the National School Lunch Program or School Breakfast Program offer meals at no cost to children during the traditional summer vacation periods and, for year-round schools, vacation periods longer than 10 school days.

Secretary means the Secretary of Agriculture.

State means any of the 50 States, District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and, as applicable, American Samoa and the Commonwealth of the Northern Marianas.

State agency means:

(1) The State educational agency;

(2) Such other agency of the State as has been designated by the Governor or other appropriate executive or legislative authority of the State and approved by the Department to administer the Program in schools as specified in § 210.3(b) of this chapter; or

(3) The FNSRO, where the FNSRO administers the Program as specified in § 210.3(c) of this chapter.

State educational agency means, as the State legislature may determine:

(1) The chief State school officer (such as the State Superintendent of Public Instruction, Commissioner of Education, or similar officer), or

(2) A board of education controlling the State department of education.

Tofu means a soybean-derived food, made by a process in which soybeans are soaked, ground, mixed with water, heated, filtered, coagulated, and formed into cakes. Basic ingredients are whole soybeans, one or more food-grade coagulants (typically a salt or an acid), and water. Tofu products must conform to FNS guidance to count toward the meats/meat alternates component.

USDA implementing regulations include the following: 2 CFR part 400, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards; 2 CFR part 415, General Program Administrative Regulations; 2 CFR part 416, General Program Administrative Regulations for Grants and Cooperative Agreements to State and Local Governments; and 2 CFR part 418, New Restrictions on Lobbying.

Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.

Whole grains means grains that consist of the intact, ground, cracked, or flaked grain seed whose principal anatomical components—the starchy endosperm, germ and bran—are present in the same relative proportions as they exist in the intact grain seed.

Yogurt means commercially prepared coagulated milk products obtained by the fermentation of specific bacteria, that meet milk fat or milk solid requirements and to which flavoring foods or ingredients may be added. These products are covered by the Food and Drug Administration's Definition and Standard of Identity for yogurt, 21 CFR 131.200, and low-fat yogurt and non-fat yogurt covered as a standardized food under 21 CFR 130.10.

■ 25. In § 220.3, revise and republish paragraph (a) to read as follows:

§ 220.3 Administration.

(a) Within the Department, FNS shall act on behalf of the Department in the administration of the Program covered by this part.

* * * * *

■ 26. In § 220.7:

■ a. Revise and republish paragraphs (d)(3)(ii) and (iii), (e)(1)(iii), and (e)(2);

■ b. Revise paragraph (e)(4); and

■ c. Revise and republish paragraphs (e)(5), (9), and (13) and (h).

The revisions read as follows:

§ 220.7 Requirements for participation.

* * * * *

(d) * * *

(3) * * *

(ii) The food service management company must have State or local health certification for any facility outside the school in which it proposes to prepare meals and the food service management company must maintain this health certification for the duration of the contract;

(iii) No payment is to be made for meals that are spoiled or unwholesome at time of delivery, do not meet detailed specifications as developed by the school food authority for each meal component specified in § 220.8, or do not otherwise meet the requirements of the contract. Specifications will cover items such a grade, purchase units, style, condition, weight, ingredients, formulations, and delivery time; and

* * * * *

(e) * * *

(1) * * *

(iii) Revenues received by the nonprofit school food service must not be used to purchase land or buildings or to construct buildings;

* * * * *

(2) Serve breakfasts which meet the minimum requirements prescribed in § 220.8;

* * * * *

(4) Serve breakfast free or at a reduced price to all children who are determined by the local education agency to be eligible for such meals under part 245 of this chapter;

(5) Make no discrimination against any child because of the child's inability to pay the full price of the breakfasts;

* * * * *

(9) Purchase, in as large quantities as may be efficiently utilized in its nonprofit school food service, foods designated as plentiful by the State agency;

* * * * *

(13) Upon request, make all accounts and records pertaining to its nonprofit school food service available to the State agency and to FNS for audit or review at a reasonable time and place. Such records must be retained for a period of three years after the end of the fiscal year to which they pertain, except that if audit findings have not been resolved, the records must be retained beyond the three-year period as long as required for the resolution of the issues raised by the audit;

* * * * *

(h) Local educational agencies must comply with the provisions of § 210.31 of this chapter regarding the development, implementation, periodic review and update, and public notification of the local school wellness policy.

■ 27. Revise and republish § 220.8 to read as follows:

§ 220.8 Meal requirements for breakfasts.

(a) *General requirements.* This section contains the meal requirements applicable to school breakfasts for students in grades K through 12, and for children under the age of 5. In general, school food authorities must ensure that participating schools provide nutritious, well-balanced, and age-appropriate breakfasts to all the children they serve to improve their diet and safeguard their health.

(1) *General nutrition requirements.* School breakfasts offered to children age 5 and older must meet, at a minimum, the meal requirements in paragraph (b) of this section. Schools must follow a food-based menu planning approach and produce enough food to offer each child the quantities specified in the meal pattern established in paragraph (c) of this section for each age/grade group served in the school. In addition, school breakfasts must meet the dietary specifications in paragraph (f) of this section. Schools offering breakfasts to children ages 1 to 4 and infants must meet the meal pattern requirements in paragraphs (o) and (p) of this section, as applicable. When breakfast is served in the cafeteria, schools must make plain potable water available and accessible without restriction to children at no charge.

(2) *Unit pricing.* Schools must price each meal as a unit. The price of a reimbursable breakfast does not change if the student does not take a food item or requests smaller portions. Schools must identify, near or at the beginning of the serving line(s), the food items that constitute the unit-priced reimbursable school meal(s).

(3) *Production and menu records.* Schools or school food authorities, as applicable, must keep production and menu records for the meals they produce. These records must show how the meals offered contribute to the required meal components and food quantities for each age/grade group every day. Schools or school food authorities must maintain records of the latest nutritional analysis of the school menus conducted by the State agency. Information on maintaining production and menu records may be found in FNS guidance.

(b) *Meal requirements for school breakfasts.* School breakfasts for children ages 5 and older must reflect food and nutrition requirements specified by the Secretary. Compliance with these requirements is measured as follows:

(1) On a daily basis:

(i) Meals offered to each age/grade group must include the meal components and food quantities specified in the meal pattern in paragraph (c) of this section;

(ii) Meal selected by each student must have the number of meal components required for a reimbursable meal and include at least one fruit or vegetable.

(2) Over a 5-day school week:

(i) Average calorie content of the meals offered to each age/grade group must be within the minimum and maximum calorie levels specified in paragraph (f) of this section;

(ii) Average saturated fat content of the meals offered to each age/grade group must be less than 10 percent of total calories as specified in paragraph (f) of this section;

(iii) By July 1, 2027, average added sugars content of the meals offered to each age/grade group must be less than 10 percent of total calories as specified in paragraph (f) of this section; and

(iv) Average sodium content of the meals offered to each age/grade group must not exceed the maximum level specified in paragraph (f) of this section.

(c) *Meal pattern for school breakfasts for grades K through 12.* A school must offer the meal components and quantities required in the breakfast meal pattern established in the following table:

TABLE 1 TO PARAGRAPH (c) INTRODUCTORY TEXT—SCHOOL BREAKFAST PROGRAM MEAL PATTERN

Meal components	Amount of food [1] per week (minimum per day)		
	Grades K–5	Grades 6–8	Grades 9–12
Fruits (cups) [2]	5 (1)	5 (1)	5 (1)
Vegetables (cups) [2]	0	0	0
Dark Green Subgroup	0	0	0
Red/Orange Subgroup	0	0	0
Beans, Peas, and Lentils Subgroup	0	0	0
Starchy Subgroup	0	0	0
Other Vegetables Subgroup	0	0	0
Grains or Meats/Meat Alternates (oz. eq) [3]	7–10 (1)	8–10 (1)	9–10 (1)
Fluid Milk (cups) [4]	5 (1)	5 (1)	5 (1)
Dietary Specifications: Daily Amount Based on the Average for a 5-Day Week [5]			
Minimum-Maximum Calories (kcal)	350–500	400–550	450–600
Saturated Fat (% of total calories)	<10	<10	<10
Added Sugars (% of total calories)	<10	<10	<10
Sodium Limit: In place through June 30, 2027	≤540 mg	≤600 mg	≤640 mg
Sodium Limit: Must be implemented by July 1, 2027	≤485 mg	≤535 mg	≤570 mg

[1] Food items included in each group and subgroup and amount equivalents.
[2] Minimum creditable serving is ⅛ cup. Schools must offer 1 cup of fruit daily and 5 cups of fruit weekly. Schools may substitute vegetables for fruit at breakfast as described in paragraphs (c)(2)(i) and (ii) of this section.
[3] Minimum creditable serving is 0.25 oz. eq. School may offer grains, meats/meat alternates, or a combination of both to meet the daily and weekly ounce equivalents for this combined component. At least 80 percent of grains offered weekly at breakfast must be whole grain-rich as defined in § 210.2 of this chapter, and the remaining grain items offered must be enriched.
[4] Minimum creditable serving is 8 fluid ounces. All fluid milk must be fat-free (skim) or low-fat (1 percent fat or less) and must meet the requirements in paragraph (d) of this section.
[5] By July 1, 2027, schools must meet the dietary specification for added sugars. Schools must meet the sodium limits by the dates specified in this chart. Discretionary sources of calories may be added to the meal pattern if within the dietary specifications.

(1) *Age/grade groups.* Schools must plan menus for students using the following age/grade groups: Grades K–5 (ages 5–10), grades 6–8 (ages 11–13), and grades 9–12 (ages 14–18). If an unusual grade configuration in a school prevents the use of the established age/grade groups, students in grades K–5 and grades 6–8 may be offered the same food quantities at breakfast provided that the calorie and sodium standards for each age/grade group are met. No customization of the established age/grade groups is allowed.

(2) *Meal components.* Schools must offer students in each age/grade group the meal components specified in meal pattern in this paragraph (c). Meal component descriptions in § 210.10 of this chapter apply to this Program.

(i) *Fruits component.* Schools must offer daily the fruit quantities specified in the breakfast meal pattern in this paragraph (c). Fruits that are fresh, frozen, or dried, or canned in light syrup, water or fruit juice may be offered to meet the fruits component requirements. Vegetables may be offered in place of all or part of the required fruits at breakfast. Schools that choose to offer vegetables in place of fruits at breakfast one day per school week may offer any vegetables, including starchy vegetables. Schools that choose to offer vegetables in place of fruits at breakfast two or more days per school week must offer at least two different vegetable subgroups as defined in § 210.10(c)(2)(ii) of this chapter. All fruits are credited based on their volume as served, except that ¼ cup of dried fruit counts as ½ cup of fruit. Only pasteurized, full-strength fruit juice may be offered, and may be credited to meet no more than one-half of the fruit component.

(ii) *Vegetables component.* Schools are not required to offer vegetables as part of the breakfast menu but may offer vegetables to meet part or all of the fruit requirement. Schools that choose to offer vegetables in place of fruits at breakfast one day per school week may offer any vegetables, including starchy vegetables. Schools that choose to offer vegetables in place of fruits at breakfast two or more days more than one day per school week must offer vegetables from at least two different vegetable subgroups as defined in § 210.10(c)(2)(ii) of this chapter. Fresh, frozen, or canned vegetables and dry beans, peas, and lentils may be offered to meet the fruit requirement. All vegetables are credited based on their volume as served, except that 1 cup of leafy greens counts as ½ cup of vegetables and tomato paste and tomato puree are credited based on calculated volume of the whole food equivalency. Pasteurized, full-strength vegetable juice may be offered to meet no more than one-half of the vegetable component. Cooked dry beans, peas, and lentils may be counted as either a vegetable or as a meat/meat alternate but not as both in the same dish.

(iii) *Grains.* Grains offered at breakfast count toward the combined grains and meats/meat alternates component. Schools may offer grains, meats/meat alternates, or a combination of both to meet the daily and weekly ounce equivalents for this combined component. Information on crediting grain items may be found in FNS guidance.

(A) *Whole grain-rich requirement.* Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched. At least 80 percent of grains offered at breakfast weekly, based on ounce equivalents, must meet the whole grain-rich criteria as defined in § 220.2, and the remaining grain items offered must be enriched.

(B) *Breakfast cereals.* By July 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.

(C) *Daily and weekly servings.* The grains component is based on minimum daily servings plus total servings over a 5-day school week. Schools serving breakfast 6 or 7 days per week must increase the weekly grains quantity by approximately 20 percent (⅕) for each additional day. When schools operate less than 5 days per week, they may

decrease the weekly quantity by approximately 20 percent (1⁄5) for each day less than 5.

(iv) *Meats/meat alternates.* Meats/meat alternates offered at breakfast count toward the combined grains and meats/meat alternates component. Schools may offer grains, meats/meat alternates, or a combination of both to meet the daily and weekly ounce equivalents for this combined component. Information on crediting meats/meat alternates may be found in FNS guidance.

(A) *Enriched macaroni.* Enriched macaroni with fortified protein, as defined in appendix A to part 210 of this chapter, may be used to meet part of the meats/meat alternates requirement when used as specified in appendix A to part 210.

(B) *Nuts and seeds.* Nuts and seeds and their butters are allowed as meat alternates. Acorns, chestnuts, and coconuts do not credit as meat alternates because of their low protein and iron content. Nut and seed meals or flours may credit only if they meet the requirements for Alternate Protein Products established in appendix A to this part.

(C) *Yogurt.* Yogurt may be offered to meet all or part of the combined grains and meats/meat alternates component. Yogurt may be plain or flavored, unsweetened or sweetened. By July 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Noncommercial and/or non-standardized yogurt products, such as frozen yogurt, drinkable yogurt products, homemade yogurt, yogurt flavored products, yogurt bars, yogurt covered fruits and/or nuts or similar products are not creditable. Four ounces (weight) or 1⁄2 cup (volume) of yogurt equals one ounce of the meats/meat alternates requirement.

(D) *Tofu and soy products.* Commercial tofu and soy products may be offered to meet all or part of the combined grains and meats/meat alternates component. Noncommercial and/or non-standardized tofu and products are not creditable.

(E) *Beans, peas, and lentils.* Cooked dry beans, peas, and lentils may be used to meet all or part of the combined grains and meats/meat alternates component. Beans, peas, and lentils are identified in this section and include foods such as black beans, garbanzo beans, lentils, kidney beans, mature lima beans, navy beans, pinto beans, and split peas. Cooked dry beans, peas, and lentils may be counted as either a vegetable or as a meat/meat alternate but not as both in the same dish.

(F) *Other meat alternates.* Other meat alternates, such as cheese and eggs, may be used to meet all or part of the combined grains and meats/meat alternates component.

(v) *Fluid milk component.* Fluid milk must be offered daily in accordance with paragraph (d) of this section.

(3) *Grain substitutions.* (i) Schools in American Samoa, Guam, Hawaii, Puerto Rico, and the U.S. Virgin Islands may serve any vegetable, including vegetables such as breadfruit, prairie turnips, plantains, sweet potatoes, and yams, to meet the combined grains and meats/meat alternates component.

(ii) School food authorities and schools that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children, may serve any vegetable, including vegetables such as breadfruit, prairie turnips, plantains, sweet potatoes, and yams, to meet the combined grains and meats/meat alternates component.

(4) *Traditional Indigenous foods.* Traditional Indigenous foods may credit toward the required meal components. Information on food crediting may be found in FNS guidance. Schools are encouraged to serve traditional Indigenous foods as part of their breakfast service. Per the Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)) traditional foods means food that has traditionally been prepared and consumed by an American Indian tribe, including wild game meat; fish; seafood; marine mammals; plants; and berries.

(d) *Fluid milk requirements.* Schools must offer students a variety (at least two different options) of fluid milk at breakfast daily. All fluid milk must be fat-free (skim) or low-fat (1 percent fat or less). Milk with higher fat content is not creditable. Low-fat or fat-free lactose-free and reduced-lactose fluid milk may also be offered. Milk may be flavored or unflavored, provided that unflavored milk is offered at each meal service. By July 1, 2025, flavored milk must contain no more than 10 grams of added sugars per 8 fluid ounces, or for flavored milk sold as competitive food for middle and high schools, 15 grams of added sugars per 12 fluid ounces. Schools must also comply with other applicable fluid milk requirements in § 210.10(d) of this chapter.

(e) *Offer versus serve for grades K through 12.* School breakfast must offer daily at least the three meal components required in the meal pattern in paragraph (c) of this section. To exercise the offer versus serve option at breakfast, a school food authority or school must offer a minimum of four food items daily as part of the required components. Under offer versus serve, students are allowed to decline one of the four food items, provided that students select at least 1⁄2 cup of the fruit component for a reimbursable meal. If only three food items are offered at breakfast, school food authorities or schools may not exercise the offer versus serve option.

(f) *Dietary specifications*—(1) *Calories.* School breakfasts offered to each age/grade group must meet, on average over the school week, the minimum and maximum calorie levels specified in the following table:

TABLE 2 TO PARAGRAPH (f)(1)—SCHOOL BREAKFAST PROGRAM CALORIE RANGES

	Grades K–5	Grades 6–8	Grades 9–12
Average Daily Minimum-Maximum Calories (kcal) [1]	350–500	400–550	450–600

[1] The average daily amount must fall within the minimum and maximum levels. Discretionary sources of calories may be added to the meal pattern if within the dietary specifications.

(2) *Saturated fat.* School breakfast offered to all age/grade groups must, on average over the school week, provide less than 10 percent of total calories from saturated fat.

(3) *Added sugars.* By July 1, 2027, school breakfasts offered to all age/grade groups must, on average over the school week, provide less than 10 percent of total calories from added sugars.

(4) *Sodium.* School breakfasts offered to each age/grade group must meet, on average over the school week, the levels of sodium specified in the following table within the established deadlines:

TABLE 3 TO PARAGRAPH (f)(4)—SCHOOL BREAKFAST PROGRAM SODIUM LIMITS

Age/grade group	Sodium limit: in place through June 30, 2027 (mg)	Sodium limit: must be implemented by July 1, 2027 (mg)
Grades K–5	≤540	≤485
Grades 6–8	≤600	≤535
Grades 9–12	≤640	≤570

(g) *Compliance assistance.* The State agency and school food authority must provide technical assistance and training to assist schools in planning breakfasts that meet the meal pattern in paragraph (c) of this section, the dietary specifications established in paragraph (f) of this section, and the meal pattern in paragraphs (o) and (p) of this section, as applicable. Compliance assistance may be offered during training, onsite visits, and/or administrative reviews.

(h) *State agency responsibilities for monitoring dietary specifications.* When required by the Administrative Review process set forth in § 210.18 of this chapter, the State agency must conduct a weighted nutrient analysis to evaluate the average levels of calories, saturated fat, added sugars, and sodium of the breakfasts offered to students in grades K–12 during one week within the review period. The nutrient analysis must be conducted in accordance with the procedures established in § 210.10(i)(3) of this chapter. If the results of the nutrient analysis indicate that the school breakfasts do not meet the specifications for calories, saturated fat, added sugars, or sodium specified in paragraph (f) of this section, the State agency or school food authority must provide technical assistance and require the reviewed school to take corrective action to meet the requirements.

(i) *Nutrient analyses of school meals.* Any nutrient analysis of school breakfasts conducted under the administrative review process set forth in § 210.18 of this chapter must be performed in accordance with the procedures established in § 210.10(i) of this chapter. The purpose of the nutrient analysis is to determine the average levels of calories, saturated fat, added sugars, and sodium in the breakfasts offered to each age grade group over a school week.

(j) *Responsibility for monitoring meal requirements.* Compliance with the applicable breakfast requirements in paragraph (b) of this section, including the dietary specifications, and paragraphs (o) and (p) of this section will be monitored by the State agency through administrative reviews authorized in § 210.18 of this chapter.

(k) *Menu choices at breakfast.* The requirements in § 210.10(k) of this chapter also apply to this Program.

(l) *Requirements for breakfast period*—(1) *Timing.* Schools must offer breakfasts meeting the requirements of this section at or near the beginning of the school day.

(2) [Reserved]

(m) *Modifications and variations in reimbursable meals.* The requirements in § 210.10(m) of this chapter also apply to this Program.

(n) *Nutrition disclosure.* The requirements in § 210.10(n) of this chapter also apply to this Program.

(o) *Breakfast requirements for preschoolers*—(1) *Breakfasts served to preschoolers.* Schools serving breakfast to preschoolers under the School Breakfast Program must serve the meal components and quantities required in the breakfast meal pattern established for the Child and Adult Care Food Program under § 226.20(a), (c)(1), and (d) of this chapter. In addition, schools serving breakfasts to this age group must comply with the requirements set forth in paragraphs (a), (c)(3), (g), and (k) through (m) of this section, as applicable.

(2) *Preschooler breakfast meal pattern table.* The minimum amounts of meal components to be served at breakfast are as follows:

TABLE 4 TO PARAGRAPH (o)(2)—PRESCHOOL BREAKFAST MEAL PATTERN

[Select the appropriate components for a reimbursable meal]

Meal components and food items [1]	Minimum quantities	
	Ages 1–2	Ages 3–5
Fluid Milk [2]	4 fluid ounces	6 fluid ounces.
Vegetables, Fruits, or portions of both [3]	¼ cup	½ cup.
Grains (oz. eq.) [4]	½ ounce equivalent	½ ounce equivalent.

[1] Must serve all three components for a reimbursable meal.

[2] Must be unflavored whole milk for children age one. Must be unflavored low-fat (1 percent) or unflavored fat-free (skim) milk for children two through five years old.

[3] Pasteurized full-strength juice may only be offered to meet the vegetable or fruit requirement at one meal, including snack, per day.

[4] At least one serving per day, across all eating occasions, must be whole grain-rich. Grain-based desserts do not count toward meeting the grains requirement. Meats/meat alternates may be offered in place of the entire grains requirement, up to 3 times per week at breakfast. One ounce equivalent of a meat/meat alternate credits equal to one ounce equivalent of grains. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce. Information on crediting grain items and meats/meat alternates may be found in FNS guidance.

(p) *Breakfast requirements for infants*—(1) *Breakfasts served to infants.* Schools serving breakfasts to infants ages birth through 11 months under the School Breakfast Program must serve the meal components and quantities required in the breakfast meal pattern established for the Child and Adult Care Food Program, under § 226.20(a), (b), and (d) of this chapter. In addition, schools serving breakfasts to infants must comply with the requirements set forth in paragraphs (a), (c)(3), (g), and (k) through (m) of this section as applicable.

(2) *Infant breakfast meal pattern table.* The minimum amounts of meal components to be served at breakfast are as follows:

TABLE 5 TO PARAGRAPH (p)(2)—INFANT BREAKFAST MEAL PATTERN

Birth through 5 months	6 through 11 months
4–6 fluid ounces breast milk [1] or formula [2]	6–8 fluid ounces breast milk [1] or formula; [2] and 0–½ ounce equivalent infant cereal; [2 3] or 0–4 tablespoons meat, fish, poultry, whole egg, cooked dry beans, peas, or lentils; or 0–2 ounces of cheese; or 0–4 ounces (volume) of cottage cheese; or 0–4 ounces or ½ cup of yogurt; [4] or a combination of the above; [5] and 0–2 tablespoons vegetable or fruit, or a combination of both.[5 6]

[1] Breast milk or formula, or portions of both, must be served; however, it is recommended that breast milk be served from birth through 11 months. For some breastfed infants who regularly consume less than the minimum amount of breast milk per feeding, a serving of less than the minimum amount of breast milk may be offered, with additional breast milk offered at a later time if the infant will consume more.
[2] Infant formula and dry infant cereal must be iron-fortified.
[3] Information on crediting grain items may be found in FNS guidance.
[4] Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).
[5] A serving of this component is required when the infant is developmentally ready to accept it.
[6] Fruit and vegetable juices must not be served.

(q) *Severability.* If any provision of this section is held to be invalid or unenforceable by its terms, or as applied to any person or circumstances, it shall be severable from this section and not affect the remainder thereof. In the event of such holding of invalidity or unenforceability of a provision, the meal pattern requirements covered by that provision reverts to the version immediately preceding the invalidated provision.

■ 28. In § 220.13:
■ a. Revise paragraph (b)(3);
■ b. Revise and republish paragraphs (c) and (f)(3); and
■ c. Remove paragraph (l);
■ d. Redesignate paragraph (m) as paragraph (l).

The revisions read as follows:

§ 220.13 Special responsibilities of State agencies.

* * * * *

(b) * * *

(3) Each State agency must keep the records supplied by school food authorities showing the number of food safety inspections obtained by schools for the current and three most recent school years.

(c) Each State agency must promptly investigate complaints received or irregularities noted in connection with the operation of either program, and must take appropriate action to correct any irregularities. State agencies must maintain on file evidence of such investigations and actions. FNS will make investigations at the request of the State agency or where FNS determines investigations are appropriate.

* * * * *

(f) * * *

(3) For the purposes of compliance with the meal requirements in § 220.8, the State agency must follow the provisions specified in § 210.18(g) of this chapter, as applicable.

* * * * *

■ 29. In § 220.14, revise and republish paragraphs (c) and (e) to read as follows:

§ 220.14 Claims against school food authorities.

* * * * *

(c) The State agency may refer to FNS for determination any action it proposes to take under this section.

* * * * *

(e) If FNS does not concur with the State agency's action in paying a claim or a reclaim, or in failing to collect an overpayment, FNS will assert a claim against the State agency for the amount of such claim, reclaim, or overpayment. In all such cases the State agency will have full opportunity to submit to FNS evidence or information concerning the action taken. If, in the determination of FNS, the State agency's action was unwarranted, the State agency must promptly pay to FNS the amount of the claim, reclaim, or overpayment.

* * * * *

■ 30. In § 220.16, revise paragraphs (d) and (f)(1) to read as follows:

§ 220.16 Procurement standards.

* * * * *

(d) *Buy American*—(1) *Definitions.* For the purpose of this paragraph (d):

(i) *Domestic commodity or product* means:

(A) An agricultural commodity that is produced in the United States; and

(B) A food product that is processed in the United States substantially using agricultural commodities that are produced in the United States.

(ii) *Substantially using agriculture commodities that are produced in the United States* means over 51 percent of a food product must consist of agricultural commodities that were grown domestically.

(2) *In general.* Subject to paragraph (d)(4) of this section, a school food authority must purchase, to the maximum extent practicable, domestic commodities or products.

(3) *Required language.* School food authorities must include language requiring the purchase of foods that meet the Buy American requirements in paragraph (d)(1) of this section in all procurement procedures, solicitations, and contracts.

(4) *Limitations.* Paragraphs (d)(2) and (3) of this section apply only to:

(i) A school food authority located in the contiguous United States; and

(ii) A purchase of domestic commodity or product for the school breakfast program under this part.

(5) *Exceptions.* The purchase of foods not meeting the definition in paragraph (d)(1) of this section is only permissible when the following criteria are met:

(i) The school food authority determines that one of the following limited exceptions is met:

(A) The product is listed in the Federal Acquisition Regulation (FAR) at 48 CFR 25.104 and/or is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or

(B) Competitive bids reveal the cost of a United States product is significantly higher than the non-domestic product.

(ii) Non-domestic food purchases (those that do not meet the definition of domestic commodity or product, as defined in paragraph (d)(1) of this

section) must not exceed the following caps by the established deadlines:

(A) By July 1, 2025, non-domestic food purchases must not exceed 10 percent of total annual commercial food costs that a school food authority purchases per school year.

(B) By July 1, 2028, non-domestic food purchases must not exceed 8 percent of total annual commercial food costs that a school food authority purchases per school year.

(C) By July 1, 2031, non-domestic food purchases must not exceed 5 percent of total annual commercial food costs that a school food authority purchases per school year.

(iii) School food authorities must maintain documentation, except when the item purchased is found on the FAR at 48 CFR 25.104 when using an exception under paragraph (d)(5)(i) of this section.

(iv) School food authorities must maintain documentation, to demonstrate that when using an exception under paragraph (d)(5)(i) of this section their non-domestic food purchases do not exceed the annual threshold specified in paragraph (d)(5)(ii) of this section.

(6) *Harvested fish.* To meet the definition of a domestic commodity or product, harvested fish must meet the following requirements:

(i) Farmed fish must be harvested within the United States or any territory or possession of the United States; and

(ii) Wild caught fish must be harvested within the Exclusive Economic Zone of the United States or by a United States flagged vessel.

(7) *Applicability to Hawaii.* Paragraph (d)(2) of this section applies to school food authorities in Hawaii with respect to domestic commodities or products that are produced in Hawaii in sufficient quantities to meet the needs of meals provided under the school breakfast program under this part.

(8) *Temporary accommodation.* For school food authorities that demonstrate they cannot meet the threshold, State agencies may provide an accommodation for temporary relief from the requirement as the State agency works with the school food authority to increase domestic purchases.

* * * * *

(f) * * *

(1) School food authorities participating in the Program, as well as State agencies making purchases on behalf of such school food authorities, may apply a geographic preference when procuring unprocessed locally grown or locally raised agricultural products, including the use of ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications or selection criteria for unprocessed or minimally processed food items. When utilizing the geographic preference to procure such products, the school food authority making the purchase or the State agency making purchases on behalf of such school food authorities have the discretion to determine the local area to which the geographic preference option will be applied, so long as there are an appropriate number of qualified firms able to compete;

* * * * *

PART 225—SUMMER FOOD SERVICE PROGRAM

■ 31. The authority citation for part 225 continues to read as follows:

Authority: Secs. 9, 13 and 14, Richard B. Russell National School Lunch Act, as amended (42 U.S.C. 1758, 1761 and 1762a).

■ 32. In § 225.16:

■ a. Revise paragraphs (d)(1) through (3);

■ b. Revise and republish paragraph (e)(2); and

■ c. Revise paragraphs (e)(5) and (f)(3).

The revisions read as follows:

§ 225.16 Meal service requirements.

* * * * *

(d) * * *

(1) *Breakfast.* The minimum amount of meal components to be served as breakfast are as follows:

TABLE 1 TO PARAGRAPH (d)(1)—BREAKFAST MEAL PATTERN

Meal components	Minimum amount
Vegetables and Fruits	
Vegetable(s) and/or fruit(s)	½ cup.[1]
Full-strength vegetable or fruit juice or an equivalent quantity of any combination of vegetable(s), fruit(s), and juice.	½ cup (4 fluid ounces).
Bread and Bread Alternates [2]	
Bread or	1 slice.
Cornbread, biscuits, rolls, muffins, etc. or	1 serving.[3]
Cold dry cereal or	¾ cup or 1 ounce.[4]
Cooked cereal or cereal grains or	½ cup.
Cooked pasta or noodle products or an equivalent quantity of any combination of bread/bread alternate.	½ cup.
Milk [5]	
Milk, fluid	1 cup (½ pint, 8 fluid ounces).
Meats/Meat Alternates (Optional)	
Lean meat or poultry or fish or	1 ounce.
Alternate protein product[6] or	1 ounce.
Cheese or	1 ounce.
Egg (large) or	½.
Cooked dry beans, peas, or lentils or	¼ cup.
Peanut butter or	2 tablespoons.
Yogurt, plain or flavored, unsweetened or sweetened or an equivalent quantity of any combination of meats/meat alternates.	4 ounces or ½ cup.

[1] For the purposes of the requirement outlined in the table, a cup means the standard measuring cup.

[2] Bread, pasta or noodle products, and cereal grains (such as rice, bulger, or corn grits) must be whole grain or enriched; cornbread, biscuits, rolls, muffins, etc. must be made with whole grain or enriched meal or flour; cereal must be whole grain, enriched, or fortified.
[3] Information on food crediting, including serving sizes and equivalents, may be found in FNS guidance.
[4] Either volume (cup) or weight (ounces), whichever is less.
[5] Milk must be served as a beverage or on cereal or used in part for each purpose.
[6] Must meet the requirements in appendix A of this part.

(2) *Lunch or supper.* The minimum amounts of meal components to be served as lunch or supper are as follows:

TABLE 2 TO PARAGRAPH (d)(2)—LUNCH OR SUPPER MEAL PATTERN

Meal components	Minimum amount
Meats/Meat Alternates	
Lean meat or poultry or fish or	2 ounces.
Alternate protein products [1] or	2 ounces.
Cheese or	2 ounces.
Egg (large) or	1.
Cooked dry beans, peas, or lentils or	½ cup.[2]
Peanut butter or soynut butter or other nut or seed butters or	4 tablespoons.
Peanuts or soynuts or tree nuts or seeds [3] or	2 ounces.
Yogurt, plain or flavored, unsweetened or sweetened or an equivalent quantity of any combination of the above meats/meat alternates.	8 ounces or 1 cup.
Vegetables and Fruits	
Vegetables and/or fruits [4]	¾ cup total.
Bread and Bread Alternatives [5]	
Bread or	1 slice.
Cornbread, biscuits, rolls, muffins, etc. or	1 serving.[6]
Cooked pasta or noodle products or	½ cup.
Cooked cereal grains or an equivalent quantity of any combination of bread or bread alternate.	½ cup.
Milk	
Milk, fluid, served as a beverage	1 cup (½ pint, 8 fluid ounces).

[1] Must meet the requirements of appendix A of this part.
[2] For the purposes of the requirement outlined in this table, a cup means a standard measuring cup.
[3] Information on crediting meats/meat alternates, including nuts and seeds, may be found in FNS guidance.
[4] Serve 2 or more kinds of vegetable(s) and/or fruits or a combination of both. Full-strength vegetable or fruit juice may be offered to meet not more than one-half of this requirement.
[5] Bread, pasta or noodle products, and cereal grains (such as rice, bulgur, or corn grits) must be whole grain or enriched; cornbread, biscuits, rolls, muffins, etc., must be made with whole grain or enriched meal or flour; cereal must be whole grain, enriched or fortified.
[6] Information on food crediting, including serving sizes and equivalents, may be found in FNS guidance.

(3) *Snacks.* The minimum amounts of meal components to be served as snacks are as follows. Select two of the following four components. (Juice may not be served when milk is served as the only other component.)

TABLE 3 TO PARAGRAPH (d)(3)—SNACK MEAL PATTERN

Meal components	Minimum amount
Meats/Meat Alternates	
Lean meat or poultry or fish or	1 ounce.
Alternate protein products [1] or	1 ounce.
Cheese or	1 ounce.
Egg (large) or	½.
Cooked dry beans, peas, or lentils or	¼ cup.[2]
Peanut butter or soynut butter or other nut or seed butters or	2 tablespoons.
Peanuts or soynuts or tree nuts or seeds [3] or	1 ounce.
Yogurt, plain or flavored, unsweetened or sweetened or an equivalent quantity of any combination of the above meats/meat alternates.	4 ounces or ½ cup.
Vegetables and Fruits	
Vegetable(s) and/or fruit(s) or	¾ cup.

TABLE 3 TO PARAGRAPH (d)(3)—SNACK MEAL PATTERN—Continued

Meal components	Minimum amount
Full-strength vegetable or fruit juice or an equivalent quantity or any combination of vegetable(s), fruit(s), and juice.	¾ cup (6 fluid ounces).
Bread and Bread Alternates [4]	
Bread or	1 slice.
Cornbread, biscuits, rolls, muffins, etc. or	1 serving.[5]
Cold dry cereal or	¾ cup or 1 ounce.[6]
Cooked cereal or	½ cup.
Cooked cereal grains or an equivalent quantity of any combination of bread/bread alternate.	½ cup.
Milk [7]	
Milk, fluid	1 cup (½ pint, 8 fluid ounces).

[1] Must meet the requirements in appendix A of this part.
[2] For the purposes of the requirement outlined in this table, a cup means a standard measuring cup.
[3] Information on crediting meats/meat alternates, including nuts and seeds, may be found in FNS guidance.
[4] Bread, pasta or noodle products, and cereal grains (such as rice, bulgur, or corn grits) must be whole grain or enriched; cornbread, biscuits, rolls, muffins, etc., must be made with whole grain or enriched meal or flour; cereal must be whole grain, enriched, or fortified.
[5] Information on food crediting, including serving sizes and equivalents, may be found in FNS guidance.
[6] Either volume (cup) or weight (ounces), whichever is less.
[7] Milk should be served as a beverage or on cereal, or used in part for each purpose.

(e) * * *

(2) Cooked dry beans, peas, and lentils may be used as a meat alternate or as a vegetable, but they may not be used to meet both component requirements in a meal.

* * * * *

(5) Nuts and seeds and their butters are allowed as meats/meat alternates. Acorns, chestnuts, and coconuts do not credit as meat alternates due to their low protein content. Nut and seed meals or flours may credit only if they meet the requirements for alternate protein products established in appendix A to this part.

(f) * * *

(3) *Bread and bread alternative substitutions.* In American Samoa, Guam, Hawaii, Puerto Rico, and the U.S. Virgin Islands, and for sponsors in any State that serve primarily American Indian or Alaska Native children, any vegetable, including vegetables such as breadfruit, prairie turnips, plantains, sweet potatoes, and yams, may be served to meet the bread and bread alternatives requirement.

* * * * *

■ 33. In § 225.17, revise paragraph (e)(1) to read as follows:

§ 225.17 Procurement standards.

* * * * *

(e) * * *

(1) Sponsors participating in the Program may apply a geographic preference when procuring unprocessed locally grown or locally raised agricultural products, including the use of ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications or selection criteria for unprocessed or minimally processed food items. When utilizing the geographic preference to procure such products, the sponsor making the purchase has the discretion to determine the local area to which the geographic preference option will be applied, so long as there are an appropriate number of qualified firms able to compete;

* * * * *

PART 226—CHILD AND ADULT CARE FOOD PROGRAM

■ 34. The authority citation for part 226 continues to read as follows:

Authority: Secs. 9, 11, 14, 16, and 17, Richard B. Russell National School Lunch Act, as amended (42 U.S.C. 1758, 1759a, 1762a, 1765 and 1766).

■ 35. In § 226.2:
■ a. Revise the definition of ''Functionally impaired adult'';
■ b. Add in alphabetical order a definition for ''Meal component'';
■ c. Revise the definition of ''Persons with disabilities'';
■ d. Add in alphabetical order a definition for ''State licensed healthcare professional''; and
■ e. Add in alphabetical order a definition for ''Whole grain-rich''.

The revisions and additions read as follows:

§ 226.2 Definitions.

* * * * *

Functionally impaired adult means chronically impaired disabled persons 18 years of age or older, including persons with neurological and organic brain dysfunction, with physical or mental impairments to the extent that their capacity for independence and their ability to carry out activities of daily living is markedly limited. Activities of daily living include, but are not limited to, adaptive activities such as cleaning, shopping, cooking, taking public transportation, maintaining a residence, caring appropriately for one's grooming or hygiene, using a telephone, or using a post office. Marked limitations refer to the severity of impairment, and not the number of limited activities, and occur when the degree of limitation is such as to seriously interfere with the ability to function independently.

* * * * *

Meal component meals means one of the food groups which comprise reimbursable meals. The meal components are: fruits, vegetables, grains, meats/meat alternates, and fluid milk.

* * * * *

Persons with disabilities means persons of any age who have a physical or mental impairment that substantially limits one or more major life activities, have a record of such an impairment, or have been regarded as having such an impairment, and who are enrolled in an institution or child care facility serving a majority of persons who are age 18 and under.

* * * * *

State licensed healthcare professional means an individual who is authorized to write medical prescriptions under State law. This may include, but is not limited to, a licensed physician, nurse

practitioner, or physician's assistant, depending on State law.

* * * * *

Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.

* * * * *

■ 36. Revise and republish § 226.20 to read as follows:

§ 226.20 Requirements for meals.

(a) *Meal components.* Except as otherwise provided in this section, each meal served in the Program must contain, at a minimum, the indicated components:

(1) *Fluid milk.* Fluid milk must be served as a beverage or on cereal, or a combination of both. Lactose-free and reduced-lactose milk that meet the fat content and flavor specifications for each age group may also be offered.

(i) *Children 1 year old.* Unflavored whole milk must be served.

(ii) *Children 2 through 5 years old.* Either unflavored low-fat (1 percent) or unflavored fat-free (skim) milk must be served.

(iii) *Children 6 years old and older.* Low-fat (1 percent fat or less) or fat-free (skim) milk must be served. Milk may be unflavored or flavored.

(iv) *Adults.* Low-fat (1 percent fat or less) or fat-free (skim) milk must be served. Milk may be unflavored or flavored. Six ounces (weight) or ¾ cup (volume) of yogurt may be used to fulfill the equivalent of 8 ounces of fluid milk once per day. Yogurt may be counted as either a fluid milk substitute or as a meat alternate, but not as both in the same meal.

(2) *Vegetables.* A serving may contain fresh, frozen, or canned vegetables, dry beans, peas, and lentils, or vegetable juice. All vegetables are credited based on their volume as served, except that 1 cup of leafy greens counts as ½ cup of vegetables.

(i) Pasteurized, full-strength vegetable juice may be used to fulfill the entire requirement. Vegetable juice or fruit juice may only be served at one meal, including snack, per day.

(ii) Cooked dry beans, peas, and lentils may be counted as either a vegetable or as a meat alternate, but not as both in the same dish.

(3) *Fruits.* A serving may contain fresh, frozen, canned, dried fruits, or fruit juice. All fruits are based on their volume as served, except that ¼ cup of dried fruit counts as ½ cup of fruit.

(i) Pasteurized, full-strength fruit juice may be used to fulfill the entire requirement. Fruit juice or vegetable juice may only be served at one meal, including snack, per day.

(ii) A vegetable may be used to meet the entire fruit requirement at lunch and supper. When two vegetables are served at lunch or supper, two different kinds of vegetables must be served.

(4) *Grains*—(i) *Enriched and whole grains.* All grains must be made with enriched or whole grain meal or flour.

(A) At least one serving per day, across all eating occasions of bread, cereals, and grains, must be whole grain-rich, as defined in § 226.2. Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.

(B) A serving may contain whole grain-rich or enriched bread, cornbread, biscuits, rolls, muffins, and other bread products; or whole grain-rich, enriched, or fortified cereal grain, cooked pasta or noodle products, or breakfast cereal; or any combination of these foods.

(ii) *Breakfast cereals.* Breakfast cereals are those as defined by the Food and Drug Administration in 21 CFR 170.3(n)(4) for ready-to-eat and instant and regular hot cereals. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.

(iii) *Desserts.* Grain-based desserts do not count toward meeting the grains requirement.

(5) *Meats/meat alternates*—(i) *Serving meats/meat alternates.* Meats/meat alternates must be served in a main dish, or in a main dish and one other menu item. The creditable quantity of meats/meat alternates must be the edible portion as served of:

(A) Lean meat, poultry, or fish;

(B) Alternate protein products;

(C) Cheese, or an egg;

(D) Cooked dry beans, peas, and lentils;

(E) Peanut butter; or

(F) Any combination of these foods.

(ii) *Nuts and seeds.* Nuts and seeds and their butters are allowed as meat alternates. Information on crediting nuts and seeds may be found in FNS guidance.

(A) Nut and seed meals or flours may credit only if they meet the requirements for alternate protein products established in appendix A of this part.

(B) Acorns, chestnuts, and coconuts do not credit as meat alternates because of their low protein and iron content.

(iii) *Yogurt.* Four ounces (weight) or ½ cup (volume) of yogurt equals one ounce of the meats/meat alternates component. Yogurt may be used to meet all or part of the meats/meat alternates component as follows:

(A) Yogurt may be plain or flavored, unsweetened, or sweetened;

(B) Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce);

(C) Noncommercial or commercial standardized yogurt products, such as frozen yogurt, drinkable yogurt products, homemade yogurt, yogurt flavored products, yogurt bars, yogurt covered fruits or nuts, or similar products are not creditable; and

(D) For adults, yogurt may only be used as a meat alternate when it is not also being used as a fluid milk substitute in the same meal.

(iv) *Tofu and soy products.* Commercial tofu and soy products may be used to meet all or part of the meats/meat alternates component in accordance with FNS guidance and appendix A of this part. Non-commercial and non-standardized tofu and soy products cannot be used.

(v) *Beans, peas, and lentils.* Cooked dry beans, peas, and lentils may be used to meet all or part of the meats/meat alternates component. Beans, peas, and lentils include black beans, garbanzo beans, lentils, kidney beans, mature lima beans, navy beans, pinto beans, and split peas. Beans, peas, and lentils may be counted as either a meat/meat alternate or as a vegetable, but not as both in the same dish.

(vi) *Other meat alternates.* Other meat alternates, such as cheese, eggs, and nut butters may be used to meet all or part of the meats/meat alternates component.

(b) *Infant meals*—(1) *Feeding infants.* Foods in reimbursable meals served to infants ages birth through 11 months must be of a texture and a consistency that are appropriate for the age and development of the infant being fed. Foods must also be served during a span of time consistent with the infant's eating habits.

(2) *Breastmilk and iron-fortified formula.* Breastmilk or iron-fortified infant formula, or portions of both, must be served to infants birth through 11 months of age. An institution or facility must offer at least one type of iron-fortified infant formula. Meals containing breastmilk or iron-fortified infant formula supplied by the institution or facility, or by the parent or guardian, are eligible for reimbursement.

(i) *Parent or guardian provided breastmilk or iron-fortified formula.* A parent or guardian may choose to accept the offered formula, or decline the offered formula and supply expressed breastmilk or an iron-fortified infant formula instead. Meals in which a mother directly breastfeeds her child at the child care institution or facility are also eligible for reimbursement. When a parent or guardian chooses to provide breastmilk or iron-fortified infant formula and the infant is consuming solid foods, the institution or facility must supply all other required meal components in order for the meal to be reimbursable.

(ii) *Breastfed infants.* For some breastfed infants who regularly consume less than the minimum amount of breastmilk per feeding, a serving of less than the minimum amount of breastmilk may be offered. In these situations, additional breastmilk must be offered at a later time if the infant will consume more.

(3) *Solid foods.* The gradual introduction of solid foods may begin at six months of age, or before or after six months of age if it is developmentally appropriate for the infant and in accordance with FNS guidance.

(4) *Infant meal pattern.* Infant meals must have, at a minimum, each of the food components indicated, in the amount that is appropriate for the infant's age.

(i) *Birth through 5 months*—(A) *Breakfast.* Four to 6 fluid ounces of breastmilk or iron-fortified infant formula, or portions of both.

(B) *Lunch or supper.* Four to 6 fluid ounces of breastmilk or iron-fortified infant formula, or portions of both.

(C) *Snack.* Four to 6 fluid ounces of breastmilk or iron-fortified infant formula, or portions of both.

(ii) *6 through 11 months.* Breastmilk or iron-fortified formula, or portions of both, is required. Meals are reimbursable when institutions and facilities provide all the components in the meal pattern that the infant is developmentally ready to accept.

(A) *Breakfast, lunch, or supper.* Six to 8 fluid ounces of breastmilk or iron-fortified infant formula, or portions of both; and 0 to ½ ounce equivalent of iron-fortified dry infant cereal; or 0–4 tablespoons meat, fish, poultry, whole egg, cooked dry beans, peas, and lentils; or 0 to 2 ounces (weight) of cheese; or 0 to 4 ounces (volume) of cottage cheese; or 0 to 4 ounces of yogurt; and 0 to 2 tablespoons of vegetable, fruit, or portions of both. Fruit juices and vegetable juices must not be served.

(B) *Snack.* Two to 4 fluid ounces of breastmilk or iron-fortified infant formula; and 0 to ½ ounce equivalent bread; or 0–¼ ounce equivalent crackers; or 0–½ ounce equivalent infant cereal or ready-to-eat cereals; and 0 to 2 tablespoons of vegetable or fruit, or portions of both. Fruit juices and vegetable juices must not be served. A serving of grains must be whole grain-rich, enriched meal, or enriched flour.

(5) *Infant meal pattern table.* The minimum amounts of meal components to serve to infants, as described in paragraph (b)(4) of this section, are:

TABLE 1 TO PARAGRAPH (b)(5)—INFANT MEAL PATTERNS

Infants	Birth through 5 months	6 through 11 months
Breakfast, Lunch, or Supper.	4–6 fluid ounces breast milk [1] or formula [2]	6–8 fluid ounces breast milk [1] or formula; [2] and 0–½ ounce equivalent infant cereal; [2 3] or 0–4 tablespoons meat, fish, poultry, whole egg, cooked dry beans, peas, and lentils; or 0–2 ounces of cheese; or 0–4 ounces (volume) of cottage cheese; or 0–4 ounces or ½ cup of yogurt; [4] or a combination of the above; [5] and 0–2 tablespoons vegetable or fruit, or a combination of both.[5 6]
Snack	4–6 fluid ounces breast milk [1] or formula [2]	2–4 fluid ounces breast milk [1] or formula; [2] and 0–½ ounce equivalent bread; [3 7] or 0–¼ ounce equivalent crackers; [3 7] or 0–½ ounce equivalent infant cereal; [2 3] or 0–¼ ounce equivalent ready-to-eat breakfast cereal; [3 5 7 8] and 0–2 tablespoons vegetable or fruit, or a combination of both.[5 6]

[1] Breast milk or formula, or portions of both, must be served; however, it is recommended that breast milk be served from birth through 11 months. For some breastfed infants who regularly consume less than the minimum amount of breast milk per feeding, a serving of less than the minimum amount of breast milk may be offered, with additional breast milk offered at a later time if the infant will consume more.

[2] Infant formula and dry infant cereal must be iron-fortified.

[3] Information on crediting grain items may be found in FNS guidance.

[4] Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).

[5] A serving of this component is required when the infant is developmentally ready to accept it.

[6] Fruit and vegetable juices must not be served.

[7] A serving of grains must be whole grain-rich, enriched meal, enriched flour, bran, or germ.

[8] Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce.

(c) *Meal patterns for children age 1 through 18 and adult participants.* Institutions and facilities must serve the meal components and quantities specified in the following meal patterns for children and adult participants in order to qualify for reimbursement.

(1) *Breakfast.* Fluid milk, vegetables or fruit, or portions of both, and grains are required components of the breakfast meal. Meats/meat alternates may be offered to meet the entire grains requirement a maximum of three times per week. The minimum amounts of meal components to be served at breakfast are as follows:

TABLE 2 TO PARAGRAPH (c)(1)—CHILD AND ADULT CARE FOOD PROGRAM BREAKFAST

[Select the appropriate components for a reimbursable meal]

Meal components and food items [1]	Minimum quantities				
	Ages 1–2	Ages 3–5	Ages 6–12	Ages 13–18 [2]	Adult participants
Fluid Milk	4 fluid ounces [3]	6 fluid ounces [4]	8 fluid ounces [5]	8 fluid ounces [5]	8 fluid ounces.[6]
Vegetables, fruits, or portions of both [7]	¼ cup	½ cup	½ cup	½ cup	½ cup.
Grains [8]	½ ounce equivalent	½ ounce equivalent	1 ounce equivalent	1 ounce equivalent	2 ounce equivalents.

[1] Must serve all three components for a reimbursable meal. Offer versus serve is an option for at-risk afterschool care and adult day care centers.
[2] At-risk afterschool programs and emergency shelters may need to serve larger portions to children ages 13 through 18 to meet their nutritional needs.
[3] Must serve unflavored whole milk to children age 1.
[4] Must serve unflavored milk to children 2 through 5 years old. The milk must be fat-free, skim, low-fat, or 1 percent or less.
[5] May serve unflavored or flavored milk to children ages 6 and older. The milk must be fat-free, skim, low-fat, or 1 percent or less.
[6] May serve unflavored or flavored milk to adults. The milk must be fat-free, skim, low-fat, or 1 percent or less. Yogurt may be offered in the place of milk once per day for adults. Yogurt may count as either a fluid milk substitute or as a meat alternate, but not both, in the same meal. Six ounces (by weight) or ¾ cup (by volume) of yogurt is the equivalent of 8 ounces of fluid milk. Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce).
[7] Juice must be pasteurized. Full-strength juice may only be offered to meet the vegetable or fruit requirement at one meal or snack, per day.
[8] Must serve at least one whole grain-rich serving, across all eating occasions, per day. Grain-based desserts may not be used to meet the grains requirement. Meats/meat alternates may be offered in place of the entire grains requirement, up to 3 times per week at breakfast. One ounce equivalent of meats/meat alternates credits equal to one ounce equivalent of grains. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereals must contain no more than 6 grams of added sugars per dry ounce. Information on crediting grain items and meats/meat alternates may be found in FNS guidance.

(2) *Lunch and supper.* Fluid milk, meats/meat alternates, vegetables, fruits, and grains are required components in the lunch and supper meals. The minimum amounts of meal components to be served at lunch and supper are as follows:

TABLE 3 TO PARAGRAPH (c)(2)—CHILD AND ADULT CARE FOOD PROGRAM LUNCH AND SUPPER

[Select the appropriate components for a reimbursable meal]

Meal components and food items [1]	Minimum quantities				
	Ages 1–2	Ages 3–5	Ages 6–12	Ages 13–18 [2]	Adult participants
Fluid milk	4 fluid ounces [3]	6 fluid ounces [4]	8 fluid ounces [5]	8 fluid ounces [5]	8 fluid ounces.[6]
Meats/meat alternates [7]	1 ounce equivalent	1½ ounce equivalents	2 ounce equivalents	2 ounce equivalents	2 ounce equivalents.
Vegetables [8]	⅛ cup	¼ cup	½ cup	½ cup	½ cup.
Fruits [8]	⅛ cup	¼ cup	¼ cup	¼ cup	½ cup.
Grains [9]	½ ounce equivalent	½ ounce equivalent	1 ounce equivalent	1 ounce equivalent	2 ounce equivalents.

[1] Must serve all five components for a reimbursable meal. Offer versus serve is an option for at-risk afterschool care and adult day care centers.
[2] At-risk afterschool programs and emergency shelters may need to serve larger portions to children ages 13 through 18 to meet their nutritional needs.
[3] Must serve unflavored whole milk to children age 1.
[4] Must serve unflavored milk to children 2 through 5 years old. The milk must be fat-free, skim, low-fat, or 1 percent or less.
[5] May serve unflavored or flavored milk to children ages 6 and older. The milk must be fat-free, skim, low-fat, or 1 percent or less.
[6] May serve unflavored or flavored milk to adults. The milk must be fat-free, skim, low-fat, or 1 percent or less. Yogurt may be offered in place of milk once per day for adults. Yogurt may count as either a fluid milk substitute or as a meat alternate, but not both, in the same meal. Six ounces (by weight) or ¾ cup (by volume) of yogurt is the equivalent of 8 ounces of fluid milk. A serving of fluid milk is optional for suppers served to adult participants.
[7] Alternate protein products must meet the requirements in appendix A to this part. Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Information on crediting meats/meat alternates may be found in FNS guidance.
[8] Juice must be pasteurized. Full-strength juice may only be offered to meet the vegetable or fruit requirement at one meal or snack, per day. A vegetable may be offered to meet the entire fruit requirement. When two vegetables are served at lunch or supper, two different kinds of vegetables must be served.
[9] Must serve at least one whole grain-rich serving, across all eating occasions, per day. Grain-based desserts may not be used to meet the grains requirement. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereal must contain no more than 6 grams of added sugars per dry ounce. Information on crediting grain items may be found in FNS guidance.

(3) *Snack.* Serve two of the following five components: Fluid milk, meats/meat alternates, vegetables, fruits, and grains. Fruit juice, vegetable juice, and milk may comprise only one component of the snack. The minimum amounts of meal components to be served at snacks are as follows:

TABLE 4 TO PARAGRAPH (c)(3)—CHILD AND ADULT CARE FOOD PROGRAM SNACK

[Select two of the five components for a reimbursable snack]

Meal components and food items [1]	Minimum quantities				
	Ages 1–2	Ages 3–5	Ages 6–12	Ages 13–18 [2]	Adult participants
Fluid milk	4 fluid ounces [3]	4 fluid ounces [4]	8 fluid ounces [5]	8 fluid ounces [5]	8 fluid ounces.[6]
Meats/meat alternates [7]	½ ounce equivalent	½ ounce equivalent	1 ounce equivalent	1 ounce equivalent	1 ounce equivalent.
Vegetables [8]	½ cup	½ cup	¾ cup	¾ cup	½ cup.
Fruits [8]	½ cup	½ cup	¾ cup	¾ cup	½ cup.
Grains [9]	½ ounce equivalent	½ ounce equivalent	1 ounce equivalent	1 ounce equivalent	1 ounce equivalent.

[1] Must serve two of the five components for a reimbursable snack. Milk and juice may not be served as the only two items in a reimbursable snack.
[2] At-risk afterschool programs and emergency shelters may need to serve larger portions to children ages 13 through 18 to meet their nutritional needs.
[3] Must serve unflavored whole milk to children age 1.
[4] Must serve unflavored milk to children 2 through 5 years old. The milk must be fat-free, skim, low-fat, or 1 percent or less.
[5] May serve unflavored or flavored milk to children ages 6 and older. The milk must be fat-free, skim, low-fat, or 1 percent or less.
[6] May serve unflavored or flavored milk to adults. The milk must be fat-free, skim, low-fat, or 1 percent or less. Yogurt may be offered in place of milk, once per day for adults. Yogurt may count as either a fluid milk substitute or as a meat alternate, but not both, in the same meal. Six ounces (by weight) or ¾ cup (by volume) of yogurt is the equivalent of 8 ounces of fluid milk.

[7] Alternate protein products must meet the requirements in appendix A to this part. Through September 30, 2025, yogurt must contain no more than 23 grams of total sugars per 6 ounces. By October 1, 2025, yogurt must contain no more than 12 grams of added sugars per 6 ounces (2 grams of added sugars per ounce). Information on crediting meats/meat alternates may be found in FNS guidance.
[8] Juice must be pasteurized. Full-strength juice may only be offered to meet the vegetable or fruit requirement at one meal or snack, per day.
[9] Must serve at least one whole grain-rich serving, across all eating occasions, per day. Grain-based desserts may not be used to meet the grains requirement. Through September 30, 2025, breakfast cereals must contain no more than 6 grams of total sugars per dry ounce. By October 1, 2025, breakfast cereal must contain no more than 6 grams of added sugar per dry ounce. Information on crediting grain items may be found in FNS guidance.

(d) *Food preparation.* Deep-fat fried foods that are prepared on-site cannot be part of the reimbursable meal. For this purpose, deep-fat frying means cooking by submerging food in hot oil or other fat. Foods that are pre-fried, flash-fried, or par-fried by a commercial manufacturer may be served, but must be reheated by a method other than frying.

(e) *Unavailability of fluid milk*—(1) *Temporary.* When emergency conditions prevent an institution or facility normally having a supply of milk from temporarily obtaining milk deliveries, the State agency may approve the service of breakfast, lunches, or suppers without milk during the emergency period.

(2) *Continuing.* When an institution or facility is unable to obtain a supply of milk on a continuing basis, the State agency may approve service of meals without milk, provided an equivalent amount of canned, whole dry or fat-free dry milk is used in the preparation of the components of the meal set forth in paragraph (a) of this section. (f) *Grain substitutions.* In American Samoa, Guam, Hawaii, Puerto Rico, and the U.S. Virgin Islands, and in institutions or facilities in any State that serve primarily American Indian or Alaska Native participants, any vegetable, including vegetables such as breadfruit, prairie turnips, plantains, sweet potatoes, and yams, may be served to meet the grains requirement.

(g) *Modifications and variations in reimbursable meals and snacks as described in paragraphs (a) through (c) of this section*—(1) *Modifications for disability reasons.* Institutions and facilities must make meal modifications including substitutions in meals and snacks described in this section for participants with a disability and whose disability restricts their diet. The modification requested must be related to the disability and must be offered at no additional cost to the child or adult participant.

(i) In order to receive Federal reimbursement when a modified meal does not meet the meal pattern requirements specified in this section, the institution or facility must obtain from the household a written medical statement signed by a State licensed healthcare professional. By October 1, 2025, institutions and facilities must also accept a medical statement signed by a registered dietitian. The medical statement must provide sufficient information about the child or adult participant's dietary restrictions, such as foods to be omitted and recommended alternatives, if appropriate. Modified meals that meet the meal pattern requirements in this section are reimbursable with or without a medical statement.

(ii) Institutions and facilities must ensure that parents and guardians, and their children when age-appropriate at institution or facility discretion; adult participants; and persons on behalf of adult participants have notice of the procedure for requesting meal modifications for disabilities and the process for procedural safeguards related to meal modifications for disabilities. See §§ 15b.6(b) and 15b.25 of this title.

(iii) Expenses incurred when making meal modifications that exceed Program reimbursement rates must be paid by the institution or facility; costs may be paid from the institution or facility's nonprofit food service account.

(iv) A parent, guardian, adult participant, or a person on behalf of an adult participant may supply one or more components of the reimbursable meal as long as the institution or facility provides at least one required meal component.

(2) *Variations for non-disability reasons.* (i) Institutions and facilities should consider participants' dietary preferences when planning and preparing meals and snacks. Any variations must be consistent with the meal pattern requirements specified in this section.

(ii) Expenses incurred from variations that exceed program reimbursement rates must be paid by the institution or facility; costs may be paid from the institution or facility's nonprofit food service account.

(iii) A parent, guardian, adult participant, or a person on behalf of an adult participant may supply one component of the reimbursable meal as long as the component meets the requirements described in this section and the institution or facility provides the remaining components.

(3) *Fluid milk substitutes for non-disability reasons.* (i) An institution or facility may offer fluid milk substitutes based on a written request from a child's parent or guardian, an adult participant, a person on behalf of an adult participant, a State licensed healthcare professional, or registered dietitian for participants with dietary needs that are not disabilities that identifies the reason for the substitute. An institution or facility choosing to offer fluid milk substitutes for a non-disability reason is not required to offer the specific fluid milk substitutes requested but may offer the fluid milk substitutes of its choice, provided the fluid milk substitutes offered meet the requirements of paragraph (g)(3)(ii) of this section. For disability-related meal modifications, see paragraph (g)(1) of this section.

(ii) If an institution or facility chooses to offer one or more fluid milk substitutes for non-disability reasons, the fluid milk substitutes must provide, at a minimum, the nutrients listed in the following table. Fluid milk substitutes must be fortified in accordance with fortification guidelines issued by the Food and Drug Administration.

TABLE 5 TO PARAGRAPH (g)(3)(ii)—NUTRIENT REQUIREMENTS FOR FLUID MILK SUBSTITUTES

Nutrient	Per cup (8 fl. oz.)
Calcium	276 mg.
Protein	8 g.
Vitamin A	150 mcg. retinol activity equivalents (RAE).
Vitamin D	2.5 mcg.
Magnesium	24 mg.
Phosphorus	222 mg.
Potassium	349 mg.

TABLE 5 TO PARAGRAPH (g)(3)(ii)—NUTRIENT REQUIREMENTS FOR FLUID MILK SUBSTITUTES—Continued

Nutrient	Per cup (8 fl. oz.)
Riboflavin	0.44 mg.
Vitamin B–12	1.1 mcg.

(iii) Expenses incurred when providing fluid milk substitutes that exceed Program reimbursements must be paid by the participating institution or facility; costs may be paid from the institution or facility's nonprofit food service account.

(h) *Special variations.* FNS may approve variations in the meal components of the meals on an experimental or continuing basis in any institution or facility where there is evidence that such variations are nutritionally sound and are necessary to meet ethnic, religious, economic, or physical needs.

(i) *Meals prepared in schools.* The State agency must allow institutions and facilities which serve meals to children 5 years old and older and are prepared in schools participating in the National School Lunch and School Breakfast Programs to substitute the meal pattern requirements of the regulations governing those Programs (parts 210 and 220 of this chapter, respectively) for the meal pattern requirements contained in this section.

(j) *Meal planning.* Institutions and facilities must plan for and order meals on the basis of current participant trends, with the objective of providing only one meal per participant at each meal service. Records of participation and of ordering or preparing meals must be maintained to demonstrate positive action toward this objective. In recognition of the fluctuation in participation levels which makes it difficult to estimate precisely the number of meals needed and to reduce the resultant waste, any excess meals that are ordered may be served to participants and may be claimed for reimbursement, unless the State agency determines that the institution or facility has failed to plan and prepare or order meals with the objective of providing only one meal per participant at each meal service.

(k) *Time of meal service.* State agencies may require any institution or facility to allow a specific amount of time to elapse between meal services or require that meal services not exceed a specified duration.

(l) *Sanitation.* Institutions and facilities must ensure that in storing, preparing, and serving food proper sanitation and health standards are met which conform with all applicable State and local laws and regulations. Institutions and facilities must ensure that adequate facilities are available to store food or hold meals.

(m) *Donated commodities.* Institutions and facilities must efficiently use in the Program any foods donated by the Department and accepted by the institution or facility.

(n) *Family style meal service.* Family style is a type of meal service which allows children and adults to serve themselves from common platters of food with the assistance of supervising adults. Institutions and facilities choosing to exercise this option must be in compliance with the following practices:

(1) A sufficient amount of prepared food must be placed on each table to provide the full required portions of each of the components, as outlined in paragraphs (c)(1) and (2) of this section, for all children or adults at the table and to accommodate supervising adults if they wish to eat with the children and adults.

(2) Children and adults must be allowed to serve the meal components themselves, with the exception of fluids (such as milk). During the course of the meal, it is the responsibility of the supervising adults to actively encourage each child and adult to serve themselves the full required portion of each meal component of the meal pattern. Supervising adults who choose to serve the fluids directly to the children or adults must serve the required minimum quantity to each child or adult.

(3) Institutions and facilities which use family style meal service may not claim second meals for reimbursement.

(o) *Offer versus Serve.* (1) Each adult day care center and at-risk afterschool program must offer its participants all of the required food servings as set forth in paragraphs (c)(1) and (2) of this section. However, at the discretion of the adult day care center or at-risk afterschool program, participants may be permitted to decline:

(i) *For adults*—(A) *One of the four food* items required at breakfast (one serving of fluid milk; one serving of vegetable or fruit, or a combination of both; and two servings of grains, or meat or meat alternates);

(B) *Two of the five* meal components required at lunch (fluid milk; vegetables; fruit; grain; and meat or meat alternate); and

(C) *One of the four* meal components required at supper (vegetables; fruit; grain; and meat or meat alternate).

(ii) *For children. Two of the five* meal components required at supper (fluid milk; vegetables; fruit; grain; and meat or meat alternate).

(2) In pricing programs, the price of the reimbursable meal must not be affected if a participant declines a food item.

(p) *Prohibition on using foods and beverages as punishments or rewards.* Meals served under this part must contribute to the development and socialization of children. Institutions and facilities must not use foods and beverages as punishments or rewards.

(q) *Severability.* If any provision of this section is held to be invalid or unenforceable by its terms, or as applied to any person or circumstances, it shall be severable from this section and not affect the remainder thereof. In the event of such holding of invalidity or unenforceability of a provision, the meal pattern requirements covered by that provision reverts to the version that immediately preceded the invalidated provision.

■ 37. In § 226.22, revise paragraph (c)(1) to read as follows:

§ 226.22 Procurement standards.

* * * * *

(c) * * *

(1) Institutions participating in the Program may apply a geographic preference when procuring unprocessed locally grown or locally raised agricultural products, including the use of ''locally grown'', ''locally raised'', or ''locally caught'' as procurement specifications or selection criteria for unprocessed or minimally processed food items. When utilizing the geographic preference to procure such products, the institution making the purchase has the discretion to determine the local area to which the geographic preference option will be applied so long as there are an

appropriate number of qualified firms able to compete;

Cynthia Long,

Administrator, Food and Nutrition Service.

Note: The following appendix will not appear in the Code of Federal Regulations.

Appendix A—Regulatory Impact Analysis

I. Statement of Need

On February 7, 2023, USDA published a proposed rule, *Child Nutrition Programs: Revisions to Meal Patterns Consistent with the 2020 Dietary Guidelines for Americans,* to further align school meal nutrition requirements with the goals of the *Dietary Guidelines for Americans, 2020–2025 (Dietary Guidelines).*[1] USDA is now finalizing that proposed rule with the expectation that these changes will continue to improve the health of meals and snacks served in child nutrition programs in the coming years. To develop the rule, USDA considered broad stakeholder input, including written public comments received in response to the proposed rule, and a comprehensive review of the latest *Dietary Guidelines.* The rule represents the next stage of the rulemaking process to permanently update and improve school meal pattern requirements. This rule includes a focus on nutrition requirements for sodium, whole grains, and milk in school meals as well as new requirements to limit added sugars. Further, in addition to addressing these and other nutrition requirements, this rule finalizes a variety of changes to school meal requirements from the 2020 proposed rule, *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs.*[2] Updates for the Child and Adult Care Food Program (CACFP) and Summer Food Service Program (SFSP) are also included in certain provisions of this rule. Finally, USDA is issuing a final rule of the provisions of this rulemaking that strengthen the Buy American requirement.[3]

II. Background

The National School Lunch Program (NSLP) and School Breakfast Program (SBP) were established in 1946 and 1966, respectively. Both programs provide nutritionally balanced and low or no-cost meals to children in schools each day. In 2012, USDA issued a final rule that increased the availability of nutritious foods like fruits, vegetables, and whole grains and established limits for sodium in school meals, among other key changes. Since then, school nutrition professionals, industry partners, and other stakeholders have made tremendous strides in improving the nutritional quality of school meals, and recent research shows that school meals are the healthiest meals children eat during the day.[4] Many components of the 2012 nutrition requirements were successfully implemented, such as vegetable subgroups at lunch and calorie ranges for school meals. However, some requirements faced challenges, including Congressional intervention and administrative policies that delayed implementation or allowed less stringent requirements for milk, whole grains, and sodium. In addition, during the COVID–19 public health emergency, schools required meal pattern flexibilities to ensure that children had continued access to nutritious meals amid supply chain challenges. Program operators continue to face pandemic-related and supply chain challenges. To that end, this rule considers those challenges and uses a phased-in approach to implementation to strengthen the nutritional quality of school meals over time and provide ongoing support to school nutrition professionals. This rule builds on USDA's prior rulemakings, such as *Child Nutrition Programs: Revisions to Meal Patterns Consistent With the 2020 Dietary Guidelines for Americans* proposed rule and *Child Nutrition Programs: Transitional Standards for Milk, Whole Grains, and Sodium* (87 FR 6984), from February 7, 2022, to further align school meal nutrition requirements with the goals of the *Dietary Guidelines, 2020–2025.*

III. Comments

USDA received 51 comments on the Regulatory Impact Analysis (RIA) in response to the 2023 proposed rule *Child Nutrition Programs: Revisions to Meal Patterns Consistent with the 2020 Dietary Guidelines for Americans.* The majority (45 respondents) commented on the costs, 2 respondents commented on long-term benefits, and 3 respondents commented on gaps in the RIA of the proposed rule.

There were 26 comments on the RIA for the 2020 proposed rule *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs.* This rule includes five provisions from the 2020 proposed rule:

- Meats/Meat Alternates at Breakfast
- Dry Beans, Peas, and Lentils at Lunch
- Meal Modifications
- Clarification on Potable Water Requirements
- Synthetic Trans Fats

The comments received on the regulatory impacts of the 2020 proposed rule did not include any comments related to expected impacts of the specific provisions included in this rule.

Comments on the 2023 Proposed Rule Child Nutrition Programs: Revisions to Meal Patterns Consistent With the 2020 Dietary Guidelines for Americans

- Respondents expressed concern that implementation of the 2023 proposed rule would cause school districts to take on more debt or make budget cuts in other areas to fund school meals that meet the updated requirements. Respondents noted that though scratch cooking may be the most efficient way to reduce sodium levels in meals, it could be costly and should be accounted for in the cost-benefit-analysis. Other respondents pointed out that schools could face additional costs passed along from manufacturers having to reformulate their products and change their labels.

USDA Response

The decisions around the rule have taken into consideration the comments received on the 2023 proposed rule regarding costs to school districts. This rule maintains the current flavored milk requirements (Alternative B), which is the less restrictive and less costly option. This RIA also estimates $7 million in average annual cost savings associated with aligning afterschool snacks with CACFP snack requirements and $5 million in average annual cost savings from simplifying requirements for schools that choose to substitute vegetables for fruits at breakfast. This rule provides additional operational or administrative flexibilities for geographic preference, meats/meat alternates as breakfast, nuts and seeds, and beans, peas and lentils at lunch.

The sodium limits finalized in this rule are less restrictive and intended to be more attainable as compared to the proposed limits. Instead of three 10 percent reductions in NSLP and two 10 percent reductions in SBP over several years, this rule includes one reduction in each program to meet Target 2 levels from the 2012 rule, effective school year (SY) 2027–2028. USDA recognizes that in order to meet the sodium limits included in this rule, additional recipe and product reformulation may need to occur over time. To that end, to develop the sodium limits in this rulemaking, USDA considered the Food and Drug Administration's (FDA) voluntary sodium reduction goals, which aim to reduce sodium across the U.S. food supply. USDA expects that aligning school meal sodium limits with FDA's voluntary sodium reduction goals may help support children's acceptance of school lunches and breakfasts with less sodium, as the school meal reductions will occur alongside sodium reductions in the broader U.S. food supply. While USDA recognizes that schools may choose to introduce more scratch and quick-scratch cooking to meet the sodium limits, USDA lacks data to fully estimate those costs. However, potential equipment costs associated with increased scratch cooking are estimated in the ''Uncertainties/Limitations'' section and table 29 of this RIA. The ''Uncertainties/Limitations'' section also includes discussion of other uncertainties in

[4] Liu J, Micha R, Li Y, Mozaffarian D. Trends in Food Sources and Diet Quality Among US Children and Adults, 2003–2018. JAMA Netw Open. 2021;4(4):e215262. doi:10.1001/jamanetworkopen.2021.5262. This study found that foods consumed at schools provided the best mean diet quality of major US food sources.

this analysis and their potential impact on the costs and benefits of this rule.

The weekly average sodium limits are approximately a 15 percent reduction for lunch and 10 percent reduction for breakfast and will take effect in SY 2027–2028. Schools can maintain current sodium limits (Target 1A) prior to the SY 2027–2028 reduction. This will allow time and flexibility for a variety of sodium reduction practices that the RIA has estimated costs for, including product reformulation, scratch cooking, menu adjustments, reducing the frequency of offering higher sodium foods, and recipe alterations.

- Respondents mentioned areas of impact that were not considered in the proposed RIA. These respondents noted that CACFP and costs specific to its sponsors and providers were largely excluded from the RIA. One respondent suggested applying the methods used to estimate the reporting and record keeping costs for the Buy American provision to the other proposed provisions. Another respondent recommended that USDA conduct a marginal analysis on the cost of single-percent changes to the Buy American non-domestic ceiling and provide more information on the benefits of this provision on child nutrition.

USDA Response

The reporting and record keeping administrative burden hours estimated in this RIA are in accordance with the information collection request for these activities approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act. USDA anticipates regulatory familiarization costs, including state administrative costs, local level training costs, and costs associated with adjusting purchasing patterns and menus at the local level. The administrative costs associated with this familiarization period were also expected for the 2012 final rule, which is used as a reference for the administrative costs for this rule; see Administrative Costs section.

Anticipated costs to CACFP sponsors and providers have been incorporated into the RIA in response to public comment. Costs include reporting and record keeping costs, administrative costs, familiarization costs, and local training costs, as well as costs associated with changes in purchasing patterns and menus. CACFP purchasing patterns and menu impacts are most likely to occur due to the added sugars provision, specifically the added sugars limit of 12 grams per 6 oz of yogurt. This replaces the existing limit of 23 grams of total sugars per 6 oz of yogurt for CACFP menus. The cost impact for CACFP is estimated to be about $2 million (table 6). Other provisions that apply to CACFP in this rule are not estimated to have a cost impact because they are technical corrections, clarifications, or add flexibility to menu planning.

The costs associated with the Buy American provision are based on increases in reporting and record keeping burden due to the final rule. Instead of a 5 percent ceiling as proposed, the final rule institutes a phased approach over seven school years to reach the 5 percent ceiling on the non-domestic commercial foods a school food authority may purchase per school year. The phased implementation will begin in SY 2025–2026 with a 10 percent non-domestic food cost cap, with an 8 percent cap beginning in SY 2028–2029, and finally a 5 percent cap in SY 2031–2032. We estimate a $3 million annual total food cost increase once the phased in non-domestic foods ceiling reaches 5 percent. Based on the average use of exceptions by school food authorities (8.5 percent), each single-percent reduction in the cap equals approximately $0.8 million in annual costs. These estimates are further detailed in the ''Buy American'' section (table 18). In response to public comments that suggested a 5 percent cap is too restrictive under current procurement conditions, USDA intends to help schools, State agencies, and other stakeholders adjust to the new requirement and achieve compliance with the Buy American provision through a phased in approach. The mission of Child Nutrition Programs is to serve children nutritious meals and support American agriculture.

IV. Summary of Impacts

The estimated impacts of this rule primarily reflect changes in the foods purchased for use in school meals, administrative familiarization, and labor costs incurred by schools for meal production. While this rule takes effect SY 2024–2025, the required changes will be gradually phased in over time. Program operators will not be required to make any changes to their menus as a result of this rule until SY 2025–2026 at the earliest. USDA estimates this rule will cost [5] schools between $0.02 and $0.04 per meal,[6] or an average of $206 million [7] annually including both the SBP and NSLP starting in SY 2024–2025, accounting for the fact that changes will be implemented gradually and adjusting for annual inflation.[8] Annual costs range from $53 million to $283 million over eight school years, adjusting for yearly inflation (table 20). While some changes—such as aligning the NSLP snack meal pattern with that of CACFP or simplifying requirements for schools that choose to substitute vegetables for fruits at breakfast—are estimated to reduce school food costs or have no cost impact, other changes, such as added sugars and sodium limits, are estimated to increase food costs. There are no estimated changes in Federal costs due to the changes in this final rule, as the rule does not impact the Federal reimbursement rate for school meals and is not expected to significantly impact baseline participation.

The changes in this rule are achievable and realistic for schools and address the need for strong nutrition requirements in school meals. This analysis provides nine-year cost streams to project potential impacts over each impacted fiscal year (FY), though FY 2024 and FY 2032 are shown as half year costs to account for the fact that implementation of this rule spans eight total school years (table 1). These same data are presented in table A in the ''Appendix'' section by school year.

---

[5] Except where noted in the participation impacts, the terms ''costs'' and ''savings'' are used in this analysis to describe the school level shifts in food purchases and labor associated with school meal production.

[6] This is about 0.5% of the average cost to SFAs per breakfast and lunch, in 2024 dollars. Factoring 4% annual inflation, breakfast costs $4.03 and lunch costs $5.64 for SFAs to produce. Based on School Nutrition Meal Cost Study (SNMCS) Report—Volume 3, the average SFA had a reported cost of $3.81 per NSLP lunch and $2.72 per SBP breakfast in SY 2014–2015 (*https://fns-prod.azureedge.us/sites/default/files/resource-files/SNMCS-Volume3.pdf*).

[7] This annual average is based on this rulemaking finalizing Milk Alternative B in the proposed rule.

[8] Using 2023 dollars and not adjusting for annual inflation results in $1.256 billion dollars over eight school years (over nine fiscal years) or $52 to $227 million annually ($0.03 per meal), see appendix.

TABLE 1: STREAM OF QUANTIFIABLE COSTS TO SCHOOLS DURING THE 9 YEARS OF IMPLEMENTATION, IN 2023 DOLLARS[9,10]

	FISCAL YEAR ($ MILLIONS)									
	2024[11]	2025[12]	2026	2027	2028	2029	2030	2031	2032[13]	Total[14]

DISCOUNTED COST STREAM										
3 PERCENT	$26	$92	$109	$147	$184	$160	$155	$156	$78	$874
7 PERCENT	$26	$88	$101	$131	$158	$132	$124	$124	$62	$761

As required by OMB Circular A–4, in table 2 below, the Department has prepared an accounting statement showing the annualized estimates of benefits, costs, and transfers associated with the provisions of this rule. The next section provides an impact analysis for each change.

[9] No adjustment for inflation was done for this table aside for inflation from the time-period of data collection up to 2023.

[10] For data in 2023 dollars presented by school years (July–June) instead of fiscal years (October–September), see table A in the 'Appendix' section. Totals are the same as table 1 and the breakdown of costs is shown across the eight school years.

[11] First year of provision implementation presents half a year of costs from SY 2024–2025 (first half of the school year).

[12] Including costs from the second half of SY 2024–2025 and the first half of SY 2025–2026; this style is also true of FY 2026 through 2031.

[13] Presenting half a year of costs from SY 2030–2031 (second half of the school year).

[14] This is eight full fiscal years, including 7 full fiscal years and two half years.

[15] The nominal cost stream values are based upon 2023 participation levels and assumes participation holds steady through FY 2032.

[16] The percentage of baseline is calculated as total costs of the proposed changes divided by the total expected costs of the NSLP, SBP, and CACFP programs in each fiscal year. Expected costs for NSLP, SBP and CACFP are inflated from FY 2019 based on actual and forecasted food price inflation.

TABLE 2: ACCOUNTING STATEMENT

Benefits	Range	Estimate	Year Dollar	Discount Rate	Period Covered
Qualitative: Establishes achievable requirements that are expected to improve the nutritional content of meals served through USDA child nutrition programs and therefore diet quality and health of children who consume those meals. Additional provisions will also increase meal planning flexibility and improve program administration. Strengthens the Buy American provision to ensure that school meals use foods produced in the US to the extent feasible.

V. Section by Section Analysis

This rule finalizes the following provisions from the 2023 proposed rule:

- Added Sugars
- Milk
- Whole Grains
- Sodium
- Substituting Vegetables for Grains in Tribal Communities
- Traditional Indigenous Foods
- Afterschool Snacks
- Substituting Vegetables for Fruits at Breakfast
- Nuts and Seeds
- Competitive Foods: Bean Dip Exemption
- Professional Standards: Hiring Exemption for Medium and Large Local Educational
- Agencies
- Buy American
- Geographic Preference
- Miscellaneous Changes

This rule also finalizes the following provisions from the 2020 proposed rule:

- Meats/Meat Alternates at Breakfast
- Beans, Peas, and Lentils at Lunch
- Meal Modifications
- Clarification on Potable Water Requirements
- Synthetic Trans Fats

USDA worked closely with program stakeholders to gather input for the proposed rule. The public was also invited to submit comments on the transitional standards rule, the 2023 proposed rule, the 2020 proposed rule, and their accompanying Regulatory Impact Analyses. Analyses below detail the financial impacts of each provision of this rule.

A. Key Assumptions

Impacts in this analysis are based on data collected during SY 2014–2015 for the School Nutrition and Meal Cost Study (SNMCS).[17] Distribution of the types and quantities of foods school districts purchase may have changed since that time due to pandemic supply chain challenges, meal pattern flexibilities, implementation of the transitional standards, changing consumer preferences, and industry changes. Using a 10-year average of the Consumer Price Index (CPI) for all food (including food consumed away from home and at home) from 2015 to the 2024 and the predicted 2023 and 2024 years, cost data were inflated four percent annually for the analyses detailed below.[18] The analyses in this rule assume that the significant progress schools made toward serving healthier meals after 2012 rule was implemented will continue.

These analyses assume that school meal participation (average daily participation and meal counts) will normalize to be consistent with the service levels in FY 2023, as that is the most recent full year of typical program operations. USDA acknowledges that changes in the food served have the potential to impact participation. This impact could be either positive or negative, depending on how specific menu or product changes are implemented. Additional students may participate due to the availability of Healthy School Meals for All in several States in recent years, where all students receive breakfast and lunch at no cost to their families. Discussion of potential participation impacts are included in this Regulatory Impact Analysis under the ''Uncertainties/Limitations'' section as a sensitivity analysis. The analyses in this Regulatory Impact Analysis assume participation returns to more typical, pre-pandemic levels and projects participation will hold steady each school year during the time period between SY 2024–2025 and SY 2029–2030.

For discussion of health benefits of the rule, expected impacts of specific provisions on diet quality are estimated based on the SNMCS and prior data from School Nutrition Dietary Assessment Study (SNDA) IV.[19] Between SY 2009–2010 and SY 2014–2015, ''Healthy Eating Index–2010'' (HEI–2010) scores[20] of diet quality for NSLP and SBP meals increased significantly. The Healthy Eating Index is a tool to ''measure of diet quality that can be used to assess how well a set of foods aligns with key recommendations of the *Dietary Guidelines.*''[21] At the time of data collection in the SNMCS, the HEI–2010 score was used

[17] *https://www.fns.usda.gov/school-nutrition-and-meal-cost-study.*

[18] *https://www.ers.usda.gov/data-products/food-price-outlook/.*

[19] *https://www.fns.usda.gov/school-nutrition-dietary-assessment-study-iv.*

[20] The Healthy Eating Index is a measure of diet quality used to assess how well a set of foods aligns with key recommendations of the *Dietary Guidelines for Americans* that is periodically updated with each edition of the Guidelines. HEI–2010 and HEI–2015 scores are cited/calculated in this impact analysis. At this time, no HEI–2020 score version has been released.

[21] *https://www.fns.usda.gov/healthy-eating-index-hei.*

for evaluation so that there could be a direct comparison in diet quality between SY 2009–2010 and SY 2014–2015. Over this period, the overall mean HEI–2010 score for NSLP lunches served increased from 57.9 to 81.5 out of a possible 100 points, and the mean HEI–2010 score for SBP breakfasts increased from 49.6 to 71.3 out of a possible 100 points. USDA assumes these improvements were due to the 2012 rule. This impact analysis assumes that the dietary content of served school meals continued to improve until 2019 and potentially even during the pandemic for some schools because of the 2012 rule. However, USDA acknowledges that following implementation of the 2012 rule, there have been changes to the school meal pattern requirements because of USDA rulemakings related to the milk, whole grains, and sodium requirements, as well as COVID meal pattern waivers, which might have resulted in changes in the dietary content of meals served.

With regards to added sugars, USDA assumes that schools will use a variety of menu changes to reduce added sugars to 10 percent or less of the weekly calorie content at school lunch and breakfast. Because added sugars have not been part of school meal regulations in the past, there may be a learning curve for school food authorities to adjust as the product specific and weekly average limits are gradually implemented. Analyses of milk product data were conducted with the assumption that some products that meet the finalized flavored milk added sugars limit of 10 grams per 8 fluid ounces are available. At the time data were collected for SNMCS in SY 2014–2015, no products met a 10-gram added sugars limit; the mean added sugars content in flavored milk was 12.2 g. However, data collected by USDA in 2022 from a limited number of K–12 school and food service catalogs suggest that there has been a shift in the added sugars content of milk products available to schools in the last 7 years.[22] More information can be found in the ''Added Sugars'' subsection of the ''Impacts'' section below. Additionally, in April 2023, milk processors representing more than 90 percent of the school milk volume in the United States committed to provide school flavored milk options with no more than 10 grams of added sugar per 8 fluid ounce serving beginning in SY 25–26.[23]

Because flavored milk is the main source of added sugars in school meals, there is some overlap in the impact analyses of added sugars and milk changes in this rule. In this rule, USDA adopts the milk provision described as Alternative B in the proposed rule, which maintains the current requirement allowing all K–12 schools to offer flavored and unflavored milks. Because this rule maintains the current flavored milk requirements, child nutrition program operators will not need to make changes to their menus to comply with this provision, beyond those changes described in *Section 2: Added Sugars.*

For the analysis of the sodium provision of this rule, several assumptions were made. The sodium content of school meals has been trending downwards since implementation of the 2012 rule. From SY 2009–2010 to SY 2014–2015 HEI–2010 sodium component scores increase by almost 270 percent (from 10 to 27 percent of the maximum score). A sodium component score of 10 indicates a meal with sodium density content that is less than or equal to 1100 mg of sodium per 1000 calories. A higher score indicates lower meal sodium content. USDA assumes that the sodium content of school meals continued to decrease until the pandemic waivers allowed flexibility to the meal requirements, including sodium, beginning in 2020 due to the COVID–19 pandemic disruptions to school meal operations. Additionally, USDA assumes that sodium reductions in school meals will take place in a variety of ways and that there are a multitude of strategies schools can use to reduce the sodium content of meals served. As a result, this impact analysis analyzed a variety of meal pattern food and portion combinations to account for the various ways that sodium levels could be reduced.

Assumptions were also made in order to measure the impacts of sections of the rule that pertain to substituting vegetables for grains in Tribal communities, traditional Indigenous foods, afterschool snacks, substituting vegetables for fruits at breakfast, nuts and seeds, and the Buy American provision. As our baseline for current school meal program operations, it was assumed that the proportion of the relevant food items or food groups offered would be the same as, or similar to, foods offered in SY 2014–2015, which is the most recent school year data available. This assumption provided a baseline to simulate the impact of the updates to foods served at school that will occur as a result of this rule. For instance, since we do not have the data to know what combination of food and drink items schools currently serve to meet snack program requirements, USDA assumed the proportion of offered food components in afterschool snacks would be comparable to the proportion of food components offered in school meals in the current school year (SY 2023–2024). Similarly, the baseline assumes that the proportion of foods purchased under an exemption in the Buy American provision would be comparable to purchasing patterns from prior years.

For all analyses, the baseline for meals served was the number of breakfasts, lunches, and afterschool snacks served in fiscal year 2023 (table 3). There were approximately 4.1 billion lunches served in the NSLP, 2.1 billion breakfasts served in the SBP, and about 148 million snacks served through NSLP afterschool snacks. As noted, while this rulemaking takes effect in SY 2024–2025, USDA is gradually phasing in required changes over time. Program operators will not be required to make any changes to their menus as a result of this rulemaking until school year 2025–2026, at the earliest.

TABLE 3. TOTAL MEALS SERVED IN 2023 - VALUES USED FOR IMPACT CALCULATIONS

MEALS	N
BREAKFASTS	2,105,299,111
LUNCHES	4,118,346,313
SNACKS	148,028,994

B. Impacts

Baseline

The goal of this rule is to align school meal nutrition requirements more closely with recommendations in the *Dietary Guidelines for Americans, 2020–2025* and strengthen the existing Buy American requirement. It is assumed that the costs detailed in the Regulatory Impact Analysis for the transitional standards rule will carry forward from SY 2022–2023 through SY 2023–2024, accounting for inflation. For this RIA, SY 2022–2023—the year in which the transitional standards rule was implemented in the school meal programs—is used as the baseline for measuring changes schools would need to make in order to meet the new requirements included in this rule. Since USDA expects the rule to be gradually implemented beginning in SY 2024–2025, this is the starting point for estimating the annual costs of the new requirements.

Based on the total costs of the NSLP, SBP, and CACFP programs from FY 2023, the most recent full year of typical program operations, costs have been forecasted to the

[22] This was not an exhaustive data collection of milk products across the marketplace, simply a fact-finding search. See 'Added Sugars' subsection of the 'Impacts' section below.

[23] International Dairy Foods Association. IDFA Announces 'Healthy School Milk Commitment' to Provide Nutritious Milk with Less Added Sugar for Students in Public Schools, Surpassing USDA Standards. April 5, 2023. Available at: *https://www.idfa.org/news/idfa-announces-healthy-school-milk-commitment-to-provide-nutritious-milk-with-less-added-sugar-for-students-in-public-schools-surpassing-usda-standards.*

time-period between FY 2024 and FY 2032. Absent this rule, we expect the overall baseline program cost to be approximately $208 billion over the eight fiscal years, seven full fiscal years and two half fiscal years. The estimated cost to implement this rule of $1.2 billion (table 1) represents a 0.6 percent [24] increase over the baseline cost of the three largest child nutrition programs. Throughout the 'Impacts' section, annual cost estimates are presented for SY 2024–2025, meaning that they are based on data that has been inflated to SY 2024–2025 from the time of data collection.

Administrative Costs

In order to implement this rule between SY 2024–2025 and SY 2031–2032, it is expected that there will be some regulatory familiarization costs, including state administrative costs, local level training costs, and costs associated with adjusting purchasing patterns and menus at the local level. While USDA has not collected data on this element of rule implementation in the past, comparable measures were used in the 2012 final rule. For that rule, Congress provided $50 million per year for state administrative costs (for two years, FY 2013 and 2014), and raised Federal reimbursements for schools by 6 cents for all lunches in schools that serve both breakfasts and lunches that meet meal pattern regulations and nutrition requirements.[25] Since this rule includes more gradual and smaller changes than the 2012 rule, USDA expects state administrative costs to amount to $25 million annually during the three school years of gradual rule implementation, SY 2024–2025, SY 2025–2026, and SY 2027–2028,[26] for a total of $75 million. Congress has not provided additional funding for this rule change; school food authorities will need to account for them within their operations. The same is true of the local costs detailed in the next paragraph. State agencies may use State Administrative Expense funds (SAE) available in FY 2024 and FY 2025 towards administrative familiarization costs. Fiscal year 2024 SAE funds were substantially higher than in FY 2023 due to pandemic waivers allowing schools to serve meals at no cost to students reimbursed at SFSP rates.

For familiarization costs at the local level, USDA based the estimates on the additional reimbursement rate (from the 2012 final rule) of $0.06 per school lunch and about half of other non-production labor costs. The proportion of cost breakdown used in the transitional standards rule was 45 percent labor, 45 percent food, and 10 percent other. Labor costs include both production (meal-prep) and non-production labor costs; the latter represent 19.8 percent of total labor and would include familiarization costs as well as other costs like nutrition education.[27] We assume non-production costs are evenly split between these 2 activities, so overall, familiarization would represent about 10 percent of labor costs. Therefore, USDA assumes that 45 percent of the $0.06 addition reimbursement represents labor costs, and 10 percent of this amount, or $0.003 ($0.004 after adjusting for inflation up to 2024 per lunch), was the expected cost associated with becoming familiar with the rule and making necessary adjustments. This would then cost $17 million annually at the local level during the three school years of rule implementation during which new changes will be implemented, $51 million overall. In total with state and local costs, this would be $130 million dollars over the course of the rule that would be incurred by school food authorities during rule implementation, or $42 million annually (table 4).

TABLE 4: ESTIMATED ADMINISTRATIVE COSTS (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

CATEGORY	Estimated Annual Cost	Estimated 3 Year Cost[28]
STATE	$25	$75
LOCAL	$17	$51
TOTAL	**$42**	**$126**

Added Sugars

In this rule, USDA finalizes the proposed added sugars product-based and weekly limits to school lunch and breakfasts. The product-based limits will take effect in SY 2025–2026, allowing schools to make gradual changes to their menus. The weekly dietary limits will take effect two school years after the product-based limits are implemented. With added sugars now included on the food and beverage product Nutrition Facts label and the recommendation in the *Dietary Guidelines for Americans, 2020–2025* to limit intake of added sugars to less than 10 percent of calories per day, added sugars limits in school meals will help students to achieve a healthy dietary pattern without restricting naturally occurring sugars. Effective SY 2025–2026, for school lunch and breakfast, this rule establishes the following product-based added sugars limits in school meals:

- For school lunch and school breakfast, breakfast cereals are limited to no more than 6 grams of added sugars per dry ounce. This limit will also apply to CACFP starting October 1, 2025.
- For school lunch and school breakfast, yogurt is limited to no more than 12 grams of added sugars per 6 ounces. This limit will also apply to CACFP starting October 1, 2025.
- For school lunch and for school breakfast, flavored milk is limited to no more than 10 grams of added sugars per 8 fluid ounces. This limit does not extend to CACFP.

The weekly dietary limit, which will take effect in SY 2027–2028, limits added sugars to less than 10 percent of calories per week in the school lunch and breakfast programs. This weekly limit will be in addition to the product-based limits described above and aligns with the *Dietary Guidelines* recommendation to limit added sugars to less than 10 percent of calories. The weekly limit does not extend to CACFP.

While the NSLP and SBP have not had total sugar or added sugars limits in the past, product-based total sugar limits have been in place in CACFP since 2017. The current CACFP product-based limits apply to breakfast cereals (≤6 g total sugar/1 dry oz) and yogurt (≤23 g total sugar/6 oz). This final rule applies the product-based added sugars limits for breakfast cereals and yogurts to the CACFP, effective October 1, 2025; the added sugars limits will replace the current total sugar limits for breakfast cereals and yogurts. This aligns the yogurt and breakfast cereal added sugars limits between the two programs, simplifying program administration for schools that operate both programs and simplifying any necessary product reformulation.

The product-based limits for breakfast cereals and yogurts were supported by food label data collected by USDA in May 2022.[29] These data were used to estimate the proportion of recently available products that could meet the added sugars limits and demonstrated a shift in the proportion of products currently meeting existing CACFP total sugar limits. SNMCS data shows that in SY 2014–2015, only nine percent of served yogurt products met the existing CACFP total sugar yogurt limit and 35 percent of hot and cold cereal products met the CACFP total sugar cereal limit. Based on food label data, about 90 percent of yogurt products and 44 percent of hot and cold cereal products

[24] These costs are school food authority costs as a percentage of reimbursement baselines at this time (not Federal costs).

[28] Three school years when provisions of the rule take effect: SY 2024–2025, SY 2025–2026, and SY 2027–2028.

[29] USDA Food and Nutrition Service, Office of Policy Support data collection of nutrition label information from major cereal and yogurt manufacturer K–12 and food service catalogs.

available during SY 2021–2022 met the existing CACFP total sugar limits.[30] This indicates that in recent years manufacturers were able to make considerable changes in the sugar content of both yogurt and cereal products. The CACFP does not have any flavored milk total sugar limits. This analysis compares the cost of products that met the added sugars limits finalized in this rule to those that did not during SNMCS data collection. Since there is now wider market availability of products with a lower sugar content than there were during SY 2014–2015, it is possible that the actual cost of these changes may be lower than estimated due to a higher number of lower sugar product options.

Breakfast Cereals

The estimated cost of sweetened and unsweetened cold cereals was the same per dry ounce regardless of added sugars content. All hot cereal products met the added sugars limit in SY 2014–2015. While hot cereal is about half the price of cold cereal per dry ounce, it is not widely served; only five percent of menus included hot cereal and an even lower proportion of students consumed hot cereal. The cost of hot cereal per dry ounce also does not account for potentially costly toppings, such as nuts, seeds, or dried fruit. Toppings for hot cereal such as brown sugar or chocolate chips would also contain additional added sugars that are not accounted for in SNMCS data. Because it is unknown whether the proportion of schools serving hot cereal would increase under the final rule and because there is no cost difference among cold cereals based on added sugars content, we expect that this final rule will result in no change in annual cost for breakfast cereals despite the introduction of the added sugars limit. Of those hot and cold cereal products available during data collection in 2022,[31] 50 percent of products available met the added sugars limit of ≤ 6 g added sugars per ounce.

The added sugars limit for breakfast cereals extends to NSLP, SBP, and CACFP. The new 6 grams of added sugars limit for breakfast cereals is similar to the current CACFP limit of 6 grams of total sugars, but focuses on added sugars rather than total sugars, consistent with *Dietary Guidelines* recommendations. Therefore, USDA estimates it will not have a cost impact for CACFP as operators will continue to be able to serve breakfast cereals currently allowed in the program. Alignment of this limit across child nutrition programs may simplify program administration for State agencies and local program operators.

Yogurt

About 1.1 billion portions of yogurt are served annually at school breakfast and lunch combined. During SY 2014–2015, almost all yogurt products exceeded 12 grams of added sugars per 6 ounces. However, of the yogurt products available during SY 2021–2022, 57 percent of yogurt nutrition labels, or approximately 627 million portions, met the added sugars limit finalized in this rule.[32] The recent nutrition label data collection indicates that manufacturers have already made significant changes to yogurt products since the implementation of the CACFP total sugars limit in 2017, but also indicates that there is room for product reformulation in at least 43 percent of currently available products. For this analysis, to more accurately reflect currently available products, USDA used the SY 2021–2022 nutrition label data that indicated 57 percent of yogurt products meet the added sugars limit finalized in this rule.

When school meal cost data were last collected in SY 2014–2015, low-fat and fat-free yogurt products that met the added sugars limit cost $0.05 more than those products that did not meet the limit. On average, yogurt products with more than 12 grams of added sugars per 6-ounce container cost $0.42 and those with 12 grams or less of added sugars cost $0.47. This estimate assumes the cost of yogurt products is the same for CACFP providers, and that, based on program year 2016–2017, CACFP providers served yogurt at snacks and suppers.[33] If the added sugars limit is met in every meal and snack that includes yogurt, 43 percent of yogurt portions served would need to shift to products with fewer added sugars. This would cost an estimated $32 million total for NSLP, SBP, and CACFP, assuming the products that meet the added sugar limit cost $0.05 more per meal (about $0.07 after adjusting for inflation) (table 6).

TABLE 6. ANNUAL COST OF IMPLEMENTING YOGURT ADDED SUGARS LIMIT (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

	100% of yogurt products offered meeting limit			57% of yogurt products meeting limit (based on 2022 data)			Difference in Cost

***DUE TO ROUNDING, SOME TOTALS MAY NOT CORRESPOND WITH THE SUM OF THE SEPARATE FIGURES**

Flavored Milk

This rule establishes a flavored milk added sugars limit of 10 grams of added sugars per 8 fluid ounces or, for flavored milk sold as a competitive food for middle and high schools, 15 grams of added sugars per 12 fluid ounces. As detailed in *Section 3A: Flavored Milk* of the rule preamble, schools may continue to offer fat-free and low-fat milk, flavored and unflavored, to all K–12 students. Effective SY 2025–2026, flavored milk must meet the product-based added sugars limit. In SY 2014–2015, there were no flavored milk products that met the new added sugars limit (≤10 g added sugars/8 fluid ounces); therefore, USDA could not compare the cost of flavored milk products that did and did not meet the added sugars limit. Instead, cost analyses are based on the difference in cost of unflavored and flavored milk, using unflavored milk as a proxy for milk that meets the added sugars limit.

The SY 2014–2015 data indicate that the cost of milk varied by fat content, but not

[30] USDA Food and Nutrition Service, Office of Policy Support internal analysis using collected nutrition label data during the development of the rule. Data were collected on 110 total yogurt products and 191 total cereal products.

[31] USDA Food and Nutrition Service, Office of Policy Support data collection of nutrition label information from major cereal and yogurt manufacturer K–12 and food service catalogs. Data were collected on 191 total cereal products.

[32] USDA Food and Nutrition Service, Office of Policy Support data collection of nutrition label information from major cereal and yogurt manufacturer K–12 and food service catalogs. Data were collected on 110 total yogurt products.

[33] *https://www.fns.usda.gov/cn/study-nutrition-activity-childcare-settings-usdas-cacfp.*

consistently. On average, low-fat, flavored milk cost $0.01 more than low-fat, unflavored milk per carton (8 fluid ounces). However, fat-free, flavored milk cost $0.01 less than fat-free, unflavored milk per carton. Low-fat, flavored milk was the least offered milk variety based on the SNMCS report (table 7). Low-fat, unflavored milk and fat-free, flavored milk were offered on a majority of menus at both breakfast and lunch, whereas fat-free, unflavored milk was offered on about half of menus for both breakfast and lunch.

TABLE 7. PERCENTAGE OF DAILY SBP AND NSLP MENUS THAT OFFERED MILK PRODUCTS IN SY 2014-2015[34]

	SBP	NSLP
LOW-FAT, FLAVORED	6%	7%
LOW-FAT, UNFLAVORED	91%	91%
FAT-FREE, FLAVORED	76%	91%
FAT-FREE, UNFLAVORED	51%	50%

To estimate the cost of serving milk that meets the added sugars limit, the cost of serving 100 percent unflavored milk (low-fat and fat-free), was compared to the estimated cost of all milk served during SY 2014–2015 (table 8). In lieu of data on milk served in school meals that meets the added sugars limit, the cost of unflavored milk is used as a proxy. The cost increase from serving milk with ≤10 grams added sugars per 8 fluid ounces is approximately $76 million annually, assuming the same proportion of servings as SY 2014–2015 menus. In addition to fat-free, unflavored milk costing $0.01 more than fat-free, flavored milk, this cost increase reflects that there was a much higher proportion of fat-free, flavored milk served compared to low-fat flavored milk during that school year.

TABLE 8. ANNUAL COST OF IMPLEMENTING FLAVORED MILK ADDED SUGARS LIMIT (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

	100% unflavored milk (proxy for milk with ≤10 grams added sugars per 8 fluid ounces)		Based on SY 2014-2015 menu proportions		Difference in cost
	# of servings of milk	Cost	# of servings of milk	Cost

FAT-FREE, UNFLAVORED	5,806	$2,149	2,059	$762	$1,387
TOTAL	14,558	$5,336	14.558	$5,261	$76

It is possible that prices of milk types have aligned since SY 2014–2015 and that the annual cost changes from reducing added sugars in flavored milks will be minimal. These estimates use the most recent school food authority-representative data available. During SY 2014–2015, flavored milk products had a mean added sugars content of 12.2 grams (minimum: 10.4 grams, maximum: 17.8 grams). Public comment on proposed rule that preceded the 2022 transitional standards rule[35] from the International Dairy Foods Association and National Milk Producers Federation indicated that the average added sugars content of flavored milk has declined from 16.7 to 7.1 grams in an eight-ounce serving of flavored school milk between SY 2006–2007 and SY 2019–2020. Despite the fact that no flavored milk products served in SY 2014–2015 met the added sugars limit, an internally conducted search of recent K–12 and food service product catalogs containing milk products indicated that there are some flavored milks now available to schools that meet the 10 grams of added sugar per eight fluid ounces limit.[36] At least four manufacturers had at least one flavored milk product with under 10 grams of added sugars per eight fluid ounce serving, and three manufacturers had products with 6 grams of added sugars per eight fluid ounce serving. A total of 10 flavored milk products from

[34] SNMCS Report—Volume 2.

[35] *https://www.regulations.gov/comment/FNS-2020-0038-4702.*

[36] This was not an exhaustive data collection of milk products across the marketplace, simply a fact-finding search.

four companies were below the 10 grams limit. The catalogs used for data collection generally showed that there were lower and higher sugar versions of flavored milk available. However, it is likely that additional product reformulation will be necessary for those manufacturers that have yet to reduce added sugars content of their flavored milk products. More recently, in April 2023, the International Dairy Foods Association announced a commitment to provide flavored milk with no more than 10 grams of added sugars per 8 fluid ounces, consistent with the limit established by this rule. This commitment was made by 37 school milk processors representing more than 90 percent of the school milk volume in the U.S.[37]

Product Limit Total Impact

In total, across all four product categories, we estimate the cost to meet the added sugars limits would be around $107 million per year. This total reflects the cost impacts of cereal, yogurt, and flavored milk products added sugars limits. These estimated annual costs, adjusted for inflation, are shown in table 9.

TABLE 9: ESTIMATED COST OF PRODUCT-SPECIFIC ADDED SUGAR LIMITS (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

PRODUCT TYPE	Estimated Annual Cost
BREAKFAST CEREALS (SBP+CACFP ONLY)	$0
YOGURT	$32
FLAVORED MILK (NSLP+SBP ONLY)	$76
TOTAL*	**$107**

***DUE TO ROUNDING, TOTALS MAY NOT CORRESPOND WITH THE SUM OF THE SEPARATE FIGURES**

Weekly Limit

This rule also finalizes a weekly limit of less than 10 percent of calories per week from added sugars in the school lunch and breakfast programs, effective SY 2027–2028. Considerable menu changes will be required to meet the weekly limit at breakfast. In SY 2014–2015 approximately 11 percent of calories offered at lunch and 17 percent at breakfast were from added sugars.[38] Since there are so many approaches to reduce added sugars across menus, there is not an accurate way to estimate the cost change of reducing all breakfast menus to containing less than 10 percent of calories per week from added sugars. In school breakfasts during SY 2014–2015, fat-free, flavored milk contributed 30 percent of added sugars content, with sweetened cold cereals contributing 13 percent, grain-based desserts contributing 12 percent, and condiments/toppings contributing 12 percent.[39] Schools may find that replacing flavored with unflavored milk is an effective way to begin to approach the weekly limits. Flavored milk in school meals has an average of 12 g of added sugar (minimum 10.4 g and maximum 17.8 g). If all flavored milk products were replaced with unflavored milk products, the percentage of calories from added sugars drops to six percent at lunch and to 13 percent at breakfast.[40] School food authorities could also use a more moderate approach of reducing, but not eliminating, flavored milk offerings at school breakfast; for example, offering unflavored milk varieties only certain days of the school week. Although this approach is not required in this final rule, it would be a simple and effective way to initiate a decrease in the added sugars content of weekly menus. School food authorities may also choose to reduce or eliminate grain-based desserts, sweetened cold cereals, and/or some condiments. This final rule allows schools to more easily offer meats/meat alternates at breakfast by removing the requirement for schools to meet a minimum grains requirement each day at breakfast. Under this provision (see: *Section 6: Meats/Meat Alternates at Breakfast*), schools may offer grains, meats/meat alternates, or a combination of both to meet the combined grains and meats/meat alternates component. Consequently, schools have more flexibility to replace grains that are high in added sugars with meats/meat alternates, such as scrambled eggs, which could help schools to meet the weekly added sugars limit at breakfast upon implementation. In making menu changes, school food authorities will likely choose to balance making the best economic decision for their operations with the need to minimize impacts on student participation and acceptance of new foods. The phased-in approach of this final rule, first with the product specific limits and then with a weekly average limit of added sugars, will help to temper any potential participation changes.

Health Benefits

A major source of added sugars, sugar-sweetened beverages (SSBs), has been studied widely as it relates to health outcomes. The World Health Organization defines SSBs as all beverages containing free sugars, including carbonated or non-carbonated soft drinks, liquid and power concentrates, flavored water, energy and sports drinks, ready-to-drink tea, ready-to-drink coffee, and flavored milk drinks.[41] Flavored milk is the top source of added sugar in school meals, and other SSBs may be sold as competitive foods to high school students under specific competitive food requirements.[42 43] Consumption of SSBs is related to risk of type 2 diabetes (T2D),[44] cardiovascular disease (CVD),[45 46] and chronic kidney disease.[47] Tooth decay and cavities are also associated with increased SSB consumption.[48] Other top sources of added sugars in school meals include sweetened cold cereal and grain-based desserts. If a third of school children met the *Dietary Guidelines* recommendation for

added sugars consumption into adulthood, it could prevent an estimated 12,260 adult deaths related to CVD and cancer and save $6.01 billion in medical costs per year.[49] Gradual reduction in added sugars content to 10 percent of calories per week at school lunch and breakfast will align meals with the goals of the *Dietary Guidelines* and will promote improved lifestyle habits and health outcomes during childhood that can track into adulthood.[50]

Milk

This final rule codifies the proposal to maintain the current regulation allowing all schools the option to offer fat-free and low-fat milk, flavored and unflavored, to K–12 students, and to sell fat-free and low-fat milk, flavored and unflavored, à la carte. No annual change in the cost of milk is expected due to maintaining the transitional milk standards.

Several additional provisions would apply under this requirement. The added sugars requirement for flavored milk, which limits flavored milks to 10 grams of added sugars per 8 fluid ounces, effective SY 2025–2026, applies to milk served in reimbursable school lunches and breakfasts, and to milks sold as a competitive beverage.[51] Consistent with current requirements, this rule would require that unflavored milk be offered at each school meal service. This rule also continues to allow fat-free and low-fat milk, flavored and unflavored, to be offered to participants ages 6 and older in the SMP and CACFP.

Health Benefits

In the transitional standards rule, the decision to allow fat-free, flavored milk and low-fat, flavored milk reflected concerns about declining milk consumption and the importance of the key nutrients provided by milk for school-aged children.[52] However, USDA recognizes that flavored milk is the highest source of added sugars in school meals, which is why the product-specific added sugars limit has been finalized. Under this limit, flavored milk must contain no more than 10 grams of added sugars per 8 fluid ounces of milk. Both flavored milk and unflavored milk contain protein, calcium, potassium, vitamin A, vitamin D, and many more essential nutrients. About 90 percent of the U.S. population does not meet dairy recommendations. Most individuals would benefit by increasing intake of dairy in fat-free or low-fat forms of milk. Calcium, potassium, dietary fiber, and vitamin D are considered dietary components of public health concern for the general U.S. population because low intakes are associated with health concerns.[53] Low-fat dairy was also shown in some evidence to be part of a healthy dietary pattern in children that was associated with lower blood pressure and improved blood lipid levels later in life.[54] These potential health benefits combined with the fact that milk is a nutrient-dense beverage support the continued serving of both fat-free and low-fat flavored and unflavored milk. With flavored milk also meeting added sugar limits, all milk options schools offer will better align with the *Dietary Guidelines for Americans* regardless of student flavor preferences.

Whole Grains

This rule maintains the current requirement that at least 80 percent of the weekly grains offered are whole grain-rich, based on ounce equivalents of grains served in the school lunch and breakfast programs. The definition of whole grain-rich, which is codified in this final rule, reads as follows: *Whole grain-rich is the term designated by FNS to indicate that the grain content of a product is between 50 and 100 percent whole grain with any remaining grains being enriched.* This definition does not change the meaning of whole grain-rich, which has previously been communicated in USDA guidance, but is simply a clarification for school food authorities. The definition is included in NSLP, SBP, and CACFP regulations. There is no cost change expected as a result of these provisions because the requirement that at least 80 percent of weekly grains offered are whole grain-rich is carried forward from the 2022 transitional standards rule.

Health Benefits

The 2022 transitional standards rule required that at least 80 percent of grains offered be whole grain-rich. This was an increase from the 2018 rule which required that at least 50 percent of grains offered be whole grain-rich, in light of the challenges schools were facing in meeting the 2012 rule requirements. Despite these challenges, schools have made considerable progress offering whole grain-rich products. On average, in SY 2014–2015, 70 percent of the weekly menus offered at least 80 percent of the grain items as whole grain-rich for both breakfast and lunch.[55] This rule continues to emphasize the importance of consuming a dietary pattern with grains that are whole grain-rich, but also carries forward manageable, achievable goals.

Prepared NSLP lunches in SY 2014–2015 scored 95 percent of the maximum HEI–2010 whole grains component score, on average, and prepared breakfasts in the SBP scored 92 percent of the maximum.[56] NSLP participants scored the maximum HEI–2010 whole grains component score for lunches consumed on average in SY 2014–2015 and nonparticipants scored only 63 percent of the maximum score, a significant difference. SBP participants scored 98 percent of the maximum HEI–2010 whole grain component score on breakfasts consumed, whereas nonparticipants scored 68 percent of the maximum score.[57] A maximum whole grain component score in the HEI–2010 is achieved with at least 1.5 ounces equivalent of whole grains per 1000 kilocalories of intake, a measure of nutrient density. In SY 2014–2015, school meal programs were matching recommendations from the *Dietary Guidelines* at a high level with regards to whole grains.

Whole grains are considered to be a nutrient dense food, and the Dietary Guidelines recommend making half of your grains whole grains. However, almost all (98 percent) of Americans fall below recommendations for whole grains, while most (74 percent) exceed limits for refined grains, underscoring the importance of school meal requirements that encourage children's consumption of whole grain-rich foods. Throughout the lifespan, consumption of whole grains has also been shown to reduce the risk of type 2 diabetes.[58] Additionally, if children consume whole grains at the level recommended in the *Dietary Guidelines* through to adulthood, it could prevent an estimated 2,940 CVD- and cancer-related deaths and save $6.01 billion in medical costs per year.[59] Whole grains are shown in some evidence to be part of a healthy dietary pattern in children that was associated with lower blood pressure and improved blood lipid levels later in life.[60]

Factors that contribute to increased consumption of whole grains in children include providing a variety of whole grain options, serving whole grains in school programs, and improving appearance of package and product marketing.[61] The documented health benefits of the consumption of whole grain-rich products and strategies to increase whole grain intake in children both support a continued whole grain requirement in school meals.

Sodium

This rule updates the approach to sodium reduction in school meals. Lessons learned from the 2012 rule indicate that smaller, incremental reductions in sodium content may be more achievable given the need for industry to reformulate products and for schools to modify both the products they serve and their preparation methods. Based on these lessons learned and on comments received on the proposed rule, the current sodium limits (implemented in the 2022 transitional standards rule) will be maintained over the next three school years, and a single reduction will be implemented in SY 2027–2028. This final rule sets forth an approximate 15 percent reduction for school lunch and an approximate 10 percent reduction for school breakfast from the current sodium limits. The sodium limits in this rulemaking are informed by the *Dietary Guidelines* and FDA's voluntary sodium reduction goals, which aim to reduce sodium across the U.S. food supply.

To provide context, the previous three sodium targets from the 2012 rule and the targets from the 2022 transitional standards rule are presented below (table 10). The transitional standards rule required schools to meet Sodium Target 1 for school lunch and breakfast, effective SY 2022–2023. For school lunch only, schools were required to meet Sodium Target 1A beginning in SY 2023–2024. This final rule maintains the current limits under Target 1A for lunch and Target 1 for breakfast through the end of SY 2026–2027 and adds new limits that conform to the Target 2 limits from the 2012 rule, effective SY 2027–2028 (table 11).

TABLE 10: THREE 2012 SODIUM TARGETS AND TARGETS FROM THE TRANSITIONAL STANDARDS RULE (MG) FOR CURRENT SCHOOL LUNCH AND SCHOOL BREAKFAST

AGE/GRADE GROUP	NSLP				
	2012 TARGET 1	2012 TARGET 2	2012 TARGET 3	TARGET 1 SY 2022-2023	TARGET 1A SY 2023-2024
K-5	1,230	935	640	1,230	1,110
6-8	1,360	1,035	710	1,360	1,225
9-12	1,420	1,080	740	1,420	1,280
	SBP				
	2012 TARGET 1	2012 TARGET 2	2012 TARGET 3	TARGET 1 SY 2022-2023 AND SY 2023-2024	
K-5	540	485	430	540	
6-8	600	535	470	600	
9-12	640	570	500	640	

TABLE 11: FINAL RULE SODIUM LIMITS (MG) FOR SCHOOL LUNCH AND SCHOOL BREAKFAST

AGE/GRADE GROUP	NSLP	
	Current: In effect through June 30, 2027	Effective July 1, 2027
K-5	< 1,110	≤ 935
6-8	< 1,225	≤ 1,035
9-12	< 1,280	≤ 1,080
	SBP	
K-5	≤ 540	≤ 485
6-8	≤ 600	≤ 535
9-12	≤ 640	≤ 570

The school lunch baseline for this analysis is the menu-served sodium content from SY 2014–2015, in which elementary, middle, and high school lunch menus had sodium content, on average, of 1135 mg, 1235 mg, and 1330 mg, respectively. The school breakfast baseline for this analysis is the menu-served sodium content from SY 2014–2015, in which elementary, middle, and high school breakfast menus had sodium content, on average, of 510 mg, 570 mg, and 580 mg, respectively. This indicates that the majority of schools were already meeting Sodium Target 1 from the 2012 rule for both breakfast and lunch in SY 2014–2015, and almost meeting Sodium Target 1A from the 2022 transitional standards rule for school lunch. More specifically, 72 percent of weekly lunch menus and about 66 percent of weekly breakfast menus were meeting Sodium Target 1 in SY 2014–2015.[62]

[61] Meynier A., Chanson-Rollé A., Riou E., Main Factors Influencing Whole Grain Consumption in Children and Adults—A Narrative Review. Nutrients. 2020;12(8):2217. Published 2020 Jul 25. doi:10.3390/nu12082217.

[62] SNMCS Report Volume 2.

Because this final rule maintains the current sodium limits, no additional costs are expected through the end of SY 2026–2027. In order to simulate the potential increase in costs due to the final rule sodium limits effective SY 2027–2028, we determined whether products served in schools met the FDA short-term voluntary sodium targets.[63] For products that did not meet the FDA voluntary targets, we simulated the change in sodium by capping the sodium amount at the appropriate FDA category voluntary target. This simulation was originally used to estimate the cost of the proposed sodium limits, which was a series of 10 percent reductions over multiple school years. The analysis described in the subsection below ''Analyses Related to Gradual Sodium Reduction'' found that when foods served in school meals met the FDA voluntary sodium reduction targets the overall sodium content of menus decreased by approximately 10 percent. We assume this is true for estimating the cost impact of the final sodium limit. The cost difference was estimated by comparing the cost of a meal with foods that either already meet, or are not subject to, the FDA short-term voluntary targets to the cost of a meal with foods that do not meet, and are being subject to, the FDA short-term voluntary targets and represents the cost difference associated with a 10 percent sodium reduction. The average cost of multiple food group combinations in sample menus was used for both breakfast and lunch to simulate the cost of a variety of menus that might be created and used by school food authorities. This cost difference was used to estimate the total cost for the 10 percent sodium reduction applicable to breakfast in this final rule. For the 15 percent sodium reduction for lunch, the estimated cost difference for a 10 percent reduction was increased by 50 percent to reflect the additional costs associated with the larger sodium reduction.

When comparing higher sodium school meals (those containing more foods being targeted by FDA voluntary sodium guidance) to lower sodium school meals, higher sodium meals were found to be less expensive. Meals from SY 2014–2015 with higher sodium foods were $0.09 cheaper per SBP meal and $0.05 cheaper per NSLP meal than those meals that contained lower sodium products when only considering food costs. Adjusted for inflation, this was a $0.08 difference per meal, on average, for breakfast and lunch. We use those per meal food cost differences, adjusted for inflation, to estimate the food cost of the final rule sodium limits. We include in the total cost impact an added 25 percent labor costs associated with increased scratch cooking, totaling $2 million annually for labor from rule implementation. We assume scratch cooking will only increase about 25 percent since products should already be available that would allow schools to meet the final rule sodium limits (table 12). The approximate cost of implementing the sodium reduction is $118 million, with food costs totaling $94 million annually from rule implementation. The breakdown by meal type of annual total food costs are $27 million for breakfast and $68 million for lunch. Potential equipment costs are detailed in the ''Uncertainties/Limitations'' section below. The existing sodium limits will remain in effect through the end of SY 2026–2027, and there are no costs associated with current limits already in effect.

TABLE 12: ESTIMATED COST OF SODIUM REDUCTION (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

CATEGORY	Estimated Annual Cost Beginning SY 2027-2028
FOOD	$94
LABOR	$24
TOTAL	**$118**

Food and labor costs account for almost all of the costs to produce a meal in a school (about 45 percent for labor and 45 percent for food, on average). The impact analysis of the new sodium limits used the same method to estimate labor costs that was used in the 2022 transitional standards rule RIA. It also assumes a need for increased scratch cooking, staffing changes, and time needed for manufacturer product reformulation. The USDA study, ''Successful Approaches to Reduce Sodium in School Meals,'' found that school districts served more fresh fruits and vegetables to reduce sodium content. This may cause a reduction in food costs if items purchased to prep and serve fresh or to cook from scratch are less expensive; however, these costs may be offset by higher quantities needed or additional foods needed to prepare meals from scratch.

While meeting the 10 percent sodium reduction in breakfast is possible with products already available, the 15 percent reduction for lunch may require some product reformulation or new preparation methods such as scratch-cooking which, in turn, require changes in staffing and equipment. This is supported by the USDA study on ''Successful Approaches to Reduce Sodium in School Meals,''[64] in which schools, Food Service Management Companies, and manufacturers noted similar effects from the original sodium targets in the 2012 rule. Previous studies have shown that many schools have some capacity to conduct scratch-cooking, but that new equipment and more staff may be necessary to achieve recipe reformulation and cooking or baking from scratch.[65] Because data have not been collected since SY 2014–2015, it is possible that further product reformulation and recipe restructuring occurred prior to or during the COVID–19 pandemic. Likewise, it is unclear how much menus changed during the pandemic and what the baseline level of sodium in menus will be for SY 2022–2023 due to a lack of recent data. The USDA study, ''Successful Approaches to Reduce Sodium in School Meals,'' also noted that reducing sodium can be challenging, especially when using pre-packaged products. Schools may no longer purchase high-sodium items, and manufacturers may eliminate certain product lines.[66] However, the FDA's voluntary sodium goals may have already led to the reduced use of high-sodium pre-packaged foods and reformulation of some products, which may help to reduce the transition challenges.

Analyses Related to Gradual Sodium Reduction

A variety of factors may affect the reduction of sodium in school meals, including the short-term FDA sodium voluntary targets, improved sodium component Healthy Eating Index (HEI) scores, an adjustment for actual consumption of meals by students, and palatable reduction over time. Additionally, a comparison to sodium requirements in other organizations and a summary of health benefits of sodium reduction may inform further reduction of sodium content in school meals. These points may be considered alongside the expected additional cost of the final rule sodium limits.

[66] Gordon, E.L., Morrissey, N., Adams, E., Wieczorek, A. Glenn, M.E., Burke, S & Connor, P. (2019). Successful Approaches to Reduce Sodium in School Meals Final Report. Prepared by 2M Research under Contract No. AG–3198–P–15–0040. Alexandria, VA: U.S. Department of Agriculture, Food and Nutrition Service.

The FDA sodium voluntary targets are designed to support a reduction in average daily sodium intake of 12 percent nationwide by targeting products across almost all available food categories containing commercially processed, packaged, and prepared foods.[67] An internal USDA analysis of school foods that met or did not meet the FDA voluntary food guidance used a matching process between categories of food products shown to have been on menus in the SNMCS and the FDA food categories. For products that did not meet the FDA voluntary sodium reduction guidance, the sodium content of these products was capped at the FDA short-term targets across all the potential food categories for the item to simulate reduction in those targeted food groups. This analysis found that when foods served in school meals met the FDA voluntary sodium reduction targets the overall sodium content of menus decreased by approximately 10 percent. Some foods served in school meals, including milk, fresh fruits and vegetables, and fresh cooked meats are not targeted for sodium reduction because most contain naturally occurring sodium. Condiments/accompaniments, breads/grains, combination entrees, some cheeses and a variety of other foods are targeted, leading to an estimated total reduction of 10 percent of menu sodium content. As detailed in the rule preamble, FDA's goals are not intended to focus on food or beverages that contain only naturally occurring sodium, but rather, to focus on items where actionable reductions in sodium are feasible. The sodium limits in this final rule account for naturally occurring sodium levels in foods and beverages in the current food supply. Therefore, foods and beverages containing naturally occurring sodium are not exempt from these sodium limits; rather, the sodium limits in this final rule account for naturally occurring sodium.

This analysis also showed that many products were available in SY 2014–2015 that would meet a 10 percent sodium reduction in breakfasts and lunches if menus are changed to include these products. At lunch, about 70 percent of accompaniments/condiments and combination entrees available already met the FDA voluntary sodium targets. At breakfast, 96 percent of accompaniments and 85 percent of combination entrees met the FDA sodium targets. Replacing condiments and combination entrees served at lunch would require the most effort with regards to sodium reduction through scratch cooking, menu changes, and product reformulation. However, minimal scratch cooking and reformulation is needed to reduce sodium by 10 percent. It is of note that current FDA voluntary targets are short-term and equal to a 10 percent reduction when applied to the NSLP and SBP menus,[68] and this rule finalizes a gradual 15 percent reduction for the NSLP and 10 percent reduction for the SBP.

The benefits of the new sodium limits are best measured with the HEI component scores. While the HEI is usually used to measure nutritional quality for daily dietary intake (ex. 24-hour recalls, food diaries), it can also be used to evaluate the alignment of single meals to the *Dietary Guidelines.* The maximum score for sodium is 10, indicating ≤1.1 grams of sodium per 1,000 calories, and the minimum score available is zero, indicating ≥2.0 grams of sodium per 1,000 calories.[69] A lower score indicates a higher sodium level in foods (higher sodium density), so a score of 10 is best and indicates lower levels of sodium in line with the *Dietary Guidelines.* This formula for scoring the sodium component is the same in the HEI–2010, HEI–2015, and HEI–2020[70] scoring versions.[71] The SNMCS reports[72] use the HEI–2010 version, but because the sodium component score did not change in 2015, HEI scores in tables 13 and 14 could be considered either HEI–2010 or HEI–2015. Intakes between the minimum and maximum levels of sodium are scored proportionately. Tables 13 and 14 show the HEI scores for menus that meet the sodium targets in the transitional standards rule and as finalized in this rule. The scores demonstrate improved consistency with the goals of the *Dietary Guidelines* through a decreased level of sodium density. For lunch, the sodium limit corresponds to an increase of 263 percent in HEI sodium component scores over the five years of implementation for elementary, middle, and high schools, respectively (table 14). Breakfast menu HEI scores were already 10 for the sodium component in SY 2014–2015 (table 13). However, further improvement is necessary to reach sodium intake levels recommended in the 2019 sodium dietary reference intakes (DRIs),[73] which have also been recommended in the *Dietary Guidelines for Americans, 2020–2025.* HEI sodium component scores are a good measure of sodium density, but Dietary Reference Intakes for sodium also provide recommendations for daily sodium intake by age group in the U.S. and Canada.[74] The latest edition of the sodium and potassium DRIs was released in 2019 and also included Chronic Disease Reduction Risk (CDRR) values that are a recommended maximum daily intake level to prevent chronic disease (table 15). Various organizations, including both the USDA through the *Dietary Guidelines* and non-Federal groups[75] [76] have indicated support for usage of these CDRR proportions as the goal for sodium consumption in school meals.

	Elementary	Middle	High
BREAKFAST	340	390	500
LUNCH	510	580	740

School meal consumption data yields differing HEI scores from the menu data presented above. The sodium component HEI scores of consumed lunches in SY 2014–2015 were 4.2 on average for NSLP participants of all age/grade groups and a slightly better score than 4.0 on average for non-participants.[77] NSLP participants had a lunch sodium component score of 4.7, 4.6, and 3.0 for elementary, middle, and high schools, respectively. For breakfast, sodium component HEI scores in SY 2014–2015 were 8.7 on average for SBP participants and 7.9 on average for non-participants across age/grade groups. SBP participants had a breakfast sodium component score of 9.6, 9.0, and 6.7 for elementary, middle, and high schools, respectively.[66] Since both breakfast and lunch consumption data include competitive foods and foods brought from home, it is difficult to compare the menu sodium scores to the scores based on the consumed amount of sodium. Overall lunch HEI–2010 scores (scored out of 100), including all elements of the meal consumed, were 80.1 for NSLP participants and 65.1 for students that were not NSLP participants. Overall breakfast HEI–2010 scores were 66.1 for SBP participants and 58.9 for students that were not SBP participants.[78] While participants of school meal programs have higher meal HEI scores, indicating a higher adherence to the recommendations of the *Dietary Guidelines*,[79] there is room for improvement overall. For sodium, there is especially room for improvement in lunches at all ages and in high school breakfasts. The final rule sodium limits would improve these scores even when accounting for foods consumed that are not part of a reimbursable meal.

[78] SNMCS Report Volume 4.

[79] The HEI–2010 score corresponds to the *Dietary Guidelines for Americans, 2010–2015.*

Other reasons to finalize a single sodium reduction with a longer implementation timeline include palatability and the need for product reformulation. Manufacturers have found that a 10 percent reduction in sodium for individual products is manageable with regards to product reformulation and consumer approval in the past, as well as in internal discussions with USDA.[80] Various studies agree with gradual reduction being manageable for consumers both at an individual and population level.[81 82 83] Additionally, small reductions of sodium (2 to 5 percent) are generally not noticed by consumers.[84] The 15 percent and 10 percent reduction will not affect every single food product equally but will be spread across the lunch and breakfast menus, respectively, at varying levels. For instance, some products may easily be reduced in sodium content by 20 percent, whereas only a 5 percent change may be possible in others. Manufacturers also may have existing lower sodium product lines in their portfolio that they may be able to use without needing to reformulate existing products. Additionally, manufacturers may already be making strides in adjusting products as a result of the short-term FDA voluntary sodium guidance that was released in October 2021, especially with additional updated guidance expected to come out in 2024.

USDA completed a limited search of other food service operations in the U.S. in order to compare their sodium requirements to those finalized in this rule. The CDC Food Service Guidelines for Federal Facilities were designed to be used in Federal, State, and local government facilities, as well as hospitals, health care facilities, colleges and universities, private worksites, stadiums, and recreation centers.[85] This set of guidelines recommends that all meals, defined as an entrée and two sides, contain ≤800 milligrams of sodium. Entrees alone should contain ≤600 milligrams of sodium and all side items alone contain ≤230 milligrams of sodium. Though these guidelines are directed toward adults, it is helpful that beverages are included in these guidelines unlike other available measures since the NSLP and SBP require milk as part of the school food pattern. The U.S. Army Food Program Implementation Guide for Nutrition Standards[86] and the Healthier Campus Initiative Guidelines[87] also advise that lunch and dinner meals should contain ≤800 milligrams of sodium. The National Restaurant Association's Kids Live Well program[88] advises that at least two of the children's meal options served in restaurants should contain ≤700 milligrams of sodium, including at least two different food groups (fruit, vegetable, non/low-fat dairy, meat/meat alternative, and whole grains) and at least one of the two food groups must be a fruit or vegetable. No mention is made in the Kids Live Well program materials if a beverage is included as part of a meal when calculating the total sodium content. An 8-ounce carton of milk contains up to 130 milligrams of sodium, indicating that the lunch sodium limits of 935 milligrams, 1,035 milligrams, and 1,080 milligrams for elementary, middle, and high schools are achievable relative to organization limits when accounting for milk and the full meal pattern requirements.

Health Benefits

The most important reason for sodium reduction in school meals is the health benefits. Closer alignment of school meals with the goals of the *Dietary Guidelines for Americans, 2020–2025* is meant to promote a healthy lifestyle and prevent chronic disease by meeting dietary needs. During SY 2011–2012, U.S. elementary, middle, and high school age school children consumed about 3,050 mg, 3,115 mg, and 3,565 mg of sodium daily, respectively.[89] This exceeds the recommended daily sodium DRI values[90] for school age children; 1,500 mg for age 4 to 8 years, 1,800 mg for age 9 to 13 years, and 2,300 mg for age 14 to 18 years. Sodium DRI values are presented by age group so there is some overlap when comparing to school age groups.

Reducing sodium intake has been shown to reduce blood pressure in children, birth to age 18 years. This was shown in a systematic review conducted in 2015 by the Dietary Guidelines Advisory Committee (DGAC).[91] The 2015 DGAC also conducted an update on the 2013 Institute of Medicine (IOM) (now NASEM) and National Heart, Lung, and Blood Institute (NHLBI) systematic reviews that evaluated the relationship between sodium intake and the risk of cardiovascular disease (CVD). The DGAC found agreement with the NHLBI review, which concluded that ''a reduction in sodium intake by approximately 1,000 mg per day reduces CVD events by about 30 percent'' and that ''higher dietary sodium intake is associated with a greater risk for fatal and nonfatal stroke and CVD.'' The DGAC also found agreement with the IOM review that found that there is evidence to support a positive relationship between higher levels of sodium intake and risk of CVD and is consistent with blood pressure serving as a surrogate indicator of CVD risk.[80] Blood pressure tracks over the life course, meaning that reducing sodium intake and maintaining a healthy blood pressure level in childhood can benefit individuals into adulthood.[92] A recent study suggests that among the three major dietary groups addressed in this rule (sodium, added sugars, and whole grains), children's consumption of sodium at the D*ietary Guidelines, 2020–2025* recommendations into adulthood has the largest potential health and economic impacts. The maintenance of this dietary pattern from school age was associated with 5,580 fewer adult deaths from CVD and cancer and $8.26 billion in reduced healthcare-related costs per year.[93] Evidence is strong to support the conclusion that reduction in sodium intake reduces blood pressure and in turn reduces CVD risk and CVD events. A gradual reduction in sodium content of school meals will likely contribute to an improvement of dietary habits, blood pressure, and CVD risk factors in NSLP and SBP participants that could track into adulthood.

Meats/Meat Alternates at Breakfast

This rule codifies the combined grains and meats/meat alternates meal component at breakfast and removes the requirement for schools to offer 1.0 ounce equivalent of grains each day at breakfast, included from the 2020 proposed rule *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs.* Schools may offer grains, meats/meat alternates, or a combination of both to meet this combined component requirement. The minimum daily requirement (1 ounce equivalent) and minimum weekly requirement (7–9 ounce equivalents, depending on the age/grade group) for this component remain the same. This rule allows for these daily and weekly requirements to be met with grains and/or meat/meat alternates. This provision does not require school food authorities to change their breakfast meal service. Schools should balance this

flexibility while still offering grains to ensure adequate nutrition of school breakfasts. In SY 2014–2015, whole grain-rich offerings in the SBP helped school breakfasts meet the *Dietary Guidelines* recommendations for grains.[94] This change allows school food authorities the flexibility to develop SBP menus that include meats/meat alternates without a requirement to serve a minimum amount of grains. This change is not anticipated to impact program costs, but rather, to provide flexibility for school food authorities to balance resources and meal pattern requirements with student preferences when planning SBP menus.

Substituting Vegetables for Grains in Tribal Communities

Current regulations allow program operators in American Samoa, Puerto Rico, and the U.S. Virgin Islands to serve vegetables such as yams, plantains, or sweet potatoes to meet the grains or breads component. This rule allows school food authorities and schools that are tribally operated, operated by the Bureau of Indian Education, and that serve primarily American Indian or Alaska Native children to serve vegetables to meet the grains requirement in NSLP and SBP. For SFSP and CACFP, this final rule allows sponsors, institutions, and facilities, as applicable, that serve primarily American Indian or Alaska Native children to substitute vegetables for grains or breads. This rule also allows all program operators in Guam and Hawaii to substitute vegetables for grains or breads in NSLP, SBP, SFSP, and CACFP. This final rule clarifies that under this provision, any vegetable may substitute for the grains or bread component. However, USDA emphasizes the importance of traditional and culturally relevant vegetables, including traditional vegetables such as breadfruit and prairie turnips, for grains.

USDA has limited data regarding consumption of these foods in the SBP and NSLP and the cost of these specific foods to schools serving American Indian and/or Alaska Native children specifically. However, SNMCS data from SY 2014–2015 indicate that starchy vegetables, including potatoes, and red/orange vegetables such as sweet potatoes, cost $0.18 per portion on average and bread/grain items also cost $0.18 per portion on average. Based on this data we expect this provision will lead to minimal, if any, cost change per meal. Further, program operators would not be required to make any changes to their menus under this rule and may continue to serve grain items to meet the grains component requirement if that is most cost-effective.

Traditional Indigenous Foods

This rule states in regulation that traditional Indigenous foods may be served in reimbursable school meals. USDA acknowledges that many traditional Indigenous foods may already be served in school meal programs; the goal of this provision is to draw attention to this option and support efforts to incorporate these foods into school meals. By ''traditional food,'' USDA means the definition included in the Agriculture Improvement Act of 2014[95] which defines traditional food as ''food that has traditionally been prepared and consumed by an American Indian tribe,'' which includes wild game meat, fish, seafood, marine mammals, plants, and berries.

Due to limited data regarding the consumption and cost of traditional Indigenous foods in the SBP and NSLP, no cost analysis can be done to predict how this provision would affect child nutrition programs. Traditional Indigenous foods may be served in school meals under existing guidance, and this provision encourages rather than requires schools to serve traditional Indigenous foods, so it is expected to result in a negligible annual cost change for food service operations.

Afterschool Snacks

USDA aligns NSLP snack requirements for school-aged children with the CACFP snack requirements in this final rule, effective SY 2025–2026. NSLP requirements for snacks served to infants and preschool-aged children remain in effect. For school-aged children, under this final rule, reimbursable snacks include two of the following five components: milk, vegetables, fruits, grains, and meats/meat alternates. USDA also requires that NSLP snacks adapt these existing CACFP snack requirements: (1) only one of the two components served at snack may be a beverage; (2) milk served to children age 6 and older must be fat-free or low-fat and may be flavored or unflavored; (3) grain-based desserts do not count toward meeting the grains requirement, and (4) foods that are deep-fat fried on-site are not reimbursable NSLP snacks. Additionally, the added sugars product limits for breakfast cereals and yogurt finalized in this rule apply to NSLP snacks, effective SY 2025–2026. The component options for afterschool snacks are the same categories as previously, aside from fruits and vegetables now being separate components.

The number of afterschool snacks served represents four percent of the number of lunches served, based on 2023 data.[96] Of those snacks served, over 80 percent were breads/grains, fruits, and milk. SNMCS data from SY 2014–2015 indicate that under half of snack items served were beverages. Milk served was already meeting the final rule requirement to be fat-free or low-fat, flavored or unflavored. Combination entrees were not considered in this analysis because they are very rarely served as snacks.

This provision will require schools to replace grain-based desserts with other grains and to limit breakfast cereals and yogurts to those that meet the product-based added sugars limits, upon implementation. Cereal costs the same per dry ounce regardless of added sugars content, so there would be no cost change. In SY 2014–2015, grain-based desserts made up 14 percent of items served at snacks, and about half of the grain items in snacks were grain-based desserts. On average, grain-based desserts cost $0.35 per ounce equivalent and other grain items cost $0.19 per ounce equivalent, about a $0.22 difference after adjusting for inflation. Switching those to grains/breads that are not grain-based desserts would save approximately $9.4 million. Since yogurt was not as widely served as a snack item, the cost of switching to yogurt products with no more than 12 grams of added sugars per 6 ounces—an increase of $0.05 per portion—is under half a million dollars. In total, the final rule that aligns NSLP snack requirements with CACFP snack requirements is estimated to save around $9 million on average (table 16).

TABLE 16: ESTIMATED COST OF AFTERSCHOOL SNACKS RULE BY EACH AFFECTED PRODUCT (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

PRODUCT TYPE	Estimated Annual Cost
GRAIN-BASED DESSERTS	-$9.4
BREAKFAST CEREALS	$0
YOGURT	$0.3
TOTAL	**-$9.1**

[94] U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *School Nutrition and Meal Cost Study, Final Report Volume 2: Nutritional Characteristics of School Meals* Project Officer: John Endahl. [95] Agriculture Improvement Act of 2014, as amended (25 U.S.C. 1685(b)(5)).

[96] USDA—Food and Nutrition Service National Database Publicly Available Data.

Substituting Vegetables for Fruits at Breakfast

This rule establishes that schools can continue to substitute vegetables for fruits at breakfasts but simplifies the vegetable variety requirement. Under this final rule, schools that substitute vegetables more than one day per school week will be required to offer vegetables from at least two subgroups. The vegetable subgroups include starchy; red and orange; dark green; beans, peas, and lentils; and ''other'' vegetables. Starchy vegetables are consumed at a higher rate in children and adolescents compared to the other vegetable subgroups, so this provision continues to encourage consumption of a variety of vegetables at breakfast, in cases where schools opt to substitute vegetables for fruit.

SNMCS data from SY 2014–2015 showed that only about three percent of fruits were substituted for vegetables at breakfast. Of the servings of vegetables substituted for fruits in SY 2014–2015, half were starchy, and the other half were primarily red and orange vegetables. USDA expects more vegetables to be offered in breakfast meals in order to meet the required reduction in added sugars. This may lead to vegetables being offered alongside servings of eggs or in breakfast burritos, for example. However, it is also expected that fruits will be served in most breakfasts since fruits are easy to incorporate in meals and menus, and fresh fruits contain no added sugars, only naturally occurring sugars. Depending on the local prices, school food authorities will decide the most cost-effective menus for their operations, but this provision continues to promote vegetable variety at breakfast.

TABLE 17: ESTIMATED ANNUAL COST OF SUBSTITUTING VEGETABLES FOR FRUITS AT BREAKFAST (MILLIONS), ADJUSTED FOR ESTIMATED INFLATION TO SY 2024-2025

PRODUCT TYPE	10% OF FRUIT SERVINGS SWITCHED TO VEGETABLES	25% OF FRUIT SERVINGS SWITCHED TO VEGETABLES
# OF TOTAL FRUIT SERVINGS	1,705	1,705
# OF FRUIT SERVINGS TO SWITCH	170	426
COST	-$4	-$10

An internal USDA analysis simulated switching between 10 and 25 percent of fruit servings at breakfast to vegetables. This simulation assumed that half of the vegetables would be starchy vegetables and the other half would be non-starchy vegetable subgroups (red and orange; dark green; beans, peas, and lentils, and ''other'' vegetables), following the pattern of substitution shown in SNMCS. In SY 2014–2015, starchy vegetables served at breakfast and lunch cost approximately $0.18 per portion, and all other vegetables served cost approximately $0.20 per portion, on average. Fruits served at breakfast were $0.21 per portion, on average. Using these prices per portion and the number of breakfasts served in 2023, there would be a savings ranging from $4 million to $10 million resulting from a substitution of 10 to 25 percent of fruit servings with vegetable servings (table 17).

Nuts and Seeds

This rule allows nuts and seeds to credit for the full meats/meat alternates component in all child nutrition programs and meals. It removes the 50 percent crediting limit for nuts and seeds at breakfast, lunch, and supper. USDA expects that nuts and seeds will most often continue to be offered in snacks or in small amounts at breakfast, lunch, or supper alongside other meats/meat alternates. Nuts and seeds are most often offered in school meals in the form of a nut butter (or nut butter alternative, such as soy or sunflower seed butter) in a sandwich.

About 17 percent of daily lunch menus in SY 2014–2015 offered ''other protein items'' in the form of eggs, seeds, nuts, beans, and peas.[97] Of combination entrees served in the NSLP, about six percent were peanut butter and jelly sandwiches,[98] including variations with sunflower seed butter and almond butter.[99] Nuts, seeds, or nut/seed butters represented less than one percent of meat and meat alternate food items offered on NSLP menus [100] Very few instances of serving whole nuts and seeds were found in this analysis at either breakfast or lunch. Because USDA expects that nuts and seeds will be minimally offered as the sole meat/meat alternate at a meal and because this change may take shape in a variety of combinations across menus, this element of the rule is not expected to result in a measurable per-meal cost change. The saturated fat content of school meals must be less than ten percent of total calories per week and replacing some lean sources of meat with nuts or seeds may result in higher saturated fat content of meals. When creating menus, operators must be aware of the saturated fat content of meals if offering more nuts and seeds. Operators who serve combination entrees using nut butters (*e.g.,* peanut butter and jelly sandwich) will also need to consider requirements related to whole grains, although SY 2014–2015 data indicate that over 85 percent of peanut butter and jelly served were prepared using whole grain-rich bread.

Beans, Peas, and Lentils at Lunch

This final rule codifies the flexibility to allow school food authorities to count beans, peas, and lentils offered as a meat alternate at lunch toward the weekly beans, peas, and lentils vegetable subgroup requirement, included from the 2020 proposed rule *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs.* Under this option, as with the current requirement, schools would determine which overall meal component the beans, peas, and lentils would count toward: the vegetable meal component, or the meats/meat alternates meal component. This change aims to facilitate service of the legumes subgroup; compared to other vegetable subgroups, the legumes subgroup requirement has proven to be more difficult for some school food authorities to meet.

Legumes are often an ingredient in combination entrées. Such entrées are common in lunch menus, especially in high schools where about 25 percent of daily menus include burritos, tacos, nachos, quesadillas, fajitas, or enchiladas.[101] Children benefit from the array of essential nutrients legumes offer, including protein and fiber, regardless of whether legumes are labeled as a vegetable or meat alternate for menu planning purposes. The daily and weekly menus must still meet minimum quantity requirements for vegetables, which are unchanged. This flexibility will not result in a reduction in total calories or vegetables served, but rather allows school food authorities the ability to develop menus that better reflect student preferences. The daily and weekly meat/meat alternate quantities are also unchanged. There are negligible impacts to program costs associated with this flexibility.

Competitive Foods—Bean Dip Exemption

In this final rule, USDA is revising the terminology for this provision based on public comment. Instead of referring to ''hummus'' in regulation, this final rule will refer to ''bean dip,'' which includes hummus. This change reflects input received through a public comment, which noted that the word ''hummus'' already has a culturally significant meaning and is traditionally made from chickpeas (rather than any variety of beans, peas, or lentils). This rule adds bean dip to the list of foods exempt from the total fat standard in the competitive food, or Smart Snack, regulations. Smart Snacks are foods that are sold to students outside of the school meal programs, such as foods sold a la carte, in school stores, in vending machines, or in any other venues where food is served to students during school hours. Bean dip is already permitted as a part of a reimbursable school meal but with this change could also be sold as a Smart Snack. A specific definition of bean dip is also given as part of this provision. Bean dip will still be subject to the saturated fat standard, which limits competitive foods to less than 10 percent of calories from saturated fat per item as packaged or served and the sodium standard in which snacks must be 200 mg of sodium or less and entrees must be 480 mg of sodium or less.[102]

USDA does not collect or track competitive food sales, so it is unclear the exact cost change to school food authorities that will result from this provision. A served portion of bean dip was comparable in price to a served portion of regular or reduced-fat peanut butter according to SNMCS data. Peanut butter and bean dip are comparable in that they are served as part of a snack alongside another food (*i.e.* pretzels, bread, vegetables, apple slices, etc.). As a result, USDA expects a minimal cost change for school food authorities that choose to sell bean dip as a competitive food due to this provision. Individual schools often sell competitive foods to complement reimbursable foods and maintain a revenue-neutral operation; therefore, USDA assumes that schools will opt to sell bean dip as a competitive food if they determine it is financially beneficial. When data were collected in SY 2014–2015, bean dip was served minimally in the NSLP, but it is likely the popularity of bean dip among students has increased since that time, so allowing an additional option for schools could be beneficial to schools.

Meal Modifications

This rule updates the regulatory text for meal modifications, removes the term ''medical or other special dietary needs'' from the regulations, authorizes State licensed healthcare professionals and dietitians to write a medical statement in support of a meal modification for a disability, and defines the term ''State licensed healthcare professional'' in regulation. These changes are not expected to impact program costs, but rather, clarify procedures for State agencies, schools, institutions, and facilities working to meet the needs of participants with disabilities that restrict their diets. This provision was included in the 2020 proposed rule *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs.*

Clarification of Requirements for Potable Water

This final rule maintains the requirement that schools make potable water available and accessible without restriction to children at no charge during the meal service, and clarifies in regulation that the potable water must be ''plain.'' This is a change from the 2020 proposed rule, where this provision was introduced, *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs,* which would have allowed schools to offer calorie-free, naturally flavored, noncarbonated water to meet the potable water requirement, without requiring that plain potable water be offered. This change from the proposed rule was made in response to public comments that emphasized the importance of ensuring children have access to plain potable water. This change is not expected to increase costs, as schools will be in compliance with the potable water requirement by continuing to offer plain potable water.

Synthetic Trans Fat

This final rule change eliminates the requirement for SBP, NSLP, and competitive foods to have zero synthetic trans fat.[103] FDA regulations removed synthetic trans fat from the United States food supply, with a final compliance date of January 1, 2020, and thus, the requirement to monitor synthetic trans fat in the school meal programs is unnecessary. This final rule eliminates regulations that are not necessary since synthetic trans fat is no longer in the food supply. This change will align Program regulations with the food supply standards. There are no impacts to program costs associated with this change. This provision was included in the 2020 proposed rule *Simplifying Meal Service and Monitoring Requirements in the National School Lunch and School Breakfast Programs*.

Professional Standards: Hiring Exemption for Medium and Large Local Educational Agencies

USDA codifies allowing State agency discretion in the hiring of a school nutrition program director in a medium or large local educational agency for individuals who have 10 years or more of school nutrition program experience but who lack a bachelor's or associate's degree. In other words, this provision allows for a substitution of experience for education to widen the potential applicant pool for school nutrition program director positions. A high school diploma or GED is still required, but this shift may help with hiring challenges experienced in recent years. Instead of education being the only path to promotion, substantial experience can be an alternative path. Directors hired under this provision are encouraged to work toward a degree related to nutrition and/or business, but this is not required. This rule also clarifies in regulation that State agencies may determine what counts as ''additional educational experience'' for the hiring standards.

This provision is estimated to have no cost impact. Codifying this standard allows State agencies more discretion in hiring selection, but States are not required to change current practices. It is unclear exactly how many school food authorities this will affect and how many individuals have 10 years or more of experience and could be promoted to director positions. However, USDA has recently received requests from State agencies to substitute school nutrition program experience for a higher degree in order to fill existing vacancies. Also, in response to USDA's 2018 professional standards proposed rule,[104] USDA received 13 comments (out of 76 total comments) that mentioned alternatives to the education requirement. Of those, 9 specifically recommended experience as a substitute for a degree, with 10 years of experience being the most common suggestion. Data will be collected by USDA between SY 2024–2025 and SY 2029–2030 to support ongoing assessment of the effects of this rule change. In 2017, around 8.3 million U.S. workers (5.4 percent) were employed in food preparation and serving-related occupations.[105] Employment in this category is beginning to recover from COVID-era challenges that began in 2020. Of the food service managers across the U.S. in 2019 and 2021, 9.6 percent had less than a high school diploma, 28.6 percent had a high school diploma or equivalent, and 25.7 percent had some college but no degree.[106] Thirty-six percent of food service managers had an associate's degree or higher level of education. For school food authority directors specifically, a recent USDA study indicated that 12 percent of school food authority directors had advanced degrees, 29 percent had bachelor's degrees, 13 percent had associate's degrees, 20 percent had some college but no degree, and 26 percent had high school diplomas.[107] The study also found that directors at larger school food authorities had higher levels of educational attainment. Comparing school food authority directors to food service managers across the U.S., school food authority directors have a higher level of education on average than food service

[102] *https://fns-prod.azureedge.us/sites/default/files/resource-files/smartsnacks.pdf.*

[103] This restriction does not apply to naturally occurring trans fats, which are present in meat and dairy products.

[105] *https://www.census.gov/library/stories/2022/07/how-food-service-transportation-workers-fared-before-pandemic.html.*

[106] *https://www.bls.gov/emp/tables/educational-attainment.htm.*

[107] Urban location and low poverty level of the SFA were also correlated with higher educational attainment among SFA directors. USDA, FNS, Office of Policy Support, School Nutrition and Meal Cost Study, Final Report Volume 1: School Meal Program Operations and School Nutrition Environments, prepared by Mathematica Policy Research and Abt Associates, April 2019, pp. 34–35, *https://fns-prod.azureedge.net/sites/default/files/resource-files/SNMCSVolume1.pdf.*

managers, yet about 46 percent of school food authority directors have no degree. As a result, it is likely that a substantial percentage of operations could benefit from the ability to promote based on experience rather than education level.

Buy American

This final rule seeks to strengthen the Buy American requirement but also acknowledges that purchasing domestic food products is not always feasible for schools. USDA maintains the current two limited exceptions to the Buy American provision and will also phase in a new threshold limit for school food authorities using these exceptions. The two exceptions apply when: (1) the product is not produced or manufactured in the U.S. in sufficient and reasonably available quantities of a satisfactory quality; or (2) competitive bids reveal that the costs of a U.S. product are significantly higher than the non-domestic product. Consistent with current USDA guidance, this final rule clarifies in regulation that it is the responsibility of the school food authority to determine whether an exception applies.

With this final rule, USDA institutes a phased approach over seven school years to reach a 5 percent ceiling on the non-domestic commercial foods a school food authority may purchase per school year. The phased approach would be the following:

- Beginning in SY 2025–2026, the non-domestic food cost cap will be 10 percent.
- Beginning in SY 2028–2029, the non-domestic food cost cap will be 8 percent.
- Beginning in SY 2031–2032, the non-domestic food cost cap will be 5 percent.

School food authorities will be required to maintain documentation regarding use of an exception as well as to demonstrate that the percent non-domestic food costs of total commercial foods purchased per year are not more than the cap for that school year. Beginning in SY 2031–2032, the documentation must demonstrate that exceptions were used for no more than 5 percent of total commercial foods purchased per year. In addition, in response to public comment, USDA is including that when a school food authority purchases a food item found on the Federal Acquisition Regulations (FAR) 25.104 Nonavailable articles list, no further documentation is required, upon implementation of this final rule. There still may be individual school food authorities that cannot meet the threshold. USDA will work in concert with State agencies during implementation to provide needed technical assistance and guidance, and if, appropriate, an accommodation for temporary relief from the requirement as the State agency works with the school food authority on increasing their domestic purchases.

This rule will codify the requirement to maintain documentation for an exception, while decreasing the amount of required documentation compared to current practices. To supplement this documentation, USDA will continue to collect information and data on the Buy American provision and school food authority procurement. This final rule will require all school food authorities to include the Buy American provision in documented procurement procedures, solicitations, contracts for foods and food products procured using informal and formal procurement methods, and in awarded contracts. State agencies will verify the inclusion of this language when conducting reviews. Additionally, this final rule codifies a definition of ''substantially,'' as well as a clarification of requirements for harvested, farmed, and wild caught fish.

The Food and Nutrition Service Child Nutrition Program Operations Study [108] collected data on Buy American exceptions during SY 2017–2018. This study found that an average of 8.5 percent of total food expenditures were purchased under exceptions among school food authorities that used an exception to the Buy American provision. During SY 2017–2018, 25.7 percent of school food authorities used an exception to the Buy American provision. Based on this data, it is likely that the majority of school food authorities already meet the final rule ceiling on the non-domestic commercial foods a school food authority may purchase per school year. Around a quarter of school food authorities may need to decrease their purchase of non-domestic commercial foods to reach the 5 percent limit starting in SY 2031–2032. Among the school food authorities using an exception to the provision, the reasons cited included: limited supply of the commodity or product (88 percent), increased costs of domestic commodities or products (43 percent), and quality issues with available domestic commodities or products (21 percent). The exceptions to the Buy American provision will help school food authorities control costs of purchasing domestic food products despite the eventual 5 percent ceiling.

TABLE 18: USE OF EXCEPTIONS BY SCHOOL FOOD AUTHORITY CHARACTERISTICS

SCHOOL FOOD AUTHORITY CHARACTERISTIC	Foods purchased with Buy American exceptions (%)
SMALL (1-999 STUDENTS)	9.5
MEDIUM (1,000-4999 STUDENTS)	8.1
LARGE (5,000-24,999 STUDENTS)	7.5
VERY LARGE (>25,000 STUDENTS)	7.5
IN TOWNS	12.7
RURAL	8.0
URBAN AREA/CITY	7.9
IN SUBURBS	6.5
HIGH F/RP PARTICIPATION (0-29%)	10.9
LOW F/RP PARTICIPATION (≥60%)	10.4
MEDIUM F/RP PARTICIPATION (30-59%)	5.9

Some school food authorities will be more affected by the final rule Buy American provision than others (table 18). School food authorities that are small, located in towns, and that had either a low or high percentage of students approved for free and reduced-price meals used exceptions for more than the 8.5 percent average of food expenditures. School food authorities falling in these groups may have the most difficulty meeting the Buy American provision finalized in this final rule. Larger school food authorities

[108] Child Nutrition Program Operations Study (CN–OPS–II) Report: School Year 2017–2018. *https://fns-prod.azureedge.us/sites/default/files/resource-files/CNOPS-II-SY2017-18.pdf.*

(>999 students), those in suburban, city or rural environments, and those that have 30 to 59 percent of students approved for free and reduced-price meals are already closer to the final rule limit of 5 percent and may have less difficulty complying with the change.

For the 26 percent of school food authorities that used an exception to the Buy American provision during SY 2017–2018, USDA expects they will incur some costs associated with the need to update menus and/or update purchasing practices to meet the five percent ceiling. These costs are included in the regulatory familiarization cost totals that are detailed in the ''Administrative Costs'' section above. Using SY 2009–2010 total food expenditure data from the School Food Purchase Study, we estimated the difference in food costs needed to reach the 5 percent threshold for the 26 percent of school food authorities that used exceptions in SY 2017–2018. Of those school food authorities that used an exception, 43 percent sought exemptions based on cost. The majority of those school food authorities (70 percent) used a cost threshold of 30 percent or less when determining whether a cost is significantly higher for a domestic commodity or product, warranting a use of exception. Therefore, we assume that, on average, the cost of purchasing domestic products will be 15 percent higher for those affected purchases.

Based on the assumption that domestic products cost 15 percent more on average, food cost impacts vary by each phase over seven school years (table 19). Beginning in SY 2025–2026, school food authorities may use exceptions to purchase non-domestic foods for 10 percent of total food cost expenditures. This is estimated to have negligible annual cost impact due to a 10 percent ceiling being higher than the 8.5 percent average among school food authorities using exceptions. However, some school food authorities such as those in towns (table 18) may need to make an incremental shift in food purchasing to meet the 10 percent limit, or the State agency may seek an accommodation for temporary relief from the requirement if the school food authority needs additional support. In SY 2028–2029, the next phase of the Buy American provision is an 8 percent ceiling that is estimated to have a food cost impact of $0.40 million annually. We estimate a nearly $3 million annual total food cost increase once the phased in non-domestic foods ceiling reaches 5 percent in SY 2031–2032. Based on the data mentioned in the previous paragraph, the proposed rule estimated that 43 percent of the cost difference of using exemptions for 5 percent of food purchases instead of the 8.5 percent average is approximately $20 million. A 15 percent increase in that cost equals approximately $3 million. Proportionately, the cost of moving from the 8.5 percent average to 8 percent in SY 2028–2029 would have a food cost of approximately $0.40 million annually. In SY 2031–2032 and beyond when the ceiling reaches 5 percent we estimate a $3 million annual total food cost increase.

Additionally, USDA estimates that the final rule record keeping requirement to include that school food authorities maintain documentation when using an exception and that school food authorities include language requiring Buy American in all procurement procedures, solicitations, and contracts and maintain such documentation. While the PRA section of this rule includes burden estimates associated with including and maintaining language requiring Buy American in all contracting documents and procurement procedures, USDA has promoted this as a best practice for years. Based on this longstanding guidance and public comments to the proposed rule that this is already in practice to some extent, USDA estimates half of school food authorities will develop and maintain changes to contracting documentation record each year, and that it takes approximately 20 hours NSLP and 10 hours for SBP [109] to complete the record keeping requirement for each set of contracting and procurement documents. This results in a total of 270,535 burden hours. When using the latest hourly compensation of public administration in state and local government from 2022 of $54.05,[110] the cost of this requirement is $15 million in SY 2024–2025. For those school food authorities that are not already including this information in their procurement documents, we expect this is a one-time change that will be in place by SY 2025–2026 and annual maintenance will happen as part of their normal administrative processes.

For documenting exceptions to the non-domestic food purchase cap, USDA estimates all school food authorities (18,495 total) will develop and maintain 10 records each year per NSLP and SBP, and that it takes approximately 15 minutes [111] to complete the record keeping requirement for each record documenting an exception. This results in a total of 89,030 annual burden hours. The additional cost of this reporting requirement is nearly $5 million annually. In total, USDA estimates that the final rule Buy American provision will cost $15 million leading up to SY 2025–2026 and approximately $5 million to $8 million annually starting in SY 2025–2026 with both food costs and record keeping included (table 19). USDA acknowledges that the estimated cost of this provision will add to school food authority costs, potentially reducing funds for other areas of spending. However, it will be at school food authority discretion how funds are shifted to meet the threshold for non-domestic foods. USDA does not anticipate that this provision will have any effect on the ability of school food authorities to meet school meal nutrition requirements.

Table 19: Estimated Annual Cost (millions) of Buy American Provision Phases by Implementation Year, Adjusted for Estimated inflation to SY 2024-2025

% CAP	NA	10%	8%	5%
CATEGORY	**SY 2024-2025**	**SY 2025-2026**	**SY 2028-2029**	**SY 2031-2032**
Food Costs	$0	$0	$0.40	$2.8
Record keeping[112]	$15	$4.8	$4.8	$4.8
Total	**$15**	**$4.8**	**$5.2**	$7.6

Geographic Preference

In this rulemaking USDA is expanding geographic preference options by allowing locally grown, raised, or caught as procurement specifications (a written description of the product, or service that the vendor must meet to be considered responsive and responsible) for unprocessed or minimally processed food items in the child nutrition programs. This is intended to increase the procurement of local foods and ease procurement challenges for operators interested in sourcing food from local producers. USDA requested public input on whether respondents agree that this provision would ease procurement challenges for child nutrition program operators or if it would encourage smaller-scale producers to submit bids to sell foods to child nutrition programs. No specific cost impact is being estimated for this provision

[109] As explained in the PRA (Paperwork Reduction Act program).

[110] Using the U.S. Bureau of Labor Statistics series ID of CMU3019200000000D of total compensation cost per hour worked for state and local government workers in public administration industries (*https://data.bls.gov/cgi-bin/dsrv*).

[111] See final rule Paperwork Reduction Act (PRA) burden charts.

[112] Record keeping costs are total annual estimates for the final Buy American provision, not estimates per phase of implemented cap. No inflation adjustment was completed for record keeping costs since they are not food costs or based on a factor of food costs.

since USDA does not have any applicable data, but USDA assumes that this option will be used at school food authority discretion depending on individual school budgets, the availability of local products, and other school and region-specific factors. USDA research found that among school food authorities participating in Farm to School, 85 percent served at least some local foods, and about 20 percent of participating school food authorities' total food spending was on local foods in School Year 2018–2019. In this same period, one-fifth of participating school food authorities used geographic preference in its current form to prioritize local foods in the bid or proposal evaluation process.[113] Therefore, the expansion of geographic preference options may facilitate increased local food purchases by school food authorities at their discretion.

Miscellaneous Changes

This section establishes a variety of miscellaneous changes and updates to child nutrition program regulations, including terminology changes, from the 2023 proposed rule. For the ''legumes (beans and peas)'' vegetable subgroup, this rule changes the name to ''beans, peas, and lentils'' to reflect the *Dietary Guidelines, 2020–2025.* As noted in the rule preamble, the rule also finalizes a variety of technical corrections, including correcting cross-references, updating definitions, removing outdated requirements, and revisions to the meal pattern tables to make them more user-friendly.

Summary

As noted above, this rule was developed in order to align school nutrition requirements more closely with the goals of the *Dietary Guidelines for Americans, 2020–2025* and to support the continued transition to long-term requirements after the pandemic and implementation of the transitional standards rule. Most of the impacts associated with this rule are in the form of shifts in purchasing patterns and increased labor costs. Costs in this section are uncertain (and thus estimates should be considered as somewhat imprecise) but reflect the potential value of the changes in this rule that States and local entities may need to account for. There are no estimated changes in Federal costs due to the changes in this final rule.

TABLE 20: ESTIMATED ANNUAL COSTS IN MOVING FROM TRANSITIONAL STANDARDS RULE TO THIS RULE BEGINNING BY SCHOOL YEAR (MILLIONS), ADJUSTED FOR ANNUAL INFLATION[114,115]

YEAR OF IMPLEMENTATION	SY 2024-2025	SY 2025-2026	SY 2026-2027	SY 2027-2028	SY 2028-2029	SY 2029-2030	SY 2030-2031	SY 2031-2032	Total	Annual Average[116]
ADMINISTRATIVE COSTS[117]	$42	$43	$0	$44	$0	$0	$0	$0	$129	$16
ADDED SUGARS	$0	$112	$116	$121	$125	$131	$136	$141	$881	$110
MILK	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
SODIUM	$0	$0	$0	$128	$133	$138	$144	$149	$691	$86
AFTERSCHOOL SNACKS	$0	-$9	-$9	-$10	-$10	-$11	-$11	-$12	-$72	-$9
SUBSTITUTING VEGETABLES FOR FRUITS AT BREAKFAST	-$4	-$4	-$4	-$5	-$5	-$5	-$5	-$5	-$37	-$5
BUY AMERICAN[118]	$15	$5	$5	$5	$5	$5	$5	$8	$52	$7
TOTAL	$53	$146	$107	$283	$248	$258	$268	$281	**$1,645**	**$206**
TOTAL PER MEAL	**$0.008**	**$0.023**	**$0.017**	**$0.045**	**$0.040**	**$0.041**	**$0.043**	**$0.045**	**NA**	**$0.033**

The estimated cost to schools averages $206 million annually over eight school years, or $0.03 per lunch and breakfast in food and labor costs (table 20). The majority of costs associated with this rule are a result of purchasing different products with less sodium and the additional labor needed to increase scratch cooking, update menus, and introduce new recipes to reduce sodium. The estimated cost of shifting to the product specific added sugars limits and substituting vegetables for fruits is based on switching to products already available on the market; costs to schools may vary if manufacturers alter products or create new products to meet the added sugars regulations. However, we estimate cost savings to update the requirements for afterschool snacks related to food prices to meet the breakfast cereal and yogurt product-based added sugars limits. The costs associated with Buy American are due to additional food costs and additional burden hours for documentation. All estimates from this rule, intending to implement achievable requirements in alignment with the goals of the *Dietary Guidelines,* are supported by a variety of analyses of the most recently available data.

VI. Uncertainties/Limitations

Many assumptions were made in this analysis of this rule's impacts, and the resulting uncertainties and limitations must be acknowledged. Some general limitations are noted first, followed by limitations specific to sections and then a discussion of the uncertainty of school meal program participation levels going forward. Some of these uncertainties and limitations result from this rule being written directly after extended use of COVID–19 meal pattern waivers, in which assumptions must be made about future participation in school meal programs, and others result from unknown future food and labor price trajectories.

General

Due to the pandemic, the next edition of the School Nutrition Meal Cost Study (II) was delayed, thus leaving the SY 2014–2015 data from the first version of that study as the most recent data that could be used for this analysis. Product availability and costs have likely changed from SY 2014–2015 and will continue to change through the implementation date of this rule (SY 2024–2025, although required changes will be phased in over time). Because the transitional standards rule went into effect recently, it is unclear how well schools will adapt to the updated requirements in this rule. A lack of recent data on school staffing levels and impacts of the pandemic in all aspects of school foodservice make it challenging to estimate changes in staffing cost, especially as it affects changes in the need for scratch cooking and professional standards final regulations.

USDA acknowledges that the data used to evaluate cost, although the most recent available data, is relatively old. One remedy has been to adjust for inflation from SY 2014–2015 to the years of implementation prescribed in this rule. However, as noted throughout the analysis, it is possible that

[113] Bobronnikov, E. et al. (2021). Farm to School Grantee Report. Prepared by Abt Associates, Contract No. AG–3198–B–16–0015. Alexandria, VA: U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, Project Officer: Ashley Chaifetz.

[114] Values reflect annual costs from sections above with added three percent annual inflation. Costs are also shown by school year in this table. This varies from table 1 which shows fiscal years and does not include expected annual inflation through the duration of the final rule.

[115] Due to rounding, numbers may not add up to rounded sum in 'total' column exactly.

[116] Annual average over 8 school years of rule implementation.

[117] Only local costs (not State costs) are adjusted for inflation because they are based on a factor of food-costs.

[118] Only food costs (not record keeping) are adjusted for inflation.

changes in product formulation, availability, and cost have occurred in the years since these data were collected. Among the more significant changes in this rule are the requirements to reduce levels of sodium and added sugars in school meals. USDA conducted additional analysis of these two changes in order to more fully account for possible cost impacts. A sensitivity analysis shows a range of possible cost impacts from half the estimated cost impact to double the cost impact of the added sugars and sodium provisions (table 21). It is possible that the impacts could be higher or lower in the future, but this sensitivity analysis shows a range in costs to illustrate the potential magnitude of change. If the costs of food with lower sodium and lower added sugars has doubled since SY 2014–2015, then the costs of implementing this rule would be considerably higher. However, if the market has changed already due to the CACFP total sugar limits, public desire for healthier packaged food options, and the FDA voluntary sodium reduction goals, then it is possible that the cost differential has already decreased.

TABLE 21: SENSITIVITY ANALYSIS - ESTIMATED 7-YEAR COST DIFFERENTIALS OF REDUCING SODIUM AND ADDED SUGARS IN SCHOOL MEALS (MILLIONS), ADJUSTED FOR ANNUAL INFLATION[119]

SODIUM LIMIT EFFECTIVE SCHOOL YEAR	SY 2025 - 2026	SY 2026-2027	SY 2027-2028	SY 2028-2029	SY 2029-2030	SY 2030-2031	SY 2031-2032	7-YEAR TOTAL	ANNUAL AVERAGE
ADDED SUGARS									
SY 2014-2015 ESTIMATES	$112	$116	$121	$125	$131	$136	$141	$881	$110

Another area of uncertainty is about the types of products available from manufacturers, especially those products that are created for school foodservice. Certain products will be eliminated, others will be reformulated, and the dimensions of such product changes are difficult to predict. Product lines that have been created specifically for schools may become more common with this rulemaking. School food authorities have also faced supply chain delays in recent years that may continue. About 92 percent of school food authorities reported experiencing challenges due to supply chain disruptions in SY 2021–2022, including product availability, orders arriving with missing or substituted items, and labor shortages.[120] In addition, it may take longer to reformulate certain product lines than anticipated. Food manufacturers play an integral role in school food service operations and in the ability for school food authority menus to meet regulations, especially when it comes to added sugars, milk, whole grains, and sodium.

For this analysis, HEI scores were used to measure the alignment of school menus with recommendations from the *Dietary Guidelines.* The HEI measure has a few limitations as used for this analysis. HEI component scores for added sugars and sodium only reflect one aspect of the diet, not a complete diet. HEI scores were originally designed to measure a full day of intake, not necessarily to evaluate one or two meals a day. Another limitation regarding HEI scores is that the calculation does not exactly align with the recommendations in the *Dietary Guidelines* but is a tool to evaluate nutrient density of foods consumed throughout an entire day. For instance, a maximum score for the sodium component is achieved if sodium content is ≤1.1 grams of sodium per 1,000 kilocalories (HEI–2010 and HEI–2015) and a maximum score for the added sugars component is achieved if added sugars are at ≤6.5 percent of total energy (HEI–2015).[121] The *Dietary Guidelines for Americans, 2020–2025* sodium recommendations are based on the sodium DRIs and the added sugar recommendations are more liberal at 10 percent when considering the entire population, including adults. While these are limitations of using the HEI score and component scores, HEI is still a valuable tool to evaluate meals in a standardized way that allows for comparison and measuring improvement over time.

Decreasing sodium and added sugars menu content may inadvertently increase other nutrients such as fat and protein. It is uncertain what the effect of these changes across this final rule will have on average across school food authorities since there are so many combinations of food groups and permutations of menu changes. For example, a decrease in added sugars content alone could inadvertently increase sodium content through usage of more meat/meat alternate products on menus. School nutrition program directors will have to be aware of possible tradeoffs when making menu changes.

The adaptability of children's taste preferences is at the root of the way the final rule impacts for sodium have been measured. Typical benefit-cost analysis of a policy intervention of the type in this rulemaking often uses a willingness-to-pay (WTP) measure.[122] WTP reflects underlying preferences—in this case, preferences for

[119] Product-specific added sugars limits and weekly added sugars and sodium limits included in this final rule will not take effect until SY 2025–2026 and SY 2027–2028, respectively.

[120] Results of USDA's FNS-Administered SFA Survey II on Supply Chain Disruption and Student Participation | Food and Nutrition Service.

[121] *https://epi.grants.cancer.gov/hei/comparing.html.*

[122] Either a direct WTP estimate could be developed or a multistep estimation could quantify health and longevity effects with lost eating-experience utility subsequently being subtracted. For example, in the context of sugar-sweetened beverages (SSB), Kalamov and Runkel (2021), citing Allcott et al.'s (2019) estimates, suggest that internalities (representing the harm consumers of relatively unhealthy foods suboptimally impose on their future selves) could be 30- to 50-percent of gross health impacts; it is the 30- to 50-percent that would appropriately be retained in an analysis of the intrapersonal benefits of a policy that reduces consumption of SSB or foods with similar characteristics. Kalamov, Z. Y. and M. Runkel, *Taxation of unhealthy food consumption and the intensive versus extensive margin of obesity.* International Tax and Public Finance, 2021: p. 1–27. Allcott, H., B. B. Lockwood, and D. Taubinsky, *Regressive sin taxes, with an application to the optimal soda tax.* The Quarterly Journal of Economics, 2019. 134(3): p. 1557–1626.

food characteristics, including both health consequences and short-term eating experience—and if preferences are unstable, then key inputs to the analysis are not well-defined. Indeed, shifting taste preferences (when they are malleable during childhood) away from foods with high levels of sodium is a key expected outcome of this final rule.

Health Benefits

The financial impacts of changes that affect our health can be challenging to quantify, especially for a younger, student population. A 2023 study used NHANES data to evaluate the health and economic effects of school meal requirements consistent with the *Dietary Guidelines for Americans, 2020–2025*—namely added sugars, sodium, and whole grains. The study estimated that, if only 25 percent of school children's dietary changes were maintained into adulthood, that would prevent 7,760 adult deaths and save $14 billion in medical costs annually.[123] Such estimates are model projections and do not prove the extent of health-related benefits over time. While a variety of studies have shown that habits developed in childhood can track into adulthood,[124 125] it is unclear what proportion of individuals hold to this trend and the related level of reduced chronic health conditions in adults consuming healthier meals during childhood and adolescence.

As detailed above in the 'Impacts' section, reducing intake of added sugars can result in reductions in T2D, CVD, and chronic kidney disease. Consumption of meals with low-fat dairy (including low-fat milk) and whole grains was associated with lower blood pressure and improved blood lipid levels. Throughout the lifespan, consumption of whole grains has been shown to reduce the risk of CVD, T2D, and some types of cancer. Reducing sodium intake has been shown to reduce blood pressure in children of all ages, and in turn to reduce CVD incidence.[126]

Despite the challenges of quantifying the costs or savings resulting from improved health outcomes in children, there are some available studies that quantify these findings in adults for major health outcomes. For instance, annual medical costs for individuals with high blood pressure are up to $2,500 higher than costs for people without high blood pressure,[127 128] resulting in a $79 billion total annual medical cost associated with high blood pressure in the U.S.[129] From 1996 to 2016, there was an increase of over $100 billion in spending on adult CVD, to a total of $320 billion spent in 2016 in the U.S., reported in 2016 dollars.[130] This indicates that a reduction in CVD overall could result in significant savings. One model from 2017 showed ''clear and significant benefits for interventions that reduce consumption of added sugars.'' The study found that reducing added sugar consumption by 20 percent would mean lower annual direct medical costs for U.S. adults by more than $10 billion. While the study only modelled the population with an age over 20, it noted that including interventions for children, especially with T2D, would lead to additional benefits.[131] A scientific statement from the American Heart Association noted that CVD ''is the leading cause of death in North Americans and generates tremendous personal and economic burden globally.'' [132] The most expensive chronic condition in the U.S. is diabetes, with a $327 billion annual cost ($237 billion of which are medical costs).[133] The cost and benefit estimates from these studies may be subject to a variety of limitations depending on study design and available data; however, these estimates help to provide insight into potential savings associated with consuming a healthy diet over the lifespan. While there is some cost associated with improving the dietary intake of school-aged-children through school meals and other child nutrition programs, the potential savings in adulthood through reduced medical costs and increased productivity could be substantial, especially when considering blood pressure, CVD, and diabetes.

Added Sugars

For milk products, the market availability of flavored milks that meet the added sugars limit of ≤10 mg of added sugars per 8 fluid ounces is uncertain. While a limited search completed in 2022 by USDA showed that some manufacturers are already producing flavored milks that meet the added sugars limit, the full availability across the nation is unclear, as is whether it will be a slow transition for manufacturers.[134] It is possible that some school food authorities will need to serve unflavored milk varieties only, temporarily, if the availability of flavored milks with a lower level of added sugars is limited. However, a recent commitment from the milk industry states that, beginning in SY 2025–2026, 37 school milk processors representing more than 90 percent of the school milk volume in the United States commit to provide school milk options with no more than 10 grams of added sugar per 8 fluid ounce serving. This would improve the market availability of flavored milks that meet the added sugars limit finalized in this rule in time for implementation in SY 2025–2026.[135]

Milk

With regards to milk, there is some uncertainty about the differences in price by milk type. When comparing the average price per eight fluid ounces of milk in SY 2009–2010 data to the average price in SY 2014–2015 data, both show small differences in prices by milk type, although those differences are not consistent between the two time periods. For instance, in the SY 2009–2010 data, flavored, low-fat milk cost $0.02 more per carton than other milk types (flavored, fat-free milk, unflavored, low-fat milk, and unflavored, fat-free milk). In the SY 2014–2015 data, however, flavored, low-fat milk cost $0.01 more than flavored, fat-free milk, and flavored, fat-free milk cost $0.01 more than unflavored, fat-free milk. More data regarding these cost differences are in table 22.

USDA acknowledges the possibility that this rule and the transitional standards rule may cause, or have already caused, milk product prices to change and that school milk prices have been similar by fat content and flavor status in the past. A comparison of the potential impacts of the added sugars limits for milk using milk prices in the two different data collection time points (SY 2009–2010 and SY 2014–2015) is included below.

[134] The search was conducted in 2022, however some product catalogs were older. It was found that at least four manufacturers had at least one flavored milk product with under 10 grams of added sugars per serving and in fact, three of them had products with six grams of added sugars per serving. A total of 10 flavored milk products from four companies were below the 10-gram added sugars limit. The catalogs used for data collection generally showed that there were lower sugar and higher sugar versions of flavored milk available.

[135] The Healthy School Milk Commitment—IDFA.

TABLE 22. COMPARISON OF COST OF MILK PER EIGHT FLUID OUNCES BY MILK TYPE DURING TWO DATA COLLECTIONS

	SY 2009-2010 Data	SY 2014-2015 Data
LOW-FAT, FLAVORED	$0.21	$0.25
LOW-FAT, UNFLAVORED	$0.19	$0.24
FAT-FREE, FLAVORED	$0.19	$0.24
FAT FREE, UNFLAVORED	$0.19	$0.25

As noted above, on average, low-fat, flavored milk cost $0.01 more than low-fat, unflavored milk per carton (8 fluid ounces) in the SY 2014–2015 data, and fat-free, flavored milk cost $0.01 less than fat-free, unflavored milk per carton. If across all NSLP and SBP menus, all fat-free, flavored milk was replaced with low-fat, flavored milk, it would cost about $85 million more a year (using updated data from SY 2014–2015). Any change to low-fat, flavored milk from fat-free, flavored milk must be made within available resources and calorie and fat limits, and upon implementation, added sugars limits, so it is unlikely that all school food authorities will make this change for all flavored milk offerings. USDA estimates this to be about $9 million more a year in the value spent on milk (table 23). By using the updated milk cost data, the annual cost of purchasing low fat flavored milk is about 30 percent less than the cost using the SY 2009–2010 data, adjusted for inflation (table 23).

TABLE 23: ESTIMATED IMPACT OF PURCHASING LOW-FAT, FLAVORED MILK (MILLIONS) WITH UPDATED DATA

SUBSTITUTION LEVEL	Estimated Annual Cost with SY 2009-2010 Data	Estimated Annual Cost with SY 2014-2015 Data
MAXIMUM – REPLACE ALL FAT-FREE, FLAVORED WITH LOW FAT FLAVORED	$126	$85
MINIMUM - 9 PERCENT OF DAILY MENUS REPLACED FAT-FREE, FLAVORED WITH LOW-FAT, FLAVORED (BASED ON EXEMPTION DATA)[125]	$13	$9

Whole Grains

Due to the age of the available data, it is unknown if schools made substantial changes in the proportion of whole grain-rich items served during the time from SY 2014–2015 to SY 2019–2020. In order to update the RIA with SY 2014–2015 data, the analysis also incorporated whole grain-rich based combination entrées because they contribute importantly to daily intake in school meals, according to the SNMCS report.[136] However, the cost of combination entrees also includes the cost of other food groups, so the cost comparison was based on a cost per grain portion of the combination entrées. The values are still comparable because the same methodology was used for whole grain-rich items and the non-whole grain-rich items overall, but it is not possible to compare to the transitional standards rule RIA methodology which included bulk cost data from another source.[137]

Sodium

A limitation in the cost analysis of sodium is that the sodium limit is meant to be met by product reformulation, changing food menu items, and scratch cooking, so the assumptions about the cost distribution, 45 percent food, 45 percent labor, and 10 percent other, might not be accurate or complete. As a result, the costs of the sodium limits were not adjusted to account for additional costs of equipment as part of an estimate for this 'Uncertainties/Limitations' section. This is a limitation because the exact needs of each school food authority to equip kitchens for scratch cooking and menu changes are not known.

This additional analysis provides a high and low estimate of the costs to schools for equipment that would allow them to reach the sodium limits established in this rule. About half of schools make under 50 percent of their recipes from scratch according to the Farm to School Census data.[138] In the 2012 rule, estimates based on public comments regarding the sodium targets were included in the Uncertainties discussion to calculate potential equipment costs; around $5,000 per school for approximately half of schools.[139]

Adjusting for inflation, this would be equivalent to $7,700 beginning in SY 2025–2026 for about 50,000 schools, which was the basis of the equipment cost estimate used for the proposed sodium limits of several 10 percent reductions for breakfast and lunch. However, since the final sodium limit implements only one 10–15 percent sodium reduction, we assume fewer equipment costs than the proposed rule. On the low end, we estimate a quarter of all schools will spend an average of $3,850 on equipment costs, for a total of about $100 million. As an upper bound, we assume schools may need more equipment to adapt to the reduced sodium limits, spending an average of $7,700 spread over the two school years prior to the SY 2027–2028 implementation year. This would be equivalent to about $200 million across two school years (SY 2025–2026 and SY 2026–2027). These estimates, adjusted for inflation, are shown below in table 24 with the low end estimate accounting for $30 million in equipment grants that are available annually. The actual costs for equipment may be higher as the exact needs of schools for equipment and remodeling to increase scratch cooking are unknown. Examples of equipment needed by schools to improve the appearance, safety, and healthfulness of food include ovens, skillets, broilers, refrigerators or freezers, serving equipment, steam equipment, and food preparation equipment.[140] It is also possible that schools may sustain higher costs as a result of purchasing more pre-made meals and foods through food service companies if they do not have the necessary equipment to lower sodium content through scratch cooking or menu reformulation.

TABLE 24: ESTIMATED COSTS OF EQUIPMENT FOR IMPLEMENTING NEW SODIUM REDUCTION PLAN (MILLIONS) [141]

SODIUM LIMIT EFFECTIVE SCHOOL YEAR	SY 2025 - 2026	SY 2026-2027	TOTAL
LOW END ESTIMATES[142]	$0	$70	$70
HIGH END ESTIMATES	$48	$152	$200

Participation Impacts

As noted earlier, in the Key Assumptions section, participation costs associated with this rule are based on a level of service in school lunch and breakfast programs that mirrors the 2023 level of service. There are multiple contributing factors that may lead to an increased or decreased level of school meal participation in these years after the pandemic. Due to the uncertainty of the direction of student participation, a variety of possibilities are detailed here and the change in cost is simulated below (table 25). Nearly three-quarters of school food service directors reported that gaining student acceptance of the meal pattern standards, particularly whole grains, was moderately to extremely challenging with respect to maintaining student participation.[143] If there is a similar downward trend in student participation as a result of sodium and added sugar standards, there would be a corresponding reduction in food costs and potentially a reduction in labor hours. USDA is not aware of any evidence to support that there is a correlation between updates to school meal patterns and student participation, however. If student participation increases, there would be an expected increase in food and labor costs, but potentially a reduction of cost due to economies of scale as the operation scale increases. Relatedly, more states and schools are offering Healthy School Meals for All due to the realized benefits of free school meals during the COVID pandemic. [This could be through State initiatives [144] or increased use of Community Eligibility Provision (CEP).] Research has shown that schools offering all meals at no charge through CEP experience higher student participation levels and increases in Federal revenues.[145] These revenue increases may offset (from the local perspective, though not from the nationwide perspective) some of the estimated costs associated with this rule.

TABLE 25: PROJECTED COSTS BY STUDENT PARTICIPATION CHANGE (MILLIONS)

	ONE-YEAR	8-YEAR TOTAL
FULL PARTICIPATION	$206	$1,645
ESTIMATED COSTS IF SCHOOL MEAL PARTICIPATION INCREASES		
2.5 PERCENT PARTICIPATION INCREASE	$211	$1,686
5 PERCENT PARTICIPATION INCREASE	$216	$1,727
10 PERCENT PARTICIPATION INCREASE	$226	$1,809
ESTIMATED COSTS IF SCHOOL MEAL PARTICIPATION DECREASES		
2.5 PERCENT PARTICIPATION DECREASE	$200	$1,604
5 PERCENT PARTICIPATION DECREASE	$195	$1,563
10 PERCENT PARTICIPATION DECREASE	$185	$1,480

Improving meal pattern requirements may have corresponding impacts on student participation. After publication of the updated meal patterns in the 2012 final rule, which were implemented in SY 2012–2013 and beyond, there were variable changes to school meal program participation. Total breakfasts served increased steadily between fiscal year 2012 and fiscal year 2016. School lunches served decreased by approximately three percent between fiscal year 2012 and fiscal year 2016. However, similar breakfast and lunch trends existed prior to fiscal year 2012 [146] and the exact relationship between the new meal patterns and participation changes is unclear based on these data.

Other factors unrelated to meal pattern requirements may also impact student participation. In 2014, a sample of principals and foodservice managers in elementary schools indicated that 70 percent of students ''generally seem to like the new school lunch'' and 78 percent said participation in school lunch was the same or more than the previous year.[147] However, about 25 percent of those surveyed still disagreed that students seemed to like lunches offered under the new requirements. CEP became available to all school districts nationwide in SY 2014–2015, and rates of SBP and NSLP participation increased in SY 2016–2017 in school districts that had implemented CEP.[148] As participation in CEP continues to expand it is possible there may be some offset of any downward trend in school lunch participation though USDA has no evidence to support that this is likely to occur. While student participation may be variable following implementation of this rule, it is known that students who participate in the school meal programs consume more whole grains, fruits, vegetables, and milk than non-participants, leading to a better quality of daily diet overall.[149]

It is assumed that levels of SBP and NSLP participation will continue to increase to pre-pandemic rates, but it is difficult to know how long the supply chain disruptions and

[141] Changes to sodium limits as a result of this final rule will not take effect until SY 2027–2028.

[142] Includes the $30 million offset of annually available equipment grants.

staffing challenges will continue. A variety of Executive orders and plans within the Federal Government have been employed to track and address supply chain disruptions, as well as a task force with a focus on supply chain issues.[150] The U.S. Department of Transportation reported improvements in supply chain disruption in early 2022, but there are still existing stressors in the U.S. supply chain.[151 152] Unemployment levels have returned to pre-pandemic rates as of mid-2022, and gains are continuing in the hospitality sector, so it is likely staffing challenges in school food service will continue to improve.[153] These disruptions in service have created additional burden for school food authorities and it is possible this burden may hold on for a few years, potentially affecting student participation in school meal programs. USDA recognizes that schools may have been offering meals that were higher in sodium under the COVID–19 meal pattern waivers. The sodium limits finalized in this rule, which align with Sodium Target 2 from the 2012 final rule, will be gradually implemented. This gradual approach, which requires implementation in SY 2027–2028, is expected to ease implementation for schools as they adjust to the new limits. There is potential for a decrease in participation if students find meals less desirable because of lower added sugars and sodium levels, though USDA has no evidence to support that this has occurred during prior meal pattern updates. However, research indicates that a 10 percent sodium reduction in individual food products does not substantially impact consumer approval.[154] If there is a five percent decrease in participation of school meal programs, then the readily quantifiable annual cost of this rule would be $195 million, or $1.6 billion over the eight years (table 25).[155] Other possible levels of decrease in participation are also provided.

Many students who had never participated in the NSLP and SBP prior to the pandemic but who did participate under USDA's COVID–19 nationwide waivers may have found a level of convenience associated with participating in the school meals programs instead of eating breakfast at home or bringing a lunch from home. Parents and guardians may also find that school meals with reduced sodium and added sugars are a healthier option than meals that were available at school previously. If there is a five percent increase in participation of school meal programs, then the quantified annual cost of this rule would be $216 million, or $1.7 billion over the eight years (table 25).[156] Costs associated with other possible levels of potential increase in participation are provided. It is possible that an increase in revenue resulting from greater participation in school meal programs would offset some of the costs that occur from implementation of this rule.

VII. Benefits of the Rule and Other Discussion

Health Benefits

The goal of this rule is to more closely align school meals with the goals of the *Dietary Guidelines for Americans, 2020–2025.* The *Dietary Guidelines* are meant to promote health, prevent and reduce risk of chronic disease, and meet nutrient needs.[157] School meals are an important source of nutrition for school age children. Pandemic disruption to school operations demonstrated the continued importance of child nutrition programs including the NSLP and SBP.

Making the changes outlined in this rule can lead to improved health outcomes in the long-term. Lifestyle habits including dietary habits are established in childhood and research has shown that they may carry through into adulthood.[158 159] The two most impactful changes in this rule are reductions in added sugars and sodium content of school meals. Reducing sodium and added sugars intake is associated with a variety of potential health benefits that are detailed above in the sodium and added sugars 'Impacts' sections. Reduction in sodium intake reduces blood pressure which in turn can reduce CVD risk and CVD events. Added sugars consumption is associated with a variety of potential chronic health conditions, including CVD and T2D, and risk factors for these chronic diseases. While this rule maintains the existing whole grain-rich requirements for school meals, it is of note that increased whole grain consumption is associated with an improved overall dietary pattern.[160] On average, in SY 2014–2015, 70 percent of the weekly menus offered at least 80 percent of the grain items as whole grain-rich for both breakfast and lunch.[161] Recent research evaluating the health benefits of aligning the school meal nutrition requirements with the *Dietary Guidelines for Americans, 2020–2025* found an association of 7,760 fewer annual deaths due to CVD and cancer and save $13.8 billion in healthcare-related costs annually if 25 percent of school children's dietary changes were sustained into adulthood.[162] Systematic review evidence also exists that shows intake in children of healthier dietary patterns including ''higher intakes of vegetables, fruits, whole grains, fish, low-fat dairy, legumes, and lower intake of sugar-sweetened beverages, other sweets, and processed meat,'' are associated with lower blood pressure and improved blood lipid levels later in life.[163 164] These dietary patterns associated with improved health outcomes have higher intake of whole grains and lower intake of both foods high in sodium and high in added sugars. Improvements in school meals finalized in this rule, with a focus on sodium and added sugars reduction, will lead to healthier dietary intake and improved health outcomes over time.

This rule also includes sections on traditional Indigenous foods that may have

some potential health benefits for American Indian and Alaska Native children. USDA acknowledges that for decades, the United States government actively sought to eliminate traditional American Indian and Alaska Native ways of life—for example, by forcing Indigenous families to send their children to boarding schools. This separated Indigenous children from their families and heritage, and disrupted access to traditional foods, altering Indigenous children's relationship to food. This disruption effected food access, food choice, and overall health. The Traditional Foods Project (TFP) and associated research have shown that there may be benefits to integrating culture and history through locally designed interventions framed by food sovereignty among American Indian and Alaska Native communities to help prevent chronic disease, especially type 2 diabetes.[165] [166]

Food and Nutrition Security

Prior to and during the pandemic, school meals played an important role in serving healthy meals to millions of children and increasing food security by serving free or reduced price meals to eligible students. Food and nutrition security is defined as ''consistent and equitable access to healthy, safe, affordable foods essential to optimal health and well-being'' by the USDA.[167] In 2020, about fifteen percent of households with children were food insecure compared to about fourteen percent in 2019.[168] This means that millions of children are affected by food insecurity in the U.S. Free and reduced-price meals in the SBP and NSLP are served to students from households with lower income levels. In 2023, about 80 percent of meals served in the SBP and about 71 percent of meals served in the NSLP were free or reduced-price meals.[169] This rule targets the diet quality of meals served through child nutrition programs, and we estimate this rule to benefit the health of program participants. Providing nutrient-dense meals and snacks is especially valuable for children that may not always have access to nutritious foods at home. In 2021, USDA found that around 55 percent of food-insecure households participated in one or more of three Federal food and nutrition assistance programs (SNAP, WIC, NSLP).[170] This same report indicated that in households with income below 185 percent of the poverty line, those that received free or reduced-price school lunch in the previous 30 days (in 2021) were less likely to be food insecure compared to those that did not receive free or reduced-price lunch, indicating that school meals are an important source of food for families facing hardships. Student participation in the NSLP has been found in other research to be associated with a reduction in food insecurity.[171] Households with incomes near or below the Federal poverty line, all households with children and particularly households with children headed by single women or single men, and Black- and Hispanic-headed households have higher rates of food insecurity than the national average.[159] Efforts to increase participation in child nutrition programs should focus on expanding and encouraging participation among children in households under these circumstances to promote equity in daily nutrient intake nationwide.[172] School meal programs reach children across the U.S. from households of all income levels and of various backgrounds and race/ethnicities with nutritious meals. As noted previously, the incremental effect of the rule on program participation is uncertain as regards both magnitude and direction; the impact on food security is likewise uncertain.

Achievable Limits

While some elements of the 2012 rule were challenging to meet over a long period of time, this rule prescribes smaller gradual shifts and targeted changes to improve the overall nutrient content of meals. This rule will require changes over time, at achievable levels for schools and manufacturers. For instance, reduction in sodium finalized in this rule is about 15 percent at lunch and about 10 percent at breakfast, which is more manageable than the previous final targets in the 2012 rule. The FDA's voluntary sodium reduction goals were introduced in October 2021, so manufacturers may already be making changes to their products. Additional reduction goals are expected in the coming years. School food authorities and manufacturers have indicated in the past that the sodium targets from the 2012 rule (especially Target 3) were challenging to achieve due to several contributing factors. These challenges included high labor and equipment costs needed to support food preparation, lack of lower sodium products associated with school food authority urbanicity and size, and low levels of student acceptance varying by cultural and regional taste preferences.[173] This rule addresses these concerns by implementing a single sodium reduction that is supported by FDA voluntary sodium goals for industry and the 2019 dietary reference intakes [174] that call for continued reduction in sodium intake to promote health.

USDA data collection in 2022 [175] showed that reductions in total and added sugars content of certain food types (yogurt, milk, cereal) have already been observed, on average, since the last data collection during SY 2014–2015. This indicates that manufacturers are willing to make shifts in their product formulations and that regulations for programs such as CACFP do help to jumpstart product shifts. Another aspect of this rule is that USDA finalizing added sugar limits, rather than total sugars limits. Limiting added sugars will not limit naturally occurring sugars from fruit or milk, which will allow many yogurt products containing fruit and cereals containing dried fruit to remain a part of school meals. This less restrictive group of limits for added sugars is more achievable for school food authorities compared to total sugar limits and reflects *Dietary Guidelines* recommendations.

The changes from this rule will occur gradually over time. The sodium reduction included in this final rule will not occur until SY 2027–2028—over three years after this rule is published. Schools will maintain current sodium limits prior to the SY 2027–2028 reduction. This gradual approach will provide adequate lead in time, allowing school food authorities and manufacturers time to make changes to menus and available food products. Reduction of added sugars in school meals will also occur gradually, beginning with product specific limits, followed by an overall weekly limit. This approach will also allow time for adjustment both by food service operators and food/beverage manufacturers. Gradual formulation changes are also recommended for consumer satisfaction and product desirability.[176] [177] Taste preference may be established early in life and early food preference can influence

later food choices, so a gradual change may influence school age children for years to come. Along with gradual change, the added sugars weekly limit and the sodium reduction will be introduced the same year, allowing for menus to be changed simultaneously, avoiding the inconvenience of making substantial changes multiple times. This rule ensures that there will be a high nutrition quality of school meals with continued improvements over time.

VIII. Alternative(s)

Sodium

As a result of comments and feedback from stakeholders on the proposed sodium limits, this final rule implements more gradual and attainable sodium reduction compared to the proposed rule. USDA proposed to phase in three 10 percent sodium reductions at lunch and two 10 percent sodium reductions at breakfast beginning in SY 2025–2026. The estimated annual costs of the proposed sodium limits assumed a higher increase in labor and scratch cooking compared to the final rule due to the proposed multiple reductions. The estimated annual food and labor costs of the proposed changes averaged $102 million annually, compared to $68 million annual average for the final rule sodium provisions. The equipment costs associated with an increase in scratch cooking assumed at least half, or 50,000, of schools would spend between $7,350 to $14,700 each leading up to the proposed implementation years. The range of equipment costs for the proposed rule was $324 million to $792 million total, compared to the final rule equipment costs of $70 million to $200 million total.

Added Sugars: Grain-Based Desserts

The final rule does not adopt the proposal to limit grain-based desserts to 2 ounce equivalents per week in school breakfasts. The change from the proposed rule is to avoid potential negative impacts on breakfast programs, especially grab-and-go breakfasts. The proposed grain-based dessert limit for school breakfast had an estimated cost savings of $23 million annually, because the average cost of grains other than grain-based desserts is estimated to be $0.22 less than the average cost of grain-based desserts. The final added sugar product limits annual cost is $107 million annually, an increase from $84 million, after removing cost estimates associated with the proposed limit for grain-based desserts at school breakfast.

Buy American

The final rule maintains reaching a 5 percent cap on total costs per school year on non-domestic food purchases, consistent with the proposed rule. However, the proposed rule would have implemented a 5 percent cap as soon as the provision was effective. The final rule takes an incremental approach and considers procurement for SBP in addition to NSLP. USDA made this change in the rule in response to public comments that suggested a 5 percent cap is too restrictive under current procurement conditions. The cost analysis assumptions were the same in the proposed rule, but the estimated costs were due to a shorter implementation period and the associated burden hours with meeting the cap in the next school year for NSLP. While the final rule incorporates a more gradual timeline, burden estimates were calculated for both SBP and NSLP ($7 million annually for both the proposed rule and the final rule).

Whole Grains

The final rule maintains the current whole grain-rich requirements, however, the proposed rule requested comments on an alternative proposal for the whole grain-rich requirement for final rule consideration. Under the proposed alternative, all grains offered in the school lunch and breakfast programs would be required to be whole grain-rich, except that one day each school week, schools may offer grains that are not whole grain-rich. On average, a similar number of servings of whole grains would be provided in the alternative proposal, just on different days than before, leading to no additional expected costs. In response to comments, the final rule maintains the existing whole grain-rich requirement.

Other Considered Alternatives

In the process of creating this rule, there were a few other potential alternatives considered for added sugars and whole grains. Initially, product-specific total sugar limits were considered to align with the current CACFP total sugar limits for breakfast cereals and yogurts. However, this meant restricting naturally occurring sugars and did not align with the *Dietary Guidelines for Americans* [178] which recommend limiting added sugars to 10 percent of calories per day. The product-specific added sugars limits for yogurt, breakfast cereal, and flavored milk are expected to help introduce the concept of limiting added sugars, specifically as part of the gradual goal of reaching the final 10 percent weekly limit. For whole grains, other percentages were considered for the proportions of grains to be served that must be whole grain-rich (*i.e.,* 50 or 100 percent). However, 80 percent was decided on as a measure that allows for flexibility, but also still requiring that the majority of grains offered in school meals are whole grain-rich.

Retirement Security Rule: Definition of an Investment Advice Fiduciary; Final Rule

DEPARTMENT OF LABOR

Employee Benefits Security Administration

29 CFR Part 2510

RIN 1210–AC02

Retirement Security Rule: Definition of an Investment Advice Fiduciary

AGENCY: Employee Benefits Security Administration, Department of Labor

ACTION: Final rule

SUMMARY: The Department of Labor (Department) is adopting a final rule defining when a person renders ''investment advice for a fee or other compensation, direct or indirect'' with respect to any moneys or other property of an employee benefit plan, for purposes of the definition of a ''fiduciary'' in the Employee Retirement Income Security Act of 1974 (Title I of ERISA or the Act). The final rule also applies for purposes of Title II of ERISA to the definition of a fiduciary of a plan defined in Internal Revenue Code (Code), including an individual retirement account or other plan identified in the Code. The Department also is publishing elsewhere in this issue of the **Federal Register** amendments to Prohibited Transaction Exemption 2020–02 (Improving Investment Advice for Workers & Retirees) and to several other existing administrative exemptions from the prohibited transaction rules applicable to fiduciaries under Title I and Title II of ERISA.

DATES: This regulation is effective September 23, 2024.

FOR FURTHER INFORMATION CONTACT:

- *For questions regarding the rule:* contact Luisa Grillo-Chope, Office of Regulations and Interpretations, Employee Benefits Security Administration (EBSA), 202–693–8510. (Not a toll-free number).
- *For questions regarding the prohibited transaction exemptions:* contact Susan Wilker, Office of Exemption Determinations, EBSA, 202–693–8540. (Not a toll-free number).
- *For questions regarding the Regulatory Impact Analysis:* contact James Butikofer, Office of Research and Analysis, EBSA, 202–693–8434. (Not a toll-free number).

Customer Service Information: Individuals interested in obtaining information from the Department of Labor concerning Title I of ERISA and employee benefit plans may call the Employee Benefits Security Administration (EBSA) Toll-Free Hotline, at 1–866–444–EBSA (3272) or visit the Department of Labor's website (*https://www.dol.gov/agencies/ebsa*).

SUPPLEMENTARY INFORMATION:

A. Executive Summary

The Department is issuing a final rule defining an investment advice fiduciary for purposes of Title I and Title II of ERISA. The final rule defines when a person is a fiduciary in connection with providing advice to an investor saving for retirement through a workplace retirement plan or other type of retirement plan such as an IRA. Such retirement investors include participants and beneficiaries in workplace retirement plans, IRA owners and beneficiaries, as well as plan and IRA fiduciaries with authority or control with respect to the plan or IRA.

Under the final rule, a person is an investment advice fiduciary if they provide a recommendation in one of the following contexts:

- The person either directly or indirectly (*e.g.,* through or together with any affiliate) makes professional investment recommendations to investors on a regular basis as part of their business and the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation:
  - is based on review of the retirement investor's particular needs or individual circumstances,
  - reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and
  - may be relied upon by the retirement investor as intended to advance the retirement investor's best interest; or
- The person represents or acknowledges that they are acting as a fiduciary under Title I of ERISA, Title II of ERISA, or both with respect to the recommendation.

The recommendation also must be provided ''for a fee or other compensation, direct or indirect'' as defined in the final rule.

As compared to the previous regulatory definition, which was finalized in 1975, the final rule better reflects the text and the purposes of ERISA and better protects the interests of retirement investors, consistent with the Department's mission to ensure the security of the retirement, health, and other workplace-related benefits of America's workers and their families.

The final rule is designed to ensure that retirement investors' reasonable expectations are honored when they receive advice from financial professionals who hold themselves out as trusted advice providers. The Department's regulation fills an important gap in those advice relationships where advice is not currently treated as fiduciary advice under the 1975 regulation's approach to ERISA's functional fiduciary definition. This may be the case even though the financial professional holds themselves out as providing recommendations that are based on review of the retirement investor's needs or circumstances and the application of professional or expert judgment to the retirement investor's needs or circumstances, and that can be relied upon to advance the retirement investor's best interest.

Together with amendments to administrative exemptions (PTEs) from the prohibited transaction rules applicable to fiduciaries under Title I and Title II of ERISA published elsewhere in this issue of the **Federal Register**, the final rule is intended to protect the interests of retirement investors by requiring persons who are defined in the final rule as investment advice fiduciaries to adhere to stringent conduct standards and mitigate their conflicts of interest. The amended PTEs' compliance obligations are generally consistent with the best interest obligations set forth in the Securities and Exchange Commission's (SEC) Regulation Best Interest and its Commission Interpretation Regarding Standard of Conduct for Investment Advisers (SEC Investment Adviser Interpretation), each released in 2019.

The Department anticipates that the most significant benefits of the final rule and amended PTEs will stem from the application of ERISA's fiduciary protections under Title I and Title II and PTE conditions to all covered investment advice provided to retirement investors. Under the final rule and amended PTEs, advice providers that satisfy the definition of an investment advice fiduciary will be required to adhere to the prudence standard of care, reduce retirement investor exposure to conflicted advice that may erode investment returns, and adopt protective conflict-mitigation requirements.[1]

Requiring advice providers to operate in compliance with ERISA fiduciary protections will be especially beneficial with respect to those transactions that currently are not uniformly covered by fiduciary protections consistent with ERISA's high standards. Those transactions include recommendations to roll over assets from a workplace

[1] The references in this document to a ''fiduciary'' are intended to mean an ERISA Title I and Title II fiduciary unless otherwise stated.

retirement plan to an IRA in those cases in which the advice provider is not subject to Federal securities law standards and, as is often the case, has not previously advised the customer about plan or IRA assets on a regular basis. Other examples include investment recommendations with respect to many commonly purchased retirement annuities, such as fixed indexed annuities; recommendations of other investments that may not be subject to the SEC's Regulation Best Interest, such as real estate, certain certificates of deposit, and other bank products; and investment recommendations to plan fiduciaries with authority or control with respect to the plan.

A proposed rule and proposed amendments to the PTEs were released by the Department on October 31, 2023 for notice and public comment, and public hearings on the proposals were held on December 12 and 13, 2023. The Department has made certain changes and clarifications in the final rule in response to public comments on the proposal and the testimony presented at the public hearings. The final rule narrows the contexts in which a covered recommendation will constitute ERISA fiduciary investment advice and makes clear that the test for fiduciary status is objective. Similarly, a new paragraph in the regulatory text confirms that sales recommendations that do not satisfy the objective test will not be treated as fiduciary advice, and that the mere provision of investment information or education, without an investment recommendation, is not advice within the meaning of the rule. Additionally, the final rule makes clear that the rule is focused on communications with persons with authority over plan investment decisions (including selecting investment options for participant-directed plans), rather than communications with financial services providers who do not have such authority. Accordingly, the rule excludes plan and IRA investment advice fiduciaries from the definition of a retirement investor. As a result, an asset manager does not render fiduciary advice simply by making recommendations to a financial professional or firm that, in turn, will render advice to retirement investors in a fiduciary capacity. The Department believes the final rule, with these revisions, appropriately defines an investment advice fiduciary to comport with reasonable investor expectations of trust and confidence.

B. Background

1. Title I and Title II of ERISA and the 1975 Rule

Title I of ERISA imposes duties and restrictions on persons who are ''fiduciaries'' with respect to employee benefit plans. In particular, fiduciaries to Title I plans must adhere to duties of prudence and loyalty. ERISA section 404 provides that Title I plan fiduciaries must act with the ''care, skill, prudence, and diligence under the circumstances then prevailing that a prudent [person] acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims,'' and that they also must discharge their duties with respect to a plan ''solely in the interest of the participants and beneficiaries.'' [2]

These fiduciary duties, which are rooted in the common law of trusts, are reinforced by prohibitions against transactions involving conflicts of interest because of the dangers such transactions pose to plans and their participants. The prohibited transaction provisions of ERISA, including Title II of ERISA which is codified in the Internal Revenue Code (Code), ''categorically bar[ ]'' plan fiduciaries from engaging in transactions deemed ''likely to injure the pension plan'' [3] absent compliance with a prohibited transaction exemption. The provisions include prohibitions on a fiduciary's ''deal[ing] with the assets of the plan in his own interest or for his own account,'' and ''receiv[ing] any consideration for his own personal account from any party dealing with such plan in connection with a transaction involving the assets of the plan.'' [4] Thus, ERISA requires fiduciaries who have conflicts of interest, including from financial incentives, to comply with protective conditions in a prohibited transaction exemption. Congress included some statutory prohibited transaction exemptions in ERISA and also authorized the Department to grant conditional administrative exemptions from the prohibited transaction provisions, but only if the Department finds that the exemption is (1) administratively feasible for the Department, (2) in the interests of the plan and of its participants and beneficiaries, and (3) protective of the rights of participants and beneficiaries of such plan.[5]

Title II of ERISA, codified in the Code,[6] governs the conduct of fiduciaries to plans defined in Code section 4975(e)(1), which includes IRAs.[7] Some plans defined in Code section 4975(e)(1) are also covered by Title I of ERISA, but the definitions of such plans are not identical. Although Title II, as codified in the Code, does not directly impose specific duties of prudence and loyalty on fiduciaries as in ERISA section 404(a), it prohibits fiduciaries from engaging in conflicted transactions on many of the same terms as Title I.[8] Under the Reorganization Plan No. 4 of 1978, which Congress subsequently ratified in 1984,[9] Congress generally granted the Department authority to interpret the fiduciary definition and issue administrative exemptions from the prohibited transaction provisions in Code section 4975.[10]

Many of the protections, duties, and liabilities in both Title I and Title II of ERISA hinge on fiduciary status. ERISA includes a statutory definition of a

[2] ERISA section 404, 29 U.S.C. 1104.

[4] ERISA section 406(b)(1), (3), 29 U.S.C. 1106(b)(1), (3).

[5] ERISA section 408(a), 29 U.S.C. 1108(a).

[6] This preamble discussion includes some references to the Code in the context of discussions of Title II of ERISA involving specific provisions codified in the Code. The Department understands that references to the Code are useful but emphasizes that both Title I and Title II are covered by the same general definition of fiduciary and the same general framework of prohibited transactions, and that, under both Title I and Title II, fiduciaries must comply with the conditions of an available prohibited transaction exemption in order to engage in an otherwise prohibited transaction.

[7] For purposes of the final rule, the term ''IRA'' is defined as any account or annuity described in Code section 4975(e)(1)(B)–(F), and includes individual retirement accounts, individual retirement annuities, health savings accounts, and certain other tax-advantaged trusts and plans. However, for purposes of any rollover of assets between a Title I plan and an IRA described in this preamble, the term ''IRA'' includes only an account or annuity described in Code section 4975(e)(1)(B) or (C). Additionally, while the Department uses the term ''*retirement* investor'' throughout this document to describe advice recipients, that is not intended to suggest that the fiduciary definition applies only with respect to employee pension benefit plans and IRAs that are retirement savings vehicles. As discussed herein, the final rule applies with respect to plans as defined in Title I and Title II of ERISA that make investments. In this regard, see also paragraph (f)(12) that provides that the term ''investment property'' ''does not include health insurance policies, disability insurance policies, term life insurance policies, or other property to the extent the policies or property do not contain an investment component.''

[8] 26 U.S.C. 4975(c)(1); *cf. id.* at 4975(f)(5), which defines ''correction'' with respect to prohibited transactions as placing a plan or an IRA in a financial position not worse than it would have been in if the person had acted ''under the highest fiduciary standards.''

[9] Sec. 1, Public Law 98–532, 98 Stat. 2705 (Oct. 19, 1984).

[10] 5 U.S.C. App. 752 (2018).

fiduciary at section 3(21)(A), which provides that a person is a fiduciary with respect to a plan to the extent the person (i) exercises any discretionary authority or discretionary control respecting management of such plan or exercises any authority or control respecting management or disposition of its assets, (ii) renders investment advice for a fee or other compensation, direct or indirect, with respect to any moneys or other property of such plan, or has any authority or responsibility to do so, or (iii) has any discretionary authority or discretionary responsibility in the administration of such plan.[11] The same definition of a fiduciary is in Code section 4975(e)(3).[12]

These statutory definitions broadly assign fiduciary status for purposes of Title I and Title II of ERISA. Thus, ''any authority or control'' over plan assets is sufficient to confer fiduciary status, and any person who renders ''investment advice for a fee or other compensation, direct or indirect'' is an investment advice fiduciary, regardless of whether they have direct control over the plan's assets, and regardless of their status under another statutory or regulatory regime. In the absence of fiduciary status, persons who provide investment advice to retirement investors would neither be subject to Title I of ERISA's fundamental fiduciary standards, nor responsible under Title I and Title II of ERISA for avoiding prohibited transactions. The broad statutory definition, the prohibitions on conflicts of interest, and the core fiduciary obligations of prudence and loyalty (as applicable) all reflect Congress' recognition in 1974, when it passed ERISA, of the fundamental importance of investment advice to protect the interests of retirement investors.

In 1975, shortly after ERISA was enacted, the Department issued a regulation at 29 CFR 2510.3–21(c)(1) (the 1975 regulation) that defined the circumstances under which a person renders ''investment advice'' to an employee benefit plan within the meaning of ERISA section 3(21)(A)(ii), such that the person would be a fiduciary under ERISA.[13] The 1975 regulation significantly narrowed the plain and expansive language of ERISA section 3(21)(A)(ii), creating a five-part test that must be satisfied in order for a person to be treated as a fiduciary by reason of rendering investment advice. Under the five-part test, a person is a fiduciary only if they: (1) render advice as to the value of securities or other property, or make recommendations as to the advisability of investing in, purchasing, or selling securities or other property (2) on a regular basis (3) pursuant to a mutual agreement, arrangement, or understanding with the plan or a plan fiduciary that (4) the advice will serve as a primary basis for investment decisions with respect to plan assets, and that (5) the advice will be individualized based on the particular needs of the plan. At the time the 1975 regulation was issued, the Department of the Treasury had sole regulatory authority over Code section 4975(e)(3), and issued a virtually identical regulation, 26 CFR 54.4975–9(c)(1), which applies to plans defined in Code section 4975.[14]

Since 1975, the retirement plan landscape has changed significantly, with a shift from defined benefit plans (in which decisions regarding investment of plan assets are primarily made by professional asset managers) to defined contribution/individual account plans, such as 401(k) plans (in which decisions regarding investment of plan assets are often made by plan participants who lack professional investment expertise). In 1975, individual retirement accounts had only recently been created (by ERISA itself), and 401(k) plans did not yet exist.[15] Retirement assets were principally held in pension funds controlled by large employers or other large plan sponsors and professional money managers. Now, IRAs and plans providing for participant-directed investments, such as 401(k) plans, have become more common retirement vehicles as opposed to traditional pension plans, and rollovers of workplace retirement plan assets to IRAs are commonplace. Individuals, regardless of their financial literacy, have thus become increasingly responsible for their own retirement savings, and have increasingly become direct recipients of investment advice with respect to those savings.

The shift toward individual control over retirement investing (and the associated shift of risk to individuals) has been accompanied by a dramatic increase in the variety and complexity of financial products and services, which has widened the information gap between investment advice providers and their clients. Plan participants and other retirement investors may be unable to assess the quality of the advice they receive and may not be in a position to learn of and guard against the investment advice provider's conflicts of interest.[16] However, as a result of the five-part test in the 1975 regulation, and its limiting interpretation of ERISA's statutory, functional fiduciary definition, many financial professionals, consultants, and financial advisers have no legal obligation to adhere to the fiduciary standards in Title I of ERISA or to the prohibited transaction rules in Title I and Title II of ERISA, despite the critical role these professionals, consultants and advisors play in guiding plan and IRA investments. In many situations, this disconnect undermines the reasonable expectations of retirement investors in today's marketplace; a retirement investor may reasonably expect that the advice they are receiving from a trusted adviser is fiduciary advice even when, under the 1975 regulation's interpretation, it is not. If these investment advice providers are not fiduciaries under Title I or Title II of ERISA, they do not have obligations under Federal pension law to either avoid prohibited transactions or comply with the protective conditions in a PTE.

Recently, other regulators have recognized the need for change in the regulation of investment recommendations and have imposed enhanced conduct standards on financial professionals who make investment recommendations, including broker-dealers and insurance agents. As a result, the regulatory landscape today is very different than it was even five years ago. In 2019, the SEC adopted Regulation Best Interest, which established an enhanced best interest standard of conduct applicable to broker-dealers when making a recommendation of any securities transaction or investment strategy involving securities to retail customers.[17] The SEC also issued its SEC Investment Adviser Interpretation

[11] ERISA section 3(21)(A), 29 U.S.C. 1002(21)(A).

[13] 40 FR 50842 (Oct. 31, 1975).

[14] 40 FR 50840 (Oct. 31, 1975). The issuance of this 1975 regulation pre-dated The Reorganization Plan No. 4 of 1978, and thus authority to issue this regulatory definition under Title II of ERISA was still with the Department of the Treasury.

[15] Section 2002(b) of Title II of ERISA established individual retirement accounts with the addition of 408(a) to the Code. *See* Public Law 93–406.

[16] In the securities law context, both SEC Regulation Best Interest and the Advisers Act fiduciary duty have specific obligations related to disclosure and/or mitigation of conflicts of interest. The SEC also adopted the Form CRS, which is a brief relationship summary required to be provided by broker-dealers and investment advisers to retail investors. The SEC stated that the Form CRS ''is intended to inform retail investors about: [t]he types of client and customer relationships and services the firm offers; the fees, costs, conflicts of interest, and required standard of conduct associated with those relationships and services; whether the firm and its financial professionals currently have reportable legal or disciplinary history; and how to obtain additional information about the firm.'' 84 FR 33492 (July 12, 2019).

[17] Regulation Best Interest: The Broker-Dealer Standard of Conduct, 84 FR 33318 (July 12, 2019) (Regulation Best Interest release).

in 2019, which addressed the conduct standards applicable to investment advisers under the Investment Advisers Act of 1940 (Advisers Act).[18] Describing these actions, the SEC has said, ''key elements of the standard of conduct that applies to broker-dealers under Regulation Best Interest will be substantially similar to key elements of the standard of conduct that applies to investment advisers pursuant to their fiduciary duty under the Advisers Act.'' [19] In this connection, the SEC has also stressed that Regulation Best Interest ''aligns the standard of conduct with retail customers' reasonable expectations.'' [20]

In 2020, the National Association of Insurance Commissioners (NAIC) also revised its Suitability In Annuity Transactions Model Regulation to provide that insurance agents must act in the consumer's best interest, as defined by the Model Regulation, when making a recommendation of an annuity. Under the NAIC Model Regulation, insurers would also be expected to establish and maintain a system to supervise recommendations so that the insurance needs and financial objectives of consumers at the time of the transaction are effectively addressed.[21] The stated goal of the NAIC working group related to the NAIC Model Regulation was ''to seek clear, enhanced standards for annuity sales so consumers understand the products they purchase, are made aware of any material conflicts of interest, and are assured those selling the products do not place their financial interests above consumers' interests.'' [22] According to the NAIC, as of March 11, 2024, 45 jurisdictions have implemented the revisions to the NAIC Model Regulation.[23]

These regulatory efforts reflect the widespread understanding that broker-dealers and insurance agents commonly make recommendations to their customers for which they are compensated as a regular part of their business; that investors rely upon these recommendations; and that regulatory protections are important to ensure that the recommendations are in the best interest of the retail customer (in the case of broker-dealers) or consumers (in the case of insurance agents).[24] After careful review of the existing regulatory landscape, the Department has concluded that the 1975 regulation should also be revised to reflect current realities in light of the text and purposes of Title I and Title II of ERISA.

In the current landscape, the 1975 regulation narrows the broad statutory definition in ways that no longer serve the purposes of Title I and Title II of ERISA to protect the interests of retirement investors. This is especially the case given the growth of participant-directed investment arrangements and IRAs, the conflicts of interest associated with investment recommendations, and the pressing need for plan participants, IRA owners, and their beneficiaries to receive sound advice from professional financial advisers when making critical investment decisions in an increasingly complex financial marketplace. As the SEC and NAIC recognized, many different types of financial professionals, including insurance agents, broker-dealers, investment advisers subject to the Advisers Act, and others, make recommendations to investors for which they are compensated, and investors rightly rely upon these recommendations with an expectation that they are receiving advice that is in their best interest. Like these other regulators, the Department has concluded that it is appropriate to update the existing regulatory structure to ensure that it properly protects the financial interests of retirement investors as Congress intended. As reflected in this regulatory package, after evaluation of the types of investment advisory relationships that should give rise to ERISA fiduciary status, the Department has concluded that it is appropriate to revise the regulatory definition of an investment advice fiduciary under Title I and Title II of ERISA in the manner set forth herein.

2. Prior Rulemakings

The Department began the process of reexamining the regulatory definition of an investment advice fiduciary under Title I and Title II of ERISA in 2010. After issuing two notices of proposed rulemaking, conducting multiple days of public hearings, and over six years of deliberations, on April 8, 2016, the Department replaced the 1975 regulation with a new regulatory definition of a fiduciary under ERISA (the 2016 Final Rule) which applied under Title I and Title II of ERISA.[25] In the preamble to the 2016 Final Rule, the Department noted that the 1975 regulation's five-part test had been created in a very different context and investment advice marketplace.[26] The Department expressed concern that specific elements of the five-part test—which are not found in the text of Title I or Title II of ERISA—worked to defeat retirement investors' legitimate expectations when they received investment advice from trusted advice providers in the modern marketplace for financial advice.[27]

The Department identified the ''regular basis'' element [28] in the five-part test as a particularly important example of the 1975 regulation's shortcomings.[29] The Department stated that the requirement that advice be provided on a ''regular basis'' had failed to draw a sensible line between fiduciary and non-fiduciary conduct and had undermined ERISA's protective purpose.[30] The Department pointed to examples of transactions in which a

[24] The SEC stated in the Regulation Best Interest release that ''there is broad acknowledgment of the benefits of, and support for, the continuing existence of the broker-dealer business model, including a commission or other transaction-based compensation structure, as an option for retail customers seeking investment recommendations.'' 84 FR 33318, 33319 (July 12, 2019). The NAIC Model Regulation section 5.M. defines a recommendation as ''advice provided by a producer to an individual consumer that was intended to result or does result in a purchase, an exchange or a replacement of an annuity in accordance with that advice.'' Section 5.B. defines ''cash compensation'' as ''any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer *in connection with the recommendation* or sale of an annuity from an insurer, intermediary, or directly from the consumer.'' (Emphasis added), *https://content.naic.org/sites/default/files/inline-files/MDL-275.pdf.*

[28] This refers to the requirement in the 1975 regulation that, in order for fiduciary status to attach, investment advice must be provided by the person ''on a regular basis.'' *See* 40 FR 50842 (Oct. 31, 1975).

[29] Definition of the Term ''Fiduciary''; Conflict of Interest Rule—Retirement Investment Advice, 81 FR at 20955.

[30] *Id.*

discrete instance of advice can be of critical importance to the plan, such as a one-time purchase of a group annuity to cover all of the benefits promised to substantially all of a plan's participants for the rest of their lives when a defined benefit plan terminates, or a plan's expenditure of hundreds of millions of dollars on a single real estate transaction based on the recommendation of a financial adviser hired for purposes of that one transaction.[31]

The Department likewise expressed concern that the requirements in the 1975 regulation of a ''mutual agreement, arrangement, or understanding'' that advice would serve as ''a primary basis for investment decisions'' had encouraged investment advice providers in the current marketplace to use fine print disclaimers as potential means of avoiding ERISA fiduciary status, even as they marketed themselves as providing tailored or individualized advice based on the retirement investor's best interest.[32] Additionally, the Department noted that the ''primary basis'' element of the five-part test appeared in tension with the statutory text and purposes of Title I and Title II of ERISA.[33] If, for example, a prudent plan fiduciary hires multiple specialized advisers for an especially complex transaction, it should be able to rely upon any or all of the consultants that it hired to render advice, regardless of arguments about whether one could characterize the advice, in some sense, as primary, secondary, or tertiary.[34]

The 2016 Final Rule defined an investment advice fiduciary for purposes of Title I and Title II of ERISA in a way that would apply fiduciary status in a wider array of advice relationships than the five-part test in the 1975 regulation.[35] The 2016 Final Rule generally covered: (1) recommendations by a person who represents or acknowledges that they are acting as a fiduciary within the meaning of ERISA; (2) advice rendered pursuant to a written or verbal agreement, arrangement or understanding that the advice is based on the particular investment needs of the retirement investor; and, most expansively, (3) recommendations directed to a specific retirement investor or investors regarding the advisability of a particular investment or management decision with respect to securities or other investment property of the plan or IRA.[36]

The 2016 Final Rule also specifically superseded a 2005 Advisory Opinion, 2005–23A (commonly known as the Deseret Letter) which had opined that it is not fiduciary investment advice under Title I of ERISA to make a recommendation as to distribution options from an employee benefit plan, even if accompanied by a recommendation as to where the distribution would be invested.[37]

On the same date it published the 2016 Final Rule, the Department also published two new administrative class exemptions from the prohibited transaction provisions of Title I and Title II of ERISA: the Best Interest Contract Exemption (BIC Exemption)[38] and the Class Exemption for Principal Transactions in Certain Assets Between Investment Advice Fiduciaries and Employee Benefit Plans and IRAs (Principal Transactions Exemption).[39] The Department granted the new exemptions with the objective of promoting the provision of investment advice that is in the best interest of retail investors such as plan participants and beneficiaries, IRA owners and beneficiaries, and certain plan fiduciaries, including small plan sponsors.[40]

The new exemptions included conditions designed to protect the interests of the retirement investors receiving advice.[41] The exemptions required investment advice fiduciaries to adhere to the following ''Impartial Conduct Standards'': providing advice in retirement investors' best interest; charging no more than reasonable compensation; and making no misleading statements about investment transactions and other important matters.[42] In the case of IRAs and non-Title I plans, the exemption required these standards to be set forth in an enforceable contract with the retirement investor, which also was required to include certain warranties and disclosures.[43] The exemption further provided that parties could not rely on the exemption if they included provisions in their contracts disclaiming liability for compensatory remedies or waiving or qualifying retirement investors' right to pursue a class action or other representative action in court.[44] In conjunction with the new exemptions, the Department also made amendments to pre-existing exemptions, namely PTEs 75–1, 77–4, 80–83, 83–1, 84–24 and 86–128, to require compliance with the Impartial Conduct Standards and to make certain other changes.[45]

3. Litigation Over the 2016 Rulemaking

The 2016 Final Rule and related new and amended exemptions (collectively, the 2016 Rulemaking) was challenged in multiple lawsuits. In *National Association for Fixed Annuities* v. *Perez,* a district court in the District of Columbia upheld the 2016 Rulemaking in the context of a broad challenge on multiple grounds.[46] Among other things, the court found that the 2016 Final Rule comports with both the text and the purpose of ERISA, and it noted ''if anything, it is the five-part test—and not the current rule—that is difficult to reconcile with the statutory text. Nothing in the phrase 'renders investment advice' suggests that the statute applies only to advice provided 'on a regular basis.' ''[47] Relatedly, in *Market Synergy* v. *United States Department of Labor,* the U.S. Court of Appeals for the Tenth Circuit affirmed a district court's decision similarly upholding the 2016 Rulemaking as it applied to fixed indexed annuities.[48]

On March 15, 2018, however, the U.S. Court of Appeals for the Fifth Circuit (Fifth Circuit) overturned a district court's decision upholding the validity of the 2016 Final Rule[49] and vacated the entire 2016 Rulemaking, in *Chamber of Commerce* v. *United States Department*

Nov. 3, 2017) (granting the Department's motion for a stay and the plaintiff's motion for a preliminary injunction, with respect to Thrivent's suit challenging the BIC Exemption's bar on class action waivers as exceeding the Department's authority and as unenforceable under the Federal Arbitration Act).

[49] *Chamber of Commerce* v. *Hugler,* 231 F. Supp. 3d 152 (N.D. Tex. Feb. 8, 2017) (finding, among other things, that in the 2016 Final Rule, the Department reasonably removed the ''regular basis'' requirement; and noting, ''if anything, however, the five-part test is the more difficult interpretation to reconcile with who is a fiduciary under ERISA.'').

of Labor (Chamber).[50] The Fifth Circuit held that the 2016 Final Rule conflicted with ERISA section 3(21)(A)(ii) and Code section 4975(e)(3)(B). Specifically, the Fifth Circuit found that the 2016 Final Rule swept too broadly and extended to relationships that lacked ''trust and confidence,'' which the court stated were hallmarks of the common-law fiduciary relationship that Congress intended to incorporate into the statutory definitions. The court concluded that ''all relevant sources indicate that Congress codified the touchstone of common-law fiduciary status—the parties' underlying relationship of trust and confidence—and nothing in the statute 'requires' departing from the touchstone.'' [51]

In addition to holding that the 2016 Final Rule conflicted with the statutory definitions in Title I and Title II of ERISA, the Fifth Circuit in *Chamber* also determined that the 2016 Rulemaking failed to honor the difference in the Department's authority over employee benefit plans under Title I of ERISA and IRAs under Title II, by imposing ''novel and extensive duties and liabilities on parties otherwise subject only to the prohibited transactions penalties.'' [52] These included the conditions of the BIC Exemption and Principal Transactions Exemption that required financial institutions and individual fiduciary advisers to enter into contracts with their customers with specific duties, warranties, and disclosures, and forbade damages limitations and class action waivers. Under the Code, IRA investors do not have a private right of action. Instead, the primary remedy for a violation of the prohibited transaction provisions under the Code is the assessment of an excise tax.[53] In the Fifth Circuit's view, the Department had effectively exceeded its authority by giving IRA investors the ability to bring a private cause of action that Congress had not authorized.[54]

In response to the Fifth Circuit's vacatur of the 2016 Rulemaking, on May 7, 2018, the Department issued Field Assistance Bulletin 2018–02, Temporary Enforcement Policy on Prohibited Transactions Rules Applicable to Investment Advice Fiduciaries (FAB 2018–02).[55] FAB 2018–02 announced that, pending further guidance, the Department would not pursue prohibited transaction claims against fiduciaries who were working diligently and in good faith to comply with the Impartial Conduct Standards for transactions that would have been exempted in the BIC Exemption and Principal Transactions Exemption, or treat such fiduciaries as violating the applicable prohibited transaction rules.

4. Subsequent Actions by the Department

In 2020, the Department issued a technical amendment to the Code of Federal Regulations (CFR) reinserting the 1975 regulation, reflecting the Fifth Circuit's vacatur of the 2016 Final Rule.[56] The technical amendment also reinserted into the CFR Interpretive Bulletin 96–1 (IB 96–1) relating to participant investment education, which had been removed and largely incorporated into the text of the 2016 Final Rule. Additionally, the Department updated its website to reflect the fact that the pre-existing prohibited transaction exemptions that had been amended in the 2016 Rulemaking had been restored to their pre-amendment form, and also to reflect that the Department had withdrawn the Deseret Letter.

The Department also adopted a new PTE, Improving Investment Advice for Workers & Retirees, also known as PTE 2020–02.[57] The exemption provides relief that is similar in scope to the BIC Exemption and the Principal Transactions Exemption, but it does not include contract or warranty provisions.

The preamble to PTE 2020–02 also included the Department's interpretation of when advice to roll over assets from a workplace retirement plan to an IRA would constitute fiduciary investment advice under the 1975 regulation's five-part test.[58] The preamble interpretation confirmed the Department's continued view that the Deseret Letter was incorrect, and that a recommendation to roll assets out of a Title I plan is advice with respect to moneys or other property of the plan and, if provided by a person who satisfies all of the requirements of the 1975 regulatory test, constitutes fiduciary investment advice.[59] The preamble interpretation also discussed when a recommendation to roll over assets from an employee benefit plan to an IRA would satisfy the ''regular basis'' requirement.[60] Additionally, the preamble set forth the Department's interpretation of the 1975 regulation's requirement of ''a mutual agreement, arrangement, or understanding'' that the investment advice will serve as ''a primary basis for investment decisions.'' [61] In April 2021, the Department issued Frequently Asked Questions (FAQs) that, among other things, summarized aspects of the preamble interpretation.[62]

The Department's preamble interpretation and certain FAQs were challenged as inconsistent with the 1975 regulation in two lawsuits filed after the issuance of PTE 2020–02.[63] On February 13, 2023, the U.S. District Court for the Middle District of Florida issued an opinion vacating the policy referenced in FAQ 7 (entitled ''When is advice to roll over assets from an employee benefit plan to an IRA considered to be on a 'regular basis'?'') and remanded it to the Department for further proceedings.[64] On June 30, 2023, a magistrate judge in the Northern District of Texas filed a report with the judge's findings, conclusions, and recommendations, including a recommendation that the court should vacate portions of PTE 2020–02 that permit consideration of actual or expected Title II investment advice relationships when determining Title I fiduciary status, as inconsistent with the 1975 regulation.[65]

5. Other Regulatory Developments

U.S. Securities and Exchange Commission

Since the vacatur of the Department's 2016 Rulemaking, other regulators have considered and adopted enhanced standards of conduct for financial professionals as a method of addressing, among other things, conflicts of interest. At the Federal level, on June 5, 2019, the SEC finalized a regulatory package relating to conduct standards for broker-dealers and investment advisers. The package included Regulation Best Interest, which established an enhanced best interest standard of conduct applicable to broker-dealers when making a recommendation of any securities transaction or investment strategy involving securities to retail customers.[66]

The SEC's Regulation Best Interest enhanced the broker-dealer standard of conduct ''beyond existing suitability obligations.'' [67] According to the SEC, this

> [A]lign[ed] the standard of conduct with retail customers' reasonable expectations by requiring broker-dealers, among other things, to: Act in the best interest of the retail customer at the time the recommendation is made, without placing the financial or other interest of the broker-dealer ahead of the interests of the retail customer; and address conflicts of interest by establishing, maintaining, and enforcing policies and procedures reasonably designed to identify and fully and fairly disclose material facts about conflicts of interest, and in instances where [the SEC has] determined that disclosure is insufficient to reasonably address the conflict, to mitigate or, in certain instances, eliminate the conflict.[68]

Regulation Best Interest's ''best interest obligation'' includes a Disclosure Obligation, a Care Obligation, a Conflict of Interest Obligation, and a Compliance Obligation. The Care Obligation requires broker-dealers, in making recommendations, to exercise ''reasonable diligence, care, and skill'' to:

> (A) Understand the potential risks, rewards, and costs associated with the recommendation, and have a reasonable basis to believe that the recommendation could be in the best interest of at least some retail customers;
>
> (B) Have a reasonable basis to believe that the recommendation is in the best interest of a particular retail customer based on that retail customer's investment profile and the potential risks, rewards, and costs associated with the recommendation and does not place the financial or other interest of the broker, dealer, or such natural person ahead of the interest of the retail customer; [and]
>
> (C) Have a reasonable basis to believe that a series of recommended transactions, even if in the retail customer's best interest when viewed in isolation, is not excessive and is in the retail customer's best interest when taken together in light of the retail customer's investment profile and does not place the financial or other interest of the broker, dealer, or such natural person making the series of recommendations ahead of the interest of the retail customer.[69]

In guidance on the care obligations applicable to both broker-dealers and investment advisers, the SEC staff explained,

> In the context of providing investment advice and recommendations to retail investors, the care obligations generally include three overarching and intersecting components. . . . [T]hese components are:
>
> Understanding the potential risks, rewards, and costs associated with a product, investment strategy, account type, or series of transactions (the ''investment or investment strategy'');
>
> Having a reasonable understanding of the specific retail investor's investment profile, which generally includes the retail investor's financial situation (including current income) and needs; investments; assets and debts; marital status; tax status; age; investment time horizon; liquidity needs; risk tolerance; investment experience; investment objectives and financial goals; and any other information the retail investor may disclose in connection with the recommendation or advice; and
>
> Based on the understanding of the first two elements, as well as, in the staff's view, a consideration of reasonably available alternatives, having a reasonable basis to conclude that the recommendation or advice provided is in the retail investor's best interest.[70]

The Conflict of Interest Obligation requires the broker-dealer to establish, maintain, and enforce written policies and procedures reasonably designed to:

> (A) Identify and at a minimum disclose, [in accordance with Regulation Best Interest], or eliminate, all conflicts of interest associated with such recommendations;
>
> (B) Identify and mitigate any conflicts of interest associated with such recommendations that create an incentive for a natural person who is an associated person of a broker or dealer to place the interest of the broker, dealer, or such natural person ahead of the interest of the retail customer;
>
> (C) Identify and disclose any material limitations placed on the securities or investment strategies involving securities that may be recommended to a retail customer and any conflicts of interest associated with such limitations, and prevent such limitations and associated conflicts of interest from causing the broker, dealer, or a natural person who is an associated person of the broker or dealer to make recommendations that place the interest of the broker, dealer, or such natural person ahead of the interest of the retail customer [in accordance with Regulation Best Interest]; and
>
> (D) Identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific securities or specific types of securities within a limited period of time.[71]

A conflict of interest is defined as ''an interest that might incline a broker, dealer, or a natural person who is an associated person of a broker or dealer—consciously or unconsciously—to make a recommendation that is not disinterested.'' [72]

In guidance on conflicts of interest applicable to both broker-dealers and investment advisers, the SEC staff has stated,

> All broker-dealers, investment advisers, and financial professionals have at least some conflicts of interest with their retail investors. Specifically, they have an economic incentive to recommend products, services, or account types that provide more revenue or other benefits for the firm or its financial professionals, even if such recommendations or advice are not in the best interest of the retail investor. . . . Consistent with their obligation to act in a retail investor's best interest, firms must address conflicts in a way that will prevent the firm or its financial professionals from providing recommendations or advice that places their interests ahead of the interests of the retail investor.[73]

In the Regulation Best Interest Release, the SEC stated that ''[t]he Commission has crafted Regulation Best Interest to draw on key principles underlying fiduciary obligations, including those that apply to investment advisers under the Advisers Act, while providing specific requirements to address certain aspects of the relationships between broker-dealers and their retail customers.'' [74] The SEC emphasized that, ''[i]mportantly, regardless of whether a retail investor chooses a broker-dealer or an investment adviser (or both), the retail investor will be entitled to a recommendation (from a broker-dealer) or advice (from an investment adviser) that is in the best interest of the retail investor and that does not place the interests of the firm or the financial

professional ahead of the interests of the retail investor.'' [75] The SEC also noted that the standard of conduct established by Regulation Best Interest cannot be satisfied through disclosure alone.[76]

The SEC's Regulation Best Interest applies to broker-dealers and their associated persons when they make a recommendation to a retail customer of any ''securities transaction or investment strategy involving securities (including account recommendations).'' [77]According to the SEC, this language encompasses recommendations to roll over or transfer assets in a workplace retirement plan account to an IRA, and recommendations to take a plan distribution.[78] However, the SEC also stated that while Regulation Best Interest applies to advice regarding a person's own retirement account such as a 401(k) account or IRA, it does not cover advice to workplace retirement plans themselves or to their legal representatives when they are receiving advice on the plan's behalf.[79]

The SEC Investment Adviser Interpretation, published simultaneously with Regulation Best Interest, reaffirmed and in some cases clarified aspects of the fiduciary duty of an investment adviser under the Advisers Act.[80] The SEC stated that ''an investment adviser's fiduciary duty under the Investment Advisers Act comprises both a duty of care and a duty of loyalty.'' [81] According to the SEC, ''[t]his fiduciary duty is based on equitable common law principles and is fundamental to advisers' relationships with their clients under the Advisers Act.'' [82] The fiduciary duty under the Federal securities laws requires an adviser ''to adopt the principal's goals, objectives, or ends.'' [83] The SEC stated:

> This means the adviser must, at all times, serve the best interest of its client and not subordinate its client's interest to its own. In other words, the investment adviser cannot place its own interests ahead of the interests of its client. This combination of care and loyalty obligations has been characterized as requiring the investment adviser to act in the ''best interest'' of its client at all times.[84]

The SEC further stated, ''[t]he investment adviser's fiduciary duty is broad and applies to the entire adviser-client relationship.'' [85] An investment adviser's fiduciary duty under the Advisers Act applies to advice about whether to rollover assets from one account to another, including rolling over from retirement accounts into an account that will be managed by the investment adviser or an affiliate.[86]

State Legislative and Regulatory Developments

Since the vacatur of the Department's 2016 Rulemaking, there have also been legislative and regulatory developments at the State level involving conduct standards. For instance, the Massachusetts Securities Division amended its regulations to apply a fiduciary conduct standard under which broker-dealers and their agents must ''[m]ake recommendations and provide investment advice without regard to the financial or any other interest of any party other than the customer.'' [87]

Additionally, the NAIC Model Regulation, updated in 2020, provides that insurance agents must act in the consumer's ''best interest,'' as defined by the Model Regulation, when making a recommendation of an annuity, and insurers must establish and maintain a system to supervise recommendations so that the insurance needs and financial objectives of consumers at the time of the transaction are effectively addressed.[88] The NAIC Model Regulation also provides that it does not apply to transactions involving contracts used to fund an employee pension or welfare plan covered by ERISA.[89] According to the NAIC, as of March 11, 2024, 45 jurisdictions have implemented the revisions to the model regulation.[90]

The NAIC Model Regulation includes a best interest obligation comprised of a care obligation, a disclosure obligation, a conflict of interest obligation, and a documentation obligation, applicable to an insurance producer.[91] If these specific obligations are met, the producer is treated as satisfying the overarching best interest standard as expressed in the NAIC Model Regulation. The care obligation states that the producer, in making a recommendation, must exercise ''reasonable diligence, care and skill'' to:

> (i) Know the consumer's financial situation, insurance needs and financial objectives;
>
> (ii) Understand the available recommendation options after making a reasonable inquiry into options available to the producer;
>
> (iii) Have a reasonable basis to believe the recommended option effectively addresses the consumer's financial situation, insurance needs and financial objectives over the life of the product, as evaluated in light of the consumer profile information; and
>
> (iv) Communicate the basis or bases of the recommendation.[92]

The NAIC conflict of interest obligation requires the producer to ''identify and avoid or reasonably manage and disclose material conflicts of interest, including material conflicts of interest related to an ownership interest.'' [93] Further, under the NAIC Model Regulation, insurers are required to ''establish and maintain reasonable procedures to identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time.'' [94]

The NAIC Model Regulation's requirements regarding mitigation of material conflicts of interest are not as stringent as either the Department's approach under ERISA or the SEC's approach. This is made clear in the NAIC Model Regulation's definition of a ''material conflict of interest'' which expressly carves out all ''cash compensation or non-cash compensation'' from treatment as sources of conflicts of interest.[95] ''Cash compensation'' that is excluded from the definition of a material conflict of interest is broadly defined to include ''any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer in connection with the

recommendation or sale of an annuity from an insurer, intermediary, or directly from the consumer,'' and ''non-cash compensation'' is also broadly defined to include ''any form of compensation that is not cash compensation, including, but not limited to, health insurance, office rent, office support and retirement benefits.'' [96]

Recent guidance from the SEC staff on broker-dealer and investment adviser conflicts of interest, on the other hand, makes clear that conduct standards in the securities market require a ''robust, ongoing process that is tailored to each conflict.'' [97] The SEC staff guidance provides a detailed list of types of compensation that the SEC staff believes are examples of common sources of conflicts of interest, as follows:

> compensation, revenue or other benefits (financial or otherwise) to the firm or its affiliates, including fees and other charges for the services provided to retail investors (for example, compensation based on assets gathered and/or products sold, including but not limited to receipt of assets under management (''AUM'') or engagement fees, commissions, markups, payment for order flow, cash sweep programs, or other sales charges) or payments from third parties whether or not related to sales or distribution (for example, sub-accounting or administrative services fees paid by a fund or revenue sharing);
>
> compensation, revenue or other benefits (financial or otherwise) to financial professionals from their firm or its affiliates (for example, compensation or other rewards associated with quotas, bonuses, sales contests, special awards; differential or variable compensation based on the product sold, accounts recommended, AUM, or services provided; incentives tied to appraisals or performance reviews; forgivable loans based upon the achievement of specified performance goals related to asset accumulation, revenue benchmarks, client transfer, or client retention);
>
> compensation, revenue or other benefits (financial or otherwise) (including, but not limited to, gifts, entertainment, meals, travel, and related benefits, including in connection with the financial professional's attendance at third-party sponsored trainings and conferences) to the financial professionals resulting from other business or personal relationships the financial professional may have, relationships with third parties that may relate to the financial professional's association or affiliation with the firm or with another firm (whether affiliated or unaffiliated), or other relationships within the firm; an
>
> compensation, revenue or other benefits (financial or otherwise) to the firm or its affiliates resulting from the firm's or its financial professionals' sales or offer of proprietary products or services, or products or services of affiliates.[98]

The NAIC expressly disclaimed that its standard creates fiduciary obligations, and the obligations in its Model Regulation differ in significant respects from those applicable to broker-dealers in the SEC's Regulation Best Interest or to investment advisers pursuant to the Advisers Act's fiduciary duty.[99] In addition to disregarding all forms of compensation as a source of material conflicts of interest, as discussed above, the NAIC Model Regulation's ''best interest'' standard is satisfied by the four component obligations—the care, disclosure, conflict of interest, and documentation obligations—but these components do not expressly incorporate the best interest obligation not to put the producer's or insurer's interests before the customer's interests, even though compliance with the component obligations' terms is treated as meeting the NAIC Model Regulation's ''best interest'' standard. Similarly, the NAIC Model Regulation's care obligation does not repeat the ''best interest'' requirement but instead includes a requirement to ''have a reasonable basis to believe the recommended option effectively addresses the consumer's financial situation, insurance needs and financial objectives . . . .'' [100] Additionally, the obligation to comply with the ''best interest'' standard is limited to the individual producer, as opposed to the insurer responsible for supervising the producer.

The State of New York took a different approach than the NAIC Model Regulation in its NY Insurance Regulation 187, effective February 1, 2020. Under the New York regulation, an insurance producer acts in the best interest of the consumer when, among other things,

> the producer's . . . recommendation to the consumer is based on an evaluation of the relevant suitability information of the consumer and reflects the care, skill, prudence, and diligence that a prudent person acting in a like capacity and familiar with such matters would use under the circumstances then prevailing. Only the interests of the consumer shall be considered in making the recommendation. The producer's receipt of compensation or other incentives permitted by the Insurance Law and the Insurance Regulations is permitted by this requirement provided that the amount of the compensation or the receipt of an incentive does not influence the recommendation.

Thus, under New York law, insurance producers must act prudently in making a recommendation and must not allow compensation or other incentives to influence their recommendations. According to the American Council of Life Insurers, out of 713 life insurers in the United States, 81 were domiciled in New York in 2022, and annuity direct premium receipts in New York in 2022 totaled $31.4 billion.[101]

The regulatory changes described above cover many, but not all, of the assets held by ERISA retirement plans and IRAs. Further, the SEC's Regulation Best Interest and the NAIC Model Regulation are each limited in important ways in terms of their application to advice provided to ERISA plan fiduciaries.[102] For example, Regulation Best Interest does not cover advice to workplace retirement plans or their representatives (such as an employee of a small business who is a fiduciary of the business's 401(k) plan).[103] The NAIC Model Regulation specifically states that it does not apply to transactions involving contracts used to fund an employee pension or welfare plan covered by ERISA.[104] And there remain investments held by retirement investors in retirement accounts that are not covered by securities laws or insurance laws, including real estate, certain certificates of deposit and other banking products, commodities, and precious metals. The Department believes that retirement investors and the regulated community are best served by ERISA fiduciary protections in Title I and Title II that apply to all

[102] The fiduciary obligations of investment advisers under the Advisers Act are not limited in this way, however.

[103] Regulation Best Interest release, 84 FR 33318, 33343–44 (July 12, 2019). Regulation Best Interest would apply, however, to retail customers receiving recommendations for their own retirement accounts. *Id.*

[104] NAIC Model Regulation at section 4.B.(1).

investments that retirement investors may make with respect to their retirement accounts when they receive recommendations from trusted advice providers. Amendments to the ERISA regulation are necessary to achieve that result.

6. Coordination With Other Agencies

Under Title I and Title II of ERISA, the Department has primary responsibility for the regulation of ERISA fiduciaries' advice to retirement investors. Because of the fundamental importance of retirement investments to workers' financial security and the tax-preferred status of plans and IRAs, Congress defined the scope of ERISA fiduciary coverage broadly and imposed stringent obligations on ERISA fiduciaries, including prohibitions on conflicted transactions that do not have direct analogues under the securities and insurance laws. The fiduciary protections and prohibited transaction rules set forth in Title I and Title II of ERISA, as applicable, broadly apply to covered fiduciaries, irrespective of the particular investment product they recommend or their status as investment advisers under the Advisers Act, broker-dealers, insurance agents, bankers, or other status. This final rule is designed to ensure that the standards and rules applicable under Title I and Title II of ERISA are broadly uniform as applied to retirement investors receiving advice from a trusted advisor across different categories of investment advice providers and advisory relationships.

At the same time, many commenters stressed the need to harmonize the Department's efforts with rulemaking activities by other regulators, including the SEC's standards of care for providing investment advice and the Commodity Futures Trading Commission's (CFTC) business conduct standards for swap dealers (and comparable SEC standards for security-based swap dealers). In addition, some commenters have urged coordination with other agencies regarding IRA products and services.

As the SEC has adopted regulatory standards for broker-dealers that are based on fiduciary principles of care and loyalty also applicable to investment advisers under the Advisers Act, and the NAIC has issued a model law that includes a best interest standard, the Department believes that it is possible to hew to the unique regulatory structure imposed by the law governing tax-preferred retirement investments, adopt a regulatory approach that provides a broadly uniform standard for all retirement investors when they receive advice from a trusted advisor, as contemplated by Title I and Title II of ERISA, and avoid the imposition of obligations that conflict with financial professionals' obligations under other applicable Federal and State laws. In particular, in the Department's view, PTE 2020–02, as amended and published elsewhere in today's **Federal Register**, is consistent with the requirements of the SEC's Regulation Best Interest and the fiduciary obligations of investment advisers under the Advisers Act. Therefore, broker-dealers and investment advisers that have already adopted meaningful compliance mechanisms for Regulation Best Interest and the Advisers Act fiduciary duty, respectively, should be able to adapt easily to comply with the amended PTE.

Nevertheless, to better understand whether the proposed rule and proposed amendments to the PTEs would have subjected investment advice providers to requirements that conflict with or add to their obligations under other Federal laws, the Department has reached out to and consulted with the staff of the SEC; other securities, banking, and insurance regulators; [105] the Department of the Treasury, including the Federal Insurance Office; and the Financial Industry Regulatory Authority (FINRA), a self-regulatory organization that oversees broker-dealers.

The Department has also consulted and coordinated with the Department of the Treasury and the Internal Revenue Service (IRS), particularly on the subject of IRAs, and will continue to do so. Although the Department of Labor has responsibility for issuing regulations and prohibited transaction exemptions under section 4975 of the Code, which applies to IRAs, the IRS maintains general responsibility for enforcing the excise tax applicable to prohibited transactions. The IRS' responsibilities extend to the imposition of excise taxes on fiduciaries who participate in prohibited transactions. As a result, the Department and the IRS share responsibility for addressing self-dealing by investment advice fiduciaries to tax-qualified plans and IRAs.

7. Proposed Retirement Security Rule

On October 31, 2023, the Department released the proposed Retirement Security Rule: Definition of an Investment Advice Fiduciary, along with proposed amendments to PTE 2020–02 and proposed amendments to other administrative prohibited transaction exemptions available to investment advice fiduciaries.[106] The proposed rule was designed to ensure that protections established by Titles I and II of ERISA would apply to all advice that retirement investors receive from trusted advice providers concerning investment of their retirement assets in a way that ensures that retirement investors' reasonable expectations are honored.[107]

Under the proposal, a person would be an investment advice fiduciary under Title I and Title II of ERISA if they provide investment advice or make an investment recommendation to a retirement investor (*i.e.,* a plan, plan fiduciary, plan participant or beneficiary, IRA, IRA owner or beneficiary or IRA fiduciary); the advice or recommendation is provided ''for a fee or other compensation, direct or indirect,'' as defined in the proposed rule; and the person makes the recommendation in one of the following contexts:

- The person either directly or indirectly (*e.g.,* through or together with any affiliate) has discretionary authority or control, whether or not pursuant to an agreement, arrangement, or understanding, with respect to purchasing or selling securities or other investment property for the retirement investor;
- The person either directly or indirectly (*e.g.,* through or together with any affiliate) makes investment recommendations to investors on a regular basis as part of their business and the recommendation is provided under circumstances indicating that the recommendation is based on the particular needs or individual circumstances of the retirement investor and may be relied upon by the retirement investor as a basis for investment decisions that are in the retirement investor's best interest; or

[105] The Department acknowledges the comments from the NAIC expressing disappointment that the Department coordinated with the NAIC staff rather than with the NAIC members prior to the proposed rule's publication and that the Department did not share its intended approach in advance of public release of the proposal. As the NAIC's comment acknowledged, however, the staff level discussions focused on aspects of the NAIC Model Regulation. Further, immediately after the release of the proposed rule, the Department met with NAIC members and repeatedly offered additional meetings before the rule was finalized. The NAIC also offered substantive comments to the proposed rule after its release, which the Department has carefully considered along with other commenters, including the comments of many others in the insurance industry.

[106] The proposals were released on the Department's website on October 31, 2023. They were published in the **Federal Register** on November 3, 2023, at 88 FR 75890, 88 FR 75979, 88 FR 76004, and 88 FR 76032.

[107] Proposed Retirement Security Rule, 88 FR 75890 (Nov. 3, 2023).

- The person making the recommendation represents or acknowledges that they are acting as a fiduciary when making investment recommendations.[108]

The proposal's preamble highlighted developments in retirement savings vehicles and in the investment advice marketplace since the 1975 regulation was adopted that have altered the way retirement investors interact with investment advice providers.[109] As noted previously, in 1975, retirement plans were primarily defined benefit plans, which were typically managed by sophisticated financial professionals. IRAs were not major market participants and 401(k) plans were not yet in existence. Today, however, plan participants, IRA owners, and their beneficiaries exercise direct authority over their investments, and depend upon a wide range of financial professionals, including broker-dealers, investment advisers subject to the Advisers Act, insurance agents, and others on how to make complex decisions about the management of retirement assets.

The Department expressed the view in the proposal that when a financial professional satisfies all five parts of the 1975 regulation with respect to a given instance of advice, the professional is properly treated as an investment advice fiduciary in accordance with the parties' reasonable understanding of the nature of their relationship.[110] However, the 1975 regulation, as applied to the current marketplace, is underinclusive in assigning fiduciary status because it fails to capture many circumstances in which an investor would reasonably expect that they can place their trust and confidence in the advice provider as acting in their best interest. The Department's experience in the current marketplace is that the five-part test—in particular, the ''regular basis'' requirement and the requirement of ''a mutual agreement, arrangement or understanding'' that the investment advice will serve as ''a primary basis for investment decisions''—too often works to defeat legitimate retirement investor expectations of impartial advice and allows investment advice providers to hold themselves out as offering individualized advice that is intended to promote the best interest of the customer, when they, in fact, have no such obligation under the 1975 regulation's implementation of Title I or Title II of ERISA.

[108] *Id.*

[109] *Id.* at 75892–3, 75899–900.

[110] *Id.* at 75899.

The proposal noted that these components of the five-part test are not found in the statute's text, and in today's marketplace, undermine legitimate investor understandings of a professional relationship centered around the investor's best interest.[111] In other words, there are currently many situations where the retirement investor reasonably expects that their relationship with the advice provider is one in which the investor can (and should) place trust and confidence in the recommendation, yet which are not covered by the 1975 regulation. The proposal was designed to reconcile the regulatory text with both today's retirement investors' reasonable expectations, along with the statutory text and purpose of ERISA.[112]

The Department stated in the proposal that an important premise of Title I and Title II of ERISA is that fiduciaries' conflicts of interest should not be left unchecked, but rather should be carefully regulated through rules requiring adherence to basic fiduciary norms and avoidance of prohibited transactions.[113] The specific duties to avoid conflicts of interest or comply with a prohibited transaction exemption applicable to fiduciaries under Title I and Title II of ERISA stem from Congress' judgment regarding the best way to protect the public interest in tax-advantaged benefit arrangements that are critical to workers' financial and physical health. In contrast to the Federal laws and other regulatory regimes which can permit certain conflicts if prescribed disclosure obligations are met, the statutory prohibited transaction provisions in Title I and Title II of ERISA contemplate a more stringent approach for the protection of these tax-advantaged retirement savings. In this context, an appropriately constructed regulatory definition of an investment advice fiduciary under Title I and Title II of ERISA is essential.

C. Overview of the Comments Received on the Proposal

The Department received over 400 individual comments and just under 20,000 petition submissions as part of 14 separate petitions on the proposal. These comments and petitions came from consumer groups, financial services companies, academics, trade and industry associations, and others, both in support of, and in opposition to, the proposed rule and proposed amendments to the PTEs.[114]

[111] *Id.*

[112] *Id.*

[113] *Id.*

Commenters on the proposal generally agreed that as a result of the shift from defined benefit plans to 401(k)-type individual account retirement plans, retirement investors today face increased responsibility for ensuring their own secure retirement.[115] Commenters cited studies indicating that many Americans are concerned that they will not have saved enough money to achieve that goal.[116] Many commenters discussed the related importance of retirement investors' access to professional investment advice. In connection with these points, some commenters said the proposed update to the investment advice fiduciary definition would provide important protections that would support retirement investors' access to investment advice intended to advance their interests. Other commenters said the proposed update to the investment advice fiduciary definition was not necessary and that the scope of the proposed definition exceeded the Department's jurisdiction and could reduce access to advice. These comments and the Department's responses are discussed in this preamble Section C. Comments on specific provisions of the proposal are discussed in preamble Section D.

1. Comments Supporting the Proposal

Commenters supporting the proposal echoed many of the concerns expressed by the Department in the proposal's preamble. These commenters emphasized the need to update the 1975 regulation to better align with retirement investor expectations in today's retirement investment marketplace and to fill important gaps in advice relationships where advice is not currently required to be provided in the retirement investor's best interest

[114] The 2023 proposed rule and proposed amendments to the PTEs provided for a 60-day comment period which ended on January 2, 2024. The Department held a virtual public hearing on December 12–13, 2023, at which over 40 witnesses testified. The Department posted a video recording of the virtual public hearing on its website on December 19, 2023, an unofficial hearing transcript on December 22, 2023, and the official hearing transcript on January 10, 2024.

[115] References to ''comments'' and ''commenters'' in this preamble generally include written comments, petitions, and hearing testimony.

[116] *See, e.g.,* Board of Governors of the Federal Reserve System, ''Economic Well-Being of U.S. Households in 2022'' 67 May 2023, *available at https://www.federalreserve.gov/publications/files/2022-report-economic-well-being-us-households-202305.pdf,* (''While most non-retired adults had some type of retirement savings, only 31 percent of non-retirees thought their retirement saving was on track, down from 40 percent in 2021.'')

and the investor may not be aware of that fact.

Some commenters expressed specific support for applying ERISA fiduciary protections to recommendations to roll over assets from a workplace retirement plan to an IRA, in light of the significant consequences of that decision. They also expressed support for applying ERISA fiduciary protections to recommendations to plan fiduciaries where, currently, advice regarding plan investment options may not be considered to occur on a regular basis, and therefore would not be considered ERISA fiduciary advice. Commenters said many employers, even larger employers, are not necessarily knowledgeable about selecting prudent investment options for the plans they sponsor.

Commenters also said an updated regulatory definition of an investment advice fiduciary would protect retirement investors from harm caused by conflicts of interest. They said conflicts of interest can expose savers to higher costs, lower returns, and greater risk. Some commenters emphasized that retirement investors with modest balances are more vulnerable to harm from conflicted investment advice, as the high fees would disproportionately diminish their savings. One commenter, a State securities regulator, identified multiple examples of abusive sales tactics impacting retirement investors and said more protections are needed.

In this regard, Morningstar submitted a comment that quantified potential benefits of the proposal in two areas. First, as a result of the proposal's coverage of recommendations to plan fiduciaries about the fund lineups in defined contribution plans, participants in workplace retirement plans would save over $55 billion in the first 10 years and over $130 billion in the subsequent 10 years, in undiscounted and nominal dollars, due to reductions in costs associated with investing through their plans. Second, retirement investors rolling over retirement funds into fixed indexed annuities would save over $32.5 billion in the first 10 years and over $32.5 billion in the subsequent 10 years, in undiscounted and nominal dollars, also due to decreased pricing spreads.[117]

Commenters supporting the proposal discussed the need for application of ERISA fiduciary protections even in light of other regulators' conduct standards. Some commenters said SEC Regulation Best Interest had only limited reach in that it applies only to investments that are securities and some commenters also said it had only limited requirements for conflict mitigation at the financial institution level. A commenter also said there are disparities in the degree to which firms are implementing SEC Regulation Best Interest's requirements. Commenters referenced a 2023 report by the North American Securities Administrators Association on SEC Regulation Best Interest implementation that found that even as firms have updated their investor profile forms and policies and procedures to focus on Regulation Best Interest obligations, many broker-dealers continue to recommend complex products and rely on financial incentives instead of lower cost, lower risk products.[118] One commenter said alternative assets, which they said included for example, precious metals, real estate, private equity, and debt, may not be subject to standards set by the SEC and that state laws vary and leave gaps in protections for investors in these type of investments.

With respect to the insurance marketplace, several commenters described significant conflicts of interest associated with large commissions on some annuity sales, as well as abusive sales practices. Commenters also noted that the terms of annuity contracts, including surrender charges, may often be detrimental to retirement investors but may not be well understood. One commenter said recommendations of annuities for purchase inside retirement accounts deserve special scrutiny because the annuities are often marketed based on purported tax deferral advantages that would not be realized inside an already tax-preferred retirement account.

Some commenters said these issues are not addressed by the NAIC Model Regulation, which some described as providing a best interest standard in name only, when in substance it remains a suitability standard. One commenter presented a guide developed by the Certified Financial Planner (CFP) Board comparing the CFP Board's Code and Standards to the NAIC Model Regulation, which states, among other things, that the NAIC Model Regulation appears to provide a care obligation that does not rise to the level of a ''prudent professional standard.'' The guide further states that the NAIC Model Regulation does not effectively require the client's interests to come first.[119] Even though the NAIC Model Regulation's best interest obligation includes the requirement that the producer shall not place the producer's or the insurer's financial interest ahead of the consumer's interest, several commenters observed that none of the component obligations include a specific requirement for the producer to act in the best interest of the consumer. In other words, the NAIC Model Regulation treats the best interest obligation as satisfied if the producer meets specified component obligations, none of which require the producer to put the client's interests first.

Commenters also said the NAIC Model Regulation does not sufficiently address compensation-related conflicts of interest, noting that it does not include cash and non-cash compensation within the definition of a material conflict of interest. As discussed above, ''cash compensation'' that is excluded from the definition of a material conflict of interest is broadly defined to include ''any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer in connection with the recommendation or sale of an annuity from an insurer, intermediary, or directly from the consumer,'' and ''non-cash compensation'' is also broadly defined to include ''any form of compensation that is not cash compensation, including, but not limited to, health insurance, office rent, office support and retirement benefits.''[120] One commenter expressed the view that an annuity producer that recommends an annuity because that particular annuity pays a larger commission or will help the producer meet a sales goal or ensure the producer wins an expensive trip will meet the best interest standard in the NAIC Model Regulation so long as the annuity is ''suitable'' for the retirement saver.

Another commenter noted that there are abuses in life insurance recommendations as well, and that the NAIC has not addressed investment-oriented life insurance policies even

[117] Available at *https://www.dol.gov/sites/dolgov/files/ebsa/laws-and-regulations/rules-and-regulations/public-comments/1210-AC02/00290.pdf.* Morningstar also suggested that the Department should revise its Form 5500 to reduce gaps in the disclosures that would provide additional transparency on fees and compensation. Another commenter suggested that the Department should require plans to provide a 404a–5 participant fee disclosure with cost details, as with their annual reports on Form 5500. The Department acknowledges these comments but notes they are outside the scope of this project.

[120] NAIC Model Regulation at section 5.B. and J.

though regulators receive many thousands of customer complaints about the policies.

Several commenters responded to arguments that disclosures are sufficient for financial professionals to avoid conflicts of interest. The commenters stated that, while disclosures are important components of financial regulation and provide transparency, they are ineffective in protecting investors. The commenters noted that the disclosures are often long and full of technical language. The commenters stated that studies showed that disclosures cause investors to trust and increasingly rely on financial professionals, enhancing the ability of financial professionals to provide information not in the investors' best interest.

Overall, these commenters suggested that the proposal would benefit retirement investors by ensuring that investment advice they receive from trusted advice providers is consistent with ERISA's fiduciary protections under Title I and Title II.

2. Comments Opposing the Proposal

Some other commenters said the Department should retain the 1975 regulation as the applicable regulatory definition of an investment advice fiduciary. They said the five parts of the 1975 regulation are needed to describe a relationship of trust and confidence, consistent with the Fifth Circuit's *Chamber* opinion. Some of the commenters further said that the Department had not provided sufficient evidence of existing problems that would be solved by the updated investment advice fiduciary definition.

Commenters also said the proposed rule exceeded the Department's jurisdiction, for a variety of reasons, including in covering advice to roll over from a workplace retirement plan to an IRA as advice under Title I of ERISA. Many commenters said that the proposal suffered the same legal flaws as the 2016 Final Rule and would be legally vulnerable under the *Chamber* opinion. One commenter said that the statutory language in ERISA section 3(21)(A) and Code section 4975(e)(3) provides that a person is a fiduciary only ''*to the extent*'' they ''provide investment advice for a fee or other compensation, direct or indirect,'' which indicated there were limits on the breadth of what is considered ERISA fiduciary investment advice.

Some commenters also said that financial professionals paid by commission cannot satisfy the ERISA fiduciary duties under Title I which require, among other things, fiduciaries to discharge their duties with respect to the plan ''solely in the interests of the participants and beneficiaries.'' [121] These commenters said they understood this standard to require a complete disregard of any financial interest, which they said is incompatible with the business of broker-dealers and insurance agents. Some commenters also said the Department did not have jurisdiction to create a ''best interest'' standard, which they said has no basis in ERISA. Commenters also said the Department should not rely on ''best interest'' standards of other regulators to demonstrate trust and confidence required for ERISA fiduciary status. Some commenters said the SEC in Regulation Best Interest and the NAIC in its Model Regulation intentionally created standards that were not fiduciary standards, and the Department should not override those decisions.

Many of these commenters also said an updated definition of an investment advice fiduciary is unnecessary in light of the conduct standards in SEC Regulation Best Interest and the adoption by many States of the NAIC Model Regulation. Commenters described these regulatory actions as establishing robust, effective, and workable best interest standards while preserving the ability of retirement investors to work with the financial professional of their choosing and to retain choice as to how they pay for financial services and products.

Some commenters said the proposal's preamble discussion of the NAIC Model Regulation reflected misunderstanding by the Department. They said the NAIC Model Regulation sets forth a clear best interest standard despite not restating the ''best interest'' requirement in the component obligations. They also said that the NAIC Model Regulation did require mitigation of compensation-related conflicts of interest in the area of sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time, and the decision to exclude compensation from the definition of material conflicts of interest demonstrated a conscious choice that the best way to address conflicts is through disclosure.[122] Commenters also identified other types of State insurance laws that provide protection to retirement savers, such as regulations governing insurance advertising. An insurance commissioner commenter said the Department's proposal would displace the requirements of the NAIC Model Regulation as adopted by the States.

In sum, these commenters generally urged the Department to withdraw the proposal and focus its resources on other priorities.

3. Comments About Preserving Access to Investment Advice and Products in the Retail Market

Many commenters addressed the impact of the proposal on access to investment advice and products in the retail market. Some commenters believed that the rule would lead to advice providers imposing account minimums or raising their fees. Commenters also said that imposing ERISA fiduciary protections on advice and recommendations to retirement investors would lead to a decrease in commission-based arrangements and related access to certain investment products. They said this would be the case because status as an investment advice fiduciary would expose financial services providers to additional compliance costs and litigation risk. Commenters further said that the proposal was insufficiently specific about when ERISA fiduciary status would apply, and uncertainty would result in some providers taking a conservative approach and discontinuing serving retirement investors. Commenters said commission-based arrangements provide a valuable source for investment advice and information, and that a reduction in such arrangements would negatively impact retirement investors who may not be best suited for a fee-based investment advice arrangement.

A number of commenters said the proposal would have a negative impact on access to annuities, which are generally sold on commission. These commenters described annuities as an important option for retirement investors seeking a guaranteed lifetime income stream as part of their retirement plan. Some of these commenters said the Department's proposal failed to recognize the value of these products and was inconsistent with congressional intent to promote lifetime income options, as evidenced by recent pension legislation in the SECURE Act [123] and the SECURE 2.0 Act.[124] Commenters specifically mentioned such features as protection

against volatility, longevity and inflation risk through guarantees.

In this regard, some commenters said the Department's proposal would impose ERISA fiduciary duties on financial professionals who are traditionally considered salespeople. The commenters said that when the financial professional is paid on commission it should be clear to the retirement investor that the professional is engaging in sales activity, as opposed to providing advice. Commenters said that under the Fifth Circuit's *Chamber* opinion, salespersons are generally not considered to have a relationship of trust and confidence with their customers. One commenter said: ''the fact that a broker-dealer or insurance agent acts in a manner that is trustworthy and provides guidance and recommendations in the investor's best interest does not alter the sales relationship and does not implicate or confer fiduciary status.''

Another commenter discussed the proposal in the context of alternative investments, where the commenter said commissions are relatively large. The commenter said applying ERISA's reasonable compensation standard and the PTEs' conduct standards in this context would likely chill willingness to recommend investment products with higher-than-average commissions, including alternative investments that the commenter said provide diversification, income, and other important portfolio elements. They said that although the SEC in Regulation Best Interest does require a focus on costs associated with an investment, it does not employ a distinct inquiry into the broker-dealer's compensation analogous to ERISA's reasonable compensation standard. Therefore, they did not believe that the Department's proposal was consistent with the SEC's approach in Regulation Best Interest or workable for broker-dealers.

Other commenters generally urged the Department to be skeptical of industry predictions of loss of access to advice and services. They believed providers would remain available to serve retirement investors irrespective of account balance size. They also said they were not aware of any decrease in access to advice and products following the recent adoption of other conduct standards including Regulation Best Interest. Rather, they said, the experience with Regulation Best Interest shows that financial professionals paid on commission can comply with an explicit best interest standard that requires conflict mitigation. A commenter also pointed to the fact that financial professionals paid on commission are among the CFP professionals who have adopted the CFP Board fiduciary duty.

These commenters disagreed that retirement investors are well aware when they are receiving a sales pitch. They said retirement investors generally do not understand how financial professionals are paid or the differences in the regulatory requirements applicable to broker-dealers, investment advisers, and insurance agents.

A number of these commenters also said commission-based financial professionals commonly hold themselves out as trusted advice providers. Commenters said that marketing slogans and titles such as ''financial advisor,'' ''financial consultant,'' and ''wealth manager'' are commonly and deliberately used to establish a sense of trust and confidence. One commenter cited several examples of marketing strategies employed in the insurance industry. One such example described a ''Trusted Advisor Success Training Workshop'' showing insurance agents how they ''can have endless streams of new, repeat, and referral business'' by ''mak[ing] the move from a salesperson to a 'Trusted Advisor!'''

One commenter described a study that found that 25 of the largest insurance companies and broker-dealers substantively market themselves as offering advice services and using advice titles, even as they continued to rely on the regulatory standards that apply to salespersons.[125] Another commenter provided examples, such as the following statement they said was on the annuities page of an insurance company: ''by working with a trusted financial professional, you can discuss your unique circumstances and how best to prepare for the challenges that may lie ahead.'' These commenters did not agree that commission-based financial professionals should categorically be excluded as investment advice fiduciaries or that such a categorical exclusion was compelled by the Fifth Circuit's *Chamber* decision.

A number of comments from financial professionals paid on commission also indicated they did not think of themselves as salespeople. One financial services provider who testified at the Department's public hearing on the proposal and said that most of his customers pay by commission, stated he was not a salesperson and agreed that he did have a relationship of trust and confidence with his customers.[126] He described himself as ''[a]n advisor and somebody who helps and serves my clients, that's my highest ethic and creed. . . . I believe those individuals who are called to serve others gravitate towards professions like ours.'' [127]

The witness represented the National Association of Insurance and Financial Advisors (NAIFA), a large association representing the interests of insurance professionals, and said ''NAIFA members are Main Street advisors who primarily serve and maintain longstanding relationships with individuals, families and small businesses in their communities.'' [128] In describing the process for deciding whether to recommend an annuity to someone and determine what the right annuity is, the witness said: ''basically we have a long-term relationship where I get to know the client, get to know their needs, their objectives, their risk tolerance and try to figure out what the best products and services are to meet those needs.'' [129] Other comments similarly indicated that some financial professionals paid on commission nevertheless view themselves as trusted advisers.[130]

Other commenters said that the Department's proposal would lead to a reduction in sales recommendations in the institutional market and also in the provision of educational information. These comments are discussed in Section E of the preamble. Access to advice in the retail market is further

discussed in section 7 of the Regulatory Impact Analysis.

4. The Department's Decision to Issue the Final Rule

After careful consideration of the comments discussed in this section, the Department has determined to issue a final rule updating the regulatory definition of an investment advice fiduciary, with changes reflecting input from the commenters. This decision reflects the continued view that applying ERISA fiduciary protections under Title I and Title II to trusted advice to retirement investors about their retirement accounts is necessary and appropriate to protect the retirement investors from conflicts of interest.

The Department's Jurisdiction

To begin with, as some commenters noted, when Congress enacted ERISA, it chose to impose a uniquely protective regime on the management and oversight of plan assets. The law's aim was to protect the interests of plan participants and beneficiaries by imposing especially high standards on those who exercise functional authority over plan investments, including rendering investment advice for a fee.[131] As many courts have noted, ERISA's obligations are the ''highest known to the law.'' [132] Thus, the Department has not deferred completely to the Federal securities laws and State insurance laws, as some commenters advocated, because such deference would not be consistent with congressional intent or ERISA's purposes.

Under Title I of ERISA, the Department has express authority to issue regulations defining terms in Title I and to grant administrative exemptions from the prohibited transactions provisions. Pursuant to the President's Reorganization Plan No. 4 of 1978,[133] which Congress ratified in 1984,[134] the Department's authority was expanded to include authority to issue regulations, rulings, and opinions on the definition of a fiduciary with respect to Title II plans under the Code (including IRAs) and to grant administrative prohibited transaction exemptions applicable to them.[135] Thus, the Department has clear authority to promulgate the regulatory definition of a fiduciary under both Title I and Title II of ERISA, and the Department has taken care in this final rule to honor the text and purposes of Title I and Title II of ERISA.

The final rule is consistent with the express text of the statutory definition and will better protect the interests of retirement investors as compared to the 1975 regulation. It comports with the broad language and protective purposes of the statute, while at the same time limiting the treatment of recommendations as ERISA *fiduciary* advice to those objective circumstances in which a retirement investor would reasonably believe that they can rely upon the advice as rendered by a financial professional who is acting in the investor's best interest and on their behalf.

In today's market, the 1975 regulation's five-part test is underinclusive in assigning fiduciary status as it fails to capture many circumstances in which an investor would reasonably expect that they can place their trust and confidence in the advice provider. As noted above, the Department has become concerned that the 1975 regulation's regular basis test has served to defeat objective understandings of the nature of the professional relationship and the reliability of the advice as based on the investor's best interest. The proposal noted that even a discrete instance of advice can be of critical importance to the plan. As another example, under the 1975 regulation's ''regular basis'' requirement, which is not found in the text of the statute, a financial professional could provide recommendations on a regular basis for many years to an investor regarding the investor's non-retirement accounts and yet still not be considered an investment advice fiduciary with respect to a recommendation to roll over all their retirement savings from the investor's workplace retirement plan to an IRA if that is the first instance of advice with respect to that plan account.

Therefore, the Department does not believe that the 1975 regulation's five-part test is the only test that can properly define an investment advice fiduciary under the statute, and the Department does not believe its authority to revisit the regulatory definition of an investment advice fiduciary and depart from the 1975 five-part test is foreclosed by the *Chamber* opinion. The discrete components of the five-part test are not found in the text of the statute, and commenters did not identify—and the Department's research did not uncover—any common law cases predating enactment of ERISA that limited the application of fiduciary status and obligations to those persons that meet all five of the requirements created and imposed by the 1975 regulation. To the contrary, the Department notes that multiple cases discuss how ERISA's statutory definition of ''fiduciary'' is broad,[136] with one such case indicating that the definition of ''fiduciary'' under ERISA is broader than the more restrictive approach the Department articulated through the 1975 five-part test.[137]

The Department also does not agree with a commenter that said that the proposal would render the ''*to the extent*'' language in the statute a nullity.[138] Under ERISA's functional test of fiduciary status, as the courts have repeatedly recognized, a person is a fiduciary *to the extent* the person engages in specified activities, and only

[131] One commenter provided following statement by the Chair of the Senate Committee on Labor and Public Welfare upon introduction of the Conference Report on ERISA:

Despite the value of full reporting and disclosure, it has become clear that such provisions are not in themselves sufficient to safeguard employee benefit plan assets from such abuses as self-dealing, imprudent investing, and misappropriation of plan funds. Neither existing State nor Federal law has been effective in preventing or correcting many of these abuses. Accordingly, the legislation imposes strict fiduciary obligations on those who have discretion or responsibility respecting the management, handling, or disposition of pension or welfare plan assets. The objectives of these provisions are to . . . establish uniform fiduciary standards to prevent transactions which dissipate or endanger plan assets. . . .

Rev. 1, 4–5 (1977) (referring to the ''broadness of the [statutory] definition'' of ''fiduciary'' under ERISA, such that the definition could cover ''insurance salesmen who recommend the purchase of certain types of insurance and receive a commission on the sale of such insurance'' and ''stock brokers or dealers who recommend certain securities and then participate in the acquisition or disposition of securities and receive a commission for their services'').

[137] *See Farm King,* 884 F.2d at 293 (discussing ''evidence of the wide sweep given to the meaning of 'fiduciary' under ERISA'' in relation to the narrower definition codified in the 1975 test).

[138] ERISA section 3(21)(A)(ii) provides: ''a person is a fiduciary with respect to a plan to the extent . . . (ii) [t]he [person] renders investment advice for a fee or other compensation, direct or indirect, with respect to any moneys or other property of such plan, or has any authority or responsibility to do so . . . .''

to that extent.[139] Under both the proposed rule and the final rule, therefore, a person renders fiduciary advice only to the extent they meet the regulatory definition with respect to the particular communication at issue. A person may be a fiduciary for purposes of one advice transaction and not another, and the person must meet the specific requirements of the final rule to be treated as a fiduciary with respect to any given transaction. To the extent a person does not meet the final rule's requirements (*e.g.,* by not making a recommendation, receiving a fee, providing individualized advice, or purporting to act in the investor's best interest), they are not a fiduciary with respect to that recommendation. The final rule fully adopts the statute's functional and transactional approach to the determination of fiduciary status.

The final rule also does not base fiduciary status on firms' or financial professionals' status under other laws, as some commenters have asserted. Instead, the final rule is focused on defining those circumstances in which the retirement investor has a reasonable expectation that the recommendation reflects a professional or expert judgment offered on their behalf and in their interest. In the circumstances specified, a retirement investor would be entitled to treat their relationship with the person making the recommendation as one of trust and confidence. To the extent that a financial professional satisfies the conditions, in part, based on compliance with other regulators' conduct standards, that would merely be a consequence of independent decisions made by other regulators. The final rule does not override those regulators' decisions as to how to characterize their conduct standards, require them to take any particular approach to oversight of investment recommendations, or pin fiduciary status on anything other than a reasonable understanding of the nature of the relationship between the persons giving and receiving the advice. The Department's regulation is based on its unique authority to define a fiduciary for purposes of Title I and Title II of ERISA, establish a uniform definition for all persons giving investment advice to retirement investors under Title I and Title II of ERISA, and fulfill the statute's investor-protective purposes in accordance with the text of the statute.

Moreover, commission-based financial professionals are fully able to satisfy ERISA's fiduciary standard of loyalty in Title I. The Department has long interpreted the duty of loyalty, as set forth in section 404(a)(1)(A) of ERISA (a fiduciary must discharge their duties with respect to the plan "solely in the interests of the participants and beneficiaries") as establishing a standard that prohibits a fiduciary from "subordinating the interests of participants and beneficiaries in their retirement income to unrelated objectives." [140] This standard properly applies section 404(a)(1)(A)'s duty of loyalty in the context of advice arrangements. ERISA further permits fiduciaries to receive reasonable compensation—including commission-based compensation—for their services.[141]

Indeed, the statute recognizes the impossibility of avoiding all fiduciary conflicts of interest by giving the Department authority to grant exemptions from the prohibited transaction rules. The mere existence of a conflict is insufficient to defeat fiduciary status or to establish a violation of the prohibited transaction rules. Instead, the conflict of interest must be managed in accordance with a statutory exemption or administrative exemption granted by the Department. This does not prevent commission-based compensation arrangements, as some commenters have asserted, so long as the advice provider does not subordinate the interests of the retirement investor to their own financial interests and does not charge more than "reasonable compensation," as expressly authorized by the statute.[142] Indeed, in many instances, such as those involving advice on "buy and hold" strategies, a commission-based model may be more appropriate for the investor, and a prudent fiduciary may recommend the use of a commission-based structure, rather than advise the investor to enter into an arrangement that requires the payment of ongoing fees without a commensurate need for ongoing advice. Nothing in the text of the statute, the text of the 1975 regulation, or previous guidance draws a distinction between commission-based compensation and other forms of compensation in determining whether a person is a fiduciary when making recommendations for direct or indirect compensation.

One commenter expressed concern that the rule could reduce access to advice on alternative investments because of the relatively large commissions paid in connection with alternative investments. The commenter said the reasonable compensation requirement did not have an analog in Regulation Best Interest and also would be unworkable for broker-dealers. However, the obligation to pay no more than reasonable compensation to service providers has been long recognized under Title I and Title II of ERISA. The statutory exemptions in ERISA section 408(b)(2) and Code section 4975(d)(2) expressly require services arrangements involving plans and IRAs to result in no more than reasonable compensation to the service provider. Financial institutions and investment professionals—when acting as service providers to plans or IRAs—have long been subject to this requirement, regardless of their fiduciary status. The reasonable compensation standard requires that compensation not be excessive, as measured by the market value of the particular services, rights, and benefits the financial institution and investment professional are delivering to the retirement investor.

To the extent an investment advice fiduciary's receipt of compensation would constitute a self-dealing type prohibited transaction under ERISA section 406(b) and Code section 4975(c)(1)(E) or (F), conditional relief for investment advice fiduciaries to receive compensation that varies based on their investment advice is provided pursuant to amended PTE 2020–02 and amended PTE 84–24. One such condition in these PTEs is adherence to a loyalty obligation that the Department has stated is consistent with the "sole interest" standard in ERISA section 404.[143] The use of the standard in the PTEs is an appropriate exercise of the Department's exemptive authority under ERISA section 408(a) and the Reorganization Plan No. 4 of 1978 to provide an exemption that is protective of the interests of retirement investors, not an improper conflation of the two standards, as suggested by some commenters. Based on this discussion, the Department disagrees with the commenter who said the proposal would be unworkable for broker-dealers.[144]

[144] The Department also notes that there are compensation requirements applicable to broker-

Continued

Some commenters also sought to draw a bright line distinction between recommendations made in a sales capacity and those made in a fiduciary capacity, asserting that commission-based recommendations are properly viewed as mere sales pitches that should not lead to ERISA fiduciary status. This approach, however, is neither supported by the text of the statute nor the Department's consistent views starting in 1975 that advice can be compensated through commissions.[145] The text of the statute does not draw a distinction between commissions and other fee-based forms of compensation, but rather broadly refers to ''advice for a fee or other compensation, direct or indirect,'' which the Department has consistently recognized includes commission-based advice. Accordingly, the final rule properly focuses on the nature of the relationship between the parties, rather than the specific mode of compensation. Whether a firm or financial professional has held themselves out as providing the sort of recommendation that may rightly be relied upon as a fiduciary recommendation is a function of the test set forth in the final rule, which requires compensation, but does not draw a bright line between commissions and fee-based compensation. In those circumstances where the final rule's definition is satisfied, the firm or investment professional is doing much more than merely executing a sale. They are offering a professional recommendation that is purportedly based on the investor's best interest, and that recommendation is central to the relationship and a key component of the services offered to the investor.

In this connection, however, it is important to note that neither the proposed rule nor the final rule assigns fiduciary status to a party who merely engages in a sales transaction with a retirement investor. Under the express terms of paragraph (d) of the final rule, merely executing a sale does not give rise to fiduciary status. Moreover, even if one makes a recommendation in connection with a commission-based transaction, that recommendation will not amount to fiduciary advice unless the recommendation meets the specific conditions set forth in the final rule, all of which are aimed at ensuring that the advice goes beyond a mere ''sales pitch,'' and instead reflects the sort of relationship of trust and confidence that should be afforded fiduciary status and protection. To that end, and in response to comments, the Department narrowed the contexts that give rise to fiduciary status, and included a new paragraph confirming that mere sales recommendations devoid of the two covered contexts will not result in ERISA fiduciary status and that investment information or education, without an investment recommendation, will also not result in ERISA fiduciary status.

Finally, some commenters said that the *Chamber* opinion indicated that the Department's authority to regulate conduct in the financial services industry has been limited by the Dodd-Frank Act. The commenters said that under Dodd-Frank, Congress had authorized the SEC, and not the Department, ''to promulgate enhanced, uniform standards of conduct for broker-dealers and investment advisers who render 'personalized investment advice about securities to a retail customer.' ''

The Department's well-settled authority under ERISA to regulate investment advice rendered by fiduciaries to retirement investors in the context of certain annuity sales was not impaired by the Dodd-Frank legislation. Rather, section 913 of the Dodd-Frank Act directed the SEC to study the effectiveness of the rules applicable to investment advice respecting securities by entities subject to SEC regulation ''and other Federal and State legal or regulatory standards.'' The reference to other standards demonstrates Congress' clear awareness that there are overlapping Federal regulatory schemes. Moreover, this rulemaking is closely aligned with the SEC's standards under both the Advisers Act and under Regulation Best Interest, which was adopted subsequent to the *Chamber* opinion and is rooted in fiduciary principles.[146]

In addition, some commenters posited that section 989J of Dodd-Frank limited regulation of fixed indexed annuities to States (provided certain criteria are met). In making this assertion, commenters cited language in the *Chamber* decision to the effect that ''[s]ection 989J . . . provides that 'fixed indexed annuities sold in states that adopted the [NAIC's] enhanced model suitability regulations, or companies following such regulations, shall be treated as exempt securities not subject to federal regulation.' '' [147] The quoted language, however, was taken from an appellate brief, not section 989J. The statutory language simply states that ''[t]he *Commission* [SEC] shall treat as exempt'' such annuities from regulation as securities. By its express terms, section 989J restricts regulation only by the SEC under the securities laws.[148] It does not address or limit the Department of Labor's separate authority under ERISA or its separate obligations with respect to retirement plans and IRAs. In accordance with its authority under ERISA, the Department has determined that it is appropriate to include investment advice regarding plan and IRA investments in fixed indexed annuities within this scope of this rule.

Need for an Updated Definition of an Investment Advice Fiduciary

The 1975 regulation makes it all too easy for financial professionals and firms to hold themselves out as trusted advisers acting in the individual investor's best interest and based on their individual circumstances when, in fact, they have no obligation to act in

---

dealers, *see e.g.,* FINRA rule 2121 (fair prices and commissions).

[145] *See e.g.,* U.S. Department of Labor Adv. Op. 83–60A (Nov. 21, 1983) (Rejecting the interpretation that fiduciary status under ERISA section 3(21)(A)(ii) would not attach to broker-dealers unless a broker-dealer provides investment advice for distinct, non-transactional compensation), The Department stated that ''if . . . the services provided by the broker-dealer include the provision of 'investment advice', as defined in regulation 2510 .3–21(c), it may be reasonably expected that, even in the absence of a distinct and identifiable fee for such advice, a portion of the commissions paid to the broker-dealer would represent compensation for the provision of such investment advice.'' *Id.* The statutory language broadly encompasses any ''fee or other compensation,'' and even under the five-part test promulgated in 1975, the Department rejected the position that payment of compensation through commissions categorically excluded a broker-dealer from being an investment-advice fiduciary. *See* 40 FR 508842 (Oct. 31, 1975).

[146] *See* Regulation Best Interest release, 84 FR 33318, 33330 (July 12, 2019) (noting that Regulation Best Interest ''draws from key fiduciary principles underlying fiduciary obligations'' and that the ''key elements of the standard of conduct that applies to broker-dealers under Regulation Best Interest will be substantially similar to key elements of the standard of conduct that applies to investment advisers pursuant to their fiduciary duty under the Advisers Act.''); *see also,* SEC Staff Bulletin: Standards of Conduct for Broker-Dealers and Investment Advisers Care Obligation (''Both [Regulation Best Interest] for broker-dealers and the [Advisers Act] fiduciary standard for investment advisers are drawn from key fiduciary principles that include an obligation to act in the retail investor's best interest and not to place their own interests ahead of the investor's interest.''), *https://www.sec.gov/tm/standards-conduct-broker-dealers-and-investment-advisers.*

[147] 885 F.3d at 385 (citation omitted). The decision incorrectly attributes the internally quoted language to the text of Dodd-Frank. *Id.* This language is actually from an appellate brief by the Indexed Annuity Leadership Council (IALC), one of the plaintiffs that challenged the 2016 Rulemaking. Brief of Plaintiff-Appellant, *Chamber of Com. of United States of Am.* v. *U.S. Dep't of Lab.,* 885 F.3d 360 (5th Cir. 2018) (No. 17–10238), 2018 WL 3301737, at *8. The statutory text itself provides no basis for the broad conclusion that fixed indexed annuities sold in a State that follows the NAIC's model suitability (or successor) regulations, among other criteria, are exempt from Federal regulation.

[148] 15 U.S.C. 77c Note (emphasis added).

the investor's best interest or otherwise adhere to the fiduciary standards under Title I and Title II of ERISA. While the actions of other regulators, particularly the SEC's adoption of Regulation Best Interest, have partly addressed this concern, significant gaps remain, and the current patchwork regulatory structure is neither uniform nor sufficiently protective of retirement investors. As discussed in greater detail in the Regulatory Impact Analysis, the Department has determined that the final rule will provide additional benefits and needed protections for retirement investors, even in light of other regulators' recently enhanced conduct standards.[149]

For example, commenters did not dispute the fact that certain recommendations by broker-dealers to retirement investors are not covered by SEC Regulation Best Interest, including recommendations to plan fiduciaries such as the fiduciaries of small employer plans who need assistance in constructing the lineup on a 401(k) plan menu.[150] Several commenters expressed strong support for applying ERISA fiduciary protections in this context, with Morningstar quantifying potential benefits of the proposal's coverage of recommendations to plan fiduciaries on the investment options in defined contribution plans as saving participants over $55 billion in the next 10 years in costs associated with investing through their plans. Other investments that may not be subject to the Federal securities law include: real estate, fixed indexed annuities, certain certificates of deposit and other bank products, commodities, and precious metals. Furthermore, there are a number of persons who provide investment advice services that are neither subject to the SEC's Regulation Best Interest nor to the fiduciary obligations in the Advisers Act. Additionally, some commenters indicated that are disparities in the degree to which firms have implemented Regulation Best Interest. The Department expects the addition of ERISA remedies and the Department's enforcement resources to enhance protection of retirement investors in Title I plans, and to better ensure that advice providers compete on a level playing field where recommendations are made pursuant to a common best interest standard.

Applying ERISA fiduciary protections to the recommendations covered by the rule will also result in increased protections in the insurance market, even in those States that have adopted the 2020 revisions to the NAIC Model Regulation. For example, commenters discussed significant conflicts of interest associated with large commissions on annuity sales, as well as abusive sales practices. Conflicted, imprudent, and disloyal advice with respect to such annuity sales can result in large investor losses. The dangers are compounded by the complexity of the products, which makes sound advice critical.

For example, recommendations of fixed indexed annuities are generally not covered by Regulation Best Interest, but typically are complex products that depend upon careful and expert assessment of myriad contract and investment features. Between 2005 and 2022, the number of indexes available in the market grew from a dozen to at least 150. Many of these indexes are hybrids, including a mix of one or more indexes, as well as a cash or bond component. More than 60 percent of premium allocations for new fixed indexed annuity sales in mid-2022 involved hybrid designs. In addition, the determination of the right annuity requires careful consideration of the method by which the index is credited to the contract's value, charges associated with the contract, potential surrender charges, and any limiting factors on the crediting (such as cap rates, participation rates, or spread). Given the complexity of the products, it is very easy for investors to purchase products that have very different risks and benefits than they thought they were purchasing, and that have considerably more downside than they expected. For all these reasons, fixed indexed annuities have been the subject of various regulatory alerts, warning investors of the dangers associated with the products.[151] Sound advice is critical. In its comment, Morningstar estimates that the Department's proposal would increase retirement investors' savings with respect to fixed indexed annuities by approximately $32.5 billion over the next ten years.

The Department agrees with those commenters who concluded that the NAIC Model Regulation is not as protective as Regulation Best Interest and does not protect retirement investors to the same degree as the fiduciary protections in Title I and Title II of ERISA.[152] Although the NAIC Model Regulation provides that insurers must ''establish and maintain reasonable procedures to identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time,'' [153] the Department believes that broader conflict mitigation is needed to protect the interests of retirement investors. An important premise of Title I and Title II of ERISA is that fiduciaries' conflicts of interest should not be left unchecked, but rather should be carefully regulated through rules requiring adherence to basic fiduciary norms and avoidance of prohibited transactions.

In particular, the Department is concerned about the NAIC Model Regulation's definition of ''material conflicts of interest'' which must be identified and avoided or reasonably managed and disclosed and which excludes all ''cash compensation'' and ''non-cash compensation.'' As a result, the NAIC Model Regulation excludes ''any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer in connection with the recommendation or sale of an annuity from an insurer, intermediary, or

[149] One commenter urged the Department to follow the Statement on Standards in Personal Financial Planning Services implemented by the American Institute of CPAs (AICPA). The commenter described the standards as requiring CPAs to assess whether there are any conflicts of interest related to client engagements. If a conflict of interest exists, the CPA should determine if they can perform the engagement objectively. If they can, they must disclose all known conflicts of interest and obtain written consent. If they cannot, the engagement must be terminated. The Department believes in the context of ERISA fiduciary investment advice to retirement investors, ERISA's prohibited transaction rules provide the appropriate approach by requiring financial professionals to avoid conflicts of interest or comply with a prohibited transaction exemption.

[150] One commenter noted that other securities law protections, such as those under FINRA rules, would be applicable to broker-dealers making recommendations to plan sponsors. However, the commenter suggested that the protections lack a duty of loyalty of comparable rigor to that in PTE 2020–02.

[151] *See, e.g.,* SEC Office of Investor Education and Advocacy Updated Investor Bulletin: Indexed Annuities (July 31, 2020), *https://www.sec.gov/oiea/investor-alerts-and-bulletins/ib_indexedannuities;* Iowa Insurance Division, Bulletin 14–02 (September 15, 2014), *https://iid.iowa.gov/media/153/download?inline=.*

[152] The exclusion of commission payments and other compensation as well as non-cash compensation from the definition of a material conflict of interest is in direct contrast to the SEC's approach in Regulation Best Interest. *See* Regulation Best Interest release, 84 FR 33318, 33319 (July 12, 2019)(''Like many principal-agent relationships—including the investment adviser-client relationship—the relationship between a broker-dealer and a customer has inherent conflicts of interest, including those resulting from a transaction-based (*e.g.,* commission) compensation structure and other broker-dealer compensation.'') *see also* Staff Bulletin: Standards of Conduct for Broker-Dealers and Investment Advisers Conflicts of Interest which specifically identifies commissions as an example of a common source of a conflict of interest, available at *https://www.sec.gov/tm/iabd-staff-bulletin-conflicts-interest.*

[153] NAIC Model Regulation at section 6.C.(2)(h).

directly from the consumer,'' as well as ''any form of compensation that is not cash compensation'' despite their obvious potential to drive recommendations that favor the financial professional's own financial interests at the expense of the investor's interests. [154]

Although some commenters said that the NAIC's approach reflected the view that the best way to address compensation conflicts is through disclosure, the Department discusses in the Regulatory Impact Analysis its view that disclosure without conflict mitigation is limited in its effectiveness at protecting investors from the dangers posed by conflicts of interest. The NAIC's approach also stands in marked contrast to ERISA's treatment of such competing financial incentives as material conflicts, which give rise to prohibited transactions that require protective conditional exemptions. It also conflicts with the SEC's approach with respect to broker-dealers and investment advisers, in which the SEC staff provided a detailed list of types of compensation that they believe are examples of common sources of conflicts of interest, as follows:

compensation, revenue or other benefits (financial or otherwise) to the firm or its affiliates, including fees and other charges for the services provided to retail investors (for example, compensation based on assets gathered and/or products sold, including but not limited to receipt of assets under management (''AUM'') or engagement fees, commissions, markups, payment for order flow, cash sweep programs, or other sales charges) or payments from third parties whether or not related to sales or distribution (for example, sub-accounting or administrative services fees paid by a fund or revenue sharing);

compensation, revenue or other benefits (financial or otherwise) to financial professionals from their firm or its affiliates (for example, compensation or other rewards associated with quotas, bonuses, sales contests, special awards; differential or variable compensation based on the product sold, accounts recommended, AUM, or services provided; incentives tied to appraisals or performance reviews; forgivable loans based upon the achievement of specified performance goals related to asset accumulation, revenue benchmarks, client transfer, or client retention);

compensation, revenue or other benefits (financial or otherwise) (including, but not limited to, gifts, entertainment, meals, travel, and related benefits, including in connection with the financial professional's attendance at third-party sponsored trainings and conferences) to the financial professionals resulting from other business or personal relationships the financial professional may have, relationships with third parties that may relate to the financial professional's association or affiliation with the firm or with another firm (whether affiliated or unaffiliated), or other relationships within the firm; and

compensation, revenue or other benefits (financial or otherwise) to the firm or its affiliates resulting from the firm's or its financial professionals' sales or offer of proprietary products or services, or products or services of affiliates.[155]

The Department also notes that the State of New York took a different approach than the NAIC Model Regulation in its NY Insurance Regulation 187. Under the New York regulation, ''[o]nly the interests of the consumer shall be considered in making the recommendation. The producer's receipt of compensation or other incentives permitted by the Insurance Law and the Insurance Regulations is permitted by this requirement *provided that the amount of the compensation or the receipt of an incentive does not influence the recommendation.*'' (Emphasis added.)

The NAIC Model Regulation also specifically disclaims creating fiduciary obligations and differs in significant respects from the protective standards applicable to broker-dealers and investment advisers under Regulation Best Interest and the Advisers Act, respectively, and this final rule. For example, in addition to disregarding compensation as a source of material conflicts of interest, the specific care, disclosure, conflict of interest, and documentation requirements do not expressly incorporate the ''best interest'' obligation not to put the producer's or insurer's interests before the customer's interests, even though compliance with these component obligations is treated as meeting the best interest standard. Instead, the core conduct standard of care includes a requirement to ''have a reasonable basis to believe the recommended option effectively addresses the consumer's financial situation, insurance needs, and financial objectives.'' Additionally, the obligation to comply with the ''best interest'' standard is limited to the individual producer, as opposed to the insurer responsible for supervising the producer. In contrast, the standards in the amended PTEs mirror ERISA section 404's standards of prudence and loyalty, and provide that the advice must:

- reflect the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims, based on the investment objectives, risk tolerance, financial circumstances, and needs of the retirement investor, and
- must not place the financial or other interests of the investment professional, financial institution or any affiliate, related entity, or other party ahead of the interests of the retirement investor, or subordinate the retirement investor's interests to their own.

The amended PTE standards are aligned with the SEC's conduct standards applicable to broker-dealers and investment advisers.[156] Further, as noted above, the NY Insurance Regulation 187 includes a similar standard of care, providing that ''an insurance producer acts in the best interest of the consumer when, among other things, the producer's . . . recommendation to the consumer is based on an evaluation of the relevant suitability information of the consumer and reflects the care, skill, prudence, and diligence that a prudent person acting in a like capacity and familiar with such matters would use under the circumstances then prevailing.''

In response to commenters who expressed concern that the Department's rule would improperly displace State regulation in the annuities market, it bears repeating that in enacting ERISA, Congress imposed a uniquely protective regime on tax-preferred retirement investments. The Department's final rule, which covers compensated retirement recommendations under conditions where it is reasonable to place trust and confidence in the advice, falls well within ERISA's broad fiduciary definition, even if it is more protective of federally-protected retirement investments than State insurance regulations. It is also important to note the interaction between the NAIC Model Regulation and the fiduciary protections under Title I and Title II of ERISA is explicitly recognized in the NAIC Model Regulation's safe harbor for the recommendations and sales of annuities in compliance with comparable standards, including those applicable to fiduciaries under Title I and Title II of ERISA.[157]

Although some commenters maintained the Department misunderstands the NAIC Model Regulation, the Department's analysis is based on the terms of the Model

[154] NAIC Model Regulation at section 5.B. and J.

[155] SEC Staff Bulletin: Standards of Conduct for Broker-Dealers and Investment Advisers Conflicts of Interest, *https://www.sec.gov/tm/iabd-staff-bulletin-conflicts-interest.*

[156] *See generally,* Regulation Best Interest release, 84 FR 33318 (July 12, 2019); SEC Investment Adviser Interpretation, 84 FR 33669 (July 12, 2019).

[157] NAIC Model Regulation at section 6.E.

Regulation and is consistent with that of other commenters, including the CFP Board in their publication discussed above. There can be no misunderstanding with respect to the fact that the NAIC Model Regulation clearly and unambiguously excludes cash and non-cash compensation from the definition of a material conflict of interest.[158] Because of this exclusion, the NAIC Model Regulation does not provide that producers must identify and avoid or reasonably manage material conflicts of interest arising from cash and non-cash compensation. This leaves disclosure as the sole method of addressing such conflicts other than the prohibition of sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time, which are prohibited. The Department's PTEs' more stringent requirements will require insurance market participants not only to disclose but also to more broadly mitigate conflicts of interest associated with commissions and other cash and non-cash compensation to insurance producers providing recommendations to retirement investors, resulting in enhanced protections to consumers.[159]

The Chamber Opinion

Many commenters said the proposed regulation was essentially a re-proposal of the 2016 Rulemaking and had the same legal vulnerabilities. They generally said that, in *Chamber,* the court had approved the 1975 regulation's five-part test as defining a relationship of trust and confidence and they objected to any revision of the five-part test as inconsistent with both the statutory definition and the Fifth Circuit's opinion. The Department disagrees and notes the various differences between the 2016 Rulemaking and this final rule. In writing the proposal and this final rule, the Department has been careful to craft a definition that is consistent with both the statutory text and with the Fifth Circuit's focus on relationships of trust and confidence. The Department's authority to revisit the regulatory definition of an investment advice fiduciary and depart from the 1975 five-part test is not foreclosed by the *Chamber* opinion. In this regard, commenters did not identify for the Department, and the Department's research did not uncover, any common-law cases predating enactment of ERISA that limited the application of fiduciary status and obligations to those persons that meet all five of the requirements created and imposed by the 1975 regulation. Other courts that considered the Department's 2016 Final Rule noted that it was the 1975 five-part test that was difficult to reconcile with the statute, or that the elements of this test, such as the ''regular basis'' prong, do not appear in the text of ERISA.[160] To that end, the Department notes that other cases discuss how ERISA's statutory definition of ''fiduciary'' is broad,[161] with one such case indicating that the definition of ''fiduciary'' under ERISA is broader than the more restrictive approach the Department articulated through the 1975 five-part test.[162]

The final rule is far narrower than the previous rulemaking, which treated all investment recommendations directed to a specific retirement investor or investors regarding the advisability of a particular investment or management decision as fiduciary in nature, subject to a few carve-outs. By contrast, this rule specifically focuses on whether the investment recommendation can be appropriately treated as trust and confidence advice. Accordingly, and in response to certain comments (which are discussed in greater detail below), the final rule covers recommendations made in the following contexts:

- The person either directly or indirectly (*e.g.,* through or together with any affiliate) makes professional investment recommendations to investors on a regular basis as part of their business and the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation:
  - is based on review of the retirement investor's particular needs or individual circumstances,
  - reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and
  - may be relied upon by the retirement investor as intended to advance the retirement investor's best interest; or
- The person represents or acknowledges that they are acting as a fiduciary under Title I of ERISA, Title II of ERISA, or both with respect to the recommendation.

In these circumstances, the failure to treat the recommendation as fiduciary advice would dishonor the investor's reasonable expectations of professional advice that is offered to advance their best interest and can be relied upon as rendered by a financial professional who occupied a position of trust and confidence. When firms and financial professionals meet the requirements of this definition, it would defeat ERISA's plan-protective purposes and the investor's legitimate expectations of trust and confidence to hold that the advice was not fiduciary. Accordingly, this final rule is wholly consistent with the Fifth Circuit's *Chamber* opinion and the broad language of the statute.

To the extent that the 1975 five-part test excluded such recommendations, it would be underinclusive from the

[158] NAIC Model Regulation at section 5.I.(2).

[159] One commenter provided a summary of the differences between the NAIC Model Regulation and ERISA's fiduciary responsibilities. These differences highlight the additional protection under ERISA in the insurance marketplace. *See* Federation of Americans for Consumer Choice 6 (''The differences between NAIC model regulation best interest and ERISA fiduciary duties include: (i) ERISA has a duty of loyalty to act solely in the interest of the client different from the NAIC model regulation requirement for agents not to put their interests ahead of client interests, (ii) ERISA contains a prudence requirement not considered applicable to insurance producers, (iii) the NAIC model regulation establishes four specified obligations deemed to satisfy the best interest standard consisting of care, disclosure, conflict of interest, and documentation, all of which comport with the sales function of an agent, (iv) the NAIC model regulation requires neither ongoing monitoring nor diversification of assets which may need to be considered by ERISA fiduciaries, (v) the NAIC model regulation does not define conflicts of interest as broadly as ERISA instead relying on disclosure befitting insurance sales practices, (vi) the NAIC model regulation contains no reasonable compensation restrictions but limits certain forms of incentive compensation, and (vii) the NAIC model regulation does not expose agents to common law fiduciary liabilities, DOL oversight, or potential private right of action under ERISA.''), *https://www.dol.gov/sites/dolgov/files/ebsa/laws-and-regulations/rules-and-regulations/public-comments/1210-AC02/00345.pdf.*

Co.,* 949 F.2d 960, 964 (8th Cir. 1991), *cert. denied,* 503 U.S. 985 (1992))); H. Stennis Little, Jr., & Larry Thrailkill, *Fiduciaries Under ERISA: A Narrow Path to Tread,* 30 Vanderbilt L. Rev. 1, 4–5 (1977) (referring to the ''broadness of the [statutory] definition'' of ''fiduciary'' under ERISA, such that the definition could cover ''insurance salesmen who recommend the purchase of certain types of insurance and receive a commission on the sale of such insurance'' and ''stock brokers or dealers who recommend certain securities and then participate in the acquisition or disposition of securities and receive a commission for their services'').

[162] *See Farm King,* 884 F.2d at 293 (discussing ''evidence of the wide sweep given to the meaning of 'fiduciary' under ERISA'' in relation to the narrower definition codified in the 1975 test).

standpoint of trust and confidence, as discussed above. For example, under the 1975 rule, a recommendation to a plan participant to roll over a lifetime of savings and invest them in a fixed indexed annuity would not count as fiduciary advice if the person making the investment recommendation had not regularly made recommendations to the investor about plan assets. This would be true, even if the advice followed a series of meetings about the particular financial circumstances and needs of the investor; purported expert recommendations about how to meet those needs and circumstances based upon consideration of the investor's most intimate financial details; and a clear understanding that the advice was being held out as based upon the best interest of the investor. Moreover, the five-part test would defeat fiduciary status even if the investor had relied upon the financial professional for advice about all aspects of their financial life for a period of many years encompassing many transactions, as long as that advice did not relate to plan assets. It is hard to square such a result with a trust and confidence test, and impossible to square the result with the text of the statute, which contains no such limitation. The final rule avoids such inequitable results, while limiting advice to those circumstances in which the investor reasonably should expect *fiduciary* advice.[163] In this way, the Department believes that treating one-time advice as fiduciary investment advice subject to ERISA is consistent with a relationship of trust and confidence, provided that all of the requirements of the regulatory test are satisfied.[164]

In the final rule, and in response to public comments, the Department has also made changes designed to ensure that it did not capture communications that were not properly viewed as fiduciary advice. Thus, for example, the final rule includes a new paragraph expressly declining fiduciary treatment for mere sales pitches that fall short of meeting the test above. Similarly, the rule makes clear that mere investment information or education, without an investment recommendation, is not treated as fiduciary advice.

This rule is not only a very different rule from the one that was before the Fifth Circuit in *Chamber;* it also addresses a very different regulatory landscape. The regulatory actions taken by the SEC and NAIC to update conduct standards reflect the understanding that broker-dealers and insurance agents commonly make recommendations to their customers for which they are compensated as a regular part of their business; that investors rely upon these recommendations; and that regulatory protections are important to ensure that the advice is in the best interest of the retail customer, in the case of broker-dealers, or consumers, in the case of insurance agents. In this regard, also as discussed above, commenters informed the Department that it is common for broker-dealers and insurance agents to hold themselves out as trusted advisers and take deliberate steps to develop relationships of trust and confidence with their customers.[165] Moreover, as the SEC has repeatedly noted, Regulation Best Interest ''draws from key fiduciary principles underlying fiduciary obligations, including those that apply to investment advisers'' under the Advisers Act.[166] As a result, the final rule is far more consistent with the SEC's regulation of advice than was true of the 2016 Rulemaking, which represented a significant departure from securities law regulation of broker-dealers at the time.

For all these reasons, both the final rule and the regulatory context are far different than the 2016 Final Rule considered by the Fifth Circuit in the *Chamber* opinion. In addition, there are other important ways in which the final rule is different than the 2016 Rulemaking, above and beyond this final rule's clear focus on relationships of trust and confidence:

- The final rule and associated exemptions, unlike the 2016 Rulemaking, contain no contract or warranty requirements. The 2016 Rulemaking required that advisers and financial institutions give their customers enforceable contractual rights. This final rule and amended PTEs do not create any such rights. The sole remedies for non-compliance are precisely those set forth in ERISA and the Code, which include only the imposition of excise taxes in the context of advice to IRAs.
- The amended PTEs, unlike the 2016 Rulemaking, do not prohibit financial institutions and advisers from entering into class-wide binding arbitration agreements with retirement investors.
- PTE 2020–02, as finalized, specifically provides an exemption from the prohibited transaction rules for pure robo-advice relationships, unlike the 2016 Rulemaking.
- PTE 84–24, unlike the 2016 Rulemaking, does not require insurance companies to assume fiduciary status with respect to independent insurance agents, an important concern of insurers with respect to the 2016 Rulemaking.
- Neither PTE 2020–02 nor PTE 84–24, as amended, require financial institutions to disclose all their compensation arrangements with third parties on a publicly available website, as was required by the 2016 Rulemaking.

In sum, commenters err in asserting that this rulemaking is simply a repeat of the 2016 Rulemaking, or in contending that the final rule fails to take proper account of the nature of the relationship between the advice provider and the advice recipient.

[163] As also noted by the magistrate judge in *Federation of Americans for Consumer Choice* v. *United States Dept. of Labor,* the Fifth Circuit's opinion ''did not foreclose that Title I duties may reach those fiduciaries who, as aligned with Title I's text, render advice, even for the first time, '*for* a fee or other compensation.' '' Findings, Conclusions, and Recommendations of the United States Magistrate Judge, *FACC,* No. 3:22–CV–00243–K–BT, 2023 WL 5682411, at *22 (N.D. Tex. June 30, 2023) (quoting ERISA section 3(21)(A)(ii), 29 U.S.C. 1002(21)(A)(ii)) (emphasis in original).

[164] One commenter cited the *Chamber* opinion for the proposition that a relationship of trust and confidence that involves ''control and authority'' is necessary for investment advice fiduciary status. The Department does not read the *Chamber* opinion to state that ''control and authority'' is required, but rather that the use of the terms ''control'' and ''authority'' in the other parts of the statutory fiduciary definition (*i.e.,* ERISA section 3(21)(A)(i) and (iii) and Code section 4975(e)(3)(A) and (C)) indicate that the investment advice part of the definition also involves a ''special relationship.'' *See* 885 F.3d at 376–77. As discussed herein, the final rule appropriately defines an investment advice fiduciary to comport with reasonable investor expectations of trust and confidence which is the special relationship described in the *Chamber* opinion.

[165] It is also worth noting that in the litigation surrounding the 2016 Final Rule, there were affidavits from independent insurance agents describing ongoing relationships with their customers in which detailed personal financial information is shared. One such affidavit filed by Donald E. Wales in *Market Synergy Group, Inc.* v. *United States Department of Labor* stated, ''I take great pride and care in developing deep familiarity with my clients' individual financial circumstances, resources, and goals. All my sales of life insurance and fixed annuities . . . are made following a face-to-face meeting with my clients . . . . I also attempt to have periodic meetings with my clients . . . to review their financial state of affairs and recommend changes . . . to their financial plans. I proudly use the same financial products that I recommend to my clients . . . and often share my own personal results with them.'' Memorandum of Plaintiff-Appellant in Support of Motion for Preliminary Injunction at Exhibit 9, *Mkt. Synergy Grp., Inc.* v. *United States Dep't of Lab.,* No. 5:16–CV–4083–DDC–KGS, 2017 WL 661592 (D. Kan. Feb. 17, 2017), ECF No. 11–9, *aff'd,* 885 F.3d 676 (10th Cir. 2018).

D. Discussion of the Final Rule

Under the final rule, a person is an investment advice fiduciary if they provide a recommendation in one of the following contexts:

- The person either directly or indirectly (*e.g.,* through or together with any affiliate) makes professional investment recommendations to investors on a regular basis as part of their business and the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation:
  - is based on review of the retirement investor's particular needs or individual circumstances,
  - reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and
  - may be relied upon by the retirement investor as intended to advance the retirement investor's best interest; or
- The person represents or acknowledges that they are acting as a fiduciary under Title I of ERISA, Title II of ERISA, or both with respect to the recommendation.

The recommendation also must be made ''for a fee or other compensation, direct or indirect'' as defined in the final rule.

The provisions of the final rule are organized into the following paragraphs and discussed in greater detail below. Paragraph (c) of the regulation defines the term ''investment advice.'' Paragraph (d) retains the provision in the existing regulation regarding ''execution of securities transactions.'' Paragraph (e) defines the phrase ''for fee or other compensation, direct or indirect.'' Paragraph (f) sets forth definitions used in the regulation. Paragraph (g) addresses applicability of the regulation. Paragraph (h) confirms the continued applicability of State law regulating insurance, banking, and securities.

1. Covered Recommendations

Definition of a Recommendation

Whether a person has made a ''recommendation'' is a threshold element in establishing the existence of fiduciary investment advice. For purposes of the final rule, whether a recommendation has been made will turn on the facts and circumstances of the particular situation, including whether the communication reasonably could be viewed as a ''call to action.'' The more individually tailored the communication to a specific customer or a targeted group of customers about a security or other investment or group of securities or other investments, the greater the likelihood that the communication may be viewed as a recommendation. The determination of whether a recommendation has been made is an objective rather than a subjective inquiry.

The Department intends that whether a recommendation has been made will be construed in a manner consistent with the SEC's framework in Regulation Best Interest. In the Regulation Best Interest release, the SEC stated,

> [T]he determination of whether a broker-dealer has made a recommendation that triggers application of Regulation Best Interest should turn on the facts and circumstances of the particular situation and therefore, whether a recommendation has taken place is not susceptible to a bright line definition. Factors considered in determining whether a recommendation has taken place include whether the communication ''reasonably could be viewed as a 'call to action' '' and ''reasonably would influence an investor to trade a particular security or group of securities.'' The more individually tailored the communication to a specific customer or a targeted group of customers about a security or group of securities, the greater the likelihood that the communication may be viewed as a ''recommendation.'' [167]

Commenters generally supported the Department's statement in the preamble for the proposal that it intended to take an approach that is similar to the SEC and FINRA on the definition of a recommendation, and some asked for confirmation that the Department would interpret the definition *consistent* with the SEC's framework in Regulation Best Interest. In this regard, some commenters identified the word ''suggestion'' in the following statement in the Department's preamble, and said this set too low a bar for fiduciary status:

> For purposes of the proposed rule, the Department views a recommendation as a communication that, based on its content, context, and presentation, would reasonably be viewed as a suggestion that the retirement investor engage in or refrain from taking a particular course of action.[168]

Commenters also said this was inconsistent with the SEC's approach, although some commenters acknowledge this statement was consistent with prior FINRA guidance—and, in fact, quoted that guidance.[169] Based on the word ''suggestion'' some commenters posed scenarios involving the provision of information to a retirement investor and said those communications would appear to be covered as recommendations under the proposal.

Commenters also identified other statements in the proposal's preamble that they believed were not consistent with the SEC's approach in Regulation Best Interest. These statements are: ''the fact that a communication is made to a group rather than an individual would not be dispositive of whether a recommendation exists'' and ''providing a selective list of securities to a particular retirement investor as appropriate for the investor would be a recommendation as to the advisability of acquiring securities even if no recommendation is made with respect to any one security.'' [170]

The Department confirms that, for purposes of the final rule, the Department intends that whether a recommendation has been made will be construed consistent with the SEC Regulation Best Interest and the inquiry will focus on whether there is a ''call to action.'' To the extent a person provides information to a retirement investor that does not rise to the level of a recommendation as defined in this way, the communication would not lead to fiduciary status.

However, the Department does not believe that the statements regarding communications to a ''group'' or

[167] Regulation Best Interest release, 84 FR 33318, 33335 (July 12, 2019)(footnote omitted).

[168] Proposed Retirement Security Rule, 88 FR 75890, 75904 (Nov. 3, 2023).

[169] *See* FINRA Regulatory Notice 11–02 (''[S]everal guiding principles are relevant to determining whether a particular communication could be viewed as a recommendation for purposes of the suitability rule. For instance, a communication's content, context and presentation are important aspects of the inquiry. The determination of whether a ''recommendation'' has been made, moreover, is an objective rather than subjective inquiry. An important factor in this regard is whether—given its content, context and manner of presentation—a particular communication from a firm or associated person to a customer reasonably would be viewed as a suggestion that the customer take action or refrain from taking action regarding a security or investment strategy. In addition, the more individually tailored the communication is to a particular customer or customers about a specific security or investment strategy, the more likely the communication will be viewed as a recommendation. Furthermore, a series of actions that may not constitute recommendations when viewed individually may amount to a recommendation when considered in the aggregate.'') (footnote omitted), *https://www.finra.org/rules-guidance/notices/11-02. See also* FINRA Notice to Members 01–23 (''The determination of whether a 'recommendation' has been made, moreover, is an objective rather than a subjective inquiry. An important factor in this regard is whether—given its content, context, and manner of presentation—a particular communication from a broker/dealer to a customer reasonably would be viewed as a ''call to action,'' or suggestion that the customer engage in a securities transaction.''), *https://www.finra.org/rules-guidance/notices/01-23.*

[170] Proposed Retirement Security Rule, 88 FR 75890, 75904 (November 3, 2023).

communications about ''a selective list of securities'' are inconsistent with the SEC's approach. Both of those concepts appear in the SEC's discussion in the Regulation Best Interest release quoted above that indicates that both communications to a ''targeted group of customers'' and communications about ''a group of securities'' may be considered recommendations.

A commenter also said that the following statement made in the Department's preamble described a concept of a recommendation that was too expansive and unworkable: ''a series of actions, taken directly or indirectly (*e.g.,* through or together with any affiliate), that may not constitute a recommendation when each action is viewed individually may amount to a recommendation when considered in the aggregate.'' [171] The commenter suggested that the Department withdraw that preamble statement and include instead an ''anti-evasion'' provision such as: ''No person shall knowingly act in a manner that functions as an unlawful evasion of the purposes of this regulation.''

Although this quoted language is similar to language that appeared in the previous FINRA guidance, the Department's proposal expanded it to include the language ''directly or indirectly (*e.g.,* through or together with any affiliate).'' [172] This language is not intended to capture all actions of affiliates, however; rather, ''through or together with'' is intended to describe circumstances in which an advice provider, in its interactions with the retirement investor, utilizes an affiliate to formally deliver the recommendation to that investor. Therefore, the Department does not believe that this is unworkable or difficult to monitor. For that reason, the Department does not believe it is necessary to include an anti-evasion provision instead of this preamble discussion. However, the Department cautions that the description of ''indirectly'' is not limited to use of affiliates and would extend to parties working around this provision with non-affiliates.

A few commenters suggested alternative definitions of a recommendation. One commenter's proposed language focused on the nature of a recommendation as an endorsement and expression of support for the retirement investor making or refraining from making a specific investment decision. Another commenter had an opposite view that the Department should clarify that an endorsement or expression of opinion would not rise to the level of a recommendation. The Department did not adopt these suggestions, taking the view that it should remain consistent with the SEC on this familiar and well-established definitional term.

Commenters also asked the Department to include a definition of a recommendation in the regulatory text, as opposed to a preamble discussion, to provide parties greater certainty regarding how the term would be interpreted. In this regard, however, it is important to note that the SEC declined to include a definition of a recommendation in the text of Regulation Best Interest. The SEC said, ''what constitutes a recommendation is highly fact-specific and not conducive to an express definition in the rule text.'' [173] In order to maintain consistency with the SEC's approach, which commenters supported, the Department also declines to create a defined term in the final rule's regulatory text.

Types of Recommendations Covered (Paragraph (f)(10))

Paragraph (f)(10) defines the phrase ''recommendation of any securities transaction or other investment transaction or any investment strategy involving securities or other investment property.'' This phrase largely parallels the language in the SEC's Regulation Best Interest, which applies to broker-dealers' ''recommendation of any securities transaction or investment strategy involving securities (including account recommendations).'' [174] The phrase's broader reference to ''other investment property'' reflects the differences in jurisdiction between the SEC and the Department.

Under paragraph (f)(10), the phrase ''recommendation of any securities transaction or other investment transaction or any investment strategy involving securities or other investment property'' is defined as recommendations as to:

(i) The advisability of acquiring, holding, disposing of, or exchanging, securities or other investment property, investment strategy, or how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred, or distributed from the plan or IRA;

(ii) The management of securities or other investment property, including, among other things, recommendations on investment policies or strategies, portfolio composition, selection of other persons to provide investment advice or investment management services, selection of investment account arrangements (*e.g.,* account types such as brokerage versus advisory) or voting of proxies appurtenant to securities; and

(iii) Rolling over, transferring, or distributing assets from a plan or IRA, including recommendations as to whether to engage in the transaction, the amount, the form, and the destination of such a rollover, transfer, or distribution.

The following sections discuss the components of the definition and the comments received.

Recommendations Related to Rollovers, Benefit Distributions, or Transfers From a Plan or IRA

Both paragraphs (f)(10)(i) and (iii) describe types of recommendations related to rollovers, benefit distributions, and transfers from a plan or IRA. Paragraph (f)(10)(iii) describes, as covered recommendations, recommendations as to ''[r]olling over, transferring, or distributing assets from a plan or IRA, including recommendations as to whether to engage in the transaction, the amount, the form, and the destination of such a rollover, transfer, or distribution.'' Paragraph (f)(10)(i) describes recommendations as to ''how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred, or distributed from the plan or IRA.''

These provisions of the final rule are consistent with the Department's longstanding interest in protecting retirement investors in the context of a recommendation to roll over workplace retirement plan assets to an IRA, as well as other recommendations to roll over, transfer, or distribute assets from a plan or IRA. Decisions to take a benefit distribution or engage in a rollover transaction are among the most, if not the most, important financial decisions that plan participants and beneficiaries, and IRA owners and beneficiaries are called upon to make. Advice provided in connection with a rollover decision, even if not accompanied by a specific recommendation on how to invest assets, is appropriately treated as fiduciary investment advice, provided that it falls within one of the two covered contexts articulated in this final rule and the other provisions of the final rule are satisfied. When an advice provider recommends that a retirement investor transfer assets out of a Title I plan, the recommendation entails the loss of the retirement investor's property

[171] *Id.* at 75904.

[172] *See* FINRA Regulatory Notice 11–02.

[173] Regulation Best Interest release, 84 FR 33318, 33336 (July 12, 2019).

[174] 17 CFR 240.15l–1(a)(1).

rights with respect to the plan, the sacrifice of protections under Title I of ERISA, and consequential changes to the nature of the retirement investor's account, services, fees, asset holdings, and investment options, all of which can affect the risk, reward, and returns associated with the retirement investor's holdings. Even if the assets would not continue to be covered by Title I or Title II of ERISA after they were moved outside the plan or IRA, the recommendation to change the plan or IRA investments in this manner and to extinguish investor interests and property rights under the plan is investment advice under Title I or Title II of ERISA. In the words of section 3(21)(A)(ii) of ERISA, it is advice with respect to ''any moneys or other property of the plan.''

Under paragraph (f)(10)(iii), recommendations on distributions from a workplace retirement plan (including rollovers or transfers into another plan or IRA) or recommendations to entrust plan assets to a particular IRA provider would fall within the scope of investment advice in the final rule, and would be covered by Title I of ERISA, including the enforcement provisions of section 502(a). Further, in the Department's view, the evaluation of whether a recommendation constitutes fiduciary investment advice should be the same regardless of whether it is a recommendation to take a distribution or make a rollover to an IRA or a recommendation not to take a distribution or to keep assets in a plan.

The provision in paragraph (f)(10)(i), regarding how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred, or distributed from the plan or IRA, addresses an important concern of the Department that investment advice providers should not be able to avoid fiduciary responsibility for a rollover recommendation by focusing solely on the investment of assets *after* they are rolled over from the plan.

The proposal stated that in many or most cases, a recommendation to a plan participant or beneficiary regarding the investment of securities or other investment property after a rollover, transfer, or distribution involves an implicit recommendation to the participant or beneficiary to engage in the rollover, transfer, or distribution.[175] It also stated that a prudent and loyal fiduciary generally could not make a recommendation on how to invest assets currently held in a plan after a rollover, without even considering the logical alternative of leaving the assets in the plan or evaluating how that option compares with the likely investment performance of the assets post-rollover, and that a fiduciary would violate ERISA's 404 obligations if it recommended that a retirement investor roll the money out of the plan without proper consideration of how the money might be invested after the rollover.[176]

The proposal also said that advice to a plan participant on how to invest assets currently held in an ERISA-covered plan is ''advice with respect to moneys or other property of such plan'' within the meaning of ERISA section 3(21)(A)(ii), inasmuch as the assets at issue are still held by the plan.[177]

Many commenters expressed specific support for the proposal's coverage of recommendations to roll over assets from a workplace retirement plan to an IRA as advice under Title I of ERISA. They cited the importance to the retirement investor of the rollover decision; the potential for increased costs outside of a workplace retirement plan; the loss of a fiduciary responsible for prudently selecting investment options in the workplace retirement plan; and financial professionals' conflicts of interest because they are likely to benefit financially if the retirement investor does roll their assets out of the workplace retirement plan. The North American Securities Administrators Association's comment on the proposal said that State securities regulators have routinely observed abuse in rollover and account transfer recommendations.

Other commenters said that recommendations regarding rollovers and recommendations regarding assets after they will leave the plan are not properly considered ERISA fiduciary investment advice under Title I, with the resulting application of the ERISA section 404 duties and the ERISA section 502(a) enforcement provisions. Commenters said that covering these recommendations as Title I advice is inconsistent with the Fifth Circuit's discussion in the *Chamber* decision on the distinction between the Department's jurisdiction under Title I and Title II. A commenter also stated that Congress has had opportunities in recent pension legislation to declare rollover advice as covered under ERISA Title I but has not. Some also said covering these recommendations would create additional liability under Title I for financial services providers where none exists now, which is similar to creating a private right of action that the Fifth Circuit found fault with. Commenters opposing covering these recommendations as fiduciary investment advice also said that the significance of the decision was not a sufficient basis for the Department to assert jurisdiction and that these recommendations would be protected by the conduct standards in Regulation Best Interest and the State insurance laws adopting the NAIC Model Regulation.

Some commenters focused on the Department's statements that recommendations to take a distribution necessarily involved a recommendation to change investments in the plan or to change fees or services directly affecting the return on those investments. One commenter provided examples of discussions about distributions that they did not think involved an investment recommendation, such as recommendations to take a distribution from a defined benefit plan, discussion of the merits of a participant loan or hardship withdrawal or educating a retirement investor about rules related to a required minimum distribution. The commenter suggested that the rule be clarified to provide that discussions about distributions and transfers of assets that are not for the purposes of changing investments are not covered recommendations.

Finally, a number of commenters expressed concern about the Department's position in the proposal that recommendations of how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred, or distributed from the plan or IRA often would involve an implicit rollover recommendation. They said this position would lead to the conclusion that all conversations about rollovers would be ERISA fiduciary investment advice under Title I with no opportunity for information to be provided in a non-fiduciary capacity. Commenters believed this outcome would be detrimental to retirement investors. For example, one commenter said it is vitally important for retirement investors to be informed that they can leave their assets in the retirement plan even upon employment termination (if that is the case). Commenters urged the Department to state that the rollover decision can be separate from a recommendation as to how to invest the assets, and that discussions about rollovers can be purely educational. In this regard, one commenter asked the Department to make clear that the delivery of non-individualized information about a financial service

[175] Proposed Retirement Security Rule, 88 FR 75890, 75905 (November 3, 2023).

[176] *Id.*

[177] *Id.*

provider's offering without a reference to a specific investment product or strategy would not be fiduciary investment advice.

As discussed below, the Department views several of the positions taken by commenters as consistent with this final rule. The Department agrees that it is important that retirement investors continue to have access to information about the options available to them regarding rolling over, transferring or distributing retirement assets and that these discussions can be purely educational. However, to the extent there is a recommendation with respect to these options, the recommendation is evaluated under all parts of the final rule, and if the recommendation is with respect to assets held in a workplace retirement plan, it will be fiduciary advice under Title I of ERISA if all parts of the final rule are satisfied. Recommendations to take a distribution from a workplace retirement plan necessarily impact the specific investments in the plan or the fees and services directly affecting the return on those investments, even in the context of a recommendation to roll over from a defined benefit plan, and clearly change the investor's property interests with respect to the plan and associated legal protections. For these reasons, the Department continues to believe it is appropriate to treat such a recommendation as advice under Title I of ERISA if all the parts of the final rule are satisfied, and has not accepted the commenter's suggestion to provide that recommendations about distributions and transfers of assets that are not for the purposes of changing investments are not covered recommendations. The recommendation not to hold an asset in the plan, even if the intention is to hold essentially the same asset outside the plan, is still an investment recommendation. To the extent the recommendation falls within the test set forth in this rule it is clearly fiduciary advice ''with respect to any moneys or other property of such plan,'' within the meaning of ERISA section 3(21)(A)(ii).

The Department also continues to believe that recommendations of how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred, or distributed from the plan or IRA often involve an implicit rollover recommendation. Further, in these scenarios too, recommendations regarding Title I plans are made with respect to ''moneys or other property of such plan'' within the meaning of ERISA section 3(21)(A)(ii), so coverage under Title I is appropriate. For this reason, the Department does not agree with a commenter that said a financial professional should be permitted to agree with its customer that any advice to be given will concern how to dispose of assets once removed from a Title I plan and no advice will be given regarding whether to remove the assets from the plan. If the customer is a current participant or beneficiary in a Title I plan, the recommendation necessarily involves the assets currently held in the Title I plan. A different conclusion would create loopholes in the final rule that would undermine the protection of retirement investors in this important context.

These provisions of the final rule do not create a new private right of action but rather adopt a regulatory definition of an investment advice fiduciary with an appropriate scope. The fact that Congress has not addressed the status of rollovers in recent pension legislation leaves the Department's clear jurisdiction, as discussed herein, undisturbed.

The final rule's approach in this respect aligns with the SEC's Regulation Best Interest, and with the Advisers Act fiduciary obligations, which extend to account recommendations to customers and clients as well as recommendations to customers and clients to roll over or transfer assets from one type of account to another. As stated by the SEC in Regulation Best Interest, ''account recommendations are recommendations of an approach or method (*i.e.,* a 'strategy') for how a retail customer should engage in transactions in securities, involve conflicts of interest, and can have long-term effects on investors' costs and returns from their investments.'' [178]

The Department's position is not, however, that all conversations regarding rollovers and distributions are recommendations. A recommendation is a threshold element in the analysis of whether a person is an investment advice fiduciary. For example, consistent with the SEC's position in Regulation Best Interest, the Department will not consider merely informing a retirement investor of the need to take a required minimum distribution under the Internal Revenue Code to be an investment ''recommendation.'' [179] Likewise, absent additional facts, merely discussing the merits of a participant loan or hardship withdrawal would not rise to the level of an investment recommendation. Section E.3. of this preamble provides additional guidance on investment information and education that will not be considered a recommendation leading to investment advice fiduciary status.

Recommendations Involving Securities, Other Investment Property, and Investment Strategies

Paragraph (f)(10)(i) also describes, as covered recommendations, recommendations as to ''the advisability of acquiring, holding, disposing of, or exchanging, securities or other investment property, investment strategy, or how securities or other investment property should be invested after the securities or other investment property are rolled over, transferred, or distributed from the plan or IRA.'' Similar to the SEC and FINRA, the Department will interpret ''investment strategy'' broadly, to include ''among others, recommendations generally to use a bond ladder, day trading . . . or margin strategy involving securities, irrespective of whether the recommendations mention particular securities.'' [180]

The reference to ''other investment property'' is intended to capture other investments made by plans and IRAs that are not securities. This includes, but would not be limited to, non-securities annuities, banking products, and digital assets (regardless of status as a security). The Department does not see any statutory or policy basis for differentiating advice regarding investments in CDs, including investment strategies involving CDs (*e.g.,* laddered CD portfolios), from other investment products, and therefore will interpret paragraph (f)(10) to cover such recommendations.

The term investment property, however, does not include health insurance policies, disability insurance policies, term life insurance policies,

[178] Regulation Best Interest release, 84 FR 33318, 33339 (July 12, 2019); *see also* SEC Investment Adviser Interpretation, 84 FR 33669, 33674 (July 12, 2019) (''An adviser's fiduciary duty applies to all investment advice the investment adviser provides to clients, including advice about . . . account type. Advice about account type includes advice about whether to open or invest through a certain type of account (*e.g.,* a commission-based brokerage account or a fee-based advisory account) and advice about whether to roll over assets from one account (*e.g.,* a retirement account) into a new or existing account that the adviser or an affiliate of the adviser manages.'') The SEC Investment Adviser Interpretation further provides that ''with respect to prospective clients, investment advisers have antifraud liability under section 206 of the Advisers Act, which, among other things, applies to transactions, practices, or courses of business which operate as a fraud or deceit upon prospective clients, including those regarding investment strategy, engaging a subadviser, and account type.'' *Id.,* at 33674 n. 42.

[179] Regulation Best Interest release, 84 FR 33318, 33338 (July 12, 2019).

[180] *Id.* at 33339 (citing FINRA Rule 2111.03 and FINRA Regulatory Notice 12–25, available at *https://www.finra.org/rules-guidance/notices/12-2*).

and other property to the extent the policies or property do not contain an investment component. This is confirmed in a definition of ''investment property'' in paragraph (f)(12). Although there can be situations in which a person recommending group health or disability insurance, for example, effectively exercises such control over the decision that the person is functionally exercising discretionary control over the management or administration of the plan as described in ERISA section 3(21)(A)(i) or section 3(21)(A)(iii), the Department does not believe that the definition of investment advice in ERISA's statutory text is properly interpreted or understood to cover a recommendation to purchase group health, disability, term life insurance, or similar insurance policies that do not have an investment component.

Commenters also asked the Department to provide additional guidance on the definition of investment property. Several focused on the definition as it would relate to group products, as opposed to retail products, and posed various scenarios involving recommendations of assets that they did not think should be considered investment property, including a group annuity contract. For example, one commenter asked the Department to eliminate both group life insurance policies and annuities from the definition of investment property because the purchase decision would be made by a plan fiduciary who already had a duty of loyalty to the plans' participants and beneficiaries. The Department has not accepted that comment, as that result would be contrary to the general approach taken in this final rule to include, as retirement investors, fiduciaries with control with respect to a plan or IRA. In those circumstances in which the person recommending the investment meets the final rule's terms, they occupy a position of trust and confidence with respect to the recommendation, and that recommendation merits fiduciary status. Certainly, nothing in the statute categorically carves out advice to plan fiduciaries. Many commenters supported the application of ERISA's protections in this context. Further, the Department believes there should be little question that the definition of investment property should include a group annuity contract that is a plan asset. Whether the other arrangements mentioned by commenters include an investment component would depend on a review of the specific facts and circumstances.

Recommendations on Management of Securities or Other Investment Property, Including Account Types

Paragraph (f)(10)(ii) of the final rule describes, as covered recommendations, recommendations as to the ''management of securities or other investment property, including, among other things, recommendations on investment policies or strategies, portfolio composition, selection of other persons to provide investment advice or investment management services, selection of investment account arrangements (*e.g.,* account types such as brokerage versus advisory), or the voting of proxies appurtenant to securities.''

In this regard, the statutory text broadly refers to ''investment advice . . . with respect to any moneys or other property of such plan.'' Recommendations as to investment management or strategy fall within the most straightforward reading of the statutory text. Accordingly, the final rule makes clear that covered investment advice is not artificially limited solely to recommendations to buy, sell, or hold particular securities or investment property to the exclusion of all the other important categories of investment advice that financial professionals routinely provide and that have the potential to impact retirement investors' costs and investment returns.

A commenter referenced the fact that this language was not limited to recommendations regarding a specific security or investment as an example that the proposal appeared overly broad. The Department does not think there is a basis for narrowing the definition of a covered recommendation to those regarding buying, holding, or selling particular securities or investment property. Language in the 1975 regulation indicates that it is not that narrow but would extend to recommendations regarding ''investment policies or strategy,'' ''overall portfolio composition,'' and ''diversification of plan investments.'' The SEC has also stated in Regulation Best Interest and the SEC Investment Adviser Interpretation that the conduct standards are not limited to recommendations that mention particular securities.[181]

A few other commenters said this covered recommendation, combined with what they viewed as broad proposed definitions of a ''recommendation'' and ''for a fee or other compensation, direct or indirect,'' would impact and limit information provided to plan sponsors. Other commenters raised questions about the limits of this covered recommendation.

The Department has made a number of changes and clarifications to the final rule to address concerns raised by these commenters. First, the Department has confirmed that it intends that whether a recommendation has occurred will be construed consistent with the SEC's framework in Regulation Best Interest. This should alleviate some commenters' concern about whether merely providing information to a retirement investor, including a plan sponsor, might be considered a covered recommendation under this part of the final rule. Additionally, it is important to remember that all parts of the final rule must be satisfied for ERISA fiduciary status to apply, including receipt of a fee or other compensation, direct or indirect, as defined in the final rule. Finally, the Department has provided additional clarifications regarding the application of the final rule in the institutional market that makes clear that parties are permitted under the final rule to define their own relationships.

This provision of the final rule also makes clear that recommendations as to the selection of investment account arrangements would be covered. Accordingly, a recommendation to move from a commission-based account to an advisory fee-based account (or vice versa) would be a covered recommendation. This provision too, is consistent with the SEC's Regulation Best Interest and the Advisers Act's antifraud provisions, which establish the Advisers Act fiduciary duty.[182]

[181] *Id.* at 33339 (July 12, 2019)(''Existing broker-dealer regulation and guidance stresses that the term ''investment strategy'' is to be interpreted broadly. . . . This approach appropriately recognizes that customers may rely on firms' and associated persons' investment expertise and knowledge, and therefore the broker-dealer should be responsible for such recommendations, regardless of whether those recommendations result in transactions or generate transaction-based compensation.'') Recommendations on the Selection of Other Persons To Provide Investment Advice or Investment Management

Paragraph (f)(10)(ii) extends to recommendations as to the ''selection of other persons to provide investment advice or investment management services.'' Consistent with the Department's longstanding position, the final rule covers recommendations of another person to be entrusted with investment advice or investment management authority over retirement assets. Such recommendations are often critical to the proper management and investment of those assets and are fiduciary in nature if the other conditions of the definition are satisfied.

Recommendations of investment advisers or managers are similar to recommendations of investments that the plan or IRA may acquire and are often, by virtue of the track record or information surrounding the capabilities and strategies that are employed by the recommended fiduciary, inseparable from recommendations as to the types of investments that the plan or IRA will acquire. For example, the assessment of an investment fund manager or management is often a critical part of the analysis of which fund to pick for investing plan or IRA assets.

The Department's proposal discussed that the language in paragraph (f)(10)(ii) regarding recommendations of ''other persons'' to provide investment advice or investment management services was intentional to avoid concerns that the final rule would impose fiduciary status on a person based on the marketing of the person's own advisory or investment management services (sometimes referred to as ''hire me'' communications).[183] Thus, the Department said the proposed language would not result in a person becoming an investment advice fiduciary merely by engaging in the normal activity of marketing themselves (*i.e.,* ''hire me'') as a potential fiduciary to be selected by a plan fiduciary or IRA owner, without making a recommendation of a securities transaction or other investment transaction or any investment strategy involving securities or other investment property.[184]

Commenters on the ''hire me'' discussion generally asked the Department to allow for more expansive communications outside of ERISA fiduciary status for various marketing of services, and to make that explicit in the final rule. These comments and the Department's response are discussed further in Section E.1. of this preamble.

Some commenters also said that the Department should not consider a recommendation of *other persons* to provide investment services as a covered recommendation, as they saw it as distinct from investment advice. Commenters described referral arrangements that they believed are beneficial to investors by assisting in the identification of fiduciary service providers. One commenter asked for a ''hire them'' carve-out, under which a recommendation of another person to provide investment advice or investment management services would not be a covered recommendation for purposes of the final rule unless the person making the referral was specifically engaged to make such a recommendation for a fee or other compensation.

The Department has not eliminated recommendations of other persons to provide investment advice or investment management services as a type of covered recommendation, because it continues to believe that the recommendation of another person to provide investment advice or investment management services is conceptually indistinguishable from recommendations of investments that the plan or IRA may acquire. However, it is important to remember in this context that all parts of the final rule must be satisfied for a covered recommendation to be considered ERISA fiduciary investment advice, including the ''for a fee or other compensation, direct or indirect'' requirement. Accordingly, if the recommendation is not made for a fee or other compensation, direct or indirect, it would not give rise to fiduciary status. As the relevant fee or other compensation may be *direct or indirect,* a referral fee paid by a third party (*e.g.,* the person to whom investors are referred) would be relevant to the inquiry as to whether the person making the referral would be a fiduciary under the final rule.

Proxy Voting Appurtenant to Ownership of Shares of Corporate Stock

Paragraph (f)(10)(ii) also extends to recommendations as to the ''voting of proxies appurtenant to securities.'' The Department has long viewed the exercise of ownership rights as a fiduciary responsibility; consequently, advice or recommendations on the exercise of proxy or other ownership rights are appropriately treated as fiduciary in nature if the other conditions of the final rule are satisfied.[185]

Similar to other types of broad, generalized guidance that would not rise to the level of investment advice, however, guidelines or other information on voting policies for proxies that are provided to a broad class of investors without regard to a client's individual interests or investment policy and that are not directed or presented as a recommended policy for the plan or IRA to adopt, would not rise to the level of a covered recommendation under the rule. Similarly, a recommendation addressed to all shareholders in an SEC-required proxy statement in connection with a shareholder meeting of a company whose securities are registered under Section 12 of the Exchange Act, for example, soliciting a shareholder vote on the election of directors and the approval of other corporate action, would not, under the rule, constitute fiduciary investment advice from the person who creates or distributes the proxy statement.

Several commenters addressed including recommendations regarding proxy voting as a covered recommendation under the proposal, with some supporting the inclusion as important and relevant to plan participants' interests and others indicating the inclusion was too broad and likely to impede useful information from being provided to plan sponsors. The Department retained this provision in the final rule, consistent with its long-term position on this issue.

One commenter requested that the final rule regulatory text, as opposed to the preamble, make clear that merely providing proxy voting materials would not lead to investment advice fiduciary status. As discussed in greater detail in Section E, the Department has generally not included exceptions and specific carve-outs in the final rule text for specific circumstances but instead has opted to provide guidance in the preamble as to how the rule will apply.

2. When Covered Recommendations Are Fiduciary Investment Advice (Paragraph (c)(1))

Paragraph (c)(1) establishes the contexts in which a covered recommendation would be considered

fiduciary duty applies to all investment advice the investment adviser provides to clients, including advice about investment strategy, engaging a sub-adviser, and account type.'').

[183] Proposed Retirement Security Rule 88 FR 75890, 75906 (Nov. 3, 2023).

[184] *Id.*

[185] *See* Fiduciary Duties Regarding Proxy Voting and Shareholder Rights, 85 FR 81658 (Dec. 16, 2020) (''In connection with proxy voting, the Department's longstanding position is that the fiduciary act of managing plan assets includes the management of voting rights (as well as other shareholder rights) appurtenant to shares of stock.'').

ERISA fiduciary investment advice if the remaining parts of the final rule are satisfied. Paragraph (c)(1)(i) sets forth an objective facts and circumstances test for when, based on the interactions between the advice provider and the retirement investor, the retirement investor would reasonably place their trust and confidence in the advice provider as acting to advance the retirement investor's best interest. Paragraph (c)(1)(ii) identifies a specific factual scenario—the advice provider's acknowledgment of ERISA Title I or Title II fiduciary status—as one in which the retirement investor can always reasonably place their trust and confidence in the advice provider as acting to advance the retirement investor's best interest. The contexts in the final rule are:

- *Paragraph (c)(1)(i):* The person either directly or indirectly (*e.g.,* through or together with any affiliate) makes professional investment recommendations to investors on a regular basis as part of their business and the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation:
  - is based on review of the retirement investor's particular needs or individual circumstances,
  - reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and
  - may be relied upon by the retirement investor as intended to advance the retirement investor's best interest; or
- *Paragraph (c)(1)(ii):* The person making the recommendation represents or acknowledges that they are acting as a fiduciary under Title I of ERISA, Title II of ERISA, or both with respect to the recommendation.

In the proposal, the Department had identified three contexts in which a covered recommendation would be considered ERISA fiduciary investment advice. The contexts identified in the proposal were:

- *Proposed paragraph (c)(1)(i):* The person either directly or indirectly (*e.g.,* through or together with any affiliate) has discretionary authority or control, whether or not pursuant to an agreement, arrangement, or understanding, with respect to purchasing or selling securities or other investment property for the retirement investor;
- *Proposed paragraph (c)(1)(ii):* The person either directly or indirectly (*e.g.,* through or together with any affiliate) makes investment recommendations to investors on a regular basis as part of their business and the recommendation is provided under circumstances indicating that the recommendation is based on the particular needs or individual circumstances of the retirement investor and may be relied upon by the retirement investor as a basis for investment decisions that are in the retirement investor's best interest; or
- *Proposed paragraph (c)(1)(iii):* The person making the recommendation represents or acknowledges that they are acting as a fiduciary when making investment recommendations.[186]

Some commenters supported the paragraphs as proposed and said they would be appropriate to define an investment advice fiduciary. For example, one commenter agreed that in these contexts, clients reasonably expect a professional relationship of trust and confidence involving fiduciary obligations. Commenters who disagreed expressed various bases for their disagreement, including the view that the proposed paragraphs, without any specific exclusions or carve-outs, would result in a final rule that was too broad and did not sufficiently allow for non-fiduciary sales activity. Some commenters expressed particular concern about sales activity in the institutional market. Some of the commenters thought the proposal would result in ERISA fiduciary status being applied outside of a relationship of trust and confidence. Many of these commenters also objected to the possibility that one-time advice could ever lead to ERISA fiduciary status.[187]

One commenter suggested that the Department issue a ''salesperson's'' prohibited transaction exemption under which parties would not have to comply with ERISA's fiduciary obligations as long as they are clear and explicit that they are operating in a sales capacity to retirement investors, as a way of addressing the impact of the historical use of advice-oriented titles and marketing and providing additional clarity between advice services and sales. Another commenter suggested a new provision in the final rule under which recommendations to a plan fiduciary would not give rise to fiduciary status if made ''in the context of a communication or series of communications in which the seller of a product or service clearly indicates that such product or service provider has an interest in the transaction and that such plan fiduciary is responsible for independently evaluating and determining whether to enter into a transaction for the purchase of such product or service, including negotiating the terms of the transaction.'' Other commenters likewise advocated for provisions under which sales activity would not be considered fiduciary investment advice.

In the final rule, the Department made a number of changes to the proposal in response to these comments. As discussed in greater detail below, the contexts for fiduciary status in paragraph (c)(1) were narrowed and clarified, including the elimination of proposed paragraph (c)(1)(i). Additionally, a new paragraph (c)(1)(iii) was inserted in the regulatory text confirming that sales recommendations that do not satisfy the specific contexts for fiduciary advice will not lead to ERISA fiduciary status and that the provision of investment information and education, without an investment recommendation, also will not result in ERISA fiduciary status. Although commenters suggested different ways of addressing sales communications, including the suggestion of a special PTE for salespersons and the carve-out described above, the Department believes the revised regulatory text, including paragraph (c)(1)(iii), provide appropriate clarity with respect to those sales pitches that fall short of fiduciary advice, without creating improper loopholes that would defeat legitimate expectations of trust and confidence. Additionally, the Department revised the definition of a retirement investor to limit the scope of plan and IRA fiduciaries who would be treated as retirement investors to those with authority or control over plan or IRA assets. As a result, communications to plan or IRA fiduciaries acting as investment advice fiduciaries will not result in the person making the communication also being considered an investment advice fiduciary.

This preamble section discusses the contexts for fiduciary status adopted in

[186] Proposed Retirement Security Rule, 88 FR 75890, 75977 (Nov. 3, 2023).

[187] One commenter said the final rule should be revised to insert a proximity requirement between the financial professional providing the recommendation and the financial professional with whom the retirement investor works to act on the recommendation, as well as a time proximity requirement for the retirement investor to act on the recommendation. The commenter suggested this was needed to assist in operationalizing the rule. The Department believes certain principles will avoid the operational concerns suggested by this comment. First, whether ERISA's fiduciary duties and the PTEs' ''impartial conduct standards'' are satisfied will be measured as of the time of the recommendation, not in hindsight. *See Donovan* v. *Mazzola,* 716 F.2d 1226, 1232 (9th Cir. 1983); Improving Investment Advice for Workers & Retirees, 85 FR 82798, 82821 (December 18, 2020). Second, ERISA fiduciary status will occur only if all conditions of the final rule are satisfied, including the ''for a fee or other compensation, direct or indirect'' requirement.

the final rule paragraphs (c)(1)(i) and (ii) and the comments received on the proposed tests. The changes to the definition of a retirement investor are discussed in section D.4. of this preamble. Application of the final rule to certain specific circumstances is discussed in Section E of this preamble.

Proposed Paragraph (c)(1)(i)—Discretion—Not Adopted

Proposed paragraph (c)(1)(i) included a proposed expansion of a provision of the Department's 1975 regulation, which defined as a fiduciary a person who renders advice to the plan as to the value of securities or other property, or makes a recommendation as to the advisability of investing in, purchasing, or selling securities or other property, if the person

> either directly or indirectly (*e.g.,* through or together with any affiliate) . . . has discretionary authority or control, whether or not pursuant to agreement, arrangement or understanding, with respect to purchasing or selling securities or other property for the plan.[188]

The Department noted in the proposal's preamble that the proposed language expanded the existing provision beyond discretionary authority or control with respect to investments of the *plan,* to any investments of the *retirement investor,* stating ''[p]ersons that have discretionary authority or control over the investment of a retirement investor's assets necessarily are in a relationship of trust and confidence with respect to the retirement investor.'' [189]

Commenters said the proposed language to expand this context beyond investments of the plan was inconsistent with ERISA. They also said it would be a significant expansion that would be difficult to monitor, particularly in the context of pooled investment vehicles that a retirement investor might be invested in. Commenters also thought the meaning of discretionary authority or control was not clear and might be triggered by limited discretion that would ordinarily not result in ERISA fiduciary status.

Commenters were particularly concerned about the language in proposed paragraph (c)(1)(i) that would consider whether the person had discretion ''directly or indirectly (*e.g.,* through or together with any affiliate).'' [190] Paragraph (f)(1) of the proposal defined an affiliate as ''any person directly or indirectly, through one or more intermediaries, controlling, controlled by, or under common control with such person; any officer, director, partner, employee, representative, or relative (as defined in paragraph (f)(12) of this section) of such person; and any corporation or partnership of which such person is an officer, director, or partner.'' [191] Commenters viewed this language as very broad as applied to discretionary asset management and said in the context of a large financial institution, the language in the proposal could be satisfied by an affiliate with no direct relationship with the retirement investor. Other commenters noted that the provision appeared to use affiliates as an example of an indirect discretionary relationship, but the language would not necessarily be limited to affiliates.

Several commenters asked that the provision be revised to include an objective requirement that the advice or recommendation be individualized to the retirement investor. Another comment was that the provision should be revised to add language permitting parties to define their relationship by focusing on whether the facts and circumstances indicate that the recommendation may be relied upon by the investor as a basis for investment decisions that are in their best interest. A few commenters also advocated for complete removal of the provision, believing paragraphs (c)(1)(ii) and (iii) more clearly described an investment advice fiduciary relationship and to the extent paragraph (c)(1)(i) would apply more broadly, it was overbroad.

In response to these comments, the Department has determined not to include proposed paragraph (c)(1)(i) in the final rule. Although it is important to note that an existing provision in the 1975 regulation applies fiduciary status to a person who makes a covered recommendation and ''either directly or indirectly (*e.g.,* through or together with any affiliate) . . . has discretionary authority or control . . . with respect to purchasing or selling securities or other property for the plan,'' the Department is persuaded by commenters who said that the general approach in proposed (c)(1)(ii) would more appropriately define an investment advice fiduciary based on the facts and circumstances surrounding the covered recommendation and would likely include, to a more targeted extent, parties with investment discretion. Accordingly, paragraph (c)(1)(i) of the final rule is a revised version of proposed paragraph (c)(1)(ii). Paragraph (c)(1)(ii) of the final rule is a revised version of proposed paragraph (c)(1)(iii). A new paragraph (c)(1)(iii) clarifies that sales recommendations that are not made in one of the contexts set forth in paragraph (c)(1)(i) or (ii) would not result in a person being an investment advice fiduciary and the provision of investment information and education, without an investment recommendation, also will not result in ERISA fiduciary status.

Adopted Paragraph (c)(1)(i)—Facts and Circumstances

Adopted paragraph (c)(1)(i), establishes an objective facts and circumstances test that is satisfied if the ''person either directly or indirectly (*e.g.,* through or together with any affiliate) makes professional investment recommendations to investors on a regular basis as part of their business and the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation is based on review of the retirement investor's particular needs or individual circumstances, reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and may be relied upon by the retirement investor as intended to advance the retirement investor's best interest.''

Investment Recommendations as a Regular Part of Their Business

The requirement that the ''person either directly or indirectly (*e.g.,* through or together with any affiliate) makes professional investment recommendations to investors on a regular basis as part of their business'' is intended to limit application of the final rule to persons who retirement investors would typically view as making investment recommendations based on the retirement investors' interests. It is intended to update the ''regular basis'' prong of the 1975 regulation's five-part test to properly focus on persons who are in the business of providing investment recommendations, rather than defeating legitimate investor expectations by automatically excluding one-time advice from treatment as fiduciary investment advice.

A number of commenters addressed the proposed language which was: ''[t]he person either directly or indirectly (*e.g.,* through or together with any affiliate) makes investment recommendations to investors on a regular basis as part of their business.'' One commenter specifically supported this provision as indicating the test would suggest that the person making

[188] 29 CFR 2510.3–21(c)(1)(ii)(A).

[189] Proposed Retirement Security Rule, 88 FR 75890, 75901 (November 3, 2023).

[190] *Id.* at 75977.

[191] *Id.* at 75978.

the recommendation has expertise and professionalism.

Other commenters expressed the view that the proposed language did not place meaningful limits on investment advice fiduciary status. Similar to comments on proposed paragraph (c)(1)(i), some commenters said the ''directly or indirectly (*e.g.,* through or together with any affiliate)'' language would make this context very broad and difficult to monitor. Some said the proposed language would cover everyone in the financial services industry.

Commenters also said that whether a person made investment recommendations to investors as a regular part of their business had no bearing on whether there was a relationship of trust and confidence with the particular retirement investor receiving the recommendation, and further, that the ''regular basis'' prong of the 1975 regulation was needed because one-time advice would not be fiduciary advice under the Fifth Circuit's *Chamber* opinion.

The Department has retained this provision in the final rule with a slight revision, discussed below. In response to the commenters who said this requirement had no bearing on a relationship of trust and confidence with the particular retirement investor, the Department states that satisfying this provision, on its own, does not result in status as an investment advice fiduciary. Fiduciary status is imposed only if all parts of the final rule are satisfied. However, the fact that the person regularly provides advice as part of their business is an important component of the test, inasmuch as it limits application of the fiduciary definition to financial professionals who could reasonably be viewed as providing advice that can be relied upon with trust and confidence.

Consistent with the discussion in the preamble to the proposal, this provision is not intended to exclude parties in the financial services industry but rather persons outside the financial services industry who may engage in isolated communications that could fit within the definition of a covered recommendation but under circumstances that would not comport with a general understanding of professional investment advice.[192] In this way, the final rule's version of the regular basis test is more narrowly tailored than the 2016 rule and is relevant to the existence of trust and confidence between the advice provider and retirement investor, because retirement investors consulting advice providers who meet this test are likely to expect professional or expert investment advice that is based on the retirement investors' interests.

The final rule retains the language ''either directly or indirectly (*e.g.,* through or together with any affiliate).'' This language is in the 1975 regulation, and the Department believes it is important to include so as to avoid parties structuring their affiliate relationships to avoid application of fiduciary status. This language is not intended to capture all actions of affiliates, however; rather, ''through or together with'' is intended to describe circumstances in which an advice provider, in its interactions with the retirement investor, utilizes an affiliate to formally deliver recommendations to investors.

One commenter suggested that the Department revise the language of this provision to eliminate the ''indirectly'' reference and instead use the language ''either directly or through or together with any affiliate.'' The Department has not adopted this suggestion because it could result in parties working around this provision with non-affiliates.

Some commenters asked the Department to provide additional clarification as to how it would apply this provision in the rule. A commenter suggested that the final rule would be clearer if it were revised to limit fiduciary status to circumstances in which the person making the recommendation is:

> an employee, independent contractor, agent, or representative of a broker or dealer registered under the Securities Exchange Act of 1934 . . . , a financial institution described in [ERISA section 3(38)(B)], or other organization that provides financial advice on a regular basis as part of its business[.][193]

Another commenter asked the Department to clarify that the test would apply based on whether the individual person making the recommendation made regular investment recommendations as part of their business.

Other commenters said that although the Department's preamble said this provision would exclude human resources employees of the plan sponsor, they were not confident that human resources employees would, in fact, be excluded by the regulatory text, especially if they were employed by a financial services firm. A commenter asked for clarification regarding actions taken by a plan sponsor (either directly or through a third party) in connection with a merger or acquisition to provide information and assistance to affected employees regarding various retirement plan issues.[194] One commenter said the language also appeared to them to extend to real estate agents, life coaches, probation officers and divorce counselors, since those entities may provide financial counseling and education.

The Department will apply the test based on the activities of the ''person'', which would include the firm, and its employees, agents and representatives. The fact that the firm is a broker or dealer registered under the Securities Exchange Act of 1934 or a financial institution described in ERISA section 3(38)(B), would indicate that the test would likely be met, but the final rule is not limited to these financial institutions. Further, not all employees, independent contractors, agents, or representatives of a financial institution would be considered to provide investment recommendations on a regular basis. The test will also focus on the role of the individual providing the recommendation in relation to the retirement investor. Therefore, the Department did not adopt the language suggested by the commenter, as the inquiry will be based on all facts and circumstances.

The Department did revise this provision in the final rule to refer to ''professional'' investment recommendations. This change is designed to provide additional certainty that the provision would not be satisfied by the ordinary communications of a human resources employee, who is not an investment professional, in communications with plan participants.[195] Similarly, this language

[192] *Id.* at 75902.

[193] The financial institutions described in ERISA section 3(38)(B) include an entity that: (i) is registered as an investment adviser under the Advisers Act; (ii) is not registered as an investment adviser under such Act by reason of paragraph (1) of section 203A(a) of such Act, is registered as an investment adviser under the laws of the State (referred to in such paragraph (1)) in which it maintains its principal office and place of business, and, at the time the fiduciary last filed the registration form most recently filed by the fiduciary with such State in order to maintain the fiduciary's registration under the laws of such State, also filed a copy of such form with the Secretary; (iii) is a bank, as defined in that Act; or (iv) is an insurance company qualified to perform services described in subparagraph (A) under the laws of more than one State.

[194] The commenter also asked the Department to provide guidance that agreements regarding the integration of plans as part of a merger or acquisition and resulting plan amendments are settlor acts. The Department declines to address the settlor analysis as part of this final rule but will consider providing sub-regulatory guidance upon request of interested parties.

[195] The Department also would not consider salaries of human resources employees of the plan

Continued

is intended to make clear that the provision would not pick up other employees of the plan sponsor, who are not investment professionals, interacting with plan participants, including in the context of a merger or acquisition. The Department also does not intend that this language will be construed as being satisfied by the common activities of real estate agents selling homes to prospective residents, life coaches, probation officers and divorce counselors.

Trusted Advice Provider

The second element of paragraph (c)(1)(i) is that ''the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation is based on review of the retirement investor's particular needs or individual circumstances, reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and may be relied upon by the retirement investor as intended to advance the retirement investor's best interest.''

This provision is intended to define, objectively, when a retirement investor would reasonably place their trust and confidence in the advice provider. In the Department's view, when a financial professional provides a recommendation under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation is individualized to the retirement investor, reflects professional or expert judgment as applied to the individual investor's circumstances, and may be relied upon by the retirement investor to advance their own interests, that financial professional has held themselves out as a trusted advice provider and invited the retirement investor's reliance on them. Several commenters agreed that when financial professionals hold themselves out as trusted advice providers, including through portraying themselves as knowledgeable experts, they have invited the investor's trust, regardless of the form of compensation they will receive.

sponsor to be a fee or other compensation in connection with or as a result of the educational services and materials that they provide to plan participants and beneficiaries. Further, the final rule does not alter the principles articulated in ERISA Interpretive Bulletin 75–8, D–2 (29 CFR 2509.75–8) (IB 75–8). IB 75–8 provides that persons who perform purely administrative functions for an employee benefit plan, within a framework of policies, interpretations, rules, practices and procedures made by other persons, but who have no power to make decisions as to plan policy, interpretations, practices or procedures, are not fiduciaries with respect to the plan by virtue of those purely ministerial functions.

In accordance with this facts and circumstances test, the application of paragraph (c)(1)(i) does not turn, however, on whether the financial professional expressly represents that each component has been or will be satisfied. In other words, the specific components of the test are not intended as talismanic phrases that the advice provider must utter before triggering fiduciary status. Rather, the definition turns on whether the facts and circumstances would indicate to a reasonable investor in like circumstances that the paragraph's components were met. For example, the retirement investor doesn't need to be expressly told the recommendation is individualized when it follows the collection of information on the investor's personal financial needs or circumstances. The components of the definition can be satisfied by the various facts and circumstances of the parties' interactions and, as noted above, are evaluated under the objective standard of a reasonable investor in like circumstances. Although the Department did not finalize proposed paragraph (c)(1)(i), which would have applied ERISA fiduciary status based in part on whether the person making the recommendation had investment discretion with respect to the retirement investor's assets, investment discretion could still be relevant to whether adopted paragraph (c)(1)(i) is satisfied. For example, absent unusual circumstances, in any case in which a financial professional has investment discretion with respect to the assets that are the subject of a recommendation, the circumstances would indicate to a reasonable investor in like circumstances that the recommendation is individualized to the retirement investor, reflects professional or expert judgment as applied to the individual investor's circumstances, and may be relied upon by the retirement investor to advance their own interests.

The language in the final rule was changed from the proposal which provided ''the recommendation is provided under circumstances indicating that the recommendation is based on the particular needs or individual circumstances of the retirement investor and may be relied upon by the retirement investor as a basis for investment decisions that are in the retirement investor's best interest.''

Some commenters asserted that they found the proposed language ''under circumstances indicating that the recommendation is based on the particular needs or individual circumstances of the retirement investor'' to be meaningless and said the provision should instead require an explicitly customized or tailored communication. They also said the ''may be relied upon'' language set too low a bar for establishing fiduciary status and that the Department should retain the ''primary basis'' test from the 1975 regulation. Commenters said it was not clear whether this language was intended to establish an objective or subjective test, and several commenters suggested language that would specifically reference a ''reasonable'' investor or ''reasonable person in like circumstances.''

Some commenters also said that overall, the proposed test did not define a relationship of trust and confidence as it appeared to focus on the circumstances from the retirement investor's perspective and did not include the ''regular basis,'' ''mutual agreement, arrangement, or understanding'' and ''primary basis'' requirements that they believed were required to identify a relationship of trust and confidence as required by the Fifth Circuit's *Chamber* opinion. They also said the proposed language would apply in all interactions between financial professionals and retirement investors including sales pitches. Finally, commenters said to the extent this language would be satisfied because a financial professional was subject to another regulator's best interest standard, that was inappropriate as those standards are not intended to establish fiduciary standards.

In the final rule, the Department revised the language in several ways in response to comments. The provision is now clearly objective as it references a ''reasonable investor in like circumstances.'' The revised language includes three component parts that the Department believes identify objectively when a person has held themselves out as providing an individualized, reliable recommendation based on the application of their professional or expert judgment, and that is intended to advance the retirement investor's interest. Thus, the final rule will result in the application of fiduciary status under circumstances in which both parties should reasonably understand that the retirement investor would rely on the recommendation for investment decisions.[196]

[196] One commenter asked the Department to clarify that communications to a ''class of investors'' in the private equity context would not be considered individualized. As with the other scenarios posed by commenters, the Department will apply the final rule based on all facts and circumstances.

The final rule also changed the language ''may be relied upon by the retirement investor as a basis for investment decisions that are in the retirement investor's best interest'' to ''may be relied upon by the retirement investor as intended to advance the retirement investor's best interest'' in response to a comment that suggested that the proposed language might cause confusion as to how the rule would apply in the event of a recommendation that is not in retirement investor's best interest. In the context of the final rule, ''best interest'' is not meant to refer back to the elements of the precise regulatory or statutory definitions of prudence or loyalty, but rather to refer more colloquially to circumstances in which a reasonable investor would believe the advice provider is looking out for them and working to promote their interests.

The Department also notes that the 1975 regulation's language in this respect requires a ''mutual agreement, arrangement *or understanding* ''regarding the retirement investor's reliance on the recommendation. This final rule also will apply in circumstances in which the parties each would reasonably understand that the retirement investor may rely on the recommendation as intended to advance their best interest. The Department continues to believe this is an improvement over the ''primary'' basis requirement in the 1975 regulation, as that requirement, which is not found in the text of the statute, is difficult to apply, unclear in its meaning, and ill-suited to determining whether the advisory relationship is one of trust and confidence. Similarly, the Department does not think that the lack of the ''regular basis'' requirement as expressed in the 1975 regulation means that a relationship of trust and confidence does not exist, as discussed above.

Finally, while other regulators' standards may result in firms and financial professionals being more or less likely to occupy a position of trust and confidence, the final rule's focus is on the nature of the relationship between the advice provider and the advice recipient, not on the specific status assigned to the advice provider under other regulatory regimes. The final rule is neither intended to pick up all interactions between financial professionals and retirement investors, nor to impose fiduciary status based on considerations other than the nature of the relationship as defined in the rule's specific provisions. Paragraph (c)(1)(i) will base fiduciary status on evaluation of the three objective components, as well as the other parts of the final rule.

Use of Titles

In the proposal, the Department said it intended to examine the ways in which investment advice providers market themselves and describe their services in deciding whether the context in proposed paragraph (c)(1)(ii) was satisfied.[197] The preamble noted that stakeholders had previously expressed concern that investment advice providers that adopt titles such as ''financial consultant,'' ''financial planner,'' and ''wealth manager,'' are holding themselves out as acting in positions of trust and confidence, even while simultaneously disclaiming status as an ERISA fiduciary in the fine print or otherwise.[198]

The Department expressed the view that an investment advice provider's use of such titles would routinely involve the provider holding themselves out as making investment recommendations that will be based on the particular needs or individual circumstances of the retirement investor and may be relied upon as a basis for investment decisions that are in the retirement investor's best interest. The Department invited comments on the extent to which particular titles are commonly perceived to convey that the financial professional is providing individualized recommendations that may be relied upon as a basis for investment decisions in a retirement investor's best interest (and if not, why such titles are used). The Department also requested comment on whether other types of conduct, communication, representation, and terms of engagement of investment advice providers should merit similar treatment.

Some commenters who addressed this issue agreed that when a financial professional uses titles such as financial consultant, financial planner, and wealth manager, they give an impression of financial expertise that has an impact on investors and creates a sense that the retirement investor may place their trust and confidence in the professional. One commenter said that in some cases, including in insurance markets, financial professionals characterize themselves as ''trusted advisors.'' In addition, the commenter said, they commonly describe their services as ''investment advice'' or ''retirement planning'' and market those services as designed to serve investors' best interest. These commenters said the Department's proposed approach to titles and marketing was appropriate, although a few commenters said the Department should provide guidance in the final rule to clarify when titles, credentials, and marketing would satisfy the provisions of the rule. Other commenters said that the use of titles should not be determinative or create a *per se* rule regarding ERISA fiduciary status but rather that status should be based on the facts and circumstances of the parties' relationship.

For purposes of evaluating paragraph (c)(1)(i) in the final rule, the Department intends that the use of titles, credentials, and marketing slogans will be a relevant consideration but will not generally be determinative. A person holding themselves out, for example as an adviser, would contribute to a reasonable investor's belief that they are receiving professional or expert advisory services and that the person's recommendations reflect the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and may be relied upon by the retirement investor as intended to advance the retirement investor's best interest.

Adopted Paragraph (c)(1)(ii)—ERISA Title I or Title II Fiduciary Acknowledgment

Under paragraph (c)(1)(ii), a person making a recommendation is a fiduciary if they ''represent[] or acknowledge[] that they are acting as a fiduciary under Title I of ERISA, Title II of ERISA, or both, with respect to the recommendation.'' This paragraph identifies a specific factual scenario—the advice provider's acknowledgment of ERISA Title I or Title II fiduciary status—as one in which retirement investors can always reasonably place their trust and confidence in the advice provider as acting to advance the retirement investor's best interest.

As adopted, this provision of the final rule will focus on the substance of the acknowledgment, even if the exact words vary from the regulatory text; and thus, the provision will be satisfied if, for example, the acknowledgment spells out ERISA (*i.e.,* references ''the Employee Retirement Income Security Act''), or if the acknowledgment references the Internal Revenue Code rather than Title II of ERISA. The Department believes that status as an ERISA investment advice fiduciary should apply because a retirement investor who is told by a person that the person will be acting as an ERISA fiduciary reasonably and appropriately views the advice provider as occupying a position of trust and confidence.

[197] Proposed Retirement Security Rule, 88 FR 75890, 75902–3 (Nov. 3, 2023).

[198] *Id.* at 75903 (citing the preamble to Prohibited Transaction Exemption 2020–02, Improving Investment Advice for Workers Retirees, 85 FR 82798, 82803 (Dec. 18, 2020)).

The Department noted in the proposal that this provision would ensure that parties making a fiduciary representation or acknowledgment cannot subsequently deny their fiduciary status if a dispute arises, but rather must honor their words.[199] The proposal also noted that in the retirement context, the Department has stressed the importance of clarity regarding the nature of an advice relationship and has encouraged retirement investors to ask advice providers about their status as an ERISA fiduciary with respect to retirement accounts and seek a written statement of the advice provider's fiduciary status.[200] Several commenters expressed support for this provision for the reasons stated by the Department in the proposal.

Some commenters said that the Department should consider all the facts and circumstances surrounding the parties' relationship rather than a single acknowledgment, and that they, therefore, did not support including this provision in the final rule. The Department disagrees. To the extent that a person has specifically advised a retirement investor that their recommendation is made in their capacity as a fiduciary under ERISA Title I or Title II or both, they have necessarily assumed a position of trust and confidence with respect to the investor. Therefore, the Department has adopted this requirement in the final rule.

In the final rule, the Department made some changes to the language of the proposal, which read, ''[t]he person making the recommendation represents or acknowledges that they are acting as a fiduciary when making investment recommendations.'' As adopted, paragraph (c)(1)(ii) applies when an advice provider acknowledges their status as a fiduciary under *Title I of ERISA, Title II of ERISA, or both.* This change from the proposal responds to comments that said that acknowledging fiduciary status under Federal securities laws or State laws may be more remotely connected to the retirement investor and should not have the same effect as an ERISA Title I or Title II fiduciary acknowledgment. The Department concurs with this comment and has made the suggested change. Consequently, it is clear that this paragraph will not be satisfied by a person's marketing statements offering to be a ''trusted adviser'' or some term other than a ''fiduciary'' under Title I or Title II of ERISA, as one commenter suggested might be the case, although that type of representation will be relevant under paragraph (c)(1)(i).

Further, some commenters said the proposed language ''when making investment recommendations'' was too open-ended and should focus on the particular recommendation at issue. Otherwise, the commenters said, once a fiduciary acknowledgment had been made, it would appear to apply fiduciary status for every future interaction regardless of the circumstances of that interaction. Additionally, commenters said that if one financial professional acknowledged fiduciary status, this would apply to all financial professionals employed by the financial institution. The Department understands these commenters' concerns and accordingly revised the final rule so that it applies fiduciary status if the person acknowledges ERISA Title I or Title II fiduciary status with respect to *the recommendation.*

Some commenters requested that the Department ensure that for each provision in paragraph (c)(1), an individualized recommendation must be made. In the Department's proposal, only one of the proposed provisions (proposed paragraph (c)(1)(ii)) had included a requirement that the recommendation must be provided ''under circumstances indicating that it is based on the particular needs or individual circumstances of the retirement investor.'' Commenters expressed concern that this could result in fiduciary status being assigned based on communications that were made broadly to many investors or in marketing materials. As the Department revised the language of paragraph (c)(1)(ii) to be focused on a particular recommendation, the Department believes the commenters' concerns are addressed and has therefore not also revised the language to specify that the recommendation must be individualized.

One commenter suggested that the Department should limit this provision to a written representation. The Department has not adopted that requirement. A written representation will be the clearest way to demonstrate that this context has been satisfied, but the Department does not believe that it is appropriate to rule out oral communications in which an individual committed to fiduciary status. Whether the advice provider makes the acknowledgment in writing or orally, the significance is the same. In both circumstances, the provider is holding themselves out as an ERISA Title I or Title II fiduciary and should be held to that status.

Adopted Paragraph (c)(1)(iii)—Sales Pitches and Investment Education

The final rule includes a new paragraph (c)(1)(iii) that provides confirmation that sales pitches and investment education can occur without ERISA fiduciary status attaching. The paragraph generally provides that a person does not provide investment advice within the meaning of the final rule if they make a recommendation but neither paragraph (c)(1)(i) nor (c)(1)(ii) is satisfied, and further that the provision of investment information or education, without a recommendation, is not advice within the meaning of the final rule.

This provision was added to the final rule in response to commenters who said that the Department's proposal would apply too broadly and would eliminate the ability of salespeople to avoid fiduciary status with respect to mere sales pitches. Paragraph (c)(1)(iii) of the final rule includes a specific example regarding salespersons, which confirms that is not the case so long as the salesperson does not acknowledge fiduciary status under Title I or Title II of ERISA, and so long as the salesperson does not hold themselves out as making an individualized recommendation intended to advance the best interest of the customer based on the person's professional or expert review of the investor's particular needs or circumstances.

When, however, the person making the recommendation meets the specific elements of paragraphs (c)(1)(i) or (ii), they are not merely making a sales pitch. They are holding themselves out as providing an important advisory service, either by expressly acknowledging their fiduciary status under ERISA or by indicating that the recommendation is based on review of the retirement investor's particular needs or individual circumstances, reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and may be relied upon by the retirement investor as intended to advance the retirement investor's best interest. In these circumstances, they are offering far more than a mere sales pitch. Instead, they have assumed a position of trust and confidence with

[199] *Id.*

[200] *Id.* noting that Department of Labor FAQs, *Choosing the Right Person to Give You Investment Advice: Information for Investors in Retirement Plans and Individual Retirement Accounts* state ''A written statement helps ensure that the fiduciary nature of the relationship is clear to both you and the investment advice provider at the time of the transaction, and limits the possibility of miscommunication,'' available at *https://www.dol.gov/agencies/ebsa/about-ebsa/our-activities/resource-center/faqs/choosing-the-right-person-to-give-you-investment-advice.*

respect to the investor, and provided a valuable service to the investor which the retirement investor can reasonably rely upon as intended to advance their interests. In such circumstances, it denigrates the work of the advice provider and the reasonable expectations of the investor to characterize the recommendation as a mere sales pitch.

Nothing in the final rule, however, requires mere sales pitches that fall short of the definition to be treated as fiduciary investment advice. Thus, for example, absent additional facts, the following scenario described in the *Chamber* opinion would not be sufficient to establish ERISA fiduciary status under the final rule: ''You'll love the return on X stock in your retirement plan, let me tell you about it,'' even if, as the opinion hypothesizes, the advice recipient buys the stock based solely on this communication.[201] Certainly, the salesperson touts the stock, but the scenario falls short of suggesting that the sales pitch was individualized, the salesperson considered the investor's particular circumstances, applied professional judgment to the investor's particular needs and circumstances, or was providing a recommendation intended to advance the best interest of the investor. Under the final rule, a mere sales pitch of this sort, without more, does not amount to fiduciary investment advice for purposes of ERISA.

Paragraph (c)(1)(iii) also makes clear that the mere provision of investment information or education, without an investment recommendation, is not advice within the meaning of the final rule. Investment education is discussed in greater detail in Section E.3. of this preamble.

Proposed Paragraph (c)(1)(iv)—Not Adopted

In the final rule, the Department did not adopt proposed paragraph (c)(1)(iv) which had provided, ''for purposes of this paragraph, when advice is directed to a plan or IRA fiduciary, the relevant retirement investor is both the plan or IRA and the fiduciary.'' One commenter said the meaning of this provision was unclear. Another commenter said, for purposes of analyzing proposed paragraph (c)(1)(ii), it was unclear how or why it would be required to evaluate the ''individual circumstances'' of a financial professional acting as a plan fiduciary.

In the final rule, the Department added a new defined term of a ''retirement investor'' in paragraph (f)(11) that means a plan, plan participant or beneficiary, IRA, IRA owner or beneficiary, plan fiduciary within the meaning of ERISA section (3)(21)(A)(i) or (iii) and Code section 4975(e)(3)(A) or (C) with respect to the plan or IRA fiduciary within the meaning of Code section 4975(e)(3)(A) or (C) with respect to the IRA. The definition of a retirement investor is discussed in Section D.4. of this preamble. In that discussion, the Department notes that under the final rule, for purposes of paragraph (c)(1)(i), when advice is rendered to a plan or IRA fiduciary within the meaning of ERISA section 3(21)(A)(i) or (iii) or Code section 4975(e)(3)(A) or (C), the relevant ''particular needs or individual circumstances'' are those of the plan or IRA, and the determination of whether the recommendation may be relied on by the ''retirement investor'' as intended to advance the ''retirement investor's best interest'', focuses on the plan or IRA.

Adopted Paragraph (c)(1)(iv)—Disclaimers

Paragraph (c)(1)(iv) in the final rule provides that ''[w]ritten statements by a person disclaiming status as a fiduciary under the ERISA Title I or Title II, or this final rule, or disclaiming the conditions set forth in paragraph (c)(1)(i) of this final rule, will not control to the extent they are inconsistent with the person's oral or other written communications, marketing materials, applicable State or Federal law, or other interactions with the retirement investor.''

This paragraph was proposed as paragraph (c)(1)(v) but was redesignated paragraph (c)(1)(iv) in the final rule. The Department's intent in including this paragraph is to permit parties to define the nature of their relationship, but also to ensure that to be given weight under the final rule, any disclaimer is consistent with oral or other written communications or actions, marketing material, State and Federal law, and other interactions based on all relevant facts and circumstances. Firms and financial professionals cannot readily evade fiduciary status through disclaimers that are at odds with their other communications with the retirement investor. Thus, a written disclaimer is insufficient to defeat fiduciary status if the advice provider makes professional investment recommendations to investors on a regular basis as part of their business and the recommendation is made under circumstances that would indicate to a reasonable investor in like circumstances that the recommendation is based on review of the retirement investor's particular needs or individual circumstances, reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, and may be relied upon by the retirement investor as intended to advance the retirement investor's best interest. For example, a boilerplate disclaimer of fiduciary status is insufficient to defeat fiduciary status under the final rule when the rest of the advice provider's communications are calculated to reassure the investor that, in fact, the advice is precisely the sort of trustworthy advice that meets the regulatory standard.

The disclaimer provision extends not just to broad disclaimers of ERISA fiduciary status, but also to disclaimers of *the conditions set forth in paragraph (c)(1)(i) of this final rule.* Thus, any statement disclaiming that a recommendation is based on review of the retirement investor's particular needs or individual circumstances, that a recommendation reflects the application of professional or expert judgment to the retirement investor's particular needs or individual circumstances, or that a recommendation is intended to advance the retirement investor's best interest, would not control to the extent it is inconsistent with other oral or written communications, marketing materials, other interactions with the retirement investor, or with applicable State or Federal law. For example, depending on the facts and circumstances, such disclaimers from a broker-dealer or an investment adviser under the Advisers Act making recommendations to and providing advice to retail customers would generally be ineffective to the extent the disclaimers are inconsistent with their obligations under the securities laws. These obligations, which are rooted in fiduciary principles,[202] include, but are not limited to the requirement under SEC Regulation Best Interest to ''exercise[ ] reasonable diligence, care, and skill to . . . [h]ave a reasonable basis to believe

[201] *Chamber,* 885 F.3d 360, 369 (5th Cir. 2018).

[202] *See* Regulation Best Interest release, 84 FR 33318, 33327 (July 12, 2019) (''key elements of the standard of conduct that applies to broker-dealers under Regulation Best Interest will be substantially similar to key elements of the standard of conduct that applies to investment advisers pursuant to their fiduciary duty under the Advisers Act.''); *see also* SEC Staff Bulletin: Standards of Conduct for Broker-Dealers and Investment Advisers Care Obligation (''Both [Regulation Best Interest] for broker-dealers and the [Advisers Act] fiduciary standard for investment advisers are drawn from key fiduciary principles that include an obligation to act in the retail investor's best interest and not to place their own interests ahead of the investor's interest.''), *https://www.sec.gov/tm/standards-conduct-broker-dealers-and-investment-advisers.*

that the recommendation is in the best interest of a particular retail customer based on that retail customer's investment profile and the potential risks, rewards, and costs associated with the recommendation and does not place the financial or other interest of the broker, dealer, or such natural person ahead of the interest of the retail customer;[203] the obligation under the Advisers Act to provide investment advice ''in the best interest of the client based on a reasonable understanding of the client's objectives;[204] and the requirement in SEC Form CRS to disclose to retail investors the required associated standard of conduct associated with their relationship and services.[205] Waiver of these obligations under Regulation Best Interest and the Advisers Act's is generally not permitted.[206]Likewise, a disclaimer of any of the conditions of paragraph (c)(1)(i) by an insurance agent would not govern to the extent such disclaimer would be inconsistent with State insurance law.

In other contexts, however, firms and financial professionals may rely on disclaimers to a greater degree but must exercise care to ensure that their actions and communications are consistent with their disclaimer of fiduciary responsibility. When a disclaimer is at odds with the investment advice provider's oral or other written communications, marketing material, State or Federal law, or other interactions, the disclaimer is insufficient to defeat the retirement investor's legitimate expectations.

Commenters who supported this provision in the proposal said it would appropriately close loopholes in the 1975 regulation that had allowed financial professionals to disclaim elements of the five-part test in fine print. According to these commenters, instead of allowing fine print disclosures to govern, this provision would result in the consideration of the nature of the parties' other interactions as well as the advice provider's use of titles, marketing materials, and description of services, and would better give effect to retirement investors' expectations.

One commenter said the final rule should not permit a disclaimer to have any effect if the person would have met the fiduciary definition in the absence of the disclaimer. The Department has not adopted this suggestion. To the extent a written disclaimer is otherwise permitted by Federal or State law and the firm and financial professional's communications and conduct are consistent with the disclaimer, it is relevant to determine whether a reasonable investor in like circumstances would have viewed the recommendation as trustworthy advice aimed at advancing the retirement investor's best interest based on their individual needs and circumstances.

Other commenters criticized the proposal's treatment of disclaimers and even suggested that the proposal effectively prohibited disclaimers. Commenters said the proposed provision on disclaimers—along with the contexts in proposed paragraphs (c)(1)(i), (ii), and (iii) which they described as ''status based''—left no viable way for a financial institution or financial professional to define their relationship with an investor even by clearly stating they are not acting as a fiduciary. One commenter said disclaimers should be permitted to manage the legal risk of ''inadvertent'' fiduciary status unintended by the parties. Some commenters focused on the relevance of disclaimers in communications between plan fiduciaries, such as in connection with a request for proposal to provide asset management services, and in communications between asset managers and financial services providers who are themselves plan and IRA fiduciaries. One commenter said the final rule should allow an ''ERISA disclaimer'' that would allow parties to operate under Regulation Best Interest or other securities law but would limit their services merely to investment education to avoid ERISA fiduciary status.

As discussed above, the Department has not prohibited disclaimers of fiduciary status. Under the final rule, weight will be given to a disclaimer to the extent the disclaimer is consistent with State and Federal law, but it is clear that disclaimers are not ''dispositive'' when at odds with State and Federal law, or other actions and communications. To the extent firms and financial professionals wish to avoid fiduciary status, they should take care to ensure that their disclaimers are consistent with their actions and communications with respect to the retirement investor as well as with State and Federal law. Disclaimers should not function as mere legal boilerplate intended to insulate advice providers from fiduciary status and liability, while the remainder of the provider's actions, communications, and marketing materials are designed to reassure the investor that, disclaimer notwithstanding, they are providing the sort of professional advice that falls within the fiduciary definition and can be relied upon with trust and confidence.

The Department believes that concerns about ''status based'' provisions and ''inadvertent'' fiduciary status have been appropriately addressed by the text of the final rule, which provides an objective test based on reasonable investor understandings. As noted above, firms and financial professionals can best ensure that there are no misunderstandings as to fiduciary status by ensuring that they are clear and consistent in their communications with their client. Under the final rule's objective standards, fiduciary status does not turn on the retirement investor's subjective state of mind, but rather on how a reasonable investor in like circumstances would have viewed the relationship and recommendation, including whether the advice provider has expressly acknowledged ERISA fiduciary status. In this manner, the final rule ensures that neither the advice provider's, nor the retirement investor's, reasonable expectations will be dishonored. It is within the advice provider's control to manage how it interacts with and holds itself out to the investor, within the limits of other State and Federal laws.

A commenter additionally requested confirmation that a financial institution may agree with a customer expressly, clearly, and in writing that it is only providing brokerage trade execution services (*i.e.,* acting as an order taker) and such agreement may govern to avoid ERISA fiduciary status, so long as the disclaimer is consistent with the person's oral or other written communications, marketing materials, applicable State or Federal law, or other interactions with the retirement investor. The Department confirms and notes that this is the case even if other assets of the retirement investor are managed on a discretionary basis by the financial institution or an affiliate. Moreover, as discussed above, the new paragraph (c)(1)(iii) confirms that sales recommendations that do not meet paragraph (c)(1)(i) or (ii) will not give rise to fiduciary status.

[203] 17 CFR 240.15l–1(a)(2)(ii).

[204] SEC Investment Adviser Interpretation, 84 FR 33669, 33673 (July 12, 2019).

[205] Form CRS Relationship Summary; Amendments to Form ADV, 84 FR 33492 (July 12, 2019).

[206] Regulation Best Interest release, 84 FR 33318, 33327,33330 (July 12, 2019) (noting, among other things, that a ''broker-dealer will not be able to waive compliance with Regulation Best Interest, nor can a retail customer agree to waive her protections under Regulation Best Interest''); SEC Investment Adviser Interpretation, 84 FR 33669, 33672 (July 12, 2019).

The Department believes this provision on disclaimers should also address many commenters' concerns about communications to plan and IRA fiduciaries who are retirement investors under the final rule. Express disclaimers in the context of a request for proposal for asset management services or similar process would be permitted under this provision and would govern, provided the disclaimer is consistent with the other interactions and circumstances set forth in paragraph (c)(1)(iv). Additional discussion of requests for proposals and other specific circumstances is in Section E of this preamble. Also, as discussed in Section D.4. of this preamble, the Department has revised the definition of a retirement investor to make clear that financial services providers serving as plan and IRA investment advice fiduciaries are not captured within that definition.

The Department does not agree, however, that there should be an ''ERISA disclaimer'' under which parties that would otherwise satisfy all of the provisions in the final rule could nevertheless disclaim ERISA fiduciary status and only comply with securities law conduct standards. As Congress enacted ERISA against the backdrop of securities laws with the aim of imposing especially high standards in the context of retirement plans, the Department believes a flat disclaimer to avoid ERISA fiduciary status without limiting conduct accordingly is inconsistent with congressional intent and ERISA's purposes.[207] The final rule defines those circumstances in which a reasonable investor is entitled to rely upon a recommendation as a fiduciary recommendation made from a position of trust and confidence. In such circumstances, the advice provider cannot upend legitimate investor expectations and avoid fiduciary accountability merely by stating that they disclaim responsibility under ERISA, irrespective of the investor's reasonable understandings.

3. Fee or Compensation, Direct or Indirect (Paragraph (e))

Paragraph (e) in the final rule defines ''for a fee or compensation, direct or indirect'' for purposes of ERISA section 3(21)(A)(ii) and Code section 4975(e)(3)(B) as follows:

For purposes of section 3(21)(A)(ii) of ERISA and section 4975(e)(3)(B) of the Code, a person provides investment advice ''for a fee or other compensation, direct or indirect,'' if the person (or any affiliate) receives any explicit fee or compensation, from any source, for the investment advice or the person (or any affiliate) receives any other fee or other compensation, from any source, in connection with or as a result of the recommended purchase, sale, or holding of a security or other investment property or the provision of investment advice, including, though not limited to, commissions, loads, finder's fees, revenue sharing payments, shareholder servicing fees, marketing or distribution fees, mark ups or mark downs, underwriting compensation, payments to brokerage firms in return for shelf space, recruitment compensation paid in connection with transfers of accounts to a registered representative's new broker-dealer firm, expense reimbursements, gifts and gratuities, or other non-cash compensation. A fee or compensation is paid ''in connection with or as a result of'' such transaction or service if the fee or compensation would not have been paid but for the recommended transaction or the provision of advice, including if eligibility for or the amount of the fee or compensation is based in whole or in part on the recommended transaction or the provision of investment advice.

In the proposal, the Department explained that the proposed definition was consistent with the preamble of the 1975 regulation, which stated that ''a fee or other compensation, direct or indirect'' includes all fees or other compensation ''incident to the transaction in which the investment advice to the plan has been rendered or will be rendered,'' including, for example, brokerage commissions, mutual fund sales commissions, and insurance sales commissions.[208] The Department's proposal cited several other instances where the Department confirmed its longstanding view in this respect.[209]

Like the proposal, the definition in the final rule makes clear that there must be a link between the transaction-based compensation and the financial professional's recommendation. Thus, the compensation is treated as paid ''in connection with or as a result of'' the provision of advice only if it would not have been paid but for the recommended transaction or the provision of advice, or if the investment advice provider's eligibility for the compensation (or its amount) is based in whole or part on the recommended transaction or the provision of advice.

This definition in the final rule would also be satisfied by any fee that is paid explicitly for the provision of investment advice. This would include, for example, a fee paid to an investment adviser as defined in the Advisers Act based on the retirement investor's assets under management.

A fee or other compensation received in connection with an investment transaction also would fall within the definition of ''for a fee or other compensation, direct or indirect.'' This treatment of investment compensation is in accord with the actions of other State and Federal regulators, and with the modern marketplace for investment advice in which brokers and insurance agents can do far more than merely execute transactions, close sales, or make sales pitches. Financial professionals are commonly compensated for their advice through the payment of transaction-based fees, such as commissions, which are contingent on the investor's decision to engage in the recommended transaction. In the circumstances described in the fiduciary definition, the advice provider has either specifically acknowledged fiduciary status under Title I or Title II ERISA or both, or has otherwise offered individualized advice reflecting the application of expert or professional judgment to the retirement investor's financial circumstances and needs that may be relied upon to advance the investor's best interest. In these circumstances, the advice provider's compensation is not simply a charge for executing a transaction, but rather compensates the provider for the provision of a valuable fiduciary service.

The SEC acknowledged this reality in the Regulation Best Interest release, noting that ''there is broad acknowledgment of the benefits of, and support for, the continuing existence of the broker-dealer business model, including a commission or other transaction-based compensation structure, as an option for retail customers seeking investment

[207] *See* statement by the Chair of the Senate Committee on Labor and Public Welfare upon introduction of the Conference Report on ERISA: ''Despite the value of full reporting and disclosure, it has become clear that such provisions are not in themselves sufficient to safeguard employee benefit plan assets from such abuses as self-dealing, imprudent investing, and misappropriation of plan funds. Neither existing State nor Federal law has been effective in preventing or correcting many of these abuses. Accordingly, the legislation imposes strict fiduciary obligations on those who have discretion or responsibility respecting the management, handling, or disposition of pension or welfare plan assets. The objectives of these provisions are to . . . establish uniform fiduciary standards to prevent transactions which dissipate or endanger plan assets . . . .'' Statement by Hon. Harrison A. Williams, Jr., Chairman, Senate Committee on Labor and Public Welfare, introducing the Conference Report on HR 2, 120 Congressional Record S 15737 at 11 (Aug. 22, 1974).

[208] Proposed Retirement Security Rule, 88 FR 75890, 75909 (Nov. 3, 2023) (citing 40 FR 50842 (Oct. 31, 1975); 41 FR 56760, 56762 (Dec. 29, 1976)).

[209] *Id.* (discussing the preamble of proposed PTE 77–9, 41 FR 56760, 56762 (Dec. 29, 1976) and U.S. Department of Labor Adv. Op. 83–60A (Nov. 21, 1983), available at *https://www.dol.gov/agencies/ebsa/about-ebsa/our-activities/resource-center/advisory-opinions/1983-60a*).

recommendations.'' [210] The SEC discussion further contemplated that commissions compensate broker-dealers for their recommendations and may be the preferred method of investment advice compensation with respect to certain transactions; as an example, the SEC stated that retail customers seeking a long-term investment may determine that ''paying a one-time commission to a broker-dealer recommending such an investment is more cost effective than paying an ongoing advisory fee to an investment adviser merely to hold the same investment.'' [211] The SEC also noted that transaction-based compensation is not limited to commissions and includes markups or markdowns, 12b–1 fees and revenue sharing.[212] The Department agrees that there are benefits to ensuring a wide range of compensation structures remain available to retirement investors.

Likewise, the NAIC Model Regulation effectively acknowledged that insurance agents make recommendations and might be compensated for their recommendations through commissions. The NAIC Model Regulation defines a recommendation as ''advice provided by a producer to an individual consumer that was intended to result or does result in a purchase, an exchange or a replacement of an annuity in accordance with that advice.'' [213] The definition of ''cash compensation'' in the NAIC Model Regulation is: ''any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer in connection with the recommendation or sale of an annuity from an insurer, intermediary, or directly from the consumer.'' [214]

When a financial professional meets the regulatory fiduciary definition, the services rendered by the professional include individualized advice, and the compensation, including commission payments, is not merely for execution of a sale, but for the professional advice provided to the investor, as uniformly recognized by the Department's previous guidance and by other State and Federal regulators.[215]

The statutory exemption for investment advice to participants and beneficiaries of individual account plans set forth in ERISA section 408(b)(14) indicates that Congress similarly recognized that compensation for advice often comes in the form of commissions and transaction-based compensation.[216] Accordingly, the exemption applies to transactions ''in connection with the provision of investment advice described in section 3(21)(A)(ii)'' including ''the direct or indirect receipt of fees or other compensation by the fiduciary adviser or an affiliate thereof . . . in connection with the provision of the advice *or in connection with an acquisition, holding, or sale of a security or other property available as an investment under the plan pursuant to the investment advice.*'' [217]

As has been true since the Department first proposed regulations under this section in 1975 and as discussed above, the Department understands the phrase ''for a fee or other compensation, direct or indirect'' to encompass a broad array of compensation incident to the transaction.[218]

Several commenters indicated the definition of ''for a fee or other compensation, direct or indirect'' in the proposal was too broad in extending to commissions outside the context of the 1975 regulation's five part-test. One said the Fifth Circuit made clear that commissions would fall within this language only if all parts of the of the five-part test are satisfied including a mutual understanding that the commission would be intended to pay for advice. Concern was expressed that the proposed rule would extend fiduciary status to an investment manager based on its provision of information about its services in a hiring context, if it ultimately was hired and paid, and to a platform provider that is hired to manage assets based on the provision of a narrowed-down list of investment options for the plan. In this connection, one commenter asked the Department to state that the definition does not extend to compensation that ''has a connection with 'incidental''' recommendations of financial products or services.

The Department does not believe that the definition of ''for a fee or other compensation, direct or indirect,'' must be narrowed in the context of the final rule. The Department believes the final rule is appropriately constructed to define when retirement investors can reasonably place their trust and confidence in an advice provider and their recommendations, and compensation received ''in connection with or as a result of'' recommended transactions or advice services from such financial professionals is appropriate to establish ERISA fiduciary status. The Department has consistently interpreted the statutory language ''for a fee or other compensation, direct or indirect'' to include transaction-based compensation since the adoption of the 1975 regulation, and the Department believes this approach is consistent with the recognition by the SEC that commissions may be paid, in part, for advice or recommendations. The Department has not adopted the suggestion of the commenter that sought an exception for compensation that has a connection with ''incidental'' recommendations of financial products or services. The commenter did not define ''incidental'' or explain why that restriction would be appropriate under the statutory definition, which provides that a person is a fiduciary ''to the extent'' the person provides compensated advice, without any such carve-out. The Department believes that concerns about marketing advice services and products are appropriately addressed in other ways in the final rule. Section E of this preamble discusses application of the final rule in specific circumstances involving ''hire me'' communications, requests for proposals and platform providers, and others.

Another commenter made a related comment that Federal securities laws recognize that financial professionals receive ''no compensation'' for the provision of advice that is incidental to brokerage services, and that absent specific language to the contrary, Congress must have intended the same in ERISA. The Department has concluded this assertion does not hold up under examination. While the Advisers Act includes an exception from the definition of an investment adviser for broker-dealers ''whose performance of such advisory services is solely incidental to the conduct of his business as a broker or dealer and who receives no special compensation'' for those services, [219] this does not reflect

a broad view that broker-dealers are uncompensated for their advice or recommendations. Rather, it acknowledges that broker-dealers can provide a form of advice that is incidental to their primary business and that they can get compensated for such advice. They do not go uncompensated for those services, but rather are commonly compensated on a transaction basis for the work required to make a best interest recommendation. The SEC acknowledged this reality in the Regulation Best Interest release.[220] The quotes set forth earlier in this preamble Section D.3 from the NAIC Model Regulation definition of ''cash compensation'' reflect similar views in the insurance context.[221]

In response to another commenter who requested clarification of the analysis that would apply to non-transaction-based compensation models, such as salary or hourly paid positions, the Department responds that the definition of ''for a fee or other compensation, direct or indirect,'' includes any fee that is paid explicitly by any source for the provision of investment advice or any fee paid in connection with investment advice. This would include an assets under management fee, flat fee, or hourly fee paid in connection with advisory work. Other commenters asked the Department to confirm that a set salary or other fixed compensation paid to an individual who is providing information such as product information and operational or administrative information to participants does not constitute a fee or other compensation for rendering investment advice. The Department is unwilling to state that any particular compensation arrangement with an individual would categorically not constitute a ''fee or other compensation''; however, it is important to note that for fiduciary status to apply, all parts of the final rule must be satisfied, including the provision of a covered recommendation.

4. Retirement Investor Definition (Paragraph (f)(11))

Sophisticated Advice Recipients

Many commenters argued that the final rule should explicitly state in the regulatory text that recommendations to certain sophisticated advice recipients would not be considered ERISA fiduciary advice. Many commenters who suggested this type of limitation wanted it to apply to plan sponsors acting as plan fiduciaries and/or independent financial services providers who are themselves plan or IRA fiduciaries. These commenters said the Department should adopt a different approach in the institutional market than the retail market, where they said these plan fiduciaries are not expecting advice in their best interest and do not have a relationship of trust and confidence. The commenters said a specific limitation in the regulatory text for sophisticated advice recipients is needed to avoid impeding the exchange of important information such as market color and market availability and pricing between advice providers and plan fiduciaries. Some commenters pointed to Regulation Best Interest's limitation to recommendations to ''retail customers'' and other securities law provisions, such as for ''accredited investors'' as precedent for this approach.

Some commenters suggested the Department should include a limitation similar to the 2016 Final Rule's limitation for ''transactions with independent fiduciaries with financial expertise,'' while others said the Department should not take that approach again.[222] One commenter suggested including an assets-based test carving out plan sponsors with more than $100 million in assets, based on the commenter's analysis that there would be minimal benefit to plans and their participants from including these plan sponsors as retirement investors. Other commenters suggested securities-law based definitions such as ''accredited investors,'' ''qualified purchasers,'' or ''qualified institutional buyers.''

Some other commenters discussed the issue of sophisticated advice recipients in the context of ''wholesaling'' activity aimed at financial services providers such as broker-dealers, registered investment advisers, banks, insurance companies, and consultants, that are or might be serving in an ERISA Title I or Title II fiduciary capacity to plans or IRA investors. Commenters said asset managers should be free to engage in marketing efforts with these providers, sometimes described as intermediaries, to better inform the providers for purposes of their own fiduciary recommendations to plan and IRA clients. One scenario raised in a number of comments involves the provision of model portfolios. One commenter described a scenario involving model portfolios created by asset managers as a service to the financial services providers, such as broker-dealers, who then use those models in their direct interactions with investor clients. Commenters said that the proposal was not clear as to whether such interactions between wholesalers and advisers constituted fiduciary recommendations, and if they did, ERISA fiduciary status might attach broadly to asset managers providing these models based on the contexts in proposed paragraphs (c)(1)(i), (ii), and (iii).

In this regard, commenters said wholesaling interactions present clear examples where there is no relationship of trust and confidence involving a customer. They said the regulatory text of the final rule should reflect a limitation under which financial services providers receiving information in wholesaling interactions would not be considered ''retirement investors,'' with one commenter suggesting that the Department should eliminate the reference to ''plan and IRA fiduciaries'' altogether in the definition of a retirement investor and leave the reference to ''plans'' and ''IRAs'' as advice recipients. The commenter said this would avoid treating non-fiduciary interactions between financial professionals as fiduciary investment advice. Another commenter suggested that the definition of a retirement investor should be limited to plan fiduciaries that are named fiduciaries and IRA fiduciaries that are in a fiduciary relationship to a particular IRA or IRA owner or beneficiary and

Exclusion From the Definition of Investment Adviser, 84 FR 33681, 33682 (July 12, 2019).

[220] Regulation Best Interest release, 84 FR 33318, 33319 (July 12, 2019) (''there is broad acknowledgment of the benefits of, and support for, the continuing existence of the broker-dealer business model, including a commission or other transaction-based compensation structure, as an option for retail customers seeking investment recommendations.'')

[221] The commenter cited the *Chamber* opinion, 885 F.3d at 372–373, as support for the assertion that financial professionals receive ''no compensation'' for the provision of advice that is incidental to brokerage services. On page 373, the *Chamber* opinion stated, ''[s]tockbrokers and insurance agents are compensated only for completed sales ('directly or indirectly'), not on the basis of their pitch to the client. Investment advisers, on the other hand, are paid fees because they 'render advice.''' The Department does not read this passage as foreclosing the view that, in a completed investment transaction that was the subject of a fiduciary relationship of trust and confidence, a portion of the commission would be considered compensation for the recommendation. This is consistent with the position taken by the Department in Advisory Opinion 83–60A, which was discussed favorably by the court in *Chamber.* In that opinion, the Department said ''if, under the particular facts and circumstances, the services provided by the broker-dealer include the provision of 'investment advice', as defined in regulation 2510.3–21(c), it may be reasonably expected that, even in the absence of a distinct and identifiable fee for such advice, a portion of the commissions paid to the broker-dealer would represent compensation for the provision of such investment advice.'' who are receiving the recommendation on behalf of a specific IRA or IRA owner or beneficiary.

A commenter discussed their views on the potential impact of the proposal on the private equity market. They described communications between fund sponsors and plan fiduciaries as ranging from sales communications to information about fund characteristics and responding to questions to aid in the due diligence process. Similar to other commenters expressing their desire for a sophisticated advice recipient carve-out, the commenter said it is widely understood that these communications are on an arm's length basis. Nevertheless, to avoid impacting ERISA plans' investment in private equity, the commenter suggested adding a provision to the regulatory text as follows:

Communications with sophisticated and independent parties. The provision of any advice, within the meaning of Section 3(21)(A)(ii) of the Act, by a person to a sophisticated and independent party in connection with an arm's length purchase, sale, loan, exchange or other transaction related to the investment of securities or other investment property, if the sophisticated and independent party has expressly acknowledged, in a clear and conspicuous manner, that such person is not acting as a ''fiduciary,'' within the meaning of Section 3(21)(A)(ii) of the Act or Section 4975(e)(3)(B) of the Code, to the sophisticated and independent party with respect to such transaction, and such person does not (i) receive a fee or other compensation directly from the sophisticated and independent party solely for the provision of such advice or (ii) expressly acknowledge or represent that it acts as a ''fiduciary,'' within the meaning Section 3(21)(A) of the Act or Section 4975(e)(3) of the Code, to such sophisticated and independent party with respect to the transaction.

A party is ''sophisticated'' if such person (or such person's representative) (i) is a ''bank,'' as defined in section 202 of the Investment Advisers Act of 1940 or similar institution that is regulated and supervised and subject to periodic examination by a State or Federal agency, (ii) is an insurance carrier which is qualified under the laws of more than one state to perform the services of managing, acquiring or disposing of assets of a plan, (iii) is an investment adviser registered under the Investment Advisers Act of 1940 or, if not registered as an investment adviser under the Investment Advisers Act by reason of paragraph (1) of section 203A of such Act, is registered as an investment adviser under the laws of the State (referred to in such paragraph (1)) in which it maintains its principal office and place of business, (iv) is a broker-dealer registered under the Securities Exchange Act of 1934, (v) has total assets or assets under management of at least $25 million, or (vi) meets the requirements of a ''qualified purchaser'' under the federal securities laws.

A party is ''independent'' of another person if the person were not, and were not affiliated with, the other person. For these purposes, an ''affiliate'' of a person is one who controls, is controlled by, or is under common control with, the other person.''

A communication is ''clear and conspicuous'' if it is reasonably understandable and noticeable to a typical sophisticated and independent party.

Many supporters of the Department's proposal, however, counseled against a limitation in the regulatory text regarding sophisticated advice recipients that are plan sponsors acting as plan fiduciaries. They said the various suggested carve-outs from the fiduciary definition do not reliably identify whether an advice recipient is in fact sophisticated, and they did not believe plan sponsors acting as plan fiduciaries would necessarily know that the fiduciary protections under Title I did not apply when they receive recommendations and advice. These commenters also said there is nothing in the text of ERISA that would indicate that Congress intended to deny protections to certain investors based on their presumed sophistication, and at least one commenter said that the use of wealth or income exemptions from public disclosure requirements in the securities context has led to harms to retail investors. Many of these commenters specifically supported extending ERISA's protections to plan sponsors and believed there would be significant benefits to plan participants and beneficiaries as a result. These commenters said that the fact that plan sponsors are neither protected under Regulation Best Interest nor under State laws adopting the NAIC Model Regulation weighs in favor of including them within the definition of a retirement investor.

In the final rule, the Department has determined not to include a provision that would generally exclude plan sponsors acting as fiduciaries from the definition of a retirement investor. The Department believes that rather than attempt to define financial sophistication through a particular asset test or other specific regulatory limitation as suggested by a few commenters, including the commenter advocating for a carve-out for ''communications with sophisticated and independent parties,'' it is preferable to retain the facts and circumstances test set forth in this rule for all recommendations. For example, when a financially sophisticated retirement investor engages in an arm's length transaction with a counterparty who makes an investment recommendation, absent an acknowledgment of fiduciary status under ERISA Title I or Title II, it is appropriate to consider whether a reasonable investor *in like circumstances* would rely on the recommendation as intended to advance the investor's best interest.

In many circumstances, plan fiduciaries with responsibility for plan investments may need professional advice to responsibly discharge their duties. For example, many fiduciaries of small plans do not have specialized investment expertise and are quite dependent on recommendations from financial professionals about the complexities of constructing a prudent 401(k) plan investment lineup. As noted above, in a comment on the proposal, Morningstar quantified the potential benefits from the proposal's coverage of recommendations to plan fiduciaries about the fund lineups in defined contribution plans as exceeding $55 billion in the first 10 years and $130 billion in the subsequent 10 years, in undiscounted and nominal dollars, due to reductions in costs associated with investing through their plans, noting that over 80 percent of these savings would be experienced by small-plan participants. Even plan fiduciaries responsible for large portfolios may require fiduciary advice to make decisions with respect to categories of investment or financial transactions for which they lack expertise. In these circumstances, the regulatory text enables the fiduciary with investment authority to obtain fiduciary advice when that is appropriate in accordance with the same objective test that applies to fiduciary advice generally. This approach will avoid an artificial limitation in the definition of a retirement investor that may not have bearing on the parties' relationships and could undermine application of the ERISA fiduciary protections under Title I to plan sponsors that many commenters supported. Moreover, as explained above, the Department believes this facts and circumstances approach based on the parties' relationship is fully consistent with the *Chamber* opinion's emphasis on relationships of trust and confidence, as opposed to an artificial carve-out from fiduciary status that does not reflect the parties' reasonable understandings.

In this regard, it is worth noting that the Department did not finalize proposed paragraph (c)(1)(i), which would have automatically treated recommendations from persons who had discretionary authority over the retirement investor's assets as fiduciary investment advice provided all the other parts of the definition were satisfied.

Many of the comments related to the proposed rule's overbreadth, especially in the institutional market, were focused on this provision, which the Department has deleted. As discussed in greater detail in Section E of this preamble, the Department has also made a number of other changes to the final rule that should alleviate concerns about the flow of information in the institutional marketplace.

In addition, the final rule does include a limitation in the regulatory text for recommendations to plan and IRA fiduciaries that are merely themselves investment advice fiduciaries. In such cases, the recipient of the communication does not have the authority or control necessary to invest the plans' assets, and the final rule does not treat the recommendation as fiduciary investment advice to the plan. Accordingly, a new paragraph (f)(11) is added in the final rule defining a ''retirement investor'' and it extends only to plan and IRA fiduciaries to the extent they are described in ERISA section 3(21)(A)(i) or (iii) or Code section 4975(e)(3)(A) or (C), which generally involve the exercise of authority or control over plan assets, or discretionary authority or discretionary control with respect to the plan's management, or the possession of discretionary authority or discretionary responsibility in the plan's administration. Any subsequent recommendation made by the investment advice fiduciary directly advising the plan or IRA, however, would itself be treated as fiduciary investment advice to the extent it met the terms of the final rule, including paragraph (c)(1).

In this regard, under the final rule, for purposes of paragraph (c)(1)(i), when advice is rendered to a plan or IRA fiduciary within the meaning of ERISA section 3(21)(A)(i) or (iii) or Code section 4975(e)(3)(A) or (C), the relevant ''particular needs or individual circumstances'' are those of the plan or IRA, and the determination of whether the recommendation may be relied on by the ''retirement investor'' as intended to advance the ''retirement investor's best interest'', focuses on the plan or IRA.

The Department disagrees with commenters' suggestion that the category of fiduciary retirement investors should be limited to the ''named fiduciary,'' inasmuch as it would exclude advice to many fiduciaries who have or exercise direct control over plan investments. The Department did not wholly eliminate the reference to plan or IRA fiduciaries leaving only the ''plan'' and the ''IRA'' as the retirement investor, as suggested by one commenter, out of concern that there would continue to be uncertainty as to whether recommendations received by a financial services provider that is a fiduciary would be considered advice to the plan or IRA.

Some commenters also presented an additional concern that a wholesaler would not be able to tell if a particular financial professional that they are interacting with might be a plan or IRA fiduciary, particularly if the wholesaler is presenting in a group setting such as an educational forum. To the extent that is the case, and the scenario is not addressed through the limited definition of a retirement investor discussed above, it would appear that any communication in this context would not be investment advice under the final rule as it would not be based on the individual needs or particular circumstances of any plan or IRA. Such communications, to the extent they are covered recommendations that are not accompanied by an acknowledgment of ERISA Title I or Title II fiduciary status with respect to the recommendation, would not meet paragraph (c)(1)(i) of the final rule. In the scenario in which a financial professional acts as both an investment advice fiduciary and a fiduciary with control over investment decisions, the limitation in the definition of a ''retirement investor'' would apply only to the extent of their role as an investment advice fiduciary. In their role as a fiduciary with control, communications to them would be analyzed under the provisions of the final rule discussed in this paragraph.

Several commenters also asked the Department to address the status of independent marketing organizations (IMOs), field marketing organizations (FMOs) and other insurance intermediaries, which commenters said play a significant role in the distribution, training, and sales support of producers and insurance carriers. Specifically, the commenter said these entities assist independent producers in training, compliance, marketing, product selection and many other roles. Based on the commenter's description of the interactions, the Department would determine the status of these entities under the final rule based on, among other things, determination of whether the communications involve ''recommendations'' and whether the insurance producers are considered ''retirement investors'' pursuant to this discussion.

Health and Welfare Plans and Health Savings Accounts

The proposal included, as retirement investors, employee benefit plans described in ERISA section 3(3) and Code section 4975(e)(1)(A), as well as IRAs, which were defined to include any account or annuity described in Code section 4975(e)(1)(B) through (F), including, for example, an individual retirement account described in section 408(a) of the Code and a health savings account described in section 223(d) of the Code (HSA). [223]

The proposal further stated:

> For purposes of the proposed rule, the term ''IRA'' is defined as any account or annuity described in Code section 4975(e)(1)(B)–(F), and includes individual retirement accounts, individual retirement annuities, health savings accounts, and certain other tax-advantaged trusts and plans. However, for purposes of any rollover of assets between a Title I Plan and an IRA described in this preamble, the term ''IRA'' includes only an account or annuity described in Code section 4975(e)(1)(B) or (C). Additionally, while the Department uses the term ''*retirement* investor'' throughout this document to describe advice recipients, that is not intended to suggest that the fiduciary definition would apply only with respect to employee pension benefit plans and IRAs that are retirement savings vehicles. As discussed herein, the rule would apply with respect to plans as defined in Title I and Title II of ERISA that make investments. In this regard, see also proposed paragraph (f)(11) that provides that the term ''investment property'' ''does not include health insurance policies, disability insurance policies, term life insurance policies, or other property to the extent the policies or property do not contain an investment component.'' [224]

Several commenters asked the Department to exclude HSAs from the final rule. These commenters described HSAs as individually-owned accounts established exclusively to fund health care expenses. They said the HSAs operate more like a deposit account than a retirement savings vehicle, with investments being merely an optional feature that is not commonly utilized. They said HSAs may accept rollovers from IRAs but not from workplace retirement plans, and the amounts they may accept are limited. Commenters expressed concern that routine provider communications regarding HSAs might become fiduciary investment advice under the rule, and they said that this would increase the cost of offering HSAs. Further, commenters said that HSAs are often held and administered by non-bank custodians or trustees, and

[223] Proposed paragraph (f)(6) (the term ''plan'') and (f)(3) (the term ''IRA'').

[224] Proposed Retirement Security Rule 88 FR 75890, 75891 n. 9 (Nov. 3, 2023).

these entities are not ''financial institutions'' eligible to rely on PTE 2020–02 for prohibited transaction exemptive relief.

To the extent the Department decided not to exclude HSAs as retirement investors under the final rule, commenters asked the Department to confirm that HSA providers would be considered the same as platform providers because HSA providers make available investment options that are acceptable to all of their HSA customers, including employers who may select service providers for their employees' HSAs. Commenters also asked the Department to include IRS-approved non-bank trustees and custodians as financial institutions in the final amendment to PTE 2020–02.

One commenter more broadly urged the Department to completely exclude health and welfare plans, policies, and benefits from the final rule. The commenter said these plans are complex and fundamentally different than retirement plans. The commenter expressed appreciation for the definition of ''investment property'' in the proposal but suggested there were additional questions related to that definition.[225]

The Department has not eliminated health and welfare plans and HSAs from the definition of a retirement investor in the final rule. The Department acknowledges commenters' views that there are significant differences in how these plans operate as compared to retirement savings vehicles, and that HSAs may not commonly involve investment activity at all. However, these plans are clearly covered by either Title I of ERISA or by the prohibited transaction provisions in Title II.

Based on commenters' descriptions of HSA operations, the Department agrees that HSA providers may fall within the analysis regarding platform providers, presented below in Section E.2 of the preamble, which confirms that providers who merely identify investment alternatives using objective third-party criteria (*e.g.,* expense ratios, fund size, or asset type specified by the plan fiduciary) to assist plan sponsors and plan fiduciaries in selecting and monitoring investment alternatives, without additional screening or recommendations based on the interests of the retirement investor, would not be considered under the final rule to be making a recommendation.

However, to the extent that a person makes a covered recommendation and satisfies the rest of the rule's requirements to any of these retirement investors, the Department does not see a reason to treat them differently or provide a lower level of protection for them than other plans covered by ERISA Title I or Title II. To address commenters' concerns about prohibited transaction relief, the Department has accepted the commenters' recommendation to allow IRS-approved non-bank trustees and custodians to rely on the prohibited transaction relief in PTE 2020–02 when they are serving in these capacities with respect to HSAs.

E. Application of the Final Rule to Specific Circumstances

The final rule generally retains the proposed approach of providing a general rule under which investment advice providers can determine their status through application of the facts and circumstances surrounding their interactions with retirement investors, as opposed to including provisions addressing specific circumstances. The use of carve-outs and special provisions in the 2016 Final Rule was criticized by the Fifth Circuit in *Chamber* as evidence of an overbroad rule.[226] Specifically, with respect to the 2016 Rulemaking, the Fifth Circuit's *Chamber* opinion had found that the rulemaking was overly broad and captured relationships that lacked the requisite hallmarks of a relationship of trust and confidence, such that fiduciary status under ERISA should not attach. The court further found that the exemptive relief and other carve-outs included in that rulemaking amounted to ''backdoor regulation'' of parties and transactions that the Department lacked authority to regulate.[227] As reiterated elsewhere in this final rule, the Department carefully considered the Fifth Circuit's emphasis on relationships of trust and confidence in developing this rule. To further distinguish the careful and judicious approach of this rulemaking (to extend fiduciary status to only relationships of trust and confidence) from the framework of the 2016 Rule, here the Department crafted a narrowed functional test that appropriately balances competing interests without the need for carve-outs.

Instead of proposing carve-out provisions in the regulatory text, the proposal's preamble included a discussion of the rule's intended application in certain common circumstances, specifically including circumstances involving sophisticated retirement investors, platform providers and pooled employer plans, swaps and security-based swaps, and valuation of securities and other investments.[228] The proposal sought comment on the discussion presented and whether the regulatory text should be adjusted to address any of the issues discussed.[229]

Commenters generally expressed appreciation for the Department's views presented in the proposal's preamble regarding the specific circumstances, however, many asked the Department to add provisions to the regulatory text to provide additional certainty regarding the Department's position. Some commenters said that without specific limitations in the regulatory text, the rule appeared overly broad and that without increased certainty as to how the rule would apply, providers may limit their services and beneficial information provided to retirement investors in a variety of settings. Commenters proposed specific carve-outs that they would like to see in the final rule to address specific circumstances, including the carve-outs that were included in the 2016 Final Rule. Some commenters also urged the Department to revise its position on some of the circumstances discussed in the proposal's preamble to broaden the circumstances in which ERISA fiduciary status would not apply.

Many commenters particularly highlighted interactions between parties in the institutional market and asserted that in these interactions it is clear that communications are sales activity and parties are interacting on an arm's-length basis. Commenters also described a broad range of circumstances and asked the Department to provide guidance as to how the rule would apply to the circumstances. Commenters also asked the Department to include specific language in the final rule addressing specific circumstances. The circumstances raised by commenters included those circumstances discussed in the proposal's preamble but also ranged to pension risk transfers; services provided by futures commission merchants; persons acting pursuant to CFTC and SEC safe harbors under 17 CFR 23.440 and 240.15Fh–5, respectively, related to swaps and security-based swaps; screening of retirement investors for access to exchange traded funds and futures; compensation arrangements applicable to less liquid, alternative investments; financial wellness programs;

[225] Comments on the definition of investment property are discussed in Section D.1 of this preamble.

[229] *Id.* at 75907.

discussions regarding foreign exchange transactions; services in connection with securities lending transactions; and financial professionals who solicit customers to join them when they move to a new firm, among others. One commenter posed a list of factual circumstances and asked the Department to confirm that they would not involve a covered recommendation when made to a retirement investor that is a financial institution, a named fiduciary with respect to an ERISA plan, or an authorized representative of either; the circumstances included, for example, the retirement investor soliciting information from more than one provider during a request for proposals. There were also requests for confirmation in areas outside the scope of this project, including on ERISA coverage issues.[230]

The changes made in the final rule should address many of the concerns expressed regarding application of the final rule and the potential for overbreadth. These changes include:

- confirmation that whether a ''recommendation'' has occurred will be interpreted consistent with the SEC's framework;
- elimination of proposed paragraph (c)(1)(i) and changes to the contexts in adopted paragraphs (c)(1)(i) and (ii) that narrowed them and made them more objective;
- adoption of a new paragraph (c)(1)(iii) confirming that sales recommendations that are not made in the circumstances set forth in paragraph (c)(1)(i) or (ii) will not result in investment advice fiduciary status and that providing investment information or education, without an investment recommendation, is not advice for purposes of the final rule; and
- revision of the definition of a ''retirement investor'' to exclude plan and IRA fiduciaries that are investment advice fiduciaries.

The Department also provided a discussion in Section D.2. of this preamble regarding paragraph (c)(1)(iv) that makes clear that parties can use disclaimers to define their relationships so long as written statements disclaiming fiduciary status are consistent with the person's oral or other written communications, marketing materials, applicable State or Federal law, or other interactions. That preamble discussion specifically addressed the use of disclaimers in the context of requests for proposals.

The Department also made clarifications in the amended PTEs in this context. Some commenters said it would be impractical to rely on a PTE during preliminary interactions before they know whether the retirement investor is going to hire them or otherwise act on their recommendations. In response, the Department confirmed in the amended PTEs that the disclosure conditions of the PTEs, such as the acknowledgment of fiduciary status, are not required at the time of the first meeting. Rather, the disclosure obligations apply at or before the time the covered investment transaction occurs. The Department also revised the final amendment to PTE 2020–02 to include a special provision for firms and financial professionals who provide fiduciary advice to a retirement investor in response to a request for proposal to provide services as an investment manager within the meaning of ERISA section 3(38).

The Department has not included provisions in the final rule's regulatory text suggested by commenters to address certain specific circumstances. The Department believes that the text of the rule properly applies a fiduciary definition that is consistent with the Fifth Circuit's *Chamber* opinion and the text of the statute, and that can be properly applied to the wide range of investment interactions described by the commenters, without need of special exceptions or carve-outs. However, below, the Department confirms that the proposal's discussions regarding certain specific circumstances remain applicable and adds some additional discussion to provide further guidance. The Department has also determined that it will not include questions and answers in the regulatory text, as some commenters suggested. The Department does not believe that including questions and answers on these specific factual circumstances would be an efficient or effective way to respond to myriad different factual patterns that could arise under the final rule. The Department looks forward to continuing its engagement with the public following publication of this final rule.

1. ''*Hire Me*'' *Communications*

In the preamble to the proposed rule, the Department stated that the proposal was not intended to result in a person becoming a fiduciary merely by engaging in the normal activity of marketing themselves as a potential fiduciary to be selected by a plan fiduciary or IRA owner, without making a recommendation of a securities transaction or other investment transaction or any investment strategy involving securities or other investment property (*i.e.,* ''hire me'' communications). Thus, touting the quality of one's own advisory or investment management services would not trigger fiduciary obligations. This was made clear in the language in proposed paragraph (f)(10)(ii) that extended to recommendations of ''other persons'' to provide investment advice or investment management services.

However, the Department cautioned that the proposal's preamble discussion should not be read to exempt a person from being a fiduciary with respect to any of the investment recommendations covered by proposed paragraph (c)(1) and defined in proposed paragraph (f)(10). There is a line between an investment advice provider making claims as to the value of its own advisory or investment management services in marketing materials, on the one hand, and making recommendations to retirement investors on how to invest or manage their savings, on the other. An investment advice provider can recommend that a retirement investor enter into an advisory relationship with the provider without acting as a fiduciary. But when the investment advice provider recommends, for example, that the investor pull money out of a plan or invest in a particular fund, that advice may be given in a fiduciary capacity even if part of a presentation in which the provider is also recommending that the person enter into an advisory relationship. The Department also said in the proposal's preamble that it believed that this is consistent with the functional fiduciary test laid out in the statute in which an entity is an investment advice fiduciary to the extent that they satisfy the definition. It does not follow from the fact that one piece of advice is not fiduciary investment advice (here, the ''hire me'' recommendation) that the rest of the advice is necessarily excluded from the definition (here, the advice to pull money out of the plan and invest in a particular fund). The investment advice fiduciary could not recommend that a plan participant roll

[230] One commenter asserted that the Department's proposal as applied in the ''hire me'' context conflicted with a decision by the U.S. Court of Appeals for the Fifth Circuit in *D.L. Markham* v. *VALIC,* which the commenter said held that service providers are not ''parties in interest'' before the service provider has started providing services or has at least agreed to do so. *D.L. Markham DDS, MSD, Inc. 401(K) Plan* v. *Variable Annuity Life Ins. Co.,* 88 F.4th 603 (5th Cir. 2023). The decision, which involved a different provision of ERISA than the fiduciary definition at issue here, is inapposite. Under the final rule, a person is treated as a fiduciary only if they have made investment recommendations for which they were ultimately compensated. The rule does not treat an investment professional or firm as a fiduciary before they have rendered the advisory service.

money out of a plan into investments that generate a fee for the fiduciary but make an imprudent recommendation that leaves the participant in a worse position than if the participant had left the money in the plan. Thus, when a recommendation to ''hire me'' effectively includes a recommendation on how to invest or manage plan or IRA assets (*e.g.,* whether to roll assets into an IRA or plan or how to invest assets if rolled over), that recommendation would need to be evaluated separately under the provisions in the proposed regulation.

In this discussion, the Department noted its belief that its proposed approach was consistent with the SEC's approach in Regulation Best Interest. In FAQs, the SEC staff described a scenario involving broker-dealer communications with a prospective retail customer that would not rise to the level of a recommendation.[231] The FAQs describe a scenario where the broker-dealer meets a prospective retail customer at a dinner party and says, ''I have been working with our mutual friend, Bob, for fifteen years, helping him to invest for his kids' college tuition and for retirement. I would love to talk with you about the types of services my firm offers, and how I could help you meet your goals. Here is my business card. Please give me a call on Monday so that we can discuss.'' However, unlike this scenario, the SEC staff cautioned that a recommendation made in the context of a ''hire me'' conversation or otherwise would be subject to Regulation Best Interest.

Some commenters addressing the proposal's ''hire me'' discussion advocated for a broader ''hire me'' limitation. This was based on the assertion that information beyond merely touting the quality of one's own services is commonly exchanged and needed for a robust hiring process. One commenter said that incidental recommendations in the context of a ''hire me'' discussion should not be covered recommendations under the final rule. Commenters further asked the Department to include the limitation in the regulatory text as opposed to the preamble. They argued that, without such a limitation, fear of liability could cause advice providers to curtail beneficial information exchanges.

One commenter described the reality of the selection process for an investment adviser subject to the Advisers Act as involving the adviser describing its investment offerings and services and its investment approach in general, to provide a basis for the retirement investor to make an informed hiring decision. The commenter asked the Department to confirm that this type of information exchange would not result in an adviser becoming an investment advice fiduciary.

Many other commenters addressed the ''hire me'' issue in the context of requests for proposals by plan fiduciaries. Commenters said requests for proposals often involve the plan asking for specific investment ideas, and if responses included information tailored to the plan, that would appear to result in the person marketing their services being considered an ERISA fiduciary under the proposal. Commenters offered varying descriptions of the types of information commonly provided, including ''investment strategies,'' ''industry trends,'' ''performance history,'' ''quality of services,'' ''detailed description of services,'' ''portfolio construction views and approach,'' ''suggestions of one or more strategies that would appear to be a fit for the plan's needs'' and others.

Some commenters asserted that the concern expressed about ''hire me'' conversations was exacerbated by the lack of a limitation in the proposal for recommendations to sophisticated advice recipients that could have otherwise addressed ''hire me'' communications in the institutional market. Commenters said uncertainty in this area will limit important information sharing between financial services providers and plan and IRA fiduciaries. One commenter also asserted that the difference in consequences for a recommendation under Regulation Best Interest as opposed to a recommendation under ERISA are significant enough to warrant different treatment. This is particularly the case if the advice provider would need to comply with a PTE in connection with the recommendation, and the communication occurred before it had entered into a contractual arrangement with the retirement investor, according to the commenter.

Commenters also raised questions about specific circumstances, including marketing bundled services arrangements; marketing additional services where a services relationship already exists; marketing discretionary management services; and communications between limited partners and private equity fund sponsors. One commenter suggested that the rule should be revised to differentiate ''level-fee'' advice providers' ''hire me'' discussions where the advice provider will operate on a level-fee basis after being hired and does not have an incentive to steer investors towards any particular investment product. Another commenter suggested a new paragraph should be added to the regulatory text as follows:

> Marketing or Sales Conversations. A person who engages in marketing or sales conversations with a Retirement Investor as to the advisability of engaging such person (or an affiliate) to provide investment advice or investment management services shall not be deemed to be a fiduciary within the meaning of section 3(21)(A) of the Act or section 4975(e)(3)(B) of the Code to the extent of such conversations, provided the person engaging in such conversations does not have discretionary authority or control with respect to a decision to engage the service provider and does not represent or acknowledge that they are acting as a fiduciary with respect to such decision.

In the final rule, the Department has taken the same approach as it took in the proposal regarding ''hire me'' communications. Persons can tout their own services and provide other information (including information about their affiliates' services), but to the extent ''hire me'' communications include covered investment recommendations, those recommendations are evaluated separately under the provisions of the final rule. The Department believes it is important to retain this distinction to avoid opening loopholes in the protections of the final rule similar to those resulting from the 1975 regulation's ''regular basis'' test. When firms and financial professionals make investment recommendations that satisfy the objective terms of the final rule's fiduciary definition, they occupy a position of trust and confidence with respect to those recommendations and are appropriately held to fiduciary protections and accountability under ERISA Titles I and II. In many cases, as in the rollover context or when the recommendation concerns the design of an entire plan portfolio, the investment recommendation made in those initial communications may be among the most important the plan receives. Denying fiduciary status to such recommendations would defeat legitimate investor expectations that meet the terms of the final rule just as it would in subsequent communications that are not associated with ''hire me'' conversations. Thus, the final rule extends ERISA fiduciary status to covered recommendations that are made in accordance with all parts of the final rule, even if the recommendations occur during ''hire me'' communications.

[231] *See* SEC Frequently Asked Questions on Regulation Best Interest, *https://www.sec.gov/tm/faq-regulation-best-interest.*

The Department does not believe this approach in the final rule will realistically expose advice providers to significantly increased litigation risk or unduly impair business interactions in the institutional market. Persons marketing their own services can provide a significant amount of information described by commenters (*e.g.,* ''industry trends,'' ''performance history,'' ''quality of services,'' ''detailed description of services'') that would not appear, without more, to rise to the level of a recommendation. Under the revised provisions of paragraph (c)(1)(i), they can also provide other generalized information, including information on investment strategies, including, for example, portfolio construction views, that are not based on the particular needs or individual circumstances of the plan, without ERISA fiduciary status attaching, as confirmed in paragraph (c)(1)(iii). Under paragraph (c)(1)(iv) they can also reinforce the non-fiduciary nature of their communications by including a clear disclaimer of ERISA fiduciary status with respect to communications provided in connection with the request for proposal, which one commenter said was common, so long as the disclaimer is consistent with person's oral or other written communications, marketing materials, applicable State or Federal law, or other interactions with the retirement investor.

The Department has declined to provide a special provision in the final rule for ''level-fee'' advice providers in connection with their marketing of their own services. The final rule states a functional test that applies based on the facts and circumstances without the need for carve-outs and that assigns fiduciary status in circumstances where a covered recommendation is made and the retirement investor can reasonably place their trust and confidence in the compensated provider. The Department does not agree that the assignment of fiduciary status should vary based on the nature of the compensation arrangement, or that it could plausibly read ''level fees'' out of the broad statutory reference to ''fee or other compensation, direct or indirect.'' The receipt of ''level fees'' may change the nature of conflicts of interest or affect the application of the prohibited transaction rules and administrative exemptions, but it is not a basis for avoiding fiduciary status under the statute or this final rule.

Finally, it is also important to emphasize that investment recommendations that are made during such interactions do not become ERISA fiduciary investment advice unless the elements of the facts and circumstances test are met, and the advice provider receives compensation, direct or indirect, for the advice. Moreover, to the extent concerns about ''hire me'' communications are based on the perceived need to rely on a PTE at the time of a recommendation, additional clarity has been provided in the amended PTE 2020–02 regarding the required timing of disclosures, as discussed above. In addition, a special provision has been added to provide relief for financial professionals providing fiduciary investment advice in response to a request for a proposal to provide services as investment managers within the meaning of ERISA section 3(38).

2. Platform Providers and Pooled Employer Plans

Platform Providers

Platform providers are entities that offer a platform or selection of investment alternatives to participant-directed individual account plans and their fiduciaries who choose the specific investment alternatives that will be made available to participants for investing their individual accounts. In connection with such offerings, platform providers may provide investment advice, or they may simply provide general financial information such as information on the historic performance of asset classes and of the investment alternatives available through the provider.

As stated in the proposal, application of the final rule to platform providers may often focus on whether the communications fall within the threshold definition of a recommendation. Whether a recommendation exists under the final rule will turn on the degree to which a communication is ''individually tailored'' to the retirement investor or investors, and providing a selective list of securities to a particular retirement investor as appropriate for the investor would be a recommendation as to the advisability of acquiring securities even if no recommendation is made with respect to any one security. Therefore, the inquiry may turn on whether the platform provider presents the investments on the platform as having been selected for and appropriate for the investor *(i.e.,* the plan and its participants and beneficiaries). In this regard, platform providers who merely identify investment alternatives using objective third-party criteria provided by the investor (*e.g.,* expense ratios, fund size, or asset type specified by the plan fiduciary) to assist in selecting and monitoring investment alternatives, without additional screening or recommendations based on the interests of plan or IRA investors, would not be considered under the final rule to be making a recommendation.

Commenters on the proposal's platform provider discussion generally said additional certainty on the status of platform providers is needed in the regulatory text to avoid loss of assistance to plan sponsors in developing plan investment lineups and support plan formation. One commenter said an exception for platform providers should be explicit in the text of the rule and should be available regardless of the legal structure of a particular investment platform, thus the exception should apply to insurers offering a variable annuity. Some of these commenters said platform provider interactions typically do not involve individualized recommendations, while others said the sample investment lineups are tailored to the plan but both the platform providers and the plans' fiduciaries are aware that the sample lineup is being delivered in the context of an arm's-length business negotiation.

One commenter provided specific language for a platform provider sales exclusion in the regulatory text as follows:

> Proposals of investment line-ups or menus by recordkeeping services investment platform providers, when made within the context of a request for proposal or other vendor selection process or where the platform provider's communications clearly indicate that the proposal is being advanced in connection with a negotiation for the terms of a potential future business relationship shall not give rise to a ''recommendation of any securities transaction or other investment transaction or any investment strategy involving securities or other investment property''.

Another commenter suggested that as a means of avoiding fiduciary status, platform providers should be permitted to make a prominent disclosure on the website for the investment menu that the provider is not undertaking to provide impartial investment advice or to give advice in a fiduciary capacity.

For purposes of applying the final rule, the Department has not changed its position from the proposal that presenting a list of investments as having been selected for and appropriate for the investor *(i.e.,* the plan and its participants and beneficiaries) will not be carved out from ERISA fiduciary status. If the communications between a platform provider and a retirement investor amount to a covered recommendation, ERISA fiduciary status will attach if the

other parts of the final rule are satisfied. If there is a covered recommendation, the fact that it is made in the context of a request for proposal or other negotiation of a future business relationship should not, in and of itself, result in the recommendation being carved out as fiduciary investment advice. Similar to the conclusion reached in the ''hire me'' communications discussion, immediately above, the Department believes this position is important to avoid opening loopholes in the final rule that will defeat legitimate investor expectations and frustrate the text and purposes of ERISA's fiduciary definition.

When a firm or financial professional provides individualized recommendations to a plan on the construction of a prudent fund lineup, and otherwise meets the terms of the rule's definition, the investor is entitled to rely on the recommendation as fiduciary advice intended to advance the plan's best interest. Moreover, such advice is often profoundly important given that it defines and constrains the range of options available to plan participants for their retirement. As noted by some commenters who supported extending ERISA fiduciary protections to plan sponsors, recommendations on plan investment lineups can have significant impact on plan participants' and beneficiaries' retirement security and Morningstar quantified the potential benefits from the proposal's coverage of recommendations to plan fiduciaries about the fund lineups in defined contribution plans as exceeding $55 billion in the first 10 years and $130 billion in the subsequent 10 years, in undiscounted and nominal dollars, due to reductions in costs associated with investing through their plans.

However, the Department's position also remains that platform providers who merely identify investment alternatives using objective third-party criteria (*e.g.,* expense ratios, fund size, or asset type specified by the plan fiduciary) to assist in selecting and monitoring investment alternatives, without additional screening or recommendations based on the interests of plan or IRA investors, would not be considered under the final rule to be making a recommendation. Likewise, a provider does not make a recommendation merely by offering a preset list of investments as part of a variable annuity, or offering a menu of pre-selected HSA investment options, without additional facts. In this context, the parties can also define their relationship pursuant to paragraph (c)(1)(iv) so long as they conform their other actions and communications accordingly. The Department does not agree, however, that mere website disclosure that the investment menu provider is not undertaking to provide impartial investment advice or to give advice in a fiduciary capacity should be dispositive, as suggested by one commenter.[232] In this context, as in other contexts, one must consider all the relevant facts and circumstances and apply them to the tests set forth in the rule. For example, such website disclosure, even if reviewed by the retirement investor, would not defeat fiduciary status to the extent it was inconsistent with other communications and actions by the firm or financial professional that met the terms of the rule's objective test and demonstrated that the recommendation was given from a position of trust and confidence.

Pooled Employer Plans

In the preamble to the proposal, the Department stated that the analysis presented regarding platform providers would apply in the context of pooled employer plans (PEPs), which are individual account plans established or maintained for the purpose of providing benefits to the employees of two or more employers, authorized in the SECURE Act.[233] PEPs are required to designate a pooled plan provider (PPP) who is a named fiduciary of the PEP.[234] PPPs are in a unique statutory position in that they are granted full discretion and authority to establish the plan and all of its features, administer the plan, act as a fiduciary, hire service providers, and select investments and investment managers.

The Department stated in the proposal that when a PPP or another service provider interacts with an employer about investment options under the plan, whether they have made a recommendation under the proposal will turn, in part, on whether they present the investments as selected for, and appropriate for, the plan, its participants, or beneficiaries.

Commenters that addressed PEPs said preserving marketing and sales activity is especially important in the small plan market where many employers cannot afford an independent adviser and instead may rely on PEP providers to help them understand how plans work. Some believed that the Department's proposal would apply fiduciary status in the event there is only one investment lineup available through a PEP because that will be interpreted as a recommendation of that lineup. Commenters generally said imposing compliance burdens on the formation of these plans is inconsistent with congressional intent in including these type of plans in the SECURE Act.

Another commenter said that communications with employers about joining a PEP involve employers acting in their settlor capacity because they are considering adopting a plan or merging an existing plan into the PEP. Therefore, the commenter believed the Department should revise its discussion of this issue accordingly.

The Department continues to believe that the analysis of when a recommendation is made in the context of a PEP is the same as that of a platform provider. Accordingly, when a PPP or another service provider interacts with an employer about investment options under the plan, whether they have made a recommendation under the proposal will turn, in part, on whether they present the investments as selected for, and appropriate for, the plan, its participants, or beneficiaries.

This does not mean, however, that marketing a PEP with a single investment lineup is necessarily a recommendation to each employer that will result in ERISA fiduciary status. Whether a recommendation has occurred will be based on the facts and circumstances of the interaction. If a recommendation is made, paragraph (c)(1)(iii) in the final rule makes clear that sales and marketing activity can continue so long as any recommendation is not made in the context of paragraphs (c)(1)(i) or (ii).

The Department does not agree that employers joining the PEP act in a solely settlor capacity in doing so. The provisions in ERISA section 3(43) provide that each employer retains fiduciary responsibility for the selection and monitoring of the PPP and any other person who is designated as a named fiduciary as well as, to the extent not otherwise delegated to another fiduciary by the pooled plan provider and subject to the provisions of ERISA section 404(c), the investment and management of the portion of the plan's assets attributable to the employees of the employer (or beneficiaries of such employees). For these reasons, the Department has decided that this final

[232] A commenter also advocated for a platform provider exception that extended to the marketing and provision of brokerage window services and factual information provided to participants through such brokerage windows, as well as to call centers. The commenter did not describe why there was concern about ERISA fiduciary status related to marketing brokerage window services however, so this comment was not accepted. Comments related to call centers are discussed in Section E.3. of this preamble.

[233] ERISA section 3(43), 29 U.S.C. 1002(43).

[234] ERISA Section 3(43)(B), 29 U.S.C. 1002(43)(B).

rule strikes the correct balance and not to adopt changes that would single-out PEPs and PPPs.

3. Investment Information and Education

General

In the proposal's preamble, the Department stated that Interpretive Bulletin (IB) 96–1 relating to participant investment education would continue to provide guidance with respect to the fiduciary advice definition under the rule if finalized. IB 96–1 provides examples of four categories of information and materials regarding participant-directed individual account plans—plan information, general financial and investment information, asset allocation models, and interactive investment materials—that do not constitute investment advice.[235] This is the case irrespective of who provides the information (*e.g.,* plan sponsor, fiduciary, or service provider), the frequency with which the information is shared, the form in which the information and materials are provided (*e.g.,* on an individual or group basis, in writing or orally, or via video or computer software), or whether an identified category of information and materials is furnished alone or in combination with other identified categories of information and materials. The IB states that there may be many other examples of information, materials, and educational services, which, if furnished to participants and beneficiaries, would not constitute ''investment advice.''

Multiple commenters supported the preservation of non-fiduciary investment education under the IB. These commenters highlighted the importance of financial education to retirement investors and stressed the need for such communications to continue freely after adoption of the final rule. The commenters encouraged the Department to clarify that the final rule would not treat investment education as fiduciary advice, and some further suggested that the text of the final rule directly incorporate the IB or incorporate the provisions of the 2016 Final Rule on investment education.

Several commenters asked for confirmation that discussions about the benefits of enrolling and saving in a plan, including increasing contributions, would not be deemed ERISA fiduciary investment advice under the final rule. They said these conversations are important efforts to prepare retirement investors for retirement. Relatedly, commenters asked about educating participants about products and services offered by a plan and communicating the value of investment diversification.

Some commenters requested additional clarity on information relating to distributions and rollovers that can be provided without becoming an investment advice fiduciary. A commenter explained that its members make available beneficial forms of assistance that inform participants of their distribution and rollover options, encourage them to keep money in the retirement system until they retire, and help them connect their individual circumstances to rollover and transfer options that are available to them. In this commenter's view, such tools help reduce the problems associated with abandoned accounts and other issues that result when participants have accounts scattered among various employment-based plans and service providers. Another commenter indicated that participants can have avoidable misconceptions about retirement and termination, such as a mistaken belief that they are required to remove their plan accounts when their employment terminates. The commenter viewed it as critical that retirement educators be able to clearly communicate rules relating to rollovers, plan terms, general financial and investment information, and available distribution options. In this commenter's opinion, such communication could be made consistent with the principles of IB 96–1, but the emphasis on IRA rollover advice in the proposal's preamble raises concern that even general advice about the benefits of retaining retirement funds in a retirement plan as opposed to an IRA would be classified as ERISA fiduciary investment advice.

Some commenters also requested confirmation regarding the permissibility of referencing specific plan investments in non-fiduciary investment education. They noted that the preamble included cautionary language warning that service providers engaging in investment education may cross the line into fiduciary investment advice if the education relates to a specific investment or investments strategy. They requested confirmation that, as provided for conditionally in the IB, investment education may reference specific investment options available under a plan without triggering fiduciary status under the final rule.

Several commenters suggested that the Department take the broader step of generally updating the IB. They explained that there have been significant changes in the types of information being sought by plan participants and plan sponsors (*e.g.,* relating to spend down of assets, and auto-enrollment and auto-escalation plan features) and types of interactions utilized (*e.g.,* electronic and digital) since the IB was first published. They suggested that the Department take the opportunity to evaluate the impact of these developments on the types of information and materials that may be provided without constituting fiduciary investment advice under the final regulation.

In general, for purposes of the final rule, the line between an investment recommendation and investment education or information will depend on whether there is a call to action. Thus, many of the types of information cited by commenters as important to retirement investors could be provided under the final rule without the imposition of fiduciary status. For example, like the SEC in Regulation Best Interest, the Department believes that ''a general conversation about retirement planning, such as providing a company's retirement plan options'' to a retirement investor, would not rise to the level of a recommendation.[236]

In this regard, the Department confirms that providing educational information and materials such as those described in IB 96–1 will not result in the provision of fiduciary investment advice as defined in the final rule absent a recommendation, regardless of the type of retirement investor to whom it is provided. Information on the benefits of plan participation and on the terms or operation of the plan, as described in the first category of investment education in the IB, clearly could include information relating to plan distributions and distribution options. Additionally, an analysis of the plan-information category of investment education applied in the context of IRAs would allow such a plan sponsor or service provider to also provide a wide range non-fiduciary information about IRAs, such as tax benefits associated with rollovers into IRAs.

Likewise, the Department confirms that furnishing the categories of investment-related information and materials described in the ''Investment Education'' provision in the 2016 Final Rule would not result in the provision of fiduciary investment advice under

[235] 29 CFR 2509.96–1; see also 85 FR 40589 (July 7, 2020) (technical amendment reinstating Interpretive Bulletin 96–1 following the vacatur of the 2016 Final Rule).

[236] Regulation Best Interest release, 33337 (July 12, 2019).

the final rule.[237] The provision in the 2016 Final Rule included, for example, information on ''[g]eneral methods and strategies for managing assets in retirement (*e.g.,* systemic withdrawal payments, annuitization, guaranteed minimum withdrawal benefits).''

To the extent parties seek additional confirmation of specific information that may be provided regarding rollovers within the category of investment education, the Department notes that the IRS provides model safe harbor explanations that may be used to satisfy the Code section 402(f) requirement to provide certain information regarding eligible rollover distributions to the distributee within a reasonable period of time prior to making the distribution.[238] The model safe harbor explanations provide a significant amount of information on rollovers, including how to do a rollover, what types of plans accept rollovers, how much can be rolled over, the tax implications of pursuing a rollover or declining the rollover, and information about special circumstances such as offsets against plan balances by outstanding loans or rules involving employer stock. Merely providing the information contained in the model safe harbor explanations would not constitute ERISA fiduciary investment advice.

Some commenters asked the Department to address education to plan fiduciaries. They said that financial professionals may provide information to plan fiduciaries about how plans work as part of the sales process. Several commenters specifically asked about educational interactions between service providers and plan sponsors about features such as automatic enrollment and automatic escalation, among others. As stated above, provision of investment information or education, absent a recommendation, would not cause a financial professional to become a fiduciary under the final rule regardless of the type of retirement investor to whom it is provided. Based on the discussion set forth above, the Department believes there is significant flexibility and clarity for a plan sponsor or service provider to furnish helpful non-fiduciary investment education materials to participants relating to plan participation, distributions and rollovers. Likewise, the final rule is clear that absent a recommendation, provision of investment information to IRA owners and beneficiaries and plan and IRA fiduciaries that are retirement investors would not give rise to fiduciary status.

The Department emphasizes that the inquiry in this respect will focus on whether there is a call to action. Thus, the Department cautions providers against steering retirement investors towards certain courses of action under the guise of education. The SEC similarly stated in Regulation Best Interest that while certain descriptive information about employer sponsored plans would be treated as education, rather than as a recommendation, broker-dealers should ''ensure that communications by their associated persons intended as 'education' do not cross the line into 'recommendations.' ''[239]

The Department further emphasizes that a recommendation to take a distribution, even if it is not accompanied by a recommendation of a specific investment, is a ''recommendation of any securities transaction or other investment transaction or any investment strategy involving securities or other investment property,'' such that if all the other parts of the final rule are satisfied, the person making the recommendation will be an ERISA fiduciary. For example, if a person states, ''After reviewing your plan, I think you should roll over into an IRA''—that is not investment education. Although the Department is not updating IB 96–1 at this time, it intends to monitor investment education practices to determine whether the principles in the IB are being used to evade fiduciary status under circumstances that would otherwise support the conclusion that a recommendation is being made by persons who occupy a position of trust and confidence. The Department may at a later date determine that the IB should be revisited.

Call Centers

Within the context of investment information and education, some commenters specifically addressed the functions of recordkeeper call center personnel and the information they provide to plan participants and beneficiaries who need assistance on a variety of plan-related matters. Several commenters said that the proposal would appear to result in the imposition of ERISA fiduciary status on call center personnel to the extent they provided investment-related information to a retirement investor or referred retirement investors to a financial professional. One commenter said that IB 96–1 is helpful in this context but does not address all matters that may arise in call center interactions. Several commenters stated that call center interactions typically do not involve collecting significant data about the retirement investor because call center representatives do not make individualized recommendations or suggest a specific course of action.

One commenter suggested a paragraph be added to the final rule excluding call center support personnel from fiduciary status as follows:

> Participant and Beneficiary Call Center Support. Notwithstanding other paragraphs of this section, a person who provides participant call center support services on behalf of a recordkeeper or other administrative services provider to a plan shall not be deemed to be a fiduciary, within the meaning of section 3(21)(A) of the Act or section 4975(e)(3)(B) of the Code with respect to a plan or an IRA solely because such person recommends a securities or investment transaction or any other investment strategy where such recommendation is limited to unbiased suggestions, consistent with generally accepted investment principles and sound plan administrative practices, that are directly responsive to a request for assistance initiated by a participant or beneficiary.

In the Department's view, the discussion earlier in this preamble section about the application of IB 96–1 in the context of the final rule is responsive to some comments on call centers. Further, although commenters said call center personnel may provide investment-related information to retirement investors, commenters generally indicated that call center activities involve neither collecting significant data about the retirement investor nor individualized recommendations or suggestions as to a specific course of action. Under the revised contexts in paragraph (c)(1)(i) and (ii), unless call center personnel provide an acknowledgment of ERISA Title I or Title II fiduciary status with respect to the recommendation, they can provide investment-related information that is not based on the particular needs or individual circumstances of the retirement investor without ERISA fiduciary status attaching, as confirmed in paragraph (c)(1)(iii). The Department declines to provide a broader limitation for call center activity, as requested by some commenters. Covered recommendations that meet all parts of the final rule should be subject to the ERISA fiduciary protections and not a different standard merely because they are made in a call center setting. Advice providers can just as easily hold

themselves out as trusted advisers in phone communications as in other contexts.

4. Swaps and Security-Based Swaps

Swaps and security-based swaps are a broad class of financial transactions defined and regulated under amendments to the Commodity Exchange Act and the Securities Exchange Act of 1934 (Securities Exchange Act) by the Dodd-Frank Act. Section 4s(h) of the Commodity Exchange Act [240] and section 15F of the Securities Exchange Act [241] establish similar business conduct standards for dealers and major participants in swaps or security-based swaps. Special rules apply for swap and security-based swap transactions involving ''special entities,'' a term that includes employee benefit plans covered under ERISA. Under the business conduct standards in the Commodity Exchange Act as added by the Dodd-Frank Act, swap dealers or major swap participants that act as counterparties to ERISA plans must, among other conditions, have a reasonable basis to believe that the plans have independent representatives who are fiduciaries under ERISA.[242] Similar requirements apply for security-based swap transactions.[243] The CFTC and the SEC have issued final rules to implement these requirements.[244]

In the Department's view, when Congress enacted the swap and security-based swap provisions in the Dodd-Frank Act, including those expressly applicable to ERISA-covered plans, it did not intend to broadly and automatically impose ERISA fiduciary status on the plan's counterparty as it engaged in regulated conduct as part of the swap or security-based swap transaction with the employee benefit plan. The Department conferred with both the CFTC and SEC staff at the time of those agencies' rulemakings, and assured harmonization of any change in the ERISA fiduciary advice regulation so as to avoid unintended consequences.

The Department makes the same assurance with respect to this final rule. The disclosures required of plans' counterparties under the business conduct standards would not generally constitute a ''recommendation'' under the final rule, or otherwise compel the dealers or major participants to act as fiduciaries in swap and security-based swap transactions conducted pursuant to section 4s of the Commodity Exchange Act and section 15F of the Securities Exchange Act. This includes disclosures regarding material risks, characteristics, incentives and conflicts of interest; disclosures regarding the daily mark of a swap or security-based swap and a counterparty's clearing rights; disclosures necessary to ensure fair and balanced communications; and disclosures regarding the capacity in which a swap or security-based swap dealer or major swap participant is acting when a counterparty to a special entity, as required by the business conduct standards.

This is not to say that a dealer or major participant would necessarily fall outside the scope of the final rule if, in addition to providing the disclosures mandated above, it also chose to make specific investment recommendations to plan clients. In that circumstance, a swap dealer could become a fiduciary by virtue of their voluntary decision to make individualized investment recommendations to an ERISA-covered plan if the subparagraph's conditions were met.[245] To the extent dealers wish to avoid fiduciary status under the final rule, however, they can structure their relationships to avoid making such investment recommendations to plans. Additionally, clearing firms would not be investment advice fiduciaries under the final rule merely as a result of providing such services as valuations, pricing, and liquidity information. As discussed in greater detail in the next section, the final rule does not include valuation and similar services as a category of covered recommendations.

5. Valuation of Securities and Other Investment Property

The final rule does not include valuation services, appraisal services, or fairness opinions as categories of covered recommendations. In this regard, the Department notes that the definition of ''recommendation of any securities transaction or other investment transaction or any investment strategy involving securities or other investment property'' in paragraph (f)(10) does not include reference to any of these functions. Accordingly, the provision of valuation services, appraisal services, or fairness opinions would not, in and of themselves, lead to fiduciary status under the final rule.

F. Scope of Investment Advice Fiduciary Duty

Paragraph (c)(2) of the final rule confirms that a person who is a fiduciary with respect to a plan or IRA by reason of rendering investment advice is not deemed to be a fiduciary regarding any assets of the plan or IRA with respect to which that person does not have or exercise any discretionary authority, control, or responsibility or with respect to which the person does not render or have authority to render investment advice defined by the rule. On the other hand, nothing in paragraph (c)(2) exempts such a person from the provisions of section 405(a) of ERISA concerning liability for violations of fiduciary responsibility by other fiduciaries or excludes such person from the definition of party in interest under section 3(14)(B) of ERISA or section 4975(e)(2) of the Code. This provision is unchanged from the current 1975 regulation.

Further, if a person's recommendations relate to the advisability of acquiring or exchanging securities or other investment property in a particular transaction, the final rule does not impose on the person an automatic fiduciary obligation to continue to monitor the investment or the retirement investor's activities to ensure the recommendations remain prudent and appropriate for the plan or IRA. Instead, the obligation to monitor the investment on an ongoing basis would be a function of the reasonable expectations, understandings, arrangements, or agreements of the parties.

One commenter asked the Department to make clear that for one-time recommendations, the parties' reasonable expectations typically do not include an ongoing duty to monitor unless the parties expressly agree to such a duty. The commenter believed that otherwise the Department would conclude that the parties' reasonable expectations always include an ongoing duty to monitor. The Department continues to believe that the parties' reasonable expectations, understandings, arrangements, or agreements should govern the monitoring obligation and does not concur with the commenter's concern that the Department would always conclude under that standard that a duty to monitor exists; accordingly the

[245] The business conduct standards do not preclude a swap dealer from giving advice if it chooses to do so. *See, e.g.,* 17 CFR 23.434 (imposing requirements on swap dealers that recommend a swap or trading strategy involving a swap to a counterparty); *see also* 17 CFR 240.15Fh–3(f) (similar provision applicable to security-based swap dealers).

discussion was not revised to require an express agreement to monitor.

Also, as has been made clear by the Department, there are a number of ways to provide fiduciary investment advice without engaging in transactions prohibited by Title I or Title II of ERISA because of the conflicts of interest they pose. For example, an investment advice provider can structure the fee arrangement to avoid a prohibited transaction (and the related conflicts of interest) by offsetting third-party payments against direct fees agreed to by the retirement investor, as explained in advisory opinions issued by the Department.[246] If there is not a prohibited transaction, then there is no need to comply with the terms of an exemption, though an investment advice fiduciary with respect to a Title I plan would still be required to comply with the statutory duties including prudence and loyalty.

Several commenters expressed concern about plan sponsors' co-fiduciary liability under ERISA. One commenter specifically focused on call centers and human resources employees. The commenter believed that if call center personnel cross the line and provide fiduciary advice, this would heighten the plan sponsor's obligation to monitor the call center and could expose the plan sponsor to co-fiduciary liability. The commenter asked the Department to provide a safe harbor to avoid plan sponsors having liability for acts of any plan service provider under certain conditions. Another commenter asked the Department to clarify that each fiduciary associated with the plan would not have to continually monitor the others to avoid co-fiduciary liability.

In response, the Department notes that plan sponsors already have fiduciary obligations in connection with the selection and monitoring of plan service providers (both fiduciary and non-fiduciary service providers), including service providers that provide educational materials and assistance to plan participants and beneficiaries. The Department does not believe the rule significantly expands the obligations or potential liabilities of plan sponsors in this regard. Accordingly, the Department does not believe it would be appropriate to create special rules or safe harbors with respect to co-fiduciary status or liability under this final rule, but rather believes that plan sponsor activity should be evaluated under the existing provisions of ERISA.

Paragraph (d) of the regulation is identical to paragraph (d) of the 1975 regulation, apart from updated references. The paragraph specifically provides that the mere execution of a securities transaction at the direction of a plan or IRA owner would not be deemed to be fiduciary activity.[247] The regulation's scope remains limited to advice relationships, as delineated in its text, and does not cover transactions that are executed pursuant to specific direction in which no advice is provided.

One commenter suggested revisions to paragraph (d) to address foreign broker-dealers and transactions in fixed income securities, options, and currency that are not executed on an agency basis. The Department has considered the suggestion but declines to adopt them without a more robust record regarding the reasons for, and impact of, the suggested changes.

G. Application to Code Section 4975

Certain provisions of Title I of ERISA, such as those relating to participation, benefit accrual, and prohibited transactions, also appear in Title II of ERISA, codified in the Code. This parallel structure ensures that the relevant provisions apply to Title I plans, whether or not they are ''plans'' defined in section 4975 of the Code, and to tax-qualified plans and IRAs, regardless of whether they are subject to Title I of ERISA. With regard to prohibited transactions, the ERISA Title I provisions generally authorize recovery of losses from, and imposition of civil penalties on, the responsible plan fiduciaries, while the Title II provisions impose excise taxes on persons engaging in the prohibited transactions. The definition of fiduciary is the same in section 4975(e)(3)(B) of the Code as the definition in section 3(21)(A)(ii) of ERISA, and, as noted above, the Department's 1975 regulation defining fiduciary investment advice is virtually identical to the regulation defining the term ''fiduciary'' under the Code.

To rationalize the administration and interpretation of the parallel provisions in Title I and Title II of ERISA, Reorganization Plan No. 4 of 1978 divided the interpretive and rulemaking authority for these provisions between the Secretaries of Labor and of the Treasury.[248] Under the Reorganization Plan, which Congress subsequently ratified in 1984,[249] Congress generally granted the Department authority to interpret the prohibited transaction provisions and the definition of a fiduciary in the Code.[250] ERISA's prohibited transaction rules, sections 406 to 408,[251] apply to Title I plans, and the Code's corresponding prohibited transaction rules, 26 U.S.C. 4975(c), apply to tax-qualified pension plans, as well as other tax-advantaged arrangements, such as IRAs, that are not subject to the fiduciary responsibility and prohibited transaction rules in Title I of ERISA.[252] In accordance with the above discussion, paragraph (g) of the rule, entitled ''Applicability'' provides that the regulation defines a ''fiduciary'' both for purposes of ERISA section 3(21)(A)(ii) and for the parallel provision in Code section 4975(e)(3)(B).

Paragraph (g) explains the applicability of Title I of ERISA and the Code in the specific context of rollovers. As that paragraph explains, ''a person who satisfies paragraphs (c)(1)(i) or (ii) and (e) of this section in connection with a recommendation to a retirement investor that is an employee benefit plan as defined in section 3(3) of the Act, a fiduciary of such a plan as defined in paragraph (f)(11), or a participant or beneficiary of such a plan, including a recommendation concerning the rollover of assets currently held in a plan to an IRA, is a fiduciary subject to the provisions of Title I of the Act.'' With this example, the Department intends to clarify the application of Title I to recommendations made regarding rollovers from a Title I plan under the final rule.

In the event of a recommendation to roll over assets from a Title I plan that meets the provisions of the final rule, the fiduciary duties of prudence and loyalty and the prohibited transaction provisions of ERISA section 406 would apply to advice to take the distribution and to roll over the assets. After the assets were distributed from the Title I plan into the IRA, fiduciary investment advice concerning investment of and ongoing management of the assets would be subject to obligations in the Code, including the prohibited transaction provisions in Code section 4975. For example, if a broker-dealer satisfies the fiduciary definition set

[246] *See* U.S. Department of Labor, Adv. Op. 97–15A (May 22, 1997).

[247] The citation in paragraph (d) of the proposal to ''section 4975(e)(3)(B) of the Code'' was revised in the final rule to read ''section 4975(e)(3) of the Code,'' consistent with the scope of the 1975 regulation as adopted by Treasury. *See* 40 FR 50840, 50841 (Oct. 31, 1975).

[250] 5 U.S.C. App. 752 (2018).

[251] 29 U.S.C. 1106–1108.

[252] Reorganization Plan No. 4 of 1978 also transferred to the Secretary of Labor the authority to grant administrative exemptions from the prohibited transaction provisions in section 4975 of the Code. *See* Code section 4975(c)(2).

forth in this rule with respect to a recommendation to roll a retirement investor's assets out of their workplace retirement plan to an IRA, the broker-dealer would be a fiduciary subject to Title I with respect to the advice regarding the rollover. Following the rollover, the broker-dealer would be a fiduciary under the Code subject to the prohibited transaction provisions in Code section 4975 to the extent it gave subsequent fiduciary investment advice, within the meaning of the final rule, with respect to the assets rolled out of the plan.

One commenter set forth a series of assertions regarding the Department's jurisdiction to issue the final rule and the preamble discussion in the proposal. The commenter said that the proposal's preamble was misleading in describing prohibited transactions under Title II of ERISA as prohibiting fiduciary conduct, because the provisions in Code section 4975 do not include prohibitive language (*e.g.,* ''shall not'') restricting the conduct of fiduciaries to Title II plans. The commenter also asserted the Department lacked authority to include plan participants and beneficiaries as retirement investors, because the statutory language refers to advice to ''a plan.'' The commenter made several additional arguments that the Department's authority to issue a regulatory definition of an investment advice fiduciary was limited by ERISA section 404(c) (providing conditional relief from certain provisions of Part 4 of Title I of ERISA for fiduciaries of a pension plan that permits participants and beneficiaries to exercise control over the assets in their individual accounts), by ERISA section 408(b)(14) (providing a statutory exemption for transactions in connection with the provision of investment advice described in ERISA section 3(21)(A)(ii) to a participant or beneficiary of an individual account plan that permits such participant or beneficiary to direct the investment of assets in their individual account) and by the Reorganization Plan's provision in section 102 transferring authority to the Secretary of Labor to issue ''regulations, rulings, opinions, and exemptions under section 4975 of the Code, except for (i) subsections 4975(a), (b), [and] (c)(3) . . . of the Code.''

The Department disagrees with the assertion that it is misleading to describe the *prohibited transaction* provisions in Code section 4975 as ''prohibiting'' specified fiduciary conduct. Code section 4975(c), entitled ''Prohibited Transaction,'' sets forth a series of transactions, several of which apply only to fiduciaries as defined in Code section 4975(e)(3). For example, Code section 4975(c)(1)(E) defines a prohibited transaction as ''any . . . act by a disqualified person who is a fiduciary whereby he deals with the income or assets of a plan in his own interest or for his own account.'' Fiduciaries are subject to an excise tax for engaging in these transactions.

With respect to the commenter's other assertions, it is important to note that both Congress and the Department have recognized that advice to a participant or beneficiary in a participant-directed plan is advice within the meaning of ERISA section 3(21)(A)(ii).[253] Further, the fact that Congress provided a statutory prohibited transaction exemption applicable to investment advice fiduciaries is not the same as defining an investment advice fiduciary and does not limit the Department's authority to do so, as the commenter suggested. Likewise, the Department does not agree with the commenter's broad assertion that pursuant to ERISA section 404(c), Part 4 of Title I does not apply to individual account plans when participants have control and discretion over their individual accounts. The relief provided in ERISA section 404(c) is conditional and limited, and does not, for example, relieve a plan fiduciary from its duty to prudently select and monitor designated investment alternatives offered under the plan; therefore, there is no reason the Department could not define an investment advice fiduciary to include persons making recommendations to such plan fiduciaries. Finally, given the Reorganization Plan's clear assignment of authority to the Department under Code section 4975(e)(3), the Department does not agree that the reservation of authority with respect to Code section 4975(a), (b), or (c)(3) indirectly limits this authority. For these reasons, the Department does not agree with the commenter that the final rule exceeds the proper exercise of its regulatory authority under ERISA section 505, or that the rule expanded the definition of a ''plan'' in violation of ERISA section 514(d).

H. State Law

Paragraph (h) is entitled ''Continued applicability of State law regulating insurance, banking, or securities'' and provides ''[n]othing in this section shall be construed to affect or modify the provisions of section 514 of Title I of the Act, including the savings clause in section 514(b)(2)(A) for State laws that regulate insurance, banking, or securities.'' This paragraph acknowledges that ERISA section 514 expressly saves State regulation of insurance, banking, and securities from ERISA's express preemption provision, and confirms that the regulation is not intended to change the scope or effect of ERISA section 514, including the savings clause in ERISA section 514(b)(2)(A) for State regulation of insurance, banking, or securities.

I. Effective Date

The final rule is effective September 23, 2024. The amendments to the PTEs also finalized today are effective September 23, 2024. Both amended PTE 2020–02 and amended PTE 84–24 include a one-year transition period after their effective dates under which parties have to comply only with the Impartial Conduct Standards and provide a written acknowledgment of fiduciary status for relief under these PTEs.

In the proposed rule, the Department proposed that the rule would be effective 60 days after publication in the **Federal Register** but sought comment on whether additional time would be needed before the rule became applicable. Many commenters said 60 days would be an inadequate amount of time to review their businesses and prepare for and implement the compliance obligations in the rulemaking package, many of them noting that in previous rulemaking on this topic, the Department had provided more transition time than 60 days. Commenters requesting a delay suggested a range of compliance timetables which generally fell between 12 months and 36 months. The Department was also urged to stay enforcement for a period after applicability. On the other hand, several supporters of the proposal asked the Department to finalize it without undue delay.

The timetable established in the final rule and amendments to the PTEs provides a phased transition period. First, parties have approximately 5 months following the date of publication in the **Federal Register** before the final rule and amendments to the PTEs are effective. As of this effective date, the rules under Title I and Title II of ERISA would become applicable to parties who satisfy the final rule and compliance with the PTEs' Impartial Conduct Standards and

[253] *See* ERISA section 408(b)(14) (providing a statutory exemption for transactions in connection with the provision of investment advice described in ERISA section 3(21)(A)(ii) to a participant or beneficiary of an individual account plan that permits such participant or beneficiary to direct the investment of assets in their individual account); Code section 4975(d)(17) (same); *see also* Interpretive Bulletin 96–1, 29 CFR 2509.96–1.

the fiduciary acknowledgment would be required for relief under the amended PTEs. Compliance with all the conditions of the amended PTEs, in order to obtain relief under the PTEs, would not be required until the expiration of the PTEs' one-year transition period. The Department believes this approach addresses commenters' request for additional time before they would need to comply with the final rule and PTEs without unduly delaying the important protections in this rulemaking. The Department also confirms that, rather than take an enforcement-oriented approach in the initial period following applicability, its primary focus will be on promoting compliance and providing assistance to parties working in good faith to comply with the law's obligations.

Commenters also asked for assurances related to recommendations made and arrangements entered into before the effective or applicability date of the final rule and amended PTEs. One commenter described services agreements that would need revision to recognize that agreed upon services would now be considered fiduciary advice services. While the Department confirms that the final rule and amended PTEs apply to recommendations made after the applicability date, it cannot confirm that all existing agreements can be maintained as described by the one commenter.

J. Severability

The Department proposed that the rulemaking include a severability provision. The Department stated its intent that discrete aspects of the regulatory package would be severable.[254] The Department explained that it intended that the definition of investment advice fiduciary finalized in this rule would survive even if the amendments to any of the PTEs were set aside by a court.[255]

The Department received one comment in favor of including a severability provision. The commenter expressed the view that a severability provision is important for closing the regulatory gap to ensure that small business owners receive retirement investment advice that is not conflicted. The commenter suggested language the Department could include in the operative text stating that any aspects of this rulemaking package not vacated by potential court action would then remain in force. Separately, one commenter expressed the view that the Department provided its ''general intentions on the subject'' of severability but did not propose a specific severability provision or provide any rationale for severability.

Moreover, several commenters expressed opposition to a severability provision on the ground that the rulemaking package is not amenable to severability. The Department received many comments describing the entire rulemaking, namely the amendments to the regulation and PTEs, as a ''comprehensive regulatory package.'' Other commenters described the new fiduciary investment advice definition and PTE amendments as ''inextricably linked'' or an ''integrated package'' with individual parts that operate together. One commenter suggested that the entire rulemaking be vacated if any one part is vacated because the elimination of one such component could result in a ''gap for which there is no regulatory or exemptive solution.'' In this same vein, another commenter added that retaining any aspects of the rulemaking when another aspect is overturned would cause ''unintended impacts and harms.''

Other commenters suggested that the remaining aspects of the rulemaking would be unnecessary if part of the rulemaking is overturned. One commenter said that the amendments to existing PTEs were included to ''blunt'' the ''over inclusiveness'' (sic) of the new regulation. That same commenter added that the ''new affirmative obligations'' under amended PTEs 2020–02 and 84–24 lead to the conclusion that the elements of the rulemaking are not severable.

The Department acknowledges, as one commenter noted, that the notice of proposed rulemaking did not propose a specific severability provision. The Department disagrees, however, with the commenter that the Department did not provide notice of its ''initial position'' on severability. As noted above, when this rule was proposed, the Department expressed its intention that the definition of investment advice fiduciary finalized in this rule would survive even if the amendments to any of the PTEs were vacated by a court. This remains the Department's position. While courts take into account severability language in a rule when analyzing severability, a specific severability provision is not required for one element of a rulemaking to be severable from another.[256]

The Department also disagrees with the comments that different aspects of the rulemaking are inextricably linked. While the regulation updates the definition of an investment advice fiduciary to better accord with marketplace changes and the reasonable expectations of retirement investors, the amendments to the PTEs provide additional clarity for investment advice fiduciaries seeking to receive compensation for their advice, among other changes. In all its regulatory actions, the Department endeavors to ensure that any changes to the regulatory structure function smoothly. In accordance with that guiding principle, the Department has worked to ensure that each separate regulatory action being finalized today works together and works within ERISA's full framework. Together, these changes reduce the gap in protections with respect to ERISA-covered investments and level the playing field for all investment advice fiduciaries. Still, the amended regulation and PTEs operate independently and should remain if any component of the rulemaking is invalidated.

K. Administrative Procedure Act

Reliance Interests

The Department received comments that the proposed rulemaking failed to properly weigh reliance interests of advice providers in the pre-existing regulatory and exemptive framework, in violation of the Administrative Procedure Act (APA). One commenter states that, under the APA, when an agency reverses an existing policy and ''changes course,'' the agency must take into account ''serious reliance interests'' associated with the existing policy. The commenter further states that an agency must provide a ''reasoned explanation'' for the policy change. The commenter believes that the proposal did not adequately justify changing the definition of fiduciary investment advice when compared to the advice providers' reliance interests at stake and that the Department did not consider that advice providers have provided one-time rollover advice, for a fee or other compensation, for decades without needing to rely on exemptive relief from the prohibited transaction provisions in ERISA Title I and Title II. Other commenters described reliance interests in aligning their business

[254] 88 FR 75890, 75912.

[255] *Id.*

[256] *E.g., Bd. of Cnty. Commissioners of Weld Cnty., Colorado* v. *Env't Prot. Agency,* 72 F.4th 284, 296 (D.C. Cir. 2023) (''If parts of a regulation are invalid and other parts are not, we set aside only the invalid parts unless the remaining ones cannot operate by themselves or unless the agency manifests an intent for the entire package to rise or fall together. This is true for agency rules in general . . . .'').

models in accordance with the 1975 regulation and the existing PTEs.

The Department notes that even when there are certain reliance interests, an agency may change an existing policy if the new policy is permissible under the respective statute and the agency provides a reasoned explanation for the change—namely that the agency demonstrates awareness of the change and justifies the change with ''good reasons.'' [257] The Department is aware that a ''more detailed justification'' for a policy change is required ''when [the] prior policy has engendered serious reliance interests that must be taken into account.'' [258] In the event of ''significant'' reliance interests, an agency must ''weigh any such interests against competing policy concerns.'' [259] The Department has considered the reliance interests described by commenters and ultimately determined that these interests are outweighed by the public interest in protecting the interests of retirement investors to ensure the security of the retirement benefits of America's workers and their families.

As the Department outlines extensively throughout this document, there have been significant changes in the retirement plan landscape and investment marketplace since the 1975 regulation was adopted. Individuals, regardless of their financial literacy, have become increasingly responsible for their own retirement savings, and have increasingly become direct recipients of investment advice. At the same time, there has been a dramatic increase in the variety and complexity of financial products and services, which has widened the information gap between investment advice providers and their clients. One of the particular concerns of the Department is that recommendations to roll over from a workplace retirement plan to an IRA should be made in accordance with the retirement investors' best interest. This rulemaking ensures that ERISA's fiduciary protections in Title I and Title II apply to all advice that retirement investors receive from trusted advice providers concerning investment of their retirement assets in a way that aligns with the retirement investors' reasonable expectations.

Fundamentally, this rulemaking responds to the pervasiveness of conflicts of interest in investment advice, and the associated cost of these conflicts. Ultimately, that cost is borne by workers saving for a secure retirement, as the conflicts leave plan participants vulnerable to lower returns on their critical investment savings. Likewise, as greater numbers of retirement savers consider whether to roll over their retirement savings from a workplace retirement plan into an IRA or other plan, these savers are receiving conflicted advice from financial professionals, despite their reasonable expectations that the advice is provided in a fiduciary capacity and in each saver's best interest.

The Department recognizes that the final rule will result in some advice providers newly becoming investment advice fiduciaries. However, under the final rule, these providers would be fiduciaries only to the extent they make covered recommendations in contexts in which retirement investors reasonably expect that they can place their trust and confidence in the recommendation. As discussed above, the advice provider will be aware, by its conduct, that it has invited this trust and confidence. Accordingly, the advice provider should be able to adhere to the basic fiduciary norms of care and loyalty that correspond to such relationships of trust and confidence. Further, in developing the final rule and amended PTEs, the Department has considered the compliance burden on investment advice fiduciaries and has taken care to ensure that the compliance obligations—which generally involve adherence to fundamental obligations of fair dealing—align with the conduct standards adopted by the SEC and other regulators. These regulators too have moved to more protective standards in recent years, so that the Department's actions are consistent with the broad trend in the regulatory landscape. The Department has also taken care to ensure that to the extent that providers had implemented compliance with PTE 2020–02 prior to its amendment, the providers can build on that compliance to implement the amended PTE, without undue burden. Finally, the Department notes that this rulemaking follows more than 14 years in which the Department has expressed concern that the 1975 regulation no longer sensibly defined an investment advice fiduciary.[260] In light of each of these considerations, the Department does not believe that these providers' reliance interests in the 1975 regulation and current exemption structure, with the associated lack of comprehensive protections against conflicts of interest, outweigh the interests of America's retirement investors.

Comment Period

After the rulemaking was proposed, the Department received several requests for an extension of the public comment period beyond the original 60-day public comment period.[261] The Department considered the requests and decided not to extend the public comment period for the reasons explained in response to the requests.[262] The Department also received several comments that the comment period was too short. In the first instance, commenters said that a 60-day comment period is insufficient for a rule of this scope. Further, several commenters expressed the view that the comment period was effectively cut short because it overlapped with year-end holidays and because the Department held two days of public hearings on the proposal during the comment period.

The APA does not specify a minimum number of days for a comment period,

Nor does the Department believe the current framework represents the most effective means of distinguishing persons who should be held accountable as fiduciaries from those who should not. For these reasons, the Department believes it is appropriate to update the 'investment advice' definition to better ensure that persons, in fact, providing investment advice to plan fiduciaries and/or plan participants and beneficiaries are subject to ERISA's standards of fiduciary conduct.''); see also Fall 2009 Regulatory Agenda (''This rulemaking is needed to bring the definition of 'fiduciary' into line with investment advice practices and to recast the current regulation to better reflect relationships between investment advisers and their employee benefit plan clients. The current regulation may inappropriately limit the types of investment advice relationships that should give rise to fiduciary duties on the part of the investment adviser,'') *https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=200910&RIN=1210-AB32.*

[261] Although the proposal was officially published in the **Federal Register** on November 3, 2023, the text of the proposal was announced and released on October 31, 2023. Press Release, EBSA, US Department Of Labor Announces Proposed Rule to Protect Retirement Savers' Interests by Updating Definition of Investment Advice Fiduciary (Oct. 31, 2023), *https://www.dol.gov/newsroom/releases/ebsa/ebsa20231031.* The Department first alerted the public that this rulemaking was underway in the Spring 2021 Unified Regulatory Agenda, nearly three years ago. U.S. Dep't of Lab., Unified Regulatory Agenda, RIN: 1210–AC02 (last visited Jan. 26, 2024), *available at https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=202104&RIN=1210-AC02.*

[262] Letter from Lisa M. Gomez, Assistant Secretary, EBSA, to Lisa J. Bleier, SIFMA (Nov. 14, 2023) (on file with Department).The Department noted that the Department did not agree that an extension of the comment period was warranted in light of the significant public engagement on the topic of fiduciary investment advice since at least 2010, as well as the more recent informal engagements with an array of stakeholders, among other reasons. *Id.*

though it must be long enough to afford the public a meaningful opportunity to comment.[263] Ultimately, courts recognize the broad discretion agencies have in determining the reasonableness of a comment period, and courts have frequently upheld comment periods that were significantly less than the 60-day comment period here.[264] Moreover, holding hearings within the comment period did not limit the opportunity to comment; to the contrary, it provided commenters a forum for exchanging views and sharpening their own understanding prior to submitting comments. The record generated by the public notice and comment process was robust and reflected strong input from a wide range of affected parties on a wide range of issues. Based on its careful review of that record, the Department is confident that the process was full and fair, the process served its important goals, and the final rulemaking benefitted from the thoughtful input of the thousands of commenters, including firms, investment professionals, consumers, and others who participated in the process.

Regulatory Impact Analysis

The Department received a comment stating that it had failed to provide the underlying documents on which the regulatory impact analysis relied. Specifically, the commenter noted that the proposal's regulatory impact analysis cited a Department-sponsored study by Panis and Padmanabhan (2023) that had examined how investors timed the purchase and sale of mutual funds between 2007 and June 2023.[265] Two commenters noted that the study was not publicly available at the time the proposal was released.[266] One such commenter requested a copy of the study through a Freedom of Information Act filing. On November 28, 2023, that same commenter also requested a copy of the study through a submission to the Federal eRulemaking Portal. The Department promptly provided a link to the study the following day, November 29, 2023.

Another comment also noted that the proposal discussed Form 5500 data for 2021, which was taken from the Department's Private Pension Plan Bulletin: Abstract of 2021 Form 5500 Annual Reports (Bulletin)—a report that was ''forthcoming'' at the time of the proposal's publication.[267] That report was made publicly available December 13, 2023. Because the Panis and Padmanabhan (2023) study and updated Bulletin were not made available until the comment period was already underway, one commenter believes this hindered the commenter's ability to evaluate the proposal.

The Department understands the requirement that an agency supply technical studies and data relied upon as part of a rulemaking, including in particular ''critical factual data'' on which a rulemaking relies.[268] Here, the Panis and Padmanabhan (2023) study is discussed only briefly in the proposal and was made available during the comment period.[269] The Department concluded that the results of the study were consistent with an interpretation that Regulation Best Interest enhanced the standard of conduct for broker-dealers.[270] This conclusion is not disputed by commenters. The Department's assessment that there remains a gap in protections with respect to ERISA-covered investments is independent of this study. The Panis and Padmanabhan (2023) study does not represent critical factual data that are central to this rulemaking.

The Department used data in the updated Bulletin to estimate the number of plans that would be affected by the proposed amendments to the rule and related PTEs.[271] When this rule was first proposed, the Bulletin was undergoing internal departmental clearances for publication. The Bulletin was subsequently published online[272] on December 13, 2023. One group said that its assessment of the proposal was ''hindered'' due to the delayed release of the Bulletin and the Panis and Padmanabhan (2023) study. The data in these documents supplements the information in the rulemaking record, and confirms the Department's earlier assessments.

The Bulletin summarizes Form 5500 data filed by private-sector retirement plans for plan years ending in 2021. The underlying data on which the Bulletin relies were extracted from these publicly available Form 5500 filings. Therefore, while the Bulletin summaries were not available at the time the proposal was published, interested parties had the underlying data available to them and had the option to perform independent analyses of the relevant Form 5500 data.[273] The proposal details how the Department arrived at its estimates of affected entities, and the Bulletin analysis expands on and confirms the information in the proposal. The commenter did not explain how the release of the Bulletin summaries hindered the commenter's ability to examine and provide comments on the proposal, nor does the Department believe that the public's ability to meaningfully engage with the proposal was negatively affected by the timing of the publications of the Panis and Padmanabhan (2023) study and the Bulletin. This supplemental information confirms the Department's prior assessments, but does not change the methodology.

L. Other Legal Issues[274]

McCarran-Ferguson Act

A few commenters raised questions about the role of the McCarran-Ferguson

[263] *E.g., N. Carolina Growers' Ass'n, Inc.* v. *United Farm Workers,* 702 F.3d 755, 770 (4th Cir. 2012) (holding that there is no bright-line rule for the number of days necessary for adequate notice); Executive Orders 12866 and 13563 generally instruct Federal agencies to provide 60 days of public comment on a proposed rulemaking. *See* E.O. 12866 § 6(a)(1); E.O. 13563 § 2(b).

[274] Some commenters raised questions about the authority of Acting Secretary of Labor Julie A. Su. The Department disagrees and notes that Acting Secretary Su is serving lawfully in accordance with both the Department's organic statute and the Federal Vacancies Reform Act of 1998. *See* 5 U.S.C. 3345(a)(1)–(3); 29 U.S.C. 552. The Department also notes that the signatory for this rulemaking is Assistant Secretary for Employee Benefits Security Lisa M. Gomez, who is authorized to promulgate this rule pursuant to a valid delegation of authority. *See* Secretary's Order 1–2011 § 4, 77 FR 1088 (Jan. 9, 2012).

Act and the Department's authority to regulate insurance products. The McCarran-Ferguson Act states that Federal laws do not preempt State laws to the extent they relate to or are enacted for the purpose of regulating the business of insurance; it does not, however, prohibit Federal regulation of insurance.[275] Specifically, the Supreme Court has made it clear that ''the McCarran-Ferguson Act does not surrender regulation exclusively to the States so as to preclude the application of ERISA to an insurer's actions.'' [276] The Supreme Court further held that ''ERISA leaves room for complementary or dual federal or state regulation, and calls for federal supremacy when the two regimes cannot be harmonized or accommodated.'' [277] The Department has designed the final rule and amended PTEs to work with and complement State insurance laws, not to invalidate, impair, or preempt State insurance laws.[278]

Major Questions

The Department received several comments regarding the Major Questions Doctrine. One commenter stated that the Doctrine did not apply because the Department is closing loopholes and making relatively minor updates to existing exemptions. This commenter pointed to the dramatic changes in the retirement space since ERISA's enactment, stating that the Major Questions Doctrine ''does not prevent agencies from addressing new threats to the public interest that come with such changes.'' Other commenters disagreed, characterizing the proposal as an unprecedented and sudden change in the Department's regulatory scheme that lacked firm footing in ERISA. Many of those same commenters described the proposal as enormously impactful both economically and politically, and characterized it as a ''novel'' and ''unprecedented'' expansion of the Department's regulatory authority over a substantial segment of the U.S. economy. One commenter took specific issue with the compliance costs of the proposal as well as the proposal's impact on financial markets involving trillions of dollars.

In certain ''extraordinary cases . . . the history and the breadth of the authority that the agency has asserted, and the economic and political significance of that assertion,'' has led the Supreme Court to consider ''whether Congress in fact meant to confer the power the agency has asserted.'' [279] In such cases, courts require a showing of ''clear congressional authority'' for the regulatory activity at issue.[280]

As is the case here, the Major Questions Doctrine does not apply where the regulatory action is grounded in neither an ancillary statutory provision [281] nor in the sudden ''discover[y] . . . [of] an unheralded power.'' [282] This final rule is rooted in one of the most fundamental provisions of ERISA upon which many of the statute's duties, protections, and liabilities are conditioned—the statute's definition of a fiduciary. This final rule builds on an extensive and continuous history of Department-issued regulatory and sub-regulatory guidance of investment advice fiduciaries. Although the Department first issued a regulation defining investment advice in 1975, it has continued to regulate in this space. The Department has issued numerous class PTEs regarding the provision of investment advice (*e.g.,* 75–1, 80–03, 81–8, 84–24, 86–128, 2020–02). Additionally, the Department issued Interpretive Bulletin 96–1, Advisory Opinions 97–15A, 2001–09A, and 2005–23A, Field Assistance Bulletins 2007–01 and 2018–02, and proposals to change the regulatory definition in 2010, 2015, and 2023. The Department's regulation of commission-earning insurance agents and brokers bears an equally extensive regulatory history, dating back to 1976 with the issuance of a proposal for what would become PTE 77–9. The PTE was issued in response to a class exemption request submitted by pension consultants and other interested parties, including the ACLI and ICI.[283] The applicants also requested the Department rule that ''the normal sales presentation and recommendations made by an insurance agent or broker to a plan or plan fiduciary will not be considered to constitute the rendering of investment advice for a fee so as to classify such agent or broker as a fiduciary,'' [284] but this request was notably absent from both the proposed and final versions of PTE 77–9.[285] This regulatory history highlights the Department's unique experience and expertise in matters involving employee benefit plans and their fiduciaries and the fact that the Department has the ''great[est] familiarity with the ever-changing facts and circumstances surrounding [employee benefit plans and their fiduciaries]'' of any agency.[286]

In any event, even if the Major Question Doctrine applied, Congress has clearly and expressly granted the Department the authority to issue the current proposal. Title I of ERISA delegates broad authority to the Department to issue regulations defining terms used in Title I and to establish exemptions from prohibited transactions.[287] The Department was granted the same regulatory authority with respect to Title II plans, including IRAs, by the President's Reorganization Plan No. 4 of 1978, as ratified by Congress in 1984.[288]

First Amendment

One commenter posits that the proposed amendments to the definition of an investment advice fiduciary amount to ''content-based'' and ''viewpoint-based'' regulation of speech that would presumptively violate the First Amendment to the U.S. Constitution. This commenter believes the new definition ''would directly regulate truthful sales speech by insurance agents and broker-dealers by prohibiting their recommendations about retirement products unless the rule's onerous fiduciary requirements are satisfied.'' As a result, the commenter claims that the Department must show the rule both advances a compelling government interest and is narrowly tailored to achieve that interest.

[288] Sec. 1, Public Law 98–532, 98 Stat. 2705 (Oct. 19, 1984).

The rule applies to transactions, and does not prohibit speech based on content or viewpoint or in any capacity, nor does it prohibit financial professionals from recommending any type of investment. Rather, the rule imposes fiduciary duties on covered parties when those parties are providing covered investment advice to tax-preferred accounts. The rule works to ensure that such advice is in the client's best interest, is not conflicted, and accords with the reasonable expectations of client-investors. In this way, the rule regulates professional conduct, rather than speech. Courts have generally applied a deferential standard of review to regulations of professional conduct.[289] The Department is not aware of any cases in which a court has held that requiring that a fiduciary act in accordance with fiduciary obligations would violate the First Amendment. The rule does not fundamentally implicate—much less violate—the First Amendment. For example, an adviser who did not receive conflicted compensation (*e.g.,* received an hourly fee regardless of what was recommended), would not be governed by the rule in any way.

When the Federal Government (or a State) regulates professional conduct in a way that incidentally burdens speech, the regulation does not violate the First Amendment if the measure is sufficiently drawn to protect a substantial governmental interest.[290]

This rule directly advances the Government's substantial interest in protecting retirement savers, and their tax-preferred accounts, from conflicted investment advice, the harms of which are discussed throughout this preamble. Moreover, the Department drafted this rule to be responsive to the Fifth Circuit's decision in *Chamber,* which emphasized relationships of trust and confidence. In this way, and in contrast to the 2016 Final Rule, this rule provides that fiduciary status attaches only if compensated recommendations are made in certain specified contexts, each of which describes circumstances in which the retirement investor can reasonably place their trust and confidence in the advice provider. Accordingly, this rule advances a substantial governmental interest and is sufficiently drawn to advance that interest, and, as a result, does not violate the First Amendment.

[289] *Nat'l Inst. of Fam. & Lifdvocs.* v. *Becerra,* 138 S. Ct. 2361, 2372–73, 2377 (2018) [hereinafter *NIFLA*] (citations omitted).

M. Regulatory Impact Analysis

This section analyzes the economic impact of the final rule and amendments to the following class administrative exemptions (PTEs) providing relief from the prohibited transaction rules that are applicable to fiduciaries under Title I of ERISA and the Code: PTEs 2020–02, 84–24, 75–1, 77–4, 80–83, 83–1, and 86–128. The Department is publishing the amendments to the PTEs elsewhere in this issue of today's **Federal Register**. Collectively, the final rule and amendments to the PTEs are referred to as the ''rulemaking'' for this section for ease of discussion.

The final rule and the amendments to the PTEs are designed to work independently and are each separate regulatory actions. In order to consider the full impact of the regulatory actions, the costs, benefits, transfers and alternatives to each aspect of this rulemaking are discussed below.

Employment-based retirement plans and IRAs are critical to the retirement security of millions of America's workers and their families. Because Retirement Investors often lack financial expertise and are increasingly responsible for deciding how to invest their retirement savings, professional investment advice providers can play a critical role in guiding their investment decisions. Prudent professional investment advice helps consumers set and achieve appropriate retirement savings and decumulation goals more effectively than consumers would on their own. For many years, the benefits of professional investment advice, however, have been persistently undermined by conflicts of interest that occur if financial services firms compensate individual investment advice providers in a manner that incentivizes them to steer consumers toward investments and transactions that yield higher profits for the firms. These practices can bias the investment advice that providers render to Retirement Investors and detrimentally impact consumers' retirement savings by eroding plan and IRA investment results with excess fees and lower performance.

This rule focuses on the provision of fiduciary investment advice to ERISA plans, participants, beneficiaries, IRAs, IRA owners and beneficiaries, and plan and IRA fiduciaries with authority or control over the plans and IRAs, and seeks to reduce or eliminate the impacts of conflicts of interest on advice they receive, as well as to ensure that trusted advisers adhere to a stringent professional standard of care when making investment recommendations. The rule amends the definition of a fiduciary so that investors can be confident that the recommendations they receive are made by advisers relying on their professional judgment, based on the investor's individual circumstances or needs, and made with the expectation the investor will act on that advice. This change in the definition of a fiduciary will primarily impact service providers to plans, those recommending rollovers, and independent insurance producers recommending non-securities-based annuities.

The amendments to PTE 2020–02 build on the existing conditions to provide more certainty for Retirement Investors receiving advice and clarity for Financial Institutions and Investment Professionals that are complying with the exemption's conditions. The amendments expand the scope of the exemption to cover transactions involving ''pure'' robo-advice providers and recommendations to buy or sell a product on a principal basis. The amendments revise the disclosure obligations to more closely align with existing SEC disclosure requirements. The amendments will also provide more guidance for Financial Institutions and Investment Professionals complying with PTE 2020–02's requirements related to Financial Institutions' policies and procedures.

PTE 84–24 is also being amended to provide relief for compensated investment advice only for independent insurance producers that recommend annuities from multiple unaffiliated insurance companies to Retirement Investors, subject to conditions similar to those in PTE 2020–02. Additionally, PTEs 75–1 Parts III and IV, 77–4, 80–83, 83–1, and 86–128 are being amended to eliminate relief for the receipt of compensation resulting from fiduciary investment advice, as defined under ERISA.

Rather than look to an assortment of different exemptions with different conditions for different transactions, investment advice fiduciaries—apart from independent insurance producers—will generally be expected to rely solely on the amended PTE 2020–02 for administrative exemptive relief for covered investment advice transactions. These amendments extend the same or similar requirements for the provision of advice to Retirement Investors, regardless of the market and investment product.

The most significant benefits of the rulemaking are expected to result from (1) changing the definition of a fiduciary by amending the 1975 five-part test, (2) requiring advice given to a broader range of advice recipients, including plan fiduciaries and non-retail investors, to meet fiduciary standards under ERISA, (3) extending the application of the fiduciary duties of care and loyalty in the market for non-securities-based annuities, to create a uniform standard of trust and confidence for investment advice across different retirement products and markets, and (4) requiring that more rollover recommendations be in the Retirement Investor's best interest.

These amendments generally align with the Advisers Act and the SEC's Regulation Best Interest. ERISA has a functional fiduciary test [291] and imposes fiduciary status only to the extent the functional test is satisfied.[292] The Department intends for the compliance obligations under this rulemaking to broadly align with the standards set by the SEC in Regulation Best Interest and the Advisers Act where practicable and has tried to accomplish such alignment in this rulemaking. The Department believes that by harmonizing the application of fiduciary duty for retirement investment advisers, irrespective of the type of product they recommend, Retirement Investors will benefit from more uniform protections from conflicted advice that ensures prudent and loyal investment recommendations from financial advisers regardless of the type of investment vehicle used. While extending fiduciary duties to more entities will generate costs, the Department believes any new compliance costs will not be unduly burdensome, as the rulemaking broadly aligns with those compliance obligations imposed under the Advisers Act and the SEC's Regulation Best Interest on investment advisers and broker-dealers, respectively, and simply expands these protections to additional sectors of the retirement market.

The Department has examined the effect of the rulemaking as required by Executive Order 13563,[293] Executive Order 12866,[294] the Regulatory Flexibility Act,[295] section 202 of the Unfunded Mandates Reform Act,[296] and Executive Order 13132.[297]

1. Executive Orders

Executive Orders 12866 (as amended by 14094) and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives. If regulation is necessary, agencies must choose a regulatory approach that maximizes net benefits, including potential economic, environmental, public health and safety effects; distributive impacts; and equity. Executive Order 13563 emphasizes the importance of quantifying costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

Under Executive Order 12866, "significant" regulatory actions are subject to review by the Office of Management and Budget (OMB). As amended by Executive Order 14094,[298] entitled "Modernizing Regulatory Review," section 3(f) of Executive Order 12866 defines a "significant regulatory action" as any regulatory action that is likely to result in a rule that may:

(1) have an annual effect on the economy of $200 million or more (adjusted every three years by the Administrator of the Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, Territorial, or Tribal governments or communities;

(2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in the Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

It has been determined that this rulemaking is significant within the meaning of section 3(f)(1) of the Executive Order. Therefore, the Department has provided an assessment of the rulemaking's costs, benefits, and transfers, and OMB has reviewed the rulemaking. Pursuant to the Congressional Review Act, OMB has determined that the rule and amended PTEs are "major rules," as defined by 5 U.S.C. 804(2).

2. Need for Regulatory Action

In preparing this analysis, the Department has reviewed recent regulatory and legislative actions concerning investment advice, market developments in industries providing investment advice, and research literature weighing in on investment advice. From this review, the Department believes there is compelling evidence that Retirement Investors remain vulnerable to harm from potentially imprudent advice and conflicts of interest in the investment advice they receive. Given this evidence, and the Department's mission to ensure the security of retirement benefits of America's workers and their families, the Department is amending the definition of fiduciary and certain exemption relief.

Why Being an ERISA Fiduciary Matters

As described above, fiduciaries under ERISA are subject to specific requirements. ERISA section 404 requires Title I fiduciaries to act with the "care, skill, prudence, and diligence under the circumstances then prevailing that a prudent [person] acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims." Further, fiduciaries must carry out their duties "solely in the interest of the participants and beneficiaries" of the plan. Title II of ERISA, codified in the Internal Revenue Code, governs the conduct of fiduciaries to tax-qualified plans and IRAs. Under both Title I and Title II, fiduciaries are subject to prohibited transaction rules that forbid them from, among other things, self-dealing.[299] The aim of the prohibited transaction provisions is to protect plans, their participants, and beneficiaries from dangerous conflicts of interest that threaten the safety and security of plan benefits.[300]

This combination of a high standard of conduct and personal liability for violations of the standard of conduct for Title I fiduciaries, and restrictions on behavior for Title I and Title II fiduciaries, functions to protect plans, participants, and beneficiaries from fiduciary misdeeds. Previously, the Department conducted an economic analysis [301] (2016 Regulatory Impact

[301] Employee Benefits Security Administration (EBSA), *Regulating Advice Markets Definition of the Term "Fiduciary" Conflicts of Interest—Retirement Investment Advice Regulatory Impact Analysis for*

Continued

Analysis (RIA)) of then-current market conditions and the likely effects of expanding the definition of fiduciary to include more individuals. It reviewed evidence that included:

- statistical comparisons finding poorer risk-adjusted investment performance in more conflicted settings;
- experimental and audit studies revealing questionable investment advice provider conduct, including recommendations to withdraw from low-cost, well diversified portfolios and invest in higher-cost alternatives likely to deliver inferior results;
- studies detailing gaps in consumers' financial literacy, errors in their financial decision-making, and the inadequacy of disclosure as a consumer protection;
- Federal agency reports documenting abuse and investors' vulnerability;
- economic theory, which predicts that when expert investment advice providers have conflicts of interest, non-expert investors will be harmed; and
- international experience with harmful advisory conflicts and responsive reforms.

The Department's analysis found that conflicted investment advice was widespread and caused serious harm to Retirement Investors, and that solely disclosing conflicts would fail to adequately mitigate the conflicts or remedy the harm. While subsequent market developments and changes to the regulatory landscape have mitigated some of this harm, the Department still finds that Retirement Investors are subject to conflicted investment advice and that conflicted advice causes Retirement Investors harm. Therefore, extending fiduciary protections to more types of advice will reduce advisory conflicts and deliver substantial net gains for Retirement Investors.

Some commenters criticized the Department's use of research and reports pre-dating the passage of Regulation Best Interest to justify the need for this rulemaking and in assessing its costs and benefits. The Department is aware of the limitations of using findings that precede the SEC's regulatory action to measure the impact of this rulemaking, and requested data measuring both the impact of Regulation Best Interest on mitigating harm from conflicted advice as well as how that action may have impacted markets not covered by the SEC's Regulation. While the Department relied on updated data and research as much as possible, it also utilizes earlier evidence that clearly demonstrates that conflicted advice causes harm and that, without a uniform standard requiring that all advisers act with both loyalty and prudence, Retirement Investors will continue to be subject to significant harm.

Also, while Regulation Best Interest caused important changes to the investment marketplace, Regulation Best Interest, in tandem with the Advisers Act, covers only a subset of the investment products and Investment Professionals covered by the Department's rulemaking. To a considerable degree, this rulemaking would extend the same important protections provided by Regulation Best Interest and the Advisers Act to the wider range of advisory relationships and transactions that ERISA covers, but Regulation Best Interest and the Advisers Act do not (*e.g.,* non-security recommendations, recommendations by broker-dealers to persons other than retail investors, such as plan fiduciaries, and advice given by Investment Professionals who are not broker-dealers or registered investment advisers). A large body of evidence, dating from before and after 2016, supports a finding that conflicted advice causes significant injury to investors, and that the broader and more uniform imposition of ERISA's fiduciary standards to such relationships will result in improved investor outcomes.

Changes in Retirement Savings Since the 1975 Regulation

While the 1975 regulation that established the five-part test has remained fixed, the private retirement savings landscape has changed dramatically. In the late 1970s, private retirement savings were mainly held in large employer-sponsored defined benefit plans. Under the terms of these plans and the governing legal structure, the plans and plan sponsors promised fixed payments to retirees, generally based on a percentage of their compensation and years of employment with the sponsoring employer. Plan sponsors hired professional asset managers, who were subject to ERISA's fiduciary obligations, to invest the funds, and the employers or other plan sponsors shouldered the risk that investment returns were insufficient to pay promised benefits. Individual plan participants did not take direct responsibility for management of the assets held by the plan and did not depend on expert advice for the sound management of funds, which were directly controlled by Investment Professionals.

Since then, much of the responsibility for investment decisions in employment-based plans has shifted from these large private pension fund managers to plan participants and beneficiaries, as well as IRA owners and beneficiaries, many with low levels of financial literacy.[302] Over time, the share of participants covered by defined contribution plans, in which benefits are based on contributions and earnings within an individual account, grew substantially, from just 26 percent in 1975 to 79 percent in 2021.[303] By 2021, 94 percent of active participants in defined contribution plans had responsibility for directing the investment of some or all of their account balances.[304] The Department could not have foreseen such a dramatic shift when it issued the existing fiduciary investment advice regulation in 1975. The passage of ERISA authorized IRAs in 1974, and IRAs remained in their infancy when the 1975 rule was issued. The vast majority of consumers were not managing their own retirement savings, nor consulting with investment advisers to do so, because 401(k) plans did not even exist in 1975.

Though workers have assumed more of the responsibility for their investment decisions, they still receive significant ERISA fiduciary oversight and protections while participating in certain employment-based plans—for example, plan fiduciaries must ensure that 401(k) plan lineups are prudently constructed and that the assets of defined benefit plans are managed in full conformity with ERISA's fiduciary duties. However, workers who change jobs or retire often roll over their retirement savings to an IRA, where they assume full responsibility for investing the assets in the larger marketplace without the protections

[304] EBSA, *Private Pension Plan Bulletin: Abstract of 2021 Form 5500 Annual Reports*, Table D5, (Sept. 2023), *https://www.dol.gov/sites/dolgov/files/EBSA/researchers/statistics/retirement-bulletins/private-pension-plan-bulletins-abstract-2021.pdf.*

that an employment-based plan could offer. Not only is it very common for defined contribution plan participants to roll over their retirement savings into an IRA, but it is also increasingly common among defined benefit plan participants. Defined benefit plan participants have the option to perform a rollover if their plan allows them to take a lump-sum payment when they separate from service. About 36 percent of private industry workers in traditional defined benefit plans have a lump-sum payment available at normal retirement, as do virtually all private industry workers in non-traditional defined benefit plans, such as cash balance plans.[305]

In 1981, private defined benefit plans held more than twice the assets in private defined contribution plans, and roughly 10 times more than IRA assets. By the third quarter of 2023, the order had reversed: IRAs held $13.0 trillion in assets, private defined contribution plans held $8.4 trillion, and private defined benefit plans held $3.7 trillion in assets.[306] This trend is expected to continue as Retirement Investors are projected to move $4.5 trillion from defined contribution plans to IRAs from 2022 through 2027.[307]

Moreover, workers have become more reliant on their retirement savings as Social Security benefits have eroded in recent decades. The age to receive full retirement benefits is gradually increasing from 65 to 67 between 2003 and 2027. Those who claim Social Security before age 66—which in 2021 was 57 percent of new retired-worker beneficiaries—receive reduced benefits.[308] For a hypothetical medium wage earner who first claims benefits at age 65, their Social Security benefit, as a share of average career earnings, was more than 40 percent in 2005 but is projected to be only about 35 percent in 2025.[309]

Investment Advice and the 1975 Regulation

As the nature of retirement savings has changed since 1975, investment advice has also evolved. Commercial relationships between employment-based pension plan sponsors and investment managers and their consulting advisers have been supplanted by retail relationships between consumers and the trusted experts they turn to for help managing their retirement plan and IRA savings.

Instead of ensuring that trusted advisers give prudent and unbiased advice in accordance with fiduciary norms, the 1975 regulation erected a multi-part series of conditions for fiduciary responsibility requiring, among other things, that advice must be on a ''regular basis'' and be ''a primary basis for investment decisions'' to confer fiduciary status. While advice providers that meet all of these conditions clearly occupy a position of trust and confidence, and are appropriately treated as fiduciaries under ERISA, the 1975 rule's technical requirements often defeat legitimate expectations of trust and confidence by failing to treat advice providers as fiduciaries, even though they hold themselves out as providing individualized and expert recommendations on behalf of the Retirement Investor and in the Retirement Investor's best interest. Advice providers that are not ERISA fiduciaries are not subject to its stringent duties of prudence and loyalty, leaving plans and plan participants vulnerable to advice providers who may engage in self-dealing transactions that would otherwise be flatly prohibited by ERISA and the Code. Moreover, the Department has found that the 1975 regulation requirement that a ''mutual agreement, arrangement, or understanding'' that advice would serve as ''a primary basis for investment decisions'' had unwittingly encouraged investment advisers, who presented themselves to investors as making a recommendation that considered an individual's personal circumstances and was in their best interest, to use fine print disclaimers stating that no such agreement or understanding exists, as potential means of avoiding ERISA fiduciary status.

While consumers often use financial advisers for investment advice related to their retirement savings, if an investment recommendation does not meet *all* five parts of the 1975 test, the adviser is not treated as a fiduciary under ERISA, no matter how complete the investor's reliance on recommendations purported to be based on their best interest in light of their individual circumstances.

For example, if a plan participant seeks advice on whether to roll over all their retirement savings, representing a lifetime of work, out of an ERISA-covered plan overseen by professional ERISA fiduciaries to purchase an annuity, the person making the recommendation with respect to the purchase of the annuity has no obligation to adhere to a best interest standard unless they meet all prongs of the 1975 rule, including regularly giving advice to the plan participant. This is true even if the person giving the advice holds themselves out as an investment expert whose recommendation is based solely on a careful and individualized assessment of the investor's needs or who has regularly provided advice to that investor on non-ERISA related investments such as the purchase of insurance products, the plan participant has no investment expertise whatsoever, and both parties understand that the participant is relying upon the advice for the most important financial decision of their life. Because the advice had not previously been rendered on a ''regular basis'' with respect to plan assets under the 1975 rule, in the absence of an expectation of ongoing advice to the Title I Plan, the adviser has no obligation under ERISA to adhere to fiduciary standards in the context of the rollover recommendation, and thus would not be subject to ERISA's requirement to act solely in the interests of the participant, allowing the adviser to recommend an annuity that is imprudent and ill-suited to the participant's circumstances, and favor the adviser's own financial interests at the expense of the participant.[310] This is not a sensible way to draw distinctions in fiduciary status, and finds no support

[310] Investors have suffered significant losses when an Investment Professional does not act in the investor's best interest. For example, in 2021, the SEC settled with Teachers Insurance and Annuity Association of America (TIAA) for $97 million, citing disclosure violations and failure to implement policies and procedures. *See https://www.sec.gov/litigation/admin/2021/33-10954.pdf.* While the SEC was able to settle, the Southern District of New York recently dismissed a complaint by plaintiffs in this same TIAA plan who argued that TIAA acted as an ERISA fiduciary when advising plan participants to roll over assets from their employer-sponsored plan to a TIAA managed account product. Although TIAA represented in market materials that it ''[met] a fiduciary standard'' when providing investment recommendations, the court found that it did not provide this advice on a regular basis and therefore did not satisfy the five-part test to be considered an ERISA fiduciary. *See Carfora* v. *TIAA*, 631 F. Supp. 3d 125, 138 (S.D.N.Y. 2022).

in the text of ERISA, which makes no mention of a ''regular basis'' requirement.

When the Department issued PTE 2020–02, it sought to ameliorate some of the effects of the regular basis requirement by suggesting that rollover advice could be treated as falling within the 1975 rule if it was rendered at the beginning of an ongoing advisory relationship. Accordingly, in an April 2021 FAQ, in the context of advice to roll over assets from an employee benefit plan to an IRA, the Department acknowledged that a single instance of advice would not satisfy the regular basis prong of the 1975 test [311] but explained that ''advice to roll over plan assets can also occur as part of an ongoing relationship or as the beginning of an intended future ongoing relationship that an individual has with an investment advice provider.'' [312]

Ultimately, however, that policy interpretation was struck down as inconsistent with the text of the 1975 rule.[313] In *American Securities Association* v. *United States Department of Labor,* the court found that ''the scope of the regular basis inquiry is limited to the provision of advice pertaining to a particular plan.'' [314] Further, the court held that, ''[b]efore a rollover occurs, a professional who gives rollover advice does so with respect to an ERISA-governed plan. However, after the rollover, any future advice will be with respect to a new non-ERISA plan, such as an IRA that contains new assets from the rollover. The professional's one-time rollover advice is thus the last advice that he or she makes to the specific plan.'' [315] As a result, the first instance of advice with respect to the assets that were rolled over will not be treated as fiduciary advice, no matter how important the recommendation (*e.g.,* to expend a lifetime of savings on a single annuity), even though the professional had previously made recommendations about plan assets and planned to continue making recommendations after the rollover. Based on the court's ruling, the Department sought to remedy the shortcomings of the ''regular basis'' test, which has no basis in the statutory text of ERISA, through new rulemaking.

Inexpert Customers

Researchers have consistently found that many Americans demonstrate low levels of financial knowledge and lack basic understanding of investment strategies. In particular, for the population age 50 and older and nearing retirement, many ''fail to grasp essential aspects of risk diversification, asset valuation, portfolio choice, and investment fees.'' [316] Such customers appear to be particularly vulnerable to receiving harmful advice. Egan et al. (2019) found that misconduct among investment advice professionals was higher in counties with populations that were less financially sophisticated, including those who are less educated and older.[317]

Retirement Investors face increasingly complex investment options that vary widely with respect to return potential, risk characteristics, liquidity, degree of diversification, contractual guarantees and/or restrictions, degree of transparency, regulatory oversight, and available consumer protections. As a result, Retirement Investors often rely on professional investment advice. While, theoretically, individuals know more about their personal assets and risk preferences than an adviser, Schwarcz and Siegelman argue in the insurance context that agents are much better situated than consumers to appreciate the implications of these facts and that the ability to process such information requires training and experience.[318] Due to high information costs, Retirement Investors are in a poor position to assess the quality of the advice they receive while the advisers' incentives are often misaligned with the investors' interests.[319] The dependence of inexpert clients on advisers with significant conflicts of interest creates a large risk of investment advice and investment decisions that are not in the best interest of Retirement Investors.

The Department's 2016 regulatory impact analysis [320] demonstrated that the balance of research and evidence indicates that the aggregate harm from cases in which consumers received bad advice due to investment advice providers' conflicts of interest is significant. The complex nature of financial markets alone, particularly for insurance products, creates information asymmetry that makes it difficult for inexpert investors to navigate savings for retirement. Multiple studies cited found that Retirement Investors often lack a basic understanding of investment fundamentals.[321] A subsequent 2018 FINRA study of non-retired individuals age 25–65 found that those investors who only had retirement accounts through their employment routinely scored lower on financial literacy questions than active investors and that these workplace-only investors scored only two percentage points higher than the general population (32 percent versus 30 percent) on a composite question regarding interest, inflation and risk diversification.[322] In

addition to lacking rudimentary financial knowledge, many Retirement Investors do not understand the roles of different players in the investment industry and what those players are obligated to do.

The SEC has commissioned several studies on whether investors can differentiate between different types of investment service providers. A 2005 study considered four focus groups in different geographic locations and found that investors were generally unclear about distinctions between broker-dealers, financial advisers, investment advisers, and financial planners and often used the terms indistinguishably.[323] A 2008 household survey found that while most of the survey respondents had ''a general sense of the difference in services offered by brokers and by investment advisers but that they are not clear about their specific legal duties.'' [324] A 2018 study also evaluated four focus groups and found that participant understanding of the distinction between broker-dealers and investment advisers was low, even among those who were provided information describing the classifications of the two categories.[325] If investors are unable to distinguish between types of advice providers, they cannot be expected to understand legal distinctions of the standard to which that advice is held.

Confusion regarding the different types of advice providers and the different standards of conduct to which they must adhere is often made worse by industry marketing and other practices.[326] To attempt to address this, the SEC adopted as part of its 2019 Rulemaking a new required disclosure of a ''Form CRS Relationship Summary,'' under which registered investment advisers and broker-dealers must provide retail investors with certain information about the nature of their relationship with the firm and its financial professionals in plain language.[327] Although it does not apply to all of the products that a Retirement Investor might purchase, one of the purposes of the Form CRS is to help retail investors better understand and compare the services and relationships that investment advisers and broker-dealers offer in a way that is distinct from other required disclosures under the securities laws.[328]

Many investors also cannot effectively assess the quality of investment advice they receive. Research suggests that, in general, consumers often fail to fully comprehend the quality of professional services they receive, including services from doctors, lawyers, and banks in addition to investment advice providers.[329] The 2016 regulatory impact analysis cited research that advisers may inflate the bias in their advice to counteract any discounting that might occur because of the disclosure of conflicts.[330] It further cited evidence that advice from providers often encouraged investors' cognitive biases, such as return chasing, rather than correcting such biases; that payments made to broker-dealers influenced the advice provided to clients; and that funds distributed through more conflicted broker channels tend to perform worse.[331] Research also suggests that investors' opinions of adviser quality can be manipulated. For instance, Agnew et al. (2014) found that if an adviser first provides good advice on a financial decision that is easy to understand, the client will subsequently trust bad advice on a more difficult or complicated topic.[332] Investors who are unable to discern when they are receiving bad advice are at greater risk of being persuaded to make decisions that are not in their best interest.

The complexity of evaluating investment results to assess the quality of advice received is difficult for most Retirement Investors. Multiple studies have found that many individuals, across a variety of demographic groups, are not able to correctly answer questions about even the most basic principles of finance.[333] [334] [335] Furthermore, even if investors can determine whether investment returns are favorable, this is not tantamount to determining whether an adviser provides consistently sound investment advice.[336] Investment returns are noisy, and even several years of experience cannot reveal with high confidence whether the performance difference between an adviser's recommendations and a benchmark are due to chance or skill, unless the difference is substantial and persistent.[337]

Overall, the evidence demonstrates that the combination of inexpert customers and conflicted advisers results in investment underperformance compounded over time and negative outcomes for Retirement Investors. A substantial body of research showed that prior to 2016, IRA holders receiving conflicted investment advice could expect their investments to underperform by approximately 50 to 100 basis points per year.[338] Compounded over a 10 to 20 year investment period could mean that a retiree spending their savings down over 30 years would have 6 to 12

percent less to spend.[339] If a retiree encounters conflicts of interest and experiences a 100-basis point reduction in performance but still spends as though they were not encountering conflicts of interest, they would run out of retirement savings more than five years early.[340]

Pervasiveness of Conflicts of Interest in Investment Advice

Since the Department finalized the current rule in 1975, consolidation of the financial industry and innovations in products and compensation practices have multiplied opportunities for self-dealing and made fee arrangements less transparent to clients and regulators. Moreover, the existence of safeguards in only certain markets, such as those regulated by the SEC's Regulation Best Interest or the Advisers Act, creates incentives for agents to recommend conflicted products in less regulated markets.[341]

While the relative newness of Regulation Best Interest makes it challenging to measure its impact on the quality of advice in other markets, there is research demonstrating similar impacts from other policies addressing financial conflicts of interest or misconduct that varied across markets. Consistent with the previous version of their paper cited in the proposal, Bhattacharya et al. (2024) found that higher fiduciary standards lead to the sale of higher quality annuity products, identified as products with higher risk-adjusted returns.[342] Honigsberg et al. (2022) showed that variation in regulatory oversight regimes leads to a situation where the worst financial advisers, with a history of serious misconduct, operate in the most lightly regulated regimes.[343] Blanchett and Fichtner (2023) found that among households with higher levels of financial wealth, those that worked with commission-based financial advisers (*i.e.,* broker-dealers) claimed Social Security benefits two years earlier than those working with advisers paid hourly. This raises concerns that commission-based advisers were not acting in their clients' best-interest, as claiming Social Security earlier is generally inconsistent with the interests of higher income households who have more discretion on when they claim Social Security, and delaying claiming is associated with improved retirement-income outcomes.[344] Charoenwong et al. (2019) found that under lighter regulation, advisers were more likely to receive complaints, particularly advisers with past complaints or with conflicts of interest.[345] This rulemaking will impose the impartial conduct standards on trusted advice pertaining to ERISA-covered investments, regardless of the market, thereby extending the protections associated with fiduciary status under ERISA and ensure the security of retirement benefits of America's workers and their families.

Conflicts of Interest After the SEC's Regulation Best Interest

Under the Advisers Act, the SEC imposes a fiduciary duty on investment advisers, requiring them to act in a client's best interest. In 2019, with Regulation Best Interest, the SEC extended a ''best interest'' standard of conduct for broker-dealers and associated persons when they make a recommendation to a retail customer of any securities transaction or investment strategy involving securities, including recommendation of types of accounts.[346] In the Regulation Best Interest Release, the SEC stated that ''[t]he Commission has crafted Regulation Best Interest to draw on key principles underlying fiduciary obligations, including those that apply to investment advisers under the Advisers Act, while providing specific requirements to address certain aspects of the relationships between broker-dealers and their retail customers.'' [347] The SEC emphasized that, ''[i]mportantly, regardless of whether a retail investor chooses a broker-dealer or an investment adviser (or both), the retail investor will be entitled to a recommendation (from a broker-dealer) or advice (from an investment adviser) that is in the best interest of the retail investor and that does not place the interests of the firm or the financial professional ahead of the interests of the retail investor.'' [348]

The SEC also noted that the standard of conduct established by Regulation Best Interest cannot be satisfied through disclosure alone.[349] A conflict of interest is defined as ''an interest that might incline a broker, dealer, or a natural person who is an associated person of a broker or dealer—consciously or unconsciously—to make a recommendation that is not disinterested.'' [350] In guidance on conflicts of interest applicable to both broker-dealers and investment advisers, the SEC staff stated,

> All broker-dealers, investment advisers, and financial professionals have at least some conflicts of interest with their retail investors. Specifically, they have an economic incentive to recommend products, services, or account types that provide more revenue or other benefits for the firm or its financial professionals, even if such recommendations or advice are not in the best interest of the retail investor. . . . Consistent with their obligation to act in a retail investor's best interest, firms must address conflicts in a way that will prevent the firm or its financial professionals from providing recommendations or advice that places their interests ahead of the interests of the retail investor.[351]

The SEC Investment Adviser Interpretation, published simultaneously with

[339] For example, an ERISA plan investor who rolls $200,000 into an IRA, earns a 6 percent nominal rate of return with 2.3 percent inflation, and aims to spend down her savings in 30 years, would be able to consume $11,034 per year for the 30-year period. A similar investor whose assets underperform by 0.5, 1, or 2 percentage points per year would only be able to consume $10,359, $9,705, or $8,466, respectively, in each of the 30 years. The 0.5 and 1 percentage point figures represent estimates of the underperformance of retail mutual funds sold by potentially conflicted brokers. These figures are based on a large body of literature cited in the 2015 NPRM RIA, comments on the 2015 NPRM RIA, and testimony at the Department's hearing on conflicts of interest in investment advice in August 2015. The 2-percentage point figure illustrates a scenario for an individual where the impact of conflicts of interest is more severe than average. *See* EBSA, *Regulating Advice Markets Definition of the Term ''Fiduciary'' Conflicts of Interest—Retirement Investment Advice Regulatory Impact Analysis for Final Rule and Exemptions,* p. 4 (Apr. 2016), *https://www.dol.gov/sites/dolgov/files/EBSA/laws-and-regulations/rules-and-regulations/completed-rulemaking/1210-AB32-2/ria.pdf.*

[351] Staff Bulletin: Standards of Conduct for Broker-Dealers and Investment Advisers Conflict of Interest, *https://www.sec.gov/tm/iabd-staff-bulletin-conflicts-interest.*

Regulation Best Interest, reaffirmed and in some cases clarified aspects of the fiduciary duty of an investment adviser under the Advisers Act.[352] The SEC stated that ''an investment adviser's fiduciary duty under the Investment Advisers Act comprises both a duty of care and a duty of loyalty.'' [353] According to the SEC, ''[t]his fiduciary duty is based on equitable common law principles and is fundamental to advisers' relationships with their clients under the Advisers Act.'' [354] The fiduciary duty under the Federal securities laws requires an adviser ''to adopt the principal's goals, objectives, or ends.'' [355]

The SEC stated:

> This means the adviser must, at all times, serve the best interest of its client and not subordinate its client's interest to its own. In other words, the investment adviser cannot place its own interests ahead of the interests of its client. This combination of care and loyalty obligations has been characterized as requiring the investment adviser to act in the ''best interest'' of its client at all times.[356]

While the standards of care imposed under the Advisers Act and Regulation Best Interest overlap with ERISA's fiduciary standard, the SEC's jurisdiction does not cover all transactions that are covered under ERISA. Specifically, Regulation Best Interest does not cover advice to non-retail investors, and the SEC's authority under Regulation Best Interest and the Advisers Act is tied to the regulation of securities. Similarly, while there is a large overlap in the substance of the different regulatory regimes, in enacting ERISA, Congress provided special protections for tax-advantaged retirement savings that do not apply more broadly. For example, Congress prohibited transactions (absent an exemption) that were determined to raise significant risk to retirement plan participants and beneficiaries.

Regulation Best Interest shares the same goal as the Department's own rulemaking, in seeking to ensure investors are receiving investment advice in their best interest. Further, Regulation Best Interest expands protections in some of the same markets that are a concern of this rulemaking.

After Regulation Best Interest's adoption, the North American Securities Administrators Association's (NASAA) Broker-Dealer Section Committee concluded a review of over 200 examinations evaluating broker-dealers' compliance of Regulation Best Interest by State Examiners in 25 States.[357] This review revealed steady implementation progress, including that firms had been updating investor profile forms and policies and procedures; that firms recommending complex, costly or risky products were imposing restrictions based on ages, income/net worth and risk profiles; and that firms were utilizing cost-comparison tools to better consider reasonable investment alternatives.[358]

Moreover, the majority of the firms did not cease (94 percent) or restrict (76 percent) sales of any products following Regulation Best Interest. Only 2 percent or less of firms ceased the sale of options, non-traded real-estate investment trusts (REITs), highly-leveraged products, private securities, cryptocurrency or other digital assets, Special-purpose Acquisition Companies (SPACs), leveraged or inverse ETFs/ETNs, and penny stocks or other thinly-traded securities.[359] The report noted, however, that firms still struggled with considering reasonably available alternatives and conflict mitigation; ignoring lower cost and less risky products when recommending complex, costly and risky products and relying on financial incentives to sell them; and that firms have not enhanced point of sale disclosures.[360]

The SEC began conducting limited scope broker-dealer examinations and risk-based inspections in June 2020 to assess whether firms established written policies and procedures to comply with Regulation Best Interest and had made reasonable progress in implementing those policies and procedures. In their reviews, staff identified instances of deficiencies with respect to Regulation Best Interest's Disclosure, Care, Conflict of Interest, and Compliance Obligations.[361] FINRA has identified similar deficiencies in its Report on Examination and Risk Monitoring Program.[362] At the same time, the SEC's Division of Examination notes that, in response to deficiency letters identifying these issues, many broker-dealers modified their practices, policies and procedures.[363] In addition, the SEC staff released additional guidance in April 2023 focused on broker-dealers' and investment advisers' obligations with respect to their care and conflicts of interests obligations, in addition to account recommendations.[364]

The SEC staff announced in January 2023 that it intends to incorporate compliance with Regulation Best Interest into retail-focused examinations of broker-dealers [365] and both the SEC and FINRA have begun enforcement actions related to Regulation Best Interest.[366] In June 2022, the SEC charged a firm and five brokers for violating Regulation Best Interest and selling high-risk bonds to retirees and other retail investors [367] and in February 2024, the SEC reached a settlement of over $2.2 million with TIAA–CREF for failing to comply with Regulation Best Interest in connection with

recommendations to retail customers to open a TIAA IRA.[368] Meanwhile, FINRA levied its first Regulation Best Interest-related fine in October 2022 and suspended two New York-based brokers in February 2023.[369]

Conflicts of Interest in Advice Given to Plan Fiduciaries

Concerns regarding investment advice extend to that received by ERISA plan fiduciaries. Pool et al. (2016) found that while mutual fund companies involved in plan management for 401(k) plans included both funds from their own family as well as unaffiliated funds in the menu of investment options, poor performing funds were less likely to be removed and more likely to be added to the menu if they were affiliated with the plan trustee.[370] In 2005, the SEC staff found evidence that some pension consultants do not adequately disclose their conflicts and steer plan fiduciaries to hire money managers based partly on the consultants' own financial interests.[371] The U.S. Government Accountability Office (GAO) found these inadequately disclosed conflicts were associated with substantial financial losses. GAO's study found that between 2000 and 2004, plans associated with pension consultants without adequate disclosure of their conflicts of interest saw annual rates of return 1.2 to 1.3 percentage points lower than plans associated with pension consultants with adequate disclosure of conflicts of interest.[372] In another study, GAO found that ERISA plan sponsors often are confused as to whether the advice they receive is fiduciary advice, and small plans in particular may suffer as a result.[373] This confusion leaves plan participants vulnerable to lower returns due to conflicted advice.

Conflicts of Interest in Rollover Recommendations or Advice

The treatment of rollover recommendations or advice under the 1975 rule has been a central concern in the Department's regulation of fiduciary investment advice. The decision to roll over assets from a plan to an IRA is often the single most important financial decision a plan participant makes, involving a lifetime of retirement savings.

Most IRA assets are attributable to rollover contributions, and the amount of assets rolled over to IRAs is large and expected to increase substantially.[374] In 2021, IRA rollovers from defined contribution plans increased by 4.9 percent. Cerulli Associates estimates that aggregate rollover contributions to IRAs from 2022 to 2027 will surpass $4.5 trillion.[375]

The decision to roll over one's retirement savings from an ERISA-covered employment-based plan into an IRA or other plan has significant consequences, and for many investors is the single most consequential advice they will receive and affects a lifetime of savings. About 57 percent of traditional IRA-owning households indicated that their IRAs contained rollovers from employment-sponsored retirement plans and of those households, 85 percent indicated they had rolled over their entire account balance in their most recent rollover.[376] In 2020, more than 95 percent of the dollars flowing into IRAs came from rollovers, while the rest came from regular contributions.[377]

Retiring workers must decide how best to invest a career's worth of 401(k) savings, and many look to an investment advice provider for guidance. Financial Institutions face an innate conflict of interest, in that a Financial Institution that provides a recommendation or advice concerning a rollover to a Retirement Investor may expect to earn transaction-based compensation such as commissions and/or receive an ongoing advisory fee that it likely would not receive if the assets were to remain in an ERISA-covered plan. Further, under the 1975 rule, if an investment advice provider makes a one-time recommendation that the worker move the entire balance of their retirement plan into an IRA and invest it in a particular annuity, and there is no expectation of ongoing advice to the original retirement plan, then the advice provider has no fiduciary obligation under ERISA to honor the worker's best interest unless this recommendation is part of a preexisting "ongoing" advice relationship with respect to plan assets. Moreover, if the advice provider makes the recommendation for the first time after the participant rolled the money out of the plan, and before they have received advice on specific investments in the IRA from the provider, the recommendation to invest all the assets in an annuity would not be treated as fiduciary advice, even if the adviser had regularly made recommendations to the participant for years about investments in the ERISA-covered plan or about other non-IRA investments. The resulting compensation represents a significant revenue source for investment advice providers.

While PTE 2020–02 mitigates some of these concerns by requiring investment advice fiduciaries to render advice in their customer's best interest in order to receive certain types of compensation from otherwise prohibited transactions resulting from rollover advice, the limitations of the existing five-part test for fiduciary status under the 1975 rule still result in significant portions of the retirement investment market operating outside of the PTE's protections.

Uniformity Across Markets and Product Types

The current regulatory approach to investment advice results in standards that vary by advice market and investment product.[378] As a result, Retirement Investors cannot rely on a single protective standard, and their exposure to risk is not only based on the types of products they invest in but also by who gives that advice or makes that recommendation and in what capacity they are acting. This creates investor confusion and makes room for regulatory arbitrage, where investment advice providers can use more favorable

rules in one market to circumvent less favorable regulations elsewhere. The Department identifies the following nuances of the regulatory landscape as sources of investor confusion:

- Regulation Best Interest only applies to recommendations made by broker-dealers to retail customers. As a result of this limitation, broker-dealers' recommendations of securities transactions, investment strategies, plan design, and plan investment options to plan fiduciaries, generally fall outside its scope. This may be particularly confusing and, similar to retail individuals as described above, raise risks for small plan fiduciaries that lack investment expertise.
- Securities laws (*i.e.,* the Advisers Act and Regulation Best Interest) may not apply to advice on investments such as real estate, fixed indexed annuities, commodities, certain certificates of deposit, and other bank products.
- Variable annuities and some indexed annuities are considered securities and are subject to securities laws, while fixed annuities, including fixed indexed annuities, are subject to State law. As discussed in the Regulatory Baseline section, these laws vary significantly from State to State.
- The NAIC Model Regulation, which sets standards and procedures for recommending annuity products, has been adopted in most, but not all, States. Some States made substantive changes to the NAIC Model Regulation when adopting it, to ensure more robust protections, while other States adopted it in its entirety, including carve-outs that the regulation established for cash and non-cash compensation from best interest protections.

This list is not exhaustive but provides a sense of how many seemingly similar investments are subject to widely different regulators and protective standards.

Honigsberg et al. (2022) identified associated persons of broker-dealers who had been registered with FINRA between 2010 and 2020 but were no longer registered with the regulatory authority. Of those that exited, roughly one-third continued providing financial advice under a different regulatory regime, and eight percent of those had a history of serious misconduct while registered with FINRA. This share increased to 12 percent when compared to those that were still providing financial advice as an insurance producer registered with the NAIC and 13 percent when compared to the National Futures Association members providing advice regarding derivatives. The authors argued that the existing framework for regulating adviser misconduct creates incentives for the worst advisers to migrate to more poorly regulated State regimes.[379]

The risk posed by non-uniform regulatory environments is exemplified by the annuity market. A recent survey of insurers reported that 58 percent of insurers thought the SEC's Regulation Best Interest had improved protections for consumers.[380] However, as discussed above, generally only annuities that are considered securities are under the jurisdiction of the SEC and these comprised just 26 percent of retail annuity sales in 2023.[381] The remaining annuities are covered by State regulations that generally hold those selling such insurance products to a lower standard. In crafting this rulemaking, the Department strove to craft a definition that hews to both the text and purpose of ERISA.

An investor's retirement account may hold a wide range of investment products, those products may touch multiple regulatory regimes, and the Retirement Investor may not be aware of the different standards. Once the investment products are held in a plan or account covered by ERISA Title I or Title II, however, the Title I and Title II ERISA protections apply regardless of the type of investment product. This range of investment products held in these plans and accounts means that the regulatory definition of an investment advice fiduciary for purposes of Title I and Title II of ERISA takes on special importance in creating uniform standards for investment advice, particularly when a Retirement Investor may not realize the investment product is not covered by another regulatory regime such as Federal securities laws.

Need for Uniformity Concerning Rollovers

The difference between types of products, such as securities subject to regulation by the SEC and non-securities annuities subject to regulation by State insurance departments, creates problematic incentives for financial professionals to recommend certain products.

Under the Advisers Act and Regulation Best Interest, investment advisers and broker-dealers must have a reasonable basis to believe both the rollover itself and the account being recommended are in the retail investor's best interest.[382] SEC staff guidance recognizes that it would be difficult for an investment adviser or broker-dealer to have such a reasonable basis if it does ''not consider the alternative of leaving the retail investor's investments in their employer's plan, where that is an option.'' [383] Moreover, broker-dealers and investment advisers generally should consider certain factors when making rollover recommendations to retail investors, specifically and without limitation, including ''costs; level of services available; features of the existing account, including costs; available investment options; ability to take penalty-free withdrawals; application of required minimum distributions; protection from creditors and legal judgments; and holdings of employer stock.'' [384] As such, the SEC's regulatory framework is likely to mitigate some of the aforementioned harms to Retirement Investors, but only in markets where it applies.

In contrast, the NAIC Model Regulation, which is the basis for much of the State regulation on insurers,[385] makes no direct reference to rollovers, and imposes a less stringent obligation on annuity recommendations than the best interest standard imposed on securities recommendations and investment advice by the SEC. Given the average rollover contribution to a traditional IRA in 2019 was $112,000,[386]

[382] The SEC recognized in Regulation Best Interest that, ''as part of determining whether a broker-dealer has a reasonable basis to believe that a recommendation is in the best interest of the retail customer, a broker-dealer generally should consider reasonably available alternatives offered by the broker-dealer'' which the SEC viewed as ''an inherent aspect of making a 'best interest' recommendation.'' *See* Regulation Best Interest Adopting Release, 84 FR 33318, 33381. Investment advisers have fiduciary obligations with respect to rollover recommendations: ''An adviser's fiduciary duty applies to all investment advice the investment adviser provides to clients, including advice about investment strategy, engaging a sub-adviser, and account type. Advice about account type includes advice about whether to open or invest through a certain type of account (*e.g.,* a commission-based brokerage account or a fee-based advisory account) and advice about whether to roll over assets from one account (*e.g.,* a retirement account) into a new or existing account that the adviser or an affiliate of the adviser manages.'' *See* 2019 Fiduciary Interpretation, 84 FR 33674.

Continued

the variation in regulatory standards regarding rollover advice can result in widely disparate outcomes among similarly situated Retirement Investors based solely on who they sought for advice and whether that adviser was required to put the investor's interests above their own.

An update to the regulatory definition of an investment advice fiduciary, for purposes of Title I of ERISA and the Code, is necessary to enhance protections of Retirement Investors. This approach both reflects ERISA's and the Code's statutory text, which adopts a uniform approach, as well as sound public policy. Investment recommendations should be consistently governed solely by the best interest of Retirement Investors, rather than adviser perceptions that advice on one category of investment product is subject to different regulatory standards than another.

How the Final Rule Addresses the Need for Regulatory Action

The amendments to the 1975 rule contained in this final rule will better reflect the text and purposes of ERISA and address inadequacies that the Department has observed during its decades of experience in implementing the 1975 rule. These amendments will honor the broad statutory definition of fiduciary in ERISA by amending the five-part test to create a uniformly protective fiduciary standard for Retirement Investors, subject to firm-level oversight, designed to mitigate and eliminate the harmful effects of biased advice. The amendments to the 1975 rule and related exemptions will also eliminate the risk of regulatory arbitrage, in which an investment advice provider may operate in a particular market to evade more stringent regulation. For instance, under the current regulation, an Independent Producer selling an indexed annuity, a financial professional giving a Retirement Investor one-time advice to roll investments into an IRA, or a financial professional giving advice on one transaction, could portray themselves as serving the best interest of the investor while being held to a lower care standard than financial professionals subject to the Advisers Act, the SEC's Regulation Best Interest or the Department's fiduciary standard. In contrast, the amended rule will broadly align the standard of care required of all financial professionals giving retirement investment advice with Retirement Investors' reasonable expectations that those recommendations are trustworthy. This will in turn create a retirement market where all advisers compete under a uniform fiduciary standard, reducing investor exposure to harms from conflicted advice.

The fiduciary standard, as buttressed by the protective conditions of the amended PTE 2020–02 and PTE 84–24, protects investors from getting investment recommendations that are improperly biased because of an adviser's competing financial interests. The fiduciary standard requires firms and advisers to put the interests of Retirement Investors first and to take appropriate action to mitigate and control conflicts of interest. These conditions should go a long way to redressing the dangers posed by biased advice.

In addition, the exemptions also give inexpert investors important information on the scope, severity, and magnitude of conflicts of interest. Moreover, by imposing a uniform fiduciary standard on conflicted advisers in the retirement marketplace, the final rule and amended exemptions reduce investor confusion about the standards governing advice. Retail investors who rely on expert advice are unlikely to have a sound understanding of differences in standards across various categories of investments and Investment Professionals,[387] but there is nearly universal agreement among Americans who have worked with a financial professional that those professionals providing advice about retirement investments should be required to act in their client's best interest.[388] The SEC Investor Advisory Committee, when considering a uniform adoption of a standard of duty for investment advisers and broker-dealers in 2013, found that ''investors do not distinguish between broker-dealers and investment advisers, do not know that broker-dealers and investment advisers are subject to different legal standards, do not understand the difference between a suitability standard and a fiduciary duty, and expect broker-dealers and investment advisers alike to act in their best interest when giving advice and making recommendation.'' [389]

Accordingly, when the SEC adopted Regulation Best Interest, it imposed a common standard based on fiduciary principles of care and loyalty that are applicable to broker-dealers and registered investment advisers alike. As noted in recent SEC Staff Bulletins on Regulation Best Interest, ''[b]oth [Regulation Best Interest] for broker-dealers and the [Advisers Act] fiduciary standards for investment advisers are drawn from key fiduciary principles that include an obligation to act in a retail investor's best interest and not to place their own interests ahead of the investor's interest.'' [390] These standards of conduct are aligned with the Department's rulemaking, and as SEC staff has noted, ''[a]lthough the specific application of [Regulation Best Interest] and the [Advisers Act] fiduciary standard may differ in some respect and be triggered at different times, in the staff's view, they generally yield substantially similar results in terms of the ultimate responsibilities owed to retail investors.'' [391]

While these issues have been mitigated to a considerable degree by the imposition of a common ''best interest'' standard for broker-dealers governed by Regulation Best Interest and investment advisers subject to the Advisers Act or State law, significant differences remain with respect to the standards governing investments that are not securities, such as fixed indexed annuities. Investor confusion is

As a practical matter, the most significant difference between the standards between advisers subject to the Advisers Act fiduciary standard and broker-dealers subject to Regulation Best Interest is that advisers generally have a baseline obligation to monitor their clients' accounts on an ongoing basis. In this respect, ERISA's fiduciary obligations are closer to the standards applicable to broker-dealers because, under ERISA's functional test of fiduciary status, a person is a fiduciary only ''to the extent'' they give the requisite advice, and there is no baseline obligation to act as a fiduciary adviser on an ongoing basis. Instead, the determination of fiduciary status under the definition set forth in ERISA Section 3(21)(a)(ii) is transactional.

exacerbated by different regulatory regimes referencing a ''best interest standard'' while defining what that means and the protections that entails differently.

The amendments to PTEs 2020–02 and 84–24 will enhance disclosures of conflicts of interest, while utilizing existing disclosure requirements from the SEC and State insurance commissions in order to mitigate burden. Nevertheless, the Department stresses that disclosure alone is limited in its effectiveness at protecting investors from the dangers posed by conflicts of interest. Merely disclosing a conflict of interest does not give the investor a working model on how to determine the impact of the conflict of interest on the advice they are receiving or of how to use the disclosure to make a better investment decision. While the disclosure puts the investor on notice of the conflict, the inexpert investor remains dependent on the expert's advice and may in fact interpret the disclosure as a sign of honesty, rather than a warning that the advice they're receiving may be influenced by their adviser's self-interest.[392] By mitigating or removing conflicts, requiring the adviser to adhere to a strong conduct standard, and requiring the adviser to establish a mechanism for overseeing and enforcing compliance, the rulemaking creates a strong infrastructure for compliance addressing the problems posed by conflicted and imprudent advice.

The growing body of evidence underscores that best interest fiduciary standards play an important role in protecting Retirement Investors.[393] One of the Department's objectives in issuing this rulemaking is to abate these and similar harms in areas outside of the SEC's jurisdiction, to ensure that Retirement Investors' assets outside the securities space are also protected from conflicted advice. This rulemaking will extend the fiduciary best interest standard to additional individuals, firms, markets, and investment products, including annuities and other non-securities. This rulemaking will apply to advice given to plan fiduciaries as well as plan participants.

In addition, for Retirement Investors who already receive the protections in the Advisers Act, Regulation Best Interest, and PTE 2020–02 under the regulatory baseline, this rulemaking will provide even stronger protections. Standards for mitigating conflicts under this rulemaking will be more rigorous and well-defined.

3. Baseline

Since the Department first took on the issues of fiduciary advice and conflicts of interest, there have been numerous developments in the regulatory environment overseeing retirement investments and the financial markets in which they operate.

Market Baseline

This rulemaking will expand the fiduciary standard to individuals, firms, and markets not currently held to a fiduciary or best interest standard. This will in turn impact how advisers make recommendations to Retirement Investors and potentially the types of investments they recommend and how they are compensated. As such, it is helpful to understand the regulatory and market baselines for retirement investments, including which sectors will be most significantly impacted by this rulemaking.

The Department has, in response to a commenter, estimated the current market size of a selected set of commonly held assets and sales of financial products for retail and institutional investors, as well as for Retirement Investors, as summarized in the table below. The Department estimates the total value of these assets at over $168 trillion, of which approximately $62 trillion is attributable to retail investors.[394] As seen below, investments in securities, which are currently covered by Regulation Best Interest and the Advisers Act, account for the majority of the retail market.

This rulemaking will specifically apply to invested assets subject to ERISA, including non-securities not covered by Regulation Best Interest and the Advisers Act. Where possible, the Department has provided the amount of assets in retirement accounts. In 2022, there were $0.74 trillion of fixed and variable annuities reported invested in IRA accounts.[395] The Department does not have data on assets invested in annuities in pension accounts, nor does it have a breakdown of how many assets are invested in fixed and variable annuities in IRA accounts.

TABLE 1—MARKET DESCRIPTION OF SELECTED COMMONLY HELD ASSETS, 2022

[In USD billions]

	Securities					Non-securities		Total
	Equities [1]	Bonds [2]	Money market funds [3]	Mutual funds [3]	Variable annuities [4]	Fixed annuities [4]	Bank deposits

Source: Board of Governors of the Federal Reserve System, *Financial Accounts of the United States,* December 7, 2023.

Notes: Retail investors include households and non-profits.

1 Includes shares of exchange-traded funds, closed-end funds, and real estate investment trusts.

2 Includes open market paper, treasuries, agency and GSE-backed securities, municipal securities, and corporate bonds.

3 Money market funds and mutual funds include approximately $1.66 trillion in variable annuity mutual fund assets.

4 Variable and fixed annuities of Retirement Investors include some annuities held in IRAs, totaling some $0.74 trillion.

5 The Department does not have data to indicate the total value of fixed and variable annuity assets held by Retirement Investors, only those held by retail investors or in IRAs.

392 George Loewenstein, Daylian M. Cain & Sunita Sah, *The Limits of Transparency: Pitfalls and Potential of Disclosing Conflicts of Interest,* 101(3) American Economic Review 423–28, (May 2011).

393 For more information on the relationship of best interest fiduciary standards and the protection of Retirement Investors, refer to the Benefits section of the regulatory impact analysis.

394 EBSA tabulations based on The Board of Governors of the Federal Reserve System, *Financial Accounts of the United States,* December 7, 2023.

395 *Ibid.*

This rulemaking will affect assets owned by private pension investors shown in the table above. As noted above, the Department does not have data on how many of the assets in variable and fixed annuities are owned by private pension investors but believes it to be a significant amount.

Market Developments, the Annuity Market

Before it was vacated, the 2016 Final Rule had begun exerting substantial influence on financial advice and products in the insurance market, particularly with regard to annuities. There are three common types of annuities offered by insurance companies.

- In a variable annuity, an insurance company invests in an investment option chosen by the investor, which is often a mutual fund.[396] The return of the variable annuity reflects the return on the underlying investments. Variable annuities have often been referred to as ''mutual funds in an insurance wrapper.'' [397]
- In a fixed annuity, an insurance company agrees to pay the investor no less than a specified rate of interest during the asset accumulation phase and to pay a specified amount per dollar in the decumulation phase.[398] [399]
- In an indexed annuity, an insurance company agrees to pay the investor returns linked to the performance of a market index. However, unlike a variable annuity, the terms in the contract and the method used to calculate gains and losses may result in actualized gains or losses that differ from the gains and losses experienced by the index.[400]

Annuity regulators also vary by type. While all annuity products are subject to State regulation, variable annuities and some indexed annuities are considered securities, and therefore are also subject to SEC and FINRA regulations.[401] As the financial structure of each type of annuity varies, so does the risk of conflicted advice. Variable and fixed-indexed annuity commissions tend to be similar, while fixed rate income and immediate annuity commissions are generally lower.[402]

In recent years, the mix in demand for annuities has changed dramatically. While variable annuities accounted for 56 percent of the annuities market in 2016 (with fixed annuities accounting for the remaining 44 percent),[403] variable annuities only accounted for 26 percent in 2023 with fixed annuities now accounting for 74 percent of the market.[404] Driving much of the shift, in addition to changes in how fees are structured in the variables annuities space and recent increases in interest rates, is the growth in share of the population approaching retirement age. The population age 65 and older was 13 percent in 2010 and had risen to 17 percent by 2022.[405] Moreover, the proportion of the population over age 65 is expected to reach more than 20 percent by 2030.[406]

The aging population has shifted their demand to annuities that provide protection against market downturns as they approach retirement and the spenddown phase of their retirement planning, but purchasing such products also requires them to consider multiple sources of uncertainty (mortality, inflation, performance) when making their investment decisions. At the same time, annuity contracts are becoming increasingly complicated. Ninety-four percent of fixed indexed annuities now involve hybrid indexes which may utilize alternative or non-traditional investment strategies and complex features such as volatility or risk controls that rely on derivative instruments and algorithms that are increasingly complex and lack historical performance data.[407]

Research has shown that a person's financial decision-making ability peaks in their early 50s, thereby putting them at risk in later years as the ability of older individuals to recover from financial mistakes may be negatively impacted by declines in physical health and cognition and related difficulties reentering the labor force.[408] Angrisani and Lee (2019) demonstrated this, when analyzing data for individuals 50 and older in the Health and Retirement Survey. Angrisani and Lee (2019) observed significant declines in wealth among households whose financial decision-maker experienced cognitive decline. Households that received pension or annuity income or had assistance with their finances from children did face smaller wealth reductions, but the researchers did not distinguish between pension or annuity income, or when an annuity might have been purchased.[409] However, given that the median age of owners when they first purchase an annuity is 51, roughly half of annuity purchases would be made after an individual's financial decision-making ability has, according to research, begun to decline.[410]

These market trends suggest that, unless the Department acts, in the coming years an increasing number of retiring Americans will pursue more complex investment options in markets where advisers are held to a lower advice standard.

Regulatory Baseline

The problems of conflicted advice and supervisory structures for advice have received increased regulatory attention, resulting in action from the Department, the SEC, individual States, and the

NAIC. The major actions are summarized below.

Regulatory Baseline, the Department of Labor

Many Financial Institutions undertook efforts to adapt to the Department's 2016 Final Rule. As such, the intended improvements in Retirement Investor outcomes appear to have been on track prior to the Fifth Circuit's vacatur of the 2016 Final Rule.[411] Research suggests that the Department's prior efforts produced positive changes in advice markets, even without fully taking effect, which were then reinforced by the SEC's actions. For instance, several studies found that the Department's 2016 Final Rule had a positive effect on conflicts of interest and that some categories of conflicts, such as bundled share classes of mutual funds and high-expense variable annuities, were reduced even after the 2016 Final Rule was struck down.[412] The nature of the conflicts associated with bundled share classes and high-expense variable annuities are discussed later in this document.

In 2020, the Department issued a technical amendment to the CFR to reinsert the 1975 rule and published PTE 2020–02. The exemption is available to registered investment advisers, broker-dealers, banks, and insurance companies and their individual employees, agents, and representatives that provide fiduciary investment advice to Retirement Investors. However, the exemption explicitly excluded investment advice solely generated by an interactive website, referred to as ''pure robo-advice.'' [413] Under the exemption, Financial Institutions and Investment Professionals can receive a wide variety of payments that would otherwise violate the prohibited transaction rules. The exemption's relief extends to prohibited transactions arising as a result of investment advice to roll over assets from a plan to an IRA, under certain conditions.

This exemption conditions relief on the Investment Professional and Financial Institution investment advice fiduciaries providing advice in accordance with the Impartial Conduct Standards. The Impartial Conduct Standards include a best interest standard, a reasonable compensation standard, and a requirement to make no misleading statements about investment transactions and other relevant matters. The best interest standard in the exemption is broadly aligned with the Federal securities laws. In addition, the exemption requires Financial Institutions to acknowledge in writing the institution's and their Investment Professionals' fiduciary status under Title I and the Code, as applicable, when providing investment advice to the Retirement Investor, and to describe in writing the services to be provided and the Financial Institutions' and Investment Professionals' material conflicts of interest. Financial Institutions must document the reasons for a rollover recommendation and provide that documentation to the Retirement Investor.[414] Financial Institutions are required to adopt policies and procedures prudently designed to ensure compliance with the Impartial Conduct Standards and conduct a retrospective review of compliance.

In order to ensure that Financial Institutions provide reasonable oversight of Investment Professionals and adopt a culture of compliance, the exemption provides that Financial Institutions and Investment Professionals will be ineligible to rely on the exemption for 10 years if they are convicted of certain crimes arising out of their provision of investment advice to Retirement Investors. They can also become ineligible if they engage in a systematic or intentional violation of the exemption's conditions or provided materially misleading information to the Department in relation to their conduct under the exemption.

At the time PTE 2020–02 was finalized, the Department left in place other administrative exemptions that could be used to provide investment advice in place of PTE 2020–02, including the other PTEs being amended in this rulemaking. Leaving the other PTEs in place allowed for significant variation in the conditions and compliance obligations of Financial Institutions when they provide investment advice for different types of assets and financial products. Those variations create opportunities for regulatory arbitrage where investment advice providers can use more favorable rules in one market to circumvent less favorable regulations elsewhere.

Regulatory Baseline, the Securities and Exchange Commission

For investment advisers subject to the Advisers Act and broker-dealers subject to Regulation Best Interest, there is substantial overlap between SEC requirements and the obligations imposed by ERISA, the Code, and this rulemaking.

The Advisers Act, ''establishes a fiduciary duty for [investment advisers] roughly analogous to the fiduciary duties of care and loyalty established by ERISA for investment advisers to plans and plan participants.'' [415] This means the adviser must, at all times, serve the best interest of its client and not subordinate its client's interest to its own.[416] The SEC's Regulation Best Interest established a standard of conduct for broker-dealers and associated persons, requiring a broker-dealer to act in the best interest of a retail customer when making a recommendation of any securities transaction or investment strategy involving securities.[417]

The SEC also covers robo-advice, and robo-advisers that meet the definition of ''investment adviser'' are regulated under the Advisers Act. Regulations and guidance included the need for adequate disclosure about the robo-adviser and the services it provides, the need to ensure that the robo-adviser is

[413] ''Hybrid robo-advice,'' or advice that combines combine features of robo-advice and traditional investment advice, is included under the existing PTE 2020–02. 85 FR 82798, 82830 (Dec. 18, 2020).

[414] The PTE 2020–02 preamble says: ''This requirement extends to recommended rollovers from a Plan to another Plan or IRA as defined in Code section 4975(e)(1)(B) or (C), from an IRA as defined in Code section 4975(e)(1)(B) or (C) to a Plan, from an IRA to another IRA, or from one type of account to another (*e.g.,* from a commission-based account to a fee-based account). The requirement to document the specific reasons for these recommendations is part of the required policies and procedures, in Section II(c)(3).''

[416] Commission Interpretation Regarding Standard of Conduct for Investment Advisers, 84 FR 33669 (July 12, 2019).

[417] SEC Regulation Best Interest defines retail customer to include ERISA plan participants and beneficiaries, including IRA owners, but not ERISA fiduciaries. *See* 84 FR 33343–44 (July 12, 2019). This subject is further addressed in the Affected Entities section below. The SEC's Regulation Best Interest was adopted pursuant to the express and broad grant of rulemaking in Section 913(f) of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

providing appropriate advice to its customers, and the need to adopt and implement appropriate compliance programs tailored to the automated nature of the robo-adviser's services.[418]

Broker-dealers under Regulation Best Interest and investment advisers under the Advisers Act must consider costs, the level of services available, and features of existing accounts. This approach is consistent with this rulemaking. Regulation Best Interest applies to recommendations by broker-dealers to rollover or transfer assets from workplace retirement plan accounts to an IRA and recommendations to take a plan distribution, which are also covered by this rulemaking. In Regulation Best Interest, the SEC instructed that, when making a rollover recommendation:

> [B]roker-dealers should consider a variety of additional factors specifically salient to IRAs and workplace retirement plans, in order to compare the retail customer's existing account to the IRA offered by the broker-dealer. These factors should generally include, among other relevant factors: Fees and expenses; level of service available; available investment options; ability to take penalty-free withdrawals; application of required minimum distributions; protection from creditors and legal judgments; holdings of employer stock; and any special features of the existing account.[419]

Similarly, in its 2019 Fiduciary Interpretation, the SEC clarified that for registered investment advisers:

> An adviser's fiduciary duty applies to all investment advice the investment adviser provides to clients, including advice about investment strategy, engaging a sub-adviser, and account type. Advice about account type includes advice about whether to open or invest through a certain type of account (*e.g.,* a commission-based brokerage account or a fee-based advisory account) and advice about whether to roll over assets from one account (*e.g.,* a retirement account) into a new or existing account that the adviser or an affiliate of the adviser manages. In providing advice about account type, an adviser should consider all types of accounts offered by the adviser and acknowledge to a client when the account types the adviser offers are not in the client's best interest.[420]

Further, the SEC staff issued guidance stating that "it would be difficult to form a reasonable basis to believe that a rollover recommendation is in the retail investor's best interest and does not place your or your firm's interests ahead of the retail investor's interest, if you do not consider the alternative of leaving the retail investor's investments in their employer's plan, where that is an option." [421]

With respect to these areas of overlap, the potential costs and benefits of this rulemaking are more limited, because the SEC actions and this rulemaking share many similarities and many firms have already built compliance structures based on SEC actions, PTE 2020–02 and initial compliance before vacatur of the Department's 2016 Final Rule. Outside this area of overlap, however, current standards generally are lower, so the potential costs—and benefits—of this rulemaking are likely to be more significant.

For example, this rulemaking will apply to State-licensed insurance agents and State-registered brokers, who are not uniformly regulated by the SEC, when they provide investment advice to IRA or ERISA plan investors. It will also apply to broker-dealers who give fiduciary advice to ERISA plan fiduciaries, who are not included within Regulation Best Interest's definition of a retail customer. Recommendations regarding plan and IRA investments in real estate, certain certificates of deposit, other bank products and fixed indexed annuities that are not considered securities under the Federal securities laws are also not generally regulated by the SEC.

Regulatory Baseline, State Legislative and Regulatory Developments

The appropriate baseline for this analysis is also informed by certain recent legislative and regulatory developments involving conduct standards at the State level.

Summary of State Legislative and Regulatory Developments

In a list compiled in March 2024, the Department identified 47 States that have enacted legislation, finalized regulations, or both that impose conduct standards and disclosure requirements on various Financial Institutions.[423] The table below summarizes the enacted legislation and finalized regulation in each State, as well as the type of Financial Institution each regulation pertains to. This list includes States that have adopted the NAIC Model Regulation,[424] in addition to States that have adopted conduct standards and disclosure requirements outside of the NAIC Model Regulation.

In addition, two States that have not yet enacted legislation or finalized regulations have introduced legislation or proposed regulations that would impose conduct standards and disclosure requirements on various Financial Institutions.[425]

NAIC Annuity Transactions Model Regulation

As shown in the table above, much of the legislative and regulatory action among States focuses on insurers and Independent Producers. In February 2020, the NAIC membership approved revisions to its Suitability in Annuity Transactions Model Regulation to include a ''best interest'' standard of conduct. When the Department conducted its analysis of States in July 2023, 39 States had adopted the NAIC Model Regulation.[426] Since then, additional States have adopted the NAIC Model Regulation. In March 2024, the NAIC reported that 45 States had adopted it, with the recent addition of California, Indiana, New Hampshire, Oklahoma, Utah, and Vermont.[427]

The revisions were in response to both the SEC's and the Department's work in the regulatory space and reflected some movement in the direction of greater uniformity, although significant differences remain, as partially discussed below.[428] The NAIC Model Regulation includes a best interest obligation comprised of a Care Obligation, a disclosure obligation, a conflict of interest obligation, and a documentation obligation, applicable to an insurance producer.[429] If these obligations are met, the producer is treated as satisfying the best interest standard. The Care Obligation states that the producer, in making a recommendation, must exercise reasonable diligence, care and skill to:

- Know the consumer's financial situation, insurance needs and financial objectives;
- Understand the available recommendation options after making a reasonable inquiry into options available to the producer;
- Have a reasonable basis to believe the recommended option effectively addresses the consumer's financial situation, insurance needs and financial objectives over the life of the product, as evaluated in light of the consumer profile information; and
- Communicate the basis or bases of the recommendation.

The NAIC Model Regulation's requirements regarding mitigation of material conflicts of interest is not as stringent as either the Department's approach under ERISA or the SEC's approach. The conflict of interest obligation under the NAIC Model Regulation requires the producer to ''identify and avoid or reasonably manage and disclose material conflicts of interest, including material conflicts of interest related to an ownership interest.'' However, the NAIC Model Regulation expressly carves out all ''cash compensation or non-cash compensation'' from treatment as sources of material conflicts of interest.[430] ''Cash compensation'' that is excluded from the definition of a material conflict of interest is broadly defined to include ''any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer in connection with the recommendation or sale of an annuity from an insurer, intermediary, or directly from the consumer,'' and ''non-cash compensation'' is also broadly defined to include ''any form of compensation that is not cash compensation, including, but not limited to, health insurance, office rent, office support and retirement benefits.'' [431]

This limited regulation of conflicts of interest departs substantially from both ERISA's treatment of such conflicts as giving rise to prohibited transactions

[422] The Massachusetts Supreme Judicial Court recently upheld the validity of the Commonwealth's fiduciary duty rule, holding that the Secretary of the Commonwealth had authority to promulgate it, that the Secretary's authority was not an impermissible delegation of legislative power, that the rule did not override the common-law protections available to investors, and that the rule was not preempted by the SEC's imposition of the Regulation Best Interest. Robinhood Fin. LLC v. Sec'y of Commonwealth, No. SJC–13381, 2023 WL 5490571, at *1, *6–15 (Mass. Aug. 25, 2023).

[423] States that have enacted legislation include Arizona, California, Connecticut, Florida, Hawaii, Idaho, Louisiana, Maryland, Michigan, Minnesota, Montana, Nebraska, Nevada, North Dakota, Oregon, Pennsylvania, South Dakota, Texas, Washington, and Wisconsin. States that have finalized regulation include Alabama, Alaska, Arizona, Arkansas, Colorado, Connecticut, Delaware, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maine, Maryland, Massachusetts, Minnesota, Mississippi, Montana, New Hampshire, New Mexico, New York, North Carolina, Ohio, Oklahoma, Rhode Island, South Carolina, Tennessee, Utah, Vermont, Virginia, West Virginia, Washington, and Wyoming.

[424] For more information on the NAIC's Suitability in Annuity Transactions Model Regulation, or NAIC Model Regulation, refer to the section entitled ''NAIC Annuity Transactions Model Regulation'' in this RIA.

[425] Missouri and New Jersey have introduced legislation and/or regulation.

[426] Based on internal Department analysis, the modified NAIC Model Regulation, including a best interest standard, was adopted by Alabama, Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Montana, Nebraska, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, and Wyoming.

[429] A producer is defined in section 5.L. of the model regulation as ''a person or entity required to be licensed under the laws of this state to sell, solicit or negotiate insurance, including annuities.'' Section 5.L. further provides that the term producer includes an insurer where no producer is involved.

[430] *Id.* at section 5.I.

[431] *Id.* at section 5.B. and J.

and from the SEC's more robust regulation of conflicts of interest. For example, recent guidance from the SEC staff on broker-dealer and investment adviser conflicts of interest makes clear that conduct standards in the securities market require a ''robust, ongoing process that is tailored to each conflict.'' [432] The SEC staff guidance provides a detailed list of types of compensation that the SEC staff believes are examples of common sources of conflicts of interest, as follows:

- compensation, revenue or other benefits (financial or otherwise) to the firm or its affiliates, including fees and other charges for the services provided to retail investors (for example, compensation based on assets gathered and/or products sold, including but not limited to receipt of assets under management (''AUM'') or engagement fees, commissions, markups, payment for order flow, cash sweep programs, or other sales charges) or payments from third parties whether or not related to sales or distribution (for example, sub-accounting or administrative services fees paid by a fund or revenue sharing);
- compensation, revenue or other benefits (financial or otherwise) to financial professionals from their firm or its affiliates (for example, compensation or other rewards associated with quotas, bonuses, sales contests, special awards; differential or variable compensation based on the product sold, accounts recommended, AUM, or services provided; incentives tied to appraisals or performance reviews; forgivable loans based upon the achievement of specified performance goals related to asset accumulation, revenue benchmarks, client transfer, or client retention);
- compensation, revenue or other benefits (financial or otherwise) (including, but not limited to, gifts, entertainment, meals, travel, and related benefits, including in connection with the financial professional's attendance at third-party sponsored trainings and conferences) to the financial professionals resulting from other business or personal relationships the financial professional may have, relationships with third parties that may relate to the financial professional's association or affiliation with the firm or with another firm (whether affiliated or unaffiliated), or other relationships within the firm; and
- compensation, revenue or other benefits (financial or otherwise) to the firm or its affiliates resulting from the firm's or its financial professionals' sales or offer of proprietary products or services, or products or services of affiliates.[433]

The NAIC expressly disclaimed that its standard creates fiduciary obligations, and specifically provides that it does not apply to transactions involving contracts used to fund an employee pension or welfare plan covered by ERISA. The obligations in the NAIC Model Regulation differ in significant respects from those in Regulation Best Interest. For example, in addition to disregarding compensation as a source of conflicts of interest, the specific care, disclosure, conflict of interest, and documentation requirements, do not expressly incorporate the obligation not to put the producer's interests before the customer's interests, even though compliance with their terms is treated as meeting the ''best interest'' standard. The care obligation in the NAIC Model Regulation only requires that the adviser ''[h]ave a reasonable basis to believe the recommended option *effectively addresses the consumer's financial situation.*'' [434] This is comparable to the suitability obligation imposed on broker-dealers under the federal securities laws prior to Regulation Best Interest, which the SEC replaced with more stringent and protective standards.

Here too, the Department's rulemaking is much more closely aligned with Regulation Best Interest than to the NAIC Model Regulation. In contrast to the NAIC Model Regulation, Regulation Best Interest requires that, when making a recommendation, the broker-dealer ''exercises reasonable diligence, care, and skill to . . . [h]ave a reasonable basis to believe that the *recommendation is in the best interest of a particular retail customer,*'' [435] and the exemptions, consistent with ERISA's text, require that advice reflect the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims, based on the investment objectives, risk tolerance, financial circumstances, and needs of the Retirement Investor.

In recent insurance industry litigation against the Department, the plaintiffs described the differences between ''the requirements of an ERISA fiduciary and an insurance agent operating under the NAIC model regulation [as] extensive.'' [436] Among the numerous differences they identified is the fact that ''the NAIC model regulation does not define conflicts of interest or the requirements pertaining to such conflicts as broadly as ERISA.'' [437] Additionally, they asserted that ''the NAIC model regulation does not contain a 'prudence' standard'' [438] and characterized ''these best interest requirements . . . [as] a far cry from the obligations imposed on an ERISA fiduciary.'' [439]

The NAIC Model Regulation has come under additional criticism. The Certified Financial Planner Board of Standards noted in a comment that the regulation ''allows a producer to recommend products that other insurance professionals would determine effectively address a consumer's financial situation, insurance needs and financial objectives, even if a prudent professional would not recommend the product'' and ''allows a producer to recommend an annuity from a limited menu of products, without consideration of what is generally available in the marketplace.'' [440] This assessment is consistent with comments made by New York's Insurance Superintendent Lacewell during the NAIC 2020 Proceedings where she noted that while the New York standard is the ''best interest of the consumer without consideration of the producer's financial or other interest in the matter,'' that is not the standard of the NAIC Model Regulation.[441] New York voted against adopting the Model Regulation revisions, instead adopting its own rule, Regulation 187, whose standard generally aligns with this rule.

The Department is especially concerned about the proper regulation of fixed annuities, as sales totaled an estimated $286 billion in 2023, or 74 percent of the retail annuity market, an

increase of 36 percent from 2022, as investors responded to rising interest rates.[442] This growth in fixed annuity investments has increased the share of retirement savings residing in a less secure environment with fewer protections against conflicted advice compared to direct investors in mutual funds and securities. The Department, uniquely among the regulators, can impose uniform standards for the provision of investment advice to Retirement Investors. It is neither limited to the regulation of securities, nor to insurance products, but rather can set a uniform fiduciary standard for the regulation of conflicts of interest with respect to any advice on any investment products recommended to Retirement Investors. The Department believes that Retirement Investors and the regulated community are best served by a consistent, protective, and understandable fiduciary standard.

Summary

The recent regulatory and market developments, combined with the judicial vacatur of the 2016 Final Rule, provide for a different baseline than the pre-2016 Final Rule baseline. While some reforms and improvements in the delivery of advice have endured despite the vacatur, without new regulatory action, gains made to some products and markets that are not covered by recent regulatory actions by the Department, SEC, or States, could be derailed. Other regulatory agencies have worked to reduce conflicts of interest, but this has resulted in a ''patchwork'' approach to regulating advice arrangements of retirement investments,[443] which has already resulted in the most conflicted advisers moving to markets with the least oversight.[444]

This rulemaking, in accordance with ERISA, will extend important and effective protections broadly to Retirement Investors. Specifically, the rulemaking will replace the 1975 regulation's five-part test with a new fiduciary status test, which, consistent with ERISA's text, purpose and focus on relationships of trust and confidence, will capture more retirement investment transactions in which the investor is reasonably relying on the advice individualized to the investor's financial needs and best interest. This rulemaking will also increase the number of rollover recommendations being considered as fiduciary advice in the context of a relationship of trust and confidence between the investor and adviser, which will enhance protections to Retirement Investors, particularly in regard to recommendations regarding annuities.

4. Accounting Table and Discussion

In accordance with OMB Circular A–4, Table 3 depicts an accounting statement summarizing the Departments' assessment of the benefits, costs, and transfers associated with this regulatory action. The Department is unable to quantify all benefits, costs, and transfers of the rulemaking but has sought, where possible, to describe these non-quantified impacts. The effects in Table 3 reflect non-quantified impacts and estimated direct monetary costs resulting from the provisions of the rulemaking.

The quantified costs are significantly lower than costs in the 2016 regulatory impact analysis due to the narrower scope of the rulemaking relative to the 2016 Final Rule as well as compliance structures adopted by the industry to reduce conflicted advice in response to State regulations, Regulation Best Interest, existing PTE 2020–02, and the Department's 2016 Rulemaking. The methodology for estimating the costs of the amendments to the rule and PTEs is consistent with the methodology and assumptions used in the 2020 analysis for the current PTE 2020–02.

Benefits:
Non-Quantified (please also see the Transfers section of this table):
- Increase uniformity in the regulation of financial advice for Retirement Investors, across different market segments and market participants to ensure that this advice adheres to a stringent professional standard of care.
- Protect consumers from losses that can result from advisory conflicts of interest (without unduly limiting consumer choice or adviser flexibility).
- Better align investors' portfolio with their risk preferences and savings horizons as advisers provide individualized advice based on their individual circumstances.
- Facilitate Retirement Investors' trust in advisers.

Costs:	Estimate	Year dollar	Discount rate (percent)	Period covered
Annualized Monetized ($million/Year)	$359.9	2024	7	2024–2033
	356.0	2024	3	2024–2033

Quantified Costs:
The Department expects that entities will not incur additional costs from the amendments to PTE 77–4, PTE 80–83, and PTE 83–1. However, the Department expects that entities will incur costs directly from the amendments to the following PTEs:
- The annualized cost estimates in PTE 2020–02 reflect estimated costs associated with reviewing the rulemaking, preparing written disclosures for investors, reviewing and updating policies and procedures, reviewing and updating the retrospective review, and preparing rollover documentation.
- The annualized cost estimates in PTE 84–24 reflect estimated costs associated with reviewing the rulemaking, providing disclosures to Retirement Investors, establishing written policies and procedures, conducting a retrospective review, and maintaining recordkeeping.

Transfers:
Non-Quantified:
The Benefits section provides a qualitative description of the expected gains to investors; however, the available data do not allow the Department to break down those gains into component social welfare "benefits" and "transfers." Transfers identified in this analysis include:
- Lower fees and expenses for participants paid to Financial Institutions.
- Reallocation of investment capital to different asset classes, share classes, or investment products that better meet the individual Retirement Investor's goals.
- Shifts in the assets in plans and IRAs.

Implications for Retirement Savings Estimates

While the Department is confident that the savings to Retirement Investors will exceed the costs of this rulemaking, the Department acknowledges that it has limited data to assess the magnitude of savings that would result for Retirement Investors as a result of the rulemaking.

The SEC's Regulation Best Interest extended new protections to recommendations made by broker-dealers to retail customers on securities transactions. According to the SEC, the Conflict of Interest Obligation under Regulation Best Interest is "intended to reduce the agency costs that arise when a broker-dealer and its associated persons provide a recommendation to a retail customer by addressing the effect of the associated person's or broker-dealer's conflicts of interest on the recommendation." [445] In its Economic Analysis, the SEC explored the market mechanisms by which this and other provisions would benefit retail investors. The SEC estimated that the present value of potential future mutual fund fee reductions after Regulation Best Interest would be between $14 billion to $76 billion.[446] The SEC separately estimated that the potential present value of improved future mutual fund performance net of fees (which would overlap with fee reductions) would be between $7 billion to $35 billion. The SEC noted that these estimates represented only "some of the potential benefits" and that more benefits were expected. It also noted that while its estimates focused on mutual funds, it expected that "the same or similar dynamics could apply to other financial products." [447]

The preliminary evidence that is available for the mutual fund and annuity markets following the 2016 Final Rule and SEC's Regulation Best Interest reinforces the Department's view that well-designed reforms that raise advisory conduct standards and mitigate advisory conflicts of interests will benefit Retirement Investors.[448]

The Department believes that this rulemaking, by requiring advisers to provide Retirement Investors with information about the basis of their recommendations, fees, and potential conflicts, will better align incentives to ensure advisers act in the long-term interests of investors and reduce information asymmetries between advisers and investors. In doing so, Retirement Investors' assets may be invested more efficiently and consistent with investors' savings goals, while protecting them from potential costs associated with advisory conflicts.

Many commenters expressed concern that the Department did not quantify the benefits of the proposal. The Department is unable to quantify benefits and transfers of the rulemaking across all asset classes and investor types. The Department has, however, laid out evidence supporting its claims that this rulemaking will create significant benefits that justify the associated compliance costs. In response to the proposal, some commenters provided estimates of the benefits and costs. The Department has considered these estimates, many of which are discussed later in this document and in Table 4 below. These estimates provide strong additional support for the rulemaking.

Benefits and Transfers Scenario Analysis

This rulemaking fits into a complicated system of regulatory

[445] Regulation Best Interest, 84 FR 33318, 33447 (July 12, 2019).

[446] Regulation Best Interest, 84 FR 33318, 33491 (July 12, 2019).

[447] Regulation Best Interest, 84 FR 33318, 33458 (July 12, 2019).

[448] For more information, refer to the Benefits of a Fiduciary or Best Interest Standard section.

regimes, differing by the types of investment products being sold and the type of Investment Professionals selling the products. As such, the benefits, transfers, and costs from the rulemaking will be more prominent in some markets than others. While the Department believes that a uniform standard of care across investment products and investment advice professionals will benefit Retirement Investors, the magnitude of benefits and transfers will be more significant in markets not under a fiduciary or best interest standard. More specifically, the Department expects Retirement Investors investing in annuities to see the greatest benefits or transfers. The table below summarizes the estimates quantified by the Department and by commenters which expand on and confirm the Department's views of the benefits, costs and transfers of the rulemaking. It is difficult to separate the impacts into benefits or transfers. However, the benefits and transfers are both goals of the rulemaking. These impacts include transfers from Investment Advisers to Retirement Investors in the form of reduced fees and expenses and improved asset allocations.

TABLE 4—SUMMARY OF QUANTIFIED BENEFIT OR TRANSFER ESTIMATES

Market segment	Source	Average annual benefit or transfer: first 10 years (billion)	Estimate
Plan Participants	Comment Letter from Morningstar [449].	$5.5	The rule would result in participants saving $55.0 billion in plan fees in the first 10 years, with small plan participants receiving the largest benefit, estimated as $47.3 billion in the first 10 years.
Annuities	Comment Letter from Morningstar [450].	3.3	The rule would result in Retirement Investors rolling retirement funds into fixed index annuities saving $32.5 billion in the first 10 years.
	Council of Economic Advisers [451].	7.0	CEA provided an illustration of how to try to quantify the benefits and costs of a fixed index annuity, using the fair market price of the options. Using options on the S&P 500 index for a specified day in 2023, CEA estimated that investors may be paying 1.2 percent of the assets invested for the downside risk protection in fixed index annuities.[452] If total assets invested in fixed index annuities in 2021 had paid 1.2 percent of assets for the protection of an annuity, forgone returns could be as high as $7 billion. CEA noted that that this illustration demonstrates how, under the current system, a retirement saver could end up with lower returns than they would under the rule.
	Vivek Bhattacharya, Gaston Illanes, & Manisha Padi (2024) [453].	....	Bhattacharya et al. (2024) found that a common law fiduciary duty increased risk-adjusted returns by 25 basis points in annuity investments.
	Department of Labor Illustration, based on Bhattacharya et al. (2024).	5.3	If $3.8 trillion dollars are invested in annuities, 70 percent of the market is not currently subject to a fiduciary standard, and 80 percent of the market is covered by ERISA, then the rulemaking could affect 2.1 trillion in annuity assets. If, consistent with Bhattacharya et al. (2024), this segment of the market sees an increase in average returns of 25 basis points, the expansion of fiduciary duty would lead to gains for investors (a mix of societal benefits and transfers) of $5.3 billion annually.[454]

Based on these estimates, the rulemaking could result in benefits and transfers amounting to $5.5 billion annually for plan participants and amounting to between $3.3 billion and $7.0 billion annually for Retirement Investors, due to just reduced price spreads in the fixed index annuities market, with potential additional benefits stemming from reduced spreads in other fixed annuities and reductions in surrender fees paid as investors purchase. This implies that if just looking at the benefits and transfers to plan participants and to Retirement Investors investing in fixed index annuities, the rulemaking could result in estimated benefits and transfers ranging from $8.8 billion to $12.5 billion annually.

Cost Scenario Analysis

The Department estimated that the costs associated with the proposal would be $253.2 million in the first year and $216.2 million in subsequent years. In response to comments received in the proposal, the Department has increased the cost estimates to $536.8 million in the first year and $332.7 million in

[449] NPRM #290 (Morningstar).

[450] *Id.*

[451] Council of Economic Advisers, *The Retirement Security Rule—Strengthening Protections for Americans Saving for Retirement,* (October 2023), *https://www.whitehouse.gov/cea/written-materials/2023/10/31/retirement-rule/#_ftnref1.*

[452] CEA's estimate was calculated using August 1, 2023 end-of-day prices, using the historic volatility of the S&P 500 price index on Bloomberg's options pricing calculator, with the put option's strike price at the current index price, the call option's strike price at 6.75% above the index's price on August 1, and the maturity of the option at 1 year.

[453] Vivek Bhattacharya, Gaston Illanes, & Manisha Padi, *Fiduciary Duty and the Market for Financial Advice,* Working Paper, (February 27, 2024), *https://www.dropbox.com/scl/fi/gj5skfflsip2nhee1662c/Draft.pdf?rlkey=msd12c734n8ddrct8uzqg0qut&dl=0.* This is an updated version of the working paper cited in the proposal. (*See* Vivek Bhattacharya, Gaston Illanes, & Manisha Padi, *Fiduciary Duty and the Market for Financial Advice,* Working Paper, (May 20, 2020), *https://www.nber.org/papers/w25861.*

[454] This is estimated as: $3.8 trillion in assets × 70% of the assets not covered by a fiduciary standard × 80% covered by ERISA × 0.25% increase in returns = $5.3 billion.

subsequent years. The largest contributions to the change in cost estimates from the proposal to the final rulemaking are an increase in time to review the rule as well as an increase in the number of Independent Producers and transactions by Independent Producers affected by the rulemaking. The justification for the change in costs is discussed in greater detail in the cost section below.

It is worth noting that in many cases the Department likely over-estimated the number of affected entities. This includes simplifying assumptions such as:

- the inclusion of non-ERISA rollovers in its count of rollovers,
- the inclusion of insurance companies that do not sell IRA or Title I Plans,
- the inclusion of insurance companies domiciled or conducting business in New York which enforces a higher standard of care on annuity sales that is comparable to the standards set forth in this rulemaking,
- the inclusion of Independent Producers that do not sell annuity products,
- inclusion of insurance companies and captive agents under PTE 84–24 that will rely instead of PTE 2020–02,
- that all eligible entities use PTE 2020–02 or PTE 84–24 for transactions instead of other existing exemptions, and
- that all affected entities incur the costs directly, rather than utilizing a third-party that is able to perform these services at a lower rate.

As a result, the Department's total costs reported in this rulemaking are likely overstated.

Moreover, it is important to note that many of the costs incurred under this rulemaking are due to the Department formalizing best practices for those providing individualized investment recommendations to investors for whom they have a relationship of trust and confidence. The requirements to describe the services provided, explain fees and disclose any conflicts as well as document the basis for an investment recommendation simply ensures that advisers are providing all necessary information that investors should have access and are entitled to. Similarly, conducting an annual review to identify potential violations and ensure that an entity is in compliance with the guiding laws and regulations should be standard practice. Given similar disclosures and reviews are already required by other financial regulators, the Department expects that many of the affected entities are already performing these actions for at least some part of their current business, and so extending the same or similar requirements to their remaining clients in practice will be less costly than the Department's estimate.

In its comment letter, the Financial Services Institute cited findings from a survey conducted by the Oxford Economics. This survey interviewed members of the Financial Services Institute and was commissioned by the Financial Services Institute. The survey estimated that the costs of the proposal imposed on broker-dealers would be approximately $2.8 billion in the first year and $2.5 billion in subsequent years, 11 and 12 times the Department's estimate in the proposal, respectively. They noted that their estimates include costs to upgrade software systems and incremental time of staff and broker-dealers.[455] The Department has revised this rulemaking, however, to make PTE 2020–02 largely consistent with the requirements of Regulation Best Interest, even more so in this final rulemaking than in the proposal. As most broker-dealers surveyed for these estimates would already be subject to Regulation Best Interest, the Department questions the magnitude of additional burden on broker-dealers for complying with the closely aligned requirements of Regulation Best Interest.

In its comment letter, the ICI stated that the Department had underestimated cost. They provided a sensitivity analysis on the first-year cost estimates for PTE 2020–02, estimating that the costs would exceed $2.9 billion. This is 12.1 times higher than the first-year cost estimates in the proposal. Notably, 98 percent of the difference between the proposal and ICI estimates is associated with costs to review the rule. Excluding this difference, the ICI estimates for disclosure, retrospective review, and policy and procedure costs are only 1.2 times higher than the estimates in the proposal.[456]

As discussed above, the Department questions the validity of some assumptions made by the commenters. However, both commenters noted that the Department's estimates in the proposal were off by a factor of 12. For illustrative purposes, if a multiplier of 12 were applied to the Department's estimate in the proposal, the rulemaking would result in an annualized cost of $2.7 billion. The Department has revised its estimates since the proposal to reflect feedback from commenters, resulting in a total cost estimate that is more than double its proposal cost estimate. This estimate is still significantly below the estimates provided from these commenters.

The table below summarizes the Department estimates calculated by the Department and by commenters.

TABLE 5—SUMMARY OF QUANTIFIED COST ESTIMATES

Focus	Source	First-year	Subsequent years	Annualized, 7% discount rate [457]
Total	Department of Labor: Final	$536.8 million	$332.7 million	$359.9 million.
	Department of Labor: NPRM	$253.2 million	$216.2 million	$316.7 million.
	Adjusted NPRM Estimate: Multiplied by 12	$3.0 billion	$2.6 billion	$2.7 billion.
Total: Broker-Dealers	Department of Labor: Final	$37.5 million	$28.9 million	$21.2million.
	Comment Letter from Financial Services Institute [458].	$2.8 billion	$2.5 billion	$2.5 billion.
PTE 2020–02	Department of Labor: Final	$248.1 million	$165.5 million	$176.5 million.
	Department of Labor: NPRM	$231.5 million	$197.3 million	$201.9 million.
	Comment Letter from Investment Company Institute [459].	$2.9 billion	N/A	N/A.
PTE 84–24	Department of Labor: Final	$288.7 million	$167.2 million	$183.4 million.

[455] NPRM #342 (Financial Services Institute).

[456] NPRM #395 (Investment Company Institute).

[457] The annualized benefits, costs, and transfers spread the effects equally over each period, taking account of the discount rate. The annualized value equals the present value divided by the sum of discount factors.

[458] Comment letter received from the Financial Services Institute on the *Notification of Proposed Rulemaking: Retirement Security Rule: Definition of an Investment Advice Fiduciary,* (January 2024).

[459] Comment letter received from the Investment Company Institute on the *Notification of Proposed Rulemaking: Retirement Security Rule: Definition of an Investment Advice Fiduciary,* (January 2024).

TABLE 5—SUMMARY OF QUANTIFIED COST ESTIMATES—Continued

Focus	Source	First-year	Subsequent years	Annualized, 7% discount rate [457]
Mass Amendments [1]	Department of Labor: NPRM	$18.1 million	$15.3 million	$15.7 million.
	Department of Labor: Final	$0	$0	$0.
	Department of Labor: NPRM	$3.6 million	$3.6 million	$3.6 million.

[1] As finalized, the amendments to the Mass Amendment do not impose an additional burden on entities continuing to rely on those exemptions. However, the amendments will require entities to rely on PTE 84–24 and PTE 2020–02 for exemptive relief covering transactions involving the provision of fiduciary investment advice. These costs are accounted for in the cost estimates for PTE 84–24 and PTE 2020–02.

Summary

Due to data limitations, a changing regulatory environment, and the scope of the entities affected by the rulemaking, the Department is unable to calculate a comprehensive estimate for the benefits and transfers across all asset classes and account types. However, the estimates discussed above attempt to make clear the estimated benefits and transfers (particularly those from Investment Advisers to Retirement Investors in the form of reduced fees and expenses and improved asset allocation), and the total expected costs are discussed below.

5. Affected Entities

The table below summarizes the estimated number of entities that will be affected by the amendments to the Rule and each of the PTEs. These estimates are discussed in greater detail below.

TABLE 6—AFFECTED FINANCIAL ENTITIES

	Prohibited transaction exemptions					
	2020–02	75–1	77–4	80–83	86–128	84–24
Retirement Plans	765,124	765,124	277,390	6,312	1,000	1,722
Individual Retirement Account owners	67,781,000				210	500,000
Broker-Dealers	1,920	1,920				
Discretionary Fiduciaries					251	
Registered Investment Advisers	16,398					
Pure Robo-Advisers	200					
Insurance Companies	84					358
Captive Insurance Agents and Brokers	1,577					1,577
Insurance Producers						86,410
Banks		2,025		25		
Mutual Fund Companies			812			
Non-Bank Trustees	31					
Investment Company Principal Underwriters	([1])					20
Pension Consultants	([1])					1,011

[1] Pension consultants and investment company principal underwriters who were relying on PTE 84–24 for investment advice will no longer be able to rely on the exemption as amended for receipt of compensation as a result of providing investment advice. However, these pension consultants and investment company principal underwriters can rely on PTE 2020–02 when they are part of a Financial Institution, such as a registered investment adviser, broker-dealer, insurance company, or bank, which are already accounted for.

In the preamble to the proposed rulemaking, the Department requested input from commenters on its estimates of the entities affected by the proposed amendments. The Department asked commenters for information on how many entities currently rely on each of the exemptions, how many entities currently rely on each of the exemptions for investment advice, and how many entities would continue to rely on each of the exemptions, as amended. The Department also asked for information on how retirement plans, IRAs, and Retirement Investors at large would be affected by the proposed amendments. The Department has considered the comments received and revised its estimates where appropriate. These considerations are discussed more fully below.

Plans and Participants

The amendments to the rule and related PTEs will affect plans that receive investment advice from a Financial Institution. Participants may be affected by advice they receive directly and by advice that is received by their plan's administrators and fiduciaries. As of 2021, there were approximately 765,000 private sector retirement plans with 146 million participants and $13.2 trillion in assets that will be affected by these amendments. Approximately 46,000 of these plans are defined benefit plans, covering 31 million participants and $3.7 trillion in assets, and approximately 719,000 are defined contribution plans with 115 million participants and $9.5 trillion in assets.[460] The Department recognizes that some plans, such as simplified employee pension (SEP) plans and Savings Incentive Match Plan for Employees IRA (SIMPLE IRA) plans, are exempt from filing and are not included in these estimates but will typically be affected by the amendments.

The Department expects that participants, in general, will benefit from the stronger, uniform standards imposed by the amendments to the rule and PTEs. Participants who receive

[460] Private Pension Plan Bulletin: Abstract of 2021 Form 5500 Annual Reports, Employee Benefits Security Administration (2023; forthcoming), Table A1. Table A1 reports that there were 765,124 pension plans, consisting of 46,388 defined benefit plans and 718,736 defined contribution plans. Due to a rounding discrepancy, the sum of defined benefit and defined contribution plans does not equal the aggregate of the plans. Additionally, some individuals participate in two or more plans, so the number of individuals covered is lower than the number of gross participants.

investment advice will be directly affected by the amendments, particularly participants receiving one-time advice as to whether they should roll over their retirement savings. These participants are discussed in the section on IRA owners, below.

Similarly, plans receiving fiduciary investment advice will also be directly affected by the amendments.

In the proposal, the Department requested comment on how plans would be affected. Some commenters stated that the amendment would create a significant burden on advice providers because more transactions would be fiduciary investment advice and Financial Institutions would need to satisfy an exemption. Other commenters remarked that plan and plan participants, particularly in small plans, would benefit significantly from the proposal because the advice would be held to a fiduciary standard. As discussed elsewhere, the Department has revised its estimate of compliance burden for Financial Institutions providing fiduciary investment advice accordingly. Additionally, the Department has included a discussion of the benefits plans and plan participants may experience as a result of the rulemaking.

Several commenters remarked that the proposal was unclear on whether education and ''hire me'' conversations would be considered fiduciary advice. Many of these commenters noted that this would disincentivize such communications with plans which could result in significant costs. The Department has clarified in the preamble for the final rule that such conversations would not constitute advice, absent a recommendation.

Some commenters expressed concern that by not providing a specific carve-out from fiduciary status for advice to sophisticated advice recipients, plans would have access to fewer investment opportunities. For example, one commenter suggested plans would have fewer investment opportunities in private equity and that this would decrease investment returns and diversification in plans. As discussed in greater detail in the preamble, the Department has decided not to exclude plan sponsor fiduciaries from the protections of the final rule when they receive advice from trusted advisers, with the view that it is preferable to retain a facts and circumstances test for recommendations to plan sponsor fiduciaries absent an acknowledgment of fiduciary status with respect to the recommendation. However, the Department made a number of changes and clarifications in the final rule, including a new paragraph (c)(1)(iii) that confirms how sales recommendations can occur without fiduciary status attaching.

In addition to PTE 2020–02, the Department is amending several other Prohibited Transactions Exemptions. PTE 84–24 is being amended to provide relief for compensation received for investment advice only for independent insurance producers that recommend annuities from multiple unaffiliated insurance companies to Retirement Investors, subject to conditions similar to those in PTE 2020–02. Additionally, PTEs 75–1 Parts III and IV, 77–4, 80–83, 83–1, and 86–128 are being amended to eliminate relief for the receipt of compensation resulting from fiduciary investment advice, as defined under ERISA. As amended, PTE 86–128, PTE 84–24, PTE 77–4, and PTE 80–83 will directly affect subsets of plans, described below.

The amendments to PTE 86–128 will limit the scope of the amendment to transactions in which a fiduciary uses its fiduciary authority to cause the plan or IRA to pay a fee to such trustee for effectuating or executing securities transactions as an agent for the plan. Using 2021 Form 5500 data, the Department estimates that 1,257 unique plans hired service providers that indicated on the Schedule C that they were a discretionary trustee. Further, among these plans, 801 plans also reported that the discretionary trustee provided investment management services or received investment management fees paid directly or indirectly by the plan.[461] Based on the range of values (801 and 1,257), the Department assumes on average, 1,000 plans have discretionary fiduciaries with full discretionary control. As small plans do not file the Schedule C, this estimate may be an underestimate.

The Department requested comment on how many plans have discretionary fiduciaries with full discretionary control and how many would continue to rely on PTE 86–128 under the proposed amendments and did not receive any which directly discussed plan reliance on PTE 86–128.

The Department estimates that of the 1,000 plans discussed above, 7.5 percent are new accounts or new financial advice relationships.[462] Based on these assumptions, the Department estimates that 75 plans will be affected by the amendments to PTE 86–128.[463]

For PTE 84–24, the Department estimates that 7.5 percent of plans are new accounts or new financial advice relationships[464] and that 3 percent of plans will use the exemption for covered transactions.[465] Based on these assumptions, the Department estimates that 1,722 plans will be affected by the amendments to PTE 84–24.[466]

In response to its request for comment in the proposal, the Department received one comment noting that Financial Institutions have relied on PTE 77–4 for both investment advice and discretionary programs. This commenter did not indicate the proportion of these Financial Institutions that would continue to use PTE 77–4 as a result of the proposed amendments.

To estimate the number of plans affected by the amendments to PTE 77–4, the Department estimated the number of plans relying on a mutual fund company. The Department does not have data on what percentage of plans receive fiduciary advice through mutual fund companies. A 2013 Deloitte/ICI survey found that 37 percent of 401(k) plans have a mutual fund company as their service provider.[467] Based upon ICI analyses and Form 5500 data that examines the percentage of plans that are invested in registered investment companies, the Department estimates that 24.7 percent of defined benefit plans have mutual fund companies as money managers.[468] Applying these percentages to the universe of pension plans that filed a Form 5500 in 2021 yields a total of approximately 277,390

---

[461] Estimates based on 2021 Form 5500 data.

[462] EBSA identified 57,575 new plans in its 2021 Form 5500 filings, or 7.5 percent of all Form 5500 pension plan filings.

[463] The number of new plans is estimated as: 1,000 plans × 7.5 percent of plans are new = 75 new plans. The number of new IRAs is estimated as: 10,000 IRAs × 2.1 percent of IRAs are new = 210 new IRAs.

[464] EBSA identified 57,575 new plans in its 2021 Form 5500 filings, or 7.5 percent of all Form 5500 pension plan filings.

[465] In 2020, 7 percent of traditional IRAs were held by insurance companies. *See* Investment Company Institute, *The Role of IRAs in US Households' Saving for Retirement, 2020,* 27(1) ICI Research Perspective (2021), *https://www.ici.org/system/files/attachments/pdf/per27-01.pdf.* This number has been adjusted downward to 3 percent to account for the fact that some transactions are not covered by this exemption.

[466] 765,124 plans × 7.5 percent of plans are new × 3 percent of plans with relationships with insurance agents or pension consultants = 1,722 plans.

[467] The Department uses this estimate as a proxy for the percent of defined contribution plans that have service provider relationships with mutual fund companies. *See* Deloitte & Investment Company Institute, *Defined Contribution/401(k) Fee Study,* (August 2014).

[468] Based on Form 5500 Data 2000–2010, defined benefit plans are approximately 33 percent less likely than defined contribution plans to be invested in a registered investment company. *See* Sarah Holden, *The Economics of Providing 401(k) Plans: Services, Fees, and Expenses,* Investment Company Institute (September 2010).

plans with service provider relationships with mutual fund companies.[469] Thus, the Department estimates that 277,390 plans will be affected by the amendments to PTE 77–4. The Department acknowledges that this estimate likely overestimates the number of plans affected by the amendments.

The Department estimates that 6,312 plans are affected by PTE 80–83 based on the number of new plans relying on a broker-dealer.[470]

IRA Owners

In addition to the specific requests for comment discussed below, the Department requested comments on how IRAs and rollovers are likely to be affected by the amendments. The Department also welcomed comment on the number of IRAs and rollovers that might be affected by the rulemaking. Several commenters provided data, surveys, or studies on the IRA and rollover markets. The Department has considered this information and adjusted its estimates as appropriate. Some commenters stated that increased costs resulting from the rollover documentation imposed by the rulemaking would decrease the number of rollovers. In response to these concerns, the Department is narrowing the required rollover disclosure to only apply to rollovers from Title I Plans to IRAs. One commenter cautioned that the rulemaking's definition of an IRA would include health savings accounts (HSAs) and expressed concern about this inclusion. The Department has decided to include HSA owners in the definition of Retirement Investor. The data sources used below to estimate the number of IRA owners already include HSA owners.

According to Cerulli Associates, there were 67.8 million IRA owners holding $11.5 trillion in assets in 2022.[471] The amendments to the rule and PTE 2020–02 will affect Retirement Investors who roll over money from a plan into an IRA. A 2020 survey found that 46 percent of recent retirees who had at least $30,000 in retirement savings had rolled at least some of their savings into an IRA.[472]

In 2022, almost 4.5 million defined contribution plan accounts with $779 billion in assets were rolled over into an IRA. Additionally, 0.7 million defined contribution plan accounts with $66 billion in assets were rolled over to other employment-based plans.[473] The Department used IRS data from 2020 to estimate overall rollovers into IRAs and arrived at estimates of 5.7 million taxpayers and $618 billion.[474] Adding in the figures for plan-to-plan rollovers, the Department estimates the total number of rollovers at 6.4 million accounts with $684 billion in assets.[475]

As amended, PTE 2020–02 requires rollover disclosure only for rollovers from a Title I Plan and recommendation to a participant or beneficiary as to the post-rollover investment of assets currently held in a Title I Plan. According to Cerulli Associates, in 2022, financial advisers intermediated 49 percent of defined contribution rollovers.[476] The Department estimates that 2.2 million rollovers and $535 billion in assets will be affected by the rollover disclosure in the amendments to PTE 2020–02.[477] These figures are overestimates because they include some rollovers from non-ERISA plans and because they are based on the assumption that all of the advisers intermediating rollovers are ERISA fiduciaries.

As amended, PTE 86–128 and PTE 84–24 will each affect subsets of the number of IRAs discussed above. The Department's estimates of the IRAs that will be affected by the amendments to PTE 86–128 and PTE 84–24 are discussed below.

PTE 84–24, as amended, only requires rollover disclosure for recommendations to rollover from a Title I Plan. The Department requested, but did not receive, comments on the assumptions used in the proposal regarding annuity contracts affected by the rulemaking. However, in conjunction with updating its estimate of the number of independent agents the Department has revised its estimate of annual annuity transactions affected by the amendments to PTE 84–24, increasing the estimate from 52,449 to 500,000.

While there are several sources of information regarding total sales or size of the annuity market that are generally consistent, the same is not true for transaction activity, which can vary dramatically across quarters and between sources. To improve its estimate of annual annuity transactions affected by the amendments to PTE 84–24, the Department tried two approaches which both relied on LIMRA total fixed annuity sales data. LIMRA data from 2023 indicates that 34 percent of fixed annuity sales were fixed-indexed annuities.[478] Assuming sales are proportionate to transactions and using data from the Retirement Income Journal which reported roughly 109,863 fixed-indexed annuity products were sold in the fourth quarter of

[469] Private Pension Plan Bulletin: Abstract of 2021 Form 5500 Annual Reports, Employee Benefits Security Administration (2023; forthcoming), Table A1. There are 765,124 pension plans, of which 718,736 are defined contribution plans and 46,388 are defined benefit plans. The number of plans with service provider relationships with mutual fund companies is estimated as: 718,736 defined contribution plans × 37% = 265,932; 46,388 defined benefit plans × 24.7% = 11,458.

[470] EBSA identified 57,575 new plans in its 2021 Form 5500 filings, or 7.5 percent of all Form 5500 pension plan filings. Additionally, the Department estimates that 12 percent of plans have a relationship with a broker-dealer. This is a weighted average of the Department's estimates of the share of defined benefit plans and defined contribution plans with broker-dealer relationships. The Department assumes that approximately 20 percent of defined benefit plans have relationships with broker-dealers. As a proxy for the share of defined contribution plans with broker-dealer relationships, the Department uses the sum of the percent of load mutual funds in 401(k) plans (6 percent) and the percent of 401(k) stock mutual fund assets paying 12b–1 fees between >.0 to 0.25 (5 percent). Both data are published by the 2021 Investment Company e Institute report. (See *The Economics of Providing 401(k) Plans: Services, Fees, and Expenses, 2021,* Investment Company Institute, June 2022. *https://www.ici.org/system/files/2022-06/per28-06.pdf*). The number of plans is estimated as: 765,124 plans × 7.5 percent of plans are new × 11 percent of plans with broker-dealer relationships = 6,312 new plans.

[472] Pew Charitable Trusts. ''Pew Survey Explores Consumer Trend to Roll Over workplace Savings Into IRA Plans.'' Issue Brief. (October 2021), *https://www.pewtrusts.org/en/research-and-analysis/issue-briefs/2021/09/pew-survey-explores-consumer-trend-to-roll-over-workplace-savings-into-ira-plans.*

[473] According to Cerulli, in 2022, there were 4,485,059 defined contribution plan-to-IRA rollovers and 707,104 plan-to-plan rollovers. The Department was unable to find any data on the number of IRA to IRA or defined benefit to IRA rollovers. *See* Cerulli Associates, *U.S. Retirement End-Investor 2023: Personalizing the 401(k) Investor Experience,* Exhibit 6.04. The Cerulli Report.

[474] Internal Revenue Service, *SOI Tax Stats—Accumulation and Distribution of Individual Retirement Arrangement (IRA),* Table 1: Taxpayers with Individual Retirement Arrangement (IRA) Plans, By Type of Plan, Tax Year 2020, (2023).

[475] Estimates for the number of IRAs may include some non-retirement accounts such as HSAs, Archer medical savings accounts, and Coverdell education savings accounts. See the discussion on Code section 4975 in the Background section of the preamble for more details. The final rulemaking has clarified that HSAs are covered by the amendments; however, other non-retirement accounts may not be.

[476] Rollovers from defined contribution plans are 49% adviser-mediated rollovers into IRAs, 37% self-directed rollovers into IRAs, and 14% plan-to-plan rollovers. *See* Cerulli Associates, *U.S. Retirement End-Investor 2023: Personalizing the 401(k) Investor Experience,* Exhibit 6.04. The Cerulli Report.

[477] In 2022, 4,485,059 defined contribution plan accounts were rolled over into IRAs. The rollovers were mediated by a financial adviser and destined for an IRA in 49% of cases. (4,485,059 × 49%) = 2,17,679. Additionally, in 2022, $535 billion assets were advisor intermediated. *See* Cerulli Associates, *U.S. Retirement End-Investor 2023: Personalizing the 401(k) Investor Experience,* Exhibit 6.04. The Cerulli Report.

[478] LIMRA, Preliminary U.S. Individual Annuity Sales Survey, Fourth Quarter 2023, (2023), *https://www.limra.com/siteassets/newsroom/fact-tank/sales-data/2023/q4/4q-annuity-sales.pdf.*

2021,[479] annualizing this number to 439,452 the Department estimates that roughly 838,000 other fixed-rate annuity products were sold over the same period, for a total of 1.3 million fixed annuity transactions in 2021 using this approach.

The Department considered an alternative approach which estimated the number of annual transactions by dividing the total sales data from LIMRA described above by the average contract size as reported by the Retirement Income Journal, which is $147,860. Using the same proportional methodology described above, this approach yields an estimate of roughly 1.9 million transactions.

Using the average of these estimates, the Department then applied the following assumptions to arrive at its final estimate. Using McKinsey data on annuity distribution channels, the Department assumes that third-party distribution channels account for 81 percent of the annuity sales volume.[480] The Department further assumes that 80 percent of these annuities are held in ERISA-covered accounts or purchased with ERISA plan assets[481] and that 49 percent of transactions will rely on investment advice.[482] This results in an estimate of roughly 500,000 ERISA-covered fixed annuity transactions involving an Independent Producer providing advice to an investor.[483]

The amendments to PTE 86–128 will limit the scope of the amendment to transactions in which a fiduciary uses its fiduciary authority to cause the plan or IRA to pay a fee to such trustee for effectuating or executing securities transactions as an agent for the plan, without providing investment advice. The Department lacks reliable data on the number of managed IRAs that will experience such a transaction in a given year. For the purpose of this analysis, the Department assumes that there are 10,000 managed IRAs. To err on the side of caution, the Department assumes that all managed IRAs will have a relationship with a discretionary fiduciary. As discussed above for PTE 84–24, the Department assumes 2.1 percent of IRA accounts are new each year. This results in an estimate of 210 managed IRAs that are new accounts or new financial advice relationships.[484] In the proposal, the Department requested comment on the assumption of managed IRA accounts but did not receive any comment directly addressing this estimate.

These estimates likely overestimate the number of IRA owners that will be affected by the amendments, since IRA owners will only be affected by the amendments to the rule and PTEs when they have a relationship with certain financial entities and are conducting certain financial transactions, as defined by the revised fiduciary definition and the conditions for exemptive relief of each PTE.

Summary of Affected Financial Entities

In the proposal, the Department received several comments regarding its estimate of the number of financial entities that would be affected. Commenters expressed concern about the Department's assumption that all eligible entities already rely on PTE 2020–02, as some entities did not consider their conduct to trigger fiduciary status. This commenter noted that under the amended definition of a fiduciary, these entities would consider themselves fiduciaries for the first time and incur significant costs, accordingly. In response to this comment, the Department has revised its estimate to assume that 30 percent of broker-dealers, registered investment advisers, and insurance companies were not previously complying with PTE 2020–02 and will incur the full cost under this rulemaking.
